"Another thing we ask of you is in behalf of the children. You and your contemporaries are established in your thought, your reading and your recreation. You are probably conversant with the best in art and literature. You are in touch with the questions of the day, and have a general idea of the history of the world, both ancient and modern. But what of the children? Are they having the same direction in the home that you and I had? . . . Do not leave too much of this training to the teacher or librarian. Read and teach others to read. Let us read fiction, if we must, or if we need it, to keep that small spark of the imaginative and the ideal, but let us spend at least one-half hour each day in something worth while."

#### LIBRARIES, SMALL—ORGANIZATION OF

Form of library organization for a small town making a library beginning. Alice S. Tyler. *North Carolina Lib. Bull.*, D., 1915. p. 3-7.

When a few individuals awakened to the possibilities for good contained in a public library, the basis of the movement for a library will probably take one of the following forms, or a combination of two or more:

1. Enlargement of the meager school library.
2. A church reading room.
3. Women's club or town federation library.
4. Library association or subscription library.
5. Free public library, supported by taxation.
6. Traveling library center or station.

The first plan may be successful, and the books, which are usually neglected during the school year and of no use during the three months vacation, become of some value to the general public, though the plan is seldom tried.

The second plan is unwise and undesirable, as it almost immediately arouses denominational opposition or jealousy, and is not likely to attract those not identified with orthodox churches.

The third method is often tried. Because it confines the movement to a limited group of workers it sometimes encounters jealousy and criticism from those outside the club that is not conducive to a movement that should include all ranks and conditions.

The fourth plan is popular when properly understood, and is often a satisfactory method of making a beginning, the association forming an organization to work for a tax-supported library.

For since the fundamental need in every library project is money, the assurance of a regular annual income through a municipal tax becomes the most satisfactory basis for maintaining a public library. Eventually, if not in the beginning, the fifth form of organization, the tax-supported free public library, is the goal of every commission worker. If the amount raised by taxation is insufficient for the entire maintenance expense, let it be used to keep up running expenses, and inaugurate a movement to provide a book fund by some other means.

The state library commission in its advisory capacity should be able to help the small town to avoid the mistakes made elsewhere, but it should take care not to arouse the charge of paternalism. The commission worker should come to the town on the invitation of the local leaders, if she is to work most effectively. Besides telling the experience of other towns in organizing libraries, she can help in the selection of books, in installing a simple loan system and other necessary records, and in providing the traveling library to supplement the local book collections. The use of these collections may make possible the diversion of part of the funds for the

maintenance of a reading room, and with the right kind of a librarian in charge, this room may be the most potent feature of the library's work.

Certainly all the interests mentioned—the schools, the churches, the clubs—should be concerned in providing the public collection of books for the town, but they must rise above their particular interests to unite in service for the public good. Without their support the work would be well-nigh impossible.

#### MILITARY ENGINEERING

Military reading course for civilian engineers. *Engineering News*, March 16, 1916. p. 506-507.

This list is classified and annotated, and contains fifty-one titles, arranged under the following headings: On military policy, conduct of war and history, On permanent fortifications, On organization, equipment and duties of engineer troops, On field engineering, Miscellaneous works, Army service periodicals.

#### MUNICIPAL REFERENCE WORK

Report of committee on municipal reference libraries and archives. National municipal league. *Spec. Libs.*, Feb., 1916. p. 19-21.

There is urgent need of a central clearing house of municipal information, to save duplicated and wasted effort. The situation demands a central national bureau, which shall collect municipal documents, publish guides to this material, promote co-operation among local libraries, collect and index city ordinances, and use its information to answer inquiries from city officials and others.

The committee has carefully considered the question whether the proposed national bureau should be under government control, or be organized as a voluntary co-operative agency. The Public Affairs Information Service, conducted by the H. W. Wilson company, is an example of the latter class. Mr. Lapp, a member of the committee, inclines to an extension of this service. The other members prefer control by the Library of Congress, and recommend that the National municipal league lay the matter before Congress.

The suggestion that some cities now maintaining municipal libraries enlarge their scope to serve as a national bureau, is not regarded as feasible by the committee.

ORGANIZATION. See Libraries, Small—Organization of

## OVERDUE BOOK DAY

In the Public Library in Syracuse, N. Y., an interesting experiment was tried this spring in an effort to get back to the library shelves the books which had been so long overdue that hope of their recovery by the ordinary routine had been abandoned. An "Overdue Book Day" was planned, and is described by Paul M. Paine, the librarian, in the following letter:

"I think the first suggestion for an Overdue Book Day came from Mrs. Cora M. Cahill, assistant in the circulation department. She thought something might be accomplished by making a big effort to get overdue books in all at once. We settled upon April 19th for the day and announced in the newspapers of three days previous that books returned on that day would not be subject to fine. This caused a little confusion on the part of some of our patrons who could not see why they were not allowed to return their books on the day before and have the fine remitted. As a matter of fact they should have been given exactly this privilege whenever they demanded it for that would have been to our advantage and would have caused a much better feeling than telling them they must wait until the exact day was announced.

"However I know of but one case where ill feeling resulted and on the whole the experiment succeeded, although the North branch was closed for repairs and the stations had hardly a fair chance to take advantage of the occasion. We got back to the library 160 books on that day, a few of which had been missing since last year and some of which had been charged off as lost. I think we shall try it again sometime next fall and with our present knowledge we can get better results. Letters were written to principals of the schools asking them to announce it to the pupils. Items were inserted in the newspapers and the students in the chapter houses and dormitories in the university were asked to help, but such a campaign to be really successful must have a wider and more thorough publicity."

## READING COURSES

Many libraries throughout the country have made a special feature this winter of grouping together and making available to the public the books needed to follow the reading courses planned by the Home Education Division of the United States Bureau of Education. The first two courses are as follows:

Course I, The World's Literary Bibles, including:

The Iliad and the Odyssey of Homer.  
The Divine Comedy of Dante.  
Shakespeare's *The Merchant of Venice*.  
Shakespeare's *Macbeth*.  
Shakespeare's *Hamlet*.  
Shakespeare's *Othello*.  
Goethe's *Faust*.

and Course II, which includes these eight books and also the nine following:

Job.  
Isaiah.  
Deuteronomy.  
Prometheus Bound of Aeschylus.  
The Aeneid of Virgil.  
The Nibelungenlied.  
Cervantes' *Don Quixote*.  
Select lays of Molière.  
Milton's *Paradise Lost*.

The Bureau invites all who wish to undertake this course of reading under its direction to join its Second National Reading Circle. For admission to this circle it is only necessary to write to the "Home Education Division of the Bureau of Education, Washington, D. C.," giving name, post office address, your age, and a very brief statement of education and occupation.

To each person submitting satisfactory evidence of having read all the books on this list within three years from the time of joining the circle, there will be awarded a certificate bearing the seal of the United States Bureau of Education and signed by the Commissioner of Education. In states where the state department of education co-operates with the Bureau this certificate may bear the signature of the chief school officer of the state also.

The other reading courses which are either ready or in course of preparation are as follows:

Course III. A reading course for parents (now ready).  
Course IV. Miscellaneous reading for boys (now ready).  
Course V. Miscellaneous reading for girls (now ready).  
Course VI. Thirty books of great fiction (now ready).  
Course VII. Some of the world's heroes.  
Course VIII. American literature (now ready).  
Course IX. Biography.  
Course X. History.

Readers may take one or more courses. They are required to read Course I twice during the three years succeeding enrollment.

Any other courses are to be read but once. No reading done previous to the date of enrollment will be considered adequate.

A certificate will be given for each course completed.

#### READING TABLE

"The problems involved in the selection of tables for the reading use of boys and girls are several," writes Miss Caroline Burnite, director of children's work for the Cleveland Public Library. "The chief difficulty, however, is to secure a table which shall prompt correct posture on the part of the child users. Undoubtedly, many children have a natural tendency toward incorrect posture confirmed

when the book lies on a flat-top table, the distance from the eyes to the top varies from the distance to the bottom of the page in direct ratio to the size of the book. Since the child assumes a correct posture, easily and naturally, he shows no disposition to spread his arms on the tables, nor could he do so with comfort, because there is only a narrow ledge to keep the book from falling. Moreover it is noticed that the child turns the page correctly, at the top instead of the bottom of the page.

"These tables were first designed for oversized books, such as *St. Nicholas*. It was soon noticed that children preferred them when reading the smaller books as well. It

Reading Table 5'0" Long

1/2 in Scale

by using the tables in the children's room. It is noticeable in looking over children's rooms that more children sit incorrectly than sit correctly; either they sit on their spines and with their chins too close to the tables, or else lean far over their book with shoulders rounded, with arms spread, and with chins a few inches from the page.

"A recently designed slant-top reading table in use in the Cleveland Public Library, has been of great aid in securing correct posture. With a slant surface of about sixteen inches from top to bottom, and a slant of about eight inches, the tendency to lean over the table is almost entirely counteracted. The child sits correctly in his chair, as a rule, and there is a consequent lessened strain in reading, for the top of the page is about the same distance from the eyes as is the bottom of the page. On the other hand,

is now planned to use them as fully as possible in the children's rooms. For little children a table two inches lower at the lower edge and with a ten-inch slant is used.

"One marked advantage which these tables have over the old flat-top table is this: they may be so placed that the light falls in the right direction, because the children sit at one side of the table only. No child can sit in such a way that the light is in his eyes, if the tables are placed with judgment.

"A frequent remark of visitors who know of this experiment is, that the tables look better in the rooms than they expected. Knowing the advantages, one even prefers their appearance to the usual tables, which become easily scratched and scarred by the buttons on the boys' sleeves, and which cost considerably more. One librarian said she expected to see a choir stall effect, and another

termed them "an admirable return to the mediæval!"

#### RURAL COMMUNITIES, LIBRARY WORK IN

The farmer and his tools. Mary C. Lacey. *Educational Review*, March, 1916. p. 268-274.

A discussion of books as tools for the farmer as well as for the doctor and lawyer. The author argues that the time has come when somebody ought to weed out the publications on agriculture, and separate the really valuable, of which there is a vast deal, from the utterly valueless popular book compiled only to sell. The latter class supports the contention of the non-reading farmer that book farming is valueless. The article refers in a general sort of way to some of the methods in getting books to the farmers, such as the county library, the traveling library, etc.

Feeding the book hungry. Walter A. Dyer. *Country Gentleman*, April 1, 1916.

A general account of the efforts put forth in various parts of the country to supply reading matter from libraries to persons in rural communities. Most of the article refers to the county and state traveling libraries, although there are a few paragraphs relating to the county library work as carried on at Hagerstown, Md., California, Oregon, etc. The article has several illustrations of the Hagerstown automobile book wagon. There are several minor inaccuracies in the article.

Clover-land libraries are doing a splendid work. Zana K. Miller. *Clover-Land Magazine*, April, 1916.

This is an illustrated article on the public libraries of the Upper Peninsula of Michigan, as follows: Marquette, Houghton, Stambaugh Township, Ishpeming, Painesdale, Iron wood, Crystal Falls, Hancock, and the Northern State Normal School Library, of 20,000 volumes, at Marquette.

Some of the libraries of this part of the state have an unusually large per capita circulation. The Public Library at Houghton gives Sunday lectures during the winter. The Library at Painesdale distributed in the spring of 1915 6000 penny packages of flower and vegetable seeds to children, and at Christmas through the efforts of friends of the library each child got a bag of candy. It would be interesting to see what would happen if one of the East Side branch libraries in New York were to announce on a

given day the distribution of a bag of candy for each child.

Progress versus difficulties. Mary Morison. *Bull. of N. H. Pub. Libs.*, D., 1915. p. 136-138.

The small country libraries in a rural state like New Hampshire often find a location convenient to all the people difficult to secure. The books must often be in a spare room off the town hall or in some private house where the housekeeper is willing to look after them, and the hours are frequently not more than two or three a week. The question of income is serious. In the small towns the librarian's service is often voluntary; in others she is given \$5 to \$10, to pay her, as is often said, "for sweeping out the dirt people bring in."

The libraries whose income is from \$15 to \$100 should spend practically all on books. The summer visitors who bestow on the library a lot of cheap novels are a serious menace. The people need more help and education than they can get without outside help, and have as good a right to it in their libraries as in any other part of the educational system. The state school inspector is paid a good salary, but the library commission appointed by the state has no money and can only help the smaller libraries by advice. Gifts of books and traveling libraries and traveling picture collections all help, but the thing that is really needed is a centralized plan of library work so that the little libraries may appeal to the authorities at the state capital and be shown how to get what they want either from the State Library or from some neighboring larger library.

RURAL LIBRARIES. See Carnegie United Kingdom Trust—Report by Prof. Adams

SALARIES. See Carnegie United Kingdom Trust—Report by Prof. Adams

SCHOOL LIBRARIES. See High schools—Cooperation from public libraries; Intermediate school libraries

#### SCHOOLS, LIBRARY RELATIONS WITH

Library work and the public schools. Charles Hughes Johnston. *School and Society*, March 18, 1916. p. 408-411.

This is the stenographic report of an address by Prof. Hughes of the University of Illinois, at the Illinois State Library Association meeting, held at Urbana on November 5, 1915.

#### SICK, BOOK SELECTION FOR THE

"What can I find to read aloud?" Some books for the convalescent patient. Edith Kathleen Jones. *The Nurse*, F., 1916. p. 79-

88. (Also separately printed, with editorial comment.)

Miss Jones, who is the librarian of the McLean Hospital at Waverley, Mass., offers in this paper "not a compilation of favorite books, but rather a loosely classified catalog of a number of stories, poems, and essays which 'read aloud well' (all books do not, however absorbing they may be), and which, therefore, may offer some suggestions to nurses of convalescent or chronic patients. Some well-known books and authors are purposely omitted because of the very fact that they are so well known—Longfellow, Whittier, Tennyson, Dickens, and Thackeray, for instance."

Following her informal comment on a number of books which nearly every one enjoys, as well as those which appeal chiefly to men and those which are "as interesting as a story," is a bibliography compiled by Julia S. Stockett of the University of Wisconsin Library School, in collaboration with Miss Jones. This divides the fiction into two groups, short stories and light fiction, and novels. The non-fiction is subdivided into description and travel, essays and letters, books of outdoor life, poems, and biography.

#### SPECIAL LIBRARIES ASSOCIATION

Résumé of the association's activities. Guy E. Marion. *Spec. Libs.*, N., 1915. p. 143-146.

Since Mr. Marion assumed the secretaryship of the Special Libraries Association, in the spring of 1910, its membership has increased from 75 to 354. On the association's list may be found libraries for railways, business houses, manufacturing concerns, laboratories, agricultural interests and municipal reference workers. Much of the success of "the library idea in business" he attributes to the official organ of the association, *Special Libraries*, which was started in January, 1910, and is now edited by Mr. John A. Lapp of Indianapolis.

Many separate bibliographies have been published, chief among them being the "Bibliography of scientific management and efficiency" prepared by the Library of Congress for the Efficiency Society of New York, and the "City planning list," compiled by Miss Kimball of Harvard, in co-operation with the Library of Congress.

The year 1915 witnessed the publication of chapter eight of the "Manual of library economy," prepared by the retiring president, Richard H. Johnston, of Washington, D. C., and entitled "Special libraries." Though written to tell the story of the special libraries movement to those engaged in other library activities, its pleasing style will commend it to members of the association.

Descriptive articles on the operation of individual libraries have been of great service to young librarians starting a special library career. A valuable report on the handling of clippings was submitted by Mr. Cunningham, at the Kaaterskill conference. A committee to investigate training for special libraries made some preliminary inquiries into this important subject.

The association has encouraged co-operation among special librarians by constituting a national advisory board made up of district heads representing different sections.

The business man's view of special libraries is embodied in Mr. Marion's comment:

"Give me the Boston telephone book, the New York, Philadelphia and Chicago telephone books, a desk with a pad of paper, my present acquaintance with the Special Libraries Association and, I might say almost no books, and I should not be afraid to offer myself as a special librarian to many a business house." The business man prefers a librarian who gives him the facts he wants, not the books from which to extract them.

Mr. Marion advocates a publicity campaign dealing with the application of the library idea in industries. He concludes with a plea for adequate headquarters, and for paid workers to carry on the rapidly increasing work of the association.

TAXATION FOR LIBRARIES. See Finance.

---

### Bibliographical Notes

---

"Notes on legal bibliography," by Frederick C. Hicks, the law librarian at Columbia University, have been reprinted from the *Law Library Journal* of January, 1916. The "notes" supplement his "Aids to the study and use of law books" published in 1913, and give approximately 150 additional references.

The Agricultural Extension Department of the International Harvester Company, in Chicago, has prepared a number of practical lectures on agriculture, illustrated by charts and lantern slides, which will be furnished to individuals or institutions willing to pay express charges to and from Chicago. No rental charge is made for the use of charts or slides.

A catalog of the business books in the Business branch of the Newark Public Library, which with its 1600 titles will prove practically a record of the best business literature of the day and is endorsed by the Associated Advertising Clubs of America, is announced for early publication by the H. W. Wilson Company.

The U. S. Bureau of Labor Statistics lists in its *Monthly Review* all the official reports relating to labor received at the bureau, including state and foreign reports, with a brief note or statement as to the character of each report or its contents. Bulletin 174 of the bureau is a subject index of its publications.

In Legislation bulletin 41 of the New York State Library, William E. Hannan, the legislative reference librarian, has prepared a historical summary of the legislation in New York State looking toward the establishment of a system of mothers' pensions. The bulletin also contains in tabulated form a digest of similar laws in twenty-eight other states, and other useful information on the subject.

*Trinity College Bulletin* for April is given over to the publication of a list of current periodicals in the libraries of Hartford, Ct. The list is in two parts, the first in alphabetical arrangement and the second classified by subjects, and the various libraries in which the periodicals are located are indicated after each title. The suggestion for compiling the list was made by Howard R. Hill of Trinity College Library, and the work of collecting and arranging the data was performed by him.

The 1916 "Catalogue of books in the 'Moon' type for the blind" has been issued by the Pennsylvania Home Teaching Society and Free Circulating Library for the Blind. This society has a special department in the Free Library of Philadelphia, and a branch deposited in the Carnegie Library of Pittsburgh. From these two libraries 27,078 volumes of embossed books were distributed in 1915, and of this number 18,928 were in Moon type, which has been found the easiest for adult readers to master.

A copy of the 221-page catalog issued in November, 1915, by the Public Library in Hilversum, Holland, has been received. It includes the volumes of Dutch language and literature, Flemish literature (in both cases inclusive of fiction) and the translations from other languages into Dutch, which are to be found in the library. In many cases the location of reviews of the titles included in the list, is indicated under the book's entry, and for books which might reasonably have been looked for in more than one place, the entry is repeated as often as necessary.

A "Supplementary catalog of books for district, township and high school libraries in the state of Michigan" has been published under the joint sponsorship of Mrs. Mary C.

Spencer, state librarian, and Fred L. Keeler, superintendent of public instruction. This includes the best books for school libraries published since the lists for district school libraries and for township and high school libraries published in 1914 and 1915 respectively. Net prices for the books are quoted, and a corrected list of prices for the 1914 list is also given.

A manual for the guidance of those who lack library training but who must nevertheless take charge of the libraries in the hospitals or other institutions in which they are employed, is being prepared by Miss Carrie E. Scott of the Indiana Library Commission. The need of such a manual was felt by the A. L. A. committee on library work in state institutions, and it will be brought out during the summer by the A. L. A. publishing board. The choice and preparation of books and their classification will be considered, also the making and keeping of the standard library records, including the catalog, and the supplies necessary for its upkeep.

The University of Illinois Library has a new edition of its "List of American and English novels" which aims to include only the best and runs to less than 100 titles, arranged in three groups—those written before 1880, those written between 1880 and 1900, and between 1900 and 1915. The books were selected by Miss Emma Felsenthal, reference assistant, and F. K. W. Drury, assistant librarian, who based their work on a list of 101 titles first issued in 1907. This list is supplemented by one of 160 "Familiar foreign novels in English translation" issued some years ago, and it is hoped to round out the fiction lists with a "Short story" selection at an early date.

The official library journal of Norway, *For Folke- og Barnebogsamlinger*, has appeared under a new title *For Folkeoplysning* (Public Instruction), beginning with the number for January, 1916. The magazine is the official organ of all the libraries that come under the jurisdiction of the Department of Church and Education which it represents. The new title, which the editors do not altogether like but apologize for as the best they could find, is intended to include the work of the "People's Academies" or University Extension courses, now managed together with the libraries by a special sub-department. Volume 1, no. 1 of the new journal gives tables of circulation of public libraries (this does not include scientific or university or college libraries) from 50 Norwegian towns.

There was altogether a yearly circulation for these libraries of 1,392,287 volumes, an increase of over 100,000 over the preceding year. The highest percentage of circulation per capita of the city's population was in Kristianssand where the rate was 4.03.

## The Open Round Table

---

### SPECIALIZATION IN LIBRARIES

In a letter written last winter to Mr. G. W. Lee of Boston, Dr. E. C. Richardson, librarian of Princeton University, discussed at length the question of specialization and of sponsorships for knowledge in which Mr. Lee has been so actively interested. Through the courtesy of the latter we are enabled to reprint the greater part of Dr. Richardson's letter in this column.

" . . . The problem which you are approaching from the standpoint of getting and giving information is much the same as the one that we university and reference librarians are approaching from the standpoint of the purchase and storage of books—at least, the only solution in either event lies in specialization and co-operation; *i. e.*, devising means of letting others use our specialties, and letting us use theirs. I figure that there are five million books in the world which some one of our professors is liable to want for use any day. It is obvious folly for thirty universities, and still greater folly for seven or eight hundred colleges to expect to buy, house, care for, and catalog five million volumes, and the absurdity, especially in the duplication of housing and cataloging, is just as real, if not as great, until one gets down to about a million volumes for the larger universities, and down to fifty thousand or one hundred thousand volumes for the medium college.

"Some of us are actually doing something in the way of specialization; *e. g.*, Columbia keeps a remarkable collection in the history of school and college text books. A few weeks ago, I sent three or four hundred such books which had come in to us in the past three or four years and had been laid away for this disposition, and this is not the first consignment by any means, as we have been doing it for a great many years. These are not, by any means, duplicates; the point simply is, 'Shall we invest \$300 housing, plus \$140 cataloging, and a cent a piece annually, at least, for upkeep, or say, roughly at least \$20

a year for a lot of books very rarely of use, and which, when used, will be better used in connection with a rich collection?" It would be actually cheaper for the library to pay a professor's expenses to New York and back and his day's salary to boot.

"Of course, we risk the establishment of a school for pedagogy here, and the need of a representative collection, but even then, it is not worth while to have in this country more than two or three, or at most five or six properly distributed library collections of this sort to serve every reasonable need. I am personally of the opinion that specialization on these grounds could be extended tremendously. And this, of course, links right up with your idea, because, as you suggest, wherever there is specialization, there must be the accurate bibliographical knowledge of the specialist.

"At the meeting of the American Library Institute at Atlantic City this year [1915], this matter was discussed more or less, also, from the point of view of co-operative cataloging. It started with Dr. Hill's collection on Costumes, and the point was made as to whether he was prepared to make his collection complete and be responsible for an analytical and cumulative catalog of all his material, introducing even, in the case of unusual books, possibly, indication to other places where copies could be found, and introducing into the catalog even analysis of a few books which he could not secure for his own library on account of their rarity.

". . . They asked me to take the presidency of the American Library Institute, and I said that I would do so provided they were all cordially of a mind to radically change operations so that it should be an association for the promotion of higher education, learning, and research in library matters, and co-operation between reference libraries in this matter of specializing and furnishing one another catalog information of their specialties. In short, it is in line with your idea of sponsorship for specialties.

"We have swapped notes before on the advantage of the ordinary joint lists of periodicals and their value for locating copies, which, of course, is somewhat different from the problem of co-operative information, and yet it does bear precisely on the matter of locating specialties. I have myself prepared, as chairman of the bibliographical committee of the American Historical Association, such a co-operative list of "Collections on European history in American libraries," and I have been very much impressed with the

enormous possibilities of the saving in cataloging expenses to the various university libraries which would result either by dividing up the specialties, or in having Harvard, which has increased its collections since this list was published until it includes not far from ninety per cent. of the collections, analyze these, and keep up a cumulative analytical catalog of this whole specialty.

"Of course, the point that you make about the analyzed information as distinguished from the book information is one of the most vital and live ones in modern libraries because much of the liveliest information for practical purposes is in the periodical or pamphlet form. Here the university library problem gets into the millions very fast, and the need of specialization becomes enormous.

"When it comes to the actual swapping of information and the matter of charging and so on, theoretically each library might well afford to furnish its information freely to other libraries or to persons applying through the reference departments of all other libraries on the ground that it would average up in the long run. Practically, it would result in the bulk of the burden falling on a few big libraries unless the matter were carried to a very high degree of organization, just as it does in the case of the inter-library loan, which is based on this principle. As a matter of fact, this results in a very large burden being thrown on Harvard and a few other libraries which are likely to have the books, while on the other hand, it has very few opportunities to call correspondingly on small libraries. If it were possible to have a very strong organization for indicating where specialties and individual copies of books could be found, it would be possible to lift a great deal of Harvard's burden by their simply referring applicants to them to sponsored collections; and at the same time it would reveal in the smaller libraries little specialties and unusual books, which, if available for the use of the Harvard professors, would tend to equalize in the other direction. I am convinced that there is an enormous waste in American libraries by duplication, which could be saved by specialties and organized information as to location of the specialties. It strikes me that with organized service of information as to the location of specialties and copies of unusual books, libraries could easily and inexpensively furnish information as to location of the specialty; and the specialty, bibliographical information; but if information was wanted as to the contents of books and articles re-

ferred to, it would be on some system of payments, of course, or the big reference libraries would be overwhelmed. Even special bibliographical information of any extent which could not be supplied by printed or mimeographed lists would have to be somewhat protected from abuse.

"The crux of the whole matter is simply capital. We in the Library Association have attempted a dozen things of this sort in this way. They are useful for those who have leisure to read them consistently, and combine notes on them, but they always peter out, although serving a certain usefulness meantime. You have worked out an admirably stimulating, thoroughly useful, practical idea which, from my university library standpoint, I would describe as co-operation of reference departments. Some of the rest of us have had pretty thoroughly worked out ideas of co-operation of purchase departments to promote specialization and to avoid duplications. Again, and still more fully, practical schemes of co-operation in cataloging have been experimented on until they are no longer experiments, but simply business unaccomplished for lack of capital. I have no doubt myself that the thirty or so university libraries which spend \$700,000 or \$800,000 a year for the purchase of books could double their efficiency for American education by a well-capitalized organization for promoting co-operative selection and distribution of books among these libraries and a co-operative catalog, and I think that, unless the Library of Congress or one of the great foundations is about to take this up on an adequate scale, it will be necessary for these thirty university libraries to make some sort of a voluntary association and do something radical. It is preposterous and appalling, the waste of money involved in this random purchasing for individual need as it occurs, and duplicate analyses. I think that we shall be able to do a lot anyway without quite so much capital by pushing the idea of what you have called sponsorship; *i.e.*, making complete specialized collections and complete analyzed catalogs of these collections. The reference end work of this which you have in mind is in the university libraries very much developing by the demand for state-wide help from the university libraries in connection with University Extension activities, and there is a tremendous field in university libraries for just the sort of reference work which you suggest, and in fields of high technical scholarship in history, language, science, etc. You are aiming at the live present-day

economic use, and we have to consider that, too. As a matter of fact, we have already taken up the Pliny Fisk Library in that spirit; *e.g.*, the librarian next week goes through the documents of one of the big trust companies in New York, and they have promised to give us photostat copies of all the things that we lack in a large particular specialty. We shall be able, in turn, to furnish photostat copies; and indeed in our modern library work I have become convinced that one of the best reference ways in which libraries can help one another is in this of furnishing type-written or photostat material to one another.

"I congratulate you on your useful development of a really very practical matter, and I repeat that my conviction is that somehow, somewhere, ordinary financial common-sense must bring us to the point of co-ordinated work which may, in effect, as I have suggested, double in the case of thirty university libraries the permanent value of \$1,200,000 a year, more or less, spent by them for the purchase of books and the cataloging of them. When one thinks that the by-product of such a co-operation of even thirty libraries would be worth far more to all the libraries large and small in the country, it does seem a pity that there isn't some way of capitalizing a co-ordinating bureau for serving all American libraries. I believe that if the kind of men who run the Rockefeller and Carnegie funds could get started thinking of the practical aspects of this co-operation in reference, specialization, purchase, and cataloging, they would see that it is precisely the problem involved in the duplication of small manufacturing plants or the attempt to manufacture all sorts of specialties in one small plant. The fundamental fact is simple enough for anybody to grasp—the fact that it would take more than five million books and ten million separates or analyticals to serve the demands which are liable to be made any day in this or any fair-sized university or reference library.

"Taking the practical matter as it stands, it is quite in the line with the thing that I am discussing now with Dr. Hill and Dr. Andrews and others as to our actually taking each a number of narrow specialties and making ourselves each responsible for producing a cumulative catalog of that specialty. I have well towards completion one or two extremely narrow ones, just as a matter of illustration of the possibilities of the method; *e.g.*, "Collections of English drama," and in a less advanced but yet rather advanced state of experiment and experimental printing, the

matter of Palæography—the subject in which I give a graduate course here. We have already taken up, or could take up, owing to special collections, a dozen specialties right away, under some system of apportionment where we felt that other libraries were doing other things; *e.g.*, Railroad finance, Virgil, Horace, Cruikshank, Chess, and one or two historical and scientific specialties. In a system of general co-operation, we could afford to take up our share, whatever it might be. . . .”

#### FOR BETTER BOOK EVALUATION

Several of the large libraries of the country have received a letter from George P. Brett, president of the Macmillan Company, urging the inauguration of some better scheme than at present exists for the guidance of the reading public in choosing the best of the published books each year. Mr. Brett sums up his ideas on the subject in the following paragraphs:

“My suggestion roughly is (1) that the great universities and great libraries should work together in this matter by the appointment of readers from among the faculties of the universities and from among the librarians and library reading committees to examine all the books that are published.

“(2) That the libraries aided by the universities should publish lists of the books that are worth while and approved by these readers, such lists being issued weekly or monthly as might be thought best; the expense of the publication of the lists to be borne as part of the current university and library expenses.

“(3) That the libraries furnish these lists through the American Library Association as they now do their published lists, to librarians belonging to their association, and that in addition the lists be furnished to readers of books who might be interested in them sufficiently to apply to the librarians for them.

“(4) That each university have an adjunct to its extension department or publicity department which should furnish these lists to inquirers throughout the state in which the institution is situated, and that the official in charge of the distribution of these lists should also furnish information to inquirers about books on any subject in which the inquirer is interested.

“In making this suggestion I may seem to be working only in the interests of the publishers and yet it seems to me that it should be a part of the work of great libraries and universities to enlighten and adjust popular judgment and taste, especially in a country so

large as this where information of the kind and character of that indicated is so difficult to arrive at. And I believe they could be of the greatest service to the country by lending themselves to a plan of this sort. . . .

“I am of course, aware that the different large libraries have reading committees who recommend books for purchase or who in some cases recommend books for blacklisting as far as their libraries are concerned. I know also of the very excellent work done by the extension department of the universities in disseminating information in regard to all subjects among the people generally. What is needed here is a concerted effort along the lines which I have ventured to put before you above, and co-operation between the universities and libraries to accomplish what, I believe, would be a very desirable end, *i.e.*, the serving as a guide to the public in the reading of worth-while books and their recommendation.”

#### WANTED: AN INDEX TO INDIVIDUAL POEMS

Has any library a card or other list of titles of individual poems, not found in Granger, from which it would give answers to post card queries from other libraries? Information desks are so often asked for the authorship of poems to which the only clue is the title. One or two libraries have attempted such a list—but has anyone got very far? It is understood a new edition of Granger is in press, which will be useful to librarians.

#### AS ONE READER SEES US

“. . . Most of the library journals print what they think librarians like to read; and as you know, most librarians when they talk immediately become pussy-footed. Very few of them will tell the truth about conditions which are not up to the highest ideals of library school discourses. The same is of course true in other fields of endeavor.

“Why not have some variation to the thrilling statement that ‘Miss Cora McZinc has left her job as third assistant cataloger in the Dead Sea institution for deaf and dumb in order to assume similar duties at the University of Popocatapetel.’ ”

# THE LIBRARY JOURNAL

Vol. 41

JULY, 1916

No 7

It is with extreme regret that the members of the American Library Association will learn of the necessitated absence from the conference of 1916 of Miss Mary W. Plummer, its president, whose condition of health makes rest from excitement and stress imperative. Unless her forceful courage impels her to disobey medical orders, she will remain in Chicago, where she has been for some time under the care of the old family doctor in whom she has especial trust and confidence. Miss Plummer, ever since her graduation from the Library School at the very beginning of library schools, has been one of the most active and useful members of the library profession; indeed, few have done so much to make the calling a profession and to make it a worthy and suitable profession for women. It was, therefore, a matter of great satisfaction to those who knew the present library movement in its beginnings that Miss Plummer was made president of the A. L. A., as the second woman honored by such election. The honor was paid her at a time when she could say neither yea nor nay, and it is from the after effects of the operation then that she is still suffering. Characteristically, she had completed her presidential address—which will be read for her—and the arrangements for the conference before she allowed herself to obey the counsel of her physicians, and it is to be hoped that she will not have to pay, by lengthened absence from her duties, too severe a penalty for this plucky persistence. One of the highest compliments paid to her was in her selection as the head of the New York Public Library School when that was endowed by Mr. Carnegie for advanced library work, and she had given it so good an organization that its

good work has gone on despite her frequent enforced absences of the year past. The conference of 1916 will miss her gracious and inspiring presence, with cordial appreciation and gratitude for what she has done in the service of all librarians and readers.

THE library difficulties arising from the world war have increased as the war has gone on. The embargo placed by the British on importations from the Teutonic countries of printed books as well as other matter was somewhat relieved by a *modus vivendi* for the benefit of American libraries, worked out by the British Embassy through its trade adviser in consultation with the Librarian of Congress. But the plan has by no means succeeded as was hoped. The Librarian of Congress could do no more than certify the good faith of the institution making application for importations, usually through an importing house as agent, and the practical application of the scheme was, of course, left to the English authorities. They have limited permissible importations very closely and have in especial applied the embargo to periodicals and daily newspapers necessary to keep up the files in American libraries, which are of historical as well as present importance. In one case, where an importer's agent abroad included periodicals and newspapers in the shipment, the permit of the importer has been cancelled—an extreme act which it is to be hoped may be revoked in the absence of any implication of bad faith. The course of the State Department, in demanding as a neutral right that the mails should not be interfered with except in the case of contraband articles in parcel post, is thoroughly

approved by Americans; and it is to be hoped that the result will be to open a wider door to American libraries to receive books and periodicals, not excluding daily newspapers, from abroad. This is a right which cannot be surrendered, and it should apply to exportation and importation of books by ordinary shipment as well as through the mails.

---

It is almost universal throughout the country that libraries in the past year have suffered severely from reduction of municipal or institutional appropriations, or have had the appropriations for their growing work confined to the figures of the preceding year. This is especially true in the library systems of New York City, where circulation has increased approximately 20 per cent. in a year, while appropriations for the current year were kept down to the figures of the previous year. A year ago there was general apprehension that the prosperity of the country would soon wane, and, consequently, there was hesitation and economy on the part of fiscal authorities. But the country has continued to be prosperous, libraries have continued to grow, and unless they are checked in their development appropriations must be larger in total year by year, though the appropriations per capita or per unit of circulation or other service may and should be less. Few institutions have been administered with more care, economy and effectiveness than American libraries as a whole. City fathers, town authorities and village selectmen should see to it that the libraries have money to do the service which the public now feel they have the right to expect. In this case a penny saved may be a penny wasted.

---

OCCASIONALLY some one recurs to the suggestion that the Chaldean method of baked books, which Prof. Jewett undertook to apply to catalog preservation, and of which Dr. Kunz has proposed a modification,

should be accepted as the way out for book and record preservation, in view of the uncertain durability of modern paper and print. But this involves the worse dilemma of the size limitation of library buildings, if not the carrying weight possible to book stacks. Another form of record is that of the phonograph, which in disc shape solves some of the problems of space and weight; but no estimate seems to have been made as to the permanent durability of these discs, which are so recent an invention. These records might be an improvement on the Chaldean baked cylinders, but would present much the same problem as to house room and other difficulties. They afford, however, one new feature for library treasure houses, which should not be overlooked. It would be most interesting if we could have in our modern libraries not only Homer in Greek type but Homer's own speaking or singing rendition of the Iliad, and Demosthenes' or Cicero's orations as recorded by the orator's voice. What a blessed contribution would these have been to the vexed questions of how the Greeks and the Latins actually talked! There are now discs recording the voices of Presidents Roosevelt and Taft and of other orators and statesmen, as well as of the great singers of the day; and such records may come to be of increasing library importance. Last fall an interesting record was made at the Edison laboratory of an address from Mr. Edison's friends by means of an Edison disc, the sounds of which were conveyed to Mr. Edison himself in San Francisco through the long distance telephone. This record, made by Mr. M. R. Hutchison, gave interesting summary of the remarkable development of certain Edison and other inventions in recent years, and is an interesting illustration of the historic value which may become an important feature of this modern class of records. Mr. Hutchison has indicated willingness to send this disc from the Edison Laboratory, South Orange, N. J., to a limited number of libraries which are developing such collections.

## IMPORTANCE OF ORGANIZED LIBRARIES IN INSTITUTIONS\*

BY EDITH KATHLEEN JONES, *Librarian, McLean Hospital, Waverley, Mass.*

THERE is no other one fact which so clearly shows the growing recognition of the library as an important department of an institution as this: that, whereas ten, or even five years ago, any one speaking on this subject would have been obliged first to enter a plea for such libraries and prove their usefulness, to-day he has chiefly to urge that they be administered efficiently. For it is now an established truth that the right books are an important factor in the diversional treatment of mental diseases and the education of the feeble-minded; also in inculcating higher ideals and better mental training in reform schools and prisons. Moreover, aside from the purely therapeutic and educational point of view, a good library probably furnishes more real happiness for the money expended than any other department of the institution, and happiness is a great contributor to mental health. Indeed, the institutions are learning that instead of being unable to afford books, they can no longer afford to be without them; that a good library is an additional tool in the hands of doctors and nurses and attendants, and one of the least expensive, considering that books may be used over and over again and give pleasure and help to succeeding generations of patients.

There is, however, one argument which is still often advanced against having libraries in certain state hospitals, namely, that a large proportion of their inmates are uneducated if not actually illiterate. "Our rich and educated patients go to the private hospitals," is the plea of the superintendent of these institutions; "our inmates have not the reading habit."

Now, if education and wealth or poverty and ignorance were synonymous, this would be a good argument, but as a matter

of fact, it is a question of money not of education which decides the fate of state or private hospital for the insane patient, and there is in almost every state hospital a certain percentage of professional men and women, teachers, librarians, college professors, ministers, whose lack of means keeps them there, but whose unhappiness is greatly increased if they are deprived of the books to which they are accustomed. Some of these are too feeble to employ themselves in any other way, and must sit, day after day, listless and brooding, their thoughts running in the same old abnormal channels, when by the right books their outlook on life might, temporarily, at least, be much brighter. For

There is no frigate like a book  
To take us lands away,  
Nor any coursers like a page  
Of prancing poetry.  
This traverse may the poorest take  
Without oppress of toll;  
How frugal is the chariot  
That bears a human soul!

Their usefulness being recognized, the only question which remains is this: How can the institution best meet the growing demand for efficient libraries?

First, what sort of library is efficient in an institution? Obviously, one which provides wholesome and entertaining books and magazines suited to its inmates, and gets its people interested in reading.

Let us speak of the institution libraries in terms of the hospital, for the word "patients" is so much more euphonious than "inmates," and because what is true of the organization of libraries in hospitals or schools for the feeble-minded is also applicable to prisons and reform schools.

If we accept the statement made above, that the successful institution library is one which gets its patients interested in the right sort of reading, this explains the failure of the old ward bookcases, with their attic donations never changed, sel-

\* Read before the section on institution libraries at the National Conference of Charities and Corrections in Indianapolis, May 13, 1916.

dom added to, and with no one to look after them. They certainly were not interesting as libraries, whatever they may have been as museums of antiquities. A library, to be of any use, must be vital, wholesome and progressive; it must have new material and be kept in circulation. When books cease to be read and enjoyed, their usefulness, for institution purposes, is ended; they are dead, and should be decently interred with other dead things, and new and live matter put in their places. Of course all this means that someone must keep a finger on the library pulse; that someone must be responsible for the wholesomeness and efficiency of the library as the doctors are for the health of the wards and the supervisors for the efficiency of the training-schools. As no hospital would think of putting a well-equipped laboratory in charge of a person who knows nothing of chemistry, we believe that the time will soon come when the library, which is really a laboratory for diversional treatment and education, will be placed in the hands of a person who knows books and has the requisite technical knowledge for efficient administration.

It has been proved that an institution library, to be successful, must have three things:

1. An annual appropriation for new books. This need not necessarily be large. The usefulness of the library lies in the quality, not the quantity, of its reading matter.

2. Some competent person in charge, preferably a trained librarian, who has no other duties, but can devote all her time to the administration of the libraries, medical as well as general, establish friendly relations with patients and employes and see that the right books get to the patients.

3. A central library with books suited to its readers; arranged on the shelves by some simple classification and found by some equally simple method of cataloging; kept in circulation by an efficient charging system.

I repeat, the necessity of these things has been proved. Let me cite a few examples. You will pardon me if I quote

McLean Hospital, for this is the best known to me and it proves all these points. This library was founded in 1835 with an annual appropriation of \$300. For some time this sum seems to have been expended in books and magazines for the patients, and a good start was made. Then, as the years went on, there apparently was no one particularly interested in it or responsible for it; other departments crowded it out; the medical library was begun and seemed more important. Nevertheless, when, in 1895, the hospital was moved from Somerville to its new building in Waverley, a library room was fitted up in the Administration House and about 4000 of the best volumes of the old library were installed here and classified and cataloged. A stenographer—several stenographers in succession—had charge; some of them had more or less library experience, but their other duties crowded out the library; few new books were bought, and the medical library still received the most attention and nearly all the appropriation. In 1904 a trained librarian was appointed with instructions to spend the whole \$300 on the patients' library and build it up; she had no other duties than the care of the two libraries.

Now in 1904 the patients' library numbered 4400 volumes, a growth of only about 400 volumes in ten years of the old desultory methods. In 1914, after ten years of steady and systematic development, it numbered 7600, an increase of 3200 volumes; and now, in 1916, after twelve years of this modern administration, there are 8400 volumes entered in the accession book, of which between 6000 and 7000 are still in the library; the rest have been discarded as dead wood. In other words, in the twelve years of organized up-building, it has nearly doubled the spasmodic accessions of the whole seventy previous years.

But even more important than this, the use of the books by the patients and employes leaped in the first year from a circulation of about 5000 to 7000, and it has steadily increased until, for three years, it has exceeded 9000, or an average of about twenty-five books a day.

Here at McLean the three things, annual appropriation, trained librarian and organized central library, are combined. Let us see what happens with other combinations.

There is one hospital which has as well selected a library as that at McLean—classified and cataloged, with an annual appropriation sufficient for its needs; but there is no one directly in charge and little attempt is made to get the book and the patient together. Consequently this library represents good material wasted. There is another hospital, with no funds, but a patient in charge who is well educated and much interested; he is doing remarkably well with what material he has, and gets the other patients to read; with even a small appropriation that patient is capable of building up a good working library.

Still another hospital has a very good collection of books to which new books are constantly added; the room is pretty and the patients use the library to an extent of about 40 books a week. This hospital went on the old idea that cataloging, classification and charging system represented so much "red-tape" and was a useless expenditure of time and money. It has become converted, however, and the library is being organized. This spring, when the books were compared with the shelf-list, over 400 were discovered to be missing, and an exhaustive search has failed to find 276 of them, most of them new books which everyone wants. Patients, nurses and staff alike seem to have appropriated them to their own uses. This was a strong argument to the superintendent in favor of a competent charging-system.

The question of effective administration after all resolves itself into one comprehensive factor, a competent person in charge. This may be a patient; several hospitals have very satisfactory patient-librarians. But there is this one great drawback to such a person, that, from the very nature of his illness, his work will be more or less unstable. Either he recovers and leaves the hospital and another patient must be put in charge, or his mental condition fluctuates and he is not always to

be depended on. Nevertheless, it is a good thing for patients to interest them in such work and give them a certain amount of responsibility, and, under supervision, many of them are capable of doing very good work at times. But for the good of the library there must always be supervision, and we again come back to our first point, the necessity for a competent librarian.

The private hospitals have been told again and again that what is possible for them with their adequate endowments and liberty to conduct their administration as superintendent and trustees think best, is not possible for state hospitals, where, to our national shame be it admitted, politics and graft do creep in and it is extremely difficult to get a state appropriation for what a group of politicians terms "luxuries." To an educated, cultured person, sane or insane, prisoner or free man, books are not a luxury but a necessity, and some of us would as soon have our bodies starved as our minds; moreover, in the modern hospital books are as important a part of the treatment as the handicrafts rooms; but, not to argue the point, let us accept the fact that many state hospitals cannot get funds sufficient for the salary of a trained librarian and the maintenance of an up-to-date library. Must they accept this? Must they be content to remain dependent on the charity of attic refuse? Is there no way out?

Most assuredly there is a way, and Iowa found it when, in 1906, she broke through conventions and, as pioneer, blazed a trail in the appointment by the State Board of Control of an institution library organizer, who has charge of all the state institution libraries. Where Iowa led, with Judge Robinson as chairman of the State Board of Control, Minnesota followed, with the same institution library supervisor, by the way, in the person of Miss Carey, who thus has the proud distinction of having organized the institution libraries of two states.

In the meantime, Nebraska had solved her problem in a little different manner. There, the State Library Commission, under Miss Templeton, took the matter up,

and in this state the institution libraries are under the supervision of this commission instead of the State Board of Control.

In all three of these states the appointment of an institution librarian has proved an economic and efficient solution of the problem. Instead of eight or ten individual librarians in as many institutions, with salaries of \$400 or \$500 each, with living expenses, there is one head librarian who, we regret to say, does not receive a combined salary of \$4000 or \$5000! She ought, however, to receive one of from \$1500 to \$2000, which is still much more economical than several individual salaries. Also, by means of a small annual sum from each state institution, combinations of books are bought and sent to the different hospitals and schools as traveling libraries. Thus, in Minnesota, each hospital pays \$50 a year, sees all the best of the new books in turn, and at the end of the year receives fifty volumes as a permanent addition to the library. All cataloging, classification and other technical work is done at the main office by the institution librarian; the person in charge of each individual library receives the books, gets them to the patients, and sees that they are forwarded to the next place on time. Nevertheless, this librarian in charge, whether patient or member of the staff, must be competent to interest patients and employes and to make the library really useful. To train her is part of the supervising librarian's duties.

While the state institution library organizer is more economical, there is no doubt that a trained librarian in each individual hospital is more ideal. Such a person, having the necessary technique at her fingers' ends, can organize and keep in working order the medical library as well as the one for the patients, and can often be of the greatest help to the doctors in looking up material for research work. Also, since she knows the best methods of filing, she can keep the case records filled out and quickly available. She may combine stenography with her library work; or, since she is probably a college graduate, she may be able to give "culture" courses to the nurses in books and reading, fine arts, or current events, which will raise

the standard of the training school and make the nurses more intelligent companions, thus increasing greatly their efficiency, especially in the care of mental and nervous patients. Several training schools, in general as well as mental hospitals, are including such courses in their curricula with most satisfactory results. The nurses show a decided improvement, not only in general intelligence and a large vocabulary, but also in spelling, grammar and punctuation. If the librarian is able to conduct these classes, the hospital need not be at the expense of employing teachers from the outside.

To sum up, the efficiency of a library lies not in the number of its volumes, but in their appropriateness to the institution and the use made of them, and this efficiency, it has been proved, cannot be attained under the old desultory methods, but only under intelligent organization. Whether each institution develops its own library or the state institutions co-operate, to be successful these three things are necessary: a definite, annual appropriation, trained leadership, and organization, and the greatest of these, because including the other two, is trained leadership.

---

#### A LOVER OF THOMPSON SETON

A LITTLE chap of ten came to the library regularly and took out Ernest Thompson Seton's book of "Wild Animals I Have Known." Finally the librarian said to him, "You must be learning that book by heart, aren't you? You have had it out at least ten times. Do you like it as much as all that?"

"No, ma'am, I'm not exactly learning it, but I'm copying it. I want it always, and I can't buy it, so I'm writing it all out and putting in the pictures. I've got seven blank books full now and it's nearly done."

The librarian wrote the incident to Mr. Seton, who immediately replied, "I want to send that boy a complete set of my works, but on one condition, that he give me his seven blank books." And there they are now, in Mr. Seton's library, the sincerest compliment, he says, of his whole literary career.—From a special library edition of the Pottsville, Pa., *Journal*.

# HANDLING LIBRARY OF CONGRESS CARD ORDERS IN THE AVERAGE LIBRARY

BY CLIFFORD BLAKE CLAPP, *Dartmouth College Library*

By "average library" is meant, for the purposes of this paper, a library the scope of whose resources and activities is general, one which is not called on to modify its internal practices by reason of its prominence or affiliations, and one in which there is a separate department or person devoted to cataloging work.

The proportion of Library of Congress work in such an institution depends on several things, chiefly on the closeness of the kindred relation of the library's stock in trade with that of the Congressional Library, but also on the local policy in regard to form of headings, card alteration, analytical work, availability of certain reference tools, and so on. But whatever the amount of this work, the methods of handling its routine need not greatly vary, and doubtless there is not a great difference between the practices of libraries in this respect. It is mainly a matter of common sense, a growth in each institution according to immediate requirements. One notes the L. C. order number, adds the number of cards wanted, and sends to Washington—or lacking the order number, sends author, title, and imprint—keeps some record of these card orders, receives the cards, adds headings and call numbers, does some checking and counting, and the thing is done. But there is a little more to it than that, as any person doing the work, even in a moderate sized library, will learn; and as there are at least two ways of doing everything, it cannot be amiss to record a method that has worked well.

At some point in the process the book is classified and subject headed. This may be done after the cards are received, under two conditions, either if the cards are ordered simultaneously with the ordering of the book, or if the book has come, but can wait around until the cards come. One of these conditions will be immediately discussed; of the other it is sufficient to re-

mark that the book ought never to wait around—unless it were bought for that purpose.

## ADVANCE ORDERS

When a book order is sent off the catalog department is apprised of the fact by receiving the order department's record of the same. Immediately a cataloger seeks preliminary information requisite to the entering, classifying, subject heading, and card ordering for these books. The L. C. card information may be obtained from the Library of Congress catalog, or proof slips, or the *A. L. A. Book-list*, or the Cumulative book index, or the United States catalog, or the Catalogue of copyright entries, or the Monthly catalogue of United States public documents, or the Monthly list of state publications, or from some other source, but best of all from the L. C. catalog if it be available. Should there be little doubt about getting L. C. cards on which small alteration need be made, order for cards can be by author and title, and this is necessary where the L. C. order number cannot be obtained. But for the sake of economy the number will be used when possible. The title as found will be inspected, and cards will be ordered in the number probably needed, or by a fixed number according to the library's regular policy, or by formula through the method suggested in the Library of Congress Handbook of card distribution, 3d ed., 1914, pages 32-34. But should the book order be indefinite as regards edition, or information at hand show that the Library of Congress cataloged only a very old edition, or should cards be required immediately for a work not published in America and not within the Library of Congress scope of stock (see Handbook, 3d ed., pp. 5-10), cards must not be ordered, or should be ordered only with special instructions on the specific points in question, an awkward arrange-

ment not generally recommended. Yet if the Library of Congress catalog shows that contents are printed on their cards, a cast may be made in the dark for the sake of this great advantage, since typewriting contents is expensive and unsatisfactory work.

#### PRELIMINARY PROCESSES

When a book is received in the catalog department, reference is first made to a file that shows whether cards have been ordered previously and what needed information has been obtained from any source, especially from the catalog, shelf list, L. C. catalog or other source of Library of Congress practice or of name or number necessary for ordering cards (cf. above, under Advance orders). The nature of the file giving these particulars must depend on the size and internal convenience of the library; it may be the order department's file, or the L. C. order file to be mentioned hereafter in which printed cards and information slips are kept until needed, or it may perhaps be a third file containing also the notes for the preparation of written cards or with a checking system showing the distribution of books in process of classifying and cataloging. In a big department it would be a sort of key to all the work being undertaken. Whatever its nature, if this file shows that cards have been ordered, these will now be sought and if received will be compared with the book, and all further processes carried through. If cards have not come but order number is at hand or cards already ordered, proceedings will be as the case requires. If nothing is found in the key file, resort is next made in the customary manner to the catalog or shelf list and the source of L. C. information, and if this information be wanting for the particular book under treatment cards are ordered or not according to the probability of satisfactory results, on somewhat the same considerations as those stated above for advance orders, but with the book itself instead of the book order in hand. If cards are not obtainable, this fact is made evident to all concerned. Extreme division of labor may so modify this routine that books will come to catalogers without their knowing whether

printed cards can be obtained, but such condition is not advisable, owing to the great advantages furnished by knowledge of what the Library of Congress has done.

#### INFORMATION SLIPS

It is a great convenience to have the Library of Congress card (or proof slip), found in the L. C. catalog, brought to the cataloger in the book, or brought in the case of an advance order to the person responsible for decision upon the ordering of cards. Notes are made on the back of this card (or proof slip), or on a slip appended to it, and all such notes—which may be conveniently referred to as information slips—kept together during the few days pending the arrival of the printed cards. Where the L. C. catalog is public or the library staff large, no such card should be long extracted unless a dummy take its place in the file. When there is no chance to use a depository catalog in this way, because the library has not the use of one or is hampered in its use, the cataloger will be served with notes on what has been learned from the best available sources. It is, of course, perfectly obvious that the amount and kind of this predigested information that can be conveyed with any satisfaction to a cataloger or classifier by a second person is extremely limited. But it has been found in practice that a person experienced in preliminary search work can produce all that is necessary to enable a responsible cataloger to decide whether cards should be ordered or written, and in what way to be ordered, or if cards are not to be ordered to go ahead in most cases without personal reference to the catalog.

Both the book and the preliminary information notes being now in hand, the work is classified, subject headed, referred to the shelf list for its complete call number, and its cards ordered. The notes or information slips (one or more) finally accumulated with the book give in detail all alterations required for the face of the cards, such accession information as the department preserves, the classification and author notation, the subject heads, references, and additional headings, any special

cataloging instructions, and a tally of the cards needed for extra files. As stated above, these notes may where possible be made solely on the card from the L. C. catalog (under such safeguards as shall be necessary), but libraries will frequently have forms for checking or filling according to their peculiar needs. The final addition to the information slips is the total number of printed cards required, and then, the order being written for L. C., a check mark is immediately placed against the number of cards to confirm the ordering.

#### ORDERING CARDS—L. C. ORDER FILE

L. C. orders may be sent on sheets, but the better way is on standard manilla slips, unpunched, one to a title. These slips will be returned with the cards and will be useful not only as evidence but also to separate the sets of cards. The manner of ordering cards is sufficiently well known (see Handbook, 3d ed., Ordering cards, Methods of ordering, Number of cards, etc.). Most libraries can order the exact number of cards required in each case, even for advance orders, with the resultant economy, but when Library of Congress judgment is desired the formula may well be used (Handbook, pp. 32-34). A lot number is assigned for each package of orders sent, and this is put on the corner of the manilla order slip, after the name of the library. If letters are used for this lot number there can be no confusion with the number of cards asked for. All information slips are then placed in a tabbed envelope (described below), and the lot number written on its tab. This envelope, with contents, stays with the book while it is getting its book number added or confirmed by the shelf list, and getting its pocket and book-card, its "new books card," and any other temporary or permanent unprinted cards or instructions that may be required. Then the envelope and contents is removed, and the book passes along at once to its perforating, lettering, plating, pocket-pasting, labeling, etc.

The envelopes are filed alphabetically by authors in a box or tray (L. C. order file). Each envelope has an open top, with the

front cut down low enough to show the author's name on the slip enclosed, but the back nearly the height of the cards. The tab bearing the lot number is preferably on the side of the envelope, not the top, leaving the top of the file to the necessary alphabetical tabs of guide cards and to "tickle" or "follow-up" markers for delayed work. For this envelope nothing serves the purpose better than Gaylord's style G book-card pocket, with its flaps unpasted, the flaps making excellent tabs, left and right. The box in which these pockets come will do to hold the L. C. order file, one side being cut down to one inch to facilitate fingering the tabs.

Meanwhile, the lot of card orders is sent off, at convenience, under U. S. government frank; about fifty slips can be conveniently sent in an envelope, but the number in each lot is more properly determined by the time one can wait for cards. The Library of Congress will usually fill orders the day it receives them. Record is kept of the lots ordered, by lot number, date sent, number of sets ordered, date returned, number of orders filled, and sometimes number of Out, C, R, Oe, Np, errors, etc.

#### RECEIVING CARDS

When the Library of Congress cards are received, each set is accompanied by the manilla order slip bearing its number—assuming that L. C. orders are sent upon such slips. These sets are tallied with those charged for on the account slip received with the cards, and the account filed if correct. Order slips unaccompanied by cards and marked Out, C, R, Oe, Rc, P, Ci?, C?, Np, etc. (see Handbook, 3d ed., pp. 58-61), are for the moment put aside. Record is made of the date the lot is returned and the number of orders filled, with further details if found practically useful. Then the cards are alphabetized. The L. C. order file is consulted and all envelopes extracted whose tabs bear the same lot number as that which is on the manilla order slips. Since these are already in alphabetical order they should correspond with the cards that have been received and alphabetized.

## DISTRIBUTING AND PREPARING

Place in three lots, side by side, the L. C. cards with their order slips, the unfilled order slips, and the envelopes containing information slips. Compare and unite the cards with the information in the envelopes and with the numbers on the manilla slips, set by set, cross off the manilla orders, and divide the united alphabet so far as necessary into eight parts, as follows:

(1) Cards and information correct and complete; ready for the typewriter.

(2) Face of cards to be altered on account of previous determination or present discovery that edition sent differs from book owned.

(3) More or different information needed for typewriter regarding headings, call numbers, etc.

(4) Cards whose corresponding information envelopes are missing.

(5) Information slips and cards for books that have not come.

(6) Information slips for cards that cannot be obtained (Np).

(7) Information slips for cards that are to come later (order slips checked Out, C, or R).

(8) Information slips for all other unfilled orders (i. e. for order slips checked Rd, Rdl, On, Oe, Rc, P, Ci?, C?, D). Also information slips corresponding to any orders where errors have been made in filling by the Library of Congress.

The best time to compare the cards received with the order slips and information slips is during this process of division and conjunction, and a glance at order number, author, title, imprint, suffices for the moment. Such comparison and sorting can be done very rapidly if all the suggestions outlined above have been followed to the letter, each set of cards being accompanied by its own order slip, either with number or else author, title, and imprint, and each information slip indicating all essentials for further work on the cards. The advantage of ordering on unpunched manilla slips now becomes evident when it is seen that sets of cards are clearly discriminated, and further, that they can be separated by running a pencil through the hole in the cards and drawing slightly forward.

The cards in the first division can be sent immediately to the person who is to typewrite their headings, those in the second division following them after being given to a responsible person to be altered according to direction on the information slips. Such alteration is obviously best accomplished when the card from the L. C. catalog is at hand and properly pencil-marked. The third and fourth lots of cards, if any, go to catalogers or classifiers who adjust any difficulties and complete the information notes, even having recourse again at this point, if necessary, to the book that is being cataloged. In case a book has not yet arrived, and cards were ordered in advance, as in the fifth division, the cards are put into the envelopes along with the information slips and placed in the L. C. order file to await the books. Information and order slips for cards that could not be obtained at all, or that, being delayed, were adjudged not best to wait for, must be sent to catalogers for the preparation of typewritten work; but those in the seventh and eighth divisions must be pronounced on by a person competent to decide whether cards ought to be awaited from L. C., or re-ordered, or typewritten—except in the case of wrong cards sent, when the order would be returned anyway with the card L. C. provides for the purpose (see Handbook, 3d ed., p. 52). If the cards are to be re-ordered, the order slips are marked "Hold till week——," and returned to the Library of Congress (see Handbook, pp. 54-63, where considerable detailed advice is given to card subscribers). The desirability of awaiting cards depends, of course, on local usage in several matters touching the particulars of card preparation and filing and use of the card catalog. It seems always desirable that a brief temporary card be made for the catalog under the name of the author in cases where printed cards are not to be had immediately.

Throughout the foregoing exposition it has been assumed that libraries using the process would do so in its entirety, with the possible variations indicated; but different methods from these are perfectly practicable, involving, however, changes in

routine or equipment that there has been no attempt to discuss here. Likewise, it is assumed here that experience will show those using Library of Congress cards how far they can profitably use them, to what extent advance orders pay, what verification of numbers and titles is necessary, what system of accounting is needed and how careful inspection of Library of Congress charges, what records are worth while, and how far the necessary details of the system can be made useful for the purposes of other printed work and type-written work. Nothing has been said, moreover, about rules for cataloging, methods of card changing, use of subject headings and classification notation or other details given on Library of Congress cards, all topics outside the purpose of this paper. Several matters of interest to a few libraries only, to special libraries, to bibliographers rather than libraries, or to beginning subscribers, are not touched upon. The Handbook of card distribution enters upon some of these questions, and the Library of Congress is ever ready to extend its usefulness by answering inquiries according to need.

It is a pleasure to record the fact that the Library of Congress service proves very efficient in its many and minute details. Before closing the subject by a brief discussion of standing orders, it will be useful to look over a few figures on the results of everyday L. C. order work that show what good work is being done by the Library of Congress card section.

#### STATISTICAL RESULTS

Out of a lot of fifty orders sent, a typical result is this: Returned, 45 order slips with cards, and five without cards. Of the latter, three are checked Out, one Ci?, one Rc. Of the 45 sets of cards received, 23 are ready for typewriting, six are to be altered, five have questions as to headings, one seems to have no information slip corresponding, and ten are for books ordered but not yet received in the department.

A typical record of ordering for one year—an actual experience during 1915—shows that out of 1161 sets ordered there were only 78 cases where cards were not re-

ceived immediately. Most of these were Outs; there was but one Np (no prospect), and only five were errors. This record shows very discreet ordering and very careful filling of orders. These 78 cases were so cleared up that on Dec. 31 there were only 13 cases on hand of cards not received, and these were all Outs (cards out of print) on orders not over ten weeks old; in fact, eleven were not over four weeks old. Six of these Outs were disposed of by the arrival of cards on Jan. 3, 1916.

An examination of the L. C. order file on Dec. 31, 1915, showed 136 envelopes on hand. All but 13 of these contained L. C. cards for books not yet received. Out of the 123 such cases, the cards for 12 were ordered in 1913, for 26 in 1914, for 85 in 1915. Of the latter 85, 71 were ordered during the quarter October to December, being divided as follows: Oct., 5; Nov., 27; Dec., 39. A few of the older orders were probably for books that will never be received, and there is a small sum of money thrown away, but even then the cards can be returned to the Library of Congress and something reclaimed (see Handbook, 3d ed., pp. 52-53). A periodical as to the prospect of receiving the books weeding of the L. C. order file is necessary, inquiry being made of the order department in question.

#### STANDING ORDERS

Libraries which analyze a considerable number of series will find it worth while to file with the Library of Congress a standing order for cards for analytics for each of these series for which cards are printed. Bulletin 16-19 of the card section of the Library of Congress (3d ed., Mar. 1, 1914) gives a list of about 3500 series for which cards are in stock; it gives also the method of ordering by series (see also Handbook, 3d ed., pp. 45-46). The method need not be repeated here. Suffice it to say that the number of cards called for depends on the library's treatment of the series in question, and is to be regulated somewhat as follows:

The greatest number of cards needed may be one for shelf list, one for author, one for title, one for filing under name

of series, one or more subject cards, one or more "additional" cards for joint authors, editors, etc. Libraries will not require the shelf list card when all the volumes of the series are kept together, one card sufficing in the shelf list for the whole series. Perhaps not many libraries use Library of Congress cards in the shelf list anyway. Most will want the author card. The desire for title cards will depend on the nature of the monographs or publications in the series and the ability adequately to subject head them. The card under series will be wanted anyway when the number of monographs or parts analyzed in the series is small. When the number gets large it will depend on whether the cards are to cumber the catalog or the shelf list or to be filed elsewhere, or whether the individual titles are to be entered on a "contents" or "details" book, to which reference can be made from a single card under the series. In the case of very large series, or those having a complicated numbering, if the library can dispense with its own separate entries under series and merely refer to a printed source of information, it may do just as well. Small libraries can get along without "additional" cards in many cases, typewriting these when they turn out to be necessary. But they will probably want all the subject cards if any.

As a result of these considerations, the maximum and minimum orders are likely to be in formulæ 3sat and 1s, or if in fixed numbers not under six for maximum nor over two for minimum.

The cards for analytics from series, when received thus on standing orders, should immediately be filed alphabetically by series and then by numbers in the series, revised cards being arranged in their proper places and those which they replace being discarded at once if not yet used. The preparation of the cards will naturally be deferred in many libraries until times of relative abatement in the amount of regular work, except in the case of some much used series. It is not wise, therefore, to hold up volumes of series in the cataloging rooms, but better to send them to the shelves and give a note of the parts received to the person keeping the file of

analytical cards. This makes it necessary for the person checking the unbound parts of the series or the cataloger adding bound volumes to the cards—when they are so added—to have some regular means of knowing that the series is analyzed on Library of Congress cards. When a cataloger comes to the point of taking up the analytical work, she must find out the manner of treatment of the series in question, and this will be facilitated by keeping with the cards, or in a tray convenient to them, brief notes showing whether cards are filed for the separate parts under the series in the catalog, or elsewhere, or whether entry is to be made in some other place under the series name; also where the series is classified, and other such particulars. In the same place can be kept the notes of parts received and as yet not analyzed. Classification will have been attended to previously, except in new series. Series not kept together, having to be separately classified, will probably have been treated like volumes not in series, being classified and subject headed as received and the cards extracted from the file at the same time. Subject headings for analytics from series kept together can be assigned either from the books or from observation of the headings assigned by the Library of Congress. The latter method is so much more economical of time that it will usually be followed, and inasmuch as it takes advantage of one of the features of Library of Congress work wherein cooperation is effective, it is recommended. Only in case of essential differences between the headings of the local library and the Library of Congress, and at the same time titles that are not sufficiently self-explanatory, need the books or pamphlets themselves be consulted at this point; but if the parts have to be checked to show analytical work done this checking can be made a special piece of work from time to time from notes saved for the purpose.

---

The public library, free to all the people, gives nothing for nothing; . . . the reader must himself climb the ladder and in climbing, gain knowledge how to live this life well.—ANDREW CARNEGIE.

# THE LIBRARIAN'S MUSE

BY FORREST B. SPAULDING, *The New York Public Library*

LOOKING back on the early history of librarianship in this country, one is struck by the number of men who were not only librarians of note, but authors, essayists, poets, and historians; men who were constant contributors to the literature of their day. It is to be regretted that in these days of the high development of the technical side of the work, this type of librarian is fast disappearing, as seems to be the case, although we still have among us a few who can justly claim recognition for their literary work. The total output, however, of books from the pens of American librarians is pitifully small.

In this connection it may be of interest to recall what librarians, both of the older and of the younger generations, have contributed to the art of poetry, an art which is to-day attracting more attention than ever before in its history. The time has passed when a poet was looked down upon as a creator of the unimportant and ephemeral in imaginative literature, and it is not strange that we find a fair number of poets among librarians. A great poet among American librarians we have not yet had—that is, great in the sense that Lessing was in Germany, or Anatole France in France. Nor has an American librarian written a song that has won the approval of time as has "Sally in our alley," whose author, Henry Carey, was at one time a librarian at Oxford. But so far the output of librarian poets has been good, and it is more than likely that we have some among us who will achieve a poet's fame.

In Stedman's "American anthology" will be found poems by eight librarians, all well known names: Herbert Bashford, R. R. Bowker, John Vance Cheney, Arthur Colton, Ina Coolbrith, Sam Walter Foss, Harry Lyman Koopman, and Frederic Ridgely Torrence. Of these, Sam Walter Foss is probably the best known, both as a poet and as a librarian. His true humor, not unminged with pathos, has won him a large audience, and the pathetic story of

the martyr "Young Montmowenci Averwy" and his "pwecious cigawette" has been retold many times from the speakers' platform. It would be hazardous to quote anything here, for the name of Sam Walter Foss is a household word, and nearly everyone has selected his own favorite from his works. A suggestion might be made, however, that if any librarian has chanced to miss acquaintance with "The song of the library staff" he has a delightful treat in store.

Herbert Bashford, who was at one time librarian of the Tacoma Public Library, and later state librarian of Washington, published in 1898 a volume of songs and poems, written mostly about Puget Sound and the Northwest. His poetry is all of the great out-doors, the poetry of the mountains, and the poetry of the sea. "By the Pacific" is one of his best:

From this quaint cabin window I can see  
The strange, vague line of ghostly drift-wood,  
though

No ray of silver moon or soft star-glow  
Steals through the summer night's solemnity.  
Pale forms drive landward and wild figures  
flee

Like spectres up the shore; I hear the slow,  
Firm tread of marching billows which I know  
Will walk beside the years that are to be.

Sweet, gentle sleep is banished from mine  
eyes;

I lie and think of wrecks until the sobs  
And groans of drowning sailors, lost at sea,  
Come mingled with the gray gulls' plaintive  
cries

And those tumultuous, incessant throbs—  
The heavy heart-beats of Eternity.

Anyone who has watched the sun set in the Pacific will appreciate the beautiful quatrain, "Sunset":

Like some huge bird that sinks to rest,  
The sun goes down—a weary thing—  
And o'er the water's placid breast  
It lays a scarlet, outstretched wing.

The editor of the LIBRARY JOURNAL, Richard Rogers Bowker, is also known as a poet. A recently issued pamphlet contains

many rare lyrics, most of which have appeared before in various periodicals. The sonnet on Thomas à Kempis may be found in Stedman's anthology, so we will not quote it here. One of his finest lyrics is entitled "She plays," and was written in London on hearing a gifted musician play some Basque melodies which she had helped to collect among the peasants of the Western Pyrenees.

In the softly lighted room, fair with fair thoughts of all lands,  
She touches the ivory keys and they leap to the kiss of her hands.

The cling of the castanets, the whirr of the wheel, the cradle croon, I hear  
Moonlight, the gleam of stars, good-nights, the song that's a tear!

And I listen, listen and long, in the softly lighted room

As she touches the answering keys and weaves from her wonderful loom.

—The song that's a tear! Ah, me, on the other side of the pane,  
Without, is the pitiless sleet, the cruel river, the rain.

The rain is so bleak, the river runs far to the sea,  
Broad and deep is the ocean of tears that divide ye from me.

Yet—the stars shine out from the clouds.  
In the softly lighted room,  
She touches the answering keys and I, exiled think upon home.

John Vance Cheney, formerly in charge of the Public Library in San Francisco, and later of the Newberry Library in Chicago, has published in all seven volumes of his poetry. The collected "Poems" contains his best work, including the well known reply to Edwin Markham's "The man with the hoe." The song "Evening" might well have been written by William H. Davies or some other of the present school of young English lyric poets. More such poets are needed in this country:

The birds have hid, the winds are low,  
The brake is awake, the grass aglow:

The bat is the rover,  
No bee on the clover,  
The day is over  
And evening come.

The heavy beetle spreads her wings,  
The toad has the road, the cricket sings:

The bat is the rover,  
No bee on the clover,  
The day is over  
And evening come.

A quatrain entitled "I wouldn't" is indicative of this poet's mood:

A sprig of mint by the wayward brook,  
A nibble of birch in the wood,  
A summer day and love and a book,  
And I wouldn't be king if I could.

Arthur Colton, librarian of the University Club in New York, has published several poems, many of which have been collected in "Harps hung up in Babylon." The verse from "The canticle of the road" is but a sample of his lyric grace:

On the open road, with the wind at heel  
Who is keen of scent and yelping loud,  
Stout heart and bounding blood we feel,  
Who follow fancy till day has bowed  
Her forehead pure to her evening prayer  
And drawn the veil on her wind-blown hair.  
Free with the hawk and the wind we stride  
The open road, and the world is wide  
From rim to rim, and the skies hung high,  
And room between for a hawk to fly  
With tingling wing and lust of the eye.

"Let me no more a mendicant" is another good example to show this poet's versatility:

Let me no more a mendicant  
Without the gate  
Of the world's kingly palace wait;  
Morning is spent,  
The sentinels change and challenge in the tower,  
Now slant the shadows eastward hour by hour.

Open the door, O Seneschal! Within  
I see them sit,  
The feasters, daring destiny with wit,  
Casting to win  
Or lose their utmost, and men hurry by  
At offices of confluent energy.

Let me not here a mendicant  
Without the gate  
Linger from dayspring till the night is late,  
And there are sent  
All homeless stars to loiter in the sky,  
And beggared midnight winds to wander by.

The library of Brown University boasts not only the remarkable Harris collection of American poetry, but a librarian who has been an active and prolific poet. Harry Lyman Koopman is also one of the few poets who has found in books and libraries fit subjects for verse, and his poem on "The librarian of the desert" has for its subject

the great library of the Senussi brotherhood which was moved across the Libyan desert in 1893, requiring five hundred camels for its transportation. Some of Mr. Koopman's best work has been in the sonnet form and we will quote as an example "The town clock":

Day after day, above the market-place,  
Thou standest looking on the throng below;  
Night after night, above thee, still and slow,  
The bannered constellations westward pace.  
By day, thou dealest with the insect race  
Of men, that come and look on thee and go;  
By night, the dark hours from thy bosom flow  
To mingle with eternity and space.  
The spire above thee rears its masonry,  
As if its thin shaft were a monument  
Over the wasted moments that must lie  
Within thy chamber, evermore unspent;  
And still thy flaming finger writes on high  
The hurried summons of each moment sent.

A true poet's creed is entitled "Song-birth":

Beyond the beach's trodden slope of sand,  
Down past the frothy, shifting water-line,  
Deep underneath some fathoms of the brine,  
A crystal spring rolls up sweet waters, bland  
Fresh amid all the saltness of the strand.  
No ebb-tide ever lets the sunlight shine  
Unblurred upon it, and around it twine  
Dark, slimy weeds by west-wind never  
fanned.

So in the poet's heart, amid the gross  
And brackish bitterness of earthly tides,  
The well-spring pure of song forever flows,  
Sweetening all wherethrough it mingling  
glides;  
For, though its life streams up through sun-  
less woes,

Its birth was on the hills where light abides.

"The house of a hundred lights" by Frederic Ridgely Torrence, who was formerly on the staff of the Lenox Library in New York, bears the sub-title, "A psalm of experience after reading a couplet of Bidpai." It consists of a sequence of quatrains, of much lyric beauty, which one is at first tempted to compare with the Rubaiyat of Omar Khayyam, but a second glance shows that their philosophy is quite different:

The Great Inn Keeper's table is  
the whole green face of Earth, and so  
I sit at meat with Him nor care  
whether the Guest be friend or foe.  
The wise man said, "Beware of Love;  
behold, its end is Ash and Rue!"  
"Ho, ho," cried Youth, "this heart of mine  
is braver than I ever knew."

Last night I heard a wanton girl  
call softly down unto her lover,  
Or call at least unto the shade  
of Cypress where she knew he'd hover.

Said she, "Come forth, my Perfect One;  
the old bugs sleep and take their ease:  
We shall have honey overmuch  
without the buzzing of the bees."

\* \* \*

At first, she loved nought else but flowers,  
and then—she only loved the Rose,  
And then—herself alone, and then—  
she knew not what, but now—she knows.

Ah, Flattery, thou'rt like a comb  
with double face and double tongue,  
These women wear thee on their brows  
like an asp coiled where it stung.

The lies men tell I can see through—  
they hold no more than does a sieve:  
But women's lies hold like the sea,  
and like it surge and swell and live.

The finest work that Mr. Torrence has done is his blank verse drama "El Dorado," from the fifth act of which we quote these lines:

Here shall we bide, for 'twill be home for us!  
Far in the East a land of cooler lights  
Dreams between Spring and Spring beneath  
no touch  
Save rain and leaves or snow and falling  
flowers,  
Yet it is this same land; lo, half the world  
Has lain here till this hour, stainless, asleep,  
And up from the old, blood-choked, semi-orb  
That mothered us, shall come the wandering  
tread  
Of those who seek for home,—here shall they  
find it!

A later verse drama, "Abelard and Heloise," gives still more proof that Mr. Torrence is both a poet and a dramatist of great distinction.

During last year's exposition in San Francisco, Miss Ina Coolbrith was crowned poet laureate of California, an unusual honor in a state which has produced so many of our foremost poets. In 1874, Miss Coolbrith became librarian of the Oakland Free Library, and since that time she has published many volumes of verse. Many of her poems appear now in the magazines, all of which have the same qualities that distinguished her early work. A good example is "A Mariposa lily":

Insect or blossom? Fragile, fairy thing,  
Poised upon slender tip, and quivering  
To flight! a flower of the fields of air;

A jewelled moth; a butterfly, with rare  
 And tender tints upon his downy wing,  
 A moment resting in our happy sight;  
 A flower held captive by a thread so slight  
 Its petal-wings of brodered gossamer  
 Are, light as the wind, with every wind astir,—  
 Wafting sweet odor, faint and exquisite.  
 O dainty nursling of the field and sky,  
 What fairer thing looks up to heaven's blue  
 And drinks the noontide sun, the dawning's  
 dew?  
 Thou winged bloom! thou blossom-butterfly!

The city of Oakland has had more than its share of our librarian poets, for Charles Samuel Green, who is the present librarian, is the author of many poems, mostly published in the Western magazines, especially the *Overland Monthly*, of which he was editor for sixteen years. In his case, however, most of his published poems were written during his editorial career, rather than during his librarianship.

Charles Knowles Bolton of the Boston *Athenaeum* has published but little poetry, but that little is high in quality, and fortunate indeed is the possessor of the attractive little volume containing the quaint "Love story of Ursula Wolcott":

'Twas Ursula whose gentle tread  
 Bore round the broad-rimmed wheel of oak  
 That whirled, and hung, and whirled again,  
 As though she timed it with her heart.  
 And when it stopped, her fingers ran  
 Over the spokes until it whirled,  
 A moment hung, and whirled again.

We mentioned above that the subject of books has been almost neglected by the librarian poets. Mr. Bolton is an exception to the rule, having drawn upon his knowledge of book titles in "A literary solution":

We stood in the bookstore together,  
 She chatting of this and of that;  
 My heart kept time with the feather  
 That clung to her Gainsborough hat.  
 On Stevenson, Stockton and Kipling,  
 And poets galore she enthused;  
 But how to propose to her, rippling  
 With music and laughter, I mused.

On this one and that one she tarried  
 To label their place on the shelf;  
 This "How to be Happy, Though Married":  
 "Absurd!" and I thought so myself.  
 "But those who have tried it may surely  
 Be trusted to know," I replied.  
 "I tell you," she said, "it is purely  
 The tone of the age to deride."

"The task for solution," I ventured,  
 "Is how to be married, though poor"—  
 I know that I ought to be censured,  
 She looking so sweet and demure.  
 Her voice was so low, 'twas the border  
 Of thought where it breaks into word:  
 "We might," she said, "solve this, in order  
 To prove that the book is absurd."

The versatile "Librarian" of the Boston *Transcript*, Edmund Lester Pearson, has never published a volume of poems, but many library lyrics are scattered through his books. "The reference librarian" is well known, as is the poem "To a small library patron" to be found in "The librarian at play":

Uncombed, a bit unwashed, with freckled face,  
 And slowly moving jaws—implying gum;  
 A decade's meagre dignity of years  
 Upon your head—your only passports these,  
 All unconcerned you enter—Fairyland!

"The passionate librarian to his love" is a clever parody, which contains a catalog (by this greatest enemy of library catalogs) of books dear to the hearts of all reference librarians:

Come live with me and be my love,  
 And we will dwell—oh, far above  
 The silly multitude who feed  
 On novels, and who fiction read.

For all day long we'll sit and pore  
 Upon the very dryest lore;  
 Some ancient gray-beard shall dispense us  
 The latest volumes of the Census.

And I, ah I! will hold your hand  
 And sing you songs of Samarcand—  
 Then you shall softly read to me  
 From Dr. Ploetz' "Epitome."

When through the fields of daisies wide  
 We stroll together, side by side,  
 I'll bind your brows with pink carnations  
 And read you from the "Wealth of Nations."

Each month I'll bring, my love to you,  
 The *North American Review*,  
 Nor, sweetheart, shall you ever lack  
 For Whitaker's great Almanack!

Why, Spencer, Kant, John Stuart Mill—  
 They all await your word and will;  
 Let me obey your fads and whims  
 And get you Cushing's "Anonyms."

In winter when the nights are cool  
 The "Index" made by Dr. Poole  
 Shall give you joy, my dearest dove—  
 So live with me and be my love!

Charles F. Lummis is seldom thought of as a poet, although hundreds of school boys

have stood trembling on the platform to recite his dialect poem of "Arizona Jim." "My meerschaums" also finds favor with the many compilers of smokers' anthologies. Indeed there are few well known novelists who have not written a poem or two, and Burton L. Stevenson, the librarian of the Public Library of Chillicothe, Ohio, proves no exception to this rule. His "After the play" has found a resting place in several anthologies, and another of his poems, "Henry Hudson's quest," may be found in "The home book of verse."

Besides Miss Coolbrith, so far as we know, there are only two women among librarians who have published volumes of verse. Delightful lyrics by Miss Mary Wright Plummer, the present president of the American Library Association, have often appeared in the leading magazines. Several of her earlier poems have also been gathered together in a little volume of "Verses," published in a limited edition in 1896. The initial poem is probably the finest in this collection, "The wind-swept multitude in the Inferno":

Ever we drift, drift,  
Swept by a wind we resist not,  
Whirling and turning swift;  
Onward we drift, drift,  
Blown through the cloud and the rift,  
Whither we know not and list not.

Hark to the curses that tear  
Their way through the rush of the air!  
Love that was uncontrolled,  
Killed by the ceaseless cold,  
Holds like a weight in its arms the price of  
the heaven it sold,  
Daring its voice to lift,  
Cursing the fatal gift,  
Winding in closer folds as onward we circle  
swift.

\* \* \*

Fools to beg of a mindless wind!  
Fools to hope that a sin once sinned  
May ever be cast behind,—  
Forgot in our endless race,—  
When at every turn we see it lined  
In the look of a pallid face,  
As we whirl and cling and eddy and drift,  
Through cloud and rift,  
Swift, more swift—  
Whither to know it avails not:  
Blown by a tempest that fails not,  
Ever we drift, drift.

Another lyric of great beauty and rare depth of feeling is entitled "My own" and

was originally printed in *The Century*. We will quote the first and last stanzas:

Brown heads and gold around my knee  
Dispute in eager play;  
Sweet, childish voices in my ear  
Are sounding all the day;  
Yet sometimes in a sudden hush  
I seem to hear a tone  
Such as my little boy's had been,  
If I had kept my own.

The years go fast; my children soon  
Within the world of men  
Will find their work, and venture forth  
Not to return again;  
But there is one who cannot go,—  
I shall not be alone,—  
The little one who did not live  
Will always be my own.

This is the sort of poem, of irresistible human appeal, which will be preserved in many a well-thumbed scrapbook.

Miss Margaret Widdemer, a graduate of the Drexel Institute Library School, is a young poet whose work has already attracted considerable attention. Her first book of poems, published in 1915, is entitled "The factories," the title poem being a plea for the child worker. True lyric beauty is reached, however, in such poems as "The forgotten soul":

'Twas I that cried against the pane on All  
Souls' Night—  
(O pulse o' my heart's life, how could you  
never hear?)  
You filled the room I knew with yellow  
candle-light  
And cheered the lass beside you when she  
prayed in fear.

'Twas I that touched your shoulder in the  
gray wood-mist—  
(O core o' my heart's heart, how could you  
never know?)  
You only frowned and shuddered as you bent  
and kissed  
The lass hard by you, handfast, where I used  
to go.

'Twas I that stood to greet you on the church-  
yard pave—  
(O fire o' my heart's grief, how could you  
never see?)  
You smiled in pleasant dreaming as you  
crossed my grave,  
And crooned a little love-song where they  
buried me!

Miss Widdemer has also written two of the finest war poems we have seen. "Jeanne d'Arc at Rheims" is too long to quote here,

so we will quote the two final stanzas of "The war god":

The War-God snapped his golden chain;  
His mercies thundered down the world,  
And lashing battle-lines unfurled  
Scoured through the crouching lands again:

The grinding wheels of Greed and Lust  
Checked—clean was Pestilence, clean Death,  
And clean to God rose the last breath  
From broken bodies in the dust.

Early last year, O. R. Howard Thomson, librarian of the public library of Williamsport, Pennsylvania, published his volume "Resurgam: poems and lyrics." Lilith has always been a favorite subject with the poets, and Mr. Thomson's version contains much of beauty:

As night withdrew, reluctant to fold up  
The purple draperies with which she veiled  
The garden that was made for man, Lilith  
awoke;

And while her heavy lids still seemed inclined  
To hide again the deep pools of her eyes  
She, with the luxurious abandon of a queen,  
Stretched her bare arm. She was so beautiful,  
So utterly and wholly beautiful,  
It seemed the sun, now peeping o'er the  
crests

Of Eden's hills, climbed drawn by desire;  
And that the stars, faint in the kindling sky,  
Had paled in sheer despair.

A moment's space  
Her firm, cool fingers played, unconsciously  
As some young child's might play, amongst  
The long blades of the grass, that grew a  
scant

Two palm's-breadths from the heaped up  
boughs  
Of balsam-fir whereon she couched.

Many are the themes which contribute to his muse, one of his finest poems being that in which "Gold" speaks:

My chink sets the Nations to quaking, I  
govern their armies vast,  
The Kingdoms are but of my making, my grip  
it hath gotten them fast.

The Earth and her teeming millions  
Shall dance, or war, for my mirth:  
By the glint of my golden billions—  
It is I, rule the Earth!

The volume closes with this "Triplet":

Give me a red rose from thy hair  
To wear forever on my breast;  
If thou wouldst ease my deep despair

Give me a red rose from thy hair,  
Touched by thy hands so white and fair;  
If thou wouldst make me doubly blest,  
Give me a red rose from thy hair  
To wear forever on my breast.

English verse is not the only medium employed by our librarian poets. Herman Rosenthal, who is in charge of the Slavonic division of the New York Public Library, has published a rhymed version of "Das Lied der Lieder" in German, as well as other volumes of German lyrics and translations. His volume "Spätherbstnebel" contains translations of Longfellow, Victor Hugo, and the Russian poets, Nadson, Ler-montov, and Nekrassov, among others. Original lyrics and sonnets, however, fill the greater part of the book.

Nor has free verse been entirely neglected by librarians. Harold Hersey, who was until recently on the staff of the Library of Congress, has three published volumes to his credit. "The wings of song" contains the following entitled "The poet":

I found a flower in the wastes laughing at  
the sun;

I plucked it from the dreary spot and set it  
near my heart.

At first my friends admired it,  
Spoke of its simple grace—  
Yet when it withered not one would have it.  
I threw it from me.

There it lay crumpled in the dust.  
I left it and tried to banish its beauty from  
my soul.

I heard that a young poet found it there,  
Stooped down, tenderly picked it up  
And pressed it to his lips, dust and all.

There are undoubtedly many more librarians who have written creditable poetry, but the work of minor poets is difficult to locate. Few indeed are those who having a natural love of beauty and nature in her various moods, have not put down their thoughts on paper, thus making poetry, whether it be rhymed or unrhymed. Careful research would bring to light more proof that the library profession has made a considerable contribution to the art of poetry. Considering this, it is pleasant to close with these lines by John Vance Cheney:

Few listened to the lonely singer's lay  
Our life, it is a little day;  
He sang, and vanished in the valley dim,  
Where, all in vain, praise followed him.

## A SURVEY OF INSTITUTION LIBRARIES IN THE UNITED STATES\*

THIS survey was prepared from the replies to a questionnaire sent to six hundred institutions supported by the national and the state governments. These included homes for the aged, chiefly soldiers and sailors and their wives and widows, sixty-six in number; homes and hospitals for dependent children, thirty-one of which receive state aid; institutions which are strictly educational in character—the eighty-nine schools for the blind and the deaf; twenty-eight sanatoria for tuberculosis patients and those ill with other diseases; three institutions for inebriates, forty-seven institutions for the feeble-minded and for epileptics; one hundred and fifty-five hospitals for the insane; eighty-one industrial and reform schools; thirty reformatories for young and first-term offenders; and seventy-two national and state prisons.

The report gives the following averages for each of these groups: the age of the inmates and their degree of education; the proportion of the whole population who make use of the library; the size of the collection available for their use; the number of books purchased annually; and the number of institutions in each group which include the library in their annual budget, and the amount of such appropriation.

As it is impossible to give figures for all the institutions, a choice has been made of the groups which responded in sufficient number to make a comparison of averages worth while. Some institutions were able to answer more specifically than others, and for this reason the averages for each group do not always include the same institutions. As those reporting are generally distributed throughout the country, the general averages will probably hold true.

In the institutions for soldiers and their wives and widows, the average age of the members is 72 years; the general average of education is between sixth and eighth grade. Nine institutions report that they

have no library, one has a deposit of books from the state traveling libraries. Six have an annual library appropriation, ranging from \$87-\$200, and averaging \$130; one home has an endowment for the library. Nine reported no book purchases during the past year, eight had purchased from 25-500 volumes, an average of 145 volumes. In the 23 homes which give the size of the book collection, the average is 2800 volumes. The percentage of the members who make use of the library ranges from 10-100 per cent., the average being 63 per cent. It is probable that the preference of readers of this age for magazines and newspapers may account for the fact that most of the soldiers' homes are not purchasing books in any quantity.

In the schools for the blind the average age of the students is 15 years. Six schools reported an annual library appropriation, averaging \$375. The number of books purchased during the past year averaged 150 volumes, the number ranging from 35-500 volumes. The average number of books in 14 schools was 3600 volumes, the smallest library having 700 volumes and the largest 8500 volumes. From 50-100 per cent of the students were reported as using the library, the average being 88 per cent.

The average age of the pupils in the schools for the deaf is 13 years. Four schools reported an annual appropriation for the library of from \$75 to \$500. The number of books added in the past year was from 10-300 volumes, with an average of 100 volumes. The smallest collection reported was 200 and the largest 6000 volumes, the average size being 2500 volumes. Nine schools gave the percentage of pupils who used the library as from 25-100 per cent., with 62 per cent. as an average.

The patients in the sanatoria for tuberculosis average 27 years of age, 96 per cent. can write and their education is between 6th and 8th grade; the number of patients in each hospital averages 150. Four of the hospitals have an annual sum set apart for books, ranging from \$50 to \$250. Twelve spent no money for books during the past year, five made purchases

\* Read at the section meeting on institution libraries, National Conference of Charities and Correction, Indianapolis, May 13, 1916.

of from 30-300 volumes. The libraries vary in size from 100 to 9000 volumes, the average size being 960 volumes. The proportion of patients who use the library averages 65 per cent., the percentage ranging from 25-100 per cent.

The great majority of these institutions depend upon donations for their books and the collections are largely fiction. In one state, a number of traveling libraries have been purchased for the tuberculosis sanatoria. Seven hospitals report that they have calls for books which they cannot supply. With a reading population of 65 per cent. of the patients, chiefly adult and of normal mentality, the annual book purchases of these hospitals seem inadequate.

The figures for the institutions for the feeble-minded include eight institutions for epileptics, which reported the majority of their inmates as feeble-minded. The average age of the feeble-minded was given in but five cases, in these it was 22 years. Fifteen institutions reported on the proportion of inmates who could write, the average being 42 per cent. Eight institutions have no library facilities, three depend upon books from the state traveling libraries. Twelve institutions have from 100 to 3000 volumes, with a general average of 1000 volumes. Four have annual appropriations for library purposes, of from \$100 to \$280, averaging \$170. The number of books added in the past year ranged from 10-150 volumes; the average was 72 volumes. The percentage of inmates who use the library runs from 5-66 per cent., with an average of 19 per cent. The inmates of these institutions are segregated there for the greater portion of their lives, and those of a higher grade of mentality are therefore peculiarly dependent upon the instruction and entertainment which books may afford. The libraries include picture books and easy stories; fairy tales, and fiction; books of games and puzzles, and books on nature study, agriculture, and metal working. One institution has a special collection of finely illustrated children's books. The care of the collection necessitates locked cases in the cottages or wards where the patients are destructive.

The inmates of the hospitals for the insane average 42 years of age; in 39 institutions the proportion who could write is 80 per cent.; a large majority had been in school beyond the sixth grade. Seven out of 81 hospitals reported that they have no library, three have the use of traveling libraries, and one is a regular branch of a city library system. Twelve have an annual appropriation for the library, averaging \$180 per year. Eleven reported no book purchases during the past year; the average number of volumes purchased was 60. The size of the collections varies from 50-10,000 volumes, with an average of 1500. Thirty-six hospitals reported on the percentage of inmates who used the library; the average was 20 per cent., the figures ranging from 5-60 per cent.

The libraries in the insane hospitals are seldom organized and developed as separate departments. Although an average of 325 inmates used the library in each institution, the number of books added last year averaged 60 volumes in those hospitals which reported purchases; over one-fifth of the hospitals had made no addition to their libraries. In some cases purchases for the medical library and a special employes' library were included in the general book fund.

The boys and girls in the industrial and reform schools average 15 years of age, 98 per cent. can write, and their education is about the 6th grade. Nine of these schools report that they have no library for the inmates. One has an endowment for the library which yields \$500 per year, and eleven have a regular appropriation of from \$140-\$300 per year, averaging \$200. Seven institutions purchased no books during the past year; twenty-one reported additions averaging 140 volumes. The size of the book collection varies from 100-3500 volumes, with an average of 1200 volumes. Ninety per cent. of the inmates, of 35 institutions reporting, make use of the library. Three of these schools depend largely upon the city library system for their books, two others are branches of a county library system. Three have deposits of books from the state traveling libraries. The nature of the book collec-

tions and the use made of the libraries show a correlation with the school departments; in fourteen institutions a teacher has charge of the library.

The reformatories for young and first-term offenders have an average population of 570 inmates, averaging 22 years of age. Eighty-seven per cent. can write, and a majority are below 6th grade in education. Seven report an annual library appropriation of from \$50-\$1000; the average is \$420. One institution has \$550 for the library and the entertainment fund; three receive an average of \$380 from visitors' fees. The books purchased last year averaged 230 volumes; four institutions reported that they had made no purchases. The size of the libraries varies from 100-12,000 volumes; the average is 3700 volumes. In 17 institutions reporting, 80 per cent. of the inmates make use of the library.

The school courses in these institutions have had an appreciable effect upon the character and extent of the book collections. It is encouraging to see a growing liberality in the number of books allowed to be drawn at one time. In one institution the inmates may take as many books as they choose; in three, two books are allowed, and in two others the number depends on school standing or on behavior. Six institutions reported that they had many calls for books which they could not furnish. In one reformatory, the women inmates asked the privilege of finishing with lath and plaster the room which was to be their library and general reading room.

The men and women confined in the national and state prisons have an average age of thirty-two years. Eighty-four per cent. can write, and a small majority is below sixth grade in schooling. Five of the prisons reporting have no library. An annual appropriation from \$50-\$750 is reported by 11 institutions, with an average of \$340. In six prisons the visitors' fees are used for the library; the average income from this source is \$350. Four prisons made no book purchases last year; the average number of volumes added by 23 others was 200. The size of the libraries varies from 300 to 33,000 volumes, with

an average of 5500 volumes. The proportion of the prisoners who make use of the library, in 30 prisons, is 64 per cent.

These libraries are generally recognized by the authorities as an important factor in the administration of the prisons; they are larger than any other group of institutional libraries, and have a larger annual appropriation for their upkeep. This fund is often included in that for the chapel, the school, and for entertainments. In spite of the fact that the great majority of these libraries need reorganization, the elimination of unreadable material and the addition of good recent books, they circulate many more books than the public libraries of the same size.

The returns from this study do not show that many of the state institutions have taken advantage of the help which is freely offered by the state library commissions and similar agencies in selecting and buying books, and in cataloging the collections. In three states a special institutional librarian is employed by the Board of Control, or by the State Library Commission, to give this definite aid. In several other states the institutional libraries, like the public libraries, are under the care of the state library workers, and receive from them the aid which they may desire.

It may be of interest to inquire concerning the use made of the library in some of the institutions which have had, for some years, advice and aid from trained library workers. Statistics from the public libraries of the country show an average annual book circulation of three issues for each volume in the collection; each reader registered does not take out over fifteen volumes during the year.

Twenty-three prisons reported a yearly circulation of 7 issues for each volume, of 34 volumes per year for each inmate, and 57 volumes for each reading inmate. Six other prisons, which had aid from library workers, had eleven issues for each volume, 92 volumes per year for each inmate, and 109 volumes for each reading inmate.

Sixteen insane hospitals issued each volume 3.6 times; each inmate read an average of 1.7 books per year, and each reading inmate 23 books. In five other hospitals,

under the supervision of librarians, each volume circulated 5 times, each inmate read an average of 4 books during the year, and each reading inmate 32 books.

In seven institutions for the feeble-minded, each volume was issued 1.6 times, each inmate read 2.8 volumes, and each reading inmate 15 volumes. In four institutions which had been aided by library workers, each volume was issued 4 times, each inmate read 3.4 volumes, and each reading inmate 21 volumes.

The officers and employes in these institutions are in the following proportion to the prisoners: in the institutions for the feeble-minded, one employe to seven patients; in the hospitals for the insane, one to every six patients; in the prisons, one to every fourteen prisoners. The hours of the employes are long and many live outside the institutions; the proportion of reading employes will probably not affect to any great degree the figures which show the use of the libraries by the inmates.

This was a preliminary report, prepared for this meeting. A committee of the American Library Association will make further study of the replies to this questionnaire on institution libraries.

FLORENCE R. CURTIS.

#### CARLYLE'S ADVICE ON THE CHOOSING OF BOOKS

In a letter to a student who had asked his advice as to the books he should read, Thomas Carlyle wrote in this manner:

"You are to discriminate carefully between true desire and false. The medical men tell us that we should eat what we truly have an appetite for, but what we only falsely have an appetite for we should resolutely avoid. It is very true, and flimsy desultory readers who fly from foolish book to foolish book and get good of none and mischief of all—are not those as foolish, unhealthy eaters, who mistake their superficial false desire after spiceries and confectioneries for their real appetite, of which even they are not destitute, though it lies far deeper, far quieter, after solid nutritive food?"

#### THE LIBRARY AND THE IMMIGRANT IN ST. LOUIS

UNUSUAL and, alas, all too infrequent, is such appreciation of the public library's social work in the community as is embodied in the report made by Miss Ruth Crawford to the St. Louis School of Social Economy on "The immigrant in St. Louis." Of the library's efforts in the foreigner's behalf she writes as follows:

"The St. Louis Public Library is, perhaps, more keenly interested in the foreigner *per se* than any other city institution. Thoroughly alive to the responsibilities which a library shares in the training of good citizens, branches located in distinctly foreign communities, such as the Divoll, Crunden and Soulard, spare no effort which brings them in contact with their immigrant neighbors. The librarians willingly confess that their most stimulating patron is the black-browed Russian Jew, or the eager Croatian, and they point with pride to the fact that the distribution of books of a serious nature is proportionately far greater in the downtown district than in the West End branches, which are supposed to cater to the more cultured tastes. . . .

"Books in 54 different languages are owned by the library, and kept, as far as possible, in the branch calling most frequently for the particular language. More books are bought as rapidly as finances permit. Of foreign periodicals the library receives 41 German, 20 French, 7 Polish, 17 Bohemian, 2 Danish, 3 Hungarian, 4 Italian, 2 Spanish, 3 Croatian, 7 Yiddish, 1 Arabic, 50 English.

"The policy of the library is one of liberal education and the buildings have all been planned with a large auditorium and club rooms in the basement. These rooms are popular indeed. By the mere whisking away of chairs, the young people have the use of a delightful dance hall; and the active competition evidenced in signing up for the use of the rooms is surely an index of their popularity. . . . The club rooms give the much-needed opportunity for the numerous neighborhood clubs to meet in an environment far more conducive to ideals than the corner saloon, which is so very

generally the only place for congenial souls to meet in the congested districts. The library register of clubs 1913-14 shows names such as 'Karl Marx Educational Club,' 'United Workmen's Study Club,' etc. They suggest at once the response to a country and a city that makes good its pledge of freedom and opportunity to the stranger from lands of caste and creed distinctions. Many social agencies also make use of these club rooms; the Young Men's Christian Association has six English and citizenship classes in the various libraries. . . .

"The children's department reaches the immigrant youngster along with his American born brother, especially by the winter story hour at the library. In the summer, the fairy story tellers adjourn to the playgrounds. Close co-operation with the school dovetails this playground period with the grade school life of the child. One striking point in the attitude of the library is the careful study which is made of the individual who takes out the books. In the case of immigrant children, an effort is made to watch interest as it develops in the different nationalities; so that in every way the right books may be given to guide a child who is fast discarding foreign heritage and assuming 'American ways.' This is certainly a sound basis for successful work, and a basis that might well be used by every other institution in the city that deals in any way with the foreigner.

"The library is not found wanting in sympathetic interest when the step from the grade schools to work and night schools is taken. In localities beyond the reach of the branch library, deposits are made in homes, in drug stores, in settlements, wherever a responsible individual is found who will issue the books. In addition, the 'traveling library' has been placed in many factories where the foreigner, as well as the American born employe, can derive benefit from the noon hour distribution of good books.

"A comprehensive view of the work of the St. Louis Public Library among the foreign population of the city shows that the problems of the immigrant are being constantly studied. Every effort is made to

meet their needs, and their all-round development is fostered by the splendid co-operation of library officials with outside agencies working among such people. A similar attitude on the part of the various civic and private agencies in the city would soon make possible a constructive policy of assimilation that would put St. Louis in the front rank of cities attempting to deal with this new type of citizen material from south and southeastern Europe."

---

#### THE LIBRARY AND THE GRAPHIC ARTS

In an address before the "Graphic Group" of the American Institute of Graphic Arts, Dr. Frank Weitenkampf, chief of the art division of the New York Public Library, talked on "What the Public Library can do for the members of the American Institute of Graphic Arts." He spoke in part as follows:

"What does the art division of the library mean to the public? First of all, that dilettantism has no place here, that our purposes and our methods are eminently practical. There is only opportunity to-day for general remarks, not for details. If I were to state in one sentence the object of our art division, it would be: To answer any question or demand that can be answered with pictures. To do this we have, of course, our books, which are made still more useful by proper indexing. For example, when the first reader came to us with the request for peacocks in color, our assistants had to hunt up individual plates in various books. But a note was immediately made of every plate and the information properly recorded on the index cards, so that subsequent demands for the same subject were easily and quickly satisfied. In addition to the books we have a large collection of pictures arranged by subject—photographs, old prints, cuttings from magazines and books, anything that will serve the purpose of pictorial information. Furthermore, we can draw on our print room, which has a large and growing collection of representative examples illustrating the artistic development of the graphic arts—etching, line engraving, mez-

zotints, wood engraving, lithography, and so on. And, finally, the whole of the big library at 42d street is more or less at our disposal, partly through memory, partly through indexing. For example, it is not inconceivable that the demand for a log cabin may not be entirely satisfied by the pictures in our collection, while the little cut that appears on such and such a page of a memorial volume issued by a singing society in Buffalo at the time of the exposition there will prove to be just what is wanted.

"Perhaps the best way of illustrating what we can do and are trying to do is to state some of the actual demands that have been made. We have been asked for vessels (Viking ships, Cleopatra's barge, Fulton's steamboats), vehicles (English coaches, western stage coaches, eighteenth-century sleighs), saints, dogs, bears, warming pans, chimeras, spinning wheels, papposes, floating flour mills on the Danube, lions, Minerva, mediæval shops, bellows, owls, mountain streams, portraits of consumptive musicians, love, lacemakers at work, Christmas scenes, Kit Carson's saddle, the pump room at Bath, face patches as seen in paintings, the door of the library of the cathedral at Siena, mediæval easel—anything you can possibly think of. Or take the specialty of costume: Beau Brummel's manner of tying his cravat, head-dress of an old lady of 1810, aprons of ladies of the eighteenth century in France. Sometimes, as I have said, our books and picture collections fail us. Then we have our card catalog to fall back on. Here is a case in point. Some years ago there came a request for an Irish peasant girl of the present century. Of course, there were no costume books on that specialty, and our separate pictures were not as numerous then as now, so that nothing was found. But in the catalog, under the heading 'Costume—Irish,' it was duly set down that at such a page of such and such a volume of a ten-volume set of Irish literature edited by Justin McCarthy, there appeared a half-tone photograph of an Irish peasant girl in her national garb, which proved to be just what was wanted.

"Here, then, may be found material for

the illustrator, the designer of book plates, of posters, of programs, of advertisements, or of any other form of graphic art. There is one man who has spent many hours in our division and in other parts of the library, collecting pictorial material relating to various trades, forms of business, and professions, to be used in special advertising publications. Thus, as I remember, he dug up an astounding amount of material, often going back to the days of Egypt, with regard to hats, baking, sweeping, dentistry (which implied the use of some pictures of that female saint whom they tortured by extracting her teeth). He developed a remarkable ingenuity in finding material in the most unlikely places. Then there is the bookbinder, the printer, the picture printer, and the publisher, whose activity naturally is inclusive and covers that of most of the others. Here again I recall a case that illustrates our methods. When the matter of offset printing first came into notice, literature on the subject was not easy to find. We indexed articles that we found in annuals, such as those of Penrose or of Klimsch, and in periodicals, and so were able to help the workers who came to us with the evident desire to learn something about new methods that their employers were intending to look into or introduce. I remember, also, that in the early days of rotogravure, the days of the invention of Mertens, we had at hand a little collection of foreign articles and of pictures printed by the Mertens process, in order to answer questions in regard to this new reproductive method.

"Our books cover various applications of the graphic arts and the material used, including paper. Particularly, also, we have in view in this division the book in its entirety—a matter which I am afraid we are too apt to overlook. In this matter, one naturally thinks of such men as William Morris in England or Joseph Sattler in Germany, with their insistence on the book as an entity, as a thing conceived with a proper understanding of and regard for the relation of the different parts to each other. When Sattler designed an entire book—the type, illustrations, decorations, end papers, and binding—his object was, of course, to

produce a harmonious whole. Here, then, will be found examples of printed books to enforce the ever-necessary virtue of appropriateness. And in working for this harmony between the parts of the book, the kinship between type lines and line illustration or decoration is not to be overlooked in our complaisant acceptance of the half-tone at all times and for all purposes.

"The achievement of the past has its lessons for us. From the rich resources of that achievement we can draw inspirations for future advance.

"With this note of optimism there comes also a plaint as to a want of restraint, of knowledge, of technical training in many young designers. If our costume designers, worried by the war's interference with the transmission of designs from abroad, find inspiration and suggestion in the fashion of the thirties and forties of the past century, or in the Spain of Velasquez or Goya, and apply the same intelligently, well and good. But the demand of the female for 'costume of the French renaissance, Mary Anthonette, you know, about 1830,' is apt to result in mere oddity rather than adaptation to the needs of the time. The signs of the want of training are sad. Young artists ask for very definite things, such as 'an angry soldier charging.' They want things ready made. A request for a mediæval herald is answered with a satisfactory picture, but it does not satisfy the visitor. He objects because it is in tone, and he wants it in line, and then comes the admission that he cannot put the tone drawing into lines. I presume that in many cases there may be also pressure from above, from the employer, and the rush for the up-to-date. And many of you are no doubt familiar with the misguided would-be cartoonist after easy money, who has heard of big prices paid for newspaper comics and is after books that will tell him by short-cut just how to do it.

"This is partly to be changed by education. Here is hardly the place to speak of the attitude towards life, which implies the matter of principles, of honest thoroughness, of solid foundations of knowledge and technique. Those are to some extent matters to be brought about by slow national or

local change and development. Naturally, help can come also through the attitude of both employers and designers of solid attainment. There is where you can help the librarian, help the young designer, help your own business, help the public, help to improve our whole national way of looking at and doing things, and, incidentally, help to a saner and clearer view of the importance of art in the daily life."

## PRESIDENT MEZES SPEAKS FOR CITY COLLEGE LIBRARY

AT a general meeting of the alumni committee that is working for a new library building for the College of the City of New York, held at the Park Avenue Hotel in May, President Mezes addressed the gathering. In his appeal to the alumni to support the effort the college is now making to secure adequate library facilities, he spoke in part as follows:

"You can't have a modern college without a library. It is absolutely an impossibility. We have at the City College, so far as buildings are concerned, certainly as good a plant, aside from the library, as any other in the country.

"But the chain is no stronger than its weakest link, particularly when that is an essential link in the chain, and you will never have and can never have an enterprise that can do the work that it ought to do, until we get a good library. We will not have a first-class college until we have a library. We might as well make up our minds that we won't have a college in the first rank, until we have a library and a good one.

"You can't have a library until you have a building. We have had a recent request from the students themselves to exclude the boys from Townsend Harris from the library, because there was no room for the college boys themselves in the library. They don't know how much library facilities they need. If they only realized how much use they could make of a library and how much the use of a library would increase their advantage, they would be even more clamorous for books.

"You can't get the books until you get a building. It would not take long to get books for the library; for when you have a place to put them, then you have something to appeal to the imaginations of people who might give books. You are not going to get as many books as you would if you had a library building. If you once get the library building, the number of books will be increased readily.

"The lack of a building has held back the giving of a number of books that we could get, and we have an insufficient num-

ber of books at the present time. We have various collections of books that are not being used now because we have nobody to look after them. Our library staff is inadequate and it will continue to be inadequate until we have a building which will appeal to the imaginations of our people.

"So this whole library enterprise opens the possibility of having a library which will make the college a first-class institution. The whole thing depends upon getting this building. There we will get the books; I will guarantee we will get all the books we need.

"We will get the students into the habit of using a library, and we will increase the benefits of every student who enters the institution. I regard the library as the most important need of the college at the present time; so every one of you here is rendering a very important service to the institution. And the more you can do, the better the service will be."

### ODE TO MELVIL DEWEY

O thou, beneath whose eagle eye  
The varying fields of knowledge lie,  
Awaiting thy decision;  
Surveyor of the earth and space,  
Who dared all ways of life to trace,  
And set the planets in their place  
By decimal division.

Who put the theorists to rout,  
And blew their tangled fancies out,  
Their moonshine mazes viewy;  
Who overthrew their citadels,  
And made philosophers thy thralls,  
In mystic bonds of decimals—  
O subtle Doctor Dewey!

So order out of chaos grew;  
In tens and centuries we view  
Thy numbered legions swelling:  
All things of life in ordered state—  
The animate, inanimate,  
All present, past, and future fate  
Assigned its rank and dwelling.

Still unto thee a pæan grows,  
Who set the decimals in rows,  
Of reverent acclamation;  
And we, who at thine altars wait,  
Avouch thy words so truly great  
We pray thee set them soon or late  
In English—by translation.

ROBERT JOHNSON.

Croydon, England.*

## Library Organizations

### DISTRICT OF COLUMBIA LIBRARY ASSOCIATION

The bi-monthly meeting of the District of Columbia Library Association was held in the lecture room of the Public Library on Wednesday evening, April 19.

Dr. E. M. Borchard, law librarian of the Library of Congress, gave a most interesting illustrated talk on "South American libraries and intellectual life." Dr. Borchard has but recently returned from an official trip of five months to South America and spoke of his own observations, verified by those of other observers, upon the educational and literary activities of the South American states.

But a small part of the talk was devoted to libraries as library development in South America is as yet limited. The library is not considered an inherent part of the educational system; there is no public library system as we know it, though Argentina has attempted to centralize the purchase of books for her numerous rural libraries; the library is administered rather for the library itself than for the reading public; and too often financial support is inadequate. One of the most modern libraries as to building and equipment is the National Library of Brazil at Rio de Janeiro, but this library has no catalog and at present no funds for the making of one. Chile has probably the most progressive National Library. By its bibliographical publications it has given the world information as to its literary activities, something which is still a great need in the other countries of South America. Dr. Borchard paid tribute to the enthusiasm and disinterested devotion of the librarians to their work, often carried on under great handicaps.

The university was an extremely early development in South America, but there has been no coherent school system to link primary, secondary schools and universities together. The widely separated centers of population, and the absence of any local autonomy have tended to centralize the educational system in the capitals and have interfered with local initiative, to the great disadvantage of primary education in rural districts. The Argentine Republic has been the most progressive of the South American countries in the matter of primary education. The high schools are not many nor are they largely attended. The bachelor's degree is given for the high school course and

the doctor's degree at the close of the university course. Teaching is not a profession, most of the professors in the universities having other vocations from which they take an hour or so at stated times for university lectures, the instruction being given entirely by means of lectures. The University of La Plata is being reorganized on modern lines designed to stimulate original research by the faculty and promises to blaze the way for more progressive methods in university education.

For intellectual stimuli and standards, South America looks to Europe and especially to France; there is almost no exchange of intellectual ideas between the individual South American states. As most of the books are imported from Europe and as the reading public is small there is no incentive to authorship; if the author would publish he must do so at his own expense or with government aid. Poetry is the form of literature in which the South American excels, though they have some great names in other fields of literature. As there is no teaching profession so there is no literary profession; literature is rather a recreation.

What is true of literature is also true of the other fine arts, music, opera, and drama. For all these South America looks mainly to Europe. There is almost an entire lack of private initiative in fostering the arts; for all such aid composers and authors must look to the government, which in this as in other particulars is much more paternal than that of the United States.

In spite of this rather negative statement as to the intellectual activities of South America, Dr. Borchard left with his hearers the impression that the South American countries present great intellectual possibilities and that we may look to them for a future of progressive and enlightened development.

Alice C. Atwood, *Secretary.*

### PENNSYLVANIA LIBRARY CLUB

The last meeting of the Pennsylvania Library Club for the season of 1915-1916 was held May 8 in Taylor Hall, Bryn Mawr College.

Mr. Morton, the president, called the meeting promptly at 4 o'clock. The reading of the minutes of the last meeting was omitted in favor of those taken at the time of an earlier visit of the club to Bryn Mawr, on November 13, 1899, signed "Mary P. Farr, secretary."

After the treasurer's report for the year was read and accepted, the election of offi-

cers for the year 1916-1917 took place as follows: President, John Ashhurst, librarian of The Free Library of Philadelphia; first vice president, John F. Lewis, president, Pennsylvania Academy of the Fine Arts, Philadelphia; second vice president, Lois Reed, librarian, Bryn Mawr College; secretary, Jean E. Graffen, Free Library of Philadelphia; treasurer, Bertha Seidl Wetzell, Library Company of Philadelphia.

After the election Dean Marion Reilly extended a very gracious welcome to the members of the club, and said that she remembered the earlier visit which we made in 1899, as she was a student in the college at the time, and a member of the reception committee. Dean Reilly laid particular emphasis on the wonderful opportunities librarians as a class have in the whole scheme of education.

At the close of a very interesting talk about the College Library and its work, Dr. Nolan, who had been president on the occasion of our former visit, extended a very hearty vote of thanks on behalf of the members of the club to both Dean Reilly and Miss Lois Reed, the librarian, to whom we were indebted for the delightful afternoon.

A movement to adjourn to Pembroke Hall for an impromptu reception and tea was next in order, and it was felt that a second vote of thanks should be extended for the continuation of good things. Of the 120 present, less than 10 had attended the meeting in 1899.

JEAN E. GRAFFEN, *Secretary*.

#### NORTHERN NEW YORK LIBRARY CLUB

A joint meeting of the Northern New York Library Club and the Library Institute of the state was called to order at the Flower Library, Watertown, on Thursday morning, May 25.

The general topic, "Conditions and activities needed to promote the best interests of the library," was discussed and the following speakers gave helpful ideas on the subject: Miss Hasbrouck, of the Ogdensburg Free Library; Miss Cleveland, of the East Hounsfield Library; Mrs. Augsbury, of the Antwerp Library Board; Mr. Bowman, superintendent of schools of Sacket Harbor; Mr. Linnell, of the High School at Brownville; Mr. Craves, of the Philadelphia High School; Rev. Mr. Keeling, of the Flower Library branch at Faith Chapel, Watertown; Deaconess Wilson, of Faith Chapel, Watertown; Miss Anna Phelps, of the State Library; Miss Hazelton, of the Black River Library; and Miss Bemis, of the Flower Library, Watertown.

There were eighteen libraries represented

at the meeting, and forty-three librarians and trustees present.

An invitation was extended to the club to hold a fall meeting at the Ogdensburg Library, to view the Frederic Remington collection of Indian curios which has been presented to the Ogdensburg Library. The librarian will endeavor to secure Mrs. Remington to address the meeting.

JANE NAUGHTON, *Secretary*.

#### ALABAMA LIBRARY ASSOCIATION

The annual meeting of the Alabama Library Association, held in Montgomery May 3-5, inclusive, was marked with its usual enthusiasm and spirit. The program was planned to include the entire field of library activities in the state and the subjects discussed were designed to meet the most practical questions of library administration.

Henry N. Sanborn, secretary of the Indiana Library Association, Indianapolis, was rightly chosen as the one to launch the meeting and give it the impetus which would carry along the succeeding sessions with energy and power. His address at the first session, "The message of the book," was given as one of a series of lectures under the auspices of the City Federation of Women's Clubs, and was thoroughly enjoyed by everyone.

The morning session of the second day was held in the historic Senate chamber at the Capitol. Dr. Thomas M. Owen, president of the association, in his introductory remarks, enumerated the many history-making events which had taken place within its four walls.

Miss Mary Martin, assistant librarian, Alabama Polytechnic Institute, Auburn, presented a paper on "College libraries—their needs and problems" in a most understanding way. The paper was followed by discussions of the subject by Miss Frances Pickett, librarian, Judson College, Marion; Miss Olive Mayes, librarian, Alabama Girls' Technical Institute, Montevallo; and by Mr. Joseph A. Boyd, librarian, State Normal School, Troy.

The University of Alabama, situated in Tuscaloosa, is devoutly hoping and ardently working for a new library building. Miss Alice S. Wyman, the university librarian, told much of their campaign plans for the new building, which is to be called "The Amelia Gayle Gorgas Memorial Library" in honor of the mother of Gen. William C. Gorgas, famed for his brilliant sanitary work in the Canal Zone. Mrs. Gorgas presided for a period of twenty-four years over the library, as she did also over the affections and the

well-being of the students of the days gone by. There could be no more fitting monument to so noble a woman than a splendid, modern, adequate library structure.

Prof. J. R. Rutland, librarian, Alabama Polytechnic Institute, gave a very vivid description of "Libraries in Alabama high schools—conditions and needs." He spoke from abundant experience, having been state high school inspector for a number of years. This was followed by a discussion of the "Alabama rural school library system" by Mrs. R. L. Faucett, president of the State School Improvement Association.

The entire body adjourned at noon to the home of Dr. and Mrs. Thomas M. Owen, where luncheon was served.

The afternoon was devoted to round table discussions. A few of the topics presented were, "Present library policy of the Carnegie Corporation"; "U. S. government and state documents"; "Care of magazines and periodicals," etc.

One of the features of the afternoon was a visit to the State and Supreme Court Library, as well as to the State Historical and Reference Library of the Department of Archives and History.

The evening session was held in the auditorium of the Carnegie Library where the members of the association and their friends were given a most interesting paper, "The library and community service," by Mr. Carl H. Milam, director of the Birmingham Public Library. Two other papers of the evening were "Libraries in Alabama charitable and correctional institutions," by Rev. W. D. Hubbard, chaplain to the Alabama penitentiary, Montgomery, and "The work of law libraries," by Mr. Charles F. White, librarian, Birmingham Bar Association.

After the evening adjournment, Miss Laura Martin Elmore, librarian of the Carnegie Library, with the members of her staff and board of trustees, entertained the association in a most charming manner with an informal reception.

The morning session of the last day, held in the auditorium of the Carnegie Library, was one of intense interest. Miss Randolph Archer, librarian, Public Library, Talladega, and Miss Mollie Norman, Union Springs, discussed "County library extension"; Miss Fannie Tabor, librarian of the Avondale branch of the Birmingham Library, gave a paper on "Children's books and reading," and Mr. J. R. Rutland, "The Alabama teachers' and young people's reading circle."

Besides the foregoing papers, there were a number of informal talks on various subjects, including a discussion of "Books that please men," by Mr. Henry N. Sanborn.

As a fitting climax to an already happy and eventful meeting, the association was taken by auto out into the country to visit one of the now fast disappearing types of ante-bellum plantation homes, where tea was served by the most gracious hostess, Mrs. Fannie Drespring, assisted by her happy, smiling black mammy, a relic of the olden days in the Southern South.

The following officers were elected for the ensuing year: President, Dr. Thomas M. Owen, Montgomery; first vice president, J. R. Rutland, Auburn; second vice president, Alice S. Wyman, University; third vice president, P. W. Hodges, Montgomery; secretary, Gertrude Ryan, Montgomery; treasurer, Laura M. Elmore, Montgomery. Executive council (in addition to the officers), Carl H. Milam, Birmingham; Olive Mayes, Montevallo; Frances Pickett, Marion; Lena Martin, Cadsden; and Miss Randolph Archer, Talladega.

GERTRUDE RYAN, *Secretary*.

#### SPECIAL LIBRARIES ASSOCIATION, EASTERN DISTRICT

The meeting held on the afternoon and evening of Wednesday, June 7, at the Social Service Library in Boston, was a pronounced success. Thirty-two were present, representing educational, engineering, industrial, public utilities, social, and general library interests.

Mr. L. A. Armistead, librarian of the Boston Elevated, spoke on "Interdependence and the need for a reservoir library." He said that he had, in the interests of his organization, used every library in Boston, and that he felt keenly the need for co-operation in the purchase of books. "If you will buy 'A,' we shall not need to, but shall do our share by buying 'B.'" Of course, this refers to books that serve special interests, some of which cost \$10 and upwards, and simply have to be bought by one or more concerns. He says the Boston Elevated has some storage room for itself at one of the terminal stations, but that there lacks a central reservoir library. Mr. Armistead emphasized the importance of all indexes, and as a result there is likely soon to be a central registration of the availability of special indexes, like the Readers' Guide, Industrial Arts Index, Street Railway Journal index, etc.

Mr. Ralph A. Power, librarian of the Bos-

ton University College of Business Administration, spoke on "Problems of a library in process of formation." His problems included those of book selection (need for experts in various departments to vouch for the publications that come within their specialties), of classification, cataloging, bibliographies, illustrations, research material, etc. He called attention to the need for trained library experience, as well as for knowledge in a special field. Boston University plans to form this coming year a nucleus for a commercial museum in connection with the business library.

Mr. Waldo A. Rich, Jr., of the Dennison Manufacturing Company, spoke on "Centralization of merchandise catalogs." He considered this from the standpoint of the Information Clearing House of Boston, now in its fifth year. The clearing house has had a most successful career among its members, but it has not succeeded in giving the service of which its possibilities allow to the large field of business which should be opened to it. Its value is first, perhaps, in that it is a time saver; this should mean a saving of money. Then by getting more detailed and complete information than is ordinarily obtained, it should be more valuable. The subject on which the Information Clearing House intends to reach a greater field of service is trade catalogs, as it intends to index the specialization of local business in conjunction with a central bureau of merchandise catalogs. The only limits to the field of service for this information bureau are those set for it by its users. The centralization of trade catalogs will be one more step for the service it can render, and is not for a source of profit.

Miss Margaret Watkins, librarian of the Social Service Library, spoke on "The possibilities of the Social Service Library." This is a free reference and lending library, consisting of a valuable collection of over 51,000 books, reports, and pamphlets relating to the various movements, educational, medical, philanthropic, and economic, which are broadly classed under the head of social service. To the recent graduates of the School for Social Workers the Social Service Library, which for three years has been established in connection with the school, is well known, and, in addition to the direct service given to the students, the library tries to serve the large body of social workers, both professional and volunteer, in Boston and the vicinity. Over twenty years ago the Boston Children's Aid Society realized that

there was need for such a library, and began collecting annual reports of societies and institutions, national, state and municipal publications, as well as books on social questions. All these were used continually by social workers of Boston and they now form the nucleus of the present library.

Mr. Thomas J. Homer, compiler and editor of the new Union List (with Subject Index) of Current Serials received in this vicinity, in course of publication by the Boston Public Library, reported progress upon the work, especially by way of contributions of titles from many different libraries. About fifty libraries are co-operating in the sending of titles, and as the co-operating organizations include not only the leading general libraries, but a large number of special libraries, it is believed that the great assemblage of titles will be notably comprehensive. Speaking of the need of closer inter-working and co-ordination of the libraries in this vicinity, Mr. Homer laid especial stress upon the proposition to install and maintain in Boston a union catalog of current accessions not only of periodicals but also of books. The *modus operandi* would be very simple. The libraries would co-operate to form what might be known as the Massachusetts Union Catalog Association, and would contribute in appropriate proportions toward the installation and maintenance of a union catalog of their more important accessions. Each library would prepare two extra cards for each of these accessions. Such cards would be for the union catalog, to be filed respectively under author and subject. The catalog would rapidly expand and would soon become a decided convenience and time-saver. It would also be of great assistance toward the avoidance of unnecessary duplication, and, conversely, toward the acquirement of *desiderata*.

Miss Ethel M. Johnson, librarian of the Women's Educational and Industrial Union, presented a paper on "Following legislative action," in which she described her efforts to keep posted on the bills in which the Union was actively interested, and to follow as well as possible the course of general social welfare legislation, particularly those measures with which the women's clubs were concerned. There are really two phases to the work: direct legislative action, and legislative information. For these two types of work two distinct types of information are required. For the purposes of legislative action it is essential to secure advance information, the kind of information that isn't apt

to appear in printed form, and this can safely be secured only from authoritative sources and by personal effort and acquaintance. For the general information service, for following what is really legislative history, there are adequate means. The equipment is quite simple, and consists largely of the following material: Revised Laws and Acts and Resolves to date; a file of the bills of the session just ended dealing with social welfare matters, as well as a selected list of bills for several years back, with record of action on same; the daily journal of House and Senate; Bulletin of Committee Hearings and Legislative Action; daily bulletin of hearings; daily calendar of both branches; and a number of special directories and reference tools, as the Manual of the General Court, list of committees, list of members of the General Court, with their districts, biographical sketch of members, and legislative roll call for the preceding year. In order to have information quickly available a card list was made of the state representatives and senators, giving their addresses, pertinent facts in their biographies, and their record on certain bills, if they had previously been in the legislature, also their districts, with the towns and wards included. This was cross indexed by senatorial and representative districts, and again by towns. The daily papers, particularly the *Advertiser*, which gives much prominence to legislative news, and such special publications as *Practical Politics*, and the departmental reports of the Commonwealth, supplemented the equipment.

H. B. Alvord, of the Aberthaw Construction Company, said, in effect, that in any new propaganda it was always necessary to spread the information concerning it as widely as possible, and that this must be done by mutual interchange of ideas between people and associations. However, there is a danger which is likely to be encountered in this line of propaganda, in that there will not be sufficient financial reserve, which will be of a permanent value, even though small at the beginning. Money is the standard of value in all economic matters, and any propaganda which is to be of lasting value will necessarily take this into account.

A. D. Smith, secretary and manager of the Information Clearing House of Boston, described the methods by which that organization gained its information, and mentioned in detail the well-known library tools and their relative value to the information service. From bibliographies he had less assistance than might be supposed and explained

their lack of fitness for the purpose of the clearing house. This is because the information required is of a nature that calls for up-to-dateness as well as selection. The usual library bibliography is too frequently comprehensive and usually of too old a date. Likewise the various indexes, major and minor, while they are in constant use and are indispensable, do not necessarily cover the whole field. The system of the bureau of building up a "where to look" was described, the end sought being to minimize as far as possible the hap-hazard method by which at present much of the information is sought. The great mass of important uncopyrighted material that is constantly coming from the press, mostly in the form of pamphlets, and which finds its way only in part to the libraries, was pointed out as a problem which it must be the task of the special librarians to solve.

Mr. F. W. Faxon, of the Boston Book Company, in the discussion called attention to the very large collection of magazines that his company had, which could be consulted but not borrowed. They are for sale in sets. He also noted that one of the library schools is to make a checklist of indexes as a feature of thesis work.

The resolution of the meeting was to the effect that the matter of co-ordinating special libraries be left to the Information Clearing House, with the understanding that a later meeting be called, probably in the autumn, to hear its report.

G. W. LEE.

---

## Library Schools

---

### NEW YORK STATE LIBRARY SCHOOL

The regular school year will close Friday, June 23. Informal commencement exercises will be held in the main classroom. Dr. A. E. Bostwick will give the main address. More than twenty of the students will go to the meeting of the A. L. A. the following week.

Visiting lecturers and their subjects have been as follows: May 12-13, Dr. Frank P. Hill, "Library buildings"; June 2, Mr. F. K. Mathiews, chief Boy Scout librarian, "Books for boys"; June 3, Dr. G. E. Wire, "Library housekeeping."

Circumstances compelled a change in the plan of this year's course in "Library buildings." Instead of being given as a whole by Mr. Eastman, as in preceding years, lectures on various phases of the subject were given by Mr. Eastman, Mr. N. L. Goodrich, of Dart-

mouth College, and Dr. Frank P. Hill, of the Brooklyn Public Library. The amount of required reading was also increased.

The school has been represented by the faculty and students at eight of the library institutes conducted under the general direction of the New York Library Association.

The first course of the summer session began May 31. Twenty-one are in attendance. Several others are enrolled for the second course which begins June 21. Miss Jennie D. Fellows, who, for several years, has taught cataloging in the summer session, is unable to do so this year. Miss Sabra W. Vought (1901) will teach in her place. Fuller details of the summer session will appear in a later number of the LIBRARY JOURNAL.

The juniors gave the faculty and seniors a boat ride to Kingston Point, May 27.

The seniors have selected the following subjects for their graduation bibliographies:

- Bailey, Beulah. A contribution to a bibliography of publications on New York colonial history (1899-1915).
- Brown, Ruth L. The industries and resources of Vermont.
- Davis, Earl H. A digest of the laws of the various states regulating trusts and monopolies in force Jan. 1, 1914.
- Driscoll, Marie M. Books and references on Reading, Pa.
- Emerson, Ralf P. A contribution to the bibliography of America drama, 1850-1880, being an author and title list of plays published and printed.
- Furbeck, Mary E. Guide to the bulletins of the University of the State of New York.
- Haynes, Marguerite. An annotated list of portraits and paintings in the public buildings and institutions of the Capitol district: Albany, Schenectady and Troy.
- Hull, Edna M. Recent views on the duties of citizenship.
- Kemmerer, Leila. Union list of periodicals in the Capitol district (Albany, Troy and Schenectady), exclusive of the New York State Library.
- Laws, Helen M. Occupational hygiene, 1910-15 (inclusive).
- Meisel, Max. A bibliography of the pioneer century of American natural history and its institutions, 1769-1865.
- Miller, Wharton. List of books and separates on the history of bookbinding, and on special forms of binding.
- Oberholtzer, Katherine A. Bibliography of domestic economy, supplementing a similar bibliography by R. K. Shaw, 1901.
- Price, Marian. Contributions to a bibliography of genetic psychology.
- Shields, Ethel A. Civil war in fiction.
- Webb, William. Albany congress in 1754.
- Winslow, Amy. Irish plays and playwrights.

#### STUDENT APPOINTMENTS

##### Senior

- Ruth L. Brown, reference librarian, Silas Bronson Library, Waterbury, Conn.
- Mary E. Furbeck, cataloger, Forbes Library, Northampton, Mass.
- Marguerite E. Haynes, assistant, Minneapolis Public Library.
- Edna M. Hull, cataloger, University of Washington Library, Seattle.
- Katherine A. Oberholtzer, assistant, legislative refer-

ence department, Connecticut State Library, Hartford.

Ethel A. Shields, reference librarian, Iowa State Teachers' College Library, Cedar Falls.

##### Junior

- Earl W. Browning, head of applied science department, St. Louis Public Library.
- Earl H. Davis, legislative reference librarian, North Dakota State Library Commission, Bismarck.
- Grace I. Dick, assistant, Bushwick branch, Brooklyn Public Library.
- Odine Domaas, assistant, Norges tekniske Høiskole Bibliotek, Trondhjem.
- Mildred R. Forward, librarian, City Normal School, Rochester, N. Y.
- Helen M. Harris, assistant, Minneapolis Public Library.
- Alice L. Knapp, assistant, Brooklyn Public Library.
- Elizabeth W. Little, assistant, Wells College Library.
- Mary N. MacKay returns to the Michigan State Library, Lansing, as head of the special library department.
- Wharton Miller, assistant librarian, Syracuse (N. Y.) Public Library.
- Alice E. Mills, assistant in catalog department, Connecticut State Library, Hartford.
- Anne M. Mulheron, head of order department, Los Angeles, Cal., Public Library.
- Ruth Norton, assistant, Wesleyan University Library.
- Rachel Ogle, head of circulation department, Iowa State Teachers' College Library, Cedar Falls.
- Barbara H. Smith, cataloger, Silas Bronson Library, Waterbury, Conn.
- Mary A. Tawney returns to a new position in the St. Paul Public Library.
- A. Eugenie Vater returns to Purdue University Library as reference assistant.

The following students have been engaged for summer work:

- Esther Betz, instructor, University of Michigan Summer Library School.
- Carl L. Cannon, assistant, Newark, N. J., Free Public Library.
- Edith Edwards, assistant, Webster branch, New York Public Library.
- James L. Hodgson and Mary I. O'Sullivan, catalogers, reference catalog section, New York Public Library.

F. K. WALTER.

#### PRATT INSTITUTE SCHOOL OF LIBRARY SCIENCE

The class room work in the third term consists largely of courses of lectures upon special subjects. Mr. Eastman's usual course on library buildings was given in April. Mr. Stevens' courses on printing and on technical books ran through the term. Miss Cowing has given four lectures on children's books, Miss Julia A. Hopkins four lectures on civic institutions, and Miss Anna Tyler two lectures on story-telling, with an additional story hour. Single lectures have been given by Miss Harriet A. Wood, in charge of school work of the Portland (Ore.) Public Library; by Miss Kathleen Jones of the McLean Hospital Library, Waverley, Mass.; by Miss Alice S. Tyler, director of the Western Reserve Library School; and by Mr. Mathews, chief scout librarian of the Boy Scouts of America.

Three very pleasant out-of-town trips have

been made during the term: the first to the H. W. Wilson Company at White Plains, spoken of last month. The second of these trips took place on May 19 when we went, by invitation, to East Orange, where Miss Hinsdale, class of 1898, is librarian. Automobiles met us at the station and we visited first the two attractive little branch library buildings, and then inspected the main building that has recently been enlarged. A tea party put the finishing touch to a delightful afternoon. On June 14 the class made its annual visit to Garden City to inspect the Doubleday, Page & Company printing establishment.

The entrance examinations for the class of 1917 were held on June 2nd with very gratifying results. Over forty of those examined were able to qualify, and the choosing of the twenty-five to be accepted was rendered both difficult and interesting.

#### ALUMNI NOTES

Katharine P. Ferris, 1912, who went as cataloger to the Kings County Free Library in Hanford, Cal., has recently been made librarian.

Martha Albers, 1914, has been made an assistant in the banking house of Bonbright & Company in New York.

Janet E. Hileman, 1915, who since graduation has been in the children's department of the Hamilton Fish Park branch of the New York Public Library, has been made children's librarian at the Public Library of New Castle, Pa.

Mildred Maynard, 1915, assistant in the children's department of this library, has been made supervisor of children's work in the Public Library of Waterloo, Iowa.

#### CLASS OF 1916 APPOINTMENTS

In addition to the appointments in the class of 1916, listed in May, the following have been made:

Helen L. Crowe returns to the staff of the Chicago Public Library.  
 Mary A. Eastman is to become a member of the training class for children's librarians of the Cleveland Public Library.  
 Elsie R. Friedmann, assistant, reference catalog division, New York Public Library.  
 Clara Gravez, assistant, catalog reference department, Cincinnati Public Library.  
 Louise Douglas Coulter-King, assistant, Osterhout Free Library, Wilkes-Barre, Pa.  
 Edith May Patterson, first assistant, Public Library, Fond du Lac, Wisconsin.  
 Genevieve Pierson, assistant, Tompkins Square branch, New York Public Library.  
 Hilda M. Rankin, assistant, children's room, Pratt Institute Free Library.  
 Truman R. Temple, librarian, Public Library, Leavenworth, Kansas.

JOSEPHINE ADAMS RATHBONE, *Vice-Director*.

#### LIBRARY SCHOOL OF THE NEW YORK PUBLIC LIBRARY

The last junior visits of the year were to the libraries at Newark and East Orange.

Miss E. Kathleen Jones, librarian of the McLean Hospital, Waverley, Mass., gave an address to the juniors on "Books in hospitals," May 19.

Miss L. E. Stearns lectured to the juniors on "Reminiscences of a pioneer," May 31, and the students had the pleasure of meeting her at tea afterwards.

Mr. E. L. Pearson, editor of publications of the New York Public Library, gave two lectures on "Library publications" to the juniors.

Miss Adelaide R. Hasse gave a supplementary course of six lectures on United States documents to the juniors. The general subject was "United States foreign relations," and the work was conducted as a seminar.

Mrs. Elizabeth C. Earl, president of the Indiana Public Library Commission, spoke to the members of the senior class on "The Indiana Library Trustees' Association," May 22.

Seniors of the reference and cataloging and school and college courses visited the library of J. P. Morgan, May 16.

Saturday evening, May 13, the juniors entertained the faculty and seniors at a circus. Some of the feats were unequalled by any presented by Barnum. The usual spring outing to West Point by boat occurred Saturday, May 20.

The work of the juniors for the war sufferers this year was sent to the Polish Victims' Relief Fund.

Mr. Samuel Tsu-Yung Seng received the degree of Bachelor of Science from Columbia University, in addition to the diploma from our school.

On June 3, thirty-nine persons took the entrance examinations at the school and fifty in other parts of this country and abroad.

The final exercises of the school took place on June 3, at 11 a. m. Mr. Charles Howland Russell, secretary of the board of trustees, presided and bestowed the diplomas. Mr. W. W. Appleton, chairman of the committee on circulation, gave the certificates. Dr. Harry Lyman Koopman's address was entitled "The librarian himself." After the exercises many of those present visited the schoolroom and examined the theses and bibliographies. The gift of the class of 1916 was a beautiful mahogany tea tray.

The list of graduates receiving diplomas is as follows:

Elizabeth Voshall Clark, Philadelphia, Pa.  
 Mary Ethel Clarke, Ypsilanti, Mich.  
 Lucy Condell, East Orange, N. J.  
 Gladys L. Crain, Newtonville, Mass.  
 Caroline Hill Davis, University, Va.  
 Philena A. Dickey, Washington, D. C.  
 Jennie C. Engell, Tacoma, Wash.  
 Dorothy Allen Goodrich, Williamstown, Mass.  
 Jessica Hopkins, Paducah, Ky.  
 Louise E. Jones, Oshkosh, Wis.  
 Jessie Catharine MacCurdy, Toronto.  
 Johanna L. Olschewsky, New York City.  
 Louise Overton, New York City.  
 Olivia Hebard Paine, New York City.  
 Elizabeth N. Prall, Santa Ana, Cal.  
 Ena Robb, Houston, Tex.  
 Helen Salzmann, Kingston, N. Y.  
 Samuel Tsu-Yung Seng, Wuchang, China.  
 Elizabeth Julia Sherwood, Ames, Ia.  
 Ray Simpson, New York City.  
 Maud Innes Stull, Canton, Pa.  
 Grace F. Thomson, New York City.  
 Robert W. Glenroie Vail, Romulus, N. Y.  
 Ella E. Wagar, New York City.  
 Edna H. Wilder, New Haven, Vt.

#### The following students received certificates:

Charlotte A. Ayres, Upper Montclair, N. J.  
 Corabel Bien, Washington, D. C.  
 Marguerite Boardman, Claremont, Cal.  
 Anna L. Brackbill, East Petersburg, Pa.  
 Frances Grace Burdick, Glenfield, N. Y.  
 J. Katheryn Burnett, Westmount, Canada.  
 Donald K. Campbell, Nashua, N. H.  
 Helen M. Campbell, Denver, Colo.  
 Virginia C. Carnahan, Ft. Wayne, Ind.  
 Jannette A. Chapin, Essex Junction, Vt.  
 Grace L. Cook, Cananoharie, N. Y.  
 Edna A. Dixon, New York City.  
 Laura M. Eberlin, Spokane, Wash.  
 Jennie C. Engell, Tacoma, Wash.  
 Ethel M. Fair, Harrisburg, Pa.  
 Ruth Fleming, Salem, Ore.  
 Sheldon Fletcher, Linden, Mich.  
 Claire Graefe, Sandusky, O.  
 Lenore Greene, New York City.  
 Mabel A. Howe, New York City.  
 Perrie Jones, Buffalo, N. Y.  
 Julia B. Lanice, New York City.  
 Greta Linder, Stockholm, Sweden.  
 Henrietta M. Mackzum, New York City.  
 Jennie Meyrowitz, Brooklyn.  
 Cora P. Millard, Burlington, Ia.  
 Jessie S. Millener, Ashland, Neb.  
 Eunice H. Miller, New York City.  
 Emma L. Pafort, New York City.  
 Anne Lucile Patton, Duluth, Minn.  
 Lulu Reed, Paducah, Ky.  
 Leila H. Seward, Binghamton, N. Y.  
 Lillian Spencer, Portland, Ore.  
 Josephine M. Stults, Morrilstown, N. J.  
 Nathalie Swift, New York City.  
 Allan K. A. Wallenius, Abo, Finland.

MARY W. PLUMMER, *Principal.*

#### SIMMONS COLLEGE LIBRARY SCHOOL

The examination period closed June 9 and commencement activities began with the baccalaureate sermon, by the Rev. Willis Howard Butler, on Sunday, June 11. Wednesday, June 14, commencement exercises were held in Harvard Church, the address being delivered by the Rev. Albert Parker Fitch, of Andover Theological Seminary.

Immediately after the exercises the Alumnae Association entertained at luncheon in the college, and later held their annual meeting. The president of the college gave a reception

on Wednesday evening to the graduating class, their friends, and the alumnae.

The degree of B. S. was conferred upon the following members of the four year class:

Dorothy G. Bell,	Elizabeth P. Jacobs,
Mildred Bouvé,	Jessie H. Ludgate,
Louise V. Clary,	Mary A. Nimms,
Ella M. Coats,	Caroline Righter,
Elsie B. Cruttenden,	Mary E. Rogers,
Estelle L. Freeman,	Gertrude A. Shaw,
Helen P. Gere,	Margaret E. Sinclair,
Marian W. Hayward,	Lorna A. Wardwell,
Margaret G. Heimer,	Margaret M. Welch,
Isabelle B. Hurlbut,	Marjorie Yates.

The same degree was conferred upon the following graduates of other colleges who had completed the one-year course in library science, and had offered proof of professional experience:

Marjorie M. Flanders,	Alice T. Rowe,
Madeline Junkins,	Mary L. Terrien,
Minnie W. Pert,	Beatrice Welling,
Mary B. Pillsbury,	Mildred E. Whittemore,
Lois Rankin,	Jennie B. Frost.

#### SUMMER SESSION

The summer session, as announced in the April issue, will open July 3 and close Aug. 11. The classes will be arranged so that the different courses may be taken in two three-week periods, and the work is planned to be especially helpful to those in charge of small public libraries or teachers who have the supervision of school libraries and who are unable to undertake longer courses of study.

#### APPOINTMENTS

Ella R. McDowell, 1915, has been appointed librarian of the Danbury (Conn.) Public Library.

Mrs. Elizabeth Blackall, special 1912-13, has been appointed librarian of the Oneonta (N. Y.) Public Library.

Mildred Bouvé, 1916, has been appointed to the position of desk assistant at the Boston Athenæum.

Isabelle Chaffin, 1915, has resigned from the Brooklyn Public Library to do some bibliographical work under Dr. Ames of Clark University.

Louise V. Clary, 1916, has received an appointment in the Phillips Exeter Academy Library as general assistant.

Marion Hayward, 1916, has received an appointment in the Penn State College Library.

Olive K. Bramhall, 1915-16, has been appointed on the cataloging staff of the New York Public Library.

Elizabeth Fanning, 1915-16, has been appointed to a position in the cataloging-reference department of the Cincinnati Public Library.

Ada M. Johnson, 1915-16, has been ap-

pointed as general assistant in the Norfolk House Centre Library, Roxbury, Mass.

Mary M. Raymond, 1915-16, has been appointed secretary to the director of the Library School of Simmons College.

Helen A. Russell, 1915-16, has received an appointment as general assistant in the Buffalo Public Library.

JUNE RICHARDSON DONNELLY, *Director.*

#### UNIVERSITY OF ILLINOIS LIBRARY SCHOOL

Dr. Arthur E. Bostwick, librarian of the St. Louis Public Library, gave two lectures before the Library School on April 27 and 28, his subjects being "A love of books as a basis for librarianship" and "A message to beginners."

Miss Harriet A. Wood, school librarian, Portland (Oregon) Public Library, gave two lectures before the Library School on May 19 and 20, her subject being the work of the school department of the Portland Library.

Miss Anna May Price, secretary of the Illinois Library Extension Commission, gave two lectures before the school on May 26 and 27, her subjects being "Illinois library legislation" and "Library conditions in the smaller libraries."

The last regular meeting of the Library Club for the current year took the form of a picnic and was given on the afternoon of May 29 on the upper verandas of the Woman's Building. At a business meeting held later the following officers were elected: President, Margaret Williams; secretary, Ruth Hammond; treasurer, Florence Craig.

The graduating banquet of the senior class was given in the Beardsley Hotel, June 9. The members of the faculty and their wives were the guests of the class; Miss Kate D. Ferguson, class president, acted as toast-mistress.

The baccalaureate sermon was preached by the Reverend Charles F. Wishart, of Chicago, on Sunday, June 11, before the members of the graduating classes of the various colleges and schools of the university. Monday and Tuesday were given over to the numerous festivities connected with class day and alumni day, and on Wednesday was held, in the new armory, the formal Commencement exercises of the university, at which 942 degrees were conferred. Eleven received the degree of Bachelor of Library Science, on the recommendation of the Library School faculty. The names are as follows:

Elsie Louise Baechtold, Grinnell College, A.B., 1911.  
Susan True Benson, Missouri Wesleyan College, A.B., 1909.

Jessie Elizabeth Bishop, Smith College, A.B., 1911.  
Nelle Uree Branch, University of Illinois, A.B., 1907.  
Mary Gladys Burwash, University of Illinois, A.B., 1913.

Marian Leatherman, Cornell University, A.B., 1907.  
Marguerite Mitchell, Ohio State University, B.A., 1915.

Beatrice Prall, University of Arkansas, B.A., 1911.  
Charles Holmes Stone, University of Georgia, B.S., 1912, M.A., 1913.

Alta Caroline Swigart, University of Illinois, A.B., 1910.  
Margaret Stuart Williams, University of Texas, B.A., 1912.

Miss Jessie E. Bishop was awarded "final honors" on graduation, her grades during the two years being the best in the class.

Miss Florence R. Curtis, who has been a member of the Library School faculty for eight years, will spend next year in the University of Minnesota pursuing graduate work leading to the Master's degree. It is expected that Miss Sabra Vought, B.L.S., New York State Library School, will carry Miss Curtis' work during the coming year.

#### ALUMNI NOTES

Jessie E. Bishop, B.L.S., 1916, has been appointed assistant in the Cedar Rapids (Iowa) Public Library.

Beatrice Prall, B.L.S., 1916, has been appointed assistant librarian in the Little Rock (Ark.) Public Library.

Mildred Johnson, 1915-16, has been appointed librarian of the Northwestern University School of Commerce, Chicago.

Mary A. Nichols, 1915-16, has been appointed assistant in the Minneapolis Public Library.

Elizabeth M. Palm, 1915-16, has been appointed assistant librarian of the Michigan Agricultural College, Lansing.

Ethel M. Stanley, 1915-16, has been appointed assistant in the Eastern Illinois Normal School, Charleston.

Miriam Tyler, 1915-16, has been appointed assistant librarian of the John Marshall High School Library at Richmond, Va.

Dorothy Cook, 1915-16, will be reviser in the University of Illinois Library School summer session.

The following students will fill temporary positions in the University of Illinois Library during the summer: Mary G. Burwash, Mildred Johnson, Ruth Hammond, Lillie Citley, Sallie Vaught.

P. L. WINDSOR, *Director.*

#### LIBRARY SCHOOL OF THE UNIVERSITY OF WISCONSIN

Several outside lectures have been pleasant features of the past month's work. Dr. Arthur E. Bostwick, librarian of the St. Louis Pub-

lic Library, gave two lectures on May 17. His subjects were "The love of books as a basis for librarianship" and "A message to beginners." He also told of the Shakespeare celebration to be given in St. Louis in June. On the same day Miss Harriet A. Wood, head of the school department of the Portland (Ore.) Public Library, spoke of the work of this department. Mr. William H. Brett of the Cleveland Public Library paid an unexpected visit to the school on May 31 and gave his interesting lecture on the Decimal classification. He also talked informally on the work of the Cleveland library. The class rejoiced in having the opportunity of hearing Miss Stearns, who gave on June 8 her stimulating lecture on "Library spirit."

Two motion picture films have been shown recently to the students of the Library School and the School of Journalism by the department of visual instruction, University Extension Division. They consisted of four reels on "Making of a magazine," loaned by the Curtis Publishing Co., and two reels on "Making of a book," loaned from Ginn & Co. to the Library School.

Miss Louise Fernald, librarian of Great Falls (Mont.) Public Library, spent a day at the school in May.

Entrance examinations for the class of 1917 were held June 9. Closing exercises took place June 14, the commencement address, "The companionship of books," being delivered by Prof. James F. Hosc of the Chicago Normal School. President Van Hise, Hon. C. P. Cary, state superintendent of public instruction, and Mr. Dudgeon also spoke upon the occasion.

The faculty and students were invited by Miss Turvill for a picnic supper on May 20 at her country place, and Mr. and Mrs. Lester entertained the school Saturday evening, June 10.

#### ALUMNI NOTES

Mrs. Grace B. Darling, 1908, has resigned her position as instructor in English and home and social economics at Stout Institute, Menomonie, Wis. She expects to engage in social service work in New York City.

Winnie V. Foster, 1908, assistant at Marinette (Wis.) Public Library, succeeds Grace Lane, 1909, as cataloger in the Sioux City (Iowa) Public Library. Miss Lane was married June 1 to Mr. Leon Maxwell Young of Promontory Point, Utah.

Florence C. Farnham, 1909, has been elected librarian of the new State Normal School, Eau Claire, Wis.

Doris Greene, 1911, will succeed Miss Farnham as cataloger in the Superior (Wis.) Public Library. She has held a similar position in Coburn Library at Colorado College.

Mary Ives, 1912, has been appointed librarian of the Oakland (Cal.) High School. She formerly held a position in the Library of Leland Stanford University.

Ethel A. Robbins, 1912, was married in May to Mr. Osman M. Camburn of Starkville, Miss. Since graduation she has been head of the loan department in Cedar Rapids (Iowa) Public Library.

Lura E. Brubaker, 1913, has been chosen president of the Upper Peninsula (Mich.) Library Association.

Freda M. Glover, 1913, has received appointment as children's librarian of the East Portland (Ore.) Branch Library, beginning in August. For the past three years she has filled a similar position at Boise, Idaho.

Lynne Malmquist, 1913, assistant librarian of the Sioux City (Iowa) Public Library, has resigned to take the position as manager of the Sioux City Book and Stationery Co.

Mrs. Elizabeth Blackall, 1914, began her duties as librarian of the Oneonta (N. Y.) Public Library June 1.

Esther Friedel, 1914, began work in her new position in the Brownsville Children's branch, Brooklyn Public Library, June 1. For the past year she has been children's librarian in the Alleghany (Pa.) Public Library.

Doris M. Hanson, 1914, has been elected librarian of the El Paso (Texas) High School Library, beginning September 1.

Georgia Lutkemeyer, 1914, has resigned the librarianship of the Watertown (Wis.) Public Library, to become children's librarian at Sioux City, Iowa.

Julia C. Stockett, 1914, revisor in the Library School and field visitor for the Wisconsin Library School, has been elected acting-librarian of the University of Idaho, Moscow.

Frances A. Hannum, 1915, who was prevented by serious trouble with her eyes from accepting a position offered her in the Newark (N. J.) Public Library, hopes to be able to undertake the work in September.

Marie Pulling, 1915, has accepted a temporary position for the summer in the Buffalo (N. Y.) Public Library.

Ethel Stephens, 1915, who resigned her position as librarian of the Kewatin (Minn.) Public Library, has been elected assistant cataloger in the Iowa State Teacher's College, at Cedar Falls.

## ADDITIONAL APPOINTMENTS—CLASS OF 1916

Anna Dewees, reference assistant, Madison (Wis.) Free Library.  
 Frances M. Hogg, cataloger, Great Falls (Mont.) Public Library.  
 C. Louise Jaggard, librarian, Presbyterian College, Emporia, Kansas.  
 Dorothy Ketcham, fellowship, University of Indiana.  
 Amy L. Meyer, librarian, Deer Lodge (Mont.) Public Library.  
 Elizabeth Ohr, assistant, Indiana Library Commission.  
 Clara E. Rolfs, member Training class for children's librarians, Cleveland Public Library.  
 Louise A. Sias, librarian, Keewatin (Minn.) Public Library.

MARY EMOGENE HAZELTINE, *Preceptor.*

## SYRACUSE UNIVERSITY LIBRARY SCHOOL

The Easter trip of the senior class, extending from April 21 to May 4, included visits to Washington, Philadelphia, New York, Brooklyn, and Newark. The class examined the methods of work in eleven libraries and also visited several art galleries and museums. In Washington Dr. Herbert Putnam and Mr. George F. Bowerman kindly explained to the students the special problems and purposes of their respective libraries.

A library institute was held on May 18 at the Syracuse Public Library. The librarian, Mr. Paul M. Paine, arranged an unusually excellent and varied program. The general subject of discussion was "Promoting the usefulness of the library." All the students of the University Library School attended both the morning and afternoon sessions and Miss Wandell, Miss Thorne, and Mr. Sperry of the school faculty gave short talks.

The members of the junior class gave a reception on Monday evening at the Gamma Phi Beta chapter house for the senior class of the Library School. The guests much enjoyed the reading of Bernard Shaw's play, "You never can tell," by students of the school, assisted by teachers from the English department of the College of Liberal Arts.

Miss Clara W. Hunt of the Brooklyn Public Library gave a series of four lectures on children's work, May 8-10, before the students of the school.

Miss Adeline Zachert of the Rochester Public Library lectured May 19 on the subject "Story telling in community work."

Miss Lutie E. Stearns gave an address on the afternoon of the same day on "The relation of the public library to the nine great problems of the day."

## ALUMNI NOTES

Aimee Peters, 1913, has been made an assistant in the library of the Smithsonian Institution, Washington, D. C.

Mildred Van Schoick, 1912, recently mar-

ried Mr. Robert L. Watson, and is to live in Columbus, Ohio.

E. E. SPERRY, *Director.*

## CARNEGIE LIBRARY OF ATLANTA—LIBRARY SCHOOL

The spring term always brings most of the out-of-town lecturers to the school. On May 1 and 2, Miss Josephine Rathbone, vice-director of the Pratt Institute School of Library Science, was the guest of the school, giving two lectures, one on modern fiction and one on reference work. On Monday the faculty entertained at luncheon in the classroom for Miss Rathbone.

Miss Charlotte Templeton, secretary of the Nebraska Public Library Commission, gave two lectures on May 10 and 11 on libraries in state institutions and the work of a library commission. The members of the class and the library staff had the pleasure of meeting Miss Templeton at luncheon in the classroom after the lecture on Wednesday, May 10.

Mr. William H. Brett, librarian of the Cleveland Public Library, visited the school on May 19 and 20. Mr. Brett lectured on the Dewey decimal classification and on the work of the Cleveland Public Library.

Miss Lutie E. Stearns made her annual visit in June, giving a lecture on June 5 and making the graduation address the next morning. The closing exercises were held at 10 o'clock in the classroom. Certificates were awarded to the eleven young women completing the course by Harrison Jones, president of the board of trustees.

On the afternoon of June 5, the annual meeting of the Graduates' Association was held in the classroom, with the president, Miss Vera Southwick, presiding. The following officers were elected for 1916-1917: President, Miss Susie Lee Crumley; vice-president, Miss Agnes Goss; secretary-treasurer, Miss Lena Holderby; member of the executive board, Miss Grace Anderson, of the class of 1916. After the formal meeting, punch was served by the students of the school, and the graduates had the pleasure of meeting Miss Stearns.

The following students have received appointments:

Sadie N. Alison, assistant, Birmingham Public Library.  
 Grace Anderson, assistant, Carnegie Library of Atlanta.  
 Harriet Boswell, assistant librarian, Carnegie Library, Paducah, Kentucky.  
 Virginia Bowman, assistant, children's department, New York Public Library.  
 Loretta Chappell, member, training class for children's librarians, Cleveland Public Library.  
 Zona Peck, librarian, Piedmont College, Demorest, Georgia.

TOMMIE DORA BARKER, *Director.*

---

## Review

---

SWEM, EARL G. A bibliography of Virginia. Part I, Containing the titles of books in the Virginia State Library which relate to Virginia and Virginians, the titles of those books written by Virginians, and of those printed in Virginia. . . . Richmond: Davis Bottom, Supt. of Public Printing. 767 p. 50c. (Bull Va. State Library. Ap.-O., 1915. Vol. 8, nos. 2-4.)

The longest-established English community in America, dating from the Jamestown settlement of 1607, with a history second to none in variety and extent and in picturesqueness of incident, having an unrivaled background of romance and tradition, battle-ground of Colonial, Revolutionary and Civil wars—with all these advantages how meagre a showing does the Old Dominion make on the shelves and in the catalogs of the average library!

Various explanations come to mind: the great Virginians, makers of history and not narrators of it; the state's manuscript treasures subject to unusual vicissitudes, making serious modern investigation most difficult; the population now, as always in the past, rural and widely scattered, with few large communities; printing presses always few in number, etc.

But it is becoming apparent that there is an accumulation of manuscript sources in the state archives and in private hands, almost unused, and a mass of printed matter, little known, issued in small editions and at out-of-the-way places.

For many years the splendid *Magazine* of the Virginia Historical Society and Pres. Tyler's *William and Mary College Quarterly* wrought almost alone and unaided; but within the last decade or so there has been a notable revival of interest in the state's historic past, and in this revival the State Library has assumed the leadership. Its work is in two lines: historic (including such publications as the notable "Journals of the House of Burgesses" 1619-1776, lists of Revolutionary soldiers from Va., etc.); and bibliographic. The latter department is in charge of the assistant librarian, Earl G. Swem, who has already prepared several notable special contributions to Virginia bibliography. He now issues the first part of "A bibliography of Virginia" to be completed in four volumes. It is issued as *Bulletin Virginia State Library* Vol. 8, nos. 2, 3 and 4 (pages 31-767).

This instalment is a simple author list of such Virginia as is now possessed by the Virginia State Library (about 7000 titles), based on the style of the familiar Library of Congress printed cards and giving, in most cases, the library call number.

Noes are few, but admirable in form and clearness, in fact the whole work shows the careful librarian.

The appendix of 22 pages contains a list of bibliographies of the state and there is a good index of nearly 100 double-column pages, giving subjects, titles, places of publication, printers, etc.

Part 2, nearly ready for publication will cover the colonial and state documents while the remainder of the work is to include Virginia not in the State Library, 10,000 to 15,000 titles as estimated. Its completion will place Virginia in that small group of commonwealths possessing a satisfactory and usable state bibliography.

C. A. FLAGG.

---

## Librarians

---

ALLEN, Mary W., Pratt 1900, who has been bibliographer of the New International Encyclopædia, has been appointed to a bibliographical position in the Rockefeller Foundation.

ANDERSON, Edwin H., director of the New York Public Library, received the honorary degree of Master of Arts from Columbia University at the commencement exercises, June 8.

AYLESWORTH, Mrs. Allison, of the 1916 winter school of the Riverside Public Library has been appointed the librarian of the Hemet Public Library, Hemet, Cal.

CARMICHAEL, E. Lois, who has been on leave of absence from the Grand Rapids Public Library service all winter, has resigned her position as librarian of the Buchanan School branch and plans to enter another line of work.

CONANT, Genevieve, N. Y. State Library School, 1913, will be one of the instructors again this year at the Chautauqua Summer Library School.

COOK, Leeson Hay, Illinois, 1915-16, has been appointed librarian of the Warrensburg (Mo.) State Normal School.

DAWS, S. O., for several years librarian of the State Law Library of Oklahoma, died in

Mangum in that state Mar. 23. He was born in De Kalb county, Missouri, Dec. 28, 1848. He served in the Confederate Army during the last year of the Civil War, and about 1870 he moved to Texas, where he lived for several years teaching school. He was one of the organizers of the Farmer's Alliance of the state, and at one time was national lecturer of the organization. In 1898 he moved with his family to Washita county, Oklahoma. In 1905 he assisted in organizing the Farmer's Union of the two territories and later during the same year founded the *Indianoma Union Signal*, a farmer's newspaper. He printed this paper at Cordell for a short time, but later moved it to Shawnee, where he published it until a short time before statehood. He was elected president of the Farmer's Union in 1905 and served until he was appointed state librarian. He served as state librarian by reappointment until 1915, when he resigned on account of ill health.

GRANT, Thirza E., N. Y. State Library School, 1915, has resigned her position as reference assistant in Oberlin College Library to join the faculty of Western Reserve Library School at Cleveland.

HAMILTON, William J., N. Y. State Library School, 1912, has resigned his position in the shelf department of the New York Public Library, to succeed C. S. Thompson as assistant librarian of the Public Library of the District of Columbia.

HEDRICK, Ellen, N. Y. State Library School, 1902-03, has resigned as cataloger at Yale University Library, to take charge of the recataloging of the University of California Library, Berkeley.

HERDMAN, Margaret M., Illinois, B.L.S., 1915, at the close of the present academic year will resign her position as assistant in charge of the Library of Philosophy, Psychology and Education at the University of Illinois, to accept the librarianship of Rockford College at Rockford, Ill.

HICKS, Frederick C., law librarian of Columbia University, had an article in the *New York Sun* of April 16, discussing the question, "Was Shakespeare a lawyer," and including a bibliography of books and magazine articles in English on the law in Shakespeare's plays and poems. The article was copied in *Case and Comment*, vol. 22, no. 12, and is now reprinted in a separate pamphlet.

HOLMES, Florence I., N. Y. State Library School, B.L.S., 1912, is cataloging temporarily at the Kingston (N. Y.) City Library.

KNEESHAW, Faye T., has been appointed assistant in the San Diego County Free Library.

LONDON, Fred, formerly on the editorial staff of the London (Ont.) *Free Press*, succeeds W. O. Carson as librarian of the London Public Library. Mr. London is a graduate of the Western University.

McLACHLAN, Rachel, is the newly appointed librarian of the public library of Beechwood, Ont. This library, established two years ago, now comprises 694 volumes.

NOLAN, Dr. Edward J., librarian of the Academy of Natural Sciences of Philadelphia, received the honorary degree of Doctor of Science from Villanova College, June 7, in recognition of the work accomplished during his connection of fifty-four years with the Academy of Natural Sciences.

PERKINS, Marsh O., librarian in Windsor, Vt., since 1908, died Feb. 10.

PRICE, Helen L., Illinois, B.L.S., 1900, has resigned her position as assistant in charge of school libraries under the Michigan State Board of Library Commissioners, to accept the librarianship of the New University High School, Oakland, California.

QUIGLEY, Margery C., N. Y. State Library School, 1915-16, will be an instructor in the University of Missouri Summer Library School.

SHAVER, Mary M., N. Y. State Library School, 1906-07, will be one of the instructors at the Chautauqua Summer Library School, July 8-August 18.

STEVENS, Mrs. Alice F., who has been a cataloger of public documents at the Library of Congress, resigned in May.

STONE, Charles H., Illinois, B.L.S., 1916, has been appointed librarian of the Oklahoma College of Agriculture and Mechanic Arts, at Stillwater.

TOPPING, Elizabeth R., N. Y. State Library School, 1909-10, has gone to the Public Library at Everett, Wash., as acting librarian.

WALKER, Kenneth C., Pratt 1914, at present head of the technical department of the New Haven Public Library, has been appointed an assistant in the technical department of the Carnegie Library at Pittsburgh.

WALLACE, Charlotte E., Pratt, 1897, head of the Yorkville branch of the New York Public Library, was married April 15 to Dwight Clark, of Pittsburgh.

# THE LIBRARY WORLD

## New England

### MAINE

*Islesboro.* At its annual meeting in March the town voted to build a library building upon a lot previously acquired, appropriated \$500 for this purpose, and voted to accept \$500 which had already been collected by private subscription and any other sum or sums that may be presented. An additional \$500 was appropriated for maintenance. Building and finance committees are now hard at work and expect to have the building completed before the year ends. Islesboro has had a free public library since 1902, but has not had a separate library building.

*Kenduskeag.* The Public Library building which was erected by Mrs. Nellie A. Rust, of Newtonville, Mass., in 1914, has been deeded to the town as a memorial to Mrs. Rust's parents. The conditions imposed are that the building shall be maintained as a library for the public, and that the W. C. T. U. shall have such use of it as shall not conflict and be inconsistent with the purpose for which it was intended and that the organization shall have the control and management of it as regards rules and regulations, including the character of all reading matter.

*Milo.* The library building was destroyed by fire on Feb. 6. The Women's Christian Temperance Union by strenuous effort had started a library and reading room in 1909 and the town had made it a free library by appropriating each year for its support four hundred dollars. At the time of the fire 400 books were out on loan and these with the insurance and gifts received will nearly make up the 2100 books the library had on its shelves. A movement is on foot to secure a Carnegie building, and its progress will be watched with interest.

*Winthrop.* On Monday, June 5, ground was broken for the new Bailey Memorial Library. School children in a long procession marched with flags flying to meet Charles M. Bailey, the donor, and escorted him to the ground near the high school, where the library is to be built. After music and a prayer, Mr. Bailey turned the first sod and made a short speech, announcing his intention of being present Oct. 1, when the building is to be completed. Oct. 24, when Mr. Bailey will be 95 years old, has been suggested as the date for dedication.

### NEW HAMPSHIRE

*Barnstead.* A new public library building is to be erected here in memory of the late Oscar Foss, by his widow. It will be of brick and stone with a slate roof. The interior will be of oak. The building will be 27 by 46 and contain a reading room, town offices and vault for town records, and it will house the large library the town owns. Work has already begun.

### VERMONT

*Colchester, Winooski.* The library has received from Mrs. Goodrich, widow of Prof. John E. Goodrich, a number of valuable books from his library; and from Troop K, 2d Cavalry, the books in the troop library numbering some 200 volumes. The Ladies' Progressive Study Club gave the library the proceeds from a recent play, amounting to \$81.

*Hyde Park.* Work has been started on the new library building.

*Johnson.* By the will of Mrs. Cornelia Holton, of Waterbury, the residue of her estate (amount to about \$400) is left to the Public Library here.

### MASSACHUSETTS

*Amherst, Mass. Agric. Coll. L.* Charles R. Green, lbn. (Report—yr. ending Nov. 30, 1915.) Accessions, 4005; total, 48,411. Home use, 9324. Receipts, \$6804.27; expenditures, \$6804.27, including \$2333.92 for books, \$1689.70 for periodicals (plus a special appropriation of \$155 for scientific periodicals), and \$1410.23 for binding.

*Athol.* After considerable discussion the plans for the new Carnegie Library, submitted by W. H. & Henry McLean Co., of Boston, have been approved, with a few minor changes, and have been forwarded to Carnegie Corporation for approval.

*Beverly Farms.* The new Beverly Farms library of marble and terra cotta brick is fast nearing completion. The grounds surrounding the structure were given to the village by Misses Louisa P. and Katherine P. Loring, of Boston. The basement of the building will provide a lecture room and electric lights set in tall, ornate bronze standards will add to the beauty of the architectural lines. It is thought that Oliver Wendell Holmes' desk, which was in the old library, will be given a special niche in the new structure.

*Boston. Mass. State L.* Charles F. D. Bel-den, lbn. (Annual report—year ending November 30, 1915.) Accessions of books were 4673, of pamphlets, 3870. Expenses (covered by state appropriations), \$36,328.34, including salaries \$15,010, books \$7100.54, binding \$1434.30, card catalog for public use \$5208.71, cataloging and indexing \$1298.77. The work of recataloging the State Library was begun on October 1, 1914, and during the year 39,898 volumes were cataloged and 36,462 cards typed and filed. The trustees recommended an appropriation of \$5000 to continue this important work, and also asked for the appointment of a trained reference director for the legislative department.

*Boston.* The proposed addition to the Public Library on Blagden street will provide for new boilers outside the main structure and give ample accommodation for the branch department and its deposit collection. There will also be room for the overflow cases of books in the corridors and basement of the central building, there being space for five stories of steel bookstacks, with room for about 450,000 volumes. The new building will conform to the general architectural style of the Blagden street front of the main building, although not identical in treatment or material. The building line is not continuous and the new structure is not, architecturally speaking, an addition to the existing building. In the basement will be the shipping department, in the rear, the new boiler room, connecting directly with a large coal storage subcellar; on the first floor, workrooms of the branch department and from the first to the fifth floor will be the stacks, opening from the corresponding stacks in the present building. On the upper floor will be the printing and binding departments. The architect is Joseph McGinniss.

*Boston.* At a meeting in the chapel of the Old South Church, in May, public support of the work of the General Theological Library at 53 Mt. Vernon street and of its free service of books to New England ministers, was urged. Gen. Francis H. Appleton, chairman of the library's board of directors, reviewed the work since the day of its foundation in 1862. Rev. Alexander Mann gave details of the work. "There are about 6000 ministers in the various Protestant communions of New England," he said, "and of that number 2006 last year used the library, about 30,000 books being sent out, most of them to little towns and villages far away from the life of the great cities. It costs the ministers nothing

more than a postcard, and the books are sent and returned free of charge of the recipients." The library has a valuable collection of books, and its reading room has an average attendance of something like 100 readers a day. The library has a modest endowment of something like \$22,000, the income of which can be used only for the purchase of books, and it is hoped that \$150,000 may be forthcoming to build on the rear lot a two-story brick building, which would be fireproof, for the storing of books on the first floor and for a reading room on the second.

*Boston.* Work will be pushed during the summer on the new library of the Boston University Law School, which will be constructed at a cost of \$50,000 from a fund of which one-half will be given by alumni and friends of the school and an equal amount by the trustees of the university. The new library will mean the addition of another story to the present school building on Ashburton place and plans for it have already been drawn by Kilham & Hopkins, architects. The present library now occupies part of the second floor on the Ashburton place front of the building, but it has always been badly lighted and poorly ventilated and has never accommodated the entire student body. The new library will consist of an entirely new fifth floor, starting 10 feet back from the façade and running the entire depth of the building to the rear wall. The setback of 10 feet from the Ashburton place front has been planned so that the proportions of the present beautiful Grecian façade may be preserved. It will also provide an outdoor terrace where reading and studying may be pursued in hot weather. The new library will be exceptionally well lighted, as it will have windows on all four sides in addition to numerous skylights.

*Boston Athenæum.* Charles Knowles Bolton, lbn. (Annual report—year ending December 31, 1915.) Accessions, 3640; withdrawals, 36; total, 264,531. Circulation, 36,621. Shares held by trustees and proprietors, 795; receipts from assessments and fines, \$6789.70. Expenses, \$11,834.82, covering books, periodicals, newspapers, binding and expenses of repairing department. In 1915, 657 photographs, engravings and maps (including 312 gifts) were placed in the library. Through privileges granted by the proprietors, the total of non-proprietors using the library in 1915 was 661. The home of the Athenæum has been enlarged from three to five floors, modernized and made fireproof. Several new

features have been added, such as a separate room for children, rest rooms, and space for a roof-garden on the fifth floor, while greater opportunity for art exhibitions is offered on the second floor. Many interesting gifts have been received. A remarkable collection of old valentines which illustrate by picture and poetry, British manners and customs in costume and sentiment, of more than half a century ago, was purchased; a bibliography of books and articles relating to George Washington and Mount Vernon, comprising 5000 cards, was completed at the expense of the Mount Vernon Ladies' Association of the Union; and a card catalog already including some thousands of examples has been prepared of such heraldic devices as have been used within the present boundaries of the United States from the earliest times.

*Brookline P. L.* Louisa M. Hooper, lbn. (59th annual report—year ending December 31, 1915.) Accessions, 4182; lost or withdrawn, 907; total, 89,663. Circulation, 230,913. New registration, 2425; total, 11,207. Receipts, \$35,348.74; expenses, \$34,553.47, including salaries \$20,575.61, books and maps \$4676.96, binding \$847.26, music and pictures \$231.26, periodicals \$908.44.

The branch at Coolidge Corner was moved in December to new and larger quarters, made necessary by the increased use of the branch.

*Granby.* After first refusing to accept the offer, Granby voters at a special meeting, May 10, decided to go ahead and accept \$5000 from the Carnegie Corporation for a library building.

*Northampton.* An appropriation of \$25,000 has been made by the city council for the long-needed steel stacks in the Forbes Library.

*Worcester.* These items from the 56th annual report of the Public Library may interest other librarians. The one-cent fine system is successfully operating in the children's department, but the library would like to dispense with fines altogether. "Community rooms" established in basements of all three branch libraries have proved very useful for story-telling, club meetings, and other kinds of library extension work. A rental of \$3 per evening is charged for political gatherings. "Library classes" from high and grammar schools were managed regularly and successfully during the year. Per capita circulation was 4.2; 27 volumes per card-holder. The total circulation amounted to 687,087 volumes, with 227,843 books in stock. The municipal appropriation was \$60,500; the total receipts, \$74,752.22. Expenditures: books, \$13,156.11;

periodicals, \$1771.55; binding, \$4672.40; administration, \$39,980.20.

#### RHODE ISLAND

*Cranston.* Under the will of William H. Hall, of Edgewood, the residue of his \$1,000,000 estate, after certain other public bequests have been paid, is left to establish a free public library in Edgewood, a suburb of this city. The library is to be known as the William H. Hall Free Library. An interesting point will probably be raised when the question is asked whether the present Edgewood Library Association may claim the bequest for the library by becoming the William H. Hall Library. The library bequest, however, with the others, does not become operative until after the death of Mrs. Hall, with whom the whole estate is placed in trust during her lifetime.

#### CONNECTICUT

*Unionville.* Work on the foundation for the new Carnegie Library was started in May.

*Waterbury.* A petition, containing over 600 names, has been circulated in the east end of the city requesting the board of directors of the Bronson Library to establish a branch here. This will be presented to the board at the first opportunity. The argument is made that in the past two years, owing to the manufacturing in this part of the city, the population has more than doubled and that persons wanting to use a library cannot do so as the central library is too far away.

### Middle Atlantic

#### NEW YORK

*Altamont.* Through the efforts of the Colony Club a Free Library Association has been formed here, with an enrollment of 72. The club has given \$100, the Misses Wasson, \$100 and approximately another \$100 has been subscribed. Rooms have been rented and the library will be opened as soon as possible.

*Arlington.* When the Arlington Reformed Church was built a year ago, a special gift was made providing for a room to be used for library purposes. The library was opened on Wednesday, May 10, and is open every Wednesday and Sunday afternoon and Saturday evening. Over one hundred books have already been contributed and one hundred dollars' worth ordered besides a considerable number of current periodicals. Miss Amy Louise Reed, Vassar College librarian, will have full charge of the ordering of books and volunteers from the college and residents

of Arlington will be on duty during the hours the room is open.

*Auburn.* A valuable medical and surgical library of 500 volumes left to the Seymour Library by a former trustee, Dr. William S. Cheesman, has recently been classified and cataloged. It has proved surprisingly helpful not only to the medical profession but to the laity as well, being much consulted by nurses, mothers and others. The publication of a list of "Books for business men" has stimulated the already large demand for books on efficiency, salesmanship, advertising, etc. The list was mailed to members of the Chamber of Commerce, Rotary Club and Ad Club. The formation of a lending collection of sheet music and a file of mounted pictures are among the new activities of the library.

*Binghamton P. L.* William F. Seward, lbn. (Annual report—year ending December 31, 1915.) Accessions, 3441; lost or withdrawn, 1041; total, 38,995. Circulation, 197,956. New registration, 2421; total, 16,350. Receipts, \$13,647.41; expenses, \$13,205.65, including salaries \$6666.45, books \$3406.54, binding \$743.44, periodicals \$433.92. In the young people's department the issue of books from the children's desk was 45,116, an increase over the preceding year of 4158. The school libraries reported a circulation of 12,594, of which 6168 were non-fiction. The sub-stations and traveling library collections reported a circulation of 13,004, an increase of 1711 over 1914. The newspapers printed 96 volumes of library news, book reviews by members of the staff, etc., and in talks to clubs and schools about 4000 people were informed about the opportunities offered by the library.

*New York City.* The Appellate Division decided, May 19, that the New York Public Library is entitled to receive the \$100,000 willed by James Hood Wright to the Washington Heights Library. Mr. Wright died in 1894, but the bequest did not become payable until recently, when the decedent's sister, Elizabeth J. Wright, died. The Knickerbocker Hospital, formerly the J. Hood Wright Hospital, which was residuary legatee under the will, claimed the bequest on the ground that since Mr. Wright's death the Washington Heights Library has been absorbed by the New York Public Library, but the Court holds that the Washington Heights branch of the Public Library, at 160th street and St. Nicholas avenue, fulfills the terms of the bequest.

*New York City.* In an article entitled "War sends puzzled chemists to Public Library,"

the magazine section of the *New York Times* of June 11 describes some phases of the work of the technology division. According to this article, books and technical papers relating to the manufacture of explosives have been put under lock and key on account of the widespread activities of plotters, and certain works on these subjects are accessible only to those who can present credentials that will satisfy William B. Gamble, chief of the division, that they have no sinister designs which might involve this government in a breach of neutrality. This precautionary measure was adopted when members of the library staff were convinced by pictures in the newspapers that plotters who have fallen foul of the law had actually made use of the library in working out their plans.

*Seneca Falls.* All contracts for the construction of the new Mynderse Library building have been let. They aggregate about \$11,000, exclusive of interior fittings and furniture. It is expected to have the building finished in the fall.

#### NEW JERSEY

*Elizabeth F. L.* Charles A. George, lbn. (7th annual report—year ending December 1, 1915.) Accessions (net), 6073; withdrawn, destroyed and unaccounted for, 715; total, 49,848 (with government documents, 54,908). Circulation, 238,057; increase, 18,130. New registration, 1000; total, 12,219. Receipts, \$26,158.01; expenses, \$22,757.02, including \$13,625.14 for salaries, \$4058.14 for books, \$312.95 for periodicals, \$1087.36 for binding. Nearly 5000 additions were made to the loan print department, and during the year the circulation of mounted prints was 7357, double that of 1914.

*Verona.* The transfer of the Free Public Library from its present quarters in the public school to the Borough Hall will be made about August 1. If the trustees carry out their present intention to locate the proposed new \$11,000 Carnegie Library their act will mean the first step in the establishment of a civic center in the community. An option has been secured on a piece of property at the corner of Bloomfield and Montrose Avenues, which the trustees expect to purchase for about \$2500. It is expected that the future will witness the erection nearby of a municipal building, a schoolhouse and a firehouse.

#### PENNSYLVANIA

*Braddock.* Carnegie F. L. George H. Lamb, lbn. (27th annual report—year ending December 31, 1915.) Accessions, 8134; with-

drawn, 4986; total, 66,652. Circulation, 383,218. New registration, 3663; total, 15,556. Receipts, \$26,331.44; expenses, \$22,137.12, including staff salaries \$9576, books \$3107.25, binding \$1548.89; periodicals \$806.97.

A column of "Library notes" was started in one of the local papers, and amounted in the year to 997 inches in length. Other notices of library activities made a total of 2740 inches of publicity given the library by this one paper. The lesson outlines for instruction to high school classes in use of the libraries were issued in pamphlet form in the fall for the first time. The report contains a study of the Bureau of Education library bulletin (no. 25, 1915), as it forms a basis of comparison between this and other public libraries in the United States.

*Chambersburg.* By a unanimous vote, May 26, the city council accepted the terms of the will of Mrs. Blanche Coyle, late of this city, and will receive a legacy of \$25,000 or more to establish a free library. The town will appropriate \$1000 a year, and the school board \$500 to maintain the library, which will be known as the Coyle Free Library. When the question was up in council before, a tie vote kept the ordinance from passing. A postal card vote was taken among the taxpayers and the vote was 6½ to 1 in favor of accepting the terms of the will. Council bowed to the will of the people and voted accordingly.

*Philadelphia.* The *Public Ledger*, for June 6, shows the Parkway elevation of the new Free Library building upon which work will be started this summer. Remodeled to meet the changed conditions of the site, in its outward appearance it follows very closely the famous Ministry of Marine in Paris. It will be 385 x 219 feet, covering about two acres.

*Pottsville.* After securing a Carnegie appropriation of \$45,000 for a library building, and the offer of a site from a public-spirited Pottsville family, it looks as if the last state of the Public Library were to be worse than the first. Not only have the authorities refused to vote the increased appropriation necessary to secure the Carnegie grant, but on a technicality have held up the regular appropriation for the coming year. The reason given is that clause in the Pennsylvania constitution which prohibits the appropriating of public money for a private corporation, and the Pottsville Library Association is a private corporation, though administered for public purposes, with only *ex-officio* members from

the school board. Whether the organization of the library will be changed or the matter taken into the courts for decision, is not yet decided.

#### MARYLAND

*Baltimore.* Enoch Pratt F. L. Bernard C. Steiner, lbn. (30th annual report—year ending Dec. 31, 1915.) Accessions, 20,194; lost or withdrawn, 7959; total, 334,366; circulation, 696,111. New registration, 2032; total, 44,929. Expenses, \$101,650.26, including salaries, \$55,361.63, books \$16,178.46, binding \$4538.56, periodicals \$2465.95, covered by a civic appropriation of \$50,000, miscellaneous receipts, fines, etc., amounting to \$3109.52, and the income from an endowment fund. The library system, administered by 125 officers and employes, consists of a central library building, 15 branches and two delivery stations. In addition, books are sent to 55 institutions, and, by an arrangement with the Maryland Public Library Commission, to 17 blind persons outside of the city.

### The South

#### SOUTH CAROLINA

*Charleston.* The board of trustees of the Charleston Library Society has been vested with the power to make a canvass in order to discharge the indebtedness of the society. It is probable that direct appeal to the Charleston public will be made. The amount to be raised is about \$18,000, which with \$5000 promised by Andrew Carnegie, would leave the organization free of debt.

#### GEORGIA

*Macon.* A committee from the Macon Woman's Club has filed a petition with the city authorities asking the city to take steps for the establishment of a larger and better library in this city. Mrs. E. W. Bellamy has offered to give a big lot at the corner of College street and Washington avenue as a site for the new library building.

#### FLORIDA

*Clearwater.* Bids have been received for the construction of the Carnegie Library building, but the contract has not yet been awarded.

#### TENNESSEE

*Chattanooga P. L.* Margaret Stewart Dunlap, lbn. (11th annual report—year ending September 30, 1915.) Accessions (net), 3896; lost or withdrawn, 552; total, 37,455. Circulation, 131,288. New registration, 2436; total, 15,559. Receipts, \$15,627.12; expenses, \$14,754.97, including staff salaries \$6015.60, books

\$3399.24, binding \$722.25, periodicals \$360. The library maintains six county branches and one rented branch.

*Knoxville.* The City of Knoxville has received notice that Carnegie Corporation will build a \$10,000 library for the Knoxville negroes. The city will maintain the library.

*Nashville.* A movement to secure a branch library for East Nashville has been started, and application made to Carnegie Corporation for an appropriation of \$25,000 for the building.

#### ARKANSAS

*Little Rock.* To discuss plans for obtaining money to purchase a site for the proposed negro library, a mass meeting of negroes was held, in May, under the auspices of the Little Rock Commercial League, a negro organization. A proposal for the establishment of the library is under consideration by a subcommittee of the finance committee of the city council and the library board. Under the plan the negroes would donate a site acceptable to the city.

### The Central West

#### OHIO

*Chillicothe P. L.* Burton E. Stevenson, lbn. (Annual report—year ending December 31, 1915.) Accessions, 2623. Circulation, 84,726. Receipts, \$4380.35; expenses, \$5134.21; deficit, \$753.86. Salaries amount to \$2443.65; books, \$962.58; binding, \$159.29; periodicals, \$150.10. There has been an extraordinary increase in the library's activities. A fourth branch library was opened in the fall at Frankfort, and a fifth at Clarksburg. In addition 695 residents of the county hold library cards. The work of the library, however, is greatly cramped, owing to lack of funds. One feature of the library's service which has done a great deal to solve the book problem is the rental fiction list. Eight years ago there was no money in the book fund and no possibility that there would be any for many months. In desperation the librarian secured an appropriation of \$10 to purchase ten new novels to be circulated at a charge of two cents a day. That was the last appropriation ever needed, for the success of this list from the start was astonishing. To-day it provides the funds for all the current fiction bought by the library, and it has added over three thousand books to the shelves. Last year \$324.84 was taken in and 403 novels which had passed through

the rental list were placed on the shelves for regular issue. The total of circulation of rental books for 1915 was 4103.

*Cincinnati. Univ. of Cin. L.* Charles Albert Read, lbn. (Summary report—1906-14.) The increase in the number of volumes for the period was 21,184, making a total of 64,265 accessioned. The inclusion in the statistics of a number of special collections not yet accessioned brings the total number of volumes up to 71,428. The yearly circulation increased from 18,625 to 38,064 in the same time. "Much has been done in the way of arranging and listing the private collections owned by the library. Since 1906, the Brühl library has been cataloged, and check lists have been made for the library of the American Association for the Advancement of Science, the library of Dr. Seely, and the Engineers' Club library. A careful inventory has been made of the entire stack, and the publications of the university, formerly stored in the basement in a most chaotic condition, have been arranged and counted. A collection known as the U. C. collection has been formed, which includes official publications of the university, student magazines and papers, theses presented for degrees, publications of the alumni and faculty, a file of programs and other memorabilia dating back to 1878, and a file of newspaper clippings relating to university affairs. The duplicate books have been arranged alphabetically, and will soon be listed and offered in exchange for volumes from other libraries. The catalogs of other universities and colleges have been so disposed that they can now be consulted without much difficulty, and the periodicals have been rearranged, according to subjects, in the periodical room, where a list has been posted of all the periodicals received by the University Library. A lecture on the use of the library and other sources of bibliographical information is now given each year by the librarian to all freshmen taking English I. This is followed by individual conferences with the librarian, which will later be supplemented by a series of questions now in the process of compilation."

*Cleveland.* In a little folder entitled "Some things the Cleveland Public Library did last year," the following information culled from the annual report is presented: "During 1915, the Cleveland Public Library conducted its work through 606 distributing agencies in addition to the Main Library. It inventoried 542,992 volumes, and was custodian for 64,000 other volumes, making a total of over 620,000 volumes, having added 57,642 volumes.

It lent 3,173,783 books for home use, or 4.96+ books per capita, estimating the population at 639,431 (government figure of July, 1914). It registered 37,521 borrowers, making a total registration of 171,610, including 64,607 children, and served 1,942,339 persons visiting the library for reading, reference or study. It supplied rooms for over 500 meetings of clubs and other organizations at the Main Library alone, and for many more at the 12 larger branches having club rooms. It conducted free library lecture and concert courses at four of the larger branches having auditoriums, besides opening these auditoriums for the use of outside agencies. It lent 3893 embossed books for the blind, 241,292 books in 21 foreign languages, and 1,392,482 books to children, or thirteen times as many books as there are children in Cleveland of the reading age. It maintained 28 home library clubs for the distribution of books in neighborhoods not reached by branches. It held story hours for children at 26 branches and also in schools, institutions, playgrounds, vacation schools and settlements. It conducted, with volunteer aid, 63 reading and debating clubs for children and young people in the club rooms of 16 branches. It circulated 121,567 books to factories, telephone offices, department stores, clubs, engine houses, churches and charitable institutions through 45 deposit stations and 65 delivery stations.

*Youngstown.* A branch of the Public Library has been established in the foreign department of the Dollar Savings & Trust Company for the particular convenience of the foreign speaking peoples of the city. Besides furnishing them with good reading, a second purpose is that of Americanization. There are books in six languages thus far—Hungarian, German, Italian, Croatian, Serbian and English. Additions will be made from time to time. For the present the library will be open only on Saturdays, from eight to eight.

#### ILLINOIS

*Sheldon.* The contract for the new library building has been let and work is well under way.

*Urbana.* President James, of the University of Illinois, has presented to the University Library a fourteenth century illuminated manuscript containing Latin translations of several works in the Aristotelian corpus; and also a copy of Aristotle's Ethics translated into Latin by Aretino and printed in 1474(?).

#### INDIANA

*Bloomington.* The city council has made a permanent appropriation of \$3100 a year to maintain a Carnegie library to cost \$31,000. Site for same has already been purchased, and work will begin at once.

*Pierceton.* This town has received a \$10,000 appropriation from the Carnegie Corporation for a library building.

*South Bend.* Hundreds of people attended the informal opening of the new Carnegie Library, on the corner of First and Hill streets, Friday evening, May 5. The building is of old English type of architecture, built of oriental brick with terra cotta trimmings and Queen Anne windows. The main floor is one room, divided by low partitions into the adult reading room, librarian's office and children's reading room. A room at the north end of the basement will serve as a meeting place for all civic and social organizations. The entire building is finished and furnished in fumed oak.

*Warsaw.* Plans have been completed and work started on the new public library building to be erected in Warsaw this year. A \$15,000 appropriation has been received from the Carnegie Corporation.

### The Northwest

#### MINNESOTA

*Duluth P. L.* Frances E. Earhart, lbn. (26th annual report—year ending December 31, 1915.) Accessions (net), 3917; lost or withdrawn, 4303; total, 67,623. Circulation, 269,429. New registration, 7343; total, 22,063. Receipts, \$29,060.97; expenses, \$28,847.06, including salaries for staff \$10,581.36, and for janitors \$2684.06, books \$3853.32, binding \$1319, periodicals \$675. A collection of stereoscopic views was of popular appeal in one of the branches, 26,777 views being borrowed in five months. Besides the two regular branches, 17 deposit stations (15 in school buildings) were maintained, and 16 other distributing agencies. The new Harriet Beecher Stowe school building in New Duluth made special provision for a library room in the plans of the building.

*St. Paul.* A collection of fifty Babylonian tablets, formerly belonging to the Rev. John Wright, has been presented to the library by Miss Anne Carpenter.

*St. Paul.* During April the Public Library installed a collection of books relating to building construction and allied subjects in the offices of the Builders' Exchange, the membership of which is 261. It is planned to replace the collection monthly by more recent accessions, and keep with it an up-to-date list of all books of interest to builders. A public delivery station has been opened in the Church Club, Portland avenue and Dale street.

## IOWA

*Burlington F. P. L.* Miriam B. Wharton, lbn. (29th annual report—year ending December 31, 1915.) Accessions, 2893; lost or withdrawn, 1054; total, 39,278. Circulation, 113,336; 58 per cent. fiction. New registration, 1557; total, 7254. Receipts, \$9792.16; expenses, \$9646.46, including staff salaries \$3841.82, books \$2536.78, binding \$292.29, periodicals \$204.30. The library controlled 20 collections of books in nine school buildings with a circulation among the children in 1915 of 12,847. Library stations were maintained in six other school buildings with a circulation of 14,949 volumes. A new branch library was opened at Mediapolis in October. Gifts to the library included a collection of paintings—copies of old masters—presented by Mrs. G. C. Lauman, widow of a former president of the library board; and the medical library of his father, given by Dr. H. B. Young.

*Clinton F. L.* Anna M. Tarr, lbn. (11th annual report—year ending December 31, 1915.) Accessions, 2597; lost or withdrawn, 826; total, 21,715. Circulation, 98,458. New registration, 980; total, 19,473; population, 26,091. Receipts, \$14,907.76; expenses, \$8840.06, including: salaries, staff, \$3535.03; janitor, \$760; books, \$2266.38; binding, \$372.87; periodicals, \$220.45. Three stations, the first the library has maintained, were opened in stores during 1915, and more will be started this year.

## NORTH DAKOTA

*Bismarck.* At a meeting of the board of directors of the Public Library, May 24, lots east of the city, now city property, were selected as the site for the new library building.

## MONTANA

*Missoula P. L.* Grace M. Stoddard, lbn. (Report—year ending May 1, 1916.) Circulation, 51,326; per cent. of fiction, 74. New registration, 686; total, 5399. Accessions, 988; total, 17,456. Receipts, 10,036.02; expenditures, \$7162.72, including salaries of librarian and

assistants, \$2903.50; books, \$1345.26; periodicals, \$231.45, and binding, \$291.83.

Missoula county is in the midst of a campaign for a county library, petitions being circulated by the Women's Clubs of the county. These petitions ask the county commissioners to enter into contract with the Missoula Public Library, so that it may serve the whole county through branch libraries, deposit stations, and traveling libraries. No difficulty is found in getting the support of the county people and in a few weeks the matter will come before the county commissioners, who are free to reject the proposition if they are so inclined.

## WYOMING

*Laramie.* The new library proposed for the University of Wyoming came one step nearer realization June 7, when the board of trustees authorized the secretary to advertise an architects' competition for plans for the building, the plans to be submitted at the meeting of the board in December. The cost of the building planned is limited to \$100,000. Though plans are sought for the building, it is quite probable that it cannot be erected immediately. The board also approved the plan of placing a mezzanine floor in the stack room of the present library to provide additional reading room. This floor will be over the present stacks, and will make a considerable addition to the space which may be utilized by the students.

## The Southwest

## MISSOURI

*Columbia.* The addresses made at the opening of the new library building at the University of Wisconsin, Jan. 6, have been edited by the librarian, H. O. Severance, and printed in the university *Bulletin* for May. Numerous views of the library and portraits of the speakers illustrate the number.

*Excelsior Springs.* The corner stone of the new Carnegie Library was laid May 26. Lodges of the city attended in bodies. The new library is to cost about \$10,000.

*Shelbina.* In response to numerous petitions from the voters, the city council has decided to put the matter of setting aside a portion of the city revenue for the support of a Carnegie Library, to a popular vote. It is the purpose of those pushing the matter to see if a city hall and community building can be combined with the library.

## KANSAS

*Hutchinson.* The public library board has awarded the contract for an addition to the library building, practically doubling its capacity, and representing a cost of \$20,000.

## TEXAS

*Galveston.* An addition is to be made to the Rosenberg Library. Two lots adjoining the library property on the north side of Avenue I have been purchased by the board of directors for \$15,000. The lots were bought as a site for the proposed improvements. What the addition will consist of has not been determined, according to members of the board. One suggestion is that a large auditorium be built adjoining the building now standing at the rear, and that the present auditorium be converted for use of the library proper. The library now has approximately 60,000 volumes and about 30,000 periodicals.

## The Pacific Coast

## OREGON

*Astoria.* Mrs. F. R. Strong and Mrs. George Taylor, of Portland, daughters of the late Colonel James Taylor, have offered a part of the old Taylor homestead in this city as a free site for a public library. This offer has been tendered to the Astoria library board on condition that the county erect the required buildings here, as well as one at Seaside, and also provide funds for the maintenance of the institutions. The plan includes the establishment of branch libraries at various points in the county. The matter has been taken up with the County Court, and that body probably will provide for the necessary funds in compiling its budget for next year.

## CALIFORNIA

*Berkeley P. L.* C. B. Joeckel, lbn. (Report—year ending June 30, 1915.) Accessions, 5379; lost or withdrawn, 1510; total, 55,188. Circulation, 296,362. Registration, 8711. Receipts, \$39,736.90; expenses, \$29,950.93, including staff salaries \$12,930.05, books \$6767.53, binding \$1800.75, periodicals and newspapers \$1217.83.

Under a revision of the registration rules, the signature of a guarantor is no longer required on an application blank, verification of the address given being sufficient. Vacation privileges have been made more liberal, and Sunday opening was begun at four branches. Two duplicate catalogs were discontinued, and

call numbers henceforth will be omitted from fiction.

*Berkeley. Univ. of Cal. L.* J. C. Rowell, lbn. (Report—year ending June 30, 1915.) Accessions, 23,038; withdrawn, 114; total, 304,662. The library made 189 loans to other libraries (387 volumes), and borrowed 74 times (170 volumes). The reclassification and recataloging of the library was continued, but the appropriation for the work each year is insufficient to enable the library to make any real headway, when the relative number of accessions and of books recataloged is considered. The report discusses the policy to be pursued, and recommends a considerably increased expenditure so as to finish the work while the collection is still relatively small. If the present staff were quadrupled, the work would be completed in twelve years. During the year an author card was inserted in the public catalog for every book in a departmental library outside of Berkeley, except that of Lick Observatory, not duplicated by a book in the general library or in a campus department. This covers the Medical School, the College of Dentistry, Hooper Foundation, the Citrus Experiment Station, the University Farm at Davis and the Department of Anthropology. Heretofore these libraries had been represented in the general library only by shelf-lists, not in all cases complete. A card for each title represented in the new dictionary catalog is furnished at cost to the California State Library, for insertion in its union catalog of California libraries. Circulation statistics, including day, home, and overnight use, totalled 251,031, and the record of the loan desk reserve collection shows additional circulation of 99,990. Research inquiries to the number of 15,526 were handled by the reference department. The system of issuing books for vacation use installed in 1913-14 proved satisfactory and was continued. On September 1, 1914, the library formally took over the handling of exchanges from the University Press, and 1231 institutions have been placed on the list. A systematic effort was made to extend the field of exchange activities in South and Central America, China and Japan. Unusually heavy losses from the open shelves and the frequent mutilation of periodicals necessitated the removal of a considerable number of volumes and files of periodicals to the stacks.

*Burlingame.* The final payment on the library site has been made, and a request for aid in erecting a suitable building will soon be sent to the Carnegie Corporation.

*Martinez.* The contract for the erection of a \$2550 Carnegie Library, at Walnut Creek, has been awarded by the county supervisors to C. R. Hook of that town.

*Oakdale.* An appropriation of \$7000 has been made by Carnegie Corporation for a library building for Stanislaus county, the building to be located in Oakdale.

*Yolo.* The prize of \$100, which was won by Wilson Scarlett of Yolo County for the best decorated out-of-town automobile in the causeway floral parade, at Sacramento, will be donated to the library fund for the town of Yolo.

## Canada

### ALBERTA

*Calgary P. L.* Alexander Calhoun, lbn. (5th annual report—year ending December 31, 1915.) Accessions, 2464; missing, 293; lost or withdrawn, 1143; total, 25,977. Circulation, 239,123. New registration, 3371; total, 15,230. Receipts, \$22,045.76; expenses, \$20,292.33, including salaries \$11,308.73, books and binding \$1665.36, periodicals \$414.14. The population shrank from 75,000 (1914) to 67,000 (1915), owing to the war and enlistment. While there was a marked falling off in re-registration and in the circulation of fiction, non-fiction showed a total increase of 3932 over 1914; reflecting a more serious mood among citizens and emphasizing the educational influence of the library.

## Newfoundland

At a meeting of the board of directors of the Grenfell Association in New York City in May, it was voted, after some discussion, to postpone the development of library work in the southern portion of the island until the whole question can be taken up with the government. Preliminary steps have been taken in New York that it is hoped may eventually lead to the erection of a suitable building for library headquarters.

## Foreign

### GREAT BRITAIN

*Edinburgh.* The report of the librarian of the Edinburgh Public Library calls attention to the demand in 1915 for books that dealt with what would be new trades in this country if they were established after the war. So great was the demand for this class of technical

books that older editions had to be replaced to bring the subjects up to date. Two men, said the librarian, had come requesting books dealing with farina mills, and he was rather surprised to find two men in that district interested in starch (used in papermaking). It appeared that while all the machinery for starch mills came from America and none from Germany, most of the starch used in this country for manufacturing purposes was of Teutonic origin. Books on several other branches of trade were also in demand.

*London.* The Hon. John William Fortescue, librarian at Windsor Castle, has been appointed by the government to write the official history of the war. He has been librarian at Windsor Castle since 1905, and is the author, among other publications, of "History of the British Army, 1899-1915."

*Manchester.* In the January-March number of the *Bulletin* of the John Rylands Library a short survey of the work of the library during 1915 is given. At the beginning of the year a decline in the library's activities was feared because of the war, but instead the governors have sought to "carry on" along all lines already established and to open new avenues of service wherever possible. As a result there has been not only no decline in the number of readers, but an actual increase. Obviously there have been fewer male readers, but the increasing number of women who have used the library has at times produced considerable congestion in the reading rooms. This, together with the overcrowded condition of the bookshelves, will be relieved with the completion of the new building in the course of six or eight months. As a result of the library's efforts to commence reconstruction of the library of the University of Louvain, about 6000 volumes have already been received or definitely promised. Since this appeal was first made, a movement has been started to organize an international committee for the restoration of the library. The John Rylands Library added to its own collections during the year 3060 volumes, 2670 by purchase and 390 by gift.

### HOLLAND

*Amsterdam. University L.* Dr. C. P. Burgers, lbn. (Report—1915.) Statistics show that visitors to the library, including those who used the Bibliotheca Rosenthaliana, numbered 97,000 this year, as compared to 74,600 for the year preceding. The number of books consulted also increased from 204,200 to 242,600, and the books in circulation from 23,700

to 26,600. Twenty-five hundred manuscripts and 532 maps were consulted.

#### FRANCE

"The ministerial order issued some little time ago by M. Painlevé, the French minister of education, affecting a reorganization of school libraries, is as interesting as it is undoubtedly important," says the *Boston Christian Science Monitor*. "By this new ministerial order every public school is obliged to have a library, though two or three schools belonging to the same commune, or to a neighboring commune, may join together in forming one. The libraries are to be open to the students, to former pupils, to their parents, and to members of the school associations."

#### SPAIN

*Valladolid*. An item in the *New York Staats-Zeitung* of June 4 states that on April 23, at the tercentenary of the death of the poet Cervantes, his home at Valladolid, previously purchased by the Spanish government, was fitted out as a Cervantes museum, and it is proposed to collect there as complete a library of Cervantes literature as possible. The Spanish Infanta, wife of Prince Ludwig Ferdinand of Bavaria, has always claimed the warmest relations between Germany and her native land, and at her suggestion Cervantes literature originating in Germany, from the seventeenth century to our day, is to be collected and presented to this museum.

#### ARGENTINA

A library of 10,000 volumes, devoted exclusively to the United States, the gift of the Carnegie Endowment for International Peace to the Museo Social Argentino of Buenos Aires, was shipped at New York, May 13, on the steamship *Voltaire*. The collection is said to be the most complete of its kind ever assembled. The gift is designed, according to the official document which will transfer it legally to the Argentine institution, "to serve as a symbol of good will and as a permanent interpretation of the thought, feelings and activities of the people of the United States in the capital of our great sister republic of Argentina." Dr. Peter H. Goldsmith, of the American Association for International Conciliation, who assembled the collection, has been charged with its delivery and installation in a hall set apart for it in the Museo Social Argentino. The opening and presentation of the library will take place July 4. The idea

of sending a library of this character to Buenos Aires is said to have been suggested by the announcement that Argentina might deposit with some institution in the United States the library of 5000 volumes of Argentina books which formed part of the educational exhibit of that republic at the Panama-Pacific Exposition.

#### SOUTH AUSTRALIA

*Adelaide P. L. H. Rutherford Purnell*, lbn., (Rpt.—yr. ending Je. 30, 1915.) Accessions 8051; total 92,548, exclusive of duplicates of Australian books, and the 978 volumes in the children's room opened in February, 1915. This latter is believed to be a new departure in Australian library work. The room was opened three days a week, including Sundays, and while the average weekday attendance was 26, it rose to 62 on Sundays. The war considerably affected the work of the library, and for several months book purchases were suspended. The reclassification of the library on the Dewey decimal system was continued, and the arrangement of the 7000 United States government documents, transferred from the Parliamentary Library, was completed. The installation of electric lights in place of gas was begun, and proved a great convenience. In November, 1914, the periodicals room was opened to the public, and in February the catalog was brought up to date and made accessible to readers in the main hall. Use of the library was the largest on record, 107,590 adults and 2319 children attending.

#### CHINA

The ministry of education is contemplating the enlargement of the Pekin Library by adding to it from time to time all the newly published books. According to the publication laws of foreign countries it is required that a specimen copy of every new publication which is to be registered has to be presented to the national library. As this procedure was adopted by Japan after the establishment of the Imperial Library and has produced satisfactory results, the ministry of education has decided that it should be followed in this country, says the *National Review* of Shanghai, and, consequently, has memorialized the president requesting that the ministry of the interior be instructed to order all publishers and authors who wish to register their publications in accordance with the publication law to present Pekin Library with a complimentary copy so as to enrich the national treasury of letters.

ADVERTISING. See Application blanks

## APPLICATION BLANKS

An Indiana library is advertising itself and at the same time increasing the number of borrowers by inserting in one of the daily papers an application blank which, when properly filled out, can be taken to the library and exchanged for a borrower's card.

BIOGRAPHY. See Smith, Lloyd Pearsall

BOOK BUYING. See Book selection

## BOOK COVERS

A book cover protector is described and illustrated in the *Official Gazette* of the United States Patent Office for May 23, 1916 (Vol. 226, p. 1135). Ten claims are allowed for this device.

## BOOK LOSSES

The 1914-15 annual inventory of the University of California Library showed 53 volumes missing from the stack as against 199 volumes the preceding year.

"The improvement is due in part," says the 1914-15 report of the librarian, "to the new plan by which a small section of the stack is checked each day for misplaced books; the stack is covered in this manner about six times a year in addition to the complete checking of the annual inventory, now taken in vacation rather than continuously throughout the year. Another reason for the improvement is probably the letter sent last February, with the approval of the library committee, to every member of the faculty and to every holder of a stack permit, regarding these losses. Four hundred and eighty-three letters were mailed, to which 363 replies were received. None of the missing books were recovered directly, but the reminder probably resulted in a more careful regard for the rules governing the use of the stack and the removal of books therefrom. Losses from the stack might be further reduced and the charging of books by those having stack privileges facilitated by placing on duty at the entrance an attendant who would see all persons entering or leaving the stack, visé all permits, charge all books which readers in the stack might wish to take out, look after readers using restricted material at the tables in the

rear of the loan desk, and handle all of the varied business arising within the stack, the intrusion of which on the regular loan desk attendants at busy times causes confusion and delay. To be effective this system of supervision should be in operation whenever the library is open. To cover our daily schedule of fourteen hours, two additional attendants would be required."

## BOOK SELECTION

"Another small thing that indicates the interest shown by the reading public and is a great help to the library staff," writes George E. Nutting in the 1915 report of the Fitchburg (Mass.) Public Library, "is the 'request' book that has been on the delivery desk ever since the library was opened. There were 60 requests this year, practically negligible in relation to the circulation of the library, but still significant as to the interest of studious and zealous users of the library. Of the 60 books asked for six were not ordered. Of these six, four were undesirable fiction, one was a magazine for which it was inexpedient to subscribe, and the other book could not be found. Of books on ethics and religion nine were asked. There were three requests for books concerning government and growth of nations; 15 for industrial books; two each for music history and theory, and poems; five books of travel; three of biography; four of history, and 11 acceptable books of fiction. Deducting the books of fiction and the books not ordered there remain 43 books out of the 60 along the line of serious literature. This number, though small, is so high in ratio to the total requests that it is deemed exceedingly significant and important as reflecting interest in the best use of the library opportunities."

## BOOKPLATES

The Public Library of New Bedford, Mass., has adopted a new bookplate. The design, which is oval, pictures the library building, a full-rigged whaling ship and a loom, thus indicating the past and present industries of New Bedford. On the left is placed the date of the library's incorporation, 1852; on the right the date of entrance into the new building, 1910. Two other attractive library bookplates have recently come to this office, one from the University of Alabama and the

other from the library of the University of Illinois, for use in the books "purchased from Mr. H. A. Rattermann of Cincinnati in 1915."

#### BOOKS AND READING

Books and their educative use. George Van N. Dearborn. *Scientific Amer. Suppl.*, May 20, 1916. p. 330-331.

This is the third article in the series "Economy in study," by this author. Most of it is devoted to the use of books as text-books and the author emphasizes the importance of expending much energy in a short period of time in order to get the most out of books. With reference to general reading he urges that we should learn to read a book without reading on the average more than a quarter of it.

BORROWERS' RULES. See Number of books

#### BUSINESS BOOKS

Books and the advertiser. Merle Sidener. *Spec. Libs.*, Ap. 1916. p. 59-60.

To-day the business man need not obtain all his knowledge from experience. Publishers are issuing special departments for business literature, and the wide-awake man has been quick to realize the value to him of books and publications which present in a practical way the thoughts and experiences of others in meeting his problems.

The Associated Advertising Clubs of the World, with headquarters in Indianapolis, maintains in its offices a model business library and through the efforts of this organization, many public libraries have been helped to install special departments of business literature, and thousands of individuals have been inspired to purchase for their private libraries volumes on business subjects.

Through the co-operation of Doubleday, Page & Company this organization has published several of the best business books, and Mr. Sidener discusses several that he considers especially valuable, largely in the field of advertising.

In the office of his own firm, the Sidener-Van Riper Advertising Agency of Indianapolis, the books described are in constant use. In addition, *Printers' Ink*, *Advertising and Selling*, and *System Magazine* are indexed and cross indexed as the current numbers arrive, and the magazines are bound as each volume is completed. These are of even more use for reference purposes than the books, because the magazines are constantly

presenting the actual experience of advertisers.

#### CHILDREN'S READING

When the new library building was opened for circulation in Swanton, Vt., small note-books with pencils were given to all children who registered, so that they might readily keep a list of all books read during 1916.

Co-operation between the high school and the library is being carried on in Sigourney, Ia., by the offer of credits in literature to each pupil reading and reporting on four books from a list prepared by the library.

#### CIRCULAR LETTERS

Here is a letter that Miss Roberts, librarian in Pottsville, Pa., has had inserted in the pay envelopes of the employes of the silk mill in that town.

*To the Employes of the Silk Mill:*

Have you ever used the Pottsville Free Public Library? There are all sorts of books there for you. Good stories to read when you are tired, interesting true stories about other people, descriptions of your country and other countries; then there are books about different trades and occupations if you want to fit yourself for a better job. It's the man (and woman) who knows who gets ahead these days, and the books have been written by people who know. Listen to what they say, and then you will know.

All who live in Pottsville may have the free use of the library, and those who live out of town but work in Pottsville may also have the books. Try the library some day, and see if you don't find just the books to make you glad.

Very sincerely yours,  
FLORA B. ROBERTS,  
Librarian.

Miss Roberts has also used to advantage printed blotters like these:

Let The  
Pottsville Public Library  
Assist You in Your  
Business

United Telephone  
440Y

"Ask the Librarian."

COLLEGE LIBRARIES. See also University libraries

A recent enumeration and classification of books in the different libraries of Harvard University shows that the Cambridge institution owns 183,317 more books than Yale, the next largest college library, and if, in the total number, Harvard's 705,225 pamphlets are included, the university has 888,542 more volumes than the next largest college library in the country. The number of volumes owned by Yale University is approximately one million. Columbia ranks third with 550,000 books; Cornell is fourth with 455,129; Penn-

sylvania fifth with 400,000; Princeton sixth with 353,845; and Michigan seventh with 352,718. Harvard University has 1,183,317 volumes and 705,225 pamphlets, which makes a total of 1,888,542. The main collection in the college library totals 1,113,678 and in the special libraries are 78,056 volumes. The remainder are distributed in the different departmental libraries as follows:

Law School.....	183,723
Andover Theological School.....	157,724
Zoölogy Museum.....	94,555
Medical School.....	73,067
Phillips Library.....	49,404
Arnold Arboretum.....	37,463
Gray Herbarium.....	26,625
Blue Hill Observatory.....	22,981
Busey Institute.....	19,271
Peabody Museum.....	12,767
Dental School.....	12,228

In addition to the large numbers in the collection of first editions and valuable books, there is the Harry Elkins Widener collection at Harvard, and other groups of rare books which have been bequeathed to the University Library.

#### DESKS

Walter C. Green, librarian of the Meadville (Pa.) Theological School, has sent us the following suggestion:

"It has occurred to me that some of your readers might be interested in knowing what I do with the little round or square empty typewriter boxes in which the ribbons come. I put them in a row in the middle drawer of my desk, close to the edge, cut a thin piece of wood or cut down a yardstick such as you may get free from a store, and fasten it in the drawer with a couple of screws, or with the drawer partition to be obtained from Gaylord Brothers, Syracuse, N. Y. They make very convenient little places for holding pins, paper fasteners, stamps, and the like. There can be easily placed in the average drawer two or even three rows of these little boxes."

#### ENGINEERING LIBRARY, ADMINISTRATION OF

For a year careful statistics were kept by the library of the American Society of Civil Engineers as to the number of hours spent on library work and the cost of such work. The results of this investigation are stated briefly in the society's report for 1915.

"The library is open for 13 hours each week-day," says the report, "and the desk work therefore has to be taken care of in relays. There are six librarians employed. Part of their time (12½%), however, is used, when necessary, in office work of the society

not connected with the library, and this part is not included in the following statement.

"The total salaries charged to library work for the year amounted to \$6137. About 10% of the total time was used for desk work, the time charged to this item being only that devoted to attendance on visitors. 18% was spent in cataloging, 8½% in research work for the membership, 7% in the compilation of the published list of current technical literature, and 56½% in other library work. This latter item includes the work preliminary to securing additions to the library, either by purchase or gift, such as the examination of catalogs of publishers, lists of government and state publications, and book reviews in technical periodicals; the ordering of new books; requests for donations of books, periodicals, reports, etc.; acknowledgment of donations; all the detail of making entries for accessions; preparation for the binding of volumes; care of books on the stacks; periodical inventories; preparation of book notices and other matter published in *Proceedings*; the care of the various weekly and monthly publications, and other minor details which cannot well be specified.

"During the year for which these statistics were kept, 5000 accessions were received and cataloged. These comprised the general run of accessions; bound and unbound volumes; pamphlets; periodical additions to society publications, and other serials. The cost of cataloging, including the writing, checking, and filing of index cards, was 22 cents for each accession.

"Summing up—the total cost of the labor connected with the maintenance of the library may be stated as follows: Desk work, \$620.51; cataloging, \$1,102.57; research work, \$531.94; list of technical articles, \$504.94; other library work, \$3,377.19; total cost of labor, \$6,137.15.

"On the basis of the total number of hours devoted to library work, the average pay of the librarians employed by the society has been 55.8 cents per hour."

#### ENVELOPE-CLIP

An envelope-clip is described and illustrated in the *Official Gazette* of the United States Patent Office for May 23, 1916 (Vol. 226, p. 1297). Three claims are allowed for this device, which would be of use in handling newspapers in reading rooms.

#### EUROPEAN WAR—EFFECT ON LIBRARIES

War effects. *The Librarian*, Ap., 1916. p. 182-184.

Editorial. The war has already had far-

reaching influences on libraries of all kinds, as well as on art galleries and museums. "The closing of the national museums while the equally great national libraries remain open has differentiated between these institutions in a way that will have its effect throughout the country. . . . Concerning the libraries, there are two points requiring early and careful consideration—the administration of libraries from which the librarian has been called to the army, and the craze for economy after the war.

"It is usual, when the librarian goes, whether as a volunteer or otherwise, to give the sub-librarian or chief assistant charge of the administration. In a few cases advisory or supervising librarians have been 'borrowed' from other neighboring libraries to 'keep an eye' on things; but as so many librarians have been called up this is impossible in most cases, even if it is desirable in any. Where the sub-librarian or chief assistant can remain either on account of sex or age or physical disability, this is undoubtedly the best solution of the problem."

But in many cases these also have joined the army, and some will not return. In these cases it is likely that the acting librarians will receive permanent appointments, and the conditions, the writer fears, will be thrown back twenty years. It will be pointed out that the library has "gone on" during the absence of librarian and staff, and so it can "go on" longer. It is only after the lapse of long periods of time that reduction in standard becomes apparent.

The second danger referred to will be one of means, and the National Association of Local Government Officers points out the danger. "Under the vicious system in which we live," says the writer of the editorial, "the object of the local authority is to obtain the best they can at the smallest cost, whereas the object of the librarian must be to obtain as much as he can in return for the best that is in him. The pressure of this 'system' is being felt already in certain directions . . . and whatever is possible to be done should be done quickly and effectively. Concerted action is suggested, but . . . individual action may do more. In many cases it is undoubtedly best to do nothing until some active steps are taken in opposition to the library. . . . But in *all* cases unobtrusive work may be done at all times to strengthen the position of the library—and it is only by doing this that the position of the librarians and the staff can be strengthened."

EXHIBITS. *See* Gardening exhibit

FURNITURE. *See* Desks

#### GARDENING EXHIBIT

The library in Hopewell, N. J., held a gardening exhibit early in the spring, displaying gardening pictures and catalogs, giving away seeds, and making a special showing of books on gardening, borrowing and buying as many as possible for the time of the exhibit. A talk upon home and school gardens was given in the library.

#### HIGH SCHOOL LIBRARIES

Some phases of library-study-room management. Hannah Logasa. *School Rev.*, May, 1916. p. 352-358.

A plea for the study-room in a library rather than in a room bare of books, magazines, etc. The article is a discussion of the problem connected with the administration of such a room, serving both as a library and as a study-room. The whole article centers in the idea that in a great measure the reading public of the future is in the making in our high schools, and that using the library as a place for study in the school helps to form this taste more intelligently.

#### —CERTIFICATION OF LIBRARIANS

A certificate from the California State Board of Education is now required of all high school librarians. Applicants for special certificates must show that they have had at least four years' instruction beyond that required for graduation from a high school maintaining a four years' course in advance of the eighth grade, or an equivalent amount of training; that at least half of said four years' instruction has been devoted to study of work in library craft, technique and use, or to subjects strictly supplementary thereto; that at least two-fifths of a year has been devoted to pedagogical subjects suited to the training of a secondary school teacher, including practice teaching. Special work in library craft during the secondary period may be substituted at the rate of half time for similar study in the collegiate period, providing it does not exceed half the total time required in library craft. One year of successful teaching may be substituted for half of the pedagogical work and two years for entire pedagogical requirements.

The state Board of Education in consider-

ing applicants has the above given standard in mind. However, it accepts certain equivalents, each application being considered on its own merits.

Holders of special certificates in library work who have completed 30 years' service, according to the law governing the granting of retirement salaries may obtain teachers' retirement salary.

INDEXES. *See* Periodicals—Indexes to; Readers—Index of interests of

#### INFORMATION SERVICE

An information desk has been established in the lobby of the Hartford (Ct.) Public Library with the idea of serving more fully the users of the library. The assistant in charge is ready to answer questions about the card-catalog and explain its use. She explains to new borrowers the library regulations, tells them of their privileges, how to get the books they want, and suggests books for reading. The library's lists of books on business and home-building as well as the current bulletins may be secured at this desk. The assistant also has lists of reading for young people, reading courses, lists of books for reading aloud, entertaining biographies and other lists, which may be consulted.

Writing in the January issue of *Public Libraries*, Frank H. Whitmore, of the Brockton (Mass.) Public Library discusses the need of what he calls a "library interpreter." The suggestion came to him from one of his trustees that the library needed some one who would correspond in a general way to the man "on the floor" in a business establishment.

"We often wonder why our books remain unread," writes Mr. Whitmore. "There is no lack of books, no lack of willing service, and no lack of well-prepared lists. What we do often need is something that shall vitalize the books and establish some form of communication, so to speak, between the author and reader. . . . To correct the selections and apportion more time for aiding readers in a direct, personal way, offers a fruitful field not, perhaps, for faultless work, but for endeavor. . . . The problem of the selection of books is difficult enough for the librarian who has at his command innumerable aids. How much more puzzling to the casual reader who is engrossed for the most part with totally different things and who looks to books at intervals for entertainment or profit. . . ."

"The chief objection to be raised against such a plan would be the financial one. How can we justify the plan?"

"First, the need for more work in this direction exists; and secondly, we are not adequately meeting it. We assume that the adult reader knows what he wants or can get it, and he is left to flounder about in a mass of material which he has neither the inclination nor the time to examine carefully.

"Such service would be far from simple to perform. The work would call, first of all, for knowledge. This would necessarily be a surface knowledge of many things and many books. It would call, however, for wide reading, an acquaintance with literature and a willingness to keep informed on the more important happenings in the world at large. . . . It would call for discretion. . . . It would call for affability. . . . And finally, it would call for patience. The person who carried on the work would expect many a rebuff, many a failure to get immediate results, but one would in time have the satisfaction of directing reading along desirable lines and securing a reading for many books too often left unread."

#### INSTRUCTION IN THE USE OF THE LIBRARY

Instruction in the use of the library has been given by the librarian in West Boylston, Mass., from the third grade up through the high school. A set of questions was prepared to give practice work. Those having correct answers had their names posted at the library. Almost all the seventh, eighth and ninth grades took the test, but as it was optional with the fifth and sixth, not many took it. In the high school credit was given for this in their English course.

INVENTORY. *See* Book losses

#### LANTERN SLIDES

The Elementary School Library of Los Angeles has a collection of 808 lantern slides for use in the public schools of the city, and the 1915 report of the librarian states that the total issue of slides from September 1914-May 1915 was 1188. There are forty-seven schools that own lantern slide machines and avail themselves of the use of the collection of slides. In connection with the lantern slide section the library has added a number of the Underwood stereograph views.

LIBRARIANS—TRAINING OF. *See* High school libraries—Certification of librarians

MAGAZINES. *See* Periodicals

## MOVING PICTURES

The Gary (Ind.) Public Library has inaugurated the giving of desirable motion picture shows for children on Saturday mornings. The library passes on all films before they are publicly run, and during the performances library assistants are in attendance to look after young children. The one difficulty seems to be to secure good films which will appeal to little boys and girls. Some stories presented have been "Robinson Crusoe," "Lady of the Lake," "Aladdin" and "Treasure Island." Educational and humorous cartoon films are also run, together with attractive studies of birds. Five cents admission is charged, and the attendance has been very gratifying. The pictures are shown at one of the leading houses, which makes a small profit from the arrangement.

## NUMBER OF BOOKS

The New Haven (Ct.) Public Library will hereafter allow adults to take four books at a time on one card, provided one only is a book (or magazine) in special demand. It is necessary, in fairness to all, to continue to restrict the new novels and current magazines to one per card, but a reader taking one new novel or one current magazine, may take also from one to three older novels, if desired. It will probably prove advisable to restrict also certain non-fiction books.

## PERIODICALS

Magazine deterioration. Frederick W. Faxon. *Bull of Bibl.*, Apr., 1916. p. 34-35.

Mr. Faxon comments on the general lowering of the popular magazine standards from the time, twenty-five years ago, when practically every octavo-size monthly was considered of sufficient reference value to be included in Poole's Index, to the present day, when the cheap story magazines and the moving-picture magazines seem to the casual observer to be the only periodicals on sale on the newsstands. Of these popular magazines Mr. Faxon makes a list, dividing them into three groups: class A, "ginger type"; class B, "story class"; and class C, "movie."

## —INDEX TO

For many years the American Society of Civil Engineers has printed monthly in its *Proceedings* references to current technical literature. Since November, 1914, these references have been written on cards in such form that after they have served their purpose as copy for the printer, they are filed for reference under specific headings.

Thus has been started an up-to-date and easily consulted index to more than 100 engineering periodicals and society publications which in the first 13 months included about 10,000 cards.

The *Library Association Record* for March, 1916, makes prominent announcement of the fact of the completion of the class lists of the 1915 Subject Index of Periodicals prepared and issued, in London, by *The Athenaeum*, at the request of the Council of the Library Association. The reception of these class lists by the press is said to have been uniformly satisfactory, though tinged with certain melancholy presentiments of an early decease. Special acknowledgment is made to the editors of leading "dailies" for their very generous appreciation of the labors entailed. The class lists, which were issued as rapidly as possible between November, 1915, and April, 1916, comprised:

- a. Theology and philosophy. 34 p. (Mar., 1916.)
- b. The European war. 48 p. (Jan., 1916.)
- c. History, geography, anthropology and folk lore. 32 p. (Apr., 1916.)
- d. Sports and games. 8 p. (Dec., 1915.)
- e. Economics and political science. Law. 28 p. (Apr., 1916.)
- f. Education. 16 p. (Mar., 1916.)
- g. Fine arts and archæology. 18 p. (Nov., 1915.)
- h. Music. 12 p. (Feb., 1916.)
- i. Language and literature. 34 p. (Mar., 1916.)
- j. Science and technology. 80 p. (Feb., 1916.)
- k. Preventive medicine and hygiene. 16 p. (Nov., 1915.)

These class lists consolidated with additional matter in one alphabet, form the annual "Subject index for 1915," which comprises not less than 10,000 entries, selected from over 400 English, American and Continental periodical publications issued between January and December, 1915. The index is based upon the "alphabetical subject headings" of the Library of Congress (under revision), modified to suit English practice and considerably extended. Annotations are introduced where the titles of articles insufficiently indicate the nature of their contents. Magazine fiction, verse, and essays not possessing special subject interest are not included. Both class lists and annual volume are provided with brief name indexes and lists of periodicals cited. Work has since been started on the 1916 material and the first instalment of the "Index" will

be for the quarter January-March, as it was found impracticable to commence the monthly numbers until the whole of the 1915 lists had been compiled. The whole of this important work has been done gratuitously by the *Athenaeum*. Mention is made of the fact, that the L. A. is endeavoring with success to co-ordinate this work with that of kindred publications. In view of the limited demand for index publications, and the wide extent of the field that remains uncovered by such publications, duplication of work is obviously to be deprecated. The attention of librarians is directed to the "Index to legal periodicals"; to "Science abstracts: (a) Physics; (b) Electrical engineering"; the *Engineering Magazine* (monthly) and annual cumulation; *The Engineering Index*; to the *International Military Digest*, and the newspaper digest, *Information*.

#### PHONOGRAPH RECORDS

"The educational value and pleasure derived from the library of phonograph records," says the 1915 report of the Elementary School Library in Los Angeles, "is evident from the large circulation. There are 332 records in the collection, filed in a cabinet provided for them. A card catalog for all records has been completed, entries being made for composer, artist, subject, and title. Teachers may borrow five records at one time to be kept one week. These are charged on book charging checks and delivered in stout manila envelopes. From September 1914 to May 1915 there were 2298 phonograph records circulated from the library to aid teachers in developing musical appreciation.

"After constant usage the records have been played, and it is gratifying to find them in such excellent condition. There are eighty Victrolas in our schools."

#### PLINY FISK STATISTICAL LIBRARY

The famous Pliny Fisk statistical library, the gift to Princeton University of Pliny Fisk, of the class of '81, has been in the process of collection since 1880 by the banking house of Harvey Fisk & Sons of New York City, and is well known to all bankers. It is undoubtedly the most complete and exhaustive library in the realm of finance and economics in any American university.

According to statistics made public by President Hibben, the collection is made up of more than 5000 bound volumes, 13,000 pamphlets, 39,000 stock and bond circulars, and newspaper clippings, which form, mounted, over 70,000 separate sheets. It is said

that as a collection of corporation reports, financial pamphlets and copies of mortgages, it is unexcelled anywhere. There is a great number of reports of all the railroads in the country, and those of the more important roads are complete. Some of the statistics date back to 1828. In the collection also are copies of leases, treaties, and agreements of railroads, some of which are extremely rare. A great part of the library is made up of the original manuscripts, the older ones written out in longhand.

This library was moved to Princeton during the summer of 1915, and Harvey Fisk, brother of Pliny Fisk, personally attended to the installation and setting up of the collection. Most of the furnishings of the room are of the original library in the offices of the bankers in New York City. It is now placed in commodious quarters in the university library building, and requires the continuous services of a special librarian and an assistant. It is thought that a great number of economists will be drawn to Princeton by this valuable collection, as the well worked out index system makes the library easily accessible to all. It has already proved its value to the many students in the economic and financial departments of the university, and is in daily reference use by many professors and graduate students. The development of the collection will not be stopped by its removal to Princeton, and it is expected that it will soon be one of the most serviceable libraries of its kind in the country.

#### PRINT COLLECTIONS

In an address on "The appreciation of prints" before the Massachusetts Library Club in January, 1916, Fitzroy Carrington, curator of the department of prints at the Boston Museum of Art, considered five American print collections, differing one from another, in five cities: those of The Library of Congress, Washington; The New York Public Library; The Albright Art Gallery, Buffalo; The Museum of Fine Arts, Boston; and The Newark Free Public Library, Newark, N. J.

"The collection housed in the Library of Congress is, numerically, of national importance—some 400,000, and growing at the rate of 15,000 or more each year. The New York Public Library has as a 'nest egg' the unqualified S. P. Avery collection, 19,000 or more prints, the work, mainly, of nineteenth century etchers and lithographers; especially strong in the French school—also 'minor accessories' which throw light on the work or personality of the artist. This collection is

not yet strong in examples of the earlier masters—where the Boston collection is especially noteworthy. In the Boston Museum of Fine Arts the student can follow the history of engraving, from its beginnings, in Germany and Italy, to the work of our contemporaries, by chosen examples of all the great engravers and etchers. To supplement this there is a large and constantly growing collection of fac-similes of the work of early German and Italian engravers and woodcutters, where the originals are unique, or so rare as to be, for all practical purposes, unobtainable. There are also some 3000-3500 fac-similes of drawings by the great masters, and printing presses, etc., where the student can print, or see printed, etchings and woodcuts."

In the Albright Art Gallery, Mr. Carrington said, there are hung in two rooms about 1000-1200 engravings and etchings, the best prints of the great painter-engravers, every process being shown.

Of the collection in the Newark Public Library and of its general utility Mr. Carrington spoke at length, quoting freely from an article by Mr. John Cotton Dana in the *Print Collector's Quarterly* for February, 1913.

The Boston Museum of Fine Arts is prepared to lend to libraries all such prints as are in its lending collections. It also has a pictorial clipping collection, numbering about 10,000 items, on boards 10½ x 14½, illustrating such subjects as architecture, decoration, illustration, furniture, metal work, portraits, painting and sculpture. Some 40,000 photographs are also available. These can be borrowed for forty-eight hours for the purpose of illustrating talks. Photographs of objects in the Museum of Fine Arts, to the number of 50-75 at a time, may be borrowed for a longer time.

Mr. Carrington outlined, with some detail, the growth of the print collection in the Newark Public Library and urged the formation of a department of illustration in libraries. Such a department, he said, could be readily organized in any library. The collection of a "few prints showing technical processes and a case containing tools illustrating 'How prints are made' would start off in the right direction."

Mr. Carrington described the method of keeping prints in the Museum of Fine Arts. He invited librarians to make use of the museum material and to consult him freely whenever he could assist them. He said that the museum wished to help libraries get together a collection of prints which will help in the communities they serve and that it was the

aim of the museum itself to be not only a treasure house, but a pleasure house as well.

PUBLICITY. See also Circular letters

The signed article. O. E. C. *Lib. World*, Oct., 1915. p. 106-107.

Probably the most effective way in which the public library may be brought home to the general public is through the press; more especially is this true in country districts, where the local newspaper is very thoroughly read.

The signed article always carries more weight with it, and in the case of libraries the public is naturally impressed by the views of the librarian, who is (or should be) the main director of book standards in the town. W. Bramley Coupland, the librarian, deals in the *Burnley News* with "The modern library; its function in public life." Here truths long familiar to librarians are set forth for the benefit of the public, who are scored for their lack of appreciation for the public library as an asset in daily business life.

In cases of signed articles, statements must be verified, and books of a high standard noted. The writer then has nothing to fear.

A note from Edgewater, N. J., in the *New Jersey Library Bulletin* for April, says that the trustees of the Edgewater library having decided that numerically the adult patronage does not compare favorably with the juvenile patronage, have had posters bearing the following legends printed and put up in the ferry-houses and the post office:

Call up Cliffside 403 M.  
Do you make use of our 'phone service:  
When in search of that name you have forgotten?

To settle a disputed fact?  
To verify that date which slipped your mind?

Our reference books are for you, make them yours.  
Get the library habit—it's a good one.

What do you know?  
As much as your boss knows?  
As much as your neighbor knows?  
As much as you would like to know?  
There are 5000 volumes of general and specific information in the  
Edgewater Free Library—for you!

Is your brain padlocked?  
Come to the free library for a key.  
Every man his own college  
On nothing a year.

For instance we suggest:  
[Then follow four or five titles of books that would presumably help a man to help himself.]  
Get the library habit—it's a good one.

Does it pay  
To keep up with the best that has been written about your profession?  
To study to increase your efficiency?  
Watch your pay-envelope for the answer.

Come to the Edgewater Free Library and  
let our books show you how.  
Get the library habit—it's a good one.

In addition to these posters, library advertising is to be further conducted by a weekly article in the local paper, and the distribution of leaflets giving titles of 1916 books. These leaflets, with a library application blank and a book mark, are to be mailed to each subscriber listed in the telephone directory for Edgewater and those near-by towns that are without library service.

#### RAILROAD LIBRARIES—ERIE R. R.

On Mar. 24 the Erie Railroad opened a free circulating and reference library for the use of the 1300 employes at headquarters, 50 Church street, New York City. On the day the library was opened half of the 1000 books quickly disappeared. The demand came from all classes, including officers and the girls who count cancelled tickets in the auditors' department.

Mrs. C. A. Vaughn is in charge of the room on the fourteenth floor, which contains standard text books and reference works, engineering and technical books of interest to railroad men, and also the latest popular fiction, together with current magazines.

Only Erie employes are allowed to take out books, and only one book can be taken at a time, to be kept a week, with the privilege of renewal for another week.

#### READERS—INDEX OF INTERESTS OF

A suggested index of readers. *Lib. World*, S., 1915. p. 78.

A well-known librarian once said, "I have always a reader for every book I buy." He has been in the habit of spending his evenings, not in his office, but amongst his shelves and his readers, and in most libraries something might be done in a systematic way to bring the readers of special classes of books into continuous touch with them. It would be a valuable work if librarians would follow the lead of certain publishing houses who, when issuing their catalogs, send with them a list of subjects on a post card, inviting the recipient to mark those in which he is interested and return the card. The replies could be indexed, and when any new book was added the index could be consulted and the reader notified.

#### REFERENCE BOOKS FOR POOR STUDENTS

"At a time when much public enthusiasm is being shown in the cause of education," says *The Librarian* for April, 1916, "too

much attention cannot be directed to the work undertaken by a new organization, known as the Central Library for Students, of 20 Tavistock square, London, W. C. The aim of the library is to secure that no bona-fide student in the British Isles shall in future be hindered in his or her studies by inability to obtain the use of necessary books of reference. The library will co-operate with national and local libraries. It will be ready to consider applications from students in all parts, whether made by students direct or by institutions serving their needs. No books will be issued which are not difficult to obtain for reasons of price or scarcity, and students will be charged only the cost of carriage or registration. It is, in brief, a library for poor students, and is an experiment which is likely to arouse the sympathetic interest and practical support of many students of former days. At 20 Tavistock square the library can be seen any day between the hours of ten and five."

#### SHELVING

During the year 1914-15 it was determined to change the system of shelving in the main stack of the University of California Library. Each of the five stack floors is bisected by an aisle running from east to west, at right angles to the stack bays. In the numbering of the bays, those north of the dividing aisle constitute row 1, those south of the aisle row 2. Under the shelving system originally adopted, books were shelved in each row from east to west, so that the sequence interrupted at the west end of row 1 was resumed at the east end of row 2, distant the entire length of the stack. The new system provides that the numbers in row 2 shall run in reverse order to those in row 1, so that the sequence interrupted at the west end of row 1 shall be resumed at the west end of row 2, immediately across the aisle. This system will prevent any considerable separation of related subjects. The contents of the third stack floor have been rearranged according to the new system, and the other floors will be undertaken as rapidly as the routine work of the department permits.

SPECIAL LIBRARIES. See Engineering library, Administration of; Pliny Fisk statistical library; Railroad libraries—Erie R. R.

UNIVERSITY LIBRARIES—See also College libraries  
University libraries and their arrangement.

Thos. A. Barnett. *Lib. Asst.*, Mar., 1916. p. 37-41.

This paper, written by Mr. Barnett, of the University Library, Manchester, and read before the North Western branch of the L. A. A. at its December, 1915, meeting, examines the functions of universities and the demands which they make upon the library. In the light of these, it endeavors to ascertain which is the more satisfactory of the two systems of arrangement in general use, the departmental or the seminar system. In the departmental system, the books are divided into collections according to subject and housed in their respective departments in the university. That is, there are a number of independent libraries in the university instead of one general library. In the seminar system, there is one large central library, containing a series of small seminar libraries.

At the heart of every university there must be a large and well-equipped library. A library is itself a magnificent educational apparatus; it is there to supplement the instruction given in the classroom. It is essential that its contents shall always be readily accessible—and this is where the question of arrangement has to be taken into consideration. Preference must naturally be given to that method of arrangement, which enables the reader to get the books he requires in the least possible time, and with the least amount of trouble. The advocates of the departmental system of arrangement base their claim to its superiority upon the four main points following:

(a) That it secures greater freedom in the use of the books; (b) that it minimizes the risk of misplacement and loss; (c) that it assures the personal aid of the professor in their use; and (d) that it places the books under the supervision of the one who is most interested in them—the professor—which the best interests of the library demand.

On first thought these advantages appear considerable, but the arrangement at the same time is accompanied by several dangers. There are many books which are equally important to the work of several departments. To make the reference sections of the library of any real value this arrangement necessitates a considerable amount of duplication. It is also a very difficult matter to supervise the work of such libraries—situated so far from one another, often in separate buildings—without the appointment of separate custodians and assistants, which means greatly increased expenditures, and most professors, even if they possessed the necessary qualifications, are unable

to devote the necessary amount of time to supervise the library work successfully. With such an arrangement there is always the possibility of a professor interested in some particular phase of his subject giving it undue prominence to the detriment of the subject as a whole.

With the seminar system quite a different state of things exist. First of all, there is the general library, usually located in the center of the university buildings so as to be within easy reach of all departments. Here are kept readily accessible all those works which it is agreed are essential to carry on and unify successfully all the branches of the university's work. In numerous cases the buildings are so constructed as to allow of certain alcoves or rooms being allotted to particular subjects, thus enabling a student to do his reading surrounded by the literature of the subject in which he is interested, and securing practically all that is claimed for the departmental arrangement. Then there is a series of seminar libraries. In almost every department of a university, there is a well-equipped room set apart for the convenience, principally of advanced students and those engaged upon research, to which they can retire at their leisure and study without fear of interruption. A carefully selected collection of books has long been recognized as an essential part of the equipment of these rooms. These seminar libraries are under the direct control of the General Library, which supervises the purchasing, accessioning, and cataloging of the books, the responsibility for their safety alone resting with the department. The two things most essential to the successful working of seminar libraries are that they be kept within reasonable size, and that they be under the direct control of the central authority. Once a book ceases to be in frequent use—and books, especially those upon scientific topics, are constantly going out of date and being superseded—it should not be allowed to remain in the seminar, but should be returned to the General Library. Fifty up-to-date standard works, placed by themselves upon the shelves in a department, are much more useful to the practical worker, than when mixed up with a hundred of an inferior quality. Provided that everything is carried on systematically this arrangement of the university library is capable of meeting all the demands that are likely to be made upon it. In the case of the ordinary university, where the departments are all fairly easily within reach, it is difficult at present to conceive of anything more suitable and more efficient than the seminar arrangement.

## Bibliographical Notes

The address on "Cataloging as an asset" made by William Warner Bishop before the New York State Library School May 1, 1915, has been printed in pamphlet form.

The Royal Library of Vienna has announced its intention to publish soon a bibliography of the European War literature under the title "*Archiv für Geschichte u. Literatur d. Weltkriegs.*"

An article on books for children in hospitals and "homes," written by Miss Alice Jordan of the children's department of the Boston Public Library, is to appear in the August number of *The Modern Hospital*.

The January, 1916, number of the *Bulletin* of the Rosenberg Library of Galveston, Tex., is devoted to the needs of the schools. It contains a priced and graded list of stories to read aloud to children, a list of plays for children, and an introduction to the poets.

The study outline on "Travel in the United States," prepared by Miss Clara Fanning and published by the H. W. Wilson Co., contains twenty-one programs. Numerous short bibliographies accompany most of the outlines, and a supplementary bibliography is given at the end of the pamphlet.

Four more of the short lists or "library leaflets" of the Massachusetts Agricultural College have recently been received. No. 18 is on "Soil fertility," no. 19 is "Good books for poultrymen," no. 20 lists "Books on garden design and garden making," and no. 21 gives "References in agriculture for high schools."

The publication of the *Technical Book Review Index*, gotten out by the Index Office, Inc., of Chicago, has been suspended, as the subscriptions received barely paid the cost of printing the two numbers issued. In order to reimburse subscribers the *Reference Bulletin* will be sent for the rest of the current year. Three numbers have already been issued and three more are being planned.

The New York Public Library has reprinted in pamphlet form the report made at the Berkeley conference in 1915 by the A. L. A. committee on work for the blind. The pamphlet is entitled "Library facilities for the blind in the United States," and under an alphabetical listing by states and cities is given the location of all collections of books for the blind, together with the number of volumes

each contains, the kinds of embossed types and the numbers of volumes in each, and the regulations for their use.

"The foundations of Slavic bibliography" is the title of a monograph by Robert Joseph Kerner, published for the Bibliographical Society of America by the University of Chicago Press. It is an attempt to indicate the bibliographical sources from which to draw scientific information about the Slavs, both generally and also for each Slavic nation individually, and will be followed later by a bibliography of Slavic Europe in the Western European languages, covering history, languages, and literatures, on which Mr. Kerner is now at work.

For the special use of librarians and assistants who must look after the binding of library books, Arthur L. Bailey, librarian of the Wilmington (Del.) Institute Free Library and chairman of the A. L. A. committee on binding, has brought together in one volume under the title "Library bookbinding" the best information available relating to the subject. The text treats of materials, processes, and the general routine of binding, and is supplemented by the U. S. Bureau of Standards' specifications for book cloth, a reading list on binding, a list of technical terms employed, and an index.

The Bodleian Library at Oxford has published a "Catalogue of the Shakespeare exhibition held in the Bodleian Library to commemorate the death of Shakespeare, April 23, 1616." The Bodleian's collection of Shakespeareana ranks second only to that in the British Museum, and the catalog is illustrated with some interesting reproductions of its treasures. Beside the catalog proper, the book includes a valuable prefatory note on the building up of the Shakespearean collections by Sir Sidney Lee; a brief chronology of the library's history; an essay on "Shakespeare and Oxford," by the Ven. Archdeacon Hutton; a note on the Crown Tavern at Oxford, by E. T. Leeds; and four appendixes.

The "Door yard number" of the Syracuse Public Library *Bulletin*, and the "Gardening number" of the *Bulletin* of the New Rochelle Public Library, both testify to the growing interest in the literature of gardening as well as in the actual delving in the soil. The Syracuse *Bulletin* describes briefly the work of both the state and federal governments in issuing farmers' bulletins, and prints two short lists—one of U. S. bulletins under the cap-

tion "Reading for city farmers," and the other a list of books for rose growers. In the New Rochelle *Bulletin* are lists on gardens and gardening, landscape gardening, vegetables and fruits, and a few references to helps in flower arrangement, the study of insects and insecticides, weeds and spraying, and the building of greenhouses.

The "Handbook of Texas libraries" as re-issued by the state commission is the most complete source of information available on library work in that state to-day. Library progress since 1908, when the old Handbook was published, is described, and historical sketches of public libraries, in addition to those in the 1908 Handbook, are included. Several chapters are given to the college and university libraries, to special libraries, and to libraries in state institutions. Statistical tables summarize the work of both the free and the subscription public libraries throughout the state, and the minutes, papers, and notes of the Texas Library Association 1915 meeting, together with its constitution, officers, and list of members, are printed in full. Numerous pictures of library buildings are scattered through the Handbook.

The British Museum is sending out specimen parts of the new monthly issue of the "Catalogue of accessions to the department of printed books" of the museum. The catalogue has been issued in fortnightly form for some 27 years, but many libraries have never heard of its existence. It is hoped that the new monthly lists, as of greater convenience than the former fortnightly lists, will be recognized as giving such a conspectus of the entire output of British literature and the best of that of foreign countries as no other catalog or list affords. The entries are printed on one side only and can, therefore, be cut up to form a cumulative catalog, the paper being suitable for mounting on cards. In restarting the series in an improved form, the opportunity is taken to bring it to the notice of librarians of the larger libraries in case any of them should wish to subscribe. The subscription price of £3 (\$15) a year, covers 12 monthly parts, and if more than one copy is wanted for use in the same library, special terms can be arranged.

## Humors and Blunders

## HOW TO ECONOMIZE ON BULLETINS, PUBLICATIONS, ETC.

(The cost of paper is very high. Many libraries find it necessary to economize on their bulletins and other publications. The following rules, if carefully followed, will make their publications so unpopular that it will be possible to get along with a small edition—it may even turn out that readers will be so repelled that it will prove unnecessary to print anything at all.)

1. Print, in fine type, on the front cover a directory of your libraries and branches, telephone numbers, etc. This makes the publication look as exciting as a telephone book.

2. Adopt a set form for each month, week or quarter. Use as much old stuff as you can and print it in the same place each issue. This makes the May, 1916, number look like the one for December, 1914, or that for January, 1912. It insures uniformity—and deadliness.

3. Don't say anything about books. That would be like a literary publication.

4. Give full descriptions of all the technical library processes which are going on. For instance, if you are rewriting the old subject catalog, containing all books acquired by the library prior to June 30, 1892, except those in classes DWZK, WUFF, QWQX, and VKGZ (save for sub-section QDGBip), and removing the old cards to replace them with new cards 3/4 millimeters higher—if you are doing this soul-stirring thing, why, give an account of it. The public loves this sort of thing.

5. Don't omit library politics. If somebody in the library has been elected to the sub-committee on co-operation with the Cataloger's Union in the Amalgamated Library Clubs of North Wawhekus—tell your readers all about it. The public is awfully interested.

6. Find out what books your readers like best and put their titles at the end of the list of recent additions. Decide what they ought to like, and put such books at the head of the list. Catalogs and bibliographies, the dreary dry bones of literature, are good to begin with.

7. When you print the title of a book, put in it and after it as many mystic marks and technical signs as possible. Fill it up with things that only a library cataloger will understand, and that even he might have to look up unless he knew the special customs

of your library. If the public doesn't understand such things, let 'em learn.

8. Follow each title with a whacking big call-number. It saves somebody's time in the circulation department. Besides, it makes a book look interesting and delightful, if after its title is printed some such legend as 964-7531rabMsq29\*jx.

9. Follow the classification scheme rigidly. In the Decimal Classification, for instance, a book about municipal government, one about military tactics, and one on collecting postage stamps all are grouped in the "300's." Put them all together and label them "Sociology." If anyone asks for an explanation, look wise and say: "We follow the D. C."

10. Follow the cataloging rules—like a sheep. If the result is a total disguise of a celebrated author's name, why worry? To make things clear and useful is not important—compared with "following the rules." Besides, it might require someone to think.—THE LIBRARIAN, in the *Boston Transcript*.

## Open Round Table

---

### THREE LETTERS FOR THE BOOK ORDER DEPARTMENT

*Editor Library Journal:*

Upon questioning the statement in regard to the recently published lecture by Lincoln on "Discoveries and inventions," we received from the Library of Congress the following statement:

"The note on L. C. card 16-8819 quoted from the editor's preface is correct. A comparison of the text of the lecture published by Nicolay and Hay in Lincoln's works, v. 1, p. 522-528 with that of the lecture on the same subject published by Howell and first printed in the *Sunset* magazine, May, 1909, p. 463-474, shows that the two lectures are quite different in treatment of the subject and were delivered at different times and places."

It seems to me that many librarians may fall into the same error that we did and that the matter is worth bringing to their attention. It should, of course, have been stated more definitely by the publisher.

Yours sincerely,

C. W. ANDREWS.

*The John Crerar Library, Chicago.*

*Editor Library Journal:*

Possibly librarians in general are not aware of the fact that "The library of original sources," published by the University Research Extension Company, Milwaukee, Wis-

consin, copyright, 1901, by the Roberts-Manchester Publishing Company and 1907 by the University of Research Extension Company, is the same as "The ideas that have influenced civilization, in the original documents," published by the Roberts-Manchester Publishing Company, Milwaukee, copyright, 1901. They are both ten-volume compilations by Editor-in-Chief Oliver J. Thatcher, Department of History, University of Chicago.

The above information may prevent duplication in ordering.

Very truly yours,

EVERETT R. PERRY, *Librarian.*

*Los Angeles Public Library.*

*Editor Library Journal:*

I have noticed that Tweddell's "A mother's guide" has appeared on practically every special list on babies issued by libraries. A year or more ago this library made up a list of six books on babies for a pamphlet to be issued by the Health Department of the District of Columbia. Our list was based on the lists of other libraries, the titles of which were not examined here. Our Health Department is about to issue a new edition of its pamphlet entitled "How to keep your baby well," and Dr. William C. Woodward, the District of Columbia health officer and former president of the American Public Health Association, has thrown out Tweddell's "A mother's guide." It occurs to me that other libraries may be interested to know his reasons for doing so. With his permission I am forwarding his statement of these reasons. They are appended to this letter.

Sincerely yours,

G. F. BOWERMAN.

*Public Library, District of Columbia.*

#### DR. WOODWARD'S STATEMENT

I have felt obliged to eliminate Tweddell's "A mother's guide" from the list of books recommended by this department in its pamphlet, "How to keep your baby well." It is given, it seems to me, to the exploitation to an unwarrantable degree of proprietary medicines and other commercial ventures. . . . The recommendations made with respect to the use of milk for infants is not in keeping with the views generally entertained by sanitary authorities to-day. The statement on page 80 that fresh milk whenever it is obtainable is preferable to pasteurized milk is certainly not true. The statements on page 154 with respect to the relation of boiled or sterilized milk to rickets, and on page 155 with reference to the use of *pasteurized*, boiled, or sterilized milk to scurvy, are in the unqualified form in which they appear misleading. . . . There is a tendency in the book to recommend to the mother medication that should be carried on only under a physician's direction. . . . The foregoing criticism is based on an examination of this book that could not be regarded as exhaustive. What might have been found had an exhaustive examination been made, I am unable to say.

# SCHOOL AND LIBRARY

SUPPLEMENT TO

## THE LIBRARY JOURNAL

JULY, 1916

THE School Library Exhibit prepared by the Bureau of Education for the meeting of the American Library Association, held in Washington, D. C., in 1914, has been used extensively by associations of teachers and librarians over the United States. It has been exhibited at the meetings of the American Library Association, National Education Association, National Council of Teachers of English, Southern Educational Conference, at the summer sessions of the University of Tennessee and Columbia University of the City of New York, and at meetings of various state associations. It is now traveling from Spokane, Wash., to Texas. It is a great pity that so comprehensive and valuable an exhibit cannot be divided so that high schools or normal schools may use the material in which they are most interested. A classified list of the material and an explanation of the various parts of the exhibit and of how to arrange and to pack the material would add much to its value.

AN elective teacher-librarian course of two years, specializing in English and library work, has a distinct place in the modern normal school. The graduates of such a course are prepared to do departmental teaching of English or history in the upper grades or in a small high school, and, in addition, to organize the school library, select books, conduct a "story hour" for children, give library lessons on the use of books, conduct a "library hour" for each grade, and by means of exhibits and constantly changing bulletin boards make the library the indispensable laboratory for the preparation of all school work.

School superintendents will find in this teacher-librarian course a solution of the problem of the small unorganized school

library, which cannot afford the services of a library school graduate. Even though teacher-librarian graduates choose to teach in the grades rather than to do departmental teaching, combined with library work, they will be more efficient teachers from having had the library course, which includes children's literature, reference books, cataloging and classification, and the organization of a small library.

The following letter from Dr. P. P. Claxton, U. S. commissioner of education, is a notable contribution to the question of teacher-librarian courses in normal schools:

One tendency of contemporary educational development is an increasing recognition of the value and importance of library training for teachers. While this training is especially necessary when care of the school library is one of the teacher's duties, a knowledge of books and their use is also well-nigh indispensable to the teacher who devotes his entire time to instruction, especially in subjects such as English history, the social sciences, etc. On this account, normal schools and training schools for teachers, to a growing extent, now offer courses in library methods and bibliography, during their regular sessions. The combination of technical library training with pedagogical ability and experience furnishes just the preparation required for practical administration of a school library. . . . The teacher with library training will be able to prepare children, before they leave the elementary school, to use dictionary and cyclopedia readily, to read rapidly and understandingly, and to take notes systematically; will introduce the pupils to the literature of the subjects studied in the school curriculum, and teach them to use catalogs and indexes as soon as they are able to handle them; will make them know the library as an organism, not merely a collection of books, and will start intellectual impulses and a love of good books, which will go on widening and developing through life. It has been well said that there are three proper functions of the school library, stated as follows in the inverse order of their importance, but in the direct order of ease of accomplishment: 1. Reading for pleasure. 2. Reading to supplement school studies. 3. Reading for the sake of culture, for uplift, to create higher ideals.

# PERIODICALS IN THE HIGH SCHOOL LIBRARY

BY MARION L. HORTON, *Librarian, John C. Fremont High School,  
Oakland, California*

How can high school librarians make the best use of the flood of periodical literature that threatens to sweep us off our feet if it does not quite drown us in its waves? We are urged to spend one-quarter of our book fund for periodicals and their binding; we are advised to use them as texts in history and English classes; we are warned that a thinker's library is valuable in proportion to the unbound material it contains. One wonders whether the magazine is to be made a substitute for the traditional studies, or a stepping-stone. The *Independent, Literary Digest, Outlook and Review of Reviews* issue pamphlets to show the possibilities of the magazine in the hands of a good teacher. Only one (H. E. Woodbridge, *Nation* 101:327) fears that this is a subtle and attractive device for sacrificing permanent to temporary values. Whatever one thinks of the ultimate value of present-day literature, we must recognize that here is an opportunity for the alert librarian to offer the boy and girl something suited to their present need that will at the same time suggest something broader than they have known before. Children often see only the Sunday supplement and five-cent magazines whose names even are unknown to the librarian anxious to uplift with the *Nation* and *Atlantic*. Unless they see better ones and are given a basis for comparison in the schools, their mental horizon will never broaden.

Nathan, returning a long overdue copy of the "Last of the Mohicans," apologizes. "You know, I ain't got what you might call an awful thirst for readin'." But he likes pictures. From the *London Illustrated News* and *National Geographic Magazine*, he turns to books of travel; from the *Craftsman* to "Making of box furniture;" from the *Scientific American* to "Leading American scientists of today." Then he remarks candidly: "I'm thirstier than I used to be!" This of

course means personal responsibility for the librarian; she must know each boy intimately enough to give him what he can assimilate, not *Current Opinion* if he is mature enough for the *Nation*, but some of us think that this contact is the most durable satisfaction of high school library work.

Securing the material is very simple. For \$50 twenty-five of the best magazines and the *Reader's Guide* can be purchased. If there is less money available, gifts can be made to swell the library collection. Students and their families are glad to give to the school back numbers of magazines that have been read at home. Fancy the joy of receiving a gift of the *Century* with Guerin's pictures of Egypt and Greece, or *Harper's* containing the Abbey Shakespeare! Complete sets, single number and duplicate copies are treated in different ways, but all are valuable.

Making this treasure-trove available is more difficult. Unless it is ready for use, it is no more a part of the library than when it lay under the attic eaves. Binding is the obvious method of treating complete volumes. Cloth binding need not cost over seventy-five cents a volume, and stands wear better than leather. In general, only magazines indexed in the *Reader's Guide* need be bound, but the character of each school must be considered. In a technical high school, the *Textile World Record, Advertising and Selling, Business Journal, or System* are in demand as much as the *Literary Digest* and *World's Work*. If it is impossible to bind, complete volumes should be kept on the shelves chronologically arranged, either held upright by thin strips of wood, or flat with the back to the front edge of the shelf, and the latest number on top. Better still, the numbers may be kept in pamphlet cases, properly lettered with name, date and volume number on the back.

When odd numbers of magazines con-

tain only one or two articles worth keeping, the Gaylord pamphlet binders are useful. Cataloged like books, accounts of Greek plays in America from the *Craftsman*, and "Troyland to-day" from the *National Geographic Magazine*, stand on the shelves with books on Greek literature and history. Or the illustrations may be cut out and mounted for the picture collection.

For current numbers, stiff, half leather cases are made by the Universal binder, 5 East 14th Street, New York (50-75 cents each, according to size). Cheaper press-board covers are made by Gaylord Brothers, Syracuse, for 12 cents each.

Newspapers offer valuable material, not only for the study of economics and current history, but also for teaching how to discriminate in source and presentation. The most careless observer sees the contrast between the true and the tawdry when the comparison is set before his eyes. If an interested class clips from the daily paper those events most worthy of notice, the clippings can be mounted on bulletins for the benefit of the whole school. After being pasted on manila or typewriter paper, they are filed by subject in a vertical file. As soon as the material becomes out-of-date or accessible in periodicals or books, the ephemeral should be destroyed.

The *Readers' Guide* makes a fascinating tool for students. Its use is taught in the lessons given by the librarian as part of the English course. After the required practice in using the *Guide*, the boys have the pride of discoverers in using it for all kinds of school work. Bibliographies for debates or oral compositions are made; disputed points of spelling are settled; names of recent authors and dates of birth and death are verified. At the same time skill in finding the suitable material with speed and accuracy are by-products not to be despised.

There is no end to the ways in which the periodical material may be used by every department of the school, when it is made accessible either in the clipping file, pamphlet binder or bound volume indexed by the *Readers' Guide*. Of course debates without its aid are strawless bricks, but other phases of school work are

coming to rely quite as much upon the magazine. One English class is investigating the history and character of the weeklies, each student being responsible for data concerning the aim of one, its founding, editors, and value as literature. If this does nothing more than lead them to do individual botanizing in the magazine field, it is valuable, but it leads also to better reading and thinking. Another class in studying English poetry collected the best lyrics of all the ages from Anacreon to Verhaeren and James Stephens, using the *Literary Digest* and *Current Opinion* for recent writers. After comparing these diverse examples they were to write verse of their own, not deathless lyrics perhaps, but spontaneous and characteristic.

The science classes must supplement their texts with more recent discoveries. The teacher must use scientific journals for his own work, and boys often dip into these as they lie on his desk. Not all students are as enthusiastic as one who recommended a "swell" article in *Science* on the refraction of light, but all read *Popular Mechanics* with avidity; some read better things. One boy thinks ultraviolet rays might be used to preserve food, and the *Scientific American* tells him what experiments have been made. A report on the scarcity of dye-stuffs is given by a student of organic chemistry in connection with the study of coal-tar. Biology classes learn the newest ways of controlling yellow fever and malaria from the last number of the *Supplement*.

Even the classics are made to show their vital connection with the present by means of the magazines. To the freshman Greece and Rome seem very far away, but he can compile a book of myths illustrated with pictures cut from periodicals, or make a collection of advertisements of automobiles and soaps and pianolas based on the stories of the ancient gods. Hero and Leander are never abstractions to one who has pictured the lovely lady with her swans and sparrows in her turret above the murmuring sea, while the ill-fated swimmer lies dead on the rocks below. The boy sees the two-faced Janus on the

*Nineteenth Century and After*, and reads the Vergilian motto on the *North American Review*. He clips poems from current magazines about Persephone and Semele and Arachne, and finds how great our debt is to the classics, for even if the world is much with us, we still have sight of Proteus rising from the sea.

The following twenty-five magazines might be chosen for a high school library:

## LITERARY

*Atlantic Monthly*  
*Bookman*

## ART

*Craftsman*  
*International Studio*

## FOREIGN

*Boletin de la Union Panamericana*  
*L'Illustration*  
*Sphere*  
*Uber Land und Meer*

## SCIENCE

*National Geographic Magazine*  
*Popular Mechanics*  
*Scientific American*  
*Scientific American Supplement*

## CURRENT HISTORY

*Current Opinion*  
*Independent*  
*Literary Digest*  
*Outlook*  
*Review of Reviews*  
*Survey*  
*World's Work*

## COMMERCIAL

*Business Journal*  
*System*

## DOMESTIC ARTS

*American Cookery*  
*Good Housekeeping*  
*House Beautiful*

## INDEX

*Readers' Guide*

## THE HIGH SCHOOL LIBRARY AS A BRANCH OF THE PUBLIC LIBRARY\*

BY ELIZABETH WHITE, *Librarian, Passaic, N. J., Public Library*

IN answer to the question "Of what use is the catalog?" a pupil gave the answer: "If we want to start something and do not know how, we can look in the catalog and that tells us the best way." So much has been written about high school library problems in the past two or three years and the subject has been so well covered, that I have taken the pupil's advice and made a catalog of high school library topics. By a process of elimination I find that the advantage of having the high school library directly under the public library has not been fully discussed and so my catalog has told me "how to start." Some time ago a school superintendent, who was undecided whether or not to make his school library a branch of the public library, consulted with me on the subject.

As I pointed out to him the many ways in which the librarian of the public library could use time and thought in trying to improve the work of his school library, I was surprised to find that in his opinion all of this should be done by the librarian anyway and that it should be left to the high school librarian to follow the librarian's advice or not as he or she chose. I doubt whether in these days of small appropriations, few assistants, and much work, there are many public librarians who can give the same time and attention to the separate high school library that he or she does to a branch of the library system.

Passaic tries to make the connection between the pupil and the library start before the high school, as a large percentage of pupils do not reach the high school. To such a pupil a letter is sent by the Public Library calling to his attention the ability

\*Read before the Massachusetts Library Club at Marblehead, June 9, 1916.

of the library to further his education and make him a better workman. Most of the children in the schools composed largely of children of foreign parentage are now introduced to the library through the medium of motion pictures. Special grades, adapted to the pictures to be shown, are sent to the Public Library auditorium, where they see travel pictures, industrial pictures, and stories from the best children's books. Such pictures as Rip Van Winkle, Treasure Island, and The Prince and the Pauper have been shown. The children then make this a part of their class room work and the teachers have obtained very interesting results. Six schools are reached in this way. In the evening the same pictures are shown to another audience and the high school teachers often make this a part of their class work. The Gary school has shown an interesting development by not only summarizing stories from the library books but by printing them in the school and putting them out in pamphlet form. Nearly all pupils know the library before they reach the High School, through the use of the library books, the motion pictures, or talks given them by the librarian on travel, the use of the library, or the history of the use of books.

After this preparation the student when he reaches the High School knows the library and the librarian. He is then ready for his library lectures which teach him how to get the most out of the library and out of his own books. From this time on the High School student knows how to look out for himself to a large degree. His reading is of interest to his librarian and his English teachers, and is easily followed by means of his borrower's card. This the student finds from the file when he wishes to draw a book and on it he writes the name of the book he is borrowing. These cards are easily kept and are of use to all connected with his high school work, the student included.

In Passaic, the Board of Education pays to the Public Library trustees \$600 annually toward the support of the High School branch. The Public Library trustees place a trained assistant in charge of the High

School branch and spend about \$300 annually for books. As a dollar saved means much to libraries and schools, the matter of book-buying is of primary importance. It seems to be the custom in most high school libraries to place book orders through the school book dealer. The high school librarian has neither time nor opportunity to study book reviews and visit second-hand dealers. In Passaic this is largely in the hands of the city librarian. As each review is read, the High School Library is in one corner of the librarian's mind; as each book dealer is visited, books suitable for school reference work are examined; and as each new book is bought it is inspected by the high school librarian, who decides whether it is important enough to be bought by the High School Library, whether it should be called to the attention of a teacher and later borrowed from the Public Library, or whether it is of no use in her high school work. In this way, the high school librarian becomes thoroughly conversant with the new books in the Public Library and makes them supplement her own collection. All of our finely illustrated editions and a large part of our reference books have been picked up at second-hand prices, thus saving many dollars during the year; and the teachers seem pleased with this method of book-buying as they get not only the books they ask for personally but also many they have not known before.

From books to pamphlets is but a step. The mail delivery at a high school library is comparatively small, but we all know how voluminous the public library mail bag sometimes is. Through it come all kinds of pamphlet material, much of it of just the right length and interest to fill the high school demand for oral topics. In Passaic, this material is sent to the High School Library and other copies are sent for if needed for the Public Library. In this way the High School branch has compiled a good working oral topic collection at least three-fourths of which has come from the Public Library. This was made plain to me recently in making a list of free pamphlets on the lives of prominent persons. Each high school library I wrote to replied that it had almost none, yet I have

been able to find scarcely a pamphlet on authors' lives that the Passaic High School Library does not have. Back magazines and magazines sent as gifts to the Public Library are used extensively by the High School Library in its clipping material for oral topics. In fact we have found these oral topics of so much interest in the High School that an oral topic index is being made to all books in the High School Library, and a current event index to magazines is kept. An English teacher told me a few days ago that she considers this work one of the most important uses her students make of the library.

Not only pamphlets but many pictures are sent to the High School Library from the Public Library mail bag, as the entire picture collection is kept in the High School branch. This includes the *Mentor* magazine, which is extensively used in oral topic work and for the bulletin board and museum cases. The exhibits placed in the museum cases are usually gathered together by the Public Library.

Reference work is of such prime importance in the high school that the librarian is on a constant lookout to make it more efficient. We find in Passaic that the high school librarian's nine hours a week spent at the various branches of the public library give her such a working knowledge of the books in the Public Library that by the use of her telephone she can collect at once material she needs from the Public Library, and in this way her book collection means not only the books on her shelves but the books of the whole system. At the same time she reports to the library branches what subjects are in demand for the day, and books on these subjects are reserved at the Public Library for high school students.

A very pleasant result of the connection between the High School and the Public Library has been the interchange of assistants. This is especially important during the library lectures when almost the complete time of one and sometimes two assistants is given to the High School Library. At other times the Public Library is called upon to prepare new books, take an inventory of the library, and bring any work up to date. By always having a sub-

stitute ready the high school librarian is able to attend library meetings which occur during the school period, visit other high school libraries, etc. Passaic has a public library assistant who has been trained to help out in the high school.

A final and very important reason for making the high school library a branch of the Public Library is that two heads are better than one. The Passaic high school librarians attend all staff meetings and high school problems are discussed by any members of the staff who have worked in the high school branch. Often new helpers are able to give suggestions which have not before been thought of, and a suggestion from the high school librarian is often added to by another member of the staff. Whenever any special piece of work is given the High School, the Public Library staff is called upon to assist and give suggestions. For instance, the high school librarian has just been asked to compile a scrap-book showing the work of her library. In this scrap-book the high school librarian has given the material and thought, while one member of the staff has supervised the work, a second has typewritten all lists, and a third has lettered the book and put the material together. In this way through a combination of workers results have been obtained which one librarian could not easily accomplish alone.

The Public Library finds that it reaps benefits from this connection with the High School Library in many ways. The high school librarian takes charge of much evening reference work, for which she is especially trained; the public library assistants become familiar with the high school books and often borrow them or send people to the High School to investigate a subject; high school books are borrowed by the Public Library for the summer; books, pamphlets, and pictures are not duplicated to the degree they would be if the two libraries were not connected; and knowing the high school collection, the Public Library does not duplicate the work which should be done in the High School branch, but sends the student to that library for his material. Altogether the connection has proven a pleasant and profitable one to both the school and the library.

# TRAINING FUTURE TEACHERS TO KNOW CHILDREN'S LITERATURE

BY IDA M. MENDENHALL, *Librarian, State Normal School, Geneseo, N. Y.*

THAT this is a matter of great importance may be concluded from the motley array of books in the small unorganized school libraries showing how teachers have been at the mercy of the book agent, from the statement of school principals that the normal school graduate's greatest weakness is her ignorance of children's books, and from the cheap books given to children by Sunday school and other teachers for Christmas and birthday gifts.

Here is an answer to the question from one normal school that is trying to send out teachers who know children's books. Some of the different methods are given by which the school attempts to solve the problem of "making sure that future teachers know children's literature."

## TEACHER-LIBRARIAN COURSE

An elective teacher-librarian course of two years' length is offered to a small group of students. A graduate teacher-librarian is prepared to do departmental teaching of English or history, and in addition, to organize the school library, select books, conduct a "library hour" in each grade, give library lessons on the use of books, take charge of a "story hour" for children, and make the library an indispensable laboratory for preparation of school work, and by means of exhibits, constantly changing bulletin boards, and collections of pictures and industry exhibits to make the library the most inviting place in the school.

The course in children's literature is given during the junior year and the class meets three times a week for twenty weeks. The students make a study of the different classes of children's books—fiction, poetry, fairy tales, history, biography and travel, useful books, and picture books. Each student reads one or more books of each class and reports upon them. Some of the book reports are given with the purpose of introducing children to a book in such an attractive way that children will want to

read it. Other reports are made from the teacher's standpoint, the following points being discussed:

### 1. *Kind of book:*

Fairy story, myth, hero-story, nature—or animal-story, book of travel, history or biography.

If a story, is it about home-life, school-life, sea, war, adventure, etc.

### 2. *Literary merit of the book:*

Plot: Is it loose, simple, complex, involved, impossible, overdrawn, etc.

Characters: Wholesome, natural, well-bred, too good, morbid, lifelike, well drawn, etc.

Motive of theme: Human sympathy, moral courage, valor, friendship, character building, commonplace, etc.

Style: Is the English correct, pure, slangy, babyish, in dialect; language figurative, conversational; vocabulary, simple, stimulating.

### 3. *Use of the book:*

Adapted to what age; most interesting to boys or girls; for children's outside reading; supplementary reading in school; for story-telling; reading aloud; dramatization; intensive study.

### 4. *Physical make-up of the book:*

Binding, paper, type, index, illustration.

The best books of each class are compared with cheap, poorly written books, different editions of the classics among children's books are discussed and some principles of book selection are worked out. Students also read what experienced children's librarians and teachers of English have written about children's reading, as Miss Hunt's "What shall we read to the children?" McClintock's "Literature in the elementary school," Rose Colby's "Literature and life in school," Miss Olcott's "Children's reading" and Lowe's "Litera-

ture for children." There are class discussions of such problems as: The influence on children's reading of the "nickel novel," the "movie," Sunday supplements, juvenile series, and the mediocre novel; Difference in the reading of boys and girls; Ways of directing children's reading; Successive tastes in a child's reading; Influence of "library hour," "story hour," and reading aloud at home.

These recitations are not theoretical discussions, but, as much as possible, books are studied in connection with children. When the reading aloud of poetry is being considered, a grade of children come to the library class room and hear the teacher read poetry, while the junior teacher-librarians observe. Stories, poems and picture books are tried out with the children. The students help find books for the children to read in their "Library hour" and thus learn from real experience that before they can fit books to children they must know the books as well as the children. The regular grade teacher or a senior teacher-librarian usually takes charge of the children's class held in the library class room, while the juniors observe. At the end of the course in children's literature, the juniors have read children's books of different kinds, have handled and have heard discussed many other books which they have not read, have heard book talks, story-telling and reading aloud tried with different grades of children, and have been awakened to the various problems of children's reading.

#### THE LIBRARY HOUR

Each grade in the Training School comes to the library once a week for a period which is called "library hour." During the hour stories are told, book talks are given, stories or poems are read aloud, library lessons on the dictionary, card catalog or arrangement of books are given, or the children select their own books and read for enjoyment. The library hour is the means of creating and directing the reading tastes of the children. The senior teacher-librarians are placed in charge of the library hour and must know the books suited to the grade in which they are doing practice teaching. They try to learn what books

the children are reading outside of school and how they happen to read these books, whether the children have books of their own at home, whether they take books from the public library, what books they have re-read and whether there is reading aloud at home. When new books come they introduce the children to them. All of this is a part of the regular practice teaching and whether graduates get good positions in June depends largely on their success in this practice work.

#### GOOD BOOK WEEK

About a month before Christmas, Good Book Week was observed by the library, and the mothers of Geneseo were invited to the library to see the book exhibit. The different tables of books suggestive for Christmas gifts—picture books for little children, stories for reading aloud by the parents, books for boys, books for girls, beautiful editions, inexpensive books for grown-ups, etc.—were in charge of the senior librarians. The first problem for each one was to select the best books for her table. It was necessary to examine many books and many different editions, also to look through the best lists of children's books for suggestions on her selection of books. The students became familiar with the lists by Miss Hewins, Miss Hunt, Miss Power, Miss Olcott, Miss Zachert and other experienced children's librarians. When the mothers' meeting was held these seniors took charge of the different tables and talked with mothers about the books.

#### BULLETIN BOARDS AND SPECIAL TABLES OF BOOKS

Constantly changing bulletin boards add to the lure of the school library and widen the horizon of students. An anniversary table celebrates by means of attractively arranged books, pictures, poems and stories, the different special days upon which teachers wish material. Nature study bulletins and tables show the bird arrivals by month, the migrants, and winter residents, also the succession of wild flowers for April, May and June. Special topics in the English department are brought to the attention of the stu-

dents by means of inviting tables of books, some of the topics being Hamlet as played by great actors, King Arthur and the Holy Grail, and *Midsummer Night's Dream*. Pictures of and interesting articles about the lecturers, readers, and musicians of the entertainment course are posted on the bulletin boards. In collecting material for these bulletins and tables, students gain a wide acquaintance with reference material suitable for children and adults.

#### STORY HOUR AT THE PUBLIC LIBRARY

The senior teacher-librarians have taken charge of a story hour on Saturday mornings at the town library. To select the stories and to collect the books which the children may wish to take home after the story hour, it is necessary to handle many children's books as well as books about story telling and best story programs.

A senior taking the teacher-librarian course cannot complete the training without getting a practical knowledge of children's books.

#### LIBRARY LESSONS FOR ALL STUDENTS

You say that this elective course reaches only a small number out of the two hundred or more who graduate every year from the Normal School. What about the others who do not elect the teacher-librarian course? Every student in Geneseo has during her junior year a required course of ten lessons on the use of books and library tools, and during the senior year just before graduation, when students have their positions and know what grades they are to teach, a required course of ten lessons is given on book selection for children. In this senior course many children's books are handled and discussed, a few are read and students learn what the United States and the state education departments do for small schools in the way of traveling libraries, book lists and other helps in book selection. Though these graduates do not take charge of the library hour for children, they all see more or less of what is done during the library hour. In reading methods some handling of children's books is required. A list of books consulted in preparing lessons for practice teaching of geography, history, etc., in the grades is re-

quired of each student in the lesson plans handed to the teacher for criticism.

No student leaves the school without knowing the necessity of the library in school work, and without some knowledge of the best books for the school library. The "library germ" is in the air, so to speak, at Geneseo and it is hard for a student to go through the school without being infected. The transformation of small school libraries made by graduates of the school prove that this library infection is working itself out to the betterment of library conditions in schools over the state.

#### ENGLISH IN NORMAL SCHOOLS

THE National Council of Teachers of English has appointed a committee to study English in the normal schools of the United States, with a view to discovering what is being done in the normal school courses in English, to studying a few courses very closely, and, finally, to formulating a series of principles and suggestions looking toward a standard course in normal school English.

The committee will base most of its findings upon the replies to the following questionnaire which has been sent to all the normal and training schools in the United States:

#### QUESTIONNAIRE

Name and location of school.

Name of person filling out questionnaire.

1. Give a brief summary of *all* your normal school English courses (if possible, refer to page of catalog instead of writing out the outline of the courses).
2. What English work is required?
3. Are your normal school English courses satisfactorily credited at nearby colleges and universities?
4. Who conducts your courses in methods of teaching English, members of the English department, or members of the education department?  
Do these courses include practice teaching in English subjects?  
Who conducts the practice teaching in English subjects?
5. Do you have courses in English methods for rural schools, commercial schools, high schools, or any other special schools? (Underscore or write in the special courses you have.)
6. Do you offer courses or work in the following? (Underscore the ones you offer.)  
a Story-telling. b Dramatization. c Oral

expression. *d* Use of books and libraries. *e* Children's literature.

7. If you have a preparatory high school or academic course in your school, is the English work in this course given a professional trend? In what way?
  8. In what details do you consider your course unsatisfactory?
  9. Briefly formulate your conception of the proper required course in English for a two-year normal school.
- Remarks.

The committee will make its report at the next annual meeting of the National Council of Teachers of English, to be held in New York City in November at the time of the Thanksgiving holiday.

The committee is as follows: Walter Barnes, State Normal School, Fairmont, W. Va., chairman; Elizabeth Tait, Philadelphia Normal School for Girls, Philadelphia, Pa.; Florence Skeffington, State Normal School, Charleston, Ill.; W. H. Wilcox, State Normal School, Baltimore, Md.; C. R. Rounds, inspector of English in normal schools, Milwaukee, Wis.; Herbert E. Fowler, State Normal School, Lewiston, Idaho; Ida Mendenhall, State Normal School, Geneseo, N. Y.

### PAMPHLET BIOGRAPHIES

A COLLECTION of pamphlet biographies which may be obtained free or at small cost has been made in the High School Library at Passaic, N. J., and the list of subjects and the publishers from whom they may be obtained may be of use to many teachers and school librarians:

- Dodd, Mead & Co.*  
J. Henri Fabre
- George H. Doran Co.*  
Arnold Bennett
- Doubleday, Page & Co.*  
Joseph Conrad  
O. Henry  
Kipling Index

### HIGH SCHOOL BRANCHES OF PUBLIC LIBRARIES

(Tentative List—June, 1916.)

As the chairman of the committee on high school libraries in the National Education Association is anxious to have a card

index to public library branches in high schools and to keep it up to date, public libraries are urged to notify the chairman whenever a high school branch is established and to send reports of changes and of progress.

## "REFERENCE GUIDES"

LIBRARIANS planning a course of instruction to pupils in the use of the library will find in this new book by Miss Hopkins,\* an answer to many of their most serious problems. It contains eight groups of lessons on the use of reference guides, in graded sequence, to be given by a teacher or librarian, and these are published in a complete series and also issued in separate groups.

Carefully selected material, with full and detailed descriptions, good illustrations, including many specimen pages, and numerous and helpful practice questions are special features that will win grateful recognition for the book from those for whom it is written.

The grouping is unusually practical; normal school librarians and teachers will find that more attention is given to their point of view and needs than in most manuals of this kind, and the method of publication, by which one may obtain the lessons separately if the whole course can not be given, is an economical feature that will be appreciated.

Altogether, the book is a significant and scholarly contribution to a literature as yet in its infancy, and should receive a warm welcome from the profession.

N. I. T.

\*Hopkins, Florence M. Reference guides that should be known, and how to use them. Detroit: Willard Co., c. 1916. 187 p. \$1.50. (Separate groups, in lots of 12 or more, 20c. each.)

### SCHOOL LIBRARY EXHIBITS IN NEW YORK CITY

A LOCAL committee of the N. E. A., with Miss Annie Carroll Moore as chairman, is preparing an exhibit of library aids for teachers. The exhibit will be in the New York Public Library, and arrangements will be made to have librarians from the public and school libraries of New York, Brooklyn, and Queens Borough assigned to the exhibit each day while the N. E. A. is in session to serve as a reception committee and welcome the teacher and explain the exhibit. A printed "List of library aids for teachers," which will include most of the inexpensive printed lists shown, will be on sale for a nominal sum. The committee plans to have for free distribution some brief selected lists of books for boys and girls. The general feeling of the committee is that the children's room of the New York Public Library will in itself be the best possible exhibit of books for teachers in elementary schools who were interested in children's reading.

Another exhibit, under the direction of Miss Mary Hall, will be held in the Washington Irving High School, where three rooms have been granted for an exhibit illustrating what a modern organized high school library can do for the school. Two corridors have also been promised, and Mr. Dana, of the Newark Public Library, has offered to lend the large pictures most used by teachers in the different departments of the Barringer High School, Newark, and to prepare a pamphlet on the use of such pictures in high school work. The plan of the committee is to have the main library room of the Washington Irving High School devoted to the books useful in vocational and science courses, physical training, art, and music. The library classroom adjoining will contain library aids for Latin, modern languages, history. Room 119, a large room similar to the library in shape, will be used for teachers of English. This will also illustrate proper library equipment for a high school library. There will be photographs and blue prints of some of the best planned and best equipped high school library rooms.

### SCHOOL LIBRARIANS MEET

ON Saturday, June 10th, the New Jersey School Librarians' Association joined the New York High School Librarians Association in a visit to the plant of the H. W. Wilson Company at White Plains, New York. After a most interesting trip through the plant and a delicious luncheon at the White Plains clubhouse, the New Jersey Association held its regular June meeting in the White Plains High School Library, with the New York librarians as its guests. A report was read of the work of the association since its organization a little over a year ago, a collection of pamphlet material on the lives of modern authors and inventors was exhibited, and a question-box on problems of high school library administration brought forth much helpful discussion of problems common to all present.

A. M. HARDY, *Acting Secretary.*

### HANDBOOKS ON LIBRARY IN- STRUCTION IN SCHOOLS

SOME of the valuable recent contributions to the handbooks of library instruction for schools are:

RICE, O. S. Lessons on the use of the school library for rural schools, state graded schools, village and city schools; also for use in high schools in the giving of such library instruction outlined as has not been given in the grades. Issued by C. P. Cary, State Superintendent, Madison, Wis. 1915. free.

LAMB, G. H. Lessons in arrangement and use of the Carnegie Free Library, Braddock, Pa. 1915. free.

HOPKINS, F. M. Allusions, words, and phrases that should be known and where to find them; comp. by high and normal school students. Detroit: Central High School, 1915. 25 c.

—Reference guides that should be known and how to use them; a series of eight groups of graded lessons on the use of reference books which could be given in connection with English courses in high and normal schools. Detroit, Mich.: Willard Co., 479 Sixth St, 1916. \$1.50.

—Course of lessons on the dictionary. Published by Funk & Wagnalls and furnished free in quantities for use in classes.

SEVERANCE, H. O. Library primer for Missouri high schools. Columbia, Mo.: Univ. of Mo., 1915. free.

I do hold the buying of more books than one could peradventure read, as nothing less than the soul's reaching toward infinity; which is the only thing that raises us above the beasts that perish.—PENMORE.

## IN THE SCHOOL LIBRARY FIELD

The responsibility for the administration of school libraries in St. Paul has been transferred to the Public Library.

A short course in library science is to be given for the first time this summer in the Montana State Normal College, by the librarian, Miss Lilian R. Free.

The North Carolina Library Commission makes a practice of sending to students in the rural schools literature to be used in writing their graduation essays, as well as recitations and orations.

The tenth annual story-telling season in the Louisville Public Library ended May 19 with an entertainment in which some sixty boys and girls took part. The program consisted of recitations and musical selections and two plays, "Peter Pan" and "Pandora's wonderful box."

For three years one of the branches of the St. Louis Public Library has been conducting a German story hour for children. The attendance has been very good and new library readers have been gained. The stories are told by an assistant in the children's room, who has been familiar with the best German folklore since childhood.

Members of the New York State Education Department have suggested that a map of the state be made showing the location of graduates of the teacher-librarian course of Geneseo State Normal School. It is hoped that these graduates can be called upon for discussion of library topics and to prepare library exhibits for teachers' conferences that are held over the state.

Mr. Congdon, English inspector of the New York State Education Department, has asked for a course of study giving minimum requirements in library instruction for high schools, normal schools and training classes. These courses are being prepared by Miss Mary E. Hall for high schools and Miss Ida M. Mendenhall for normal schools and training classes.

The usual six-weeks course in library economy will be given by Columbia University from July 10 to Aug. 18. School library administration will be taught by Miss Mary E. Hall and Miss Ida Mendenhall. Courses will also be given in bibliography, cataloging, classification, public documents, and legislative and reference work. Complete information will be furnished by the secretary of the university.

Arrangements have been made by the board of education at Council Bluffs, Iowa, to have the branch libraries which are maintained at the various school buildings during the school term continued through the summer, opening the schools one day each week for the distribution and exchange of books. The collections of books will be reorganized to include volumes for more mature readers as well as for the children.

Library training in Michigan summer schools was given last summer at Ferris Institute, Big Rapids, by Miss Florence M. Hopkins; at the Western State Normal School, Kalamazoo, by Miss Esther Braley; and at the Northern State Normal School, Marquette, by Miss Marie A. Newberry. These courses were all given under the supervision of the State Board of Library Commissioners, and there was a total enrollment of 68 students.

Miss Mary Richardson has left the State Normal School of Castine, Me., to become librarian in one of the high schools of Spokane, Wash. She has been one of the pioneers in school library work, having organized both the Normal School and Public Library of Castine, and reaching the entire state, through talks at Teachers' Institutes, summer library courses at the Normal Schools, and talks before the State Teachers' Association and the the State Federation of Women's Clubs.

At the annual meeting of the Texas State Teachers' Association last November a resolution was passed endorsing the work of the Texas Library Association and favoring the organization of a Library Section of the Teachers' Association. After the meeting the necessary twenty-five signatures were secured for the petition asking for a Library Section, and the petition was turned over to the proper authorities. Nothing was done in the way of organization, but plans are under way to make such a section worth while.

The National Council of Teachers of English will hold its next annual meeting in New York City during the Thanksgiving vacation. The meetings have heretofore been held in Chicago. For three years a library section has held meetings devoted to the questions of normal and high school libraries, which have been attended mostly by librarians and teachers of the Middle West. This meeting in New York City will give opportunity for a conference on library questions between teachers and librarians of the Eastern states.

The June "Teachers Bulletin" of the Haverhill (Mass.) Public Library, which is unusually successful in its work with teachers and pupils, is a three-page mimeographed list of the educational books and periodicals added to the Public Library since June, 1915. The books and magazines on education are placed in a room by themselves, classified by subject, and at all times available for consultation. College catalogs are kept on file in the reference room. By a special arrangement teachers may take educational books away with them for summer study, keeping them until Sept. 15.

Miss Ruth Wright, librarian of the Tempe Normal School of Arizona, is coming East for the summer to visit her relatives and friends and to attend the Cornell Summer School. Miss Wright is a graduate of Pratt Institute Library School and has had wide and interesting experience in school library work—first in conducting library courses in the Normal School summer sessions in Michigan, then taking charge of school libraries for the Library Commission of Oregon, then becoming librarian of the Tempe Normal School of Arizona. Soon after the meeting of the first legislature of Arizona she met the education committee of the Senate, to explain the work of library commissions of other states, and has served as a bureau of library information for the state.

At the East Technical High School in Cleveland, Ohio, moving pictures at noon have proved both interesting and instructive. In connection with a nine-reel film of "Last days of Pompeii" the library had on exhibition some fine photographs and curios from Pompeii, also a collection of post cards. Pupils were informed of this exhibit by means of a slide made for the occasion and thrown on the screen before and after each reel. Much interest was shown and there was a steady demand for Bulwer-Lytton's "Last days of Pompeii," six copies being issued the first day. Earlier in the season the same school had an exhibit on the "History of printing" including some rare specimens loaned by the Art Museum. This was followed by some excellent mounted photographs of Greece loaned by a member of the art department. Pupils are offering to loan personal collections. One pupil loaned his collections of coins and stamped envelopes which he had mounted and lettered according to suggestions made by the librarian.

In an account of what the Hartford (Ct.) Public Library is doing for children the libra-

rian, Caroline M. Hewins, says: "We have bright, sunny rooms in an old-fashioned house next the library, a book room (open shelf), and two reading rooms, one for the older boys and girls. We have a story hour in our large store room, formerly the studio of the Art Society. The stories are read, rather than told, for two good reasons, one that the children may hear the best English, the other that the story reader is a busy person who has not time to prepare her work as the professional story-tellers do. Hawthorne's 'Wonder book' and 'Tanglewood tales' are an unfailing resource for story reading, and we always have 'The pomegranate seeds' when pomegranates are in the market, and pass one around for the children to see and taste, and again in the spring, using at both seasons Leighton's 'Return of Persephone' that hangs on the wall. We have never tried large audiences, and would much rather read to 25 attentive children than to 250 wrigglers."

On the top floor of the Seattle Public Library's main building is the teachers' room, so named because it may be used by them as a committee room, a reading room, or a bureau of information. A good working collection of books on education is kept here, together with current files of all the educational periodicals, school reports from most of the larger cities of the country, and courses of study from these cities wherever they are available in printed form. Elsewhere in the library are bound sets of educational journals and the publications of educational societies, and periodical material for use in debates. There are pictures for circulation in both the fine arts and the teachers' rooms. The fine arts room supplies bird pictures in color, besides pictures of architecture and sculpture, photographs showing the work of various schools of painting, and stereoscopic views of travel at home and abroad. In the teachers' room are the pictures and clippings for the study of geography, history, and American industries. There are approximately 6500 pictures and over 4000 clippings about all the countries of the world, which have been so arranged as to make selection easy. The reference, children's, and periodical rooms all have a system of collecting and holding for a given period on reserve shelves material on any special subject requested by teachers either for their own use or for the use of their classes. It is necessary only to telephone or leave word in advance at the library to have such reservation made.

5342

WALTER L. BROWN

*President-elect of the American Library Association, 1916-17, and Librarian of  
the Buffalo (N. Y.) Public Library*

THE conference of 1916 marked the fortieth anniversary of the American Library Association, though the omission of meetings in 1878, 1880, and 1884, before annual meetings became the rule, made it only the thirty-eighth conference. Exceeding the great gathering at Washington in 1914, when attendance from the departmental libraries of the government swelled the recorded and estimated total to 1366, this proved the banner conference, the advance registration reaching 915 and the recorded attendance 1333, which figure will probably be swelled beyond 1400 after including by verification at the libraries, which is now proceeding, the many who came from the New York and Brooklyn and other nearby libraries in successive waves, but failed to register. The hotel management at the New Monterey left nothing to be desired, rivaling the ever memorable stay at Bretton Woods in 1909, and the Columbia and other overflow hotels were not less zealous in providing for the comfort and convenience of their library guests. To the New Jersey and local committees great credit is due and the latter was admirably supported by the municipality of Asbury Park which co-operated in proffering abundant entertainments, while the journey to Princeton marked the red letter day of high festival. To all our hosts—and there were hosts—all thanks were due, and they were heartily accorded.

THE one regret of the conference was the absence of the president, Miss Mary W. Plummer, but the sorrow at the lack of her gracious presence was lessened by word of her advancing convalescence from the long illness which began at the very time of her election to the presidency. She had written her address, which touched a high level

of inspiration and despite her apologies was as finished and charming as is usual in her writing. The affectionate message to her expressed unanimous and genuine feeling. Messages of appreciation to Melvil Dewey and to the widow of Frederick Leypoldt, and the presentation of a loving cup to R. R. Bowker, expressed the recognition by the association after forty years of success of the three men who initiated the call for the 1876 conference. Greetings were also sent to the other members of the A. L. A. who were present at the first conference. Fourteen of these are known to be living, the senior being the venerable William Ives of Buffalo—a co-worker with the lamented Larned—whose one hundredth birthday is nearly reached. The call initiated by the three men was sent out with the signatures of a score or more, then better known in library work, and brought together 103 persons, of whom 67 became members of the association. Between Justin Winsor's presidency and that of Miss Plummer the A. L. A. has reached the accession roll of 7231, of whom about 3200 are in active membership, more than two-fifths being registered at the Asbury Park conference. The success of the association in these forty years has been fully as great in all fields of library endeavor as this growth indicates and it is gratifying that so many of those who took part in the seed sowing have lived to see the harvest of the present.

THE message authorized to be sent to the Director of the National Library of Mexico, who had been named as one of the unofficial conferees to preserve peace, came from no bias of partisanship or lack of patriotism but was intended to mark the world-wide sympathies of American libra-

rians in promoting conditions of peace from which only can come that progress for which librarians are workers. One of the greatest of disappointments in the world war has been that just as librarians were doing their part in weaving ties of international sympathy, such kindly and helpful folk as Mr. Tedder of London, M. Otlet of Brussels, Dr. Schwenke of Berlin, Mme. Haffkin-Hamburger of Moscow and Prof. Biagi of Florence should suddenly find themselves enemies instead of friends. Canada and the United States are such close friends that their librarians are together in the American Library Association; and although Mexico is separated by another tongue, there is every desire that the people of the third nation on this continent, though far behind in that development of which modern libraries are the exponent, should remain friendly with the other powers and peacefully work out the salvation of her people partly through the development of schools and libraries such as we enjoy. The attention of the Council was called to several plans on foot in Europe to develop popular education in some of the warring countries by the adaptation of the American library system to foreign needs, and though action at the present moment seemed inopportune, a committee was charged with the consideration of such co-operation as might later prove practicable.

---

THE Council held only one session, for the "open session" was in reality a general meeting of the Association, except for Mr. Brett's paper left over from the program of the first session and, despite its importance, read to a diminuendo accompaniment of a departing audience. This was a pity, for Mr. Brett's treatment of relations with the book trade was a candid and common sense presentation which should have had full discussion, especially in view of pending legislation. The actual meeting of the

Council showed how important Council meetings may become, for Mr. Dudgeon's report of lack of progress by the Council committee on library insurance led to an animated and useful discussion in detail on this subject. Whether a large library system should be self-insured as part of a municipal plant of buildings and equipment, whether individual libraries should take out fire insurance for building, books and catalog together or separately, employers' liability, accident to public, boiler and elevator insurance, forms of policy with respect to co-insurance and concurrent insurance, library loans and special riders, fire drill and safe-guarding without alarming the public, the best means of fire prevention and the best apparatus for quenching small fires without injury to books,—these were among the practical points touched upon in the discussion, which should stimulate the committee on insurance to a comprehensive and practical report next year.

---

THE several papers from writers outside the library profession were well and in some cases enthusiastically received, but we repeat that the value of conferences, national, state or local, is not in this, however entertaining, but in the practical or inspirational contributions which evoke discussion. For the most part the sessional programs which were always crowded, did not permit this, and large attendance in a great hall does not promote it. But that this difficulty can be overcome was shown in the children's librarians session in the Auditorium, where the four addresses, none over long, were followed, thanks to Miss Andrus' clever presiding, by a real discussion all about the hall, which was alike entertaining, informing, and helpful. All library conferences would be the better if speaking were limited to half the time and the other half of the session were given to such experience meetings as that on work and books for children.

# THE PUBLIC LIBRARY AND THE PURSUIT OF TRUTH\*

PRESIDENTIAL ADDRESS BY MARY WRIGHT PLUMMER, *President of the American Library Association and Principal of the Library School of the New York Public Library*

It would seem impossible in a year such as the past year has been, with its overturnings and upheavals, not only of material things but of ideals and of what had seemed moral certainties, that we should spend the time of our annual meeting in the discussion of small or esoteric questions. These crises in life show us the littleness of little things, the subserviency of technique; make us feel through the pull of events our connection with the rest of the world, and even with the universe; take us out of our professional selves and make us conscious of more inclusive selves. And they make us see, as perhaps even we have not seen before, that our profession has a not insignificant part to play in world matters. Hence, we have chosen as our general theme for the conference, "The public library and democracy."

Whichever theory we may hold of the constitution of this world of men, whether we believe that the actions of man are the results of free-will or are determined for him by powers and causes over which he has no control, civilization is based practically on the former doctrine. The game has rules, we say, but within the rules man is free. If this were not the consensus of opinion, why laws and ordinances, and punishments or rewards? Why praise or blame, renown or ignominy? Why take anyone to task for what he cannot help doing or saying? Why bestow the laurel or even the martyr's palm, when owing to the unknown forces of the past and present, the victor or the martyr could not have chosen otherwise than to do as he did? If the test of a doctrine's truth or value is that it "works," as our great pragmatist has expressed it, then we must accept the doctrine of free-will as our working basis until we find something better that also works. In

other words, we are given as guide-posts, general principles arrived at by the accumulated experience and wisdom of mankind; as a goal, many of us would still say, the Kingdom of Heaven on earth; as a motive power, a certain constraint to go forward toward this goal, felt more strongly by some than by others, consciously felt perhaps by few, absolutely ignored by almost no one. With these indications we are given the liberty to govern ourselves, be the arrival at the goal early or late, the journey steady or interrupted, or marked by retrogressions. No compulsion is used, except that constant, mostly unrealized constraint; no punishment, except natural and inevitable consequences, follows the breaking of the rules.

What is this but the method after which democracy strives? A long way after, let it be granted. Still it moves and it faces that way, toward the goal of individual self-government by way of collective self-government. Doubtless, if we gave the enlightened few full sway, many things would be better done, better understood; but the things that such sway would take away are greater than the things it would give. Outer peace and harmony and efficiency do not mean inner conditions of the same kind necessarily, and if they are forced upon us they generally mean quite the contrary.

Doubts of democracy, its value as compared with the value of other forms of government, bitter criticisms of its weaknesses, disbelief in the final accomplishment of its stated ends, are so commonly heard all about us that only a rooted faith that knows its reasons is sure of standing against the tide.

The believer in and the promoter of democracy in these days has need of a great patience, a firm conviction, a balanced mind. He needs to remember that the faults of democracy are the faults of human nature

\*Read at the first general session of the American Library Association at Asbury Park, June 26, 1916.

itself, and that for what all have done or helped to get done or hindered being done, all bear the consequences; while the faults of other forms of control are the faults of human nature plus those engendered by undue power or monopoly, and *all* abide by the results of what the *few* have done. We can correct our own mistakes, retrace our own missteps, but when they are the mistakes and missteps of others who have power over us, where is our remedy?

Out of democracy may evolve something greater and better than we have yet visioned, but as one watches the human tides all over the world, the rising of classes once submerged, the awakening of nations once slumbering or stupefied under an absolute sway of some kind, the call of the women of all civilized countries to be pressed into service, it is fair to believe that for years to come more democracy rather than less is the next number on the program, the next phase through which we must work to our goal. There are faults inherent in democracy; granted. We are beginning to see this, which is the first step toward correction. We are no longer satisfied with theoretical democracy; it must be applied; and if the theory does not work, so much the worse for the theory, for we begin to see that by the fruits of a democracy we are to know if it is real democracy.

The consciousness of power to improve, to amend what is wrong, is a great asset for any worker with vision. The knowledge that a great mass of uninterested, or unintelligent, or hazy-minded persons are to be waked up, stimulated, focussed, means that those having this knowledge are incited to keep everlastingly at it. The certainty that the world cannot go back, that there is no golden age to go back to and never was, that there is an inner urge which all obey consciously or unconsciously, which is bound to bring us all out into some better place if it is wisely guided; this certainty is an impelling force that cannot be resisted. One may step aside out of the movement and take refuge in a corner and call names at those who go forward, or turn one's back and take no further interest in the subsequent proceedings, and so may save one's own remaining years from dis-

turbance, perhaps, but it is useless to stand in the road and try to stem the tide; that is, useless in the long run. There are and there will be obstructions, but when the dam breaks the cumulated movement will be all the greater and swifter and more damage will be done.

The great dangers of a democracy are ignorance and fear; the fear born of ignorance. When, as children, we have learned that there is no such thing as the bogey we have been threatened with, we no longer fear it, and as we grow older and successive bogies are presented by those who, like the nurse or the unwise parent, would frighten us into doing their will, it is only intelligence, it is only the knowing and the power to think and reason that can divest us of successive fears. The majority of us are very bold in proclaiming our ideals, but when in order to reach desirable things we find we must go through phases and periods of disorder and confusion and even danger, we back down, appalled by the bogies which our opponents assure us are permanent evils and not necessary incidents of progress. To get *to* things, we must go *through* things, and the real democrat is he who is not dismayed, who even if shocked or disappointed realizes that he is meeting the phantasms that stand threatening before every stronghold of reaction to be taken and before every goal of progress to be reached.

What has all this to do with libraries? This: that free-will to choose must be based upon a knowledge of good and evil; access to all the factors for making choices must be free to the people of a democracy which can flourish and develop and improve only as it continues to make wise choices. The *free library* is one of the few places where education and wisdom can be obtained for preparation in the making of choices.

We speak of the pursuit of truth. The phrase is an unhappy one, suggesting the picture of truth fleeing before pursuers as the hare before the hounds, with the implication that when caught she also will be killed. The search for truth is better, though even that seems to imply that truth hides. It is hard indeed to find a phrase to describe the work of the seekers of truth.

There are, however, truths that are hidden; there are also truths that seem to flee as we approach, and it is, perhaps, truths rather than truth concerning which I should speak, and truths relative rather than truth absolute, for to Pilate's question, "What is truth?" there has been no answer but its echo. If truth could be condensed into a formula, a statement, or an assertion, we should all be able to have it and pursuit might cease with damaging results, for it is in the search that we gain "mightier powers for manlier use." Truths, however, may advantageously be found, for beyond each one lies another temptingly obscured, that incites further search. May it be possible that absolute truth is a composite, the sum of myriads of smaller or larger truths which may to some extent be compassed to the great advantages of mankind?

There have been, it is true, discoveries that have had to be set aside as knowledge grew and proved them only semblances; a fact that should tend to make all students humble and open-minded. Yet if the law of gravitation is not a law and the Darwinian theory is to be disproved, we are but set free for further study of the meaning of the phenomena on which these were based, and the universe does not become less interesting. Physical truths, the truths of the laboratory, are but one class of those that closely concern the human race. There are economic truths, intellectual truths, esthetic truths, spiritual truths to be sought. For the finding of these, observation, reflection, and concentration of thought are needed, but also a knowledge of truths previously found, of the reasoning previously employed, of facts already ascertained, of untruths set aside and discarded. And at this point, the library becomes the resource of all seekers after truth. Granted, that a large percentage of those who read in libraries are not so much seeking truth for itself as for their own advantage; yet, however or by whomever found, a truth is a truth and is bound to advantage the world sooner or later, if only as a point of departure. Indeed, this is the best use to which to put all truth, and so the seeker continues to seek and inspires others to seek.

We know that important physical laws

have been deduced and valuable powers secured to mankind, from the chance observation of some apparently unimportant fact, but we do not know how many times a reader has been put on the trail of a truth by some sentence in a book, around which shone to him a light invisible to others, nor how often the written word has produced the tense emotion in which great living truths are sensed and absorbed once and for all.

If the librarian could know, could not only know but realize, the power that is going forth from the books over which so many heads are bent, or which he gives out to be taken home, I know not whether he would be puffed up with pride or stunned with his responsibility. If he knew the paths of discovery, the inspired response to inspired words, the impulse toward or away from truth or truths, for which his books are accountable, would he have the strength to hold his hand, saying: "With the search for truth I must not interfere. Whatever my beliefs, whatever my convictions, whatever my apprehensions, I must have confidence in truth's power to take care of itself. I must trust the truth to make its own way"? Perhaps it is fortunate for truth that the librarian does not know the effects of his books and what is going on in the minds and hearts of their readers, for in every generation fear and distrust of the mental and spiritual processes of others are the drags on the wheels of the chariot that sets out in pursuit of truth.

The parent who cannot realize that the time has come for his child to walk alone and "dree its own weird," the teacher or preacher who does not recognize that his audience is ready for the undisguised truth as he can give it to them, the censor who suppresses facts that he considers inflammatory, the ruler who stamps out in his dominion unwelcome truths that are quickly contagious, are all saying in one way or another: "Truth must be protected; I will protect her by concealing what seem to me dangerous paths of thought, and I am the judge as to what is true and what is safe."

Truth is expansive and explosive. Where it cannot make its way gradually

and gently, it comes with the roar and the force of revolution. Every social class buttressed by distrust of the class above or below, acting with closed mind, refusing to let truth penetrate by the smallest chink, may look to see some day its fortifications flying upward in pieces, through the underground workings of the great explosive. If but one way is left open, the catastrophe may be avoided. Shall the public library be that way?

To all appearances, and by their own confession, the churches have failed so long to trust the truth and the people that now, when they do trust, they find themselves mistrusted, and it is only slowly and with infinite pains that they are building up again their congregations on a basis of sincerity and truth.

The schools of higher learning are now on trial, and the people are asking if and why plain truths or facts cannot be spoken in some of them. The press vacillates between suppression and over-emphasis, and we know beforehand which side a journal will take in a controversy and suspect the argument that has led to its choice. Governments professedly based upon fundamental truths deny those truths by their actions.

So far the American people have trusted the public library because more and more the public library has trusted the people. Where truths are being debated, no matter how strenuously, the people know that the library will give them both sides, that they may have all the material for a decision. On the shelves are the books and other records to disprove the misleading figures of one side or the other. If new scientific discoveries seem to connote changes in moral or religious belief, they must be met by new moral or religious discoveries, not by denials unsupported or refusals to consider or the suppression of the discovery. It is entirely possible, if we keep cool, that we may find the connotation to be only seeming.

Few librarians are entirely free in their movements when it comes to the choice of books. There may be a distrustful or prejudiced board member trying to exercise a biased censorship; there may be a timid

member afraid of a one-sided community, and books may have to be withdrawn as a sop to popular prejudice by order of the board. Whether or not there is really anything untrue in the book, it can safely be left to profit by the advertisement it gets in the contest—it is the library that loses, for some people begin to mistrust an institution that is afraid of a book, for a book cannot really and permanently damage truth. Even a temporary and seeming damage brings out at once the defenders of the other side and puts the question again to the forum. Most librarians have at some time or other been requested to withdraw certain books because of their untruth; but investigation of the books will almost invariably show that they have not attacked truth, but an institution. Much more to be dreaded than open assault upon the library's buying of books is the interpenetration of a public library's policy by insidious and gradual changes in its personnel, or in its rules, or in its guiding factors. Those who wish all argument for and against to have a fair field, need to be everlastingly vigilant to keep the umpire's mind and to have courage. "Nothing is lost that has not been yielded up," the German saying has it, and if the library will not give up its right, it cannot lose it, but it must also have the intelligence to know what is happening and where and how its right is being endangered.

Perhaps since the foundation of the world, ours is the first generation to demand facts, to be willing, in the main, to face facts however disconcerting, however disappointing, however shocking. All over the world men and women are refusing to live longer in a fool's paradise. "Let us hear the whole," is the cry; "let us know our real situation, so that we may make it better, so that we may no longer build on a false foundation," and there is no doubt that some terrible things are coming to light through the drama, through the novel, through the new contact between class and class, even through the falling out of thieves. We can no longer turn our backs on these in the Victorian manner, covering up the glimpses we have had and making believe we have seen nothing, or

putting a touch of legal salve upon a visible sore spot; too much has been shown. Face conditions, we must; learn the facts, we must; whoever or whatever is thereby discredited.

The schools give the citizen his tool, the ability to read; the free library and the press, the stage and the moving picture, and life itself give him his material for thought. Might the first four agencies combine to uphold the liberty of the adult citizen to know what concerns him and not

what it is judged best he should know by those who have interests to serve, however worthy these interests may seem, we should have the prime requisite for an enlightened democracy capable of infinite development.

The spirit of truth itself seems to be abroad in the world, speaking through manifold and different voices, and through the printed word. Is it not a wonderful grace that is offered to the public library, the opportunity to be and to continue truth's handmaid?

## HOW THE COMMUNITY EDUCATES ITSELF\*

BY ARTHUR E. BOSTWICK, *Librarian, St. Louis Public Library*

IN endeavoring to distinguish between self-education and education by others, one meets with considerable difficulty. If a boy reads Mill's "Political economy" he is surely educating himself; but if after reading each chapter he visits a class and answers certain questions propounded for the purpose of ascertaining whether he has read it at all, or has read it understandingly, then we are accustomed to transfer the credit for the educative process to the questioner, and say that the boy has been educated at school or college. As a matter of fact, I think most of us are self-educated. Not only is most of what an adult knows and can do, acquired outside of school, but in most of what he learned even there he was self-taught. His so-called teachers assigned tasks to him and saw that he performed them. If he did not, they subjected him to discipline. Once or twice in a lifetime most of us have run up against a real teacher—a man or a woman that really played a major part in shaping our minds as they now are—our stock of knowledge, our ways of thought, our methods of doing things. These men have stood and are still standing (though they may have joined the great majority long ago) athwart the stream of sensation as it passes through us, and are determining what part shall be stored up, and where; what kind of action shall ultimately result from it. The influence of a good

teacher spreads farther and lasts longer than that of any other man. If his words have been recorded in books it may reach across the seas and down the ages.

There is another reason why the distinction between school education and self-education breaks down. If the boy with whom we began had any teacher at all it was John Stuart Mill, and this man was his teacher whether or not his reading of the book was prescribed and tested in a class-room. I would not have you think that I would abolish schools and colleges. I wish we had more of the right kind, but the chief factor in educative acquirement will still be the pupil.

So when the community educates itself, as it doubtless does and as it must do, it simply continues a process with which it has always been familiar, but without control, or under its own control. Of all the things that we learn, control is the most vital. What we are is the sum of those things that we do not repress. We begin without self-repression and have to be controlled by others. When we learn to exercise control ourselves, it is right that even our education should revert wholly to what it has long been in greater part—a voluntary process.

This does not mean that at this time the pupil abandons guidance. It means that he is free to choose his own guides and the place and method of using them. Some rely wholly on experience; others are wise enough to see that life is too short and too

\*Read before the American Library Association, Asbury Park, N. J., June 27, 1916.

narrow to acquire all that we need, and they set about to make use also of that acquired by others. Some of these wiser ones use only their companions and acquaintances; others read books. The wisest are opportunists; they make use of all these methods as they have occasion. Their reading does not make them avoid the exchange of ideas by conversation, nor does the acquirement of ideas in either way preclude learning daily by experience, or make reflection useless or unnecessary.

He who lives a full life acquires ideas as he may, causes them to combine, change and generate in his own mind, and then translates them into action of some kind. He who omits any of these things cannot be said to have really lived. He cannot, it is true, fail to acquire ideas unless he is an idiot; but he may fail to acquire them broadly, and may even make the mistake of thinking that he can create them in his own mind.

He may, however, acquire fully and then merely store without change or combination; that is, he may turn his brain into a warehouse instead of using it as a factory.

And the man who has acquired broadly and worked over his raw material into a product of his own, may still stop there and never do anything. Our whole organism is subsidiary to action and he who stops short of it has surely failed to live.

Our educative processes, so far, have dwelt heavily on acquirement, somewhat lightly on mental assimilation and digestion, and have left action almost untouched. In these two latter respects, especially, is the community self-educated.

The fact that I am saying this here, and to you, is a sufficient guaranty that I am to lay some emphasis on the part played by books in these self-educative processes. A book is at once a carrier and a tool; it transports the idea and plants it. It is a carrier both in time and in space—the idea that it implants may be a foreign idea, or an ancient idea, or both. Either of its functions may for the moment be paramount; a book may bring to you ideas whose implantation your brain resists, or it may be used to implant ideas that are already present, as when an instructor uses

his own text book. Neither of these two cases represents education in the fullest sense.

You will notice that I have not yet defined education. I do not intend to try, for my time is limited. But in the course of my own educative processes, which I trust are still proceeding, the tendency grows stronger and stronger to insist on an intimate connection with reality in all education—to making it a realization that we are to do something and a yearning to be able to do it. The man who has never run up against things as they are, who has lived in a world of moonshine, who sees crooked and attempts what is impossible and what is useless—is he educated? I used to wonder what a realist was. Now that I am becoming one myself I begin dimly to understand. He certainly is not a man devoid of ideals, but they are real ideals, if you will pardon the bull.

I believe that I am in goodly company. The library as I see it has also set its face toward the real. What else is meant by our business branches, our technology rooms, our legislative and municipal reference departments? They mean that slow as we may be to respond to community thought and to do our part in carrying on community education, we are vastly more sensitive than the school, which still turns up its nose at efforts like the Gary system; than the stage, which still teaches its actors to be stogy instead of natural; even than the producers of the very literature that we help to circulate, who rarely know how even to represent the conversation of two human beings as it really is. And when a great new vehicle of popular artistic expression arises, like the moving picture, those who purvey it spend their millions to build mock cities instead of to reproduce the reality that it is their special privilege to be able to show. And they hire stage actors to show off their staginess on the screen—staginess that is a thousand times more stogy because its background is of waving foliage and glimmering water, instead of the painted canvas in front of which it belongs. The heart of the community is right. Its heroine is Mary Pickford. It rises to realism as one man. The

little dog who cannot pose, and who pants and wags his tail on the screen as he would anywhere else, elicits thunderous applause. The baby who puckers up its face and cries, oblivious of its environment, its always a favorite. But the trend of all this, these institutions cannot see. We librarians are seeing it a little more clearly. We may see it—we shall see it, more clearly still.

The self-education of a community often depends very closely on bonds of connection already established between the minds of that community's individual members. Sometimes it depends on a sudden connection made through the agency of a single event of overwhelming importance and interest. Let me illustrate what I mean by connection of this kind. For many years it was my duty to cross the Hudson river twice daily on a crowded ferry-boat, and it used to interest me to watch the behavior of the crowds under the influence of simple impulses affecting them all alike. I am happy to say that I never had an opportunity of observing the effect of complex impulses such as those of panic terror. I used particularly to watch, from the vantage point of a stairway whence I could look over their heads, the behavior of the crowd standing in the cabin just before the boat made its landing. Each person in the crowd stood still quietly, and the tendency was toward a loose formation to ensure comfort and some freedom of movement. At the same time each was ready and anxious to move forward as soon as the landing should be made. Only those in front could see the bow of the ferry-boat; the others could see nothing but the persons directly in front of them. When those in the front rank saw that the landing was very near they began to move forward; those just behind followed suit and so on to the rear. The result was that I saw a wave of compression, of the same sort as a sound-wave in air, move through the throng. The individual motions were forward but the wave moved backward. No better example of a wave of this kind could be devised. Now the actions and reactions between the air-particles in a sound wave are purely mechanical. Not so here.

There was neither pushing nor pulling of the ordinary kind. Each person moved forward because his mind was fixed on moving forward at the earliest opportunity, and because the forward movement of those just in front showed him that now was the time and the opportunity. The physical link, if there was one, properly speaking, between one movement and another was something like this: A wave of light, reflected from the body of the man in front, entered the eye of the man just behind, where it was transformed into a nerve impulse that reached the brain through the optic nerve. Here it underwent complicated transformations and reactions whose nature we can but surmise, until it left the brain as a motor impulse and caused the leg muscles to contract, moving their owner forward. All this may or may not have taken place within the sphere of consciousness; in the most cases it had happened so often that it had been relegated to that of unconscious cerebration.

I have entered into so much detail because I want to make it clear that a connection may be established between members of a group, even so casual a group as that of persons who happen to cross on the same ferry boat, that is so real and compelling, that its results simulate those of physical forces. In this case the results were dependent on the existence in the crowd of one common bond of interest. They all wanted to leave the ferry boat as soon as possible, and by its bow. If some of them had wanted to stay on the boat and go back with it, or if it had been a river steamboat where landings were made from several gangways in different parts of the boat, the simple wave of compression that I saw would not have been set up. In like manner the ordinary influences that act on men's minds trend in all sorts of directions and their results are not easily traced. Occasionally, however, there occurs some event so great that it turns us all in the same direction and establishes a common network of psychical connections. Such an event fosters community education.

We have lately witnessed such a phenomenon in the sudden outbreak of the great European War. Probably no person in the

community as we librarians know it remained unaffected by this event. In most it aroused some kind of a desire to know what was going on. It was necessary that most of us should know a little more than we did of the differences in racial temperament and aim among the inhabitants of the warring nations, of such movements as Pan-Slavism and Pan-Germanism, of the recent political history of Europe, of modern military tactics and strategy, of international law, of geography, of the pronunciation of foreign place-names, of the chemistry of explosives—of a thousand things regarding which we had hitherto lacked the impulse to inform ourselves. This sort of thing is going on in a community every day, but here was a catastrophe setting in motion a mighty brain-wave that had twisted us all in one direction. Notice now what a conspicuous rôle our public libraries play in phenomena of this kind. In the first place, the newspaper and periodical press reflects at once the interest that has been aroused. Where man's unaided curiosity would suggest one question it adds a hundred others. Problems that would otherwise seem simple enough now appear complex—the whole mental interest is intensified. At the same time there is an attempt to satisfy the questions thus raised. The man who did not know about the Belgian treaty, or the possible use of submarines as commerce-destroyers, has all the issues put before him with at least an attempt to settle them. This service of the press to community education would be attempted, but it would not be successfully rendered, without the aid of the public library, for it has come to pass that the library is now almost the only non-partisan institution that we possess; and community education, to be effective, must be non-partisan. The press is almost necessarily biassed. The man who is prejudiced prefers the paper or the magazine that will cater to his prejudices, inflame them, cause him to think that they are reasoned results instead of prejudices. If he keeps away from the public library he may succeed in blinding himself; if he uses it he can hardly do so. He will find there not only his own side but all the others; if he has the ordi-

nary curiosity that is our mortal heritage he cannot help glancing at the opinions of others occasionally. No man is really educated who does not at least know that another side exists to the question on which he has already made up his mind—or had it made up for him.

Further, no one is content to stop with the ordinary periodical literature. The flood of books inspired by this war is one of the most astonishing things about it. Most libraries are struggling to keep up with it in some degree. Very few of these books would be within the reach of most of us were it not for the library.

I beg you to notice the difference in the reaction of the library to this war and that of the public school as indicative of the difference between formal educative processes, as we carry them on, and the self-education of the community. I have emphasized the freedom of the library from bias. The school is necessarily biassed—perhaps properly so. You remember the story of the candidate for a district school who, when asked by an examining committee whether the earth was round or flat, replied, "Well, some says one and some t'other. I teach either round or flat, as the parents wish."

Now, there are books that maintain the flatness of the earth, and they properly find a place on the shelves of large public libraries. Those who wish to compare the arguments pro and con are at liberty to do so. Even in such a *res adjudicata* as this the library takes no sides. But in spite of the obliging school candidate, the school cannot proceed in this way. The teaching of the child must be definite. And there are other subjects, historical ones for instance, in which the school's attitude may be determined by its location, its environment, its management. When it is a public school and its controlling authority is really trying to give impartial instruction there are some subjects that must simply be skipped, leaving them to be covered by post-scholastic community education. This is the school's limitation. Only the policy of caution is very apt to be carried too far. Thus we find that in the school the immense educational drive of the European

War has not been utilized as it has in the community at large. In some places the school authorities have erected a barrier against it. So far as they are concerned the war has been non-existent. This difference between the library and the school appears in such reports as the following from a branch librarian:

"Throughout the autumn and most of the winter we found it absolutely impossible to supply the demand for books about the war. Everything we had on the subject or akin to it—books, magazines, pamphlets—were in constant use. Books of travel and history about the warring countries became popular—things that for years had been used but rarely became suddenly vitally interesting.

"I have been greatly interested by the fact that the high school boys and girls never ask for anything about the war. Not once during the winter have I seen in one of them a spark of interest in the subject. It seems so strange that it should be necessary to keep them officially ignorant of this great war because the grandfather of one spoke French and of another German."

Another librarian says:

"The war again has naturally stimulated an interest in maps. With every turn in military affairs, new ones are issued and added to our collection. These maps, as received, have been exhibited for short periods upon screens and they have never lacked an appreciative line of spectators, representing all nationalities."

One noticeable effect of the war in libraries has been to stimulate the marking of books, periodicals and newspapers by readers, especially in periodical rooms. Readers with strong feelings cannot resist annotating articles or chapters that express opinions in which they cannot concur. Pictures of generals or royalties are especially liable to defacement with opprobrious epithets. This feeling extends even to bulletins. Libraries received strenuous protests against the display of portraits and other material relating to one of the contesting parties without similar material on the other side to offset it.

"Efforts to be strictly neutral have not always met with success, some readers apparently regarding neutrality as synony-

mous with suppression of everything favorable to the opposite side. One library reports that the display of an English military portrait called forth an energetic protest because it was not balanced by a German one."

Such manifestations as these are merely symptoms. The impulse of the war toward community education is a tremendous one and it is not strange that it should find an outlet in all sorts of odd ways. The German sympathizer who would not ordinarily think of objecting to the display of an English portrait, and in fact would probably not think of examining it closely enough to know whether it was English or Austrian, has now become alert. His alertness makes him open to educative influences, but it may also show itself in such ways as that just noted.

Keeping the war out of the schools is of course a purely local phenomenon, to be deprecated where it occurs. The library can do its part here also.

"G. Stanley Hall believes that the problem of teaching the war is how to utilize in the very best way the wonderful opportunity to open, see and feel the innumerable and vital lessons involved." Commenting on this a children's librarian says: "The unparalleled opportunity offered to our country, and the new complex problems presented by these new conditions should make the children's librarian pause and take heed.

"Can we do our part toward using the boy's loyalty to his gang or his nine, his love of his country, his respect for our flag, his devotion to our heroes, in developing a sense of human brotherhood which alone can prevent or delay in the next generation another such catastrophe as the one we face to-day?"

Exclusion of the war from the schools is partly the outcome of the general attitude of most of our schoolmen, who object to the teaching of a subject as an incidental. Arithmetic must be studied for itself alone. To absorb it as a by-product of shop-work, as is done in Gary, is inadmissible. But it is also a result of the fear that teaching the war at all would necessarily mean a partisan teaching of it—a conclusion which perhaps we cannot condemn when we re-

member the partisan instruction in various other subjects for which our schools are responsible.

Again, this exclusion is doubtless aided by the efforts of some pacifists, who believe that, ostrich-like, we should hide our heads in the sand, to avoid acknowledging the existence of something we do not like. "Why war?" asks a recent pamphlet. Why, indeed? But we may ask in turn "Why fire?" "Why flood?" I cannot answer these questions, but it would be foolish to act as if the scourges did not exist. Nay, I hasten to insure myself against them, though the possibility that they will injure me is remote. This ultra-pacifist attitude has gone further than school education and is trying to put the lid on community education also. Objection, for instance, has been made to an exhibit of books, prints and posters about the war, which was displayed in the St. Louis Public Library for nearly two months. We intended to let it stand for about a week, but the public would not allow this. The community insists on self-education even against the will of its natural allies. The contention that we are cultivating the innate blood-thirstiness of our public, I regard as absurd.

What can we do toward generating or taking advantage of other great driving impulses toward community education? Must we wait for the horrors of a great war to teach us geography, industrial chemistry and international law? Is it necessary to burn down a house every time we want to roast a pig? Certainly not. But just as one would not think of bringing on any kind of a catastrophe in order to utilize its shock for educational purposes, so also I doubt very much whether we need concern ourselves about the initiation of any impulse toward popular education. These impulses exist everywhere in great number and variety and we need only to select the right one and reinforce it. Attempts to generate others are rarely effective. When we hear the rich mellow tone of a great organ pipe, it is difficult to realize that all the pipe does is to reinforce a selected tone among thousands of indistinguishable noises made by the air rushing through a slit and striking against

an edge. Yet this is the fact. These incipient impulses permeate the community all about us; all we have to do is to select one, feed it and give it play and we shall have an "educational movement." This fact is strongly impressed upon anyone working with clubs. If it is desired to foster some movement by means of an organization, it is rarely necessary to form one for the purpose. Every community teems with clubs, associations and circles. All that is needed is to capture the right one and back it up. Politicians well understand this art of capture and use it often for evil purposes. In the librarian's hands it becomes an instrument for good. Better than to offer a course of twenty lectures under the auspices of the library is it to capture a club, give it house-room, and help it with its program. I am proud of the fact that in fifteen public rooms in our library, about four thousand meetings are held in the course of the year; but I am inclined to be still prouder of the fact that not one of these is held formally under the auspices of the library or is visibly patronized by it. To go back to our thesis, all education is self-education; we can only select, guide and strengthen, but when we have done these things adequately, we have done a very great work indeed.

What is true of assemblies and clubs is also true of the selection and use of books. A book purchased in response to a demand is worth a dozen bought because the librarian thinks the library ought to have them. The possibilities of free suggestion by the community are, it seems to me, far from realized, yet even as it is, I believe that librarians have an unexampled opportunity of feeling out promising tendencies in this great flutter of educational impulses all about us, and so of selecting the right ones and helping them on.

Almost while I have been writing this I have been visited by a delegate from the foundrymen's club—an organization that wants more books on foundry practice and wants them placed together in a convenient spot. Such a visit is of course a heaven-sent opportunity and I suppose I betrayed something of my pleasure in my manner. My visitor said, "I am so glad you feel this way about it; we have been meaning for

some time to call on you, but we were in doubt about how we should be received." Such moments are humiliating to the librarian. Great heavens! Have we advertised, discussed, talked and plastered our towns with publicity, only to learn at last that the spokesman of a body of respectable men, asking legitimate service, rather expects to be kicked downstairs than otherwise when he approaches us? Is our publicity failing in quantity or in quality?

Whatever may be the matter, it is in response to demands like this that the library must play its part in community education. Here as elsewhere it is the foundrymen who are the important factors—their attitude, their desires, their capabilities. Our function is that of the organ pipe—to pick out the impulse, respond to it and give it volume and carrying power. The community will educate itself whether we help or not. It is permeated by lines of intelligence as the magnetic field is by lines of force. Thrust in a bit of soft iron and the force-lines will change their direction in order to pass through the iron. Thrust a book into the community field, and its lines of intelligence will change direction in order to take in the contents

of the book. If we could map out the field we should see great masses of lines sweeping through our public libraries.

All about us we see men who tell us that they despair of democracy; that at any rate, whatever its advantages, democracy can never be "efficient." Efficient for what? Efficiency is a relative quality, not absolute. A big German howitzer would be about as inefficient a tool as could be imagined, for serving an apple-pie. Beside, democracy is a goal; we have not reached it yet; we shall never reach it if we decide that it is undesirable. The path toward it is the path of Nature, which leads through conflicts, survivals, and modifications. Part of it is the path of community education, which I believe to be efficient in that it is leading on toward a definite goal. Part of Nature is man, with his desires, hopes and abilities. Some men, and many women, are librarians, in whom these desires and hopes have definite aims and in whom the corresponding abilities are more or less developed. We are all thus cogs in Nature's great scheme for community education; let us be intelligent cogs, and help the movement on instead of hindering it.

## INSPIRATION THROUGH CATALOGING\*

BY J. CHRISTIAN BAY, *John Crerar Library, Chicago*

ONE of the most common superstitions about library work is that it offers not only a fair social advantage but also a snug haven of rest, relaxation and perpetual delight to the person fond of literary pursuits. We all know that stern reality does not sustain this popular view; that we are not called upon to collect, but to dispense information, and that mere enthusiasm about books will lead us nowhere, unless it is properly balanced with a wholesome regard for library routine and a willingness to bow to the spirit of service.

Education for library work presupposes such a tempering of enthusiasm to a practical end. We are not dreamers, but workers. We are not poets or historians or scientists shelved in a library position in

order to enjoy leisure for a set study. Library training justly emphasizes the business, social and routine phases of library activity, and the personal equation is expected to be solved by personal effort.

I am concerned here with this personal equation. There is no lack of evidence in the experience of every one of us to show that its solution is a matter of common interest. We know that many are called but few are chosen, even in our profession. We are aware of a tendency of the young in our ranks leading away from its philosophical, scientific aspects and even disregarding the routine details, and instead making straight for what is termed administrative work. This is not an evidence of ambition toward higher things as much as it is due to the belief that an easier life and a greater power go with administra-

\*Read before the Catalog Section of the American Library Association at Asbury Park, June 27, 1916.

tive and representative duties; which is another delusion. We also know colleagues who perform routine duties in the spirit that fate has wronged them by consigning them to drudgery, and who regard their work as a necessary evil, hoping that the tide may turn and land them high and dry in a swivel chair on a Brussels rug in an exclusive office. The feeling of dissatisfaction with routine work undoubtedly is responsible for much lack of buoyancy and for many a case of nervous prostration among library workers.

I give praise to the sentiment that whether we catalog, classify, shelf books or label them, file cards in a catalog or gather in our hands the threads, the web-work of administration, *we all are librarians*. I claim for us the ideal spirit that during the janitor's sickness any one of us willingly and in sight of everybody would sweep out the reading-room or dust the furniture. I still am to meet the librarian that refuses to admit the equal necessity of all work in the library, the equal privilege of doing it, the equal honor in performing it well.

This is theory and philosophy. In practice, we frequently think differently. The work, well done, does not always seem its own reward. Cataloging and classification will grow monotonous, the preliminary leaves, semicolons, plates, subject headings and what not, bore us, and we chafe at the necessity which dooms us to merely pass into the routine a book which we would rather read and enjoy.

These days of severe specialization are apt to foster the idea that only functioning administrators are librarians *ex professo*, while those who functionate in special line of work possess no general view of the whole field—precisely as the chief librarian is not considered versed in the details of other specialties than those which he prefers. The functioning librarian may speak for himself, yet as a type of worker he undoubtedly deserves credit for a mastery of detail not often attributed to him. The functioning *specialist*, however, frequently lacks the broad outlook on library science, and remains content to support such linguistic immoralities as

"cataloger," "classifier," "shelver," "subject-headinger," "card-filer,"—the result being that only a "reference librarian" is considered some sort of librarian; others are mere clerks. Even the romantic title of "page" is of some positive value as compared with the ignominy of "shelflifter," just as a Reginald or Horace will color the human clay differently from that designated by John or Peter. The clay does not become inferior, perhaps, but different. Luke McLuke asserts that "the name is one-half of the education." Our specialties begin with their names,—they should not end with them!

If we fall into the error of regarding invariably the cataloger only as a person who catalogs books but is supposed to know little else, we are apt to narrow the sphere of influence and utility of a person perhaps well versed in matters of other special and probably general interest in the library. We cannot wonder that cataloging has fallen into most undeserved disrepute as a monotonous, grinding occupation involving some tedious routine, much pettifogging and automatism unworthy of a real live woman's or man's efforts. Classification still retains some flavor, because one may gain reference knowledge or other useful insight from even a casual glance at a book.

The cataloger's professional attitude depends in a measure upon the value set upon the work by others. But it depends emphatically upon the cataloging librarian's estimate of his own efforts, their general and relative importance, their results. Experience seems to prove without doubt that a great deal of that knowledge by which a librarian's usefulness is measured, begins and ends with the art of cataloging. It is an art, the doing of which can be learned, but the philosophy of which develops only with personal growth toward the ideal. Describing a book accurately and adequately for a definite purpose certainly is an accomplishment worth striving for; if it is not worth doing passing well, no library work is of any value. The very keynote of the work is as democratic as the plan of the city directory where none is excluded because of rank or fortune.

The catalog department is the one place in the library where all books are treated equally, without reference to their individual merits, described calmly and committed to the catalog to win such use and favor as they deserve.

While the work of cataloging is a routine effort depending for its efficiency upon the intelligent observance of a code of rules, the very intellectual character of this work should presuppose in the cataloger a *personal* method as a safeguard against monotony and drudgery. This can be indicated better than described. First and foremost, let it be remembered that all rules for cataloging yet are in a preliminary and preparatory state, and that we are far from creating in the reader's mind an adequate picture of any book by simply recording the title, noting some of the most apparent physical and historical peculiarities of the book, and confiding to the world some subjects of which the book seems to treat. The cataloger should know that his art still is in a state of development; that many cataloging problems await a general solution; that the ideal of full and adequate book-description still is a far and distant light. It always gives courage and buoyancy to know that we are carrying stones to a common temple; and certainly, every day's work must satisfy any of us that we can work our problems and accumulate intelligence of common interest to all. Here the personal method should apply itself. If we carry out easily and cheerfully those rules which already have been formulated for general practice, we shall be able to reserve some effort for those problems which are still to be solved. We may carry the particular detail which engages our attention, through the process of comparative study, until by observation and experiment we have surveyed it fully and succeeded, perhaps, in solving it, thus adding a trifle to the common store of professional knowledge and gaining the high joy felt by the pioneer in breaking new soil.

By the term personal method I do not mean a free, individual use and interpretation of cataloging rules, for each library is bound to demand a historical continuance in the methods of work it sustains, and

this does not permit a free play of personal preferences. Furthermore, it is not contrary to freedom and independence to follow a system which, although the individual may chafe at certain inconveniences, represents a collective effort, historically fixed and of known efficiency. A personal method is *that economy of efficiency which draws the line between essential and unessential, which lets the rule and regulation have its way in all ordinary questions, which wastes no effort in discussing futilities, but bridles with alertness to new forms, important distinctions and rare opportunities.* There are some catalogers who seem incapable of anything but debating the distinction between illustrations and diagrams; who spend every grain of their energy upon the elaboration of impossible and misleading author and subject headings, collations and descriptive notes, plagiarizing information easily available everywhere. In such cases, the "cataloger" is not the master of the catalog, but the catalog governs him—not as a cherished care of which he is proud, but as a burden. His mind may be perfectly serene as to the treatment of literature on apples until he runs up against the reports of a pomological society and realizes that he cannot use the subject heading "Apples—societies," and relapses into consternation, because he cannot be consistent. If of a literary bent he may remember with a sad feeling the young farmer in Eugene Field's story who bought an encyclopedia and looked up the subject of "apples" when they came, and searched under "baby" when the baby caught the measles. He was referred to "pomology" and "maternity," respectively, and growled because the volumes containing these letters had not yet appeared. George Eliot throws him into cold perspiration until, after having consulted every available source of information, he produces the following beautiful concoction:

Eliot, George, *pseud.*, i. e., Marian Evans, afterwards Cross, 1819-1880.

Cross, Mrs. Marian (Evans). See Eliot, George, *pseud.*, i. e., Marian Evans, afterwards Cross, 1819-1880.

Evans, Marian (Mrs. Cross). See Eliot, George, *pseud.* i. e., Marian Evans, afterwards Cross, 1819-1880.

Small wonder that catalogers go into nervous prostration under the strain of the

dictations of a supposedly harsh catalog which demands the distinction of being an encyclopedia of universal knowledge rather than a discreet guide to the library's resources of books.

Let us turn the leaf and consider how that inspiration which means well balanced power and mastery of required method, may be won.

One important source of inspiration to the cataloger is the library itself, the mass of books with their actual or potential value for public reference or enlightenment. The library may be small, sordid, commonplace, and the cataloger may despair of it, but this despair should relieve itself in an effort to build up the catalog all the more effectively. Analytical entries, or even a sort of indexing, will do wonders to increase the efficacy of a limited collection of books. If the library is deficient in modern, up-to-date books, the cataloger's duty consists in bringing to light all that is of actual value to the community, according to the spirit of Mark Tapley, who grew more alert, the darker and drearier the prospects were. Not one of the little, outdated, perhaps mismanaged libraries is indifferent, nor the library which lacks support,—for the *problems* are there; and problems turn up to be solved, not to be despaired of. The worse the catalog, the greater the necessity of renewing it. If one can do nothing with a small library and under adverse circumstances, he had better not imagine that an easier life or a large institution will make him either more efficient or more happy.

One very important matter—one, moreover, which touches upon the personal method aforesaid—is that the cataloger never should become *isolated*. The principle of specialization frequently isolates workers in different departments of even moderate-sized libraries. The cataloger may feel that his very work relegates him to a place out of touch with what is going on in the library. This isolation is not necessary. I admit that the average daily working period is too long for most employes in the modern library, but I contend also that whoever works strictly by the clock fails to have acquired the correct in-

stitutional spirit and attitude. This spirit demands that you reach out at all times and make certain of being in ready, sympathetic mental intercommunication with your surroundings. In a large library, an occasional extra hour or two spent in looking about, in studying the catalog, in exchanging opinions with colleagues, in the hundreds of ways offered by intellectual workers housed under one roof, will assist materially to build up that *esprit de corps* without which we despair.

Again, there is a great satisfaction in doing justice to a book which partakes of the public service extended by the library. A good and useful book—any book in the true sense—will reward your efforts, perhaps by being worn out with use; or it may back up on you and remind you of some mistake in its treatment. Books respond in these ways almost as readily as human beings.

Nor are the human beings themselves slow in responding where the right word has been spoken. The cataloger always should consider himself in direct intercommunication with the reading public; should speak through his catalog, of the books, tersely and clearly, with the one object in mind of engaging the reader's attention. If he fails, it is not the fault of the public, it is the fault of him who has not spoken well enough, advertised well enough, offered strongly enough the opportunity which it is his business to see in behalf of others.

In the large libraries all these conditions are emphasized and more complicated, but not different. There, the cataloger has the added advantage of finding the great books and of co-operating with persons who know them. The advantage to the cataloger of working in a large library lies chiefly in the wider range of view and in the greater historical outlook induced by the greater mass of books. On the other hand, the danger of isolation grows with the greater specialization, and the isolation embodies the most significant source of discomfort of the cataloger. A wise organization will do all in its power to harmonize the different elements among the workers, by assigning some reference work, book selection, advertising, etc., to such as might

suffer from the monotony of one continuously repeated effort.

It is possible that some of the ill repute of cataloging may arise from a fault of adjustment which is a common trait of many young librarians in these days of strenuous life. The library worker who follows the recognized and universally applauded course of professional training, will acquire a college education, followed by a library school course, and then, suddenly, *his education ceases*; he no longer reads professional literature, no longer feels the spur of a definite purpose, but plunges into work and is lost in it. Many and many a library worker who studies eagerly and with good results while at school, becomes indifferent to library science and library literature as soon as he lands in a position. Thenceforth he thinks of little else than his daily duties, and carries stones to no building but the cherished castle of his own success. Many and many of this type of library worker never read, far less study, a book, but fling themselves into work at that pace which kills, which stifles the higher ambition and renders its slaves incapable of personal growth, philosophic view and ideal striving. Why go to the trouble and expense of a special education for librarianship, merely to toil strenuously for outward success and gain, when we know that the same amount of dynamic effort in other lines will produce far greater remuneration? Why seek library work at all, unless one strives toward the ideal which colored the lives of such men as Panizzi, Ebert, Justin Winsor, and Spofford? Rarely if ever do the executives of our large libraries antagonize an effort toward personal growth and development in their subordinate associates; on the contrary, a ready and free sympathy is reached out to those who strive for higher things.

No library worker can succeed in the higher sense without being somewhat of a *studiosus perpetuus*, nor can he create harmony within himself without dreaming the healthy dream of high hope. Efficiency alone is as much a curse as knowledge alone. Only a handful of years ago men's time was of scant commercial value com-

pared with its value to-day. But the woman or man is lost who thinks he has solved the great life problem of an occupation when he has succeeded in trading his time and work against a fair economic equivalent. The frequent changes in library staffs all over the country, and the rather numerous adventures in neurasthenia, prove that the few suggestions offered here are not entirely out of season. There is some need of a pastoral theology for library workers!

The problem which I have tried to discuss freely and without prejudice to any side, may be summed up in a simile. Years ago a man came out of a country of wild heather and fresh breezes to a great metropolis, where an unkind fate consigned him to a night's so-called rest in a large modern hotel which faced an open square. He went to his room, but could not sleep. He lay awake long, listening to the noises within the immense building and without, in the vast city surrounding him. Finally he arose, opened a window and looked out. There was the rush of sound in his ears, of clang and noise,—but not one sound which he knew. He listened a long time. Then, of a sudden, he became all alive with attention. He heard something which he recognized. It was springtime, and from high above the city came the dart of swift wings and the honk of the wild geese and other migratory birds which travel by night. He knew the sound of each new and different flock that came. None was visible, but they were there, and he felt grateful and at rest.

Such is in some respects the position of the worker in a modern library. The din and rush of the routine are around him, and he responds with sullenness or cynicism, or becomes apathetic and automatic—unless he listens and reaches out for the higher, but often hidden, symbols of freedom and joy, and listens for the chorus of gleeful and jubilant praise which is everywhere to be heard by him who listens earnestly. And then he will turn to his work with a morning face, glad that he is there, his work awaiting him, *his work*, because duty alone does not call him, nor the reward, nor anybody's praise, but the approval of his own conscience.

## SOME OF THE PEOPLE WE WORK FOR\*

By JOHN FOSTER CARR, *Director Immigrant Publication Society, New York*

It's work with the immigrant, of course—as the jeering cynic says, “doing good to one's fellow man at the other end of a book.” Rejoicing in my equivocal title, my first thought is to turn an admiring mirror toward your busy selves, and to show something of the rapid development and progress of a library movement that within a few years has become both nationwide and wonderfully efficient in patriotic service. Yet it has been accomplished so quietly that a campaigning propagandist has found it possible to ask, “Why don't the libraries do something for the Americanization of the immigrant?”

What I shall have to say must be largely concerned with individual results, and, above all, with the opportunities of the work. But I must also tell something of the magnitude of actual accomplishment, and of the remarkable way in which the libraries have adapted existing methods and machinery, with plentiful invention, to this new problem—new in its present interest and great extent.

Let me begin by saying that our society, to a greater or less extent, has had the privilege of the co-operation of more than five hundred public libraries in our particular work for the immigrant. With a considerable number of them, we have a friendly and frequent correspondence, that tells its own amazing story of results. But for the purpose of this talk, I have especially sought the opportunity of knowing more intimately of the work now being done in the libraries of some twenty cities, that are very actively engaged in the education and Americanization of these foreign-born friends of ours.

In spite of its newness, much of the work has a background of many years of labor. There is a wide range of ingenious and successful experiment, yet the startling thing is the union in common purpose and method. I sometimes quote, as true of one, a method that is common to nearly

all. Or I have caught a single activity, as it stood out, and have seemed to make it represent the complex work of a large and aggressive organization. I can here attempt no fairly comprehensive account of these undertakings—only a series of flash pictures, taken as the magnesium chanced to burn, that together, I hope, may have a certain truth of indication. As to the injustice done, I mean later to make full amends.

Let me give you some of the large, or illuminating, facts taken almost at random from the mass of these records, personal as well as formal. Bear in mind that these last two years have been years of exceptional difficulty. In the matter of foreign literature, it has been impossible to purchase any books whatever from some of the nations now at war. Add to this that during these two years many of our important libraries have been forced, through lack of funds, to curtail work, to close stations or branches, discharge employes, buy fewer books. At such times new ventures are the first to suffer or be abandoned.

Yet see how the work glows! In our own city of New York, with its forty-three library branches, those branches having the largest so-called immigrant membership lead all the others in circulation. The use of books in foreign languages has increased so rapidly that their circulation now reaches nearly seven hundred thousand a year. The results have proved so satisfactory that the library supply of foreign books has been increased thirty per cent. in two years. The demand? The Italian circulation has increased twenty-seven per cent. in each of two successive years. The Yiddish thirty-one per cent. and forty-two per cent.

Chicago writes graphically how the foreign-born are “storming” the library for books in their own tongues. “Crave” and “yearn” are the immigrant's words. “The shelves for foreign books are nearly always empty, volumes being borrowed as fast as they are returned.” For the com-

\*Address delivered before the American Library Association, at Asbury Park, N. J., June 29, 1916.

ing year a generous appropriation is to be devoted to the purchase of foreign books; yet this is the official word of despair: "The supply will still fall far short of the demand." Appropriately, Mr. Legler tells the story of the poor little Jewish boy, whose head hardly reached the top of the librarian's desk. He wanted *Oliver Twist*, because he knew the story. It was of a hungry little boy, who lived in a poorhouse, and who always asked for more. "More what?" asked the sympathetic librarian. "More cornflakes," lisped the small borrower.

Cleveland has pushed the work with many clever devices. There is, of course, as almost everywhere, the systematic use of night schools, national clubs and foreign language newspapers. But, besides, there are talks and lectures on citizenship, American institutions, the opportunities of American life. One branch in a Jewish district supplies Russian tea with wafers at two cents a glass. The staff numbers many assistants speaking foreign languages. Patiently, persistently, the children are used to interest the parents. Results? One branch writes: "The demand for foreign books far exceeds the supply." Another: "We are losing steady readers who have read 'everything.'" Another: "It is seldom possible to find a single English grammar, conversation book, or naturalization guide on the shelves." Another: "After languages, fiction is most popular."

St. Louis, like Cleveland and Chicago, has made surveys, and on a wide scale, of the different populations served by the library's branches. It has made sympathetic studies of their racial and national ideals, their cultural backgrounds. Like Cleveland, New York and Chicago, it is struggling with the problem of nationalities constantly shifting from district to district. "Kerry Patch," with its joyous brick-bat rule, has disappeared before an invasion from eastern Europe; and the ancient and unchanging "Old French Town" is actually becoming polyglot. Industrious work has been pushed. Members of the staff have done house-to-house visiting. Posters and leaflets have been energetically used. These sentences, for

quoting, picture the character of the work and tell results: "All our material is used over and over again." "These people devour American history and biography." "Grown men and women pass books in their own languages, pocket their pride, and go on to the children's corner." "Books in English for foreigners are in such demand that we are unable to fill the call."

One St. Louis branch librarian reports: "The one class of books which reaches readers of all nationalities is the collection of easy readers and books on civics and citizenship." And for the benefit of those who fear divided allegiance among the mass of our foreign-born, she adds: "Our collection of books on the war is not to be compared in popularity to crochet and cook books, or books on poultry and automobiles."

Providence, distinguished for its careful lists and its *Bulletin*, and for so much other model work in this field, is dealing, like several other cities, with a problem of twenty different languages. Slides of the library have been explained by interpreters at the movies. The library has helped organize meetings of different nationalities.

Springfield is using attractive leaflets of invitation. Staff members visit the evening schools and give library talks. They also visit the foreign clubs, treating the people "as normal folks," and there is the same happiness of result. Detroit, stressing "human sympathy," is determinedly making the foreign department a bridge to the English. Pittsburgh is successfully using window exhibits and an automobile in parade decorated with books and placards advertising the library. It has had groups of foreigners organized and brought to the library on personally conducted visits.

Louisville, almost outside the immigrant zone, is still doing interesting, original and successful work with Yiddish. Jersey City believes in cultivating patriotism in the American as well as in the foreigner, and has prepared for general free distribution an admirable and attractive series of leaflets and pamphlets dealing with the origins and government of city, county and state,

our patriotic holidays, the flag, and sketch biographies of great Americans.

Buffalo, specializing, has made of the small branch library a friendly center, "where guidance can be had to almost anything that pertains to the new country." These branches give advice and help in the humblest matters of daily life—settling disputes, naming babies, writing letters of condolence, obtaining employment; but they also work, and they work powerfully, in helping the newcomer to learn English, to obtain citizenship papers, as well as aiding in many difficult cases with the public authorities. "Extraordinary work for the library to undertake!" would have been our comment but a short time ago!

"It is the personal contact which tells," writes Mr. Walter L. Brown. And this claim of human helpfulness proves its unexpected power in the Buffalo library in such a matter as dealing with street gangs. It is a power based upon the gratitude of the people for service generously and democratically rendered. A couple of years ago a cut was threatened in the library appropriation that would have closed some of the branches. An appeal was made for the help of those who used the libraries, and the branches were speedily saved.

I know no more impressive testimony to the possibilities of this work than those earnest words of Mr. Brown, born of practical and successful experience with the immigrant in Buffalo: "We believe that the branch libraries, if they were as plentiful as they should be in cities where new Americans gather, would practically solve the whole problem."

In Boston, also, the remarkable success of the work has brought a remarkable faith. The North End branch writes in full conviction: "It is the library which has the greatest power to interpret the spirit of American democracy to the foreign-born." From the immigrant's very first day the library in Boston serves him. It is often his official welcomer. And so highly does it succeed in its friendly education that new difficulties are discovered, and a junior librarian writes from Bennet street in warning: "The librarian's duty as a public hostess is not so to socialize the

library as to make it a public rendezvous!" Much work is done in Boston that deserves careful description. Summing its activities, Mr. Ward, supervisor of branches, says of the growing success: "With results like that, what librarian would not be willing to do any amount of work?"

Passaic, pioneer in the field, systematically begins with fundamentals and takes for its motto: "The first thing is to inform ourselves." And so for three years the staff has made special studies in the history, literature and conditions of life in the native countries of our immigrants. Picturesque exhibits have brought many foreign-born visitors, and there are lectures on Franklin, Washington and Lincoln. "I came with a sad heart and a tired head," wrote a grateful Italian, "but left with joyous, happy feeling."

And may I end this hasty summary with a note of the work so humbly started by Mrs. Kreuzpointner, of Altoona? You remember her beginnings four years ago with ten books in a soap-box?

I wish I had time to share with you some of her wonderful letters—her quaint and human stories of readers. For it is the spirit and wit that count. The major problems and the work are the same, be the library large or small.

"Our books are read to pieces," she says. "We are altruists playing Cinderella on short rations. But the joy I get doing something with nothing! Some weeks I get nothing out of it but mud. It depends on the weather. Once in a while I have the pleasure of scrubbing up some dear Italian boy before I allow him to take a book in his hand. That is where the personal touch comes in!"

And so it goes! The uncouth newcomers, soon disciplined! The zeal in reading, the growing appreciation of our country among her members—Poles, Italians, Armenians! The sudden success that perforce led for a while to taking all English books out of the Polish library, until a fair supply could be secured, and the clamor stopped.

As I talk to these good librarian folk, I find myself always in an atmosphere of en-

thusiasm when we speak of work with our immigrants. They tell me—and I have collected hundreds of astounding instances—of miracles wrought, of affecting gratitude, of beautiful friendships formed. They have level judgments, undeceived, of the failings of these newcomers, but they also understand their possibilities. And in the work they find personal benefits. One librarian, questioned in an open Boston meeting, told me that the first thing she and her staff had learned from the foreigner was—what do you think?—politeness! Another librarian gives the happy confidence that she had entered the work with the compassion that the kind hearts of the first cabin hold for the steerage; but that the gain in the end for her had been a complete conversion to democracy. "I could talk on forever about it," writes one of your most distinguished and successful workers.

To the immigrant the library represents the open door of American life and opportunity. "Before we had these books, our evenings were like nights in a jail," said an Italian in a Massachusetts hill town.

"You mean that I can take these books home? You trust me?" asked a poor fellow of a Chicago librarian. "If I tell that in Russia they no belief me."

"Will America ever be militarist?" I heard one Italian baker ask of another. "No," was the prompt reply; "the friendly schools and the libraries are against it."

I gave a simple sketch of Lincoln to a Lithuanian waiter, who came back in a couple of weeks and said: "Gee, that book you gave me sure did give me a hunch. I was sick and out of work, but it got me a job." Next I found him struggling through Bacon's Essays and Epictetus. That was only six months ago. The other day he wrote me from Detroit, where he had joined the library, and had just heard a lecture on psychology.

Wonderful and rapid is often the surface change in these people of good will. They fall, for instance, very readily into our ways and into our vernacular.

I descended into a greengrocer's dark cellar in our Bleeker street colony. It was lit by a smudgy lamp. Peppers fes-

toonned the walls. The black-shawled *padrona* was roasting her big pine cones over a charcoal fire. I seemed in Naples. An eager *signorina* was haggling over a purchase. I looked. It was about the choice of a Christmas tree. I listened. She impatiently stamped her foot: "No, not that one; it's kind o' skimpy."

It was at the movies—a special showing of the film of Paul Revere's Ride for an audience of new-come Poles. The bombastic English general advanced and imperiously ordered his lieutenant to swing wide open the barn doors, expecting to find a great store of Yankee ammunition. But, lo! the barn was empty! Excitedly, a young Pole jumped up, waved his hat, and joyously shouted: "Stung!"

You may fairly take these surface things for straws indicating a vital change, a change often brought about from sheer gratitude for the peace and the comfortable living of America, and its rough and hearty good fellowship.

Ever in this library work I find a deep patriotic purpose, and never do I fail to find two thoughts to which I wish power might be given. One is that we Americans born need a more perfect understanding—a more human understanding—of these newcomers, and of the enormously complex problem that they represent. The other is an entire lack of sympathy with this mad propaganda of haste in turning the immigrant forthwith into a citizen—the foolish beating of patriotic tom-toms!

Citizenship counts for nothing unless it is sought in love and knowledge, and conferred in dignity. Doubt human nature, talk of the menace of the "unassimilated foreigner," his violence and crime; force unschooled men to learn English within a year under the penalty of losing their jobs, though you yourself may not have the gift of tongues, or be able to learn a foreign language for the life of you; force them in droves through citizenship classes; and you earn only contempt, gaining nothing to the nation. But first give a man reasons for loving his new country; appeal to his ambition; give him the opportunity he so often craves; and then you will have a citizen indeed!

Miss Marguerite Reid, whose admirable work in Providence has been made so effective through understanding and sympathy, tells me of an indignant Greek friend of hers, an ardent, unpaid library worker. "Make them over into Americans," he cried, "before they have had time to breathe the air of freedom! Don't be too energetic! Let time do something!"

My mind turns back to these immigrant millions—their splendid human material for the upbuilding of our country. Among them we shall often find refreshment for our own patriotism. The other day, in the mouth of my friend Gusto, I heard again the old slogan of the Know-Nothings: "That's just what it ought to be!" he said, in his fluent Italian. "America for the Americans!" "But who are the Americans?" I interrupted. "Why, we are! Those who care for America! We, too, who came here starving and are grateful!"

In my intimate living with these humble folk of many nations, though many times sharply divided by the conflicting passions of the war, I have still found them one in devotion to the new land. Their patriotism is not that of Decatur's: "My country, right or wrong!" Not that of the distinguished hyphenate's of the other week: "My country, when she's right!" But among them I have always caught the calm certitude: "My country will be right!"

"Patriotism refreshed!" I said. You cannot fail of a heartening thrill when you come to know of so many instances of patriotic devotion, devotion like that of a lover, finding expression in extravagances, may I say, impossible to our slower pulses; for the rest of us are apt to take our love of country too much "as a matter of course."

And so may I give you three stories, each of which I know to be true?

A friend of mine saw a young Armenian hurl himself into the roadway to save our flag, a torn and muddied bit of cotton that had been thrown away, from the wheels of an onrushing automobile. He grasped the flag, slipped and desperately tried to roll out of the way to save himself, but not in time to prevent the crushing of one of his legs.

And this comes to me directly. A lady bought an old colonial mansion in New Jersey, reputed to have been used as headquarters by Washington. For months it had housed a gang of Italian laborers. Fearfully, she went to inspect her purchase. She found it indeed spoiled—a grimy barracks. But one room was spotless. The answer, to her surprised question was that the Italians had heard that that room was great Washington's own. So they carefully cleaned it; found a lithograph of the famous Stuart portrait in Boston; hung it on the wall, and under it kept a glass with a floating and ever-burning wick.

I've been asked to tell you again the tale of my Russian-Jewish friend—the electrician. I'm glad to do so, because only now can I give you the full story.

He was a little, wizened, squint-eyed, old man. He had told me that he came to America because of Lincoln, and I had asked him how that was. He said he was born on the shores of the Sea of Azof, and that as a boy he had heard this story: Tolstoi was once traveling in the Caucasus, and being very fond of public speaking, he one day made a speech through an interpreter to a Tartar tribe. He was at that time very much interested in Napoleon. So he spoke of Napoleon and of other great war captains.

When he had finished his address, the Tartar chieftain said: "Now, will you be good enough to tell my children of a man who was far greater than any of these men, of a man who was so great that he could even forgive his enemies?" When Tolstoi asked him who that might be, he said, "Abraham Lincoln."

The next time he heard of Lincoln it was in this way: A sailor friend, a Russian Christian, returning from one of his voyages, brought back a wonderful book in English, of which he knew a little. "It contains," he said, "things so true and beautiful that they would bring tears to your eyes if you could only read them." So they had some pages of it translated and hektographed, and these they circulated among their friends. But some of the sheets fell into the hands of the police.

And my Jewish friend told me how he and the poor lad's mother, early one morning, crept through the shadows of by-streets down to the railroad station, and from the hiding of an old engine house saw his friend start on the long journey to Siberia. "And the book?" I eagerly asked. "It was Henry J. Raymond's 'Life, speeches and public services of Abraham Lincoln.'"

And so this man came to America. To-day, beside his telephone in his little shop in New York, there are the two great speeches pasted on the wall, and very old and dirty they are. I asked him about them. "Oh," he said, "I learned them quick. But when I am waiting for a telephone call I let my eye go over them, and you know I always find something new and something fine. It is like a man who looks into one point of the heavens all the time. He ends by discovering a new star!"

An American by right of the spirit! Few of them, it is true, are like my Russian-Jewish friend. But to all of them, particularly now, is it our duty to reveal the ideal America, to prove that the sacred things of our past, and the great ideals of our fathers, for which they have such won-

derful, ready reverence, can still be found in the America of to-day.

This is the remedy for the divided allegiance that some fear. This is the nation's great need to-day—a preparedness for the future more important than any other, for it will give us citizens filled with devotion to our country and to the ideals for which she stands. This is our work and our opportunity. Millions are to come. Some of them already are at the gateway, eager to know of our life and to have a part in it, but barred by ignorance.

Shall we not with them build up this America, one with our past, into the greatest cosmopolitan nation of the world—a glorious welding of men, who are one in their desire for Liberty, Equality, Brotherhood and Peace?

The work that you are doing is a mighty part of it. And there come back to me certain words from "The dream of John Ball": "In these days are ye building a house which shall not be overthrown, and the world shall not be too great or too little to hold it; for, indeed, it shall be the world itself, set free from evil doers for friends to dwell in."

## LIBRARY PREPAREDNESS IN THE FIELDS OF ECONOMICS AND SOCIOLOGY\*

BY ADELAIDE R. HASSE, *Chief of Documents Division, New York Public Library*

IN my most serious appeals about documents I never was as serious as I am about my present subject. Whatever I have said about the failure of librarians to get at the crux of the document question I see now is only part of the general failure of librarians to value the essentials of their whole business. . . . You remember Benjamin Franklin's "Mind your business"? Well, that is what we have not been doing. We've been letting our business mind itself, and now we are face to face with the greatest opportunity that will come to us—and we are making mudpies in the back yard.

Every interest in this country which is essential to the economic and social well-

being of our people has had, within the last two years, a prod to be up and doing. Manufacturers, engineers, scientists throughout the country are arrested by the sense of an impending revolution in the existing order of things. You cannot pick up a single number of any technical journal without finding there some appeal for greater appreciation of this fact. The industrialists say: We must pull together, not apart. The technologists say: We must pay more attention to research. They all say in effect: We must look around more, we must extend our knowledge and intensify its application.

Last autumn I sent out a questionnaire to engineers, manufacturers, and economists which read:

"There is every reason to believe that with the cessation of European hostili-

\*Read before the College and Reference Section, A. L. A. Conference, Asbury Park, N. J., Wednesday, June 28, 1916.

ties, scientific research in the United States, using the term in its widest application, will experience an intensified activity. Universities, manufacturers, engineers are already anticipating it. The large American libraries naturally will feel it too. What can these do in the way of preparation?

"What suggests itself to you as a practical, useful—above all useful—library undertaking in the field both of economics and sociology designed to meet the anticipated inquiries referred to?"

Since then I have been reading every technical and scientific periodical I could get hold of in order to sense the attitude of the interests represented. I have attended numerous meetings of business men in New York City with the same object in view. The Newlands Bill has been introduced in Congress. The replies to my questionnaire, the gist of the technical press, the substance of the addresses, and the Newlands Bill has been: Intensified research and the benefit to be derived from accumulated experience. Does this touch us? Does it touch us?

What are we but the keepers, the conservators, the dispensers of this accumulated experience? What are we doing to adjust it for the use of these men who maintain the good of the country depends upon their having it?

Dr. Willis R. Whitney of the General Electric Co. of Schenectady, N. Y., is one of our keenest exponents of research as a national duty. In an article in *Metallurgical and Chemical Engineering* of May 15, 1916, he says, speaking of the co-operative scientific research in a certain European state: "We should do all we can to bring about the establishment of this kind of effort in the United States. It could be done as it has been done in so many cases in that country, by encouraging the scientific men of our colleges. Most of them are now so exhausted by undergraduate teaching, and discouraged by financial conditions that research seems impossible. When we recall the successful teaching and research work of such men as Liebig, Nernst, Roentgen, Hertz, Bunsen, Helmholtz and many more, we must deplore the short-sighted method of confining our scientists to teaching. Con-

sider the sheer waste of intellect. There is no other field calling so acutely for conservation. And the nation needs what these men might give it. Thus far we have been forgetting that growth and continued prosperity come only to those nations which are responsible for original research work and not for the storage and conservation of knowledge."

Governor Walsh in 1914 in the report of the committee on organized co-operation between the Massachusetts Institute of Technology and the Commonwealth of Massachusetts, said: "One cannot be governor of the Commonwealth of Massachusetts very long without realizing the absolute lack of thorough research information available on public problems."

What Dr. Whitney says of scientific research and what Governor Walsh says of research in political economy is equally true of economic research and of social research. When the federal valuation law was enacted in 1913 we were stampeded with demands for railway statistics. We were not prepared and it was a case of hunt, hunt, and hunt with loss of time and loss of business. If the operation of one American federal law of normal intent finds us so unprepared, where will we be when the shattered economic and social structure of seven-eighths of the civilized world becomes operative! The years 1910 and 1911 were census years in most of these countries. In ordinary circumstances approximate estimates of probable variations could be based on these census figures. The war has made this impossible. Incalculable depletion of population has taken place, incalculable shifting of population will take place when the war is over. The same displacement is foreseeable in industry and commerce. Granted. But, you say, where do we come in? Just here. The academic world and the business world are each considering the most feasible, the most advantageous adjustment of these displacements. They will require during the next five or ten years an enormous variety of combinations of fluctuation of value, of output of resources, natural and intrinsic, of marketing possibilities, of transportation facilities, of banking, exchange and credit. They will

have to draw upon accumulated experience. This accumulated experience they themselves have recorded from time to time in the technical press. This we have religiously subscribed to, bound, and shelved, and considered our duty ended there. We have made of the lauded American library a vast storage place, a warehouse of accumulated experience. Our failure to appreciate the need of a practical display of the contents is an effective padlock on the contents.

I would like to see within the near future a plot of the country, state by state, displaying the library resources and the probable consumers, *i. e.*, students, educational, industrial and manufacturing concerns. I would like a liberal distribution of this plot to consumers. I would like to follow this up with the actual goods. I would like to be able to distribute to consumers at least at the end of a year a general guide to the richest deposits of economic and sociological accumulated experience in American libraries.

It makes me heartsick day after day to have the short-sightedness of our business as a whole brought home to me. If this business were one of material profit and loss we would all have been in the receiver's hands years ago.

From personal experience, particularly since conducting reference work in the New York Public Library, I am convinced that there is a large and important public to whom the service we could render would be of material benefit. The little tapping of this lead which I have dared to do, owing to our inadequate facilities to follow up any possible response, has amazed me with the richness of the prospect. I am sure other reference workers must have had the same experience. It is not fair to our administrators nor to our trustees not to impress them with the impairment of plant which an inadequate reference service is. Almost all our libraries are overloaded at the business end and undermanned at the reference end. Yet it is the reference end which brings the solid business to the library. We all know what good advertisers students are for us. The slightest service rendered them is sure to

bring a comeback. They do not, however, begin to compare with the business man. He will talk about your service at the office, to his friends, and he never fails to follow up the first satisfactory attention. It is a great pity therefore that with the opportunity of the past two years already spent, we are not making some effort towards economic and sociological preparedness. Our business sense, if we had any, would tell us that German systems of industrial co-operation, economic information without end concerning new foreign markets, port development in this country, terminal facilities, economics of transportation, utility development, are among the great questions which will influence theoretical and practical economic research in the near future.

It would be out of place to consider here the best method of preparation, but it goes without saying that the orthodox catalog is wholly inadequate. Nor is the exceptional industry of a few persons sufficient. We reference workers must have a program which will enable us to co-operate on a common basis, which will relate us closely as a body to those men and women in the world of affairs who need the corroboration of accumulated experience. Only then can we hope to lift our work out of that half-light of romantic piffle in which it is generally viewed. It is not fair to all the young people we are enticing into librarianship not to develop this opportunity of reference work for them, while insisting on overlong training in routine matters. It is not fair or loyal to the great men, Winsor, Poole, Dewey or Billings, who believed so mightily in the American library, to allow this most dynamic phase to lapse into insipidity.

With the coming reorganization, countries heretofore in the lower ranks of the economic and sociological scale will come to the front as subjects of research. India, Russia, Latin America, Asia Minor are on the tapis for exploitation. It is our business to see that accumulated economic and sociological experience concerning these regions is exploited simultaneously with the demand. The finest collections of official documents in the world are in this coun-

try. I dare say some of the richest deposits of accumulated economic and sociological experience are to be found in the great American libraries. Has there been so much as a whisper of suggestion for the working of these deposits? No! Can it be possible that we don't care? Dr. Whitney has said of the wastage of confining scientists to teaching to the exclusion of research—"the nation needs what these men might give it." The nation needs what we can give it. Then, why not arouse ourselves out of our professional complacency and do what another group of men, no more fit than we are, will surely do. By our own inertia we are condemning ourselves to a deserved inconsequence.

It is a sore temptation to expatiate on the importance to us of the opportunity now waiting. A trifle of foresightedness, a moment of attention to the alert professional and business men, and we must realize that an advantage such as is offering now to give to our business a functional value, will never again come to us.

#### NEW YORK LIBRARY CLUB RECEPTION TO A. L. A.

THROUGH the courtesy of the directors of the Metropolitan Art Museum, the New York Library Club held a reception in the museum on the afternoon of July 3 for members of the American Library Association. As this was a pay-day at the museum, tickets of admission were given out in advance at Asbury Park to all who applied.

An informal receiving line was headed by Dr. Hill, of the Brooklyn Public Library, president of the club. The museum was represented by Mr. Clifford, Miss Wallace, and Miss Felton, of the library; Mr. Dean, the curator of armor; Miss Abbot and Mrs. Vaughan of the educational department; and Miss Gash, of the secretary's office. Others who assisted in receiving were Mr. Anderson of the New York Public Library, Miss Hutchinson of the Brooklyn Art Institute, Mr. Meyer of the Library of Congress, and Miss Mitchell of the Chicago Art Institute.

After a half hour of sociability those present, numbering about a hundred and fifty, adjourned to the lecture room, where Mr. Kent, the secretary of the museum,

gave them formal welcome to the institution. He then introduced Mr. Clifford, who described the work and resources of the library. The room was then darkened and slides of some of the museum's treasures were shown, with running comment by Miss Abbot. On behalf of the librarians present, Mr. Hodges of Cincinnati thanked the officers of the museum and the New York Library Club for the hospitality shown to the visiting librarians, and after the serving of refreshments in the museum restaurant, the rest of the afternoon was spent in wandering through the various rooms, getting such glimpses as the limited time permitted of the more famous art objects housed there.

#### A BETTER COMMUNITY CONFERENCE

A BETTER Community Conference was held at the University of Illinois June 20, 21, and 22, 1916, under the general direction of Professor R. E. Hieronymus, community adviser of the university. About 350 people from out of town attended the conference and many students in the University Summer Session also attended the various sessions. It is expected that a similar conference will be held annually at the university.

Besides three general sessions there were nineteen section meetings. Each of the sectional meetings represented either a community of a certain size or some subject of general community interest such as Recreation, Religion, Commercial Clubs, Music, or Public Health.

One of these section meetings was devoted to the library as a community agency. Fifty people attended this section meeting, most of them being students registered in the Summer Session of the Library School, and representing about 22 libraries of Illinois. The section meeting was in charge of P. L. Windsor, librarian of the university, and the following program was given, each number being followed by lively discussion.

The public library and art in the community.  
Eva Cloud, librarian, Kewanee Public Library.

What the library does for city officials.  
Florence R. Curtis, University of Illinois Library School.

What the library does for public health. Lydia Barrette, librarian, Jacksonville Public Library.

How the State Library Commission can help small libraries. Anna May Price, secretary, Illinois Library Extension Commission.

Mr. F. K. W. Drury, assistant librarian of the University of Illinois Library, acted as secretary of the section and prepared a full summary of all the papers and discussions. P. L. W.

#### PROFESSOR EDWARD WINSLOW HALL\*

FROM the early days of Waterville College down to eight years ago, the great event in the history of any class was the assignment of the Junior Parts at the Senior Exhibition. Its interest centered in the fact that it was the occasion when the leaders of the class in scholarship were first officially announced. The exercises consisted of original orations by the seniors, and translations by the juniors, into English, French, Latin, and highest of all, Greek. Fifty-five years ago, shortly after the fateful election of 1860, and only a little before the bombardment of Sumter began to echo in drum-beats throughout the North, the class of 1861 held its Senior Exhibition, and the Greek Junior Part was awarded to Edward Winslow Hall. He chose for translation the "Defence of liberal studies" which Cicero gave in his plea for the poet Archias—that utterance in praise of reading which has been a favorite with book-lovers for nearly two thousand years. Other occupations, said Cicero, are not appropriate to all times, or ages, or places; but literary studies are the nourishment of youth and the comfort of age; they adorn our prosperity and afford a refuge and a solace in adversity; at home they are a delight and abroad no burden; the companions of our night-watches, they banish the fatigue of travel and the loneliness of the country. The selection of this passage was no happy accident; it arose from the deepest springs of Dr. Hall's nature. It was so profound a self-revelation that it foreshadowed at thirteen years' distance

the choice of his real life-work. It was so typical of his inmost self that when the committee on this memorial were casting about for the most appropriate inscription, these words appealed to them above all others, though at the time they were unaware of their peculiar fitness.

Memorials originate in a great variety of motives, differing widely in moral value, but this arose from the noblest of all impulses, friendship raised to the higher power of love. One of those most deeply concerned in the erection of this tablet was not a pupil of Dr. Hall's, but his classmate and roommate. To him it stands simply—but how beautifully!—as a tribute to his chum. To another it commemorates one who not only in his youth

"Led his bewildered feet through learning's maze,"

but was from his earliest childhood his intimate friend and counsellor. To the rest of us it represents affection, but still more a debt,—not the payment of a debt, not the cancelling of an irksome obligation,—but the willing, glad, proud acknowledgment of a debt that we never can repay. As such this tablet will stand fifty, sixty, seventy years, so long as a single living link remains between its pictured bronze and the man it commemorates. But when the bond is at last severed, will this tablet lose its meaning? Must its inscription then be changed to those words of Lucan: *Stat magni nominis umbra?* By no means. Even with its unveiling this tablet took on a third significance, which is destined to grow with every passing year, and finally to supplant the others. How shall I express in words that meaning? You have already anticipated my thought; and I need only to say that what before was individual will then have become universal, the single life will have been merged in the type. As Milton said of Lycidas, who in his mortal powers had passed from the scenes of human action,

"Henceforth thou art the Genius of the shore."

Thus to stand in the eyes of generations yet unborn as the representative of the noble activities that filled his life in this New England Academe, surely that is, in Milton's words, "a large recompense."

\*Remarks on the unveiling of a memorial tablet to Professor Edward Winslow Hall, Colby College, June 27, 1916.

But a memorial has often not only a message to its larger, even if a selected, public, but also a special message to a public that may be very small but is sure to be highly appreciative. A few weeks ago I was in New York, at the foot of Central Park, standing before Saint Gaudens' glorious statue of General Sherman. I could thrill to it as a lover of art, as an American, and as one whom chance had once favored with an hour in the great general's company. But how if I had been a young American soldier? What a flame of inspiration that martial vision would have shot through my veins! What an incentive I should have found it to deeds of heroism, and what a pledge of recognition from a grateful country! The librarian is not a warrior; his activities are not symbolized by the thunder and the lightning; rather by the dew and sunshine. Hence his work never strikes the popular imagination, and rarely rises to the level of public recognition. Thrice precious therefore to librarians is this memorial. In its eloquent expression of the spirit that prompted it the successor of Dr. Hall and his successors will day by day find that encouragement, that assurance of appreciation, which glorify drudgery; and not they alone, but their colleagues everywhere; and not only this inward refreshment, but a mighty stimulus to action. Plutarch was eternally right when he said in his life of Pericles that worth makes such an appeal to the souls of men that the bare recital of its deeds will stir them both to admiration of the things done and to emulation of the doer.

So it will profit us all to know whom and what manner of man this memorial sets before us. A Portland boy, born September 9, 1840, the son of teachers, growing into a tall, handsome, athletic youth, who even in school made his mark as a public speaker. Of his character as it had already developed in boyhood, Rev. Henry M. King, D.D., who was his schoolmate, said to me, "You cannot say anything too good." In his last year in the Portland High School he came under the influence of Dr. James H. Hanson, that widely revered name that has meant so much for this town—*clarum et venerabile*

*nomen, multum nostrae quod proderat urbi.* In college his favorite studies were the languages, literature, and art. We have already seen what distinction he won in the class-room. To the discipline of study he added that of teaching, as the old calendar encouraged college students to do. He showed himself in college, as afterwards, amply endowed with humor—that lubricant of the soul, that stabilizer of the intellect—but he never figured as a wit, though he was capable, under provocation, of a sudden thrust of satire that finished at once the argument and his opponent. If ever handwriting was an index to character, it was Dr. Hall's. Neat, even, as legible as print and far more beautiful, his was the ideal library hand, as he himself became to all who knew his work the ideal librarian. After leaving college he taught for a year in the Oread Institute at Worcester, and then, being debarred by the result of an accident in the gymnasium from enlisting in the army, he entered the civil service of his country, and served for three years, first in the War Department and later in the Treasury Department. He was thus in Washington during the last two years of the war and the year following. In 1865 he made an ideal marriage, which was destined for him to be life-long. In the following year the chair of Modern Languages was established in Waterville College, and he was called to fill it. That was just before his twenty-sixth birthday, and for twenty-five years he faithfully performed the duties of this bilingual position. The only interruption was a year abroad in the early seventies. A former student describes him on his return as an Apollo with curly locks and a blonde beard. The beard he soon discarded, and his appearance at his physical prime, as his students of that decade remember him, has been caught in the happiest manner by the artist of our memorial. Such was the face illumined that greeted us in the class-room and the library. For on his return from Europe he was entrusted with a new function, that of librarian, and "from that moment," as Colonel Shannon has justly said, "Professor Hall found his true vocation." He welcomed this appointment as an opportunity,

BRONZE MEMORIAL TABLET TO PROFESSOR EDWARD WINSLOW HALL UNVEILED AT COLBY COLLEGE, JUNE 27, 1916

and already by the beginning of the great modern library movement in 1876, when I first came to know his work, he had placed the Colby Library, by its intelligent arrangement, its accurate catalog, and its active, sympathetic and generous administration, in a position of acknowledged leadership. He was an early member of the American Library Association, which was one of the important results of the Centennial, and took part in its conferences. In the thirty-seven years of his librarianship, the number of books under his charge was multiplied by more than five, an increase from 9000 to nearly 50,000. His fellow librarians recognized his attainments by making him president of the Maine Library Association at its first meeting in 1896, to which he contributed a paper on "The value and use of reference books." He was a founder and vice-president of the Maine Pedagogical Society, before which he delivered in 1888 an address on "The teacher and the library." As if two men's work during nearly twenty years were not enough, he accepted the keeping of the Graduate Records, and the preparation of our General Catalog, of which he issued three editions, the last, which crowned his life-work, being a substantial volume. He also found, or made, time to write a "History of higher education in Maine." In addition, he served for twenty-six years as the secretary and treasurer of the Colby Alumni Association, and for a like period as clerk of the Waterville Baptist Church. So he continued his work almost up to the limit of three score and ten years. Then, after a few months of failing strength, he bade farewell to earth on the 8th of September, 1910, as if it had been graciously prearranged that he should open his eyes on his seventieth birthday in the world that needs not the light of the sun.

Such, on the surface, is the record of the man whom we commemorate to-day with blended regret and pride. But what was the real work that he did as he went in and out of these portals for forty-five years? Was it training our ears and limbering our organs of speech until we could make sounds that would pass for the French *u* and the German guttural? Ex-

pending to the best advantage year by year the tiny allowance of money for his library? Arranging the books in effective order, cataloging, caring for them, keeping the record of loans, helping the students in their search for elusive information, inducting them in the course of their four years into the knowledge and use of intellectual tools? All this, indeed, but more. Little time or strength would seem to be left for more; but the addition was not some separate item of instruction or aid; it was that quality diffused through all which made the difference between diligent service and the highest service. It was the spirit of the man which, to the measure of our receptivity, we absorbed. It was the overtone that transformed the monotonous marching strain of daily life into a pean. Shall we call it Culture? That word has been so overworked or abused that we may well lay it by, like an instrument that has lost its edge, and employ instead another word almost forgotten, Taste. I recently heard a college president, championing the intellectual mission of the college, deny its call to furnish so vague a product as taste. Whether the omission is to be hailed or lamented, the fact remains that American colleges from the beginning have conspicuously failed, in their training, to quicken the esthetic sense. Their graduates who have achieved this final flowering of the mind have done so, either by themselves, or under the inspiration of an exceptional teacher. Such a stimulus to sensibility toward art was the class-room of Professor Warren; toward literature, the library of Dr. Hall. It is not enough to *know*, in a world the springs of whose life are beauty; one must be alive to that beauty, or one is spiritually but a Caliban. So the message of this memorial to the after-world of the college, which, as regards Dr. Hall, began developing six years ago, shall be, along with knowledge, exalting and glorifying it, the finer life of the spirit, and for this inspiration, which the artist has here fixed in imperishable bronze, she needed but to turn to the work, and guided by that, to the character of Edward Winslow Hall.

HARRY LYMAN KOOPMAN.

## American Library Association

---

THIRTY-EIGHTH CONFERENCE, ASBURY PARK, JUNE 26-JULY 1, 1916

THE thirty-eighth general conference of the American Library Association, forty years old this year, was held at Asbury Park, N. J., June 26-July 1. Headquarters were in the New Monterey Hotel, where about 600 librarians stayed, and the rest were accommodated in hotels nearby. It was announced at the meeting that 1333 members had registered at headquarters, and it was estimated that the number actually in attendance during the week was close to 1500, surpassing even the record made at Washington in 1914.

Regret was everywhere expressed over the absence of Miss Mary W. Plummer, the association's president, who was ill in Chicago. Though in poor health all the year, Miss Plummer had never ceased her work for the welfare of the association, and continued her efforts until the success of the conference was assured.

The exhibition of labor-saving devices, which was originally planned for this conference, was finally given up, as the committee in charge found it impossible to make the exhibit as comprehensive as had been hoped. A large room on the ground floor, however, was set aside for any exhibits which individual firms or organizations might wish to display, and about 25 firms, chiefly publishers, booksellers and picture dealers, took advantage of the opportunity.

There was no official post-conference trip this year, but many of the librarians visited New York the following week, when the National Education Association was holding its annual conference.

Five general sessions were held. In addition to the A. L. A. section meetings, the Special Libraries Association, the American Association of Law Libraries, the National Association of State Libraries, the American Library Institute Board, the League of Library Commissions, and the Bibliographical Society of America also held meetings during the week, and these, coupled with the meetings of the various sections of the A. L. A., made a program so full that selection was difficult.

On Monday evening, following the first general session, a reception was held in the ballroom of the New Monterey Hotel. The officers of the A. L. A., the officers of the N. J. L. A., and the members of the N. J. Public Library Commission were asked to stand in the receiving line, the invitation in-

cluding the wives of those who are married. As was to be expected, various things prevented some from being present on the first evening of the conference, so that those who actually stood in the receiving line were Walter L. Brown, Chalmers Hadley, Harrison W. Craver, Dr. Herbert Putnam, Dr. Arthur E. Bostwick and Mrs. Bostwick, Matthew S. Dudgeon, George B. Utley and Mrs. Utley for the A. L. A.; Dr. Ernest C. Richardson, Edward S. Katzenbach and Mrs. Katzenbach, and Adelene J. Pratt, for the N. J. L. A.; and Moses Taylor Pyne and Mrs. Pyne, Everett T. Tomlinson and Mrs. Tomlinson, and Edmund J. Cleveland and Mrs. Cleveland, of the State Commission.

A pleasant break in the week's full schedule of meetings was the visit made on Thursday afternoon to Princeton University. Over 650 librarians went over on the special train provided for the party, but few of them realized that the \$1.16 carfare which each one paid was a half fare and that Mr. Pyne, chairman of the New Jersey Library Commission, paid the other half to the Penn. R. R. for each one who went. Mr. Pyne's generosity was manifested in many quiet ways throughout the week, but at no time did he give greater pleasure to a larger number of people than on this pleasant visit. The party was received in Alexander Hall, where President Hibben gave them special welcome. A pamphlet, describing "Short walks about Princeton," and containing a map on which the buildings of interest were marked, had been distributed on the train. With its help and the guidance of Mr. Pyne, Dr. Richardson and other members of the University Library staff, the visitors easily found their way about. The university buildings were all open for inspection, and the walks about the campus, and especially the beautiful garden of old-fashioned flowers in the rear of the president's house, were enjoyed by all. Busses were in readiness to transport any who cared to visit the plant of the University Press, pleasantly quartered in its own building with ideal working conditions. A copy of Gen. Leonard Wood's "Military obligation of citizenship," issued by the Press, was given to each visitor. A photostat exhibition, showing the possibilities of its usefulness in all departments of the library, was arranged for this visit, and it was a matter of regret that lack of time prevented careful examination of this and other collections displayed. Toward the end of the afternoon automobiles and busses took the guests to the Graduate College, where an organ recital was given and afternoon tea was served.

On Friday afternoon the Asbury Park Chamber of Commerce took members of the A. L. A. on an automobile drive up the coast, and as a result of special effort on their part Pryor's Band began its engagement this week, expressly for the benefit of those in attendance at the conference. The hotel orchestra played for dancing every evening after the meetings, and the special books of amusement tickets issued to members drew many to Deal Lake, the "movies," the band concerts, and other amusements of the Boardwalk.

There were dinners for the various library schools, dinners for different states, and Mrs. Carr's blue-ribbon dinners and breakfasts for those who had attended ten A. L. A. conferences. Sherman Dennis, the manager of the New Monterey, who planned most carefully for both the comfort and pleasure of the librarians, offered to provide a special menu card with a seal or motto, and this gave Secretary Utley an opportunity to carry out a long cherished plan of running a series of quotations from librarians of yesterday and to-day. The quotations were changed with each meal, and were chosen to follow in thought the general trend of the meetings.

#### OFFICERS ELECTED

The election of officers for the coming year was held on Friday, and the following were chosen:

*President*—Walter L. Brown, librarian, Public Library, Buffalo, N. Y.

*First vice-president*—Harrison W. Craver, librarian, Carnegie Library, Pittsburgh, Pa.

*Second vice-president*—George H. Locke, librarian, Public Library, Toronto, Ont.

*Members of the Executive Board*—Josephine A. Rathbone, vice-director, Pratt Institute School of Library Science, Brooklyn, N. Y.; Arthur L. Bailey, librarian, Wilmington Institute Free Library, Wilmington, Delaware.

*Trustee of the Endowment Fund*—E. W. Sheldon, trustee and treasurer, Public Library, New York city.

*Members of the Council* (elected by the association for term ending 1921)—Mary F. Isom, librarian, Portland Library Association, Portland, Ore.; Willard H. Austen, librarian, Cornell University, Ithaca, N. Y.; J. C. M. Hanson, associate director, University of Chicago Libraries, Chicago, Ill.; Gratia A. Countryman, librarian, Public Library, Minneapolis, Minn.; Linda A. Eastman, vice-librarian, Public Library, Cleveland, O.

*Members of the Council* (elected by the Council for term ending 1921)—Gertrude Andrus, Public Library, Seattle, Wash.; Chalmers

Hadley, Public Library, Denver, Colo.; Isadore G. Mudge, Columbia University Library, New York city; A. S. Root, Oberlin College Library, Oberlin, O.; W. T. Porter, trustee, Public Library, Cincinnati, O.

#### FIRST GENERAL SESSION

All the general sessions, and some of the larger section meetings, were held in the Auditorium, opposite the New Monterey. The first general session was called to order Monday evening at 8:30, with Walter L. Brown, first vice-president of the association, in the chair.

In opening this thirty-eighth conference of the American Library Association and its fortieth year, Mr. Brown spoke of the extreme regret felt by those in charge that the first official announcement had to be that of the absence of the president because of illness; and he emphasized the fact that the meeting was after all Miss Plummer's meeting, for it was she who had drawn up the program, who had secured the speakers, and who had even written her presidential address which was to be read by the secretary.

"Miss Plummer has devoted herself without stint, notwithstanding her year of sickness and pain, to the interests of the association," said Mr. Brown. "We feel under great obligation to make this meeting a success, and we hope that all Miss Plummer's friends will share with us this obligation and do all that we can to send her word of a successful conference."

He then introduced M. Taylor Pyne, chairman of the New Jersey Public Library Commission and trustee of Princeton, who welcomed the librarians to Asbury Park and to New Jersey.

Before proceeding to read Miss Plummer's address, Mr. Utley said: "The regret at the absence of Miss Plummer has already been voiced, and I can assure you that I feel her absence very keenly. It has been a pleasure to work with Miss Plummer as president during the year, and we all share in the sorrow in knowing that she is ill; but we are likewise glad to know that she is getting better. You will be interested to know that last Tuesday I had the pleasure of seeing Miss Plummer. I called on her for a few moments and found her looking well, in spite of the fact that she was too weak still to consider coming to be with us to-night. I asked her if she had a greeting which she could send us on this occasion, and she said, 'Tell them I feel as guilty as a hostess who has invited friends to a banquet and is not there to help entertain them.' You can yourselves realize how keen the disappointment is to Miss Plummer.

"I would like to say in starting to read her address that at her special request the announcement must be made—I repeat, at her special request—that the address is not in as polished and finished a condition as she would like to have it. I think you will feel that the announcement is unnecessary. Miss Plummer wrote this address—she did not write it, Miss Plummer dictated this address from the bed of pain and illness—dictated it to a stenographer. Under those trying conditions I am sure you will feel that no apologies are necessary for any awkward expressions which Miss Plummer feels are in the address, but I think you will have difficulty in finding them, unless it be the shortcomings of the reader."

Miss Plummer took for the subject of her address "The public library and the pursuit of truth," and the paper is reprinted in full elsewhere in this issue.

Following the reading of the address, the vice-president called upon Mr. Bowker to voice for the association its desire to send Miss Plummer a message that should show its appreciation of her fine and thoughtful address.

Mr. Bowker accordingly offered the following resolution to be sent to Miss Plummer in the name of the A. L. A., with the signatures of the vice-president and secretary:

To Miss Mary Wright Plummer, Chicago, Ill.

The American Library Association send to their absent president their affectionate sympathy and their high appreciation of her devoted service to the profession and to the association. As a leader in library school development you have the gratitude of hundreds here present for whom you have cleared the way, and your achievements have contributed largely to the honor and dignity of the profession. The association, while sorrowing at your absence, appreciate gratefully your efforts for the success of this conference, and thank you for the inspiring presidential address which they have just heard.

In offering this resolution, Mr. Bowker said: "It has more than once been the lot of this association to miss from the annual conference the president of the year, but I think never under circumstances which we must all so regret. Miss Plummer has so devoted herself to her library work for years that we pay in her absence the penalty for that devotion. She has sent her special apologies that she cannot be here as our hostess, and it is one of our regrets that we miss the gracious presence, the winning smile, the kindly word in which she typifies the eternal feminine, the ever womanly which represents so large a majority of this association. Miss Plummer came to her library work from out the sweet sanctity of the Society of Friends, and from that brought perhaps two qualities which many of us who have been her intimate friends know, but perhaps not all of you—the quality

of a quiet sincerity and the quality of force which often comes into noble causes from that society.

"Next to Melvil Dewey, whose thought of the library school met at the start with such scoffing, not least from our dear scoffer of honored memory, Dr. Poole, Miss Plummer perhaps has done more for the development of that part of the inspiration of the profession than anyone else. It required some courage not only to propose a library school, as Mr. Dewey did, but to become a member of the first class in the first library school, as Miss Plummer did, and from that first class have come many whose names and whose work you recognize as leaders in this profession, first among them all—Mary Wright Plummer.

"Perhaps most of you may not know Miss Plummer as she shows herself in that volume of poems, most creditable contributions to American poetry not of the new sort, which she published in 1896. Those of you who have conducted small libraries know how much you owe to her for her "Hints for small libraries," which the American Library Association has published through successive editions. Those who are children's librarians have reason to be thankful to her for those charming books of travel "Roy and Ray in Mexico," and the two children again in Canada, as well as for the delightful reworking of the stories of the *Cid*, which have come from her pen.

"So throughout she has dignified the work of the librarian, the work of the teacher, the work of the writer, in a united library service. I know that she is one whom all of you have especially delighted to honor. I know that no one could be more missed, especially in this year, than she, and I know that you will all unite with absolute unanimity in sending her some such expression of your real feeling, which I am sure, Mr. Vice-President, will be adopted by a rising vote, after others have said a word or two in further expression of your feeling."

In rising to second the adoption of the resolution presented by Mr. Bowker, Dr. Hill, of the Brooklyn Public Library, said that he did so with mingled regret and sorrow: regret at the absence of the honored chief executive officer and sorrow because the absence has been occasioned by illness. "I have known Miss Plummer for a long time as a trained librarian and as a trainer of librarians," said Dr. Hill, "and in both capacities she has attained the highest standard of proficiency. I cannot add to the effectiveness of the resolution or to the words of Mr. Bowker, but I am sure that I voice the unanimous senti-

*Gate Co.  
1st Park Mt.  
512*

AT ASBURY PARK, NEW JERSEY

ment of the association in wishing for the speedy recovery of our president, and for her early return to her own chosen field of library activity."

The resolution having been unanimously agreed to by a rising vote, the vice-president declared the meeting adjourned, and the audience returned to the New Monterey for the delightful reception tendered by their New Jersey hosts.

#### SECOND GENERAL SESSION

Chalmers Hadley, second vice-president of the association, presided over the second general session, which was called to order Tuesday morning at 9:30. Attention was called to the report on co-ordination rules to be presented later by Dr. Gould, of McGill University, and certain other reports were briefly mentioned. Most of the reports had been printed and distributed to members in advance of the meeting and were read only by title. On motion of Willis H. Kerr, it was voted to send a telegram of greeting to the 8000 members of the Association of Advertising Clubs of the World, in convention in Philadelphia. The nominating committee presented its list of candidates for officers for the coming year, and announced that the election would be held on Friday.

The first paper was by Dr. Arthur E. Bostwick, on "How the community educates itself," and as this paper is printed in full elsewhere in this issue, the summary of it is omitted here.

Owing to the tragic death at Verdun, on June 24, of his son Victor Chapman, who was a sergeant in the Franco-American Flying Corps, John Jay Chapman of New York city was not present, and his paper on "Children's reading" was read by Henry N. Sanborn, secretary of the Indiana Public Library Commission. "It is seldom mentioned," wrote Mr. Chapman, "that the chief end of education is happiness," and it is the task of the educator to bring young people and the great minds of all ages together. The truly great things of life—as love, hate, remorse—children can understand, and the best children's books are both *real* and *old*. For the ordinary child the family dinner table represents life, and the young child will accept with avidity all that interests its parents, so long as its treatment is individual. It is only the exceptional child that should be sent to the librarian. With us to-day the libraries and schools do too much of the work of parents, which should be kept private and personal, in training the minds and tastes of children.

Miss Mary Ogden White, of Summit, N. J., who has assisted in conducting the fiction seminars of the Library School of the New York Public Library the past year, was the next speaker, taking as her subject "Democracy in modern fiction." The rise in the general level of democracy to-day she attributes less to the magazines than to the newspapers, which furnish a "motion picture of current events." In modern fiction is felt the clash of the old and new schools, and the work suffers from the lack of a common background, alike on the part of the author and reader. Miss White showed how the growth of democracy in fiction has kept step with the historical growth of democracy, and discussed the salient features of the work of various novelists, in support of her thesis.

The last paper of the morning was on "Leadership through learning," by William Warner Bishop, librarian of the University of Michigan. Mr. Bishop opened his address by calling attention to the one theme on which every graduation orator laid emphasis, that the young men who are now going out from the universities are "the future leaders of the community." The real leaders of the next generation will be college bred, a condition which has never yet been wholly true. They will be the men who know and know how—who will combine knowledge and efficiency and character. Granted this, what relation does the fact bear to the libraries of the country? Since it is impossible to divorce learning from books, pre-eminence in any field means more and more the ability to put book learning to practical use. The question for librarians to consider is this: Can our libraries provide the needed food for the real leaders of the community—not just the real and useful material, but that which is absolutely vital? In general, Mr. Bishop believes we do not have the books we should. Our leading libraries, though big in number of volumes, are not equal in quality to the British Museum or the Bibliothèque Nationale. Only fair progress has been made in specialization since 1899, when a splendid beginning was made. More co-operation in buying is needed if this specialization is to succeed, and no real scholar should be hindered from doing real work by lack of books. More and more scientific books are needed to help the people of the United States and the existing and recorded literature now in libraries should be located so as to be available. While emphasizing this need of better preparation for research work on the part of libraries, Mr. Bishop gave due recognition to the worth and value of the

recreative reading now being done in libraries everywhere. In closing he urged the development of professional spirit and a higher degree of technical efficiency so that the library may be prepared on the side of service for research aid, and more co-operation and coordination between libraries everywhere.

#### THIRD GENERAL SESSION

On Thursday morning the third general session convened in the Auditorium, with Vice-President Brown in the chair. Resolutions of the American Association of Law Libraries, thanking the American Library Association for the privileges enjoyed through affiliation with the latter organization, were read. Two letters were also read, one bringing greetings and good wishes from the National Conference of Charities and Correction, recently held in Indianapolis, and the other from James Bertram, secretary of the Carnegie Corporation of New York, acknowledging an invitation to attend this conference of the A. L. A.

The proposed amendment to section 2 of the by-laws to the constitution, on the duties of the nominating committee, was discussed. The section originally provided for the appointment of the committee one month before the annual meeting, and for the posting of its nominations 48 hours before the election. The amendment, whose adoption was recommended by the executive board, provides that "one month" be changed to "three months," giving the committee more time for consideration, and that the requirement that nominations be posted 48 hours before election be changed to provide for their publication in the *Bulletin* of the association at least one month before election. After a short discussion of these two points the amendment was adopted.

The first paper of the morning was read by Robert Gilbert Welsh, the dramatic critic of the *New York Telegram*, who discussed "Modern drama as an expression of democracy." He said that while it is the aim of the theater to mirror every phase of life, the spirit of social democracy has been shown more clearly in foreign plays during the last few years. Of the plays which ran in New York city last winter, he selected "The weavers," "Major Barbara," and "Justice" as the most significant, and proceeded to analyze and discuss each at considerable length. From these he touched briefly on the work of Ibsen, Strindberg, Sudermann, and Brieux, and passed to the evolution of American plays from those of the "Way down East" and "Shenandoah" type to Augustus Thomas's "Witching hour" and Eugene Walter's "Easi-

est way." The real theater of democracy, he thinks, may be with us now in the "movies," which are essentially a crowd creation, and he questioned whether the influence of the Gordon Craig type of theater would work down to the crowd or whether the crowd, through its "movies," would move itself up to the higher standard set up by Craig for the legitimate drama.

Continuing the general theme of the conference, Miss Jessie B. Rittenhouse, of New York, followed Mr. Welsh with a talk on "The new poetry and democracy." She showed how poetry follows the universal law of growth through revolution. The romanticism of the nineteenth century was merely reaction against the cold formalism which preceded it, and it in turn had been torn down to make way for the realism introduced by Walt Whitman. Miss Rittenhouse charmed her hearers with her clean-cut analysis and happy characterizations of the work of Whitman, Edwin Markham, Robert Haven Schauflyer, Ezra Pound and Amy Lowell (apostles of imagism), Robert Frost, and Edgar Lee Masters. Just as the older forms of poetry were first regarded as revolutionary, and each, after running its cycle, was discarded as too conservative, so to-day Miss Rittenhouse felt that the pure free verse was passing and that a new form is growing up, partly free verse and partly rhyme, and best exemplified in some of the work of Witter Bynner.

The third and last address at this session was given by John Foster Carr, director of the Immigrant Publication Society of New York city, who talked on "Some of the people we work for." He spoke largely on the opportunities which the libraries have in the Americanization of the immigrant, and said that over 500 libraries are now co-operating with his society. He said that Americans in general need a better understanding of the difficulties of foreigners in this country, and he had no sympathy with the mad haste urged in some quarters to turn the foreigners into citizens before they have learned to love the nation which they are adopting as their new home. Mr. Carr's paper is printed in full in the front of this issue.

#### FOURTH GENERAL SESSION

Vice-President Hadley presided over the fourth general session, which convened in the auditorium Friday evening. Before beginning on the formal part of this evening's program, Mr. Bowker was introduced. Understanding that the Librarian of the National Library of Mexico City is one of the foremost in endeavoring to maintain and promote friendly rela-

tions between that republic and our own, Mr. Bowker proposed "that the Executive Board be authorized to send to Señor Luis Manuel Rojas, the Librarian of the National Library of Mexico, from the American Library Association, its earnest hopes for the continuing friendliness and the increasing intimacy and mutual appreciation between the people of the United States and the people of our sister republic of Mexico," and this resolution was carried.

Mr. Bowker then proceeded to recall some of the events incident to the organization of the American Library Association, saying: "It is my happy fortune to be the representative—it is my unhappy misfortune to be the sole representative, at this meeting, of the men and women who forty years ago started the American Library Association. This meeting has been spoken of as the thirty-eighth annual conference. In truth, the conferences have not been annual: had they been, this would have been the forty-first annual conference.

"For a special purpose I will hark back for a moment to those early days. It was something more than 40 years ago, in the spring of 1876, that Melvil Dewey, recently a student at Amherst College, and then assistant librarian of his college—he had already evolved, or begun to evolve, the decimal classification—came to New York for a consultation at the office of the *Publishers' Weekly*, then in Park Row, with Mr. Frederick Leyboldt and myself regarding the starting of a library journal. The earlier periodical had developed a department of library notes which we had thought might be further developed into a separate professional periodical, and Mr. Dewey, whose enthusiasm for library work was already active, desired to associate himself in such an enterprise, which he also had in mind. In the consultations between the three of us it was suggested that there should be an American Library Association. In 1853 the first library conference had been held in New York, with a large attendance, and with promise of an effective future. A number of resolutions and plans were adopted which prophesied in large measure the work which has since been accomplished or is under way. It was proposed to hold a meeting the next year and annually thereafter, but that would-be organization lacked a Melvil Dewey to carry the thing through, and the second meeting was never held.

"From us three, therefore, a call was sent out to ask if librarians generally would cooperate in calling a national conference, and

that was met with not a little scoffing, particularly from that honored veteran whom I very often speak of as our dear scoffer, Dr. Poole, as to who these young people were who had proposed this national association; but the thing carried itself. An organization was begun at the meeting held in Philadelphia in September, 1876, the year when Mr. Cutter had published his famous Rules as a part of the great government work on libraries. Since that time events and estrangements have somewhat sundered old ties, but the continuing work of twenty-five years cannot be forgotten, and I think you will like to join, I am sure, with unanimity, in sending messages of gratitude to those who can be reached now, and who took part in the beginning of the work which has reached such a wonderful culmination. I will ask the secretary to read two telegrams which, if they meet with your approval, it has been arranged shall be sent to-night to Mr. Dewey at Lake Placid and to the widow of Mr. Leyboldt at Scranton, and after that I will take two minutes more to tell you as to the survivors—the other survivors of the 1876 conference—to whom it is proposed to send a general message which will later be read."

The first telegram, addressed to Melvil Dewey, read as follows:

The American Library Association sends from this fortieth anniversary special greetings and gratitude to that one of its founders whose indomitable courage, energy and persistence assured the early and permanent success of the association, and whose inventive genius in evolving the decimal classification and in initiating the library school has earned the worldwide recognition of the library profession.

That to Mrs. Leyboldt was as follows:

The American Library Association, on the occasion of its fortieth anniversary, sends to you its appreciative recognition of Frederick Leyboldt's part in the formation of this association and of his self-sacrificing labors in behalf of American bibliography.

The sending of these two telegrams was approved by a rising vote, after which Mr. Bowker proceeded:

"At the 1876 conference there were present no less than 103 persons, men and women, of whom, however, only 67 became members of the American Library Association and were called charter members. The consecutive numbers on our roll do not represent quite the order of the membership, it being a relation with the treasurer which somehow governed the accession number. Of the 67, counting Mr. Dewey and myself, sixteen are certainly known to be living, and there are possibly a few more, perhaps making up twenty in all, of whom even Mrs. Carr has no present knowledge. By Mrs. Carr's help we can present to you the brief list of the other fourteen.

"Perhaps I may mention first of all a man whose name is unknown to most of you, who came to that first conference in his sixtieth year, a friend and associate of Mr. Larned in Buffalo, and who will presently, we hope, celebrate his hundredth birthday, Mr. William Ives, of Buffalo. There came also our honored associate, Mr. Peoples of New York. From Boston came Mr. Griffin, then of the Boston Public, but now assistant librarian of the Library of Congress. From Worcester there came Dr. Green, our Uncle Samuel, always of affectionate memory, and Mr. Barton, of the Antiquarian Society. From Lynn our ever-young lady, Miss Matthews, and her associate, Miss Rule. From Providence Mr. W. E. Foster, whose absence of recent years we old fellows have much deplored, and from New Haven Mr. Addison Van Name, still living in that city. From Philadelphia Dr. Nolan, who should have been with me at this time to help me in this representation, but who disappeared in his usual fashion on Tuesday; and Mr. Barnwell, still in Philadelphia, though retired—also Mr. Rosengarten, a library trustee, of whom we have since seen too little. From the West came Mr. Charles Evans, whose service to American bibliography you know, and who was at this time librarian of the Indianapolis Public Library. I must include also—and this is a name which I would not willingly omit—Mrs. Melvil Dewey, then Annie Godfrey. Her marriage was one of several with which the library association has been honored. To her who for some time spelled herself A-n-i D-u-i, in the reformed spelling of her husband, and to these others it is proposed to send to-night a message of greeting, for it seems a pity that the fortieth anniversary should pass without this recognition of affectionate memories on the part of an association which has grown into such an effective and remarkable membership from a not very large beginning."

The secretary then read the following telegram, which was sent in identical terms to the fourteen people named by Mr. Bowker:

The American Library Association, on the occasion of its fortieth anniversary, sends to those members of the first conference still with us in spirit, though absent from this meeting, its affectionate greetings, remembrances and thanks for their participation in the seed sowing which has produced such abundant harvest.

Before Mr. Bowker could leave the platform, Mr. Hadley rose and said: "The chair has the privilege of communicating to you still another expression of felicitation issuing out of this anniversary. It is directed to Mr.

Bowker himself. A number of our members have asked me on their behalf to hand him this loving cup and to read to him in your presence the inscription which accompanies it. I do so gladly, for I assume your satisfaction with the incident will thus become part of our official records.

"In presenting this cup, which is full of affection for Mr. Bowker, let me read the inscription on it: '1876—1916. To Richard Rogers Bowker, friend of libraries and librarians, from members of the American Library Association. In admiration of his forty years of unique service to the Association in whose foundation he shared, at whose meetings he has been a constant attendant, to whose councils he has without obligation brought the wise judgment of a man of affairs, and whose work he has furthered in many practical ways by lavish gifts of his time and talent. Asbury Park, June 30, 1916.'"

Mr. Bowker, who was taken completely by surprise, responded briefly, saying: "Words are poor things, and tears are not in place. This comes to me with a glad surprise—for it is absolutely a surprise to me—and is therefore the more welcome. One could have no better reward after so many years than in reaping such a harvest of thanks as this cup of love represents; and for Mrs. Bowker, whom you have so pleasantly welcomed as a newer member, as well as for myself, I thank you from the depths of our hearts."

This pleasant introduction to the evening being concluded, the formal program was begun with a symposium on "The American public as seen from the circulation desk." The first speaker was Miss Edith Tobitt, of Omaha, Neb. Before considering the public as seen from the circulation desk, she said all librarians should question themselves how they appear to the public at the circulation desk. She believes that it is not often a library gives direct service to more than thirty per cent. of its community, indirect service to possibly 50 per cent. Librarians generally are too commercial in their attitude, too eager for mere bigness of numbers in their circulation records. It would be much better if every member of a community should use the library once a year than if a few should use it many times. The use of the public library is more general in the West than in the East, for in many towns it is the only place to go for information. The librarian should know the readers and the tastes of all, and the choice of desk assistants is of the highest importance, for it is only with

the best assistants that the best results can be obtained.

Continuing Miss Tobitt's thought of the importance of quality in desk assistants, Miss Louise Prouty, of Cleveland, humorously suggested that classes be held for library assistants to perfect them in the science of questioning, or as she termed it, "the gentle art of getting information by suggestion" from those readers whose queries are so broad and vague as to be difficult to answer properly.

Miss Catherine Van Dyne of Newark was unable to take part as expected, and Paul M. Paine, of the Syracuse (N. Y.) Public Library, was the last contributor to this symposium. He said every librarian should study his community to find out where his readers are coming from, what his library contains for them, and what it might contain for their use. He urged rural libraries to do more than has been done for the *wife* of the farmer. While libraries are waking up to the fact that they can help the farmer to raise better crops, they do not always seem to realize that they form an agency that can do much to add joy to the family life on the back road settlement, a service much more valuable than giving formulae for sulphur sprays or the best methods of raising chickens.

In a paper on "Establishing libraries under difficulties" written by Miss Mabel Wilkinson, organizer and county librarian in Cody, Wyo., and read by Miss Askew, of New Jersey, the audience was treated to a vivid picture of the adventures which attend library work in Platte county. In two weeks Miss Wilkinson traveled 400 miles on horseback, stopping at every settlement to explain the library plan and to make arrangements for the installation of collections of books from the central library. There is not a bookstore in the county, the nearest being in Cheyenne. In one settlement where a deposit station had been started and library interest aroused, a "pic social" was held to raise money to buy a few reference books for a permanent collection.

Following Miss Wilkinson's paper, Miss Mary S. Saxe, of Westmount, P. Q., whose topic "One hundred years ago—relatively speaking" had piqued the curiosity of the audience, gave a little sketch of the life and works of her uncle, John Godfrey Saxe, whose centenary occurred in June. She recited some of the unpublished poems which he wrote for the children of the family, and described him very entertainingly.

The last speaker was Mr. Faxon, of Boston. Owing to the lateness of the hour he omitted

most of his paper of reminiscences on "Times past," but showed the slides he had had made from snapshots taken at the A. L. A. conferences since he began going in 1893. The pictures of well-known librarians and his humorous comments on them kept the audience in laughter until the last picture had been shown.

#### FIFTH GENERAL SESSION

The last general session was held in the Auditorium Saturday morning, Mr. Brown presiding. The first speaker was Frederick C. Hicks, law librarian at Columbia University, who discussed the present status of "The public library as affected by municipal retrenchment." Mr. Hicks said that when he began his study the newspapers were full of stories of reduction of library incomes, and he thought a crisis in library work had been reached. A questionnaire was sent out and the replies do show a general reduction in five states. He found, however, that public opinion was changing in the press, and that no general reduction of library support in the country as a whole was to be noted. Cities in which the commission form of government is in use as a general thing are making more generous provision for libraries than those governed by mayor and council. Mr. Hicks commented on the various sources of library revenue—direct taxation, endowment, gifts for special collections, rental collections, fines, sale of duplicates, license fees and dog taxes, court fines, state grants, etc. He said of gifts that they show the interest of the leaders in a community rather than of the taxpayers as a whole, and often take away the incentive for community interest and effort. Only one state, Michigan, has constitutional provision for libraries in each township or city, though all state legislatures have passed library laws. Direct local taxation is necessary for best results, and Mr. Hicks discussed the different methods of fixing the library rate, and spoke of the A. L. A. committee now co-operating with the National Municipal League in the preparation of a library section for the model city charter.

Dr. E. A. Hardy, secretary of the Ontario Library Association, followed Mr. Hicks with a paper on "How Ontario manages her free libraries." With an introductory paragraph on the early history of Ontario he showed how "legislative authority existed in the province before the population arrived," which accounts for the standardization of its library system and for its being under a minister of the Crown instead of a

library commission. The first library in Ontario was organized in 1800, and the Free Libraries Act was passed in 1882. This act provides for (a) the establishment of free libraries by the vote of the taxpayers, (b) their administration by a board of management ranking with the city or town council, and (c) their maintenance by taxation to the extent of a half-mill rate. Every library is entitled to a legislative grant based on its expenditure for books, for periodicals and newspapers, and for maintaining a reading room. Assistance is also given to small libraries in cataloging and classification. Traveling libraries were introduced into the province in 1901, but have not yet reached their full usefulness. A free summer library school was opened in 1911 and held for four years, and will be resumed this year. A library bulletin has just been started by the department. Besides these official measures for library progress, Dr. Hardy noted certain unofficial library activities, notably the organization and work of the Ontario Library Association, which was formed in 1900 and held its first meeting in 1901, with 32 representatives of 24 libraries. It has since brought hundreds of library workers together, initiated many improvements, and shaped legislation. Finally, he described the joint activities of the O. L. A. and the Department of Education. These include the issue and distribution of the O. L. A. Proceedings as a government document, and the joint publication of the quarterly "Selected list of books" which he edits. The library institutes held annually in 15 districts are another joint labor, and there are joint committees for the improvement of legislation and for the investigation of library problems. The development of the trustee's work has kept pace with that of the librarian, in which Mr. Hardy feels that Ontario has surpassed our own country where too often the trustee's interest and share in the library administration is altogether perfunctory.

Miss Ahern rose at the close of Dr. Hardy's paper and paid eloquent tribute to the work which Dr. Hardy has himself done for Ontario library development during the years he has been closely associated with the O. L. A.

Joseph L. Wheeler emphasized, in his paper on "The larger publicity," the need of more intimate relations between the librarian and the public. In days to come, he said, the library schools may offer a course on how to get books read. Too much stress is now put on securing circulation of books, which is no more desirable than use within the building, though making a better showing in sta-

tics. By informing and inspiring his trustees, the librarian can make them his active co-workers in his efforts to promote a larger understanding of the library's place in the community. He should also take his staff into his confidence regarding his plans, and never allow them to get their library knowledge from the newspapers or the public. Business men will take more interest in the library when they see that it is like any other business, with buying and turn over of stock and the good will of the patron to be held. Individual readers should be known to the librarian and their tastes in books studied. Such publicity methods as those used in Toledo last spring, when the Public Library and the Chamber of Commerce joined forces for a week of library advertising, were excellent. A public exhibition of diagrams and charts, showing the library's use of its money will often serve to secure an increase in the library budget. The librarian should spend half his time outside the library building, studying his community, and should seek and grasp every opportunity to speak on library matters before all kinds of gatherings.

Mr. Brett, in the last paper of the morning, gave a general analysis of library legislation. While all library work is done under state authority, some of it directly, the greater part is carried on from local centers—municipality, township, or county. Most public libraries belong in one of three classes, municipal, school district, or association or proprietary. Geographically the county is the logical unit and the only one giving general provision for all people. Mr. Brett discussed the laws of the various states under the heads of government, organization, acquisition of property, support, staff appointments and pensions, book selection and purchase, protection of property, and traveling libraries. The conditions vary greatly between the states which have commissions and those which are without them.

Only routine business followed. The committee on resolutions offered, and the meeting adopted, resolutions of thanks to all the individuals and organizations who had contributed to the success of the conference. In addition to the record in the printed reports of those members who had died during the year, special resolutions were read for Dr. Little of Bowdoin and Dr. John Thomson of Philadelphia. The secretary reported that 171 ballots were cast, and read the list of officers thereby elected, and with a few words from President-elect Brown, the meeting and the conference came to an end.

## EXECUTIVE BOARD

A meeting of the Executive Board of the American Library Association was held at the New Monterey Hotel, Asbury Park, N. J., June 26. Present: Messrs. Brown, Hadley, Craver, Putnam, Bostwick, Dudgeon and Ranck.

The following committee on resolutions was appointed: Bernard C. Steiner, Gertrude E. Andrus, and J. T. Gerould.

It was voted that the election of officers be held on Friday, June 30, and that the polls be open from 9 a. m. to 4:30 p. m. William Teal and H. E. Roelke were appointed tellers of election.

The following report of the committee on nominations was received, adopted and ordered posted on the official bulletin board:

President—Walter L. Brown, librarian, Public Library, Buffalo, N. Y.

First vice-president—Harrison W. Craver, librarian, Carnegie Library, Pittsburgh, Pa.

Second vice-president—George H. Locke, librarian, Public Library, Toronto, Canada.

Members of the Executive Board—Josephine A. Rathbone, vice-director, Pratt Institute School of Library Science, Brooklyn, N. Y.; Arthur L. Bailey, librarian, Wilmington Institute Free Library, Wilmington, Delaware.

Members of the Council—Mary F. Isom, librarian, Library Association, Portland, Ore.; Willard H. Austen, librarian, Cornell University, Ithaca, N. Y.; J. C. M. Hanson, associate director, University of Chicago Libraries, Chicago, Ill.; Gratia A. Countryman, librarian, Public Library, Minneapolis, Minn.; Linda A. Eastman, vice-librarian, Public Library, Cleveland, O.

Trustee of the Endowment Fund—E. W. Sheldon, trustee and treasurer, Public Library, New York City.

A communication was read from Dr. Frank P. Hill recommending that Section 2 of the by-laws to the constitution be so amended that the nominating committee be appointed at least three months before the date of the annual meeting instead of one month, and that the report of the committee on nominations, instead of being posted on the official bulletin board at least 48 hours before the election, be printed in the *Bulletin* of the American Library Association at least one month before the election. This proposed amendment received the unanimous recommendation of the executive board. (Note—The association, at its general session on June 29, adopted this amendment to the above by-law.)

The board discussed plans for library re-organization in France and Belgium after the

war, but took no official action, inasmuch as this subject was scheduled to come before the Council at a subsequent meeting.

Adjourned.

## SECOND SESSION

A second meeting was held at the New Monterey Hotel on Saturday, July 1. Present: President Brown, First Vice-President Craver, Miss Rathbone and Messrs. Bostwick, Dudgeon, Ranck, and Bailey.

Mrs. H. L. Elmendorf was unanimously elected a member of the Publishing Board to succeed herself for a term of three years.

A brief report was presented from William Stetson Merrill, chairman of the committee on code for classifiers. The report stated that the committee had held no meeting during the past year, owing to difficulty of assembling the members. Interest in the code continued to be manifested by occasional requests for copies, of which the supply would long since have been exhausted had not the chairman decided to decline personal requests and instead to send a code to the library most accessible to the applicant, where it can be consulted. The Executive Board was requested to add to the committee Miss Letitia Gosman, Princeton University Library, and Miss Julia Pettee, Union Theological Seminary Library, who have aided the committee by their papers treating on the subject of the code, and whose further counsel and co-operation is desired. The board voted to accept the report and appoint the members recommended.

A report was received from Aksel G. S. Josephson, chairman of the committee on cost and method of cataloging. He stated that since arriving at Asbury Park the committee had further discussed the matter of having a study made of the material it had collected, and the suggestion was made that this material be turned over to one of the library schools as problem work by some student or a group of students. He reported that the matter had been taken up with Mr. Wyer, who had expressed his willingness to give the suggestion careful consideration and to give the work personal supervision in case it is taken up by the New York State Library School.

The appointment of standing committees was postponed to a later date, to be taken up either by correspondence or at a meeting of the board.

The meeting place for 1917 was informally discussed, but no decision was reached.

GEORGE B. UTLEY, *Secretary*.

## A. L. A. COUNCIL

## FIRST SESSION

The first meeting of the Council was held in the ballroom of the New Monterey on June 28, with 44 members present. Vice-President Walter L. Brown presided. On behalf of the committee on a union list of serials, Dr. C. W. Andrews reported that plans for co-operation with the Library of Congress had again failed. That library reported it was not in a position to undertake such a general list which would reach 100,000 titles and take a long time for preparation. The Smithsonian Institution and the Carnegie Institution also felt unable to undertake the work, and the committee had discussed the possibility of issuing the work in sections. Medical and agricultural libraries and societies are discussing the preparation of checklists of their respective specialties, and the committee expected to confer with the H. W. Wilson Co. on the possibility of co-operation from them. Mr. Bowker suggested that the committee might draft a form which could be a model for different sections and that these sections might be brought together as issued. The committee was continued for another year.

Owing to the absence of Mr. Brett, of Cleveland, who was to have presented a paper on "The libraries' relation with book publishers and dealers," and of Mr. Brown, chairman of the bookbuying committee, who was expected to discuss it, this topic was postponed to the second session.

The secretary then described the correspondence he had had with the French committee calling itself the Alliance for Social and Civic Education, through its spokesman, M. Henri Oger, of Paris. This committee has drawn up an elaborate plan for reconstruction after the war, which will include libraries, social centers, playgrounds, university extension work, gymnasium, and many other forms of social work. Before the committee was formally organized M. Oger had corresponded personally with several librarians and others in this country, and as a result many library reports and booklists, photographs and plans of library buildings, and other material had been sent to him. The plans of the committee now include the establishing of an American circulating library in Paris, which shall be both in its architecture and in its methods of operation a model of what an American library is like. In addition, since France has so many small villages, the committee would like to establish a village library which would show what the small public libraries are

doing in this country. And finally, the committee would like more material for an exhibit of American library methods, including lantern slides and motion picture films where available.

The secretary also described the correspondence he had carried on with Prof. George Sarton, of the University of Ghent, secretary of the Belgian Scholarship Committee formed in Washington. This committee's problem is divided into two parts: first, to provide for school and university libraries, and second, to establish tax-supported libraries. In this latter work, Madame Van Schelle, the American wife of a Belgian gentleman, is very much interested. She has been in this country for some months, and has been specially interested in the work of the traveling libraries and of the library commissions. While she realizes the difficulty there will be in inducing the Belgian authorities to tax the people for the support of libraries, she hopes something may be done by private means. Madame Van Schelle has an educational establishment outside of Brussels, where she hopes to instill in the students a greater realization of the importance and value of broad general reading and of popular education, without question of government or religion, and she desired the commendation or endorsement of the A. L. A. She has gathered several hundred books in this country, in English and in French, and is grateful for any donations.

Mr. Bowker spoke of the presence in this country of M. Louis Rouquette, a representative of the French Government at the San Francisco Exposition, and interested in book production and distribution. He also spoke of M. Olet's anxiety over the fate of the card collection in Brussels, and the suggestion that a duplicate collection be deposited in the Library of Congress or the A. L. A. He said he thought any work done by the association should be on an international basis, and suggested that the matter be referred to a special committee on international co-operation, made up of persons who could correspond in the different languages and who should study the best means for promoting the extension of library development among the peoples of Europe after the war.

Dr. Putnam thought it would be impracticable for the association to do anything of any widely extended practical value at present, and that it would be unfortunate if the appointment of a committee at this time should give an impression abroad of some immediate possible service from this side. He suggested that the committee now be charged simply

with the accumulation of information and with observation of the trend of things abroad, to report at the midwinter meeting. This suggestion was approved and a motion to that effect was made and carried.

#### COMMITTEE ON FIRE INSURANCE RATES

Mr. Dudgeon then presented the report of the committee on fire insurance rates, which in its last report announced that the committee was working on three things: first, the language to be placed in a fire insurance policy; second, to consider whether or not an entire library policy was a practical thing, and third, to develop a simple but effective fire prevention code.

In response to the question whether it is general to insure books separately from the building, and what the rates are, Mr. Dudgeon replied: "There is absolutely no general practice followed as to rates. We have a great deal of information which we have attempted to tabulate, and from which we can conclude almost nothing, except that librarians generally have not been, possibly, as watchful as they should be as to rates. Our purpose was to deposit with the secretary of the A. L. A. these figures and tabulations so that they should be a source of information and give some suggestions as to prevailing rates. The other question was whether books and buildings were separately insured. Generally they are; but we find also that there is a great deal of carelessness in the insuring of the contents for the very simple reason that most of the standard policies used exclude much of the property of a library from the property insured unless it is specifically included in the written portion. For example, the tapestries and art works are excluded as not insured unless they are mentioned, and some of the libraries have not mentioned them. We are seeking to include these in the form.

"Another feature is omitted. The law seems to be that if a card catalog is destroyed it is deemed to be of value equal to the material—the tangible property that went into it, unless a special value is put upon it."

Mr. Bowker described the new standard policy of 1916, which he said he had had occasion to study, partly from the librarian's point of view. He said the insurance commissioners of the several states now have a national association and have been working out a new form of standard policy which has been adopted by Pennsylvania, North and South Carolina and possibly by this time by other states. It came into operation in 1916 in Pennsylvania and it is understood that every

effort will be made by insurance authorities throughout the states to make that an absolutely national standard policy. It is based on the old standard policy, but contains a very important change, to this effect: the old policy voided insurance indefinitely if certain restrictions were at any time not complied with. For instance, in the case of a house—this would not apply to a library, probably—non-occupancy was permitted only for a month. If a person left his house for two months and then a year or two afterward a fire should occur, the policy would be voidable. One of the chief changes has been that the word "while" is used, so that the policy is voided only *while* these conditions are in existence. He advised librarians to study the standard policy of their state with a view to helping the committee get a "rider," as it is called, which will be inclusive of library property.

"The next service of the committee," Mr. Bowker continued, "would be in regard to rates, and with respect to fire prevention. There has been an enormous saving of property—hundreds of millions of dollars—in the last few years through fire prevention methods, and most of the great industrial establishments find their insurance lowered by the use of the mutual system. Whether any mutual system is possible for libraries is a question. It might be possible to have some such organization in specific states. One feature of the fire prevention plan has been to make a rate—this has been carried out in New York City—on a general scale, which means a large rate, and then give credit of so many points, so many fractions of a cent, for this or that or the other feature of precaution.

"I think the committee can do a very real service in the three directions I understand Mr. Dudgeon to indicate. First, the nature of the standard policy as affecting libraries; second, the rider which should be inclusive of library property—and there let me add this caution: that when you are insuring the contents of the library be sure to make the description not specific and exclusive, but general and inclusive; that is to say, that you include not simply 'books and card catalog,' but 'books, cards and like property,' or some general phrase of that sort. Then the third point—that the committee should suggest what could be done in the way of additional fire precaution that would reduce the rates to libraries. This last is a matter of great importance, and I think it is one to which not enough attention has been given."

Mr. Dudgeon said in connection with the question of fire prevention, that he has the

co-operation of the expert on his State Industrial Commission, who is a practical inspector and has inspected fire prevention methods in all the factories of the state, and that the committee have corresponded with authorities all over the country to some extent to get the best of these fire prevention methods.

Mr. Anderson called attention to an anomalous condition in New York city. The Public Library carries no insurance, but recently the question arose as to whether a loan collection should be insured, and it was found that the rate on prints, for instance, in a private residence in New York, in a non-fireproof building, was fifteen cents per hundred. In the library building it was fifty-six cents per hundred, because it came under the skyscraper rule; that is, although the library is in a fireproof building, the local underwriters' association applies to it rules designed for these large, tall, concrete, steel-constructed buildings. Further, if the library should take out the wire glass which at the time the building was erected was required by the underwriters' association, and put in a separate screen of wire with the glass above, that would cause the rate to come down two or three points.

Mr. Ranck, of Grand Rapids, reported that the matter of rates in Michigan is simply outrageous. "Apparently conditions were identical in different towns, so far as character of building was concerned, separation from other buildings, etc., etc., and yet they would be charging three times as much per hundred in one town as in the other. We have had this situation in the last few weeks; we have a fireproof building and carry a limited amount on the building, which we believe would cover all damage in case of fire, yet they want us to carry \$300,000 on the building, and we do carry a considerable amount of insurance on the books and contents, which has been worked out rather carefully; but one of the large companies of New York within the last month canceled their policy, which was for five years, for the reason that we did not carry a sufficient amount on the building. We had no difficulty in placing the insurance with another company. At the last session of the Legislature a bill was slipped through, putting insurance on the basis of a public utility; in other words, the same rate uniform throughout the state for the same class of property, leaving the classification of the property to the Board of Underwriters, and as a result of that the insurance rates on a great deal of property have gone up tremendously by changing the classification. And this is only one of the aspects of a very big subject."

Dr. Andrews, of the John Crerar Library, said that that library had voted not to insure itself, feeling that any loss it might meet would not be irreparable, and in a few years its surplus would be large enough to cover it. He asked if the committee would consider not merely the question of fire insurance on property, but the question of safety of life, and the advisability of establishing a fire drill so that the people in the library would know what to do when the fire alarm rang. So far the library has contented itself with printing in red a little card showing where the exits are, where the fire plugs are, and also a statement that the men of the staff are expected to see that the public and the women of the staff are in safety—and then save the catalogs! Everyone of the staff has one of the cards and keeps it in plain sight on his or her desk, so it can be referred to in case of need, but they have never had a drill.

Mr. Bowker described the simple drill he had used in some industrial establishments, and then called attention to another question that he felt should be taken up.

"The enemy of books is water," he said. "We should consider whether the use of sand is not thoroughly effective, or whether dry powder fire extinguishing methods could not be used. Another thing has come up in Brooklyn, the question of the employer's liability insurance and the question of accident insurance of the public. This has come rather interestingly in regard to the Carnegie libraries. The city is self-insured, and as we understand it the Carnegie libraries, having been given to the city, are taken care of by the city as to fire or accidents to the public, but that does not cover the buildings which are owned by library associations and it does not cover the books in the Carnegie libraries. There is a beautiful complication. Then we have the question of people slipping on the steps, and the question of elevator insurance. The whole matter is one of the questions that should be taken up in the Trustees' Section, and I think that a committee report, submitted either to the Trustees' Section or sent to trustees of libraries through the country, would emphasize the value of this association, and all library associations, to board of trustees that at present believe them to be rather a luxury than otherwise, to whose meetings the librarian goes for enjoyment."

Mr. Bishop, of the University of Michigan, brought up the danger from fire prevention apparatus to the contents of libraries. "In planning for the library which has occupied my time for the last ten months," he said, "I

found one extremely serious difficulty. We have on the campus in the University of Michigan a high-pressure system of fire mains, and it has proven effective in the case of incipient fires in the old, non-fireproof buildings on the campus. Naturally, the superintendent of the grounds and the university authorities thought well of the system, which has saved them serious losses, and the architect and superintendent of building were proposing to couple it to the reservoir system in the library stacks. I protested and succeeded in having connection made with the ordinary city mains, for if they had a fire on the campus with the high-pressure system connected through our building the chances of bursting inside the book stacks were good, and we might find ourselves with an incipient flood on our hands because there was a fire somewhere else. Another matter that concerns us is the possibility of using other than a liquid form of fire extinguisher. There are other means of extinguishing fires than by water. We are experimenting with a view to introducing into our new structure certain apparatus of that sort, but I do not yet know exactly what it will be."

Mr. Gould, of McGill University, asked whether the committee has considered the question of insuring inter-library loans. Last winter in sending a rare book to another library, it occurred to him that possibly the library to which the book was being sent might not insure it, and he thought his own library would like to insure it, but found that he could not insure a book going to another library. There seemed no way of overcoming the difficulty.

Mr. Dudgeon was of the opinion that it could be done either through Lloyd's or another insurance company. Lloyd's at the present time would be very high, but the Wisconsin Library Commission is handling exhibits from out of town all the time, and they are insured against any and all risks. It is a high rate, but for a short period. Special insurance is taken for each loan, but recently institutions have insured loans as sent out. For instance, the American Federation of Arts' collection is insured from the beginning to the end of its journey. No value is given the express companies. In closing, Mr. Dudgeon emphasized the importance of education in fire prevention, citing the factory mutuals as a case in point. These factories are getting insurance for those inflammable buildings where oils and paints are stored at a very much lower rate, some of them less than one-third the rate fireproof library buildings are paying.

## SECOND SESSION

The second half of the open meeting of the Council, held in the Auditorium Friday morning, was really another general session, and was largely attended. The general subject for discussion was "The library's part in the Americanization of the immigrant," and Dr. Albert Shiels, director of the reference division of the New York Board of Education, was the first speaker, talking on "The immigrant, the school, and the library." He said, as had Mr. Carr in his talk the night before, that the great need in the work with immigrants was for a more general knowledge of actual conditions. The immigrant is very like ourselves, sometimes intelligent, sometimes ignorant, and sometimes unpleasant. He foregoes with others of his race—so do the Americans in Paris—and obeys the laws as well as he can, though often puzzled by the confusion of practice and profession. The libraries are doing good work with the immigrants in spots, but there is no general policy, and the need is not for a multiplication of activities, but a centralization of knowledge of what has already been done—of the failures as well as the successes. The evening schools of the cities do not reach one-tenth of the people. Suppose in each community having an evening school there should be appointed a committee consisting at least of a librarian, a teacher, and a leader among the foreign element, and that this committee should meet regularly in the library building for discussion of some of the many questions of interest to the foreigners, how much such a series of conferences might be made to do toward revealing the possibilities of the library service and forming the library habit.

Dr. H. H. Wheaton, of the Federal Bureau of Education, speaking on "An Americanization program for libraries," said that the schools and libraries were the most potent influences now working on this problem. Estimating that there are probably 5,000,000 non-English-speaking people in our country to-day, he said that there are only about 500 night schools to instruct them. The library's opportunity is much broader than the school's in any case, for it can draw the immigrant mother, the children over school age, and adults who feel themselves too old for evening schools, among its general readers. He urged that each library should make (1) a survey of the conditions among the immigrants in its community, noting their number, nationalities, school attendance, literacy, occupations, etc.; (2) a survey of the library's own condition—

its resources in books in foreign languages in proportion to the foreign population, its collections of books that will help the foreigners to understand the laws and customs and opportunities of this country, its ability to interest societies among the different peoples in its work. This last is a very important factor, for through these foreign societies the librarian will find out what the immigrant wants and needs, and will be able to circulate information among the foreign population on what the library offers them. Posters in foreign languages, advertising the library's service, should be displayed freely wherever the foreigners congregate—in churches, lodges, ticket agencies, even saloons if there is no other place. Night school teachers should give a lesson on the public library, and where possible should afterward accompany the classes to the library building for introduction to the staff and to the books. While many libraries are already doing good work with foreigners, many libraries still fail to appreciate the part the library can play in the work of Americanization, just as many state and city governments are too much interested in the machinery of government to give proper attention to civic relations.

Miss J. Maud Campbell, who is employed by the Massachusetts Free Library Commission to promote the libraries' work with foreigners in that state, said that she made her first plea for more and better books and magazines for foreigners before the A. L. A. at its conference at Narragansett Pier in 1906. Now, ten years later, she repeated her appeal. The scantiness of material in foreign tongues which will intensify love of our country and government is deplorable. The pioneer spirit and ideal should be perpetuated. Here is work for the patriotic societies to do. Practical help on every-day problems—such as raising chickens or onions or cranberries—is also hard to get in foreign languages, and more duplicates of useful books on learning English are needed everywhere.

John Foster Carr said that the greatest need of the libraries to-day in their work with foreigners is publicity, both among the foreigners and with each other. He questioned the advisability of arbitrarily trying to make the A. L. A. a clearing house of work done for foreigners by libraries, until there was some well-defined demand. He spoke of the difficulties of preparing the foreign lists so much in demand, both as to editorial supervision and in their financing. The kind of lists needed by small and large libraries are very different, ranging from a selection of 25 or

50 books to a general list with annual annotated supplements of the most important foreign publications. He proposed sending a letter to all members of the A. L. A. likely to be interested, asking what support they would give if the society he represented should issue some of the books Miss Campbell had shown to be much needed, on history, agriculture, hygiene, etc.

William H. Brett's discussion of the "Libraries' relation with book publishers and dealers," postponed from the first Council meeting, closed the session. He said he could see no reason why the library, as a library, was entitled to special discount in buying books, but that it did have a right to ask every discount to which the volume and value of its business entitled it. Considering the value of the library trade to booksellers, he said that of the total number of books published in a year (volumes, not titles), one to two per cent. of the novels go to libraries, and not over ten per cent. of the other books. From 40 to 60 per cent. are sold to libraries by large jobbers, more by remainder houses, and the small proportion left are handled by the local booksellers. The volume of business varies very greatly. Libraries in general have very high credit for promptness in payment, but their manner of ordering grades from excellent to very poor. The practice of sending books on approval has some drawbacks, from the bookseller's point of view, in the wear it entails on the books and the extra work in the publishing house in checking up \$125 worth of books for a \$25 order. As to the effect of the library on the booktrade, there is variety of opinion. The broad view might hold that as the library educates readers, it is favorable to the trade, but with this the smaller dealers might not agree. The library is not a consumer of books, but a dealer for the benefit of others.

#### SECRETARY'S REPORT

THE secretary submitted the seventh annual report of work conducted at the executive offices since their establishment in Chicago.

*Chicago Headquarters.*—It is with an exceptional sense of appreciation that we record this year our gratitude to the Chicago Public Library, board of directors and librarian, for their continued hospitality in housing the executive offices of the association. During the past year that library has been consummating some long-desired physical alterations and improvements, which involved the shifting and transfer of several departments and bases of activity. When it became necessary for the library, in carrying out its scheme of readjust-

ments, to repossess itself of the room on the fifth floor which the association has occupied since September, 1909, the board and the librarian set aside a room on the second floor which is practically of the same floor space as the other, and which serves all our purposes equally well—in fact, in some respects even better. Into these new quarters we were moved early in January by the employes of the Chicago Public Library, the shelving rearranged and set up, light fixtures and window openings readjusted, and all without any expense to the association whatever. As heretofore, heat, light, hot and cold water, janitor service and general supervision have all been gratuitously provided. The other members of the association will, therefore, I am sure, agree with the secretary that there is reason this year for an uncommon degree of appreciation to the Chicago Public Library for this continued generosity and hospitality.

*Membership.*—When the 1915 Handbook went to press there were 3024 members of the association. Since then there have been additions as follows: New personal members, 126; former personal members rejoining, 21; new institutional members, 5; total, 152. Six personal members took out life membership. During the conference year 1914-15 there were altogether 432 new members added to the roll, but of those who joined in 1914, the year of the Washington conference, 313 resigned or lapsed their membership and had to be dropped from the roll in the summer of 1915. So the *net* increase to be recorded in the 1915 Handbook was only 119.

*Routine.*—It seems unnecessary to rehearse here the routine work of the office to which previous reports have referred. It is perhaps enough to say that these duties have from week to week and month to month been discharged to the best of the ability of the office staff. It is difficult to report on that most important and time-consuming work of the office, namely, the general correspondence. Thousands of letters are written every year to librarians, library trustees, women's clubs in towns engaged in library campaigns, library commissions and library schools, publishers and booksellers, officers of other associations, applicants for positions, committees of the association, members of the executive board and publishing board, officers of the association, hotel managers, local committees, chambers of commerce, publicity bureaus, newspapers and editors of magazines; letters about our publications, arrangement for printing with authors, editors and printers, campaigns for new members; and

many others that cannot be corralled even into a semblance at classification.

*Library Plans and Photographs.*—We have endeavored during the year materially to increase our collection of library plans and inaugurate a collection of photographs of library buildings and library work. We have received some excellent material, but, on the whole, not so much in quantity as we had hoped for. Other office work has hindered us in the proper classification and arrangement of this material, and it is not yet in the shape we hope ultimately to have it. The wisdom of making such a collection has been already abundantly demonstrated in the numerous calls to borrow plans and pictures which have come in since the report went out that the office was engaged in this attempt.

*Sponsors for Knowledge.*—Members of the association have doubtless seen references in the *Bulletin* to the "sponsors for knowledge" scheme, which Mr. George Winthrop Lee, of Boston, has been particularly active in promulgating. The plan, in brief, is to have the A. L. A. office become a clearing house to bring together the man wanting certain information and the man possessing it. The plan was outlined in some detail in the January *Bulletin* and in earlier articles by Mr. Lee in *LIBRARY JOURNAL*. Thus far about seventy "sponsors" have been secured on a corresponding number of subjects in the field of knowledge. Little actual work has yet been accomplished. If the plan gives promise of growth to practical success, steps must soon be taken to place it on a business basis, formulate rules, and give it wider publicity and more systematic attention.

*Publicity.*—The A. L. A. publicity committee will in due time and place report on its efforts and accomplishments, and no extended word is here necessary. The secretary has endeavored to co-operate with the committee in every possible way and has, in addition, found opportunity to secure independently a greater than usual amount of publicity for the association and library work generally.

*Recommendations for Positions.*—The office has been consulted oftener than in previous years regarding the filling of library positions, and in a considerable proportion of cases the recommendations made have led to appointments. It has been gratifying to feel that headquarters has been of practical assistance in this way, both to those wishing a change of position and to those in search of assistants or librarians.

*Field Work.*—During the past year the secretary has addressed four regular library

schools and four summer schools, besides various clubs and other organizations.

*Uniform Library Statistics.*—The committee on library administration in its report comments on the work of collecting uniform library statistics. Last year we printed a complete tabulation of all statistics sent in by 85 public libraries. This year, with college and reference libraries also contributing, the list is more than three times as large, and the cost of printing complete statistics is unfortunately prohibitive. With the assistance of the chairman of the committee on library administration we have selected those items which seem the most important and have been most generally answered and which can be printed across a double *Bulletin* page, allowing a line to each library. These statistics are appended to the secretary's printed report. The complete statistics will be kept on file in the secretary's office, where they may be consulted at any time, or where information on any particular point will always gladly be given.

*Extra-Library Activities.*—A number of enterprises not strictly in the field of library work have engaged the attention of the office. These seem to indicate that the association is gradually being recognized by educational agencies which have heretofore overlooked its possible assistance and influence.

The association was invited to send official delegates to the National Conference on Immigration and Americanization, held in Philadelphia, January 19-20, under the direction of the National Americanization Committee. The president appointed Mr. Robert P. Bliss, of the Pennsylvania Free Library Commission, who was invited to give a short address at one of the sessions, and Miss Emma R. Engle and Mrs. Emma N. Delfino, both of the Philadelphia Free Library. Growing out of the conference there was an interesting three-cornered correspondence between Miss Frances Kellor, of the Americanization committee, and the president and secretary of the A. L. A., which resulted in the proposal that our association appoint a committee to gather, schedule and correlate information as to the work with foreigners which is being done by the various libraries of the country.

A French committee, which terms itself the Alliance for Social and Civic Education, has well-ordered and elaborately extensive plans for social and civic reconstruction in France after the war. The scheme, among other things, calls for a system of free public libraries throughout the republic of France, mod-

eled after those obtaining in the United States of America.

We have recently had some interesting correspondence also with the Belgian Scholarship Committee, of Washington, relative to free libraries in Belgium after the war.

The American Library Association received a formal invitation in August from the Secretary of State to participate by the appointment of an official delegate with alternate in the Second Pan-American Scientific Congress, to be held under the auspices of the United States government in Washington, December 27 to January 8. The president appointed Dr. Herbert Putnam as delegate and Mr. H. H. B. Meyer as alternate. Although there was an "Educational" group in charge of the United States Commissioner of Education, no library topic was included in the program, although we endeavored to have some phase of the subject treated. The only consideration of a library character, judging from the printed program, was a project for the creation of a Pan-American Library Union, introduced by the chairman of the Argentine, Brazilian and Chilean delegations.

We co-operated with the Drama League of America in a number of respects in connection with plans for observance by libraries of the tercentenary of Shakespeare's death.

For the first time in its history, the National Conference of Charities and Correction carried in its recent Indianapolis program a section meeting on library work in institutions. This was worked up and conducted by Miss Miriam E. Carey, supervising librarian of the Minnesota State Board of Control, and its unquestioned success was gratifying to all who had taken a hand in bringing it about. We are encouraged to hope that a similar meeting may be held next year.

*Necrology.*—During the past year the association has lost by the hand of death sixteen of its members. The number includes three who had served with signal success as library trustees, of whom one was perhaps the oldest member of the association; the chief librarians of four of our colleges and universities; the venerable and beloved head of the free library system in the third city of the country; and others who in their respective places of responsibility had performed their duty faithfully and well.

The list is as follows: Henrietta St. Barbe Brooks, Esther Elizabeth Burdick, Samuel S. Greeley, Helen E. Green, Walter Learned, Bertha M. Letts, George T. Little, George A. Macbeth, Lucy Ogden, Arthur Jeffrey Par-

sons, John Christopher Schwab, Ruth Lockwood Terpenning, John Thomson, Irving Strong Upson, Evan J. Williams, Albert Sherwood Wilson.

GEORGE B. UTLEY, *Secretary.*

REPORT OF THE TREASURER

January-May, 1916

*Receipts*

Balance, Union Trust Company, Chicago, Jan. 1, 1916.....	\$3,957-57

Total .....\$253-08

Respectfully submitted,

C. B. RODEN, *Treasurer.*

A. L. A. PUBLISHING BOARD

*New Publications.*—The chief publication of the last year was "Subject headings for use in dictionary catalogs of juvenile books," by Margaret Mann, chief cataloger of the Carnegie Library of Pittsburgh. In the twenty-three introductory pages, Miss Mann discusses the making of a catalog of juvenile books, passing in review the various classes in which knowledge is grouped. It may be wise to offer this introduction as a separate pamphlet publication, and as electrotype plates have been made for the entire work, this could be done very easily and inexpensively.

One of the most scholarly and highly esteemed publications which the board has put forth in recent years is the "Brief guide to the literature of Shakespeare," by H. H. B. Meyer, chief bibliographer of the Library of Congress, undertaken at the request of the Drama League of America.

Miss Hitchler's "Cataloging for small libraries" should really rank as one of the publications of the year, as it was just coming from the press as last year's report was prepared. Up to the present time more than eighteen hundred copies have been sold, and there seems to be a reasonably steady demand for it.

The A. L. A. "Manual of library economy" is nearly complete. Four new chapters have been printed during the year, leaving only four now unpublished.

Other new publications of the year are as follows:

Binding for libraries; suggestions prepared by the A. L. A. Committee on Bookbinding. Handbook 5, entirely rewritten and enlarged. 2000 copies.

Mending and repair of books, by Margaret W. Brown, revised by Gertrude Stiles. (Handbook 6.) (In press.)

List of Russian books recommended for public libraries, compiled by J. Maud Campbell. (Foreign book list 7.) (In press.) This list will supersede that which the board last year reported was in preparation by M. Braslawsky. The present list unquestionably better represents the public library point of view and is therefore an improvement for our purposes over the other list.

A. L. A. "Manual of library economy":

Chap. 11. Furniture, fixtures and equipment, by Linda A. Eastman. 3000 copies.

Chap. 18. Classification, by Corinne Bacon. 3000 copies.

Chap. 24. Bibliography, by Isadore G. Mudge. 3000 copies.

Chap. 30. Library work with the blind, by Mary C. Chamberlain. 2000 copies.

*Reprints.*—The following publications have been reprinted:

Essentials in library administration. Handbook 1. 1000 copies.

Catalog rules. 2000 copies.

A. L. A. Catalog, 1904-11. 1000 copies.

Why do we need a public library? Tract 10. 2000 copies.

From A. L. A. *Proceedings*, 1915:

Inspirational influence of books in the life of children (Scott). 500 copies.

Some recent features in library architecture (Hadley). 500 copies.

*Forthcoming Publications.*—The revised edition of the Kroeger "Guide to reference books," which is being prepared by Isadore G. Mudge, and which the board hoped to have in print before the presentation of this report, has been delayed owing to the illness of the compiler. It is hoped that the book will be printed during the summer and ready for distribution before the library schools open in the fall.

A list of modern French books, principally those in the fiction and belles-lettres classes which would be of interest to English readers, is being prepared by Mrs. George F. Bowerman.

A selected list of detective, mystery and ghost stories is being compiled by Harold A. Mattice and Miss A. C. Laws, both of the

Library of Congress, and if prepared from the point of view of the small public library will probably be published by the board.

LeRoy Jeffers, of the New York Public Library, is compiling a list of standard titles in the best editions for library use. This is akin to previously published lists compiled by him.

A list of books on railways and railroad operating, selected with a view to their educational value, is being prepared by D. C. Buell, director of the Railway Educational Bureau in Omaha. The list will be short and inexpensive, and it is hoped that it can be issued in such form as to encourage public libraries to distribute it freely to patrons who are in the employ of railroads.

Arrangements are being made with H. G. T. Cannons, of Finsbury, London, author of the "Bibliography of library economy," to publish a supplement 1910-1915 to this work. The original bibliography has been so helpful to all librarians who have learned of its existence and used it that it is believed a supplement covering the periodical library literature of the past six years will be warmly welcomed and supported. The board will probably act also as American agents for the original edition and in this way call the attention of librarians of this country more emphatically to this excellent reference tool.

The A. L. A. Committee on Co-ordination (C. H. Gould, chairman) are preparing at the request of the board rules and regulations to govern inter-library loans. When the final draft is ready, these rules will be issued by the board.

Mr. Wyer, directing editor of the "Manual of library economy," reports as follows on the four unprinted chapters:

Pamphlets and minor material.—Being prepared at the New York State Library; manuscript will be ready for submission to committee shortly.

Cataloging.—This chapter is still unassigned.

Library work with schools.—Being prepared by W. H. Kerr.

Museums and libraries.—This chapter is being prepared by P. M. Rea, and the committee hopes to have it ready for printing soon.

*A. L. A. Booklist.*—The total subscriptions to the *Booklist* now are as follows: Bulk to commissions and libraries, 2478; retail subscriptions, 2063; sent to library members and affiliated state associations as part of their membership perquisites, 478; free list, 115; total, 5134 (as against a total of 4899 reported last year).

*Reading Lists.*—At the Squirrel Inn meeting of the board last September it was voted to

secure a collection of short popular reading lists, which had been compiled and printed by individual libraries, with a view to reprinting them and offering them for sale. As a result, four such lists—"Good stories of to-day and yesterday," "Fifty-two readable books," "Cheerful books," and "Idle-hour books for high school boys"—which had been prepared and printed by the Springfield (Mass.) City Library, were reprinted and offered for sale. Imprint of the purchasing library was inserted, and at additional cost other titles could be substituted, or call numbers given. Altogether, 71,100 of these lists were taken by 35 different libraries. It is a moot question whether the scheme is a success or not. The lists were sold as cheaply as they could be and not cause loss to the board. Not only printing, but circularizing, billing, correspondence and bookkeeping, of course, have to be considered. Two or three libraries stated they were not subscribing because they could get independent lists printed locally just as cheap. Others preferred lists on timely specific subjects rather than general lists, and perhaps some such can be issued in the future. The board acknowledges gratefully the permission of the Springfield City Library to use these four lists, and this without credit given on the lists themselves.

With the co-operation of the Harvard University Press, a "Bibliography of scientific management," by C. Bertrand Thompson, was reprinted and offered to libraries at a price which permitted free distribution to patrons. Of this list, 6973 copies were sold to 31 libraries. Mr. George Iles called attention to this bibliography and advised reprinting it.

*Advertising.*—Methods have been those pursued in previous years. Direct circularization of libraries has brought the most effective results. In October and November an extensive campaign was conducted with high school libraries on behalf of the *Booklist*. About 4500 high school libraries were addressed, a sample copy of the *Booklist* also being sent. A "follow-up" letter was mailed about two weeks later. About 110 new subscriptions were secured. The result is not very encouraging. Various attempts are made from time to time to interest specialists in certain publications in their special field: *e. g.*, we advertised Miss Curtis' "Collection of social survey material" to all the teachers of sociology in the country by the aid of a mailing list very kindly furnished by Prof. Scott E. W. Bedford, of the University of Chicago, secretary of the American Sociological Society; and Miss Chamberlain's chapter on "Library

182<sup>a</sup>

LOVING CUP PRESENTED TO R. R. BOWKER BY MEMBERS OF THE A. L. A. AT THE ASBURY PARK CONFERENCE, JUNE 30, 1916.

work with the blind" to all the institutions of the country engaged in this special work. We always get some results from these specialized efforts, but never enough to pay for the expense and time involved. Perhaps, however, the service to the few who respond is sufficient to justify the enterprise.

Reports are appended from Miss Massee, editor of the *A. L. A. Booklist*, and Mr. Merrill, editor of the *A. L. A. Periodical cards*.

HENRY E. LEGLER, *Chairman*.

#### A. L. A. BOOKLIST

Miss May Massee reports as follows on the *A. L. A. Booklist*:

A prominent publisher has said that the *Booklist* is the most influential review in this country as affecting actual sales. It is certainly the most important power of the American Library Association as a whole, and the individual members as they realize themselves part of this power are sending personal notes of books read or examined for their libraries. Since January, one commission and three more libraries have been added to the list of those which send notes each month or each week, and there have been ten additions to the list of those to whom the tentative list is sent.

The *Booklist* is as large as it can be with its present staff and resources. Each year sees an increasing number of usable books which cannot be included for lack of space. It seems that the list should be larger, with a longer suggestive list for very small libraries and with either a special supplement or a special designation for books for high school libraries.

We should have ten thousand individual library subscribers. Why could not librarians in central libraries take a census of the libraries in their districts, the public libraries and the high schools, and have a mild subscription campaign? With fifteen hundred new individual subscribers we could add a high school librarian to the *Booklist* staff and work wonders.

There is much discussion of the fiction which may and may not be included. As more librarians send in votes and notes there is chance for more varying opinions, and if only stories which have all plus votes were noted, the list would rarely if ever include ten titles in a month. This does not mean that the burden of selection is thrown entirely on the editor, because the majority must rule, and it merely becomes necessary for the editor to make sure which way majority rules.

The *Booklist* editor has visited the summer school of the Indiana Library Commission,

addressed five clubs in and about Chicago, attended three state library meetings—Illinois, Indiana and Minnesota—and addressed the American Booksellers' Association at its annual meeting in Chicago, the subject being "Libraries as bookstores—bookstores as libraries." She is to talk briefly before one of the meetings of the high school library section of the N. E. A. This work is important, as it enlarges the special acquaintance of the *Booklist*, which means sources of information about books and sometimes subscriptions.

In reviewing the work of the year, we feel that the technical books and children's books sections have given the poorest service. We would be glad of any suggestions or offers for help on those two sections especially.

Subscription books form a large part of book publishing which the *Booklist* cannot attempt to cover. Of course, the immediate advice given by experienced librarians is "Never buy subscription books." In spite of this, libraries do buy them, and in some instances of second-hand sets receive good value for their money. We have many requests for information on subscription sets, and there is need for a committee to examine such books and file reports in the office for the use of librarians who wish reliable information.

#### A. L. A. PERIODICAL CARDS

Wm. Stetson Merrill reports as follows on the *A. L. A. periodical cards*:

The present report, relating to the preparation and distribution of printed analytical cards for serials indexed, covers the year ending May 1, 1916. Four shipments were made, numbered 325 to 328, three of which are in the hands of subscribers, and the fourth is in press. The number of titles was 790 and the number of cards was 59,130, a great falling off from the record of the year 1914-15, in which twelve shipments, including 1917 titles and 149,760 cards, were sent to subscribers. The difference is due partly to the war abroad, which has seriously affected both the production and delivery of foreign serials, and partly to the change recently made in the selection of articles to be indexed. The longer interval between shipments is due to the terms of our contract with the printer, according to which a shipment must contain at least 165 titles.

A thorough and somewhat radical revision of the list of serials to be indexed by printed cards has been carried out in accordance with the recommendations of the collaborating libraries. The old list, dated July, 1904, covering 235 titles, had already been reduced by 54 periodicals, discontinued or dropped; this list

has been further decreased by dropping 49 periodicals which were not monographic in character.

In place of periodicals dropped, there have been added 89 new serials, making a present total of 221 serials for which the board is furnishing cards or will do so soon. Entries for the new serials begin with the first issues of 1915.

For several years the expense of indexing has exceeded the receipts. To meet this annual deficit, the price of subscription for the entire list has been raised from \$2.50 per one hundred titles (2 cards to a title) to \$3.00; and for subscription to selected titles, the price has been raised from \$4.00 to \$5.00. As the increase has been cheerfully accepted by the subscribers, no further modifications are looked for. The material now furnished by our printed cards is of permanent and enduring value, which renders all these cards worthy of inclusion in library catalogs.

#### REPORTS OF COMMITTEES

##### COMMITTEE ON LIBRARY ADMINISTRATION

The report of this committee covers three topics: (1) Uniform library statistics; (2) Library labor saving devices, and (3) Testing of library supplies and materials.

##### *1. Uniform Library Statistics*

The committee believes that the association took another important step forward when the College and Reference Section voted at Berkeley to adopt (at least experimentally for one year) for the use of college and reference libraries the same statistical form as had originally been adopted by the Council for the use of general libraries, plus certain additional items needed to give fuller statistical representation of reference work.

It is, of course, not to be expected that any uniform schedule could ever be devised that would prove entirely acceptable to all libraries. If, however, the present uniform schedule, with future modifications as need directs, can approve itself as even approximately acceptable to American libraries, your committee is of the opinion that it will be better to have one uniform schedule rather than two or more specialized schedules. Your committee, therefore, urges that the present form have a fair trial and suggests that such trial be for more than the single year voted by the College and Reference Section at Berkeley.

Your committee has noted with satisfaction that in an increasing number of printed reports of public libraries the A. L. A. schedule is used. However, we regret not to find it

in use in the recent reports of a number of important libraries where it was most expected.

During the year the chairman of the committee has received a number of questions and requests for interpretation of rules. For example, one librarian raised the question as to what constitutes juvenile circulation, that is, whether it is circulation of books (adult as well as juvenile) to juvenile readers or whether it is the circulation of books classed as juveniles to both juvenile and adult readers; also what are to be considered as juvenile readers. The answer was to the effect that in counting circulation the books circulated from children's rooms or other special juvenile collections are to be classed as juvenile circulation, whether given out to parents, teachers or the children themselves. It is believed that in most public libraries the transfer in registration from juvenile to adult groups is made at 16 years of age.

Another public librarian pointed out in sending his 1915 figures to the secretary that the adoption of the A. L. A. rule for counting circulation which permits the counting as home circulation of only books actually recorded as so taken out and forbids all estimates of circulation from schools and other agencies made a decrease in his total circulation figures from those of previous years. He points out that not only did the following of this rule seem to show a reduction in the work of his own library, but that he was at a disadvantage in comparisons with other neighboring libraries in which he felt sure the estimating of circulation was still carried on in spite of the adoption and use in their reports of the A. L. A. form, and that traveling library books sent to various agencies and used only at the agency are counted as books "delivered for home use." The objecting librarian says that he has reworded the definition in Section D (Rules for counting circulation) and instructed his assistants as follows: "Count one for each piece handed directly by a library employe to a personal borrower."

On this latter point your committee would urge that the rules for counting circulation be followed in this and all other respects. The chief value of the use of a uniform schedule is to make comparisons. Unless rules are closely and uniformly followed the value of the statistics is vitiated.

##### *2. Library Labor-Saving Devices*

At the meeting of the Council in December, 1915, a definite plan was outlined for the continuance of the investigation of labor-

saving devices and the preparation of a manual to be issued, probably in loose leaf form, and the Council authorized the preparation of the manual, which should be printed on a subscription basis under the auspices of the Publishing Board, for distribution among libraries represented in the association. It was then expected that the manual would be approaching completion by the middle of the year. Various circumstances, however, have arisen to delay the work.

An effort was made to arrange for an exhibit of labor-saving devices at the Asbury Park conference, where it seemed that in many ways the facilities offered were better than those afforded at the Washington conference in 1914 and better than could be expected in any meeting place likely to be chosen within the next few years. Many obstacles, however, were encountered and a number of the most important exhibitors of 1914 announced that they would be unable to participate in an exhibit this year, on account of the difficulty of keeping up with their orders, and because of the extra expense of sending machines and representatives where no regular agencies are maintained. Feeling that it would be unsatisfactory to both librarians and manufacturers to carry out the plans for the exhibit if the undertaking could be made only partially successful, the whole matter was abandoned for this year.

The time required by the effort to arrange for the exhibit has been the chief cause of delay in the preparation of the manual. The clearing house feature of the investigation has, however, been continued. Since the beginning of the work in January, 1916, requests for information have been received and answered, coming from 62 libraries concerning 39 kinds of equipment. The list of devices concerning which information is wanted when available by different librarians now includes 66 different devices. The work of answering all such requests as promptly and as fully as is desired is somewhat hampered by the fact that relatively few librarians seem to consider the work a co-operative enterprise. Careful studies have been made of several devices. These include the dictation machine, pasting machines, and ink pads. As soon as possible tests will be made of other articles. Any librarians who are willing to co-operate by making such tests in their libraries in order that the conclusions drawn by tests in one library may be checked by similar tests made in other libraries, are urged to communicate with the committee.

For some months to come it is likely that

the preparation of the manual will again be inevitably delayed. On this account, the committee is especially desirous of making the clearing house feature as important as possible. Librarians who at any time desire information concerning any kinds of library equipment or any mechanical device are urged to communicate with C. Seymour Thompson, Savannah Public Library, Savannah, Ga., and all the information which has been collected will be sent them. In many cases it may be that no information is available concerning a certain kind of device, and in such cases every possible effort will be made to collect the desired information as rapidly as possible. The committee would again urge upon all librarians the importance of their co-operation if this work is to be as successful as is desired. Information is very frequently obtained by mere chance concerning some new device or new method which some library is employing with highly satisfactory results, and which would be of very great interest to a large number of other libraries if made known to them.

### 3. *Testing of Materials and Supplies for Libraries*

Toward the close of the year the president of the association referred to this committee a statement from Samuel H. Ranck of the need for more systematic testing on behalf of libraries of the materials and supplies bought by them, and a suggestion that A. L. A. headquarters might organize and conduct a testing bureau for libraries. The available time was too short to make a thorough study of the problem, but a report of some progress is possible.

A partial list of supplies that require testing include catalog, borrowers' and book cards, paper for book plates and labels, for use in correspondence and in duplicating machines, carbon paper, envelopes, blotters, book repair materials, cloth for mounting maps, glue, paste, varnish, shellac, rubber bands and erasers, type-writer ribbons, inks for pen, for mimeographs, for marking books, for rubber stamps and for numbering machines and ink eradicators.

In view of the tests of materials and supplies made by the National Bureau of Standards for the United States and District of Columbia governments, including their libraries, the first step seemed to be to find out what the Bureau of Standards is prepared to do for the libraries of the country either to the extent of making such tests or at least to the extent of giving expert advice for the best

direction of the association's efforts. An inquiry outlining the problem brought to the chairman of this committee from the director of the Bureau of Standards the information that the Bureau of Standards is unable to make regular routine tests for the A. L. A., as it is now very much overcrowded with such work for the government service. The suggestion is offered that the committee on materials and supplies make up a list of all supplies used, secure samples of all supplies used and information relating to the use made of each material needed, after which the Bureau of Standards will advise with the committee and assist in preparing specifications. It will also help prepare simple methods of testing, most of which may be carried on with very little apparatus. The laboratories of the bureau are always open to inspection and a visit to them was suggested. Apparatus useful in testing paper was also suggested.

Your committee would not, without a further study of the question, be justified in making a recommendation to establish at headquarters a bureau for testing materials and supplies. If desired the committee will make a further study of the question. One element would be a demonstration that other librarians feel the need as Mr. Ranck does. Will not all librarians who would like to see such a testing bureau established so express themselves by letter addressed to the chairman of this committee? GEORGE F. BOWERMAN, *Chairman*.

#### COMMITTEE ON CO-ORDINATION

The committee on co-ordination has been asked by the A. L. A. Publishing Board to draw up a brief set of rules for the use of libraries participating in inter-library loans.

The committee most willingly makes the attempt, although it feels that the time is, as yet, hardly ripe for more than a beginning in the way of such rules. Practice is still being modified in those libraries which have been, and are, most active in lending; and the modifications do not always tend toward uniformity; rather the reverse. For behind the modifications lie diverse causes, such as: the natural wish of every library to preserve its freedom of action when dealing with its own property; and—of still greater influence—the fundamental differences, both as to purpose, and material sought, that are to be found between such loans as are exemplified in county library systems, on the one hand, and loans made in the interests of scholarship and research, on the other. These two classes of loans, essentially different as they are, necessarily demand diversity of treatment.

Moreover, as loans of a "popular" character grow in volume (as they surely will in future), additional sources will have to be provided for the supply of such loans. Whatever form such provision may ultimately take, it will undoubtedly entail fresh modifications of what may now be regarded as current practice concerning inter-library loans.

All this divergence, however, only makes it the more desirable that agreement should be reached upon all points upon which agreement is possible. Practical uniformity in regard to business details has already been achieved among certain leading libraries. Such details, with suggestions on more vital questions, have been embodied in the following rules. Suggestions for their improvement are earnestly requested, and will be cordially welcomed.

#### *Regulations for the Conduct of Inter-Library Loans*

Suggested by  
The Committee on Co-ordination

Note: Words or clauses enclosed in brackets, have not received the unanimous approval of the committee.

##### *1. Purpose*

The purpose of inter-library loans is (a) to aid research calculated to advance the boundaries of knowledge, by the loan of unusual books not readily accessible elsewhere [(b) to help augment the supply of the average book to the average reader; subject, in both cases, to making due provision for the rights and convenience of the [immediate] constituents of the lending library, and for safeguarding the material which is desired as a loan.]

##### *2. Scope or extent*

Almost any material possessed by a library, unless it has been acquired on terms which entirely preclude its loan, may be lent, upon occasion, to another library; [but whether a particular loan should, or should not be made on a given occasion, will depend on the use to be made of the material, and upon the person who wishes to use it.

The decision in each case must be made by the lender, and, therefore, cannot be provided for in a code of rules.] It may be assumed, however, that all libraries are prepared to go as far as their regulations permit, or as they reasonably can, in the way of lending to others.

Failing the possibility of a loan, cameragraph or photostat copies of the material desired, may often be obtained as a substitute and at small cost.

##### *3. Material which should not be applied for*

(Practice will vary according to the nature of both applicant and lender.)

Current fiction; [books that are inexpensive and can be easily procured; mere textbooks or popular manuals; hooks for students' debates, for student or study-club work; in general, books which should be accessible in any good public library;] any hook requested for a trivial purpose.

##### *4. Material which should be lent only under exceptional circumstances*

(Practice will vary according to the nature of both applicant and lender.)

Material in constant use or request in the library applied to; hooks of reference; books that are not to be taken from the library applied to except under special permission; [parts of large sets, such as periodicals and publications of learned societies;] manuscripts, incunabula, special editions, and, in general, any rare or costly hook.

Material which by reason of its size or character requires expensive packing or high insurance; material

which by reason of age, delicate texture, or fragile condition, is likely to suffer from being sent by mail or express.

#### 5. Music

Music is lent on the same conditions as books, but must not be used for public performances.

#### 6. How effected

By libraries of standing, which will apply to others expected to possess the desired material, in order of their relative distance from, or relative duty to, the community in which any particular requests originate.

#### 7. Limit of number of volumes

Each library must fix a limit for itself. Four works at one time for a single borrower is, perhaps, a reasonable maximum.

#### 8. Duration of loan

This will vary with the nature and purposes of the loan. The time allowed in each will be stated by the lender when the loan is made. Four weeks is, perhaps, a fair average period. The period is counted [from the day the book leaves the lender] to the day it is returned by the borrower. An extension of the period may usually be obtained for good reasons. Application for extension of time must be made early enough to permit an answer from the lending library to be received before the book's return is due. The lending library always reserves the right of summary recall.

#### 9. Notice of receipt and return

The receipt of books borrowed must be acknowledged at once; and when books are returned, notice must be sent by mail at the same time. Promptness in this respect is necessary to permit books to be traced if they go astray.

Notice of return should state: Titles of books sent (with call numbers); date of return; conveyance, *e. g.*, insured parcel post, prepaid express, etc., in the latter case naming the express company.

#### 10. Expenses in connection with loan

[All expenses of carriage (both ways) and insurance, when effected, must be borne by the borrowing library.]

#### 11. Safeguards

The borrowing library is bound by the conditions imposed by the lender. These it may not vary, although a good deal will usually be left to the discretion of the borrowing library. In such a case, the borrower will safeguard borrowed material as carefully as it would its own; [and its librarian will require to be used within the walls of the borrowing library whatever material would be so treated were the borrowing library its possessor.]

#### 12. Responsibility of borrower

The borrowing library must assume complete responsibility for the safekeeping and due return of all material borrowed.

[In cases of actual loss in transit the borrowing library should not merely meet the cost of replacement, but should charge itself with the trouble of making the replacement, unless the owner prefers to attend to the matter.]

#### 13. General provisions and suggestions

Disregard of any of the foregoing rules, injury to books from use, careless packing, or detention of books beyond the time specified for the loan will be considered good ground for declining to lend in future.

The borrowing library should inform individuals of the conditions attached to each particular loan.

[Lending libraries should acknowledge return of loans to the borrower.]

Individuals who wish an inter-library loan to be effected on their behalf should consult, as a first step, the librarian of the library which they expect to borrow for them. He can often suggest some source of supply nearer and more suitable than any the individuals have in view.

As a matter of course, special conditions will arise from time to time which will necessitate the modification of the foregoing rules.

For the committee on co-ordination.

C. H. GOULD, *Chairman.*

## COMMITTEE ON FEDERAL AND STATE RELATIONS

The committee on federal and state relations has had a number of matters referred to it for consideration during the year, and has endeavored to advance the interests of libraries as far as possible.

1. With reference to the importation of books from countries at war with each other, the activity of the Library of Congress has rendered it unnecessary for us to take extensive action.

2. We have urged upon the appropriate committees of Congress that they act favorably upon an amendment offered to the Post Office Appropriation Bill by Mr. Jones, on April 7, so that bulletins published by libraries which are not separately incorporated, but are part of a county government, may be admitted to the mail at second-class rates.

3. We have secured a reaffirmation of the position of the Treasury Department that each building with a separate stock of books should be considered as a separate library and that, therefore, each branch library may be considered entitled to have one copy of any book imported for it, free of duty, although copies for other branch libraries are included in the same invoice.

4. This committee has never taken any action in reference to Canadian affairs, and when it was suggested that there was need of some such action, it was requested that the duty be not added to us, but that a separate committee be instituted for the purpose of handling such questions.

5. The suggestion has been made to us that it would be desirable that a copy of the list of foreigners who are candidates for citizenship be sent by the federal officers not only to the school superintendents of the cities in which the candidates live, but also to the librarians of the public libraries in that city, in order that the latter might send to each of such candidates a letter inviting him to make use of the library to *supplement* any studies he may take in the public school. This suggestion seems a very good one to us, and we heartily endorse it.

6. In this year, as in so many previous ones, a bill was introduced into Congress for the purpose of limiting the rights of libraries to import books. The attempt at this time was in the bill H. R. 10,231, introduced by Mr. Driscoll. In this bill is contained a provision that the importation of books for public libraries be made only "with the consent of the proprietor of the American copyright or its representative." When the present copyright

law was passed, this question was thoroughly discussed and the continuation of the libraries' privilege was obtained. Protest was made against the passage of the provision at this time, and it is believed that there is no immediate danger. It behooves, however, all librarians to be on the lookout against renewal of these attempts to diminish the usefulness of the funds provided, for the most part by public taxation, for the purpose of so important a part of the educational system of the commonwealth as the public library.

7. We were glad to co-operate with the bookbuying committee in the successful attempt to insist that House Bill 4715 entitled "A bill to prevent discrimination in prices and provide for publicity of prices to dealers and the public," should not include public libraries within its provisions. This bill was first introduced by Mr. Stevens, and afterwards in various forms by Messrs. Ayres and Stephens. The great number of protests which were made by libraries, and the strong resolutions adopted by boards of trustees, were effectual in averting any danger to the interests of the public through raising the price of books bought by libraries.

BERNARD C. STEINER, *Chairman*.

#### COMMITTEE ON EXHIBITS

The final report on the Leipzig and Panama-Pacific exhibits is given with considerable fullness in the printed reports distributed at the conference. Since special articles on both these exhibits have appeared in the LIBRARY JOURNAL, from which copious extracts were made for the report, little space need be given to them here. The California Library Association and California librarians individually contributed much to the exhibit at San Francisco in time, material and money. Some of the attendants at the A. L. A. booth were detailed by their libraries, but many contributed the time from their own vacation periods.

The total amount raised for the Leipzig exhibit was \$4236.84, and the balance of \$262 which it had left after all expenses were paid was used for the payment of freight.

Of the \$5813.95 contributed for the Panama-Pacific exhibit, the California Library Association raised \$3184.50, a part of this being appropriated toward the general A. L. A. expenses in San Francisco. Altogether, \$5341, including the foregoing sum of \$3184.50 raised by California, was received in subscriptions.

The disposition of material remaining at the close of the exposition was made according to the recommendations submitted by the committee to the Executive Board in December.

These recommendations were:

1. The return of Library Bureau furniture to the Library Bureau agency in San Francisco.

2. Return to the publishers of expensive technical books loaned by them.

3. The return to libraries sending material such material as they have specifically requested should be returned.

4. That the popular books be donated to the library at Thane, Alaska, in charge of Mrs. Whipple.

5. The gift of such remaining material as may be desired to the commissioners of the Young Men's Christian Association of China to form an educational exhibit to be shown in the leading cities and educational centers of China.

FRANK P. HILL, *Chairman*.

#### TRUSTEES OF THE CARNEGIE AND ENDOWMENT FUNDS

There has been no change in investments during the year. On the 10th of February, 1916, however, the \$15,000 par value of New York Central & Hudson River Railroad Company, Lake Shore Collateral 3½ per cent. bonds of February 1, 1908, were, in accordance with the plan for the consolidation of the New York Central & Hudson River Railroad Company with the Lake Shore & Michigan Southern Railway Company, exchanged by us for a like amount of the Consolidated Mortgage 4 per cent. bonds due February 1, 1908, of the new consolidated corporation, The New York Central Railroad Company. As a result of this exchange, the income from the fund will be increased \$75 a year, dating back to February 1, 1915. All interest on investments has been promptly paid except that default was made in the payment of the semi-annual installment of 2½ per cent. due September 1, 1915, on the \$15,000 par value of Missouri Pacific Railway Company Collateral Trust 5 per cent. bonds due January 1, 1917, which were included in the securities which we took over upon our appointment as trustees. Owing to the default and to the proposed reorganization of the affairs of the Missouri Pacific Railway Company, a committee, of which Mr. Moreau Delano, of the firm of Brown Brothers & Company, is chairman, was formed to protect the interests of this particular issue of Missouri Pacific bonds. We deposited our bonds with the Columbia Trust Company, the depository of that committee, and took advantage of the committee's offer to advance to us the amount of the coupons due last September. The \$375 of coupons due March 1, 1916, have been collected in the same way. No final ad-

justment of the Missouri Pacific finances has yet been reached. We hope that such a settlement will be made as will fully preserve the interests of the Collateral Trust bondholders.

The usual audit of the investments and accounts of the trust was, at the request of the chairman of the finance committee of the American Library Association, made by Mr. Franklin O. Poole, librarian of the Association of the Bar of the City of New York.

Respectfully submitted,

W. W. APPLETON,

M. TAYLOR PYNE,

EDWARD W. SHELDON,

*Trustees Carnegie and Endowment Funds.*

#### TRUSTEES SECTION

The Trustees Section met Tuesday afternoon, June 27, at 3:00 o'clock, in the New Monterey ballroom, Trustee W. T. Porter, of the Cincinnati Public Library, holding by unanimous consent the office of perpetual president, being in the chair. There were some trustees and a number of interested librarians present making an attendance of forty or fifty.

The meeting was opened by an informing paper read by Mrs. Elizabeth Claypool Earl, the effective president of the Public Library Commission of Indiana, on "The trustee's obligation to the state." The paper dwelt on the responsibility of trustees who accept this public duty and was especially noteworthy for its account of the state meetings held periodically by library trustees in Indiana. Stated meetings have been held every two years, separately from meetings of librarians, and while it was at first hard to get trustees to come to meetings, these gatherings had now become interesting to trustees as well as resultful to libraries.

An animated discussion followed Mrs. Earl's paper, in which the perfunctory character of many boards of trustees was lamented, and it was the general sense that it would be desirable to convene in other states or neighborhood localities, meetings of trustees similar to those so successfully held in Indiana. There was some difference of opinion as to whether these meetings should be held separately or, for the sake of kindling enthusiasm, conjointly with librarians. It was specifically suggested for Massachusetts that a special endeavor might be made to obtain a meeting of trustees once a year coincident with the sessions of the Massachusetts Library Club, to cover a joint meeting on the last club day and a separate meeting on the day following.

The other feature of the program was an

address by Ex-Mayor David A. Boody, president of the Brooklyn Public Library, on "The public library as part of our educational system." Mr. Boody emphasized vigorously and patriotically the importance of the public library in the progress of our country. A discussion of the paper was scheduled to be opened by R. R. Bowker, who spoke briefly on the relationships of trustees, but as Mr. Boody's address met with general agreement, there was no further discussion.

#### SECTION ON PROFESSIONAL TRAINING

The seventh annual meeting was called to order on Tuesday, June 27, at 2:30 p. m. by the vice-chairman, Agnes Van Valkenburgh. The chairman appointed a nominating committee, as follows, to report, at the close of the session, names of officers for the ensuing year: Mary Emogene Hazeltine, June Richardson Donnelly, Harriet B. Gooch.

The general subject for consideration was "A comparison of the curricula of library schools and public library training classes." Points of similarity between the two types of courses were described by Mrs. Harriet P. Sawyer, chief of the instructional department of the St. Louis Public Library, and the points of difference between the two types of courses were described by Ernestine Rose, librarian of the Seward Park branch of the New York Public Library.

Mrs. Sawyer said that the resemblance between the two types of courses depend largely upon the size and resources of the library that operates the class. The library school course has been standardized; that of the training class has not, but there are several training classes in the country now, offering a course nine months or more in length; and these would seem to offer a fair basis for comparison. Entrance requirements follow pretty closely library school standards: a high school education or its equivalent, plus college credits if possible, with entrance examinations; or, a college diploma without examination. Many have a well-equipped school-room. The instructor is usually a library school graduate, giving full time to the work. The number of hours given to practice work compares favorably with the amount given by library schools; and for this work the public library, with its many and various branches and departments, forms an excellent laboratory. Several training classes have outside lectures from local educational institutions, or persons engaged in civic work, as well as lectures by members of the staff, and library visits are paid to libraries of varying

types in the city. The success of the graduate, of either type of course, is largely a matter of personality and devotion to the work, and the aim of the training, in each case, is to provide the library with trained workers so that they may give the best possible service.

Miss Rose said that many prominent library thinkers believe the training course, as distinct from the library school, to be the temporary expedient of a poorly organized profession, a professional short-cut, to be abandoned when a better road becomes possible.

The purpose of her paper was not only to point out certain inherent differences between the course of a library school and that of a training class, but in addition, to indicate certain values inherent in apprenticeship, and to point out that, if understood correctly, its purposes and its results form a legitimate and integral part of professional training.

The main points of difference are: (1) The stress laid upon practical work; due to the need of preparing untrained persons in as short a time as possible. And this results, also, in altering, discriminating and condensing the use of material in the course. (2) The age of the students, materially altering the character of the instruction. (3) The most conspicuous point of difference—a library school gives general preparation for librarianship, while an apprentice course trains for one library or one situation.

In regard to the inherent value of apprenticeship, the insistence on practical work is one of the elements of value. Such work, before or during technical training, is a mighty interpreter. Another value is the lower age limit of the student. Without such a course, the profession would lose many promising young people. Still another interesting element is the emphasis placed upon the human, social and book sides of the work, thus not permitting technique to loom disproportionately. The restricting character of the course, preparing for but one library, does much to protect other libraries from partial training.

The truth gathered from these various elements is that an apprentice course may be permanently valuable if it confines itself to the aims and methods of *preparatory* training. When it copies a library school course it becomes a menace, as it turns out people who believe themselves trained when they are merely *prepared* for real training. This preparatory work may be of supreme importance to professional training, providing its students with a strong educational and social

impetus plus plenty of practical work, supervised and interpreted.

In addition, without wishing to assume too large and serious a task for the apprentice work of libraries, those who have the opportunity of forming the work are peculiarly fortunate and also extremely responsible. In the selection of young people to enter library work there cannot be too much discrimination. What is needed in the profession is spontaneity, a quicker life, capacity for growth. It is the privilege of the training class to give every opportunity for such growth. It is a question whether any education, however complete, can do more.

Opening the discussion of the two papers, Frank K. Walter, representing the viewpoint of the library school, said that to his mind the main cause of misunderstanding in regard to the courses given by training classes and library schools was due to an indefiniteness of definition; and that if the *preparatory* function of the training class was kept clearly in mind the difficulty would be largely done away with. That, in reality, the two courses stood to each other as those of the high school and the college. He added that the library school course should become more thorough than it is now, with more careful instruction; that there were too many short-cuts toward efficiency; and that much of the practice work, in vogue at present, should be eliminated; that, in short, the instruction should be in principles plus some practice, rather than in practice plus some principles.

Following Mr. Walter, Carl B. Roden, speaking for the public library, took up the discussion. He said that in the Chicago Public Library, of the 364 applicants who had tried the entrance examinations, 195 had been admitted to the class, 145 had been graduated, 122 appointed, and 94 were still in the service of the library; that, in their library, three things had to be considered. (1) Assistants were born, not made. (2) The city civil service threw the examinations open to everyone. The library was allowed to prepare the entrance examinations only by courtesy. (3) That, in their rapid expansion of the library's work, they needed assistants for but one kind of work—general branch work. Therefore the instruction must be such as to prepare the students in the shortest possible time; and the function of the training class was not so much to convey knowledge as to transmit inspiration. That the aim of their course was to teach the student to like library work; and the members of the staff who spoke to the class were selected for that work largely for

their ability to convey enthusiasm. That the sifting process was the most important function of the class; and that, finally, as each individual training class must conform to its own local conditions and needs there could be no systematizing or standardizing of a training class course.

Mr. Roden was followed by Azariah S. Root, chairman of the A. L. A. committee on library training, who said that the difference between the two types of courses was well defined by their names; one was a school, the other was a class. This would mark the difference, even if the course of instruction and the methods of teaching were the same. The fundamental difference was one of atmosphere; one preparing for general service, the other for a local institution. The same difference existed for a boy going to a local college or to a college away from his home town. The breadth of training, the indirect education, was the main thing in the general course. Mr. Root said, further, that the discussion raised the whole question of the future of professional training. That in the present day library schools the age limit was too low and the period of preparation too short; and that not until the entrance requirement demanded collegiate work, and the course prescribed a rigid discipline of study and research work, would library work be regarded, in the outside world, as a learned profession.

The subject was then thrown open to general discussion. A question was asked from the floor if training classes could supply librarians for small libraries which could not afford to pay large enough salaries to obtain graduates from library schools. The chairman referred the question to Mrs. Sawyer, who replied in the negative, saying that the small libraries were taken care of by the numerous summer schools.

Annie Carroll Moore said that it would seem a pity to eliminate practice work from library school courses; inasmuch as such work was not merely mechanical and clerical, but the only medium through which the student came in touch with the borrower, and thus realized the aim of his work; and that such practice, therefore, had great psychological value.

Josephine Adams Rathbone said that the *testing* value of practice work made it an essential part of a library school course; as, without it, no director could have a fair knowledge of the working ability of the student, and so would be utterly at sea in making recommendations.

George F. Bowerman added a word to the

discussion by saying that he should hate to see a training class training students to be simply Marthas; that there must be something inspirational to give an incentive to the work and a goal towards which to work.

Mr. Walter explained his attitude toward practice work as not wishing to have it entirely eliminated, but to decrease the prominence and amount of time given to it in an advanced course.

After some further discussion, participated in by Miss Moore, Mr. Walter, Miss Rose and Mr. Roden, Mr. Bowerman asked if some library school could not offer a course for training students to take charge of training classes in public libraries. Miss Rathbone replied that, a few years ago, Pratt Institute had offered such a course for two successive years; but that it had received such slight support from the profession that it was deemed inadvisable to continue it. This closed the discussion.

The chairman now called for reports from the various library schools of any new phases of work recently undertaken or planned for the immediate future.

The Library School of the University of Wisconsin reported a course in library science for teachers, given to university students in the normal course at the university. The course, covering the elements of library science, requires five recitations a week and counts five credits.

The Syracuse University library school reported a course in library science for teachers in the high school, counting ten hours credit.

The Pratt Institute School of Library Science reported an elective course, given in the third term, in sight-reading in the Italian language; open to students who had had Latin. Also, an elective course in story-telling, which includes practice as well as instruction. Further, the instruction in the Expansive classification had been omitted this last year.

Simmons College Library School reported a course in high school library work for students.

The Library School of the New York Public Library reported that an elective course in Italian (similar to that at Pratt Institute) had been given from the beginning of the school; and this last year there had been a request for a similar course in Spanish.

The Library School of the Carnegie Library of Atlanta reported the appointment of Mary E. Robbins to the faculty in the position of associate director of the school.

Mr. Root, as chairman of the A. L. A. committee on library training, was asked to give

a report of the year's work of the committee. He replied by saying that the report was in print and had been distributed, and therefore he would not take the time to speak of it.

The report of the nominating committee was then presented, as follows: Chairman, Miss Sarah C. N. Bogle, director of the Carnegie Library School for Children's Librarians in Pittsburgh; vice-chairman, Miss Mary E. Hyde, instructor, Simmons College Library School; secretary, Mrs. Harriet P. Sawyer, chief of the instructional department, St. Louis Public Library. By unanimous vote, the report of the committee was adopted and the officers declared elected. On motion, the meeting adjourned.

JULIA A. HOPKINS, *Secretary.*

#### CATALOG SECTION

The first meeting of the catalog section was held in the Auditorium Tuesday evening. The chairman, Miss Sula Wagner, chief of the catalog department of the St. Louis Public Library, greeted her audience of co-workers and introduced the first speaker of the evening, Jesse Cunningham, of St. Joseph, Mo., who spoke on "The problems discovered in cataloging the School of Mines Library at Rolla, Mo." The school is a department of the State University and has a library of about 20,000 volumes. The student body numbers ordinarily about 300. Preceding the erection of the new building in 1913, the library had been housed in a suite of three rooms and indifferently administered by a variety of people. There was an excellent collection of books, and with the new building the problem was one of administration—to make the library attractive and usable to a body of men opposed to formalities and restrictions. Mr. Cunningham explained the method of handling the problems of cataloging, classifying and assigning subject headings. After meeting these technical difficulties the chief librarian delivered lectures to the student body, explaining the arrangement on the shelves and the use of a dictionary catalog, and arranged for their visiting and examining the new library building and the bibliographical tools. More than 80 per cent. of the students now withdraw books for home study, and the library of this institution is given the credit for raising to a higher level the standard of scholarship and the requirements for admission, as well as bringing the public schools in the locality to an accredited standing and a deeper appreciation of better things by the community as a whole.

There had been expressed, at the Berkeley

conference, a desire that something should be written presenting the more attractive side of cataloging. J. Christian Bay, of the John Crerar Library, Chicago, was asked to contribute this paper, and in his absence Carl Roden, of the Chicago Public Library, read "Inspiration through cataloging," which is printed in full elsewhere, and consequently is not summarized here.

In following up this paper, Miss Van Valkenburgh spoke of the fact that this generation seems to have become obsessed with the desire to work *with* the public; the idea of working *for* the public has eluded them. Judged in the light of real helpfulness to the world, the catalogers, for instance, who made the Debater's handbooks, did quite as much service as the person who uses them and feels a thrill of satisfaction in giving the high school boy more material than he can use. Miss Van Valkenburgh laid special emphasis on the fact that the cataloger makes a permanent record of far-reaching influence, that the work is vital and interesting, leading the way for the reading public. The watchword of the age is self-improvement, and in no branch of the profession does the actual carrying out of the work produce that effect so surely. All the new things in science—religion, art and literature—pass over the cataloger's desk and make hourly and daily for self-culture and education, and leave as a result a record which posterity will find helpful.

Miss Beatrice Winsler, of the Free Public Library, Newark, N. J., gave a very practical talk on "Making maps available." She brought with her samples of the mountings of wall maps, and discussed their arrangement. The examples of maps prepared for lending to the public were much examined and proved of great suggestive value to those present.

After the 1915 conference, Mr. Dewey was asked if he approved the appointment of a Decimal Classification advisory committee of the A. L. A. He replied most cordially that he did and that he would not only accept suggestions from them, but would also transmit to them for approval or disapproval all proposed expansions coming to him from other sources. A. Law Voge, of the Mercantile Library, San Francisco, the secretary of the committee appointed, gave the report. After stating the need of co-operation in this work, he reported that the committee had resolved to circularize the libraries asking for replies to the queries on the following points: (1) the subjects most in need of numbers, (2) the classes most in need of expansion, (3) the classes most in need of change. Sub-commit-

tees are to be appointed who will be assigned a classification to prepare or test, and after the work has been passed on by the main committee, if approved, it will be submitted to the editors of the D. C.

#### SECOND SESSION

The second meeting of the section on Friday afternoon was again largely attended, and was for the most part given over to the reports of committees.

In Mr. Hastings' absence, Mr. Martel read and lead the discussion of the report of progress in the compilation of a manual on arrangement of cards in a dictionary catalog. Many took part in this discussion. The one, two, and three-file systems were argued and also the chronological arrangement of cards in a dictionary catalog. Mr. Hastings expects to have a provisional draft of the rules ready by October. This is to be sent out for criticism and suggestions, and there is the possibility that the regular edition will be in print within the year. Miss Mann, the chairman of the committee to confer with Mr. Hastings, was not present, but Miss Sutliff made the report in her absence. Mr. Currier's "Memorandum on the method of recording Chinese and Japanese books" was read by title only and will be found in full in the Proceedings.

Mr. Josephson, of the John Crerar Library, gave the report on the cataloging test. While the test as a whole was negated by the fact that such a small number of libraries took part in it, yet many interesting facts were brought out. In summarizing his paper, Mr. Josephson said: "These two ideas, the extension of the central cataloging work of the Library of Congress and the possibility of organizing the work in the individual library, so as to utilize to a larger extent than is now the case, the special interests and the special knowledge of the individual, stand out for me as the net result of the cataloging test."

The nominating committee reported the nominations for officers for the next year as follows: Chairman, Miss Edna Goss, chief cataloger of the University of Minnesota Library; secretary, Miss Bessie Goldberg, head cataloger of the Chicago Public Library. The report was accepted and the meeting adjourned.

CHARLOTTE FOYE, *Secretary*.

#### COLLEGE AND REFERENCE SECTION

This section held one meeting in the Auditorium on Wednesday, June 28, W. M. Hepburn, of Purdue University, presiding. The general subject for discussion was the "Research facilities in American libraries: pres-

ent status, new projects, future needs." Only three formal papers were prepared, and they were followed by an informal discussion of the subject of "Library preparedness in other fields," in which Dr. Andrews, Dr. Richardson, Mr. Cutter, Mr. Meyer, Mr. Stevens of Pratt Institute, and others took part.

The first of the three papers read was by Dr. Walter Lichtenstein on "Possible results of the European War on the European book market." [This paper was reprinted in full in the LIBRARY JOURNAL for June.] It was followed by a forceful paper by Miss Adelaide R. Hasse on "Library preparedness in the fields of economics and sociology," and her paper is printed elsewhere in this issue. For the third paper it was desired to have a statement from a practical worker in the field of research, showing what such research means to the practical scientific worker. Such a paper was prepared by Dr. Walter T. Swingle, of the Department of Agriculture, Washington, in co-operation with Mrs. Swingle, on "The utilization of photographic methods in library research work with especial reference to natural science." In this paper Dr. Swingle described the practical use of the photostat by his department, both for copying ordinary printed data and for reproducing easily and cheaply material in Oriental languages. In response to a request from Mr. Bishop, Dr. Swingle showed how, with the photostat, he made a copy of a catalog in book form of a Chinese collection. Dr. Swingle explained that the Department of Agriculture is spending thousands of dollars in investigations on the economic plants of China, and many Chinese books have a practical bearing on the subject. "There existed in the Library of Congress," said Dr. Swingle, "a manuscript list of the books needed. There existed in Chicago two lists; those three lists contain nine-tenths of all the Chinese books in America. By the photostat we were able to reproduce all three lists and place them at the disposal of the Library of Congress and of our own Department. Last year I was entrusted with the purchase of additional Chinese books for the Library of Congress. Copies of these books were made, and are for sale. I need hardly mention how invaluable the photographic method is in reproducing such material as Arabic and Chinese, where you cannot use the typewriter and where the ordinary methods of copying are useless. We are using our photostat instead of hiring expert copyists; it is much cheaper."

Later in the session Mr. J. I. Wyer raised the question how far the cost of reproduction

of the Chinese books—the traveling expenses, the photostat to reproduce them with, the photostat material required, the general sum total of all expenses necessary to make one or two or at most three copies of these books—would go toward having it printed in English in a large enough edition to supply all the libraries of the country.

Dr. Swingle replied that it would go a very little distance indeed, because the cost of the photostat reproduction is very low. In many cases, moreover, it is impossible to translate the whole work, the translation of such language on technical subjects being very difficult. A translator goes through a book and translates the single paragraph that must be had. In the case of a *Bulletin* shown the lithographic subjects alone would have cost \$50 each, and there were a dozen of them.

Dr. Andrews said that the John Crerar Library is storing up its regular book appropriations which would ordinarily be spent in Europe, for the possible purchase later of such collections as Dr. Lichtenstein described in his paper. He showed by a pertinent incident the value of many of the so-called out-of-date scientific books. When he had a call for information in regard to the manufacture of certain basic substances for the development of the dyestuff industry in this country, it was found that the modern text-books on the dyestuff industry did not contain the basic processes for these basic substances, and it was necessary to go back to books of the seventies and eighties to get the material desired. Discussing Miss Hasse's paper, he said he wished she had given some hints as to how the material collected in libraries should be used in co-operation, whether by co-operative cataloging, by a revised list of special collections, and how these little collections might be tied up with the collections being made elsewhere, so that the scholars who need them can find the material they want. He emphasized the importance of the photographic methods described by Dr. Swingle as extending the field of work which has been done in the past almost exclusively by inter-library loans, a system which has its limits, most decidedly. Speaking of the value of union lists of periodicals to the scholar, Dr. Andrews told of the attempt by the A. L. A. committee to obtain a general list of all the periodicals in the country published by the Library of Congress. This being impossible, the committee has taken up the question of the revision of the union list into sections, and there are prospects of obtaining portions of this list under the different

subjects. Dr. Lichtenstein, for instance, has charge of the preparation of a union list of historical periodicals which will meet the demands of the students of history. Mr. Cutter has in preparation a list of the technical periodicals which ought to meet the needs of a great many. The Agricultural Section of the association has had under discussion and it is hoped it will bring to fruition, plans for a checklist of the agricultural periodicals. The medical societies have under discussion and partly prepared a checklist of the medical periodicals. (The Boston Medical Society already has in preparation a local list of the medical periodicals available in that vicinity.) And last, but not least in interest, though smallest in extent, the mathematics teachers have felt this need, and have under discussion plans for a checklist of the mathematical periodicals. Of local lists a number are under way. There is in preparation in Boston a general list; there is under discussion in Illinois for the libraries connected with the university a local list, and there is under discussion at least the reissue of the Chicago list. There is also under discussion the question of co-operation in a general list through a central printing bureau, which shall print sections and local lists, as desired.

Miss Kelso asked for permission to speak on behalf of a large part of the gathering—the ordinary man in the ranks—the general librarian. "These plans," she said, "are for the highest court officers. The greater number of those in attendance here have to do with the small part of this problem, that of the little towns where industries are at work. We need advice and mobilization and we are told that there will be a 'list'; to the ordinary infantry body such a list is very little good. We want the equipment—the ability to answer the personal question. It seems to me, and I have given a good deal of thought to this question, that this section and the several libraries, instead of making lists, should mobilize the material for the benefit of others, should find out through their expensive technical journals what the organizations are that are studying these subjects, so that the smaller librarian can write to these central bureaus and find out where such material is available."

Dr. Richardson pointed out a marked line of distinction between research and the general promotion of knowledge. There are two tasks for humanity, he said, one is to find out new ideas, and the other is to multiply those ideas by every individual of the human race, so far as it can be done. Those two are clearly

distinguished tasks—the task of research and the task of the propagation of knowledge. You can't propagate your ideas until you get them, and the great trouble of our United States civilization is that we propagate ideas before we get them. He agreed that the two most essential things for the promoting of research facilities for American libraries were those referred to, *i.e.*, the photostat reproductions and the joint list, and with them is closely united the matter of purchasing.

"We are talking about preparedness," he said, "the lesson of this war is that you must have no end of ammunition, or the guns and the men are of no use. The facilities of the libraries are the munitions of research in this country at the present time, and the problem is how to get munitions enough for the men we have been developing, to use for the production of new knowledge. We cannot do anything in research unless we have munitions, and the way is threefold. The first is the purchase of research material. We have revolutionized the purchasing system by the photostat, and we are behind the times if we do not recognize that we have revolutionized the method of acquiring research material through the photostat. The third method is inter-library loans, and the only possible way of utilizing that is the co-operative list." Dr. Richardson quoted from the monograph on the use of the photostat, which had been prepared at Princeton to accompany an exhibition of the photostatic material, showing what can be done in the way of ordinary reproduction; what can be done for the advantage of the administration cataloging department, reference department, and so on.

Mr. H. H. B. Meyer, of the Library of Congress, suggested the compilation of a union list of subjects, and under each subject the name of the library in the United States that is strong in that subject. He said of Dr. Johnston's "Special collections in American libraries" that while it is a very good presentation of the special collections in the Library of Congress up to the time of publication, it by no means indicates the research facilities of the library. "The list I have in mind," he said, "would do that. Under every subject that the library is strong in its name could appear. It would be a brief list, the briefer the better and the easier to make, and that would be a thing that could be put in the hand of the very small library and meet the possible need of a scholar or business man or expert in any particular line who may be located in the immediate vicinity of that library."

J. T. Gerould, librarian of the University of Minnesota, said that that library has lists of special collections printed in its library report and he spoke of the value of the lists printed by Cornell and other libraries.

Herbert O. Brigham, of the Rhode Island State Library, described a meeting at Providence, where the city's librarians formulated a list of two or three hundred subjects, and tried to ascertain the number of subjects that were absolutely lacking in their collections. That list will eventually be printed in the Providence Public Library *Bulletin*. "Suppose you do that for thirty or forty centers in the country, then consolidate it, and you have the problem worked out with the least amount of friction, with the persons directly in charge of the collections passing upon each group in his specific locality. A combined list, including the cities of Boston, Providence and Worcester, all within an hour's train ride, will show a large collection of rarities along specific lines."

E. F. Stevens spoke humorously of the facilities which gave Pratt Institute Library the greatest reference resources in the country—the Columbia University Library, the New York Public Library, the Long Island Medical Society, the Long Island Historical Society, and so forth, to all of which, and more, he refers his readers when the resources of his own library are exhausted.

The following committee in charge was chosen for the coming year: Harold L. Leupp, chairman, University of California, Berkeley; H. M. Lydenberg, New York Public Library; and M. G. Wyer, University of Nebraska, Lincoln.

#### AGRICULTURAL LIBRARIES SECTION

The annual meeting of the Agricultural Libraries Section of the American Library Association was called to order Wednesday morning, June 28, in the Auditorium, Asbury Park, N. J., by the chairman, M. G. Wyer, librarian of the University of Nebraska. Miss Julia C. Gray, librarian of the Pennsylvania State College School of Agriculture and Experiment Station, was appointed secretary of the meeting.

After brief introductory remarks by the chairman, Mr. John G. Lapp, editor of *Special Libraries*, Indianapolis, Ind., gave an address on "Agricultural libraries as special libraries." Mr. Lapp's address caused a discussion which brought out the following suggestions for making the section useful to the libraries:

(1) A union of all libraries, particularly agricultural libraries, to develop and strengthen the agricultural library in Washington for

the use of research workers—a center for the collection of material that European men already have at their disposal. This would require an appropriation of \$100,000 a year for five years.

(2) Increased co-operation between the U. S. Department of Agriculture and the agricultural libraries all over the country, by maintaining a trained assistant in Washington to serve as an agricultural library organization, and to improve those libraries for the use of faculty and students.

(3) County agent libraries or clearing houses of information, to be acquired by the collection of free material on agricultural subjects, so that the county agent may be prepared to hand out to the farmer free publications treating of special problems with which he has to deal.

The agricultural bulletins were criticized as being too technical for the farmer, and for not giving the right kind of information in the right way. It was agreed that through the Smith-Lever Bill for Agricultural Extension the agricultural libraries are facing great problems and great possibilities. In regard to methods of extension distribution, Mr. Green, of the Massachusetts Agricultural College Library, stated that it was difficult to secure the interest of extension representatives in the library phase of the work. Mr. Hepburn, of Purdue University Library, said that boxes of free literature had been fitted to the running boards of automobiles and distributed to farmers in that way in Indiana.

The paper on "A union check-list of serials in agricultural libraries" was prepared and read by Mr. Charles R. Green, librarian of Massachusetts Agricultural College, who distributed a list of the serials to be found in his own library. This paper suggested a geographical scheme in connection with the inter-lending system.

The second paper, "The agricultural index," by Mr. H. W. Wilson, of White Plains, N. Y., explained the purpose and plan of the new index of agricultural periodicals, prepared by his firm. In the discussion which followed much frank but friendly criticism occurred. Some believed the price too high. Others did not favor the inclusion of the Experiment Station *Bulletins*, because of the fact that the stations are provided with the card catalog of these bulletins by the States Relations Service. It was stated that the card catalog was seldom less than a year behind time, and that Mr. Wilson's index would come out more promptly.

The following motions were made and carried:

On motion of Mr. Hepburn, it was resolved that a committee be appointed to confer with Mr. Wilson in regard to the index. Committee to be appointed by the chair.

On motion of Mr. Deveneau of Illinois University Library, it was resolved that the section take some action to induce the U. S. Department of Agriculture to revise its list of Experiment Station publications, as contained in Bulletin 180, to bring it up to date. On a second motion made by Mr. Deveneau, it was resolved that the section also take some action to induce the U. S. Department of Agriculture to revise its own check-list of publications to date.

The appointment by the chair of a committee to co-operate with Miss Barnett, librarian of the U. S. Department of Agriculture, in the preparation of a handbook for small agricultural libraries, was approved.

On account of the lateness of the hour the paper on "Some opportunities in agricultural library work," prepared by Mrs. Ida A. Kidder, librarian of Oregon Agricultural College, was read by title only.

Mr. Charles R. Green, librarian of Massachusetts College of Agriculture, was appointed chairman of the next meeting.

JULIA C. GRAY, *Secretary*.

#### SCHOOL LIBRARIES SECTION

##### FIRST SESSION

The second annual meeting of the School Libraries Section was held in the ball room of the New Monterey at 8:30 p. m., June 29, with an attendance of about 300, Miss Mary E. Hall, Girls' High School, Brooklyn, chairman of the section, presiding; Miss Alice A. Blanchard, Public Library, Newark, secretary.

The papers and discussions centered about the topic "The national campaign for better school libraries." C. C. Certain, recently of the Polytechnic Institute, Auburn, Ala., now of the Cass Technical High School, Detroit, read the first paper, taking as his subject "The school library situation in the South." Mr. Certain read several of the answers to a survey questionnaire sent to schools. These replies were prompt and interested, all showing clearly the great need for better library service in the Southern states and the eager desire on the part of the schools to improve conditions.

A paper by James F. Hosis, Chicago Normal College, followed, read in his absence by Mr. Kerr. Mr. Hosis's subject was "The place

of the school library in modern education," and he said in part:

"The modern high school course has ceased to be a college preparatory institution and is becoming a place where the youth of our democracy may obtain a liberal education combined with preparation for a specific vocation, and the assumption is that students will need that many-sided development which only a curriculum of studies made up from all aspects of modern life can provide. In the new scheme of things the library is indispensable. At best the textbook can be only a sort of laboratory manual. Pupils must go elsewhere for facts. This means in history the use of maps, pictures, chronological tables, biographies, eye-witness accounts; in English, numerous examples of good writing by contemporary authors, information on topics to be developed and presented in class; in science the use of literature on the subject. The pupil is expected not merely to read and remember, but to read, select, evaluate, and organize. He must have access to well-filled library shelves and become a skillful user of the printed book."

A second reason mentioned by Mr. Hosc why the school library is indispensable in modern education is that the school must develop in students the reading habit. This can only be done by giving them the opportunity of companionship with books, the chance to browse and select, the use of a good library.

The rest of the meeting was devoted to a symposium on the subject: How can we further the school library movement?

Prof. Azariah S. Root, Oberlin College, spoke first on "What the college and university can do." Since 90 per cent. of high school teachers are college trained, said Prof. Root, the responsibility for good school library work depends largely upon the colleges. We can not have good school libraries until teachers, as college students, learn what good libraries are and how to use them. A teacher's ideal of what a library can do will not rise above what he found it in his college days. The college must, therefore, first make its library so efficient and so well adjusted to the student's needs that he will use it; and, second, because the student will go out to give the same kind of instruction that he got in college, must require intelligent use of the library by its faculty.

"The judicious use of supplementary reading is of great importance. Students who are to become high school teachers should not be instructed as if they were working for

Ph.D. degrees. The college faculty must know how to use reference material which will make their subjects alive to students. Furthermore, teachers must know the elements of library economy, or rather, the use of the library. They must know something about classification, various types of libraries, library etiquette, the value of unity in classification and cataloging.

"With such instruction offered generally in colleges it would be easy to supply satisfactory libraries for high schools, even in the large proportion of high schools where it is not possible to have trained librarians."

H. E. Legler, of the Chicago Public Library, followed Prof. Root with a paper on "How the public library can help in developing effective high school libraries."

Out of the 968 public high schools in cities of 8000 population, Mr. Legler found there are less than 500 of such strength as to invite consideration in connection with library organization on the basis of full effectiveness; namely, suitable quarters, ample book collections, trained teacher-librarians or librarian-teachers for full time service.

"Organization of high school libraries is justified by the increasing importance of secondary education in the development of every interest that makes for community betterment. The question of library or school management is as yet undetermined. It would seem the wiser policy to entrust to the public library the direction of the high school library. If the library has the responsibility of management some of the ways and means to be employed in furtherance of common aims are staff organization through trained and experienced librarians possessing university education and the teaching point of view; such intimate fusing of school and library resources as will enable faculty and student use of materials to the fullest possibility; and instruction of freshman and sophomore classes in the use of reference books, catalogs and bibliographic apparatus."

A paper by Miss Effie L. Power, Carnegie Library, Pittsburgh, was read. Her subject was "What the public library can do for grade schools," and she showed that in some cities library work in elementary schools has been developed on a strong co-operative basis along practical lines, its aim being to train to an appreciation of good books and an intelligent use of public library resources. Departmental work is more fully developed in grade schools than in high schools. More and better service along old lines rather than other service along many lines is what the modern

grade school asks of the modern public library.

Miss Orpha M. Peters, Public Library, Gary, Ind., read a paper on "What the public library can do for grade and rural schools," describing in some detail possible library and rural school activities and urging the need for their further extension. "The methods used," she said, "are not so important as that results be obtained. It would seem, however, that adequate library facilities will be more readily and firmly established through the pooling of library and school interests and funds; township or county supervisions by the public library with a staff especially trained for the work; teachers who know how to judge a book and who know and love good children's books."

Mr. Claude G. Leland, Department of Education, New York City, was to have spoken on "What a department of education can do for the school libraries of a city," but was unable to be present.

#### SECOND SESSION

The second session of the section was held Saturday at 2:30 p. m. in the ball room of the New Monterey, with a most enthusiastic attendance of about 200, Miss Hall presiding, Miss Blanchard, secretary.

As it was the last afternoon of the conference and many people were planning to take a 4:30 train, the business meeting, scheduled to come first on the program, was postponed, to give time for the discussion of special problems connected with school library work.

Miss M. Louise Converse, Central State Normal School, Mount Pleasant, Mich., opened the discussion by a talk on the subject of picture collections, their value and methods of caring for them. Miss Converse considers a picture collection one of the normal school's best teaching methods, both as a means of cultivating a taste for good pictures and as aid in illustrating definite lessons. She advised mounting boards  $12\frac{1}{2} \times 14\frac{1}{2}$  inches; classification, using travel numbers as closely as possible; and a brief catalog.

Mr. Kerr, Kansas State Normal School, raised the question of the advisability of cataloging pictures. With him Mr. Hodges, Cincinnati, Miss Whitmore, Chicago, and Mr. Wright, Kansas City, urged that a picture collection catalog, because of its expense and the difficulty involved in using it, was not worth while.

At the close of the discussion the meeting was divided, in order that two round-table conferences, one for high school librarians,

the other for normal school librarians might be held at the same time. Miss Hall conducted the conference for high school librarians, Miss Nancy I. Thompson, State Normal School, Newark, that for normal school librarians.

#### HIGH SCHOOL ROUND-TABLE

The high school meeting opened with a question box discussion led by Miss Bessie Sargeant Smith, Cleveland Public Library. From many questions covering a wide range of topics the one chosen as most in demand was: Is it advisable to open the high school library to the public?

Mr. Purd B. Wright, Kansas City, Mr. Samuel H. Ranck, Grand Rapids, Dr. Sherman Williams, N. Y. State Education Department, spoke strongly in favor of opening high school libraries to the public. Mr. H. E. Legler, Chicago, Mr. W. H. Brett, Cleveland, and Miss Smith, Cleveland, on the other hand, out of their experience, questioned as strongly the advisability of so doing, on the ground that the use of the library by the public crowded out the students and the book collection could not be as well adapted to the students' needs. Mr. Ranck described in detail the Grand Rapids method of successfully administering school libraries which are open to the public, laying stress upon the necessity of close co-operation between the school and the library, and the prerequisites of outside entrances for school libraries, and, for librarians, proper training, personality, and experience.

Miss Hall then took the chair and called for brief informal reports concerning specific kinds of work done by different high school libraries. Miss Louise Smith, Lincoln High School, Tacoma, described a library assignment card used by teachers sending classes for special reference material; Miss Tobitt, Omaha, described Omaha's new high school library; Miss White, Passaic, N. J., told of the Passaic method of book purchase.

The topic of instruction in the use of the library was suggested. This was such a popular subject and brought out so many questions that the meeting was given over to its discussion. It was found that nearly every high school librarian present was giving systematic library instruction, with credit given by the school. Miss Smith of Tacoma reported that the teachers in her school had asked for a course for their own benefit.

Miss Hall paid an appreciative tribute to Miss Laura Newbold Mann, Central High School, Washington, Miss Florence M. Hopkins, Central High School, Detroit, and to

the Cleveland librarians for their splendid work in developing high school library instruction.

Owing to the lateness of the hour the postponed business meeting was made as short as possible. It was voted to accept the report of Mr. Frank K. Walter, chairman of the committee on professional training of school librarians, without its being read, the report to be printed in full in the *A. L. A. Proceedings*. Other reports were omitted. The following officers were elected for 1916: Miss Ida M. Mendenhall, State Normal School, Geneseo, N. Y., chairman; Miss Elizabeth White, Passaic, vice-chairman; Miss Orpha M. Peters, Gary, Ind., secretary and treasurer.

#### EXHIBIT

During the conference the School Libraries Section held a most successful exhibit. The work of high schools was shown by a collection of loose leaf scrap books contributed by representative high school libraries throughout the country, showing photographs of rooms and equipment, floor plans, forms used, book lists, etc. These scrap books containing a wealth of valuable material are to be available as a loan collection on application to Miss Hall. A scrap book collection of mounted courses of study used by normal schools; a selection of pictures from the picture collection of the Newark Public Library; charts and pamphlets describing the work done with rural schools in Wisconsin, Missouri, and Gary, Ind.; and a permanent loan collection of over 100 book lists from public libraries and state commissions were also shown and used continually throughout the conference week.

Alice A. Blanchard, *Secretary*.

#### ROUND TABLE OF NORMAL SCHOOL LIBRARIANS

Miss Nancy I. Thompson, State Normal School, Newark, N. J., led the round table which convened directly after the joint session of high school and normal school librarians.

Mr. O. S. Rice, state supervisor of school libraries, Madison, Wis., was the first speaker. He outlined in a most interesting way the history of the compilation of a pamphlet, entitled "How to use the school library." This may be purchased for fifteen cents, from the State Department of Education in Madison. He argued that just as a teacher is not expected to teach geography without a textbook, so a teacher who is to give instruction in the use of a library should be equipped with a proper textbook. Hence the little book issued by the state of Wisconsin. These lessons are a part of the course of study. Dur-

ing the discussion that followed, many tributes as to the usefulness of this pamphlet were brought out. The desirability of any course of instruction being required as a part of the curriculum was emphasized.

Upon request, Miss Ursula K. Johnstone reported an innovation in library training installed by the Board of Education of New York City. The class was organized in September, 1915, in the Bay Ridge Evening High School for Women, Brooklyn. The school is one especially devoted to vocational branches for women, including courses in domestic science and nursing. The evening class in library training offers an opportunity to young women who cannot afford to give up a day time position to take the regular library course in a library school. The course is two years, four evenings a week.

Mr. Willis H. Kerr, librarian State Normal School, Emporia, Kansas, described what that school does for the school libraries. During the discussion that followed, the need of advertising the work done in normal school libraries was brought out. Albums and scrap-books were suggested as an excellent means of revealing the good work done in many schools. Mr. Kerr made a motion (which was duly seconded) that the N. E. A. committee on normal schools be authorized to form an outline of subjects for these scrap-books and that a request for the compilation of such books be asked of the schools. The motion was carried.

The final note of the round-table meeting was, that to make instruction in the use of a library effective, to place it where it belongs, and to give it its due value, the instruction should be a part of the curriculum.

Ursula K. Johnstone, *Secretary*.

#### CHILDREN'S LIBRARIANS SECTION

"The fact is that we are all and always asleep through our lives, and it is only by pinching ourselves very hard that we ever come to see or understand anything. At least it is not always we who pinch ourselves; sometimes other people pinch us, which I suppose is very good of them."

This quotation from Ruskin with which Miss Shedlock prefaced her paper, may well be used in speaking of the first session of the Children's Librarians Section. The meeting was held in the Auditorium, Wednesday evening, June 28, Miss Andrus, the chairman, presiding. Persons well known in the library world had been invited to speak, the subject being "Critical comments on library work with children."

Dr. Bostwick, of St. Louis, read a short paper in which he made a plea for the services of men in children's rooms. He thinks the work would be greatly strengthened if men as well as women participated in it.

Mr. Legler, of Chicago, in an interesting paper, propounded some pertinent questions as to the efforts and accomplishments of library work with children. The problem of selection of books he considers of first importance, and of secondary importance the question of methods. Some of Mr. Legler's points of criticism were: Too many books written especially for children; too many abridgments and compressions of masterpieces. "If the library of the twentieth century is to be a greater force than it has thus far been in the intellectual life of the people, and is to realize its possibilities in the cultural as well as the utilitarian development of the common life, the impulse must germinate in the children's rooms. And herein lies the potency and the worth that gives character and meaning to the efforts put forth, gropingly, maybe, but charged with that spirit which shall in the ultimate reach their purpose."

Mr. Bowker, in an unwritten talk, said that Miss Plummer's presidential address had given him the text that ignorance and fear were the great danger. While the ignorance of adults was positive and aggressive, that of children is passive and inquiring, and their inquiries often remind one of the quivering antennæ of insects seeking information. This gave the opportunity of the children's librarian. As to fear, he deprecated such story-telling as implants fear in the child's mind, illustrating the danger by specific instances. He concluded by reference to the current of inspiration which, starting with Dr. S. G. Howe as the apostle for the blind, through Mr. Anagnos and Miss Sullivan, produced Helen Keller and her radiating influence. He said that a like apostolic succession was to be found in children's librarians' work as initiated by Mrs. Saunders, taken up by Miss Hewins, continued through Miss Helen More, of the University Settlement Library, from whom Annie Carroll Moore directly received her inspiration, which has in turn influenced so many children's librarians.

Miss Marie Shedlock, of London, in a delightful paper, gave some valuable criticisms. She spoke of the tendency to treat reading as a virtue rather than as a privilege, and of the possible danger of making a fetish of reading.

Speaking of a librarian's imposing her own personality, she said: "I do not think a libra-

rian should in any way *force* her love for any particular book, or her dislike." She quoted from an article on education by Bertrand Russell, "Children are more or less at the mercy of their elders, and cannot make themselves the guardians of their own interests. Authority in education is to some extent unavoidable, and those who educate have to find a way of exercising authority in accordance with the spirit of liberty." Following these papers there was discussion from the floor, after which Miss Shedlock told a story, "The two frogs."

At a brief business meeting held in the Auditorium Friday morning, the following officers were elected: Chairman, Alice Jordan, Boston Public Library; vice-chairman, Alice L. Hazeltine, St. Louis Public Library; secretary, Rose Gymer, Cleveland Public Library; advisory board, R. R. Bowker, LIBRARY JOURNAL, and Miss Edith Tobitt, Omaha Public Library.

The second session, a round table led by Miss Hewins, was held in the ballroom of the New Monterey on Friday afternoon. Miss Crain, of Somerville, spoke on training for children's librarians in small libraries, and Miss Donnelly, of Simmons College, on the opportunities offered children's librarians by the summer school courses at various schools. Miss Zachert, of Rochester, speaking of children's librarians as social workers, said that fifty per cent. of their time ought to be spent outside of the children's rooms.

Other topics discussed were co-operative book lists and fines. Those taking part were Mr. Rush, of Des Moines; Mr. Wheeler, of Youngstown; Mrs. Root, of Providence; Mr. Sherman Williams, of New York State Library; Miss Hassler, of the Queens Borough Public Library, New York; Miss Moore, of New York, and Miss Hewins.

Miss Shedlock kept her promise to tell another story and the session then adjourned after sending this message to Miss Plummer, president of the American Library Association:

The Children's Librarians Section gathered in final session at Miss Hewins' Round Table sends affectionate greetings to the honored president. They desire to express their grateful appreciation of her early recognition of the library's part in the education of children and her valued contributions of which Mr. Chapman's inspiring paper on children's reading is one more reminder.

JESSIE GILLIES SIBLEY, *Secretary.*

#### ROUND TABLE ON DECIMAL CLASSIFICATION

The D. C. round table held a lively session Wednesday evening. There was a good deal of discussion of the weak points of the various

classes of the D. C., many of which cannot be remedied now.

The only official action was the passing of a resolution expressing the sense of the meeting that the great need was a thoroughly revised, moderate-sized edition of the D. C., about the size of the sixth edition, but brought up-to-date and more evenly expanded. The frequent issue of new and expensive editions unduly expanded in certain subjects, and these not always the ones in which expansion is most needed, was deprecated. In place of these new editions which put an unnecessary burden upon libraries and library schools, it was recommended that schedules beyond the standard edition described above should be issued in pamphlet form.

Attention was called to the need of a new abridged edition, giving special attention to the needs of high school libraries.

The desirability of having numbers assigned to new subjects as the need arose, these numbers to be published in library papers was discussed, and many such subjects were mentioned for which no provision had been made, even in the latest edition.

Dr. Andrews presided and Mr. Voge acted as secretary.

#### EUROPEAN WAR CLASSIFICATIONS

The new D. C. advisory committee of the A. L. A. met and organized at the Asbury Park conference. Several lines of work were laid out for the year, but it was decided to begin at once on a subdivision of the European War (940.913 in the 9th edition of the D. C.). All who have worked out a scheme for this war, whatever the notation, are invited to send a copy to the committee's secretary, A. L. Voge, Mechanics' Mercantile Library, San Francisco, Cal., or to Charles A. Flagg, Public Library, Bangor, Me.

#### ROUND TABLE OF MUSEUM LIBRARIANS

An informal round table of museum librarians was held in one of the writing rooms of the New Monterey Hotel on Thursday, June 29, at 11 a. m., William H. Clifford, of the Metropolitan Museum of Art, New York, in the chair. Present: the librarians of the Metropolitan Museum of Art, New York; the Grolier Club, New York; the Brooklyn Museum and the Children's Museum, Brooklyn; the Chicago Art Institute; the Cleveland Museum of Art; and representatives of Princeton University and Boston University.

This is the first time that a meeting of museum librarians has been held, and it was arranged because of the feeling of the desira-

bility of a conference of librarians whose point of view was that of museum interests.

Some of the subjects discussed were:

What is your relation to other libraries in your city, and are your purchases influenced by books in other collections?

In what subjects are your book collections specially strong?

Do you make a special effort to attract museum visitors to the museum library?

Do you lend?

Need of a bibliography of fine arts in English.

Need of an index to pictures in books.

How do you treat exhibition catalogs?

The session proved so profitable that it was decided to repeat it at a future A. L. A. conference.

#### PUBLIC DOCUMENTS ROUND TABLE

The Public Documents Round Table was held Friday morning, June 30, in the New Monterey ballroom under the chairmanship of George S. Godard, state librarian of Connecticut. The feature of the morning was the presence of George H. Carter, clerk of the joint committee on printing and his reading of the paper modestly entitled "Some observations on the status of the printing bill, especially as it affects the interest of librarians in government publications." Mr. Carter's paper showed the great progress which would be secured by the passage of the pending bill and stated that some of its provisions had already been accepted in practice by the document authorities. The bill had received favorable consideration, at different sessions, by each House of Congress, but had not been passed by both houses at the same session, and it was unlikely to receive final consideration this year. He pointed out the difficulties in satisfying every requirement of the libraries, but indicated the willingness of the joint committee to act favorably as far as possible on the desires of the association.

His paper was most favorably received and on motion by R. R. Bowker, seconded by H. J. Carr, a vote of thanks was passed to Mr. Carter for his admirable presentation of the question and to the joint committee on printing for their receptive courtesy as to the desires of librarians.

The other important feature of the morning was a paper of "Observations concerning government publications as they are and as they should be," by Miss Edith E. Clarke, now of Auburn, N. Y., whose long experience in the office of the Superintendent of Documents and as a cataloger and teacher in this

special field gives her criticisms weight. She said that she desired to present suggestions on the way to Utopia, but emphasized practically the importance of separate publication in a single edition of each public document, with its individual title page giving the specific bureau as author, and deprecated the confusion and delay resulting from numbering department publications as part of the congressional series. The following is the outline of desiderata presented in Miss Clarke's paper:

*A. Recommendations as to Methods of Publication*

Government publications to be made easy to understand, easy to handle, and duplication for form only to be stopped, by adopting the following four rules:

1. Only one edition of any publication.
2. Exclusion from the two series, Senate Documents and House Documents, of publications of the executive and judicial branches of the government, and these two series to be made up of only the smaller miscellaneous papers on Congressional business, too small to be made independent hooks or pamphlets.
3. In every branch of the government, including Congress, everything important and large enough to be published as a distinct and separate work, either in paper covers or as a bound book, to be so published. No works to be tied together into a series, whether as documents, bulletin, circulars, papers, or by any other series name, unless they fulfill the three following conditions, namely: (1) all to be issued by the same government body; (2) all to have the same general subject material or purpose; (3) all, or almost all, to be so small as to make it convenient to bind several together to make a volume.
4. Duplication caused by reprinting of sub-reports with the report of the higher office, as, for instance, bureau reports as appendixes to department reports, etc., to be minimized by exclusion of sub-reports from the report of the higher office and separate publication of the former, so far as possible, as has been done with the report of the Bureau of Education. Desirably the department report should have appended to it a list of all subordinate bureaux whose reports for the year have been published.

*B. Recommendations as to Administration*

1. The indexer of the *Congressional Record* to be trained in subject indexing.
2. (The Superintendent of Documents is to be made a Presidential appointee. This will make the position more a political appointment than ever. In the twenty years since the establishment of the office, there have been as many as six Superintendents of Documents.) In view of this, the librarians to make a concerted effort to induce the President to ignore political influence in filling the office; to require in the appointee qualifications and some kind of experience the equivalent of those demanded in the librarian of a large public library; and to give him the same continuous tenure that is accorded the Librarian of Congress.
3. An editorial board of government publications to be created on the lines of the recommendation of the Commission on Economy and Efficiency, to meet annually or quarterly, or as is needed. This board to include the Superintendent of Documents, another representative of the Government Printing Office, a representative of the Joint Printing Committee, a representative or representatives of the executive departments, and, as chairman, a person of large experience in printing and publishing who shall not be a government official.

*C. Recommendations as to Distribution*

1. Distribution by members of Congress, a survival from an earlier period when there was no Documents Office, to be now relinquished by Congress to that office, created expressly to be the

central agency for distribution, as soon as Congress can be won over to this action.

2. This one of the three agencies of free distribution being thus out of the way, and only that to known persons and for cause by the publishing body being left, the Documents Office to assume its full operation as sole distributing agent on the basis of sale to individuals and free gift to libraries open to the public. At present, the libraries are banded about between the three agencies of distribution, and frequently pay for publications, and have to resort to many expedients to get all the copies they need for use. The Documents Office to be given such control over the edition as to be enabled to answer the needs of the libraries till the last copy is given out.

3. Greater provision for distribution to non-depository libraries through this office.

4. Greater elasticity in distribution of different publications as (a) to different parts of the country and different libraries; and (b) in number of copies supplied as requested for needed use.

5. A depository of public bills and resolutions to be provided, presumably best in the Documents Office, where such bills may be obtained for a certain period, say till the next Congress, by debaters, and others interested in them.

A discussion was opened by R. R. Bowker who took occasion to thank Mr. Carter for the approach to the millennium through the pending bill and to Miss Clarke for her closer approach to Utopia. He spoke of the remarkable progress in government publication since the early days of the A. L. A. when the chronological catalog of government publications by Ben Perley Poor was the only guide to recent government issues, and cited the summary of desiderata for U. S. public documents presented by the A. L. A. committee under his own chairmanship in 1891, of which so many points had already been covered. He also emphasized the desirability of a separate publication of department issues with individual title pages as against too comprehensive inclusion in Congressional series.

Miss Adelaide R. Hasse was called upon to present her point of view and humorously alluded to the difficulties of publication and cataloging in this field. In referring modestly to her own remarkable bibliographies of state publications, she illustrated the difficulties by instancing W. N. Seaver's painstaking and excellent work in bringing order out of chaos as to the publications of the University of the State of New York, which alone required two years' labor—and then he resigned!

*THEOLOGICAL LIBRARIES ROUND TABLE*

One of the new features in connection with the Asbury Park meeting of the A. L. A. was the theological libraries round table. This was due to the initiative and co-operation of Secretary Utley of the A. L. A. and Dr. Frank G. Lewis, librarian of Crozer Theological Seminary, Chester, Pa., both of whom had sought to arouse interest in such a conference, and had made the plans for it.

The attendance was gratifying to all who were interested. Twenty-seven persons gathered in the palm room of the New Monterey, Friday morning. Many of them had come specially for this round table. They represented twenty different libraries, of which eight were libraries of theological seminaries, seven were libraries of colleges and universities in which theology is a department, two were independent, interdenominational libraries of religious literature, two were public libraries, and finally there were two representatives from the Library of Congress, who expects to classify theology soon. This seemed to indicate a widespread interest that was almost as surprising as it was gratifying to the promoters of the conference.

The opportunity of getting acquainted was, of course, one of the most highly appreciated features of the conference, and much was made of it. Every one was introduced, or introduced himself, to the others present, and for many the best part of the meeting was the informal part when all were free to engage in conversation. Dr. Lewis and Dr. Robinson, librarian of the Philadelphia Divinity School, had anticipated this by calling an informal meeting of theological librarians the preceding day for the express purpose of getting acquainted.

Of the subjects discussed perhaps the one that aroused most general interest was that of the classification of a theological library. About one-third of the libraries represented were using the Dewey decimal system with varying degrees of satisfaction and varying degrees of modification. In view of the great diversity of opinion regarding classification it was thought best to appoint a committee to investigate the whole subject of the classifications in use in theological libraries and the satisfaction given, the report and recommendations to be given at the next round table conference, one year hence. Miss Julia Pettee, head cataloger of Union Theological Seminary, New York, who has already done valuable service in this direction was made chairman of this committee.

A resolution of appreciation and expression of willingness to co-operate was given to Dr. Gates, librarian of the Andover-Harvard library in the special work that he has undertaken of making a union list of the Bibles of the country.

The discussion of the desirability of a union list of the denominational periodicals on file in the various libraries brought out the welcome information contributed by Prof. Root, librarian of Oberlin College, that the H. W.

Wilson Co. is preparing to publish a union list of the files of the periodicals of the whole country, and that later they plan to bring out local union lists.

Among the other subjects discussed was that of the co-operative indexing of material not now indexed. It was soon discovered that there was a vast amount of this work being done independently by the various libraries and the problem which has not yet reached a satisfactory solution is how to make this available generally.

Miss Hering, librarian of the Missionary Research Library, New York, was asked to tell about this, perhaps the youngest of the libraries of religious literature; and Prof. Keogh, librarian of Yale University, and Miss Monrad were also requested to tell of the similar library at Yale. The General Theological Library at Boston, of which Miss Mary M. Pillsbury is the librarian, came in for much favorable comment. It was pointed out that the quarterly bulletins of this library afford one of the best means that a public library can use in selecting popular, modern religious literature. A strong desire was expressed by those from the Middle West for a similar library to be located at Chicago, which as an interdenominational agency would send out books on easy terms to ministers and other social and religious workers, especially those in the rural localities.

It was felt by all present that this round table conference should be continued, so the temporary officers were made the permanent officers for the ensuing year. They are the Rev. Frank G. Lewis, Chester, Pa., who has already done so much for the conference, for president, and Rev. John F. Lyons, librarian of McCormick Theological Seminary, Chicago, secretary.

JOHN F. LYONS, *Secretary*.

#### LEAGUE OF LIBRARY COMMISSIONS

At the sessions of the League of Library Commissions, June 28-30, the following states were represented by one or more members of their commissions or commission staffs: Colorado, Connecticut, Delaware, Illinois, Indiana, Iowa, Kentucky, Maine, Maryland, Massachusetts, Missouri, New Jersey, New York, North Carolina, Ohio, Pennsylvania, Rhode Island, Utah, Vermont, Wisconsin.

At the first session, on June 28, Miss Mary L. Hopkins, Delaware, told of the book wagon delivery of books in Sussex county, undertaken under the auspices of the State Library Commission in the spring of 1912. The county covers 964 square miles and is covered during

in the spring, summer, and fall by various trips, some by automobiles and some over roads that necessitate a horse and carriage. In the winter, the books are placed in rural schools under the care of the rural school teachers. In the four years the work has developed remarkably, so that the librarian now boasts that she always leaves at least one book at every house. Miss Hopkins's paper was full of interesting anecdote which made it greatly enjoyed. Other counties in Delaware are doing similar work. In the discussion which followed Miss Titcomb, on request, told again of her work in Washington county, Delaware, and Mr. Sanborn, of Indiana, told of the house to house delivery of books by automobile just being undertaken by Plainfield, Ind.

"Conducting library institutes," was the subject of a paper by Asa Wynkoop, of New York, which was read by Miss Caroline Webster. Mr. Wynkoop outlined the growth of the library institutes in New York State from their origin in 1901 as a result of the realization on the part of the state library association that "Library week" was reaching only the larger libraries of the state. The state was first divided into eight districts, and the response was immediate and satisfactory. After four years of these meetings planned by the Extension Division and the committee of the State Association, it was decided to increase the number of districts to thirty and to allow each district to choose its own topics of discussion. This revised plan was followed for eight years. There was a feeling, however, that the lack of system in forming these programs was not leading to as definite results as were desired and in 1914 a fixed program for four years was decided upon and the number of meetings reduced from thirty to twenty. Some member of the Extension Division and some other conductor are present. The state provides an equivalent of \$500 a year and the State Library Association from \$150 to \$200 a year for the expense of these meetings. Miss Robinson, of Iowa, and Mr. Sanborn, of Indiana, explained the plan of the district meetings in their respective states.

Mrs. Elizabeth Claypool Earl, president of the Indiana Commission, next spoke on the value of the organization of library trustees. Mrs. Earl showed the effect which the trustees' association had had in educating trustees to a fuller sense of their responsibility to the community, the establishing of better understanding of the relation between the library trustees and the librarian, the improvement in salaries, vacations, and hours of library workers, and a wider interest in library affairs

in general. Miss Robinson, of Iowa, told of the interest which the library trustees in Iowa took in the district meetings.

The program of the afternoon was concluded with a paper by Miss Mary Elizabeth Downey, of Utah, on "Library and school cooperation in Utah." The library affairs of Utah are under the control of the State Department of Education, and in that state this situation has been of great advantage to the libraries because they have had the backing of the teachers in all library movements. Wherever there is a public library, the school library books are turned over to the public library and the school funds for the school library are turned over to the public library for the purchase and care of the children's books. A system of requiring the reading of a book every two weeks throughout the grades with a total of 100 books at the end of the 8th grade and 200 books at the end of the high school course, is training up a class of readers through the efforts of the school. At the state capitol, there is maintained a very adequate model school library which lends books throughout the state. A fifteen-cent per capita expenditure for books for each child of school age is the law, which greatly helps in the work with school libraries. Teaching the use of the library to the pupils is also a part of the program. Miss Downey also advocated the use of school buildings as branches of the public library. Miss Downey called forth considerable discussion as to the relation between the public library and the schools. Mr. Bliss, of Pennsylvania, felt that the libraries did all of the co-operating and that state library commissions should not be called upon to work with the school libraries, and that the school was not a suitable place for a public library. Mr. Galbreath, of Ohio, voiced the opinion that there was a great opportunity in the school libraries of the state and that the state library authorities could do much by working with them. Willis H. Kerr, of Kansas, showed how the public library and the school library could complement each other, and that there was a field for both. Discussion became somewhat lively and had to be terminated by adjournment.

#### SECOND SESSION

At the second session on the afternoon of June 30, Mrs. Minnie C. Budlong, of North Dakota, was to have reported on the field work of the library commission as outlined by the library survey, but the survey was not complete and Mrs. Budlong was neither able to be present nor sent a report. Franklin K.

Mathews, librarian of the Boy Scouts, made a very brief address leading to the request that the league take some action toward making the week of December 4 to 9, which has been settled upon by the Boy Scouts as "Good Book Week," a "Library Week" in all the libraries of the country. On the motion of Mr. Bliss, of Pennsylvania, it was resolved that the league suggest to the libraries of the country, through the various library commissions, that the first week in December be observed as "Library Week." Miss Downey, of Utah, amended the motion to the effect that a committee of the league be appointed to work out programs and suggestions. Mr. Bliss accepted the amendment and the resolution, as amended, was carried. Miss Downey, of Utah, and Mr. Bliss, of Pennsylvania, were appointed a committee to attend to this.

Miss Anna A. MacDonald, of Pennsylvania, took charge of a round table on traveling library problems. Miss Mary L. Titcomb, of Hagerstown, Md., discussed the possibility of library commissions giving all round library service through traveling library centers. This could only be met, she said, by the employment of a field agent who could familiarize herself with each community served. This would mean an increased staff and increased expenditure. She raised the question, however, as to whether the traveling library in its very nature is anything but a stepping stone toward the formation of a public library, and the conclusion was that the primary purpose of the traveling library was to promote a desire for a library for the community. Considerable discussion followed as to the statement that country readers were unable to understand books of the same grade as city readers. Several suggested that children's books were constantly used among the adults in rural communities.

Miss Lease, of Vermont, spoke of the character of traveling library collections from the experience of the Vermont Commission.

In the absence of Miss Elizabeth B. Wales, of Missouri, the secretary read her suggestions on how to make up traveling libraries. Although she advocated as much elasticity as possible in making up library collections, she found it necessary in practice to use fixed collections and she explained the various classes used in fixed collections in Missouri. She makes it a rule that fiction should never be more than forty per cent. of the collection, and that of twenty novels, five should represent standard and fifteen current fiction. The borrower who wishes books on a specific topic may receive additional books on request.

In the discussion, Mr. Watson, of New York, said that special study clubs were not supplied with free traveling libraries, but were charged a fee of \$1, and were required to devote a certain number of meetings to the subjects on which books were loaned. Mr. Dudgeon, of Wisconsin, felt that the study club work was one of the most important sides of traveling library work, and that no restriction should be placed upon it. Mr. Bliss said that although study club books were borrowed free in Pennsylvania, it was understood that these books must be free to all the inhabitants of the community.

"Making a station a success" was first discussed by Mr. Dudgeon, of Wisconsin. The Wisconsin Commission finds the post office or some place of business where everyone goes, the best place for a traveling library station, and the school not, as a rule, the most desirable place for a station. When a library is sent to a station, four copies of the list of books are enclosed, one for the principal of the school, one for the editor of the local paper, one to be posted by the station librarian, and one for the librarian to keep on file. This has proved effective publicity. Miss Hopkins, of Delaware, felt that the personal touch gained by the book wagon was the most effective means of bringing the reader and the book together. Mrs. Belle H. Johnson, of Connecticut, told of the Connecticut book wagon and its trips in five towns in Connecticut that are without public libraries. This is intensive rather than extensive work of the commission, and, of course, reaches only a small part of the state, but it has resulted in the establishment of a public library in a town where such a library did not seem possible. In the discussion, the question was raised as to the advisability of a state, with a small appropriation, spending money on a restricted field. This brought up the question of visiting traveling library stations. Mr. Bliss, of Pennsylvania, felt that every station should be visited as far as possible, and both Wisconsin and Indiana questioned the possibility or even the advisability of attempting to visit several hundred stations except under very special conditions. It was necessary to adjourn the meeting at four o'clock, and omit the discussion on giving definite library help through special collections and other general reference calls, which were to be discussed by Miss Robinson, of Iowa; Miss Campbell, of Massachusetts; Miss Leatherman, of North Carolina, and Miss Jones, of Massachusetts.

HENRY N. SANBORN, *Secretary.*

## AMERICAN LIBRARY INSTITUTE

The executive board of the American Library Institute held a business meeting in the New Monterey June 28, concerned with details of nominations and the publication of the Proceedings. It was agreed that union lists and similar matters too bulky or not well suited for inclusion in Proceedings or Appendix to Proceedings should be published separately as a series of monographs, the first of these to be Mr. H. S. Leach's analysis of Collections of English drama. The union list of these collections will, however, be included in the volume of Proceedings.

## BIBLIOGRAPHICAL SOCIETY OF AMERICA

The meeting of the Bibliographical Society of America was called to order by President Roden in the palm room of the New Monterey on Thursday evening. In the absence of the secretary, A. G. S. Josephson acted in that capacity.

The treasurer presented his report, and the report of the publication committee for the years 1914-16 was read by title and referred to the Council. Two amendments of the constitution were adopted. In Article III the words *a librarian* were struck out and the words "an editor" substituted in the first sentence, which now reads as amended: "The officers of the society shall be a president, two vice-presidents, a secretary, a treasurer and an editor." The reason for this first amendment was a desire to have the library permanently deposited in some library willing to take care of it, while it seemed inexpedient to have the librarian of such library as permanent member of the Council. On the other hand, an editor, as member of the Council, seemed desirable. The selection of an editor was left to the Council.

In Article VI, the words italicized below were struck out in the sentence "All fees of life members, together with such other sums as may be given for the purpose, shall be set aside as a *permanent fund, the income only of which shall be used.*" In their place the following was substituted: "Publication fund to be used to defray the cost of publications of the society authorized in accordance with Section 8 of the by-laws, and all proceeds from the sale of such publications shall be added to said publication fund."

Reason for this second amendment was the conviction that the life membership fund probably would not for a long time be large enough to yield any considerable income to the society, whereas as a publication fund it would be a valuable aid in the issuing of special publications.

The following papers were then read by the authors:

"Bibliography in relation to business and the affairs of life," by H. H. B. Meyer, chief bibliographer, Library of Chicago.

"Bibliographical problems, with a few solutions," by George Watson Cole, librarian of Henry E. Huntington.

"Some problems in the scientific cataloging of medical incunabula," by Arnold C. Klebs, M.D., Washington, D. C.

The nominating committee, consisting of Aksel G. S. Josephson, Andrew Keogh and Azariah S. Root, presented the following report, which included three councilors, there having been no meeting of the society in 1915: For president, George Watson Cole, librarian, Library of Henry G. Huntington; first vice-president, Frederick W. Jenkins, librarian, Russell Sage Foundation Library; second vice-president, Clarence Brigham, librarian, American Antiquarian Association; secretary, Henry O. Severance, librarian, University of Missouri Library; treasurer, Frederick W. Faxon, Boston Book Company; councilors: one year to fill out the term of the late Luther S. Livingston, George Parker Winship, librarian of the Widener Collection, Harvard University Library; two years, Charles Martel, chief, catalog division, Library of Congress; three years, Henry Morse Stephens, University of California.

There being no further business before the society, the meeting adjourned.

## COUNCIL MEETING

The Council met on the 30th of June. Present: Messrs. George Watson Cole, in the chair; Frederick W. Faxon, Charles Martel, Carl B. Roden, and Aksel G. S. Josephson, acting secretary.

On the motion of Mr. Roden, Mr. Josephson was elected editor.

The following committees were appointed:

*Membership*—Frederick W. Faxon, Aksel G. S. Josephson, Henry O. Severance.

*Program*—George Watson Cole, Clarence Brigham, the secretary, *ex-officio*.

*Publications*—Carl B. Roden, Andrew Keogh, George Parker Winship.

The accompanying report of the publication committee was presented, and it was voted to reprint this report from the papers in an edition of 500 copies, to be sent out with the circular of information.

The Council then adjourned.

## REPORT OF THE PUBLICATION COMMITTEE

During the last two years, since the appointment of the present committee, five parts of

the *Papers* have been issued, namely, the three double numbers for July-October, 1914, January-April and July-October, 1915, and the numbers for January and for April, 1916. The number for July, 1916, will contain the papers read at this meeting, and the October number a brief treatise, "Elements of bibliography," by Louis N. Feipel, and the first instalment of a bibliographical contribution, "The literature of the invention of printing, a chronological check-list," by Aksel G. S. Josephson.

The committee has taken under consideration the selection of one or two main lines of publication and found two fields which it seems well that the society try to cultivate. One of these, sketches, with bibliographies, of the principal book clubs of America, has already been entered, through the account of "The Club of Odd Volumes," by Percival Merritt. Other similar sketches, supplementary to Groll's "American book-clubs," will follow.

The other field is that of early American printing, especially western, which it is intended to take up both in general surveys by states and in monographs on individual printers. Some of the latter will undoubtedly be too large for issue in ten *Papers*, and would have to be published as separate volumes.

The society has now in hand for publication a work that is the outcome of a suggestion made by the society to the author some years ago, namely, "Bibliographies of English philology," by Clarke S. Northup, as already announced in the January and April numbers of the *Papers*.

The paper read at the meeting in Chicago, Dec. 30, 1915, on "Foundations of Slavic bibliography," by Robert J. Kerner, was found to be of unusual interest and has, therefore, been reprinted in a limited edition. Copies have been sent to the principal journals devoted to or dealing with Slavic literatures, languages and history, and the instructors in these special lines at American and English universities and colleges have been specially circularized.

It is planned to issue in a similar edition the treatise on "Elements of bibliography," previously mentioned, and copies in proof are being submitted to the faculties of library schools in an endeavor to interest them in the publication of the work.

Last year the committee made arrangements with the late John Thomson to have the material for the List of incunabula in American libraries, on which the latter had been at work for several years, turned over to the society; these arrangements were completed and the material placed in the committee's charge be-

fore the death of Mr. Thomson. The only condition imposed by Mr. Thomson was that, in case of publication, full credit be given to the Free Library of Philadelphia. The material was first deposited in the Newberry Library, but is now placed in charge of George Parker Winship, at the Widener Library of Harvard University. It is in various stages of completeness, no part, however, being ready for immediate publication, both on account of the large number of additions to the list that will have to be made, only part of which is at present in hand, and also on account of the considerable changes of ownership of these books which have taken place during the last few years.

Mr. Winship has not yet had time to give the material any very careful study, but he has sent in a preliminary report in which he says: ". . . The incunabula list is clearly of very great value, and every effort should be made to secure funds for printing it. A list of fifteenth-century books in American libraries would make available a large body of material of which no library can hope to have a considerable proportion, and which most students ignore because they assume that it is not accessible. Only by means of such a list can this mass of widely scattered works be brought to the attention of those who might wish to use these books. . . . I have not yet made up my mind whether it will be wiser to try to print now or to wait for the—at present very uncertain—German General Catalogue. I am rather inclined to the opinion that the American list will have a longer life of usefulness if its production is delayed until it can refer to the German as well as the British Museum Catalogue. It could then be frankly an appendix to those fundamental works—a list of copies in America with notes of peculiarities and identifications of individual copies. This is what the list in its present form attempts to do, but it refers of necessity to a wider variety of authorities than would be necessary after the German work comes out."

The chairman is decidedly of the opinion that the publication of the list should be deferred until after the German catalog has been published. In the meantime, it might be well to prepare a brief list of incunabula of which no description has hitherto been issued and to send that list to Dr. Haehler, of the Prussian Commission, so that he may check up the titles of which he has no record. These books would then be described fully and the descriptions forwarded to Dr. Haehler for insertion in the *Gesamt-Katalog*.

AKSEL G. S. JOSEPHSON, *Secretary pro tem.*

NATIONAL ASSOCIATION OF STATE  
LIBRARIES

The conference of the National Association of State Libraries opened on Tuesday evening with the address of the president, A. J. Small of Iowa, on "State library activities in the United States." Because the facts and figures assembled for the address could not easily be got elsewhere, the association voted to print an amplified edition for distribution to libraries as a separate document.

Frank L. Tolman, reference librarian of the New York State Library, cited the experience of European libraries in war-time as a basis for his plea that American libraries might contribute to the mobilization of the nation for both peace and war, the mobilization of intelligence through wider and more essential library activities, particularly through the development of inter-institutional relations and loans. Demarchus C. Brown gave an informal talk on the most significant and interesting features of the literature of to-day. Waldo G. Leland, secretary of the American Historical Association, touched briefly on the need of adequate housing for archives and sketched plans for the ideal archives depot. The report of the public archives committee, H. R. McIlwaine, chairman, was made up as in previous years of news notes from the various departments of state archives. The reports of this committee for the last few years, supplementing its first report of 1910, which was a summary of then existing laws and conditions, constitute the only fairly complete survey of the treatment of public archives in the United States.

At the business meeting on Thursday morning, resolutions were passed expressing appreciation of T. L. Cole's interest in a bibliography of American statute law and urging such action as will enable the work to be begun at the earliest opportunity. The treasurer's report showed the financial condition of the association to be excellent. There are now 51 members, representing 28 states and the two Canadian provinces of British Columbia and Manitoba.

The following officers were elected for the year 1916-17: President, John P. Dullard, librarian, New Jersey State Library; first vice-president, Gilson G. Glasier, librarian, Wisconsin State Library; second vice-president, Frances A. Davis, librarian, Wyoming State Library; secretary-treasurer, Elizabeth M. Smith, State Library, Albany, N. Y.

Two meetings were held jointly with the American Association of Law Libraries.

ELIZABETH M. SMITH, *Secretary*.

AMERICAN ASSOCIATION OF LAW  
LIBRARIES

The eleventh annual meeting of the American Association of Law Libraries held June 27-29 at Asbury Park was one of the most successful and enjoyable in its history. Two separate meetings and two joint sessions with the National Association of State Libraries gave ample opportunity for papers and discussions of mutual interest.

President E. J. Lien, in his address, touched briefly upon three topics of current interest: the present activity in the gathering of literature on the subject of administrative law; the increasing use of legal periodicals made possible by the publication of the Index to Legal Periodicals and the desirability of a check list to legal periodicals; advance opinions of supreme court reports and how they may be obtained.

F. C. Hicks, law librarian of Columbia University, read a paper on "Instruction in legal bibliography at Columbia University Law School." This was followed by a similar paper by Frederick W. Schenk, law librarian of the University of Chicago. The discussion of these papers resulted in the appointment of a committee which will urge that courses of instruction in the use of law books and tools be made a part of every law school program.

The reports of the secretary and treasurer showed a prosperous condition of the association and give assurance of a vigorous continuance of its work.

A most interesting paper on "Problems of statutory indexing" prepared by Mrs. Agnes McNamara Munson to follow her article on the same subject, printed in the April *Law Library Journal*, was read by her husband, F. Granville Munson. It was peculiarly valuable in that Mrs. Munson was engaged in the preparation of the Index to Federal Statutes and the Index to New York Statutes, two of the most extensive statutory indexes attempted. Mrs. Munson was considered an expert in her special line and her recent death has removed a leading authority on the subject.

The report of the committee on legal bibliography was devoted principally to the Official Index to State Legislation which has been promoted during 1915 and which both associations are strenuously attempting to place on a permanent footing. It is an unusual undertaking and deserving of enthusiastic support. The proposed Bibliography of Session Laws and Statutes, which it is hoped will be undertaken in the near future by T. L. Cole, who has expressed his willingness to put into permanent form such infor-

mation as he has been able to accumulate during his busy life in the field of American statute law, was strongly supported, especially as the Carnegie Institution has shown an interest in its publication.

The report of Chairman T. L. Cole on "Symbols to indicate pagination of books" will be issued in pamphlet form for use of librarians interested in statute law.

A paper by Frank E. Chipman, president of the Boston Book Company, on "Australian law reports, official and otherwise," is a valuable contribution to the bibliography of foreign law.

At the joint sessions were read the following papers: "Economic conditions of the twentieth century," Dr. Clinton R. Woodruff, secretary National Municipal League, Philadelphia; "The Library of the Bureau of Railway Economics in its inter-library relations," R. H. Johnston, librarian Bureau of Railway Economics, Washington, D. C.; "Library by-products," Joanna G. Strange, New York Public Library.

The following officers were elected to serve during the year 1916-17: President, Luther E. Hewitt, Law Association of Philadelphia; first vice-president, C. Robertson, Winnipeg, Manitoba; second vice-president, Miss Mary K. Ray, Lincoln, Neb.; secretary, Miss Gertrude Elstner Woodard, University of Michigan, Ann Arbor; treasurer, Edward H. Redstone, Social Law Library, Boston, Mass.; executive committee: Gilson G. Glazier, Madison, Wis.; George S. Godard, Hartford, Ct.; C. Will Shaffer, Olympia, Wash.

The association passed resolutions of appreciation of the work of the officers of the American Library Association and of the local committee, which made its sessions not only profitable and successful, but extremely enjoyable as well.

GERTRUDE E. WOODARD, *Secretary*.

#### A LETTER FROM MISS PLUMMER

To *The Library Journal*:

Will you allow me to take this opportunity to express my warm appreciation of the many letters and telegrams expressing sympathy and giving encouragement, which I have received from friends and colleagues far and wide. It has almost been worth while to be incapacitated temporarily to discover how much of brotherhood and sisterhood lies latent in one's professional relationships. Regretting that all these messages could not be answered individually, I thank you for giving me the space for this general acknowledgment.

Sincerely,

MARY W. PLUMMER.

## Library Organizations

### MASSACHUSETTS LIBRARY CLUB

The 90th meeting of the Massachusetts Library Club was held at Marblehead and Beverly from June 8 to 10. The meeting opened on Thursday evening with a welcome extended by William D. T. Trefry, president of the board of trustees of the Abbott Public Library, Marblehead. Mr. Frank Broughton, trustee of the Abbott Public Library, spoke on "Historic Marblehead." At the close of the evening session President Coolidge called attention to an exhibition of booklists and other library material which Mr. Lowe, agent of the Massachusetts State Library Commission, had collected and placed on view in an adjoining room.

Frederick W. Jenkins, librarian of the Russell Sage Foundation Library, New York, spoke on "The joy of being ready." Mr. Jenkins considered that a library can meet the demands of its people if it knows its community and is ready with material and resources of the kind to answer modern needs. "The library," he said, "must not stand apart from its community but be a part of it, giving advice and help where needed and being as ready to accept it from any and all who are competent to give." Mr. Jenkins referred specifically to the need of understanding the problems connected with recreation, industrial conditions, the Americanization of the immigrant, the delinquent and the Coast Guard workers.

George H. Tripp, librarian of the Public Library, New Bedford, spoke on "How to get pictures and how to use them." There followed a group of ten minute talks by F. H. Chase, John G. Moulton; Miss Louise Stuart, Miss Effaline H. King, Mr. R. K. Shaw, and Miss Louisa M. Hooper.

"Decoration of children's rooms in public libraries" was the subject of a paper by Miss Mary L. Patrick, supervisor of manual arts, Wellesley public schools. Miss Patrick treated the problem in a concrete way by furnishing a diagram of a rectangular room with its furniture, light and book cases indicated. The decorations of the room were grouped and discussed under the three divisions of pictures, casts and pottery.

Miss H. Elizabeth White, librarian of the Public Library, Passaic, N. J., spoke on the topic "The high school library as a branch of the public library." Miss White's paper was printed in full in the "School and Library" supplement to the July LIBRARY JOURNAL.

During the afternoon the members of the club were entertained at the home of Dr. and Mrs. Harris P. Mosher, of Marblehead.

Miss Mary L. Lamprey, librarian of the Ames Free Library, North Easton, presented an interesting paper on "Some recent books worth while, particularly poetry." Miss Lamprey disclaimed any intention of making a complete or evenly balanced selection but preferred to enumerate and comment upon a number of books which she had found real joy in reading.

Samuel Hopkins Adams was very appropriately introduced by the president through the reading of a short extract from Mr. Adams' book "The Clarion." The subject of Mr. Adams' address was "The facts behind the news."

H. R. Hunting spoke briefly on "Some notes on bookbinding." Definite directions were given for the treatment of books with shellac. Mr. Hunting estimated that two thin coats of shellac would add twenty-five per cent. to the life of a book. The shellac provides, besides, a sanitary coating which will not spot. Mr. Hunting presented for inspection an earthenware jar, of his own devising, for holding shellac. To replace hand lettering on the backs of books the use of type was recommended. Sixty characters of brass type cost about \$6, and a complete equipment for using the type, including a vise for holding the book and an alcohol lamp for heating the type cost about \$12.

On Saturday morning special cars were provided for the ride to Beverly. The members of the club stopped for a few moments to look over the recently erected library building before proceeding to the First Parish House where the concluding session was held. Col. William R. Driver, president of the board of trustees of the Beverly Public Library, extended a welcome.

At the business session the following officers were elected: President, Miss Katharine P. Loring; vice-presidents, Miss Alice Shepard, George H. Evans, George P. Winship; secretary, John G. Moulton; treasurer, George L. Lewis; recorder, Frank H. Whitmore.

Miss Clara W. Hunt, superintendent of children's department, Brooklyn Public Library, spoke on "Library work with children: does it pay?"

In a paper on "What school boys like to read" Henry Howe Richards, librarian and teacher at Groton school, gave an admirable account of the conditions surrounding the use of books and the formation of the read-

ing habit as he had found them in a boarding school for boys. The compulsory reading of certain books has been abandoned at Groton, in favor of what is called a reading club. Under this plan a boy reads as much or as little as he pleases but he must periodically make an oral report on his reading, and he is ranked not only on what he has read but on his understanding of it. The result is that the boys read with greater interest and intelligence than under the previous system.

At the round table conducted by Miss Lucy B. Crain, chairman of the committee of five on children's work, Miss Bertha E. Mahoney made a statement about the book shop to be opened in Boston by the Woman's Educational Union. Miss Frances S. Wiggin and Miss Edith M. Pratt outlined methods of work with the schools. During the discussion on children's work Miss Gertrude H. Lockwood said she had found that the children of American parents are reading a poorer quality of books than children of foreign parents. Miss Hunt could see no necessity for trash in children's rooms. She regarded a careful selection, knowledge and enthusiasm for good books as highly important. Miss Alice G. Higgins, as chairman of the subcommittee on children's rooms, arranged for the distribution of a list issued under the title "Aids in selecting children's books."

At the close of the morning session luncheon was served in the First Parish House. Automobiles and barges were provided for a drive along the North Shore and after a visit to the recently erected branch library at Beverly the club was cordially welcomed and entertained at the house of the Misses Katharine P. and Louisa Loring.

FRANK H. WHITMORE, *Recorder.*

#### MAINE LIBRARY ASSOCIATION

The twenty-second meeting of the Maine Library Association was held at the Lithgow Library, Augusta, on Monday, May 15.

After the reading of the secretary's and treasurer's reports, Mr. Charles A. Flagg, librarian of the Bangor Public Library, delivered his address as president of the association. This address was referred to a committee on resolutions, which committee later presented the following report:

(1) We heartily coincide with the idea of school and library co-operation and especially the establishment of branch libraries in rural schools. Especial attention is called to the Lithgow Library, in Augusta, which has a fund of \$1000 bequeathed to it for the express purpose of providing books for rural schools.

(2) It is the opinion of the committee that the State Library should be housed in a building of its

own, and that immediate steps should be taken to secure this; and that the Blaine estate is an ideal place for its location.

(3) It is the opinion of the committee that the office of state librarian should be taken out of politics and that the salary should be increased sufficiently to make possible the appointment of a competent and efficient man. (The committee stated that it intended to make no reflection on the capacity or efficiency of the present state librarian.)

(4) We advocate a system of library inspection, graded in somewhat the same manner as the high schools of the state are graded, and that to the librarians of those small libraries maintaining a class A standard a certain per cent. of the state stipend should be paid.

(5) We recommend that the Library Commission be asked to provide for the publication of the minutes of the association.

(6) We believe that the entire time of a state library organizer is needed for the development of the libraries of the state.

Sections 1, 2, 3, 5 and 6 were approved by the association, and Sections 2 and 3 were favorably reported to the committee on legislation. The first part of Section 4 was endorsed and the second part referred to the committee on legislation for further consideration.

A paper on the "Library outlook in Maine" was presented by Mr. Dunnack, the state librarian. J. W. Taylor, of the State Educational Department, reported on school libraries. Miss Brainerd, of the State Library, gave the results of a recent library survey of the state.

Lunch was served at 1 o'clock by the trustees of the Lithgow Library.

At the evening session, Miss Mary E. Averill explained very interestingly the manner in which the Thompson Free Library of Dover gives instruction to young people in the use of books. The ninth grade as a class spends part of one forenoon each week in the library learning the use of the catalog, reference work, the care of books, etc., and this work is counted as a part of the school curriculum.

Discussion of a few of the recent books was led by Miss Alice C. Furbish, Portland Public Library, and Gerald G. Wilder, Bowdoin College Library. Rev. Eugene V. Allen, chaplain of the Maine State Prison, gave an account of the conditions under which he works as librarian for the prisoners. The closing address was by Miss Mary P. Farr, organizer for the Maryland Library Commission, who told of her experiences in pioneer library work.

A committee on library legislation was appointed by the chair and the following officers were elected for the ensuing year: President, Gerald G. Wilder, librarian of the Bowdoin College Library; vice-presidents, C. A. Flagg, librarian of the Bangor Public Library, and Julia Clapp, librarian of the Lithgow Library, Augusta; secretary, Marion Brainerd, State

Library, Augusta; treasurer, Edna Goodier, librarian Thornton Academy, Saco.

RALPH K. JONES, *Secretary*.

#### BAY PATH LIBRARY CLUB

The annual meeting of the Bay Path Library Club was held at the Jacob Edwards Library, Southbridge, Mass., June 13.

After a welcome by Judge John M. Cochran, and the usual business, Miss Alice G. Chandler of Lancaster gave a very interesting report of the M. L. C. meetings at Marblehead and Beverly, bringing helpful suggestions gleaned from the papers and discussions.

A round table of new books conducted by Robert K. Shaw of Worcester brought to the attention of the club many new books worthy of purchase.

In view of the unusual amount of money in the treasury, the suggestion was made that the executive committee consider the purchase of a traveling library to be administered with the co-operation of the Library Commission.

Mrs. Edward Holton James of Milton opened the afternoon session with a reading of Macbeth. Mrs. James has a wonderful ability to interpret Shakespeare, and she was very much appreciated by the club.

Owing to the absence of David W. Armstrong of the Worcester Boys' Club, who was to have spoken on "How the Boys' Club meets the need of the community," Miss Bell of the Worcester Public Library told of the work of the club, and gave a very interesting account of the co-operation between the club and library.

Miss Hazel M. Leach of the Worcester Art Museum told of the educational work for children at the museum. The work covers a very wide and unusual field, and the methods used were brim full of suggestions for librarians.

Officers elected for the year 1916-17 were: President, Madelene Bell, Worcester; honorary vice-president, M. Anna Tarbell, Brimfield; vice-presidents, Robert K. Shaw, Worcester, and Abby Shute, Auburn; secretary, Florence E. Wheeler, Leominster; treasurer, Grace M. Whittemore, Hudson.

FLORENCE E. WHEELER, *Secretary*.

#### CONNECTICUT LIBRARY ASSOCIATION

The Connecticut Library Association held its spring meeting with the Otis Library, Norwich, on June 15, in the Slater Memorial building, with eighty members present. A few words of welcome were spoken by Mayor

Allyn L. Brown, Francis J. Leavens and Gen. William A. Aiken, president of the board of trustees.

Dr. S. H. Howe's admirable paper on "The library and the community" was much appreciated and the five-minute talks on "Library adventures" were enjoyed, after which lunch was served at the Wauregan House.

During the afternoon session, Mrs. Elizabeth Woodbridge Morris read delightful sketches from her books "The Jonathan papers."

IMOGENE A. CASH, *Librarian*.

#### SOUTHERN WORCESTER LIBRARY CLUB

The Southern Worcester Library Club held its spring meeting on June 6, 1916.

Miss Grace W. Wood, of the Worcester Public Library, gave an excellent talk on "Recent books desirable for the public library." This was followed by a discussion of "Shakespeare in the library."

LUCY W. BISCOE, *Secretary*.

#### NEW YORK LIBRARY ASSOCIATION

The final plans for the program for the meeting of the association at the Bloomfield, Richfield Springs, September 11-16, are well under way. Several speakers of more than local prominence have promised to attend the meetings. A special attempt will be made to promote discussions of library problems of the state in libraries of all sizes and classes.

Among the general subjects to be treated are: Work with foreigners, book selection, relations of libraries and schools, and college libraries.

The very liberal special rates quoted in an earlier number of the LIBRARY JOURNAL are here repeated:

Single or double rooms without private bath, \$2.50 a day each person.

Single rooms with private bath, \$3.50 a day.

Double rooms with private bath, \$3.00 a day for each person.

A very few are available for parties of three or four at \$2.00 per person, and arrangements can probably be made for similar low rates outside of the main hotel.

All rooming arrangements are entirely in the hands of the manager of the Bloomfield, Hon. Allen J. Bloomfield, and all requests for reservations should be addressed directly to him and not to any of the officers of the association.

A preliminary circular will probably be in the hands of members of the association by the time this notice is in print. The fact that Richfield Springs has for many years been famous as a sanitarium is sufficient evidence of

its pleasant and healthful location. A local committee of arrangements is exerting itself to make the conference pleasant to every member of the association. All library workers, whether in the state or not, are cordially invited to attend. Those wishing to join the association in advance of the meeting should address the treasurer, Mr. William B. Gamble, 476 Fifth Avenue, New York City.

F. K. WALTER, *President*.

#### ILLINOIS LIBRARY ASSOCIATION

The 1916 conference of the Illinois Library Association will be held at Ottawa, Ill., on October 11-13. Announcement in greater detail will be made as plans for the meeting are further developed.

ERNEST J. REECE, *Secretary*.

---

### Library Schools

---

#### NEW YORK STATE LIBRARY SCHOOL

The graduation exercises of the New York State Library School were held in the school's lecture room in the State Education Building at 10:30, Friday morning. The address to the class was made by Dr. Arthur E. Bostwick, librarian of the St. Louis Public Library, scientific editor of the *Literary Digest* and president of the St. Louis City Club. At the close of the address by Dr. Bostwick, Mr. James I. Wyer, director of the school, presented the candidates for the degree of bachelor of library science to President John H. Finley, who awarded the degree to the following persons: Beulah Bailey, Troy, N. Y.; Ruth Lydia Brown, Montpelier, Vt.; Ralf P. Emerson, Detroit, Mich.; Mary E. Furbeck, Altamont, N. Y.; Gertrude Anna Hall, Endicott, N. Y.; Marguerite Biddle Haynes, Emporia, Kan.; Edna Morris Hull, Warren, O.; Leila Kemmerer, Davenport, Ia.; Max Meisel, Brooklyn, N. Y.; Ruth Dorothy McCollough, Franklin, Ind.; Katherine Acker Oberholtzer, Troy, N. Y.; Marian Price, Whitford, Pa.; Ethel A. Shields, Rochester, N. Y.; William Webb, West Chester, Pa.

Dr. Bostwick's general subject was "Two cardinal sins." These were the sins of duplication and omission. The whole world is out of joint because of them and the world will be relieved when useless duplication of effort is used to supply omissions in things which need doing. Many practical obstacles stand in the way of a proper adjustment, prominent among these obstacles being wide-spread ignorance of the true state of affairs. Dr. Bostwick stated that a broad equalization is

badly needed, like that which has made some progress in organizing the work of charitable institutions of the community. He then treated specifically the application of this principle of duplication and omission in public libraries and urged the class to keep in mind the many things which need doing and to insure their being done by omitting the things which now take undue time and energy.

After presenting the diplomas, Dr. Finley spoke briefly to the class. He spoke of the great map of New York state recently exhibited at the Pan-American Exposition in San Francisco. In this the libraries are represented by blue lights. He drew a parallel between the blue lights of the map and the symbolic blue flower of Novalis, whose possession brought happiness. Just as the blue flower when found showed within it a happy face, so, Dr. Finley stated, should the library blue flower, which the class were about to seek, have as its main feature not wealth but the happy faces of those to whom the library gave devoted service.

#### SUMMER SESSION

The summer session began May 31 and ended July 12. As stated in a previous number of the LIBRARY JOURNAL, two distinct courses of three weeks each were given. The first course was confined to bibliography and reference, and was conducted by Mr. Wyer, who treated the subject of government documents; Mr. Biscoe, who taught subject bibliography, and Mr. Walter, who had the work in elementary reference and trade bibliography.

The second course, extending from June 21 to July 12, dealt with the technical subjects of classification, cataloging, etc., and was conducted by Miss Hawkins, of the regular school faculty, and Miss Sabra W. Vought, who taught the work given for several years by Miss Fellows.

Twenty-eight different students were in attendance. In addition to those registered from New York state, students were in attendance from Arkansas, Illinois, Kentucky, Massachusetts, Michigan, Missouri, New Jersey, Tennessee, Vermont and British Columbia and Ontario. A list of the students and the libraries from which they came follows:

#### FIRST SESSION (May 31-June 21)

Brewer,\* Glenora A., librarian, Voorheesville Free Library.  
 Burke,\* Mary E., junior assistant, Worcester Free Public Library, Worcester, Mass.  
 Donnelly,\* Helen C., assistant, Nelson branch, Queens Borough Public Library, Long Island City.  
 Hagadorn,\* Elizabeth G., assistant librarian, Albany Free Library.

Haigh,\* Elsie L., assistant, Utica Public Library.  
 Haller, Chrissie H., first assistant, Lothrop branch, Detroit Public Library, Detroit, Mich.  
 Hefron,\* Josephine M., substitute assistant, Seward Park branch, New York Public Library.  
 Kent, Sadie T., librarian, Missouri State Normal School, Cape Girardeau, Mo.  
 Macdonald,\* Katharine A., substitute, Troy Public Library.  
 Merrill,\* Esther D., assistant, Bennington Free Library, Old Bennington, Vt.  
 Merry,\* Julia G., junior assistant, Schermerhorn branch, Brooklyn Public Library.  
 Morris,\* Jessie L., librarian, East End branch, Cossitt Library, Memphis, Tenn.  
 Pollitt,\* Jean A., assistant, Riverside branch, Free Public Library, Paterson, N. J.  
 Ridington,\* John, acting librarian, University of British Columbia Library, Vancouver, B. C.  
 Ringwood,\* Ona K. D., assistant, Ilion Free Public Library.  
 Schaffer, Olga S., assistant, Genesee branch, Rochester Public Library.  
 Shaw,\* Annie L., librarian, Institute branch Department of Agriculture, Ottawa, Canada.  
 Shiner,\* Elizabeth P., assistant, Gloversville Free Library.  
 Sigglekow, Alice M., librarian, Mount Kisco Public Library.  
 Weeks,\* Sophrona A., assistant librarian, Chatham Public Library.

#### SECOND SESSION (June 21-July 12)

Beckley, Clara M., assistant to librarian, Brooklyn Manual Training High School.  
 Ferguson, Mary Louise, reference librarian, Public Library, Little Rock, Ark.  
 Kahn, Mary C., librarian, College of Arts and Sciences, University of Louisville, Louisville, Ky.  
 Kemp, Frances E., librarian in charge Lake Forest Public Library, Lake Forest, Ill.  
 Nye, Frank Harrison, librarian (elect), Chazy (N. Y.) Central Rural School, Standish, N. Y.  
 Ryan, Mary R., librarian, Central School Library, Troy.  
 Smith, Mrs. Eugenia, librarian, William B. Ogden Free Library, Walton.  
 Summers, Mrs. Mary A., librarian, Moore Memorial Library, Greene.  
 Sutliff, Mollie, librarian, Cherry Valley Library, Cherry Valley.

F. K. WALTER.

#### CARNEGIE LIBRARY SCHOOL

The school was closed for recess May 29-June 3. A number of the students from the junior class, accompanied by Miss Waller I. Bullock of the faculty, spent June 1-3 visiting the Central and branch libraries of the Cleveland system.

Miss Ethel Pierce Underhill of the class of 1909, at present children's librarian of the Reuben McMillan Free Library, Youngstown, Ohio, gave a talk to the school May 18, on "Children's work in the Reuben McMillan Free Library."

A course of three lectures on "Bookbinding" was given to the junior class, May 24 and 25, by Mr. Arthur L. Bailey, librarian of the Wilmington Institute Free Library, Wilmington, Delaware.

Mr. William F. Ashe, superintendent of the Bureau of Recreation, Department of Public Works, Pittsburgh, lectured June 6 on the

\*Attended both sessions.

work of the bureau. This talk was given in connection with the opening of library work in the summer playgrounds, where each student in the junior class is scheduled for practice work during the summer term.

Entrance examinations for admission to the Library School, 1916-17, were held June 17.

Mr. Willis H. Kerr, librarian of the Kansas State Normal School of Emporia, lectured, June 22, on "The library of the Kansas State Normal School."

Thirteen students of the junior class attended the conference of the American Library Association at Asbury Park, N. J., June 26-July 1. The following Monday was spent visiting libraries in New York city and vicinity.

June 28, the annual dinner of the Library School was held at the New Monterey Hotel, Asbury Park, N. J. Thirty-five were present, including Mr. Craver, Miss Bogle, alumnae and students.

Examinations in order work, home libraries and work with schools were held June 24, July 5 and 8, respectively.

The school will close July 29.

#### ALUMNAE

Bessie May Painter, 1914-15, has resigned her position of children's librarian of the Public Library, Evansville, Ind., to accept the position of children's librarian of the Carnegie Free Library of Allegheny, Pittsburgh, Pa.

Marian Marshall Pierce, special student, 1914-15, has been appointed children's librarian of the Public Library, Flint, Mich.

Lilian Isabel Baldwin, 1908, died at her home in East Orange, N. J., May 22.

Bess Burnham, 1908, was married to John Lynn Miner, June 10, at Erie, Pa.

Gertrude M. Edwards, 1913, has been appointed children's librarian in the Public Library of Minneapolis, Minn.

Mary Robinson Moorhead, 1915, has resigned her position of children's librarian in the Public Library, Detroit, to accept a position in the children's department of the Carnegie Library of Pittsburgh.

Estella Slaven, 1914, has been made superintendent of work with schools, Public Library, Seattle, Wash.

SARAH C. N. BOGLE, *Principal*.

#### WESTERN RESERVE LIBRARY SCHOOL

The last few weeks of the school year included the out-of-town trips to Oberlin, Buffalo and to three nearby libraries, the trips combining both pleasure and profit for the students. The last two weeks before

Commencement were assigned to technical practice in various libraries. Four students were assigned to the new library in East Cleveland, two each to the College Library at Oberlin, the Normal School at Kent, the Public Library, Lakewood, the Western Reserve Historical Society Library, and the Art Museum Library; three each to the East branch and to the catalog department of the Cleveland library, and to the Shaker Heights Village school library; and one to the College for Women Library. This was an experiment, and one that was watched with interest by all concerned, the results assuring this as a feature of next year's schedule.

The director was in New York city for the meeting of the Federation of Women's Clubs in May, and spent some time in visiting other library schools.

It is with great regret that the school has had to accept the resignation of Miss Nelle C. White, who has been so well beloved as secretary during the last seven years, and who goes to another secretarial position in the East. The alumni luncheon toasts were one continual ovation to her, voicing both wishes for her happiness in her new work, and regret that the Library School is to lose her. The resignation of Miss Mary H. Clark as assistant instructor was also announced with regret.

The alumni meeting and luncheon was held on Monday of Commencement week, at which time the following officers were elected: President, Pauline Reich, 1913; first vice-president, Abbie I. Ward, 1912; second vice-president, Viola B. Phillips, 1914; secretary and treasurer, Emelia E. Wefel, 1911.

Tuesday brought the class together for a beach picnic at Edgewater park. Wednesday at the commencement of the College for Women the degree of B.S. was granted for the first time in the combined course of the College for Women and the Library School to Clara L. Angell, 1915; Ruth A. Brown, 1914; Helen B. Lewis, 1915; Louise Lewis, 1916, and Mildred C. McAfee, 1915.

Thursday, June 15, was the University commencement day, at which certificates were granted to the following candidates:

Ethel Florence Bowers.  
Mildred Irene Braun, A.B.  
Winifred Etta Brooker.  
Dorothy Alice Bray.  
Hazel Gertrude Caldwell.  
Nora Marguerite Webster Clark, A.B.  
Mura Moore Craine.  
Alice Wakefield Curtis.  
Rachel Byard Forbush.  
Louise Elizabeth Grant, A.B.  
Elizabeth Jane Herrington.  
Jane Isabel Kuhns.

Sarah Louise Lewis, B.S.  
Lillie Cecelia Lilliequist.  
Ida Charlotte Lucht, A.B.  
Florence Eliza Mettler, A.B.  
Anna E. Peterson.  
Adelaide Clarissa Rood.  
Helen Lorraine Shearer.  
Hortense Winifred Stetler.  
Blanche Ascham Swope.  
Blanche Mabel Tate.  
Helen Margaret Tattershall.  
Frances Tetlak.  
Harriet Pauline Turner.

## ALUMNI NEWS

Mabel Delle Jones, 1908, has withdrawn from library work for the present and has taken up life insurance work in Gallipolis, Ohio.

Thirza E. Grant, 1908, has resigned her position of reference librarian at Oberlin College to accept the position of instructor in the Western Reserve Library School for the year 1916-17.

Martha Sanborn, 1909, has resigned her position as librarian of Morningside College, Sioux City, Iowa, to take effect at the end of the school year. She will spend the coming winter in California.

Vera A. Price, 1910, librarian of the Public Library, Bucyrus, Ohio, has resigned her position to be married, and Clara L. Angell, 1915, has been appointed to fill the position.

Margaret Rusbatch, 1912, first assistant in stations department of the Cleveland Public Library, has resigned her position to accept a position in the Public Library, Portland, Ore.

Mildred McAfee, 1915, has been appointed first assistant in one of the branches of the New York Public Library.

Cards have been received announcing the marriage of Louise E. Bailey, 1915, to Gerald Henry Burgess of Minneapolis, Minn.

Violet Austin, 1915, has resigned her position in Buffalo, and is returning to her home in Honolulu.

## APPOINTMENTS

The appointments of the class of 1916 are as follows:

Mildred I. Braun, assistant, Public Library, East Cleveland, O.  
Hazel G. Caldwell, cataloger, Public Library, Lakewood, O.  
Mrs. Mura Moore Craine, children's librarian, North branch, Public Library, Minneapolis.  
Alice W. Curtis, assistant, Public Library, Davenport, Iowa.  
Rachel B. Forbush, assistant, Public Library, Oak Park, Ill.  
Louise E. Grant, children's librarian, Pillsbury branch, Public Library, Minneapolis.  
Jane I. Kuhns, reference assistant, Adelbert College Library, Cleveland, O.  
Florence E. Mettler, cataloger, Public Library, Minneapolis.  
Anna E. Peterson, reference assistant, University of Iowa Library, Iowa City, Iowa.  
Adelaide C. Rood, assistant, Sumner branch, Public Library, Minneapolis.

Hortense Stetler, assistant, Public Library, Mason City, Iowa.  
Blanche Tate, senior branch assistant, Public Library, Detroit.  
Helen M. Tattershall, branch librarian, Public Library, Dayton, O.  
Frances Tetlak, cataloger, Polish National Alliance College Library, Cambridge Springs, Pa.  
Harriet P. Turner, assistant, Public Library, Keewanee, Ill.  
Winifred Brooker, Louise Lewis, Ida Lucht, and Nora M. W. Clark, will return to the staff of the Cleveland Public Library.

ALICE S. TYLER, *Director*.

## DREXEL LIBRARY SCHOOL ALUMNAE ASSOCIATION

Forty-four members of the Drexel alumnae dined together on Tuesday evening, June 27, 1916, at the New Monterey in Asbury Park. The alumnae were fortunate in having with them Miss Bacon, the last director of the school, and for a little time Miss Donnelly, who was director from 1911 to 1913.

## Librarians

FARNHAM, Florence, until recently librarian of the Superior (Wis.) Public Library, went to Eau Claire, Wis., about the middle of July to begin work on the new reference library for the Normal School.

FORREST, Elizabeth, B.L.S., Illinois, 1906, librarian of the Montana Agricultural College, will spend the coming year in graduate study at the University of Chicago.

HARNACH, Prof. Adolf, chief librarian of the Royal Library at Berlin and close friend of the Kaiser is scheduled to deliver the first lecture in Berlin on behalf of the National Committee to prepare the German public mind for an honorable peace.

HILL, Fanny W., B.L.S., Illinois, 1915, reviser and assistant in the University of Illinois Library School, was married on June 30, 1916, in Champaign, to Leo A. Gutting. Mr. and Mrs. Gutting will be at home at Gatun, Canal Zone, after August 15.

JOHNSON, Miss Laurie, has been appointed librarian of the Central High School in St. Paul. Miss Johnson is a graduate of the University of Wisconsin, received special training in the Wisconsin Library School, and has had five years' experience as teacher and librarian in high schools in Wisconsin.

JUNGERMANN, Annie C., Carnegie Library School at Atlanta, 1914, has resigned her position as assistant in the University Library at Chapel Hill, N. C., to become librarian of the Ensley branch of the Birmingham (Ala.) Public Library.

KEATOR, Alfred D., New York State Library School, B.L.S., 1913, has resigned his position as technical librarian of the Minneapolis Public Library to take up the duties of associate librarian at Carleton College, Northfield, Minn.

MUNDY, Ezekiel W., the late librarian emeritus of Syracuse Public Library, died June 8. Mr. Mundy was born in 1833 at Metuchen, N. J., attended college and the theological seminary at Rochester, from which he graduated in 1863. Immediately after he became pastor of the First Baptist Church of Syracuse, but later organized an independent church. In 1882 Mr. Mundy entered the Episcopal Church, becoming rector of St. Mark's Church, Syracuse. The small public library in Syracuse was given into his charge, and it so engrossed him that in 1893 he gave up the ministry to serve the rapidly growing library. His work as librarian continued until 1915, at which time the library had 120,000 volumes and a circulation of upwards of 400,000 annually. Syracuse University gave Mr. Mundy the degree of Litt.D. in 1904, and the University of Rochester conferred a similar honor upon him in 1912.

PRINGLE, Mary P., reference librarian of the Minnesota State Library Commission, has been given six months' leave of absence and sailed for Hawaii, June 28. She will substitute in the Library of Hawaii during August and September, and sail for Japan Sept. 29 with Miss Helen Stearns, formerly librarian of the commission.

ROBBINS, Mary E., who has been with the H. W. Wilson Company the past year, goes to Atlanta, Ga., in September as associate director of the Library School of the Carnegie Library in that city.

ROJAS, Dr. Luis Manuel, chief librarian of the National Library of Mexico, has been visiting Washington in the interests of friendly relations between the two republics. He was named as one of the unofficial peace conferees designated some weeks ago by the friends of peace. He would doubtless be pleased to receive individual expressions of personal and national good will from American librarians, and may be addressed at the Hotel Hamilton or in care of the Mexican Embassy at Washington.

SANKEE, Ruth, Illinois, 1914-15, during the past year assistant librarian of the Texas State Normal School, Huntsville, has been made librarian.

SAYERS, W. C. Berwick, of the Public Libraries of Croydon, England, is the author of an interesting biography of Samuel Coleridge-Taylor, the musician, which Cassell & Company have published.

STEINER, Bernard C., librarian of the Enoch Pratt Free Library of Baltimore, has just had published a "Life of Henry Winter Davis," one of the men whose influence was strong in holding Maryland to the Union in 1861.

STOUT, Elizabeth T., B.L.S., Illinois, 1908, has resigned her position in the Sioux City (Iowa) Public Library to accept the position of librarian of the Montana Agricultural College, Boseman.

THORSON, Elizabeth, formerly reference librarian of branches in the Minneapolis Public Library, has been appointed technical librarian to succeed Alfred D. Keator.

TORRANCE, Mary A., Illinois, B.L.S., 1912, will be librarian and have charge of the library courses in the 1916 summer session of the LaCrosse (Wis.) Normal School.

CARDS have been received announcing the marriage on April 15 of Miss Charlotte E. Wallace, Pratt 1897, head of the Yorkville branch of the New York Public Library, to Mr. Dwight Clark of Pittsburgh.

WALLACE, Ruth, N. Y. State Library School, 1913-14, will return to the Chautauqua Summer Library School to conduct a reference course, August 4-18.

WARREN, Althea H., Wisconsin 1909, has been appointed librarian of the San Diego (Cal.) Public Library. Miss Warren went to the San Diego Library as reorganizer in January, 1915, and the present appointment was made at the June meeting of the board of library trustees.

WILEY, Stella, formerly librarian at Hibbing, Minn., who was in charge of the Walker branch, Minneapolis, during Miss Dinsmore's absence last winter, became a member of the branch department in charge of factory libraries on April 1.

WILLARD, Ruth, New York State Library School, 1911-12, formerly organizer for the Iowa Library Commission, has been appointed first assistant in the 36th Street branch, Minneapolis.

WILSON, Martha, supervisor of school libraries in Minnesota went to California the last of July to give lectures at the Summer School at Riverside.

# THE LIBRARY WORLD

## New England

### NEW HAMPSHIRE

*Franklin.* The will of Mrs. Mary Dodge Aiken, of Hampton Falls, gives to the Public Library of Franklin the sum of \$1000 in memory of her late husband, Walter H. Aiken. The income is to be used for the purchase of books on science.

*Haverhill.* The library is to be moved from its present quarters in Pearson Hall to the room formerly occupied by the Register of Deeds in the old court house, as the school has to have the room in Pearson Hall.

### MASSACHUSETTS

*Amherst.* A unique memorial of Clyde Fitch, the dramatist, is to be incorporated in the new library of Amherst College. Mr. Fitch graduated from Amherst in the class of 1886, and upon his death the contents of his library—decorations, furniture and the major part of the books—were presented to the college, and they will now be installed as they were formerly in the playwright's home in New York. The room will be long and narrow, of the same dimensions as the original and will contain the carved Italian ceiling, the Della Robbia "Madonna and child," and the great oak table at which the author worked. Another interesting feature of this new library will be a vestibule decorated with eight huge stone Assyrian bas-reliefs, which were presented to the college more than half a century ago by the Rev. Henry Lobdell, D.D., Amherst, 1848, who was a missionary in Mosul. The new library is to be built on the eastern side of the common, occupying the site of the present Hitchcock Hall. The general style of the building is classic, with a leaning toward colonial in its proportions. It is to be built of Indiana limestone and brick. One of the most significant features of the building will be the great amount of space devoted to department rooms, all of the third floor and most of the second being given over to this purpose. In nearly all cases each department will have two—a small room designed as an office or workroom for members of the department, and a larger one, containing the books connected with the department work. It is hoped to make these rooms the centers of advanced study for all the non-scientific departments. Another feature of this building that deserves notice is a room to be called the "standard authors," or browsing room.

The general reading room will run through two stories and be lighted on three sides by great windows which reach almost to the ceiling. The walls of the room are to be lined to the height of fourteen feet with bookcases and oak panelling. Above that the wall will be stone and the ceiling is to be panelled and classic in style. The book stack will be six stories in height, corresponding to the basement and three main floors of the building, and it will project some twenty-five feet beyond the north and south line of the east façade. It will have a capacity of about 240,000 volumes. The library building will be 140 feet in length and 100 feet in width.

*Boston.* Within the last few years the members of the Loyal Legion of Massachusetts have been making special and successful effort to collect in the clubrooms relics of the Civil War, and also books relating to that period of our history. As a result, the library is already of more than ordinary value. Many of the volumes were secured at slight cost, when their historical worth was not realized. There is an almost complete collection of regimental histories—some 6000 volumes—and books covering every phase of the Civil War. Here are found almost everything that has been written about Lincoln, the Civil War President, a large number of Confederate publications, and a very complete account of all the phases of slavery. There is a card catalog, but no printed list. The collection is rich in photographs, scenes of camps, fields, fortifications and prisons, ships of the navy, portraits of men and officers in the land and sea forces. Nearly 40,000 prints and portraits have been acquired and 173 volumes have been filled with them, while there are hundreds of loose prints not yet properly placed.

*Boston P. L.* Horace G. Wadlin, lbn. (64th ann. rpt.—yr. ending Jan. 8, 1916.) Accessions 43,939; total 1,121,747. Circulation for home use, issued from the central building, branches and stations, 2,135,100. Net gain in registration 4736; total 112,199. Total receipts \$465,882.34 (city appropriation \$407,688); expenses \$425,661.22, including \$239,218.37 for salaries, \$39,972.66 for books, \$1879.33 for newspapers, \$6586.19 for periodicals, \$14,021.87 for the printing department, \$34,541.21 for the binding department. During the year, 79,260 volumes were sent from the central building to fill applications made at the branches. This is an increase from 76,816 in the preceding year. There have been larger

demands for books relating to subjects of education and many requests for books on technical subjects. Books classed as fiction comprised sixty-three per cent. of the number sent from the central library. The number of volumes sent from the special deposit collection at the central library for use by study clubs, or at various institutions, was 41,073. Unbound periodicals numbering 37,570 have been sent to city institutions and other places. The catalog department has cataloged 78,368 volumes and parts of volumes, representing 42,146 different titles; 234,237 catalog cards were added to the public catalogs. Of current fiction, 762 volumes have been considered, and of this number 145 different titles accepted for purchase. Besides works of fiction, the more important publications are received on approval and carefully examined, and during the year 150 auction sales catalogs, 100 book-sellers' general catalogs, with other special lists, and about 150 current periodicals were searched for possible purchases. Classes and study clubs to the number of 171 included 14,489 students and were provided with reservations for meetings. By the inter-library loan system, within which various libraries are included, 67 books were borrowed for the temporary use of readers; by the reciprocal arrangement, 1389 books were lent to other libraries. The report contains an interesting description of the relations which exist between the library and the schools. Eighty-six free lectures were given at the central library during the year, and 30 exhibitions were open to the public. Besides the exhibitions at the central library, exhibitions at the branches, upon a definite plan of rotation from branch to branch through the winter season, of material sent from the fine arts department, have been open to the public.

*Cambridge.* Early in June, according to the *London Times*, the Harvard Library came into possession of a remarkable collection of English historical broadsides and proclamations printed between 1626 and 1700. There are nearly 800 separate pieces. A large and valuable collection concerns the Duke of Monmouth and the rising in the west of England, and an even more wonderful series concerns the Rump Parliament, among which are many of a satirical character. Another extraordinary series printed in 1659 deals with the affairs leading to the restoration of the monarchy, also various ordinances issued by the royalists and by Commonwealth Parliaments, and a large number concerning the doings of Charles I during the most eventful

period of his history. Accounts of fires form another feature of the collection.

*Lenox.* The Lenox Library was recently given \$1000 for the purchase of books.

*Leverett.* The cornerstone of the Field Memorial Library was laid June 5.

*Lynn.* The new East Saugus branch library in the Ballard school was officially opened June 10. Miss Sarah Biffin has been appointed librarian.

*Lynn.* The site has been selected for the Carnegie branch of the Lynn library for ward 1. The building is to cost \$23,000, and will be ready for occupancy about Jan. 1, 1917. Plans are being completed for the West Lynn branch, which will cost \$27,000.

*North Scituate.* At a meeting of the trustees of the North Scituate Public Library, held July 5, a committee was appointed to consider the question of providing a new location for the library, the present quarters not being ample enough for convenience.

*Swampscott.* The Swampscott Public Library has received a legacy of \$1000 under the will of Mrs. Mary L. Thompson.

#### RHODE ISLAND

The *Providence Magazine* for April contains several interesting articles on the libraries of Rhode Island. An historical *résumé* by H. L. Koopman, librarian of Brown University, takes up the early Newport libraries, the Redwood library, the library of Rhode Island College, and eight libraries founded in the early nineteenth century. The origin of the John Carter Brown Library is traced, and mention made of early private and subscription libraries. W. E. Foster, librarian, has an article on the Providence Public Library, describing its departments, its industrial books, and emphasizing its co-operation with local trade and industry. The John Hay Library of Brown University is written up, with special mention of its rare collections. Miss G. F. Leonard, librarian, has written briefly of the history and the particularly interesting points of the Providence Athenæum, the oldest circulating library of the state. An excerpt from an article by W. S. Ball, and an account by Champlin Burrage, librarian, describe the John Carter Brown Library at Brown University and the Annmary Brown Memorial, near by. The Annmary Brown Memorial is an unusual museum, containing family relics, paintings of old masters and of noted modern artists, and a remarkably complete collection

of 542 "first prints" from fifteenth-century presses. An article on the Rhode Island State Library, by H. O. Brigham, librarian, gives a sketch of its history and growth, its organization, the establishment of the legislative reference bureau, and the special courses of study offered. The assembling of all these articles in one issue of this magazine, profusely illustrated, will make the number valuable for reference use. In the last year the *Providence Magazine*, published by the Chamber of Commerce, has been made over, and a series of special articles, similar to the one noted here, has been running. When completed (at the end of three years, according to the present plan) they will furnish a very valuable and comprehensive survey of civic conditions of Providence and of Rhode Island as a whole.

#### CONNECTICUT

*Hartford.* The State Library has received 1200 steel cases for the files on the north side of the probate vault.

*New Haven.* Four more branches of the Free Public Library have been established in public school buildings for the vacation period.

### Middle Atlantic

#### NEW YORK

*Binghamton.* Included in a series of articles on "Seeing Binghamton first" in a local paper, was one discussing the relation between the Public Library and the children of the city—boys in particular. In another issue is an article on the library's maps and road guides, which are of value to motorists and others in planning vacation trips.

*Carthage.* The contract for the new library building was awarded July 11. Excavations were commenced July 17. It is understood that it will take practically all of the \$15,000 left in the will of the late Martha J. Corcoran for constructing the building and its equipment.

*Fredonia.* The board of directors of the D. R. Barker Free Library is soliciting consents from taxpayers for the issuance by the village of bonds in the sum of \$25,000 for the building of a new library on the site of the present one. An enabling act was passed by the legislature at the last session.

*New York City.* The American Alpine Club has deposited in the New York Public Library its collection of works on mountaineering, containing 52 volumes, 39 pamphlets, 52 periodicals, and a few miscellaneous pieces.

*New York City.* Since the American Seaman's Friend Society was incorporated in 1833, the society has shipped more than 12,000 libraries on 27,000 voyages, and these have been open to seamen of every nationality in every part of the world. Rear-Admiral Peary carried a library from the society on the steamship *Roosevelt* on both of his North Pole expeditions. The books contained in the libraries sent out numbered 641,986 and were accessible to 470,000 seamen.

*New York City.* Following its order put into effect July 4 excluding children under sixteen years of age from moving picture theaters, the Board of Health, on July 8, closed the children's rooms in all branches of the three Public Library systems in Greater New York, and children are forbidden the use of any part of the buildings. This step was taken to aid the city in its fight against the epidemic of infantile paralysis now prevailing in every section. Summer schools for children are not in session, Sunday schools are closed, and children are not allowed to gather in the playgrounds, and, until the nature of the disease and the means of its control are more fully understood, children will not be allowed to congregate in large numbers anywhere.

*New York City.* The *Engineering News* of June 29 contains, in its report of the summer meeting of the American Society of Civil Engineers held that week in Pittsburgh, the result of the letter ballot taken on the question of moving the society's headquarters from its present building on West 57th street to the United Engineering Societies building on West 39th street. Of 2963 valid ballots cast, no less than 2500 voted for the change and only 390 against it. Two plans for housing the society were proposed. Plan A called for an addition of two and one-half stories to the present building in 39th street, the Society of Civil Engineers to pay for the addition up to \$250,000. Plan B was to keep the building as it is, the Civil Engineers to pay into the treasury of the United Societies \$240,000. By a vote of 1795 to 524, the final decision is left to the board of direction, but in an expression of preference 1096 favored plan A and 248 opposed it, while 194 approved plan B and 695 voted against it.

*New York City.* *Queens Borough P. L.* Jessie F. Hume, lbn. (Rpt.—1915.) Number of volumes 214,916. Circulation 1,533,289. Population 395,651; active membership 104,126. Volumes circulated per citizen 3.87. Circulation, branches only, 1,227,566 volumes; cir-

circulation per library member (including traveling library) 14.72 volumes each. Owing to insufficient appropriations, the hours of opening of two small branches were lessened, yet three branches reached and passed a circulation of 100,000 volumes. Circulation of foreign books were 38,343 volumes in twelve languages. Volumes added 28,408; withdrawn 7738. Registration for the year 34,651 persons. Two new stations were opened, at Morris Park and at Little Neck. The library now has 20 branches and 18 stations. Four stations were established in public schools, one in the county prison, and four in institutions. The school stations are open to the general public, while the last two groups are open only to the inmates of the institutions. New developments included reduction of service to 40 hours per week; centralization of branch statistics at headquarters; instruction of classes in use of catalog and of books for reference; transfer of accessioning from branches to the cataloging department; establishment of a traveling library station in the Queens County Prison; and truck delivery between branches and headquarters. A school garden was carried to a successful harvest under the direction of Poppenhusen branch, the whole community sharing the undertaking.

*Rochester.* As a result of the campaign started by the library committee of the Ad Club last spring, the club library now has a nucleus of 115 books on advertising which have been contributed by the members. To these will be added a loan collection of 400 volumes from the Rochester Public Library when the new club rooms are opened and the library placed on a working basis. The plan of the new quarters includes a large reading room, with plenty of wall space to take care of the library's growth. The collection to be loaned by the Public Library will be made of business fiction, classics and literature of value to the advertising writer. Up to this time the committee has asked for no appropriations or money donations, but through the columns of the *Bumble Bee* the members were asked to contribute any books on advertising they owned, reports of progress were made and the matter kept before them in nearly every issue. There are 530 members in the club, and those who have not yet responded will be made the subject of a special appeal later. The slogan of the committee has been "Every member give a book," and in this connection a bibliography of all advertising books which would make desirable gifts for the library will be printed and mailed to each member.

*Rochester P. L.* William F. Yust, lbn. (Rpt.—1915.) During the year, 633,811 volumes were issued for home use from 4 branches, 3 sub-branches, 71 stations, 453 classrooms, and 10 playgrounds. A collection of 25 volumes has been in use at each of the 33 engine, hose, and truck houses of the Fire Bureau. The library has charge of the grade libraries in the classrooms of the public schools. These libraries consist of general children's literature, approximately 35 volumes in each of the 453 schoolrooms, for grades above the second; total, 15,673 volumes. Under the immediate care and direction of the teachers they are circulated among the children in the schools for home use. The playground libraries established by the park authorities are also under the supervision of the Public Library. This collection numbers 1000 volumes, which were circulated from 10 centers this year. The library system as yet has no central building and no central collection of books. Hence it cannot supply the demands for certain classes of material for research, large numbers of books on a given subject, costly reference books, specialized current magazines, sets of periodicals, all of which have a place only in a large central library. At present, no book purchases for it are being made, but in looking forward to it the library is receiving and caring for many highly acceptable gifts of books, pamphlets, and periodicals. The ultimate plan contemplates a magnificent building located near the center of the city, which will provide on a large scale for books, readers and administration. Total books in libraries, 73,379 volumes. Expenditures: books and binding \$16,356; rent \$2224; furniture and fixtures \$3468; building alterations and improvements for new branch \$4807; payroll \$21,557; miscellaneous \$4324; total \$52,736.

*Syracuse.* Action was taken by members of the faculty in recent conference with Chancellor James R. Day towards the erection in the near future of a library building for the exclusive use of the Medical College of Syracuse University. As proposed, the new structure will be three stories high and will involve an estimated expenditure of \$75,000. The Medical College is anxious to collect in a permanent home several valuable libraries received recently as bequests.

#### NEW JERSEY

*Bayonne.* Through the co-operation of Miss Mary G. Peters, librarian of the Bayonne Free Public Library, the Bayonne Y. M. C. A.

has been made a branch of the library. The magazines in the men's and boys' reading rooms are being supplied by the library.

*Glen Ridge.* Provided the voters of Glen Ridge authorize the purchase of a site, Henry S. Chapman will erect, in this town, a free public library building that will cost approximately \$25,000. According to plans suggested by Mr. Chapman the building will be in Italian renaissance style. The frontage on Ridge-wood avenue will be sixty-two feet, and the depth thirty-eight feet.

*Hackensack.* The addition to the Johnson Public Library building, which has been under construction for nearly a year, and the repairs to the old part, are now completed. The public was invited to inspect the improvements July 8, and the regular operation of the library was resumed July 10. The addition consists of a new stack room about 50 by 35 feet in size, which when filled will accommodate about 55,000 volumes. The old stack room has been converted into a commodious and attractive reference room. The improvements and additions have been planned and executed on a scale liberal enough to supply the needs of the community for generations.

*Haddonfield.* The site for a new \$25,000 library and \$11,000 in contributions toward the building have been secured. It is expected that the remaining \$14,000 will be raised within a short time. Work on the building will be started as soon as the necessary funds are guaranteed.

#### PENNSYLVANIA

*Chambersburg.* An addition to the library at Wilson College has been built in memory of a former Indianapolis young woman, the late Miss Helen Spain, daughter of Mr. and Mrs. Herman C. Spain, whose death occurred while she was teaching at that institution. Miss Spain was president of her class in Wilson College from 1907 until she was graduated in 1910.

*Philadelphia.* The Philadelphia Free Public Library is having plans prepared for a branch to be built at York Road and Duncannon Avenue, Logan, at a cost of about \$50,000.

*Pittsburgh.* The Allegheny County Law Library will move into the new City-County Building when that structure is completed.

*Warren.* The Jefferson Memorial Library was dedicated and opened to the public June 8. The Rev. A. R. Taylor, formerly curate of Trinity Memorial Church in Warren, was the

principal speaker at the dedicatory exercises. The new library building is an example of modern fireproof construction, no wood being used in the building. The exterior of classic architecture, traditional in library building, is of limestone and marble, the general design following to some extent the Italian loggia of the Renaissance period. All the structural portions are of limestone, the marble being used only for the screens which form the rooms between the supporting members. On the main floor are the loan department, the adult room, the children's room, the study, a stack room, offices, and a room for quiet study. The basement contains, besides mechanical equipment, a rest room for employes and a supplementary stack room. On the second floor are the art gallery and museum. Five inscriptions on the building were composed by Dr. Charles W. Eliot, president emeritus of Harvard. They read: Literature—the storehouse of knowledge, the record of civilization, the fulcrum for the lever of progress; History—the story of the human race in conflict with nature and with its own elemental passions but ever aspiring; Biography—the stories of lives that counted in their times for love or hate, for misery and woe, or well-being and joy; Philosophy—the thoughts of men about human thinking, reasoning and imagining and the real values in human existence; Religion—reverencing truth, serving justice, practising gentleness and loving God and the neighbor. The library was given by J. P. Jefferson and E. D. Wetmore in memory of members of their families. Miss Mary C. Weiss is librarian.

#### MARYLAND

*Baltimore.* In his last quarterly report of the Enoch Pratt Free Library, Dr. Bernard Steiner, librarian, made the suggestion that \$1,000,000 be raised by subscription in Baltimore to be used for a new library building. Dr. Steiner also stated in his report that branch 18 of the Pratt Library would be ready in the fall.

### The South

#### NORTH CAROLINA

The campaign for "a public library in every town" for towns having 2500 population or over has been extended to include towns of 2000, and instead of starting 19 libraries in 19 towns, 33 libraries must now be started in 33 towns. As a result of the campaign eight towns have already sought information and help in starting a library. The March-June *Bulletin*

of the State Library Commission suggests first steps in starting a library, prints a model constitution and by-laws and two articles on the value of the libraries in Charlotte and in Wilmington, written by people not officially connected with these libraries. Every town which establishes a public library, erects a building, secures a tax levy, and every library which changes from a subscription to a free public library will be placed on the honor roll of the commission. The first candidates for inclusion in the honor roll are Ahoskie, Belhaven, Durham, Elizabeth City, Greenville, Hickory, Monroe, Murphy, Rockingham, Rocky Mount, and Swansboro.

#### SOUTH CAROLINA

*Sumter.* At a recent meeting of the library commission plans for the new library building were submitted and the contract for the building was awarded. Work on the building will be commenced as soon as the plans have been accepted by the Carnegie board. This building, together with its furniture and heating system, is expected to cost about \$10,000; the city has promised an annual donation for the upkeep of this institution of \$1000.

#### ALABAMA

*Birmingham.* The Birmingham board of city commissioners has voted the library an increase in its appropriation of one thousand dollars a month for the last four months of the present fiscal year, to be used for books and binding. This is considered significant by the library board because most city departments are still running on a very much reduced schedule because of the city's small income. The commission has assumed the responsibility in making all necessary repairs to library buildings, having the work done at the request of the library board under the supervision of the building inspection department, and at the expense of the city's general fund. The city commission has also authorized the use by the library of the city's delivery automobile one-half day each week for the delivery of books to the branches and deposit stations.

#### FLORIDA

*Ocala.* It is expected that the new Ocala Public Library will be opened sometime in July. The building is a combination of modified classical and mission design, with red tapestry brick trimmings and red tile roof. It is of brick and concrete construction throughout and is 60x24 feet, exclusive of outside entrance extensions. It cost approximately \$10,000.

#### KENTUCKY

*Middlesboro.* Middlesboro's Public Library at last may be opened. The Woman's Club has undertaken the task of filling the shelves with books and throwing open the building for public use. The library was built with a Carnegie grant of \$15,000, and since its completion a year and a half ago it has stood unused. The club has created a fund for the purchase of books and will seek to secure appropriations from the city.

#### LOUISIANA

*Baton Rouge.* Those interested in the Baton Rouge Library are hoping to get a \$20,000 Carnegie building. At present the library is located in one large room donated by the volunteer fire department. For this room the city furnishes lights and a fan. The library owns about 5000 volumes and has 1400 readers. It has a department of collateral reading for the high school and maintains a deposit station at the Standard Oil plant about a mile from town.

### The Central West

#### MICHIGAN

*Boyer City.* Preliminary steps have been taken to secure a Carnegie building to house the city's library of 7000 volumes, at present without adequate accommodations.

*Cedar Springs.* An important addition to Cedar Springs is the new civic center—the Congregational church building remodeled into a school annex, public library and social center, which was formally dedicated Feb. 8. This civic center was organized to provide inspiration and recreation for the entire community and is largely the work of John Luidens, superintendent of schools. Feb. 17, the first moving picture show was held here under his direction. A big audience was present at two entertainments, the first for school children and the second for the general public.

*Monroe.* The Dorsch Memorial Library bequeathed to the city by the will of the late Mrs. Edward Dorsch, an early German settler, has been formally opened to the public, and its 8700 volumes transferred from the old quarters to the new. The library is in the Dorsch homestead, built in 1850. Extensive remodeling begun last October has adapted the building to its present purpose.

*Detroit.* The board of library commissioners has sent a letter to the common council asking the submission to the people at the August primary of a proposition to bond the city for \$750,000 for the completion of the new library

building. The work of building the library was started on the authorization of a portion of the cost. A bond issue was submitted for the remainder of the cost, but it was defeated at the election one year ago. The library commission obtained another enabling act from the legislature, and now are asking that the bond issue be re-submitted.

*St. Johns.* By a small margin the effort to secure the support of the voters for a Carnegie library was defeated at the spring election. A number of organizations were working together to secure a suitable building in which to house the 4000 volumes now owned by the Ladies' Library Association. It was proposed to ask for a Carnegie grant of \$15,000 for the building.

#### OHIO

*Cleveland.* The beginning of work on clearing the sites selected for the \$2,500,000 public hall and the \$2,000,000 public library was proposed as a feature for the celebration of Cleveland Day, July 22.

*Cleveland.* The right of the city to turn over the present city hall property to the board of trustees of the Public Library has been confirmed by a decision recently handed down by the Supreme Court of the state, and there is no longer any obstacle to the selection of plans and erection of the library building.

*Cleveland.* The Cleveland Engineering Society is working to raise an endowment fund of \$400,000 for the establishment of a complete library for Cleveland engineers, and an additional \$200,000 with which to erect a library building. Announcement of the library endeavor was made June 13 at the annual banquet of the society. No announcement was made as to campaign methods to be pursued in getting the money, but hope was expressed the money would be raised this year.

*Fremont.* The former home of Rutherford B. Hayes, at one time president of the United States, was given some time since to the state of Ohio by his son, Col. Webb C. Hayes, and on May 30 the Hayes Memorial Library and Museum was dedicated with appropriate ceremonies. The Ohio Archaeological and Historical Society is a trustee of the institution and has erected the present building at a cost of \$50,000. The books and manuscripts left by President Hayes will be kept here, and Colonel Hayes has established a fund of \$50,000, whose income shall be used to purchase books and other historical material for the library.

*Youngstown.* Steps have been taken toward the establishment of a Carnegie library on the South Side, to represent an investment of from \$90,000 to \$100,000. An optional price of \$40,000 has been secured on a desirable site; it is expected that the Carnegie Corporation will contribute \$50,000.

#### INDIANA

*Coatesville.* The dedication of Coatesville's Carnegie Library was celebrated July 4 with all day exercises, at which Demarchus C. Brown, state librarian, was the principal speaker. The library has more than 2000 volumes.

*Evansville P. L.* Ethel F. McCollough, lbn. (Rpt.—1915). Accessions, 8433; withdrawals, 860; total, 24,480. Circulation, 157,440. New registration, 3369; total, 12,845. Receipts, \$29,-179.29; expenditures, \$19,372.58, including \$7040.16 for books, binding and periodicals, \$6393.38 for salaries.

*Fort Branch.* The plans submitted by the Fort Branch library board have been accepted by the Carnegie Corporation and as soon as the blue prints are completed the contract will be let.

*Indianapolis.* A library on vocational education is being developed and classified in the vocational department of the Indiana State Department of Public Instruction, which is directing the study of the industries of the state now being made by Charles H. Winslow, an expert in industrial education and survey work.

*Notre Dame.* The corner stone of Notre Dame's new quarter million dollar library was formally laid June 11.

*Warsaw.* The contract for a Carnegie library building in Warsaw was awarded July 6. The appropriation is for a building to cost not more than \$15,000. The library is to be completed and ready for use by Dec. 1, 1916.

#### ILLINOIS

*Chicago.* The persistent efforts made by President Harper to secure funds for a suitable building for the University of Chicago, and the subsequent erection and opening of the building, are described in the chapter entitled "Later buildings of the first quarter-century" in Thomas Wakefield Goodspeed's "History of the University of Chicago." Two exterior views of the library and one of the main reading room accompany the text.

*Evanston P. L.* Mary B. Lindsay, lbn. (Rpt. June 1, 1913—May 31, 1915). Acces-

sions, 3264; withdrawals, 846; total, 52,056 volumes. Circulation, 212,081. New registration for 1915, 2153; total, 10,237. Receipts, \$35,522.43; expenditures, \$24,198.68, including \$1064 for books, \$461.41 for periodicals, \$1112.27 for binding, \$14,322.22 for salaries.

*Plano.* *Little Rock Township P. L.* Maude E. Henning, lbn. (Rpt.—yr. ending Apr. 1, 1916.) Accessions, 474; withdrawals, 66; total, 7382. Circulation, 15,830. Receipts, \$2512.70; expenditures, \$1409.62, including \$427.05 for books and magazines, \$87.04 for binding, \$279.38 for salaries.

## The Northwest

### WISCONSIN

*Madison F. L.* Mary A. Smith, lbn. (40th ann. rpt.—yr. ending June 30, 1915.) Accessions, 3875; withdrawals, 886; total, 35,779. Circulation, 186,631. New registration, 3803; total, 18,341. Receipts, \$20,294.87; expenditures, \$14,636.20, including \$2723.02 for books, \$472.61 for periodicals, \$835.75 for binding, \$6393.38 for salaries.

*Milwaukee.* Upon the recommendation of M. C. Potter, superintendent of schools, public library branches will be established where night schools are held. This will be for the benefit of children who attend the night classes and lack opportunity to secure books from the main library.

*Milwaukee. State Normal School L.* Delia G. Ovitz, lbn. (Rpt.—1916.) Accessions, 56,724 books, 200 pamphlets; withdrawn, 7252 volumes; total resources, 49,472 volumes, 9000 pamphlets, 8208 pictures, 480 clippings. Circulation, 65,154. In accordance with a new Wisconsin law the Normal School is giving instruction in library methods.

### MINNESOTA

*Crookston.* A large colored copy of Blashfield's "Source of the Mississippi" has been hung in the library. It is a copy of the painting in the Senate Chamber of the Capitol, and was purchased with the fund raised by votes during the State Art Exhibit in 1914. A victrola has been purchased for the library, as the free concerts on Sunday afternoon have proved so successful.

*Dawson.* A gift of \$9000 has been received from the Carnegie Corporation, and a suitable site has been purchased on the main street. The building will be heated from the city power plant.

*Hibbing.* Plans are being made to enlarge the library building at a cost of about \$55,000. Following the closing of the saloons, a branch reading room was opened in the heart of the city where many saloons formerly flourished. A total of 2265 men visited the room during the month of April.

*Minneapolis.* Plans for co-ordination of activities were discussed at a preliminary meeting of the school, the park and the library boards in June. By co-operation it is hoped there will not be a duplication of improvements in some parts of the city while other parts are neglected.

*Minneapolis.* In an address to the alumni, June 8, President George E. Vincent, of the University of Minnesota, indicated that the university will go before the state legislature at its next session and ask provision for an adequate library, a new administration building and additional space for playgrounds, as primary necessities.

*Northfield.* A considerable change has been instituted in the government of the Carleton College Library. The faculty library committee has been abolished and in its place one of its members, Dr. W. M. Patton, has been appointed director of the library. A. D. Keator, of the Minneapolis Public Library, becomes the professional member with the title associate librarian.

*St. Paul.* Since the fireproof stack room of the new library building is now available for storage purposes the city library authorities are renewing their efforts to complete the library collection of St. Paul documents, books, maps, views and pamphlets. A large collection, containing several rare maps, has already been turned over by civic departments.

### IOWA

*Council Bluffs.* M. F. Rohrer, who has served continuously as a member of the board of trustees of the Free Public Library of Council Bluffs, for over twenty-eight years, retired upon the expiration of his term, July 1. Mr. Rohrer has served as president, treasurer or secretary much of the time.

### MONTANA

*Hamilton.* On July 5 the books were moved from the old library rooms in the city hall into the recently completed Carnegie Library. After acceptance by the city council a formal opening and dedication of the new building will be made.

*Roundup.* The plan to issue \$20,000 in bonds for the construction of a city hall and public library was decisively beaten at the special election, June 26, despite the fact that the total vote was one-third less than the registration. The library movement which was initiated last winter by a committee from fraternal organizations and the Woman's Club, will probably be abandoned for the present.

## NEBRASKA

*Omaha.* The public library board at the November election is planning to submit a \$250,000 bond issue for an addition to the library building in which an art museum would be located.

## The Southwest

## MISSOURI

*Kansas City.* Contracts for the extension to the Public Library were let July 6 by the Board of Education under six bids, aggregating \$205,289. A time limit of one year is attached to the general contract.

*Nevada.* The Nevada library board let the contract for the construction of the new Carnegie Library June 19. The building will be of Hytex gray chinchilla brick, with trimmings of Carthage stone. Work was commenced in June, and the building is to be completed by Dec. 1 of this year.

*St. Louis.* The St. Louis Public Library has instituted a traveling library similar to the county book wagons of Maryland. A motor truck, equipped with 385 books, visits each of the 16 city playgrounds once each week to distribute books to the children. An assistant from the branch nearest the playground meets the wagon and charges the books.

## OKLAHOMA

*Sapulpa.* The site for the new Carnegie Library has been selected, and as soon as plans have been drawn up, building operations will be started.

## KANSAS

*Halstead.* Bids for the \$7500 Carnegie Library were opened July 17. Dark rough brick, with stone trim and red tile roof is the material selected. The interior will be finished in oak. The old city library which has been maintained by taxation, contains 12,000 volumes. Substantial additions will be made to this number when more space is available.

## TEXAS

*Dallas.* Additional bookstacks, which will hold over 10,000 volumes, are now under construction at the Public Library.

*Houston.* The Carnegie Library has opened a branch at the Brackenridge School, which will be open every Tuesday and Saturday afternoons. Miss Irene Parsons is librarian. It is planned to establish a reading room, with newspaper and magazine files for the people of the outlying parts of the fifth ward.

*Waco P. L.* Pauline McCauley, lbn. (Rpt. —1915.) Accessions, 2760; withdrawn, 359; total, 20,211. Circulation, 107,590. New registration, 2124; total, 8011. Expenditures, \$2800.76, including \$1805.77 for books, \$250.90 for periodicals, \$3.75 for back number periodicals.

## COLORADO

*Sterling.* The town of Sterling is to build a Carnegie library in its civic center. The building is to cost not more than \$12,500. Work will be well under way by fall.

## The Pacific Coast

## OREGON

*Eugene.* The sum of \$5000 will be expended toward the upbuilding of law and architectural libraries at the University of Oregon next year. The money was voted by the board of regents recently; the money will be divided between the two schools, but the larger portion will be spent in the purchase of law books.

## CALIFORNIA

*Berkeley.* The library of the Pacific Unitarian School for the Ministry, located here, now consists of about 10,200 bound volumes and 9100 pamphlets. It is particularly rich in the history and literature of Unitarianism, and all the leading theological periodicals of Europe and America are taken.

*Colusa.* A County Free Library with headquarters at Colusa and in charge of a trained librarian, will be established in July. Branches will be opened in various parts of the county in charge of custodians.

*Dinuba.* In the fire which destroyed the Chamber of Commerce building the city library was burned June 16. The library was soon to have been moved into the new building, which is nearly finished. The loss by the fire will necessitate a new collection of books for the shelves.

*Los Angeles.* The opening of the Boyle Heights branch of the public library, June 29, was celebrated by a three-day carnival and street fair. All proceeds derived from the carnival were used to defray the debts incurred in erecting the branch library.

*Madera.* The property for the new Carnegie Library was purchased July 6 for \$13,000. The close proximity of the court house block, the Lincoln school building and grounds and the county park is in line with the civic center plan.

*Oakdale.* The supervisors, on July 13, accepted the tender of a donation of \$7000 from the Carnegie Corporation for the branch library at Oakdale. The board also set aside \$700 per year for the maintenance of the library. This action was made necessary by the fact that the Oakdale library is a branch of the county library, and is maintained at county expense. The Oakdale Woman's Improvement Club has donated a site for a new building which will be erected from the \$7000 donation.

*Oakland.* The new Carnegie branch in Melrose was formally opened in July. The building cost \$35,000, and is one of the four similar institutions in course of construction in different quarters of Oakland.

*Red Bluff.* Mrs. Herbert Kraft, who died early in June, bequeathed to the Herbert Kraft Library in Red Bluff the sum of \$5000 to be held in trust, the income to be applied to the maintenance of the juvenile book department. Mrs. Kraft built and furnished the library at a cost of \$50,000.

*Stockton.* The Board of Supervisors has voted to establish a San Joaquin County Free Library in accordance with the 1911 ruling of the Assembly. July 5 was the date set for carrying the resolution into effect. Some opposition to the action has been made on the ground that the present service by the Stockton County Library is more efficient and economical than that which the proposed library could offer.

## Philippine Islands

An act "to authorize, in the interest of the efficiency and uniformity of the public service, the consolidation of the Philippine Library, the division of archives, patents, copyrights and trade-marks of the Executive Bureau, and the law and library division of the Philippine Assembly, to form an organization to be known as 'Philippine Library and Museum,' under the administrative control of the secretary of public instruction," was enacted by the third Philippine legislature on Feb. 4. The director of the library and museum, and his assistants, will be appointed by the governor-general, with the approval of the Upper

House of the Philippine Legislature. The new organization takes over the powers and duties of the various divisions consolidated in it. Two copies of every publication printed in the Philippines are to be deposited in the library. The full text of the act is printed in the *Bulletin* of the Philippine Library for March, 1916.

## Foreign

### GREAT BRITAIN

*Norwich P. L.* George A. Stephen, lbn. (Rpt.—yr. ending Mar. 31, 1916.) Accessions in all collections, 2326 volumes and 456 pamphlets; total in lending library, 18,506 volumes. New registration, 2482; total, 7614. Circulation, 105,628 volumes. The series of classified and annotated catalogs of the books in the lending library which have been printed every other month in the *Readers' Guide* since Nov., 1911, was completed in the May issue, and in subsequent issues a series of special catalogs of literature relating to Norfolk celebrities was started. The "local collection" was increased by 250 volumes and 439 pamphlets during the year, but the work of the Norfolk and Norwich Photographic Survey, and of the Borrow House Museum, has been practically at a standstill. The library distributed several thousands of the leaflets issued by the Central Committee for National Patriotic Organizations, and has admitted all soldiers billeted in Norwich to full use of its resources. About 1300 books and magazines, partly worn books from the library and partly volumes secured through public appeals, were forwarded to the Camps Library, and the proceeds of a Shakespeare lecture in May were promised to the same organization.

### HOLLAND

In the article on the Public Library of Hilversum, Holland, published in the May JOURNAL, a typographical error was made in the number of books lent in 1915. The figure as printed was 4815, when it should have read 48,151. The circulation of this library has more than doubled in five years, for in 1911 only 23,933 books were issued for home use.

---

## Bibliographical Notes

---

Study club outlines, with bibliographies on "Twentieth century literature," "Michigan," and "South America," prepared by Helen Thomas, of the Michigan State Library, are printed in the *Michigan Library Bulletin* for March-April.

A lecture on "Shakespeare and the English ideal," delivered by Dr. H. C. Beeching, dean of Norwich, under the auspices of the Norwich (Eng.) Public Library, is printed in the June issue of the library's monthly, *Readers' Guide*.

Under the caption, "Michigan's contribution to art," the *Michigan Library Bulletin* for March-April prints a list of Michigan artists, with brief biographical sketches. The list is taken from "Biographical sketches of American artists," compiled by the Michigan State Library last year.

Dr. George F. Black, of the New York Public Library, has a short article on "Romani and Dard" in the library's *Bulletin* for May. The article is chiefly a comparative list of words found in both languages, and is the third article on Romani to appear in the *Bulletin*. Its two predecessors were also edited by Dr. Black.

A catalog of more than 2200 Catholic books in the Free Library of Philadelphia has been issued by the Catholic Alumni Sodality of that city. It is the intention of the sodality to place copies of the catalog in all the branches of the Free Library, and other libraries, in educational institutions and in Catholic club libraries.

The A. L. A. Publishing Board has just issued a third edition of Margaret Brown's "Mending and repair of books," the revision having been made by Gertrude Stiles, the supervisor of binding in the Cleveland Public Library. This edition, like its predecessors, is intended for the guidance of the librarian who is inexperienced in the work and whose knowledge must be gained through self-instruction.

In the "Digest of state laws relating to public education" (U. S. Bur. of Educ. bull., 1915, no. 17) pages 770-784 are given up to a summary of the laws relating to public school libraries in the various states of the Union. The A. L. A. exhibit at San Francisco last summer is described and illustrated in the Bureau's first bulletin of the 1916 series, "Education exhibits at the Panama-Pacific International Exposition."

Uncommonly attractive are the catalogs of "Fiction" and "Recent poetry" issued this summer by the City Library of Springfield, Mass. Pleasing in typography and format, the fiction catalog contains in two lists, arranged by author and by title, about 3000 of the best English novels in the library, while the poetry

list is an annotated record of some of the best contemporary poetry added to the library since 1908.

In a large consignment of books which the Iowa State Library recently received from Germany, all the maps of German territory and the general views of cities were cut out of the volumes. The military censor backed the action, it is said, in order that no recent maps of Germany should get into the hands of the enemy. Accompanying the explanation was the promise that the books would be restored in satisfactory condition when the war is over.

A list of "1600 business books" compiled by Sarah B. Ball, librarian of the Business branch of the Free Public Library of Newark, N. J., has been published for them by the H. W. Wilson Company. The book is by no means, of course, a complete list of business literature, and the word "business" is used elastically, many subjects of only indirect relation to business being included. Acknowledgment is made of the co-operation of the Associated Advertising Clubs of the World in the publication of the catalog. The bibliography is in dictionary arrangement, with entries under author, title, and subject. Entries are very brief, giving only author, title, and date. The price of the list is 75c.

Two numbers of the *Agricultural Index* have been issued by the H. W. Wilson Co. It is a subject index, on the lines of the *Readers' Guide*, to the leading scientific and technical journals dealing with the art and practice of agriculture, horticulture, forestry, and the allied subjects of entomology, botany, bacteriology, including fruit culture, gardenings, dairying and stock breeding. Twenty-six of the best known farm journals are indexed, also bulletins of the state and Federal departments, giving the latest scientific researches and discoveries, as well as publications of the agricultural and horticultural associations for the improvement of rural life. The *Index* will be issued five times a year. Each new number includes all references in the earlier numbers combined in one alphabet and brought up to date of issue.

Recognizing the value of having collected in one place the records, too often scattered and lost, of the early days of any organization, the executive committee of the Keystone State Library Association has published in a 63-page pamphlet a short history of the association from its organization in 1901 to the

present year. The work of preparation was performed by William F. Stevens, librarian of the Carnegie Library in Homestead and president of the association in 1915. A brief opening survey of the early libraries in Pennsylvania is followed by a report of each meeting, with its program. Tabulations of the meetings held, officers elected, and nominating committees; a list of the members, past and present; the constitution and by-laws of the association; a bibliographical index to articles by or about the association and its members; and a list of all the public, institutional and school libraries of the state, are included in this pamphlet.

## Open Round Table

## A QUERY ABOUT VERTICAL FILES

We have an inquiry as to what business equipment firm regularly manufactures the largest size vertical file drawer. The inquirer does not mean any of the very large map "cabinets," but sectional drawers of regular vertical file style equipped with rod, guides, follower block, etc. The Library Bureau manufactures one about 18 in. by 12 in., we are told, but this inquirer desires one about 20 in. by 16 in.—and at a not too exorbitant price per section. Can anyone give us this information?

## POETRY INDEX LOCATED

Editor Library Journal:

Referring to the want: "An index to individual poems," published on page 456 of the current volume of the LIBRARY JOURNAL, the Public Library of Cincinnati will be glad to answer post card queries from other libraries. We have a card index of eighteen thousand (18,000) cards supplementing, to a considerable extent, Granger. Yours very truly,

N. D. C. HODGES, Librarian.

## THE INDEX OFFICE FOR INVESTIGATORS

Editor Library Journal:

I have noticed in Dr. Richardson's letter to Mr. Lee, printed in the June LIBRARY JOURNAL, reference to information that would come outside the function of libraries to furnish gratis. I, therefore, take the liberty to call to the attention of your readers that The Index Office, Inc., of Chicago, is prepared to do just this kind of work. The Index Office is not a business house, but the embryo of a co-operative scientific office which for the present is conducted wholly on a business basis; namely, on the basis of payments for services rendered. Yours very truly,

AKSEL G. S. JOSEPHSON,  
Secretary-Treasurer.

THE BOOK WAGON THE ST. LOUIS PUBLIC LIBRARY IS USING TO CARRY BOOKS TO THE PLAYGROUNDS

# THE LIBRARY JOURNAL

VOL. 41

SEPTEMBER, 1916

No. 9

THE present issue of the LIBRARY JOURNAL is the School number in which attention to libraries and library work within schools is specially emphasized in continuation of the *School and Library* supplement to our July issue, which we hope to make a recurrent feature of this periodical. The school library sessions within the A. L. A. and the library section meetings within the N. E. A. occurring at Asbury Park at the end of one week and in New York at the beginning of the next week, linked together significantly the library conference and the greater gathering of the National Education Association. The library movement is steadily gaining ground in normal, high and graded schools and the authorities of the N. E. A. are happily alert to its significance and its importance. The pioneer work of Miss Mary E. Hall and of Willis H. Kerr may find forty years hence as rich a harvest as has been garnered in the library field from the beginnings of forty years ago.

THE programs prepared for the Library Department of the N. E. A. were excellent, and it was regrettable that in no case was the attendance what it should have been. Few teachers took the trouble to go to even one meeting, and to a large extent those present were the librarians who had attended the meetings of the School Libraries Section at Asbury Park the preceding week, with a sprinkling of school superintendents. This meant that in the discussion following the papers there was much repetition of ideas that had already been pretty carefully gone over at Asbury Park. It would seem that if the school librarians wish to bring their needs and their point of view before the school world they might do it much more effectively by following the plan employed at the educational conference held at the University of Chicago

in April, 1915. At that conference the relation of the organized library to the school was the central theme, and librarians were present to speak at every one of the fifteen section meetings, as well as at the general sessions. This scattering of the library papers through the whole program was especially successful in bringing to the attention of every person present the great value of the library to all parts of the school, and the Library Section of the N. E. A. might well adopt similar tactics next year. Incidentally the librarian might get from the discussions much light on what service the teachers would like the library to furnish, as well as what the librarians feel it desirable to give.

WHETHER the school library should be administered by school authorities or from the local public library is a question much debated, which is perhaps not to be solved by any general rule. If the school system can provide for proper equipment and a wise selection of books and employ a competent librarian, separate administration may be fully desirable, tho in no case should the helpful co-operation of the local public library be repelled or withheld. But where the school library is inadequately supplied and has not the advantage of a separate skilled librarian, it is far better to become frankly a branch or station of the public library, where that library itself is well provided and efficient. A poor school library and a poor public library cannot help each other, for valleys together cannot make a hill. An ill-administered school library is worse than nothing, and the climax of calamity was reached in the district school library system of New York State which presented the most awful example of waste in the history of libraries and set back library progress in that state many years. On the other hand, a well adminis-

tered school library, whether independent or in charge of the public library, is the greatest of blessings. It not only assists in broadening present education but develops the reading habit for the years after school and incidentally should promote good methods of conduct, of thought, and of reading during and after school life.

---

SOME of the larger library systems have taken the initiative in this work by placing branch libraries in school buildings, and this raises the question whether such school libraries should be open to the public. There is much to be said on both sides. One of the most important developments in modern school practice is the use of the school building for public purposes after school hours—and with this in view a school library may well be opened to the public. But again this is a question of possibilities of administration, and beyond this the selection of books for the school library and for the use of the general public would coincide only to a limited extent. Nevertheless, this common use of the library facilities by school children and the adult public would have a decided advantage in acquainting the latter with the usefulness of the school and its modern equipment and thus strengthen the school in the knowledge and affection of the public and invite for it more liberal support. It will be evident that generalizations are not in order in this as in most relations of libraries and of life.

---

THE children's library room is sure to become an important and indeed an essential feature of the normal school in the near future. Already the best equipped normal schools have a kindergarten or primary grade school for practice teaching, but the children's library room will be even more far reaching and have a double function. It should on the one hand acquaint teachers with children's literature and thru that with the child mind, and on the other hand it will bring teachers into closer personal and professional touch

with children as they learn to ask counsel and take out books. Moreover, there is an inspiration to teachers in dealing with children thru library work which should kindle in them the same enthusiasm as is rampant, one might almost say, among children's librarians. The cost of such a children's library room would be small compared with its value, as the outlay would be chiefly for books and equipment since the staff would be normal school students themselves. The school librarian would be the natural executive for the children's room as well as the school proper; and it will not be long before a normal school without a school librarian will be a recognized anomaly.

---

THERE are measures which have been pending before Congress for years because more pressing tho less important bills have elbowed them off the calendar. One of these is the bill for the reorganization of the Post Office Department on a non-political basis and the codification and modification of postal laws, which last requires most thoro public discussion, resulting, let us hope, in placing books from and to public libraries on as favorable a basis as periodicals. Another of even more library importance is the Printing Bill, covering the whole field of United States publications, which received very careful consideration at the Asbury Park conference. Mr. Carter's paper there read, deferred until this issue, illuminates the subject from the Congressional point of view, and in connection with it librarians should read the *précis* of Miss Clarke's experienced views printed in the August number, and the summary of *desiderata*, in part but not entirely fulfilled, presented by the A. L. A. Committee twenty-five years ago. As no action on the Printing Bill is practicable within the present Congress, it is to be hoped that before the bill is again presented, it may have some further revision that will bring it somewhat nearer to the library ideal while meeting the Congressional point of view.

# THE NEED FOR AN AGGRESSIVE CAMPAIGN FOR BETTER SCHOOL LIBRARIES\*

BY CHARLES HUGHES JOHNSTON, *Professor of Secondary Education, University of Illinois*

RECENTLY a large university had plans drawn for a model high school building. This was in design and execution to reflect modern educational conceptions with reference to high school architecture. The first and even the second elaborate sets of plans for this "ideal" high school omitted all provision for a library. No such building as projected in this instance, we are but beginning to realize, can house and provide for the free and full expression of the activities which more and more are going to center in the high school library. Indeed, the internal life of the school must for many purposes center in the library rooms.

The aggressive campaign for better books, better library organization and better school librarians has scarcely begun. We have, and rightly, aroused much enthusiasm over vocational guidance, educational guidance, supervised study, differentiated curriculums, new socialized recitations, school "projects" and longer school day. Yet all this loosening up of the old formal restricted school procedure must culminate in an efficient smooth working modern library organization and center. What is meant by "modern library organization" will become increasingly clear as I proceed. Somehow, we have not been able to make a national issue—a propaganda—out of our library convictions, as we have, for example, our methods of teaching spelling. We are not in the press enough. Our agitation is too ladylike. We hark back to anciently honored culture too exclusively. We don't adjust our library theories to the demands of the educational journals, and write in the language these readers demand. There are too few books on the library—especially the school library. There are scarcely even theories as to libraries for adolescents. We must invade the field of

educational literature more boldly and read into the best educational theory to-day the library's program and attitude. Some one has said that the modern high school recitation is one-half shop or laboratory; one-half library. We haven't made this idea articulate in the sense of interpreting it and stating it clearly in terms of actual systematically organized school activity. All this, in part at least, means that we have not at present, in adequate formulation, either our school library philosophy or its technique and administration. I know high school men who are finely fired with the vision of our one and one-half million high school boys and girls in the process of being made good discriminating critical readers of our daily and weekly publications. They see that the cause of nationalizing (and internationalizing) our secondary education actually does depend largely upon our achieving this high purpose. What these high minded high school men do not have is such a knowledge of school library technique, furniture and other appointments, space requirements, trained teacher-librarian standards, economical and efficient methods of administration, which will make the library not a collection of books, but a well-organized, smooth working, efficient "form of service."

Modern high school education is no longer mere book memorization in small daily doses with verbal tests. Its method, content and purpose have clearly broken over all bounds of mere academicism. It is entering the twentieth century stage responsive to the peculiar and varied educational demands imposed upon it. These demands in turn imply a library organization and equipment correspondingly varied.

## THE PRESENT SITUATION

There are many evidences that the campaign for making library content a vital force in modern life is succeeding. The

\*Address delivered before the joint meeting of the Departments of Secondary Education and the Library Department of N. E. A., July, 1916, New York City.

library extension of itself into branches means its extension in function. While conditions throughout the nation are very different, still we are all becoming aware of the high spots as well as the low. We know well that the public has not developed its consciousness of the value of the book, that public school pupils haven't, that even teachers are not very responsive to the appeal for the wide and economic use of library facilities. We know also by shining examples in many states that this consciousness can be developed. Few cities know as keenly as Los Angeles does that as yet only one-fifth of its people use the proffered library service, and while Portland, with its 908 agencies for distributing books, may seem too far away to emulate, still no one forgets these things and more and more begin to question the possibilities suggested. While the 91 colleges and 93 normal schools with the assistance of library schools and training schools in city libraries seem at present a meager source of supply for the thousands of possible fields for such experts, still they constitute the nucleus,—a necessary and fairly well organized beginning. Investigations like the one at Rochester showing *reading* to be in point of time spent the chief *recreation* as well as business of school children, emphasizes another important kind of possible school library service. While it appears on first looking into it that the various state library associations seem to have effected little constructive co-operation with any considerable number of particular high schools, still the intention to do this is clearer and the method of approach determined upon.

This self-consciousness of what is to be done has been clarified also by the disclosures of various so-called local "surveys." Superintendent Engleman of Decatur, Illinois, has contributed much by finding out for a whole school system just what the reading horizons and the reading facilities are for his entire high school pupil population. This study in a system where the English and other language departments are very strong has, fortunately for the writer, moved another school superintendent, whose school facilities for stimulating

the use of books, are almost criminally meager, to give also his incriminating disclosure. Dr. C. E. Holley has shown the striking high correlation of library facilities in the homes of high school boys and girls in several western cities with persistence in school. No other condition has so high a correlation. Principal White of Kansas City, Kansas, has shown that lack of library facilities appears to be a larger factor in high school elimination. More careful and elaborate studies will, doubtless, create in us the "library conscience" said to exist now in professional librarians, but very rarely to be found in high school teachers.

Contributing in a negative way to this *conscience* are the almost derisive characterizations of the present motley collections of books going under the name of high school libraries. I am impressed with the fact that almost all who write or speak on my present theme resort to this caricaturing of school libraries. Constructively and of more value, we have library idealists like Miss Hall, Miss Hopkins and others, willing to picture for us the ideal school library, the ideal school library architecture with proper provision for the library, the ideal librarian and the ideal process when these three factors are harmoniously working together as an organic part of the school's life. We must somehow read all this into our high school educational philosophy.

So much for what we may call the present situation.

#### A SURVEY OF LIBRARY CONDITIONS IN THE HIGH SCHOOLS OF ILLINOIS

A sketch of the actual high school library work in a particular state will, without further comment, emphasize the need for the aggressive campaign which I am urging.\*

An accredited high school is a school whose instruction is approved by the State University and whose students after receiving this instruction enter the university without examination. To these high schools, some 400 in number, was sent an elaborate

\*I am indebted for assistance in interpreting the data on high school libraries in Illinois to Miss Eliza R. Pendrey, a graduate student in the university, now a librarian in Chicago.—C. H. J.

questionnaire. With this list of questions we hoped to secure fairly complete information from the state as a whole regarding every phase of library activity. We received adequate replies from 183, presumably of the better half of the total number, some of these were personally visited also. These schools considered then enroll 60,500 pupils. They appropriate \$23,485 for library purposes, 38c. per pupil. They own 203,947 volumes, 3.3 volumes per pupil. The meagerness of this is apparent when we are familiar with the elaborate and luxurious scientific laboratory and the kitchen and shop equipments. Even more niggardly does this policy appear when we consider the highly paid experts who make the laboratory and shop vital by spending their professional time in personal supervision, and contrast with this the almost total lack of professional experts, whose training and enthusiasm are equally necessary to secure an equally vital use of books. We find only thirty-six acting librarians with any technical training at all, and only seventy-one with any college or university training. This means with any status at all comparable with what the pupil considers "professional standing." It means that in the other 112 of the better half of the high school systems of this state either the pupils themselves, the office girl, the needy friend of the principal or school board member, or some one needing an indirect pension, or some one bookish but with a floating residence, is presiding over the books. It often happens that it is a teacher who must do the double (and doubly useless) task of tending the books and acting as the tired monitor of the unsupervised "study hall." In only twenty-four school libraries can there be said to be in operation moderately modern scientific methods of library organization and administration. In nine others an acting librarian gives half time. In many others a possible two hours daily may be given. Not infrequently, no regular time is allotted to any one.

It is largely a matter of organization, and of library conscience, therefore. We must interpret our philosophy of school library values in terms of possible and simple school administrative practice. Our

conception of the profound educational value of all recorded intellectual resources which may be housed in school libraries must be expressed in terms of institutional adjustments which those in charge of high schools can adopt.

Thousands of books, selected without a definite policy, uncataloged and of necessity, therefore, mostly unused are not worth a few hundred always easily available for immediate use. There are 92 card catalogs in these 183 high schools. There should be 183. In the equally important matter of selection, only 80 use any kind of approved list. Some do not know "approved lists" exist, some use lists in the backs of standard dictionaries, some even use a text book publisher's lists!

In forty-three of these cities there is no public library. Thirty-two of these high schools provide no school library room. Indeed only 87 of these 183 better high schools have a library room at all. In most of the other 96 the books are scattered from room to room and from hall to study room or principal's outer office, or alcove of assembly room. With no room, of course, there are no tables or chairs, no adequate reading light, no comfort, no quiet, no congenial surroundings. Under these conditions the supervision of a pupil's study amounts to little and the much-to-be-desired adventurous and leisurely exploitations of the world in its literature, and the wholesome light recreative reading amounts to nothing.

These high schools vary in enrollment from thirty-one to three thousand, yet there can, of course, be no standard scale of library appropriations for the variety of equipment and professional service required based upon a per capita. In many obvious respects library facilities for the small and the large high school are the same. The number of duplicate copies and the degree of co-operation with an efficient public library are two factors which affect appropriation. In these particular schools, however, there are within the high school group of any equal enrollment a variation in per pupil appropriation of \$0 to \$2. What is most interesting, however, is that the circulation or use of library varies not with

its appropriation but with its library rooms and trained librarians. The school libraries least used have the lowest percentage of library rooms and trained librarians, thus suggesting a way to allow volumes to stand unused and money and unique educational opportunity to be wasted. The only inference here is that, therefore, appropriation for the school library is no more standardizable at present than is health, but should correspond to possible library use. There is no limit in sight. None should be set, except as to selection, organization and administration.

In these schools it is pleasant to note that the open shelf has almost entirely replaced the locked cases and the closed stacks. Nearly all the books are for circulation. There are, however, few instances of free text books and, unfortunately, as yet these library facilities noted above are but infrequently open to the community or to the upper grade pupils, and even when they are little use of them has been secured.

Current periodicals increase in popularity and educational use of them becomes more general. The schools report in all 1448 magazines, 59 schools not subscribing to any, however. Free government and state bulletins are not so generally received as they should be—130 of these schools receiving none at all. This lost opportunity is particularly costly of course to the departments of agriculture and domestic science. Again, only five of these high schools had availed themselves of the help of the Illinois State Library Commission. Two had secured free loans of books, one had had questions answered, while two had been helped in organizing. Here possible free and expert library service goes unused.

The idea of attractive library rooms seems to be spreading. The returns show increased use of pictures, statues, window seats, noiseless tables and chairs, bulletins, book exhibits, potted plants, flowers, and other standard library furnishings and fittings. Some report piano rolls, slides, victrola records, etc.

The "library-consciousness" of the high school faculty is reported as "low." The cooperation with trained librarians seems

somewhat better, tho the interest on the whole is chiefly confined to the English and history teachers and to such conventional library uses as "required reading" and a similar use of current magazines for specific "class reports." Some very suggestive things are reported such as "bulletinizing clippings of historical interest," collecting antiques, serving reading clubs, planning for competitive readings and later "extemporaneous" discussions of topics of national interest.

It is surprising to note that scarcely any of these one hundred and eighty-three high schools so much as mention the relation of the library to vocational guidance, the possibilities of each movement—the *essence*—not being realized. Maybe this is why each movement progresses so slowly. They need each other. Also a "course in vocational guidance" is wholly dependent upon library collections of the scattered and bulletin literature. Indeed all free class or independent (senior high school) educational work beyond literalness of textbook use, depends upon a good school library.

As to student activities, a few dramatic and literary societies are reported as having originated in the high school library. Some libraries are filing past debates and past educational records such as examination questions by departments. Many are accumulating pamphlets and clippings for specific purposes. In the field of art and music likewise sheet music and pictures are being collected. Not much is reported regarding the possible valuable collections of suitable library content bearing upon athletics, health craft, holidays, commencement and other topics upon which legitimate interests of high school boys and girls are from time to time focussed.

One reports an interesting device for developing a library *esprit du corps*.

"One phase of the work here which has proven very satisfactory and which I have not seen mentioned as followed elsewhere is the plan of having high school students as library assistants. I have one for each study period in the day and also before and after school. Have had about twelve who have worked this year. This April I took fifteen more and gave them some talks on

the work and some practice and they will now be ready to be regular assistants next year. They charge and discharge books, and assist in reference work, etc. They like it very much and are a great help. In fact I could not manage without them.

"For their side, they feel that the familiarity with all phases of library work, the training in accuracy, promptness and reliability, the knowledge of many books they would not otherwise come in contact with, more than compensates for the time and work given. It also increases their acquaintances among students and teachers and altogether is considered quite an honor. The picnic which includes all those who have worked for a semester sometime in their course as library assistant has become a very enjoyable annual affair.

"The library class above mentioned is composed of the various assistants, both active and past. We have had to meet after school and so can give but one period a week, which is often broken in upon by other things, and is not time enough for the many interests we want to take up.

"This system also does much to make the library a vital part of the school, so I have taken the liberty of calling your attention to it."

Only a few schools offer class room instruction in the library art (or science) with the school library serving as the laboratory.

Many high schools are co-operating with the public library, enjoying every desirable privilege which could be offered pupils as well as teachers. In one instance the public library adjoining is almost a part of the school, a place for study with a plan of co-operation in discipline, of purchasing reference books, and a system of regular observation and report on the study assignments of pupils in smooth operation. In several instances the high school library is a branch of the public library.

The most urgent reason for those with the new school spirit and the library spirit in education to come together in an institution which we shall call *The Modern High School* is that in spirit they are identical. Their attitudes toward the real nature of the educative process are the same.

Perhaps the simplest and most desirable library conditions may be found in three high schools of the state of about five or six hundred enrollment. In these the problem of attitude and discipline is not so serious as to becloud real library work, and almost ideal library conditions exist. Here are found splendidly equipped library rooms, excellent librarians and serious study work being done by the pupils.

One of these is in a school in which supervised study methods have been adopted and the library fills a very vital place in the school. The young people come to the library from the various study rooms whenever they wish to use library books, or they may sometimes obtain permission to come there to study their own books. The librarian knows personally almost all of the pupils and is able to help them in their work. She has made an interesting survey of various study methods, and the reflection of these in subsequent resulting recitations. She has found that almost invariably a lack of good study methods in the library is correlated with low grade work in the class room. Such systematic library work is made possible partly by the size of the school which makes it possible for the librarian thus to know the pupils and their needs and to do conscientious work with them all.

Many interesting systems have been devised to check attendance in the library. Such systems include the "admit slip," the "check lists," "self-registration," etc. Similarly various systems of circulation are being used to meet various needs.

One of the larger high schools of Chicago has such a great demand for books that it is necessary to circulate them by the hour during the school day and just over night after school. It may be noted in passing that no text books or modern fiction are circulated hence all this demand for supplementary study and reference work only. In some periods as many as forty books are thus circulated and a maximum of 185 books per day has been attained. An eight days' circulation here was 1070 plus an additional attendance in the library of 1400 students. As the attendance in this library is voluntary on the part of the pupils, such

a record may truly represent what a valuable addition and help a library is to the pupils of the school.

Similarly other schools may be described which are doing earnest library work. Such library habits and appreciation are thus being developed as will be of great value to the pupils after they leave school. English and history, and I could include almost as well any school subject, can no more be taught properly in our public schools without an adequate library organization than can botany or physics be taught without a laboratory or manual training or domestic science without shop equipment, or athletics without a field. Our present educational emphasis in all grades of public education, admirable in some respects as it surely is, is still dangerously, and will eventually be disastrously, one-sided, unless at least one fundamental oversight be seen and remedied without delay.

Of our two great sources and instruments of culture, nature and human language, the former of late, as the latter in earlier educational history, has tended to usurp the field of our school efforts. Modern science and modern industry have by their very vitality and obvious worth tended to make us forget the equally fundamental, if more subtle, claims upon our school equipment of human language in its broadest meaning as acted and spoken in drama and poetry, sung and read in music and literature. Somehow modern scientific and industrial realism in education, though succeeding in keeping alive our human passion for experimental inquiry and investigation of all aspects of nature and in satisfying our instinctive demand for participation in constructive workmanship and for conscious industrial service, and practice, even in organization and leadership, still lacks a vital humanistic factor. There is one screw loose in our modernly educated high school boys and girls. Surely nature and the occupations of man, thru science and rightly conceived vocational education, must be two of our instruments of democratic culture. As surely, however, must language in the form of literature, art and music be basal to any superstructure designed for our modern public school sys-

tem. The spirit of scholarship, of *humanitas*, has its early stages, its genetic developments just as has the spirit of science of the consciousness of craftsmanship.

The school library must in every respect take its place with the school laboratory and the school shop and the school gymnasium and playground. This is the fundamental lack of our elaborate school plants to-day. They need and they will soon have this laboratory of the humanities. We must and we can without delay make it educationally bad form and bad business to allow the present impression of a modern palatial high school building, perfectly appointed in most respects, housing absurdly such a motley array of old and useless and dirty text-books, out-of-date encyclopædias and reference works, and an unkept shelf, full of equally old, black and forbidding volumes of departments of agriculture, "attic books," gifts often of friends (?) who wish to clean up their own attics and get their names in local papers as donors.

Some recent local "surveys" have visioned for us the meager "reading horizons" of high school pupils. We have found that persistence in schools even seems to depend upon books in the home. We know by records of successful school librarians that these "reading horizons" of high school pupils are amazingly broadened as we extend to them, in any systematic way, reading facilities. In short we know that education will go hand in hand with accessibility to the world's store of wisdom, which—we must still not forget—is in books. School boards accept as a matter of course the necessity of spending large sums on science laboratories and even more liberal outlays on shops for all the practical arts, even to the extent of minute conveniences to facilitate some minor instructional requirements. The new pedagogy for Latin, for English and for the social sciences demands quite as elaborate supplementary material in the way of modern library appointments. All such matters as library staff, technical training for all high school teachers of the so-called "humanities," administrative machinery, budget apportionment, location of library rooms and their equipment, courses for credit in use of

books, etc., are not fortunately unescapable administrative duties of school officials.

More than anything else we need to think the library into our everyday school consciousness. We need to feel that a school library, moreover, is vastly more than merely a collection of even choice books. The modern school has spread into an institution with function reaching far beyond

that of merely intellectualizing the child. It cares for all that pertains to the complete flowering of the pupil's individuality, hygienic, intellectual, esthetic, vocational, moral, religious. So the modern adequate school library must be too an institution for the distribution and display and for demonstration of all legitimate modern educational tools.

## JOINT ADMINISTRATION OF THE HIGH SCHOOL LIBRARY BY THE BOARD OF EDUCATION AND THE PUBLIC LIBRARY\*

BY BESSIE SARGEANT SMITH, *Supervisor of High School Libraries, Cleveland Public Library*

IT is within the memory of many of us that public school education consisted in learning facts which were between the covers of a given text-book, no matter how dry and seemingly without meaning for the present they might be. The pupil who most accurately and quickly learned those facts was held as the best student and the pupil whose gift of imagination led him to venture on a new expression of the subject matter of the text-book was reproved.

Happily for the child to-day, teaching from the text-book has expanded into wide fields, and supplementary reading has grown to be a large part of the work which all progressive teachers require. This change in method has necessitated collections of books in the schools to furnish the child with this supplementary material. As this demand for supplementary reading has developed in all grades, the school library has followed of necessity. Class room libraries have done much fine work in bringing this supplementary reading to the grade schools, thus laying the foundation for grade school libraries. Where these grade school libraries have been established their great value has been so evident that demand for a library in every elementary school has been created. However, teachers in high schools have naturally felt

most keenly this need of books to supplement their class text books. From this need has arisen a movement for high school libraries resulting in their formation all over the country.

It is obvious that the two factors which must be instrumental in the establishment of such high school libraries are the school and the public library. What then may we expect each to contribute to the work of the high school library? The school thru its teachers represents a specialized knowledge of the child, with an understanding of his needs from the kindergarten thru the high school age in particular relation to his learning capacity. The public library, because of its very organization, is able thru its librarians to furnish a trained understanding of the way to use the world of books to the best advantage for the child.

Altho the school and the public library are in nearly every case united in the administration of the high school library, there are different ways in which the high school library administration is worked out in various communities. Because of my familiarity with the plan of administration under the joint jurisdiction of the board of education and the public library I have been asked to discuss this plan as it is in Cleveland. Here, in carrying out their plan of joint administration, the Board of Edu-

\*Read before the Library Department of the N. E. A. in New York City, July 3, 1916.

cation furnishes the high school libraries with their rooms and equipment, including shelving, tables and chairs, desks, exhibit cases, magazine racks, vertical files, catalog cases and other minor articles of furniture, all of which they keep in repair. The Board of Education also buys certain books, chiefly those of a strictly reference character, such as dictionaries and encyclopedias, and "duplicate" sets, rebinding them when required, and also it subscribes for a large proportion of the magazines.

The Public Library selects the high school librarian and pays her salary and that of any other assistants needed; but in order that there may be entire agreement between them, no high school librarian is appointed by the Public Library before the principal of the school is consulted. The Public Library is represented by a supervisor with assistants, whose duties consist primarily in unifying the work of all the libraries and bringing the ideals of the public library to the knowledge of each high school librarian. This is done by individual conferences and by regular joint meetings of all the high school librarians. At these meetings the important new books of the month are inspected and reviewed and special problems of high school library administration are discussed.

The Public Library purchases the major portion of the books in all classes, repairing them at need. It also furnishes all the stationery, supplies, etc.

However, speaking again of high school library administration in general, the chief point for our consideration is whether the combined administration justifies itself by producing *better* high school libraries. To discover whether this be the fact let us analyze specific details.

The Public Library recognizes the importance of care in technical organization of the work for efficient library service, and therefore insists that its workers must have technical library training. It follows that when the public library shares the administration of the high school library, the librarian has this point of view as to technical library routine, performing easily that which to a teacher, trained in other directions, is very difficult and often seems non-essential.

The high school librarian stands in a middle ground in relation to the pupils. She is regarded in a less formal light than are the teachers, and often because of this is enabled to become sufficiently acquainted with the pupils to suggest right lines of vocational work. Class instruction in the use of books is given by the high school librarian to all freshmen. This instruction takes up the structure and care of the book, the printed parts of the book, the content and use of the dictionary and encyclopedia and a few reference books, the use of the card catalog and the classification of the library. Questions on the dictionary and encyclopedia are given each pupil and credit is allowed by the English department for the work done. A real appreciation of the value of this work is felt by the teachers and a spirit of co-operation is evidenced by the fact that the boys in the print shop of our East Technical High School have been allowed to print 10,000 sheets of these questions for use in all our high school instruction. This class instruction in the use of the library given by the high school librarian is also a means of bringing her into a relationship with the pupils, which affords her many chances for friendly talks or for making helpful suggestions for personal reading. These suggestions are usually accepted by the pupil and a taste for good books is frequently formed in this way. The character of the high school library should not be that of the school room but should maintain the viewpoint of a library. While teachers must look upon the matter of public education from the academic viewpoint, a high school library should be a place where there may be less formality than in the school room. Experience has shown that this sense of freedom is another aid in bringing about a closer touch needed by the boy or girl in the high school with a person of mature judgment and taste. As Miss Hall has so well said:

"The room may fulfill all its proper pedagogical functions as a reference collection for obtaining information, a training school in best methods of securing that information, a laboratory for special topic work and collateral reading in connection with the subjects in the curriculum and yet

fail of one of its highest functions if it fails to be a place of inspiration and recreation as well."

The Public Library in its special technical departments catalogs and classifies the books added to the high school library, thus furthering the economy of high school library administration. The Public Library also has facilities for buying its books with much better advantage than has a school. It is the function of an order department of a public library to know the best ways and means to buy with the greatest economy. Moreover, a public library can buy its books at all times, while often a board of education, owing to its organization, in order to procure bids can buy only at infrequent intervals and in large quantities. This means that a book in immediate demand can be obtained only with difficulty. Many teachers testify as to the benefit their classes have received from the quick purchase by the public library of a new book which otherwise would not have been available in the time of need.

All lists of books to be bought, either by the Board of Education or the Public Library, are compiled by the high school librarian and always include the specific titles which teachers suggest as meeting the needs of *their* work, as well as those suggested to the librarian by the more *general* needs of the school library as a whole. These lists are carefully compared with the books at the Public Library on the same subjects that the best possible selection may be made for the school library with the funds allowed.

May we not say, then, that the great contribution of the public library to the high school library is in its function as a reservoir of books from which the high school may draw at need? The high school librarian, *when and because* she is a member of the public library staff, knows more intimately the resources of the whole book collection of the public library, than could any one not a member of the public library staff. She can therefore use the central collection more intelligently and effectively. This close affiliation makes possible a more discriminating selection of books for loans to

the high school library. The value of these loans for supplemental work is inestimable, as no high school library could possibly afford to buy extensively of books which in many instances are needed only for brief periods.

New books may be borrowed from the public library collection to test their usefulness, with a view of purchasing them for the high school. Such "trials" many times save buying books which prove unwise for the particular high school library. The opportunity to borrow books from the public library keeps the high school collection free of dead wood and makes for a working library, live and active. A very real economy for the educational funds of the community is effected on the books side, that is, needless duplication is avoided because the high school librarian knows so well the collection of the central library and does not buy when a title borrowed temporarily from the library will serve the high school purpose. In cases where there is more than one high school library in the city, books may be exchanged between the school libraries. For supplying recreational reading the loans from the public library furnish an impetus which creates a lasting taste for reading and leads the boy or girl after he leaves school to seek the rich stores of the public library in the way only the lover of books knows.

Lastly, books being the very tools of a public library, library workers to fulfill their function must have a comprehension and understanding of the world of literature thru their wide reading and specialized training and must have the ability to evaluate those books needed for the high school library.

If "a fundamental truth is never trite," may we not once more say that the public library, the continuation school for life, can be brought to the high school boy or girl more vitally when the librarian is herself part of that continuation school? May we not also say the value is greatest when the public library's reservoir of books is brought to the boy or girl by the co-operative interests of public library and public school?

# SOME PROBLEMS OF SCHOOL LIBRARY ADMINISTRATION

BY ELIZABETH S. MADISON, *Librarian, Oakland High School,  
Oakland, Cal.*

THE rapid development in library work in schools forces upon us some new questions of administration. School libraries have peculiar needs which make it impossible to handle them like small editions of the usual library, or even as ordinary branches of a big library, so that the problem of their care and development raises considerable discussion. Most of them at present are operated either directly under the control of a school board, as parts of a city library, or as units in a county library system. Each one of these forms of administration has its earnest advocates. When we are asked, however, to declare which is *the* best form we come to realize that the answer must vary widely with the conditions that surround the particular school in question. Our only guide in forming such an answer must be drawn from a careful study of the five essentials of a good school library administration, which appear to me to be as follows:

1. Standardization of qualifications of school librarians.
2. Expert book selection.
3. Unity of the library with the school life.
4. Rapidity of service.
5. Economy of administration.

The standardization of qualifications of school librarians comes first, because the selection and upbuilding of the library and its entire relation with faculty and student body depends so largely upon the scholarship, personal approach and business ability of the librarian. It is never a position which should be filled by an untrained person. The educational qualifications, or their equivalents, which are requisite in a teacher are requisite in a school librarian, and the criterion whereby she is selected should be as high as that employed for any other member of the faculty. She must have a wide scholarship to comprehend and

assist in the work that comes to the library from all departments of the schools; she must have sympathy and tact to make the hard work of the library attractive to young readers and she must have the business ability and the professional training to meet the technical demands of the position. In some states the qualifications are fixed by the state board of education, and in others by the library authorities. Perhaps the former method is on the whole more satisfactory. It is at least quite certain that any state or community desiring to build up its school libraries should look first to this very important point.

In the matter of book selection I think that we will all acknowledge that the high school library presents some special problems. Young people of high school age are neither juveniles nor adults; they lie betwixt and between these two periods of life. Our whole educational machinery recognizes this fact, and gives special training, special care and special expert service to the adolescent age. In no department of intellectual training is this expert service more urgently required than in the selection of adolescent reading. The mind of the lad and girl at this period is particularly imaginative, responsive and impressionable. The whole field of literature with its strong emotional appeal spreads before him; his choice of reading *now* will affect his whole life, establishing habits either good or bad according, largely, to the influences brought to bear upon him. We cannot give too much care to providing our boys and girls with good, interesting, inspiring, practical, wholesome books at this time. We must eliminate, at least from our school library, books of a much lesser standard for the simple reason that young people are omniverous and will read anything that is put before them, and if the cheap, the tawdry and the over-stimulated book material lies in their way they will

absorb it like a sponge. If, however, for the space of a few years you can make daily accessible to them a good library of selected and splendid reading, you can tide them over this period of intellectual indecision and build up habits of clear, logical thinking and good book judgment that shall serve them all their lives. Of course, we must not swing to the other extreme and establish a narrow censorship; we need not accentuate prohibition in reading, but we may offer good, live material with the very reasonable hope of its effecting the same end, or rather a better one.

Granted, then, that good book selection is of the highest importance, who is best fitted to make this selection? The only answer we can make that is broad and at the same time expresses the essential requirement is: somebody who is truly familiar with student life, with faculty requirements and with the field of book purchase. It would seem that a great deal of the selecting should be done by the faculty, since nobody knows so well as the teacher of a special subject the books most desirable in that department of work. If to the judgment of the teacher can be added the suggestions of a trained librarian, so much the better; if to these can be added the influence of a specially equipped school librarian who is as familiar with what the young people *want* to read as with what they *ought* to read, the resulting selection should be thoroly rounded, practical and attractive. No greater mistake can be made than to allow the selection of a school library to drift into the hands of one person, no matter how competent that person may be, altho final decisions and business arrangements must, of course, be entrusted to one proper authority. If the library is the product of school enterprise and managed by the school board alone, the matter of selection can easily be arranged by the librarian, who will distribute orderslips among the faculty, asking them to make suggestions for their respective departments. These suggestions can later be assembled and organized into a representative order-sheet by the librarian, who may make other suggestions and round out the whole. If the school library is operated as

a branch of the public library or of a county library, such co-operation from the faculty should be insisted upon with special care. It is difficult to get teachers, sometimes, to assume this extra responsibility, but after the order-maker, be it the school librarian or the city librarian, has once insisted upon this matter, the results will speak for themselves and show that the extra effort was entirely worth while. Next time it will not be so difficult to obtain this expert co-operation, and after that the good ideas that flow toward the purchaser from faculty and students, too, will make the book-buying more of a pleasure than ever, although it never becomes a responsibility that can be slighted or left in untrained hands.

The third requirement of a good school library service is that it shall become an intimate and indispensable part of the school life. Placing the librarian on the same footing as any other faculty member, with requirements of qualification just as high, and with equal recognition, goes a long way to establish this atmosphere, for it furthers her harmonious work with the rest of the faculty and gives her the opportunity to establish an influential relation with the student body. It is desirable that, wherever possible, the library room shall be in the immediate building. There it is most often and most readily used and assumes a definite and helpful place in the school life; the pupils come to it both for their hardest study and for browsing. If it is made attractive with pictures and flowers and comfortable tables and chairs it soon becomes a center for much of the school life. A good high school library holds much the same place in the work and the memories of its students as does a university library, and that has always been conceded to be a very important place indeed.

But suppose the community is too small or the school funds too restricted to admit of the maintenance of a separate collection of books for school pupils? We must then fall back upon the branch system of the city library, or upon the deposit station of the county or rural library. In many instances this sort of service is the

most excellent that can be obtained, and brings new life and vigor not only to the school but to the community of which it is the center. It is still advisable in all such instances, however, to develop as far as possible the artistic and individual side of the library room and to attract to it by gift or special purchase as many volumes and magazines and pictures as possible, which shall become permanent possessions of the school and form a nucleus for a better and more independent library.

Sometimes it is proposed to unite a public library branch and a school library, that is, to have a branch of the general public library housed in the school and open to both scholars of the institution and to the general public. Here, however, we find that the requisite of unity with the school life has been lost sight of. The specially rapid service required by scholars who need to return immediately to their recitation rooms can hardly be maintained where the librarian is called upon to wait upon members of the general public also. Besides, the main motive for the establishment of your high school or other school library has broken down when you admit to the shelves all of the books that are required by the general public; it is no longer a selective library, and for that reason it has lost much of its value. Any board or establishing body should think very carefully of the many sides of this question.

The next requirement, and one at which we have already hinted, is rapidity of service. A school library book simply must be on hand when it is called for, or it need hardly be procured at all. The demand is absolute. The old saying "I want what I want when I want it," has more meaning in a school library than in any other kind. When all the books belong to the school and are loaned only within the institution, or belong to a school system and are circulated only within that system, it is a comparatively easy matter to secure this rapidity of loaning. Books may be loaned for only one hour at a time and returned so as to do duty repeatedly during the day, and so may be made of very high efficiency. When, however, the school library is merely a branch of some other larger library, new

difficulties present themselves. Books must be ordered ahead of time, and courses carefully planned so as to have the right volumes at the right moment. This system breaks down if not very carefully arranged for and thoroly well administered. A school pupil who wants a book to-day on the founding of Rome will find little comfort in receiving the volume next week. If it is delayed too long the whole class, with youthful ardor, will be sweeping down the ages of history to the murder of Caesar before the book on the Tarquins arrives. The course of study moves relentlessly on, and any library system which serves a school must serve it *promptly*. Schools which contract for service from public libraries should have this point thoroly worked out beforehand.

In this matter of rapid circulation the disadvantage of attempting to serve both the school and the general public from the same book collection makes itself apparent. A school library book can be circulated for one-hour study periods during the whole day, and for an over-night loan as well. Thus one book may serve seven or eight pupils in the course of the day, or even nine pupils, if the day is divided into eight periods. Multiply this by five for the number of days in the school week and it will be seen that a single book may be used by forty or forty-five pupils in the course of a week, or by 116 or 180 pupils in a month. Under ordinary public-library-branch methods this book could have been loaned to one general-public borrower for two weeks and renewed for two weeks more, keeping it a month in all. So that one public-library borrower could deprive 180 school-library borrowers of the use of a much needed volume. It is clear that school methods of circulation and general public methods of circulation are quite different and that to attempt to operate them both in the same library at the same time does not produce a service that is fair to either side. In a school library of say 8000 volumes with a school attendance of 1000 children the book circulation, if properly encouraged and managed, easily totals five hundred books a day. Such service simply cannot be gotten out of a collection of this size except by

specialized and intensive methods, and these methods do not fit into the scheme employed generally by a public library which is organized to meet an entirely different demand. What is true of the circulation is also true of the reference work; school pupils require the immediate assistance of the librarian, since their study periods are fixed, and they must study during those particular hours assigned. If the school librarian is also serving the general public she will find it next to impossible not to neglect her school public at the times when they most need her. These are surely problems that must be thoroly investigated by public libraries that are attempting to serve schools with anything like adequacy, and by school boards establishing libraries.

We now come to the fourth consideration: economy of administration. In solving this problem the local conditions are the determining factors. If the school to be considered is small or is in a rural community where the funds are limited the very best results can be obtained by pooling the moneys of all the schools of the county (outside of the larger towns and cities) and organizing some system of inter-school loans and co-operative purchasing. This is usually done best by the county library, in counties and states which are so fortunate as to have a well organized county library system. Under such methods each school may contribute say fifty dollars a year and receive the use of three or four hundred dollars worth of books. Each school receives an assignment of volumes designed especially to fit its needs, and at the end of a stipulated time these books are removed and others are sent in their places, the first collection passing on to another school after a visit to the repair shop. The actual book purchasing is done by an organizing librarian thoroly trained for the work, and, the purchases for all the schools being much larger than would be possible for any one school, the prices obtained are more advantageous. States that have not a county library system already established would do well to "back up" such an organization if only for the good that would result to the schools. If a county library organization is out of the question,

the state board of education could find no better work than the establishment of a supervisorship for school libraries and school library purchases.

When, however, we come to the towns of considerable size and to the larger cities, conditions are entirely different. Many cities and towns have a well-planned purchasing system which includes adequate means for making purchases for the educational department. In such cases the library buying is often very efficiently done thru this purchasing office acting upon recommendations of the school faculties and school librarians, all the business transactions being kept within the school department. Probably, this is the ideal arrangement. Some cities have tried a dual control, by having the board of education and the city library both in charge of the recommendation and purchase of books for the schools, but I have never heard of its proving a great success. Napoleon is credited with saying that one poor general was better than two good ones, and any person who has tried to work under a dual authority system appreciates the aphorism. The main points to be remembered are that the purchases should be made by expert buyers; that deliveries should be prompt and easily controlled; that the method of communication between the school library and the person or office doing the purchasing should be direct and unencumbered by time-wasting officialism.

The conclusion of the matter, as the preacher sayeth, is that the school libraries want the best and most skillful workers procurable; they want adequate service; they want rapid service; they want service which comprehends and meets their individualistic needs; they want the kind of service which "works out" and not that kind which looks well only in reports. School libraries of the future will not be partisan about the methods under which they are to operate, but they will be absolutely insistent upon the results they desire to obtain.

---

"Reading is the most important thing the child can learn in school. It is the key that opens most of the doors through which the adult will wish to pass."

## GENERAL PRINCIPLES INVOLVED IN HIGH SCHOOL LIBRARY CONTROL\*

*Central Topic:* The Control of the High School Library. Shall the Public Library Board or the Public School Board supply the High Schools with the necessary equipment and control the educational policy of the high school library department?

TO-DAY'S topic divides itself, in my mind, very sharply into two heads: First shall the public library administer the high school library? Second, shall it control the educational policy of that library?

Before proceeding to discuss these divisions *seriatim* it is only right that I should state my conviction that the second has been so worded as to create a prejudice in advance against public library administration. The high school library can have no educational policy apart from that of the high school itself; and that the public library should control or attempt to control the educational policy of the schools is unthinkable. The way in which the subject is worded fairly creates the presumption that such control is proposed, and for this reason I object to it; for I know of no such proposal.

My advocacy of placing the machinery of administration under public library control is based on the broader thesis that when various public bodies are conducting departments whose technic is identical, that technic may be profitably put in charge of the one of them that best understands it. Thus, when a library is conducting a training school for librarians I believe it to be proper that the administration of the school should be entrusted to a local teaching body, where such a body is able and willing to undertake it. This is practically what has been done in Cleveland. Conversely, where a school is operating a library, I believe that this library should be administered by the public body that has been created for the purpose of administering libraries, that is fitted for this task by training, experience, and by the fact that it has no other aims to conflict with the proper performance of the task.

I beg you to observe that where the public library is under the authority of the board of education, no one has ever proposed any other method of administration. Where that board has what is practically a library department there is no question that all the libraries under its jurisdiction should be administered by that department. Now the question is not fundamentally changed, it seems to me, by the mere transference of the public library to a separate board. The fact that objection arises as soon as this transference is made, shows that it is not to the operation of school libraries by the public library authorities, but to entrusting anything under the jurisdiction of the board of education to what that board considers an alien body, without reference to the fact that it is an expert body. This attitude on the part of boards of education of wishing to assemble under their own jurisdiction everything that touches their work in the slightest degree is by no means confined to school libraries and has been frequently commented upon. It is doubtless a necessary attitude in cases where the city is under the rule of the ward boss and in the grasp of the spoils system—where the board of education is the only public body not permeated with graft and it is necessary to preserve its independence and liberty of action with jealous care. Complete duplication of many things may be allowable in such a situation, where on general principles it would be wasteful. I am assuming, of course, that this situation does not exist.

Where the feeling on the part of the board of education is very strong that it would be improper to let another board administer anything that goes on within its buildings, a working agreement between the two boards may solve the problem. Such an agreement is in successful operation in Portland, Oregon, where school libraries are in charge of a supervisor who is an official of both boards and whose salary is paid jointly by them.

One of the obvious advantages of library control is that when such a course seems desirable the school library may function also as a branch library for the neighborhood. This plan has been success-

\*Read before the Library Department of the N. E. A., July 3, 1916, in New York City.

ful in Cleveland, in Kansas City, in Gary, and elsewhere. There are differences of opinion about its desirability, but it certainly would not be practicable at all with school libraries wholly under the control of the schools.

I fear, however, that I may weaken my case by seeming to rest it on such particular instances as these. It does not stand or fall with any of them, but depends on the broad principle laid down at the beginning. What we are aiming at, of course, is to get good school libraries and to connect up the habit of school reading with a general habit of reading through life. That school libraries should be in charge of some one who has no other duties and who understands library technic, admits I think of no doubt. There is *a priori* no reason why such persons should not be employed wholly by boards of education and they have, in notable instances, been so employed. But the fact remains that generally, where school libraries are operated directly by school authorities they have not been put in charge of experts and are unsatisfactorily administered. The public library is not seeking for aggrandizement, but it does believe that it has the special knowledge and the machinery to reorganize and operate these unsatisfactory libraries better and more cheaply than if it were done by duplicate machinery and expert advice under the board of education. And the question is more than one of methods. The facts are that, still speaking generally, the public library does the work and the board of education does not. Boards of education have been accustomed for years to look on collections of books, outside of the text-book domain, as entirely subsidiary or even unnecessary. The present discussion is sufficient evidence that this point of view is changing. If it is desirable that it should change completely and radically, why not allow the school libraries to be taken in charge by bodies who have had the broader view for a generation, who have thought for years in terms of libraries and whose theory and practice is all directed to making libraries effective?

ARTHUR E. BOSTWICK.

## CHILDREN'S LITERATURE COURSE AT KANSAS STATE NORMAL SCHOOL, EMPORIA

THE course in children's literature as offered at Kansas State Normal School, Emporia, is part of the year's work in library science for the satisfactory completion of which a certificate of library training is conferred by the school. It is an elective, giving three semester hours credit. About forty students elect it each time it is offered.

Two invaluable adjuncts to such a course are right at hand: the children in the training school, and a well-developed children's library of some three thousand volumes in charge of a children's librarian.

The subject is presented not as a piece of work to be completed but rather as a point of view with ever-broadening possibilities, keeping in mind that

It takes sweet flowers long to grow;  
'Tis the weeds that make haste.

The classes are made up of prospective teachers for every grade from kindergarten to high school. Constructive thinking is encouraged and independent individual work, each student appropriating from the material presented that which will be of most service to himself.

Ways of introducing children to books, increasing their power of thought, giving them an emotional and literary background for life, and presenting lofty ideals to them, are some of the things specially considered.

A foundation for the study of books themselves is laid by introductory reading with oral reports in class of such articles as: Mumford, Juvenile readers as an asset; Mathiews, Blowing out the boy's brains; Scudder, Nursery classics in school; of books such as Eastman, Enjoyment of poetry; Shuman, How to judge a book; for

Child study that is divorced from adult study has led and still leads into all sorts of pedagogical absurdities

—and books such as Grahame, The golden age; Kelly, Little aliens; expressing children's attitude of mind; and further, psychological studies of the child mind, such

as Sully, Children's ways; Meynell, The children.

Class discussion brings out children's points of view, their interests and their ideals as they progress thru the different grades. Each student takes his place before the class and makes his report to the class, not to the teacher, and meets any question from the class, gaining in self-possession and ease in presenting matters to a company.

This introductory work completed, the history of children's literature is briefly outlined by periods, bringing out types and changes including the influence of the public school system as it developed. This is followed by principles of book selection in this country and abroad, with introduction to the best aids printed and available to teachers.

A study is then made of some forty good illustrators of children's books, for type of work and comparative merit. The class is now ready for actual work with children's books themselves.

Each student keeps a notebook with material well classified and short notes for each title listed, to aid in selection at future times. Books are examined in groups following as nearly as practicable the decimal classification, but broadly and beginning with books for the littlest people.

At the beginning of the study of each group the inclusive subject is discussed with relation to its possibilities from the point of view of both teacher and children, the school grades in which it should be presented, and method of handling it for best results. Questions or outlines are given to guide the student; for example, here is the outline for the study of picture books:

#### CLASSES

Didactic: A.B.C., Historical events, Manners and customs, Mechanical objects, Natural history.

Fanciful and artistic.

Domestic: Home, School, Play.

Humorous.

As further example of guidance given students, here are the questions to be kept in mind while examining books on industrial arts:

Does the author seem to have had practical experience in doing what he describes?

Are explanations so clear that a child could do the work without other help?

Does the book simply tell how to do things or also explain why?

Are there diagrams and plans as well as other illustrations, and are these clear?

Helps for teachers (for example, Holtz, Nature study) are presented with groups of books for children, as they aid materially in correlating general reading with subject study.

The groups of books thus considered are as follows: Picture books, Fairy tales, Poetry, Bible and Bible stories, Government, Nature study, Industrial arts, Arts, Biography, Travel, History, Story books, Collections of stories, Magazines.

During the recitation hour members of the class present books to the class, the ideal striven for being such presentation as will win readers among children and also bring out class discussion as to use of the books by teachers in connection with subject study in the different grades.

The study of books is supplemented by use of pictures, classified, mounted, and filed so that they can easily be found when wanted for illustrative work. The collection serves also as a model of what any one can have and at a very little cost. This picture collection includes examples of the work of various illustrators, poster material for holidays, pictures of animals, birds, noted buildings, peoples of foreign lands in native costume, and many other matters of interest in the grades and elsewhere.

This course in children's literature is followed by a course in story telling, also giving three semester hours credit, its motto being: "Story should lead children to the inside of books but should never stand out by itself as more to be desired than the books."

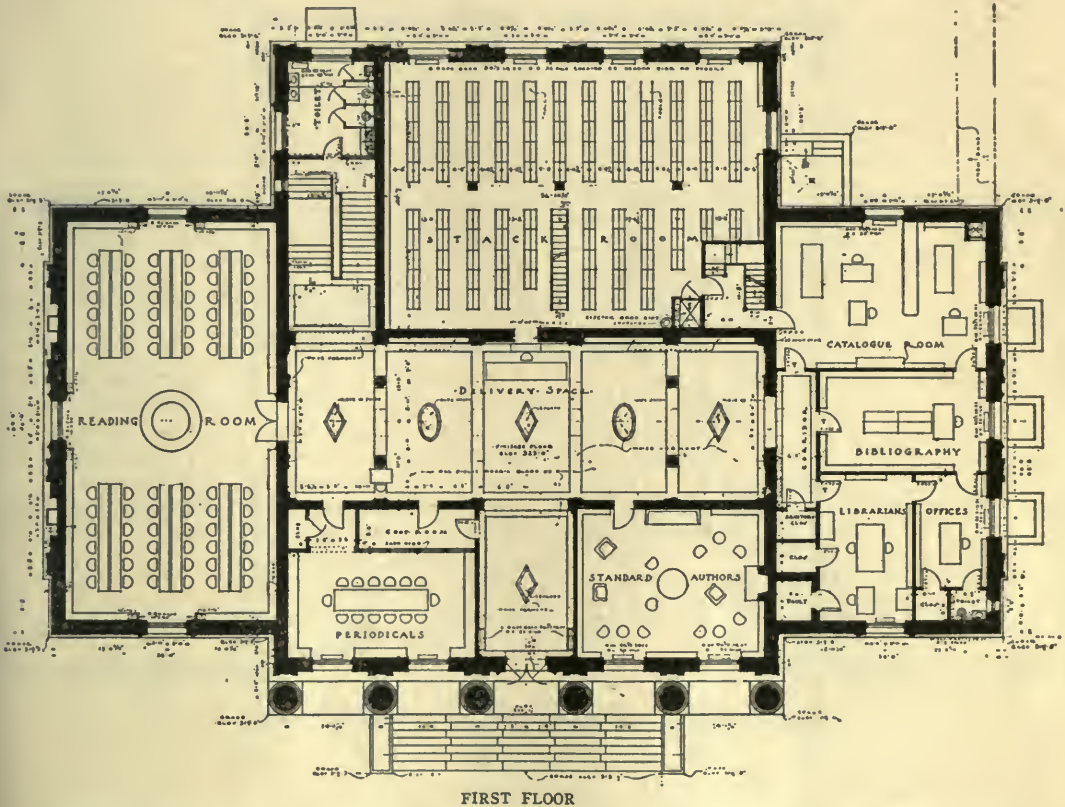

GERTRUDE BUCK.

We ought to regard books as we do sweetmeats, not wholly to aim at the pleasantest, but chiefly to respect the wholesomest; not forbidding either, but approving the latter most.—PLUTARCH.

## THE NEW AMHERST COLLEGE LIBRARY

THE new library at Amherst College has been made possible by a gift of \$250,000 from Mr. Edmund C. Converse, of New York, in memory of his brother, James B. Converse, a graduate of the college in the class of 1867. It will occupy the site of Hitchcock Hall, known to generations of

at the middle of the portico leads to a vestibule to be decorated on either side by Assyrian bas-reliefs which have been in the possession of the college for many years. The vestibule opens into the delivery space, which occupies the center of the building and runs up through two stories, being lighted by a large skylight. The walls of the first story are treated with pilasters and panel work, and in the second

Amherst men as the Boltwood mansion, which has been torn down to make room for the new structure. The main façade is to the west, facing the Common.

The general style of the building is classic, with a leaning towards colonial in proportions, the material being limestone and brick. Its dimensions are 140 feet in length and 100 feet in depth. Preceding the central part of the building is a portico of six stone columns of the Ionic order, 34 feet 7 inches high. The main entrance

story a corridor with balustrades and columns runs around three sides. The delivery space gives access on the north to the main reading room, on the east to the stack, and on the south to rooms designed for cataloging and bibliography, and also to the librarian's office. To the west of the delivery space is a large room devoted to standard authors and a room for magazines and newspapers.

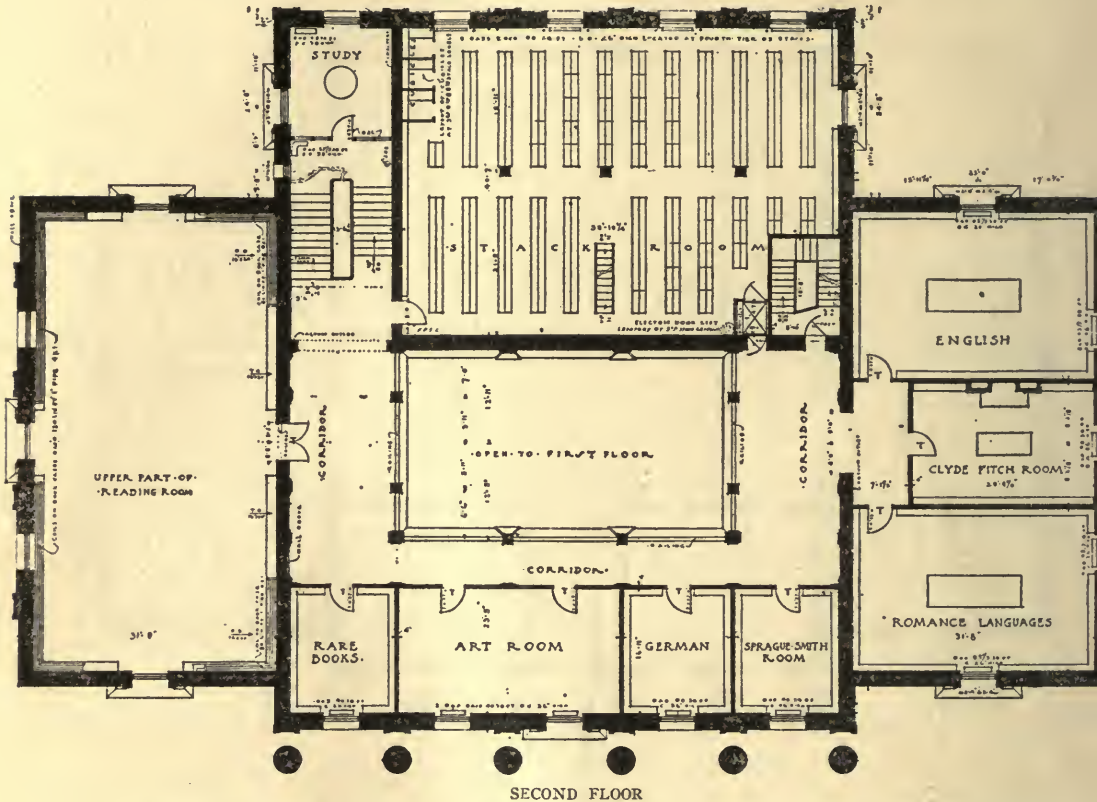

The reading room also runs through two stories and is lighted on three sides, north,

east, and west, by great windows which reach almost to the ceiling. The walls of this room are lined to the height of fourteen feet with book cases and oak paneling. Above that the wall is of stone, and the ceiling is paneled and classic in style.

The second story is devoted to special collections and department rooms. The library of the late Clyde Fitch will be re-

a rest room for the womer on the staff. Much of the basement will be left unfinished, with the idea of its being used ultimately for book storage.

The book stack will be six stories in height, corresponding to the basement and three main floors of the building, and will project some 25 feet beyond the north and south line of the east façade. It will be

SECOND FLOOR

produced exactly as it was in his house: the ceiling, furniture, books, etc. having been given to the college for this purpose. As before noted, the corridor communicating with the second floor rooms looks down between columns into the delivery room. Additional departmental rooms will occupy the entire third story.

The collection of memorabilia relating to the college will be installed in a room in the basement, which will also contain a receiving and shipping room, a room in which books will be made ready for binding, and

provided with the latest pattern of metal shelving, electric elevator, etc., and will have a capacity of about 240,000 volumes.

Perhaps the most significant feature of the building will be the great amount of space devoted to department rooms, all of the third floor and most of the second being given over to this purpose. In nearly all cases the rooms will be so grouped that each department will have the use of two: a small room designed as an office or work room for the members of the department, and a larger one in which books con-

nected with the department will be shelved, and where teachers and students may meet, formally or informally, in an atmosphere of books. While there is no intention of making the library into a recitation building, it is quite possible that the small groups formed by the new senior courses may hold their meetings in these department rooms.

The standard authors or "browsing" room simply follows the lead of other recent college libraries in supplying a place where reading for its own sake may be encouraged and stimulated. Some will think our reading room, with seats for 72 people, rather small, but it must be remembered that Amherst is not now, and never will be, a large college. Furthermore, we anticipate that the demands on reading room space will be lessened by the separate room for magazines and newspapers, as well as by the department rooms.

The architects, McKim, Mead and White, have been very exceptional in their desire to co-operate with the building committee, and there has been absolutely none of the compromise so often to be met with in library buildings.

The new structure will be dedicated at the Commencement in 1917—fifty years after the graduation of the man in whose memory it has been given.

ROBERT S. FLETCHER.

#### "LIBRARIANS NATIONAL PENSION BUREAU?"

THE attention of the LIBRARY JOURNAL has been called to circular letters with the printed signatures of "Margaret Rogers" and "Ralph Ferguson," proposing the establishment of a "Librarians National Pension Bureau." This circular matter bears the name of Fremont Rider, managing editor of the LIBRARY JOURNAL, in several places as "Secretary" of this "Pension Bureau," whose address is given as 241 W. 37th Street, which is the address of the LIBRARY JOURNAL.

The LIBRARY JOURNAL is obliged to say that it knows nothing whatever of this proposed "Bureau"; and Mr. Rider has not only made no authorization of the use of his name in this connection, but knows

nothing whatever about the "Bureau," its personnel or its plans.

The circular names a number of well-known people as having "been communicated with" relative to the subject of librarians' pensions, among them Mr. J. I. Wyer, Miss Plummer, Mr. Faxon, Mr. Hadley, Mr. Bostwick, Mr. Utley and Mr. Herbert Putnam, and states that they are believed to be interested "in the plan proposed."

#### CONCERNING OUTSIDE READING

A STUDY of the reading habits of 800 students in the Decatur High School was recently made by J. O. Engleman, superintendent of schools in Decatur, Ill. In the *Journal of Education* for Aug. 17, Mr. Engleman sums up briefly the results of his investigation. "The study," he says, "shows that one-fourth of them do not read the daily papers, tho the study was made when Congress was in session, most of Europe was at war and the rest of it compelled to preserve an armed neutrality, when treaties were being broken, ships were being sunk almost daily, and when waters disturbed in 490 B. C. and again in 453 A. D. were once more the scene of great naval encounters. Without minimizing the importance of Greek, Roman, medieval or modern history, no high school can justify its course if it fail to use the daily paper to vitalize both medieval and textbook modern history.

"Seven out of eight students regularly read one or more magazines, the *Youth's Companion* leading in popularity. Seven hundred students read a total of 178 different magazines but sixty-five of them have only one reader each. The latter list includes many of the magazines most widely read by scholarly adults.

"Almost half of the students read no books not required by their teachers. The 400 students had voluntarily read a list including 418 different titles, it is significant to note what is not found in the list. Dickens, with his long array of novels, had but four readers; Hawthorne, two; Scott, two; Kipling, one; Cooper, two; Victor Hugo, two; Barrie, one; Milton, one; Tennyson, one; Kingsley, one; Shakespeare, one; Stevenson, none, and George Eliot, none.

"In the eighth grade a larger percentage of pupils read the daily paper and a smaller per cent., magazines. There was also more voluntary reading of books but the type of matter read is less commendable. Only thirty-two of 225 pupils acknowledge a love for poetry, and of these only four are boys."

#### WORK WITH SCHOOLS IN THE HAVERHILL PUBLIC LIBRARY

THE work of the Haverhill Public Library with schools is a voluntary arrangement on the part of the teachers with the initiative and control largely from the library, and all expense of transportation, postage, stationery and assistant in charge of the work paid for by the library.

In addition to their personal cards teachers have special cards on which as many books of non-fiction as they need may be taken for four weeks. Those who leave town for the summer vacation may take with them books needed for study. Notices of new educational books, as they are received, are sent to the superintendent of schools and high school principal, and multigraphed teachers' bulletins are sent to all teachers several times during the year. The educational books and periodicals are kept in a room by themselves accessible to the teachers.

The reference librarian has charge of the school work, as the help in preparing debates, essays, etc., for the pupils is best given by the reference librarian.

As the high school is across the street from the library, the reference work for the high school is done at the library, and pupils often spend study periods at the library. Altho the high school has a fine library room, the book collection is small and few new books are bought. The high school depends largely on the public library for reference books and general new books of the day. The reference librarian keeps in touch with the high school courses, and places on the high school shelves in the reference room books to meet the changing needs of the classes during the year. As English is required in all four years in the high school, the freshmen make more or

less voluntary use of the library. The sophomores are required to learn how to use the library, and receive credit in English for preparing bibliographies on some subjects of interest, with the help of the card catalog and periodical indexes. The class visits the library in sections and receives instruction from the reference librarian in the use of the card catalog and reference books. Later, help is given the pupils individually in preparing their bibliographies.

On the high school reserve shelves in the reference room is kept a collection of up-to-date catalogs and handbooks of the leading schools and colleges to help those who are going to college or to technical schools.

The best editions of the standard English and American and some foreign authors are kept in the reference room for browsing. Many of the English classics, such as "Vanity Fair," "Rip Van Winkle," "Pickwick papers," "School for scandal," "Knickerbocker's New York," in fine, expensive editions illustrated by such artists as Baumer, Rackham, Aldin, Thomson and Parrish are on open shelves in the reference room, and are sent to the high school if the teachers desire. For the English courses small exhibitions are prepared illustrating the history of printing and book making. For these are used, among other things, a model of Gutenberg's printing press, illuminated manuscripts, early block letter books, as the Nuremberg Chronicle, a facsimile of the first Shakespeare folio, and examples of modern fine printing and binding. Talks on the history of printing and on prints have been given before teachers and their classes by the librarian.

Small collections of books on vocations are sent from time to time to the high school library to be used there by teachers and pupils. All available books and pamphlets on vocations are bought, and copies of an exhaustive catalog, prepared by the library, of books and periodical articles on vocations are kept at the library and the high school. Recently several lectures on vocations, arranged by the library, were given at the high school.

For more than twenty years the schools, other than the high school, have been used

as deposit stations. Ten traveling libraries of 60 volumes each circulate among the small ungraded schools in the country districts, staying four months at each school. Books and pictures are sent every four weeks to each room from the fourth to eighth grades. Pictures are sent to grades below the fourth. The books are selected by the teachers with the help of the librarian. The teachers use chiefly in selecting "Class-room libraries for public schools" prepared by the Buffalo Public Library, copies of which are in all the schools. The use of the books depends upon the teacher. Some circulate the books for home use, and some use them in the school-room for supplementary reading. Books and pictures are selected for general reading and to illustrate the class work. Books and pictures are sent to the playgrounds and vocation schools.

The picture collection is very large and is much used by the teachers. Pictures of places, both mounted pictures and picture post cards, are the most in demand. Historical anniversaries, holidays, birthdays of famous people and pictures of industries are much called for. Books and plates of designs and pictures on fine art subjects are much used in the drawing classes.

A collection of lantern slides suitable for school use is being made. The collection now covers local history and geography. The Haverhill slides have been much used. The picture collection includes many stereographs which have had a wide use by the schools. For the high school use particularly there is a large collection of historical colored lithographs covering chiefly European history. These pictures have a varied use. One series, on Greek and Roman life, illustrates history, home life of the people, the theatre, the Iliad and Odyssey and ancient methods of commerce and warfare. These are used by the history and literature teachers. Another series covers medieval history. Pictures of a castle and a tournament hung in a classroom give life to the reading of *Ivanhoe* and *Kenilworth*. King John signing the Magna Charta, soldiers building the Roman wall in Britain, or Danes attacking an English coast town, all shown in color with histor-

ically correct settings make the history more real.

Besides the picture collection is a small museum collection for school use. This includes such things as a model of a Swiss chalet bought in Switzerland, alabaster models of Roman ruins, dolls from Mexico, Alaska and other places in national costume, exhibits illustrating industries as silk, cotton, linen, copper mining, basketry and weaving. There are tin soldiers in correct costume, Indians, wild animals, a Japanese garden, and objects to illustrate the great inventions that have influenced history, as a model of Gutenberg's printing press, a compass, quadrant and gunpowder. All of these are exhibited either at the library or in the schools.

Classes from the high school come to the library for lectures by their teachers in history or literature. For them exhibitions of books, pictures and museum objects are prepared in the library lecture room. The pupils often come afterwards to get material for their written exercises from these exhibitions.

The library has a reference collection of the best children's books in fine editions for the use of teachers and parents in selecting books for the home library. Inexpensive but good editions are also shown in this collection, so that all purses may be suited. This collection is exhibited in the delivery room for a month before Christmas.

JOHN G. MOULTON.

#### THE ST. LOUIS PLAYGROUND-WAGON

For several years the St. Louis Public Library has been seeking a method of effective co-operation with the summer playgrounds. The problem was made more difficult by reason of the impossibility of placing enough books on the playground to attract the children, both on account of limited shelf-room and a lack of supervision, except for one hour each week when a library assistant was present. The strenuous effort of the assistant, the apathy or too great zeal of the children, together with an entirely disproportionate loss of books, united to create a feeling of desperation in the people most concerned.

Something had to be done—and something was done. The Playground-Wagon, shown as the frontispiece of this number of the JOURNAL, was evolved.

On the road it appears as a simple and ordinary motor truck, but once arrived at the playground it ceases to be ordinary, albeit as simple as ever. Within, a book-case has been concealed, a bookcase on wheels, with a capacity for 380 volumes. This is rolled out on a shelf hooked to the end of the truck and supported by a wooden upright. A small slide is next pulled out, making a desk at which the books are issued. Having loosened the chains which hold the books in place during the journey, having placed an empty box beside his stool to hold the returned books, and having seated himself on the stool before the desk, the driver of the machine is ready for the children, who have been ready for him since the machine first drove into the grounds. The assistant—a children's librarian—with the materials for registration, stations herself at the front of the wagon where she can at the same time oversee the steering gear and the horn, which have an irresistible attraction for the boys, and utilize running-board and mudguards as desks according to the size of the child who wishes to "start." "All is now intense activity." The children swarm about the books, about the driver, about the application cards; some from the ball grounds, wet and sticky; others from the bathing pool, blue and dripping; and some few demure little maids, sewing in hand, shyly waiting their turn. As the clamor for books begins to die away, a new cry is heard: "Ain't there going to be no story to-day?" There is; and in a few minutes the wagon is deserted by all save the driver and an eager handful anxious to help bring order out of chaos. The end of the story finds everything folded away, and machine and driver are ready to start for the next playground, where the scene is repeated. That the children on the second playground may not be obliged to satisfy themselves with leftovers, as they would be if all the "good" books had been drawn at the first stop, an extra box of books is carried, with which to fill up the gaps. Each day the shelves

are restocked at the Central Library, where all detail work—counting and arranging the issue, checking off returned books, etc.—is taken care of. In this way, every moment at the playground is made to count in the purpose for which we go there. With plenty of books to choose from, it has been possible to sustain the children's interest, so easily dissipated when books are scarce or unsuitable. It is still too soon to say what changes or modifications may be deemed necessary another year, but under present working conditions we feel that a maximum of service with a minimum of fruitless effort has been achieved.

MARY WILKINSON.

### THE CATALOGING TEST: RESULTS AND OUTLOOK\*

THE result of the cataloging test, as a whole, would seem to be negated by the fact that such a small number of libraries took part in it. Of the 38 libraries that finally sent in replies to the questionnaire sent out first in 1913 and again in 1914, only 17 took part in the test, and one library took part in it without having answered the questionnaire. These 18 libraries divide themselves naturally into the following four groups: (1) Three large libraries, each of which represents a type of its own, none of them easily compared with the other two. These libraries cataloged for the test a total of 302 books in 293 hours and 23 minutes at a total cost of \$193.83, giving an average of 56 minutes in point of time and an average cost of 64 1/5 cents.

(2) Four university libraries which cataloged together 402 books in 139 hours and 16 minutes at a cost of \$64.20, giving an average of 20 4/5 minutes in point of time and an average cost of 16 cents.

(3) Seven large public libraries with branch systems, reporting together 684 books cataloged in 399 hours at a total cost of \$172.52, giving an average of 35 minutes in point of time and an average cost of 25 1/5 cents.

(4) Four smaller libraries, namely, three public libraries and one state library, re-

\*Report read before the Catalog Section of the A. L. A., at Asbury Park, N. J., June 30, 1916.

porting together 326 books cataloged in 73 hours and 31 minutes at a total cost of \$36.14, giving an average of 13½ minutes in point of time and an average cost of 10 1/10 cents.

Studied in these groups, the tests made by the different libraries will have a story to tell, and the committee on cost and method of cataloging has recommended to the executive board that a study of them be made. The most fruitful group, because more of a unity than any of the others, is the third group, the seven large public libraries. For the purpose of this paper, however, I have chosen the second group, the four university libraries and the university library included in the first group. These libraries are numbered X, XI, XII, XIV and XV in the tables of replies to the questionnaire.

Dividing the grand averages of time and cost in the reports of these five libraries under the heads of books cataloged by these libraries themselves, and books for which they have used cards printed by other libraries (here called L. C., because the number of cards from other libraries than the Library of Congress is infinitesimal), and again dividing the books cataloged by the libraries themselves into books in English and foreign languages, we find the following results:

	Own.		Total Average.	L. C.	Grand Total Average.	Estimated Average Cost, 1912.
	English.	Foreign.				
X.....	1 h. 42 m. 91¾c.	1 h. 10 m. 65c.	1 h. 16 m. 67¾c.	35 m. 39c.	54½ m. 52½c.	\$1.34
XI.....	23½ m. 16½c.	30¼ m. 22¾c.	26¼ m. 18¾c.	17¼ m. 16c.	21¾ m. 17¾c.	39c.
XII.....	16½ m. 11½c.	18¾ m. 12½c.	17¾ m. 12c.	12¼ m. 18¾c.	15 m. 15½c.	30¾c.
XIV.....	25 m. 17½c.	37½ m. 26¾c.	36½ m. 28¾c.	10 m. 18c.	26¾ m. 21½c.	70c.
XV.....	18½ m. 8½c.	20½ m. 10¼c.	20 m. 9½c.		20 m. 9½c.	47c.

It is a seemingly curious fact that library no. X spent so much more time on the English books than on the foreign; but this is explained by the character of the books. Of the total of 101 books cataloged by this library nearly 25 per cent. required long searches, because the authors were new to the library and found neither in the L. C. depository catalog, nor in the first couple of reference books consulted, and some of the books in English were of this kind.

Two of the titles reported by this library represented long sets of periodicals. This library deliberately included in the test a number of difficult books, while the others more closely followed the recommendations of the committee, that in all cases average books be selected. No. XI stated that in its test books of average difficulty had been selected, and that the test, therefore, was not representative of its work; the more difficult and time-consuming books had been eliminated. This was to all appearances the case with the other three libraries as well. No. XI stated in the reply to the questionnaire that its "accessions consist to a large degree of documentary and serial matter of all sorts, for which we have some particular method of cataloging, devised to expedite the reaching of the shelves by this material." This class of books, however, was not selected for the test. That no. XIV, in estimating the cost in its reply to the questionnaire counted a monograph series, consisting of a number of analyzed monographs as one title, should be taken into account when comparing this estimate with the average computed from the test report, where individual titles only were recorded.

The high cost reported by no. X, in 1912, as compared with the average computed from the test report, is explained by the fact that in that year the library opened a

new building, necessitating the moving of half a dozen large libraries, and in addition the library was engaged in changing its method of work to a new system.

That this library maintains a number of special catalogs and shelf lists affects the number of cards to be prepared and therefore the cost of multiplying them; it affects, however, chiefly the cost of filing, a process which this library did not include in the test.

No. XI finds a cause of economy in the fact that the same person attends to both the cataloging and the classification of a book, and that the books for the purpose of treatment are divided into groups of one or more subjects, each cataloger having charge of one group.

No. XV did not make a very detailed report in response to the questionnaire, but, if I am not mistaken, this system of dividing the books into groups prevails there also, at least as far as the classification is concerned.

While speaking of the kind of books selected for the test, I might mention that, when I selected at the John Crerar Library what I considered books of average difficulty from the standpoint of cataloging, the classifiers threw up their hands and said that they had never had such a collection of snags coming to them at any one time.

Another factor that naturally influences the cost of the work is that of salaries. In this respect the five libraries stand as follows: No. X has a cataloging force of 24 persons, with an average salary of \$906. No. XI has a force of 20, with an average salary of \$581. No. XII had in 1912, a force of 16 with an average salary of \$985. The staff of this library has since been increased, but I have no report of any increase in salaries. No. XIV has a force of 12, with an average salary of \$505. No. XV has a force of 19, with an average salary of \$502.

There are other factors that will influence the time consumed in cataloging and thereby the cost of the work: matters of organization, of local conditions, and the experience and alertness of the workers, the absence of which will naturally result in waste of time.

Now, what might we regard as the net result of the test? One thing stands out clearly enough, and that is the economy effected by the use of the printed cards prepared by the Library of Congress. That library no. XV does not use Library of Congress cards at all, and still shows a low, one might say, minimal cost of cataloging even if compared with the other three libraries that selected easier books than

usual for the test, cannot be said to vitiate the result in this respect, because in this case the cost was clearly the result of low salaries. It has been shown by no. X both that the use of Library of Congress cards reduces the cost and that in university libraries, especially the larger, there always will be a large number of books for which the Library of Congress cannot supply cards. The test, therefore, in this respect points to the question whether the work of the Library of Congress could be supplemented by a central bureau, perhaps organized as an appendix to the catalog division of that library, where books purchased for a number of large libraries could be sent for cataloging before being shipped to their final destination. This involves, however, other questions of co-operation which, if I am not mistaken, are being considered by the American Library Institute. If such arrangements be made, what would then become of the cataloger? Would he be relegated to the scrap heap? By no means. For one thing there will always be a residue of local and other publications that would come within the scope of neither the Library of Congress nor any other central bureau; then there is what might be called the individualizing of the catalog of a library, the annotations to be made in order to meet the need of a particular constituency.

Until a co-operative cataloging bureau be established, and in case this idea should not be realized, there is another way of solving the problem, at least partially, namely: by arranging to have each of a group of libraries prepare entries for books falling within its special fields, the cards to be printed by the Library of Congress under some such arrangement as already exists, but with a more definite plan.

There is also the problem of possible re-organization of the work within a library, such rearrangement of the functions of the members of the working force as is suggested by library no. XI, which has found it profitable as a saving to have the books handled by the same person for both cataloging and classification. This method would necessitate a certain specialization in studies on the part of the individual. At

present too much attention is paid to the technique at the expense of the higher functions. The reorganization of work along the lines indicated might lead to a reorganization of the studies in the library schools by introducing, as a part of the curriculum, a thorough study of the history and interrelations of sciences and arts. If the plan were adopted more generally it might lead to attracting to the library profession university graduates with definite scientific specialties who might find in library work an even better outlet for their faculties than in teaching. In the meantime, libraries adopting the plan of organizing their staffs along subject lines would have to demand from their workers a certain amount of specialization in their outside reading and study, and might well encourage such specialization by offering extra time to such members of their staffs as are willing to give a considerable amount of their own time to studies of this kind.

These two ideas: the extension of the central cataloging work of the Library of Congress and the possibility of organizing the work in the individual library so as to utilize to a larger extent than is now the case the special interests and the special knowledge of the individual, stand out for me as the net result of the cataloging test.

AKSEL G. S. JOSEPHSON.

#### BOOKS FOR THE BOYS ON THE BORDER

No sooner had the National Guard of the various states been ordered to the Texas border than the question of supplying the men with reading matter came to the minds of many. Numerous agencies and individuals became interested in the matter and donations of books and magazines were solicited.

Of the organized efforts to furnish books, probably the most important is that now being worked out by the Y. M. C. A. The Rockefeller Foundation has donated \$15,000 for the purchase of books, and their selection and transportation are in the hands of George A. Reeder, international secretary of the Army and Navy Department of the Y. M. C. A. The New York

Public Library was asked to advise in the selection of the books, and has also been of assistance in their purchase and preparation, the work being cared for in the Main Building. Forrest B. Spaulding, the head of the traveling library work, has been the library's direct representative. About four hundred different titles have been chosen, mostly good fiction for men, with some books on electricity and kindred subjects, a few on Mexico and the surrounding country, and a few volumes of modern poetry. "It's not a 'high brow' collection," Mr. Spaulding admits, "but I'll guarantee that the men will like every book in it so well they'll be worn out in six months." The books will be grouped in sixty-five separate collections—forty of one hundred books, and twenty-five of twenty-five books each. They will be packed in cases like those in use for the traveling libraries in New York, and will be distributed among the 36 stations established by the Y. M. C. A. An additional gift of books is expected by the association from the American Red Cross.

In June Dr. John H. Finley, of the New York State Education Department, presented to Major-General O'Ryan a plan whereby the state libraries might operate on somewhat the same plan adopted by the English, French and German military organizations. It was suggested that independent groups of books be sent to each unit of the state forces while on service. These libraries, ranging from 50 to 250 volumes, would include small working collections on military science and engineering, topography, maps for the professional instruction of men and officers, books on Mexico and the Southern American states, and a substantial amount of the best fiction. So far as possible the books would be furnished in small pocket editions in order to aid in the easy transportation of the volumes and their use by the soldiers during free periods. Unfortunately there has been some delay in working out the routine for this plan in all its details, and it is not yet in practical operation.

The secretary of the Texas Library Commission writes that the commission is send-

ing traveling libraries to the places where soldiers are stationed, tho the limited funds of the commission do not permit it to give the work the amount of attention which it deserves. The Iowa Commission, in co-operation with the state secretary of the Y. M. C. A., has shipped to Brownsville five cases of books for the entertainment of the Iowa militia.

Likewise the Public Library of Rochester, N. Y., has arranged to open a station of the library at McAllen, Texas, where Troop H, First Cavalry, is located. The library, which consists of between 25 and 50 volumes and makes its home in a neat telescope case, will go with the Rochester boys wherever they may be moved.

#### LIBRARY WORKERS AT THE N. E. A. CONFERENCE

THE National Education Association held its annual conference in New York City July 3-8, the Library Department holding its meetings during the first half of the week. One whole session was devoted to a consideration of the best means of administering a high school library, and another to news from the various groups of school and college libraries. On Wednesday morning a joint meeting was arranged with the Department of Secondary Education, in which most of the speakers were teachers rather than librarians.

##### MONDAY'S SESSION

At the first meeting, held Monday morning in the Washington Irving High School, Irene Warren presiding, the general topic for discussion was "The administration of the high school library." Two of the papers read at that meeting are reprinted in full in this issue: "The combined administration of high school libraries by the public library and public school boards," by Bessie Sargeant Smith of Cleveland, and a statement of the "General principles involved in school library control," by Dr. Bostwick.

In offering "A constructive policy," William B. Owen, principal of the Chicago Normal College, said that the time has passed when book people have to defend books against the arguments of the man in the laboratory. The only growth is that

made possible by the use of the recorded word, and an adequate book collection is not only legitimate for every school, but is a practical necessity. The library, like the laboratory, should be in the building, as involving the least expenditure of money, energy, and time to build up the theory or demonstrate the fact the teacher is presenting to the class. The librarian should be prepared to show teachers how experiments tried in one place can be of service in others, and Mr. Owen suggested that this Library Section should have a definite plan for organizing experiments and exchanging notes on their success or failure. The school library should give to every child the library habit; that is, to know that books are available on all subjects and how to get at their information quickly. No person should graduate from a high school who cannot go to the library and work up satisfactorily an assigned topic. The average high school teacher now lacks training or conviction to see the great usefulness of the library, and the teachers and librarians should work out together a common technique so that the teachers may come to depend on the library and exalt its position in the minds of the pupils.

There was much discussion over the joint administration of high school libraries and of the location of public library branches in high or grade school buildings. Mr. Legler said he came with all the zeal of a new convert to say that he was convinced, against his first theory, that it is not feasible for the fullest efficiency to merge the high school library with the public library, making it a regular library branch. The benefit to the public is not worth enough to offset the loss in having the librarian's attention diverted from the school and its peculiar needs. In Chicago as in Cleveland, however, the Public Library and Board of Education have co-operated in administering the high school libraries. The library furnishes staff and salaries, buys and prepares the books added to the initial collections, and supplies from 80 to 100 magazines; the school board provides the room and its equipment, with heat, light, and janitorial service. The embarrass-

ment of the library now is that the schools want to extend their library arrangements faster than the library can provide the extra salaries needed.

Mr. Wright of Kansas City and Mr. Ranck of Grand Rapids stoutly defended public library branches in school buildings, claiming that this plan made it possible to install larger book collections in the schools, and that the whole educational work of the schools is strengthened by bringing adults to the buildings. Miss Zachert said that in Rochester, N. Y., such an experiment had been tried in schools in four neighborhoods of different types, and in general it had proved unsatisfactory. While such a branch may be worth while as a "feeler," the adults do not generally come, tho the children will use it freely. Dr. Sherman Williams said that the discussion so far had all been about school libraries in large cities, and he asked consideration of the problem of the small schools. New York state has 750 high schools, and three-quarters of them are in places which either have no public library or have only a poor one. In many places the high school and grades are in one building, and the school seems the best location for a library. "The child who hasn't the reading habit before the age of ten, rarely gets it."

The point was also brought out that the pupils who come from high schools of less than six teachers, where the library is usually meager and little used, find it much harder to keep up with their work in college than do those who have had the advantage of constant recourse to a good library in their high school work.

#### THE MEETINGS ON TUESDAY

Tuesday morning the librarians gathered in the lecture room of the New York Public Library to listen to reports from the various groups of school libraries, as follows: "University and college libraries," Willard Austen, Cornell University Library, Ithaca, N. Y.; "Normal school libraries," Willis H. Kerr, librarian, State Normal School, Emporia, Kan., and O. S. Rice, supervisor of school libraries, Madison, Wis.; "High school libraries," Mary E. Hall,

librarian, Girls' High School, Brooklyn; "Elementary school libraries," Effie Power, supervisor of school libraries, Carnegie Library, Pittsburgh; and "The rural school library," Orpha Maud Peters, assistant librarian, Public Library, Gary, Ind., and Renée B. Stern, of the editorial staff of *Mother's Magazine*, Elgin, Ill. Many questionnaires had been sent out to secure the data for these reports, which varied much in form and clearness. Every college library was advised to get out for the use of students a handbook on its resources and use, and the courses of instruction in library use given in various colleges were described. The dire need of better library facilities in the smaller colleges was dwelt upon. The question was asked whether any courses in children's literature were given in colleges, to which Miss Bogle replied by describing the course in children's literature and story telling in the University of Pittsburgh, for which two points credit are given. Mr. Legler announced the appointment in Illinois of a committee of eleven to make a survey of library conditions, the work being divided among public, rural school, high school, normal school, college, and university libraries. Special attention will be given to formulating a constructive policy for high school libraries and a preliminary report may be ready this fall.

Mr. Kerr had voluminous notes on replies to a very comprehensive questionnaire sent out to normal schools, covering, among other points, the instruction in library methods in state normal schools, the courses in children's literature, and the technical subjects required for teacher-librarians. One difficulty in using the textbooks on the use of reference books lies in the fact that few normal schools are equipped with the tools these books describe. Mr. Kerr says there are to-day four types of so-called normal schools, widely varying in their standards: (1) the old type doing regular high school work; (2) those doing high school work plus two years of college; (3) the Teachers Colleges, with some high school work plus four years of college; and (4) the city training schools. Until these

normal schools rank more evenly, any attempt to standardize normal school libraries will be difficult.

Miss Mary E. Hall gave an enthusiastic report of the increased interest shown in high school libraries as evidenced by discussion of their problems by teachers' associations in all parts of the country during the past year. She also emphasized the importance of the step taken by California in requiring a certificate for every school librarian in that state, and the appointment of a committee to draw up a state course of instruction in library use. Miss Hall, as chairman of the School Library Section of the A. L. A., has been instrumental in bringing together a loan collection of blueprints of school library plans, with photographs of rooms and furniture, and this material is at the service of any school principal, superintendent or architect interested in knowing what school libraries should be in size, arrangement, and equipment. C. C. Certain, chairman of the library committee of the Department of Secondary Education, paid eloquent tribute to Miss Hall's co-operation at all times and to the school library exhibit she had prepared for this conference.

In discussing library work with elementary schools, Miss Power laid special stress on the need of high standards in the book collections for departmental work in these schools. In 1914 five lists were recommended, but there was no satisfactory short list for beginners so a tentative list of 800 books has been compiled, graded and annotated, to be later extended to include 1000 to 1200 titles. The prospective publication by the Bureau of Education of a bulletin on rural school libraries was announced by Miss Peters, who said that most rural school libraries to-day contain from 50 to 300 books, unorganized and in need of repair, and not intended for outside use. Miss Stern thought the growing tendency to make school people teach the use of source material would help develop the libraries in the country schools.

Mr. Rice, going back to the normal schools, said that they are already so hard pressed for time and means to give instruc-

tion in the subjects required, that they will hesitate to give library instruction until it also is a required subject. He then proceeded to describe the preparation and use in Wisconsin of the Manual which he edited and which outlines the library lessons incorporated in elementary school courses recently. Dr. Wolcott of the Bureau of Education announced a forthcoming bulletin of the bureau giving a select list of books for high school libraries, prepared under the direction of Miss Martha Wilson, of which the preliminary draft is already out. He also called attention to the lantern slides which the bureau lends to libraries and schools, the only charge being for transportation.

In the afternoon Miss Masee gave a brief talk on "Source material in the library" before a very small audience, and the rest of the afternoon was given over to a lecture recital on "The drama of life in the lyrics of the folk," by Caroline Crawford of Teachers College, Columbia University, and Elizabeth Rose Fogg of New York City.

#### WEDNESDAY'S JOINT MEETING

On Wednesday morning the Department of Secondary Education and the Library Department held a joint meeting in the auditorium of the Washington Irving High School, over which Miss Emma J. Breck of Oakland presided. One of the best addresses of the conference, as well as one of the shortest, was the one made at this meeting by Dr. William M. Davidson, superintendent of schools in Pittsburgh. He said he had eight theses to develop, and parenthetically he said he favored public library rather than board of education control of school libraries, as reaching a larger group in a different way. Of the eight points he wished to make, the first was that the most potent single agency fostering the spirit of continuation of educational work is the library, especially the school library, and still more especially the high school library. It is fundamentally important to get the right spirit here. (2) The ultimate test of the process of education is its ability to stimulate and sustain. (3) The

modern high school, combining the useful and practical with the cultural, is constantly reshaping its processes with a view to adapting training to use. (4) The textbook method is today certainly being supplanted by the many-book method of teaching, necessitating better school libraries. (5) While the schools stimulate the pupils' desire for wider study, preparation for it must be given and training in use of the facilities at hand provided. (6) There should be a librarian with an education equal to that of the regular classroom teacher plus library experience, a college graduate preferred. The librarian who will successfully link together teachers and pupils must possess the three i's—information, illumination, and inspiration. (7) The school librarian must know in general what the teacher knows in detail and have bibliographical knowledge besides. (8) The adolescent mind is so susceptible to impressions, memories, and ideals, that too much care cannot be given to guidance in reading, and an air of refinement, culture, and scholarship should prevail in the library.

Prof. Johnston's carefully worked up paper on "The need of an aggressive campaign for better high school libraries," which followed Dr. Davidson's, is reprinted in full elsewhere in this issue. These two were succeeded by a number of short papers and reports. Principal Walter D. Hood of the Gilbert High School in Winsted, Ct., told "The value of the library in vocational and trade high schools," and in particular described how the library in his own school, by means of required English and reading and reference work and instruction in the use of library methods and books as tools, reaches all pupils in all courses. "Its abolishment would take away one-half the efficiency of the school." Miss Mary Sullivan, head of the department of English in a Pittsburgh high school, presented a report on the administration and maintenance of the high school library. In the matter of a school librarian's qualifications, she said many school superintendents now endorse the requirement that she shall be a graduate of college and of library school with some experience as a teacher,

but they say little about commensurate salary, and it is a question if it is wise to advise girls to get this education and then take a clerk's salary. Miss Sullivan said she believed the library must be in the school building, and under school control. Considering the question of its administration she stated the claim of the public library that it sends needed books quicker than the school can buy them, that it is in closer touch with library ideals, and provides more efficiency in the mechanical processes. Under board of education control the claim is made that books can be handled cheaper, a wider range is secured, efficient reference libraries are more easily procured, teachers co-operate more willingly, and better discipline is maintained. The advocates of joint administration claim all the advantages of both sides, and the committee which Miss Sullivan represented discreetly refused to make any special recommendation in the matter.

The last part of the morning's program was devoted to a symposium on the uses of the library in the teaching of subjects in the high school curriculum. Altho not all the teachers scheduled on the program were present, enough were in attendance to show in five minute talks how the library is used by the different departments and its value in their work in teaching English, French, German, and commercial subjects. History, physical training, and sciences were also to have been touched upon if the speakers scheduled had been in attendance.

C. C. Certain, chairman of the library committee of this department, made his report on what the committee has done in the past year in conducting an investigation into the present high school library situation and the preparation of an exhibit showing the use of the library in teaching different subjects, as well as its work on the preparation of the program for the present meeting. The Bureau of Education is presently to issue a special bulletin on the special investigation of Southern library conditions made with its co-operation and that of the Southern Conference for Education and Industry. As Mr. Certain is going to take up new work in De-

troit this fall he asked to be relieved of the chairmanship of this committee, though standing ready to assist in its work in an advisory capacity, and Prof. C. H. Johnston of the University of Illinois was named as his successor.

Dr. Sherman Williams proposed that the department formally recommend for high school libraries larger and better reading rooms, better book selection, an adequate annual appropriation, a trained librarian, library hours equal at least to school hours, and either school board control or joint control. With the exception of the last, these recommendations were all endorsed. The question of control was felt to be one largely influenced by local conditions, and it was held inadvisable to seem to depreciate any method by special endorsement of others. With the adoption of these recommendations, the meeting adjourned.

F. A. H.

#### THE TRAVELING LIBRARY IN THE EUROPEAN WAR

THE chief of the documents division of the New York Public Library received recently a small pamphlet of some forty-six pages entitled "Die fahrende Kriegsbücherei." It is a catalog of the newly instituted traveling libraries at the German front. The book is of interest as an indication of the remarkable constructive genius of the German, and for the progressive library methods and technique described. Furthermore, it is also worthy of attention as connoting the mental attitude of the contemporary intelligent German. It sets forth clearly a part of the reading-matter with which the German soldier is being fed. As the German soldier of to-day is to be the peaceful German citizen of to-morrow, it is of no small importance to gauge the effect of what he is seeing and reading now, and how this is likely to affect his attitude toward men and things after the war.

The use of these traveling libraries at this time will appeal immediately to the statesmen and military men of to-day. No one will deny the possible educational value to which such a collection of books may be put. Here in our own country the most

important argument against entering the army is that it does not lead anywhere. With the advantage of a chosen group of books and the inspiration of a trained officer or instructor, the possibilities to which the traveling library may be put are enormous. Again, traveling libraries are advantageous and useful because of their aid in breaking the monotony of camp life. An army must be amused; its pleasure must be thought of, for so long as the army obeys fearlessly and intelligently, all is well. We are impressed with this note immediately as we open the catalog, and, glancing at the table of contents, see the first caption—Entertaining Works.

Under the title of entertaining works there are six subdivisions,—(1) books of wit and humor, (2) stories of travel and adventure, (3) historical novels, (4) folk-tales, (5) poetical masterpieces, and (6) character novels and fiction. The humorous works are all the product of German pens. Among the tales of travel and adventure are numerous stories of life on the seas, and tales of criminals and detectives, of exciting times in Australia and America. The choice of books here is good. There is abundance of mystery, horror and power. The tales are chosen from a wide circle and we find here the works of American, English and French authors mingled with the favorites of Berlin and Vienna. The novels cover an equally large field. There are stories of the conflict among the German states, of crusaders and Moors, of Flemish heroes and French despotism, of Rome and early Christianity, of the Reformation and the Renaissance period, of Napoleon and the French Revolution. With the names of famous German novelists appear those of the Englishmen, Dickens and Scott, and the Pole, Sienkiewicz. Among the folk-tales are stories of the Tyrol and the Black Forest, of Swabia, Pomerania, and Bavaria. The books selected deal entirely with Germany and its environs. Worthy of note in the next division are the names of Björnson, Selma Lagerlöf, Tolstoi and Turgenev. Prominent among the writers of fiction appear Daudet, Dickens, Dostojewski, George Eliot, Gorki, Thackeray, Tolstoi and Turgenev.

HOW THE GERMAN WAR-LIBRARIES ARE CARRIED TO THE SOLDIERS

*Courtesy of the Literary Digest*

WHERE THE TRAVELING LIBRARIES FOR THE FRONT ARE MADE UP

Examining this first part more closely we find such familiar names in German literature as Zschokke, Riehl, Rosegger, Frenssen, Gerstaecker, Hauff, Liliencron, Freytag, Auerbach, Heyse, C. F. Meyer, Storm and Suderman. Strangely enough the names of many whom we commonly regard as master artists of German literature do not occur in this division. The names of Goethe, Schiller, Heine and Lessing, to name but a few, are not to be found here. Equally surprising is the presence of the American authors, Harriet Beecher Stowe, James Fenimore Cooper, Edgar Allan Poe and Bret Harte. There are many books by German authors dealing with life in America, and many by authors from countries now in conflict with the German Empire. English literature is represented by the names of Dickens, Defoe, Conan Doyle, Scott, Stevenson, Thackeray and George Eliot. Pierre Loti and Daudet for France, and Tolstoi, Turgeniev, Dostojewski and Gorki for Russia complete the list. This tolerance of foreign authors in such a time of stress is significant and shows us at least that the intelligent German of to-day is not as hampered by prejudice as we might be led to assume.

Division B, dealing with German life as expressed in poetry and the drama, contains the famous names of German literature. Here are found Arndt, Brentano, Goethe, Grillparzer, Hauptmann, Heibel, Heine, Lessing, Schiller, Uhland and Luther, probably the best and most lasting of Teutonic literature. Quite in keeping with present conditions there have been inserted in these traveling libraries collections of stirring poems, songs of the laborer, and ballads and lyrics of the soldier.

Group C, covering more than half the catalog and containing by far the largest number of books, deals with learned and philosophical works. Under the first subdivision, German Art and Men, works dealing with statesmen and generals are given the preference. There are works on Blucher, Bismarck, Clausewitz, Freiherr von Stein, Friedrich von Jahn, Gneisenau, Hindenburg, Mackensen, Moltke, Scharnhorst and Roon. Next in number are the works

dealing with the royal family. There are works on Frederick the Great, Frederick III, Emperor William I and the present Kaiser. Then follow biographies and reminiscences of three artists, Rembrandt, Dürer, and Richter, three composers, Beethoven, Wagner and Mozart, several writers, Goethe, Heibel, Gottfried, Keller, Heinrich von Kleist, and Detlev von Liliencron, a biography of Luther, one of Brahms and another of Kant. German politics as enunciated by Treitschke is here set side by side with classic philosophy and thought, while German poets mingle with heroes and soldiers of the past and present.

From this we come to German Politics and the War. Here it is interesting to note the variety of subjects treated. We Americans are wont to regard the present war as one of militarism against peaceful civilization, but the Teuton soldier feels the same justice in his cause as does the soldier of the Allies. Tho each feels that his country is in the right, probably few in either army understand fully the true causes of the present war. The books listed in the traveling libraries on the field make no overt attempt to present the principles underlying the war, but are concerned mainly with the presentation of the different German campaigns, the struggle about Constantinople, the voyages of the *Emden* and the *Ayesha*, the condition of the enemy and his country.

Section 3 concerns itself with German history, the story of the land and its people. Section 4 deals with the history and development of various countries. Here are books on Russia, China, Africa and the Orient, Rome, Siberia, Albania and France, the South Sea and the North Pole, England, the Belgium of to-day and to-morrow, and the America of the present and the future. The section following contains philosophical works. It is difficult to conceive a soldier in the trenches reading Darwin's "Descent of man," or Descartes' "Method of pure reason," or the philosophy of Emerson, Kant, Schopenhauer, Spinoza, or a treatise on the psychology of Wundt, yet this is what is going on daily. Under such circumstances who can help but ask

himself,—what type of man will be evolved from this strange crucible of war?

The concluding sections are concerned with religious works and ethical discussions, and a long list of books bearing on the natural sciences, like astronomy, physics, chemistry, botany and anatomy, and treatises on technology.

J. H. FRIEDEL.

#### SOME OBSERVATIONS ON THE PRINTING BILL\*

I AM directed by the Joint Committee on Printing of the Congress to thank you for this opportunity of again discussing the Printing Bill before your round table. The Joint Committee greatly appreciates the continued and helpful interest that the American Library Association has manifested in its effort to bring about much-needed reforms in the printing and distribution of government publications. On behalf of the committee, I especially desire to express its appreciation of the generous co-operation of your genial chairman, Mr. Godard, in the consideration of those provisions of the Printing Bill that are of principal concern to libraries. The committee regards the distribution of government publications to libraries of the highest importance, and, I am sure, earnestly desires to have that distribution made in the best possible manner that the fullest information may be freely available to all the people concerning the affairs of their government. With this object in view, the Printing Bill has been presented to Congress.

When I had the pleasure of addressing your round table at Washington in 1914, the bill was pending before both Houses of the Sixty-third Congress. Subsequently, the bill was passed by the House at the third session of that Congress and was favorably reported to the Senate, but it was not reached for consideration in that body before the end of that Congress. The bill was re-introduced in both Houses at the beginning of the Sixty-fourth Congress and has again been favorably reported from the Printing Committees of the House and the

Senate. In the House, the bill has been considered on two calendar Wednesdays of the present session and about half completed without any material changes, other than the rejection of the proposed valuation plan for the distribution of documents by members of Congress, which the committee expects to have restored before the bill is passed by the House. Under a new rule of that body, the bill had to be laid aside as "unfinished business" until the Printing Committee is reached again on the Wednesday call of committees, which probably will not occur until next session. In the Senate, the bill is now well to the front of its calendar of business, but will hardly be taken up for consideration at this session unless Congress remains in Washington until late in the fall. The committee is very hopeful, nevertheless, that the bill will become a law before the close of the Sixty-fourth Congress.

Representative Barnhart of Indiana, who put the bill through the House in the Sixty-third Congress, is again in charge of the measure in that body, while Senator Fletcher of Florida, chairman of the Joint Committee on Printing, has charge of the bill in the Senate, assisted by Senator Smoot of Utah, who, as chairman of the Printing Investigation Commission, introduced the bill in the Sixty-first Congress and secured its passage by the Senate in the Sixty-second Congress.

#### SENATE AND HOUSE BILLS IDENTICAL

The Senate and House Bills (S. 1107 and H. R. 8664) are identical except for a few minor amendments. The two committee reports (S. Report 183 and H. Report 32) are also similar, thus clearly showing that the Senate and House Printing Committees are united in their support of the measure, as they were in previous Congresses. It was the purpose in submitting the bill to the Senate and the House at the same time not only to give added strength to the measure by favorably reporting it in both Houses, but also to have the bill in position to be urged for consideration in whichever body the opportunity might first present itself. Thus, if the bill passes the House first, the Senate committee will

\*Read at the public documents round table at the A. L. A. Conference, Asbury Park, June 30, 1916.

substitute the House bill for its own measure in the Senate with such amendments as it may then desire to offer. The House committee will do likewise, if the Senate should enact its bill first.

As submitted to the present Congress, the bill has been thoroly revised and rearranged in the constant effort of the committee to perfect the measure, but the principal provisions are substantially the same as in the bill of the Sixty-third Congress, which I discussed at some length at your Washington meeting. I trust you will pardon me therefore, if I may indulge in some repetition of the views then expressed.

Though the bill is a complete revision and codification of all the laws relating to the public printing and binding and the operations of the Government Printing Office, I assume that you are interested chiefly in the provisions relating to the distribution of government publications to libraries and accordingly shall confine myself to that phase of the bill.

#### DEPOSITORY LIBRARIES

First, let me present those provisions that relate especially to the libraries which are designated by law as depositories of government publications, for it is in those libraries that Congress is particularly concerned. The bill continues the present plan of designating certain libraries throughout the country as depositories of the government's publications which are supplied by the Superintendent of Public Documents. These designations are made in section seventy-nine of the new bill, which provides, in addition to the government, state, land-grant college, and certain other libraries, that one library for each congressional district and two libraries at large for each state shall be selected by the Superintendent of Public Documents as depositories of government publications. The existing depository libraries are continued as permanent designations. This latter provision was taken from the printing bill and enacted into law by Congress in 1913, thus ending the privilege which members of Congress had had since 1858 of changing at will the designation of depository libraries in their respective districts. This

bit of so-called "political patronage" was given up without the slightest objection on the part of any member of Congress. It is also a credible fact that during the debates on the printing bill in either House not a single criticism has been made of any of the generous provisions relating to the library distribution of government publications. Nor has any opposition been manifest to the additional proposition that all future designations of depository libraries, whenever vacancies exist, shall be made by the Superintendent of Public Documents instead of by members of Congress, thus completely removing the libraries from the field of politics, if such a consideration has ever entered into their designation.

There are now 482 libraries on the mailing list of the Superintendent of Documents as designated depositories of government publications, while the total number of possible designations is 667. Thus 185 more libraries may become official depositories, if so designated under the present law by members of Congress whose districts now have no such depositories.

#### PUBLICATIONS FOR LIBRARIES

Next in importance to their designation are the number and character of publications that may be sent to depository libraries. It is the intention of the Printing Bill to make available for depository library distribution practically every publication issued by the government, whether congressional or departmental. The bill provides in section 80 that the Public Printer or any other government officer issuing publications shall furnish sufficient copies of each, whenever and wherever printed, for distribution to depository libraries. This provision, however, especially excepts from library distribution "matter ordered withheld as confidential, publications for the use of the courts or officers thereof, blank forms, and circulars not of a public character," which, of course, are not suitable for general library purposes. The section by its broad terms is intended to cover such printed matter as committee hearings and other committee publications which frequently are of great importance

but are not now furnished depository libraries. It also includes the House and Senate Journals which now go to only three libraries in each state under special designations by the Superintendent of Documents that are abolished by the bill. The bill likewise makes the much sought Executive Journals of the Senate available to the depositories whenever printed and released to the public by order of the Senate. Another provision of the bill makes the daily as well as the bound edition of the *Congressional Record* available for all depository libraries which will thus complete the sets of Congressional proceedings that are provided for library readers.

Additional assurance that the depositories will have access to all government publications is contained in the section which requires every establishment of the government to have practically all of its printing done at the Government Printing Office. This will end the present practice of some of the departments of having publications printed by private contractors which thus makes it impossible for the Superintendent of Documents to obtain copies for library distribution. The Postal Guide will be one of the more useful publications affected by this provision, which also prevents the War Department from having another valuable document like its "American campaigns" printed in a private office where it is inaccessible for depository distribution. There is absolutely no occasion or excuse for any government publication to be printed elsewhere than at the Government Printing Office, which is the largest and best equipped printing plant in the world. The committee is determined that henceforth Uncle Sam shall print all of his own publications.

#### EXCEPTIONS IN DISTRIBUTION

There are, however, certain publications that the bill expressly excepts from distribution to depository libraries. These include the bills of Congress, Supreme Court decisions and reports, Patent specifications, publications of the Hydrographic Office, Coast and Geodetic charts and pilots, and Geological maps and atlases.

In section 60 of the bill, it is provided

that the reports and digests of decisions of the United States courts shall not be distributed to depository libraries. As before stated, section 80 also excepts from depository distribution such publications as are printed for the use of courts and their officers. This relates to briefs, pleadings, motions, and similar legal papers which, like the reports, are of no practical value in a general public library. These publications, if distributed by the government, should be sent out only to law libraries. Depository libraries and libraries of the courts of last resort in each state will, however, continue to receive the slip and session laws, Statutes-at-Large, and the Revised Statutes and supplements.

Though patent specifications are excluded from distribution to depository libraries, any public library may obtain a copy of each patent specification with the accompanying drawings upon the payment of \$50 a year to the Commissioner of Patents. Such sets must be kept accessible for free public inspection. The bill as considered by the Sixty-third Congress restricted this privilege to only one library in each state, but under the pending measure any number of public libraries may receive the sets of patent specifications on payment of the required fee. This distribution takes the place of the library edition of patent specifications and drawings which was abolished on recommendation of the Joint Committee in 1912. The patent specifications now made available to libraries are sent out in separate sheets which each library will have to bind at its own expense, amounting to five or six hundred dollars a year. It would cost a library or an individual fully \$1500 a year to buy these specifications separately at the fixed price of 5 cents each. The nominal charge of \$50 a year to libraries is simply to prevent irresponsible requests for this costly set of publications which are of value to comparatively few libraries in large manufacturing centers.

In this connection, I call your attention to the fact that the bill abolishes the present *Patent Gazette* distribution to eight libraries specially designated by each Senator

and member under existing law. The total possible designation at present is 4488 libraries, of which only 1813, or about one-third of the total number, have been made by members of Congress, indicating the small interest taken by libraries in the weekly *Patent Gazette*. The *Gazette* will, however, be available for depository distribution.

#### GEOLOGICAL PUBLICATIONS

Geological maps and atlases for gratuitous distribution to foreign governments, literary and scientific associations, educational institutions and libraries, to be designated by the Director of the Geological Survey, are limited to 500 copies which, I take it, prevents their distribution to depository libraries, as such. These maps and atlases, if desired by depository or other libraries, are to be obtained by direct application to the Geological Survey. Two copies of each map and atlas are also placed at the disposal of each member of Congress who, undoubtedly, will gladly donate his supply to interested libraries. The bill abolishes the special depositories of geological publications, including monographs, bulletins and reports, for which each senator and member has been entitled to designate four public libraries. Out of a total possible designation of 2144 libraries only 716 are now carried on the mailing list of the Superintendent of Documents. All the geological publications that have been sent to these special depositories will be included in the distribution to the libraries designated by the bill.

The publications of the Coast and Geodetic Survey, including charts, coast pilots, and tide tables, are specifically withdrawn from free distribution except as to a limited number of copies provided for the Secretary of Commerce and members of Congress. This provision seems to prevent general library distribution by the Superintendent of Public Documents. The Secretary of Commerce has 300 copies of the charts for presentation to such foreign governments, libraries, scientific associations and institutions of learning as he may direct. Ten copies of the Coast and Geodetic charts for each session

of Congress and four copies of each Coast Pilot and Tide Table are also made available for distribution by members of Congress, which gives the libraries an opportunity to obtain such of these publications as they may desire.

Publications of the Hydrographic Office of the Navy Department are withdrawn entirely from free distribution "except for official use" and no copies are provided for library distribution either by the Navy Department itself or by members of Congress. These publications relate entirely to navigation and are extremely technical, including maps, charts, navigators' sailing directions, and instructions to seamen.

#### BILLS PRINTED FOR CONGRESS

As for the bills, I don't know what the average depository library would do with such a flood of printed matter if it were to be let loose upon them. In the Sixty-third Congress the bills numbered almost 30,000, many of which were reprinted half a dozen times in the course of their consideration by the two Houses. The bound set of bills for the Sixty-third Congress fills fully 20 feet of shelf space. The government itself preserves only six sets of bills in bound form, two each in the documents rooms of the Senate and the House and two in the Library of Congress. I understand that only two other libraries obtain full sets of bills. Your round table, I believe, has suggested that the text of a bill be printed in the accompanying report. It is evident that many of the reports now distributed to the depository libraries are of little value without the bills covered by such reports, but the reprinting of bills in the form of reports would entail a very large expense and be of little or no service to Congress itself, for Congress, as you know, considers bills in their regular form with lines numbered and every amendment to the original text carefully indicated according to line and page. Some committees, however, are beginning to include the text of important bills in their reports to make the presentation complete and more intelligible to the public. Perhaps the problem will work out its own solution in this way, but the Joint Committee on

Printing has not been convinced as yet that the adoption of a hard and fast rule for the printing of bills with reports would be advisable.

As a measure of relief from the overwhelming stream of bills pouring in on Congress each session, it has been proposed in the Printing Bill to discontinue the printing of private pension and war claims bills when introduced. Instead, it is planned to provide uniform blanks for the filing of pension and war claims which can then be referred to appropriate committees without printing, the same as petitions. This would do away with the useless printing of thousands of bills that never receive any further consideration from Congress. In the Sixty-first Congress 27,996 private pension bills were introduced, one member alone having presented more than 600 such bills. The committee estimates that \$80,000 a year can be saved by eliminating private pension and war claims bills from those printed for Congress. This will greatly reduce the bulk of bills and may eventually make it possible to supply sets of bills to public libraries, perhaps at a nominal charge.

#### SELECTION PLAN PROPOSED

After making available for distribution to depository libraries all the publications of the Government, with a few exceptions I have just discussed, the bill proposes that depository libraries may select such of the publications as they desire to receive. As a matter of fact, practically all depositories have already been compelled by the tremendous increase of government publications in recent years to select and retain from the numerous documents unloaded on them only such as they could afford to give shelf space. The result has been that for many years more than 100,000 documents have been returned to the Superintendent of Documents annually by depository libraries. This self-adopted selection plan has been a most wasteful one but it appears to have been the only relief possible under the present method of depository distribution. When depository libraries were first established by the govern-

ment it undoubtedly was the intention that they should receive and preserve complete sets of all public documents. It was easy to comply with this requirement when less than 100 documents a year were issued by the government but now that the number of publications sent to depository libraries exceeds 2000 annually only a few libraries can give shelf space to such an enormous accession.

The selection plan, as set forth in section 79, paragraph 2, of the bill, proposes that the Superintendent of Public Documents shall give advance notice, as far as possible, concerning the issuance of government publications available for library distribution. Annual, serial, and periodical publications may be selected at the beginning of a year and reasonable changes during the year are to be permitted in the discretion of the superintendent. Any depository desiring a copy of every government publication available for library distribution will be so supplied if it convinces the Superintendent of Public Documents that it is prepared to make all such publications accessible to the public. I believe that this latter provision will, or at least ought to, compel nearly every depository library to adopt the selection plan.

As a matter of fact, the Superintendent of Documents is even now planning to put the selection plan into operation without waiting for the passage of the printing bill. He takes the view that, as the plan has already been approved by both the House and the Senate, he is justified in making a liberal interpretation of the present law so as to permit its voluntary adoption. Of course, without additional legislation such as is proposed by the bill, no depository can be compelled to make selection of the publications to be furnished it, or denied the complete depository set if it so demands. When the Superintendent of Documents first undertook to adopt this selection plan in 1914 he ascertained that 276 of the depository libraries were willing to enter into such an arrangement, which would insure the success of the plan and effect a material economy in the library distribution. I quote the following from

the Annual Report of the Superintendent of Documents for 1915:

#### SELECTIONS AT EARLY DATE

"We receive many requests from the libraries asking relief from the present burden of caring for so many publications by granting them the privilege of selection instead of being compelled, as now, to receive all that are printed. This selection plan has the sanction of the Joint Committee on Printing, and as the debate on this feature of the printing bill in both Houses of Congress has not developed any opposition, it is my purpose to consider putting the selection plan into operation at as early a date as possible."

The question arises in my mind as to how much latitude should be allowed depository libraries in their selection of government publications. The designation of certain libraries as depositories imposes a duty on them that does not obtain as to other libraries. The name "depository library" itself seems to imply an obligation to receive and preserve the publications intrusted to such library by the government. It is a notice to the public that the printed records of the government are there on deposit and available to all without price or preference. The purpose of designating a depository library in each congressional district was to provide convenient and equitably distributed places where the people may have access to the publications of their government. Improper and inadequate selections by a depository library would defeat the very object of its designation.

The bill specifically requires a depository library to preserve carefully all the publications it shall receive from the government and provides that if such a depository shall cease to be a free public library or for any other sufficient cause becomes unfit to be a designated depository of government publications, the Superintendent of Public Documents shall direct the return of such publications. This provision may be construed as giving the superintendent authority to require depositories to make proper and adequate selections by virtue

of his power to declare a library, for "sufficient cause," unfit to continue as a government depository. In any event, there seems to be no doubt that such authority may be exercised by the superintendent as to future designations through the provision that these designations shall be made by him under such rules and regulations as are approved by the Joint Committee on Printing.

#### MAY CLASSIFY DEPOSITORIES

By the adoption of proper regulations, it might be possible to so classify the depository libraries as to insure that adequate and suitable sets of government publications may be obtainable in all of such libraries. The failure of the present law relating to depository libraries is due chiefly to the fact that it treats big and little libraries all alike. There ought to be an intelligent regulation of this distribution to meet the needs and capacity of the respective libraries.

The Superintendent of Documents reports that last year he sent 2130 different publications to each of the 482 depository libraries. Congressional documents and reports for the Sixty-third Congress alone numbered 5309, which were bound in 352 volumes. The number of Congressional documents and reports from the Fifteenth to the Sixty-third Congress, inclusive, totaled 182,537 which were bound, according to serial numbers, into 6894 volumes. A number of depository libraries have received the greater portion of these volumes in addition to hundreds of other government publications that did not form a part of the congressional sets. Is it any wonder that they have reached the breaking point in their capacity to further provide accessible space for the documents that are being unloaded upon them at an ever-increasing rate? What will the depositories do when the entire field of government publications is made accessible to them as proposed by the bill? It is evident that only the largest could survive such a flood without the relief to be found in the selection plan. I am sure, nevertheless, the committee does not

want that privilege turned into a license to ignore the special responsibilities that rest upon a depository of government publications.

In an effort to end duplication and delay in the distribution to depository libraries, Congress, in 1907, adopted a resolution prepared by the Joint Committee and representatives of the American Library Association, providing that all annual and serial publications originating in the executive departments should not be numbered in the document series of Congress even though ordered printed by either House. That plan, however, proved unworkable at the outset.

#### NEED OF NUMBERED DOCUMENTS

In the first place, the Senate and the House document rooms found that they could not handle with the requisite promptness the vast quantities of unnumbered documents which came to them under this new arrangement. The resolution took the Congressional number off fully two-thirds of the publications that were printed for distribution through the document rooms of Congress and utterly disorganized the work of those document rooms which are of special importance to Congress in that they supply the reports and documents that are of immediate use to members for legislative purposes.

To temporarily store away hundreds or thousands of copies of a single document is a far different proposition from that of finding permanent shelf space for only one or two copies. No fixed space can be provided in the document rooms for all of the publications that they have to distribute, as the copies remaining at the close of each session have to be moved back into more remote store-rooms to give space in front for the incoming documents of the next session, which must be easily accessible. Years of experience in this work have convinced the document room superintendents that all the publications for their distribution should have an identifying number printed thereon, not only as a stock label for their vast stores of documents, but also for the convenience of congressmen in

sending for such publications. This document number furnishes a simple and certain guide to the documents printed for the use of Congress and is of special value in view of the numerous duplications and the frequent confusing similarity of titles.

The numbers which are assigned congressional documents by the Public Printer in the order received, are generally inserted in the *Congressional Record* when the document is ordered printed and consequently can be at once adopted by the Public Printer, the Superintendent of Documents, the document rooms, all the government officials, libraries, and the public in general as the identifying number under which to record, print, catalog, store, order, or distribute such publication. No other method seems to be capable of so many uses or so simple of operation.

#### SENATE AND HOUSE LIBRARIES

In the second place, the removal of the annual and serial publications from the numbered series, while still continuing to print them as congressional documents, caused a serious break in the sets of documents that the Senate and House libraries have retained in complete numerical order for nearly 100 years. These libraries are of the first consideration to Congress for they contain the only permanent files of documents and reports printed by both Houses that are kept in the Capitol. They must have copies of all congressional documents and reports ready for immediate response to any call that may come from the floor of their respective Houses. In addition, these libraries are constantly used by members engaged in research work and the document numbers furnish the only index that is available to them in consulting the thousands of publications that have been issued by the government. Of course, the libraries at the Capitol could adopt the card system of indexing their accessions the same as other libraries, but it appears to me this would be a needless task in view of the fact that the document numbers, which are necessary for other purposes, already furnish such an index.

At any rate, Congress soon became con-

vinced that the numbering of all documents and reports submitted to it was essential to the proper transaction of its business and that a serious mistake had been made in further dividing the reports and documents printed for its information into a numbered and unnumbered series. It was, therefore, determined by the Joint Resolution of January 15, 1908, to restore to the numbered series all annual and serial publications submitted to Congress by the Departments, but, as a concession to the librarians who had so strongly urged the removal of these publications from the congressional series, it was provided that copies of such annuals and serials for depository distribution should be printed and bound under plain titles the same as the departmental editions. This arrangement made the annuals and serials available for the depositories much earlier than had been possible when they were bound in the numbered congressional sets and had to be withheld by the Superintendent of Documents until the volume and serial numbers could be assigned such sets.

Even this change has, to my mind, been a most unfortunate one in that it has practically abolished the congressional set of documents for library distribution and has continued the wasteful and confusing practice of issuing the same publication under two or more titles. Fully two-thirds of the documents that properly belong in the congressional sets owing to their having been assigned congressional document numbers are now supplied the depository libraries under plain titles with no indication whatever that they are also congressional documents. The result may be seen in your House documents for the Sixty-third Congress, third session. These documents were bound in 109 volumes, yet, out of the entire series, only 15 were supplied to the depositories with binder's titles and volume numbers indicating that they were properly House documents. It seems absurd to give volume numbers to only 15 out of 109 volumes, jumping, as they do, from 4 to 20 and then again from 21 to 101. Of the 352 volumes of congressional documents and reports for the Sixty-third Congress,

235 were sent to the depositories with plain titles. The remaining 117 volumes were given volume numbers without any regard for their sequence and they can only be shelved in complete sets by filling in the gaps with the plain-titled documents bound in as many colors as Joseph's coat. If it is the desire to abolish the depository sets of congressional documents, that task ought to be completed by wiping out the few remaining traces of the once imposing, and, in many libraries, highly cherished array of uniformly-bound reports and documents of Congress. As a matter of fact, the Superintendent of Documents has submitted such a proposition to the Joint Committee on Printing, but no action has been taken on it as the committee is not inclined to make any further changes in the depository sets until the pending bill has been disposed of.

#### CONGRESSIONAL SERIES RESTRICTED

The committee believes that it is first necessary to determine once and for all what documents shall be included in the congressional set and what documents shall be treated as departmental publications, and then to require that such designations shall be fixed for all purposes. In other words, it is proposed to end the present publication of the same document in both congressional and departmental editions. The bill provides in Section 36 that "no publication provided for by law or issued by any executive department, independent office, or establishment of the Government shall be printed as a numbered document or report of Congress, but shall be designated by its original title if reprinted by order of either House, except that reports required by law or resolution to be submitted to Congress, or either thereof, shall be designated for all purposes as numbered documents thereof, and all reprints of congressional publications shall bear the original title and number thereof."

In effect, this provision restricts congressional documents to those publications the original print of which is ordered by resolution of either House and to such reports as the departments and various officers of the Government are required to submit to

Congress. This provision eliminates from the congressional series such publications as the bulletins, monographs, professional, and water-supply papers of the Geological Survey, bulletins relating to ethnology, fisheries, the hygienic laboratory, and the yellow fever institute, and publications of the Naval Observatory, Pan-American Union, and National Academy of Sciences, none of which is of any practical service to Congress for legislative purposes, and, consequently, is not needed in the document rooms at the Capitol.

The failure of the resolution of 1907 was partly due to the fact that, after taking publications I have just mentioned out of the numbered congressional series, it continued their distribution through the document rooms. Under the plan now proposed only numbered documents and reports will be supplied the document rooms of Congress, and hence strictly departmental publications, such as I have enumerated, will not be included in the congressional series in any form. The committee has, in fact, already undertaken to limit the document room distribution to its original purpose of supplying only such documents, reports, and bills as are of immediate value to Congress in the preparation of legislation. By way of experiment the committee directed that none of the serial publications just referred to should be furnished the document rooms of either House. This test has confirmed the committee's opinion that departmental publications having no legislative value should be kept out of the congressional series. It is impossible, however, to remove them from the numbered series until the Printing Bill is enacted into law.

#### REPORTS SUBMITTED TO CONGRESS

On the other hand, the committee is just as firm in the opinion that all reports which are required to be submitted to Congress for its information and guidance should be printed as congressional documents. Though originating in the departments these reports are intended principally for the use of Congress, and, in fact, their preparation is directed by Congress. The records and files of Congress must contain

the reports submitted to it in proper and convenient form and that appears to be possible only by their publication as numbered documents of the House to which they may be submitted. If these reports were comparatively few in number it might be possible to adopt some other method of designating them as reports that have been submitted to Congress for its consideration. The fact is, more than 400 reports are required by law to be regularly submitted to Congress, and, in addition, scores of special reports are called for by resolutions each session. It has been the rule and practice of the government since its first organization to record reports submitted to Congress as a part of the papers of Congress, and, for nearly 100 years now, these reports have been printed as numbered documents of either the House or the Senate. I am under the impression that this practice is likewise observed by many state and foreign governments in the compilation and binding of their legislative and administrative reports in serial form.

This proposition of the committee, that all reports submitted to Congress shall be designated as numbered documents of Congress in printing the same for the use of both the legislative and executive branches of the government, does not necessarily require that such reports shall be bound in sets for depository libraries. The bill now pending before Congress does not contain the requirement of previous printing bills that reports submitted to Congress shall be bound the same as other congressional documents. That language has been stricken out of the bill and the House has already approved this change.

The bill, furthermore, does not contain any reference, as such, to "sets" of congressional numbered documents and reports or other publications, or make any requirement that they shall be bound in sets for depository library distribution. The matter of such binding is to be done under the direction of the Joint Committee on Printing. In this connection the committee undoubtedly will give consideration to the Superintendent of Document's proposition to eliminate the volume number from

the binder's title for all the congressional series and to make the actual title of each separate publication the principal title, with a secondary title indicating the document number, congress, and session.

#### "ONE EDITION" FOR DOCUMENTS

Such a plan would, I believe, finally bring about the much desired "one edition" for government publications, the printing bill preventing the duplication of congressional and departmental editions and the proposed binding regulation cutting out the duplications that now obtain in printing and cataloging a congressional document under its own number and also under the volume number of the library sets. The plan would seem to meet the wishes of those who desire binder's titles suitable for classifying their government publications according to subjects, and would also permit other libraries to continue shelving their government publications in sets according to numerical sequence. In case of the latter, the serial number could be adopted instead of the volume number. As a matter of fact, the volume number is of no particular value when the serial number is used, except that it is printed in the document index by the Superintendent of Documents who could as readily substitute the serial number for the volume number if the committee can persuade the Senate and House libraries to have their sets marked with the serial instead of the volume number. These two libraries are now the only ones receiving uniformly bound sets of congressional documents, including the annuals and serials, that do not have the serial number as part of the back title. The Library of Congress and the Library of the Superintendent of Documents, which also are supplied with complete sets of congressional documents, use the serial numbers, and, I have been informed, the serial number is also used as the call-number for public documents in numerous libraries.

Of course, if the documents are to be sent to depositories as soon as published, the serial number will have to be furnished later and affixed by the library itself just as at present, for these numbers cannot be

assigned until the four series of Senate and House documents and reports are practically completed. Whatever slight disadvantage there may be in this arrangement is more than offset, I believe, by the fact that the libraries could receive all of their congressional volumes practically as soon as printed. Under the present plan, aside from the plain-titled volumes, the depositories do not get the more important Senate and House documents until they can be assigned volume numbers, which delays their distribution sometimes for several months after the close of a session.

In view of the proposed prompt distribution of all congressional documents, the bill abolishes the preliminary distribution to libraries of unbound documents containing less than 100 pages.

#### NON-DEPOSITORY LIBRARIES

So much as to the depository libraries. You perhaps are asking, Of what interest is the bill to the vastly greater number of libraries that have not the special privileges of a government depository? Suggestion has been offered that the committee ought to make provision whereby any public library could obtain publications free of charge from a central distributing point such as the Superintendent of Documents. The Bureau of Education has a list of more than 18,000 libraries in the United States. If these libraries were to be accorded free access to all the government publications they might want, we would at once have 18,000 depository libraries in the United States. With government publications as the prize in a free-for-all grab-bag, there soon wouldn't be a library in the entire country with less than 5000 or 6000 public documents, regardless of its need of such publications, for you all know Uncle Sam's books make a fine beginning for any embryotic but ambitious library that is temporarily short on fiction.

Seriously, though, the bill does offer an excellent opportunity for the non-depository libraries to obtain desirable government publications. I refer to the valuation plan for the distribution of documents by members of Congress. At present senators

and members are annually allotted small quotas of certain publications, principally annual reports and other documents of a more or less perfunctory character. The few really important documents that they receive are usually ordered printed by special resolutions and the limited quotas of these are generally exhausted before the average librarian gets around to ask her congressman for a copy. The committee has ascertained that the reprint value of the documents so allotted to members of Congress has averaged for many years approximately \$1800 a year for members of the House and \$2200 a year for senators. It is proposed, therefore, to allow each senator and member such a book credit annually with the Superintendent of Public Documents, who shall supply them with publications available to the amount specified. Some publications are listed in the bill as subject to valuation distribution. These include, in addition to the documents heretofore allotted to congressmen, all the publications of the following departments and bureaus in which the public is specially interested: the Departments of Agriculture, Commerce, and Labor, the Public Health Service, the Bureau of Education, the Geological Survey, and the Bureau of Mines. Comparatively few of the publications of these departments and bureaus are now available for distribution by congressmen, and then only in very limited quantities. The valuation credit of each member is also to be available for such other publications as Congress may order printed from time to time, like the report of the recent Industrial Relations Commission.

#### DOCUMENTS FROM CONGRESSMEN

Under this plan, an alert librarian can obtain practically as complete a set of the more important government publications as is sent to the depository libraries. Senators and representatives have a personal interest in the libraries of their own states and districts, and, I believe, the non-depository libraries, especially the smaller ones, will fare better at the hands of members of Congress, who are thus closer in touch with them, than they would if the Superin-

tendent of Public Documents were vested with optional authority to supply such libraries. If you approve this valuation plan, you ought to so advise your senators and members, especially the latter as they seem to hesitate over its adoption.

In addition to this, however, the bill does provide that the Superintendent of Public Documents may supply such libraries as are suitable custodians of government publications with copies whenever there is a surplus in his office after filling the requests of the regular depositories. This is a rather indefinite provision, but it is susceptible of expansion into one of great service to the non-depository libraries.

There are also several provisions in the bill specifically authorizing distribution by the departments of certain valuable publications, such as patent specifications, daily commerce reports, coast and geodetic charts, and geological maps and atlases, to libraries. I am rather inclined to believe that the bill will be amended to provide the daily *Congressional Record* for every free public library in the United States.

It seems to me, therefore, that the interests of the libraries, both depository and non-depository, have been well cared for in the bill and that the measure will be of much benefit to them when it is enacted into law. I am sure every member of the Joint Committee on Printing has had the welfare of the libraries foremost in his thoughts in the preparation of the bill. That it may be still further improved is undoubtedly true, for we have not yet reached the millenium in legislation. The committee believes, however, that there is enough of merit in the bill to justify fully its prompt enactment by Congress.

GEORGE H. CARTER,

*Clerk, Joint Committee on Printing,  
Congress of the United States.*

Let every librarian keep a little corner of his library for the books of "good tendencies," as Dibdin called them, as an ark of the covenant with the high traditions of his calling.—HENRY W. KENT.

## PUBLIC DOCUMENTS A QUARTER-CENTURY AGO

IN connection with the publication in this issue of Mr. Carter's remarks at Asbury Park on the Printing Bill now before Congress, it may be worth while to reprint from the report of the eighth A. L. A. conference, held in San Francisco in 1891 [LIBRARY JOURNAL, vol. 36: C118-119], the recommendations presented in a special report by R. R. Bowker, then chairman of the committee on government publications. It is interesting to note how many of these recommendations have since been put into operation.

SPECIAL REPORT ON PUBLIC DOCUMENTS  
*San Francisco Conference, 1891*

Your special Committee on Government Publications submit that a satisfactory system of government issues should embrace the following conditions:

1. Public documents should be printed on durable paper, in permanent standard size, except where there is specific reason for variation, and in sufficient minimum number, under general provision of law, to supply the Executive and Congressional libraries, each Senator and Representative, each issuing department, bureau or committee, with the necessary copies for record and office use; each public depository, and a moderate surplus for general use or public sale.

2.\* Additional copies to be printed only from department appropriations or by specific legislative provision.

3. Public documents should not be understood to include office blanks, confidential instructions, or other routine papers not of public concern.

4. Each document, in addition to separate publication, should have its proper place in one series, and the binding up of one document in several shapes or series should as far as possible be avoided.

5.\*\* Except where numerical or chronological arrangement is desirable, as in the case of bills and journals, the classification and binding should be such that the issues of the same department or bureau should be together, and cognate subjects should be bound in the same or in adjacent volumes.

6.\*\* Each volume in a series should have lettering showing its individual character.

7.\*\* These conditions might best be met by

\*The last Printing Investigation Commission put onto departments the payment of costs of their reports and publications, and Congress now pays only for the copies it actually uses.

\*\*Now in operation.

substituting for the present Senate and House executive and miscellaneous series one comprehensive series to be known as United States general or miscellaneous documents, to embrace department reports and all other documents not properly belonging in the several series specifically connected with the two Houses of Congress or not special sets of publications.

8.\*\* Each volume or set should have at its end an index to that volume or set only.

9.\*\* There should be a separate annual index to all government publications of the year, whether by government subscription to individual enterprises or by public provisions: and there should be ultimately a systematic and comprehensive subject-index to all governmental publications, but not until a plan has been matured after full consultation with the best bibliographical authorities inside and outside the government service.

10.\*\* Every government publication should be sent, as soon as issued or bound, to public depositories of the first class, which should include every state library and the leading library for public use in great centres of population.

11.\*\* A select list, to embrace the Statutes, President's Message, Census volumes, Copyright lists, and other issues of universal interest, and such other issues as may be of special local interest, should be sent promptly to public depositories of the second class, which should include such other libraries as can make good use of such documents—such libraries to be registered on application of the librarian or proper officer, stating the locality and character of the library, its present or prospective shelf-room, its facilities for reference use, the character and distribution of its readers, and the lines of documents serviceable to its constituency, such application to be endorsed by the proper Senator or Representative.

12.\*\* All documents deposited to be subject to transfer or recall, in case the library becomes dead or fails to provide adequate accommodation and facilities for their use.

13.\*\* The distribution should be thru a central mailing office and bureau of distribution, except where, as in the case of serial issues which should be sent in first mail, time can be saved by mailing direct from the office of publication, such bureau to be a division of the Government Printing Office, or Library of Congress, or Department of the Interior.

14.\*\*\* This bureau should receive all orders from Congressmen, the departments, etc., and should keep check-lists to prevent unintended duplication. This bureau should also be the general depository of all unissued documents.

\*\*\*Bill pending.

## LIBRARY WORK WITH NEW YORK CITY SCHOOLS

ACCORDING to the report of the committee on school libraries of the New York Library Club, the most important event this past year in the development of school libraries in New York city has been the introduction of an elective course of twenty lessons in library methods for teachers in the Brooklyn Training School for Teachers. Thirty-five students elected the course during the year, and it proved so valuable to them in their work that next year will see a much larger class. The aim of the course is to prepare teachers for the efficient use of libraries and library tools in their school work. An interesting feature of the course is the training given in the use of the branch libraries of the Public Library. Problems are given by the school librarian and are worked out by the pupils in the branch library nearest her home or the school where she is doing practice work.

For some years certain elementary schools in New York and Brooklyn have sent classes out to the public library nearest them for a library hour, when definite instruction was given by someone in the public library, or reference work was done, during school hours, in the public library under the supervision of teacher and librarian.

This year, owing to the fact that hundreds of students in the first year of high school are in high school annexes in grammar school buildings and do not have access to any school library reading-room, a similar experiment has been tried with high school students. In the Girls' High School annex in Brooklyn, students taking the commercial course were required to report at the Bedford branch of the Public Library for instruction in the use of the resources of a public library branch. Through the courtesy of the public library the lecture room and children's room were placed at the disposal of the high school librarian, who gave a talk on the use of reference books and later gave problems in their use and that of the card catalog. These lessons were given at the suggestion of the head of the English department in this annex

and were a required part of the English work. In addition to each lesson on books as tools, a few interesting books of fiction, poetry, biography or travel were briefly discussed and the work was most successful.

## MENU QUOTATIONS FROM THE A. L. A.

MUCH pleasure was found in the quotations which appeared on the menus of the New Monterey Hotel during the conference at Asbury Park and many people will be glad to have the complete set. The quotations were chosen by Secretary Utley from the library literature of the last half century, and were selected with a view to their appropriateness in relation to the general topic of each day and to the programs of the various meetings which the meal preceded.

MONDAY, JUNE 26

### *Dinner*

"We meet to provide for the diffusion of a knowledge of good books, and for enlarging the means of public access to them. Our wishes are for the public, not for ourselves."—C. C. JEWETT, President of the 1853 Library Convention.

TUESDAY, JUNE 27

### *Breakfast*

"Our aim is in terms a simple one. It is to bring a book to a reader, to lead a reader to a book. The task may indeed vary in proportion as the book is obvious or obscure, the reader expert or a novice. . . . But its main and ultimate end is the same. And it remains so in spite of organization grown elaborate, apparatus and mechanism grown complex."—HERBERT PUTNAM.

### *Luncheon*

"A little clearer vision on the part of some trustees as to what constitutes the trust might produce better results for the library, for the community, for the librarian and for the trustee himself."—MARY EILEEN AHERN.

### *Dinner*

"A library without a catalogue is the most strange conceivable object; the worst catalogue that was ever drawn up by the hand of man is preferable to no catalogue at all."—THOMAS CARLYLE.

WEDNESDAY, JUNE 28

### *Breakfast*

"It ought to be a matter of personal shame if a brother librarian finds us using an improved method or labor saving device which we have not reported as soon as duly tested."—MELVIL DEWEY (1885).

*Luncheon*

"The great cause of weakness is inability to rise above routine; failure to see that fresh ideas, initiative, sympathy with one's work and a desire to improve and extend it, are what every live administrator is looking for—what he is anxious to reward."—ARTHUR E. BOSTWICK.

*Dinner*

"It is now the glory of the librarian that he is a liberator more than a *keeper*: he frees his books. The missionary relation of the librarian to his readers is one of the discoveries which the nineteenth century will hand along to the twentieth century."—R. R. BOWKER (1883).

THURSDAY, JUNE 29

*Breakfast*

"We librarians need to cut across all lines and regard our interests as one, whether special librarians, college librarians, general librarians, or any other, and work as a flying wedge to interest the business men in the word library."—G. W. LEE.

*Luncheon*

"The free and generous manner of conducting the libraries of the United States is not the least claim this nation has to being the most democratic in the world."—Editorial in *St. Paul (Minn.) Dispatch*.

*Dinner*

"In time the library is going to be of great importance in the world; but this importance will not be very fully shared in by libraries of the present prevailing type. We shall be obliged to change our scope and methods a good deal if we are to become usefully important or importantly useful."—J. C. DANA.

FRIDAY, JUNE 30

*Breakfast*

"Library work in business organizations is no longer a theory or a tentative experiment, but has proved itself in the firms adopting it to be an integral part of the successful work of the corporation."—LOUISE B. KRAUSE.

*Luncheon*

"When the gentlemen in Congress want to pass a law to hold up the immigrant at the gate because he cannot read fifty lines of our Constitution, say to them, 'Hold! Wait and see what the immigrant's boys and girls will read when they are let loose in a public library.'"—MARY ANTIN.

*Dinner*

"Just as the electric company is ready to furnish its current wherever, in whatever quantity and for whatever purpose its customers desire, so the public library should be ready to develop its work both in quantity and kind."—C. W. ANDREWS.

SATURDAY, JULY 1

*Breakfast*

"And we take home with us, too, a kindly

interest in one another; a tincture of other ideas than our own, wider sympathies, broader views, and deeper meanings than are deducible from the experiences of our little autonomies. Such are the uses, such are the fruits of these annual gatherings."—JUSTIN WINSOR, President's address, Conference of 1883.

*Luncheon*

"Books are the most enduring monument of man's achievements. Only through books can civilization become cumulative."—F. M. CRUNDEN.

## NEW YORK STATE TEACHERS' ASSOCIATION

IN view of the growing interest in library problems and the increasing number of requests for school library assistance which come to the State Education Department, it has been decided to adopt this year a new policy for the library section of the State Teachers' Association, as follows:

- I. The school library to be the topic emphasized at the 1916 meeting.
  1. By a library talk at the general session by Mr. Hoscic, Percival Chubb or an equally prominent educator.
  2. By discussion of a library topic in different sessions: Science, English, History, Normal School, Rural School, Commercial, etc.
  3. Short business session of school library leaders to:
    - Hear reports of committees.
    - Discuss school library situation in New York State.
    - Plan further school library campaign.
- II. Objects to be accomplished.
  1. Appointment of a school library organizer to do for New York State what Miss Wilson does for Minnesota. (Dr. Williams, chief of school libraries division, has long felt the need of such help.)
  2. Library questions to be introduced into all examinations given for teacher's licenses by Regents of the State of New York.
  3. Instructions in the use of library and in children's literature to be required in all the normal schools and training classes in New York State.
  4. Library questions to be introduced into Regents' academic examinations in English.
- III. Method of accomplishment.
  1. Co-operation of library section of N. Y. L. A. and N. Y. State Teachers' Association.
  2. Personal interview with Dr. Finley, Dr. Finegan and Mr. Congdon, by a committee representing N. Y. L. A., N. Y. State Teachers' Association and School Libraries Division at Albany.

The plan has been approved by Dr. Alfred C. Thompson, president of the New York State Teachers' Association.

JAMES V. STURGES,  
*President of Library Section.*  
 IDA M. MENDENHALL,  
*Secretary.*

## American Library Association

### EXECUTIVE BOARD

The members of the Executive Board have expressed by letter their approval of the resolution presented by R. R. Bowker at the Asbury Park conference that the board send to Señor Luis Manuel Rojas, librarian of the National Library of Mexico, then in this country for an informal peace conference, a letter expressing the earnest hopes of the association for the continuing friendliness and the increasing intimacy and mutual appreciation between the people of the two countries. The secretary has accordingly despatched to Señor Rojas a letter embodying these sentiments and urging him while in this country to visit American libraries and to give their librarians an opportunity to extend to him any possible courtesies.

### DECIMAL CLASSIFICATION ADVISORY COMMITTEE

The decimal classification advisory committee of the A. L. A. has been sending out the following circular letter to American librarians:

Dear Co-laborer:

Acting upon the democratic spirit which was the key-note of the Asbury Park Convention, this committee proposes to determine what are the general needs in classification not fulfilled by the Decimal Classification.

If you do not use the D. C., discard this communication. If you do use the D. C., we ask you to inform us where you find it insufficient in your library, by replying to the following queries:

1. What subjects are most in need of special numbers?
2. What subjects are missing in the index of the D. C.?
3. What divisions, sections, or sub-sections are most in need of expansion?
4. What divisions, sections, or sub-sections are most in need of change?

(Only changes are to be indicated that the library itself would undertake to make by relabeling the books and altering call-numbers on cards, etc., concerned.)

5. Would you prefer, to the present publication, and at a somewhat lower price, an abridged edition of the D. C. tables (not exceeding as a rule five figures) with the full relative index?

6. Please state for what sections of the D. C. you have made original expansions, and if possible supply the committee with a copy, or if feasible, several copies of these for consideration in making its recommendations to the D. C. Editors.

7. As an aid to classifying with the D. C., would your library probably buy (at a price not to exceed five dollars) the

L. C. to D. C. Equivalent tables proposed for publication by the A. L. A. (e.g.: *TF151=625.02*) arranged in the sequence of L. C. symbols? Subscribers to Library of Congress cards should find these tables very serviceable.

A. LAW VOGEL, Secretary.

### REPORTS OF COMMITTEES

#### COMMITTEE ON LIBRARY TRAINING

The committee has held one meeting during the year, in connection with the January meet-

ings at Chicago. At this meeting the work of examining the field of library training outside the regular library schools was divided among the members, one member taking "Apprentice classes in the larger libraries"; another, "Instruction in library training as given by normal schools"; another, "Work in colleges and universities aside from those maintaining regular library schools"; and another, "Summer courses in library training." It is hoped by this division of the field to complete the survey of the whole field of library training more rapidly. While none of these reports is ready for the present conference, preliminary use of the material on Apprentice classes in the larger libraries will be available for the discussion of that topic by the Association of American Library Schools.

During the year the chairman of the committee has devoted such limited time as was at his disposal, to examining all the material on library schools, which has been collected by the examiner. It seems apparent from the examination that all the schools are fairly meeting the requirements laid down by the committee in 1905 and 1906 as a minimum standard. In many cases these are very considerably exceeded. In only one case did it seem necessary to communicate with the library school authorities, and in this case not because the minimum requirements were not met, but rather because the program undertaken by the school seemed somewhat ambitious when compared with the number of instructors and the equipment of the school.

The committee having thus satisfied itself that the work done by the regular library schools meets the standards hitherto established would naturally now proceed to a discussion of the question whether the developments of the last ten years have made it necessary to modify or extend the minimum standard set down ten years ago. No time has been found during the year to take up this question. Happily, at the winter meeting of the Association of American Library Schools at Chicago, Dr. Harold O. Rugg, of the School of Education of the University of Chicago, came forward suggesting the need of a survey of the field of library training. His outline of a proposed survey seemed nearly to duplicate the work which the committee had already undertaken. Upon learning of our survey he expressed his readiness to look over the material which the committee had collected and see how far it could be utilized in studying from a strictly pedagogical point of view the conditions which ought to

be developed in professional schools of this type.

The committee was exceedingly delighted to find an educational expert interested in this material and very gladly sent it to him for his consideration. The pressure of other engagements has thus far prevented Dr. Rugg from examining the material, but during the coming year it is hoped he will find time to do this and make such recommendations as the material suggests. His work ought to give the committee much light upon the larger questions involved in such a study, particularly those of a strictly educational character, as for example, "what ought to be the curriculum of a library school," "what pedagogical training and equipment ought to be required of teachers in library schools," "what are the best methods of presentation in teaching library methods," and "how far can actual practice in library work be made stimulating and effective as a means of training."

AZARIAH S. ROOT, *Chairman*.

#### COMMITTEE ON BOOKBINDING

The most important work accomplished by the committee on bookbinding during the past year was the revision of Library Handbook No. 5, which was published in October by the A. L. A. Publishing Board. The first edition of this Handbook was confined to specifications for binding fiction, juvenile books, newspapers, periodicals, reference books and non-fiction, and was designed primarily for small libraries. In the second edition the specifications have been thoroughly revised, and, in addition, there will be found brief discussions on sewing, guarding of end papers, sections, etc., back-lining, and attachment of cover. At the end will be found a brief reading list. In its revised form the Handbook is much more useful than before, and can be used advantageously by all libraries, large and small. In Los Angeles the public school board have decided that bids for school binding must be based on the specifications in this Handbook.

A notice was sent to many of the educational periodicals calling the attention of superintendents and school teachers to the fact that the binding of reference books, such as dictionaries and encyclopædias, plays an important part in the life of the book, and pointing out the work done by this committee in inducing publishers to issue such books in a suitable binding. Many periodicals published the letter, with the result that inquiries about binding came from schools all over the country.

Two publishers have showed a renewed interest in reinforced bindings. Houghton Mif-

flin Company have reinforced several titles of new fiction. Charles Scribner's Sons have also reinforced the Universal Edition of Dickens, volumes of which are admirably suited for library use. These can be obtained either as a complete set or in single volumes. On request, specifications for commercial binding of reference books have been sent to several publishers, though we have no record that the specifications were adopted. One commercial binder has twice submitted samples of work for the approval of the committee.

The European War has had a disastrous effect upon the prices of binding materials. Some leathers are almost impossible to obtain. Cowhides have increased greatly in price and deteriorated in quality, so that the committee advises that library buckram be substituted for cowhide until the price and quality again become normal. The shortage of dyes has also affected the cost of cloths, though not to the same extent as leathers.

ARTHUR L. BAILEY, *Chairman*.

#### COMMITTEE ON BOOKBUYING

The report of the committee last year referred to the fact that owing to various court decisions, libraries were no longer limited to the former 10 per cent. discount on new net books, and that the question of discounts was a matter for the individual library and the individual dealer or jobber. The courts have practically prohibited the enforcement of fixed retail prices by the manufacturer or jobber. As a result, there has been real competition for library trade in so far as prices are concerned, which means that the discount to libraries on new set books is no longer limited to 10 per cent.

The court decisions have had an effect much wider than that of library bookbuying. In order to counteract such decisions and to obtain legislation permitting the enforcement of fixed prices by the manufacturers, various bills have been introduced into Congress. For the last two years your committee has watched these bills with interest and concern, but there seemed little chance of any such bill becoming a law until this session. In December of last year it was apparent that a determined effort would be made to pass some bill legalizing fixed prices. This movement was being strongly pushed by the American Fair Trade League, with the support of the United States Chamber of Commerce. The matter was brought before the Executive Board and the Council of the American Library Association at the December meeting with the result that the Executive Board authorized the Bookbuying Commit-

tee, in co-operation with the Committee on Federal and State Relations, to arrange for a representation of the American Library Association at hearings before Committees of the House and Senate on fixed price legislation.

[The course of this bill has been followed in the LIBRARY JOURNAL from month to month, and this part of the report is accordingly omitted.]

At this date (May 20) the bill is still before the Committee on Interstate Commerce of the House. Any such legislation will require careful and continual attention lest unfavorable amendments be introduced in committee. It seems apparent that price maintenance bills, with their ever-present danger to libraries, will be actively pushed for some time to come, whether the present bill becomes a law or not.

The report of the bookbuying committee last December, together with action by the League of Library Commissions, resulted in a number of appeals and protests to Congressmen against the earlier Stevens-Ayres bill. These protests were made before a report of the new bill exempting libraries could be given publicity. The influence of such communications was marked. It seems apparent to your committee that the effect of concerted action by libraries and librarians throughout the country, if made in season and with sufficient force, will to a large extent avert the danger of hostile legislation, such as was contained in the original fixed price bills.

CHARLES H. BROWN, *Chairman*.

#### COMMITTEE ON WORK WITH THE BLIND

Your committee desires to emphasize the need of a few well-stocked library centers for the blind in neglected districts. From St. Louis to Sacramento there is a large area, having a considerable blind population, and few distributing points for embossed books. In the southern states there is little reading matter available for the adult blind. No considerably populated territory should be without a library center, having power to circulate embossed books throughout the state and often in adjoining states.

As a definite experiment the committee has undertaken to develop by loan, a small collection of books in a district now covered by loans sent to individual borrowers from libraries at a distance. The library chosen for this experiment has consented to receive and circulate such books as may be borrowed from the idle duplicates on the shelves of large libraries. The director of the Perkins Institution for the Blind has generously promised to negotiate a loan of such duplicates as can be

spared from their book-shelves. The plan, not yet fully carried out, has already met with favorable interest and the co-operation of the local Association of Workers for the Blind.

On account of the uncertainty about type the American presses have this year printed fewer books than usual. The problem of getting more books for blind readers will be solved by the adoption of a uniform type, which may at last be imminent.

#### *Canadian Libraries of Embossed Books*

Key to abbreviations used in this inventory:

AB=American Braille.  
B=Braille.  
Circ=Circulation.  
EB=European Braille.  
LI=Line letter.  
M=Moon.  
Ms=Music scores.  
NY=New York Point.  
Vols.=Volumes.

*Nova Scotia: Halifax.* School for the Blind. vols. 500 to 600 EB (not counting duplicates). Circ. 1700. Books may be circulated throughout Canada, but are intended to meet the needs of the blind of the provinces of Nova Scotia, New Brunswick, Prince Edward Island and Newfoundland.

*Ontario: Brantford.* Circulating Library. vols. 2237; L1625; M281; NY1431. Titles 200. Circ. 157. Books may be circulated throughout Canada. Printed catalog supplied free of charge.

*Ontario: Toronto.* Canadian Free Library for the Blind. vols. 4489: AB25; EB994; L178; M325; NY3057. Title 1383. Ms: NY and B1323 (B. Ms. negligible). Circ. 9260. Books may be circulated throughout Canada, Newfoundland and the United States. EB and NY catalogs are sold for 25c. The readers of this library represent one-ninth of the total estimated blind population of Canada. 114 new names were added to the list of borrowers last year. The accessions for the year were almost 100 volumes less than actually ordered, for the disorganization of ocean transport has prevented the shipment of a very large consignment from Great Britain. The inconsiderable use of embossed music has led to a serious thought of abandoning this branch of the service. The librarian, S. C. Swift, a blind man, conducts classes of instruction in Braille reading and writing, on the library premises and elsewhere. Considerable home-teaching is done by volunteer members of the library association in various parts of the country. A supply department is maintained, which furnishes at cost or at advantageous discounts such needful articles as paper, slates, games, typewriters, etc. Last

year this library, working in conjunction with Sir Frederick Fraser, of Halifax, secured from the Dominion government the franking privilege on books for the blind sent to Newfoundland, such concession having previously been agreed to by the government of that colony.

*Quebec: Montreal.* Association of the Blind. vols. 600: AB50; EB460; LI20; M50; NY20. Titles 550. Ms: B100. Circ. 200. Books may be circulated throughout the province of Quebec. Catalogs supplied free of charge.

#### *Announcements of New Collections*

For the Public Library of Birmingham, Alabama. Mr. Carl H. Milam, director, announces a small collection of books for the blind, which is about to be considerably augmented. The local association for the blind has appropriated a sum of money for the purchase of new books, and special shelving has been installed to receive them.

The Carnegie Library at San Antonio, Texas, circulates among the local blind a small collection of loan books, which is changed from time to time. The librarian, Miss Elizabeth West, has plans for developing a permanent collection. The records of loans made to Texas adult blind by librarians extending their privileges to that state demonstrate the need of increased library facilities for the blind in Texas.

The Minnesota Agency for the Blind is experimenting to test the advisability of loan collections sent from the library center at the State School for the Blind, to the public libraries of Duluth and Minneapolis. These loans are to be exchanged for new ones whenever expedient. Agency teachers meet the local blind at these sub-centers, and assist them to learn the reading and writing of embossed systems, and to learn typewriting.

#### *The Year in a Few Important Libraries*

The California State Library, Sacramento, reports through the head of its department for the blind, Mabel R. Gillis, a collection of 5356 volumes and 636 music scores, and a circulation of 10,923.

Lucy D. Waterman, in charge of work with the blind, in the Carnegie Library, Pittsburgh, Pa., reports that the collection of embossed books was increased in 1915 by 101 volumes and now numbers 1943. There are also deposited here 792 books and periodicals which are owned by the Pennsylvania Home Teaching Society, making a total of 2735 books and magazines available for blind readers in the western part of the state. The circulation for the past year was 4336. A home teacher em-

ployed by this society has been working successfully in the Pittsburgh field for more than eight years, and during the past year two additional teachers have been appointed for work in Armstrong and McKean counties, drawing upon this library for books for their pupils.

In the New York Public Library (Lucille Goldthwaite, librarian for the blind), the year was one of unprecedented activity. The total circulation, including magazines and music scores, was 31,528, an increase of 5304 over last year. This circulation is divided among the more important types, as follows: American Braille, 4892; European Braille, 7798; Braille music, 1103; Moon, 5649; New York Point, 9866; Point music, 2113. Of the total circulation, only 1065 were due to renewals. There was only a normal increase in the number of active readers, 896 in 1915. Three embossed sections of the catalog were issued early in the year, one list of the books in the European Braille type, and two lists of the music scores. Music scores were circulated to the number of 3216. The home teacher has given 280 lessons, paid 476 visits, and exchanged 318 books.

The New York State Library at Albany (Mary C. Chamberlain, librarian for the blind) circulates books outside of the state when impossible to be obtained in the reader's home state. An ink print finding list may be had upon application and is always sent to new readers. From the annual state appropriation of \$2000, many books printed in the different systems have been purchased and twelve titles have been printed in New York Point.

The Perkins Institution Library, Watertown, Mass., is the distributing center for embossed books for the blind throughout the New England states in particular, and also loans books in any part of the United States and Canada wherever they are needed. The librarian, Laura M. Sawyer, writes that during the year September, 1914-September, 1915, the library circulated 7786 books among the pupils of the school and 5318 to blind people outside the school, making a total of 13,104. This does not include the music scores loaned by the school. The number of books circulated is reduced by the fact that there is no time limit, which would undoubtedly increase the rapidity with which many of the borrowers read. An ink print catalog of the embossed books for circulation has recently been issued, also a supplement to the list published in 1907 of the books in the special reference library relating to the blind, which is open

free to all for study and reference work on all subjects relating to blindness and the blind.

In the Library of Congress room for the blind, Mrs. Gertrude T. Rider in charge, the collection of books has been increased in all types. Great care has been taken to select from the many applicants for loans such as were considered legitimate borrowers from this center, and all other applicants have been referred to collections of embossed books in their own states, with a promise to lend to them in case they are unable to borrow nearby what they require. In addition to well-stocked tables of apparatus and devices for the blind, a permanent exhibit is maintained of the products of blind labor, lent by schools for the blind, state commissions and industrial shops. Volunteer home-teaching service has been provided by the District of Columbia Association of Workers for the Blind.

#### *Uniform Type*

In April, 1916, the Commission on Uniform Type for the Blind invited co-workers in Great Britain to appoint a committee of three having authority to work with a like committee in America toward the improvement of British Braille, with a view to the possibility of its adoption as the uniform type of the English-speaking world. Certain changes in British Braille were suggested to the proper authorities in Great Britain, and these changes will be the basis of the committee's report to the Halifax Convention of American Instructors of the Blind, July, 1916. It is hoped and believed that a substantial agreement with the British may justify America in arriving at a satisfactory conclusion of this great question.

#### *Books, Music, and Periodicals*

A number of new books and some new music have been printed during the year by various organizations and presses, and six new periodicals, embossed and ink print, have been started in the interests of the blind in different parts of the country. The full report of these various publications, and also of recent articles of interest to librarians for the blind.

#### *Effort toward Standardizing Statistics*

In reporting circulation, libraries for the blind universally count each volume of a book, each magazine and music score as a unit. Renewals are counted by very few librarians; in fact, few libraries send overdue notices regularly. The consensus of opinion is that renewals should not be counted as a second loan, as the library has not the extra work of sending them out again.

GERTRUDE T. RIDER, *Chairman.*

## Library Organizations

### *NEW HAMPSHIRE LIBRARY ASSOCIATION*

The sessions of the New Hampshire Library Association held at the Y. M. C. A. building, Berlin, N. H., July 14, proved a delightful occasion. The meeting was called to order promptly at 10:30 by the president, Miss Mary Lucina Saxton, of Keene. George F. Rich, mayor of Berlin, was then introduced and he very cordially extended to the visitors the hospitality of the city.

Miss Frances Hobart, of Cambridge, Vt., gave a very instructive talk concerning bindings for books, explaining the values and uses of the different grades of buckram and cloth and showing samples of same. Also different methods of cleaning books were mentioned, pertaining both to the covers and the leaves of the volumes.

Miss Elsie Gaskin, of Derry, followed, continuing the subject of book repairing by giving a demonstration of recasing volumes by the use of flexible glue. Miss Gaskin also showed how to replace a worn out back of a book and to tighten by means of cloth hinges a book which has become loose in its covers.

At the afternoon session Miss Hobart gave a history of the Library Commission of Vermont and told of the splendid work which Vermont has done to benefit and help the rural and small libraries of that state. Miss Mary Morison, of Peterborough, continued the subject of commission work by relating many interesting phases of the movement connected with her experience in Massachusetts and suggesting methods by which New Hampshire may be able to secure better library service among the smaller towns.

After some discussion of this subject the secretary was instructed to confer with the secretary of the State Grange and ask if the State Grange would not take action to secure better library facilities thruout the state, especially to help to secure an appropriation from the legislature for the Library Commission that it might carry on the work so well begun twenty years ago.

The round table consisting of such attractive topics as "Some worth while books of 1915-16," "Aids in book selection," "Should fines be abolished," and "Local history in the small library" proved so interesting that the discussions had not ceased when the automobiles so kindly provided by the citizens of Berlin came to take the members for a drive about the city and adjacent country. The weather was so threatening it was decided

unwise to attempt the trip to Glen Ellis Falls.

At the banquet in the evening the company was favored with a very scholarly and enjoyable address on "Some realistic devices in the drama," by Thomas L. Marble, of Gorham. Present day conditions were contrasted with those of the early stage and the effects of music and light were forcefully illustrated by selections from some of the well-known dramas of the present day.

At the close of Mr. Marble's address, Mr. Davis offered resolutions which were heartily endorsed by the association, expressing the thanks of the association to Miss Hutchinson and the trustees of the Berlin Public Library for their cordial welcome and generous hospitality; to the citizens who provided automobiles for the drives about Berlin; and to the various speakers.

On the following morning an early start was made for a trip thru Dixville Notch by automobile. The weather was fair and the drive along the Androscoggin River thru the thirteen mile woods was delightful. The Notch was reached about noon and the strong light clearly brought out the ragged and jagged peaks in all their wild beauty. A short stay was made at the Flume and at the Balsams, then the party continued on its way to Colebrook and the Monadnock House, where dinner was served. Later in the afternoon the return trip was made thru Lancaster, Jefferson, Randolph and Gorham. Many vistas of the Green Hills were to be had and wonderful views of our own White Mountains. The trip ended in the afterglow of a marvelous sunset such as is only seen among mountains and which neither pen nor brush can picture.

F. M. W.

#### OHIO LIBRARY ASSOCIATION

The Ohio Library Association at the last annual meeting voted to revive the District Meetings, or Institutes in Ohio, as recommended by the Library Extension Committee. The state was tentatively divided into five districts as follows: North West, North Central, North East, South West and South East. Considerable delay was occasioned the committee in obtaining accurate lists of the libraries in each district, and in securing central and accessible places for meetings. Members of the Library Extension Committee served as chairmen of the various districts. For sufficient reason, two of the districts did not hold meetings at this time, but look forward to doing so later in the year. The three meetings which were held were the North

Central District at Mansfield, May 17, Miss Elizabeth Steele, chairman; the North Eastern District at Warren, May 24, Miss Frances Cleveland, chairman; the South West District at Xenia, May 26, Miss Julia Merrill, chairman. The committee had prepared a suggestive list of topics to be used at these meetings and selection was made from this to give variety to the programs. Informal, free discussion of the topics was encouraged by all the chairmen. The subjects of Book selection, County libraries, High school libraries, Work with children, Work with schools, Library publicity, Smith tax law and library maintenance were considered in all of these meetings. The attendance registration varied from 31 to 70, the latter attendance being at the Xenia meeting. A considerable number of trustees were in attendance and the smaller libraries were well represented. At the Xenia meeting the Dayton Public Library had a representation of 20 from its staff. At each of the places of meeting—Mansfield, Warren, and Xenia—most cordial hospitality was shown by the library trustees and librarians, and noon luncheon was provided for those in attendance. It is hoped that the interest in these regional meetings of the Ohio Library Association will increase and that they will be a permanent part of the work of the association.

The annual meeting of the Ohio Library Association will be held in Cincinnati, October 3-5.

#### NEW YORK LIBRARY ASSOCIATION

A few of the speakers expected at the conference to be held at the Bloomfield, Richfield Springs, Sept. 11-16, have found it impossible to attend. Several others have not yet announced their specific titles. Local arrangements may also make necessary some change in the proposed order of the sessions, but the following outline of the program will be substantially followed.

*Mon. eve., Sept. 11.* Address of welcome by Hon. J. D. Cary; Response, Vice-President Stevens. Reception.

*Tues. a. m., Sept. 12.* General session. Reports of standing committees. Address, Mr. F. K. Mathews, chief scout librarian, Boy Scouts of America; Readings from Hans Christian Andersen, Rev. J. V. Moldenhewer.

*Tues. eve.* Book selection. Papers by Miss Mary Eastwood, Miss Jackson of the *Book Review Digest*, and Miss Elya L. Bascom. Discussion. Opened by Miss Annie Carroll Moore and Mr. William F. Seward.

*Wed. a. m., Sept. 13.* Addresses by Rev. J. V. Moldenhewer and Prof. Elmer W. Smith.

*Wed. p. m.* Work with foreigners. Addresses by Mr. John Foster Carr and Mr. Geo. E. Dunham, editor *Utica Press*. Discussions by Miss Harriet Burgess, Miss Anna G. Hall, and others, whose names will be announced later.

*Wed. eve.* This session will be in charge of the social committee.  
*Thurs. a. m., Sept. 14.* Round table meetings. (Subjects and leaders to be announced later.)  
*Thurs. eve.* The college library and the public library. Papers by Mr. Willard Austen of Cornell University, and Miss Isadore A. Mudge of Columbia University. Discussion.  
*Fri. a. m., Sept. 15.* Optional round tables.  
*Fri. p. m.* School libraries. Paper by Mr. R. T. Congdon, specialist in English, State Education Department. Discussion by Miss Joslyn, Jamaica High School; Miss Pritchard, White Plains High School; Miss Zachert, Rochester Public Library, and others. "Charge to the jury," by Pres. A. R. Brubacher, New York State College for Teachers.  
*Fri. evening.* The library in the educational system of the state. Addresses by Charles B. Alexander, LL.D., Litt.D., regent of the University of the State of New York; and Mr. J. I. Wyer, Jr., New York State Library.  
*Saturday, Sept. 16.* Business. Election of officers and other features to be assigned later.

#### INDIANA LIBRARY TRUSTEES ASSOCIATION

Mr. Orville C. Pratt, president of the Indiana Library Trustees Association, has resigned his position as superintendent of the Wabash public schools, to accept the position as superintendent of the Spokane, Washington, public schools. Mr. E. J. Llewelyn, superintendent of the public schools, Mount Vernon, Ind., has been made president of the Trustees Association.

#### MISSOURI LIBRARY ASSOCIATION

The annual meeting of the Missouri Library Association will be held October 11-13, 1916, at Columbia, Mo.

MARY E. BAKER, *Secretary.*

#### KEYSTONE STATE LIBRARY ASSOCIATION

The annual meeting of the Keystone State Library Association has been scheduled for October 12, 13 and 14 at Galen Hall, Wernersville, Pa.

O. R. HOWARD THOMSON.

---

## Library Schools

---

#### LIBRARY SCHOOL OF THE NEW YORK PUBLIC LIBRARY

Miss Mary W. Plummer, principal of the school during the first five years of its existence, has been compelled by continued ill health to give up all idea of resuming her work with the school for the coming year. Her many library friends will be sorry to learn that she will not be able to undertake any active library work for at least a year.

For the coming year the school has been fortunate in securing as principal, Prof. Azariah S. Root, librarian of Oberlin College, Oberlin, Ohio. Prof. Root can come for only one year, having secured a leave of

absence from Oberlin for that purpose. He received his A. B. from Oberlin in 1884, and his A. M. in 1887, since which time he has been librarian of the College Library, which is also the library of the town. He has therefore had the advantage of both college and public library experience. Since 1910 he has been chairman of the A. L. A. committee on library training, and has had unusual opportunities for the study of the library school situation in this country. In 1898-9 he studied under Dziatzko at the University of Göttingen. Since 1890 he has been professor of bibliography at Oberlin, and is a member of various bibliographical societies.

There will be several changes in the personnel of the faculty. Miss Agnes Van Valkenburgh, who has been a member of the faculty for the past five years, has resigned to accept a position with the H. W. Wilson Company. The school regrets losing her valuable services, and wishes her all success in her new work. Miss Corinne Bacon, formerly director of the Drexel Institute Library School, and at present associated with the H. W. Wilson Company, will conduct the course in book selection. Miss Isabella M. Cooper, B.L.S., Albany, 1908, will conduct the course in cataloging. Miss Cooper has taught at the Simmons College Library School, as well as in the Summer School of the Iowa Library Commission. Miss Mary L. Sutliff and the other members of the faculty will continue their work as during the past year.

Those students not having had library experience will report for practice on Sept. 11, and the school will open for regular work on Monday, Sept. 25.

E. H. ANDERSON,

*Director, New York Public Library.*

#### LIBRARY SCHOOL OF THE UNIVERSITY OF WISCONSIN

##### SUMMER SESSION

A particularly successful summer session opened on June 26 and continued thru August 5, a period of six weeks. Miss Mary F. Carpenter of the faculty served as acting-preceptor during the session, because of the absence of Miss Hazeltine in the east for all except the last week of the course. Twenty-five students registered for the full course, and two special students. After all the Wisconsin librarians had been registered, there was room for only three from outside the state, and one each from Kentucky, Michigan, and British Columbia was admitted. Nine of the 25 students were librarians of public libraries,

one of a high school library, 14 were assistants or apprentices in public libraries, and one in a law library.

The course covered 19 lessons in cataloging with practice, Miss Carpenter, instructor, and three supplementary lessons in alphabetizing; 12 lessons in classification and book numbers, Miss Turvill, instructor; 12 lessons in reference, with problems, Miss Stockett, instructor, and 3 in documents, Mr. Lester, instructor; 12 lessons in book selection with assigned reading and problems in selection, Miss Bascom, instructor; six lessons in children's literature with required reading, and six in loan and statistics with Miss Humble as instructor; library economy, binding, and mending had their quota of lessons, practice, and demonstration in 16 lessons, Miss Turvill, instructor; the administrative side of library work, its business, publicity, etc., were given by Miss Mary A. Smith and Miss Hazeltine. Mr. Dudgeon gave several lectures on the relation of library work to business, poetry, and current events.

The session was conducted amidst the torrid heat of the hottest summer in 15 years, but neither faculty nor students wavered in their determination to make the most of the opportunity. Every effort was made by Mr. Dudgeon, the director, to keep the school rooms comfortable by many electric fans and other appliances, so that the work went forward enthusiastically in spite of the heat.

Besides the out-of-door festivals of the university, in which the class was included, several pleasant social functions were planned especially for them by the faculty of the school, two informal receptions or mixers, and the annual picnic at Turvillewood. Opportunity was given to attend some of the special lectures on the program of the University Summer Session, and Miss Stearns gave her lecture on "Library spirit" to the class. At the close of the session, five records, to be used with the Victrola presented by the alumni on the tenth anniversary of the School, were given as an expression of good will and appreciation on the part of the class.

The School is most happy at all times to welcome visits from former students, and is pleased to record calls during the summer from the following: The Misses Allen and Sette (1907), Dexter, Eastland and Spencer (1911), Beust, Frederickson, and Nethercut (1913), Coon (1914), Brunsell, Germond, Head, Pratt, Reese, and Shadall (1915).

MARY EMOGENE HAZELTINE,  
*Preceptor.*

UNIVERSITY OF ILLINOIS LIBRARY SCHOOL  
SUMMER SESSION, 1916

The sixth annual summer session of the University of Illinois Library School opened on June 19, and closed on July 29, 1916. Mr. E. J. Reece and Miss Ethel Bond, of the library school faculty, had charge of the instruction, and the revising was done by Miss Dorothy Cook and Miss Ella Campbell. The course in children's literature was given by Miss Eva Cloud, librarian of the Kewanee Public Library, and consisted of ten lectures with assigned readings.

Altogether the class hours numbered ninety, and most of them were taken up with lectures preceded or followed by problems, readings, or other assignments. Thirty-two hours were given to classification, cataloging and book numbers; twelve to reference work; twelve to book selection; ten to children's work; and twelve each to two other groups of subjects covering general methods and matters of administration.

The book selection course included a number of lectures by persons familiar with particular types of literature. In addition to the general lectures given by Mr. Reece there were the following:

The literature of the out-of-doors. Professor Vaughan McCaughey, of the College of Hawaii.

Books and other material relating to history, Miss Marian Leatherman.

Dramatic literature. Mr. F. K. W. Drury.

Modern fiction. Mr. R. E. Tiejé.

Good biographies. Miss A. M. Flattery.

Some religious books. Rev. C. R. Adams.

Types of travel literature. Mr. E. J. Reece.

Books relating to agriculture. Mr. G. A. Deveneau.

The value of the summer session was much enhanced this year by the holding of special conferences on the campus. A better community conference, participated in by various agencies throughout the state interested in community welfare, was conducted June 20-22 under the direction of Dr. R. E. Hieronymus, community advisor of the University of Illinois. One of the several group meetings was devoted to the influence of the public library in the community. Mr. P. L. Windsor presided over it in the absence of Miss Mary J. Booth, president of the Illinois Library Association. Talks were given by Miss Eva Cloud, of Kewanee; Miss Lydia Barrette, of Jacksonville; Miss Florence Curtis, of the University of Illinois, and Miss Anna May Price, secretary of the Illinois Library Extension

sion Commission. The other sessions of the better community conference gave the students opportunity to hear some of the best speakers prominent in the general movement, including Dr. Graham Taylor, Dr. Shailor Matthews, Mr. Lorado Taft and President Edmund J. James.

The last three days of the fifth week of the summer session were given over to a series of round tables and to a one-day district meeting to which librarians of east-central Illinois were invited. At the round tables short talks on outstanding features of their work were given by Miss Minnie Dill, of the Decatur Public Library; Miss Dey B. Smith, of the Morris Public Library; Miss Zeliaette Troy, of the Hoopston Public Library, and Miss Ethel Kratz, of the Champaign Public Library. The district meeting was in charge of Miss Anna May Price, and its formal program consisted of addresses by Miss Blanche Gray, of the Mattoon Public Library; Miss Emma McHarry, of the Paxton Public Library; Mr. Ernest J. Reece, of the University of Illinois; Mrs. Jessie Palmer Weber, librarian of the Illinois Historical Society, and Miss Price.

The University Summer Session conducted weekly socials, campus sings, organ recitals, vesper services and a large number of general lectures. The library school students participated in these affairs, made visits to such points on the campus as interested them, and enjoyed a picnic supper at Crystal Lake and another on the veranda of the Woman's Building.

Twenty-eight students registered for the summer course, all of whom are regularly engaged in library work. Twenty-three of this number came from Illinois, and one each from Wisconsin, Minnesota, Tennessee, Texas and Kentucky. The majority are connected with public libraries, the only exceptions to this being that three came from high school libraries, one from a normal school library and one from a university library. Eleven are head librarians, five assistant librarians, three general assistants, four assistants of lower grade, two substitutes, and three teacher-librarians. Except for three special students who were enrolled because of other qualifications, all had had at least high school training. One had had some normal school work, one was a graduate of a normal school, three had had some college work, one had a degree of B.S., three that of B.A., and one that of M.A.

#### LIST OF STUDENTS

Students are from the public library of their city unless otherwise stated:

#### ILLINOIS

Barry, Irene Crawford, librarian.  
Belleville, Bella Steuernagel, assistant librarian.  
Cairo, Effie A. Lansden, senior assistant.  
Champaign, Ruth Hardin, assistant.  
Champaign, Vereta McGuire, assistant.  
Chicago Heights, Glen Christy, librarian,  
Bloom Township High School.  
Chillicothe, Gladys Carroll, librarian.  
Evanston, Edith Meers, substitute.  
Gridley, Lois R. Moore, librarian.  
Hillsboro, Bertha H. Welge, librarian.  
Joliet, Helen McClure, general assistant.  
Kankakee, Lucy O'Neill, assistant librarian.  
Morrison, Anna E. Corcoran, librarian.  
Mt. Vernon, Gertrude Moller, librarian.  
Ottawa, Myrtle E. Sparks, librarian, Ottawa  
High School Library.  
Pekin, Ida L. Gehrig, assistant librarian.  
Peru, Nellie E. Churchill, substitute.  
Rock Island, Elsie Schocker, first assistant.  
Rockford, Mae B. Andrews, general assistant.  
Rockford, Ethel Doxsey, general assistant.  
Sheffield, Lenora Jacobson, librarian.  
Tuscola, Mrs. K. E. Moore, librarian.  
Waukegan, Vivian Thomson, first assistant.

#### KENTUCKY

Frankfort, Nina M. Visscher, librarian.

#### MINNESOTA

East Grand Forks, Helen B. Spence, librarian, High School Library.

#### TENNESSEE

Sewanee, Louise Finley, librarian, University of the South.

#### TEXAS

Canyon, Susie McGinley, first assistant librarian, Texas West Normal College.

#### WISCONSIN

Marinette, Esther D. Anderson, assistant.

P. L. WINDSOR, *Director*.

#### SIMMONS COLLEGE LIBRARY SCHOOL

During the summer the chief thought of the school centres in the summer class and in the placement of graduates.

#### POSITIONS

Appointments have been made as follows:

Margaret F. Barss, 1915-16, has accepted the position of assistant in the Rochester Public Library, Rochester, N. Y.

Dorothy Bell, 1916, has been appointed librarian of the library of Irving and Casson, Boston, Mass.

Barbara M. Bolles, 1915-16, received a temporary appointment in the reference-cataloging division of the New York Public Library, and in September will join the cata-

logging staff of the University of Missouri Library.

Anne M. Davies, 1915-16, has been appointed to a position in the reference department of the Holyoke Public Library, Holyoke, Mass.

Margaret Heimer, 1916, has received an appointment as librarian of the Olean High School Library at Olean, N. Y.

Esther W. Kingsbury, 1915-16, has accepted a position in the cataloging department of the University of Chicago Library.

Ethelwyn Manning, 1915-16, has been appointed head cataloger in the Amherst College Library.

Caroline Righter, 1916, has received an appointment in the cataloging department of the University of Chicago Library.

Joice Scarf, 1915-16, has accepted the position of general assistant in the Medford Public Library, Medford, Ore.

Lorna Wardwell, 1916, has been appointed to the position of assistant in the Danbury Public Library, Danbury, Conn.

Anne Harwood, 1913, has accepted the position of assistant in the Massachusetts Institute of Technology Library.

Eliza Bigelow, 1908, is doing a piece of temporary cataloging in the private library of Francis Winslow of Norwood, Mass.

Mabel Brown, 1910-11, has accepted a position as librarian of the National Committee on Mental Hygiene, New York City.

Mabel McCarnes, 1915-16, has been appointed librarian of the Peddie Institute Library, Hightstown, N. J.

Ethel Wigmore, 1915-16, has received an appointment in the University of Maine Library, Orono, Me.

Helen Giere, 1916, has been appointed assistant in the children's department in the New York Public Library.

Chie Hirano, special 1914-16, is cataloging Japanese and Chinese material in the Boston Museum of Fine Arts.

Ruth Eaton, 1915, is organizing in the Wrentham (Mass.) Public Library.

#### SUMMER SESSION

The summer session has been of unusual interest and the attendance larger than before; in fact, it was necessary to refuse further candidates when the registration had reached fifty.

The course in "Work with children," given by Miss Alice Higgins, had fourteen members. Miss Tyler, of New York, added much to this course by her lecture on "Story-telling," followed by an hour of stories delightfully illustrating her points.

Other visiting lecturers who contributed to the value of the season were A. L. Bailey, of Wilmington, who spoke on "Binding for libraries"; James McMillen, librarian of the University of Rochester Library; and Miss Ahern, editor of *Public Libraries*.

The students had also the advantage of hearing many of the lecturers on the program of the three-day library conference held at Simmons by the Massachusetts Free Public Library Commission, July 25-28. This meeting, the first of its kind the college has had the pleasure of being associated with, was an even of special interest, and it was felt that this fresh contact with over one hundred Massachusetts librarians was a significant experience.

Despite the hot weather, the summer school people put in hard work on the two main courses, that of Miss Hyde in cataloging and classification, and that of Miss Crampton in reference and library economy. Special certificates will be issued, probably in October, to those who complete courses satisfactorily.

In general, the summer courses in this school are not parallel in time or content with any given in the four-year course, and are, therefore, not given college credit, but the faculty this year recognized the summer course in work with children, which is equivalent both in time and content to the regular course, as a substitute for it in the case of two undergraduate students of Simmons, thereby establishing a new precedent.

JUNE RICHARDSON DONNELLY, *Director*.

#### CARNEGIE LIBRARY SCHOOL

The Library School closed its sixteenth year July 29. Twenty-five junior certificates, one special certificate and seven diplomas were granted. Miss Alice M. Jordan, custodian of the children's room of the Boston Public Library, gave two lectures, July 22, on "Children's work in the Boston Public Library" and "Reference work for children."

During July the junior students were scheduled two periods each week in summer playgrounds, where they had experience in distributing books and story-telling. Miss Huse, Miss Kurth and Miss McNerney, of the junior class, will return for senior work.

Students have been appointed to the following positions:

Ruth E. Adamson, Terre Haute, Ind. Substitute assistant, children's department, Cleveland Public Library, Cleveland, O.

Enid P. Boli, Pittsburgh, Pa. Assistant children's librarian, Carnegie Library of Pittsburgh.

Florence R. Broderick, Denver, Colo. Assistant children's department, Carnegie Library of Pittsburgh.

Lucy T. Fuller, Houston, Tex. Assistant, children's department, New York Public Library, New York City.

Louise Hamilton, Denver, Colo. Children's librarian, Minneapolis Public Library, Minneapolis, Minn.

Roberta Herron, East Orange, N. J. Substitute assistant, children's department, Cleveland Public Library, Cleveland, O.

Margaret Hess, Pittsburgh, Pa. Assistant children's librarian, Carnegie Library of Pittsburgh.

Della McGregor, St. Paul, Minn. Senior assistant, children's department, Public Library, St. Paul, Minn.

Avis F. Meigs, Fort Wayne, Ind. Assistant, children's department, Public Library, Fort Wayne, Ind.

Ruth M. Paxson. Assistant, children's department, Carnegie Library of Pittsburgh.

Elizabeth C. Riddell, Long Beach, Cal. Assistant, children's department, Public Library, Los Angeles, Cal.

Katharine O. Roberts, Hartford, Conn. Children's librarian, Public Library, Cincinnati, O.

Marian K. Wallace, Tacoma, Wash. Children's librarian, Public Library, Bloomington, Ill.

Marion A. Warren, Worcester, Mass. Assistant children's department, New York Public Library, New York City.

SARAH C. N. BOGLE, *Principal*.

#### RIVERSIDE LIBRARY SERVICE SCHOOL

Miss Lulu I. Rumsey, formerly of Minnesota, graduate of Carleton College, class of 1916 Riverside Library Service School, has just been appointed librarian and study hall teacher of the Orange Union High School, Orange, Cal. Miss Rumsey has a vocational certificate from the State Board of Education.

Miss Arline Davis, class of 1915 Riverside Library Service School, is acting as Miss Rumsey's assistant at the Orange Union High School.

Miss Helen Estill, class of 1916 Riverside Library Service School, has been appointed by the Los Angeles Board of Education, but has not yet been assigned to the particular schoolhouse. Miss Estill had her preparation in Colorado College, Simmons College and has several years of teaching to her credit. Miss Estill holds a state vocational certificate.

Miss Pearl V. Kohler, graduate of the 1916

Riverside Library Service School, has been appointed cataloger for the Beaumont District Library, Beaumont, Cal. She is a graduate of the Beaumont High School.

Mrs. Allison Aylesworth, short course student in 1916 winter school, Riverside Public Library, has been duly elected librarian of the Hemet Public Library.

Miss Lilla B. Dailey, graduate 1915 Riverside Library Service School and graduate of the Escondido High School, has been elected librarian of the Chula Vista Public Library.

Miss Dorothea R. Smith, 1916 Riverside Library Service School, graduate Leland Stanford University, now cataloger at the Santa Clara County Free Library, has been appointed to a position in the library of the Leland Stanford University. Miss Smith holds a state vocational certificate.

Miss Czarina Hall, of the 1916 winter school, Riverside Public Library, graduate of Lombard College, Ill., has been appointed to a position in the Omaha Public Library.

#### TRAINING CLASS, LIBRARY ASSOCIATION OF PORTLAND, OREGON

On June 30, the class of 1915-16 finished the nine months of training. There were eight students who completed the course.

Of the eighteen graduates of the training class since its organization, two years ago, the following appointments have been made:

Esther Birrell, 1915-16, assistant, school department, Library Association of Portland.  
 Winifred Birrell, 1915-16, assistant, reference department, Library Association of Portland.  
 Hope Burdic, 1914-15, assistant, circulation department, Public Library, Seattle, Wash.  
 Genevieve Church, 1915-16, assistant, branch department, Library Association of Portland.  
 Ethel Goudy, 1914-15, first assistant, Public Library, Hood River.  
 Frances Hubbert, 1915-16, assistant, reference department, Library Association of Portland.  
 Erna Jeppesen, 1914-15, assistant, State Library, Salem.  
 Elsie McLucas, 1914-15, branch librarian, Library Association of Portland.  
 Mrs. Vida I. Smith, 1914-15, branch librarian, Library Association of Portland.  
 Helen Witter, 1914-15, assistant, Library Association of Portland.

---

### Reviews

AYRES, LEONARD P., and MCKINNIE, ADELE. The public library and the public schools. Cleveland Education Survey, 1916. 93 p.

The report of the Cleveland education survey upon "The public library and the public schools" is the first of all school surveys to give serious consideration to library service and as such is bound to receive serious consideration from all who are interested in either libraries or schools.

It devotes separate chapters to "Libraries in elementary schools," "Branch libraries," "Class room and home libraries," "High school libraries," and "The normal school library," and it contains diagrams and pictures illustrative of school library activities. Among these the diagrams showing the average number of times each kind of book is circulated in a year, and the percentage of the total amount of reading that is done by each grade in folklore, fiction, history and travel are particularly interesting.

All admirers of the Cleveland Library system will feel grateful to the authors of the report for this systematic account of the relations between the public library and the public schools in that city.

Admiration will, however, be qualified by surprise that there is at present in Cleveland a library room in only one school in every fifteen, and, to cite but one other condition, because high school librarians whose average length of service is twelve years receive an average annual salary of only \$775.

And gratitude to the authors of the report will be qualified by disappointment because more is not said upon the fundamental question of the relation between the teacher and the librarian in the direction of the reading of children, upon the relation between the school and the library club upon home reading and vacation reading and similar questions, and because of such misleading statements as the comparison between the large turn-over per book in the Cleveland libraries and the smaller turn-over in cities which are fortunate enough to have much larger and more valuable collections.

As a report upon school conditions rather than upon library conditions, however, it is more noteworthy, particularly for its emphasis upon the importance of reading. Upon this point the authors say, "The most difficult part of elementary school work is learning to read, and it is the one in which the least satisfactory results have been secured. The main reason for this is the lack of books. During the process of learning to read, the child needs many books—not one, or two, or even ten. His progress in reading is almost entirely dependent on the number of interesting books at his command. He must learn to read as he learned to talk—through unremitting exercise. Reading is the most important thing the child can learn in school."

Of special interest also is the discussion of the necessity of the library in the platoon plan of elementary instruction by which the work of the school is departmentalized, and in the junior high school.

It is to be hoped that this is the first of many such surveys because it is only by exact and thoro study of local conditions that wise generalization is made possible, and it is only as schoolmen come to recognize that there is a library problem that there will be any chance of solving that problem, or any chance of making books of considerable use in the solution of current social and industrial problems.

W. DAWSON JOHNSTON.

HOPKINS, FLORENCE M. Reference guides that should be known and how to use them. Detroit: Willard Co. 187 p. \$1.50. (Sections also issued separately.)

The library profession owes Miss Hopkins a debt of gratitude for the most comprehensive and detailed contribution yet made to the material available on the use of books as library tools. Her "Reference guides that should be known and how to use them," represents an earnest and scholarly piece of work, so admirably executed that it cannot fail to be a valuable asset for all librarians and teachers grappling with the proposition of instructing young people in the use of books.

The manual consists of a series of thirty lessons in groups, on the parts of a book, concordances, atlases, dictionaries, encyclopedias and year-books, library classification and cataloging, with a group devoted to public documents.

Following the explanation of each subject presented, is a specimen page for concrete illustration, a list of important books on the subject and a few problems for class-room use. While confusing to the eye on casual examination, closer scrutiny reveals the practical utility of this plan; the material, the specimen and the problem dove-tailing one another.

The chief criticism of the book in its entirety is, perhaps, that it is ahead of its times. Intended by Miss Hopkins primarily as a text-book for high and normal schools, there will be found far too few schools as yet equipped with material for its comprehensive use. In many instances much of it will not be found in the average small town library. Last year, for example, in attempting to demonstrate by request, in two of our largest normal schools in New England, the use of school reference guides, it proved impossible to find a copy of the "World almanac" in either school, or in any public library within easy communication. The mere purchase of Miss Hopkins' book should give both inspiration and impetus to the building of these

needed collections in both schools and libraries.

While there are many and varied opinions as to just where in the educational scheme instruction in the use of a library can best be fitted, most educators are wary of its adoption because of the probable encroachment on regular school hours. These graded lessons are excellently planned to fit in with high school courses in English, while the simplicity and directness with which the groups pertaining to the use of a catalog, the parts of a book, encyclopedias and atlases are handled, would permit their use in the grammar schools. The very full detail in the thirty-one pages on the study of the dictionary requires the more mature mind of the secondary school pupil, tho no good results can be achieved in any of this work unless there has been in the grade schools some drill in alphabetical arrangement; first of words thru the spelling lesson, then by use of indexes and a dictionary. The comparative arrangement Miss Hopkins gives of material in the last editions of Standard, Webster and Century dictionaries, is especially helpful.

In the chapter on "Guides to book selection" an untrained mind would be less confused if the trade catalogs were separated from the evaluated lists. This point can, of course, be brought out by the instructor thru Question 3 in the problems, yet a class in a summer library school, after using the United States Catalog and certain evaluated lists were perplexed when asked to state the most important difference between a tradelist and the A. L. A. Catalog. In a later edition the omission of dates to the "Guides" should be corrected.

It seems most encouraging that some high schools have reached so high a standard that public documents could be included in a course designed for their use. Group 8 considers the most useful and best known of these, but again, if this material is available, can provision be made for the great amount of practice work needed? A regular library assistant sometimes finds months necessary to gain the needful familiarity with government publications.

Whether we would or would not put some of this material into the work of the lower grades, whether we would or would not include public documents, schemes of classification or other details usually considered chiefly for professional use, the fact remains that within the covers of this little manual is material adaptable to the instructor's need,

wherever his work may lie, and for the individual student, librarian or man-at-large, an aid which will fill many educational demands.

MARY E. S. ROOT.

MANN, MARGARET. Subject headings for juvenile catalogs. American Library Association Publishing Board, Chicago. 113 p. \$1.50.

The purpose of Miss Mann's list of subject headings is clearly set forth in its title. It is intended to be used primarily in making a catalog of juvenile books and is not planned to take the place of any existing list. However, the style and form have been made consistent with the A. L. A. list prepared by Miss Briggs, thus allowing headings to be used interchangeably with the adult catalog.

Miss Mann's list will be indispensable in a school library or in a public library having a separate catalog of juvenile books. Small public libraries will also find it helpful in the choice of analytical headings and will welcome the inclusion of proper names which are so often difficult of identification or whose correct form of entry it is sometimes hard to find.

Every cataloger as well as every children's librarian should read the sound sense which Miss Mann incorporates in her introduction and even the cataloger's most captious critic must applaud when she says: "One should never be so enveloped in detail and system as to be unable to take a broad view of her field, nor should technique be allowed to thwart us in the making of a plastic and growing catalog."

Individual opinions will vary as to the reason for some of the headings Miss Mann has chosen and some will wonder why there is a cross reference from radium to X-rays and no reference from Manila to the Philippine Islands. These are minor details, however, and may well be ignored together with the few errors in proofreading which have slipped thru.

Miss Mann has achieved her own ideal of a children's catalog and has "put into it a combination of the technique of cataloging and a knowledge of literature as it is written for children."

GERTRUDE E. ANDRUS.

BAILEY, ARTHUR L. Library bookbinding. White Plains, N. Y.: H. W. Wilson Co. 248 p. D. \$1.25.

A very brief examination of this book will show that it is based on experience and not on mere opinions of how a book for library use should be bound. Both in title and contents it will at once invite comparison with

Dana's "Bookbinding for libraries." Altho Mr. Dana's comprehensive survey made it impossible for later books to avoid entirely some similarities in scope and treatment with the earlier work, and altho Mr. Bailey freely acknowledges both general and specific indebtedness, he has succeeded very well in keeping his own volume from being either a mere imitation or simply an expansion of Dana.

The author's consistency in confining himself to his professed scope,—that of binding for libraries for public use; constant emphasis on the necessity of common sense in judging what binding is best for any particular library; "up-to-dateness" in discussing processes and materials; and freedom from arbitrary decisions in detail are among the many admirable characteristics of the book. It is detailed enough to be of service to the largest libraries. It is simple enough in treatment to be a great help to the smallest library. Comparison with the lecture notes of a course of lessons in bookbinding which has developed during an experience of eight years with library school students, shows that Mr. Bailey has, to an unusual degree, anticipated the difficulties which confront the inexperienced. The characteristics of a well-bound book (p. 49); suggestions for reducing cost (p. 119); Records and routine (Chap. 9) and the very full chapter on Repairing, recasing, recovering, etc., are specific examples.

With all the ingenuity displayed in tabulating and discussing stray facts in other lines of library work, it is curious that no really adequate treatment of the principles involved in binders' titles is available. Such treatment may be difficult, but it is not impossible. Its practical utility is evident to anyone who examines the shelves of any library which is not strictly confined to fiction. Mr. Bailey's discussion of "Lettering" (p. 141-48) is so useful and sensible that one cannot help wishing that he had treated it even more fully and included more discussion of alternative treatments of periodicals, serials, and the like. One reviewer has already pointed out the desirability of an alternative treatment of periodical volume numbers. In the section on "Processes," Mr. Bailey has skillfully succeeded in giving the really important points of the technique of binding which the librarian must know in order to give intelligent directions. In the absence of any very satisfactory manual of American bindery practice it might have been worth while to note the fact that all of the English manuals mentioned in the "Reading list" (Appendix B) describe practices which

are often much at variance with those in vogue in the average American bindery and which, consequently, are often unsafe guides for detailed specifications for American librarians to follow. In other respects, the "Reading list" is excellent. The chapters in Hitchcock's "Building of a book," which deal with binding processes and materials, and Pflieger's "Bookbinding and its auxiliary branches" (1915) fall within the scope of the list and might profitably have been included. The "List of technical terms" which forms Appendix C is well selected, and in most cases adequate in its definitions. There are minor omissions (*e. g.* no indication of *size* designation under "sixteen mo" and "thirty-two mo") and occasional lack of minute accuracy (*e. g.* "Roxburghe binding"). Nevertheless, anyone with first-hand knowledge of the difficulty of compiling such a list is not inclined to be hypercritical about one as good as this. Mr. Bailey nowhere claims to have said the last word on library binding, but he has covered the field so well that it is not likely that any changes in the near future in either materials or methods of binding will make any elaborate supplement to his book necessary.

F. K. WALTER.

LAMB, GEORGE H. LESSONS in arrangement and use of Carnegie Free Library, Braddock, Pa., prepared for high school students, 1915, 19 p.

SEVERANCE, H. O. A library primer for Missouri high schools, 1915, 30 p.

LESSONS on the use of the school library for rural schools, state graded schools, village and city grades, also for use in high schools in the giving of such library instruction outlined as has not been given in the grades. Prepared by O. S. Rice, Madison, Wis., State Dept. of Public Instruction, 1915, 135 p.

The editor of the LIBRARY JOURNAL has suggested that these three titles be reviewed together, presumably because they all relate to the broad topic "Libraries and schools," yet on closer examination each proves to have been prepared for a different purpose. The Braddock pamphlet is to help high school students to effective use of a public library (probably under direction of librarian or teachers), and it is the only one of the three titles which is to be placed in the student's hands. The Missouri pamphlet is to teach teachers to organize school libraries and incidentally it is meant to be serviceable to untrained librarians of small libraries. The Wis-

consin pamphlet is to teach the teachers to teach the pupils how to use school libraries. The Missouri and Wisconsin titles seem well adapted to their declared purposes, but as much cannot be said of the Braddock pamphlet. It is true that the Missouri pamphlet contains little not in Stearns or in Plummer's Hints, yet the very definite and peculiar local need warrants a separate primer and it is a satisfaction to find it so well done.

To particularize, the Braddock pamphlet makes a bad first impression from a dark-brown mottled cover which effectively dims, almost hides, the black in of the printed title. It sets down in great detail eight lessons, of which numbers 3 and 8 are unnecessary and unsuitable, being appropriate only for training beginners for library service. Indeed, too many recent compendiums for teaching school pupils how to use libraries reflect this unfortunate confusion of purpose and are longer and more technical than necessary, their authors having apparently forgotten that the pupils are not being trained for library service. The Braddock pamphlet offers no lesson on debating nor does it even mention this important *School vs. Library* activity for which in recent years a considerable number of excellent reference books have been prepared. The selection of books for Lesson 5 is not the best, the titles are not always typical or important. The *American Statesman's Year Book*, of which but one poor volume was issued several years ago, is given among the standard annuals; Moody's "Manual of corporations" and Thomas' "Register of American manufacturers" are scarcely of interest or value to high school students. Worse still, some works are cited by title only with the better known author's name omitted or to be guessed at, while in Lesson 7 titles of some well-known reference works are vague, inexact and in several cases misspelled.

The Wisconsin list also is prepared to meet local conditions, laws and institutions. The lessons are carefully grouped by grades and by subjects, and each is worked out very minutely with a wealth of explanatory text and examples. One looks in vain, however, for some statement as to how much time is required to carry out this extensive program, and when and just how it is to be filched from the crowded curriculum.

The work which these different publications are designed to advance is important and growing rapidly. The standard and best-known manuals probably are those by Miss Florence Hopkins, of Detroit, and Mr. Gilbert

Ward's "Practical use of books and libraries." Neither the best methods of articulating this work with the school program nor the wisest content of such library instruction are yet definitely settled and there is abundant field for such additional helps as are here under notice, provided only that they are thoroly well done.

---

## Librarians

---

ALFORD, Helena B., who for five years has been librarian at the Beardsley Memorial Library in Winsted, Ct., has resigned to take a position in the Hartford Public Library.

ALLEN, Maude E., N. Y. State Library School, 1915-16, has been appointed library inspector and instructor for the various county normal schools of Michigan.

ALLSEBROOK, Anna, has resigned her position as assistant at the Decker branch library in Denver, Colo., and has been appointed librarian of the library at Coronado Beach, Cal.

BAILEY, Beulah, B.L.S., N. Y. State Library School 1915, has gone to the Forbes Library, Northampton, Mass., to assist in installing the Clarke Library.

BIRCHOLDT, Harriet N., N. Y. State Library School 1914-15, has succeeded Miss Thompson as librarian of the Bureau of Public Discussion, Extension Division, Indiana University.

BLESSING, Arthur R., N. Y. State Library School 1917, spent part of the summer as assistant in Cornell University Library.

BLODGETT, Evelyn M., Vassar 1909, Pratt 1911, has been promoted to a position as acting head of the cataloging department of the University of Washington Library, in the place made vacant by Miss Florence Currie's resignation.

BURPEE, Lawrence J., an Ottawa librarian, has written a biography of Sandford Fleming, a railway engineer who took an active part in the development of Canada. The life of Mr. Fleming, because of his connection with the building of the Northern Railway, the Intercolonial Railway and the Canadian Pacific and his work with the Canada-Australian cable, is an important addition to our knowledge of Canadian history.

CASE, Elizabeth, has been elected librarian of the Dennis Library, Newton, N. J., to suc-

ceed Miss Mary E. Cooke, who has tendered her resignation to take effect November 1.

COOPER, Isabella M., B.L.S., N. Y. State Library School 1908, has resigned the headship of the sociological department of the Brooklyn Public Library to become librarian in charge of the Central Circulation branch of the New York Public Library.

CRAMPTON, Susan C., N. Y. State Library School 1902, conducted the course in reference work at the Simmons College Summer Library School.

CUDEBEC, Bertha M., N. Y. State Library School 1917, has been appointed assistant in the New York State Library.

CURRIE, Florence Baxter, B.L., Milwaukee-Downer, 1904, B.L.S., Illinois, 1906, chief of the cataloging department the University of Washington Library in Seattle from 1908, has resigned to accept a position in the same department in the University of Minnesota Library.

DAVIS, Earle H., of Lincoln, Neb., has been appointed legislative librarian by Governor L. B. Hanna to take the place of I. A. Acker, resigned. Mr. Davis has had experience in similar work in Nebraska, Wisconsin and Missouri.

DEUTSCHBEIN, Marie E., a graduate of the Training School of the Los Angeles Public Library, has been appointed librarian of the Coburn Library of Colorado College in Colorado Springs.

DUNN, Roscoe L., N. Y. State Library School 1915-16, has been appointed assistant in the Boston Museum of Fine Arts.

EDWARDS, Eleanor M., N. Y. State Library School 1911-12, has resigned her position as reference librarian at the Silas Bronson Library, Waterbury, Ct., and will go to the New York Public Library as assistant in the reference accessions division.

EDWARDS, Gertrude, has gone to the Parmlly Billings Memorial Library in Billings, Mont., as children's librarian. Miss Edwards is a trained kindergartner and a graduate of the Pittsburgh Training School for Children's Librarians. She has been an assistant in one of the Pittsburgh branches and for the past four years has been children's librarian at La Crosse, Wis.

EDWARDS, Mrs. Sarah S., N. Y. State Library School 1915-16, has succeeded Isabella M. Cooper as librarian of the sociological department of the Brooklyn Public Library.

EMERSON, Ralf P., B.L.S., N. Y. State Library School 1916, began his duties as executive secretary to the librarian of the Carnegie Library of Pittsburgh in July.

FINNEY, Byron A., who has for twenty-five years served as reference librarian of the University of Michigan Library, will be retired upon a Carnegie pension on October 1. Mr. Finney is a graduate of the university in the class of 1871. After a business career, he went to the university in the fall of 1891, and has held the office of reference librarian continuously since then. His services have been marked by great fidelity and energy. Mr. Finney is an active member of the Michigan Pioneer and Historical Society, of the American Historical Association, of the American Library Association, of the Bibliographical Society of America and of several other organizations, to whose proceedings he has contributed various papers. He will employ the leisure which his retirement affords him in the prosecution of certain bibliographical undertakings, on which he has been long engaged.

FRANK, Mary, has resigned the position of librarian of the Everett Public Library, Everett, Wash., to accept the position of librarian of the Rivington St. branch of the New York Public Library.

GADILHE, Jeanie, has been appointed assistant in the Birmingham (Ala.) Public Library.

GARY; Mrs. Minette B., has resigned her position as librarian of the Warsaw (Ind.) Public Library.

GODARD, George S., librarian of the Connecticut State Library at Hartford, received the honorary degree of Master of Arts at Wesleyan University in June.

GREENE, Doris, for three years cataloger in the Coburn Library, Colorado College, Colorado Springs, has resigned and has accepted a similar position in the Public Library of Superior, Wis.

HATHAWAY, Francis P., for twelve years binder of the John Carter Brown Library at Providence, died in that city after a few hours' illness, on August 16, in the seventy-

first year of his age. He was an old-time master of his honorable craft. He was foreman of the bindery of the Boston Public Library under Justin Winsor. At one time he had a bindery in the basement of the Boston Athenæum. At different periods he had his own private bindery in Boston, and numbered among his patrons most of the famous people that are associated in the public mind with that city in the last third of the previous century. He contributed to the Boston conference of the A. L. A. in 1879 a paper on "Bindings of a public library," which was published in the fourth volume of the LIBRARY JOURNAL. In the John Carter Brown Library he did all his work himself and enjoyed the enviable opportunity of living up to his ideals of craftsmanship. The books that he bound there form a monument both to his own skill and to American attainment in the craft, as distinguished from the decorative art of book-binding.

HULL, Edna M., Mt. Holyoke 1907, B.L.S., New York State Library School 1916, has been appointed first assistant cataloger in the University of Washington Library at Seattle.

IVES, William, died in Buffalo, Aug. 21, in his hundredth year. He was one of the founders of the A. L. A., attending the first meeting in Philadelphia in 1876, and a telegram of greeting and remembrance was sent him by the members of the A. L. A. at the Asbury Park conference in June. Mr. Ives was librarian of the Buffalo Public Library for 52 years, retiring at the close of 1904, at the age of 88. He saw the library grow from a small subscription library, with 500 volumes and a restricted circulation, of which he was the sole custodian, to a large city institution, with branches, delivery stations, and a staff, when he retired, of nearly a hundred. During the last year of his relations with the library he was practically librarian emeritus, active charge of the administration being in the hands of the library superintendent, but his familiarity with the library's resources and his wide acquaintance with the public made his association with the institution of value both to the staff and to the public.

LAWS, Helen M., N. Y. State Library School 1916, has received an appointment as head cataloger in Wellesley College Library.

LEWIS, Emma, has resigned her position as librarian of the Wallingford (Ct.) Public Library.

LOVE, Cornelia S., N. Y. State Library

School 1917, has been appointed assistant in the Educational Extension Division of the University of the State of New York.

MEYER, Amy, of Red Wing, Minn., has been selected by the trustees of the William K. Kohrs Memorial Library, Deer Lodge, Mont., to fill the vacancy caused by the resignation of the librarian, Miss Ruth Stetson.

MONTGOMERY, Thomas L., state librarian of Pennsylvania, has edited the reissue of the volumes on the "Frontier forts of Pennsylvania," first published in 1895 as the report of a special commission appointed in 1893 to determine the number and location of the forts erected against the Indians before 1783 and the desirability of erecting suitable tablets to mark their sites.

NORTON, Vira, has been appointed librarian of the library of the Hebrew Orphan Asylum, 373 Ralph avenue, Brooklyn, N. Y.

PHELPS, Edith Allen, librarian of the Carnegie Public Library of Oklahoma City, Okla., since Feb. 1, 1905, has resigned her position, effective Sept. 15. She has not yet accepted a position elsewhere.

POPE, Mildred H., N. Y. State Library School 1915-16, has been appointed librarian of the Albany Free Library.

PRICE, Marian, B.L.S., N. Y. State Library School 1916, began her duties as librarian of the Carnegie Free Library of McKeesport, Pa., July 17.

TEMPLE, Truman R., Pratt 1916, has taken up his duties as librarian of the Leavenworth (Kan.) Public Library.

WARD, Annette P., has been appointed reference librarian of the Oberlin College Library, and enters upon her duties Sept. 1. Two years ago Miss Ward resigned the librarianship of the Western Reserve Historical Society at Cleveland, and spent the next year on the Pacific Coast. For the past year she has been in New York filling temporary positions in both the reference and circulating departments of the New York Public Library.

WEBB, William, B.L.S., N. Y. State Library School 1916, has been appointed sub-librarian of the Legislative Reference section, New York State Library.

WINSLOW, M. Amy, N. Y. State Library School, 1916, has been appointed first assistant in the East Liberty branch of the Carnegie Library at Pittsburgh.

# THE LIBRARY WORLD

## New England

### MAINE

*Jay.* Announcement has been made that the town of Jay is to be presented with a fine library building in memory of the late Viranus Niles, by members of the family, and that the building will be located in North Jay, opposite the Universalist parsonage, on what has been long known as the Gustavus Keyes place. The building will be of stone, modern in every respect, and work will be begun on it as soon as arrangements can be made.

*Steep Falls.* The long promised Public Library building is being erected, the foundation work going on rapidly. The cost of the building is estimated at \$16,000. It is to be constructed of granite and birch.

### NEW HAMPSHIRE

*Dover P. L.* Caroline H. Garland, lbn. (33d ann. rpt.—yr. ending Dec. 31, 1915.) Accessions, 1437; withdrawn, 208; total, 44,275. Circulation, 76,848. New registration, 428; total, 15,840. Receipts, \$6260.66; expenditures, \$6017.21, including \$1108.49 for books, \$288.76 for periodicals, \$358.34 for binding, \$2693.95 for salaries.

*Manchester City L.* F. Mabel Winchell, lbn. (Rpt.—1915.) Accessions, 4003; withdrawals, 1051; total, about 77,000. Circulation, 150,043. New registration, 3466; total, 11,997. Receipts, \$40,618.92; expenditures, \$39,819.68, including \$3371.65 for books, \$656.76 for periodicals, \$429.31 for binding, \$9479.51 for salaries. The open shelf room has aided in increasing the circulation, which gained 36 per cent. over 1914. The growth of the delivery stations has been rapid; at the first station to be opened the increase in circulation over 1914 was 41 per cent., in registration 63 per cent., and at West Manchester the circulation gained 76 per cent. and the registration 198 per cent. As a result of the open shelf system 57 less books were unaccounted for than in 1914. A second and enlarged edition of "Home reading for high school pupils" was issued and the price kept at ten cents. A new field of activity was developed in club rooms and lecture halls. Ninety-nine gatherings were held during the year, the attendance aggregating a little over 3000.

### VERMONT

*Brattleboro.* Thru the recent death of Miss Susan J. Fox the Brattleboro Free Li-

brary comes into an inheritance of \$3000, the income of which is to be used in the purchase of books. The money was left by the late Rev. Frederick Frothingham, formerly pastor of the Unitarian church here, on condition that Miss Fox and her sister should enjoy its income during their life.

### MASSACHUSETTS

*Boston.* Chinese students at the Massachusetts Institute of Technology are trying to keep in touch with the Chinese who have settled in the city of Boston, and keep up a Chinese library and reading room which may be approached by either Oxford street or Oxford place. The library is open at stated hours, and the key is to be had at other times at a neighboring house. Chi-Che Chu, now a senior, suggested the establishment of the library. The general movement on the part of students dates back to 1912, when Technology and Harvard men established a Chinese Welfare Association. Students working for the library then collected \$60 to \$70, with which the first accession of books, 700 or 800 in number, was procured. Recently the Chinese merchants who have tested out the benefit of the plans have subscribed about \$100 and this will be devoted to other books, so that in a short time there will be perhaps a couple of thousand volumes at the disposal of Chinese readers.

*Boston.* The College of Business Administration of Boston University moves this month to the Walker Building occupied for many years by the Massachusetts Institute of Technology. The new quarters will allow the additional space which has been so sadly needed in the former location and the library will be better able to meet the demands made upon it. A radical departure will be the formation of commercial museums to supplement the printed material in the library. A student may study a process and then by visiting the museum see objectively just how that process takes place. The Advertising Museum will contain specimens of every kind of publicity with special divisions for the various industries. The Commercial Museum will have specimens of products of various foreign countries and, in addition, exhibitions of American productions. The librarian, Ralph L. Power, will remain in charge and an additional service will be undertaken by allowing free access to all available material to the business men and investigators. The library, which is for reference only, contains a compre-

hensive selection of works in numerous branches of business and standard reference works, as well as a collection of state and national government publications all made easily accessible. Hundreds of pamphlets are being cataloged to supplement the material in books and the keynote of the administration will be to be of practical service to the active business interests of the city. This should be the more appreciated because of the lack in the city of Boston of a general business library available to the public.

*Cambridge.* The city council has passed an order making formal application for a Carnegie Library donation for North Cambridge, and pledging itself to purchase a site for the library should the donation be secured.

*Chelsea P. L.* Medora J. Simpson, lbn. (46th ann. rpt.—yr. ending Dec. 31, 1915.) Accessions, 1238; withdrawn, 47; total, 17,524. Circulation, 103,215. New registration, since July 1, 1915, 3447. Receipts, \$17,121.59; expenditures, \$9909.07 including \$1170.03 for books, \$211.76 for periodicals, \$5100.51 for salaries.

*Lynn.* With simple ceremonies the cornerstone of the Carnegie branch library, which is to be built in the Breed school yard, Western avenue, West Lynn, was laid Aug. 17 by Mrs. Elizabeth L. Mead, who is to be librarian of the new branch when completed.

*Lynn P. L.* Harriet L. Matthews, lbn. (53d ann. rpt.—yr. ending Dec. 31, 1915.) Accessions, 4390; withdrawals, 1832; total, 102,302. Circulation, 270,876. New registration, 3066; total, 17,893. Receipts, \$28,000; expenditures, \$27,999.90, including \$4320.88 for books, \$682.04 for periodicals, \$1933.15 for binding, \$10,554.32 for salaries. Beginning in March a story hour was given for children under 10 years of age. In the room for the blind six people have been taught English Braille and one pupil instructed in American Braille.

*Medfield.* At a special town meeting held July 20 it was unanimously voted to accept the gift of a new brick building for a public library to be erected on the southeast corner of Main and Pleasant streets by Granville F. Dailey of New York city, and a committee of three was appointed to draft resolutions to forward to Mr. Dailey thanking him for the gift.

*Millbury.* The new Public Library building, to which the Carnegie Corporation donated \$12,500, was completed in July. The library is always closed in August, and during that month it was expected to move the books and

fixtures from the old quarters in the town hall to the new building. The building is of one story with a basement, built of red and extra dark red brick, with white granite steps.

*Needham.* Five pages of *The Brick Builder* for July, 1916, are devoted to illustrations, plans, and details of the Needham Public Library.

*Newton.* The Newton Free Library has recently received \$5000 in cash and securities from the executors of the will of Miss Mary Shannon, who died April 19, 1901, leaving a total of \$126,000 to public institutions. This bequest to the Newton Free Library makes the total of trust funds now held by the library amount to about \$26,000. Aside from these there is \$600 received annually from the Read Fund, which is to be used for the purchase of books of a general nature.

*Taunton.* The sum of \$40,000 has recently been released for the use of the Public Library. Provision was made in the will of S. S. Cobb, formerly one of the most prominent citizens, who died about twenty-five years ago, that this amount should be set aside for the life use of certain individuals, and that upon their death it should revert to the library. The library has already secured a city appropriation to provide another much needed story in its stack room, and the income from this bequest will probably be used for the purchase of books.

*Woburn P. L.* George H. Evans, lbn. (Thirty-seventh ann. report—year ending December 31, 1915.) Accessions, 1027; withdrawals, 1278; total, 47,871. Circulation, 71,140. New registration, 970; total, 3868. Receipts, \$7567.74; expenditures, \$7563.64, including \$1123.95 for books, \$191.75 for periodicals, \$281.37 for binding, \$3345.01 for salaries. An undertaking of the year was the indexing of the files of Woburn newspapers covering the years 1840 to date, with the exception of the period 1848-1857 inclusive.

*Worcester F. P. L.* Robert K. Shaw, lbn. (Report—year ending Nov. 30, 1915.) Accessions, 12,533; withdrawals, 4358; total, 227,843. Circulation, 687,085. New registration, 6255; total 32,851. Receipts, \$74,752.22; expenditures, \$72,282.79, including \$13,156.11 for books, \$1771.55 for periodicals, \$4672.40 for binding, \$39,980.20 for salaries. There was an increase in all branches of children's work; of 3.8 per cent. in the main room, 13 per cent. in school deposits, 12 per cent. in school deliveries. The three branch libraries, opened in February, 1914, added over 25 per cent. to the home and school circulation.

## RHODE ISLAND

*Providence.* The Providence Public Library will receive \$2500 as a result of a bequest in the will of the late Newton D. Arnold, filed for probate Aug. 18.

## CONNECTICUT

*Bridgeport.* The directors of the Bridgeport Public Library have contracted for the acquirement of property at the corner of Kosuth and Jane streets on the East Side and on Main street, just north of North avenue, upon which buildings will be erected to be used as branch libraries. The city gave the library \$25,000 with which to make the purchase and the directors have kept within that figure. The property in the North End which has been purchased for library purposes is 100 feet by 140 feet and the East Side property is 145 feet by 180 feet.

## Middle Atlantic

## NEW YORK

*Carthage.* The contract for construction of the new Corcoran Memorial Library building was formally awarded in July. All the bids received exceeded the \$15,000 bequeathed by Mrs. Martha Corcoran for the building, and some changes will be made in the material called for.

*Ellenville.* Architect Frank E. Estabrook, of Newburgh, has been awarded the contract for the erection of a library and hall for the Ellenville W. C. T. U. The W. C. T. U. of Ellenville had about \$60,000 left to it by Mr. Hunt to be used for their benefit with a request that it be used in a building, and the plans are that the building be constructed on a plot of land 200 by 300 feet in size, on Canal street, opposite The Inn. The library for village use will have its entrance on one side, the main library room being 35 by 20, reference room, 12 by 30, and a two story stack room. The main building will be entered on the opposite side, and will include a reception room, dining hall, kitchen, wash rooms, etc. A stage will be provided for and the two rooms, dining hall and reception room, will be thrown into one large auditorium capable of seating 300 persons by removal of a partition. Under the building provision will be made for a bowling alley, gymnasium and lockers.

*New York City.* A new handbook of the New York Public Library has been put on sale in the library and branches at 10 cents a copy. Twenty-five thousand copies were

printed in June and were distributed free at the A. L. A. and N. E. A. conferences to all registered members. A full description, freely illustrated, is given of the Central Building, together with chapters on the work of the circulation department, a historical sketch of the library, and much other interesting matter.

*New York City.* In the July *Bulletin* of the New York Public Library is the first instalment of a "History of the New York Public Library" by Harry Miller Lydenberg, the chief reference librarian. This first instalment is devoted to an account of the inception and formation of the Astor Library, the first in point of time of the various elements from which The New York Public Library of the present day has been evolved. It is illustrated with likenesses of Mr. Astor and of Mr. Cogswell, so closely associated with the library's early history, and with a view of the library building as it appeared in 1854. Succeeding issues of the *Bulletin* will carry on the story of the Astor Library, and also describe the growth of the Lenox Library, the Tilden Trust, the New York Free Circulating Library, and the other early circulating libraries of the city.

*Sackets Harbor.* Because the trust fund created under the will of Mrs. Marietta Pickering Hay, late of Tarrytown, for the maintenance of a library in the tower of the Presbyterian church at Sackets Harbor has suddenly grown from \$3900 to \$40,000 owing to a rise in value of certain stocks, Walter H. Camp, of Watertown, the trustee, has brought a suit in supreme court to have the provisions of the will construed, and ascertain if it will be possible to build and maintain a separate library building. On Nov. 12, 1900, Mrs. Hay, who had long been a summer visitor at Sackets Harbor, arranged to contribute a tower and set of chimes for the church, and to provide a library in the tower, the church to agree to keep the tower free from debt and maintain the library. At her death, May 15, 1901, she left a will creating a trust fund whose income should be used for the purchase of books and works of art for the library, to be known as the Pickering and White Library, in memory of her parents.

*Seneca Falls.* When the time arrives, the latter part of September, for placing the corner-stone of the new Mynderse library, the officers of the library desire to have the principal address made by Rev. H. N. Denslow, a former rector of Trinity Episcopal church and the man who was the first president of the

Seneca Falls Public Library Association. The construction of the building, above the foundation line, was started Aug. 15, under the direction of Architect I. Edgar Hill of Geneva.

*Sherrill.* The Sherrill Free Library will probably be moved into new quarters within a short time, as the present quarters in the post office are not large enough. In the will of Mrs. H. E. Joslyn of Kenwood, who died last summer, is a bequest for \$15,000 to be used in the erection of a public library for the people of Sherrill and Kenwood. The library now has over 3000 volumes.

*Southampton.* The story of the Rogers Memorial Library, from its foundation in 1893 to May 31 of the present year, has just been published in pamphlet form. It is an interesting narrative and suggestive as to how great a boon such an institution is in a country village. Recent alterations to the building have added greatly to the efficiency of the library, and also afford a place for the display of historical specimens relating to the history of the Village of Southampton, shown under the auspices of the Colonial Society.

*Syracuse.* A conference has been held between the trustees of the Syracuse Public Library and City Engineer Henry C. Allen and Superintendent of Schools Percy M. Hughes relative to placing the North Side Library in the new Franklin school. The trustees are in favor of the plan, and formal action will be taken at an early fall meeting. In the plans for Franklin School provision has been made for a library space of 1800 square feet on the street floor, which will be separate from the school proper with a private vestibule entrance so that it can be used the year round. The present North Side Library is in leased property at Townsend and Ash streets, and the lease expires September 1, 1917. The removal of the branch from its present location to the new Franklin School will take it from a business district to more of a residential section, and this is believed by many to be a good move. Principal Charles E. White is in favor of the change.

*West New York.* A new library is to be opened in the Town Hall, and steps have been taken toward the installation of shelves and other furniture.

#### NEW JERSEY

*Hackensack.* The addition and repairs to the Johnson Public Library building, which have been under construction for nearly a year, were completed early in July, and the public

was invited to inspect the remodelled building July 8. The addition consists of a new stack room about 50x35 feet in size, which when filled will accommodate about 55,000 volumes. The old stack room has been converted into a commodious and attractive reference room, the second floor is the children's room, and a spacious room in the new part over the stack room is assigned to the Historical Society for their collection. On July 4 the Library Association, composed of ladies who several years ago had charge of the Hackensack Library, presented the library with a large flagpole and flag.

*Jersey City.* An appropriation of \$25,000 to purchase a site for the Hudson City branch of the Jersey City Public Library was made by the city commissioners July 25.

*Morristown.* The old library and lyceum property in South street was sold July 24 at sheriff's sale to the Morristown Library and Lyceum, complainants in a foreclosure proceeding against the Lyceum & Realty Co., on a bid of \$10,000. The claims aggregated nearly \$25,000. The Lyceum & Realty Co., which was organized to control the property, did considerable work on the burned library building a year ago, remodeling it for a theater.

#### PENNSYLVANIA

*Pittsburgh.* The Carnegie Institute and Library of Pittsburgh has issued a little illustrated booklet descriptive of its building. Included in it are an article by Mrs. Elizabeth Moorhead Vermorcken, reprinted from the *Outlook* of Sept. 26, 1908; notes on John W. Alexander's mural decorations, by Mrs. Alexander; a few facts about the library and its departments, and a schedule of library hours. The library has also issued a second edition, revised to May 1, 1916, of its "Index to the classified catalog of the technology department."

*Pittsburgh. Carnegie L.* Harrison W. Craver, lbn. (Rpt.—yr. ending Dec. 31, 1915.) Accessions, 17,163; withdrawals, 14,111; total, 422,201. Circulation, 1,355,980. New registration, 15,833; total, 113,659. Receipts, \$245,576.12; expenditures, \$206,338.80 including \$9332.65 for books, \$5604.65 for periodicals, \$121,035.84 for salaries. A reduction of \$50,710 in the appropriation made by the City Council necessitated drastic curtailment in all branches of library work; 43 branches were discontinued, the purchase of books reduced, and the staff diminished. Special emphasis was laid

on the work with schools; the circulation in the schools division increased 33 per cent. during the year.

*Wilkes-Barré.* *Osterhout F. L.* Myra Poland, lbn. (Twenty-seventh ann. report—1915.) Accessions, 3064; withdrawals, 1742; total, 46,587. Circulation, 166,932. Total registration, 18,772. The number of books circulated for school use from the adult department was 328, and of musical scores 1100.

## The South

### VIRGINIA

*East Radford.* A considerable addition is being made to the library of the Radford Normal School. The United States government has made the library a depository for government publications.

### GEORGIA

*Atlanta.* *Carnegie L.* Tommie Dora Barker, lbn. (Report—year ending Dec. 31, 1915.) Accessions, 9961; withdrawals, 2690; total, 73,711. Circulation, 371,951. New registration, 6425; total, 62,603. Receipts, \$34,805.07; expenditures, \$34,805.07 including \$9150 for books and periodicals, \$800 for binding, \$17,460 for salaries. A new branch building to be known as the South Branch was constructed during the year at a cost of \$17,000.

### LOUISIANA

*New Orleans.* At the July meeting of the Public Library board a committee was appointed to confer with the municipal authorities relative to obtaining a proper site for another branch library in the upper section of the city, and it is expected that a campaign for such a branch building will be formulated presently.

## The Central West

### OHIO

*Cincinnati.* Curtis G. Lloyd, chemist, and one of the founders of the Lloyd Library and Museum, is planning a new building to be put up at the southwest corner of Court and Plum streets. It will be of four stories and basement, and will adjoin the present structure. The new part, planned by Tietig & Lee, architects, will be used for library purposes. It will be 225 by 50 feet and of mill construction.

*Cleveland.* The present excellent condition of the bond market added \$53,220 to the building funds of the new public library, that amount being bid Aug. 2 for the \$2,000,000

issue approved by a referendum vote in 1910. Harris, Forbes & Co., of New York, were awarded the bonds.

*East Liverpool.* Plans for the new Public Library are now in the hands of the Carnegie Corporation. The location for the new library is at the corner of Ninth and Main streets on property escheated the state and later deeded to the city for library purposes by an act of the legislature, being the property of the late Gen. Reilly. The lot is 50 x 100 feet.

### INDIANA

*Anderson.* An Indiana room has been opened at the Anderson Public Library. It has been provided with two hundred and eighty volumes, works of Indiana authors, and books on Indiana history. The walls of this room are adorned with portraits of famous men of Indiana.

*Gary P. L.* Louis J. Bailey, lbn. (Rpt.—1915.) Accessions, 11,958; withdrawals, 1587; total 53,566. Circulation, 360,847. New registration, 4,068; total, 13,186. Receipts, \$42,835.97; expenditures, \$32,731.84, including \$6469.03 for books, \$823.66 for periodicals, \$950.51 for binding, \$12,343.02 for salaries. About 300 music rolls were purchased in 1915, making a total of 567; the circulation was 4847. The circulation of pictures was 22,426, of lantern slides 5125. The use of the club room and auditorium more than doubled during the year, the attendance reaching a total of 14,041; beside the regular meetings of 21 organizations there were 75 others at the main library and several more at the Hobart branch. During the year the library extended its service to two more townships, now serving over one quarter of Lake county.

*Indianapolis.* Sentiment is growing in favor of naming the new Public Library building after James Whitcomb Riley, whose generous gift of ground in a large measure made possible the new building. Under a state law passed by the last Legislature, the building has been designated as the Central Library of Indianapolis, but this could doubtless be easily changed. A room devoted to the children's books has been designated the "Riley Room." As an added testimonial of love from the school authorities and more particularly the school children, a fund was raised recently with which massive bronze doors will be put at the main entrance of the building, the gift of the children. The fund was raised by personal contributions, each pupil in some manner earning the amount contributed. March 24,

the occasion of the laying of the corner stone at the new building, was turned into a Riley tribute. Although Mr. Riley was at his winter home at Miami, Fla., he sent a greeting to his friends and the big stone was laid in place by Edmund H. Eitel as the personal representative of the poet. Meredith Nicholson was one of the principal speakers. More than 1000 school children formed a chorus, which sang the "Messiah of nations," the words of which were written by Mr. Riley and the music by John Philip Sousa. The cornerstone contained, in addition to many papers and documents, an unpublished stanza in Mr. Riley's original manuscript of the poem "No boy knows when he goes to sleep." The stanza was discovered by Mr. Riley and given to the school board officials along with a leather bound copy of "The rhymes of childhood." The original manuscript of the poem "The book of joyous children" also was given to the school authorities to inclose in the box, but it was left out and has been framed. It will occupy a conspicuous place in the new library.

*Valparaiso.* The new \$25,000 building, the gift of the Carnegie Corporation to Valparaiso and Center Township, was formally opened on the evening of May 26. Prof. B. F. Williams gave the dedicatory address. E. L. Tilton, of New York, was the architect.

#### ILLINOIS

*Evanston.* The Library of Illinois has received a notable gift of ninety-eight volumes from Albert M. Todd of Kalamazoo, Michigan, consisting of early editions of English literature and of the classics. Many of the volumes have been bound by famous London bookbinders.

### The Northwest

#### IOWA

*Dubuque.* An "Allison room" is to be opened at the Carnegie-Stout Free Public Library. The room, which is on the second floor, will contain the collection of some three thousand volumes from the library of the late Senator William B. Allison, a gift to the library from Mrs. Jennie A. Brayton. The room has been redecorated for the purpose, and the library table, some of the walnut bookcases from Senator Allison's own library, and the chair which he used during the years that he was in Congress have been placed there. The books will not be placed in general circulation, but may always be used within the room.

#### MONTANA

*Hamilton.* The Carnegie Library was formally opened in July by the Hamilton Woman's club, who held an "at home" at the library building. A book shower was a feature of the event.

*Helena.* *State Law L.* Ashburn K. Barbour, lbn. (Biennial report for 1913-1914.) The accession of 2083 bound volumes during the biennial period represents one of the largest growths of the library during any like period in its history. The library has kept well abreast of the times in current text-books, reports, session laws and statutes, and legal literature in general, but its subscriptions to law journals are limited to twenty. The board has renewed its recommendation for added book stacks and suitable furniture for the reading room.

### The Southwest

#### KANSAS

*Topeka.* The cornerstone of the new \$100,000 Masonic Library was laid July 21. A thousand Masons were present, but the attendant ceremonies were more simple than usual on account of the excessive heat of the day.

*Wichita.* The library board has asked the city commission to increase the library levy from \$7500 to \$10,000. According to the contract with the Carnegie Corporation the city must appropriate at least \$7500 a year to run the institution. This will be the second year under the library board. The city commission last year fought the library board in the courts on the theory that it would spend too much money, not being responsible to the people for levying the tax.

#### TEXAS

As a result of the joint meeting of the legislative committee of the Texas Library Association and the Texas Federation of Women's Clubs, held in Austin July 20, a number of important recommendations were made to the next legislature relative to the county library law. The committees recommended the increase of the county library tax from 5 mills on the \$100 to the maximum of 5 cents on the \$100; the provisions for the certification of county librarians by a state board of library examiners; the requiring of only 100 qualified voters to sign the petition calling for an election to vote for or against a county library instead of the 25 per cent. required in the present law; a

straight majority instead of a two-thirds vote in favor of the establishment will carry the election; and the elimination of the section in the present law permitting a city library to become a county library. Besides these changes, many minor recommendations were made, but none of these affect the purpose of the present law, which is to provide rural communities with as good library facilities as the cities now enjoy. Before presentation to the next Legislature these recommendations will be presented to the next annual meeting of the Texas Library Association for approval.

*Galveston. Rosenberg L. Frank C. Patten, lbn. (Rpt.—1915.)* Accessions, 2341; withdrawals, 2965; total, 56,564. Circulation, 72,463. New registration, 1575; total, 11,941. Receipts, \$30,917.73; expenditures, \$28,724.26, including \$2832.86 for books, \$698.96 for periodicals, \$574.28 for binding, \$12,236.23 for salaries. The attendance at the 26 lectures of the 11th season was about 11,500. The removal of the children's department from the main floor to the second floor proved successful; loans for that department increased 19½ per cent. during 1915.

#### COLORADO

*Colorado Springs.* The private library of Miss Amanda R. Bell, who died about two years ago, was recently given to Coburn Library, Colorado College. The gift comprised 860 volumes, mostly of standard literature, and English and American works in literature, and a large collection of lives of noted women writers. The library has recently acquired by exchange with the Library of Congress, bound files of the *New York Tribune* and *The Boston Transcript* during the Civil War, anti-slavery weeklies during the 40's and 50's, and several volumes of *The Rocky Mountain News* during the 70's.

*Fort Collins.* The Agricultural College Library has opened a new reading room, which has long been needed. This room is 50 by 80 feet, and has seating room for about two hundred. The semi-indirect system of lighting has been installed and has proved both beautiful and practical. One feature of the work in this library has been the growing demand for extension work, both in the state and outside. This demand has been particularly for material on agriculture and domestic science.

#### ARKANSAS

*Little Rock P. L. Dorothy D. Lyon, lbn. (6th ann. rpt.—yr. ending Dec. 31, 1915.)*

Accessions, 2575; withdrawn, 231; total, 21,602. Circulation, 102,599. New registration, 1882; total, 11,654. Receipts, \$7323.58; expenditures, \$1598.74 for books, \$159.95 for periodicals, \$465.85 for binding, \$3925.10 for salaries. The circulation has increased 121 per cent. in 5 years.

## The Pacific Coast

### OREGON

*Hermiston.* Plans are now being drawn for a one-story library building, with stucco exterior, tile walls and frame interior, to be erected at Hermiston. The cost will be defrayed by the Carnegie Corporation.

### CALIFORNIA

*Alameda.* The city council has been requested by the board of library trustees to advertise for bids for the construction and remodeling work necessary to install a children's room in the library.

*Grass Valley (Nevada Co.).* Grass Valley's new Carnegie library building has been opened to the public. The upper or main floor of the building, occupying a space 36 x 70, is to be used exclusively for library purposes. In the basement are the women's rest room, work room, class room, room for men, file room and assembly hall, the latter occupying the larger space. The building is constructed of tile and is of colonial design.

*Los Angeles.* An item in the *Los Angeles Examiner* says that controversy has arisen over a plan presented to the Board of Education by Librarian Everett R. Perry to have the city establish a library of children's books in each school building, in return for which the Board of Education is to give \$10,000 to the City Library for the purchase of new books. Superintendent Francis, who formerly partly endorsed the plan, in July submitted a report to the Board, saying that he is opposed to it. Superintendent Francis says he does not favor the plan because the experience of the schools with the city library in former years, "when the school funds were placed at the disposal of the city library, which was supposed to serve the needs of the schools," was "highly unsatisfactory, and the work has greatly improved since the change was made." He says further that if the funds were divided it might result in "a disintegration of the school library." Miss Charlotte Casey, librarian of city schools, has also written to the board protesting against the request of the city library, likewise stating that it proved unsuccessful and the school

library has grown and become more useful to the schools by its increase from 16,000 volumes to 163,000. The matter was referred to a special committee to be appointed and to the law and rules committee.

*Red Bluff.* The board of supervisors has voted to establish a county free library. It is likely that the tax levy to carry out the plan will be about 3 cents on the \$100, and the state law provides that the county librarian for Tehama county shall be paid a salary of \$100 a month. The appointment will be made by the supervisors, but the librarian must be an experienced one, who has passed successfully an examination by the board of state library examiners. The library may be in operation by October, and it is believed there will be ample room for the county free library at the Herbert Kraft Free Library.

*Redlands.* A. K. Smiley P. L. Ardena M. Chapin, lbn. (22d ann. rpt.—yr. ending June 30, 1916.) Accessions, 1629; total volumes, 29,388. Circulation, 115,591. Reference use of library is made constantly by University of Redlands and High School students, but no record is kept. New registration: adults, 701, children, 270, renewals 56; total, 5709. During the past year a thoro weeding out of cards not in active use was made and 3097 names were crossed off the list. This reduces the membership somewhat in comparison with past years but is more accurate: Reading room attendance is kept on Sundays and holidays only. This amounted to 13,020. Receipts \$10,477.53; expenditures, \$10,465.69, including \$1458.69 for books, \$544.85 for periodicals, \$586.76 for binding and \$5445.48 for salaries.

*Sacramento.* The city council expected to advertise for bids on the new library building the latter part of August, and it is expected that the work on its construction will be well under way before the end of the year.

*Watts.* A resolution was passed in July which gave over the city library to the supervision of the county. This move was made after some months of deliberation and discussion, the reason being that the city funds were not sufficient to maintain the library without help from the county board. There has been some opposition to the move, however, the Women's Improvement Club having circulated a petition in protest. The library was built under a Carnegie grant, it being stipulated that the city should furnish \$80 per month for the upkeep. This was felt to be too severe a drain upon city resources under the present regime.

## UTAH

*Mount Pleasant.* Plans have been drawn for a \$10,000 Carnegie Library. This structure is to be of pressed brick, one story and basement high, and is to be completed in December.

*St. George.* The new Public Library building is completed, and the books and furniture have been moved into the new quarters. The Carnegie Corporation furnished \$8000 towards the erection of the library, and the city \$2000. It is on the same block as the Woodward School and the Normal College.

## Canada

### ONTARIO

A new quarterly called the *Ontario Library Review* has been started by the Public Libraries branch of the Department of Education of Ontario. W. O. Carson, the new inspector of public libraries, is the editor, and besides articles of information and inspiration, notes and news of library happenings in and out of the province, a portion of each issue will be used for an annotated list of new books suitable for purchase by the smaller libraries, and for the occasional publication of short lists of approved books on special subjects.

The Superintendent of Public Libraries, acting on the authority of the Minister of Education, has organized a short course library training school, to be opened September 11. The course will last for one month. Thru the courtesy of the Toronto Public Library Board and Dr. George H. Locke, chief librarian, the school will be held in the Dovern Court branch of the Toronto Public Library. The course of instruction is arranged for the purpose of training in library science librarians and assistants who hold library positions or have had experience in library work. Special lectures will be given by W. J. Sykes, chief librarian, Ottawa Public Library; Dr. George H. Locke, chief librarian, Toronto Public Libraries; H. B. Whitton, trustee Hamilton Public Library; Dr. E. A. Hardy, secretary, Ontario Library Association; S. B. Herbert, assistant inspector of public libraries.

Appendix W to the report of the Minister of Education for the year 1913 contains a report upon the public libraries, literary and scientific institutions, etc., in the province of Ontario. "The outstanding features of the year's effort have been the prominence given to children's work, the co-operation of the public school with the public library, the development and popularity of the library institutes, emphasized by the creation of an-

other institute—no. 15—that of Toronto; the growing approval and adoption of a uniform system of classification, with the loud call for the services of the cataloger; the cry for the introduction of the county system and the steady increase of interest in library work by men of affairs." An interesting feature of the report is the tables showing in detail the circulation of all books in every library in the province with the non-fiction regularly classified, and giving a list of all townships without libraries and the distance from and location of the nearest library. With the new books accessioned during the year, the number available for circulation thru the traveling library in 1913 was over 15,000.

*Tavistock.* Excavations have been commenced for the work of building the new Carnegie library.

#### QUEBEC

*Montreal.* The Montreal Board of Control is considering a proposition to vote \$50,000 for supplying the Montreal Public Library with stained-glass windows, representing all the great historical figures of Canada.

#### SASKATCHEWAN

*Regina.* A considerable shipment of worn books has been sent by the Public Library to the chaplain of the 195th Battalion at Camp Hughes for the regimental library, and arrangements have been made by which a branch has been established at St. Chad's Convalescent Soldiers' Home. Fifty books have been supplied, mostly technical books, works of travel, biography and general literature, the home being otherwise well supplied with fiction. The non-commissioned officer in charge is responsible for the care of the library. As very little use is made of the reference department during the day time in the summer holidays (July and August), it was decided to keep the reference room open only in the evenings from 6.30 to 10 o'clock. This enabled the management to carry out an important economy by dispensing with the services of a relief assistant during vacation time. At the same time arrangements were made to accommodate members of the public who found it necessary to consult books in the reference department during the day time, by asking them to apply at the delivery desk on the main floor. The library had already sent out twenty-six vacation libraries on July 15, representing over 300 books.

## Foreign

### GREAT BRITAIN

An important exhibition of books and manuscripts has been arranged in the great hall of the National Library of Wales at Aberystwyth. It was opened to the public during the Eisteddfod week and will remain for a couple of months. The exhibition comprises a selection from the valuable books and manuscripts given to the National Library by Sir John Williams, Bart., from the Llanover Manuscripts, which have just been deposited in the library by Sir Ivor Herbert, and vellum copies of the series of old Welsh texts edited by Dr. J. Gwenogvryn Evans, lent by Sir John Williams, who also contributes a complete set of the volumes issued from the Kelmscott Press.

*Croydon.* The twenty-seventh annual report of the Libraries Committee shows that altho 1800 borrowers from the libraries are absent, probably with the colors, the use of lending and reference libraries remains almost at the pre-war level. During the year 1915-16 the total issues were 500,131, and there were 18,207 borrowers' tickets in actual use. The library stock consists of 100,375 volumes, illustrations, prints, and lantern slides. Thirty-four library lectures and readings were given, and exhibitions, receptions and library lessons to school children drew attention to the resources of the libraries.

### JAPAN

*Tokio.* The annual report of the Imperial Library of Japan for the year ending March 31, 1915, shows that 9644 books were added, making a total of 308,307 volumes in the library. The library was open 328 days, serving 220,809 readers who used 896,844 books. The daily average of readers was 673.2 of books read 2734.3. February and March showed an increase of readers as compared with the previous year, in the other months there was a decrease.

### ARGENTINA

*Buenos Aires.* During the fiscal year 1915, 61,804 persons visited the Argentine Library of Buenos Aires, or a daily average of 182 persons. The number of lectures, art entertainments, etc., given by the institution during the year amounted to 38. The National Athenaeum of Buenos Aires will soon establish a course in bibliography, which will be divided into four parts.

# LIBRARY WORK

Notes of developments in all branches of library activity, particularly as shown in current library literature

ACQUISITION OF MATERIAL. See Gifts and bequests—Of material

## ADVERTISING, LIBRARY

In a report made by Louise Boette, assistant children's librarian for the Carondelet branch of the St. Louis Public Library, is described a library booth at Carondelet Park.

"At the annual picnic of five Carondelet schools, the Blow, Lyon, Carondelet, Des Peres and Woodward, on June 17, at Carondelet Park," writes Miss Boette, "we had a Public Library booth. The decorations were in red, white and blue, and the staff wore little silk badges to match. It was opposite the band-stand, where a stream of people were passing all day. We had taken out about 100 books and our little booth was an out-door reading-room, as we had children around it all day, looking over the books and reading.

"In spite of potato races, Punch and Judy shows, boat rides on the lake, and other attractions too numerous to mention, we took quite a number of registrations and many people stopped to read our library posters and to ask questions. To each child who registered on Picnic Day we gave a book-mark.

"One old gentleman, on seeing a boy deep in a book, said to a friend, 'If I had not seen it with my own eyes, I would never have believed it; a boy reading at a picnic. Well! Well!'

"One lady asked whether we checked parcels, and a little boy wanted to know whether we sold popcorn.

"Altogether our booth at the picnic was a great success."

## AUDITORIUMS

In a recent communication N. D. C. Hodges, of the Public Library of Cincinnati, writes:

"The library can report a decided increase in the use of its auditoriums and club rooms, as well as a greater variety in the interests represented. The total number of meetings for the year ending June 30, 1916, was 2507, as compared with 1763 for the previous year. The library now has eleven auditoriums, seating from 100 to 250 people each, seven club rooms, the largest of which seats 50, and three large basement playrooms. Each auditorium is equipped for stereopticon use, with a stand for the lantern, adjusted to the proper height

and distance from the stage, and a screen painted on the plaster wall of the stage. Three branches have pianos, which have been given by local organizations. Use of the rooms is granted freely for any meeting at all educational in character. This word "educational" is very broadly interpreted and constantly covers civic or recreational activities. But politics and religion are barred, as well as entertainments for which admission is taken at the door. Bookings may be made for one meeting or for the year. The small charge of \$1.00 is made for the use of the stereopticon and the library operator, also for an extension of time after ten o'clock, the usual closing hour. Rent, heat, light and janitor service are given without charge, and the rooms are available from eight in the morning until ten at night.

"The university extension lectures, meetings of women's literary clubs, and teachers' conferences, with which our auditorium work began, are still carried on. Such purely educational meetings are however far outnumbered by those of civic or social import, such as the local improvement associations, mothers' clubs, clean-up organizations, the Woman's City Club, the National Housewives' Co-operative League, the Penny Lunch Association, Shakespeare Pageant Committees, Grocers' Associations, and even tennis and baseball clubs. The Main Library lecture course for grown people, given weekly all thru the winter, has become an established policy. Its attendance is limited only by the seating capacity of the hall—the big children's room rearranged to hold about two hundred chairs. The lectures are freely illustrated and are popular in character. The Main Library also houses the work of the Cincinnati Library Society for the Blind. Its readings for the blind are held almost daily, and one morning each week is given up to instruction in reading from raised type, in writing, and in industrial work of various kinds.

"For the children the library itself plans story hours, illustrated talks, debating and literary societies. The Boy Scouts have met with us from their organization. This spring the Girl Scouts and Camp Fire Girls came to Cincinnati, and as a matter of course, to the branch libraries. The playrooms are used in the more congested districts to absorb the

superfluous energies of the half-grown boys who have no place but the library to spend their evenings. The local business men's clubs equipped one room with simple gymnasium apparatus, which successive groups of boys enjoy under competent leadership. The girls and their older sisters as well find the cement floor of this same room satisfactory for roller skating. At this branch discipline is no longer a problem."

#### BIBLIOGRAPHY, STANDARDIZATION OF

Standardization by a library unit system. G. W. Lee. Reprinted in June, 1916, from the *Stone & Webster Journal*, the house organ of Stone & Webster, 147 Milk St., Boston, Mass.

"With all the separateness of undertakings that are in themselves worth while, we need to formulate a system that shall switch into alignment a host of activities which today have the weakness of lack of co-ordination. . . . Co-ordination is, of course, needed; to bring which about seems to me not only possible, but comparatively simple, if the task be seriously assumed by the organized library forces. . . . I would make my plea under three headings, namely: I, Lack of system; II, Sporadic systems; III, A unit system.

Lack of system is responsible for the frequently circuitous means which must be employed to obtain information and for the haphazardness of finding it. One of several illustrations of chance in securing information is that of the convention. "It is often said, 'I get more from conversations than from listening to papers.' Yet how accidentally—or incidentally if you prefer—we happen upon those with whom there is helpfulness on either side! If I am interested in the care of trade catalogs, how shall I know who else at the same convention has thoughts on the same subject? A convention is supposedly a coming together for the exchange of thought. Who, therefore, is the benefactor that has succeeded in so bringing out the clearing-house function of any convention that no member need return to his home without having met presumably every delegate that could help him?"

Various needs, largely indicated in detached undertakings, are systematized in themselves but, as related to one another, lack team play. Of the many thousands of bibliographies annually printed many escape the notice of any of the various bibliographies. "I have before me . . . the *American Library Annual* for 1914-1915, with lists compiled from the monthly *LIBRARY JOURNAL*. In it are upwards of 500 bibliographies; yet comparison shows that the

'Index to library reference lists' (about 300) in the *Bulletin of Bibliography* for January, 1915, is not altogether superseded. . . . The American Library Association in its own name publishes a monthly *Booklist*, which is well annotated. Should not this be the most inclusive list in the country? And how shall it be made the list of all lists? A matter for the docket of standardization." In catalogs, indexes, digests, etc. there are a number worth while but there is constant overlapping. Mr. Lee's suggestion is that one of two good overlapping undertakings "absorb the other, taking over half the help and letting the rest go a-fishing or earn its living in some still better way. If the survivor misbehaves, and seeks unjustifiable economy by skimping or neglecting, or becomes addicted to deadly routine, then let him be reminded of the 'survivee.' The reminder might serve as a sort of big stick."

There is similar duplication in commercial and engineering organizations, government departments and publications, information bureaus and clearing houses. Auctions, as a means of getting rid of the overflow and superseded material of the Stone and Webster Library, have not come up to expectations. For books such as "Transactions of the American Institute of Electrical Engineers" listed at from \$2.50 to \$12 bids have been received of fifty cents or possibly a dollar. The "Union list of serials in Boston and vicinity" Mr. Lee considers almost a cornerstone of co-ordination. "The importance of knowing where to find a periodical elsewhere in the community when it is not in the most convenient place . . . is almost as great as the difficulty in making men so appreciate the saving need of such a service that they are glad to contribute to its upbuilding, whether in financial support or in contribution of titles to be indexed."

The unit system comprehending all topics which Mr. Lee advocates sub-divides information on a topic under four headings: demand—class, frequency, emergency, miscellany; supply—immediate, local, general; classification; and miscellany. At Chicago there is already a nucleus, a registration of specialists, in the "Sponsors for knowledge."

Whether or not the "unit system" is workable Mr. Lee considers of slight consequence; the important thing is to set people thinking seriously about the need for a co-ordinated center. Such an effective co-ordination will hardly come as a mere business proposition; it will necessitate ideals.

## BINDING

The use of shellac for preserving the covers of books. H. R. Huntingg. *Pub. Libs.*, J1., 1916. p. 319-320.

All the products that are offered for preserving book covers are either some grade of shellac or varnish; shellac dries quickly, with a hard surface; varnish takes much longer to dry and is apt to be sticky. Mr. Huntingg gives a brief résumé of the production of shellac, followed by suggestions for the use of shellac in preserving the covers of books.

For use on book covers, shellac, cut with wood alcohol, gives a much better surface than shellac cut with denatured alcohol; it dries more quickly and leaves a hard, smooth surface. Ordinary commercial shellac should be thinned with wood alcohol to at least one-fifth its original consistency. Two thin coats are very much better than one thick one; the first acts as a priming coat, and the second gives it body and surface. Shellac will spot when wet; so, to obviate this difficulty, the surface is gone over with a good grade of wax. A book so treated with shellac and wax will wear well and keep clean and sanitary. If the book becomes soiled it can be washed with soap and water, gone over with another thin coat of shellac and wax, or with the wax without the shellac.

BIOGRAPHY. See Smith, Lloyd Pearsall

## BIRD GUESSING CONTEST

A bird guessing contest was held in the children's room of the St. Paul Public Library during the month of April. Pictures of Minnesota birds were exhibited on a bulletin board in sets of from four to six each week. Contestants were allowed to look the birds up in the various bird books which were put on the tables, and as the names were guessed they were written on slips of paper obtained at the desk. One hundred and fifty children entered the contest. Prizes consisting of bird games, bird guides and Boy Scout Guides contributed by the Humane Society were given to the successful contestants.

This contest was followed by a wild flower guessing contest conducted under the auspices of the Woman's Garden Club.

## BLIND, WORK WITH

A nucleus for a library for the blind tubercular patients at the State Sanitarium at Cresson, Pa., was started early in July by members of the social service committee of the Pennsylvania Association for the Blind.

Officials of the Pennsylvania Association for the Blind are expecting to send to Cresson the books they have at the association headquarters and efforts are being made to gather several collections belonging to private persons who are willing to donate them.

## BOOK EXHIBITS

A book exhibit not of the ordinary type was the one prepared by Miss Winifred Ticer, librarian of the Huntington (Ind.) Public Library. Instead of displaying fresh, new volumes to attract the public, she dumped in the window of one of the city's furniture stores several hundred of the books so badly worn that they had been discarded. To this mute testimony to the service the library is giving the public, she added placards with such inscriptions as these:

These books were worn out last winter—get a library card and read our books.

There are 25,000 books in the city library, and some of them may interest you.

Circulation in 1913—41,402.

Circulation in 1914—50,761.

Library blandishments. *Pub. Libs.*, J1., 1916. p. 309.

The San Diego Public Library has recently been making experiments as to how to increase their circulation of non-fiction. In two combined book bins and bulletin boards were placed groups of books such as the following: (1) rent collection, (2) special displays of books of current interest as gardening or business efficiency, (3) "fiction and other interesting books." The "other interesting books" were generally biographies, lives of men and women who, like Helen Keller, have fought thru adversity and discouragement to success. It was found that because of their human interest they were most popular. The books were spread out in the bin so that the full cover showed and each fiction book was alternated with some interesting biography. Each morning the librarian selected 35 or 50 books of non-fiction and scattered them thru the fiction; if a book did not circulate within two days it was replaced with one more interesting. An average daily biographical circulation of 8 to 10 increased to 20, 30, and as high as 50 books a day. A display of books on South America resulted in a circulation of about 75 books on that subject and developed enthusiasm for the magazine *South America* and for the *Pan-American Bulletin*.

## BOOK SELECTION

How to select books. Rebecca W. Wright. *Bull. of the Vt. F. P. L. Comm.*, Mr., 1916.

p. 31-33. Also printed in *Bull. of the N. H. Pub. Lib.*, Mr., 1916. p. 164-166.

Considering first the library helps of most use in bookbuying, Miss Wright mentions the *A. L. A. Booklist*, the state's quarterly *Bulletin*, the *A. L. A. Catalog* of 1904 and its Supplement 1904-11, Miss Humble's "Children's books for the first purchase," and a number of special lists issued by libraries and commissions. She advises spending from one-third to one-half of a small library's income on books for children. By way of warning she enumerates eleven "don'ts," cautioning librarians against depending too much on publishers' and booksellers' catalogs; against sacrificing quality to number of volumes; against buying sets, dealing with subscription agents or trusting to department store bargains; against leaving the selection to the last minute or to one person; against buying editions of the classics so cheap they will never be read; and against economizing in the matter of buying reinforced bindings for fiction and children's books that will have hard wear.

As for the principles of selection, the librarian must be guided by the gaps in her collections and the needs of her community. The proportion of fiction in libraries varies from 25 to 100 per cent., but the wise libraries keep below 40 per cent. Miss Wright closes with quotations from Dr. Bostwick and Miss Bacon on the much-debated question of "What makes a book immoral?"

#### BOOKBUYING

Bookbuying for public libraries. C. B. Roden. *Wis. Lib. Bull.*, N., 1915. p. 312-313.

"Narrowing the subject down to *methods* of buying books for libraries rather than principles, it will be in order to consider (a) where to buy, (b) how to buy, and (c) what price to pay. . . . It is best to buy . . . from that dealer nearest home from whom reasonable services and prices can be secured." It is best to arrive at a definite understanding with one dealer and then to give him all your business, new and old, current and replacement. "Out-of-print books are 'another story.'" All that dealers do with such orders is to advertise or turn the list over to a second-hand book concern; a librarian can do this himself and so reduce the expense. To buy "bargain books" is rarely expedient, for such books are usually outside actual "wants," and must be kept for the chance of future usefulness. "It is cheaper to buy a book when you want it, even if it costs a few cents more." As to what price to pay, the United States Supreme Court, in

the Macy case dealt a severe blow to the net-price system by declaring that "any attempt to maintain prices by coercion or concerted action is illegal," and bookbuying by librarians is at present a matter for the individual library and the individual bookseller.

#### BUILDINGS, LIBRARY

Importance of library building. *N. Y. Libs.*, Ag., 1915. p. 259-260.

A discussion of the questions "What particular help is it to a library to have a building of its own? Isn't the importance of the building very much overestimated?"

The second question is answered by quotations from the State Committee on Library Institutes and from an editorial in *Public Libraries*. Both point out the danger of over-emphasis on the building with the consequent neglect of the true work of the library thru the diversion of interest and money to the mere building.

"Admitting that the owning of a building is not a thing of first importance, it is nevertheless a thing greatly to be desired." Some of the unquestioned advantages of ownership of the library building are:

1. It is an important factor in library publicity by compelling attention, promoting a feeling of respect, and by giving the library individuality.

2. It develops and maintains a strong library *esprit de corps*; it gains the same help in its *morale* as does the church from a similarly appropriate building.

3. If erected thru efforts of individuals, it serves as a bond to hold them to its continuous support and use.

4. It improves the outward appearance of the town and so increases property values.

5. It can be made the means of securing increased tax supports by appealing to a class of voters not interested in books themselves.

6. A building erected specifically for its use will provide added conveniences for the public, added accessibility to books and increased efficiency in administration.

7. It will aid in making the library a real community center.

8. In its own building the library pays no tax in New York; in paying rent, it pays the full tax on those quarters.

#### BUSINESS MEN, LIBRARY WORK FOR

Getting the new ideas first. Carroll D. Murphy. *System*, Ag., 1916. vol. 30; p. 170-179.

An account of how 3000 business and professional men read in search of data that will help their business, and store up the information, and finally assemble it for use. Only a few of these business men use the public library, but the article is suggestive as to how the library can make itself more useful to business men.

#### CARD CATALOGS

"Reorganizing a card catalog" was the subject of a paper read before the Massachusetts Library Club in January, 1916, by T. Franklin Currier, assistant librarian in charge of shelf and catalog department, Harvard College Library. Mr. Currier stated that on February 1, 1911, the first standard-sized cards were ready for use in the catalog of the Harvard College Library. Previous to this the public catalog consisted of index-sized cards, and was in three parts—author catalog, classed subject catalog and a recently formed dictionary catalog of place headings. A catalog has been formed for use in the delivery room and a duplicate author catalog for staff use. About 2,000,000 cards have been filed, aside from the filing incidental to the consolidation of the official and the Library of Congress depository catalogs. "About half a million cards," Mr. Currier said, "have been typed for the public catalog and 250,000 titles replaced by Library of Congress cards. Until June, 1915, the question of treating the subject catalog had been postponed, but at that time it was decided to establish a dictionary catalog, and during the following summer and fall the cards forming the classed catalog were thrown into dictionary form and on our moving into this building were incorporated into the main catalog. During the whole five-year period the classifiers have been completing the reclassification of the library, and as a result some 175,000 volumes have suffered a change of call number, necessitating corresponding changes in the catalog. It is needless to say that we do not make claim that to-day the work is finally completed or that we have constructed a perfect catalog, for cards had to be treated in blocks rather than individually in order that the work be accomplished at all. At least we have established a definite policy, we have made available in the public catalog some fifty or sixty thousand titles hitherto accessible only to the staff, and we have at last fallen in line and adopted a standard card. In developing our policy three classes of persons must be considered: (1) the undergraduate, (2) the student in training to become a specialist, (3)

the trained worker. In a university library like this, with the neighboring cities and towns provided with excellent public libraries, we are almost entirely freed from the demands of the desultory reader. To the undergraduate we hope our catalog may be a tool suited to all his legitimate needs. The advanced students and the trained workers have access to the stacks where the books are carefully classed, and except for the introductory survey which the catalog should afford, they must by direct contact with the books gather together their sources and compile their bibliographies, if none exist. The presence of a more exhaustive catalog might lighten their labors, but certainly would not obviate the need of this preliminary work on their part, for no scholar could accept the catalog as definitive. There is an old argument for the catalog that it presents quickly to the reader the books available in the given library, while the bibliography presents so much not available that time and patience are lost in checking up what can be procured. This is undoubtedly true in a smaller library center than Boston, and is also true so far as introductory and less technical material is concerned, but for serious work in a place like Cambridge the argument loses much of its force, for, in the first place, a scholar can seldom make use of a substitute work—he must have what he asks for and nothing else—and, second, with the increase of library resources here the bibliography is becoming to an ever-increasing degree a catalog of books available. With these considerations in mind, we have adopted the policy of a selective subject catalog. To sum up, our catalog aims to record each book under its author and to supply for each title a sufficiency of added entries; to do the same for pamphlets, so far as seems wise or as money permits, but to omit subject headings for highly technical treatises, out-of-date books and books in lesser known languages. We supply to the beginner what he needs starting him on his path, but leaving to him the task of exploring his chosen field."

CHILDREN, WORK WITH. See Bird-guessing contest; Drawing contest; story-telling contest

#### CHILDREN'S READING

Making worth while boys' recreational reading. Franklin K. Mathiews. *Pub. Libs.*, JI., 1916. p. 300-303.

The boy in his early teens is likely to read more books than at any other time, frequently as many as three or four books a week. What

is true of boys is also true of girls, and they have a similar interest in the story of adventure. The unusual physical growth and the differentiation of sex during the early 'teen age explains in part both boys' and girls' interest in the story of action; this type of story serves as a prophylactic for the adolescent, and careful consideration should be given that as far as possible boys and girls be guided and directed in their choice of books. These experiences of the body give a physical basis for the rise and growth of the imagination, making necessary proper exercise for its wholesome development. The test of the worthwhileness of these adventure stories is not whether they teach morality, but as to whether they provide a kind of mental gymnastic paraphernalia for the exercise of the boy's imagination and emotional nature.

The practical value of imagination is great, for chief among the qualities that distinguish successful men are initiative and resourcefulness, and these can come only from creative and constructive imagination. "Is it too much to conclude, then, that when boys read stories of adventure of the right kind, these books will stimulate such initiative, awaken such resourcefulness as will aid the boy to change capacity into capability and so vocationally help him to find himself?"

Boys are increasingly interested in the "What and How to do" books, that is, books on handicraft, machinery, and applied electricity; the aroused imagination seeks to express itself. *Popular Mechanics* and *Popular Electricity* are the greatest competitors of nickel thrillers. "Only recently we have learned how to mend morals by making muscles. In reform schools, manual training is working many miracles in the transformation of boys' characters. And we are latterly learning that what has such merit for the bad boy is of equal worth for the good one. . . He, too, may learn thru his 'hobbies' the power of application, neatness, initiative, resourcefulness, carefulness, honesty and many more of the elemental moral qualities."

With his insatiable appetite for stories the boy develops a hunger for facts; his mind needs fact as well as fiction. Facts must, however, be presented in as fascinating and vivid style as fiction so that they will delight the boy. Even in his fiction care should be taken that the boy gets only such adventure tales as represent facts in the form of fiction.

The boy's recreational reading should contain these three chief interests. "On the one hand, the stories awaken and develop his

imagination and on the other, the 'What and How to do' books makes possible a wholesome and practical expression, while the books of fact and information serve to modify imagination by always reminding a boy that he is living in a world not of fiction, but of hard and stubborn reality."

CODES, LIBRARY. See Librarians and assistants—Rules for the governance of

#### COMMERCIAL LIBRARIES

The commercial library: its organization, administration, and service. John C. Willmer. *Lib. Assn. Rec.*, Mr., 1916. p. 98-108.

From scanty material available, Mr. Willmer gives some practical information on past commercial libraries, leading up to the present-day commercial circulating library. The first circulating library in London of which he can learn was established in 1740 by Messrs. Cawthorn and Hutt at 132 Strand, and called the "British Library." Later it was removed to 24 Cockspur street, Charing Cross, where it remained until the end of the year 1913, being then purchased by Day's Library, Ltd., and merged in their library business.

Altho this was the beginning of circulating libraries with a formulated system, the lending of books for hire was of much greater antiquity. The times appear to have been ripe for circulating libraries, because soon after the establishment of the "British Library" in 1740, one is mentioned as being kept by Robert Watts at Cambridge in 1745, another at Birmingham by William Hutton in 1751, and another at Liverpool in 1756, the latter still in existence. Up to the end of 1913, Day's Library, Ltd., established in 1776, was the second oldest circulating library in London, and having acquired Cawthorn and Hutt's Library, it has now taken the first place as the oldest in London. It was removed in 1890 to its present home, a building especially constructed for the requirements of a library.

Owing to limitations of space, passing mention only is made of other commercial libraries, Hookham's, Mitchell's, Grosvenor Gallery Library, Times' Book Club, Harrod's, Mudie's, and Smith and Son. Mr. Willmer gives interesting extracts from the courteously worded announcements of the old established firms, concerning changes of address, terms of subscription, methods of business, and the varied advantages of their respective institutions to subscribers and non-subscribers. "The functions of a library," from a recent issue of the *Saturday Review*, is also drawn upon, and some amusing illustrations of the miscon-

ceptions that many applicants for vacancies in libraries seem to have with reference to general library work close a paper containing much valuable information.

#### COUNTY LIBRARIES

The Frederick County Free Library in Maryland. S. M. Akin. *Pub. Libs.*, J1, 1916. p. 313-314.

"In the fall of 1913, the women of the Civic Club of this place conceived the idea of getting up for the town a public library. . . . In nine months they had raised \$2000, enough to equip and run the library for a year. . . . To have taken the attitude that it was going to be a little library would have been to kill it. . . . So we have always been a 'big' library. Big in plans, ambitions and visions. . . . We promptly made it a county library, emphasizing that and the *freeness* of it in its name—the Frederick County Free Library. . . . Money has been scarce, and most of the books have been given, and people have been generous."

In response to an early invitation, the school children swamped the library, within a week taking every juvenile book. The schools of the town and county have co-operated, a special effort was made to reach the night students, and next year books are to be circulated from the night schools.

"Of course, being a new enterprise, we have advertised. Notices have been posted at all the toll-gates, in the court house, the armory, at the county fair, the Interurban station, the hotels, and many sent to stores in the county. Floats in both the Sane and Safe Fourth, and the homecoming parades, slides at two moving pictures, and the Chautauqua pictures, are some of the advertisings we have done."

The results have more than justified the effort. Seventeen towns are represented in the registration, nine are branches; the registration is already over 1700. Requests for aid in selecting books for presents, in securing library equipment for the Sunday school and the State School for the Deaf—all these indicate that the library is beginning to stand for something in the county.

#### DEPARTMENTAL LIBRARIES

The policy of the Library of the University of California as regards the purchase of books for departmental libraries, is discussed at some length in the 1914-15 report of the librarian, J. C. Rowell.

"Books for departmental libraries are purchased from equipment or other funds at the disposal of the departments of instruction and not from the library book funds," he says,

"the general library acting merely as purchasing agent. Departmental purchasing is increasing to such an extent that the handling of departmental orders now forms no inconsiderable part of the work of the accessions department. The demands come from departments or allied institutions away from Berkeley, such as the Medical Department and Hooper Foundation, which receive no allotments from the book fund; the Law School, which owing to its endowment for library purposes no longer receives an allotment; Agriculture, with its independent federal and state appropriations and other special funds; and a few other Berkeley departments. While the needs of certain of the scientific and technical departments for departmental copies of books which cannot well be spared from the general library must be recognized, the creation of independent collections in other departments seems less justifiable. In some departments the practice seems to have grown up fortuitously rather than by deliberate intent, the books being housed and used in the general library. The ideal arrangement from an administrative standpoint would be, that books desired by Berkeley departments, except scientific and technical publications to be used in direct connection with departmental work or duplicates of books already in the library, should be purchased and treated thruout as part of the general library. This would result in considerable economy in handling and recording, and the books would be much more generally available. The maintenance of independent collections in most cases seems to serve no particular purpose, and when separately housed their inaccessibility is a source of constant annoyance to would-be users. During the year two such collections, those of the departments of Physical Education and Military Science, have been turned over to the general library, which has also acquired a number of books purchased by Political Science to meet the needs of large undergraduate classes. The Forestry books are shelved and otherwise treated as part of the general library, and the Library Committee of the Department of Agriculture in its meeting of December 22, 1914, took action favoring the transfer of the departmental library to the general library building if adequate facilities should be obtainable in the new portion."

#### DRAWING CONTEST

The "Silhouette game" and "Drawing contest" were used in one of the branches of the Free Library of Philadelphia. The silhouette

game is a guessing game, and was made in the form of a poster with "Guess Who We Are" at the top. There were three blank places in which were placed silhouettes of illustrations from various books, cut from black paper and mounted on light paper measuring about three and one-half by four and one-half inches. The notice, "Put your name and the name of the figures on a piece of paper and drop it in the box. If you guess correctly, your name will be put on the Honor Roll," was printed under these pictures. Under this was "The Honor Roll" in large letters, beneath which was pasted, at the end of each week, a typewritten list of the children's names. A small box in which a slit had been cut was placed to one side of the poster to receive the answers.

The first week were posted pictures from the "Goops," "Alice in Wonderland" and "East o' the sun and west o' the moon"; the second week, "The tar baby," "Puss in boots" and "The little lame prince"; the following week, "The elephant's child," "Singing," from Stevenson's "Child's garden of verses" and Rip Van Winkle were tried.

The books containing these illustrations were not allowed to circulate during the contest. Most of them were on the tables, as the rule was that no questions were to be answered. The children were expected to refer to these books to prove whether they had guessed right or not.

This game could be used in many ways, substituting famous pictures, buildings, photographs of great men and women, authors, etc.

The fourth week a drawing contest was tried. The children were told to draw free hand from some book in the children's room, and their drawings would be posted at the end of the week. The drawings were posted with a notice reading as follows: "Choose the drawing you think is the best. Put its number on a piece of paper with your name and drop it in the box. The picture getting the greatest number of votes will receive a blue ribbon and a place of honor on the Bulletin Board." A list of the artists' names was also placed on the board and the numbers of votes each received, helping to mitigate any lingering pangs of disappointment. More boys than girls entered the contest. During both of these games there was no confusion, as paper and stubs of pencils were always to be found in boxes under the bulletin board, saving the annoyance of having the children running to the desk.

EXHIBITS. See also Advertising, Library; Book exhibits

#### —AT STATE FAIR

The work of the Iowa Library Commission and the State Traveling Library were shown at the Iowa State Fair in a room in the Women and Children's Building. Selections from the books and pictures which may be borrowed from the commission were exhibited, posters and charts called attention to the resources of the Traveling Library, and maps showed the location of the public libraries and the traveling library stations in Iowa, of which there are 131 of the former and 1245 of the latter. Tho the walls and shelves were rough they were painted a dark red and with rugs of a harmonious color, pictures, ferns, tables and chairs, an attractive reading room was made where visitors were invited to read and rest as well as to learn of the books which might be borrowed for home use. The room also served to show that an attractive library room may be fitted up at small cost in any community.

#### GIFTS AND BEQUESTS—OF MATERIAL

Library Gift Day in Boulder, Colo., is described by C. Henry Smith in the April *Occasional Leaflet* of the Colorado Library Association. The University of Colorado's service in lending material around the state had so developed that a reserve of duplicate periodicals was necessary, and the Boulder Public Library needed more reference magazines and juvenile books. The library and school boards co-operated in calling upon the school children to bring contributions from home on Library Gift Day. As a result of the generous response five hundred books and many thousand magazines were collected by the university wagon from the schools. The Public Library received all the juvenile books and several runs of complete volumes of magazines. The University Library secured over one hundred yards of duplicate magazines for extension use and many volumes for sets listed in periodical indexes.

Nearly a ton of material, valuable to neither library, was distributed to hospitals and camps. Mr. Smith suggests that people will help if their attention is called to library wants and that the library can secure for the use of its patrons an abundance of useful material, if it will "go and get it."

#### HIGH SCHOOL LIBRARIES

The coming high school library. Frank K. Walter. *N. Y. Libs.*, May, 1916. p. 78-81.

The change in high school libraries will be not in development of new theories, but in the

actual application of principles long theoretically acknowledged. They will differ from those of to-day in their equipment, their organization, and their use.

The coming high school library will be equipped with a view to hygienic surroundings and to the comfort of the readers. The size of the collection of books will vary little from that found in the library to-day, but books will be more carefully selected with definite school ends in view. As high schools pay an increasing amount of attention to training for definite occupations the school library will have to provide recent and reliable information on occupational lines.

The organization of the collection will be carefully studied as to its greatest possible use. Some approved plan of accession record, loan system, systematic arrangement of books, and finding list will be adopted. The organization will be undertaken by trained librarians only, for amateur organization is neither economical nor simple.

The ornamental feature of the library will be less in evidence in the future and there will be more use. In order to make the use easier, more intensive and more extensive, a well-trained librarian will be an essential part of the library. She should have preliminary professional training as well as adequate special training. The use of the school library should be so directed that it teaches habits of research and prepares the youth to use the opportunity the public library affords. The coming high school will realize the great importance of this training in the intelligent aids to thought and action which the library offers.

#### INSTITUTES, LIBRARY

The 1915 series of library institutes. *New York Libs.*, Ag., 1915. p. 249-255.

"Another notable advance has been made in enlisting the interest and co-operation of the libraries of the state in the annual series of meetings known as library institutes." Statistics are given showing that all previous records of attendance have been broken and that the increase over the previous year is greater than in any other year since the work began, 14 years ago.

The gain, while partly due to the increase over 1914 in the number of meetings and to the narrowing of boundaries of local districts, is more directly owing to more important factors.

From a study of recent reports and tables submitted by the institute committee, it is evident that the first factor "is the manifest increase of interest on the part of the school

libraries of, the state, the sign and proof of a growing professional consciousness among these libraries. This development is partly the result of persistent forces that have been at work for several years to put new life and spirit into the libraries, but more particularly to the law passed in 1914 giving a more definite status and responsibility to the heads of school libraries. A further evidence . . . of interest . . . is the enrolment of 35 school libraries in a summer course provided for their special benefit at the New York Library School in July."

There was also fine support given to the 1915 institutes by the rural school district superintendents. Their response to invitations to attend the meetings was far beyond expectation, "and it is believed that their interest and influence had much to do with attendance from many school libraries."

Apart from the gain to be attributed to the increase of interest in school library officials, there was a decided gain in regular public and miscellaneous libraries represented. While this indicates a growing strength and interest on the part of small libraries, it may also be taken as an evidence of appreciation of the work done by the institute committee during the past two years. Formerly the program for the meetings was chosen at random by letting participating libraries select the topics for discussion. This plan had the advantage of assuring variety and of giving each librarian a voice in deciding the topic to be presented and in the discussion of it. It was found, however, that the same topics were discussed each year, that little definite progress was made, and that important things were omitted. To assure more satisfactory results, the committee in 1914 worked out a plan "to comprise a continuous course of work to cover four or five years, each year to be devoted to a particular field of library economy, the work of each series to be logically related to that preceding and to follow, the whole to include in a rudimentary way the entire problem of the small library."

The plan met with success, as was proved by the fact that altho the number of meetings was reduced because of financial uncertainty, the attendance increased. The results were taken as a tentative indorsement of the new course of work, but because the topic for discussion had been particularly interesting (the selection and purchase of books), the second year was regarded as the real test as to whether the plan would hold the interest of the libraries.

An advance program, giving outline and references, was sent to all libraries on the committee's list. "Through this means the committee has thus brought some of its ideas and help not only to the 535 libraries in actual attendance, but to the 440 others which failed to attend." The program was successfully carried out thru the generous and competent help of many library workers of the state.

The article here contains the names of many of the conductors, followed by comparative statistics on library attendance, and closes with the register of libraries or districts present at meetings and the complete list of conductors.

#### INSTRUCTION IN USE OF LIBRARIES

Recognizing the hesitancy often felt by a reader about disturbing a library assistant busy at the reading-room desk, the New Haven Public Library endeavors to encourage the public to seek the aid to which it is entitled, and to that end has published the following paragraphs in the library *Bulletin*:

##### *Why Not Ask For What You Want?*

The first duty of the assistants in the public rooms of the library is to help people to secure the books or information desired. No one should hesitate to ask for such help because an assistant appears to be busy at a desk. Much routine work must be done from time to time in these rooms, but questions from the public always take precedence over such work. Inquirers are advised to address their questions to the responsible assistants, and not to the library messengers, who cannot be expected to have the same familiarity with the resources of the library.

Help will gladly be given to those who use the library often and wish to familiarize themselves with the use of the card catalog, the general indexes to magazines, etc., but there are many lists and other special helps which can be known only to the librarians constantly using them. Therefore, if the borrower's independent efforts do not quickly lead to the desired results, there should be no hesitation in applying to the reference librarian or other assistants.

An interesting experiment in library work in Massachusetts is being conducted at Beverly and surrounding towns by Miss Frances S. Wiggin, a special agent of the Free Public Library Commission, who is instructing 600 school children in the use of the library facilities, and to these may be added a group of school teachers and the members of a woman's club.

Systematic co-operation with the schools has been definitely established by which the children of the grades from the sixth thru the high school come to the library for their class-room work at appointed hours. Miss Wiggin spends about six hours a day in the library working with these various groups. For most of the week she is engaged in

Beverly, and the remaining time is devoted to the various towns surrounding Beverly.

The work is not confined to what might be called laboratory work in which problems or questions are given to be worked out in the library. Selected reading lists are also provided for the school children in the effort to assist them in forming good reading habits and in improving their choice of literature.

The commission is conducting work of a similar nature in the western part of the state.

#### INSURANCE LIBRARIES

The Bibliotheek van de Levensverzekerings-Maatschappij "Utrecht" (Library of the Life Insurance Co. "Utrecht") in the Dutch city of Utrecht has just published an extensive catalog of its book collection, under the title, "Catalogue de la bibliothèque de l'Utrecht." This bibliographical compilation of more than 700 pages is of special interest, because it is entirely devoted to life insurance and allied subjects. It is divided in six parts: General works, Insurance companies, State control, Mortality, Statistics, and Political economy. The catalog contains a large number of works of historical value. Foremost among these are the original editions of two treatises by Jan de Witt, dated 1671, and the municipal regulations on life insurance, issued by various cities of the Netherlands during the seventeenth and eighteenth centuries.

#### LAW LIBRARIES

Allegheny county, Pa., is evolving what is claimed to be the best law library in America. It will occupy 14,000 square feet of floor space on the eighth and ninth floors of the new City-County Building in Pittsburgh, when that structure is completed, and it will comprise more departments, more carefully-planned equipment and more library conveniences than any other. The new library, with five times the present floor space, will accommodate 100,000 volumes, besides the other activities of the library, and will give plenty of space for the expansion of the present collections of records, laws and decisions. It will have a reference room 80 x 40 feet. In shelves ranged around the walls of this will be 10,000 volumes, restricted absolutely to those works of reference, digests of decisions, digests of laws and textbooks which are called upon daily by attorneys. It is planned to make the room purely one for private study, and the only books to be kept there are those which are absolutely indispensable. There will be a stack

room, where shelves and racks to accommodate 80,000 volumes will be erected. In this will be the great mass of legal books, reports of the courts of the various states and the laws of England and other foreign countries; reports of various kinds and miscellaneous books. At the end of the reference room there will be a periodical room, containing 350 box drawers for legal magazines, and advance sheets on reports and decisions. There will also be a room in which attorneys will be permitted to smoke while working on law books, two conversation rooms, where attorneys may confer with clients, and four dictation rooms to give facilities for those who wish to dictate to stenographers without moving away from the facilities of the library. On the eighth mezzanine floor will be the law students' room, with accommodations for 90 persons at one time, and shelves for 10,000 volumes. In the reference room there will be seating accommodations for 66 persons at one time at long study tables. There are windows on all sides of the room. An indirect lighting system will also be installed. The new library will give the space for further expansions of the records of public utilities commissions, a department added to the library six years ago and since then steadily developed. It will also make possible many augmentations of the foreign reports and records.

#### LIBRARIANS AND ASSISTANTS—APPOINTMENT

Controlling considerations in appointment of librarians. *New York Libs.*, F., 1916. p. 42-43.

Editorial. "For what purpose do the trustees of a library appoint a librarian? Is it to meet some social, political, charitable or personal obligation? . . . Is it to support some theory of public employment? . . . Does the library board or the public owe this position to somebody because of some individual claim?"

That some or all of these motives are accepted in many communities would seem unquestioned, yet there could hardly be made a more vicious and fallacious assumption. The object of the library is to bring the help of books to all the people of the community who need them; the only legitimate claim for appointment to a library position is that the applicant is best fitted to promote the ends for which the library exists. The undeniable right of the public to the most efficient service procurable is the one justifiable basis upon which to make appointments of librarians.

#### —QUALIFICATIONS

What we may expect of the trained librarian in village libraries. Asa Wynkoop. *New York Libs.*, Ag., 1915. p. 239-245.

"Our rightful expectations can be limited only by the possibilities of the position. . . . Of course, these possibilities depend not alone on the librarian. There must be an adequate supply of books, adequate facilities for readers and borrowers, an income sufficient to provide for the best library tools and for proper hours of service. There must also be some largeness of ideas and ideals in the governing board. Without these, it is idle to expect the best things of any librarian, whatever be her spirit or training.

"But these conditions themselves are often the product of the influences and forces set at work by the forceful and efficient librarian; and it is perhaps more often the case that the village library is without adequate facilities and support because its librarian lacks the proper spirit and training, than that it lacks the proper librarian because it has not the means to afford it. At any rate, it is true that what a library shall do and be in a community depends to only a minor degree on its equipment, its books and its buildings. It depends mainly on the spirit, zeal, training and efficiency of the one who is to administer it."

If, then, the worth and service of the library to the community depend largely upon the librarian, what particular qualities and accomplishments must he possess? Successful librarians are mostly just plain, undistinguished people in whom the world recognizes few qualities calling for special honor or distinction. . . . No extraordinary gifts are required, but certain ordinary qualities must be developed and disciplined to an unusual degree to make the good librarian.

"First of these qualities is what we may call the professional spirit and attitude." The nature of the work affords, in a peculiar degree, an opportunity for living and working for life's intellectual and spiritual satisfactions. The smallness of its material returns renders it almost impossible to secure adequately trained people for many positions, it forces distracting cares upon librarians, and lowers the value of library work in the world's market; but it keeps the calling free from those whose main thought is financial return, it eliminates material motive.

But elevation and generosity of spirit are not enough in themselves to make a successful librarian; proper training is an essential. Three specific qualifications are emphasized:

"First, some special knowledge and authority in the book world. . . . The world of books is so great, it has so many subdivisions, it is in a state of such constant change and development, it is a world so utterly beyond the capacity of any finite mind, representing as it does the totality of past and present human thought, knowledge, fancy and sentiment, that it seems absurd to speak of a public librarian as representing anything like authority in this world. Librarians have, therefore, assumed that "their function . . . is not themselves to know the best that has been thought and written, but to know where to find what others have said to be the best." The short course in library schools emphasizes this view through the necessity for specific training in library economy. By raising the requirements for admission on the literary side a long training in preliminary study of books would be insured.

More book knowledge is not sufficient, technical training must be added to the librarian's qualities. "Without a good knowledge . . . of library technic, the best result of modern library science, it is impossible to make a good librarian, it is impossible even to get together the books that go to make a good public library. Altho sometimes assumed that system is not important in the small library, it is there that success is most dependent upon the best methods of organizing its work and collection. The less the resources, the greater is the need of making available every bit of material in the collection, which can be effected only by the most thoro organization."

In addition to the professional spirit and technic, "we expect such an interest in the human and social problem that confronts your library that you will not be satisfied until you have mastered this problem as well as your book and technical problems." The only way of securing a library ideal for one constituency is for the librarian to study the people, to make sure of the real wants of the entire community and not be misguided by the clamorous demands of the minority. Statistics are given by the writer which show that "in this matter of adaptation to the real wants of the people, our public libraries are, to a sad degree, misfits." The study of the needs of the community is possible and particularly feasible in the village library where something can be known of every organization, industry, business, trade, and society.

#### —RULES FOR THE GOVERNANCE OF

A code book. Mary Myler. *Mich. Lib. Bull.*, Ja.-F., 1916. p. 16-17.

The idea of the Utley code book as used in Detroit came from Wisconsin. It began with the opening of the first branch, when notices of all rulings were posted in the staff room and at the desk.

"We also wrote in detail the process in each step of the routine work for the benefit of inexperienced people. In early days this appeared on cards, but soon this form became cumbersome. Every process of extension and reorganization brought new rulings; as these were sent to the branch they were placed in a book in order to have at hand the authority which would settle a disputed point. Our regular co-workers found this invaluable, as it renewed their interest and put their knowledge into concrete form.

"Then came the idea of the code book as it stands to-day, which has proved itself of great assistance to apprentices and substitutes. When a change is to be made, the question is thoroly discussed by the staff, and out of this discussion the clearest interpretation is put on record under the topic where it belongs. This, as well as any change in routine, necessitates a continual revision of the code book; for which reason we have made it loose leaf. Many of the later editions have been taken verbatim from reports of talks given in staff meetings by the librarian of the Detroit library system.

"We have divided our code book into subjects, each dealing completely with the different phases of the routine work, such as Order of morning work; Registration; Interloan; Educational privileges; Staff standards; etc. It also contains necessary information regarding building, janitor, and pages.

"Our aim in compiling the code book was to gain intelligent co-operation, resulting in a capable, loyal staff, striving impartially to serve our public."

#### —SOCIAL LIFE

Social activities. Almena R. DePuy. *Mich. Lib. Bull.*, Ja.-F., 1916. p. 22-23.

"It is important that your own library staff be a circle of friends. In my own experience in the time of Mr. Dewey, in Albany, I felt that he rather overemphasized the social side when we thought that we must go to the bi-monthly party at the house which he had purchased and fitted with dancing floors and a billiard room for school use. But now I look upon him as only one of the pioneers in the present movement to bring men into closer social relations.

"Have good times in your own staff, and if nobody else starts them, see that you do it

yourself. One thing I must insist upon. Don't leave anybody out! If there is any bar of obstruction, social or educational, intellectual or of whatever nature, that shuts out any member of your library staff, take it down, or climb over or under it. As a last resort, sit on it.

"Have a good time together several times in the year. Let the ones who had to work the first time come to the second party, and everybody come both times if possible."

#### —DEVELOPING AND MAINTAINING INTEREST IN

A community library. Mary Kendrick Norton. *Pub. Libs.*, J1, 1916. p. 303-306.

The development of the library in Proctor, Vt., shows to what extent a community can be interested in and induced to use the library. Fifteen years ago the library was a small subscription library, a few years later it became free but the circulation scarcely doubled and few people made use of the 5000 well selected books.

In a campaign to interest the people the first move was made thru the children. A children's department was arranged and the little folk assisted in giving two plays whose proceeds made possible a story hour. Special attention was shown the teachers of the public school; the library was opened on a certain Saturday each month for them, and they were given an informal reception during which there was a talk on the inter-relation of school and library. Two years these talks were given by the presidents of the state library association, one year by the town superintendent of schools who was also a member of the library board. The first direct effort to gain the attention of the general public was a New Year's opening with a book and picture exhibit. This was followed by afternoon teas with out of town speakers, social evenings for people of different nationalities, and the publication of a small library bulletin.

"Four years ago the Study Club, of which the librarian is a member, decided to devote a season to book reviews and discussions of certain phases of library work. At the close of the season all members expressed a willingness, each according to her ability, to supplement the work of the librarian. Accordingly the following year one member took the entire charge of the story hour; another, especially fitted for the work, gave six talks, each followed by discussions, on home sanitation;

while a third gave a series of reviews, not of new books but of those that had lived long enough to prove their worth. The other members were ready to assist whenever called upon."

Just when further growth in the old building was well nigh impossible a new building was given. In addition to the library proper there was special equipment for social work which made possible a weekly community meeting at which a literary program was presented and tea served. "Each year the educational committee has arranged for one first-class entertainment. Last year it was an illustrated talk by Ernest Thompson-Seton; this year the Ben Greet players presented 'As you like it.'" The social work has been extended lately to include two clubs; one a young woman's reading club to aid the busy woman to do a little systematic reading, the other a social club to which any woman may belong who is willing to entertain with a literary or musical program either at her home or at the library a party of ten or more at least once during the year.

Altho in the Proctor Library the main issue was not to increase the circulation, the circulation did steadily increase. "One secret of the success of the work here has been the practice of asking as many as possible to assist in some way, either in giving a talk, writing a paper, reading some selection or serving refreshments, and the whole-souled way in which every one has responded has made the librarian's task a pleasure. The work that has proved a success in this library might not be the best thing to attempt in another place, but the principles that underlie the method cannot fail to be of worth. First, the conditions of the library and its relation to the community in which it is located should be carefully considered and in consultation with those most interested in the welfare of both, a plan that seems best fitted to meet the situation should be formulated. This plan should be carried out as successfully as possible, always with a receptive mind, for gradually as the work progresses new ideas will appear which in turn should be developed."

#### —EDUCATIONAL VALUE OF

The library of the future as an educational institution. John H. Finley. *N. Y. Libs.*, N., 1915. p. 6-8.

The final test of our education must be the general intelligence, efficiency and ideals of our adult citizenry. This intimates that the education of the adult is as important as that of the child. School methods are not adapted to

the educational wants of the adult; he considers himself atypical and thinks the school does not treat his individual problem. On the other hand, the library, from the nature of its organization, treats each inquiry as unique. "In co-operation with the efforts of the schools, the library could undoubtedly develop a system of adult education which would be as adequate for the average adult at work as the college course is adequate for the young man and young woman of greater leisure. . . .

"If we can picture to ourselves a system of local libraries whose physical up-keep is assured by local taxation, whose more general needs are met by liberal state policy, and whose exceptional needs are furnished by a large central library . . . we might have some idea of the possibilities of library development."

#### —SCOPE AND PURPOSE OF

The public library a community necessity. John M. Thomas. *N. Y. Libs.*, F., 1916. p. 46-51.

The public library should be admitted into the company of the church, the school, and the press as a potential instrument in uplifting community life. "Man is not man except in social relations. . . . To be truly a man, one must be a member of a family, with intimate relations to those of his own kin. He must be a citizen of some particular community. . . . He must own allegiance also to some government."

As in other activities, so in reading matter co-operation is necessary. There is much valuable material in current literature, both periodicals and books, which well-informed citizens ought to read; every person should be interested in and keep in touch with some public movement. But no person can afford to buy all this literature, he cannot anticipate reference needs as does the library, nor could he organize a large collection of books to make them available. All this the library can do. It can also guide its constituency to the books which it needs. If the endowment is sufficient, it should extend its service to the surrounding district; it should enter into every part of community life by keeping in touch with the schools, with clubs; it should co-operate with bodies working for civic improvement by opening assembly rooms for meetings; it should encourage greater use of the library by providing small conveniences.

The library as a practical aid in the world of affairs. John Cotton Dana. *N. Y. Libs.*, N., 1915. p. 8-10.

That the libraries have failed to abate man's native ferocity is proved by the present war, for "the nations that have most freely wallowed for centuries in 'books of power' are the ones that are now wading deepest in one another's blood." If civilization of man is to be helped by the library, the library must be "more closely allied with the daily affairs of life, the practical activities and industries of the world than it has ever been in the past." To be of great importance to the world, the libraries will have to change their scope and methods.

Some work of the new type has already been done. Under library direction pamphlets of state institutions and social service organizations having to do with any aspect of rural life were distributed at a county fair in Vermont; an association of credit men have asked the library to prepare a list of the best books for the use of credit men; a library is interested in establishing a collection of books for the use of advertising men. Library management is already changing to meet the new conditions in the use of print.

The practical suggestion given by the writer is that a committee or a group be appointed to examine into and report upon the use of print to-day and the relation of the present prevailing type of public library to that use.

LIBRARY MEETINGS. See Staff meetings

#### LIBRARY POST

A plan for the public library to reach the farm home by means of the penny post is urged by Alfred L. Spencer in a letter to the *Buffalo Express*, June 11. He suggests a flat round-trip, strictly local rate of one penny for a library parcel of 2½ pounds. Such book carriage would involve almost no additional expense and little extra work for the government, and would be of practical use to the farm.

#### NURSES, LIBRARY WORK WITH

On books and reading: outline of a course of lectures for nurses in hospitals. Edith Kathleen Jones. *Amer. Journal of Insanity*. O., 1915. p. 297-303. Also reprinted in a separate pamphlet.

In a paper entitled "The book and the nurse," published in the *Bulletin of Iowa Institutions* for July, 1913, Miss M. E. Carey wrote that in developing the institution libraries in Iowa and Minnesota she discovered her almost absolute dependence on the goodwill and interest of the head nurses in getting books to the patients and interesting them in reading. A nurse who loves books will surely

keep her ward supplied with them, and will take pride in selecting suitable reading matter for the patients under her charge and in noting their reaction; but a nurse who knows little of and cares less for books will not take the time or trouble to get them for her ward, look after them if they are sent to her, or even attempt to interest her patients in their contents.

In order to give a broader culture and a wider knowledge of the things which make for companionship McLean Hospital at Waverley, Mass., thru its library inaugurated two courses in the training school—one on the development of the English novel and one on the history of art. The nurses have responded with enthusiasm, the effect on the wards has been to rouse patients to interest, and to many of the nurses a new world of books and pictures has been opened.

When the A. L. A. appointed an executive committee to further the development of institution libraries, the committee provided a "course which should make the nurse acquainted with the names and characteristics of the great writers in English literature, and at the same time teach her to use a library intelligently and how to bring the book and the patient together. . . .

It was found that the nurses can take a pretty stiff course provided it is couched in simple language and ideas, and terms new to them are carefully explained; that a blackboard, on which to write the outline of the lecture, a list of books to be read, and the names of authors and titles unfamiliar to the class, is indispensable; that a couple or more shelves of "reserved books" where all the class can find them at any time, add greatly to their interest and facilitate their required reading; that they get much better notes from a "talk" than from a written lecture read to them; that, on the whole, they rather like examinations.

The early lectures of the course presuppose a certain amount of library technique, the later ones call for a wide acquaintance with English literature, and one lecture requires hospital experience. In the hope of giving some definite ideas of ways of getting patients to read, the writer gives several interesting anecdotes and suggestions of devices to arouse interest.

There is appended to the article a skeleton outline of the recommended course of lectures to nurses.

POST OFFICE, LIBRARY RELATIONS WITH. *See* Library post

## PRIZES

A monthly prize of \$5 is given in Baltimore to that branch library whose accomplishment in efficiency has seemed most worthy during the preceding month. Some of the features which have won this prize have been bulletins upon foreign countries for special use by the school children, attractive library grounds, bulletins of authors and Presidents of the United States, excellence of records at stock taking, and efforts to instruct children concerning birds thru the books of the library. The money is spent for the benefit of the branch at the suggestion of the custodian and with the librarian's approval.

RURAL COMMUNITIES, LIBRARY WORK IN. *See* County libraries

SCHOOL LIBRARIES. *See also* High school libraries

Notable characteristics of school libraries in Chicago. Irene Warren. *Wis. Lib. Bull.*, N., 1915. p. 307-310.

"The schools of Chicago are in splendid condition in many ways but they have no adequate libraries. . . . There are a number of teachers in the Chicago high schools who have been assigned to library duty, so called, in their respective schools. . . . Naturally the teacher-librarians soon found that they did not know how to cope with the library problems and after many shifts and experiments, they drew up a petition which they presented to Mrs. Young, the superintendent of schools, this year (1915), asking that librarians be appointed in every high school and pointing out that it was not economy to hire an expert teacher for two thousand dollars, and then ask her to give one half of her time to teaching and one half of it to a subject for which she was not qualified. . . . Hundreds of teachers and pupils are being well served daily in our great Chicago libraries and in the branches of the Chicago Public Library. As they see what intelligent library help means they are becoming more and more dissatisfied with their school libraries." It is essential, therefore, for the young people in training for teaching in the high schools to be given a course in the use of books and libraries. The Chicago Teachers' College and the University of Chicago give good courses in children's literature but neither offers courses in the use of books and libraries. The school libraries are supplemented by the "school deposits" department of the Chicago Public Library. Over 32,000 volumes chosen by principals and teachers circulated thru it in 1914. The books are sent from the public library in wooden boxes

to the Board of Education rooms and from these distributed to the schools. The system is inefficient and the service inadequate for the great demand.

Among private schools, the School of Education is doing the most extensive library work. It has a splendid collection of books for children, its librarian keeps in touch with all school work, and interest is kept alive by printed lists, exhibits, and bulletins. The high school library and study room are combined with a resulting improvement in the study habits of the students. The room stimulates interest in every subject the high school offers and suggests all kinds of interesting things to do, to make, and to read in vacation and leisure time. To avoid the waste of study periods a list of Study Helps is posted in the front of every student's texts and note-book, and the librarian marks the students in "study habits." "No student sent to the library to look up a reference can return to his teacher without the desired information unless he also bears a slip from the librarian saying that it was not to be found." Class periods are checked up and students assigned to study periods as they are assigned to other classes. The problem of study habits is an important one, for few homes offer conditions suitable to study and most children need help in forming study habits.

"The first and most important thing to be done is to have the school and the library authorities determine the library work each one can and should do." Statistics should be procured to show how much money the board is spending for books per pupil and how this expenditure compares with that for laboratory apparatus, etc., the degree of efficiency in administration of the library books should be investigated, and the competency of the person acting as librarian should be compared with that of those in charge of other lines of school work. In obtaining this data the librarians should take the initiative.

Miss Warren believes that in every high school with five or more teachers, there should be a librarian. The training for school librarians could best be given in a library school located in or near a university with a strong department of education and a practice school.

#### —CLASS ROOM COLLECTIONS

"Since 1910, the schools of Chicago have been supplied upon request of principals or individual teachers with class room collections for the use of pupils," says the *Chicago Book Bulletin* for June. "These collections

comprise groups of books numbering from fifty to sixty volumes each, adapted to the average children of the several grades. They are retained in the class room for one semester, and are then exchangeable for a similar collection embracing other titles. The books are not designed for class room use, but are loaned for reading at home. During the past year 755 class room boxes were sent to 152 school buildings, and there has been a long waiting list of teachers whose requests could not be met for lack of books. The 30,990 volumes represent a total of 1512 titles, and the total issues for the year were about a quarter of a million."

The books are graded to correspond to the grading in the schools, and the list of titles chosen for the grades from first to eighth are printed in this number of the *Bulletin*.

SMITH, LLOYD PEARSALL

Biographical sketches of librarians and bibliographers. X. Lloyd Pearsall Smith (1822-1886). George Maurice Abbot. *Bull. of Bibl., Ap.*, 1916. p. 37-38.

Mr. Smith was by nature and education a scholar, a reading man and somewhat of a writer, but above all he was practical, with good common sense, and well equipped for his post. He was librarian and treasurer of the Library Company of Philadelphia, the Ridgway branch, and the Loganian Library, and also trustee of the latter. He was born Feb. 6, 1822, and died July 2, 1886. At fourteen he was graduated from Haverford College. As a boy he spent much time at the Philadelphia Library, where his father was librarian. He had an excellent business training, and was a publisher of law books when a young man. He wrote numerous reviews and short articles for periodicals.

In 1849 he became an assistant to his father, in February 1851 succeeded him, and in 1857 was also made treasurer of the library. On his return from the 1853 Congress of Librarians, he introduced the primitive system from which the modern card catalog has grown. It was not until after the sixties that Mr. Smith had any assistants in the library. He not only selected the books but labeled and cataloged them. He carried the library thru a most trying time during the Civil War, and in spite of hard times and limited resources managed to buy the best publications of the day. Through a bequest from Dr. James Rush the library, after several years of litigation, in 1880 found itself

with a new building and also a branch, and Mr. Smith divided his time henceforth between the two libraries.

Says Mr. Abbot in closing: "He was a man to be loved, kind-hearted and free from guile; he was indisposed to think ill of anyone; he had a high sense of honor and a charming manner which influenced all who came in contact with him. His disposition was happy, cheerful and hopeful. His was an exceedingly brilliant nature. Witty, and with a fund of anecdote, he dearly loved a good story; those who have heard his hearty laugh can never forget it. He was an omnivorous reader, his preference being theology, yet everything that came in his way was eagerly read. With an excellent memory, his readings furnished a fund of information which was of the highest use to those who sought his help."

#### SURVEYS, REGIONAL

Regional surveys and public libraries. C. C. Fagg. *Library Asst.*, May, 1916. p. 64-71.

The regional survey—the collection and arrangement for public reference of all the available documents which deal in any way with the region in which a library is situated—is one of far-reaching interest and import. A regional survey may be more fully described as the organized study of a region (and its inhabitants, plant, animal and human) from every conceivable aspect, and the correlation of all aspects, so as to give a complete picture of the region both in its past history and present features, from which to indicate its probable future development. The execution of such a survey is a fairly comprehensive task and provides a practical interest for every class of student. Further, the relation of the various branches of study to the same region brings together in a very living way, the sometimes exclusive specialists in each of them. While on the one hand the applications of the regional survey to education are far-reaching, on the other hand its applications to civic improvement have their present expression chiefly in the town planning movement, which in the vision of its ablest devotees holds great possibilities for the future. But, however keen the librarian, however enlightened the committee, and however ample the resources of the library, the completeness of the local collection will always be limited by the amount of material available, for it is no part of the business of a librarian to fill the gaps in local topographical literature and records from his own researches, nor even to untangle and present in orderly array,

beyond the limits of a briefly descriptive index, the mass of material that is available.

It is just at this point that the regional surveyor may come to the assistance of the librarian and in return receive the benefit of the latter's experience in bibliography and in keeping and displaying for public use the researches and writings of others.

The regional survey movement as we now know it, Mr. Fagg says, owes its inspiration largely to Prof. Patrick Geddes, of Edinburgh, whose pioneer survey of that city is displayed in his "Outlook tower." The late Professor Herbertson carried the idea to Oxford, where it became a leading feature of the Geographical School. The historian of regional surveying also accords to Dr. H. R. Mill a prominent place among its pioneers. Not only has his general influence on geographical thought done much to prepare the ground, but in a series of papers written in 1895-6, he specifically advocated the regional description of the British Isles. During the past few years several regional surveys have been started at varying places, mostly by former pupils of Professor Geddes or Professor Herbertson. The "Provisional committee for the development of regional survey" was formed as the outcome of a conference held at Edinburgh in 1914.

Mr. Fagg proceeds to describe briefly the Croydon survey undertaken by the Croydon National History and Scientific Society in which he is specially interested, and mentions the need of a conspectus, setting forth in outline and in detail the field to be surveyed, which could be adapted to the needs of any given region by the local survey society. While praising the Dewey system of notation he finds its classification too general for so special a field, and presents a modification as more suitable to the regional survey scheme. He also suggests a bibliography of regional surveying as one of the urgent needs of the movement at the present moment. The literature as yet is small, but the amount of material, published and otherwise, of direct service to the regional surveyor is colossal. It ranges from maps, directories and guides, to such magnificent productions as the Victoria county histories, and starts at the latest with the Domesday Survey of William the Conqueror.

#### STAFF MEETINGS

Staff meetings. Katharine Sleneau. *Mich. Lib. Bull.*, Ja.-F., 1916. p. 14-16.

"When I first started in my library work, staff meetings did not seem very important to

me. I doubt if I had ever heard of them. And for a year or two I was so busy getting everything running along the routine I had planned, that if we had a meeting it was purely accidental. But as time goes on, a library grows larger, the staff is increased, and a librarian is more and more held to office work, and more and more is kept from actual contact with the reading public. This is what was happening in our case and I came to realize that I could plan and work for an ideal library in my office, but unless the whole staff worked with the same ideals and held to the same rules, more trouble could be started by a new inexperienced girl at the desk, than could be overcome by months of planning.

"And so we started our staff meetings. We hold them informally, usually once a week, in the morning, and sometimes they take half an hour, sometimes an hour—but it is a time of give and take, when everyone is free to talk and where every question of library rules, every change to be made, is brought up and discussed thoroly. We also bring up every condition. We also bring up every criticism we hear against the library or its rules and discuss those carefully. If it is a just reproof we try and correct it; if it is not, we let it go. And along with the criticisms we tell the compliments. Then we have taken up the minor poets, with whom we were not familiar, entrance examinations to the various library schools with their questions on literature and events also, book reviews, current events, children's books, etc."

#### STORY-TELLING CONTEST

Negro children met in a story-telling contest at the Eastern and Western Colored branches of the Louisville Public Library three days in May. The occasion has been called the "Cotter story-telling week," in honor of Prof. Joseph S. Cotter, principal of the Coleridge Taylor Negro School, who originated story-telling contests at the Western Negro branch four years ago.

The children competing repeat stories which they have heard the librarians tell during the last year. A preliminary contest was held at the Eastern branch Monday and at the Western branch Tuesday, and the winners met at the Western branch Thursday.

The successful contestants were Lykie Smith, who told the story of "The three golden apples," Calvin Ramsey, who told "Knights of the silver shield," and Mary Thompson, whose story was "Boots and his brothers." The fourth prizes were won by

Josephine Smock, Annie Stanley and Elizabeth McElroy.

The children enter the contest with the greatest earnestness, and those who tell stories frequently act them as well as "speak them." Thomas Blue, librarian of the colored branches, says that the contest is one of the big events of the year, and that the children who listen as well as those who take part are keenly interested. It is arranged by the prize committee that every child who tells a story shall have a prize. The first prize is \$3, the second prize \$2, the third \$1.25. The fourth prizes are 75 cents.

#### VOCATIONAL GUIDANCE

Making the library serve the worker. From "Learning to earn," by John A. Lapp and Carl H. Mote. *Spec. Libs.*, Ja., 1916. p. 8-11.

"The public library stands in a peculiarly advantageous position to become the universal university of men if it recognizes its social obligation and studies the needs of men in all walks of life, the industrial worker, the farmer, lawyer, doctor, homemaker, storekeeper and salesman."

The selection of books for trade workers is often unsuited to their needs, ponderous technical works being purchased which merely remain on the shelves. Books and pamphlets on the processes and history of trades, biographies of men famous in the industrial world, trade journals and catalogs, should be collected.

Little is done in this country to "vocationize" the library, though the experience of a few cities proves its efficiency. The establishment of branches of the public library in factories and stores is a new and effective form of service, and some interesting statistics of circulation from such branches are given.

Much agricultural information is in print, but not in use. The Texas Legislature in 1913 provided for county libraries of agriculture wherever the people should so vote. These could become clearing houses of information for farmers.

The article concludes: "Practical literature to supply the needs of workers is in print and should be available to the workers and the workers should be encouraged to see its advantages. Books should be adapted to the workers and function with the job in field, factory and office. Lastly, the library owes a social duty as a vocational guide and counselor."

## Bibliographical Notes

The July number of the St. Louis Public Library's monthly *Bulletin* is devoted to municipal statistics of the city, compiled by Andrew Linn Bostwick, the municipal reference librarian. Such a compilation has never been done before for St. Louis, and the present work is a convenient summary for ready reference of the annual departmental reports of the city.

The new cumulative index to *Bird-Lore*, prepared by Ernest Ingersoll and covering volumes 1 to 15, inclusive, is now on sale at the office of the National Association of Audubon Societies in New York City at 50 cents. Besides author and title entries for each article, every bird and every picture of a bird is entered, and a list of the books and periodicals reviewed in the fifteen volumes is appended to the index.

An uncommonly attractive catalog was prepared to accompany an exhibition of books and manuscripts appropriate to the Shakespeare tercentenary selected from the collection of Marsden J. Perry and shown in the Redwood Library of Newport this summer. In typography and format the catalog is suited to its subject matter, and the notes prepared by George Parker Winship will give it permanent value after the exhibit has been dispersed.

The Chicago Public Library has recently issued a complete catalog, in three parts, of accessions during the last five years, compiled from the monthly *Book Bulletin*. The lists have been rearranged in one alphabetical sequence and title entries have been added. Part I comprises the lists of novels and stories, part II contains the listing of about 15,000 separate non-fiction works, and part III is a list of children's books. The catalog is classified and further subdivided by sub-heads under each class, related subjects being kept together, so far as possible, according to the Dewey classification.

Of the list of books for prison libraries on which the book selection section of the New York State Library has been at work for some time, part 1, containing about 500 titles of fiction, has been printed as Bibliography bulletin 57 of the State Library. The list contains 480 titles of general fiction, including 95 regarded as specially suitable for young men, and a supplementary list of 37 titles for

women. A classified general list of about the same length is to be published later. The State Library's annual list of "Best books" for a small library is issued as Bibliography bulletin 58.

The Illinois Association of Teachers of English in its *Bulletin* of May 15, 1916 (vol. VII, no. VIII) prints a list of 299 short stories, based on four other lists which had appeared prior to its printing, and supplemented by other lists and suggestions. The list was compiled by F. K. W. Drury, assistant librarian of the University of Illinois, and is limited to those short stories which have appeared in book form, the aim being to make a representative list of some of the best short story writers of the world. For ease in consultation, the stories are grouped according to their original language, and in the English and American sections subdivided by periods.

The "Life and public services of Andrew Haswell Green" by John Foord may be secured by any library that lacks it and applies in writing to Sackett, Chapman and Stevens, attorneys for the executors of the estate of the late Mr. Green, The Tribune Building, New York City. Mr. Green's important public services in connection with the establishment of Central Park in New York City, the Niagara Falls and other historic and scenic reservations, with the overthrow of the Tweed ring, with the establishment of greater New York, and with the Tilden Trust and the New York Public Library make his biography desirable for every library interested in public affairs.

An annotated list of library books for high schools has been issued by Estelle Luttrell, librarian of the University of Arizona. The list is especially intended for use in the average high school library in Arizona. The catalog is in three sections, the general reference and the English sections being compiled by Miss Luttrell, and the history section by Ida C. Reid. Comments are made on new editions of well-known works, and when possible prices of standard and economical editions are given. Books preferred for early purchase are starred. No attempt was made to make the list extensive, but only books considered of first importance were included. The pamphlet runs to 66 pages, and is issued as number 3 of volume IX of the *University of Arizona Record*.

Following close on Miss Hopkins' "Reference guides that should be known, and how to use them," comes a little volume on "How to use reference books," by Leon O. Wiswell, inspector of school libraries for the New York State Education Department. Mr. Wiswell's book is divided into five main parts: The library; Indispensable reference books (the dictionary and the cyclopedia); Reference works in particular subjects (geography, literature, history, natural sciences and useful arts, and sociology); Organization and equipment (library economy, the physical forms of books, care of books, and accessions); and Course of instruction, outlining lessons for elementary and secondary schools. The book is planned to be of practical assistance to the great body of teachers and parents who have had no special training in the use of reference books, and is written in a simple and straightforward manner that should make it easily understood and useful to all.

A Montana librarian has called our attention to the fact that there is now being published monthly at Sheridan, Wyo., a real "magazine of the West." It is appropriately called *The Teepee Book*, and its policy is announced by the editors as being "devoted to the Indians and the West, not to advertise the district in which it is published, but to perpetuate, before they are buried forever in the grave with the last of those who have lived to tell the tale, the events of historic interest, the songs and the stories of a distinct period in the onward march of civilization on this continent." *The Teepee Book* has been made the official organ of the new Western Historic Society, which was organized by a few prominent historians on the night of the fortieth anniversary of the Custer Battle, and the information gathered by this society will be published in *The Teepee Book* exclusively. The June issue was the Custer Battle number, and is perhaps the most complete résumé of that spectacular battle of the Indian Wars ever gotten together under one cover, containing stories and articles from the best living authorities, well illustrated with reproductions of rare photographs of characters and places prominent in the battle.

### ANNOTATIONS "PRO" AND "CON" IN THE CATALOG

*Editor Library Journal:*

I was interested in reading in the LIBRARY JOURNAL for June, 1916, p. 378-79, of the measures taken in the libraries in regard to books "for and against" Christian Science.

This is not a new question in this library, tho the application of the principle has never been limited here to any such subject as Christian Science,—that is, the designating of the entries in the card-catalog as being "for" or "against" respectively.

We have applied it to almost any subject on which the sentiment of the community is divided; and it has been very much appreciated. Typical instances are: a protective tariff socialism; prohibitory laws; the German or the non-German side in the European War; the "traditional" or "non-traditional" point of view in Biblical criticism, religious beliefs, such as the Roman Catholic Church, the Friends, etc.

It is done by a brief entry in *red ink*, on the "subject" card.

The first application of it was made in 1898, and this was in connection with the Roman Catholic Church. A note in our *Monthly Bulletin* for June, 1898, p. 147-48, calls attention to the publication elsewhere in the issue of a special catalog of the Catholic literature in this library.

The statement was then made that "the same method will be followed with the works in the library which bear upon the other religious bodies"; and one might perhaps infer

from this, that it was intended to have so limited an application as to include "religious" subjects, and no others. But, as a matter of fact, it was almost immediately applied to the wider field of subjects, as above indicated.

One other point should apparently be noted. In printing the list of the Roman Catholic literature, as was done in the number of the *Monthly Bulletin* referred to (June, 1898), the red ink entry on *each* catalog card was replaced, on the printed page, by a heading placed, once for all, at the beginning of the group, as printed.

For this reason, no mention seems to have been made of the use of red ink on the cards themselves.

Sincerely yours,

WILLIAM E. FOSTER.

*Providence Public Library.*

### MISLEADING REISSUES

*Editor Library Journal:*

Another instance has just come to our notice of the confusion resulting from republishing a book under a different title.

"The cinematograph book; a complete practical guide to the taking and projecting of cinematograph pictures," edited by Bernard E. Jones, editor of *Work*, was published by Cassells in 1915. "How to make and operate moving pictures" with the same sub-title and editor, was published in 1916 by Funk & Wagnalls. Page for page the books are alike, save for the first title. I think this should be known, as other libraries and individuals will be misled, as we were.

Yours truly,

MARY MEDLICOTT,  
Reference Librarian.

*The City Library Association,  
Springfield, Mass.*

■ WILLIAM IVES, FOR FIFTY-TWO YEARS LIBRARIAN OF THE BUFFALO PUBLIC LIBRARY.  
TAKEN AT THE AGE OF NINETY-FIVE

WE can but feebly voice the sorrow of the library profession in this country, and of not a few of its representatives in other lands, at the death of Mary Wright Plummer, one of the foremost women who have adorned our profession, who have made it more and more an opportunity for their sex, and who have given to it the charmed call which has brought so many into the service which she had done so much to make noble. It is a national loss, for her influence, thru the many younger women who have been her disciples and devoted friends, has been nation wide, and has, indeed, permeated into other countries where graduates of American library schools and the American library spirit have made mark. Refined in spirit, keen in mind, tender in soul, she had the gifts both of leadership and of friendship in abundant measure. To her, many hundreds of young women have looked up as their leader, teacher, model, and friend, and in her long and close association with the men of the profession she has held her place with the best of them, adding to what are often considered masculine qualities of mind the ever present feminine charm. Her relation with the profession has grown parallel with its growth and has been singularly characteristic, for she was one of the women who entered the profession with the first class of the first library school, became early in life the head of a great and growing free library, thereafter organized one of the most influential of library schools and later one of even wider range, and at last received the recognition of her associates by her election to the presidency of the A. L. A. The words with which hundreds will pay her tribute will be nothing in comparison with the sorrow in their hearts and happily with the abiding

influence with which her name will be long associated.

THE Association has also lost its oldest member in the death of William Ives of Buffalo, whose portrait is given in this issue. He died in his hundredth year and his library relationship antedates the first conference of 1876, of which he was the member oldest in years. He was an associate of that great librarian and historian, Josephus N. Larned, in the old days of what became later the Buffalo Public Library, and tho of late years he has not had library relations his name has been quietly held in remembrance. Another death in the profession is that of Prof. Charles G. Herbermann, titular librarian of the College of the City of New York, a ripe scholar of wide learning, an able teacher and the friend of a large circle of scholars. He was, however, only nominally a librarian, and increasing blindness withdrew him more and more from possibility of service in this direction. It may frankly be said that the City College committed a cardinal error in making its librarianship thus nominal, and so denying both to the working librarian and to the library itself the opportunity of development which comes with broadening of service under proper professional rather than professorial direction. Many of the foremost members of the library profession have come from other callings, as well as professorial chairs, but it has usually proved a mistake when a professor is made overlord of the librarian instead of recognizing that the librarian's desk is as important, sometimes more important, than the professorial chair. The two callings are incompatible only because each usually requires the incumbent's full time and energy.

PERHAPS the most important feature of the successful New York State meeting at Richfield Springs, which had a registration of over 250, was the delegation of fifty teachers from Utica who braved the deluge which interrupted a week otherwise blessed with happy skies, to participate in the school-and-library session. Almost for the first time it was really a meeting of teachers which librarians addressed, for as we have had previous occasion to observe, teachers' library meetings are too often attended by librarians in the discharge of their duty rather than by teachers seeking to quaff of the library spirit. Both librarians and teachers felt especial gratification and realized the full value of the intermingling. Each side inspired the other, and happily the State Teachers' Association is understood to have decided to adopt the course of inviting librarians to speak at its meetings of teachers in place of holding separate library sessions at which the attendance is chiefly of librarians. The session had the benefit of an inspiring talk from Mr. Carr on library and other educational work with the immigrant; and it may be added that both Mr. Carr and Mr. Mathiews, the latter in his equally inspiring statement of Boy Scout work, represented to best advantage the usefulness of the relation of librarians to such fields of work. The Richfield Springs meeting was one of the most delightful library gatherings ever held, with its touch of pleasure and humor in the readings of Dr. Moldenhawer and Miss Hinds, as well as in the amusing library skit dramatically presented, but the addresses of the two apostles of library extension mentioned above were the best example possible of what a library program should present in the way of touch with the outer world. With reference to Mr. Mathiews' work, let us remind librarians the country over that under the happier title of "Good Book Week" the experiment of better reading for the juveniles is to be the fea-

ture of the week of December 4 to 9, and emphasize to them the real value at once of co-operating with the Scout movement in this way and of correspondingly enlarging the clientele of the library among boys.

---

INCREASED costs of everything under the sun are likely to prove a serious deterrent in the erection of library buildings. One of the great libraries which has had to postpone work on its new building for more than a year finds that the present estimate for structural steel work doubles the proffer of the United States Steel Corporation somewhat more than a year ago, and other costs are likely to rise in serious though in less proportion. How soon costs may begin to decrease is beyond prophecy, and library building cannot stop. It is the greater reason for astonishment and congratulation therefore that in Germany the building of the great "Bücherei" in Leipzig has gone forward and has apparently reached completion. The difficulty of obtaining any direct word from Germany is such that information on this point is somewhat vague, but the indications are that this enormous building is at least well under way if it has not achieved completion. One of the most interesting features of the great Leipzig Book Exposition was the model of this enormous building, which marks the desire of Leipzig to prove itself the imperial city of the German book world, and therefore, to do something bigger than even the Royal Library in Berlin, which represents Royal Prussia rather than Imperial Germany. It is intended to gather in this great and noble building, possibly the largest library edifice in the world, a collection of every book hitherto printed or hereafter to be printed in the German tongue or within German-speaking territory, and though its motive is commercial or professional rather than popular and altruistic, it will doubtless take its place among the great libraries of the world.

# HOW ONTARIO ADMINISTERS HER LIBRARIES\*

BY E. A. HARDY, *Toronto, Secretary Ontario Library Association*

THE origins, the development and the administration of a provincial or state library system are matters of high importance to the body politic. This importance is my justification for treating the subject in a somewhat formal fashion and for introducing considerable amplifying and illustrative detail. The broad outlook and the working detail are both valuable to one studying library administration from a provincial or state standpoint, for, altho no administrator is likely to adopt another's plans in exact reproduction, yet he will find in these plans much material for comparison and for stimulating his own activities.

The thoro understanding of a state system involves a grasp of the political history of that state. The sovereignty of the town (or township) in New England is the explanation of much that would otherwise be mysterious to a Canadian. Conversely a brief glance at the history of Ontario is necessary to understand our library system. You will remember that during the Seven Years' War Canada passed into British possession, understanding by the word, Canada what we now call Quebec and Ontario and some southwestern additional territory. Military rule from 1760 to 1763 was followed by civil government under royal proclamation till 1774, in which year constitutional government was granted in the Quebec Act. This act set up a Legislature and a governor, with complete jurisdiction over the whole country of the then Canada. Note that this included what is now Ontario but in which there was no population to be governed, except Indians.

This state of affairs was suddenly changed by the immigration of the United Empire Loyalists in 1783 and immediately succeeding years, so that by 1790 Ontario had 30,000 inhabitants, over whom the Legislature of Canada had jurisdiction. In

1791 the Constitutional Act separated Ontario from Quebec and gave each province a legislature, and, with the exception of the period of union, 1841 to 1867, these provincial legislatures have had full control over their respective areas.

What I want to make quite clear is that the legislative authority existed in Ontario before the population arrived. That means that it was the legislature which created the municipalities and defined their powers, which created the school system, and which created the library system. That explains the uniformity or standardization in our municipal institutions, our school system and our library system. That also explains why we have no problems about city charters and the like, which are giving you so much concern. It also explains why the Ontario library system is under a Minister of the Crown and not under a library commission. When the Legislature speaks, its enactments cover the province from its capital city to its remotest hamlet, and thus provincial uniformity and control has been our system for one hundred and twenty-five years.

The first library in Ontario was organized in 1800 in the town of Newark (Niagara). The first legislative grants were made in 1835 to Toronto and Kingston, and the first general library statute was passed in 1851, and under the provisions of that act ten libraries were granted \$200 each. From that date to the present (with only a brief interval) the legislature has been generous in financial assistance. These early libraries were called Mechanics' Institutes and were planned to encourage what we now call technical education, but really they were public libraries, and they have been so designated since 1895. From 1851 to 1880 they were administered by the Department of Agriculture, but in 1880 they were transferred to the control of the Minister of Education, and thus became an integral part of the educational system of the province. Two things

\*Read before the A. L. A. at Asbury Park, July 1, 1916.

at once resulted, viz. the appointment in 1881 of a superintendent or Inspector of Public Libraries, which officer has full administrative powers over the libraries, and the passing of the Free Libraries Act, 1882, modelled on the Ewart Act (1850) of the British Parliament, providing for (a) the establishment of free libraries by the vote of the ratepayers, (b) their administration by a board of management ranking with the city or town council, and the school board as a municipal authority, and (c) their maintenance by taxation to the extent of a half-mill rate. There has been much subsequent amending legislation, but the main features of the system remain the same.

This brief historical sketch sets forth the basis of the official library activities of the province which may now be treated in some detail. The authorization of these official activities is found in the Public Libraries Act, a comprehensive statute providing for the establishment, maintenance and administration of public libraries and their supervision by and financial assistance from the government. The act divides libraries into two kinds, (a) those maintained by the municipality and administered by a board of management appointed by the council and the board or boards of education, and (b) those maintained by membership fees and administered by a board of management elected by the members. The former must, the latter may, receive municipal support; both receive legislative grants and both are under government supervision.

The administration of the Public Libraries Act is entrusted to the Minister of Education, who reports annually to the Legislature the condition of the libraries, their progress and their news, and who advises the House as to financial appropriations and advisable legislation. The actual work of administration, however, is in the hands of the Superintendent of Public Libraries, who has a fairly free hand, especially in initiating advance movements for the betterment of the libraries. Just here it may be noted that the retirement this year of Mr. Walter R. Nursey after seven years of valued service afforded the Min-

ister of Education the opportunity of appointing to this position a trained librarian, Mr. W. O. Carson, chief librarian of the London Public Library, a forward step in our library development of the highest importance.

The chief official activities under the Public Libraries Act are (a) grants, (b) supervision, (c) cataloging, (d) traveling libraries, (e) library school, (f) library bulletin. Every library is entitled to a legislative grant, which is obtainable in three ways. Approximately 50 per cent. of its expenditure upon books up to a maximum grant of \$200 and upon periodicals and newspapers up to a maximum grant of \$50 provides a possible grant of \$250. To this is added a maximum of \$10 for maintaining a reading-room. Thus a library which spends \$500 a year on books and periodicals and which maintains a reading room may earn a grant of \$260. (By a recent regulation this has been extended to branch libraries.) The smallest libraries with annual receipts less than \$500 receive special maintenance grants of \$5 to \$20. The total grants paid out in 1915 were \$30,351.45 to some 400 libraries.

Assistance in cataloging is provided in two ways. The department will send its official cataloger to a small library for a sufficient period to classify the library and to carry on the cataloging to a point where the local librarian can complete the work. Not only does the department bear all the expense of its cataloger, but it permits the materials used in cataloging to be counted as book purchases in estimating the annual grant. In 1915 the official cataloger, Miss Patricia Spereman, classified and cataloged, wholly or in part, sixteen libraries, with a total of 61,600 volumes, installing the Newark charging system in nine libraries and completing the establishment of a children's department in all of them. In eight years Miss Spereman has assisted 99 libraries with a total of 497,790 volumes.

Traveling libraries were introduced into the Ontario system in 1901. The maximum circulation was reached in 1911 when 241 libraries were sent out. A comprehensive plan was laid out and special appropriations have been made, but from lack of

office staff and facilities these libraries have not achieved their full usefulness. In spite of drawbacks, however, the average circulation for the past eight years has been 175 libraries.

The summer library school was opened in 1911, and was held for four years, and will be resumed this year. A short course of four weeks is given to the students accepted by the department. There are no fees in this school. The department bears the whole cost of instruction and all the supplies used by the students, and in addition pays the travelling expenses of the students outside Toronto. The only expense to the student is for the four weeks board. In 1914, 48 students registered and 30 completed the course.

The library bulletin is a new venture which we owe to Mr. Carson. The first number is now being issued. It will follow the examples of well established American bulletins and be a medium of communication between the department and the libraries, which has long been desired.

In addition to these official activities there must be noted certain unofficial activities, as they might be termed. I refer to the co-operative movements of the library workers themselves apart from the official staff of the government. Library co-operation is quite an old story in Ontario. From 1857 to 1867 we had a "Board of Arts and Manufacturers for Upper Canada" made up of representatives from the various Mechanics' Institutes. From 1868 to 1880 an Association of Mechanics' Institutes for Ontario replaced it. Both of these were organized according to statute, and each did some good work. After a lapse of twenty years the Ontario Library Association came into being, resulting from the inspiration of the Montreal A. L. A. meeting. It was intended to organize a Canadian Library Association, but that was not possible. We have never ceased to be grateful to the American Library Association for that Montreal meeting and its inspiring influence.

From its first meeting in 1901, with 32 representatives of 24 libraries, down to the recent meetings with an attendance of 200, the Ontario Library Association has been

an active missionary force. It has striven successfully to secure modern methods in book selection and purchase, in accessioning, classification and cataloging, in charging systems, in library buildings and equipment, in library training, in short in all the phases of development for which the A. L. A. stands. It has brought hundreds of library workers together, it has initiated many improvements, and it has shaped legislation. One striking indication of its vitality was evident in the presence of six ex-presidents at the 1915 annual meeting out of the ten for whom attendance was possible.

A third group of activities remains to be noted. These may be termed joint activities, since they represent the co-operation of the Ontario Library Association and the Department of Education. These may be summarized briefly: First, the issue of the O. L. A. Proceedings. A stenographic report of the annual meeting along with the papers, addresses, and annual reports, makes a volume of about 100 pages. The Proceedings are edited by the secretary of the O. L. A. and are published and distributed as a government document. The "Selected list of books" is published under the joint authority of the O. L. A. and the department. It is a quarterly bulletin issued on the following plan: Part I gives a selection of the best books of the previous year, as chosen by some twenty experts; Part II lists some 600 to 800 titles of the new books of the first half of the year, January to June, classified on the decimal system and briefly annotated; Part III contains a special bibliography—*e. g.*, Canadian history; Part IV lists some 600 to 800 titles of the new books of the latter half of the year, July to December. The purpose of the Selected List is to inform rather than to advise, two underlying principles being (a) that no two libraries have exactly the same needs, and (b) that every community has readers of culture and experience whose ability in book selection may be utilized by the local library if reasonably full and accurate information is supplied. Decentralization in book selection is valuable as well as centralization, and both should be used. The "Selected

list of books" is edited, printed and issued to all the libraries (and also to the High Schools) at the expense of the Department.

The Library Institutes were begun in 1907 with an experiment at Brantford. Since then the province has been districted into fifteen institutes, each of which has an annual meeting. The Public Libraries Act in 1909 incorporated the institutes as a feature of our library law and made three interesting provisions: first, to pay all the expenses of the meetings; second, to pay the expenses, traveling and entertainment, of one representative from each library in the institute, and, third, to fine every library that did not send a representative. All three provisions are carried out. The O. L. A. initiated the institutes and is still the active agent in arranging the yearly schedule and programs. The Inspector of Public Libraries is present at and assists in all of them. The Department of Education pays all the bills. Small wonder that the institutes are a great success, that they have linked up all but sixteen of our 389 libraries with organized library work, and that they have brought a new conception of the public library to thousands.

The legal committee of the O. L. A. is composed of two judges and a practising lawyer, all keenly interested library trustees, and two of them ex-presidents of the O. L. A. This committee carefully considers all the resolutions of the institutes and the O. L. A. and makes such recommendations thereupon to the Minister of Education as may, in their judgment, assist him in amending the Public Libraries Act from time to time. The department bears the cost of the meetings of this committee.

A special joint activity is that of deputations financed by the department. For example, in 1910 a deputation of three members of the O. L. A. and the Inspector of Public Libraries was sent to visit several American libraries to study the relation of the public library to technical education. Again in 1912 the Legislature, on the request of the O. L. A. to the Minister of Education, made a special grant of \$1000 to enable the smaller Ontario libraries to

send representatives to the Ottawa meeting of the A. L. A. In these matters as in all library matters, the Hon. Dr. Pyne, the Minister of Education, and Dr. A. H. U. Colquhoun, the Deputy Minister, are always sympathetic and alert to take advantage of every opportunity to advance the library interests of the province.

To sum up, the distinctive features of the Ontario library system are four. First, the public library is an integral part of the educational system of the province. Second, voluntary co-operation, organized as the Ontario Library Association, is a driving force of increasing power. Third, the joint activity of the official staff and the unofficial organization makes possible many things that neither could accomplish by itself. Fourth, the development of the trustee has kept pace with that of the librarian. It may be that this is our most distinctive feature, for steadily from the outset a guiding principle has been this, that the advancement of the public library to its rightful status in the community and the state is too big a task for the librarian alone. The trustee must stand beside the librarian. Especially true is this when one reflects that while librarians and trustees may both be ratepayers, yet the trustee usually has a vote, while the librarian has not. We have tried to avoid the heart-break of an enlightened librarian and an ignorant trustee, by bringing them along the road of library progress together. They really make a fine team.

Our aims are twofold, to extend library privileges to every community and citizen within the boundaries of the province and to place the public library on a par with the public school. Both are high aims and difficult of attainment, but both are worth while. Until the public library is compulsory in every community, like the public school, and until the librarian takes his place beside the teacher as a public servant, with government certificates and proper superannuation and reasonable salary, we must not be satisfied.

The dynamic of library work is the vision of democracy in the coming years. The present giant struggle will leave no nation untouched. One result will be the

rush to North America of millions of new population. Another result will be the recasting of the federal relations within the British Empire. Another will be the revision of the international relations of all the great powers. Who can be sufficient for these mighty tasks of the future? An enlightened and ennobled democracy, of

sound knowledge, wide sympathy and broad vision can render the highest service in the great days to come. The United States and the Dominion of Canada must be such democracies and the librarian must rank alongside the teacher, the legislator, and the preacher in the making of the new world.

## SOME OF THE RESULTS OF SAFETY FIRST JUVENILE BOOK WEEK

BY FRANKLIN K. MATHIEWS, *Chief Scout Librarian, Boy Scouts of America*

THE other day I came upon a copy of the *New Jersey Library Bulletin* in which was published an address delivered by Miss Clara W. Hunt at the A. L. A. conference held at Kaaterskill, N. Y., in 1913. Especially was I impressed with this statement: "I have unwittingly been an eavesdropper at Christmas book-counters and have heard the orders given by parents and the suggestions made by clerks. And I feel that the public library has but skirmished along the outposts, while the great field of influencing the reading of American children remains unconquered. Until we affect production to the extent that the bookstores circulate as good books as the best libraries we cannot be too complacent about our position as a force in citizen making."

Last year, with the godspeed of the Council of the A. L. A. and the assured support of the American Booksellers' Association, our own Library Commission fared forth to make conquest in this "great field of influencing the reading of American children." November 28th—December 4th was set apart as Safety First Juvenile Book Week and so general was the support given that from many quarters have come repeated inquiries regarding the results achieved. Thanks to the courtesy of the LIBRARY JOURNAL, I am privileged to publish a report that will, I trust, come to the attention of all those whose co-operation made possible this campaign in the interest of better books for children, particularly as Christmas gifts.

It is very pleasing to record first of all

that in our publicity plans we were supported by editorials and articles in a number of national magazines, notably *The Outlook*, *The Saturday Evening Post* and *The Woman's Home Companion*. The *Saturday Evening Post*, editorially, so admirably stated the present day problem regarding the modern boy's reading, that I think it worth while to use good space to quote from it in part:

What a boy reads is as important as anything else about him. You try to protect him from depraved associations of flesh and blood, but pretty often you make little enough effort to protect him from depraved associations in print.

You send him to school in a belief that the stuff he absorbs from printed pages forms his mind; but out of school you may let him absorb stuff from printed pages that is not fit to be in a dog's mind.

Time was when you could tell a wrong book for a boy because it was bound in yellow paper and sold for a dime. Nowadays many wrong books for boys are most respectably bound in cloth. And they are perfectly moral, in the narrowest sense of that abused word. They describe how a fourteen-year-old boy, with a discarded set of harness and an old hoop skirt, made a flying machine and sailed round the earth; or with a leaky wash-boiler and two dollars in cash built a submarine that destroyed the enemy's fleet; how a lad in knee breeches circumvented a gang of desperate criminals and so became president of a railroad at sixteen.

These tales of preposterous juvenile achievement are depraved because they are monstrous lies. They do not stimulate a boy's imagination; they drug it. They do not set his imagination usefully at work, but send it off in a weird opium dream. They do not brace or enlarge a boy's mind; they lead it

into a vicious, enervating habit of dope-taking. They are a sort of psychological whisky-drinking that makes the victim unresponsive to wholesome, natural tonics and begets a flabby craving for the artificial kick.

Of immense help was the book-list, "Books boys like best," the publication of which was made possible by the *Publishers' Weekly*. The list comprised about three hundred books, with annotations, the selection being based upon reports received from scores of libraries and bookstores representing every part of the country. Of these book-lists, there were sold to libraries and book stores, 26,000, the sale dividing itself between the two exactly 13,000 each. Approximately 30,000 more of the lists were circulated by our Library Commission, the distribution being made for the most part thru libraries. It would require a considerable amount of space to tell of the good results accomplished by this wide distribution of the list, "Books boys like best." Both bookstores and libraries received and distributed it with enthusiasm. Undoubtedly it was the direct means of selling thousands of dollars' worth of books. Without any suggestion on our part, the *New York Times Book Review* editor thought sufficiently well of it to print the entire list in the December 5th issue of that increasingly influential book review magazine. Other newspapers over the country did the same thing, printing the list either in part or in whole.

Our records show that the week in one way or another was observed in approximately three hundred cities and towns of all sorts and sizes. While in many places we had the co-operation of our scout officials or Y. M. C. A. secretaries or public school teachers, usually it was a librarian who furnished the leadership, and I would that I were gifted in verse to sing her praise. Many did excellently, but she excelled them all. It was the librarians who exhorted ministers to preach, editors to write editorials or publish articles; with unabated zeal they held book exhibits, distributed book-lists, addressed women's organizations of almost every conceivable kind, stirred to action indifferent and hesitating booksellers. In stating the results of our campaign I would reckon such val-

iant endeavor among the foremost, for here is the beginning of the fulfillment of Miss Hunt's ideal—from "skirmishing along the outposts," as she says, the public library thru its competent and self-sacrificing leadership has moved out to "affect production to the extent that the bookstores circulate as good books as the best libraries."

But how far were booksellers influenced by such action? I have already mentioned their interest in distributing the list "Books boys like best." Some of them stocked all of these books; others made a special table display of them; and others went still further, opening a room or setting apart a certain section where might be found only such books as those recommended by our Library Commission and the local librarian. There are some, too, who told us they will sell no more of the cheap, trashy books—the nickel novel in the form of the book-bound thriller. For example, in a letter one very influential bookseller has this to say:

"We have seen a marked decrease in the calls for the poorer series of boys' books and have been able to drop from stock some series that in previous years we had felt obliged to carry on account of the repeated demands. We found that thru the whole month we were selling a better class of boys' books and I think the educational campaign for boys' week must have been a prime cause for this change.

"I like to carry inexpensive juveniles because I know the people need them. At the same time outside of the un-copyrighted classic, I do not know of a single series that I enjoy selling that is marked for less than 50c. and I think we shall concentrate on the better class of books with the fifty-cent counter as a mainstay, and a good display of new books of the year."

It is most pleasing to note also in this connection, the action of the Sears Roebuck Company of Chicago. Chief among these trashy books are the so-called "Boy scout stories." We appealed to the Sears Roebuck Company to eliminate all these books from their catalog. They replied that in the future they would list only such stories as were approved by our Library Commission. Beyond such heartening reports and co-operation, it is not easy with certainty to determine how much our cam-

THOROLD'S ATTRACTIVE LIBRARY BUILDING

THE JUVENILE ROOM OF THE HAMILTON PUBLIC LIBRARY

paign influenced the sale of the "nickel" masquerading now in the full dress suit of the bound book. From what I can gather, tho, picking up a little here and a little there, there seems to be complaint on the part of some booksellers because these books did not sell as in former years: and from some of the publishers of these books, complaint is heard because last year they did not receive from the booksellers their usual re-orders. Certain it is, however, that one of the publishers has been affected sufficiently to arouse in him a recalcitrant spirit, manifested in a recent book, called "The Y. M. C. A. boys of Cliffwood," in which may be found these choice extracts:

"Here's another thing, fellows, I'm meaning to bring up the first chance I get after the Boys' Department is well started," said Phil. "You know all of us have been a whole lot annoyed by Mr. Loft, the librarian, who believes all boys' books should be thrown out of our Public Library, and only volumes along educational lines kept there."

"I'd be sorry to hear that," observed Dick. "Mr. Loft belongs to the Puritan days, when a man didn't dare kiss his wife on a Sunday. He ought to wake up and understand that this is the twentieth century, not the seventeenth."

"That's right," broke in Dan, eagerly. "I never call for a book that I've wanted to read but that he tried to show me the folly of indulging in such silly nonsense, as he calls it. Guess the high-brow Mr. Loft never was a boy himself. He must have been fed on Greek grammar and ancient history when he was six years old. He makes me tired, that's what. But go on and tell us what you've been thinking up, Phil."

"All right, I will, fellows," replied the one spoken to. "In the beginning I want to say I've already talked the matter over with Mr. Holwell, Harry Bartlett and Leslie's Uncle Henry, and all of them took to the idea first rate."

"Go on, and let's hear!" called out several of the more impatient lads as they clustered around the speaker.

"Listen then," said Phil, impressively. "After we get the Junior Club well started the idea is to have a library of our own, containing only such books as Mr. Holwell will have passed upon as being the right sort for boys to read. These can be filled with pleasing adventure such as all boys want, and at the same time be of a healthy, uplifting nature, and all our own."

"Fine!" exclaimed Dan Fenwick, who was a great reader of stories of all sorts.

"We could buy the books ourselves with money we earned or had given to us," de-

clared Clint Babbett. "I know for one thing my mother will take to the scheme right away, because she hates to have me fetch home some of the greasy looking books from the public library. You see, she says you never can tell where they've been the week before; maybe in a house where they have diphtheria or some sort of catching disease. Germs she hates the worst kind. Yes, she'll be only too glad to help out."

I don't know, but I am willing to hazard a guess that this product was manufactured in the fiction factory of that literary genius who some time ago found it best served his purpose to sign himself "John Tupper Brownell." On this occasion, in a sixteen-page pamphlet, he was writing on "Safe and sane books for boys and girls." In part, this is what he has to say:

In the last few years, I am sorry to say, a great number of books for young people have been issued that are not worth the paper on which they are printed. Issued by houses of no standing in the publishing trade, they are put out merely to catch the dollar of the purchaser, or the twenty-five cent piece, as the case may be. Many of these books are written by authors who formerly made a specialty of dime and half-dime novels, and the stories are of that order, or worse. These books are filled with hair-raising and impossible situations, and will invariably do more harm than good.

Exactly so, for with all this we agree heartily, and if there be any misgivings as to the reliability of such assertions, turn to the cover of the pamphlet and you will find that it is "Issued by permission of the Good Reading Club of America." But after that, you must not turn the pages, for if you do you will come upon a long list of books, any number of which are exactly the kind that "Mr. Brownell" has described as "not worth the paper on which they are printed," books that "are filled with hair-raising and impossible situations," and that "will invariably do more harm than good."

It is all a fiction, is this pamphlet describing "Safe and sane books for children." I find upon investigation there is no "Good Reading Club of America," and there is no "John Tupper Brownell," save as he is represented in the person and personality of the manager of that fiction factory where are employed a staff of writers who

manufacture, according to his plan and style and pattern, the product that is sold as books to a number of publishers who make a specialty of publishing books that retail for twenty-five cents. All the books listed by "Mr. Brownell" are the books of these same publishers who market, with titles "up-to-the-minute," the output of "Mr. Brownell's" fiction factory. For the most part, these books are in series, the number of books represented in all of them approximating to-day about three hundred.

Now, having said so much, it is only fair to say still further that in my judgment, even tho such devious ways of promoting book sales are employed, "Mr. Brownell" is sincere in his claim when he declares "that such books are just the kind that young people crave and should have." But as *The Outlook*, editorially, recently declared, in speaking of "Movie manners and morals," the trouble is that "almost invariably in amusements designed to meet the popular taste producers aim below the mark. The taste of the normal human being, however uneducated and undeveloped, is better than those who are so eager to please it believe." It is so as regards the authors and publishers of the thriller in its many forms; in their efforts to satisfy the craving of the boy barbarian for thrill and excitement they feed the boy with an intoxicant which makes him often a mental drunkard, with a thirst like that of the old toppers. And, whenever the brain is so befuddled, serious consequences are likely to follow. For example, I find this news item in the Oakland, Cal., *Tribune*:

Visalia, May 24.—Too much attention to literature of a lurid sort and too great zeal to emulate the deeds of famous Boy Scout leaders caused the arrest of Allen Girtley, aged thirteen years, and his brother, Bright, aged fifteen years. The lads ran away from their home in Atwater, Mercer county.

With a cash capital of \$1 and with a horse taken from a neighbor's ranch and a buggy similarly borrowed from another neighbor, the brothers started for Los Angeles, where, they said, they hoped to find adventures.

I am sure after reading this, librarians will agree with me that the millennium is not yet, that there remains still further work for us to do before Miss Hunt's ideal is achieved. Long ago I became con-

vinced that the only way to fight the devil is to fight like the devil—he wins by keeping everlastingly at it. For this year the Library Commission of the Boy Scouts of America is planning a Good Book Week, to be observed December 4th to 9th. "Buy the best books for your children" will be the slogan of the new campaign. For this same time, too, the League of Library Commissions will urge upon the libraries of their several states the desirability of observing a Library Week, when a campaign of publicity may be promoted for the purpose of stimulating a more lively interest in the work of the public library, and for making available to parents the help they need in selecting books to be purchased as Christmas gifts for their children. Much the same program will be followed this year as last and it is hoped that many more librarians will lend their support.

There is a great need for their support, for I am prepared to say that it is the boys who frequent our libraries and Y. M. C. A.'s and Sunday Schools who constitute the class upon which the publishers and booksellers depend for the sale of the nickel novel in the disguise of the cheap, bound book. If there were no other facts to prove it, the fact that they alone as a class possess the quarter to buy such books is sufficient evidence to warrant such a conclusion. In telling an editor of the waning of the nickel novel publications because the nickel now goes to the movies, and how, because the author of the "nickel," out of a job, has been taken up by the publishers of cheap books, making it possible now for the nickel thrillers in a full dress suit (bound in cloth) to sell for twenty-five cents, the editor replied: "You don't mean to say that the boys who used to pay five cents for their thrillers now pay twenty-five cents? Why, they haven't a quarter to spend."

Exactly! They have a nickel to spend and they spend it for the movies. The quarter that is spent for the nickel novel in disguise is spent by the boys of our best families. A friend tells me how in a bookstore a little time ago he saw one such boy come in and spend a dollar for four thrillers. And so it is wherever these books are sold.

It is our own boys, so to speak, who buy them, and that is reason enough why we should all be anxiously concerned about the boy's recreational reading, and just so far as we can, assist both him and his parents in the selection of the kind of books that will wholesomely satisfy his craving for thrill and excitement.

#### WHAT YOU CAN DO TO HELP

For definite information concerning plans for Library Week, inquiries should be addressed to the secretary of your State Commission. The suggestions that follow have to do particularly with the problem of educating the public to concern itself regarding the kind of books that should be purchased for children as Christmas gifts. To this end, editorially and thru articles, the national magazines will lend their aid. The altogether important thing is, however, that every leader of every organization having to do with the training of the child, should, to the very limit of his ability and time, co-operate locally.

Librarians can assist by holding book exhibits and distributing book-lists. In some instances librarians find it helpful to co-operate with local booksellers in publishing a list. In promoting publicity plans it would be helpful to mention Good Book Week in the "Monthly Bulletin," and newspaper editors can be easily persuaded to write editorials and publish articles as well as lists of books.

Women's organizations of all sorts can be easily interested. It may be suggested to them that the subject "Books for Christmas for the children" be discussed either at the November or December meetings. Effort also should be made to supply speakers. Experience in promoting Safety First Juvenile Book Week has demonstrated that it is easily possible to persuade the ministers to preach on the importance of children's reading. They too would doubtless be sufficiently interested to make mention of Good Book Week in their weekly calendars.

As for the bookstores, most of them will be interested in making window displays, and in many instances they will be glad to make a special exhibit of books approved by the local library. Effort should

also be made to have them distribute lists of these books. Some libraries too, during the holiday season, have arranged with bookstores to let an assistant act in their stores as advisers both to clerks and customers.

The list of "Books boys like best," prepared by the Library Commission of the Boy Scouts of America, is being revised. There will be added the best of the boys' books published in 1915, together with a separate list of the worth-while books for boys published during 1916. This list will be published as last year in the October 14th issue of the *Publishers' Weekly*, and may be ordered thru them in quantities with the imprint of the local library on the cover.

A bulletin board poster, "Watch your step" (showing a boy climbing up steps of good books) will be sent to librarians who desire it. Requests should be addressed to Library Commission, Boy Scouts of America, 200 Fifth Avenue, New York City.

#### THE VITAL FUNCTION OF THE DEUTSCHE BUCHEREI

THE *New York Times* of Sept. 21 quoted briefly from the speech made by Arthur Seemann, the president of the German Book Publishers' Association, at the dedication of the Deutsche Bücherei in Leipzig. The *Berliner Tageblatt* reported the dedicatory speech at some length, and the paragraph selected by the *Times* for translation was as follows:

"Our toughest and most merciless foe boasts of possessing the mightiest fleet in the world, and claims the right, therefore, to rule the seas. But is it battleships and torpedo boats, after all, which will decide the still raging battle of the nations? Certainly not. Victory does not depend on the number of the combatants, or on their weapons, or on their money. The Germans may point with pride to the fact that the intellectual fleet, a nation's books and periodicals, grows on German soil more rapidly and strongly than anywhere else in the world. Numbers are of importance in this field, because the moral power of the people is indicated directly by the wealth of its literature."

# THE LIBRARIAN HIMSELF\*

BY HARRY LYMAN KOOPMAN, *Librarian, Brown University*

I THANK you for your invitation to speak here to-day, not only for the compliment that it involves, and the opportunity that it gives me to meet old friends and perhaps make new ones, but also for a reason that would not have applied in the case of another speaker. To use Dante's reckoning, it is just half a lifetime since I began my library work in this institution, that is, in the Astor Library as it then was. That was the year for which Mother Shipton, at a safe number of centuries distant, prophesied the end of the world. It may be that she called the wrong number, or that the Fates were tempted by the possibility of this splendid library, and its Library School, and this graduating class; at any rate, the year 1916 finds the world still here and still awaiting the millennium.

In one of those vivid imaginary conversations in which Landor recreates for us the mind of past ages, he presents two famous characters—Hooker the great divine, and Bacon after his tragic fall from power. Toward the end of the dialogue, Bacon acknowledges that he has won a reputation for wide learning, and even for inspiring others to the pursuit of knowledge; but he adds that there is one subject of great importance to himself that has almost escaped him. Hooker, in surprise, begs to know what this omitted subject may be, and the philosopher answers, in two words, which close the dialogue,—“Francis Bacon.”

The year 1776 marks a turning-point in our political history not more important than the centennial year marks in our library development. The year 1876 saw the appearance of the great volume on “Public libraries in the United States,” issued by the Bureau of Education; the founding of the American Library Association, with its first conference at Philadelphia; the opening numbers of the LIBRARY JOURNAL; and that infant prodigy,

the first edition of Mr. Dewey's Decimal Classification. During the forty years that have succeeded, the American library world has been not so much developed as transformed. Where before we reckoned in units, we now reckon in tens, or even hundreds, and that not merely in regard to the volumes in our libraries, but also in regard to their readers, their circulation, and their income. Our American librarians have had not only to achieve and superintend this enormous increase, but also to learn how to do it in the very process. They have had to construct for themselves a new library economy on a gigantic scale. It is as if one were to leave port in a schooner and were compelled while crossing the Atlantic to transform the vessel into an ocean liner without any interruption of its voyage, and at the same time to solve all the problems of engineering and navigation involved by the change. In the midst of the vastness and complexity of all these urgent demands, it would not be surprising if the librarian of my generation had been tempted—or if you of the next generation should in your turn be tempted—to overlook the human element in the situation, to forget the Librarian Himself.

It is because I believe this human element to be now and forever the most important that I have taken this opportunity to remind you that as the future of society depends upon nothing so much as the character of those who are coming forward to be its men and women, so the libraries of America will depend for their success in the years to come, not so much on any other conditions as the quality represented by you and the other young men and women who are preparing to take up the burdens which the librarians of to-day will ere long lay down. I have also a personal reason for the emphasis that I place on the Librarian Himself, namely, my pride in my profession. Having known such men of the past as Poole, and Winsor, and Cutter,

\*An address before the graduating class of the Library School of the New York Public Library, June 9, 1916.

and Billings—to cite only four—and my great contemporaries who have so nobly carried on their work, I should be unworthy of membership in their profession if I could be content to think of the responsibility for American libraries as in the future entrusted to a less worthy keeping. These men were in their day the equals of the leaders in any other profession. I cannot imagine a group of men in which Dr. Poole, with his splendid soldierly poise, Dr. Winsor, with his intellectual force, Mr. Cutter, with his modesty masking such a wealth of knowledge, and Dr. Billings, with his stamp of leadership, would not have been welcome and honored. I refrain from strengthening my case by referring to the men whom I honor as my contemporaries. To mention only those whose records are closed will be enough to impress upon you the wealth of personality that has marked our profession, and your own obligation, so far as in you lies, to continue it.

What the librarian attains in this respect he attains not more for himself than for his library; and this truth will become so evident that I shall have no need to reinforce it. Let us consider three respects in which it behooves the coming librarian to remember himself. The first is the fundamental one of the body; and my counsel may be summed up in a single injunction: Keep a reserve of force to be drawn upon only on supreme occasions. This means that you will not allow yourselves to work up to the limit of your strength. Work done at the margin of endurance is never so efficient or satisfactory as work done at a safe distance below that margin. No man knows when he is going to be called upon for a supreme effort, and when the time of extra strain comes there should be extra strength to bear it. The strain may be personal—care, anxiety, or ill health; or it may come in the form of a sudden professional demand. Let me give you two illustrations, the first outside the library field. A young broker of great talent had allowed himself to overwork. An opportunity arose for him to take part in a great enterprise. In order to do so he was obliged to keep himself up by arti-

ficial stimulation. When the work was done his strength gave way, and for the next two years he vainly pursued his lost health which was slipping further and further from him; but during this period of incapacity another and far greater opportunity arose for which he might well have neglected the first; and while the new enterprise was being successfully carried out by others, he could only watch them from his deathbed and lament his shortsightedness. The other and happier instance is taken from our own profession. One of our librarians, after a day's hard work, gave himself up to an evening's pleasuring, and returning home from a party at midnight, found upon his table a note directing him to bring to his office the next morning the complete sketch plan of a building for his library, showing size, capacity, and arrangement of rooms. Laying aside his festive attire, he applied himself to his task, from which he arose at breakfast time. At nine o'clock he appeared at his office with the plans as directed—and you all have or should have seen them in their successful realization. But a librarian who allows himself to work daily on the ragged edge of his strength could never have met successfully that sudden and crucial demand.

The librarian must also give heed to himself on the intellectual side. This advice can, of course, be transferred to any profession. Years ago a banker friend of mine had an unexpected opportunity to learn Danish. He took advantage of it, and ever since has enriched his life with the great literature of that language. We may be sure that for this mental side-line he is no less a banker and much more a man. Our profession tends so much to brain-scattering that it behooves us more than most others to give ourselves the discipline of concentration. Having to know *about* almost everything, it behooves us also really to know something. What this intensive study shall be, in the case of any one of us, will depend upon our aptitudes and tastes. We may, like my banker friend, take up a language and its literature; we may devote ourselves to some historic epoch or figure, to some literary master-

piece, to some science or art, or at least to a corner of one. If we have the happy endowment, we may find our specialty in some form of creative art, of which the students in this school have before them a successful instance in Miss Plummer's poetry, at once so strong and so fine, and lacking only in quantity. It is in the retirement of such work that we shall find ourselves and make ourselves the better worth finding.

A third direction in which the librarian should give heed to himself is in his relation to his community. This is over and above his services to the community as a librarian. The public should know him not merely as a human appendage to a collection of books, but as one of themselves, as a man among men, having interests and powers beyond his library walls. He will have occasion to appear before them in the interests of his library, whether he is lecturing on books, or pleading for larger appropriations; but he should do more than this—he should take his place in his community as one of its foremost citizens. He will so not only benefit his library, but also be paying that intangible but real debt that every man owes to his profession.

Thus far, I doubt not, you have agreed with me, even if you have not easily made the application to yourselves. On the latter point I know that you are objecting somewhat in this fashion. He is talking about great men and we are only beginners, with no assurance of ever being great, and, even if we succeed, no one of us will ever be a Winsor, a Poole, a Cutter, or a Billings. My answer is that you are laboring under two illusions, which I will call the illusion of youth and the illusion of sameness. Regarding the first, Emerson has a saying, which I can use even more literally than he meant it. He says: "Meek young men grow up in libraries, believing it their duty to accept the views which Cicero, which Locke, which Bacon, have given; forgetful that Cicero, Locke, and Bacon were only young men in libraries when they wrote these books."

We look at a great man's career in full perspective, but he sees only what has gone before; he knows no more of his future

than we do of ours. When Dr. Poole, a senior at Yale, was printing his first index to periodicals, he could have had no idea what a vast revolution he was starting in making knowledge accessible. Nor could he any more have foreseen the honorable positions that were to register the stages of his fruitful career.

Of all our great librarians, there was none who received such deference from his fellows as Justin Winsor, the first president of the American Library Association, and nine times re-elected to that honor. He was the type of man that one looks upon as born not only for success, but for early and assured success. Yet there is no career in our library annals that affords more comfort to the tyro as he works his way against discouragement. Justin Winsor was a rich man's son, with so little sense of responsibility when a student at Harvard that he was obliged to end his course prematurely. Continuing his studies at Paris and Heidelberg, he returned home to take up nominally the study and practice of law, a profession alien to his tastes, but really to follow false leads in journalism and literature, which left him, fifteen years after his class graduated, a man who had not yet found his place in the world, and who was coming to be looked upon by his family and friends as a failure. In the course of his reading he spent much time in the Boston Public Library, and on account of his acquaintance with the institution, he was finally made a trustee. In 1868, when he was thirty-seven years old, occurred the sudden death of the librarian, Dr. Jewett—whom I am proud to claim as my own predecessor at one remove—and the trustees, possibly with some misgivings, made Mr. Winsor his successor. Neither they nor he could have realized at the time what a career that appointment was opening, nor what a standard it was setting to American librarianship.

We all honored Mr. Winsor, and a few who knew him intimately loved him, but we all loved Mr. Cutter. He, too, did not follow a direct course in entering the profession which he afterward so adorned; for, after graduating from college at eighteen, he spent four precious years in study-

ing for the ministry; but he was not ordained, and apparently one year more sufficed to convince him that he had been on the wrong track. So it was five years after leaving college before he took up library work, and fourteen years before he found, in 1869, at the age of thirty-two, his great opportunity, the librarianship of the Boston Athenæum. Mr. Cutter, with his Athenæum catalog, his world-famous cataloging rules, and his flexible classification, which, though incomplete, has received the high tribute of adoption, with modifications, by the Library of Congress, seems to us all a personality so secure in its enduring fame that we find it hard to realize that he was ever "a young man in a library." In reality, he had not only immaturity to contend with in the beginning, but also a personal handicap. If his superior in those days in the Harvard library had been called upon to fill one of those distressing blanks that are sent out by modern employment bureaus, I wonder how he would have answered the query in regard to personal appearance. Mr. Cutter had one of the most beautiful faces as regards expression that any man ever possessed, but one only scantily endowed with good looks. When one knew Mr. Cutter one realized in his presence only the inspiration of a rare soul of singular sweetness, but, like many another great man, he must have felt in youth that his face was a bar to his fortune. I make this intimate reference, as I think my great master would have approved my doing, to instance one of those typical handicaps that cause such discouragement to the young, but which are capable of being so splendidly triumphed over.

So much for the illusion of youth. The illusion of sameness we can discuss more summarily. It is certainly true that no one of my contemporaries has repeated the career of the great man he succeeded; in fact, to have done so would have been to brand himself as not a great man but an echo. Artemus Ward, who was one of the shrewdest of observers, remarked during our Civil War that "George Washington's forte was to not have any public man of the present day resemble him to any alarming extent."

Superficially, the gibe was warranted; yet at the time of its writing there was one man in America who, while as different from Washington in his appearance and his qualities as one great man well could be from another, yet bore the name that we now always couple with that of Washington. In the deepest sense they were alike, for Lincoln did in his day the work laid upon him, with the same devotion and ability that Washington applied to his. We may therefore say that between them there was the closest resemblance, but no sameness; and it was this illusion of sameness which prevented the keen eye of the great humorist from seeing what was all the time before him. You will be, nay, you must be, worthy successors of the great men of the past and of my great contemporaries, but you will not be the same, and you should never for a moment doubt your capacities because you realize that you cannot be the same. If I may in closing modify a famous line of Wordsworth's, I will say: "Another race is on, with other palms to win." The race is for you to run, the palms will be yours. You will win them for your libraries, for your profession, and for yourselves, and you will win them because you will not be the great men of the past nor the great men of this present, but because you will be men of your own day and generation, and because in the midst of your cares and distractions you will have remembered to become and be yourselves.

---

"It is an item of no little interest that probably the one book of fiction that is in constant demand and has been for many years (perhaps since the opening of the library) is that popular California story 'Ramona,'" writes the librarian of the A. K. Smiley Library of Redlands, Cal., in her last report. "The library has purchased fifteen copies (four having been worn out) which scarcely ever can be found on the shelves. The publishers announce that it is now going to press for its 77th edition and was first printed 33 years ago. Three million eight hundred thousand copies have been printed, showing that it is popular elsewhere as well as in this library."

# LIBRARY WORK IN NORWAY\*

BY ARNE KILDAL, *Librarian, Public Library, Bergen, Norway*

SINCE the United States holds the undoubted leadership of the world in library matters, it may seem audacious to speak of the progress of library work in Norway, which is still far behind in this field of educational labor. However, as the work is a work of progress, particularly noticeable during the last ten years, and as at the same time it shows the victorious march of American systems and methods in the library field, it may not seem improper to try to give you an impression of the character of this work in my country.

The immense growth of the library movement in Norway during the last ten years has been very encouraging and pleasing to every friend of culture in the country. The different municipalities are now trying to make amends for their previous neglect of library matters. In many parts of the country the exertions made to give people an easier opportunity to get good books, are well worth recognition, especially in view of the economic difficulties that must be met. The small funds which are at the disposal of libraries are a hindrance to a rapid library development, and the first problem in library work in Norway is to make the most out of the scanty means which are at hand.

At the centennial exhibition at Christiania last summer a small room was given over to the interests of the state-supported libraries. The exhibit comprised statistical charts, plans, pictures of library buildings, a model library of 1000 volumes, etc. The statistical charts which were made for the occasion gave a clear view of the development of library work in Norway during the last decades.

The first chart showed the number of state-supported public libraries from 1830 to 1913. (The state, *i.e.* the central government, grants a support to the libraries, equalling the amount raised by the locality, but never surpassing a sum of 500 kroner,

about \$125.) In 1830 there were 50 state-supported public libraries, in 1913 the number had risen to 950 and now (1916) there are over 1000. The second chart showed the number of volumes in the state-supported libraries from 1837 to 1912. Their collections have grown from a total of a few thousand volumes in 1837 to over 800,000 volumes in 1912. Growth in this respect was particularly noticeable in the cities. The third chart showed the number of volumes lent from the state-supported public libraries during the years 1904 to 1912. In 1904 the circulation was 900,000 volumes and in 1912 it had risen to 1,600,000 volumes, that is nearly doubled. This increase, also, was chiefly in the city libraries. The fourth chart showed the extent to which the libraries had financial support during the period 1876 to 1914. In 1876 the total support amounted to 20,000 kroner (about \$5000), and in 1914 to 310,000 kroner (about \$75,000).

Looking for the cause of this rapid progress it will be found in the introduction in the year 1901 of excellent reforms in the management of the state-supported libraries, brought about chiefly by the late librarian at Christiania, Mr. Haakon Nyhuus, who had obtained his library education in the United States. These reforms opened the door for the new library ideas which had accomplished such favorable results in the English-speaking countries and at once changed library conditions in Norway for the better. At the Ecclesiastical Department of the government a "library counsellor" was appointed, and this library counsellor, representing the government, supervises the work of all the libraries which are state-supported. He helps, advises, and guides the libraries, and the holder of this office always being a specialist on library matters, the libraries of the country naturally benefit greatly from his co-operation. In order to help the libraries financially, a scheme of co-operation which has brought fine results

\*Extract from an address given at library schools in the United States in November, 1915.

INTERIOR VIEW OF THE NEW LISKEARD LIBRARY

NEW LISKEARD PUBLIC LIBRARY

was introduced. The state-supported libraries must—according to this scheme—order their new books from a catalog which the Ecclesiastical Department has worked out, and these books are offered to the libraries at greatly reduced prices. Further, the libraries must have the books bound at a bindery under the control of the Ecclesiastical Department, where the prices likewise are much reduced on account of the great volume of work sent in. From this bindery the books are sent to the libraries, not only bound, but also furnished with book pocket, book card, ex-libris, Dewey decimal number, and—if wanted—printed catalog cards. This bindery is called “the public library-bureau” and in fact is the central bureau for all the state-supported library work of Norway. This central bureau makes the limited funds of the libraries go as far as possible. It is the high authority on all library matters to which any library may turn when in want of information. The “library counsellor” often tours the country, delivering lectures on library affairs, and seeks to stimulate interest in library work thruout the country.

It is quite natural that the development of the libraries of Norway has been rapid and steady after the introduction of these new methods, but it is a development which as yet is in its beginning, of which fact anybody who visits the small country libraries in scanty populated districts may be convinced. The country libraries are usually very small and vary in size from about 100 volumes to 2000. Most of them have less than 1000. The books are commonly placed on a shelf in the schoolhouse or in the assembly-building of the county. The library is open for lending only on Sundays before and after church hours. For the most part the teachers are librarians and they show keen interest in this part of their work. Most of the libraries suffer severely because so few *new* books are added. A large number of the collections are old and consist of partly antiquated literature which does not interest the readers of our day. A method has been introduced seeking to overcome this difficulty by changing the new books from one library to another and keeping each

group a fixed period of time at each place—that is, a regular exchange-system between the small libraries. This plan has proved a great success, as each library in this fashion gets many more new books a year than it would have received had it operated quite alone. The libraries when ordering books co-operate beforehand, to avoid duplication.

The modern loan-system with cards has been introduced in only a very few of the country libraries—the old-fashioned system with a big impractical ledger still being in use. Nor has the decimal system been adopted by most of these libraries. The books are usually marked with consecutive numbers, from 1 on, a very impractical method, I need not say. Great exertions are being made, however, on the part of the Ecclesiastical Department to have the libraries adopt the Decimal Classification. The cataloging also is rather old-fashioned. The catalog, which is only in manuscript, is arranged according to the consecutive numbers of the books. But increasingly libraries are adopting the modern catalog system (dictionary catalog) and the Ecclesiastical Department offers them printed catalog cards for books in their collections at an extremely low cost.

The city libraries are very different from the country libraries in Norway. In a large number of the city libraries modern systems have been adopted and at some places results are shown that would be worthy of an American library. The most striking effect of the introduction of modern methods has been the rapid growth in circulation. The Deichmanske Library of Christiania (250,000 inhabitants) in 1914-15 recorded a circulation of 656,855 volumes, while in the small city of Christiansand the average number of volumes lent to each inhabitant was very nearly 5.

In the large cities great efforts are made to give people a better opportunity to get good literature from the libraries. In different parts of the cities delivery stations are established, so that people may avoid walking a long distance to the library. These delivery stations, which most frequently are stationed in business stores, usually number a couple of hundred vol-

umes, from which the public may select. Catalogs and reading lists are displayed, that books which are not on the spot, may be ordered from the central library and called for at the station the next day. Naturally people become more inclined to borrow, when the books are brought so much nearer their homes. In 1913-14 the circulation from five delivery stations at Christiania was 58,375 volumes, or on an average about 12,000 volumes from each station. From four delivery stations in Bergen the circulation was about 17,000 volumes during the same year.

In recent years the American method of carrying on children's work in libraries has also been adopted by most of the larger cities of Norway. The public libraries have special children's rooms, light and attractive. In some places special lending departments for children are connected with the work in these rooms and in other places class-room libraries are sent to the schools for borrowing purposes. The city of Trondhjem (50,000 inhabitants) circulates 55,000 books to children during a year. The children's room of the public library of Christiania has an average daily attendance of 150 youngsters. To this number must be added the attendance at the children's rooms of the library's three branches. In Bergen three reading rooms for children last year were attended by 61,120 persons. Also it is encouraging to notice how the two institutions, the library and the school, are coming closer together in the feeling that they are both striving for a common aim. In Trondhjem the fine new school building, the Lademoen's school, has given over for the use of the library a large and attractive reading room, and recently a library of 1200 volumes belonging to the teachers in the schools was donated to the public library. In Bergen two new public school buildings were opened a couple of years ago, and in both the public library has acquired good-sized and very satisfactory reading-rooms for young people. In Christiania the school board is considering how to establish closer co-operation between library and school.

As a proof of the growing realization of the importance of libraries may be men-

tioned the recent erection of new library buildings in some of the larger cities. In Drammen (20,000 inhabitants) the handsome new two-story building is completed and the library (about 10,000 volumes to start with) is to be opened to the public in the immediate future. In Christiania the Grunerløkken branch of the Deichmanske Library has been in operation for a couple of years in a building of its own, which built on American plans proves very satisfactory for its purpose. The reading room for adults has a seating capacity of 54 and the one for children of 78, and the rooms are very crowded, particularly in the evenings. The excellently administered public library of Christiansand moved into a fine new building about a year ago.

Probably the most strikingly attractive building in an architectural respect will be the new library edifice of Bergen, to be ready for occupation in the fall of the present year (1916). It is kept in a typical old Norwegian style, which gives it an imposing and monumental appearance. The interior in its planning owes much to American ideas. The open-shelf room is in the center with the stack (running up in 5 tiers) immediately behind and reading rooms for adults and children on either side. On the second floor are the administration rooms, reference room, special music room (to contain Edvard Grieg's posthumous collection of music) and a large lecture room. The open-shelf room will be lighted from a skylight, leaving room for a small gallery on the second floor, to be used for special exhibitions and the like. In the lecture room a moving picture machine is to be installed, as it is the intention to show moving pictures to children at regular intervals. The cost of this machine as of all the books, pictures, lantern slides, etc., of the children's room is defrayed by a business man of Bergen, Mr. Bjørneseth, who is particularly interested in this part of the library's work.

Other cities also, such as Trondhjem, Skien and Bodö, have plans for the erection of new library buildings, plans which probably will materialize before long to the benefit of library work in these cities.

One of the most useful new methods

adopted in late years has been the sending of traveling libraries to sparsely populated country districts, that have no public library of their own. These traveling libraries contain 50 volumes, placed in attractive wooden cases and carefully selected by the library counsellor of the Ecclesiastical Department. One-half is fiction and one-half non-fiction. They belong to the state and may be borrowed on application to the department in Christiania or to the public libraries of Bergen, Trondhjem and Christiansand. The application must be signed by 10 adults or by the board of a public library or a society (young people's association, temperance society, etc.) Each case may be retained for a period of four months and the loan may be renewed for an additional two months. The rent amounts to 2 kroner (about 50 cents) a month, and the cases are sent and returned free of charge. It is quite astonishing how often application has been made for these traveling libraries; it shows that the desire for good reading is steadily increasing. At the public library of Bergen it happens frequently that applications can not be attended to at once, as no traveling libraries are available at the time. The number of cases is so far somewhat limited, but an expected increase will probably soon prove sufficient for the need. It is also encouraging to notice how widely the books from the traveling libraries circulate and how places that have had a traveling library almost without exception apply for a new sending when the time limit for the first one is out. In some places the traveling library has led to the establishment of a permanent public library. It is thus evident that the American method of sending traveling libraries has proven a great success, which is a rather natural result, however, when the long distances and scattered population of the rural districts of Norway are taken into consideration.

Another American method which has proven successful is the sending of library commissioners (or "inspectors" as the Norwegian term reads) to the public libraries all over the country. These inspectors, whose expenses are paid by the state,

travel to the different libraries in a locality, confer with the librarian and the board, give advice and direction, deliver lectures, and stimulate interest in the local library by addressing the leading people of the district. There can be no doubt that this library inspection does much good, in fact it has already at some places shown remarkably favorable results. Usually these inspectors (who for the most part are the librarians of leading city libraries) have had no other salary than the payment of their travelling expenses, but on the last budget the Ecclesiastical Department found place for a small salary for the inspectors, and it may be hoped that this is the first step towards the establishment of a permanent position for a library inspector for the whole country.

Closely related to the inspection is the question of library training. There is a growing feeling of the necessity of starting courses for the education of librarians and library assistants to take charge of the new public libraries to be administered along modern lines. Some persons have maintained that Norway ought to establish a permanent library school, like the schools of the United States, and at the annual library convention of 1911 it was resolved that "it would be desirable to start short library courses for the education of assistants and to introduce library education at the teachers' seminaries." In the summer of 1911 an attempt at a short library course was held at the Bergen public library. It lasted but two weeks, and was attended by 15 pupils, who heard lectures on the various library subjects and had some practice work. This first attempt was very encouraging, and three years later a more complete course was given at Christiania; 58 applications were received, but only half the number could be admitted. The state contributed 1200 kroner (about \$300) to the course, and half of this amount was used as traveling stipends for the attendants. The course embraced lectures and practice work. It lasted for 58 hours and included visits to the different libraries of the capital. Certificates were given to pupils who finished the course. At the teachers' sem-

inaries, library courses have been given during the latter years, and as the teachers usually serve also as librarians in the country districts, it is of great importance that they should have some kind of professional training.

There has lately been a growing tendency towards co-operation in library work in Norway, which is very promising. From 1908 on regular annual meetings of the library workers of the country have been held, at the initiative of the Ecclesiastical Department, and the proceedings of these meetings have frequently been of the highest importance, leading up to the introduction of desirable reforms in various branches of the field. Since 1907 the profession has had a periodical of its own (*For folke- og barneboksamlinger*), which is issued four times a year. Since 1916 it has appeared six times a year, and the named changed to *For folkeoplysning*. It contains many professional articles, whose purpose is to teach, advise and inspire the library workers of the country. The meetings and the periodical have created a feeling of the desirability of a closer communion, and this feeling resulted in the formation of the Norwegian Library Association which it is hoped will prove of great benefit to the library profession of Norway.

The association was founded in 1913 and has made a good start. It was an active factor in arranging the library exhibition at the great national exposition at Christiania in 1914. It has issued the first number of its "small tracts," giving a survey of library work in Norway up to the present time. The next tract, which is in press, is a guide to small libraries as to the technical details of library work. Last Christmas it issued the first three numbers of an annual series of popular scientific books which are meant particularly for the use of the public libraries of the country. This series, "the University of the Home," has met with much approval, and will be continued with treatises, either original or translated, on subjects on which no good and fairly modern books exist in the Norwegian language. The association has further organized an extensive library

advertising campaign throughout the country, with the purpose of stirring up the public to a fuller understanding of the essential factor which the libraries are in the work for educating the masses.

Taking a retrospective view it is very evident that much has already been done in the library field of Norway, but that still more is awaiting the combined energy and efforts of the men and women of the profession. The work by this time is getting to be fairly well organized, and naturally this is of great importance. The chief problems which are now facing the library workers of Norway and which will need to be solved in the comparatively near future can be summed up as follows: (1) how to increase the income of the public libraries, particularly in the country districts, (2) how to provide larger and more attractive quarters for the libraries, (3) how to give them an enlarged opportunity to get the best books at the least cost, and (4) how to give the library workers sufficient professional training, making them better fitted to fill their positions. Toward the solving of these problems the leaders of the profession are at present bending their energies, and the spirit of co-operation and enthusiasm characterizing this work offer much promise for the library future of Norway.

---

To the Minister of Education of the province of Ontario we are indebted for the use of the cuts with which this issue of the LIBRARY JOURNAL is illustrated. These libraries, with the exception of Hamilton, are built to house collections of from 2500 to 7000 volumes, and are located in different parts of the province. Ontario has been well called the "New York of Canada" for the pioneer work it has done in the library field, and much of the success it has had is due to the untiring efforts of Dr. E. A. Hardy, the secretary of the Ontario Library Association, whose paper on Ontario libraries is printed elsewhere in this issue. Since the organization of the association in 1901, with Dr. Hardy as secretary, he has labored unceasingly for the promotion of library welfare in every corner of the province.

## LONG DISTANCE REFERENCE WORK\*

BY RENEE B. STERN, *Mother's Magazine, Elgin, Illinois.*

HAVE you ever stopped to consider how many people take their pen in hand and begin: "Dear Editor"? Go to the editorial office of any live magazine some day and see the bags of mail unloaded, and you will realize that there are other places besides the library where people unburden themselves of reference questions. There is a subtle psychological effect, an element of authority, attained by the printed word such as mere speech cannot compass. A welfare worker supervising some two thousand girls had practical demonstration of that fact when she found a certain proportion were loth to take her unsupported word for a statement, but had no hesitation whatsoever in accepting the same fact presented in printed form, although this same welfare worker had written the pamphlet.

The public turns to the editor of its favorite magazine for advice on every conceivable subject, and the editor has to sustain his reputation for infallibility. As he has to maintain his health and sanity at the same time, and also keep a few minutes free for managing his periodical, these letters become a distinct problem in the editorial office. Nearly every magazine has some sort of a library for the use of its staff, although this is frequently merely a collection of books in no particular order. A favorite young people's magazine keeps a small number of reference books and a collection of classified clippings and pictures in charge of a librarian trained to handle material from the magazine point of view. One large chain of newspapers has few books, but a series of classified clippings is kept up to date and under the supervision of a number of boy attendants who are urged to efficiency by salaries that would make the ordinary library attendant gasp with envy.

But let us return to "Dear Editor" and the reference question. In order to find time for other duties, the editor-in-chief

turns over most of these letters to assistants for reply. Many go to specialists on their particular subjects, including perhaps a practicing medical expert, a director of household science and the professor of education of a leading university. But the rank and file of questions receive answer from material gathered in the periodical's own library.

The first duty of a librarian in organizing material, is to study her particular magazine and its correspondence files. What particular fields are covered by the magazine? Do the editors use any particular terminology? Do letters fall naturally into any special groups? On the answers to these questions depends the classification adopted. The Dewey system as it stands may not fit the situation, but makes an excellent basis for a classification constructed to cover the peculiar local needs.

For instance, the first rapid survey showed that a goodly proportion of the letters received by *Mother's Magazine* contain questions on child training; others ask for suggestions for entertainments; there are requests for club programs and musical programs; health, ethics and etiquette, immigration statistics and social center plans; while one gem begged for suggestions on decorating the drum for the Orangemen's parade.

In classifying material for the periodical it soon became evident that the main topics of inquiry centered logically under fifteen main heads, exclusive of Magazine business, and that over two-thirds of the material classified under six of these—Home, Amusements, Associations (including club work and civic societies), Child training, Health and hygiene, Sociology. Our natural and applied sciences go under the main head Science, since nearly all that material is in the subdivisions of Agriculture and Animal industries. Language and Literature grouped together are represented by a few good histories of litera-

\*Read before the Special Libraries Association, Asbury Park, N. J., June 28, 1916.

ture, commentaries and several shelves of collected poems and quotations. Reference includes directories and a goodly file of all types of current periodicals.

Our first problem was to make available the information contained in our letter files where some ten thousand inquiries, together with their answers, were filed in alphabetical order, according to the name of the correspondent. These letters and replies were all read and classified according to subjects. Some covered half a dozen topics of value and some were not worth any notice. A subject catalog was then made for all valuable information, a card to each topic. The sub-topics worked themselves out as we went along so that when the latter had all been cataloged we had a really good classification to apply in the arrangement of books, clippings and pamphlets. We did the letters first because they were the best possible guide to the types of material desired by our constituency and according to whose lines of thought our work must be directed.

Letters are kept alphabetized by writer and from some people we have quite a little collection of queries together with our replies. By looking at the catalog we find to whose letters we must refer for information on a specific subject. If these do not yield sufficient material for our purpose, we go to the clipping and pamphlet files which are also arranged by subject, as are also our book shelves.

Suppose a letter comes from Mrs. Walter Smith, of Eden, Kansas, asking for a series of twelve programs on South America, for her travel club, and also a method of stopping her baby's thumb-sucking habit. (Don't smile—they send just such a jumble of questions.) First, the letter file under "S" is inspected for any previous correspondence with this particular Mrs. Smith. Next, we look to the classified card index to see what we have written on both South America and on the thumb-sucking habit. On the former we find (under "Geography, history and travel," subdivision "South America") note of an outline on travel in Argentine and Chile written to a Mrs. L. B. Ross, and under "Child

training" (subdivision "Troublesome habits") a number of letters listed on thumb-sucking, one card being marked "good form letter." We get out the letter to Mrs. Ross and the good form letter. Under "Association—Papers" there is correspondence noted on a series of South American papers, and in our clipping file under like heading is a series of ten programs on South America. There is our material. We use the Mrs. Ross letter to add to these programs for the required number, copy the form paragraphs from the "habit" letter, and in ten minutes we are ready to answer Mrs. Smith's question. Had we found neither letters nor program material, the Geography, history and travel clippings under "South America," and books from our library in the same relative classification, would have supplied data for making those programs at once.

Books follow the same classification and a large library of clippings is similarly arranged in uniform sized manila envelopes with the classification headings typed on the end.

Certain requests are seasonal, and we prepare in advance programs, poems and papers for Mother's Day, Baby Week and other special anniversaries. To save time we have printed slips on methods of earning money at home and various types of entertainment, care of baby and mother, diet for children of various ages and menus for special occasions.

Nobody in an editorial office cares how things are classified or has any interest in technical methods. The only demand is that everything be accessible at once and so constituted that untrained assistants can handle material with the minimum of training. The classification must follow the needs of the periodical and be couched in language that appeals to those who use it. Amusements, Home, Child training, Health and hygiene—if these are where we look for the mass of our material, logically these become our main heads. It is easier to make an assistant remember that "AM" on a book label stands for "Amusements," then it is to teach her a decimal system, so it is "AM," "HO,"

"CT," "H & H," and so on for class numbers.

Suppose we forget where a subject is classified? Besides our classified subject index, a straight alphabetical card index is also arranged. Under Baby we find "See" headings under Child training; Sociology—Child welfare; Home—Baby; Home—Adopted children; Health and hygiene (headings under specific diseases, drug or habit). There might also be reference to Associations—Papers, if we had written a paper on the general subject of babies. Thus we have a guide to the various aspects of the problem by which to choose letters or clipping file material. Papers are written in multiple to provide material for the next call.

Sometimes letters are funny, but usually they are segments from the tragedies of life, which often require conferences with physicians, educators and ministers, together with considerable correspondence with our subscriber, before satisfactory reply can be made. Some small towns have no competent physician, or a woman may fear local gossip and prefer the long distance help of "Dear Editor" before letting her own doctor know she has tuberculosis. Or she will write to the person to whom she is only a name with a freedom concerning marital relations quite impossible to confide in the local minister. "My boy of seven lies and steals and I can't manage him though I whip him for it all the time." "I am so cross and irritable and my husband and I quarrel about nothing. How can I get self-control?" Such questions as these come constantly and mean considerable correspondence and often involve a consultation with a physician after sufficient data has been presented, for a large proportion of woes can be traced back to remediable physical causes or lack of knowledge of educational methods.

Does it do any good? Can this type of reference work be done by long distance method? Half the time the battle is on its way to victory when the writer feels that there is somebody on earth who is interested and trying to help. One half-dead little club gathered itself together and accomplished all sorts of wonderful civic

improvements, when taught. Many groups write for methods of doing something for the community, and what's more, they pitch in and accomplish it when shown the way.

Is it worth while? If you were the woman in the little town, or the bewildered, lonely big-city woman waiting for your answer from "Dear Editor" there would be no question in your mind that it is very much worth while. An editorial office is like a big telephone exchange, radiating to homes all over the country, carrying messages of cheer, help and criticism.

What does the magazine get out of it? Have you heard of a little thing called statistics? There is a general tab kept on the type of questions asked, as guide to the interests of readers, just as the responses evoked by a new type of article in the magazine indicate its popularity with the reading public. Also there is a sense of individual loyalty created by the personal touch of a letter. A little girl going from her country home to New York to work for the first time, wrote her mother's favorite magazine for addresses of places where she would be safe to board. Several girls' homes were listed for her, and if you had seen the grateful acknowledgment that came several weeks later, there would be no question that some readers are appreciative.

Altho the editor is a composite instead of an individual, and the librarian may never see most of her patrons, she is in touch with the whole round world and has variety that extends to all fields of reference work—from the data of ethics to the best reagent for the removal of vaseline stains.

As to equipment for such a position, there are several essential qualifications. The first is a good knowledge of library methods, especially classification. The second is an ability to disregard every library rule, especially classification. This is not a paradox. It is merely common sense. The basic principles remain, but must be adjusted to the peculiar needs of each individual magazine. A technical journal needs quite other main heads than does a household journal, and a medical publication demands still another arrange-

ment of material. Niceness of detail must give way to speed. Cards must be neatly typed, but there is no appreciation of perfect form. In a business house everything is estimated according to what return it makes for expense involved. A library means so much floor space at so much per foot, fixed charges for light, heat, janitor service, for supplies and salaries. Does the library give adequate return for these? Can it produce material at once and what percentage of questions are answered on first attempt? These are the things that count; all else give way before them. But for all round reference work there is no position equal to that of librarian in a live editorial office.

#### THE LIBRARY AND THE BOOK-TRADE\*

I HAVE had an opportunity within the past few weeks to discuss the relations of the library to the bookseller and publisher with some of the largest booksellers in the country who pay especial attention to library business, and have been greatly interested in what they have told me. I endeavored first to get some information as to the importance of the library business to the book-trade. I have the impression that while the library business is undoubtedly important, still, the books purchased by libraries are a very small part of the entire book sales of the country. This is something on which I realize it would be impossible to give any accurate figures, yet guesses are interesting, varying as they do from one to fifteen or twenty per cent. Possibly the average opinion would be that the libraries take two per cent. of the volume of novels published in this country and not over ten per cent. of the other books. My own guess would be that both these figures are too high.

Another opinion in which I was interested was expressed by two leading dealers, namely, that somewhere from forty to sixty per cent.—averaging the opinions I would say fifty per cent.—of the bookselling to libraries is in the hands of

a few large book jobbers who pay especial attention to library business; while this, I imagine, is largely guess work, there can be no question but that a very large share of the business is done by these dealers, while the business done by the remainder and second-hand houses is considerable but very small in comparison with that of the regular jobbers.

The most out-standing question—the one which comes into mind when we discuss our relations with the bookseller—is that of price, and I will consider that first. I have asked myself, and I have asked others, why a library should have a discount as a library, and I have never received a satisfactory answer. My own view is that there is no ground for thinking that libraries should have special treatment and receive any special consideration on account of the nature of their work, and I think the feeling that they should, so far as it exists, is a survival from those early days when the minister and the teacher were given a discount on account of their educational service to the community, and doubtless also because they were known not to receive very large salaries. The result was that in a few years discounts became very general; everybody expected twenty off, very much to the demoralization of the book-trade. To remedy this it became necessary to bring about a gradual change to net prices.

It is fundamentally unsound to base the question of price or discount on the occupation or the purpose of use on the part of the purchaser. The minister and teacher ought to be paid enough to buy their books as other people; and this is equally true of the library. It is supported by public taxation, in which case the bookseller pays his share, as other citizens, and should not be asked to make a special additional contribution in the way of discounts greater than the volume and character of the business would warrant; or it is supported by endowment, in which case the donor certainly would not want the bookseller more than any other citizen to help support the library.

The only logical and fair way of fixing prices and discounts for any purchaser is

\*Read before the American Library Association at Asbury Park, July 2, 1916.

to gauge them by the volume and character of the purchases. The library book-buyer has a right to expect as large discounts and as generous treatment in every way as is accorded to any buyer of equal quantities and of the same goods, modified by two or three other considerations which affect the value of the business to the dealers. Some of these last are: (1) The intelligence and accuracy with which orders are placed; (2) the certainty that payment will be made; (3) the promptness with which payment is made; (4) the amount of goods returned.

About these four points I have the opinion of a considerable number of book-dealers. Taking up the points separately, the opinions summarize somewhat as follows:

(1) I find that libraries stand fairly well in the matter of the intelligence and accuracy with which their orders are placed, tho dealers say there is a very great deal of difference in the individual libraries in this respect. The large library where the work is thoroly systematized sends its orders accurately and carefully made out giving all the necessary data, and its orders are therefore easy to fill. On the other hand, many libraries are careless in giving the information, uncertain as to what they want. If the purchases are made personally, a great deal of time is taken in their selection. I think the consensus of opinion from the book-dealers is that the majority of the large libraries are above the average customer as to the form in which their orders are placed, and that many of the smaller libraries are very much below the average, requiring more attention and time to sell the same amount of books than the ordinary private buyer.

(2) The credit of libraries is beyond question, according to the general testimony of booksellers. The loss of a library account is very rare.

(3) Regarding the time of payment, libraries are, on the average, prompt. There are occasional delays, due generally to formalities. They probably average better than the private buyer.

(4) As to the return of books, libraries rank very low in the estimation of book-

sellors. While many booksellers send out books on approval, accepting their return as part of the business, and sometimes even permit books to be returned which were not on approval, in case the library decides afterwards to return them. There is no question that this is a very serious deduction from the value of the business of the library to the bookseller and may very fairly, and actually does, affect the discount which the bookseller can afford to make.

The most serious objection to the return of books is, I suppose, the work involved. I saw an illustration of this recently. \$100 worth of books are sent out on approval and \$25 worth are returned. Assuming, which I think is really true, that it is almost as much trouble to the bookseller to receive books back, check the bills and restore them to their places, as it was in the first place to bill and sell them, such a deal would mean that the bookseller handles \$125 worth of books in order to sell \$75 worth, at an expense which greatly lessens the profit of the transaction, if it does not render it entirely profitless. The overhead expense of the bookseller is a factor which the librarian does not always take into account. Another serious objection to the return of books is the difficulty of keeping them from injury. It is practically impossible for even a careful reader to read a book thru without making a second-hand book of it. If you will notice a book which has been read, lying flat on the table, you will usually observe that the accurate curve of the front and the back is gone, one of the covers projects beyond the other, and the front is comparatively flat. The book is not fit to go on the shelf of the bookseller and be sold as a new book to the fastidious buyer. It would probably go to a library without question, if the bookseller happened to have another library customer for it. I have no doubt that many booksellers endure very serious impositions of this sort rather than disturb their pleasant relations with library customers, believing that on the whole the business with libraries is profitable. This I think, in simple fairness to the booksellers, should be adjusted in some way, pos-

sibly by the reduction of discount on books which are sent on approval, so that the larger profit on those retained would fairly offset the injury to those which are returned.

There are, however, certain other very important things involved in the relation of libraries to the book trade, relations of mutual service. I have been greatly impressed during the years in which I have known something of and have had some experience in library book-buying, with the thorough honest service rendered to libraries by booksellers, and more particularly by those larger jobbers who pay especial attention to the business of libraries, studying it carefully and equipping themselves to give satisfactory service. Such a bookseller will not intentionally sell to a library a book which he does not believe to be the best selection, the best edition, or a desirable purchase for the library.

The library may and does receive from the bookseller most valuable service in the making up of its orders. The larger library, with its full equipment of bibliographies, keeping up with the trade lists and journals, is much better able to select books wisely than is the small library; but even the large library may receive valuable assistance from the intelligent and well-equipped bookseller; and the small library with a meager supply of trade-helps needs such assistance much more. I am impressed with the fact that the intelligent bookseller does render real service to the library in addition to merely filling the orders as placed.

On the other hand, I am no less confident that the library renders a great service to the bookseller, in educating an army of readers who are and will be more or less book-buyers, and the aggregate of whose purchase, I believe, will very much more than offset any lessening of book-buying which may come from the fact that books may be had free in the library. This phase of the question was most admirably treated by Mr. Dudgeon in a recent paper at the booksellers' convention in Chicago, and was compared with the methods adopted by organizations in other lines to create a demand for their goods. As to

this particular question—whether the library increases or diminishes the business of the bookseller—there is a very wide difference of opinion among booksellers. So far as I can learn, some of the larger booksellers are inclined to regard the library on the whole as helpful to the book business, while others disagree with this, and the smaller booksellers more generally seem inclined to look upon the library as rather a rival and a detriment to their business. My own view of it is that the library and the bookstore are mutually serviceable to each other. The bookseller may, and the best of them do, give to the library more than mere exchange of so many books for so much money without reference to the interests of the library. They give, beyond this, an intelligent and valuable service and a genuine interest which lead them to regard the library's advantage as well as their own. On the other hand, librarians should, and many of them do, realize the difficult problems of the bookseller.

The interests of both the library and the book-trade would be promoted by a better understanding on the part of librarians of the problems and difficulties of the publisher and bookseller. No fair minded librarian wants a bookseller to sell books at a rate so low as not to afford a reasonable profit. On the other hand, every librarian should insist on the lowest rates that the volume and character of his purchases will justify. Nor should the library whose orders are carefully made and intelligible and whose bills are promptly paid have its discounts held down for the shortcomings of other institutions.

Better acquaintance and mutual understanding of each other's problems should furnish a substantial basis for business relations advantageous to both libraries and the book-trade.

WILLIAM H. BRETT.

#### INADEQUATE SALARIES OF SCHOOL LIBRARIANS

In the report on "The public library and the public schools," prepared by Leonard P. Ayres and Adele McKinnie for the Cleveland Education Survey, there is much food

for thought. While the information gathered is confined to conditions in Cleveland, much of it is equally applicable elsewhere. The section on librarians' salaries is a clear and concise statement that may be read and pondered to advantage by every school librarian.

"As a class the librarians in both the elementary and high schools are well equipped and underpaid. Most of them have graduated from high school, gone thru college, taken a two-year course in a training school for librarians, have worked for several more years as librarians, and some of them have had several years of teaching experience. Those in the elementary schools are as a class as well educated and better paid than those in the high schools. Among both groups the average of training and education is higher than it is among the teachers of the public schools.

"The management of the public libraries is to be commended for its success in securing exceptionally well-qualified people for the positions of librarians in schools. Nevertheless, there is little in the records of the employment of these librarians to encourage any young woman in Cleveland in the aspiration to go into such work. At present the average length of service among the elementary librarians is about eight years and their average annual pay about \$820. Among the high school librarians the average length of service is twelve years and the average annual salary \$775. These figures indicate that the librarians are seriously underpaid as compared with the teachers.

"This may be appreciated by comparing the probable professional experience that two Cleveland girls might have if one decided to enter the service of the public schools and the other the service of the public library as a school librarian. The former would complete her high school course and then receive two years of training in the city normal school at public expense. The other girl would go thru high school, then complete a four-year college course at her own expense, and after that go to a library training school, also at her own expense. She would require six years of training, paid for from her

own funds, as compared with two years' training paid for from public funds.

"A dozen years later the girl who entered the service of the elementary schools as a teacher would be receiving higher pay and she would have earned since going to work about \$4000 more than her companion who entered the service as an elementary school librarian. The librarian requires more time for her education, spends more money getting it, progresses less rapidly, earns a smaller salary, has less chance of promotion and does not enjoy the benefits of a pension system after her service is completed.

"The comparison between the records of two young women entering the high school service is even more impressive. In general terms it may be truly said that the high school librarians have better professional preparation than the high school teachers and are paid less than half as well. They are receiving from \$660 to \$960 per annum after periods of service which would have gained for them, if they had become teachers in the same schools, annual salaries of from \$1100 to \$2000. If two young women should prepare respectively for high school library work and high school teaching work in this city, their professional records, after a dozen years of service, would be strikingly different. The librarian would have spent more years and more money in securing her education. After she had worked a dozen years her aggregate earnings would have amounted to some \$9000. Meanwhile the earnings of her companion, who had gone into teaching in the same school, would have amounted to \$20,000. In addition there is the matter of the pension, as was mentioned in comparing the elementary teachers and librarians.

"It will be realized from the foregoing that one of the important problems which the city must face in the administration of school libraries is the payment of the workers. Every argument for the adequate payment of teachers applies with equal force to the school librarians. In addition it must be remembered that it is difficult to expect the librarians to be accepted as professional equals of the teachers in the

same schools, unless the city that employs them all itself recognizes such equality by paying them equally well."

#### AN EVENING CLASS IN LIBRARY TRAINING

IN September, 1915, the Board of Education of New York City installed in the Bay Ridge Evening High School for Women, Brooklyn, a class in library training.

This school is in reality a vocational high school for women. It includes in its curriculum courses in stenography, typewriting, domestic science, art and nursing. Its graduates are already finding places for themselves among the professionally trained women of the country.

The library course is an innovation. It was first planned and offered to meet a demand from young women who cannot afford to give up their day positions to take a course in a library school.

The requirements are a high school education or its equivalent. The course is two years in length, four evenings a week. The work pursued is that outlined by the Brooklyn Public Library, and is being kept to the standard of the average training class. It is not intended as a complete preparation for the highly paid position, but only as a stepping stone in the library field.

The material constituting the first year class was especially pleasing. Most of the class are young women between the ages of twenty-two and thirty. They are young women of refinement, many of them finding this opportunity the realization of a long desire. Most of them are employed during the day. It is a strong purpose that will bring a young woman a long distance four evenings a week to an evening high school after a hard day's work. It is this splendid determination and high purpose that the instructors believe will be a fine asset in the qualifications of these students when they are ready to go into the field. It is expected that the class will be given a term of practice work in a public library.

The first year was a successful one, fifteen students completing the first half of the course. Four of the students found summer work as substitutes in the libraries of Greater New York.

#### AN INSTITUTIONAL LIBRARY—AN EXPERIMENT

IN view of recent recommendations made by the investigating committee appointed under Commissioner William J. Doherty, in regard to ideals for child-welfare caring institutions, the following experiment has been made in the Brooklyn Industrial School Association and Home for Destitute Children.

In February, 1915, a delightful, sunny room, known formerly as a manager's room, was thrown open to the children as a library. A trained librarian was placed in charge for two hours each afternoon. Of course, little could be done in the way of organization in so short a period, but it was a splendid beginning, in that it offered to the children an opportunity for selected reading. In seven months, the library time was extended from two to four hours each day. The institution owned a few hundred books. These were supplemented by numerous and varied collections of books from the ever-ready traveling library department of the Brooklyn Public Library, and generous donations of books from the library committee. In August of this year, the library was refitted, walls retinted and some equipment installed. This was made possible thru the generosity of friends of the institution.

At first the children were slow to read, many never having acquired the reading habit. Besides, a library was supposed to be a horrid place where one had to sit still and had to read a stupid book. That idea was soon eradicated, for during the winter and spring of 1915, the children came voluntarily to the library. Perhaps to the detriment of library order, and contrary to all standards of children's library etiquette, these children were permitted to have a good time in their own way, not noisily, neither in absolute silence. Even much loved dollies were permitted and quiet games in corners. To far-away relatives, also, were written many letters, always beginning: "I am well and happy, hoping you are the same."

In August, 1915, more of a library atmosphere was required, and to reach all the children in the institution, a summer sched-

ule was made, by means of which the children came by grades for an hour each day and were *required* to come. This brought new adherents, and the library's popularity grew. Informal story-hours were given. Often a group of little heads around the librarian's desk was found to be listening to the reading of poetry. "Horatius at the bridge" was the favorite that summer. One little Italian boy, with eyes of wondrous size and lustre, demanded "Horatius" again and again, and after each reading of it, added to his dreams another doughty deed in imitation of the brave Horatius.

So many good times of an informal nature came that the library was rapidly becoming a recreation room. To fill the social need as well as that of the library, two clubs were formed in the autumn of 1915. These were for the older boys and girls, from twelve to sixteen years. Membership came thru honor lists in school and department in the institution. Many a prank was foregone in order to gain membership. The clubs were largely social, that seemingly being the crying need. Trips were made to places of interest in New York and Brooklyn—to the Aquarium, to the children's room of the Pacific branch library, Brooklyn, to the library for the blind and to historical moving pictures, these being greater treats and probably of more value than any form of reading a club could offer to these children who so much of the time live "inside." However, there have been some stories told and some practical talks given on events of interest in the outside world. Dancing lessons have been given to the girls. Both clubs are becoming familiar with the rudiments of parliamentary law. The day the boys' club drew up a constitution was one to be remembered. Debate work is planned for the coming year.

There has been a rapid and marked gain in the quality of the children's reading in one year. Scott has been read by a few from an old edition that would discourage the average adult. Dickens has been asked for. Mrs. Ewing has been devoured by some. Poetry and American history have been and are the most popular subjects

after fiction. At first many of the children were content to look at the pictures. Even a boy of twelve, during those first weeks of the library, preferred a large illustrated edition of the Bible, and gravely confided to the librarian that he was "awful 'fraid he was going to hell."

The "Home" is also a school. About two years ago the children were given the advantages of the public school system, a principal of all the grades being in charge with her corps of teachers. At present the older children go to an outside public school, the younger children remaining in the building under the public school teachers. Lists of good reading and new books, either bought or borrowed, are sent to the teachers for the purpose of assisting in the work of the class-room. Material for holidays and celebrations is also provided. But greater than any part of the library's work in its little community of some three hundred children, except for the opportunity of the book itself, has been the opportunity for individual work with the children. In their games, in the decision as to who should be given a coveted book, "fair and square," has been a constant slogan; truth telling not always found, but worked for; and instant obedience in sight, tho still unattained.

During the winter of 1915-16 a prize was offered to the boy and girl who should write the best essay on "The book in the library that I like best." The first prize among the boys was given for a description of Scott's "Lady of the lake"; the first among the girls for one on "Anne of Green Gables." Conferences with the club members, named by the boys "chats" and by the girls "visits," are numerous, sometimes breaking in upon the routine of the library, but doubtless of equal value to the children as a perfectly quiet and well-ordered library. It is the high ideal and the splendid policy of the president of the board of managers, Mrs. Eliza B. Zabriskie, and the chairman of the library committee, Mrs. George W. Davison, that have made the individual work of the library possible. The book is an established asset now in this institution. Gladly now we hear the children talk of favorites in books as well

as in *butter*. A little "orphan," on a wonderful trip to Coney Island last summer, while laboriously *buttering her meat*, claimed that "butter was her favorite." So, now, are the old tales and the poems given an equal place.

URSULA K. JOHNSTONE.

#### MARY WRIGHT PLUMMER

THE death of Mary Wright Plummer, which occurred at the home of her brother, Joseph P. Plummer, in Dixon, Ill., at three o'clock on the morning of September 21st, is not only a loss of largest value to the library profession, but of keen personal sorrow to the host of close friends which Miss Plummer's long and helpful career has earned for her within that profession. Happily, her life work was crowned by the largest recognition of her worth in the profession that could be accorded her when in 1915 she was elected to the presidency of the American Library Association, the second woman to hold that post of honor and responsibility. At the very time of her election she was in a hospital undergoing an operation which it was hoped would save her for many years of usefulness to come. That hope was disappointed and despite periods of recuperation, her vitality was steadily lowered so that it was impossible for her to preside at the conference for which she had made such careful and effective preparation of program and other details. At that time very encouraging words of her and from her and the regret of the large conference at her absence from the large gathering which delighted to do her honor, and the collective and personal expressions of regret, were coupled with the hope that she might return to the circle of her work and her friends. She was relieved from duty as the head of the Library School of the New York Public Library, but it was still hoped that the year's leave might prove a sabbatical year of rest and refreshment. Unfortunately the ailment proved a mortal one, and tho transfusion of blood saved her for a while and tho from her bed in the hospital came occasional letters from her pen, the end could not be long deferred.

She was removed safely from the hospital in Chicago, where she had been during the spring and early summer, to her brother's home at Dixon, where she passed away. Her honored father, as well as several brothers and sisters, one of them the wife of Director Anderson of the New York Public Library, survive her.

Mary Wright Plummer was of Quaker descent and in her quiet and gentle manner showed this lineage. But under this quietness was a nervous temperament full of energy, which found outlet in good work in many directions, but which told on her vitality perhaps the more because of the repression of outward manifestation.

She was born at Richmond, Ind., March 8, 1856, her father being Jonathan W. Plummer, a Chicago merchant. She spent two years in Wellesley as a special student, and was a member of the first class of the first library school, opened by Melvil Dewey at Columbia College January 5, 1887. On her graduation in 1888, she was appointed a cataloger in the St. Louis Public Library under Frederick M. Crunden. Here she stayed until 1890, when she resigned and spent the summer in Europe. On her return she assumed the librarianship of the library at Pratt Institute in Brooklyn, succeeding Miss Eulora Miller. That same year she started a training class in her library, and this class, successful from the first, soon developed into a full-fledged school. In 1904 she resigned her position as librarian in order to devote all her time to the Pratt Institute Library School, of which she was the director. She left this school in 1911 to become the principal of the newly organized library school of the New York Public Library, where she remained until her health failed this summer.

She had a true and vital poetic gift, and some of the poems collected in her privately printed volume of 1896, only a few of which had been published in periodicals, showed rare insight, reached the depths of emotion and were phrased in graceful, fitting and perfectly worked verse. Journeys to Mexico and to Canada gave opportunity for those two charming books of travel for boys and girls, "Roy

and Ray in Mexico" and "Roy and Ray in Canada," which have won deserved popularity in children's library rooms. She was a student of language and literature, made herself master of Italian and other tongues, as well as French and German, and found correspondents in other lands, among them especially her close friend Prof. Biagi of Florence. From her studies in literature resulted another book, "Stories from the chronicle of the Cid," in which she phrased felicitously some of the old Spanish traditions, and she was also the translator and compiler of a book on "Contemporary Spain," published in 1899, and made up of extracts from the works of modern Spanish novelists. Her "Hints to small libraries," reprinted in several editions, and "Training for librarianship," both published by the American Library Association, have been full of help and inspiration for many library workers.

Miss Plummer received many honors. She was the president of the New York Library Club in 1896-97 and again in 1913-14; president of the Long Island Library Club in 1897; United States delegate to the International Congress of Libraries in Paris in 1900; president of the New York State Library Association in 1906, and president of the American Library Association in 1915-16, having been vice-president in 1900 and in 1911.

The word of her death came as the executive board of the New York Library Club was in session at the New York Public Library, and steps were at once taken to provide for a memorial meeting in which the several associations with which she was connected will have opportunity to be represented. Since the death of Dr. Billings, no one has passed away who leaves so large a vacancy in the library profession, and the meeting which will honor her memory will be no less representative and appreciative than that in which his memory was honored.

So far as known the portrait of Miss Plummer which was taken when she became president of the American Library Association and which was printed in the January, 1916, issue of the LIBRARY JOURNAL, was the last one she had made.

### WILLIAM IVES

WILLIAM IVES, who served as librarian of the Young Men's Association and the Buffalo Library for fifty-two years, died in Buffalo, August 21, 1916, at the age of ninety-nine years and six months.

Mr. Ives was born in Pittstown, N. Y., February 9, 1817. He was appointed librarian of the Young Men's Association in 1854. This association was organized in 1836, and at that time of Mr. Ives' appointment occupied rooms on the second and third floors of a business block on Main street. At the time of the celebration of Mr. Ives' fiftieth anniversary of his appointment, he gave some description of his quarters and of his duties during his first year of service.

"Its quarters were reached by a sixty-foot hallway and a long flight of stairs. Another stairway led to what was known as the American Hall, used by the library as an auditorium. The library room was 80 x 22 feet, and adjoining it were a committee room and a room for the furnace which heated the hall above and the newspaper room. The furnishings were exceedingly plain, not to say scant. They consisted of three oblong tables, a dozen uncomfortable chairs, a sheet iron stove and six big spittoons.

"The duties required the library to be open at 8 a. m., closing for an hour at noon, another hour from 6 to 7 p. m., closing finally at 9 p. m. The rooms were to be kept in order, the seats and chairs in American Hall were to be moved and replaced as they might be required for lectures, concerts and festivals. I was to attend to renting the hall and collecting the rents. All books purchased or received as gifts were to be properly recorded, cataloged, labeled and placed on the shelves. The post office was to be visited twice a day, papers placed on file, bills were to be made out against delinquent members and collections made as far as possible. I had no assistant the first year. The second year a boy was employed certain hours, so that the necessity of closing the library for meals was obviated. The library at this time contained about 5500 volumes, the circulation on rush days reaching 100.

Buffalo at this time was a city of about 40,000."

The Young Men's Association continued to grow year after year, and in 1865 was able to purchase a fine property on Main street, which it occupied until 1886. In 1886 the association erected the building which is still occupied by the Public Library, its successor. In 1897, thru a contract between the association and the city of Buffalo, the Buffalo Public Library was established. The late J. N. Larned was superintendent from 1876 to 1897, and Mr. Elmendorf was appointed superintendent of the Buffalo Public Library in that year. Mr. Ives continued to hold the position of librarian until his resignation in 1904, after a continuous service of fifty-two years.

Mr. Ives never lost his interest in the library, and was a frequent visitor until a year or two before his death. The first branch of the Buffalo Public Library, which was opened in 1900, was named the William Ives branch in his honor.

No notice of Mr. Ives would be complete without a reference to his daily weather records, which were begun long before the days of the United States Weather Bureau and kept faithfully, day by day, during a long period, even many years after the weather service was established.

Mr. Ives' hundred years brought him no enemies. He was a good citizen, always devoted to his church, his work and to his garden, and was always willing to help whenever he saw an opportunity. While his old age was made lonely by his being the last survivor of his family, with the exception of a granddaughter who lived elsewhere, he never lost his cheerfulness nor his interest in his friends and neighbors and in the world's happenings.

W. L. B.

THE LIBRARY JOURNAL regrets that thru an oversight credit was not given in the September number to the *Amherst Graduates' Quarterly* for its courtesy in lending its cuts of the floor plans of the new Amherst College Library.

## BOOKS IN INSTITUTIONAL LIBRARIES

At the National Conference of Charities and Correction in Indianapolis last summer, there was an interesting discussion on the subject of books and libraries in reformatories and other institutions.

The first question raised was with regard to libraries in county jails. Was it a desirable thing and why? Miss Scott, organizer for the Indiana Public Library Commission, stated that a library in a county jail was a good thing if only as a "piece of furniture." The books served to while away the time and would have the same good effects that may be expected of books anywhere.

Miss Curtis described a county jail which had been supplied with books from the Public Library of Louisville, Ky., and which is now one of the branch libraries of that system.

As to methods of obtaining funds for books for county jails, Miss Templeton, secretary of the Nebraska Library Commission, was of the opinion that the best way to secure such funds was to get the consent of the authorities to include the library in the budget. Speaking further of the value of the budget system, Miss Templeton said:

"It seems to me that the greatest need of our institution libraries is a regular appropriation. We know how little a public library would amount to if the city made a practice of providing for the library out of the general funds after the care of the streets, the police, and other departments had been taken care of. Or if the library had to subsist on irregular and indiscriminate private generosity. It is not until the city sets aside a separate library fund that the library is on a firm foundation. From that moment—no matter how small the amount—the library goes forward.

"So the library should be included in the regular budget of the institution and if the money is wisely spent, no matter how small the amount—the library will grow up in time.

"It is surprising in buying books for institution libraries how far the money will go, for you are buying usually for one

758c

FOREST PUBLIC LIBRARY

THE PUBLIC LIBRARY AT WATFORD, ONTARIO

special class of people. Take for instance the Boys' Industrial School in Nebraska, which has about 180 boys. We have spent only about \$100 to \$150 a year for their library, but in five years we have built up a library of between 700 and 800 books and have as good a collection of books for boys as found in the ordinary public library.

"In our orthopedic hospital we have less than 150 children. We have over 1100 books—the very cream of children's books and we are spending only about \$150 a year on it.

"In Nebraska a special appropriation for books in institution libraries is made by the legislature—an appropriation of \$1800 a year for thirteen institutions, with a population of about 4000 people. This sum does not seem a great deal, but by spending \$1800 last year and the year before—this year and next—we are going to have an adequate collection of books, and since we have also a special librarian to expend that money, the libraries will be real, workable libraries without any dead lumber on the shelves."

Mr. Robinson of Philadelphia inquired as to the best manner of selecting books for institutions. Was a knowledge of local conditions necessary to wise selection? Miss Templeton, being called upon by the chairman, expressed the feeling that it was necessary to know the field and its needs and described the manner in which Miss Williams, the institution librarian of Nebraska, got in touch with the school rooms, shops, and hospital wards, in order to find out what they needed and would enjoy and use.

Mr. Shirer, of the Board of State Charities in Ohio, spoke of the condition of libraries in that state that had received donations from well-meaning persons who had books to spare which were entirely unsuitable for institution libraries. In order to obtain better books, the Ohio board secured the services of a librarian formerly connected with the Children's Department of the Cincinnati Public Library. She had compiled for them a list of books which they had published under the title "A children's home library; suggestions for Ohio child-caring institutions." This list is ar-

ranged by grades and contains author, title, publisher and price. It embodies also a list of books useful for the members of the staff. It can be obtained on application to the Board of State Charities, Columbus, Ohio.

Elizabeth MacGregor, superintendent of the Hospital for Crippled Children, St. Paul, Minn., in reply to the question whether she bought expensive books for the children's library, said that she purchased fine picture books, not for general circulation but for table use and as "rewards of merit." Miss MacGregor selects the same sort of books as are found in the best children's libraries and uses the same guides for book selection that are in use in other libraries. The children in her hospital have regular hours for story-telling by the librarian, who has no other duties outside the library, except the teaching of the bed patients.

Miss McDermott, of Chicago, inquired "What time is given to interesting the staff and employes in the library?" In answer to this question Miss Jones of McLean Hospital explained the course of lectures given to nurses in that hospital on books and reading, art and current events and repeated the expressions of satisfaction which the members of the class had voiced to show their appreciation of the advantage to them professionally and otherwise of these "culture courses."

An inquiry about the availability of books in foreign languages, especially Polish, brought out information as to the collections loaned by certain library commissions and also the lists of books in foreign languages for sale by the American Library Association Publishing Board. Rabbi Leon Volmer, superintendent of the Jewish Orphans' Home in New Orleans, La., asked whether there were interlinear translations of any of the classics of the foreign languages, stating his feeling that such would be of great use in teaching a foreigner English and at the same time giving him the comfort of his mother tongue.

---

Every book is, in an intimate sense, a circular letter to the friends of him who writes it.—ROBERT LOUIS STEVENSON.

## SUMMER LIBRARY CONFERENCE AT SIMMONS COLLEGE

THE conference of the librarians in session at Simmons College July 25-27, under the auspices of the Free Public Library Commission of Massachusetts, brought together an unusual number of devoted men and women. The commission planned the conference of 1916 to be of service especially to those who have charge of the libraries in the small towns, and for this occasion it employed its statutory power to assist librarians in towns of less than one million dollars valuation, by paying all the expenses of those librarians who could not otherwise have attended the conference from such towns. The guests of the commission met for the meetings at Simmons College, and found rooms at the college dormitories and the Deaconess Home nearby. One hundred and thirteen trustees, librarians and assistants attended.

The purpose and plan of the program was primarily to bring before the conference ways and means of stimulating the service rendered by librarians to a broader, more intelligent influence. The various phases of library routine were discussed from this viewpoint. The opportunity in well conducted reference work and the books available occupied three lectures by Miss Susan Crampton, former reference librarian of the Public Library, Tacoma, Wash. Miss E. Louise Jones, general secretary and library advisor of the commission, urged efficiency in administration thru simple methods. From her experiences with work under the commission, Miss Frances S. Wiggin, director of school extension service for the Beverly Public Library and Essex county, presented a program for vitalizing school work by giving instruction to all pupils of certain grades in the use of the card catalog, reference books and periodical indexes. Miss Florence E. Wheeler, librarian of the Leominster Public Library, illustrated the value of publicity thru the newspaper, window exhibits, signs, receptions and exhibitions in the library. Miss J. Maud Campbell, the commission's director of work with foreigners, showed ways and means of interesting the alien, a large factor of the

population of the commonwealth, and in vitalizing the library service to aid him to select whatever in the best of our way of living may be of value to him and to preserve the best of the traditions he brings with him. For efficiency in book selection, Miss Ida F. Farrar, of the Springfield Public Library, discussed the best recent books for the small library.

Attention was also directed to existing institutions which render aid to workers for library development. John A. Lowe, agent of the commission, showed ways in which the Library Commission can help to make the small library more efficient. Charles R. Green, librarian of the Massachusetts Agricultural College, discussed the practical use in the small library of the publications of the college. Charles F. D. Belden, librarian of the State Library and chairman of the commission, explained the nature and function of the State Library and the aid it renders to libraries, and pointed out certain Massachusetts documents which are of special interest and value to small libraries.

Miss Ahern honored the conference with her presence, and after speaking briefly of what the continuous reading of *Public Libraries* could do for the development of library service she made an inspiring address on the "Floodtide of librarianship."

An exhibit of charts, photographs and samples showed to the conference in concrete form some of the experiments which had proven helpful to other librarians. Lists and material for distribution were carried home in large quantities for a more careful reading at home.

Demonstration visits were made to the Brookline Public Library, especially for work with children, and to North End branch of the Boston Public Library for work with aliens.

The guests of the commission were enabled by this meeting to get a new viewpoint of their own individual work, learning much from discussing problems with others, and gaining a new understanding of what the commission and other institutions are doing and wish to accomplish for the small libraries of the Commonwealth.

JOHN A. LOWE.

## TOWER HILL LIBRARY CONGRESS

THE Tower Hill Library Congress, which was held at Tower Hill, Wis., under the chairmanship of Miss Lutie E. Stearns thru the week of August 7-13, was in many respects unique among library conventions. It was a time given over wholly to conference and discussion without a single set speech, address or lecture from start to finish. It embraced librarians from North Dakota, Illinois, Wisconsin and Michigan. The librarian of a little club library on the Dakota prairie gained inspiration from informal discussion with the librarian of a town of 600,000 population, and the reverse also was significantly true. The week had nothing of the technical side but it was rich in the deeper things of library science and economy, as it dealt with the questions of morality, politics, labor, race and war problems, public leisure, the children, and other underlying questions of the deepest import to the conscientious librarian. Such things as: what should be the librarian's attitude towards the local option campaign, pool rooms, the social evil, news-stands that sell sensual magazines, and indecent moving pictures, occupied the thoughtful attention of the morning conferences, together with the discussion of the growing sensuality school of authors, such as Merwin, Chambers, Glyn and Morris. In the discussion of controversial literature, religious, political or otherwise, it was the consensus of opinion that the "open table" should prevail, everything being admitted in the way of propaganda of various political beliefs or religious cults that kept within the law and was not abusive or libelous. As to periodical literature it was held that libraries should take some of the less known publications rather than the popular ones that are found in so many homes. It was decided to cooperate with the club women of the country in written protests to the editors when bad stories and serials appear.

The problem of the dime novel which is read so extensively by so many boys who prefer "Slimsey, the Sioux City Sleuth," or "Not guilty, your Honor," to "Pilgrim's progress" or "Robinson Crusoe," was debated at length, it being agreed that some-

thing akin to the dime novel but without the "bluggy" elements should be used at first to wean the boy away, this being followed by the best of Munroe, Stoddard, Barbour, on the principle of "the expulsive power of a new affection." It was decided to protest against the publication of the interminable series for boys such as the "Motor boys," "Aeroplane boys," "Submarine boys" and fake "Boy Scouts." In discussing the race problem it was held that libraries were for "humans" and in places where local prejudices exist toward the use of the library by any race that facilities must be provided for the ostracised class. As war is literature's greatest enemy, the librarian should bend every effort toward peace propaganda. The problem of public leisure was conceded to be one of the greatest problems of the day and the moving picture was held to be the great rival of the former popularity of the reading room. Librarians were advised to include asbestos booths in the plans for their library buildings and to secure good films of an educational nature leading to the use of books. Librarians were also advised to work for local censorship and to cooperate with local picture men in producing only that which would inform, inspire or refresh.

The afternoons during the week were given over to informal conferences and to visits to the Ann Mitchell Library building on the Tower Hill grounds, which was found to be well supplied with the classics as well as the better part of latter-day literature. The evenings were devoted to readings from the poets by Matthew S. Dudgeon of the Wisconsin Library Commission and Jenkin Lloyd Jones. On Sunday morning Mr. Dudgeon spoke on "The people and the book," in which he showed the utilitarian use of books for every man of every occupation, and the inspirational and re-creational phases of good reading. In the afternoon Mr. Jones gave "Words; the primal revelation," in which he showed the way in which the alphabet was created and words formed; the use of words being one of the distinctions between man and the lower animals. He emphasized the sacredness of speech and deprecated the

frivolities entering into modern communication. In the evening, Mr. Jones spoke on Walt Whitman and read from his works.

No formal account of the program does justice to a week spent at Tower Hill, for it cannot reveal the spirit of the place which everyone feels who visits it. The simplicity and spirituality of the surroundings make the spot of endeared and enduring remembrance to every library visitor, all of whom expressed the strongest desire for a continuance in coming years of the Library Week so auspiciously begun.

L. E. S.

## American Library Association

The Chicago mid-winter meetings will be held this year on Thursday, Friday and Saturday, December 28, 29 and 30, with headquarters at the Hotel La Salle.

## Library Organizations

### ILLINOIS LIBRARY ASSOCIATION

The Illinois Library Association will hold its annual meeting in Ottawa, October 11-13. Headquarters will be at the New Clifton Hotel, L. M. Harvey, proprietor.

#### RATES (AMERICAN PLAN)

Room without bath, \$2.50 per day.  
Room with bath, \$3.00 per day.

The Hotel Ottawa, A. P. Richardson, manager, is situated about half a block from headquarters.

#### RATES (EUROPEAN PLAN)

Room without bath, \$1.00 per day.  
Room with bath, \$1.50 per day.

At Starved Rock State Park, about nine miles west of Ottawa, is located Starved Rock Hotel, American plan, Charles P. Touton, proprietor. Post-office Utica. Those expecting to stay at this hotel should write for rates. There is trolley connection with Ottawa.

Reservations for all hotels should be made as early as possible.

### PRELIMINARY ANNOUNCEMENT OF PROGRAM

#### Wednesday afternoon, October 11

- 2.00 Meeting of executive board.
- 3.00 General meeting.  
Call to order.  
Address of welcome.  
Address of president, "A debtor to his profession."  
Celebrating centennial year. Mrs. Jessie Palmer Weber, Springfield.  
Reports of officers and committees.

#### Wednesday evening

- 7.45 Symposium on new books.  
Books and pamphlets of the war.

#### Thursday morning, October 12

- 9.30-12.30 Round tables. Send suggestions to leaders.  
Small and medium-sized libraries. Leader, Miss Mabel Thain, Scoville Institute, Oak Park.  
Large, college and reference libraries. Leader, Mr. J. C. M. Hanson, University of Chicago Library, Chicago.  
School libraries. Leader, Miss Fanny R. Jackson, State Normal School, Macomb.  
Business libraries. Send suggestions to Miss Louise B. Krause, care of H. M. Byllesby & Co., Continental and Commercial Bank Bldg., Chicago.  
Illinois Library Trustees' Association. President, Mr. J. L. O'Donnell, 510 Woodruff Bldg., Joliet.

#### Thursday afternoon

Visit Starved Rock Park. Register on Wednesday for this trip.

#### Thursday evening

Address. Speaker to be announced.  
The Illinois Library School students will dine together on Thursday evening preceding the address.

#### Friday morning, October 13

- 9.30 Library by-products. Miss Joanna G. Strange, New York Public Library. This paper was read at the meeting of the American Library Association at Asbury Park.  
Report of the Illinois Library Extension Commission. Miss Anna May Price, Springfield.  
Ways of helping the community:  
Co-operating with the Board of Health. Miss Lydia M. Barrette, Public Library, Jacksonville.  
The high school library. Miss Helen Babcock, Austin High School, Chicago.  
The municipal reference bureau. Miss Mabel Inness, Public Library, Galesburg.  
Reports of committees, election of officers, unfinished business.  
Adjournment.

Ottawa is on the line of the Rock Island R. R. and of the C. B. and Q. The interurban runs east and west from Princeton to Joliet (and from there to Chicago) and north and south from Ottawa to Streator. By this electric line connection is made with the Illinois Central at La Salle, the Santa Fé at Streator, and the Big Four at Seneca. These towns are each about 15 miles from Ottawa.

MARY J. BOOTH, *President*.

### WESTERN MASSACHUSETTS LIBRARY CLUB

The Western Massachusetts Library Club met at Amherst July 28. The sessions were held under the trees on the campus of the Massachusetts Agricultural College. Mr. Stone, president of the club, presided. Miss Lucy C. Richmond, head of the circulation department of the Springfield city library, read a paper on "American novelists." There followed readings from Robert Frost's "North of Boston," interpreted with rare feeling by Dean Edward M. Lewis, professor of language and literature in the Massachusetts Agricultural College.

The members then adjourned for lunch after which they attended a lecture on rural organization by Prof. Liberty Hyde Bailey,

given in connection with the Graduate School of Agriculture in session at the college.

The afternoon program was opened by Miss Laura Comstock, extension professor of home economics, Massachusetts Agricultural College, whose topic was, "The village library and the campaign for the home." Miss Comstock paid a tribute to the spirit of helpfulness manifested by the librarians in the small towns and urged their co-operation in interesting their readers in the literature of the home economics movement. She emphasized the usefulness of the special bulletins along this line, mentioning particularly those of the Cornell extension department and those of the Massachusetts department. These are supplied free in response to requests. The breadth of the subject should be better understood. It includes house decoration and the artistic as well as the utilitarian side of life.

Miss Effalene King of the art department of the Springfield City Library then spoke on "Recent poetry." She said that much of the new poetry reflects the spirit of unrest of modern times. The form of much of our new verse was questioned and answered by the thought of a poem on skyscrapers in the measured style of Tennyson. The poetry of the imagists was touched upon, as was *vers libre*.

Mr. Green, librarian of the Massachusetts Agricultural College Library, concluded the program with a short talk on "Agricultural literature." The Lippincott manuals headed the list. The Macmillan company's publications were recommended, as were those of the Orange Judd company of Springfield. Mr. Green also emphasized the usefulness of bulletin literature.

At the business meeting the following officers were elected for the coming year: President, William C. Stone, Springfield City Library; vice-presidents, Robert S. Fletcher, Amherst College Library, and Miss Anne Smith, Chicopee Public Library; secretary, Miss Georgianna Carr, Young Men's Christian Association College, Springfield; treasurer, Miss Mabel Moore, Holyoke Public Library; recorder, James A. Lowell, Springfield City Library. The reports of the treasurer and secretary were read by the secretary.

LALIA M. DAMON, *Secretary*.

#### MASSACHUSETTS LIBRARY CLUB

The Massachusetts Library Club will hold a union meeting with the New Hampshire Library Association and the Western Massachusetts Library Club at Greenfield, Mass., Thursday-Saturday, October 19-21, 1916. Technical

literature will be the chief topic of discussion with papers as follows: "The possibilities of contagion in the circulation of books," by Dr. Brown, of the Massachusetts State Board of Health; "University extension and the libraries," by James A. Moyer, director, University Extension Department of Massachusetts; "Selection of technical literature," by Edward F. Stevens, librarian, Pratt Institute; "Agricultural literature," by Charles R. Green, librarian, Massachusetts Agricultural College; "An architect's library," by Robert S. Peabody; "The literature of mountaineering," by N. L. Goodrich, librarian, Dartmouth College. There will be discussions on the literature of the alcohol question and on books on business. Van Nostrand, of New York, and the Massachusetts Agricultural College will exhibit recent technical books.

Greenfield, a charming town of colonial houses and elm-shaded streets, at the end of the Mohawk Trail, will be a delightful meeting place, and Friday will be free for excursions to the country and the nearby historic town of Deerfield.

The hotel headquarters will be the Weldon, a modern fireproof hotel which offers reduced rates as follows: American plan, double room for two, without bath, \$3.00 a day for each person; single room, without bath, \$3.50 for one person; rooms with bath, double or single, \$4.00 a day for each person. If more apply than can be accommodated, the hotel will find rooms for such in private houses and serve meals at the hotel. Reservations should be made directly with the hotel. Full details will appear in the *Club Bulletin*.

#### NEW YORK STATE TEACHERS ASSOCIATION —LIBRARY SECTION

Because of the growing demand for better organized school libraries and the constantly increasing number of calls for assistance in organizing these libraries, it has been thought advisable to emphasize library discussion at the various section meetings of the New York State Teachers Association. The use of the library by various departments will be a topic of discussion in eight or more section meetings and probably in one general session.

Mr. James Fleming Hosc, secretary of the National Council of Teachers of English; Dr. James Sullivan, state historian; Mr. Wallace E. Bartholomew, specialist in commercial subjects for New York State; Mr. James Peabody, Morris High School, New York; Dr. Sherman Williams, library inspector, Albany; Mr. Congdon, specialist in English, Albany, and others will discuss library topics.

A business session of the library section

will be held, probably on Tuesday afternoon, in the Buffalo Normal School. The different school library committees will report at this meeting and plans will be made for the development of school library work of New York State.

IDA M. MENDENHALL,  
*Secretary Library Section.*

---

## Library Schools

---

### PRATT INSTITUTE SCHOOL OF LIBRARY SCIENCE

The commencement festivity of most general interest to the graduates of the school is the alumni supper, which took place this year in the art gallery of the library on Saturday evening, June 17. Two reunions were held, of the classes of 1896 and of 1906. Members of the anniversary classes met downstairs in the library and marched in (after the others had taken their places) behind a lighted, seven-branched candlestick which they presented to the school. Six members of the class of 1896 and 11 of 1906 were present, while the total attendance was 108, representing 22 classes, 1897, 1905, 1907 and 1912 being the only ones unrepresented.

The institute commencement exercises were held on Monday evening, June 19. Dean Herbert L. Willett, of Chicago University, delivered the address. Fourteen of the graduating class remained over to attend the A. L. A. meeting. Over 100 Pratt graduates were present in Asbury Park sometime during the meeting and about 70 attended the Library School dinner on Wednesday evening, the largest by far of any previous A. L. A. attendance.

The class of 1916 left as their memorial in the classroom a beautiful silver teapot and silver lemon fork.

### ALUMNI NOTES

Rachel Rhoades, 1911, information desk assistant of the Portland (Ore.) Public Library, was married on June 24 to Frank V. Anderson. Mrs. Anderson is to be an assistant at the New York Public Library during the coming year, taking at the same time the administration course in the school.

Katharine P. Ferris, 1912, who went to the County Library at Hanford, Cal., as cataloger a year ago, has been made librarian.

Amelia H. Robie, 1914, has been made an assistant in the children's department of the Cleveland Public Library.

Helen H. Morgan, 1915, has resigned as cataloger at the Brooklyn Institute Museum to accept the position of assistant in the cata-

log-reference department of the Cincinnati Public Library.

Evelyn Brooke, 1916, who had charge of the Public Library at Great Neck, L. I., during the summer, has been appointed to the cataloging department of the Yale University Library.

M. Gladys Rush, 1916, has been made reference librarian of the Sioux City (Iowa) Public Library.

Minnie T. Stickney, 1916, has been appointed to the cataloging department of the Detroit Public Library.

Genevieve Pierson, 1916, was married to Forrest B. Spaulding on August 28, 1916.

JOSEPHINE ADAMS RATHBONE,  
*Vice-Director.*

### SIMMONS COLLEGE LIBRARY SCHOOL

The college entrance examinations were held Sept. 9-16, registration occurred Sept. 18-19, and the regular college year began Sept. 20, with a large registration in the Library School, both of freshmen and of college graduates for the one-year course. No changes, fortunately, have had to be made in the instructing force as announced last spring.

### APPOINTMENTS

Several appointments have been made during the last month, as follows:

Elizabeth Jacobs, 1916, cataloger, University of Rochester Library.

Elsie Cruttenden, 1916, cataloger, Art Institute of Chicago.

Margaret Welch, 1916, temporary cataloger, Harvard University Library.

Amy Freeman, who completed her academic work *in absentia* in June, is to join the children's department staff and class in the Cleveland Public Library.

Harriet Ames, 1916, has resigned from the Brooklyn Public Library and accepted a position as librarian of the Normal School, Danbury, Ct.

### MARRIAGES

Estelle Louise Freeman, 1916, was married Aug. 31 to Earle Oliver Turner.

Esther Whitcomb Sawyer, 1903-05, was married Sept. 6 to Robert Perry Capron.

JUNE RICHARDSON DONNELLY, *Director.*

### UNIVERSITY OF ILLINOIS LIBRARY SCHOOL

Elsie L. Baechtold, B.L.S. 1916, has been appointed librarian of the new Engineering Library at the University of Illinois.

Charlotte E. Bussey, 1915-16, has been appointed assistant in the State Normal School Library, La Crosse, Wis.

Bessie J. Stewart, 1915-16, has been ap-

pointed assistant in the Miami University Library, Oxford, O.

Mary E. Love, 1911-12, an assistant in the University of Illinois Library, was married on August 14, to Fred W. Muncie. Mr. and Mrs. Muncie will make their home at 512 Michigan avenue, Urbana, Ill.

Alta C. Swigart, B.L.S. 1916, was married on June 24 to Daniel Tilden Hoskins, Jr. Mr. and Mrs. Hoskins will make their home in Lincoln, Neb.

Agnes M. Cole, B.L.S. 1901, has been appointed assistant in the University of California Library.

Lillian M. Guinn, 1910-11, has been appointed acting librarian of the Bradley Polytechnic Institute at Peoria, Ill., during the illness of the librarian, Miss Elizabeth Laidlaw, 1906.

Mary A. Osgood, 1904, has resigned her position as librarian of the Fort Smith (Ark.) Public Library, to take charge of the Westport branch of the Kansas City Public Library.

P. L. WINDSOR, *Director*.

#### CARNEGIE LIBRARY SCHOOL

Entrance examinations to fill vacancies in the school for 1916-1917 were held Sept. 9, and the school opened for its seventeenth year Wednesday, Sept. 27.

#### ALUMNAE

Ruth E. Adamson, 1915-1916, has been appointed children's librarian of the Public Library, Evansville, Ind.

Clara E. Campbell, 1915-1916, has accepted the position of children's librarian in the Public Library, St. Joseph, Mo.

Ruth L. Carlisle, 1912, has resigned her position of children's librarian in the Carnegie Library of Pittsburgh to accept a similar position in the Public Library, Los Angeles, Cal.

Florence Hovey, 1915-1916, has been appointed children's librarian in the Public Library, Los Angeles, Cal.

SARAH C. N. BOGLE, *Principal*.

#### WISCONSIN LIBRARY SCHOOL

The July issue of the *Wisconsin Library Bulletin* gives prominence to the fact that the Wisconsin Library School has completed its tenth year. Two hundred and seventy students have been graduated, and a directory of the graduates, with a summary of their professional achievements, has been compiled for the *Bulletin*. In addition, extracts have been made from the letters of many of the graduates, showing the varied activities in

which they are engaged, and a map of the United States has been drawn to show where they are now located. The illustrations are all of rooms occupied by the Library School in the University of Wisconsin.

#### IOWA SUMMER SCHOOL FOR LIBRARY TRAINING

The work of the Iowa Summer School, in connection with the State University, was made uncomfortable the past summer by the intense heat. The instructors having charge of the work were Malcolm G. Wyer, director, who also gave the instruction in reference work and book selection; Anna G. Penrose, classification and cataloging; Grace Shellenberger, children's work; Blanche V. Watts, minor subjects and revising, and Miss Robinson, library administration.

Contrary to the custom in past years the children's work was given this year at the opening of the session, and library week was compressed into two days. These two days, however, proved very helpful and inspiring. The Wednesday morning program included an illustrated talk by Miss Robinson on the libraries of Iowa, and in the afternoon Mr. Brigham gave an informal talk which proved a happy introduction to Mr. Dudgeon's paper on "What shall the librarian do with poetry and drama." "Publicity," by Miss Drake, and a paper on "Practical problems in library work," by Mr. Rush of Des Moines, were also features of Wednesday's program.

On Thursday morning Miss Spencer of the South Dakota Library Commission told of library work in that state. Dr. Shambaugh explained the work of the State Historical Society of Iowa as related to the public libraries of the state. Prof. Ansley spoke of the Midland; Miss Armstrong described the work of a girls' club conducted by the children's department of the Council Bluffs Public Library. Miss Robinson spoke of rural extension thru the public libraries of the state. A visit from Miss Tobitt, of the Omaha Public Library, earlier in the term was also very helpful to the class.

On Wednesday evening a very pleasant dinner was informally arranged for and served by the ladies of the Unitarian Church. The guests included the faculty and students of the summer school, visiting lecturers and librarians, members of the Iowa City Library Board and Library Club.

In addition to the speakers already mentioned were Mr. Dickerson, of Grinnell College Library; Miss Clark, of the commission staff; Miss Hagey, of the Cedar Rapids Public

Library; Miss Stocker, Muscatine Public Library; Mrs. Murray, Grundy Center Public Library, and Miss Logsdon, Colfax Public Library.

The members of the class of 1916 were as follows:

Allen, Olive B., York, Neb., librarian, Public Library.  
 Bennett, Helen, Omaha, Neb., assistant, Public Library.  
 Cooke, Edith, Storm Lake, Iowa, assistant, Buena Vista College Library.  
 Gibbons, Ruth, Oelwein, Iowa, librarian, Public Library.  
 Gray, Rena, Osage, Iowa, librarian, Public Library.  
 Hahn, Mrs. Alice W., Garner, Iowa, librarian, Public Library.  
 Henely, Inez, Grinnell, Iowa, assistant, Grinnell College Library.  
 Knock, Edith C., St. Peter, Minn., librarian, Gustavus Adolphus College Library.  
 Lenfest, Grace E., University Place, Neb., assistant, Nebraska Wesleyan University Library.  
 Lewis, Leora I., Rapid City, S. D., librarian, Public Library.  
 McCandless, Margaret, Sheldon, Iowa, librarian, Public Library.  
 Michener, Elizabeth, Oskaloosa, Iowa, assistant, Public Library.  
 Roberts, Mrs. M. R., Malvern, Iowa, librarian, Public Library.  
 Skovlin, Manda K., Belmont, Iowa, librarian, Public Library.  
 Stapleton, Orra B., Sioux Falls, S. D., librarian, Public Library.  
 Vose, Mrs. Ida M., Shelton, Neb., librarian, Public Library.  
 Weaver, Helen, Iowa Falls, Iowa, librarian, Ellsworth College Library.  
 Williams, Carolyn L., Lincoln, Neb., librarian, Public Library.  
 Williams, Mrs. T. J., Mt. Ayr, Iowa, librarian, Public Library.  
 Wood, Katherine, University Place, Neb., librarian, Public Library.

JULIA A. ROBINSON, *Secretary*.

#### SYRACUSE UNIVERSITY LIBRARY SCHOOL

The following students graduated from this school in the class of 1916. One spent five years in college, sixteen spent four years and eleven spent only the two years necessary for completing the technical work in the Library School.

Catherine Branch, Syracuse.	Carolyn M. Merriman, Black River, N. Y.
Eleanor Church, Syracuse.	Elma V. Nau, Honeoye Falls, N. Y.
Leila M. Dominick, Syracuse.	Mabelle B. Roberts, Rome, N. Y.
Pauline Griffith, Syracuse.	Anita G. Robinson, Cambridge, N. Y.
Ruth S. Jones, Syracuse.	Lucile R. Scull, Poughkeepsie, N. Y.
Dorothy M. Snarlin, Syracuse.	Lillie H. Vanderveer, Saranac Lake, N. Y.
Edna E. Whitely, Syracuse.	Dorothy B. Welch, Saratoga Springs, N. Y.
Esther G. Wright, Syracuse.	Gladys R. Cranmer, Monroeton, Pa.
Lucy E. De Graff, Amsterdam, N. Y.	Vivien C. Diefenderfer, Conneaut, Ohio.
Addie I. Duprey, Au Sable Forks, N. Y.	Mary A. Mansfield, Coudersport, Pa.
Fannie C. Howe, Hoo-sick, N. Y.	Fannie R. Sattinger, Indianapolis, Ind.
Esther M. Hughes, Palatine Bridge, N. Y.	Helen Stiles, New Haven, Ct.
Alma L. Jones, Oriskany, N. Y.	Lucille L. Wilson, Nicholson, Pa.
Irene M. Kent, Palmyra.	
Mary L. McCabe, Campbell, N. Y.	

Aimée Peters, 1912, who resigned from the Syracuse University Library last year to accept a position in the Library of the Smithsonian Institution, returns to Syracuse for the coming year.

May Angel, 1913, who has been in the Brooklyn Public Library since graduation, has resigned, in order to do library work under the supervision of Dr. Grenfell among the Labrador fishermen.

Ruth Judd, 1914, who was assistant in the Bronson Memorial Library at Waterbury, Ct., during the past year, has joined the cataloging staff of the Syracuse University Library.

E. E. SPERRY, *Director*.

### Review

BACON, CORINNE. Classification. Preprint of the "Manual of library economy," chap. XVIII. A. L. A. Pub. Board, 1916. 10c.

In 34 pages Miss Bacon has here prepared an admirable summary of the aims and methods of classification, successfully preserving a nice impartiality in a field where lack of bias is peculiarly difficult. After a brief, but adequate, historical introduction she proceeds to discuss fixed *vs.* relative location and notation—pointing out "that every practical system sooner or later makes use of both letters and figures." The systems of classification described in detail are properly: Browne (as the only English system of importance); the Library of Congress; Cutter's Expansive; and finally, and at greatest length, the Dewey Decimal. In each case a brief summary of the classification is given and the chief criticisms of it and principal arguments for it are summarized. There follow some brief "Rules for classifying"—too brief, in fact, to be of much value (this is one of the few portions of the pamphlet which might with advantage have been further extended); a discussion of "close classification" pro and con; and an explanation of "book numbers" with the significant comment "the necessity of the book number is being questioned by some librarians to-day."

The impartiality of Miss Bacon's treatment has already been commented on. One notes, however, that she quotes, without correction, Mr. Bliss' statement that "Cutter's classification is the only system which allows unlimited contraction or expansion without rearrangement or an objectionable addition to the class mark"—which, of course, is less true of the E. C. than of the D. C. for instance. The true points of difference between the E. C. and D. C.—now concealed by their names—

might have been pointed out more clearly since the D. C. and E. C. are fundamentally more closely related than any other systems of classification. Would not a brief statement (ten lines would have told the story) of exactly what the Belgian International modifications of the D. C. consisted of also be a desirable amplification? The author's present statement is merely "by the use of curves, brackets, the colon, the dash, etc., the Belgian code classifies most minutely." And she then quotes an example, but without explaining the meaning of the various symbols. She does add, rightly enough, that these amplifications are better suited to the classification of cards and clippings than to books.

F. R.

---

### Librarians

---

BURNETT, Marguerite, Pratt 1913, assistant cataloger at the Provincial Library, Victoria, B. C., has been made librarian of the Lincoln High School in Portland, Ore.

CAMPBELL, Emma L., for a number of years assistant librarian in the Beebe Town Library in Wakefield, Mass., has resigned to take a position as a kindergarten teacher in the Boston public schools.

CARPENTER, William H., provost of Columbia University, will succeed Prof. Dean P. Lockwood as acting librarian of the University Library for the coming year.

CARVER, Mrs. Mary Caffrey Low, received the degree of Litt.D. from Colby College at its last commencement. Mrs. Carver was the first woman graduate of the college, in 1875, and was married in 1877 to the late Leonard D. Carver, who was librarian of Maine from 1890 to 1905. For 20 years she was the cataloger at the State Library.

CHILD, Grace A., Pratt 1897, of the Hartford Public Library staff, has been made librarian of the High School at Winsted, Ct.

DIXON, Vera M., Pratt 1912, head of the technical department of the Portland (Ore.) Public Library, has been made assistant librarian of the Ames College Library, Ames, Ia.

DOWNNEY, Mary E., who has spent the last two years as library organizer in Utah, has been engaged for the rest of the present year to do publicity work in the central states for the H. W. Wilson Co. Miss Downey expects to return to her work in Utah in January.

FANNING, Clara E., has gone from Minneapo-

lis to Washington, where she has taken a temporary position in the Public Library of the District of Columbia.

GREER, Agnes F., Pratt 1908, head of the circulation department of the Tacoma Public Library, has been made director of branches and the apprentice class of the Public Library at Kansas City.

HALEY, Lucia, Pratt 1912, has been appointed librarian of the Public Library at La Grande, Ore.

HERBERMANN, Charles George, Ph.D., LL.D., Litt.D., emeritus professor of Latin and for many years librarian of the College of the City of New York, died August 24 at his residence in New York. A scholar, teacher, and writer of extensive learning and of high repute, he had attained to distinctions and honors, the most notable being the Laetare Medal of the University of Notre Dame and another medal from the Pope in recognition of distinguished services to the Catholic Church. He was editor-in-chief of the Catholic Encyclopædia; also author of several books, studies, texts, etc. Born in Germany in 1840, he came to this country when a boy, was graduated from The College of St. Francis Xavier in 1858, and became professor of Latin in the College of the City of New York in 1869 and librarian there in 1873. He was president of the Catholic Historical Society from 1898 to 1913. Professor Herbermann was an erudite scholar, a thoro and effective teacher, and a man of strong and jovial personality and of many lasting friendships.

KAISER, John B., librarian of the Tacoma Public Library, has been appointed by the Regents of the University of Washington on an advisory committee for the library department of the university.

KEMMERER, Leila, B.L.S., N. Y. State Library School 1916, has received an appointment as first assistant in the Goodwyn Institute Library, Memphis, Tenn.

KENNEDY, Grace M., assistant in the Woburn Public Library, resigned on August 31 to be married.

LEASE, Evelyn S., librarian of the Kellogg-Hubbard Library of Montpelier, Vt., has been appointed a member of the State Library Commission.

LEWIS, Helen, of Cleveland, a graduate of Western Reserve College and Library School, and for several years an assistant in the Cleveland Public Library, has received an appointment in the Public Library of Council Bluffs, Ia.

METCALF, Kenneth D., who has been chief of stacks in the central building of the New York Public Library, will be acting librarian at Oberlin College during Prof. Root's year at the head of the Library School in New York City.

MILLER, Edyth L., Pratt 1903, of the Harvard University cataloging staff, has been appointed librarian of the International Health Commission of the Rockefeller Foundation.

MILLS, Marjorie, has resigned from her position as assistant in the lending department of the Tacoma Public Library and will attend the College of Puget Sound this fall. Miss Mills, while attending college, will be an assistant in the college library, and will also be in charge of the Lincoln Park High School Library three evenings a week during the session of the night school. At this time the library is used merely as a study hall.

MOORE, Edna G., N. Y. State Library School, 1914-15, resigned her position as assistant cataloger at the University of Missouri Library to undertake similar work in the Detroit Public Library.

OUTHOUSE, Emma G., N. Y. State Library School 1915-16, joined the staff of the Evansville (Ind.) Public Library as cataloger on Aug. 1.

PRINGLE, Mary P., reference librarian of the Minnesota Public Library Commission, in collaboration with Clara A. Urann, has brought together the Christmas customs of many peoples in "Yule-tide in many lands," published by Lothrop, Lee & Shepard Co.

SLAGLE, Virginia, head of the schools division in the children's department of the Tacoma Public Library, has resigned to become a member of the staff of the library of the State Agricultural College at Pullman, Wash.

SPAULDING, Forrest B., in charge of the traveling library office of the New York Public Library, was married August 28 to Genevieve Anderson Pierson, Pratt 1916.

STEELE, Katharine D., for several years librarian of the Hearst Free Library and Reading Rooms, in Lead, S. D., resigned in April to accept a position in the medical library of the Mayo Clinic at Rochester, Minn.

STOCKETT, Julia, for the past two years with the Wisconsin Library Commission and formerly in the Calgary Public Library of Calgary, Alberta, has been appointed acting head librarian in the University of Idaho during the coming year.

STOELTZING, Alice, who has held a one-

year appointment in the Tacoma Library, as head of the main children's room during the leave of absence of Miss Wallace at Pittsburgh, on Miss Wallace's resignation has been appointed permanently to the position of children's librarian in the main children's room, the juvenile department of the library being under the direction of Miss Annabel Porter.

SWEET, Belle, Illinois 1904, for several years head librarian in the University of Idaho, has been granted a year's leave of absence and has left for New York City, where she will do graduate work in library science.

VAN VALKENBURGH, Agnes, who has been associated with the Library School of the New York Public Library during the five years of its existence, has resigned to take a position with the H. W. Wilson Co., of White Plains.

WALLACE, Marian K., who has been on leave of absence from the position of head of the main children's room of the Tacoma Public Library, to attend the Pittsburgh Training School, has resigned to become head of the children's department of the Bloomington, Ill., Public Library.

WHITTIER, Florence, died in Pasadena, Cal., Sept. 11, following an operation. Miss Whittier was a woman of great ability, well known in the library world. She was a graduate of Leland Stanford Junior University, 1899, with a B.A. degree. She studied in the New York State Library School 1900-2. She was an assistant in the Summer Library School of the University of California, summer of 1902, reference librarian and cataloger Mechanics Institute Library in San Francisco, 1902-06, or until the earthquake destroyed the library. She then became librarian of the Public Library at Sedalia, Mo., where she remained until 1909, when she became assistant secretary of the American Library Association, with headquarters in Chicago. In 1910, she was appointed assistant librarian of the University of Missouri. She held this position until failing health required her to resign, September, 1915. She was granted leave of absence for the summer of 1914 and again in January, 1915, for the college year. She was secretary of the Missouri Library Association, 1908, 1909, and again in 1912, and was president of the association in 1914.

WILDER, Gerald Gardner, has been elected to succeed the late Prof. George T. Little as librarian of Bowdoin College Library. Mr. Wilder graduated from the college in 1904 and since that date has served as assistant librarian.

# THE LIBRARY WORLD

## New England

### MAINE

*Augusta.* The trustees of the Lithgow Library have placed on the western wall of the vestibule a bronze tablet in honor and memory of Llewellyn W. Lithgow, Esq., whose name the institution bears. Mr. Lithgow gave the sum of \$20,000 in trust, the income to be used for its maintenance, and a further sum of about \$16,000, which went into the construction of the building.

*Portland P. L.* Alice C. Furbish, lbn. (Rpt.—1915.) Accessions, 1757; withdrawn, 397; total, 72,480. Total registration, 8665. Circulation, 92,301. Receipts, \$13,971.20; disbursements, \$12,460.29, including \$7651.35 for salaries, \$627.12 for printing and binding, \$557.50 for periodicals, and \$1528.53 for books.

### VERMONT

*Graniteville.* The Graniteville Finnish Socialist Association, Inc., has recently been organized to promote the Socialist movement, especially among the Finns of America. The association intends to erect and maintain a building with a reading room and library, theater and gymnasium.

### MASSACHUSETTS

*Boston. Mass. Inst. of Tech.* Robert P. Bigelow, lbn. (Rpt.—1914-15.) Accessions, 5842 (including 2832 pamphlets and maps); total, 121,711 volumes, 49,614 pamphlets and maps. The Crafts collection, consisting of 634 volumes and 353 pamphlets, is not included in the accessions recorded, because the books have not yet been properly incorporated in the library. The total cost of maintaining the libraries of the Institute, exclusive of salaries, is \$8120.65. This sum includes \$6042.76 for books and binding, and \$1778.99 for periodicals. Interlibrary loan records show 68 volumes lent and four borrowed. The American Telephone & Telegraph collection was enlarged by careful purchase, arrangements for its binding were made, and preparation of the final dictionary catalog was begun.

*Dalton.* A special article on the Dalton Library, with a view of the reading room, was printed in the *Pittsfield Daily News*, Sept. 9. There are at present over 11,000 volumes in the library, all of which lately have been recataloged, in alphabetical order, accessioned, classified, repaired, rebound and relabelled.

The interior of the library has been rearranged and furnished with modern library equipment, making possible a thoro and business-like administration.

*Haverhill.* Mayor Bartlett has received a check for \$4750, which represents the bequest of the late Jonathan Eastman Pecker for the benefit of the Public Library. The bequest was for \$5000, but the state legacy tax of 5 per cent. had to be deducted. The income is to be expended annually in the purchase of New England, state, county, city and town histories, these books to be kept by themselves in an alcove to be known as the Jonathan E. Pecker alcove.

*Salem.* The work of enlarging the gallery of the law library in this city has been finished and accommodations have been provided for 15,000 additional volumes. The iron balcony has been extended so that full-sized book cases may be set there as below on the lower floor. Heretofore there have been shelves around the walls, but nothing more in the gallery.

*Wakefield.* Wakefield citizens have begun a movement to erect a new building for the Beebe Town Library, which is now quartered in the Town Hall in insufficient room. An option has been secured on the Hickock-Mansfield lot at Main and Avon streets, and citizens will be asked to contribute to a fund for the erection of a library building. "A dollar a foot" will be the slogan of the campaign, as there are about 16,000 feet of land available, and the cost is \$16,400, or \$1000 less than the assessed value. The town voted several years ago to purchase the site, but later rescinded the action.

### RHODE ISLAND

*Providence.* Two recent bequests to the Providence Public Library are of interest. By the will of the late Newton D. Arnold, of Providence, the library receives the sum of \$2500. Mr. Arnold had been a member of the board of trustees of the library from 1890 until his death, a period of 26 years. The second bequest is made in the will of the late Miss Lyra Brown Nickerson, of Providence, by which the Providence Public Library shares with one other institution (the Rhode Island School of Design) the privilege of becoming the residuary legatee. As the amount thus to be divided is stated to be \$3,000,000, this means

that the sum of \$1,500,000 is to come to the library. Miss Nickerson's deep interest in the library was plainly an inheritance from her father, the late Edward I. Nickerson, a Providence architect. Mr. Nickerson was a trustee of the library for 30 years, from 1878 until his death in 1908, and secretary for 24 years, 1884 to 1908. After her father's death, in 1908, Miss Nickerson at once made the library a gift of her father's architectural library, valued at \$5000, and followed it with a gift of \$10,000, the annual income of which is used for additions to the collection. It is too early to be able to state how soon this bequest will be made available. Fortunately, no conditions are attached.

#### CONNECTICUT

*Wilton.* The Wilton Library, which for 21 years has been maintained by the efforts of a small group of people, has now outgrown its accommodations in the studio of Henry G. Thomson, where it has been housed for some years. A fund for a permanent home, which has been accumulating, now amounts to \$700, and there is a conditional promise of another \$500. Mr. and Mrs. Timothy T. Merwin have offered the Library Association a site for a building on the Ridgefield road near the Congregational Church on condition that a building be begun within six months after the conveyance of the land. On August 21, the association, after thoroly investigating all available sites, voted to accept the offer if sufficient funds can be raised. It is estimated that a suitable building will cost about \$7500, including equipment.

### Middle Atlantic

#### NEW YORK

*Brooklyn.* In the periodical room of the Montague branch of the Brooklyn Public Library a reader, who gave his name as Morris Sherris, of 433 Hopkinson avenue, was recently observed acting in a suspicious manner. The attention of the assistant in charge was called to his behavior and, upon examination, 80 clippings from 23 volumes of the Official Gazette of the United States Patent Office were found in his possession. In some cases several consecutive pages had been removed. In addition, a few clippings were found from unbound current magazines. Sherris was placed under arrest and upon examination he stated that he was out of work and wished to prepare for a civil service examination. He was held for the Court of Special Sessions, where he pleaded guilty

and was sentenced to thirty days in the work house. The presiding justice stated that if it were not for the fact that it was his first offense and that he was but 21 years of age, he would have inflicted a more severe penalty.

*Kenmore.* The Kenmore Public Library, located in the village hall, was closed for two weeks in September while alterations and improvements were installed. There are now over 1000 books on the shelves, all donated by the people of Kenmore and friends in Buffalo. These books have been accessioned and cataloged by W. A. Morgan, of the Grosvenor Library of Buffalo.

*Lima.* A gift of over 350 volumes of works of fiction, travel, history and reference, the most notable of the last named being a complete set of the Encyclopedia Britannica, has been made to the Lima Public Library by Mrs. Jane Barnard Skinner, a resident of Lima in the early 70's. This is the largest gift from an individual the library has ever received.

*New York City.* The children's rooms in all the branches, which have been closed since July 8, were reopened Sept. 25. Brooklyn's children's rooms also reopened on the same day.

*New York City.* The Shakespeare exhibition in the New York Public Library closed July 15, after being open three months and a half, during which time 55,263 people visited the exhibition room.

*New York City.* The New York Public Library has a large collection of clippings relating to ex-Justice Hughes in its documents division. The clippings in filing cases and boxes were given to the library by Robert Fuller, secretary to Gov. Hughes, after the latter left Albany. They were stored in the stacks until last winter, when five people were put to work mounting them, 10 weeks being spent on the task. The result is a collection of over 20,000 mounts, arranged by subject, in pamphlet boxes. Under subject, they are arranged chronologically.

*New York City.* The August *Bulletin* of the Metropolitan Museum of Art notes an increase in the use of the books and photographs in the museum's library. Several hundred lantern slides have been made from illustrations in books, and also a large number from the collection of photographs, to supply the needs of those who lecture outside of the museum. The large collection of exhibition and sales catalogs has proved of great value to

many, and the files of clippings obtained from various sources, started several years ago, have grown to large proportions and are of great usefulness. All of the Japanese prints belonging to the museum are in the library, which is now in possession of 31,000 volumes and 40,000 photographs.

*New York City.* A motion that the trustees of the Supreme Court Library of Kings County be asked to explain why the salaries of the librarians exceed the standard specifications, has been carried by the city's budget sub-committee. This was the first step on the part of the sub-committee toward a reduction of salaries fixed by the state law. According to the city's rating these salaries are excessive, but they can be changed only by act of the legislature. The request from the library was for \$9800, the statutory amount, and had to be approved. The librarian receives \$4200 a year, the standard specifications being \$1800 to \$2820; the assistant librarian gets \$2500, the maximum standard specification being \$1500. The Supreme Court Library, Queens, requested \$3241, and received \$2501, the same as for this year.

*New York City.* The Municipal Reference Library has just completed plans for establishing a public health division in the Health Department Building, 139 Centre street. For years the Health Department has had a library, recently under the supervision of the Bureau of Public Health Education, but without a librarian in charge. That library will now be taken over by the Municipal Reference Library and developed to meet the special demands of the various bureaus of the department. While the new division will be conducted primarily for the officials and employes of the Health Department, it will be open to the general public for reference use. Following the general rule of the Municipal Reference Library, material will be loaned only to persons on the payroll of the city. It is believed that this will be the only library in the city specializing on public health matters and open to the public. Miss Sarah N. Halliday, librarian of the Lederle Laboratories, has been appointed assistant in immediate charge of the Public Health Division.

#### NEW JERSEY

*Verona.* The new Carnegie Library building, for which a grant of \$11,000 has been made, will stand on the southwest corner of Bloomfield and Montrose avenues on an elevated plot of ground 63 x 100 feet. The plans were drawn by Nelson & Van Wagenen, of

New York. The structure will be one-story, with a basement and an extension of 17 x 30 feet in the rear. The architecture is of the classic colonial type, plain and dignified. The walls will be of dark red tapestry brick with a roof of slate, and the cornice and wall exterior of white. The stacks will have a capacity of about 10,000 volumes. It is expected to have the building completed early next year.

*Westfield.* Oct. 2 is set for the reopening of the Free Public Library, which has been closed to the public this summer because of health regulations. During this enforced period of inactivity the library has been recataloged.

#### PENNSYLVANIA

*Millersburg.* Announcement is made that the \$50,000 Johnson Public Library and Gymnasium will be built next spring. Henry Jackson Johnson, who left the money for the library, came here in 1900 with \$1000 and started a shoe factory. When he died in 1909 he was said to be a millionaire. He left \$72,000 to the town to be used in building a memorial. The money has since grown to \$100,000, half of which will be used in building and equipping the library and gymnasium. The remainder will go into a maintenance fund.

*Pottsville.* Both the Taxpayers' Association and the Public Library Association claim victory in an opinion rendered by Deputy Attorney General Keller as to the legality of appropriations of school funds to maintain a public library and the acceptance of an appropriation from Carnegie Corporation. The Pottsville Library is owned by a corporation separate from the city government, and the Taxpayers' Association claims that the property and books must be turned over to the city before any appropriations can be legally made by the school board. The proposition to make the Pottsville school directors members of the Library Association is legal, in the opinion of Mr. Keller. A Carnegie appropriation of \$45,000 for a new building hinges on the library getting an appropriation from the school board for its maintenance. Every city in the state is affected by the ruling, as in it Deputy Attorney General Keller says: "The appropriation of moneys by a school district for the support of such a library, particularly where it is built and owned by the school district, and is in the control of the school district, thru a majority of the trustees, cannot be held to be a diversion of public funds simply because a minority of the board of trustees represents a corporation not for profit,

which generously contributes moneys for the aid and maintenance of the library carried on in the building owned by the school district."

#### MARYLAND

*Rockville.* The Montgomery County Library Association has been organized here and the County Board of Education has granted it the use of a little building on the Rockville High School grounds for headquarters. The annual dues of members have been fixed at \$1.

### The South

#### KENTUCKY

*Louisville.* The public writing desk which has been installed at the Public Library has proven a convenience to the patrons. All materials are provided free, and stamps to the amount of 10 cents can be bought there.

#### GEORGIA

*Atlanta.* The formal reopening of Oglethorpe University, a Presbyterian institution at Milledgeville which suspended during the Civil War was held Sept. 20. Beginning again as a new institution, the university is handicapped on account of a lack of library facilities, and a book shower was planned as a feature of the opening, an appeal for books having been sent out not only to citizens of Atlanta, but also to friends and supporters all over the country.

*Atlanta.* Power of appointment of notaries public for the State of Georgia was invested in the state librarian recently by passage of a bill in the legislature for this purpose. The librarian, says the bill, is to charge a fee of \$2 to each applicant, which fee is to be retained by the librarian as compensation. These notaries may act in any county in the state, and their appointment under this act for the "State at Large" will be indicated in their official signature.

### The Central West

#### MICHIGAN

*Ann Arbor.* Librarians of about 40 of the largest medical libraries in the United States met in this city June 13, as the guests of the University of Michigan. President Harry B. Hutchins gave the address of welcome. This was followed by papers on library procedure. Dr. A. S. Warthin made an address before the meeting, while a special luncheon was tendered the visitors by the board of regents.

*Calumet.* There are now 42,000 volumes, of which 5500 are in foreign languages, in the Public Library of the Calumet and Hecla Mining Company. Newspapers and periodicals to the number of 250 are subscribed for, and some of the more popular ones are duplicated from two to five times for circulation on a three-day time limit. There are 8500 clippings classified and cataloged, covering all subjects. Over 12,000 mounted pictures and 60 sets of Underwood Travel Tours are circulated. In September, 1915, there were 9550 registered borrowers.

*Hancock.* The Public School Library was organized about a year and a half ago, in charge of a trained librarian, and has continued to grow in popularity until now the library is open from 9 a. m. to 9 p. m. There has also been an extension of privileges in the number of books which may be drawn at one time. The library has been equipped with a set of stereoscopes and views which are used in the schools in connection with various courses of study.

*Marquette.* The Northern State Normal School Library was moved into its quarters in the new Normal building on June 30, 1915. The reading room is 80 x 37 feet. The remainder of the library covers a floor space 40 x 37 feet. There are 90 periodicals on file in the reading room and the library now contains 20,000 volumes, which have all been selected in the last fifteen years. The Moses Coit Tyler Library, which was presented to the school several years ago by citizens of Marquette, contains about 4000 volumes, and is especially rich in material on history and allied subjects.

#### OHIO

*Negaunee.* The library has been allotted three-quarters of the main floor of the new City Hall, and the new quarters contain a stack-room with provision for 22,000 volumes, a delivery and general work-room, librarian's private office and a reading room, all on the main floor, while in the basement is a children's story-hour and game room. The number of volumes has reached the 10,000 mark and the circulation for the past four years has averaged 27,710 annually.

*Cleveland.* On June 29 a competition was instituted by the Cleveland Public Library Board for the selection of an architect for the proposed public library building. The following architects were invited to compete: Allen & Collins, Boston; Abram Garfield, Cleve-

land; Holabird & Roche, Chicago; Hubbell & Benes, Cleveland; Robert D. Kohn, New York; John Russell Pope, New York; Edward Lippincott Tilton, New York; Walker & Weeks, Cleveland. The competition was to close on Sept. 28. The architectural adviser of the board is Prof. A. D. F. Hamlin, of Columbia University. A jury of five will be appointed to consider the plans, three by the Library Board and two by the competitors, in conjunction with the architectural adviser and the librarian. On Aug. 1, 4½ per cent. bonds, to the amount of \$2,000,000, were sold at a premium of \$53,220, the purchasers being Harris, Forbes & Company, of New York. The proceeds are deposited as a building fund for the erection of the library building.

*Toledo.* With the opening of the five new branch libraries next year, the present force of employes of the Public Library will be almost doubled. At least 20 new assistants will be needed to take care of the increased service, and a training class will be organized in October.

#### INDIANA

*Bellevue.* The trustees of Lyme, Thompson, and York townships have appropriated \$250 for each township, to provide the privilege of use of the Bellevue Public Library for both the townspeople and the schools in three townships. Boxes of 100 volumes will be sent to each school.

*Bloomington.* Construction of the \$31,000 Carnegie Library building will be begun this fall. The library is to be located on a lot purchased from the city school board at Washington and Sixth streets.

#### ILLINOIS

*Aledo.* The new township library was formally opened to the public Saturday, Sept. 9. The occasion also included the dedication of the new library building, the gift of the Carnegie Corporation. In the afternoon there were two story hours for the children, conducted by Miss Mary Bostwick Day. The evening exercises consisted of a historical sketch by Mr. Hebel, chairman of the building committee, and the dedicatory address by W. J. Graham, state representative. Miss Day came last upon the program and emphasized particularly township extension work. The library opens with 2000 new, well-chosen books, which have been classified and cataloged by Miss Day. Mrs. Flora Winger has been appointed librarian.

*Evanston.* The Northwestern University Library, and not Illinois University, was the

recipient of the gift of ninety-eight volumes from Albert M. Todd, noted in our September issue.

## The Northwest

#### WISCONSIN

*Oshkosh.* The State Board of Normal School Regents, at its meeting in August, authorized the state engineer to proceed with advertising for bids for the library or the second unit of the new State Normal School in this city. Plans and specifications were approved by the regents at the same meeting. Van Rine & Degallak, of Milwaukee, are architects of the proposed building.

#### MINNESOTA

*Virginia.* The city council has given \$2000 to the library board to equip and maintain a downtown reading room for the lumberjacks. It is open day and night, and an average of twelve guests spend the night, sleeping on benches loaned by the park board. The room is plentifully supplied with magazines and newspapers.

#### IOWA

*Greenfield.* The new Carnegie library will be dedicated Nov. 1, if the present plans of the library board do not miscarry. The board plans to spend \$300 on its first instalment of books, and the state will send a collection of 100 books every six months.

*Mount Ayr.* The contract for the new \$8000 Carnegie Library has been let. The building will be one story and basement, 30 x 52 feet. Plans were drawn by Frank E. Wethrell, of Des Moines.

*Oskaloosa F. P. L.* Eleanor M. Fawcett, lbn. (12th ann. rpt.—yr. ending Dec. 31, 1915.) Accessions 1166; withdrawals 1075; total 11,336. Total registrations 2982 (population 10,000). Circulation 58,355, an increase of 13,354 over 1914. Increase in circulation over 1905 was 86 per cent.; in expenditure, 66 per cent. An increase of one-half mill in the tax levy is noted in the report, but the total income of the library is not stated. Total expenditures, \$4685.76.

*Red Oak.* The library was advertised in the historical pageant by a float bearing a table at which eight children were seated, reading. The trimmings were green and white, and lettering on the white blankets of the horses and several attractive posters called attention to the library and its resources.

## NEBRASKA

*Omaha.* One of the large study rooms in the Central High School has been remodeled for library use. Large study tables and new chairs and rugs have been installed, and the book collection has been enlarged. Miss Zora Shields, formerly a teacher in English literature, is in charge.

*Ravenna.* Negotiations have been begun with the Carnegie Corporation, which it is hoped may result in a grant for a new building. The city council has placed an ordinance appropriating \$900 for maintenance of the institution on its first reading, and Frank Howard has offered to donate a site for the building, opposite the new high school building.

## The Southwest

## MISSOURI

*Kansas City.* Two new branch libraries have been opened in the Kensington and the Mark Twain schools, with 2000 books in each.

*St. Louis.* The August *Bulletin* of the St. Louis Public Library was prepared jointly by the library and the City Club. A. B. Chapin, of the St. Louis *Republic*, was requested to make a cover design embodying his idea of the relations between the city and the two institutions. The resulting figure, with a "Forward" motto, portrays St. Louis in coat of mail, with the sword of the City Club in his right hand and the Library torch held high in his left.

*St. Louis P. L.* Arthur E. Bostwick, lbn. (Rpt.—yr. ending April 30, 1916.) The library now contains 443,911 volumes, including 37,642 unaccessioned books, mostly duplicates. Of these, 332,245 are in the central building. Its active registered users number 104,813, a gain of 4096. It has circulated for home use during the year covered by this report 1,832,272 volumes, an increase of 142,235 over the preceding year. Of these, 913,073 were distributed from the branches, 209,348 from delivery stations, and 303,315 by means of traveling libraries. Children borrowed 923,663 volumes. In addition, 346,047 volumes of supplementary reading, usually in sets of thirty, were issued to schools. These were used many million times, but they have been counted as one "library use" each. The use of books read in playgrounds amounted to 361. Formerly all use of this kind was reckoned with the home issue and would raise it to 2,178,319. Volumes read in the central and branch library buildings numbered 803,986, so far as they could

be counted. The staff, including members of the training class, now numbers 260 persons (103 men and 157 women), of whom 83 are engaged in general work (10 in administration, 35 in ordering and cataloging, 7 in registration work, 30 in bindery and mending, and 1 in telephone work); 24 are chiefs of departments or branch librarians (5 included above); there are 61 assistants, 9 clerks, 18 messengers, 18 night assistants, 5 engineers and firemen, 37 janitors, and 10 apprentices. Reclassification of the library continues. On April 30, the total number of volumes in the Decimal Classification had been increased to 286,526, of which 69,476 were in branches. Of this total, 120,086 in the central library and 35,785 in branches had been reclassified, the remainder having been put directly into the Decimal Classification on being received in the library. The music classification was finished. Philology was also finished and Education is in progress. Use of auditoriums continued great. During the year 438 organizations used the rooms, 377 at branch libraries. At central 686 meetings were held, and at branches 3263, a total of 3949, or 132 more than were held last year. The limit has probably been nearly reached, with only 15 rooms available. A training class of 12 members was graduated in June, and another class of 12 began its course of instruction in October. A catalog of the books in the library in American Braille was made, in Braille, and a copy sent to all the readers of American Braille in the state. The collection of music scores now numbers 2886 volumes, and its circulation for the year was 4463 issues, against 3329 last year. Neither of these records includes piano rolls; they refer only to bound volumes. Sheet music is not circulated. In December, 1915, about 500 perforated rolls for mechanical piano players were added to the collection by gift, making 730 of these, which were circulated 4231 times in the first four months of 1916. The classroom libraries now number 158 collections and a total of 7500 volumes, used in 45 schools. Branch libraries, including the two sub-branches and the Municipal Reference Branch in the City Hall, now number nine. They shelve 114,051 books and have circulated 913,073 volumes during the year, or 53.9 per cent. of the library's total home issue. There are 68 stations, 61 being delivery stations only. Total receipts \$463,767.47; expenditures \$265,964.91, including \$49,098.91 for books, \$4221.42 for periodicals, \$21,038.61 for binding, and \$121,356.14 for salaries for library service. Following the custom of recent years, the last half of the report is devoted to an extended

review of the work of one department, and under the title, "New books for old," Mary E. Wheelock, chief of the binding department, describes the establishment of the library bindery and the different processes carried on there, the whole being freely illustrated.

#### KANSAS

*Lawrence.* At the regular meeting of the library board an attempt was made to foresee the demands that will be made upon the city library during the next twenty years, and to meet them by extensive plans for improvement and extension. The plans being tentatively considered by members of the board include the provision of more reading rooms for the public, both adults and children, the extension of the stack rooms, and the addition of a committee or directors' room, which the library building does not at present include. It is possible that the increased needs for room will make necessary the addition of another story to the building.

#### OKLAHOMA

*Oklahoma City. Carnegie P. L.* (Rpt.—yr. ending Je. 30, 1916.) Accessions 1826; withdrawn 478; total 25,774. New registration 1953; total 26,090. Receipts \$8840; expenditures \$8840, including \$1970.64 for books, \$339.61 for periodicals, \$417 for binding, and \$3950 for salaries for library service.

### The Pacific Coast

#### WASHINGTON

*Kelso.* A library association has been formed here, and committees on ways and means, social work, story hour, and publicity have been appointed. B. F. Paul, the president of the association, will act temporarily as librarian. Many books have been given for the library, which will be opened to the public in a short time.

#### CALIFORNIA

*Bayliss.* The Carnegie Corporation has made an appropriation of \$4000 for a community library building, and plans have been drawn and approved. All that now stands in the way of the actual beginning of construction work is a deed to the site. Some years ago the S. V. I. Company donated a three-acre tract for this purpose. The deed was not made out to the community, however, and in course of time the company went into liquidation and with its properties was taken over by the Superior California Farm Lands Company. This company has been asked for a deed to the land, and has promised to attend to the matter.

*Los Angeles.* The Sons of the Revolution in the state of California, with headquarters in this city, are anxious to have their library known as the "repository of the Southwest" for historical, biographical and genealogical publications, manuscripts, records, etc. The library already contains much valuable reference material, and is being increasingly used. A separate building for the society, with ample library and museum facilities, has been proposed, and suggestive plans have been prepared by Arthur Burnett Benton, a member of the society.

*Los Angeles.* Plans for a public library building at Olive and Fifth streets, presented to the City Planning Association by Mrs. Louis Carlton Harmon, of the library board, were unanimously adopted at a meeting of the organization, Aug. 23. The plan provides for the erection of a building—300 by 200 feet—on the west side of Olive street at Fifth. The plan suggests a four-sided building, slightly at all angles, extending from a widened Fifth street south, the building and grounds taking in as much of the block as is not now occupied by the Pacific Mutual. Westward the property extends to Grand avenue. As planned, the building will face Fifth street, and the slight slant in the hill there will allow of terraced lawns on this frontage. The scheme allows of a liberal parking and a passage to the south, running from Olive to Grand avenue.

*Madera.* The Russ house site, opposite the court house, has been purchased for the new Carnegie Library. A grant of \$12,500 has been made by Carnegie Corporation for the building, and before the money is available the usual pledge must be given that "the building the plans call for, with indispensable furniture and fixtures, will be erected complete and ready to occupy, including architect's fee, within the \$——— promist." The building desired for Madera will cost about \$1500 more than the grant, and consequently this pledge has not yet been made.

*Santa Rosa.* The library of Colonel James W. Oates, recently presented to the city, contains about 500 volumes, including history, fiction, and bound magazines.

*Susanville.* The Montocola Club has prevailed upon the supervisors to furnish a lot for a Carnegie Library, if a grant for its erection can be secured. The supervisors have offered a portion of the courthouse square for the building, but it may not be accepted on account of its distance from Main street.

# LIBRARY WORK

Notes of developments in all branches of library activity, particularly as shown in current library literature

ADVERTISING, LIBRARY. *See also* Moving Pictures; Signs

A library float which attracted much attention in a boosters' day parade held in Huntington, Ind., is described in *Library Occurrent*. On a big wagon with a driver in a silk hat and white coat large picture bulletins were placed. The pictures were such as would be appropriate to the following words, printed in the blackest of black ink: "The library has books for the farmer"; "Learn about poultry at the library"; "He cries for library books."

In the float a group of small children dressed in white sat around a little library table, and a bulletin on either side of the float asked, "These children use the library—do you?" At each end of the float were older girls with books, sofa pillows, tennis rackets, etc., and bulletins reading: "Books for vacation" and "Read library books on your vacation." Other bulletins gave library statistics. The wagon was decorated with green and white crêpe paper and plumes, and draped in white cheesecloth. The horses wore white muslin blankets and plumes. The cost for this decorative material was about \$5.

The Colorado Library Association believes in publicity for its own benefit as well as for the information and instruction of the public in a library's needs and uses. In the *Occasional Leaflet* for July, published by the association and sent to every library in the state, the following advertisement appears:

### The Colorado Library Association Stands for Better Libraries for Colorado

It wants and is entitled to the support and co-operation of every person engaged or interested in library work in Colorado. Get in the swim! The water's fine! Pay your dues!

*Head Librarians, \$1.50*

*All Others, \$1.00*

CATALOGING

In recataloging the Massachusetts State Library it has been found essential to have

the work well systematized, and the processes are described in the 1915 report of the librarian, C. F. D. Belden, as follows:

"Books as needed by each cataloger are brought from shelves and the old indexed cards, if such exist, are removed from the catalog by tracings found only in the book. These, with the Library of Congress card, if found in the depository file, are put into a folder double the size of a catalog card. It was found that greater speed could be gained if the work of recording the information was separated from that which determines what shall be recorded. By means of this folder such a division of labor is effected.

Facsimile of Folder.

STATE LIBRARY OF MASSACHUSETTS	
Note—Indicate title, editor, translator cards to be made by underlying names.	

"On this folder is recorded, under the proper heading, the classification, form of entry, bibliographic data, subject headings, analytics and cross references which the cataloger considers will render the book most valuable to its varied users. This folder is revised

with the book, after which the book is sent to the shelves at once, and its shelf-list completed and filed. The ordering and completing of Library of Congress cards, or typing of cards, can be done from this folder, and here the persons who specialize on the exact form of recording the information—the typists and proofreaders—take up the work. They alone are accountable for keeping the catalog uniform in expression, and are, therefore, far more than copyists, for they must know much of the form detail of cataloging. All such decisions they undertake to carry out, and the catalogers are freed from these details. By using a unit form of card this is possible, even when cards are typed. This plan develops two lines of responsibility, and as the powers of individuals become apparent they are assigned as nearly as practicable to the most difficult work for which each is capable. An effort is made to have an understudy in every case, and to add to the staff, when necessary, persons fitted for whatever line is falling behind."

#### CLASSIFICATION—SYSTEMS OF

The July number of the *Bodleian Quarterly Record* contains the first instalment of an article on "Bodleian press-marks in relation to classification." During the three hundred years of the Bodleian Library's history many methods of classification and shelf-notation have been in use for periods of varying length. As each in turn was limited to current accessions, leaving earlier systems unchanged, the library offers an unusual field for the study of classification methods. The classification of manuscripts, and of classes of literature, which were for many years omitted from the schemes of classification, and of special collections will be dismissed with brief notice. Up to within a few years the books have always been separated according to size, but aside from that common feature, the history of Bodleian classification can be roughly divided into three periods. The first (1602-1789) is called that of "classification by faculties"; the second (*a*, 1789-1823; *b*, 1824-60), when subject division was entirely ignored, that of "numerical sequence"; the third (*a*, 1861-83; *b*, 1883 to the present), that of "detailed subject classification by numbers," which began with a small division of subjects, was expanded a few years later, and increased almost a thousandfold in 1883. The first two periods form the theme of the first paper.

#### LANTERN SLIDES AND PHOTOGRAPHS

Teachers, students, and others seeking photographs and lantern slides for study or illustration frequently do not know what sources of such material are open to them in New York City. Of special interest to them, therefore, will be the following facts which were recently secured by the secretary of the Metropolitan Museum of Art, and published in the museum *Bulletin*:

"Photographs and lantern slides of the history of New York from 1850 to 1900 are accessible to the public at the New York Historical Society, 170 Central Park West; of the history of New York and of local government at the rooms of the City History Club, 105 W. 40th street, where they may also be rented at three cents each; and of the properties under the jurisdiction of the Department of Bridges at its office in the Municipal Building during business hours. There are no lantern slides in the possession of the American Scenic and Historic Preservation Society, but its collection of photographs, chiefly of landscapes in various parts of the country, may be inspected, and may be borrowed free of charge by persons introduced by the museum thru its secretary.

"Columbia University's collection of 18,000 photographs is available for study in the Library of the Architectural Department to students or other persons who are suitably recommended. By permission of the head of the department of Latin and Greek of Hunter College, photographs and lantern slides of Greek and Roman antiquities and of scenes in Greece, Italy, and Sicily may be seen any school day, and arrangements may be made for borrowing them. The private collection of lantern slides of buildings, grounds, etc., belonging to Professor Bristol of New York University may be seen and borrowed by responsible persons on application to him.

"In the circulation department of the New York Public Library, there is a picture collection of 20,000 covering a great variety of subjects, which may be borrowed from branch

libraries on the same terms as books; and in the reference department are more than 4000 photographs of Italian painting, sculpture, and architecture.

"At the rooms of the National Sculpture Society, 215 W. 57th street, photographs of the work of members of the society and some lantern slides of American sculpture are also available except during the summer months."

#### MOVING PICTURES

The work done by libraries in California was graphically shown at the Panama-Pacific Exposition in a moving-picture film. This film, shown in the Education Building at the exposition, in an adjoining theater, and a duplicate shown at the San Diego Exposition, occupied an hour, and covered all phases of California library work—the delivery desk of a large city library, the distribution by automobile of a box of books to a farmer's family from the top of a convenient stump, story hours, work with jails, desert scenes where cowboys dash up on their ponies, a multitude of forms of conveyance and housing of books in all sorts of locations. Schools, country stores, windmills, barber shops, private houses, banks, churches, and a great many more places where little county library deposits were housed, made the film one of great variety and interest. Since the exposition closed the film has been cut up and made into twenty-minute reels. One of these is shown in Los Angeles, one is at the California State Library, one went to China for use with the American Library Association material there, and one is in the possession of the California Library Association. Less cumbersome than the whole hour run, these films are even more interesting to the ordinary observer.

#### MUSEUM MATERIAL

'Twixt library and museum. Arthur E. Bostwick. *Pub. Libs.*, J1., 1916. p. 298-300.

"The whole difference between a library and a museum is a physical difference rather than one of either object or method." Descriptive and illustrative material is to be found in both; a text with illustrations belongs in a library and specimens with labels in a museum. "When descriptive treatises are shelved in connection with the specimens, as in some modern museums, we have an expansion of the label into the book; and the museum, in this one particular at least, crosses the dividing line between it and the library. . . . Similarly, the library may occasionally cross the line in the other direction without incurring blame."

The first step is taken by the library toward the boundary line between it and the museum when the plates which are the library's "specimens" are kept separately in a portfolio instead of being bound into a book. Separate plates are very convenient and are so highly estimated by some librarians that they break up valuable books in order to remove the plates. A further step is taken toward the museum when specimens are created by clipping and mounting book material—largely plates from books, magazines or papers. The passage here from the picture to the object seems almost negligible, and few librarians, whose collections include treatises on textiles with colored plates, will hesitate to supplement them with mounted specimens of the actual textiles. Though within the boundary between library and museum, this kind of material is peculiarly adapted to library exhibit. Botany specimens and historical material—old programs, railroad tickets, menus—are among the many instances of interesting library specimens. This kind of material resembles that utilized by museums in that its value is so often a group-value possessed by the combination rather than by any one in itself. The best way to collect such material is to gather miscellaneous related material in quantity and then sort the whole mass at once.

When museum material is adaptable to library use, the library is justified in using it. The boundary region between library and museum may be occupied by either, but should not be occupied by both.

#### MUSIC ROLL EXCHANGE

"Several libraries in Indiana own collections of music rolls for piano players, but not so many libraries, if indeed any other libraries, have such an exchange library as has been started at Mooresville," says an item in the *Library Occurrenti* for July. "Any owner

of a piano player, by donating at least three rolls for six months, is entitled to borrow from the collection two rolls for a period of two weeks. At the end of six months, the rolls are returned to the owners, who, if they wish to continue as borrowers, must lend three other rolls for six months. This plan is working well and is pleasing the patrons."

PHOTOGRAPHS. See also Lantern slides and photographs

—EXHIBITS OF

Amateur photography exhibit. Lottie M. Ingram. *Wis. Lib. Bull.*, N., 1915. p. 320-321.

An exhibit of amateur photography was held in the South Branch Library of Racine "to interest the old readers in something different, and to attract new readers to the library."

The exhibit which was held late in September, was first announced in the early summer by a poster. "The public responded so well to the call for pictures that all available space was used. The prints were mounted on large sheets of dark gray paper, and these in turn made a frieze around the walls of the basement reading room. The pictures were grouped according to exhibitor rather than by subject, as the subjects varied so widely. There were vacation pictures from Montana and Arizona, but those showing the beauty spots of Racine were not the least interesting. . . Interior views and moonlight scenes compared favorably with the others. A special exhibit was composed of pictures of Racine taken over twenty years ago. Another exhibit was made up entirely of baby portraits. . . It was originally planned to hold the exhibit for three days only, but it served its purpose so well that it was continued three days longer."

PICTURES—EXHIBITS OF

A series of exhibits showing the scenery and art of countries of interest to many residents of New Haven was displayed in the New Haven Public Library during the summer months. Photographs, colored prints and illustrations of Italy, Germany, Ireland, Scotland, England, Canada, Russia, Sweden, Norway, Japan, China, the Balkans, Austria-Hungary and Turkey were shown. Each set remained on view about ten days and was placed as follows: General views, in the delivery room; Photographs of architecture and reproductions of paintings, in the art room; Pictures of interest to children, in the juvenile

department. All residents of New Haven who formerly lived in the countries selected were especially invited to visit the exhibitions while they were on view.

POETRY INDEX

The Cleveland Public Library has a card index of poetry including between 9000 and 10,000 entries. It covers poems in *Current Literature* (and *Current Opinion*), and the *Speaker*. There are some entries from other sources, the result of occasional "finds," and one or two bits of minor indexing, e.g., Kipling's works, but the bulk of the index is made up of poems in *Current Literature*.

PRISON LIBRARIES

"If the library is acknowledged to be a distinct department of the prison and is manned with a competent officer who can devote much time to the work," said Miss Miriam E. Carey in an address before the Minnesota Academy of Social Science [printed in part in *Public Libraries* for July, 1916, p. 317], "he can give the prisoners who are to go out a helping hand toward the acquiring of a taste for good books which will perhaps divert them from temptations saloonward and lead them to libraries instead. And to the men who must remain behind the bars for most of their lives he can show that the 'mind a kingdom is.'"

The prisoner's craving at first is for diversion and that part of the library's service to prisoners is very important. But after a time many a man will set himself to get an education by liberal reading and studying. There is an enormous use of newspapers and magazines but occasionally there is found a well worn copy of such books as Jowett's translation of Plato's Dialogues or the life of Adoniram Judson.

"The library should be a powerful educational factor, but to make it so is as difficult as to make hare pie, for which you remember the first requisite is to catch the hare. First, the library must contain not only the very best, but enough of the second best and of the simpler sorts of literature to provide something for the man at every stage of his progress. This involves a librarian trained to the work to give direction to the library affairs. But even an accomplished specialist could not be entirely successful without the help of assistants chosen from among the men, for they know the prisoner's viewpoint. There should be personal visits from cell to cell and direct guidance given in the choice of books."

PLAYER PIANO ROLLS. See Music roll exchange

#### READERS, RULES FOR—NUMBER OF BOOKS

Adults are now allowed to take four books at a time on one card from the New Haven Public Library. In the case of books or magazines in special demand only one may be taken, but a reader taking one new novel may take also from one to three older novels. Certain non-fiction books may also have to be restricted.

#### READING

Reading for joy: its part in education. Paul M. Paine. *N. Y. Libs.*, F., 1916. p. 51-55.

"The complete public library as I understand it is the agency for the spread of unrequired reading and it provides this reading for those who have just begun to read, for those who are struggling with the Regents of the University of the State of New York, for those who are reading for advanced degrees, and for those who have reached the time when they can regard the book neither as an obstacle nor as a step to the heights of learning, but as a friend, a companion, an inspiration."

Since there are no examinations in a library, there is a lack of definite, tangible results, but no one who realizes the value of the printed page can think meanly of the job which is sending thousands of good books into homes each year. The library fills a place which cannot be filled to advantage by the school; it is the great agent of promoting good reading. It gives to the reader the books he reads for joy. They are the books of culture, they bestow not mere knowledge, but give wisdom, "and there is no book of this sort that is not a book of imagination."

That libraries circulate trashy novels is a common accusation. It is true that they circulate novels, and it is also true that the best book, for most adult readers is a good novel. To the charge that the novels are not standard there are two answers. The first is that novels of greatest circulation are those universally accepted as standard. The second is a counter question, "What do we mean by standard fiction?" In the face of a variety of suggested standards, it would seem best to set our own standards, to choose those books which deal with things that may never have happened, but which are essentially true.

#### READING CIRCLES

A note on library readings. L. Stanley Jast. *Lib. Assn. Rec.*, Feb., 1916. p. 53-62.

The library reading is a new development, complementary to the lecture. Books may be popularized by reading from them as well as by talking about them. Volcanoes, seemingly an intractable topic, were made interesting by a series of extracts in chronological order from writers ranging from the two Plinys to Heilprin.

A lecture on a Shakespeare play was followed at Croydon by a public reading of the play. Some readings are given entirely by one person, but as a rule several people form a group of readers. The change of voice prevents any tendency to monotony.

Specimen programs of readings are included in an appendix to Mr. Jast's note. One deals with the stories and poems of Kipling, another treats "The Englishman in the Alps" in poetry and prose, a third consists of scenes from Hardy's epic-drama, "The Dynasts."

#### REFERENCE WORK

The theory of reference work. W. W. Bishop, *Bull. of the A. L. A.*, J1., 1915 (Proceedings of the Berkeley conference), p. 134-139. Also reprinted as separate pamphlet.

Reference work, as understood in this paper, is any service rendered by a librarian in aid of research, but it is not research itself. The reference librarian is an interpreter of the library to the public; he reveals not what he himself has created, but all that has been gathered, listed, arranged, and shelved for the reader's benefit.

The term "reference books" has changed in meaning. The former connotation was restricted to books of encyclopædic character; it now extends to all books which are placed at the convenience of reference workers and readers in reading rooms. The term "reference libraries" is used to designate libraries which primarily aid in specialized, advanced research.

Beside assigning a suitable person to the reference desk there must be assurance of continuity of work. Reference work demands a policy on the part of the librarian and a definite plan of the means to be employed in following it. As it is impossible for any one person to have special knowledge on the wide variety of subjects dealt with in reference work, the reference librarian acts as a guide not only to the books, but also to the library's resources in personnel. The policy will differ according to the nature and extent of the library. There are three sorts of demands in ordinary reference work:

1. Inquiry for historico-literary information.

2. Inquiry about present-day conditions in social and economic fields.

3. Inquiry in special fields of knowledge.

Altho the librarian should not absorb all inquiries, he should sift inquiries, so as to recognize those which are answerable by encyclopædias, which by special books, and those which should be referred to a specialist in the subject. To accomplish this sifting tact, memory, knowledge of the resources at hand, and experience are the greatest assets of a librarian.

Included within the theory of reference work are the tools of the librarian. His emergency tools are dictionaries, indexes, compends of statistics, recent bibliographies, directories, etc. His next line of help is the general catalog of the library which should therefore be conveniently placed. Last come the reference books of the reference room, open to readers, but peculiarly the tools of the librarian.

We are but beginning to see the possibilities of useful service rendered the community by reference libraries. The passive attitude, politely responsive to demands, but creating none, should be abandoned; the non-recreative side of library work should be exploited and stores of books should be gathered against a future need. The keynote of reference work possibilities is specialization—acquisition in special fields, development of special clientele, and specialized service.

The theory of work of the general "reference librarian" is "service, quiet, self-effacing, but not passive or unheeding. To make books useful, and more used—this is his aim. This aim and this theory are alike honored in any gathering of librarians."

#### RURAL COMMUNITIES, LIBRARY WORK IN

Library growth in villages and rural districts. *N. Y. Libs.*, F., 1916. p. 43-46.

Editorial. The rural libraries are far from an equality with city libraries in book privileges. With over 25 per cent. of the population they have but 12 per cent. of the library circulation and 10 per cent. of the total library income. But considering the growth of cities in many respects and the stationary condition of country wealth and population, the recent growth of rural libraries is perhaps more significant than that for the cities. "Libraries of the state outside cities have to-day from four to eight times more of resources than twenty years ago, and in the last ten years have gained more in material equipment, in public support and circulation than in the whole previous history of the state." The

growth may be attributed to the following forces:

1. The simple logic of the library movement which is the same for all public utilities.

2. Advance in schools and educational methods, which has given an added stimulus toward the application of this logic.

3. Women's awakened sense of social responsibility.

4. Marked development in public spirit.

5. Benefit received by rural libraries from national, state, and local library associations.

6. The development of modern library science as represented and advanced by library schools.

7. Gifts to village libraries from wealthy persons in cities.

8. The direct and organized effort of the state, represented in the library law of 1892, to encourage, aid and direct in the establishment of local libraries, as it had long been doing for free schools.

"The object of the state, in its legislation and activities in this field, has been, of course, purely educational and moral, the enrichment of life through the diffusion of good literature." Over 3,000,000 approved books were distributed in rural homes during 1915 at a cost of less than one cent of state money for each volume. "But in addition to this direct educational service, these libraries have brought out of private possession into free public service, property in the form of buildings, sites and endowments, amounting to \$3,678,695. These libraries, many if not most of which have been brought into being thru the stimulus thus provided, have enriched the public with property eight times greater than all that the state has contributed."

In a most interesting report for the committee on libraries of the Woman's Educational Association, Miss Mary Morison, the chairman, makes some interesting notes on the books which will and will not circulate in the small towns to which the association sends its libraries.

"A city librarian, laying down the law for purchase of books said of course in the country he should purchase books on agriculture," she writes. "He was promptly told by the country librarians present that it was a needless expense, as they would not read them. This can be borne out by our statistics, when 'Farm accounting,' 'Rural Denmark,' 'Home waterworks,' 'Beginnings in agriculture,' 'Principle of rural economics,' 'Construction of dwelling houses,' and 'Common sense of the milk question,' come back unread. The

'History of the telephone' was provided with a note saying that it was 'As thrilling as any romance,' but no one was to be taken in by that honeyed phrase. The 'Life of Samuel Barrows,' 'Autobiography of Admiral Dewey,' 'Beginnings in electricity,' 'Panama gateway,' McClure's 'Autobiography,' Rihbany's 'Far journey,' Stewart's 'Letters of a woman homesteader,' met with a similar fate. We promptly provided the best books on the war, but they were hardly touched, and one librarian begged that no more be sent. Favorite books are Eleanor Porter's 'Miss Billy,' Bertha Runkle's 'Scarlet rider,' Oppenheim's 'Havoc,' Rex Beach's 'Ne'er-do-well,' Curtis's 'Woman from Wolverton,' and Webster's 'Daddy-long-legs.' Altsheler, Holman Day, and McCutcheon are names to conjure with. The children are much the same. Five books of the handicraft style, written for boys, had a circulation of two between them, and even 'Bob Knight's diary on a farm' was passed over, as probably savoring too much of the buck saw and the hoe."

The association, whose headquarters are in Boston, has for circulation 80 regular libraries, 26 special, and four Audubon libraries, a total of 110, which made 154 visits in 122 towns and villages in Massachusetts during 1915.

The libraries for foreigners now number 12. There are four Polish, two Italian, three French, one German and two Swedish, most of which were given by the Society of Colonial Dames, the Circolo Italiano and the Bostoner Deutsche Gesellschaft. One of the Swedish libraries mentioned was given by the Colonial Dames, who are ready to provide a Lithuanian one next. Twenty-nine sets of pictures have made 136 visits to 113 towns and villages.

---

Positive side of library extension in New York State. *N. Y. Libs.*, My., 1916. p. 75-77.

Editorial. The April issue of *New York Libraries* gives an exposition of the positive side of library development in New York in the last twenty years, and cites statistics to show the rapid increase in the number of free libraries during this period. "For each 1000 persons in the state the average annual issue of books from free libraries increased in twenty years from 437 volumes to 2853 volumes, the use of the free library books thus increasing six and one-half times faster than the population. . . . The progress indicated by these figures is indeed real, but they tell little or nothing as to actual library condi-

tions obtaining in numerous sections of the state." In many of these sections there has been an actual decrease which is but emphasized by the increase in the aggregate. "The average wealth in free library books of the population of this state is now 1000 volumes for every 2000 persons, the average annual issue of books is 5700 for each such group, but this does not prevent a condition of actual and utter poverty in respect to books in the case of large sections of the population included in these averages. Every new library established, every enrichment of libraries already existing, raises the average. It only emphasizes and makes more acute the need of sections unaffected by this average.

"Thus we can never show by any gross figures, however large, or by any averages, however high, that the library development of the state has attained a proper or satisfactory end. . . . In spite of all that the state has done and stood ready to do for the last twenty-three years, there is still a population of about 1,400,000 in New York State quite untouched by this modern library movement, save as it has been benefited by the school libraries." Here the editor gives some comparative statistics showing the relative library conditions in New York and in several other states. The problem in New York is similar to what it would be for a new library commission in such a state as Kansas if there were not as yet a single free library within its borders.

Fifteen per cent. or 1,400,000 of the people of New York are still to be provided for. Many of these people are grouped in communities so that with them the library difficulty, while partly physical and numerical, is chiefly a matter of proper initiative and spirit on the part of the communities. There remain 1,000,000 living in scattered homes or in tiny hamlets. Traveling libraries, district school libraries, and rural branches and stations of nearby city and village libraries, are all doing something to help these people, but the most effective plan for meeting the problem will probably be the establishment of a system of county libraries whereby the county will bear the expenses, and each family in the county will have free and convenient use of books.

---

The library and a changing Iowa. L. L. Dickerson. *Ia. Lib. Quarterly*, O.-D., 1915. p. 177-186.

This article was an address delivered at the Colfax meeting of the Iowa Library Associa-

tion considering the farmers' reading as an approach to the subject of rural extension of library work.

As regards the distribution of reading matter to municipal residents, the library movement in this country has passed through the first stage of its development, that of education and agitation. But the state has not yet accepted responsibility for the reading matter of rural residents who comprise 49 per cent. of the population, whose interests are closely allied to those of urbanities, and who are most truly representative of the state. Although in compliance to preliminary legislation sixteen libraries in Iowa are serving their neighboring farm folk, the field still to be covered is extensive and its peculiar conditions are not universally understood.

There is throughout the country a spirit of unrest due partly to the farmer's belief that he is not getting a just return for his labor and also to dissatisfaction with living conditions. Living conditions for the farmer are different from those for any other class and adjustments of them must be the outgrowth of mass thinking. In preparing the way for adjustments the printed page holds great potentiality. That adjustments have not already come is due to several conditions peculiar to the farmer, conditions which could not exist if reading were general in the country.

Primarily the farmer is an isolated unit, little touched by the social forces which have recently entered into politics, religion, and society generally. This isolation develops a type of mind distinct from that of the urbanite; the farmer may be neighborly, kindly, but he is an individualist. He stands as a separate unit at a time when the basic characteristic of capital and labor is collective thinking and bargaining.

That the farmer is not intellectually in touch with the significant facts of the day is judged from rural surveys, although they are inadequate and incomplete. Here are given statistics and numerous details from three surveys completed recently for the University of Iowa, and a summing up of conditions.

"We have then a situation something like this: In the two townships from which the information is fairly complete, and in which the combined population is 1415, an average of 26.5 per cent. are without books and 28.3 per cent. are without standard magazines. No other library facilities are available. These people are not borrowing from the state traveling library or from university extension sources. We may assume, however, that the reading of the designated number of books

is not strictly limited to the homes in which they are found, since farmers are good lenders and this is especially true of books and story magazines."

A fact standing out prominently in these surveys is the general circulation of newspapers and farm journals. Of these the greatest readers are farm women; the farmer does not read, not so much because he has little time for reading, but because he has learned how to read, but never *to read*.

One of the most important considerations in the matter of rural reading is the subject of reading for the country boys and girls. Where the boy is to get his selected and grade books, and where the girl is to get her fairy tales, poetry, and literary heroines are vital questions. The leaders in rural life will be as greatly influenced by their reading as those in any other station.

The public library is accepted as a national institution for the municipality; it should be established for the other 49 per cent. to whom it would mean immeasurably more. To the farmer wisely selected books would be not only additional luxuries or advantages, but to a considerable degree the only contact with an outside world. The social movement of the last decade has found one of its greatest advertising means the library and literature distributed by the library and it is this type of reading which least has reached the rural community.

By entering the work which daily newspapers and weeklies have already begun the library may share in the inevitable changes which are making the new agricultural life of Iowa.

#### SAFETY AND SANITATION LIBRARY

A safety and sanitation library containing works on the subject of shop rules, first aid, insurance and pension plans and kindred topics will be opened by the safety and sanitation committee of the Merchants and Manufacturers' Association of Milwaukee. The material will be indexed and kept on file at the rooms of the association for the use of manufacturers.

SHELVING. *See* Stacks, Book

#### SIGNS

August 25 was County Free Library Sign Day in California. The county libraries of the state have recently adopted a sign whose purpose is to serve as a striking and artistic advertisement of the library privileges of the county library system. The sign is double-

faced steel enameled 12 in. x 17 in.; the design black and white on an orange ground.

The hanging of the first signs, which will hereafter familiarly mark book service in California, was simply or ceremoniously done, as pleased the librarian, but everywhere in the

more than eighteen hundred communities of the thirty-six counties having already adopted the plan, the story of the sign was told. A cut of the sign with an appropriate article was published in the August 25 issue of hundreds of papers in California.

The adoption of a uniform sign to be displayed at every branch thru which county free library service may be obtained is a big, unifying step in the work, and calls especial attention to the main aims of the county free library plan—equal, economical and complete library service for everyone wherever he may happen to make his home.

A post card has recently been published by the California State Library showing the exact colors of the sign.

**SPECIAL LIBRARIES.** See Safety and sanitation library

#### STACKS, BOOK

The experimental and trial work on the new cantilever bookstack, designed by W. A. Borden, of Westport, Ct., has been brought to a successful finish and the perfected stack is now on the market. In the course of these experiments one of the posts tested at the engineering laboratory at Yale supported a weight of 56,000 pounds without bending.

As Mr. Borden has been a practical librarian for over 30 years it may be assumed that his stack meets all library requirements,

but neither he nor his business associate, John Adams Thayer, are practical engineers and it has seemed to them expedient, therefore, to associate themselves with some steel construction firm who would stand sponsor for the proper solution of the engineering problems involved.

Arrangements have, therefore, been made with the well-known firm of steel construction engineers and builders, Post & McCord, of 101 Park avenue, New York City, who will manufacture, erect and guarantee all installations of the Cantilever Stack in the United States.

#### SUMMER SCHOOLS

Summer schools and short courses. Fanny D. Ball. *Mich. Lib. Bull.*, Ja.-F., 1916. p. 24-25.

The summer school is one of the most effective agencies for promoting staff efficiency and for broadening the ideas of the library assistant as to what library work really is.

The assistant can learn methods and much about books in the course of her everyday work, but she needs the larger outlook which comes from contact with other librarians, and from acquaintance with different and larger libraries than the one with which she is familiar. Librarians of small libraries who may have already the love of books, or the culture of a good education, but who have not had the opportunity of taking a complete library course, also find the summer school a great help. A third class which has been greatly helped are the teachers who are often required to take charge of class libraries and school libraries. They can there learn things about books and the care of books, about book selection and book purchasing which they could not get in any pedagogy course. They will also obtain the librarian's point of view, and they come to know what the library is working for, what system and order and arrangement mean in a library.

In closing Miss Ball makes the suggestion that some advanced courses be arranged to be continued from one summer to another, so that by attending several summer sessions the librarian might get the equivalent of a full year's course with the attendant credit.

#### TAXATION FOR LIBRARIES

On March 16 the Library Association of Little Falls, N. J., submitted the question of tax support for the library to the voters of the township and won by a large majority. The day before election leaflets giving information about the library law and the

advantages of tax support, beginning with "Put Little Falls on the map of progressive towns," and ending with "A vote for a free public library is a vote for progress," were mailed to every voter. This was followed by a post card which went out in the first mail election day, on which was written, "Don't forget to vote for a municipal library to-day."

How to increase your tax levy. Jeannette M. Drake. *Wis. Lib. Bull.*, N., 1915. p. 310-312.

The success of the library depends so largely on its income that a great effort must be made to have as much money as the city is able to give. It is not always wise to ask for a larger levy as some cities are supporting the library as well as they can afford; "we should decide what amount is fair for us to have and ask the council for that amount and see that we get it, rather than add a mill or a half mill more than we expect and let the council cut it down.

"In considering methods of increasing the tax levy we must first have public opinion favoring the library. The only way to get this is to give prompt service to each and every patron. . . . We must not leave the council members to find out from some one else the value of the library. Neither is it enough for library officials to go to them once a year to ask for money. If possible we must have them as library patrons and call their attention to books on subjects they are interested in. . . . The librarian should know the councilmen personally, and she can with profit read to them, as a council, the annual library report."

In order to make the article practical Miss Drake outlined the methods used in Sioux City in 1912, when a decided increase in the appropriation was procured. A lawyer on the library board studied the situation and drew up comparative statistics to prove that the library was behind those in other cities no larger than Sioux City. Tabulations were prepared on the following topics: (1) cost of maintaining the library per capita, (2) cost of circulation per book, (3) amount of tax with 2 mill levy or over and names of towns in Iowa that had library levy of 2 mills or over with population of each, (4) increase in levy for all city departments in local city, (5) value of a public library. A summary for the budget for the next year was given, based on the amount of money that was being asked. The summary was for quick reference, giving de-

partments and amount of money wanted for each. Then the entire budget was included, giving the departments, amount of money wanted, and brief reasons. Whatever the facts are that are to be presented it should be done by a trustee who is influential and whose judgment is respected by the council. In every case a board member should always be present at the council meeting when the levy is made to be sure that no mistake is made.

#### TEACHER-LIBRARIANS, TRAINING OF

Carleton College (Northfield, Minn.) offers this coming school year a rudimentary course in library science for teacher-librarians. It extends over a period of two years, the first being devoted to the study of reference books and children's literature, and the second to the technical processes involved in caring for high school libraries. Regular credit towards the degree of B. A. is given to students successfully completing the course.

#### TRAVELING LIBRARIES

A war-time innovation in the library work in Germany is the organization of traveling libraries for the various Army Corps. A library consists of 1500 to 2000 volumes, fitted up compactly on shelves in its own car, equipped and sent out from the Royal Library in Berlin. It has its own catalog, but each division to which a library is sent provides its own librarians and is responsible for the care of the books.

#### TRUSTEES—POWERS AND DUTIES

"Are you trustee or librarian?" asks the *Library Occurrent* [J], 1916], and follows the question with a discussion of the duties of a library trustee and the rights of a librarian. Misunderstandings on such matters as book selection, the librarian's attendance at board meetings and the arrangement of the schedule for the librarian and her assistants, usually arise from a misconception of the relations of a trustee and an executive officer. "There are enough duties for a board of trustees, if they consider and decide upon the recommendations of the librarian, if they approve the budget and expenditures, if they attend board meetings, if they see that the library has adequate financial support, if they make sure that the librarian is getting the required results, if they make sure that their library is a leader among libraries, not a trailer. . . . The only safe rule for a board member to follow is to post himself on the standard of service that a library should at-

tain; to be on the *qui vive* for progressive ideas, and to shift as much of the responsibility of administration upon the librarian as the librarian can stand. If the board has tried a librarian and found her wanting, then is the time to take responsibility from the librarian, or, better still, to get a responsible librarian. A librarian with proper tact, and at the same time firmness, will in the long run have no trouble in convincing all but the most exceptional board member that she is better able than the trustees to manage the library and that she can be trusted to do so without loss of dignity on the part of the trustees."

---

Trustees and librarians. Frank P. Hill. *Bull. of N. H. Pub. Libs., Je.*, 1916. p. 173-174.

In organizing the Lowell (Mass.) Public Library in 1883, Dr. Hill first became aware of the necessity for close co-operation between trustees and librarians.

"In New England this co-operation was—and is to-day to a large extent—more a matter of theory than of practice, while in New York, and the West particularly, it is brought to its fullest development. This is the problem of successful library administration.

"The tendency on the part of trustees of some libraries to interfere with the internal management—the routine—of the library is a handicap to progress and a detriment to service, and often leads to the discomfort of, if not dissension among, the members of the staff.

"When a competent librarian is in charge the trustees should give little attention to the details of management if the best results are to be obtained.

"The trustees are responsible to the public in the same way that bank directors are responsible to depositors. It is their duty to adopt a policy, and, while keeping a general oversight of the institution, allow the librarian the greatest possible freedom to carry out that policy; to plan and execute along given lines; to aid in the selection of books and the purchase of supplies; to try experiments; to attend to details; in short, to place confidence in the executive ability of the librarian, leaving results to speak for themselves.

"Except at executive sessions the librarian should attend all board meetings and in large libraries should act as secretary of the board, as without his suggestions and guidance the trustees cannot act with intelligence of the work in all its phases.

"The librarian must always keep in mind

that the trustees are his superior officers, and that it is his or her duty to carry out their orders to the letter—or resign.

"Finally, both should remember that they are but servants, who together have a duty to the public, to the library, and to themselves, which can be carried out only by the closest possible co-operation. Harmony is the keystone of success."

---

At the annual meeting of the Indiana Library Trustees' Association in November, 1915, Mrs. Elizabeth Claypool Earl, said in her presidential address, that she would divide the needs of library trustees into three divisions: (1) A deeper appreciation of the functions of the library and its importance in the community, (2) a more general co-operation among trustees, and (3) better business methods.

If the public library is "really the only democratic institution in the United States, serving all ages, all colors, and all nationalities with the same intelligent care," then "the library board which lives up to its privileges is the most important factor and potent force in the community toward the right living of the people.

"With a sense of the importance of the trust we accept as board members, we naturally seek information how best to administer this obligation to the community. What are the sources of information? The Public Library Commission, whose staff of trained workers are always at the service of the state, *THE LIBRARY JOURNAL*, *Public Libraries*, and *The Occurrent*. How many trustees read these library publications and give to their librarian these professional tools to help his efficiency? Another source is library meetings. The district meeting, the state convention, and the American Library Association. How many trustees attend these meetings and learn first hand what other libraries are doing to get the right book to the right person, to help place correct values of apportionment in the budget, to see if by comparison your library is giving the return service the taxpayer has a right to expect? To be honest and intelligent members do we not owe it to the community to read the library publications and attend the library conventions in order to spend the public money judiciously and economically? Has anyone a right to accept a public trust without giving in return conscientious, intelligent service? If they cannot, there is someone in the community who can, and the importance of the library administra-

tion is too great to be neglected. There is too much at stake for anyone to hold a complimentary honor."

Mrs. Earl recommended specifically that a committee be appointed to study the needs of Indiana libraries and draft a library bill to be brought before the next meeting of the association for discussion, and, if approved, to be placed before the next session of the legislature to be enacted into law; and that "Fitness First" be adopted as an appropriate slogan for the association. At the conclusion of her address, both recommendations were adopted by the meeting.

#### TYPOGRAPHICAL LIBRARIES

The St. Bride Technical Library: a typographical library; its methods and classification. R. A. Peddie. *Lib. Asst.*, Ja., 1916. p. 7-12.

This special library of the printing arts, a library of works on practical typography, which the librarian—and writer of the article—claims has no superior and hardly an equal, had its foundation in the collection of three to four thousand books, pamphlets and prints relating to, or illustrating, the art of printing in all its branches, made by Mr. William Blades, author of the biography of Caxton.

When Mr. Blades died in 1890, the collection was acquired for the St. Bride Institute, which has become the center for the main activities of the British printing world. Through the efforts of Mr. Drummond (chairman of the joint meeting of the L. A. and L. A. A. on December 8, 1915, at St. Bride Institute, where the paper was read) and the munificence of Passmore Edwards, this collection was strengthened by the accession of modern text-books of art and the more recent historical works, bringing the library up to date. Important acquisitions also were the library of Talbot Baines Reed, author of "Old English type foundries," in 1900; in 1902-03, the working library of John Southward, author of the principal English text-books on printing, and the technical section of the library of the Society of Compositors.

In the scientific building-up of the library, considering it as a special library, three points of view were considered. First, the practical side of the printing arts; second, the history of their origin and development; third, the collection of specimens illustrating the practice and the history. There are two catalogs, one an author catalog now in process of printing which will make a volume of about 1000 pages, and a classed catalog in process of revision. Owing to lack of space the books are

shelved in fixed location, with a location book referring from the accession number. The classification is based on that used by the Grolier Club of New York, "with considerable modification on the practical side." Its main feature is that it is decimal, and it owes much to the Dewey system. The main divisions are:

0. Bibliography.
1. The book.
2. Writing.
3. Typography.
4. Illustration and engraving.
5. Bookbinding.
6. Ex libris, etc., marks of ownership.

Books not definitely on one of the library's special subjects are only kept if of value as specimens of printing, illustration, or bookbinding, and are classed accordingly.

Many subjects are subdivided geographically, and the table of countries is arranged according to the date of the introduction of printing, in the following order:

1. Germany.
2. Italy.
3. Switzerland.
4. France.
5. Low Countries.
6. Austria-Hungary.
7. Spain and Portugal.
8. Great Britain and Ireland.
9. Other countries.

The main subdivisions of class 3, Typography, will perhaps be interesting:

30. General works.
31. History, General.
32. History, Local.
33. History, Miscellaneous.
  331. Special types. Hebrew, etc.
  332. Parts of the book. Title pages, etc.
  333. Private presses.
34. Examples of typography.
35. Practical typography.
36. Presses and machines.
37. Various processes. Inkless printing, Printing for blind, etc.
38. Typographical design.
39. Administration.

Special collections to which reference is made include: a series of facsimiles of the types of early printers; the works of the Type Facsimile Society, the Gesellschaft für Typenkunde, and other similar series of facsimiles, uniformly mounted, and classified by countries, towns and printers—a valuable aid to the student; a series of pictures of printing machines of considerable historical value; the collection of periodicals; and the collection of early printed books of which there are about 100 printed before 1501, some exceedingly rare, mostly in good condition, and several in their original bindings. The difficulties of handling and storing newspapers and posters are alluded to and suggestions are welcomed. The aim of the library is to be

the depository of all information historical and practical, relating to printing and its kindred arts, from the history of the first productions of the press to the description of the latest improvement in type-casting machines. With over 30,000 volumes and pamphlets and many thousands of prints, broadsides, and cuttings, the library takes its place as a special library of considerable standing in the rapidly growing list of such institutions.

#### UNIVERSITY LIBRARIES

The library and the modern university. J. W. Hudson, Ph.D. *University of Missouri Bull.*, vol. 17, no. 12. p. 4-17. Also printed in *Pub. Libs.*, Jl., 1916. p. 293-297.

The founding of nearly every great university has been inaugurated by the founding of a library; its growth has been the concomitant of the university's development. Recent changes in the conceptions of education have made the relation of the library to the university more vital; the library has had to meet demands occasioned by the rapid multiplication of courses, the functions of the university library have become increasingly important because of the widespread adoption of research methods in education, the growth of specialization in the university has required the library to become intensive, the widespread adoption of pedagogy, which teaches a subject thru its history, has increased in the university library the number of books taking up the genesis of university subjects.

The library must grow to be a still more important factor in university life because of needs of reform in our present educational system; it will invite an initiative, now lacking, in the student to look beyond the textbook and lecture for information. Another need is the organization by the student of his separate courses into a connected curriculum; this can be done only by filling in the gaps between courses by a judicious use of the university library. By forming the habit of voluntary collateral reading the student will be more likely to continue his studies after graduation. The reforms can come only through the contagion of constructive ideals found in the instructor and through him in the masters.

Dr. Hudson introduces a brief historical sketch of the library of the University of Missouri, comments upon the new library building, and concludes by stating the purpose of the library, a double one—exact scholarship and creative research.

#### VISITS, LIBRARY

Interlibrary visits. Elizabeth Pomeroy. *Mich. Lib. Bull.*, Ja.-F., 1916. p. 23-24.

"Experience is knowledge by trial, and much may be learned from the trials of others. If it could be so managed that every librarian in Michigan could visit every library in the state once a year, how much might be gained from seeing things actually done.

"A visit, as suggested, might be made without exchanging a word with librarian or assistants, and yet the visitor would have gained something from the atmosphere of the particular library visited that would be helpful.

"The library visit is not only beneficial to the visitors, but, especially in the case of the small library, to the librarian also.

"Oftentimes new ideas will spring up where the environment suggests them that would either not be thought of at all, or not as well understood elsewhere. If it were not for reading in our library magazines of the work being done in other places, the librarian of a small town might easily fall into the way of thinking, for months at a time, herself the one individual for whom Dewey and Cutter labored. It is when in danger of becoming possessed of this idea that the library visit, or visitor is our salvation."

---

### Bibliographical Notes

---

A volume on "Walt Whitman: yesterday and to-day," by Henry E. Legler, librarian of the Chicago Public Library, is soon to be issued in a limited edition by the Brothers of the Book, of Chicago.

A pamphlet outlining 75 programs for mothers' clubs is issued by *The Mother's Magazine*, and loan papers on each of the subjects listed may be secured. The magazine also issues numerous reading lists on a wide range of subjects.

The Michigan State Library has revised and enlarged its pamphlet on "The American flag in prose, poetry and song," and it now contains rules regulating the manufacture, use and etiquette of the flag, the act punishing its desecration, suggestive programs for flag day exercises, and much other interesting material, in addition to the literary features indicated in the title.

An index to the published writings of Mark Twain is being compiled by some thirty members of the staff of the St. Louis Public Library, much of the work being done outside of regular hours. So far the work has been

confined to the various editions in book form, and whether or not the fugitive pieces will also be included, where known, has not yet been decided.

An unusual publication for a public library to put out is the excellent little guide book to "Places of interest in Syracuse and Onondaga county," compiled by Paul M. Paine, of the Syracuse Public Library. In preparation of copy and reading of proof Mr. Paine had the assistance of a number of local authorities, and an annual revision is planned. The guide book is pocket size, 24 pages, and sells for 10 cents a copy.

In *Professional Memoirs*, which is published bi-monthly at the Engineer School, Washington Barracks, D. C., Henry E. Haferkorn, the librarian of the school, conducts a department in which are noted articles of engineering interest, both civil and military, appearing in technical periodicals and in the proceedings and transactions of societies. Mr. Haferkorn has also contributed bibliographies on the War with Mexico and on Searchlights to the same publication.

The annual "Review of historical publications relating to Canada," covering the year 1915, has been issued by the University of Toronto. H. H. Langton, the university librarian, is the general editor, and he has been assisted by Prof. George M. Wrong and W. Stewart Wallace, also of the university. The subject matter is grouped to bring together the books on the relations of Canada to the Empire; the history of Canada; provincial and local history; geography, economics, and statistics; archaeology, ethnology, and folklore; and law, education, ecclesiastical history, and bibliography.

## RECENT BIBLIOGRAPHIES

## Humors and Blunders

---

### THE BOOK LOVERS

#### *A Library. Children's Department*

The Red-Headed One . . . Age 13  
The Other . . . Age 12¾

**THE Red Headed One:** Ain't any of Altscheler's in?

**The Other:** That guy that just went out took the last one. I seen him!

**The Red Headed:** Les' skin after him, and get it away from him.

**The Other:** He'd tell the teacher.

**R. H.:** I don't care.

**The Other:** Besides, he could lick you!

**R. H.:** That guy! Lick nothin'! I could lick him with one hand.

**The Other (tone of deep scorn):** You could not!

**R. H.:** Yes, I could. Didn't I lick Squealer Merrill? An' didn't he lick Pikey Smith? An' didn't he lick Sweaty Barlow? An' didn't he lick that guy?

**The Other:** You did not! Here's "The boy aviators," an' "The boys in the submarine,"—I'm goin' to take them.

**R. H.:** You can't take but one of 'em.

**The Other:** Why not?

**R. H.:** That's the rule. All the books that ain't any good, an' that you don't want, you can take two or three of them—an' keep 'em as long as you want. But all the books that's

any good—why, you can't have but one of 'em, an' you have to bring that back in a week.

**The Other:** Where are all those kids goin'?

**R. H.:** That's for the story-hour.

**The Other:** Story what?

**R. H.:** The teacher takes 'em all in that other room, an' they all sit around an' she tells stories outer Neebergoolingleed.

**The Other:** Outer what?

**R. H. Neebergoolingleed—or somethin'. It's rotten.**

**The Other:** Did you ever go in?

**R. H.:** Yes. Once or twice. It ain't so bad. Las' time I found some gum somebody had left under one of the chairs an' I chewed it a little while—it was raspberry—an' then gave it to Donkey Pratt, an' he chewed it a little while, an' then there was that girl with the two pigtails—Fatty Rollins's sister, and he stuck her two pigtails together with the gum, an'—

**The Other:** Le's go in!

**R. H.:** All right. . . . Gee! what's that? (They go to the window).

**R. H.:** An automobile has busted. . . . Gee! they're takin' movin' pictures!

(Exeunt omnes—at twenty miles an hour.)

—“The Librarian” in the *Boston Transcript*.

Oct. 19-21. Massachusetts Library Club, New Hampshire Library Association, Western Massachusetts Library Club. Joint meeting, Greenfield, Mass.

Oct. 31-Nov. 2. Kansas and Oklahoma Library Associations. Joint meeting, Arkansas City, Kan.

Dec. 28-30. American Library Association. Mid-winter meeting, Hotel La Salle, Chicago.

SENOR ROJAS, National Librarian of Mexico, has replied very cordially to the message of fraternal good will and international peace sent him from the Asbury Park conference, which, after much delay, followed him from Washington to Mexico. He expresses the desire that American libraries and like institutions will enter into exchange relations with the National Library of Mexico, and we hope that this request may be widely honored. Tho we speak with different tongues, the library spirit should be the same in both countries, and everything which helps to more cordial relations should be made the most of. Moreover Spanish, the simplest and most logical of languages, is happily becoming more and more a study in this country, while in Mexico English is widely understood. We urge American librarians to write personally to Dr. Luis Manuel Rojas, Biblioteca Nacional, Mexico City, expressing their cordial willingness to send their publications in exchange for those of his library.

THERE is growing protest in this country against British interference with our neutral rights, especially in reference to mails and library importations; and the notes and explanations of the British authorities have only made bad matters worse. In attempting to relieve a situation which should never have been created, the British authorities have made confusion worse confounded. The permits issued to importers for the passage thru British naval lines of importations of German books thru neutral countries have been good only for two months and have sometimes come undated, so that in a recent instance books arriving at Rotterdam on a certain day for exportation to this country were denied British consular approval because the permit had expired the previous day. It is absolutely

impossible that books ordered at one time in a single list should all be supplied at one time with a single invoice, and the British authorities have taken the foolish position that books covered in one permit cannot be shipped under a later permit. The Library of Congress, in acting at the suggestion of our State Department as an intermediary in certifying to the good faith of the applicant, has not been disposed to forward lists containing publications which were sure to be prohibited exportation, as for instance German fiction, whether in the original or in Tauchnitz editions, and periodicals known to be under the ban. As no specific lists could be obtained from the British embassy, misunderstanding has naturally resulted. We believe that the British authorities have no business and no right to interfere with our mails from neutral countries—parcel post possibly excepted—or with our importations of books and periodicals, and that our own authorities cannot be too firm in continuing our protest and making it effective, even to the extent of conveying our mails in vessels of our own navy. American libraries have been subjected to absolutely needless hardship in the breaking beyond replacement of their long and valuable sets of periodicals and in the denial to them of books which they are entitled to receive. The Library of Congress is doing its best to meet the difficult situation and should have the thanks of the library community in a thankless task. The American Library Association will now lend a hand in the matter thru the special committee which President Brown has appointed.

THE accountants of the Committee on Education of the Board of Estimate and Apportionment of New York City, which is really that city's Board of Directors, have presented a compilation of the figures of

the library systems of Greater New York for the past ten years, accompanied by the text of laws and contracts relating thereto which form an important contribution to library finance and legislation. The latter section is in some respects incomplete, as it omits two of the most important documents relating to the Brooklyn system, *i. e.*, opinions of the corporation counsel interpreting the provisions of its contract with the city. The figures, shown in tabulations and in charts, are extremely interesting and should furnish material for careful study by all interested in library finance and legislation.

THE munificent bequest by Miss Lyra Brown Nickerson of a million and a half as endowment for the Providence Public Library is a wholesome example of the trend of American benefactions toward public libraries as the best means for benefiting the whole people. The splendid building was itself the gift of John Nicholas Brown, and the new endowment is a crowning witness to W. E. Foster's achievement in this city. By such magnificent gifts, the future of a library is made sure and the burden upon the people thru taxation is correspondingly reduced. Such endowments provide for adequate and ample accessions of books, while administrative expenses may be very properly left to taxation. The Newark Public Library under Mr. Dana's administration has benefited in like manner tho in less measure by an endowment bequest of \$250,000 from the late James E. Howell after a life interest to his widow. Another splendid example of private benefactions for public libraries is brought to mind by the death of Allen A. Brown, the founder of the music collection bearing his name, which has made the Boston Public Library notable in that field, a collection which he not only made and gave to the library, but which has had his personal supervision and enrichment thru the later years. This combination of generosity in money and in service is

almost unique, tho somewhat paralleled by G. W. V. Smith's collection at Springfield, Mass., and is especially an example to be followed by those who can give both money and time for the public good.

MR. DANA'S success in Newark has been emphasized by his development of the Business branch of the Newark Public Library, which he has made an example to other libraries the country over. In fact, this has been an excellent commingling of self-interest, in giving the library a stronger hold on the men in its own city, and of altruism in spreading the idea for the benefit of other communities. The list of books relating to business and cognate topics, published for the Newark Public Library by the Wilson Company, already noted in the LIBRARY JOURNAL, fulfills both functions, but will be especially valuable to other libraries in starting a business branch. The list goes far afield from business technically considered, but was planned to cover the wide field of books indirectly bearing on business affairs thru higher inspiration or wider enlightenment of relations too often narrowly circumscribed without thought of the larger community and social interests involved. The list is doubtless open to criticism of sins both of omission and commission, but it is awedly a tentative list sent out in the hope that it may prove the initiator and forerunner of future lists for which it may serve as a basis. We have often had occasion to emphasize the need of preventing duplication of bibliographical work by libraries, and the bibliography of business may very properly be left to the care of the Newark Public Library. The St. Louis Public Library has had the happy inspiration of enlisting its staff in the compilation, as a labor of love outside of library hours, of an index to Mark Twain's works which will soon be at the service of other libraries and will render unnecessary other work in this special field.

## A RISING OR A SETTING SUN?\*

BY FRANK K. WALTER, *Vice-Director, New York State Library School*

THERE is an opinion more or less prevalent at library conferences that the most benefit is to be gained, not from the formal program in which matters supposed to be of general interest are discussed, but in the little groups which assemble anywhere except in the general meeting-room and which at least presumably, discuss earnestly the particular professional problems which lie nearest the hearts of those in the various groups; or that the benefit comes from the even more intimate professional colloquies which meetings like this are supposed to incite.

In so far as this opinion is based on the inevitable repetition of all programs; in so far as it recognizes that all programs must vary in the merit of their different parts; and in so far as it assumes that personal talks on any subject should exceed in directness of application to specific problems, any general talk aimed at average conditions, one need not regret that such an opinion is held.

On the other hand, it is all too often based on the assumption, expressed or tacitly assumed, that there is so little to be learned in library work, and so few lines of library work undeveloped to their greatest practicable extent, that only the novice stands in need of the professional knowledge which such associations as this are supposed to promote.

If this view were correct, there would be ground for serious discouragement. No calling which can be mastered in a short period of miscellaneous experience is worth serious consideration by any person ambitious for personal growth. It makes a difference to every library worker whether we are in a profession which has but begun to find itself or in one already in its zenith. In our evolution as a profession it makes a

great difference whether we are perfected dinosaurs or evolving primates. It is therefore optimism, not pessimism, which prompts one to feel that librarians should be encouraged not so much by what they have done as by what is still to be done.

The late Dr. Garnett, in an address at the London Conference of Librarians in 1877, spoke of "our American friends and colleagues, who, coming to the subject with unbiased minds, and an inventive ingenuity and fertility equalled by no other nation, have already done so much to advance the frontiers of the librarian's science."

It is probable that much of the enthusiasm of our predecessors was caused by the frontier character of their professional experience and that much of our present rather general professional placidity is not so much due to the fact that we are less interested as that we have ceased for the most part to be frontiersmen and have become intensive library farmers and specialized tradesmen in the circulation of books.

Following the analogy of national growth, there are two ways in which a profession advances: it may, on the one hand enlarge its scope to cover activities yet untouched or take over these activities from other professions or industries which have inaugurated them; on the other hand, it may grow by developing unutilized forces in fields already occupied.

With the great number of social institutions already in the field, we shall probably not find much new territory to engage us in the near future or even discover many fields from which we may dislodge the organizations now in possession. This is not necessarily a cause for regret. Frontier life may be more exciting, but it is not necessarily more profitable than life in a settled section. Mere acquisition of territory is not increased power. The land-poor farmer is in no worse plight than the librarian conscientiously striving to spread a one-man

\*President's address given before the meeting of the New York Library Association at Richfield Springs, Sept. 11, 1916.

ability over a ten-man field. Extensive covering capacity is usually secured thru excessive thinness.

Our profession has never been remarkable for the extent of its field. Many are grieved or vexed to find that much that we are now doing is either explicitly stated or evidently implied in very early articles on library management or in the proceedings of our earliest library meetings. The compensation for these limited boundaries is to be found in the many things formerly thought Utopian dreams but which have now become commonplaces of daily practice.

The circumscribed, our field is not so highly developed as to point to early maturity and decline. We have progressed along three main lines: the development of technical methods; an appreciation of the fact that books, like any other social remedy, must be wisely applied to be beneficial; and a growth of professional feeling among library workers of all grades. Along each of these lines there is enough room for growth to satisfy the most ambitious.

The field of technique has been the favorite battle-ground at library meetings of all periods and among librarians of all times. There can be little doubt that there were priests at the court of Asurbanipal who deplored the arbitrary methods of the entries on the brick catalogs as deeply and sincerely as the aggrieved man of to-day who finds a book by Mark Twain entered under "Clemens" or who learns that a book he wants to use in a course in history is shelved among the biographies. Granting that it is easy to condemn any system or plan of organization if only personal prejudices are considered, it is still true that in every department of technical library work further improvement is at least theoretically possible. The reform in library methods started some forty years ago has greatly increased the effectiveness not only of libraries but of the business houses which have adopted its main features. But, tho the basal features then adopted have stood the test of use remarkably well, there is no reason to consider them infallible. Changed conditions sug-

gest changed methods as well to-day as forty years ago. There is no loan system at present without marked defects. There is no library classification in use to-day which more than approaches the elasticity and adaptability of a theoretically correct scheme. The lack of agreement and consistency in bibliographical methods is surprising when one considers the relentless increase in the number of catalogs and reference lists of all kinds.

The substantial progress we have made in technical method should not blind us to the fact that our present methods were originally a protest against practices then in high favor, and that the innovations were looked on with feelings varying from disgust to alarm, by many of the best librarians of the time. The radical practice of the past has frequently become the shibboleth of present conservatism. If the "why" as well as the "how" of many of the things we do were more closely considered, it is likely that much of our procedure would appear of temporary rather than of permanent value. As it is, many an iconoclast who thrusts the accession book into outer darkness, lovingly clings to "subject fullness" despite the fact that every printed catalog card he buys increases the inconsistency of his theory. The library heroine who firmly refuses to demand guarantors' signatures often as resolutely continues to put the most minute Cutter numbers on every book in her tiny collection. By undue adherence to standards it is possible to make our professional progress resemble that of a cow tied to a stake. The pedometer might register a good distance but actual advance would be small.

In the second field, the selection and application of books, there is certainly further possible progress. Our investigations in the use of books and the reasons for such use seldom go beyond the superficial stage. It is easier and more comforting to confine them to carefully chosen cases of degenerate newsboys or desperate leaders of juvenile gangs recalled to paths of rectitude, or of almost illiterate adults who become community leaders thru carefully baited literary traps set in the library. Every instance of this kind is stimulating

and valuable as evidence but there is need of more general studies as systematically planned and as faithfully pursued as any course of investigation in a scientific laboratory. Literary taste, a knowledge of people and good judgment in weighing evidence must contribute to such studies. It is doubtless easier to take our ideas on the subject of books ready-made, but a ready-made literary judgment, like a ready-made suit, is often a misfit. Independence of opinion must be joined with tolerance for others' ideas and with personal intellectual humility. The mere hurling of rhetorical brickbats at the man who praises classics we ourselves cannot appreciate or at the person who reads novels for recreation when we are zealously trying to increase our "non-fiction circulation" (in itself often a fiction) is not an effective method. Literary bad manners and intellectual conceit may easily wear the mask of independent judgment. The librarian who does not know books cannot properly select books. The great variety of subjects with which the worker in a general library must have a nodding acquaintance precludes in most instances the possibility of becoming a scholar in the modern specialized sense of the term, but there is no insurmountable obstacle to a wide knowledge of books in every phase, from their history and their mechanical make-up, to their literary value or their standing as authorities on the subjects of which they treat.

In the third field, that of the growing professional spirit among librarians, we have as yet made but a beginning. In the very practical phase of making our always too scanty resources most effective we have a long distance to go. Much is being done in the shape of co-operative bibliographical work, inter-library loans, exchanges and the like but in no case has the development progressed much beyond the initial stages either in method or in quantity of work done. As we grow out of our local limitations and viewpoints and become more closely related as members of a common profession we shall certainly find more ways and better ways of helping each other.

In the whole matter of greater professional spirit and greater professional rec-

ognition, we are but fairly started toward our goal. There is no question of the fraternal feeling between librarians in general or of their willingness to aid one another in every possible way. It is pleasant to think that our feeling of professional obligation has done much to remove the old idea that librarians are sedentary people paid to spend a few stated hours in comfortable buildings reading congenial books bought at public expense. Prof. Palmer of Harvard says that among the marks of a real professional feeling are one's "engaging in it because he likes it, with a view to benefiting the community, and in loyalty to a growing brotherhood." In most cases we measure up to these standards. Most of us are librarians because we like to work in libraries. The changes in nearly any library staff, even in the lower grades where chances for promotion are the least, are probably proportionally fewer than in the commercial houses or in the schools of the same town. We may object to certain features of our work but comparatively few of us leave it without strong inducement.

On the second point, librarians can also present a strong claim to be considered professional. There are few who do not work with the welfare of the community constantly in mind. Our chief sorrow comes from the indifference of the community to our ministrations or to the even more exasperating failure to realize its need of being benefited. Any creed, however vital at first, can degenerate into a mere formula. There has doubtless been some cant in the constant repetitions of "library spirit" and similar phrases. Nevertheless, it has been the thought which made such phrases which has been responsible for most of what is our real claim to public confidence and support. We may dispense with the phrases but we need even more of the state of mind which the phrases indicate. In spite of our professional characteristics, there is to-day no profession seriously claiming to be such which has reached so few points of agreement as to what shall be the minimum equipment of its members. If library work is to grow, it must follow growing librarians. In-

creased ability must precede the assuming of greater responsibility. It is neither practicable nor desirable at present to expect the same requirements from all library workers but every one in the work must be willing to fit himself the best he can for the particular work he has to do. The growing tendency of our nation to substitute speed for thoroughness, license for discipline and personal gratification for civic team-work must be resisted by the librarian quite as much as by any one else. On the attitude of the librarians of to-day toward their personal responsibility to make their professional preparation as continuous as their work, depends the success of the library of to-morrow and our own claims to be considered professional instead of merely industrial.

There is much to be done to secure the public recognition we deserve as well as much to be done to deserve the recognition we sometimes get. It is not cheering to reflect that most of the really intelligent praise of libraries has come from librarians themselves. There are many in every community who appreciate the real worth of the library but their number is relatively small. The number of those who have interest enough to register as library borrowers gives a rough index of its place in the heart of the community as a whole. In 1915, the Brooklyn Public Library, one of the best and most active in the country as well as the state, had 351,835 registered borrowers among more than 1,800,000 population. In Buffalo 130,887 out of 461,887 population and in Syracuse, 25,410 out of 146,587 were registered, while New York City added 164,510 new borrowers, nearly half of them children. It is likely that few if any other social institutions can show larger relative numbers attracted simply by the opportunities offered for self-betterment. Nevertheless, figures like these show the possibilities of further development in the territories covered by even the best of our libraries.

It is disconcerting to note how seldom the library is referred to, outside of library meetings, as a major force in social progress. We speak of the library world, but to the average social worker it is only a tiny island barely visible above the horizon.

In some thirty recent books on education, examined at random and all dealing with aspects of education broader than mere school-room routine, only four even mentioned the public library and only one gave it more than passing comment.

Another evidence of the lack of real public concern in libraries is seen in the fact that librarians as a whole receive less average pay for equal amounts of preparation and mental effort than any other class of social or educational workers. Credit is due to any one who takes up work from a compelling sense of duty, even though he be inadequately paid for the work. The lack of pay, in itself, is a discredit. Even St. Paul, at the time he was supporting himself by tentmaking, vigorously asserted his right to a living wage. The library is more than an intellectual mission station; it is, or should be, a public utility to be supported as generously as any other agency for the public good. The librarian has as much right to support as any other public officer. No community can reasonably expect its library workers to be intellectual leaders if it denies them adequate means to live an intellectual life. There is improvement in this direction as libraries have increased in value to their constituencies, but there are few who will deny that much more substantial progress is desirable. A greater measure of public confidence must be won. Thru even better and more direct service, the public must be taught to feel that a poor library is as great a civic disgrace as a poor school and that good librarians, like good teachers, are not usually found at salary bargain counters. If the public is taught to demand good service, the library in turn can justly claim the public support necessary to secure good service.

You remember how Benjamin Franklin, at the close of the constitutional convention in Philadelphia, pointed to the picture of a sun painted on the back of the presiding officer's chair and remarked that he had been uncertain, during the proceedings of the convention, whether it was rising or setting. The result which had been reached, he continued, had convinced him that, as a symbol of the nation, the sun was rising.

With results which libraries have already obtained with scanty resources must be considered their possibilities when resources become adequate. With the progress made since the founding of the American Library Association in 1876 must be compared the further progress possible. We are not engaged in a work soon to be completed and laid on the shelf. Those who have been and those who still are our

leaders have set us examples to be followed but they have only pointed the way to be taken. There is work enough left for the most industrious. There are unsolved problems common to us all. The field is wide enough and the work worthy enough to impose on every one an obligation to greater effort than he has yet made. We face a rising, not a setting sun.

## “EVERYMAN’S LIBRARY”\*

BY J. I. WYER, JR., *Director, New York State Library*

To such a company as this my title is of course as familiar as “Uneeda Biscuit,” “Tammany” or “Ty Cobb,” to the man in the street. It at once connotes Dent and Dutton and those several hundred handy volumes of classics and near classics which in combined low cost and good looks fairly rival Tauchnitz. But this free, tho well-merited, tribute is merely by the way, for it is no part of my present purpose to celebrate this or any series or publisher from this conservative and impartial platform.

Again “Everyman’s Library” might well mean that ample, ideal and glorified State Library, the modest beginnings, the inspiring opportunities and the new century conception of which the last speaker has so forcefully recalled to us—that State Library of which some of us dream, a cherishing, nourishing, opulent, refreshing institution, instant with books, counsel and service to the uttermost parts of the state. A library in wise, helpful and adequate relations to all culturing agencies and thru them and of itself in deed and in truth Everyman’s Library. Truly an inspiring, an alluring vision which may be measurably realized when library authorities braver and more insistent in asking shall happily coincide with legislatures more liberal in giving to things of the mind. This is indeed a theme which some day may well claim my best effort on another occasion but one which must resolutely be put aside at this time.

Yet again, and perhaps more fittingly still, my title might well be applied to that fine flower of our forty years of professional effort, “The Free Public Library,” which in the universality of its aim and reach and the altruism which animates those who extend its work, is most appropriately characterized by the term Everyman’s Library. Indeed it is this note of universality which dominates more and more the development and conduct of all types of libraries. *Every Library for Everyman* epitomizes the library gospel of today. Chains, bolts, bars, fees, dues, shares of stock, ancient rights, special privileges, restricted constituencies, vanish before the onward march of Everyman’s Library. But neither may I tarry before this seductive prospect, so I hurry on with no more than a glance toward this attractive excursion.

My *topic* is Everyman’s Library. My *text* (perhaps remotely suggested by President Wilson’s pithy comparison of college and circus) is that *books are not the whole show*, much more elegantly and quite as aptly put in Mary Eleanor Roberts’ little rondel “In a library.”

Man cannot live by books alone,  
Nor yet by learning can man live;  
Some lore that study cannot give,  
Some hint of things we have not known,  
Disturbs the joy we thought our own;  
It wastes like water from a sieve.  
Man cannot live by books alone,  
Nor yet by learning man can live.

Some breeze from out the garden blown,  
In moments rare and fugitive,

\*Read before the New York Library Association, Richfield Springs, N. Y., September 15, 1916.

Cries, "Love and dare, exult, forgive.  
Arise in haste, the morn has flown,  
Man cannot live by books alone.

I should ask pardon from such a company—bookmen and booklovers all I trust—for intruding here the undeniable intimation conveyed in this charming verse that there are other things of the spirit at least as significant, as indispensable as the books among which we work and which if there be any health in us, we love so well. Real literature in praise of books abounds. It is easy to find gems to inscribe on our library buildings, to engrave on our bookplates, to whistle with when our professional courage is low. On a shelf in my own study are a dozen anthologies of book verse alone, in which poets have sung of books, their perennial charm, their companionship, their distillation of the purest and highest thought and speech of all time, their power to move to laughter, to tears, to high resolve.

Our days are passed among books. We are often felicitated upon this by those who seem to think that every librarian reads all the books that are added to her library. Our keenest and worthiest regret is that we can so seldom halt the endless procession of new books long enough to become really intimate with more of them. We are prone to say and think that he who best knows the most books is the greatest among us. One of our own number, a valued and beloved member of this very association, now alas no longer with us in the flesh, has written eloquently of the Seven joys of reading. Despite our shrug or smile at the eager candidate for library work who "just loves books," and has no other tangible reason to offer for the faith that is in her, we know in our hearts that her instinct has not played her false and that a love for books as poignant and consuming as first love for man or maid is the supreme desideratum in our work. Love of books must assuredly be the larger part of our personal and professional ideals.

There is no need to go on thus. All praise of books in prose or verse is true and is convincing. I cite it not to attempt denial, or refutation. Nothing is farther from my thought, for I believe every word of it.

I repeat, all praise of printed books is true; and yet—even the very books in our libraries, the true soul of the place, require to be warned against. The words of our text recur: "Man cannot live by books alone." They may be loved overmuch, not wisely but too well, so well and so unwisely as hopelessly and harmfully to distort our life's perspective and outlook.

Books after all are but the commentaries on, the pale shadows of, the true realities, and it is by these realities that our souls must be fed or chastened, our ideals strengthened or shattered, our hearts thrilled and lifted up. There is a world, wide and deep, beyond the uttermost knowledge or power which any book can confer. It will not do to believe that books can solve every problem, answer every question, heal every wound, still every sorrow. The poets who have read deepest in those unprinted volumes, the books of Life and of Nature (the oldest and greatest of all books) may confidently be invoked for such testimony as:

Up, up, my friend, and quit your books  
Or surely you'll grow double.

WORDSWORTH

Here the heart  
May give a useful lesson to the head and  
Learning wiser grow without his books.

SHAKESPEARE

Books teach us very little of the world.

GOLDSMITH

Only on the days when my life has ebbed  
Do I feel the need of books to renew me . . .  
But on the days when I am quick and pouring  
with life,

I turn to the book of the world at whatever  
page I happen to open it,

And read what never yet was told in ink.  
JAMES OPPENHEIM, *Songs for the new age.*

Books cannot always please, however good:  
Minds are not ever craving for their food.

—CRABBE.

I have read in my beautiful books all day  
And dwelt all day in a dream;  
It was wonderful, fair, but too far away,  
So I take down my coat from the beam.

For I will be walking the village street  
To learn how the schoolmistress fares,  
To get from the farmer the price of his wheat,  
And talk of our hopes and cares.

I will go to the smithy and on to the store,  
The smith is setting a shoe.

I wish, if I stood a while by the store  
I might pay with the rhyme or two.

And this is young Richard? Well, gourds  
will grow.  
Good neighbor, how is your sick wife?  
Oh I read in my books all day, but now  
I would read in the book of life.

GRACE FALLOW NORTON.

Wise Goethe, whose passion was for real life, for experience, for sensation, who to the last talked with cabmen rather than with lords, who knew how very much that is not in books one may learn by asking people; with his usual insight saw that only half the man can be developed apart from his fellows when he said:

Es bildet ein Talent sich in der Stille,  
Sich ein Character in dem Strom der Welt  
which may be fairly rendered if you will bear with my own version:

Transcendent *Genius* may in Solitude unfold,  
Of *Character* the world's swift stream's alone  
the mould.

A very modern comparison of books with life is furnished by the author of the Spoon River anthology who very obviously has studied life (or is it Death?) more deeply than books. He writes

How bloodless books, how pulseless art,  
Vain kingly and imperial zeal  
Vain all memorials of the heart  
When Life itself is real.

EDGAR LEE MASTERS

By so much as the pages of the book of life are more opulent than any printed page, it is impossible to maintain that the utmost literary realism can ever equal as soul-nurture, as a life-expander, as enrichment of character the actual experience itself. All joy is greater than any word-picture of it. No poet's account of sorrow can plumb the depths of the concrete anguish of experience.

And then the Book of Nature—that substantial and sumptuous volume of wonderful variety, of perennial interest, of the highest power for inspiration, instruction and delight. Richly bound, annual editions, profusely extra-illustrated. A book to be read by the source method, not thru the medium of the printed book. Go directly without intermediary or commentary to mountain, lake, brook, bird, flower, fern, shell, or sea-shore.

I feel it an intrusion and an impertinence to be offered, when I go into the woods and hills, printed books of that far too nu-

merous "How to know" tribe with their dry, lifeless, desiccated information.

What do I care which bird is the rubber-throated nut-cracker or which of those gorgeous toad-stools are good to eat. I just want to enjoy them, to have their restfulness, their beauty, their wholesomeness permeate me thru and thru. I don't want to be bothered with printed lists of their names.

I am always sorry for those literal-minded, despotic and untiring people who depend on books for their bird-lore, who have an impelling obsession to find out all about the birds; who go about wild-eyed, nervously peering with telescope, opera-glass, ornithological gazetteer, note book and pencil and whose attitude and activities must go far to rob the dainty bird world of its impalpable charm and its delicious music, never so delicious as when suffered to remain elusive and unlabeled.

The Bird Fiend is thus described in a recent *Atlantic* (April, 1909):

By bird fiend we do not allude to any newly discovered existing species nor to any pre-historic fowl with cruel beak and unimaginable talons. The genus referred to is to be found sitting quietly on any modest hotel piazza in the mountains on any summer afternoon or meandering innocently thru the forest. It is very numerous; it is far from fierce, and tho it multiplies with fearful rapidity it does small harm to crops or trees. Some of its varieties may be described more accurately as,

*Male*: Slender, dull-colored, with mild blue eye, no plumage on top of head, habits migratory. Found in the mountains in summer, in lecture or schoolroom in winter.

*Female*: Short, bustling, somewhat grayish, plumage slightly dragged; keeps up a constant twitter, is seldom known to pair: summer haunts—the hotels of New England.

Surely it was a yearning for something far other than books which prompted the poet to wish himself

Away, away from men and towns,  
To the wild wood and the downs—  
To the silent wilderness  
Where the soul need not repress  
Its music, lest it should not find  
An echo in another's mind

While the touch of Nature's art  
Harmonizes heart to heart.

Even more specific indictment of books in favor of God's great out-of-doors is

brought by Walter De La Mare in his little stanza,

THE BOOKWORM

"I'm tired—oh, tired of books," said Jack,  
 "I long for meadows green,  
 And woods where shadowy violets  
 Nod their cool leaves between;  
 I long to see the ploughman stride  
 His darkening acres o'er,  
 To hear the hoarse sea-waters drive  
 Their billows 'gainst the shore;  
 I long to watch the sea-mew wheel  
 Back to her rock-perched mate;  
 Or, where the breathing cows are housed,  
 Lean dreaming o'er the gate.  
 Something has gone, and ink and print  
 Will never bring it back;  
 I long for the green fields again,  
 I'm tired of books," said Jack.

—(From Peacock Pie.)

In thus suggesting to you that there are in the world, spread wide before each of us, the Books of Life and Nature, it is of course with no thought that librarians are devoid of the wish to read or the capacity to enjoy them. There are among us, I firmly believe, as many nature lovers and those full of zest for the adventure of life as among any other equal number of persons. My thought is rather of getting and keeping a just perspective while we live in and look out on the world where Life, Nature and Books play so large a part. The achievement of this just perspective is bound to be a salutary lesson in humility, for *Books*, that one of the three which we know the best and in some ways are fondest of, is the least in power and glory. This must be frankly recognized and, because it is so, we must for our very salvation's sake take time or make time to know Life and Nature as they should be known. Not only must we know them but they must be related intimately and vitally to our own work. Printed books will mean more to us to just the extent that we allow ourselves to know the books of Life and Nature. Each of these great books will enrich and react upon their familiars and upon each other in ways manifold and undreamed of. A copious blend of the three is essential to the completeness of one's self-expression and to sanity and sweetness of mind.

Note how the principle of choice runs thru these three volumes of Everyman's

Library. We librarians are familiar with our own problems of book selection. We see with mingled sorrow and consternation the swollen and turbid torrent of the world's new books as it pours from the presses. Very few of us dare or desire to open our library doors to it without restriction. Some would lessen the flood at its source, and we have lately heard from our publisher friends a faint but fleeting slogan, *Fewer and Better Books*—a slogan which we suspect was only half-hearted. We library folk, however, being like the Hollanders, few and feeble, with great labor and much conscience have constructed elaborate dikes and dams to protect ourselves and our shelves from the flood of print and have ingeniously devised pipes, mains, races, sluices or irrigating ditches, variously known to the guild as *Best Book Lists*, *Library Bulletins*, *Stepping Stones*, etc., leading out from the main stream into our own particular garden or field. These have been erected with great skill, frequently with much fasting and prayer, and they are guarded by strong and elaborate head-gates, nets and bars, so that the kind and amount of water which is allowed to separate from the main stream and run upon our own little or large field is strictly regulated. These vigilant and effective bars and nets—our book lists, our manuals of book selection—must (so some say) have meshes so fine that none of the froth and scum which the rushing stream churns to the surface may overflow and force its way into the well-trimmed library gardens, nor, above all, must the flotsam and ligan which distressed mariners have tossed into the stream, nor the rubbish which dwellers on its bank have flung into the flood, nor the sediment and dregs which foul its depths be allowed to force their way over the dams and dikes, and into the sluices and mains thru which are carefully filtered, diverted and carried off the pure library waters of good literature. So discouraging sometimes are these problems of literary water supply and sewage disposal that the conscientious and conventional library book-selector, in very terror and despair at the angry and turbulent stream of current print, is constrained to sail only upon

those earlier and upper reaches of the river which flow smoothly and with clear and placid surface thru the delightful fields and meadows of the country of the classics; or, if the more troubled lower rapids must be navigated, is prone to try only the backwaters and the eddies which the swifter current has left behind.

A like choice may be made from the Book of Life. We are tolerably free agents most of us. We may choose a calling, a husband or wife, companions and friends, the use of our leisure, where and how our life is spent. Heredity, convention, wealth or poverty may somewhat abridge or enlarge our freedom in the same way that income, constituency and tradition condition our library book selection, but in the main a life and a library are each pretty much what the liver and the librarian make them. Each is fit-

ter for any calling for knowing as much as possible about everything and everybody else in the world.

And thus ends our review of Everyman's Library—in three volumes—the Book of Print, the Book of Life, the Book of Nature. In the words of the formal review of olden time they all deserve a place in every gentleman's library. Their interest is perennially fresh, new editions are unnecessary, no hundred best books or five-foot shelf is complete without them. It is idle to attempt exact appraisal of their relative values. Each is of transcendent worth but together they are greater than their sum.

He who knows any one of them, and but one, even tho it be by heart, is yet incomparably poorer than he who is merely an amateur of all three.

## THE UTILIZATION OF PHOTOGRAPHIC METHODS IN LIBRARY RESEARCH WORK\*

BY WALTER T. SWINGLE AND MAUDE K. SWINGLE, *Bureau of Plant Industry, Department of Agriculture, Washington, D. C.*

PHOTOGRAPHIC methods are no novelty in library research work and many rare manuscripts and incunabula have been reproduced photographically. It is our purpose to call attention to the possibility of making fuller and more frequent use of some of the newer photographic methods in library research work, particularly in the natural sciences and industrial work.

### PHOTOGRAPHIC METHODS USED TO COPY BOOKS AND MANUSCRIPTS

In recent years there have been placed on the market large cameras which take photographs by the light of a mercury vapor lamp directly on a roll of sensitized paper which after exposure is cut off and developed at once in the machine. These cameras are known by the trade names of photostat, camerograph, etc., and were originally devised for use in copying important

legal documents, letters, drawings, plans, etc. Such a camera has proved so valuable in our work that we venture to give a few notes on the uses to which we have found it fitted.

We have used in our work the larger size photostat (No. 2), which is able to take a roll of paper 13 inches wide and can also use the narrower roll 11 inches wide. It takes a photograph of a maximum length of  $17\frac{1}{8}$  inches. By using the wide paper a print  $17\frac{1}{8} \times 13$  inches can be secured; allowing for trimming, plates or printed pages up to  $16\frac{1}{2} \times 12$  can be taken natural size. The large size machine can be set to wind off automatically 9 or 18 inches of paper and the smaller one  $7\frac{1}{2}$  or 15 inches. By a new attachment devised by the junior author it is possible to wind into place 36 different lengths of paper, varying from  $\frac{1}{2}$  to 18 inches, so it is easy to set the machine to make the most economical use of the sensitized paper in photographing a book, plate or map. A special

\*Read before the College and Reference Section of the American Library Association at Asbury Park, June 28, 1916.

frame that comes with the machine permits the book to be held in a horizontal position and the image is rectified by passing thru a right-angled prism which corrects the reversal of the image due to the photographic lens. Consequently a direct exposure gives a negative as to color, *i.e.* white letters on black background, but a positive as to position, *i.e.*, the print can be read directly from the face of the paper. This permits the use of such a direct image or negative for reproducing printed or written matter.

The commercial uses of the photostat are usually limited to negative prints, *i.e.*, letters, specifications, diagrams, drawings, etc., are reproduced in white on a black ground. Such negative prints are very useful for reproducing a single page or a few pages of a publication and may sometimes be used in photographing botanical specimens. If several copies are required, all that needs to be done is to make several exposures without changing the position of the book or specimen.

One drawback to such copies is that the black background prevents notes or corrections being added with pencil or pen. Even red ink does not show up well on the black ground. (Chinese vermilion ink that is ground on a slab like india ink makes a very good mark, and liquid white ink may be used.)

By photographing the negative print again a positive is secured which has black letters on a white ground. Such a copy can be annotated as easily as the original, which it is often desirable to preserve intact. By using positive prints pasted back to back it is possible to make very good copies of printed books that look remarkably like the original work. In all cases where positives are made a negative copy is also available. These negatives can be bound by perforating them so they can be tied into a pamphlet holder or a special binder made to fit them. They are then available at any time for making additional positive copies. It is sometimes desirable to make the negatives natural size, whereas the positive can sometimes be reduced in size to advantage, making a more convenient volume.

It frequently happens in copying old and more or less discolored books or manu-

scripts that it is necessary to use a color screen and make long exposures to secure good negatives. Such negatives when once secured can, however, be copied into positive prints very rapidly. Moreover, the copying of negatives is always easier than making prints from the original book since it is not necessary to open the frame and adjust the pages as with the book.

In general it would seem desirable to preserve the original negatives in the library and to make positive prints for the use of investigators. If in addition to the cost of making the positive copy one-tenth of the cost of making the original negatives is charged to the investigator, in the long run the libraries will get back the initial expense of making negatives and at the same time supply to students positive copies more cheaply than negatives can be furnished. Such positives have the advantage of reproducing properly any illustration that may accompany the text. Only simple line drawings or mechanical diagrams appear equally well on the negative and positive copies. All complicated illustrations and especially all photographic process illustrations are difficult to understand or use in the negative copy.

In copying works printed in non-European alphabets not to be found in the ordinary printing office and not capable of being typewritten, the photostat is, of course, invaluable. It has been found to be particularly useful in handling Chinese works on agriculture and botany. On account of the scarcity of translators it is often necessary to send such material to China or Japan to have it translated or abstracted. The photostat makes it easy to do such work cheaply. In the copying of ancient manuscripts the photostat method is absolutely necessary to secure accuracy. By using this machine, such copies can be made at very reasonable cost.

We have found that in order to keep the operating cost of the photostat low per unit of work it is necessary to keep the machine in continuous use during at least five or six working hours each day, thereby permitting an economic utilization of the operator's time and of the chemicals used for developing. In this way we have found

that the total cost may be kept down as low as  $4\frac{1}{2}$  cents per photostat print  $7\frac{1}{2} \times 11$ .

Altho it is true that even a beginner can get some sort of results with the photostat, it is nevertheless true that a considerable degree of skill is necessary to enable an operator to get the best results, especially in copying old or discolored books or manuscripts and in making first-class positive copies. It is well worth while for librarians having such work done to insist upon a high standard of excellence in photostat copies. Without greatly increasing the cost, a superior grade of work can be obtained.

#### PHOTOGRAPHIC METHODS IN BOTANICAL RESEARCHES

In our work on crop plants and particularly in the study of the citrous fruits and their wild relatives, we have found it necessary to have at hand the original descriptions of hundreds of different species and also notes as to their uses in their native countries, etc. These descriptions and notes are, of course, scattered thru many hundreds of volumes and even tho one might happen to be so extraordinarily fortunate as to have within reach a library containing *all* of the books needed, it is not a simple matter to have a dozen or more descriptions from as many different books immediately before one for comparison.

Our Citrus index comprises descriptions of about twenty genera, each having from one to one hundred species; in addition there are copies of numerous illustrations. Yet all of this material is contained in one filing drawer and is immediately accessible for consultation and comparison. In addition to this file we have made up booklets in cases where accounts and discussions of several species are included in one work. The title page of the book is included in these booklets and an index of the species to be found in the photostat copy is bound in at the front of the booklet. In this way we have a small Citrus library of our own containing the material on this special subject which is scattered thru hundreds of volumes, many of them so bulky or so rare that they are practically inaccessible for daily use.

We have found it possible to use to advantage the large size machine in making

copies of valuable herbarium specimens which we cannot retain in our own collection. These prints are made on glossy surface paper which gives a print somewhat like that from a glass plate. In many cases the type specimens of plants are too precious to be consulted except for very critical work. For all ordinary purposes the photostat print suffices.

#### OTHER USES OF PHOTOGRAPHIC METHODS

One of the most important uses of the method outlined above is to supply missing numbers of periodicals or missing pages from valuable books. It has been possible for us to complete in this way a number of very important old works on natural history and in one case a series of 61 dissertations of the University of Upsala, Sweden, published from 1787 to 1827, constituting a catalog of the Natural History Museum of Upsala, a collection of unusual importance because it contained many specimens collected by Linnæus or his pupils upon which the scientific names now current all over the world were based. No American library had a complete set but by using the photostat a complete set was made up for the Library of Congress (51 original, 10 photostat copies) and one for the New York Botanical Garden (59 original, 2 photostat copies). A memorandum bound in the Library of Congress copy shows where each original was found (they came from 4 public libraries and 1 private collection) so that in case of special investigations involving the quality of paper or ink, the original could be found and consulted.

A more extensive piece of work is the making of a photostat copy of an entire book, as was done with Osbeck's "Dagbok öfwer en Ostindisk resa" (Stockholm, 1757). Only one copy of this work could then be located in this country. Since it was very important for our work we borrowed this copy and made one negative and two positive copies of it. The original negatives are filed in our office, one positive copy is filed in the Library of the Department of Agriculture and the other positive copy is now available for field use so that an explorer traveling in China may consult the descriptions of plants that were

written more than one hundred and fifty years ago by Osbeck, a pupil of Linnæus, who was the first botanist to assign modern scientific names to Chinese plants.

Another instance showing the importance of photographic methods in reproducing an entire book is that of the original account of a new and virulent disease of sugar cane and maize that appeared six years ago in Formosa. A bulletin issued by the Sugar Experiment Station of the Formosan government in December, 1911, consisting of some 80 pages and 9 plates gave a full description of the new parasitic fungus causing the disease. It was not found in any library in Washington and was finally borrowed from the library of the Sugar Planters' Experiment Station at Honolulu, Hawaii. The entire bulletin and plates were copied by the photostat. Largely because of the information thus secured it has been possible for the Federal Horticultural Board of the Department of Agriculture to put into effect quarantine regulations which it is believed will effectively prevent the introduction into this country of this dangerous maize parasite. Once introduced, it might easily cause a hundred million dollars a year damage to the corn crop of the United States. As the bulletin in question contained maps, photogravures, lithographic plates, and was, moreover, written in Japanese, it would have been impracticable to copy it at any reasonable cost in any other way than by photography.

It often happens that important investigations on critical matters involving interests amounting into the tens or even hundreds of millions are delayed for years because of the lack of books which are known to exist in Old World libraries, but are hardly ever put on the market. Under such circumstances it seems the part of wisdom to make definite arrangements by which photographic copies can be secured promptly of all works believed to be of importance for scientific or economic investigations in progress in this country. It is believed that any objection the librarians might feel to having photographic copies made of their treasures would be removed by delivering to the library furnishing the work to be copied a complete photostat

copy of it. This could be circulated to readers in place of the original copy which could be kept under lock and key and only consulted on critical matters. In this way the use of the photostat would not only result in the wider diffusion and greater use of rare books but also in the better preservation of the originals from which the photographic copies were made. It will be necessary to place a photostat in one or more favorably situated cities in Europe and then copy such books and papers as they are needed.

We often forget that European investigators have access not only to the books of their own libraries but to those of foreign countries either by exchange or by a few hours railway travel. The English and French investigators for example, have access to the national libraries of France, Belgium, Holland and England by a railway journey not exceeding 8 to 12 hours duration. In order to give our investigators facilities equal to those of western Europe our great libraries should be very much more complete than those of London, Paris and Berlin, not, as is actually the case, much less complete. The only feasible way to supplement our scanty library facilities is to use modern scientific and business methods to make available the books of the Old World until we are able and willing to purchase copies. In the case of manuscripts of which often only a single copy exists it is obvious that the photostat will be invaluable for making cheap copies. There is no longer any need for any competent scholar to be hampered for lack of material provided arrangements are made for photostats in Old World library centers.

Finally the need of the isolated worker in our own country can be met by furnishing him with photographic copies of the literature he cannot consult in his state.

If American scholars are to take the place in the learned and scientific world to which their energy, originality and intelligence entitle them steps must be taken to free them from the heavy handicap they now suffer in competition with their Old-World colleagues because of the greater volume of old books and records at the disposal of the European scholars.

# A LIBRARY IN ILLUMINA

BY LAURA GROVER SMITH

MARY MASON had been fortunate enough to go to a normal school where a librarian had, with many trials and much uphill work, convinced the authorities that a course could be incorporated into the school usefulness, whereby young teachers could be hyphenated, and increase their efficiency by being teacher-librarians.

This course for teachers had taken two years and her memory of the first days in the school was still fresh—the hopelessness of the card catalog, the bewilderment of her mind, with the children in the training school calling for books of which she had never heard. Looking backward, she remembered the lessons step by step, until now she felt she knew something about administration, cataloging, classification, book selection, reference work, and the various mechanical processes. In the course in children's literature, and the classes on "books for children" and "the storytelling hour," Mary Mason had delighted. The wonderful children's books, in themselves, had given her keen enjoyment.

It was a hot day in September when Mary Mason arrived at Illumina, a town of eight hundred people, where she was to teach in the high school, really a combination grade and high school, with a young principal, and a few teachers. The first subject under discussion was a library, but the mind of the young principal was on a gymnasium, and he bracketed their "fads."

Nevertheless, she was true to her ideal—and kept fresh in her memory by constant repetition, those delightful discussions on the kind of book, its literary merit, plot, motive, style, its usefulness, and its make-up. She was glad she had used her Christmas money for Miss Hunt's "What shall we read to the children?" McClintock's "Literature in the elementary school," Miss Olcott's "Children's reading," and Lowe's "Literature for children." She had also subscribed for the LIBRARY JOURNAL, which came as a recurring pleasure. She

was wondering as she sat at her desk, early the first Monday morning, if her children would be like the children who came over from the training school, and were taught how to use the dictionary, the card catalogs, and the Reader's Guide. How eager those well trained children were to play the game of "hunting books." To them the card catalog was an enchanting puzzle. How she had loved those "beautiful books" and how glad she was to teach the children that they were beautiful, and should be carefully handled. It had been her duty in that wonderful library to arrange the wild flowers, as they succeeded each other, for the nature study classes; another time, she had arranged the bulletin boards, illustrating the events of to-day.

All of this was treasured in that marvelous House of Memory!

But it was Monday morning and hot, and the future, with all its Monday mornings, seemed a long road. The schoolroom was full of windows. There was no ornament of any kind, no growing plant—evidently her predecessor had no imagination. The janitor looked in to see the new teacher. To her question "Is there a library in the school?" he laughed, and said, "No, miss, we haven't got no library—what for? The children bring their own books!" Black despair settled upon poor Mary.

Soon she heard the sound of children's voices and they came in looking with suspicion at the "teacher." Her heart began thumping. How would the day go, and how big the boys and girls looked! But she loved children and her spirits revived. This first week was a "confusion," or so it seemed to her orderly mind. It was work without tools, for she missed the library. Friday night she wailed, "I have great sympathy with the children of Israel—making bricks without straw!" A round of lessons, textbooks, lessons! She felt that the children had never had their imagination stimulated. They knew no stories, except-

ing those in the reader! Among the children, however, there were two exceptions, John and Sara Carewe, whose mother symbolized to Mary the only interesting background in the town. In their faces gleamed something responsive, which was explained by the frequent remark of the children, "Mother read it to us."

The days went by until one rainy Friday, when Mary proposed telling a story during the noon recess. A few of the boys stayed but the others shuffled out to play in the drenching rain. It was a wonderful hour, and Mary told several enchanting stories. Sara Carewe, with her face aglow said, "I have a book of stories and will bring it to-morrow!"

This co-operation was the beginning of the school library. Mrs. Carewe became interested in a teacher who could talk books, and, as she said, "raise the standard" of the school. She wrote Mary a note, saying it would be better for the book to have companions and enclosed ten dollars to buy others. This was inspiration indeed, and the school routine immediately seemed pure enjoyment!

But how to spend this wonderful fund! It was spent and re-spent, as Mary studied the book lists. One magazine, however, was decided on, and taking a general average, she decided on the *St. Nicholas*.

A library was now in existence! No need of a new hat in Illumina! Mary decided to use the money to be spent on a hat, in buying two books for herself, to be loaned the library—Bostwick's "Library and school," and Miss Rathbone's "History of school libraries." With the arrival of "the library" as the children called the new books, the principal became a convert, and added books which he had accumulated for the older grades to use. The library added to Mary's duties, but she was very glad to give the time between periods, and with her prophetic eye she saw the library was to grow, when the older scholars would share in the care.

Mary Mason decided that she would go to the next meeting of the school board, and ask for an "appropriation." She was greeted cordially, for her enthusiasm was pleasing. But it was a conservative body,

the town doctor, the grocery man, two farmers, and the lawyer, and when she proposed a library, the faces changed into expressions of annoyance, incredulity, doubt, and resistance. "We had no books, excepting our school books. Our teacher told us what was not in the books!"

It was another blue Monday morning, but the arrival of the principal's Funk and Wagnalls dictionary and book rest, which he thought might better be in the library than in his office, was cheering.

Mary Mason sent a notice to the mothers that the children would call for their old magazines and any pretty pictures, postal cards, or even advertising pages and railway guides. Great was the response! Mary cut out the pictures and mounted them, with the help of the principal, who showed very good taste and judgment in selection. The magazines were cut up, valuable and suggestive articles saved, and put into proper binders. Pictures not otherwise used, and of current interest, were arranged on a bulletin board. Some of the better pictures were mounted, and hung on the walls. These were changed from time to time, and were instructive as well as ornamental.

The three ministers in the town agreed to send their periodicals after reading them, so the *Outlook*, *Independent*, *Nation* and *Survey* were added to the library. Others (and probably the only people taking magazines) agreed to send the *Century*, *Harper's*, *Scribner's*, *Review of Reviews*, and *World's Work*. Mary Mason had therefore secured a corner on the periodical literature of the town.

It was an established custom in the community to give the teachers a Christmas present. The principal and the teachers having heard this, artfully suggested that the present be given the school library. Fifteen dollars came from this source, and again the booklists were consulted.

While waiting for this consignment, bulletin boards "sprang up" or "out" all over the school. One, compiled of current events and framed, was hung on the outside of the school where the farmers and other men could see it as they went to town for business. The principal took a little time

to arrange this, giving prices of commodities, interesting and practical inventions of science, and the "unusual" anywhere. He also contributed his daily paper from the largest nearby city. One man who heard about it, disagreed in politics from this paper, and gave his own, bringing it with much dignity each day.

The editor of the town paper gave a subscription to the paper, and Mary Mason immediately made him a friend by acknowledging his generous gift thru the medium of his own paper. Later this developed into fine co-operation, as he was willing to print both the needs of the library and the book accessions, which were items of great interest.

Mary Mason, not only worked up local interest, but secured state interest by writing to the State Library Commission, the State Teachers' Association, etc. She also remembered the valuable outside sources of free material, United States documents and school helps.

With the arrival of the Christmas present of books and other gifts, the principal suggested that a room devoted to the janitor's brooms and pails, which was connected with Mary's schoolroom, might be used for this library. He secured the interest and co-operation of his football eleven, and after a careful study of Louise Brigham's book on "Box furniture," they made a visit to the grocery and drygoods store, and with the boxes obtained there, constructed shelves, bookcases, cases for the mounted pictures, two benches and a table.

Sara Carewe's father owned a factory in Illumina. Mary Mason was having dinner at their house one Sunday, and over-hearing Mr. Carewe say that he was obliged to have a larger card catalog case for his business, timidly asked what he was to do with the two old trays in use in his office. "I know," he answered, "you want them for the school library—and you shall have them!" It seemed a library indeed now!

Bulletins became more interesting each week and when spring came, a "sports" bulletin was made. The boys took charge of this, posting clippings and pictures of baseball and football favorites, racing

events, and so on. The boys also had charge of the war news bulletin, and current events, especially in scientific discoveries. The Boy's Club had subscribed for *Popular Mechanics* and *Scientific American* and *American Forestry*. The Girls' Club had subscribed for *Good Housekeeping* and *Little Folks* for the children.

With the spring the girls who were in the other grades took charge of the nature study exhibit, and a keen interest was aroused in the succession of wild flowers. Boys and girls alike brought interesting things from the woods and the riverside. The library hour, which had become an established thing now (the last hour on Friday—which was all the school board allowed) was sometimes changed into a nature study hour, and all went into the country to look at the birds and watch the growing green things.

The scholarship and standing for all the grades rose in the scale as the library grew. Still the board was unconvinced and would not include in the budget a penny for the library.

The principal and the teachers decided on an entertainment. The members of the school board came and contrary to their expectations, they found no seats on the platform for them. A curtain was hanging before the platform. The principal briefly stated that a library existed, told of its uphill work, and made the statement that the school had never done better work or shown greater improvement. Then the entertainment began.

The play was called "A book." The principal and the boys had made a huge book, covered it with red, and it stood in the middle of the stage with its back to the audience so that its title appeared—"Alice in Wonderland." Alice, as she looks in the well known edition, came out and sat close to the book. Then the author came from the other side of the stage. The book was opened gradually until Chap. 1, Chap. 2 and so on came out—and after each came two or three of the characters, until the Mad Hatter, the Queen and all the fascinating ones had appeared. "The end" was a group of children in black who formed these letters. Then the binder

came and drove them all into the great book, and sewed them in! An ingenious arrangement of another curtain made it possible for children to appear to enter the book. The play was very enthusiastically received, and when the school board saw the cheerful little room with the library and its equipment, they went into executive session at once and voted fifty dollars as an annual appropriation, beginning with this very evening.

What books were bought with this—and a Reader's Guide, of course, for the periodical list was growing!

Out of compliment to the school board, a few books for older people, which might be used for reference books, were also added to this list.

The library became a community center—a children's hour was given Saturday mornings and the children who came with their parents from the country were left in the library to enjoy the story telling and the books. Saturday afternoon and evening the library was also open, the teachers and the older scholars having charge of it. The men in the small town dropped in on their way home from the postoffice on Saturday evenings to look over the magazines and read the papers, for the *New York Times* had been added to the newspaper list and found many readers. The library now had become a community reading room, which resulted in a unanimous vote for a town tax for the library fund.

"The school is made up of our children, and their library is ours!"

At Christmas time of the following year, the principal came into Mary Mason's school room to show her a letter he had received from the superintendent of the Normal Training School, to which members of his last year's students had gone, saying: "Your students are doing very good work, and show a rare familiarity with books and how to use them. I congratulate you."

I have said earlier that "the principal showed good taste and judgment in selection." He and Mary Mason now have their own library in their own house and have lost none of their interest in the school library.

## A QUANTITATIVE SURVEY OF THE BODLEIAN LIBRARY

IN the *Bodleian Quarterly Record* for April, 1916 (vol. I, no. 9), Bodley's librarian, Falconer Madan, gives the results of a very careful statistical survey of the Bodleian Library.

Mr. Madan says: "The size of any library is of general interest to the community in which it is placed, especially when the institution is valuable enough to be a distinction to its district. It is of interest, not because it enables a librarian to give some answer to the evergreen question—how many books have you?—but because it may be assumed that size has some relation to importance, and that the librarian or his committee has always endeavored to purchase the best books that could be afforded. But the size is in many cases so difficult to ascertain, and the methods of arriving at a result are so different, that it seems worth while to endeavor to obtain some statistics, standards, ratios, and comparisons which may be of general value to all librarians. There seems to have been hitherto no attempt to supply them on a large scale, or on a system which can readily be standardized.

"The Bodleian Library is especially suitable for this experiment, because during three centuries of growth it has expanded on the whole normally, and without change of locality. It has had a right to a copy of every British publication since 1610. Sir Thomas Bodley's room is still furnished with most of the oldest books, and many of the other sections of the library contain books of a definite period and kind. A statistical survey of the entire institution was therefore made between March, 1913, and February, 1916. The date of the survey may be placed centrally as the middle of 1915.

"The objects kept in view have been (1) to ascertain the number of volumes; (2) to obtain ratios of folios, quartos, and octavos (on the whole and at various periods), counting all lesser sizes as octavo, and setting off the smallest sizes against abnormal folios; (3) to measure the shelvage; (4) to obtain the dimensions and weights of an average folio, quarto, and

octavo; and (5) to ascertain the relation of volumes to literary pieces.\* The results of this inquiry will be, it may be hoped, of some use in standardizing calculations of size, in a field in which standards seem to be at present not easily found.

"It may be stated at once that the most satisfactory common basis of calculation and comparison, where actual counting cannot be undertaken, appears to be shelving, distinguished where possible into folio, quarto, and octavo divisions."

To obtain satisfactory data from which to calculate the number of volumes, two important sections were actually counted—the Old Reading Room and the first floor of the Quadrangle. They, and all other sections, were then estimated by direct measurements of shelving in conjunction with several hundred countings of the actual number of volumes in a normal space of three feet in various rooms. In the two sections that were counted as well as measured, the estimate was rather lower than the result of the counting, so it may be safely assumed that the figures given below are not exaggerated. Unoccupied shelving was also measured, but does not enter into the calculations given. In every case the number of foot-runs of folio, quarto, and octavo sizes was separately noted, furnishing a basis for a statement of the ratio of sizes. Folios are taken to be volumes over 12 inches high; abnormal folios, over 15 inches. Quartos are from 9 to 12 inches, and octavos less than 9 inches, abnormally under 7 inches. To get the average height of each class, a large number taken at random from normal shelves were measured. Weights were ascertained in the same way, and also by weighing the contents of various "copyright" boxes as soon as they had been divided into their three size divisions, folio, quarto, and octavo. The ratio of volumes to separate pieces was evolved from two independent calculations based on the numbers of slips pasted in the two copies of the General Catalogue. In each case the number of slips was estimated from a very large number of chance pages, and allowances

were made for slips with double headings or additional entries on a slip, and for cross references. The number of periodicals in more than one volume and the number of slips referring to parts of volumes were carefully considered.

For the purpose of this survey the library was considered in ten sections. The number of folios, quartos, and octavos as estimated in each section, together with the actual number of feet of shelving, and the number of volumes of each size per foot, are tabulated. This table shows 175,198 folios, 340,321 quartos, and 506,263 octavos, or a total of 1,021,782 volumes, in 19.55 miles of shelves. These figures do not include the 17,500 volumes of the Backhouse Chinese collection, the two copies of the General Catalogue (2224 volumes), nor 8000 volumes on loan in the Museum. These would raise the totals to 1,049,506 volumes, of which 40,000 are manuscripts, and over 20 miles of shelving.

Mr. Madan follows this table with some interesting deductions as to the proportion of folios, quartos, and octavos in different parts of the library and at different periods of time, and has also arranged a table showing the average height, width, thickness bound and unbound, cubical contents, and weight.

A calculation of the number of pieces was made from the Camera catalog. This has 1179 volumes, with about 190 leaves each, or 224,010 leaves in all. Each leaf contains an average of  $8\frac{1}{4}$  slips or  $8\frac{3}{4}$  entries, making the total number of entries about 1,960,000—a result that was in general agreement with the calculations from the Bodley catalog. A tentative calculation of the number of items shows a total of over 2,900,000, and the general proportion of volumes, pieces, and items may be stated as 1:2:3, and in the Bodleian at the present time in round numbers as 1,000,000, 2,000,000 and 3,000,000. Annual additions in ordinary years are about 20,000 volumes.

"The total number of printed books issued from the invention of printing to the present time has been computed to be about 11,650,000, of which about 40,000 are incunabula printed before 1501, and about 8,700,000 have been printed since 1800."

\*Volumes here mean books as they stand on the shelves; pieces, separate works or parts, usually with separate title-page; items, all possible separate literary entities—broadsides, cards, etc.

Some other tables are appended to the survey. The first gives estimates of the size of the Bodleian at various dates. The second gives statistics of the library in 1604, 1652, and 1883, showing proportion of subjects. The last gives a list of the twelve largest libraries of Europe in 1912, with the number of books and in two cases their shelvage, and criticizes the Library of Congress, New York Public Library, and Boston Public Library for not making more clear their system of counting by which their statement of resources is obtained. The article closes with a hope that librarians everywhere "will endeavor to standardize their calculations (preferably by shelvage, to begin with), and give them in terms of volumes, pieces, and items, and (if possible) also of sizes."

#### CLASSES IN BOOKSELLING AND LIBRARY WORK IN PHILADELPHIA HIGH SCHOOL

THE William Penn Evening High School for Women, at Fifteenth and Wallace streets, Philadelphia, carries a course in book-salesmanship and library methods, first introduced in 1914, which is arranged so as to be of direct help to employes of bookstores and to workers in libraries and to those ambitious of entering these fields of employment. There is also a growing demand in business for the knowledge of library methods, especially where indexing, filing, and classification are routine features. The course is under the general superintendence of Dr. J. T. Rorer, principal of the school, while Miss Bessie Graham, who is a trained librarian, is the instructor in charge. The course includes library methods of classification, card cataloging and indexing, instruction in the book news of the day, and an introduction to the leading books in all departments of literature. In the words of the printed announcement: "The course is *about* books and deals with their authors, dates, publishers, editions, etc. *In no respect is this course a study of literature, nor is any analysis or appreciative discussion of literary merit attempted.*" Opportunity will be given the class to hear practical talks

from book buyers and salesmen, librarians, dealers in second-hand books, and from others in the trade. The school library will be used for illustrative purposes.

The class meets Monday, Tuesday, and Wednesday evenings. Registration was made the first week in October. Candidates with credentials of two years' work in high school English, and employes bringing commendatory letters from bookstores and libraries, were exempt from the entrance examination. After October admissions will be made only to fill vacancies in classes.

Following is the schedule of instruction in the course:

##### *First Term, October-December (12 weeks)*

7:30 to 8:30, Monday.—Classification, Alphabeting.

8:30 to 9:30, Monday.—Reference Work (000).

7:30 to 8:30, Tuesday.—Book listing: Four Dewey Classes—Philosophy (100), Religion (200), Sociology (300), Philology (400).

8:30 to 9:30, Tuesday.—Literature (800); Essays, Biography.

7:30 to 8:30, Wednesday.—Book Listing continued.

8:30 to 9:30, Wednesday.—Fiction, Juveniles.

##### *Second Term, January-March (12 weeks)*

7:30 to 8:30, Monday.—Cataloging, Classification schemes for special libraries.

8:30 to 9:30, Monday.—Magazines, Publishing Houses, Out-of-print books, Literature (800); Poetry, Drama.

7:30 to 8:30, Tuesday.—Book Listing—Science (500), Useful Arts (600), Fine Arts (700), History (900).

8:30 to 9:30, Tuesday.—Literature (800); Poetry, Drama.

7:30 to 8:30, Wednesday.—Book Listing continued.

8:30 to 9:30, Wednesday.—Fiction, Juveniles.

Among the special speakers for the Wednesday evenings will be Mr. Henkels, on book auctions; Mr. Stuart, of Leary's, on second-hand books; Mr. Rosenbach on rare books; Miss Dow, of the School of Industrial Art, on bookbinding; Mr. T. Wilson Hedley, of the Mercantile Library, on library work, and various publishers, not yet named, on the publishing side. One evening will also be given up to the Doubleday, Page pictures on the "Making of a book."

Last year a class of fifty took the course, and a still larger number was expected to enroll this year.

## THE MERIT SYSTEM IN LIBRARY APPOINTMENTS

At the meeting of the New York Library Association at Richfield Springs in September of this year, the committee on the merit system in library appointments, thru its chairman, William R. Eastman, made the following report:\*

The committee on the merit system as applied to appointments for library service, reports that, in order to ascertain existing facts and to learn the views of librarians who have occasion to deal with this subject, a series of fourteen questions was prepared and sent to sixty of the larger libraries within the state and to six library commissions and to six libraries prominent in other states. Replies were received from 53, of which 42 were from within the state. The committee is greatly indebted to all these correspondents for their ready response and their discriminating and helpful suggestions.

Seventeen of these libraries hold examinations as a basis of appointment. In six libraries of the state and three without the state, such examinations were held by the Civil Service Commission, and their testimony is that, in spite of some vexatious complications, they find the local commissioners quite willing to co-operate in trying to secure results as satisfactory as the law will permit. The best course for these libraries evidently is to take the commissioners into their confidence.

Six other libraries in the state, while not required by law to do so, examine untrained applicants because they find it the best way under their conditions. These are the libraries with branches requiring a considerable number of workers. Each has its own system under control of the directors and the librarian.

Of those consulted outside the state, the State Library of California, the Library Extension Commission of Illinois, and the Chicago Public Library are under the law of civil service, the Des Moines Public Library holds its own examinations, and those at Denver, Springfield, Massachu-

setts and St. Louis, hold examinations only for admission to their training classes. Seattle has no written examinations, but acts upon testimonials and records of experience.

The remaining 36 libraries report that they hold no examinations for appointment. This evidently means no written papers and no system of marks. And yet, in almost every instance, some provision is made for a demonstration of fitness. The idea of probation is expressed in various terms such as "known fitness," "personal investigation," "careful consideration of qualifications and experience," "after six months service without pay," "four months record of efficiency," "apprenticeship of several months unsalaried," "probation for varying terms according to ability shown." Some limit appointments to "high school graduates," "from among our apprentices," and even to "library school graduates." Such expressions show that candidates are examined and pretty effectually examined. One item of information which is of vital importance is unfortunately lacking in completeness. Only two or three tell us how the chief librarian is chosen. We are left to assume that the appointing board acted without help from the law or examination. We learn that the trustees of one of the large civil service libraries chose their librarian and that then "he complied with the necessary formalities."

The number of libraries in New York, on the Regents registered list of a year ago, is 559. About 27 of these are not free for circulation and 107 are branches. Deducting these there are 425 free library organizations. There are a few more which are not on the Regents list. The examples are at Poughkeepsie, Newburgh, Batavia, Ithaca, Cooperstown, Sag Harbor and Pratt Institute in Brooklyn. These bring the number up to at least 432. Of all these, five only are bound by the civil service law, six give examinations of their own, and 30 libraries, reporting that they hold no examinations, nevertheless take measures to ascertain fitness and some of them prescribe prolonged test of service as preliminary to appointment. But there remain at least 390 from whom we have no reports. Most of them are the small libra-

\*By vote of the association the general features of the report were approved and the subject was referred to a new committee to report at the next annual meeting.

ries where an assistant is unknown. Evidently they can have no examinations. It seemed hardly worth while to ask the librarian how her own appointment was received. The trustees are presumed to have done their best under the conditions, with the salaries they were able to offer or the voluntary service they were able to obtain. Such are the facts and here we ask the question: Is it possible that our libraries, and particularly these one-librarian libraries, could serve the people better if there were some way by which a librarian for such a place might be tested: kindly, judiciously, tested before definitely assuming the responsibility of public service?

The seven remaining questions call for opinions. Twenty-one libraries are willing to appoint assistants without examinations. Ten think examinations important; five are in doubt and five make no reply. Seven are in favor of a uniform system; twelve are opposed and seven are in doubt. As to a state system to supersede the law of civil service, eight are in favor, four undecided and eleven opposed, and we may add, rather strongly opposed. As to including present established systems, three are in favor, four in doubt, and five opposed. As to conductors of examinations, ten would leave it to the state or the Regents, two advise an expert board, two the trustees and three the librarian. Question 13 asks for opinions regarding a state certificate system, corresponding to that for teachers, requiring every librarian or assistant in a tax-supported or tax-aided public library to hold a certificate of fitness for the grade of work to be done. Here we touch the most important point in the whole inquiry. There is an evident distrust of civil service methods and written examinations and of those things which a certificate is supposed to show. Of replies received, ten are in favor of a system of certificates, twelve are opposed, and twelve are in doubt. Strong reasons are given on both sides. In favor, it is said that a certificate plan would raise the standard of service, and, incidentally, should advance the rate of compensation. But another calls it "too technical" and one even styles it "a death-blow to the small library." All insist, very properly, that any successful system

must be adapted to the conditions and that there is a doubt whether a certificate system can be so adapted, least of all, a uniform system. All admit that qualifications are essential. The puzzle is, how to find out qualifications and to find out in time.

We have, in the replies before us, many suggestions well worth thinking about, such as: "Our eligible list is based on preliminary training of apprentices and substitutes"; another, "Our training class serve six months without pay, and six months with pay." These apply, of course, to assistants in a large library. We quote a list of requirements: "A high school education, a pleasant personality, common sense, a fairly good knowledge of books, willingness to work and to learn. Would you grant a certificate for that?" Indeed, why not? Another writes, "'Library fitness' means so much that cannot be proved by a written examination. I judge by personality, home training and good manners as well as education. I want my assistants to know many things that no certificate could guarantee. I vastly prefer my system of probation." The word "personality" appears again and again as of equal account with any examination. Systems are regarded as useless. Training under a trained librarian is counted the best reliance. One says, "Examinations should be personal, first; practical, second; theoretical, third. Many people who pass with high marks . . . are often of little use in a business way requiring common sense, a level head, tact, ability to meet people, etc."

In the choice of assistants, there can be little question that the sober judgment of good librarians, who thoroly appreciate their work, can be accepted as the best safeguard for the public and that the training received from the trained and approved superior, when it is tried again by probation, is the best reliance for choosing library workers of all grades. But the larger problem is that of the 390 libraries which have no assistant. How can the public know that each of them has a competent librarian?

The facts and opinions before us offer a broad basis for discussion. On some points we shall easily agree. The public library is a public institution. It exists

for the public good and the interests of the public in it are above those of any individual. If the library is supported or aided by public tax, the public have a right to the assurance that the money is used to the best possible public advantage. It cannot be so used by an incompetent librarian. This principle is not in debate. But what is competency and how can we discover it? A uniform standard of competency is objectionable to many because a person incompetent in one place might be quite competent in another. This is very true, but it means only that competency cannot be judged upon any special grade of work to be done. Not only is the worth of the librarian to be estimated, but, at the same time, the library and the town must be measured, yes, and the salary or the lack of it.

To find a guarantee against incompetence, we have at present two lines of approach. Our main dependence is and must be upon the good judgment of the local library board. One of our correspondents, stating his opinion that our libraries are not yet in the least danger from the spoils system, against which the civil service laws were intended to raise a barrier, suggests that, if competitive examinations are set up as a protection against political pressure and graft, they should be used solely to examine the trustees. We need, first of all, to find in our library boards a high sense of public obligation and an intelligent appreciation of librarianship. This implies that no appointment should ever be made as an act of favor or charity or in response to any political or social influence. Trustees have been known to sin against the public out of a mistaken impulse of what they took for benevolence. In a far western state, not long ago, a state library bill was pending in the legislature. A member offered to amend by inserting the name of the librarian and he explained his object by adding, "He is a cripple and he needs it," and they all voted him in. But this was not fair to the public. A serious difficulty, however, with which most trustees have to contend is the lack of funds with which to secure the best service. They cannot, or think they cannot, pay the price of it. The real difficulty lies farther

back. They do not understand how much it will be worth to any community, large or small, to have a librarian who can make the library a social force as every library ought to be. If they did know that they would somehow bring it about that funds should be no longer lacking. This consideration points to a campaign of education to impress upon all alike the true meaning of our work, which, when understood, would bring the real remedy for incompetence. But, always, we must depend upon our local trustees.

The other line of approach to our desired object lies thru our state department of education. Under the Education law, the Regents are in a position of authority and responsibility in this very thing. Three provisions of the law have a bearing upon it: 1. Every library corporation must send an annual report answering such questions about their organization and work as the Regents think it wise to ask. 2. Any free library, privately controlled, may receive public money, when registered by the Regents as maintaining a proper library standard. 3. Library money from the state is to be distributed by the Regents "according to their rules." In the rules we find that this money can be given only to a library registered as maintaining a proper library standard. And this has the force of a general law in view of the fact that at present almost every free library in the state is so registered and has received the state's money to bind the bargain.

Upon the point before us, the Regents rule simply requires that a library shall be in charge of a "competent attendant." It says not a word about any method of ascertaining competence, but competence there must be and the Regents obviously have not only the power but a plain duty to be satisfied about this in such ways as they may deem wise and expedient. They are custodians of the bounty of the state, and cannot allow it to be misspent. Practically the matter has been left to the judgment of the inspector and his assistants. But the power to institute a more serious investigation requires no new legislation. It is already in the hands of the Regents, and, if we, jealous of the honor of our

profession, and zealous for better libraries, have any appeal to make it must go to the Regents and not to the legislature.

Now, what can the Regents do? Perhaps they might conduct competitive examinations, but this they never have done for the schools and we do not want them. The practice is to issue certificates of success in written examinations. These are given to pupils as a condition of advancement and to teachers as a condition of employment and the employer can choose freely among those who hold them. Do we want such pass cards for librarians?

There would be advantages. The certificates might show preparatory education, acquaintance with books and some elementary knowledge of library methods. The service proposed might be more highly esteemed by the public and by the candidate. It would mean more and might receive better compensation. All these things are good. But libraries differ widely in size, character and income; in town and people. A careful grading of service would be necessary and many grades. There would be the library of 500 books or less as well as those of 5000 and more. Some would be open every day and all day; others only three hours in the week, and the salary might be \$50 a year; some would be in charge of volunteers and pay nothing at all and it would not be strange if the unpaid service was superior to the other.

It may be a question whether the state can properly make requirements upon such libraries. And there would remain the written examinations, which may be well enough in their place in school and college and library school, but which we do not like in our libraries because they tell us less than half of what we want to know.

But, before reaching a decision, let us see what the state has done to help librarians to train themselves to real efficiency. First, there is the library school with a one or two years course under skilled teachers in the environment of a great library. Then, the summer school with two courses of three weeks each, open without cost to any one in New York holding a library appointment. These give certificates.

Then, there is the correspondence and visitation of the Extension Division, freely offering advice and instruction on every hand and holding out most cordial encouragement to the new librarian unused to the task. This personal touch of the visitor, and especially, when reinforced by the longer tarrying and actual co-operation of the organizer, is planned and expressly adapted to aid the librarian in the exact conditions that confront and perplex her. Then, there are the opportunities of this association and of the library "institutes" in which the association and the state department work together in about thirty meetings a year, so distributed over the state that there is no library, however remote and small, which cannot find at least one institute close at hand to which it may send its librarian for companionship and quickening. Any librarian from anywhere can go if so inclined, and if, in any instance a librarian is not inclined, may not this arouse misgivings as to the spirit and quality of that particular library service? We might mention also the quarterly library bulletin of the state department which so admirably presents as in a mirror the current movement of New York libraries, and to crown all, the state gifts of money to buy books. Now, it is not necessary for every librarian to be trained in the library school, nor even in the summer school tho there might be great advantage in it, but, in view of all that has been done for any and every willing librarian, the state is entitled to a response and ought to discover some evidence of a disposition on the part of the librarian to do some definite thing to advance her own larger efficiency.

Since we find that service is the admitted test of quality and that observation gives the clearest evidence of fitness, this committee, in order to give point to their conclusions, has undertaken to devise a plan for appointments, which it hereby offers. Leaving out all written examinations, it would place all appointments on a basis of probation. Contrary to the usual rule, it puts appointment first and a certificate to come afterward when it has been earned. In this plan the State Department is given

a large and decisive part because, while the good librarian may properly say, "I vastly prefer my own system of probation," it cannot be forgotten that all librarians are not equally good and that the state is concerned for them all. The following tentative plan, expressed in the form of Regents rules, is therefore submitted to your judgment and revision:

RULES SUGGESTED FOR APPOINTMENT FOR LIBRARY SERVICE

1. The Regents shall keep a list of all persons hereafter appointed or promoted for library service in registered libraries. This list shall show for each appointee, the following items: Name, residence, date of birth, education, training, extent of library experience, kind of service expected, date of appointment and salary to be paid. It shall also include a statement of credentials, references and other evidence of fitness.

2. Every board of trustees in a registered library, after making an appointment or promotion of any person for library service, shall immediately report their action to the Regents' office, furnishing the items named above and, if the appointment or promotion is approved, the Regents shall issue to each appointee a certificate, which shall entitle the holder named therein to do the work and receive the salary of the grade specified. But no assistant shall receive an absolute certificate on less than six months of library experience and no chief or sole librarian on less than one year's experience in that library or elsewhere. If, for any cause, the Regents are not satisfied to issue an absolute certificate the appointee concerned may be either rejected or placed on probation for a time fixed by the Regents, in which case a provisional certificate may be given.

3. When appointments are made of persons whose library experience or qualifications have not been found sufficient, such appointments, when not rejected, shall be placed on the list as made "on probation" for the time needed to meet the requirements of the preceding rule, and for that time, but no longer, salaries may be paid without an absolute certificate in the discretion of the appointing board.

4. When appointments are made "on probation," it shall be the special duty of the Extension Division, by advice, correspondence and visitation, to extend all reasonable aid to such appointees in the discharge of their duties and to call their attention to the facilities provided for library training by the state or otherwise, and, when the time of probation is ended, this division shall report to the Regents an estimate based upon careful inquiry and observation, of the qualifications of each of such employees for continued service.

According to the above plan, every appointee not rejected, would be on probation till the desired certificate is issued. With the appointment of trained assistants by libraries of recognized standing there would be little or no delay in receiving certificates. The results of written examinations elsewhere would be included under the head of "credentials." Large libraries would continue their present system of tests, if they so wish, reporting results, but the plan relies upon intelligent and expert observation as to personality and fitness. It puts responsibility too upon the Extension Division, where much of it belongs. It follows the lines of probation.

The Regents have the right to carry out such a plan under the full sanction of law. No legislation is required except, possibly, to remove five or six libraries at the outside from the operation of the civil service law, and that step need not be taken if the libraries concerned do not wish it. The plan will not interfere with present conditions. For the great libraries, the task of reporting to Albany would be slight, and, we believe, would be readily undertaken if they are satisfied that it will be for the good of the whole body.

If this association can agree upon such a plan, or any other, the only action required should be to approve it and appoint a committee to confer with the Commissioner of Education and the Board of Regents, and there they would meet the most cordial, impartial and sympathetic hearing from men who have at heart the highest educational interests of the state.

---

A NEW PLAN PROPOSED FOR BOOKSELLING TO LIBRARIES

ONE of the leading publishers has come forward with a plan for handling the library trade, by which each library would deal with the publisher direct, and a 10 per cent. commission would be allowed the local dealer. The plan does not receive any support from members of the American Booksellers' Association, according to the *Bulletin* of that organization.

In summing up the booksellers' feeling toward the new plan, the *Publishers'*

*Weekly* says: "There are many booksellers who have almost or entirely abandoned library business, because of the activities of jobbers and library supply houses; yet none of these wish to get back by the publisher to library direct route, or if they do, they have not responded to the request of the American Booksellers' Association for opinions. On the other hand, opposition to the idea has been frankly expressed. A very general objection that has been made is that while the publisher in question no doubt would continue his plan of allowing the local dealers the 10 per cent. commission there could be no guarantee that other publishers would follow his example. The fatal weak spot lies here: under a direct publisher to library plan, the bookseller would render no service and therefore would not be entitled to any compensation, and in the long run he would not receive that which he had not earned."

What attitude the librarians take toward the proposed plan is still undetermined. While librarians may endorse, in theory, the idea that they should buy their books thru local dealers, in actual practice they find that in many cases the local dealer is unable to give either the prompt service or the generous discount that the large jobber can offer. As a result, the canny librarian, who must stretch his book fund to the last possible limit, forswears his altruistic theories for the tangible benefits of the immediate bargain. Whether the proposed arrangement of direct dealing with all publishers could be worked out in a practicable manner, and one which would be advantageous alike to publisher, bookseller, and librarian, is open to considerable question.

#### REPORT OF THE BRITISH MUSEUM

THE first complete year of war, according to the 1915 report of G. F. Barwick, keeper of printed books in the British Museum, showed a reduction in the number of visitors to the Museum as compared with the exceptionally high figures of 1913 and the first seven months of 1914. The absence of Continental and American visitors was responsible for a reduction in the attendance; but, on the other hand, the

use of the Museum by the English people themselves was more than fully maintained. The total number of visits for the year 1915 was 733,091, which is a figure slightly in advance of the total for 1911 and slightly below those for 1910 and 1912, all of which were years in which London enjoyed a normal influx of foreign visitors.

The only publications of the year were works which had been in hand before the outbreak of the war and which it was more economical to complete and issue than to suspend. The suspension in April, 1915, of the purchase-grant (with the exception of a sum devoted to the purchase of foreign books and periodicals for the library), greatly affected the accessions, tho, since several outstanding purchases were completed, the full falling off was not visible in 1915. Reductions of the staff continued thruout the year; 99 members of the Bloomsbury staff, and 52 from the Natural History Museum went on military service; 38 from Bloomsbury and 12 from the Natural History Museum were attested under the Derby scheme, and 33 were rejected as medically unfit.

The accessions during 1915 included 26,351 complete volumes and pamphlets, 61,538 parts or volumes of serial publications and of works in progress, 84 atlases, 98 parts of atlases, 6760 maps, 10,720 musical publications, numbers of 3586 newspapers, and 5431 miscellaneous articles.

During the year 42,663 titles were written for the General Catalog and for the catalogs of maps and music; 29,176 titles and index slips for the General Catalog, 2495 for the map catalog and 2330 for the music catalog were printed. For each of the three copies of the General Catalog, 29,092 title slips and index-slips were incorporated making it necessary to re-arrange 45,627 title-slips and index-slips in each copy and to add to each copy 621 new leaves.

The number of volumes and sets of pamphlets sent to be bound was 19,344, which were returned in 11,724 volumes. In addition, 735 volumes were repaired in binders' shops, 4006 volumes were repaired in the library, 9089 were cleaned and polished and 4597 volumes of reports, parts of periodicals, etc., were put in light binding.

The number of volumes exclusive of those on open shelves which were supplied to readers during the year was 1,243,333, and the number of readers 178,410, giving an average of 588 daily.

#### TRIBUTES TO MISS PLUMMER

FROM one organization after another come tributes to the memory of Miss Plummer. The New York Library Club, with the participation of the New York Public Library and Library School, the American Library Association, and the New York Library Association, have called a meeting to honor the memory of Mary Wright Plummer, late principal of the New York Library School and ex-president of the American Library Association, in the Stuart Room of the New York Public Library, Fifth avenue and 42nd street, on Thursday evening, November 16, 1916, at eight o'clock. Dr. Hill will preside, and as president of the New York Library Club he is expected to speak on behalf of that organization. While all arrangements for the other speakers have not been completed, it is hoped to have the American Library Association represented by President Brown and R. R. Bowker; the New York State Library Association by President Stevens or Mr. Hopper. Miss Annie Carroll Moore will speak on Miss Plummer's relations with the New York Public Library, and Mrs. Caroline Weeks Barrett on her relations with Pratt Institute. Robert Welsh, dramatic critic of the *New York Evening Telegram*, has been asked to read some of Miss Plummer's verse, and other speakers may be added to the program later.

In the Pratt Institute *Students' Bulletin* for Sept. 29, Mrs. Caroline W. Barrett, who was a close personal friend of Miss Plummer's and her associate for many years at Pratt, paid tribute to Miss Plummer's unusual personality.

"The opening days of the Institute year," writes Mrs. Barrett, "have been saddened by the death of Miss Mary Wright Plummer, our former Librarian and Director of the School of Library Science. Miss Plummer came to the Institute twenty-six years ago to be Miss Healy's assistant and,

after Miss Healy's marriage in 1896, assumed full charge of both the Library and the Library School. She left the Institute in 1911 to organize and direct the Library School in connection with the New York Public Library, and continued her work there up to the time of her death. The daily papers have given due recognition to Miss Plummer's scholarship and standing in her profession, have enumerated the many positions of honor that she was called upon to fill, and have praised her published writings. It is possible, therefore, for us to confine our comment at this time to a more intimate appreciation of her personality.

"Miss Plummer had all of the sterner virtues. She came of a race of pioneers—men and women who dared to think and who went out into the West where they could think and act without the limitations imposed by an older civilization. From these brave adventurers she inherited her courage and independence. They were members of the Society of Friends and, like them, she recognized no authority but the 'inner light.' To that vision she was absolutely faithful and while in her standards of right and wrong she might differ from those about her, they were her standards and as such must be lived up to at any cost. In almost startling contrast to her uncompromising sturdiness was her exquisite graciousness and charm. She had an unerring instinct for all that was beautiful and her first-hand appreciation of works of art, music and literature was so rich and wonderful that it seemed to add something to the masterpieces of genius. There was about her an old-world flavor. She belonged to the storied past, but so simply and lightly did she carry her scholarship that few suspected her learning and most were quite unconscious of the fact that to know her was a liberal education. It was in conversation that she excelled, and it was a rare opportunity to listen to the perfect English in which she habitually expressed herself. She was an inspiring teacher. Like a mountain climber who gets first the vision of the summit, she cheered on the strugglers that followed her afar.

"The life of institutions is enriched by such personalities and we are glad to believe that into the warp and woof of our corporate life she has put some of her courage and integrity and some of her charm. Let us strive to be faithful to the vision she was permitted to show us."

The faculty of the University of Illinois Library School, at a called meeting, adopted the following minute:

This Faculty has learned with regret of the death of Miss Mary Wright Plummer, principal of the Library School of the New York Public Library. The void which Miss Plummer's removal causes, cannot easily be measured or filled. The library profession which counted her among its ablest members, the two schools who claimed her as their inspiring leader, the association to whose interests her last efforts were devoted, are united in their grief at her loss.

The faculty of the University of Illinois Library School takes therefore this opportunity of expressing its profound regret at the word which has come to it. Its sympathies are extended to the faculties and students of Pratt Institute Library School and the Library School of the New York Public Library, who have lost an incomparable leader; to the men and women of the library profession who will miss an able colleague, and chiefly to the members of Miss Plummer's immediate family, whose loss is beyond expression.

#### MARTHA THORNE WHEELER

AFTER an illness of about four years' duration, Miss Martha Thorne Wheeler died September 3. For 25 years her interests and activities centered in the New York State Library and Library School. In 1891 on the completion of the two years' course in the school, she received an honor diploma. Between this date and the summer of 1913, when continued ill health compelled her to resign from the library staff, she filled most admirably several important positions. She was indexer 1891-93, a member of the book board 1893-1913, annotator for the same period, editor of "Best books" from its first issue in 1895, instructor in indexing in the Library School from 1895, sub-librarian in book selection and annotation 1905-1913. In 1905, when Mrs. Salome Cutler Fairchild severed her connection with the school, Miss Wheeler was appointed to succeed her as instructor in the two years' course in book selection.

Her practical experience in this field, her personal interest in young people and her "infinite capacity for taking pains" made this appointment a very fitting and acceptable one. Her position as instructor in this course only terminated with her withdrawal from the library.

The undermining of Miss Wheeler's health may be traced to the Capitol fire of March, 1911, which tested the endurance of all the members of the State Library staff who held positions of responsibility. Her work of years in the shape of a comprehensive file of annotations, reference material, school lectures, and other manuscripts, was destroyed in a night. Characteristically she rallied all of her forces, and with slight working materials but tremendous pluck, she continued and completed her instruction in the two book selection courses, carried on her regular departmental duties and issued as usual the annual list of "Best books." However the shock of the fire, the constant overtaxing entailed in teaching and working without tools and outside resources, the task of re-writing lectures, and the crowded and unhygienic conditions under which the staff was obliged to work, induced the painful and lingering illness which led to her death.

Her many duties in the library and school left her little time for authorship. Helpful book lists and book reviews were prepared regularly for *New York Libraries*, but her most important publication is the valuable pamphlet "Indexing" issued by The New York State Library in 1905, and revised and reprinted in 1913. In recommending to the State Commissioner of Education the printing of the new edition, J. I. Wyer, Jr., director of the State Library, wrote: "The bulletin has been out of print for several years and a considerable demand for it persists. . . . That the publications of the Education Department are by common consent so well indexed and that expert indexers trained in the Education Department are in such demand in other state departments is due to the instruction in this subject given in the State Library School and based upon the pamphlet presented herewith." A chapter on the province and purpose of the Sun-

day school library written by Miss Wheeler is included in Miss Elizabeth Foote's book "The librarian of the Sunday school." Indeed it is to Miss Wheeler's interest in the Sunday school library that the Emmanuel Baptist Sunday School of Albany owes the satisfaction of having one of the best selected libraries of the kind. Its catalog has been in wide demand thruout the country.

Her largest legacy is intangible but vital nevertheless, the influence of a kind, gracious, strong personality, very much alive to life and its possibilities. A steady, conscientious and untiring worker, she never forgot to be human, and even during her years of invalidism her keen interest in the library, the school and her friends never flagged. Her students in the school and the assistants on her staff testify to her great capacity for friendship, her sympathy, her constancy, and her high ideals both for herself and for them. She was a woman of balance, breadth and vision. Those who studied under her or who worked with her, some of whom have only realized their own capabilities thru her confidence and encouragement, count this association a privilege of lasting personal value.

M. E.

### SOME STATISTICS OF LIBRARY EXPENSES

ANALYSIS of the United States Census Bureau financial statistics of cities for 1915, just published, shows the following comparison between general departmental expenses in 146 cities of more than 30,000 population for specified years from 1903 to 1915, inclusive, and library expenses for the same years:

Annual increase	General exp's.	Library exp's.
1905 over 1903	9.5	2.11
1907 " 1905	20.6	20.12
1909 " 1907	10.8	25.11
1911 " 1909	11.2	4.85
1913 " 1911	9.7	7.40
1915 " 1913	10.0	11.83

There was an average annual increase in general expenses of 11.9 per cent. as compared with an average annual increase in library expenses of 10.2 per cent.

The expenditures of 204 cities for libraries in 1915 constituted 1.3 per cent. of the total expenditures of general departments;

among cities of over 500,000, 1.2 per cent.; among cities of from 300,000 to 500,000, 1.3 per cent.; among cities of from 100,000 to 300,000, 1.4 per cent.; among cities of from 50,000 to 100,000, 1.3 per cent., and among cities of from 30,000 to 50,000, 1.5 per cent.

The average per capita expenditure for libraries was 24 cents; among cities of over 500,000 population, 27 cents, the highest being in Boston, 57 cents, the lowest in Chicago, 15 cents; among cities of from 300,000 to 500,000, 29 cents, the highest in Seattle, 55 cents, the lowest in New Orleans, 10 cents; among cities of from 100,000 to 300,000, 22 cents, the highest being in Springfield, Mass., 65 cents, the lowest in Richmond, Va., 1 cent; among cities of from 50,000 to 100,000, 17 cents, the highest being in Somerville, Mass., 54 cents, the lowest in Wichita, Kan., 3 cents; among cities of from 30,000 to 50,000, 20 cents, the highest being in Newton, Mass., 77 cents, the lowest, Augusta, Ga., and Shreveport, La., 1 cent.

W. DAWSON JOHNSTON.

### MAKING BOOKS AND MAGAZINES

A MOTION picture film showing the many processes that go to the making of a book or magazine has been prepared by Doubleday, Page & Company of Garden City, N. Y., and they will be glad to lend it to churches, libraries, schools or any other organizations for educational display.

This film (two 12-inch reels, about 2500 feet) takes 40 to 45 minutes to show. It is divided into two parts.

1. The making of a book—shows all the processes of book making, from the arrival of the author with manuscript to the purchase of the completed book at a book shop and the customer reading it at home. Also typical scenes in the gardens of the Country Life Press, Garden City, N. Y., illustrating some of the activities and amusements of the employes.

2. Making magazines—shows scenes of editorial and manufacturing work on the magazines; wrapping and weighing magazines for the mails, U. S. post office in the Press, children playing on the lawn with John Martin, progressive proofs of the four-color process, etc., etc.

## NEW YORK LIBRARY ASSOCIATION AT RICHFIELD SPRINGS

THE 26th annual meeting of the New York Library Association was held this year at Bloomfield's Hotel in Richfield Springs, Sept. 11-16, and never was a more delightful "library week" enjoyed by the association. Perfect weather was the rule, with the one exception of Friday, when the flood-gates were opened, but even that downpour did not dampen the ardor of the fifty teachers who came over from Utica to attend the school library session in the afternoon. The committee on local arrangements was especially active in planning entertainment for leisure hours and in personal attendance at the daily meetings, and their efforts, ably seconded by those of the hospitality committee of the association, combined to produce a feeling of cordiality and good cheer.

At the close of the first session on Monday evening an informal reception was held in the hotel lobby, when members and friends of the association had an opportunity to greet the officers and speakers. On Tuesday afternoon the Richfield Springs Board of Trade gave a motor trip to historic Cooperstown, and this was supplemented by an hour's ride on beautiful Otsego Lake in a boat chartered for the party by Mr. Thomas R. Proctor, the "fairy god father" of the Richfield Springs Public Library. Wednesday evening was in joint charge of the committees on hospitality and local arrangements, and an interesting program was provided. Miss Louise Hinds of Richfield Springs convulsed her audience with her dialect readings, which she gave in generous number, and she was followed by an all-star cast presenting the library play "Co-operation," originally written by Helen Rex Keller of the Columbia School of Journalism Library. The play was expanded from the form in which it was given before the New York Library Club last spring, and the personal allusions, local hits, and clever use of library catchwords, to say nothing of the high quality of the acting, provoked much laughter. This part of the entertainment was followed by dancing, with music by the hotel orchestra. Thursday afternoon a charm-

ing informal reception and tea was given at the country club by the local committee, automobiles being available for the use of those who did not care to take the walk to the club house. Several motor parties also went on this afternoon to Henderson House for tea. Invitations from Library Bureau and the Remington Typewriter Company to visit their respective factories at Ilion, led to the organization for Friday morning of an automobile trip to Ilion by way of Ilion Gorge, but this was unfortunately prevented by the heavy rain which fell all day. The country around Richfield Springs is all beautiful and many unofficial walks and drives were planned and enjoyed by those who were exploring the region for the first time.

Attendance on the opening day was smaller than in some previous years, but before the week had passed 271 names were recorded on the official register, a total which has been exceeded only twice in the history of the association—at New York City in 1911 and Niagara Falls in 1912. The management at Bloomfield's did everything possible for the comfort and pleasure of their guests, and their many courtesies were appreciated and will be long remembered.

### FIRST GENERAL SESSION

The first general meeting was held in the hotel ballroom Monday evening, with Mr. Walter, president of the association, in the chair. Hon. John D. Cary, of Richfield Springs, who welcomed the librarians, told of the growth of the local library from an uncared-for collection of miscellaneous books in a single room to the present well-balanced collection in its own building. It was largely the efforts of Miss Winne, the present librarian, to make something useful out of the original collection, that aroused the interest of Thomas R. Proctor of Utica and led him to offer the present beautiful building to his native town. Mr. Proctor has also contributed liberally to the book fund of the library, and to its equipment. The library is the scene of many social entertainments for the community in the winter time, and its well-equipped kitchen and china closet (with "twelve dozen of everything" in beautiful china

bearing the library mark) make possible the serving of elaborate refreshments at these gatherings. On behalf of the association Edward F. Stevens of Pratt Institute, responded to Mr. Cary, and he was followed by Mrs. Corinne Roosevelt Robinson, who talked on "What the library means to the small community." Mrs. Robinson described the library in the nearby town of Jordanville, where Mrs. Bell, who is still librarian, started the library in her back room. From her example came the inspiration that moved Mr. Robinson, his wife and sister, to erect the present building as a memorial to Mr. Robinson's parents. This library is a real center for the social life of the village, all sorts of gatherings, from boys' clubs to church fairs, being held within its walls. Mrs. Robinson gave a cordial invitation to all present to visit the library and also to come on Thursday afternoon to her own home at Henderson House for tea. The formal program closed with the president's address, "A rising or a setting sun?" which is printed in full in the front of this issue.

#### TUESDAY'S MEETINGS

Tuesday morning a business session was called at 9.30. The reports of the secretary and of the publicity committee were read and accepted, and committees on nominations (Dr. F. P. Hill, chairman), resolutions (Miss M. L. Sutliff, chairman), and auditing (J. D. Ibbotson, Jr., chairman), were appointed. Mr. Ibbotson read the report of the committee on library institutes for the year, and this was accompanied by four recommendations: (1) That the association appropriate \$200 for library institutes during the year, to be added to the \$70 balance from the past year. By amendment \$25 additional is to be spent in printing and distributing at institute meetings literature designed to increase interest and membership in the association. (2) That in libraries spending less than \$100 a year for books, the state should pay the necessary expenses incident to the librarian's attendance at the library institute for the district, and that in libraries spending \$100 for books, such expense, when borne by the library, should be reckoned as spent for books when figuring the amount of the state

grant to which the library is entitled. (3) That local committees should be appointed to stimulate interest in and secure larger attendance at institute meetings. (4) That the name "library institute" should be changed to "local library conference." This proposition caused considerable discussion and was finally referred back to the committee. The rest of the report was accepted and approved.

Mr. Eastman read a report on library legislation, which report will be expanded to include the last months of the year and will be printed as usual in the January LIBRARY JOURNAL. One of the most significant acts in this not very eventful year is the New York statute providing for the exemption from taxation of property held by libraries outside of cities, if the income is used for library support.

The report of the committee on civil service, or as it preferred to be called, the "committee on the merit system," was read by Mr. Yust. The full text is printed elsewhere in this number. The report was accepted "with thanks," and its discussion was deferred until the next day that there might be time for consideration of its recommendations.

Following the business meeting, Franklin K. Mathiews, the chief librarian of the Boy Scouts, discussed the question "How far shall the nature and needs of boys determine book selection?" Mr. Mathiews showed how the physical development of the boy influenced his moral and emotional nature. What the gymnasium is to the body, books must be to the mind, and the boy's taste should be trained, not thwarted. With a keen insight into boy nature, Mr. Mathiews recognized and described the appeal which some of the numerous "series" make to the boys, and suggested titles and authors which could be used to replace them in the boy's regard, ending with a description of what Good Book Week, Dec. 4-9, is expected to accomplish.

The last speaker of the morning was the Rev. J. V. Moldenhawer of Albany, who read from his own translations of Andersen's fairy tales. Mr. Moldenhawer, himself a Dane, showed by quotations from different translations how far some of them had gone from the spirit of the original.

Since many have come to us thru the German it is not to be wondered at that in the double translation they have lost some of their charm. He then read, in a most simple and delightful way, three of the tales.

In the evening Miss Mary Eastwood, head of the book selection department of the New York State Library and editor of the "Best books" list, described the principles which govern the selection of books for this list, which is intended primarily as a help to the small libraries of the state. High priced books are sometimes listed as suggestive for those who would give gifts to the library, while others are worth any price. Books known chiefly for literary style, and those valuable to the student only, are not included, since their appeal is so limited. For the rest, "best" is taken to mean "wholesome." The annual publication of this list is justified as giving a proper perspective on the books of the year, and if succeeding issues are used as a checklist, they will be found a useful guide for building a well-rounded collection.

Miss Margaret Jackson, editor of the *Book Review Digest*, speaking on the topic "Many men, many minds" urged the librarians to find out what the real interests of their readers are, and to try to meet them rather than to supply the books the librarian thinks they should find interesting. The co-operation of readers with special knowledge of certain subjects should be secured in selecting books on those subjects, and the sources of reliable reviews should be noted. Recreational and cultural reading should be chosen for all the community as well as the books bearing directly on its industrial interests, nowadays so much advocated.

In the discussion Mr. Seward of Binghamton, speaking on "The man and his book," said the first thing for any librarian to do was to make a survey of his community to ascertain what kind of people lived there and the industries and nationalities they represented. Then he should get the technical catalogs that are pertinent, have them readily accessible in a vertical file, and secure suggestions from technical men both in schools and in prac-

tical shop work on the books of value. In the absence of Miss Annie Carroll Moore, Miss Jacqueline Overton of the New York Public Library told how the compilation of the library's list on "The Shakespeare festival" grew out of demands from people outside the library world for such a list, and how her own book on the life of Stevenson for boys and girls grew out of a distinct need for such a book within the library. A letter from Miss Moore was read, and the discussion was continued by Mr. Paine, who felt the library was drawing too fine a point in choosing boys' books. Dr. Bostwick said more men should be interested in children's work, and interest and initiative from the public, which is not now manifest, should be sought. In ten years' time men will be working in the "youths' department," is Mr. Mathews' prophecy. He somewhat startled his hearers with the heretical query, "When standard books are worn out why should not some *new* books be purchased instead of replacing the books which were popular twenty-five years ago?" By special request Dr. Moldenhawer closed the evening's program with a reading of "The steadfast tin soldier."

#### WEDNESDAY'S PROGRAM

The first action Wednesday morning was the consideration of the following resolutions presented by the committee on the merit system:

*Resolved:* 1. That this association recognize the vital importance of ascertained fitness as a basis of appointment for library service.

2. It will welcome any plan that seems calculated to secure such fitness in all libraries, but believes that a successful plan must give time for the test of library experience in each instance under careful observation and will properly call for the co-operation of the local trustees with the state department of education.

3. Inasmuch as a satisfactory plan cannot be hastily devised, considered, and adopted, it is ordered that the plan presented by the committee as the merit system, after discussion, be referred to a new committee, to report at the next annual meeting, and that such committee be authorized, in their discretion, to confer with the state department of education.

After a short discussion in which Mr. Ibbotson, Mr. Eastman, Mr. Yust, and Dr. Hill took part, the recommendations were endorsed and ordered printed and sent to all libraries in the state.

The first address of the morning was given by Dr. Moldenhawer, on "The right book for the right person." He discussed

some individual books and authors with a mixture of whimsical humor and sound common sense that was delightful, and bewailed the manner in which so many good books are allowed to get out of print. The librarian that cannot on occasion be a dogmatist should not be a librarian. He must know absolutely about some books and be sure when to insist on their being read, his great ambition being to have his advice taken by certain people in the community. He must be ready for disappointment and discouragement, however, because so many people have a perfectly impossible taste in books—which fact Dr. Moldenhawer illustrated by a reading from one of Harold Bell Wright's books.

Prof. Elmer William Smith of Colgate University pictured the librarian as "The keeper of the gate," whose purpose should be, not more reading, but better reading. In its worst form the yellow press today is a plague of lies, robbing the nation of its virtue and its soul. If the papers are to continue to be the molders of public opinion, why not cut out from them the filthy stories, distorted facts and low pictures they now contain and give the people the decent things they do want? In the same way the charlatan in books should be eliminated. The more largely the library serves a great end the sooner it will become a power in the community, and the question will cease to be asked whether it is for the appreciative few or for the masses.

The report of the treasurer, showing total receipts for the year were \$767.35, disbursements \$517.25, and balance on hand \$250.10, was read and accepted, as was that of the auditing committee.

The afternoon session was devoted to the library and the immigrant. The first speaker was George E. Dunham, editor of the *Utica Press*, who for several years has been conducting classes for men who are preparing for naturalization. The classes vary in size from 25 to 75 members, with from 11 to 17 nationalities, and Mr. Dunham spends twelve nights with each class. The men are those going for their last papers for citizenship, and the teaching they get is confined to such elementary knowledge of American history

and civil government as they need for this specific purpose. Librarians can help in the "after-care" of these men, who find it hard to study alone, and are most appreciative of friendly advances.

The second speaker was John Foster Carr, who spoke on "The immigrant—the nation's need and the library's opportunity." Mr. Carr prophesied a great influx of foreigners after the war, when widows and children, as well as men who are sick of war, will come pouring over. Since up to the present time the country has not been able to assimilate the immigrants already admitted, the need of some further preparation for this coming immigration must be made. Of the 15,000,000 foreign-born in this country now, 4,000,000 are not citizens and 2,000,000 are illiterate. The immigrant in this country comes into the worst phase of America in the city slums, and to the foreigner who has lost the legal, social, and religious restraint of his home land, the freedom of America is likely to seem like license. We must show him also the better side of America, and the library is peculiarly able to interpret the spirit of American democracy to the foreign-born if it will only make the effort.

In the discussion following, Mrs. De Gogorza told what the Brownsville Children's branch is doing in Brooklyn. Miss Ernestine Rose described the work of the Seward Park branch of New York, and its work on the Lower East Side. Miss Mary E. Ehle told of her library gardens and clubs for the foreign children of Utica, and Miss Anna G. Hall of the Endicott Public Library showed how she solved the problem of the foreigner in her small town.

#### THE PROGRAM FOR THURSDAY

Thursday morning group meetings for informal discussion of library topics were held at convenient places, with the following leaders: Book selection and reference work, Miss Eastwood; work with men, Mr. Seward; work with foreigners, Mr. Carr; college libraries, Mr. Ibbotson; cataloging, Miss Hitchler; children's work, Miss Overton and Miss Du Bois; and book ordering, Miss E. M. Smith.

The general session in the evening was opened by Mr. Wyer, who read the report

of the committee on libraries in institutions, concerned chiefly with prison libraries and the recently-printed list of books suited for their use. Miss Downey and Miss Kelso also described briefly some of their experiences in library work with jails and prisons.

Two papers on the college library followed. Willard Austen of Cornell spoke on "Our great need," which he believes to be a better knowledge of how to use the bibliographical tools provided in the modern library, making accessible all its material. Self-helpfulness needs to be developed, and the experience of finding one's own material may be as valuable as the material itself. Miss Mudge, reference librarian of Columbia, spoke next on "The new student—how the public library can help toward the best use of the college library." She told several anecdotes illustrating the various types of new students who use the college library. The system of required reading necessitates a system of "reserves," which the professor assigns, the librarian collects, and the student reads. This system gives little training in library use. The situation changes altogether when the student undertakes some research work. The professor assigns the subject but makes no suggestion as to books, and at once the student feels the need of guidance. In the use of the library the student is entitled to the same amount of instruction as in any other class and the ability to use catalog and index and open shelves must be ensured. If the student can learn these things in his high school or public library his first year at college is less likely to be a failure.

The evening closed with Mr. Carr's slides showing phases of work with immigrants in all parts of the country, in libraries and out.

#### FRIDAY'S FULL SCHEDULE

Friday morning saw a delegation of fifty teachers and principals arrive from Utica, and as the rain forbade any outdoor recreation an informal meeting was called in the ballroom. Mr. Carr spoke to the teachers on the immigrants' need for more interesting and helpful instruction in the evening schools, where adult interest cannot long be held with childish primers. The rest

of the morning was occupied by the dialect stories and character sketches with which Miss Hinds entertained the audience.

"The school library" was the general subject for the afternoon, and its importance in relation to every side of school work, was shown. The first paper on "Real types of school libraries," written by Randolph T. Congdon of the examinations and inspections division of the University of the State of New York, was read by Mr. Stevens. As Mr. Congdon goes about visiting the schools of the state he has a splendid opportunity to know their libraries, and he found that they range from the haphazard collection of books in the superintendent's office to a central place in the school. An awakening in the high schools is now on its way, for the new pedagogy demands a change in library methods. Grade school libraries are just as important, and better selection, better housing and equipment, better knowledge of books and how to use them, must be provided before school libraries will be satisfactory.

In the discussion of school library administration that followed, several took part. Miss Adeline B. Zachert, of Rochester, sent a paper, which was read by Mr. Yust, in which she urged the employment of trained librarians with faculty standing in school libraries. Where book collections are sent from the public library to the grade schools the teacher should be familiar with the books and their use. She described the system in use in Rochester grade schools, where fixed collections of from 30 to 35 books are put into each classroom, and where the common practice of shifting collections is disapproved. Miss Sophie C. Becker, supervisor of primary grades in the Buffalo public schools, spoke from the teacher's standpoint. She told how the Buffalo Public Library, some eighteen years ago, took over the old school libraries, weeded out the undesirable books with which they were encumbered, and substituted more suitable volumes. Forty-four of the 62 schools of Buffalo now have library collections, and the library in many special ways is of great use to the teachers. Miss Becker did not agree with Miss Zachert that fixed collec-

tions were the best, feeling that they lacked freshness and interest. More provision should be made in the school library collections for night school pupils, and more training should be given to teachers in normal schools on library use and organization and on children's literature and sources of material for story-telling.

The discussion of this topic was closed by Miss Martha C. Pritchard, who told of the organization of the library in the High School at White Plains. When the new school building was planned, a room was set apart for a library and another for a stack. A trained librarian was engaged, and very satisfactory work has been done, the Public Library and the H. W. Wilson Company co-operating in lending material to fill the gaps in its collection. Since the establishment of the library the school has risen from eleventh place to third on the Regents' list.

Pres. A. R. Brubacher, of the New York State College for Teachers, presented "The charge to the jury," summing up the case of library *vs.* school, in which the librarian is the plaintiff, charging that the school library is poorly chosen, poorly patronized, and poorly managed. Books dealing with familiar things have less value than those which widen the reader's horizon. The classics are of prime importance because they give an entirely different life from that about us, and their gradual elimination is resulting in a diminishing culture.

The session closed with the reading, by Dr. Sherman Williams, of the report of the committee on relations of schools and libraries. Recommendations made by the report included (1) the appointment of a school library organizer; (2) the incorporation of lessons on the use of a library in the Regents' syllabi for normal and secondary schools; (3) systematic instruction in library use for teachers in normal and training schools; (4) more publicity for school library work; (5) a reorganization of many existing school libraries; and (6) a survey of library conditions in all schools of the state. At the request of the committee the association specially endorsed the first three recommendations, the whole report to be referred to the Regents.

In the evening "The library and the state" was the general topic, Dr. Charles Beatty Alexander, one of the Regents, opening the program with an address on "The library in the economy of the state." As Dr. Alexander's address was to be supplied in printed form to every library, he said he was going to give only the notes and errata. What he did give was a concise statement of the growth of New York libraries and their strength and weaknesses to-day. He emphasized the feeling of the Regents of the necessity for careful supervision of libraries as well as of any other public institution. He expressed a hope for a more organic connection between the schools and libraries now running in parallel lines, for better university extension, and a better contact between the rural schools and the great library systems of the state.

Mr. Wyer was the second speaker, taking as his subject "Everyman's library," which he explained did not refer to the well-known edition of reprints, but which consists of three volumes only, the Book of Print, the Book of Nature, and the Book of Life. Mr. Wyer's paper is printed in full in this issue.

At the end of this meeting Dr. Bostwick expressed the great regret of the association over Miss Plummer's absence, and the secretary was empowered to send a telegram of sympathy to Miss Plummer's sister, Mrs. E. H. Anderson.

#### SATURDAY MORNING

The final business meeting was held Saturday morning. The following resolution was adopted and sent to Mrs. Anderson:

*Resolved*, That this association deeply deploras the absence from this conference of its past-president, Mary W. Plummer, under circumstances that must cause grief to all of her many friends. We send her loving greetings and the assurance of grateful sympathy from her fellow-workers in the state for whose educational welfare she has labored so long and so nobly.

The usual resolutions of thanks and appreciation for all courtesies extended the association were read and accepted. The committee on nominations presented the following ticket, which was accepted and the candidates elected: President, Edward F. Stevens, Pratt Institute Library, Brooklyn; vice-president, Adeline B. Zachert, Rochester Public Library; secretary, E. Louise Lauder, Binghamton Public Li-

brary; treasurer, Paul North Rice, New York Public Library.

A resolution was read and adopted urging a more stringent law against the stealing of books, so that the purchaser of a stolen book or the dealer in whose possession the book is found, shall be not only liable to a money penalty, but also criminally liable unless he can clearly prove that the person from whom he obtained the property had a right to dispose of it.

Dr. Finley and Dr. Alexander were unanimously made honorary members of the association and the publication of a manual of the association, containing its constitution and a list of its members, was recommended.

The gavel was then turned over to Mr. Stevens and after a brief speech of acceptance he declared the meeting adjourned.

#### CARNEGIE GRANT

The only library grant made by the Carnegie Corporation during the month of September was of \$6600 for an addition to the South Pasadena Library building.

---

### American Library Association

#### EXECUTIVE BOARD

The Executive Board has appointed the following persons as members of the committee on international relations for the year 1916-17: Herbert Putnam, Washington, D. C.; E. C. Richardson, Princeton, N. J.; W. W. Bishop, Ann Arbor, Mich.; Elisa M. Willard, Pittsburgh, Pa.; R. R. Bowker, New York City; Andrew Keogh, New Haven, Ct.; G. H. Locke, Toronto, Canada.

#### DECIMAL CLASSIFICATION ADVISORY COMMITTEE

The decimal classification advisory committee of the American Library Association wishes to thank the large number of libraries which have replied to its circular of late summer.

Many of these replies were made in great (and proportionately gratifying) detail.

Some important libraries have not yet sent in their replies.

These should all be in the secretary's hands by Nov. 15, when the final tabulations will be made upon which the future expansions of the committee will be based.

A. LAW VOGEL.

### Library Organizations

---

#### MINNESOTA LIBRARY ASSOCIATION

The twenty-fourth annual meeting of the association was held at Virginia, Sept. 6 to 8, 1916. The registration was 69, not including local citizens and library board members from surrounding towns, who were active in providing the social part of the program.

WEDNESDAY, SEPTEMBER 6

The first session began with a paper by R. L. Walkley of Minneapolis, on "Business methods in the library." He showed by an analysis of the latest reports from 68 cities and towns in Minnesota that the average per capita library expenditure is over 50 cents, while the 39 Carnegie libraries spend only about 43 cents per capita, and average about 15 per cent. of the original cost of the building. Comparison with expenditures of other libraries shows that Carnegie libraries are sticking too close to the 10 per cent. minimum required and this amount is utterly inadequate for proper support, especially with increasing population. In recommending the budget system as one aid in estimating future expenditures and in making definite requests for more money, the paper showed that in Minnesota libraries the average amount spent for books, periodicals and binding, is about 26 per cent. of all expenses, for salaries 44 per cent. and for other expenses 29 per cent. In asking for increased appropriations it is important to have the support of the business men of the community and several ways of getting their friendship and good-will were suggested. It was urged that libraries follow the principles which have proved to be a paying proposition in business houses, and that more attention be paid to removing the possible causes of dissatisfaction in library users.

The discussion which followed centered chiefly around the questions of budget classification and Carnegie expenditures.

The second paper, entitled "Whence and whither: an appraisal," was written by Miss Gratia A. Countryman, of Minneapolis, who was unable to be present. She spoke of the many innovations by which librarians are scattering their energies in order to be useful, and insisted that we follow some course of action which shall promote good reading, which is what we are organized for. She expressed the belief that we are competing too much with other agencies instead of cooperating with them. This is especially true of our school work and our work with very little children. We should put more of our

energies to the task of holding onto the child when he leaves school. Along this line Miss Countryman described an interesting experiment which has been tried by the Minneapolis Public Library. In summing up she emphasized the spirit of helpfulness which makes librarians eager to render all possible service, and said that in spite of our side tracks we have been steadily building a broader path of our own.

In place of the report of the committee on foreign booklists, Miss Emma B. Nilsson, of Minneapolis, chairman, sent for distribution selected lists of recent Swedish, Danish and Norwegian books.

The report of the committee on library training, presented by Mr. Walkley, consisted of news notes which showed the progress of the work in Minnesota. Mention was made of the fact that the university had inserted in its budget for 1917-18 a request for funds for starting a library school. Other progress was shown by the affiliation of the Minnesota Summer Library School with the College of Education, by the establishment of courses for teacher-librarians at the University of Minnesota and at Carleton College, and by the opening of a Training Class at the Minneapolis Public Library.

New committees were appointed as follows: Nominations: Dr. Johnston, Miss Palmer, Miss Corson. Resolutions: Misses Patten, Lasby, Sadie Fuller. Legislation: Miss Clara Baldwin as chairman, to choose other members as co-operation and assistance are required during the activities of the Legislature, which meets this coming year.

At 6:30 a banquet was given for visiting librarians and library board members by the Library Board of Virginia, R. C. Pickering, secretary of the library board, acting as toastmaster. Songs by Miss Inez Davey, of Eveleth, and music by Anahalt's orchestra were enjoyed.

Guests were later taken to the Lyric Theater thru the kindness of the Oliver Iron Mining Company, and saw moving pictures which showed the work of iron mining on the Mesaba Range. J. H. Hearing, of Duluth, explained the processes in the various pictures in a most interesting and non-technical way.

#### THURSDAY, SEPTEMBER 7

The second session was a book symposium. The first paper was read by Miss Elta V. Savage, of the Duluth Public Library, on "Travel in the United States." She described a number of books and an exhibit of the books, lent by the Duluth Public Library, emphasized the value of her attractive descrip-

tions. J. H. McInnis, of the Interstate Iron Ore Company, referred in his paper on "Books on chemistry" to many that every library should have, emphasizing the importance of being up-to-date, and of following the new developments in the practical applications of chemistry. Arthur E. Anderson of the Oliver Iron Mining Company read a paper on "Books related to civil engineering." He recommended for first purchase the rare, dependable books which he called the "classics" of the engineering profession. After this we should use what funds we have for the most up-to-date books recommended by competent authorities. It is important also to have bound files of the technical magazines, and if possible the Proceedings of the engineering societies. Opportunities afforded by the system of interlibrary loans were also suggested. Miss Katherine Patten, of the Minneapolis Athenæum, read the next paper on "Domestic architecture and interior decoration." Besides the general books, she described books of plans, the books on the different-sized houses and on the different types of construction. Then she took up interior decoration and furniture and mentioned the best periodicals. She urged that in any collection we guard against books of plans prepared by the hundred by "commercial" architects, and try to include only books that illustrate and describe houses which have really been built and lived in. Miss Belle M. Owens, of the St. Paul Public Library, in speaking on "The use of war literature," commented on the changes which the great war has made in the reading of many people who are anxious to know more about the countries, places, and buildings brought into the limelight by the war. History and biography are being read much more than before. Works on chemistry and dyes and military books are more in demand and there is a real increase in interest in South America as a field for trade. Of course, the personal narratives of the war are in great demand. As a whole, the war seems to have spoiled for some people the reading of frivolous novels, and led them to more serious books of every kind.

Miss Jennie B. Lasby, librarian of the Northfield Public Library, spoke on "The librarian's magazines." She explained her interpretation of the subject as including: (1) Magazines which are needed by librarian and public in reference and club work, such as *Nation*, *Survey*, *Independent*, *Literary Digest*, *Dial*, *North American Review*, *American City*, and *Scientific American*; (2) the "time-savers" for the librarian—*Review of Reviews*, *Current Opinion*, *Bookman*, and as many weeklies as

can be afforded; (3) magazines read for pleasure and for broadening purposes, as the *Atlantic*, *Century*, *Yale Review* and *New Republic*. The speaker went on to explain a successful scheme of separating in the racks certain magazines of special interest to young people and intermediates. The list included *Popular Mechanics*, *Illustrated World*, *Motor Age*, *Machinery*, *Harper's*, and *American*. Miss Lasby said she had found it helpful to try out the public by placing with the other magazines occasional numbers of those not regularly subscribed for, contributed by interested outsiders or by the librarian herself. All her suggestions, she said, were based on experience in a library which spends from \$100 to \$150 a year for periodicals. In the discussion which followed, Miss Baldwin suggested the addition of two good papers of local interest, *Minnesota Municipalities* and *The Minnesotan*.

On Thursday afternoon the visiting librarians were given an opportunity to see the schools of Virginia and the Virginia and Rainy Lake Lumber Company, after which they were received at the library by the ladies of Virginia.

The address of the evening was made by John Foster Carr, director of the Immigrant Publication Society, of New York City. He showed by figures the relatively high rank which Minnesota has taken in the education of her foreign-born. Then he went on to speak of the difficulties which hinder our Americanization of the immigrant, many of these difficulties due to the fact that he lives in and sees the worst and not the best side of our civilization. To show him the best side, many of our institutions are too formal and uninviting, even the school, and this is why the library, by means of its individual work, has the chance to do more than any other institution or organization. Mr. Carr told something of his interesting work, which is so similar to the work that libraries can do, and his exhibition of lantern slides made his address still more effective.

#### FRIDAY, SEPTEMBER 8

At a brief business meeting, the report of the committee on resolutions was made, and later adopted by vote.

The report of the nominating committee was read by the chairman, and the following officers were unanimously elected:

President, Miss Mabel Newhard, Virginia; first vice-president, A. D. Keator, Northfield; second vice-president, Miss Ida May Ferguson, Minneapolis; secretary-treasurer, Miss Belle M. Owens, St. Paul; executive board,

the above officers, with Miss Frances Earhart, the retiring president.

The members then adjourned to enjoy a seventy-mile automobile trip around the Mesaba Range. Libraries were visited at Eveleth and Chisholm, and the party was given a palatable luncheon by the library board of Hibbing, at the high school in that village. Opportunity was given to see the luxuriously equipped high school at Chisholm, and to see in Hibbing the largest open pit mine in the world. On the return to Virginia a brief stop was made at the Public Library in Mountain Iron, which was the last official visit of the librarians in this delightful tour of the hospitable Range country.

RAYMOND L. WALKLEY, *Secretary*.

#### KEYSTONE STATE LIBRARY ASSOCIATION

The sixteenth annual meeting of the Keystone State Library Association was held October 12-14, 1916. The meeting place was at Galen Hall, Wernersville, a delightful resort hotel in the Pennsylvania mountains. Inviting paths thru the woods and over the mountain, a splendid stretch of sward for the golf lover, porches commanding views of the distant mountains, all added to the joys of freedom from regular routine.

Thursday evening O. R. Howard Thomson, librarian of the James V. Brown Library at Williamsport, presented his presidential address, "Why not face the facts?" The facts which he admonished us to face are those of inadequate financial support, and ways to rectify these. "Comparisons are frequently in bad taste, but I cannot resist the remark that the profits of the Detroit company that puts out the 'humble little Ford' were four times as large as the receipts of all the public libraries in the United States."

After the appointment of committees, E. W. Mumford of the Penn Publishing Company spoke on "The small town book store." Mr. Mumford reminded us that 70 per cent. of the population of our country lives in cities of 25,000 and less, and then told us that there were few *real* book stores in towns of less than 25,000. Thus the large proportion of our people have no access to book stores worthy of the name. He then pointed out a few ways in which a library can co-operate with book stores.

Friday morning Anna A. MacDonald, consulting librarian of the Pennsylvania Free Library Commission, conducted a round table on "Things that help and hinder." Flora B. Roberts, librarian of the Pottsville Public Library, first took up "The library as a civic

institution." Her first point was the necessity of making the library of service to all people of all classes and all interests, that the institution may be recognized as a civic institution in its scope; the next point was the necessity of adequate support from civic or tax funds. Discussion concerning the need of added library legislation in Pennsylvania followed. "The indifference of the public" was presented by Henry F. Marx, librarian of the Easton Public Library. Mr. Marx, in a contrary mood, insisted that the indifference of the public had been a blessing in disguise to librarians; that it had stimulated us to great activities in the past, and demands still more of us in the future. His constructive suggestions were most inspiring and we all felt our enthusiasm mount. The last phase, "Points of contact with the foreigner" was taken up by Mrs. Adelaide B. Maltby, librarian in charge of the Tompkins Square branch, New York Public Library. Mrs. Maltby set forth as the first essential our own attitude toward the foreigner; we must be ardent to understand the alien. Foreign assistants in libraries have proved successful points of contact, after the books have been provided.

A second round table on "Story telling" was conducted by Edna Whiteman of the Carnegie Library of Pittsburgh. Illustrative stories were told by Julia Williamson and Miss Bladerson of the Free Library of Philadelphia, Margaret Carnegie, Irma Diescher and Miss Whiteman of Pittsburgh.

Friday afternoon was given over to the discussion of the problems of school and college libraries. Mary E. Hall, librarian of the Girls' High School, Brooklyn, reviewed the "School library situation," showing the situation to be most encouraging. Effie L. Power of the Carnegie Library of Pittsburgh spoke on "Co-operation between the public library and the public school." In this she outlined the plan now followed in Pittsburgh with very satisfying results. "Reading of students" was the last part of this program. Sarah C. Evans of the West Chester High School Library spoke for the high school students; her talk was full of sympathy and understanding, and clearly showed that the personal equation was a large factor in the handling of this problem in her library. One suggestion she gave was that students enjoy poetry if they *hear* it, and she proposed reading hours or clubs. Ella C. Ritchie of the Bloomsburg State Normal School Library spoke for the normal school student. She proposed to leave to the course of study the reading of general and professional literature;

the library must lead to current events and children's literature. Helen Sharpless, librarian of Haverford College, in speaking for the college student, sounded a note of warning: "Some one has said that a boy's mind is like a pop gun—if anything is pushed in at one end, something comes out at the other. Is there a chance that the reading the librarian may urge may force out something the professor has just put in?"

Following these papers, the section was formally organized, with Miss Clara E. Howard, librarian of the Schenley High School, Pittsburgh, as chairman.

Friday evening and Saturday morning was the time for literary inspiration. In the evening John Cowper Powys, extension lecturer from Oxford and Cambridge Universities, lectured on "Shakespeare the poet." Mr. Powys' view of the poet was unique in many ways, and stimulating in all. The morning lecture on Masfield and Rupert Brooke stirred all the listeners to a deeper appreciation of poetry as an interpreter of the life of facts, and sent us all out with a higher ideal of our opportunities as librarians in the circulation of Literature (the capital letter is no accident).

The following officers were elected for the ensuing year: President, Mrs. Jean M. Hard, librarian, Public Library, Erie, Pa.; vice-president, Florence Hulings, librarian, Public Library, Lock Haven, Pa.; secretary, Flora B. Roberts, librarian, Public Library, Pottsville, Pa.; treasurer, Anna A. MacDonald, consulting librarian, Pennsylvania Free Library Commission, Harrisburg, Pa.

FLORA B. ROBERTS, *Secretary*.

#### MISSOURI LIBRARY ASSOCIATION

The seventeenth annual conference of the Missouri Library Association met at the State University, Columbia, Mo., on Oct. 11-13, 1916. The first session, in the faculty room of the new University Library building, was called to order by the president, Dr. Arthur E. Bostwick of St. Louis, at 3 p. m. on Wednesday the 11th, and was devoted to organization and preliminary business. At its close, those present adjourned to the engineering building, where they witnessed moving pictures of California libraries, shown by the courtesy of Mr. Gillis, the state librarian. Unfortunately, owing to a failure of the focussing apparatus on the machine used, the pictures were somewhat blurred; but the enterprise of the assistant librarian of the university, Mr. Stone, secured another view of them at one of the local picture theaters.

Later in the afternoon, guides conducted the visitors about the buildings and grounds of the university and also, where desired, to the libraries of the other educational institutions of the city.

In the evening the association was formally welcomed to the university in a graceful address by the president, Dr. A. Ross Hill, the session being held in the university auditorium and prefaced with selections by the university band. After a response by President Bostwick the address of the evening on "The outlook in education" was delivered by Dr. W. W. Charters, dean of the university's School of Education.

Thursday's chief session, that of the morning, was devoted to the subject of "Books for rural Missouri." What is already being done by various agencies was described by several speakers, Miss Wales, secretary of the Missouri Library Commission, telling of that body's traveling library work; Dean Mumford of the College of Agriculture, of the university's work among the farmers of the state; Miss Julia Krug, of the St. Louis Public Library, of the inter-library loan and other work of city libraries with country institutions and individuals; and Jesse Cunningham of his successful efforts in Rolla, Mo., to make the School of Mines Library in that place serve also as a public library for the town. In a paper on "California's solution," Purd B. Wright of Kansas City described the workings of the county library system, in whose inception he personally took part when librarian of the Public Library of Los Angeles. An interesting discussion followed.

The afternoon session, held in the university auditorium, was in the interest of the Public Library in Columbia, a struggling institution now occupying rooms in the county courthouse and supported entirely by private effort. The speakers, in order, were President Bostwick, Mr. Wright of Kansas City and Mrs. W. E. Harshe of Columbia. The presiding officer then called on Mrs. Emmons of Mexico, Mo., who described entertainingly the steps taken in her town to secure the present tax-supported library and its Carnegie building. Before finishing she begged to say a word "on another subject," and made a brief plea for state-wide prohibition.

Meanwhile, clouds had gathered and the falling rain made it quite evident that the projected picnic at Rollins Spring, to which the local committee had invited the Association, must be abandoned. After a brief tour of the city in automobiles, an "indoor track

meet"—a sport peculiar to Columbia—was substituted to the great interest and entertainment of all present.

The final session, held Friday morning, included an interesting discussion on publicity. The chief papers were by Margery Quigley of the Divoll branch, St. Louis, who emphasized the personal element and decried the "dodger system," and by Prof. Powell of the School of Journalism. Mr. Albert Diephuis, of the St. Louis stations department, led the general discussion in a somewhat philosophic vein.

The proposition to introduce and push a county library law caused considerable discussion, and some opposition developed from those who thought that the state was not yet ready for such a system. The vote was carried, however, overwhelmingly by those in favor; and a bill prepared by a committee of the association during the past year, will be introduced into the Missouri Legislature at its coming session.

Resolutions of thanks to all the speakers and to all the various organizations and individuals who contributed to the success of the conference, were approved, and the following minute was reported and unanimously passed:

The members of this Association, many of them with a sense of personal loss, have the sad duty of recording the death of Florence Whittier, president for the year 1914, but prevented from assuming the duties of her office by the illness which proved to be her last. Miss Whittier's contributions to library development in Missouri were many and important—at Sedalia, at the University Library and in the Association—but the greatest of them in the memory of her friends here will always be her own vivid personality. Energetic, efficient, and true, she leaves as her last service to Missouri librarians, the rare heritage of her bright example.

The following officers were elected for the ensuing year: President, Ward H. Edwards, William Jewell College, Liberty, Mo.; first vice-president, Mary E. Baker, University of Missouri Library, Columbia, Mo.; second vice-president, Katherine Jarvis, Park College Library, Parkville, Mo.; secretary, Harold L. Wheeler, School of Mines and Metallurgy, Rolla, Mo.; treasurer, Margery Quigley, St. Louis Public Library, St. Louis, Mo.

ARTHUR E. BOSTWICK.

#### MISSOURI VALLEY LIBRARY CLUB

The first meeting of the Missouri Valley Library Club for the coming year was held in the Assembly Room of the Kansas City (Mo.) Public Library the evening of Oct. 9 with a large attendance. Purd B. Wright, librarian of the Kansas City (Mo.) Public Library, the speaker of the evening, talked on

"Some book publishers." Mr. Wright's previous work with publishers enabled him to give his talk the personal touch which is always so necessary in holding the attention of any audience. In this Mr. Wright succeeded in an unusual degree. After outlining briefly the general work of the publishers, Mr. Wright gave his opinion of the best publishers, and their specialties.

Mrs. Cassandra Warner's resignation as vice-president of the club was accepted, as her duties at Columbia, Mo., this year will prevent her from attending the meetings. Florence S. Smith, head of the reference department of the Kansas City (Mo.) Public Library, was elected to fill the vacancy.

Dr. J. P. Fruit, head of the English department of William Jewell College, Liberty, Mo., will be the speaker for the November meeting.

GRACE BERGER, *Secretary.*

#### CHICAGO LIBRARY CLUB

The season opened Oct. 5 with a social meeting at the Ryerson Library, Art Institute. Miss Faith E. Smith, president, presided.

Mr. C. L. Hutchinson, president of the Art Institute, gave a very interesting account of the history and ideals of the institute, showing by statistics how much its resources and cordial spirit of hospitality are appreciated by the people of Chicago. Miss S. Louise Mitchell, librarian of the Ryerson Library, gave further information about the library and the exhibits of fine art books and of the circulating collection of pictures and slides, which were afterwards examined by the members of the club.

D. ASHLEY HOOKER, *Secretary.*

#### NEW YORK HIGH SCHOOL LIBRARIANS ASSOCIATION

A regular meeting of the New York High School Librarians Association was held Oct. 18, at the Washington Irving High School.

The program was a continuation of the study of modern dramatists, talks being given on Synge by Miss Jean Ely and on Lady Gregory by Miss Julie Robeson.

The new book issued by the Cleveland Survey on "The public library and the public school," by Ayres and McKinnie, was reviewed by Miss M. E. Hall, and "How to use reference books," by L. O. Wiswell, was reviewed by Miss Ella Hazen.

H. ARDEN, *Secretary.*

#### MONTANA STATE LIBRARY ASSOCIATION

The Montana State Library Association is to meet at Missoula, Monday, Tuesday, and Wednesday, Nov. 27 to 29.

Realizing that many new libraries are being established in Montana an effort is being made to arrange a program with special reference to the problems of the small library. Then too, full reports of the county work being carried on in this state will be made, and those seeking information regarding the County Library law or seeking assistance in starting the movement for a county library, will do well to attend the session to be conducted by Miss Buckhous, librarian of the University of Montana. This will be held Tuesday afternoon, November 28.

The program will be printed in many of the newspapers of the state as soon as it can be arranged.

RUTH STEADMAN, *Secretary.*

#### NEW YORK STATE TEACHERS' ASSOCIATION —LIBRARY SECTION

The Library Section of the New York State Teachers' Association is trying a new scheme this year in planning its share of the program for the annual meeting in Buffalo Thanksgiving week. Instead of holding a single section meeting (from which the majority of teachers would stay away), an effort has been made to introduce a library paper into the program of every other section. The following letter, outlining this constructive school library policy, was sent by officers of the section to all school librarians in the state:

The new plan goes on trial this year of having library discussion introduced into the various section meetings of the New York State Teachers' Association. A program of the library speakers for different sections is enclosed.

Will you select the section programs that interest you most and be ready to help in an informal discussion of the library topic? The School Library Committee which met in Albany in May suggests that the following resolution be passed by the different sections:

"Resolved, that in view of the growing demand for better organized school libraries, and the constantly increasing number of calls for assistance in organizing these libraries we (name of organization) respectfully request the Regents of the University of the State of New York to take steps to secure the appointment of a competent trained school library organizer."

Add your influence to help pass this resolution.

Then will you come to the business meeting of the Library Section and report on the success of the new plan for library program, also give suggestions as to furthering school library development in New York State in the following ways:

1. By the appointment of a school library organizer to assist Dr. Williams in putting all school libraries on an efficiency basis.
2. By making a thoro survey of school library conditions in New York State, the results to be printed by the State Education Department.
3. By having incorporated into the Normal School, Training School, Training Class, High School, and Elementary Syllabi, minimum requirements in library instruction, followed by library questions in Regents Examinations.
4. By introducing library discussion into the programs of the following Associations: Science Teach-

ers' Association, Associated Academic Principals, University Convocation, District Superintendents, Association of City Superintendents.

Send at once any suggestions and then please come to the meeting with a constructive campaign for school library betterment.

#### PROGRAM OF LIBRARY SECTION

*Normal and Training School* Tuesday, 2 p. m.

Reorganization of the normal school curriculum. James Fleming Hosc, secretary, National Council of Teachers of English.

*Elementary School Principals and Teachers*

Tuesday, 11:45 a. m.

The library in the school. James Fleming Hosc, secretary, National Council of Teachers of English.

*English and History. Joint Session* Tuesday 4-5 p. m.

The help that librarians can give in the teaching of English and history. Walter L. Brown, librarian, Buffalo Public Library.

*School Administration*

Library development. C. C. Certain, Cass Technical High School, Detroit, Mich.

*Commercial*

Use of the library in teaching commercial subjects. W. E. Bartbolomew, State Department of Education.

*Science*

The library as an aid in science teaching. James Peabody, Morris High School, New York City.

*Rural Education*

The rural school library. Dr. Sherman Williams, School Libraries Division, Albany, New York.

The Library Section will hold a business meeting on Wednesday, 9-10 a. m., in the library of the Buffalo Normal School. Reports of committees, plans for development of school library betterment in New York State, and an account of "The school library campaign" by C. C. Certain will be given at that time.

JAMES V. STURGES, *Pres. Library Section.*

IDA M. MENDENHALL, *Secretary.*

## Library Schools

### NEW YORK STATE LIBRARY SCHOOL

The New York State Library School opened on September 20. A rather rigid selection of candidates has resulted in a smaller registration than usual. The customary variety of localities represented is maintained. Besides nineteen states, the home localities of the students include two provinces of Canada, Norway and Denmark. All but two seniors and seven juniors have had library experience or training previous to entering the school. The names and residences of the students, with their colleges, follow:

#### Class of 1917

Adams, Ellen F., Hanover, N. H. B.A. Mount Holyoke College, 1915.  
 Blessing, Arthur R., Slingerlands, N. Y. B.A. Cornell University, 1915.  
 Cannon, Carl L., Albany, N. Y. B.A. University of Kansas, 1912.  
 Cudebec, Bertha M. (partial work), Rochester, N. Y. B.A. University of Rochester, 1914.  
 France, Edna H., Albany, N. Y. B.A. Syracuse University, 1915.  
 Harris, Rachel A., Manlius, N. Y. Ph.B. Kalamazoo College, 1906; Pb.M. University of Chicago, 1907.  
 Hodgson, James, Albany, N. Y. B.A. University of Iowa, 1915.  
 Lancfield, Hilda M., Amity, Ore. B.A. Whitman College, 1913.  
 Love, Cornelia S. (special), Albany, N. Y. Radcliffe College, 1910-14.

Russell, Harold G., Massena, N. Y. B.A. Hobart College, 1913.

Wiggin, Mary P., New York, N. Y. B.A. Mount Holyoke College, 1897.

Wilcox, Ruth, Cleveland, Ohio. B.A. Oberlin College, 1911.

#### Class of 1918

Andrews, Winnifred P., Detroit, Mich. B.L. University of California, 1906.

Baker, Charles M., Syracuse, N. Y. B.A. Harvard University, 1910; M.A. 1911.

Beim, Mildred H., Des Moines, Ia. B.A. University of Wisconsin, 1915.

Brewster, Mary B., Litchfield, Ct. B.A. Smith College, 1910.

Brown, Ruth, Newport, Tenn. B.A. Cornell University, 1912.

Buck, Edith M., Grinnell, Ia. B.A. Grinnell College, 1916.

Davis, Mildred, Portland, Ore. B.A. Beloit College, 1911.

Dorrance, Frances, Dorranceton, Pa. B.A. Vassar College, 1900.

Fisher, Nellie M., Portland, Ore. B.A. University of Chicago, 1905.

Ginsburg, Sophie M., Denver, Col. B.A. University of Denver, 1915; M.A. 1916.

Hinesley, Pearl, Louisville, Ky. B.A. State University of Kentucky, 1909.

Horton, Marion L., Pasadena, Cal. B.A. Leland Stanford Junior University, 1911.

Howard, Anna, Norfolk, Neb. B.A. University of Chicago, 1906.

Johansen, Harald, Copenhagen, Denmark. Ph.B. University of Copenhagen, 1915.

Kingsbury, Ruth, Salt Lake City, Utah. B.A. University of Utah, 1915.

McNitt, Esther U., Indianapolis, Ind. B.A. Vassar College, 1909; M.A. University of Wisconsin, 1913.

Mariotti, Guido (special), Chicago, Ill. Doctor of Jurisprudence, Royal University of Rome, 1910.

Neumann, Karen, Vejle, Denmark. Ph.B. University of Copenhagen, 1914.

Parkinson, Herman O., Brooklyn, N. Y. B.A. Dartmouth College, 1913.

Randall, Elinor E., Providence, R. I. B.A. Brown University, 1915.

Santes, Marie M., Austin, Minn. B.A. Carleton College, 1911.

Sauer, Julia L., Rochester, N. Y. B.A. University of Rochester, 1914.

Schaanning, Hedvig, Christiania, Norway. "Examen Artium," Trondhjems Katedralskole, 1914.

Stearns, Dorothy M., Lake Megantic, Canada. B.A. Smith College, 1916.

Taylor, Isabelle L., Burlington, Vt. B.A. Vassar College, 1912.

Todd, Nancy H., Franklin, Ind. Ph.B. Franklin College, 1911.

Van Sant, Clara, Victoria, B. C. B.A. University of Washington, Seattle, 1910; M.A. Columbia University, 1916.

Vosper, Zaidee B., Detroit, Mich. B.A. University of Michigan, 1904.

Weeks, Elisabeth, Rutland, Vt. B.A. Vassar College, 1912.

Wennerstrum, Winnifred, Des Moines, Ia. Ph.B. Drake University, 1907.

White, Ada J., Byron, N. Y. B.A. University of Rochester, 1915.

Young, Malcolm O., North Hanover, Mass. B.A. Amherst College, 1916.

Class organizations have been effected as follows: Class of 1917: President, Rachel A. Harris; vice-president, Ellen F. Adams, secretary-treasurer, Harold G. Russell. Class of 1918: President, Herman O. Parkinson; vice-president, Elinor E. Randall; secretary-treasurer, Malcolm O. Young.

The "Students round table," a voluntary library club composed of the students, has organized for the year. Plans are under way

to undertake a series of studies in the organization and management of foreign libraries and to include some other features supplementary to the subjects discussed in the regular seminar. The officers for the school year are: President, Cornelia S. Love, 1917; vice-president, Mary B. Brewster, 1918; secretary-treasurer, Elisabeth Weeks, 1918.

## ALUMNI NOTES

Cards have been received announcing the marriage of the following former students:

Marie Driscoll, 1916, to Stephen Barker Vernon of Albany, N. Y., on Sept. 23, at Reading, Pa.

Frances Fordice, 1911, to Charles Edward Fink of Rosendale, Wis., on Sept. 27, at Rosendale.

Kathreen Holdridge, 1910, to N. Lee Mahan of Knoxville, Tenn., on July 31, at Chicago, Ill.

Mildred K. Jones, 1911-12, to Arthur Eugene Snyder of Concord Junction, Mass., on June 7, at Utica, N. Y.

Martha C. Kessel, 1912-13, to Raymond Weaver Haas of Eldora, Iowa, on May 30, at Cresco, Iowa.

Fannie M. Smith, 1906-07, to Franklin Brown Powers of Poland, Ohio, on June 29, at Warsaw, N. Y.

Harold L. Wheeler, 1913, librarian of the Missouri School of Mines and Metallurgy, Rolla, to Kate Weston Tipton, on July 20, at Washington, S. C. F. K. WALTER.

## PRATT INSTITUTE SCHOOL OF LIBRARY SCIENCE

Nowhere could Miss Plummer's loss have been felt more keenly than in this school with which she was identified for so many years. The time that she has been away from us seems in retrospect but a moment compared to the long term of her life and service among us. To Miss Plummer's power of organization and her understanding of the needs of the profession, this school owes much, and to the graduates she has always been a wise counsellor and a true friend. Suitable action in her memory will be taken by the Graduates' Association.

The School opened Sept. 18 with a full complement of students. Geographically there are five enrolled from New York, four from Pennsylvania, three from Connecticut, two each from Massachusetts, Maryland, Ohio and Oregon, and one each from New Hampshire, New Jersey, Delaware, Indiana, Iowa and Italy. The following universities are represented among the membership,—Wellesley College, Bates College, Marietta College,

Western Reserve University, Dickinson College, Augustana College, Wilson College, the Iowa State Teachers' College, Leland Stanford University and the University of Rome. Two of the students are graduates of Russian gymnasia. Seventeen of the class have had previous library experience, and we have representatives from the staffs of the New York and Brooklyn Public Libraries, and the public libraries of Berlin, N. H.; Stamford, Ct.; Williamsport, Pa.; Newark, O.; Waterloo, Ia.; and Portland, Ore. Three of the students have taken apprentice courses in public libraries. In addition to the library experience, seven of them have taught, three have had business experience, and indeed all but three members of the class have had some kind of practical experience since leaving school or college. The following is the list of members in the class of 1918:

Frank V. Anderson, Portland, Ore.  
 Claire N. Atwater, Lockport, N. Y.  
 Elizabeth H. Baxter, Alexandria, Ind.  
 Ginevra Capocelli, Rome, Italy.  
 Florence Dewey, Waterloo, Ia.  
 Ruth W. Dickinson, Jersey City, N. J.  
 Mary L. Dodd, Wilmington, Del.  
 Marion H. Fiery, Hagerstown, Md.  
 Florence C. Finney, Williamsport, Pa.  
 Margaret J. Guerini, Middleboro, Mass.  
 Muriel Hotchkiss, Bridgeport, Ct.  
 Adria A. Hutchinson, Berlin, N. H.  
 Mary A. Johnson, Norwich, Ct.  
 Alma S. Jonson, Portland, Ore.  
 Matilda Livshitz, Brooklyn, N. Y.  
 Helen McCracken, Germantown, Pa.  
 Ruth E. McKinstry, Chicopee, Mass.  
 Evelyn L. Matthews, Clark's Green, Pa.  
 May Morris, Greenwood, Del.  
 Anne Page, Princess Anne, Md.  
 Bertha Pepper (Mrs.), Brooklyn, N. Y.  
 Muriel J. Schabacker, Erie, Pa.  
 Grace A. Taylor, Brooklyn, N. Y.  
 Grace H. Walmsley, Noroton Heights, Ct.  
 Grace E. Winton, Marietta, O.  
 Mabel Wood, Cleveland, O.

## ALUMNI NOTES

Cards have recently been received announcing the marriage on Wednesday, Oct. 11, of Louise Merrill, 1902, to Chester H. Tapping.

Florence L. Crosier, 1914, who has been first assistant in the Carnegie West branch of the Cleveland Public Library, has been recently made librarian of the Alta branch.

Ruth S. Hull, 1915, who has been on the staff of Clark College Library, Worcester, Mass., since graduation, has accepted a position in the library of Girard College, Philadelphia.

JOSEPHINE ADAMS RATHBONE,  
*Vice-Director.*

## LIBRARY SCHOOL OF THE NEW YORK PUBLIC LIBRARY

The school opened September 25. Eleven students began preliminary practice on September 11.

Faculty changes already mentioned in the

LIBRARY JOURNAL, are the death of Miss Mary Wright Plummer, principal; the resignation of Miss Agnes E. Van Valkenburgh; the appointment of Professor Azariah S. Root of the Oberlin College Library as principal for the year 1916-1917; the appointment of Miss Corinne Bacon as instructor in book selection; and the appointment of Miss Isabella M. Cooper as instructor in cataloging.

Sixty-one students are enrolled, thirty-six juniors, four partial and twenty-one seniors. The names follow:

#### Junior Class

Cecilie C. Andresen, Kristiania, Norway.  
 Florence Behr, National City, Cal.  
 Louise M. Boerlage, New York City.  
 Ellen M. Brown, Arrington, Va.  
 Martha J. Brown, St. Joseph, Mo.  
 Louise P. Bull, Bridgeport, Ct.  
 Muriel A. Crooks, New York City.  
 Gail Curtis, Lansing, Mich.  
 Florence De Leon, Pleasantville, N. Y.  
 Eleanor ff. Duncan, Dublin, Ireland.  
 Edith Gantt, North Platte, Neb.  
 Mamie O. Groesbeck, Little Rock, Ark.  
 Sigrid C. Holt, New York City.  
 Ethel F. Holzberg, Cincinnati, O.  
 Elizabeth K. Hoyt, Harrisville, Mich.  
 Hsien-yuan Hsü, Shanghai, China.  
 Helen H. Janeway, Media, Pa.  
 Katharine D. Kendig, Glen Ridge, N. J.  
 Karl H. Koopman, Providence, R. I.  
 Elta Lenart, Minneapolis, Minn.  
 Dorothy M. McMillan, Dover, N. J.  
 Harriet D. MacPherson, New York City.  
 Winifred B. Mahon, Duluth, Minn.  
 Frances L. Metcalf, Cedar Rapids, Iowa.  
 Delia W. Nicholson, Kansas City, Mo.  
 Jeanie M. Reid, Peace Dale, R. I.  
 Kathryn E. Rothschild, New York City.  
 Ruth Saxton, New York City.  
 Florence H. Severs, Cove, Ore.  
 Marian Shaw, Scarsdale, N. Y.  
 Elizabeth H. Stewart, Omaha, Neb.  
 Margarita E. Tibbetts, New York City.  
 Elizabeth T. Turner, Kansas City, Mo.  
 Janet H. Vrooman, Kingston, N. Y.  
 Winifred Washburn, Seattle, Wash.  
 Dorothy Watson, Washougal, Wash.

#### Part-Time Students

Laura M. Bertemy, New York City.  
 Louis H. Fox, New York City.  
 Helen W. Grannis, New York City.  
 Martha Rosentreter, New York City.

#### Senior Class

##### School and college course:

Marguerite Boardman, Claremont, Cal. 96th Street branch.  
 Frances G. Burdick, Glenfield, N. Y. Tremont branch.

##### Advanced reference and cataloging course:

Corabel Bien, Washington, D. C. Reference catalog room.  
 Marjorie C. Burbank, New York City. Circulation catalog room.  
 Donald K. Campbell, Nashua, N. H. Main reading room.  
 Lenore Greene, New York City. Tremont branch.  
 Mabel A. Howe, New York City. Unpaid practice.  
 Henrietta M. Mackzum, New York City. Reference catalog room.  
 Jennie Meyrowitz, Brooklyn, N. Y. Seward Park branch.  
 Eunice H. Miller, New York City. Main reading room.  
 Edith Newcomet, Brooklyn, N. Y. Hamilton Fish branch.

##### Administration course:

Rachel R. Anderson, Portland, Ore. Seward Park branch.

Inez Crandle, Mauch Chunk, Pa. Mauch Chunk Public Library.  
 Edna A. Dixon, New York City. Fort Washington branch.  
 Laura M. Eberlin, Spokane, Wash. Washington Heights branch.  
 Sheldon Fletcher, Linden, Mich. Aguilar branch.  
 Claire Graefe, Sandusky, O. Webster branch.  
 Maude D. Merritt, Erie, Pa. Hamilton Fish branch.  
 Jessie S. Millener, Ashland, Neb. Library School.  
 Josephine M. Stults, Morristown, N. J.  
 Edith Wright, Brooklyn, N. Y. Reference catalog room.

The seniors gave a delightful party to the faculty and juniors on the shores of the Hudson river on the afternoon of October 15.

Dr. E. C. Richardson, librarian of Princeton University, gave an inspiring talk on "Library preparedness" to the juniors October 2.

Miss Mary E. Hall of the Brooklyn (N. Y.) Girls' High School Library is lecturing to the seniors in the school and college course; F. W. Jenkins of the Russell Sage Foundation Library to the seniors in the administration course; and Miss Catharine S. Tracey of the school, to the seniors in the advanced reference and cataloging course.

Special lectures to the juniors have been given as follows:

Sept. 27. H. M. Lydenberg. The New York Public Library.  
 Sept. 28. C. H. A. Bjerregaard. Reference library work.  
 Oct. 5. Benjamin Adams. The circulation department of The New York Public Library.  
 Oct. 18. Annie Carroll Moore. Children's work in The New York Public Library.

AZARIAH S. ROOT, *Principal*.

#### LIBRARY SCHOOL OF THE UNIVERSITY OF WISCONSIN

The eleventh year of the school opened September 20, with an enrollment of thirty-seven students, the largest number in its history. The class of 1916, as a special remembrance for their successors, had a letter of greeting and presented a subscription to *The Daily Cardinal*, the official student publication of the university.

Owing to the pressure of administrative duties Miss Hazeltine finds it necessary to give up the course in reference work, which she has conducted since the institution of the school. The reference course will be given this year by C. B. Lester of the legislative reference department, who has been giving the course in public documents for several years. Miss Julia C. Stockett, who for two years has filled the position of reviser in the school, and field worker for the Library Commission most acceptably, has assumed the

acting-librarianship of the University of Idaho at Moscow. Her place will be filled by Miss Helen R. Cochran, a graduate of Wellesley and of the Library School, 1916.

A summary of the registration shows thirteen states, the District of Columbia, and Norway represented: ten from Wisconsin; five from Illinois; four each from Iowa and Michigan; three from New York; two from Missouri; one each from California, Indiana, Minnesota, North Dakota, Ohio, Pennsylvania, South Dakota, District of Columbia, and Norway.

Six of the class are college graduates, one with a master's degree; six are seniors in the joint course with the College of Letters and Science; seven have had one to two years of college work, making nineteen with a college point of view. The colleges represented by graduates are Chicago, Leander Clark, James Millikin, Milwaukee-Downer, Vassar, Wellesley, and Wisconsin.

Nineteen enter with one or more years of library experience, as follows: one with one year; seven with two years; one with three years; four with four years; two with five years; one each with six, eight, eleven and twelve years experience. Four enter with apprenticeship varying from six months to two years and the rest with the required minimum of six to twelve weeks apprentice experience in an accredited library. The class list follows:

Hazel E. Armstrong, Terre Haute, Ind., one year each Indiana State Normal School and University of Illinois; one year cataloger St. Mary of the Woods academy, Terre Haute, Ind.; one year librarian Mt. Vernon Public Library.  
 Corinne J. Carlson, St. Louis, Mo., two years assistant Morgan County Medical Library, Jacksonville, Ill.; three and one-half years assistant, catalog department, St. Louis Public Library.  
 Marjorie Frances Carlton, Laurium, Mich., senior in the College of Letters and Science.  
 Laura Sherrill Caton, Ottawa, Ill., four years assistant Reddick's Library, Ottawa.  
 Charlotte Hamilton Clark, Hudson, Wis., two years assistant Hudson Public Library.  
 Florence Harriet Davis (Mrs.), Grand Forks, N. D., two years University of North Dakota; six years N. D. State Educational Reference Library.  
 Mae Ellen Foley, Manson, Iowa, B.A., University of Wisconsin.  
 Beatrice Foster, Macomb, Ill., graduate Western Illinois State Normal School; Chautauqua Summer School, 1914; two years assistant Jacksonville (Ill.) Public Library; three years assistant Platteville State Normal School.  
 Esther Mae Frederickson, St. Joseph, Mo., four years assistant St. Joseph Public Library.  
 Margaret Gilpin, Duluth, Minn., senior in the College of Letters and Science.  
 Mildred Ferguson Goodnow, Chicago, Ill., three years junior assistant Chicago Public Library.  
 Emma Osborn Hance, Washington, D. C., special student George Washington University; five years assistant and six years chief of order department, Public Library of the District of Columbia.  
 Gladys Marietta Hook, South Milwaukee, Wis., two years University of Wisconsin.  
 Grace Emily Howard, Buffalo, N. Y., B.A., Vassar College.  
 Jessie Pearl Jenks, Toledo, Iowa, B.A., Leander Clark College, Toledo, Iowa.

Harriet Louise Kidder, Madison, Wis., B.A., Wellesley College; M.A., University of Chicago; six months assistant Wisconsin Legislative Reference Library; summer session of Wisconsin Library School, 1913; three years assistant librarian University of Montana.  
 Hazel Dean Laing, Gladstone, Mich., B.A., Milwaukee-Downer College.  
 Mary Beatrice Lee, Dubuque, Iowa, graduate Georgetown Convent, Washington, D. C.; four years assistant Dubuque Public Library.  
 Alberta A. Lind, Dover, Ohio, senior in the College of Letters and Science.  
 Kathinka Ingeborg von der Lippe, Kristiania, Norway.  
 Alice Lyons, Brodhead, Wis., two years University of Wisconsin.  
 Esther Melnikow, Milwaukee, Wis., two years assistant Milwaukee Public Library.  
 Lillian Susan Mochlman, Madison, Wis., senior in the College of Letters and Science.  
 Emilie Mueser, New York City, twelve years assistant New York Public Library.  
 Sue Osmotherly, Hot Springs, S. D., two years librarian Hot Springs Public Library.  
 Florence Elizabeth Price, Des Moines, Iowa, two years assistant Iowa Library Commission.  
 Emily M. Richie, Shelby, Mich., six months apprentice Menasha (Wis.) Public Library.  
 Josephine Risser, Ripon, Wis., two years Ripon College, six months apprentice Ripon Public Library.  
 Harriet Trexler Root, York, Pa., one year apprentice Pottsville (Pa.) Public Library.  
 Madaline Marie Scanlan, San Diego, Cal., one year assistant San Diego Public Library.  
 Blanche Baird Shelp, Amsterdam, N. Y., graduate New Paltz (N. Y.) State Normal School; six years librarian New Paltz State Normal School; two years assistant cataloger Philippine Library, Manila.  
 Ruth Annette Sorenson, Eau Claire, Wis., one year Lawrence College.  
 Helen Susan Stevenson, Decatur, Ill., A.B., James Millikin University, Decatur; two years apprentice in University Library.  
 Esther Merle Swain, Detroit, Mich., two years Hiram (Ohio) College; two years assistant, cataloging department, Detroit Public Library.  
 Vivian Pearl Swerig, Madison, Wis., senior in the College of Letters and Science.  
 Ruth Hull Tobey, Wausau, Wis., senior in the College of Letters and Science.  
 Sonja Wennerblad, Chicago, Ill., two years junior assistant, Chicago Public Library.

#### ADDITIONAL APPOINTMENTS—CLASS OF 1916

Siree Andrews, member Training Class for Children's Librarians, Cleveland Public Library.  
 Ava L. Cochran, librarian, Hancock (Mich.) High School Library.  
 Mrs. Winifred L. Davis, librarian, Fort Atkinson (Wis.) Public Library.  
 Helen E. Farr, assistant, Detroit (Mich.) Public Library.  
 Lillian M. Flagg, assistant, Brooklyn (N. Y.) Public Library.  
 Leona A. Hamilton, who was a special student during the first semester and since employed in the cataloging department of the Wisconsin Historical Library, has been appointed cataloger of the University of Idaho, Moscow.  
 Vivian G. Little, librarian, Watertown (Wis.) Public Library.  
 Hazel F. Long, member of the Training Class for Children's Librarians, Cleveland Public Library.

Amy L. Meyer, assistant, Detroit (Mich.) Public Library.  
 Esther L. Petterson, assistant Detroit (Mich.) Public Library during July and August, assistant, Madison Free Library.  
 Edna L. Roesler, assistant, Platteville (Wis.) Normal School Library.  
 Evelyn T. Ross, member of the Training Class for Children's Librarians, Cleveland Public Library.  
 Gertrude E. Schwab, assistant in the cataloging department, Milwaukee Public Library.  
 Charlotte E. Smith, junior assistant, Levis Institute Branch, Chicago Public Library.

#### NEW COURSE IN LIBRARY SCIENCE FOR TEACHERS

On the recommendation of President Van Hise and by vote of the Regents of the University in June, a library course for teachers will be a part of the University curriculum, beginning with the present academic year. This course, to be conducted by the faculty of the Library School, carries four-fifths credit, and will be given each semester on Tuesdays and Thursdays at 1:30 p. m. in the University High School. It is open to juniors and seniors who are prospective teachers.

The object of this course is to qualify those taking it to assume in connection with instructional duties, the supervision of high school libraries, and to qualify them also to give instruction to high school students in the use of books and libraries, and in the means and methods of developing good habits and right tastes in reading. It is offered in direct response to a formally expressed demand coming from city superintendents and high school principals of the state. It is likely that in the near future the State Department of Education will require all state aided schools to employ one teacher librarian who has had the training represented by such a course or its equivalent.

There will be included for the first semester: Cataloging, 15 periods; classification, 10 periods; library economy, 6 periods.

For the second semester: Book selection and evaluation of books, 12 periods; use of reference books, indexes, and library helps, 9 periods; mending, binding, and care of books, 4 periods; lending books and statistics, 1 period; how to teach pupils to use books, 4 periods; equipment, administration, and discipline, 3 periods. Instruction in teaching the use of books and libraries will be given consideration thruout the course.

#### ALUMNI NOTES

Grace Lane, 1909, was married in June to Leon M. Young, of Promontory Point, Utah.

Since 1913 Miss Lane had been cataloger in the Sioux City (Iowa) Public Library.

Gretchen L. Flower, 1910, will attend the University of Wisconsin during the ensuing year. After resigning her position as librarian of the Presbyterian College at Emporia, Kansas, in June, she organized the Wellington (Kan.) Public Library.

Helen Pfeiffer, 1912, was married in June to John P. Cargill, St. Joseph, Mo.

Ruth A. Stetson, 1912, for two years librarian of the Deer Lodge (Mont.) Public Library, was married in June to Owen D. Speer of Deer Lodge.

Nora Beust, 1913, has been made children's librarian of the La Crosse (Wis.) Public Library, resigning her position in the library of the La Crosse Normal School.

Verna M. Evans, 1914, librarian for two years of the Elwood (Ind.) Public Library, has accepted a position as cataloger in the San Diego (Cal.) Public Library.

May C. Lewis, 1914, organized the Seymour (Wis.) High School Library in August. She was appointed assistant in the Madison (Wis.) Free Library in September, filling the vacancy caused by the continued illness of Georgia R. Hough.

Rachel Angvick, 1915, who was assistant in the Grinnell (Iowa) College Library last year, has joined the staff of the Minneapolis Public Library.

Leona L. Clark, 1915, has accepted a position with the Wisconsin Civil Service Commission.

Eileen M. Duggan, 1915, has resigned as librarian at Clarinda, Iowa, because of her mother's ill health.

Bergljot Gundersen, 1915, after completing her year in the Cleveland Training Class for Children's Librarians, has returned to Kristiania, Norway, where she is to be chief of the children's department of the Deichman Free Library.

Loretta von Syberg, 1915, was married in June to John E. Urquhart and will reside at 724 Frederick Ave., Milwaukee, Wis.

Irma M. Walker, 1915, reference librarian in the Madison (Wis.) Free Library last year, has been elected librarian of the Biwabik (Minn.) High School.

Stewart S. Williams, legislative reference course 1915, will be a part time assistant during the coming year in the Library of Northwestern University.

Ruth Worden, 1915, resigned her position in the Buffalo (N. Y.) Public Library and has been appointed assistant in the Missoula (Mont.) Public Library.

MARY EMOGENE HAZELTINE, *Preceptor*.

## CARNEGIE LIBRARY SCHOOL

The Library School opened for the sixteenth year Wednesday, Sept. 27. The principal gave the opening talk and Miss Lutie E. Stearns, of Milwaukee, Wis., gave three lectures Sept. 27-28.

Twenty-seven junior students, one special student, and nine senior students have enrolled.

*Entering Class*

Grace Leverett Aldrich, Malden, Mass.  
 Faith Lillian Allen, New London, Conn.  
 Marjorie Barkhurst, Steubenville, Ohio.  
 Lutie Alice Beggs, Ashland, Ill.  
 Margaret Carmichael, Franklin, Pa.  
 Frances Converse Darling, Chestnut Hill, Mass.  
 Blanche L. Dodds, Cleveland Heights, Ohio.  
 Marcella Carmelita Duff, Menlo Park, Cal.  
 Margaret Ann Fife, Canton, Ohio.  
 Rachel Fleming Ghriest, Pittsburgh, Pa.  
 Myra S. Grosh, Mount Joy, Pa.  
 Amy V. Hallahan, Spokane, Wash.  
 Marion Marie Harvey, Pittsburgh, Pa.  
 Ellen Ford Howe, Seattle, Wash.  
 Edith Morrison Keister, Pittsburgh, Pa.  
 Hannah Cornelia Leffler, Miami, Fla.  
 Kathleen Arundel McBrearty, Detroit, Mich.  
 Ruth Ira McClintic, Pittsburgh, Pa.  
 Rebecca Harris Mann, Mart, Tex.  
 Anne Furlong Mitchell, Fort Dodge, Ia.  
 Eleanor Ristine, Crawfordsville, Ind.  
 Janet MacCurdy Scott, Bellefonte, Pa.  
 Sarah Herron Shaw, Glenshaw, Pa.  
 Olga Sinexon, Philadelphia, Pa.  
 Eva M. Squire, New London, Ohio.  
 Eva Thayer, Kansas City, Mo.  
 Mabel Clare True, Lansing, Mich. (Special Student)  
 Adele Mildred Warner, Ft. Wayne, Ind.

*Senior class*

Enid McPherson Boli, Pittsburgh, Pa.  
 Florence Rossiter Broderick, Denver, Colo.  
 Louise Guiraud, Pittsburgh, Pa.  
 Mary Bird Huse, St. Louis, Mo.  
 Edith A. Kurth, Milwaukee, Wis.  
 Harriet W. Leaf, Rochester, Pa.  
 Marie McInerney, Sewickley, Pa.  
 Ruth Moss Paxson, Central Point, Ore.  
 Lillian Elizabeth Sullivan, Pittsburgh, Pa.

A reception was given at the Students' House, Oct. 6 to meet the entering class.

Eight branch libraries of the Carnegie Library of Pittsburgh were visited by the entering class Sept. 29-Oct. 7, and a tour of the Carnegie Institute was made.

## FACULTY

Miss Bogle, Miss Power and Miss Whiteman attended the Keystone State Library meeting at Wernersville, Pa., Oct. 12-14. Miss Power read a paper on the "Co-operation between the public library and the public school."

A story-telling round table was conducted by Miss Whiteman. Among those who contributed to the round table were Edith C. C. Balderston, 1912-1913, Margaret Carnegie, 1915, and Irma Diescher, 1916.

## ALUMNAE NOTES

Gertrude M. Edwards, 1911-1912, has resigned her position of children's librarian, Public Library, La Crosse, Wis., to accept a

similar position in the Parmly Billings Memorial Library, Billings, Mont.

Edith I. Graft, 1915, has been made children's librarian of the West End branch of the Carnegie Library of Pittsburgh.

Roberta Herron, 1917, has been appointed assistant in the children's department of the Detroit Public Library.

Maud Mitchell, 1917, has accepted the position of children's librarian in the Public Library, Minneapolis, Minn.

Ellen W. Peckham, 1917, has been appointed assistant in the children's department of the Brooklyn Public Library.

Lillian Sullivan, 1914-1915, has resigned her position of children's librarian in the Detroit Public Library to take the senior course in the Carnegie Library School.

Edith N. Swayne, 1917, has accepted the position of children's librarian in the Brooklyn Public Library.

Jessie Gay Van Cleve, 1916, has resigned her position of assistant in the children's department of the Carnegie Library of Pittsburgh to become children's librarian of the Howe Library, Hanover, N. H.

Dorothy Wilson, 1914-1915, has resigned from the staff of the Los Angeles Public Library.

SARAH C. N. BOGLE, *Principal*.

## SIMMONS COLLEGE LIBRARY SCHOOL

The regular program for the college year started September 21, with little friction, tho the beginning of practice work in the field, which is to be much more of a feature this year, was delayed somewhat as an extra precaution to ensure "health first."

The reference classes began as usual, notwithstanding the delay in the issue of the new edition of Kroeger's Guide, for in a college schedule it is an exceedingly difficult thing to switch courses about, as the publishers of the Guide lightheartedly suggested.

In library economy the subjects of binding, printing and editing began the year with visits to the Riverside and Ginn presses, to a bindery, and to the Boston Museum of Fine Arts.

The time allotted to the course in documents has been increased this year so that the class may meet once a week at the State Library with Mr. Belden, who with the rich resources of his own library at hand, can make documents seem more vital.

The course on library buildings is being planned entirely anew this year, and we are most fortunate in having promised us an introductory lecture from the architect's point

of view by Mr. J. Randolph Coolidge, Jr., of Boston. This is to be followed by four from Mr. John A. Lowe of the Massachusetts Free Public Library Commission.

#### PERSONALS

Deane Blackshire, 1915-16, is the librarian and history teacher in the High School, Miller, South Dakota.

Barbara Bolles, 1915-16, was appointed a cataloger in the University of Missouri Library.

Helen Carleton, 1914, has been appointed on the staff of the Minnesota Public Library Commission.

Esther S. Chapin, 1913, has gone to the Ohio State University Library as cataloger.

Annie L. Craigie, 1915-16, has been appointed to the Brooklyn Public Library staff.

Elsie Cruttenden, 1916, is now a cataloger in the Leland Stanford Junior Library.

Louise Hoxie was appointed an assistant in the Somerville Public Library some months ago.

Effie A. Keith, 1909-10, is head cataloger, Northwestern University, Evanston, Ill.

Katherine Middleton, 1912-15, is cataloging for the New York Public Library.

Anna Monohan, 1908, has accepted the position of head of the filing department with the Sturtevant Company.

Mildred Page, 1914, is at the Clark University Library this year.

Mary A. Pinkham, 1915, resigned from the Clark University Library.

Mary E. Rogers, 1916, has been appointed in the children's department of the New York Public Library.

Ruth Shattuck, 1910, is an assistant in the issue department of the Brookline Public Library.

Gertrude Shaw is librarian of the Boston Y. M. C. A.

Margaret E. Sinclair is doing temporary work at the Massachusetts State Library.

Grace Thompson, 1913-14, has resigned from the Brooklyn Public Library, and in November will catalog for the Massachusetts State Library.

Dorothy Whiting, 1913-14, has been made librarian of the Public Library at Winsted, Ct.

JUNE RICHARDSON DONNELLY, *Director.*

#### WESTERN RESERVE LIBRARY SCHOOL

The opening exercises of the school were held on the afternoon of Sept. 19. President Thwing presided and spoke briefly, and was followed by the dean and director. The class

of 1917 comprises 25 regular students and one part time student. The states represented are as follows: Ohio, 15 (of which 7 are from Cleveland); New York 2; Pennsylvania 3; Michigan 1; Indiana 1; Illinois 1; California 2. Of these, four have college degrees, and 15 have had some college work.

Thirza E. Grant, 1908, has taken up her work as instructor, giving a part of the cataloging instruction and part of the book selection course, during the first semester. Miss Lydia S. Jones also entered upon her duties as secretary at the beginning of the school year.

The first visiting lecturer to the school, was Lutie E. Stearns of Milwaukee, who spoke on "The library spirit" and brought to the class her usual stimulating message of helpful service and good cheer. The students had the opportunity of meeting her after the lecture at an informal tea.

Helen M. Smith, dean of the College for Women, W. R. U., spoke to the students Sept. 28, on the co-operation between the two schools, and the ideals and aims of both.

A sightseeing trip thru the parks and residence districts of Cleveland was arranged for the second Saturday afternoon, especially for the students who were strangers in the city. A beach picnic also has been one of the pleasures that has manifested the social spirit of the class.

The meeting of the Ohio Library Association in Cincinnati, Oct. 3-6, was attended by two of the faculty—Harriet E. Howe and the director. A pleasant feature of the meeting was an "all library schools" dinner, where messages were presented in person by faculty members, or read by representatives of the various library schools. The director of W. R. L. S. was asked to preside, representing the "hostess" Ohio school. The list of officers of the O. L. A. for next year includes the name of the director, as president.

The school is indebted to the generous interest of the Alumni Association in providing a balopticon lantern which was presented to the school at the beginning of the year.

#### ALUMNI NEWS

Ruth M. Fornwalt, 1915, has resigned her position in the Sioux City, Iowa, Public Library, to become cataloger in the Public Library at Homestead, Pa.

Beatrice F. Margolies, 1912, leaves her position as assistant in the Public Library, Lakewood, Ohio, to become a cataloger at the University of Indiana, Bloomington, Ind.

Changes in positions in the Cleveland Pub-

lic Library system include promotions for the following: Sarah A. Thomas, 1910; Emelia E. Wefel, 1911; Abbie Ward, 1912; Edna M. Little, 1913; Hattie Stokely, 1913; Victoria Bronson, 1914.

Bessie H. Kelsey, 1913, who has been on leave of absence for two years, returns to the Cleveland Public Library.

Further appointments of the class of 1916 are as follows:

Dorothy A. Bray, who acted as an assistant in the Short Course Library Training School of the Department of Education, Toronto, during September, goes to the Detroit Public Library.

Ethel F. Bowers, periodical division, Detroit Public Library.

Elizabeth J. Herrington, North Portland branch, Public Library, Portland, Oregon.

Helen L. Shearer, Bowen branch, Detroit Public Library.

Ida C. Lucht, senior assistant, Lathrop branch, Detroit Public Library.

Nora M. Clark, first assistant, Carnegie West branch, Cleveland Public Library.

Ruth A. Hapgood died at her home in Warren, Ohio, Sept. 28, after an extended period of ill health. She was librarian of the East 79th St. branch at the time of her death, and had been on the staff of the Cleveland Public Library in various positions since completing her library school course.

Alice S. Tyler, *Director*.

#### CARNEGIE LIBRARY OF ATLANTA—LIBRARY SCHOOL

The twelfth session of the Library School, Carnegie Library of Atlanta, opened Monday, Sept. 18. After a week of preliminary work the regular courses for the first term were commenced, including cataloging, classification, subject headings, reference, book selection, fiction seminar, current events, typewriting.

#### ALUMNI NOTES

Louise Bercaw, 1916, has been appointed acting librarian of the Carnegie Library, Cordele, Ga.

Margaret Corrigan, 1916, has received an appointment on the staff of the Carnegie Library of Atlanta.

Margaret Jones, 1916, is a member of the Training Class for Children's Librarians, Cleveland Public Library.

Martha Kendrick, 1916, has been elected librarian of the Hawkes Free Children's Library, Griffin, Ga.

Alice Longshore, 1916, has received a temporary appointment in the Birmingham Public Library.

Helen Brewer, 1913, has resigned her position as librarian of the Carnegie Library, Cordele, Ga., to accept an appointment as assistant in the Savannah Public Library.

Caroline Moore, 1911, was married Oct. 12 to J. K. Orr, Jr., Atlanta, Ga.

TOMMIE DORA BARKER, *Director*.

#### SYRACUSE UNIVERSITY LIBRARY SCHOOL

Because of the danger from infantile paralysis, the opening of the Library School, as of the other schools and colleges of the university, was postponed this year from September 19 to October 4.

The additions to the equipment of the Library School have made necessary its expansion into larger quarters. The books used for children's work and for book selection have been placed in a new room which will be in charge of Miss Thorne, who gives the courses in these subjects. The library seminar room will continue as before under the supervision of Miss Smith.

In the large fire of September 23-24, which completely destroyed the business and manufacturing section of Phoenix, N. Y., Miss Wandell, of the Library School faculty, was so unfortunate as to have her house and its contents totally destroyed.

Members of the class of 1916 have the following positions:

Eleanor Church and Dorothy Welch in the Syracuse University Library; Mary Dollard, Leila Dominick, and Aurelia Mansfield, in the Syracuse Public Library; Pauline Griffith and Vivien Diefenderfer, Buffalo Public Library; Fanny C. Howe, Library of the University of Pennsylvania; Carolyn Merriman, Reynolds Library, Rochester, N. Y.; Helen Stiles, Public Library, New Haven, Ct.; Esther Wright, Library of Alexander Hamilton Institute, New York City; Edna Whiteley, Brooklyn Public Library; Fanny Sattinger, Public Library, Indianapolis; Dorothy Snavlin, Library of Grinnell College, Crinnell, Ia.

E. E. SPERRY, *Director*.

#### CHAUTAUQUA LIBRARY SCHOOL

The sixteenth annual session of the Chautauqua Library School was held July 8 to Aug. 18.

Miss Mary E. Downey, director of the school, lectured daily on library organization and administration. Miss Mary M. Shaver, of Vassar College Library, gave the courses in cataloging and classification. Miss Ruth Wallace, of Evansville, (Ind.) Public Library taught the reference course. Lectures were followed by practice work, which was

carefully revised. Ample opportunity was given for questions and discussion of problems relating to library experience and for consultation with instructors in regard to individual problems.

The work of the regular instructors was supplemented by lectures on the general program related to library work and by special lectures before the school as follows:

Vaughan MacCaughey spoke on "Nature study books" from the scientist's point of view; Earl Barnes lectured on "The British Museum Library"; Professor S. C. Schmucker gave a delightful address on "My way with a book"; Mrs. Evelyn Snead Barnett spoke on "The short story," illustrating with a chapter from George Madden Martin's forthcoming book; Miss Frances Cleveland spoke on "Township library extension"; Prof. J. E. Hull talked on "Peace literature"; B. W. Huebsch gave a series of five lectures on "Book publishing and selling"; Miss Nancy Beyer gave two talks on "Library binding and mending," which the students followed with practical work in mending and recasing books. The students also attended Miss Mabel C. Bragg's story telling classes.

In addition to the Chautauqua Library which doubled in value this year, the school made trips to Westfield, where the Patterson Library was used to further demonstrate the subjects of study. The Prendergast Library at Jamestown was also visited and the Art Metal Construction Company gave opportunity to examine library furniture and equipment.

Every student came with a definite purpose and it is wonderful to see what strenuous class work, enthusiasm, faithfulness and good fellowship can accomplish in six weeks.

There were many visiting librarians, trustees and others interested in library work who attended special lectures and consulted in regard to library matters.

There were 43 students representing 15 states as follows: Ohio, 18; Utah, 5; Pennsylvania, 4; two each from Iowa, Kentucky, Missouri and West Virginia, and one each from Connecticut, Kansas, Mississippi, New Jersey, New York, Tennessee, Virginia and Washington.

MARY E. DOWNEY.

#### LOS ANGELES PUBLIC LIBRARY TRAINING SCHOOL

Seventy-eight applicants took the entrance examinations given in June and September. Of this number eighteen were accepted and commenced work on Monday, Oct. 2. Iowa and Minnesota are the only states represented aside from California. Seven students are

from Los Angeles. Two have had library experience and have attended library summer schools. Nine have attended college, and two others are graduates of normal schools. A list of students follows: Katherine Ardagh, Clara Eunice Bashor, Ruth Burton, Bertha W. Franklin, Cosby Louise Gilstrap, Margaret Florence Glassey, Rosalind Green, Gladys Hanna, Grace Marvel Lawrence, Margaret Ellen Livingston, Selma Margaretten, Arnie McPherron, Margaret Elizabeth Newman, Helen Gladys Percey, Mabel Shearer, Marie Elinor Taylor, Esther Wrottenberg.

As has been the custom in past years, the afternoon of the opening day was spent in a "personally conducted" tour thru the library. In each department the class was greeted by the principal, who gave a short general talk on the work of the department. On returning to the school room, the students found the class of 1915-16 waiting to welcome them with tea.

There will be very few departures from the schedule as carried out last year. Miss Anne Mulheron, New York State Library School, 1916, who came to the library during the summer as head of the order department, will teach order and book-buying.

As a result of the "open courses" given last spring, a number of requests to attend special courses have come from library attendants in nearby towns. Eight of these have so far been accepted for different courses.

Miss Grace Hammond, the class president, entertained the class of 1915-16 at a delightful garden party and reunion, on Sunday, October 1.

#### APPOINTMENTS

Permanent appointments so far received by the class of 1915-16, are as follows:

Gladys Glenn, assistant in juvenile department, Los Angeles Public Library.

Marian Dinsmoor, reviser and assistant to principal of the Training School.

Betty Lord, assistant in play-ground libraries and sub-branches of Los Angeles Public Library.

Margaret Vinton, assistant in deposit stations, Los Angeles Public Library.

Elizabeth Walker, assistant, Long Beach Public Library.

Maria Deutschbein, assistant in Colorado College Library, Colorado Springs.

Helen Rowland, assistant in California State Library.

Elizabeth Connor, librarian of Mt. Wilson Observatory Library, Pasadena.

Susan Talmage is attending the University of California.

THEODORA R. BREWITT, *Principal*.

---

## Librarians

---

AKIN, Sally M., Pratt, 1910, for some years librarian of the County Free Library at Frederick, Md., has been made librarian of the Free Library of Conshohocken, Pa.

BABBITT, Grace E., who has been reference librarian in the Public Library of the District of Columbia for a number of years, has been compelled by ill health to withdraw from library work. Miss Fanning, who was for many years associated with the H. W. Wilson Co., is acting reference librarian.

BADGER, Evelyn, Pratt 1916, has been appointed general assistant in the Cedar Rapids (Ia.) Public Library.

BARBER, Clara V., first assistant in the Utica (N. Y.) Public Library, has resigned to be married.

BISHOP, Jessie, has been made head of the circulation department of the Public Library at Cedar Rapids, Ia. Miss Bishop is a graduate of Smith College and of the University of Illinois Library School.

BOWLES, Verne, New York State Library School 1914, has been appointed first assistant cataloger for the State College of Washington at Pullman.

BRONK, Clara L., New York State Library School 1914-15, has been appointed assistant in the Lake Erie College Library, Painesville, Ohio.

CHAMBERLIN, Mrs. Abba Doton, one of the best known library workers in Vermont, died Aug. 4, at the age of 76. She had been ill and helpless for two years. For many years Mrs. Chamberlin was a teacher, and in her later years she became librarian of the Abbott Memorial Library at South Pomfret, Vt. She contributed to the pamphlet "A Vermont library," compiled by John Cotton Dana, telling about the library work in Pomfret, and her work and original methods in conducting a library, especially her success with children, inspired many librarians to greater co-operation with schools and to wider use of the library as a social center.

CHASE, Wallace, who has rounded out a quarter century of library work in the Mary Taylor Library at Milford, Ct., has resigned, owing to ill health.

CLARKE, Dorothy, of Sacramento, Cal., has been elected librarian of Plumas County Library in Quincy, Cal., to fill the position held

by Miss Blanche Chalfant, who resigned to accept a similar place in Inyo County.

COATES, Emily C., has been appointed children's librarian in the Westfield (Mass.) Atheneum. Miss Coates took the apprentice course in library training in the Greenfield Public Library in 1913-14, and has since been on the staff of the Chicopee Public Library.

COBB, Mary E., B.L.S., New York State Library School 1915, has resigned her position as assistant in the children's department of the Brooklyn Public Library to become librarian of the New York State College for Teachers, Albany, N. Y.

COUTTS, Henry Thomas, for some time branch librarian in the Islington (Eng.) Public Libraries, died suddenly from a hemorrhage on April 22. Mr. Coutts was only 35 years old, but in his library career he had already made a splendid record for himself. An enthusiastic and thoro worker, he was one of the men chosen by James Duff Brown to assist in organizing the Public Libraries at Islington. He was a frequent contributor to *The Library Assistant* and *The Library World*, and his "Manual of library bookbinding" and "Library jokes and jottings" are well known on this side of the Atlantic. Mr. Coutts was twice elected president of the Library Assistants' Association and was prominent in other library organizations.

CREDLAND, William Robert, for many years deputy chief librarian of the Manchester (Eng.) Public Libraries, died July 18, at the age of 66.

CUMMINGS, Laura, of the Salem (Ore.) Public Library, has been appointed children's librarian of the Everett (Wash.) Public Library.

CURTIS, Alice, of Spencer, Mass., who received her library training in Cleveland, has been appointed a desk assistant in the Davenport (Ia.) Public Library.

CUTTER, Marian, and Carolyn Ulrich, both of the Brooklyn Public Library, were passengers on the *Stephano* when she was sunk off the Nantucket lightship on Oct. 8. Both Miss Cutter and Miss Ulrich had been visiting the Grenfell mission in Labrador, where Miss Cutter established a library in 1914, and for which she has now secured a trained librarian to take charge.

DART, Izella M., New York State Library School 1914-15, has resigned her position in

the Lake Erie College Library to become librarian of the State Normal School at Moorhead, Minn.

DAVIS, Ruth, a graduate from the library department of the State University of Washington last June, has been appointed an assistant in the reference department of the Tacoma Public Library.

DAVIS, William Harper, who resigned last spring his position as librarian for the Public Service Corporation of Newark, has gone back to teaching and is now professor of psychology and biology at the Ogontz School for Young Ladies in Philadelphia.

DEFORD, Estelle, assistant librarian at Yreka, Cal., for the past two months, has been called to Red Bluff, Cal., to take charge of the Tehama County Library with offices in the Kraft Memorial Library at Red Bluff.

DENTON, Jane, for seven years a member of the staff of the Elizabeth (N. J.) Public Library, has resigned to be married.

DICK, Christian R., New York State Library School 1915-16, has gone to the Carnegie Free Library of Allegheny, Pittsburgh, as head of the catalog department.

ENGELL, Mrs. Jennie C., who completed the two-year course of the Library School of the New York Public Library last June, and who has since been on the staff of the New York Public Library, has been appointed head of the lending department of the Tacoma Public Library, to succeed Agnes F. P. Greer, who resigns to go to Kansas City.

EVANS, Verna, of Ontario, Cal., has been appointed first assistant in the Public Library of San Diego.

FINNEY, Byron A., received on Sept. 30, the last day of his regular work as reference librarian of the University of Michigan Library, a silver loving cup with the inscription: "Byron A. Finney from the Library Staff, University of Michigan, for twenty-five years of service, 1891-1916."

FOLKARD, Henry Tennyson, since 1877 chief librarian at Wigan, England, died Aug. 25 as the result of a street accident. He was knocked down by a cart and died two days later. He was a Londoner by birth, and was in his sixty-seventh year. His library training began in the London Library, and from 1875 to 1877 he was sub-librarian at the Royal Academy, Burlington House. He was one of the original members of the Library Association and served on the council for thirty years. Several papers on Wigan history and the cata-

logs of several private libraries came from his pen, but his greatest work, which his untimely death left unfinished, was his reference library catalog. The fourteenth part of this (U-Wh) had been finished last March, and he expected that it would be finished in two more volumes.

FOSTER, Winnie, a graduate of the Wisconsin Library School and assistant at Marinette, Wis., succeeds Miss Lane as cataloger in the Sioux City Public Library.

GIBBONS, Ruth, has been elected librarian of the Public Library of Oelwein, Ia. Miss Gibbons was a member of this year's class at the summer library school of the Iowa Library Commission.

GOODRICH, Francis L. D., formerly in charge of accessions in the Library of the University of Michigan, has been appointed reference librarian to succeed Byron A. Finney, who retired Oct. 1. Mr. Goodrich is a graduate of Ypsilanti Normal College, working in the library there as a student. In 1903 he was graduated from the University of Michigan, where he spent his summers working in the library. After a two-year course at the New York State Library School he went to the John Crerar Library in July, 1906, and in February, 1907, he was put in charge of accessions at Ann Arbor, succeeding H. O. Severance.

HAMBURGER, Mme. L. Haffkin, who made a tour of American libraries and attended the summer session of the New York State Library School in 1914, has been conducting a course of lectures on library economy at Astrachan. A special type of traveling libraries has been developed to meet the peculiar needs of the district. This is one of a series of summer courses planned by the "zemstvos." In these courses special attention will be paid to rural libraries. A Russian Library Association has been founded at Moscow, with Mme. Haffkin-Hamburger the first president.

HANSON, Gladys, who has been an assistant in the children's room of the Davenport (Ia.) Public Library, has resigned her position to enter the University of Illinois as a student.

HOLMES, Florence I., B.L.S., New York State Library School 1912, is engaged temporarily in cataloging the special collection of European war literature at Clark University, Worcester, Mass.

IVES, Miss A. A., for many years in the New York Public Library and now living in Lakeville, Ct., is acting as subscription agent for a number of magazines and has many attractive club rates to offer.

KELLER, Esther, who has worked as cataloger for eighteen months in the Public Library at Mason City, Ia., has resigned to take a position in the library at De Pauw University while doing college work there.

KERR, Julia A. C., New York State Library School, 1915-16, has been appointed assistant in the catalog department of the Carnegie Library of Pittsburgh.

KOCH, Theodore W., who has been taking a year's rest from active library work, on Oct. 13 entered upon his new duties as chief of the order division of the Library of Congress.

LANE, Grace, for three years past cataloger in the Public Library of Sioux City, Ia., was married June 1 to Leon Maxwell Young, of Promontory Point, Utah.

LEWIS, Helen B., a graduate of Western Reserve Library School, has received an appointment in the Public Library of Council Bluffs, Ia.

LOUNSBURY, Edith, New York State Library School 1915-16, has gone to the Sioux City Free Public Library as assistant in the circulation department.

LUKEMEYER, Georgia, graduate of the Wisconsin Library School and librarian of the Watertown (Wis.) Public Library, has become children's librarian of the Sioux City Public Library.

MATTHEWS, Harriet L., for almost 50 years connected with the Lynn Public Library and since 1904 its librarian, has resigned because of ill health. The resignation will take effect Jan. 1.

MEISEL, Max, B.L.S., New York State Library School 1916, has been appointed assistant in the science division of the New York Public Library.

MESERVE, Rev. Howard C., has been chosen librarian of the Mary Taylor Library in Milford, Ct.

MILLIGAN, Flora, has been compelled by continued ill health to resign her position as librarian of the Public Library at Tipton, Ia.

POLLARD, Alfred William, assistant keeper of printed books in the British Museum, is the editor of the "Books about books" series, two volumes of which have recently been re-issued by Kegan Paul, Trench, Trübner & Co., Ltd. These popular re-issues are of "A short history of English printing, 1476-1900," by Henry R. Plomer, and "The binding of books, an essay in the history of gold-tooled bindings," by Herbert P. Horne.

POPE, Mildred, formerly a teacher of English in the Stadium High School in Tacoma, and in one of the Seattle high schools, who completed last June the first year work at the New York State Library School, has been appointed librarian in charge of the Lincoln Park High School Library in Tacoma. During the summer Miss Pope was an assistant in the New York Public Library, and gave up a definite appointment in Albany to assume the Tacoma position.

PRENTICE, Mrs. Amelia, who has been in charge of the Public Library in Newark Valley, N. Y., for the past 21 years, has resigned, her resignation taking effect Nov. 1.

PRICE, Florence, for two years general assistant in the office of the Iowa Library Commission, resigned in September to enter the Wisconsin Library School.

RICE, Paul N., New York State Library School 1912, for the past two years reference assistant in the public catalog room of the New York Public Library, has been made chief of stack for the current year.

ROGERS, Bertha, for six years an assistant in the Public Library of Davenport, Ia., has resigned.

ROTHROCK, Mary U., New York State Library School 1914, has resigned her position as assistant librarian in the Cossitt Library, Memphis, Tenn., to become librarian of the Lawson-McGhee Library at Knoxville, assuming the position Nov. 1.

SHEARER, Mabel, for six years children's librarian at Marshalltown, Ia., has resigned and will enter the Training Class of the Los Angeles Public Library.

SMITH, Belle F., one of the early librarians of the Public Library in Newton, Ia., and author of the poem "If I should die to-night," died recently in California.

SMITH, Harriet, a graduate from the library department of the State University of Washington last June, has received a temporary appointment in the Tacoma Public Library.

SMITH, Louise, who has been librarian at the Lincoln Park High School in Tacoma, has resigned to take a similar position in the Lincoln High School in Seattle.

TAYLOR, William Arthur, borough librarian of Holborn, England, died Aug. 18, at the age of 52.

TOPPING, Elizabeth R., has been appointed librarian of the Public Library at Everett, Wash., succeeding Mary Frank, resigned.

# THE LIBRARY WORLD

## New England

### NEW HAMPSHIRE

The New Hampshire Federation of Women's Clubs has taken the initiative in a splendid movement, by adopting resolutions to promote in every possible way a legislative appropriation in furtherance of the work of the library commission of the state. New Hampshire, the pioneer state of the whole country in the establishment of a public library, is now woefully behind the times in her library methods. In commenting on the action the *Manchester Union* says: "A state appropriation of only \$200 for 200 public libraries—an average of \$1 for each library—is positively ridiculous; particularly when it is known that many of these institutions receive \$50 apiece, annually, in town appropriations. . . . Contemplate the fact that, altho the traveling library system has been in operation in this country no less than 40 years, New Hampshire as a state has not one, and the very few—possibly three or four—which do exist in our state have been established and maintained by the women's clubs! . . . Not only should New Hampshire have an efficient traveling library system, but the permanent libraries in a large number of instances need re-organization. Re-cataloging and classification of books constitute an essential need. Not a few librarians, devotedly giving of their time and energies without pay, would appreciate a bit of real library training by way of encouragement." The federation, at its field meeting in September, urged the appointment of an active state commission of five members, with an appropriation sufficient to make library activity worth their while. Another valuable suggestion—which really amounted to a recommendation—was that of a "state worker" for the libraries.

### NEW HAMPSHIRE

*Hinsdale.* George C. Fisk, one of the town's prominent citizens, has presented a beautiful hall clock to the Public Library. The clock has a beautifully designed pillared case of solid mahogany eight feet in height with panels of plate glass. Delicate scroll work of gold enhances the beauty of the face, above which the varying phases of the moon are designated from day to day. Westminster chimes sound the hour and each quarter.

### MASSACHUSETTS

*Athol.* The plans for the new library, prepared by W. H. & Henry McLean of Boston, have been approved and the contract for its erection given to the Fellows & Duckworth Co., Inc., of Brookline, the contract price being \$14,916. The price does not include the heating contract.

*Boston.* The Public Library lost one of its greatest benefactors in the death of Allen A. Brown on October 2, at the age of 81 years. His memory will live in this city as long as the Public Library endures thru the magnificent gifts which he made that institution during his lifetime. These gifts consisted of a musical collection which he gave the library in 1894—said to be the finest musical collection in the United States—and a dramatic collection which he gave seven years ago, that is in many ways unrivaled. Both of these collections were placed in a magnificent room on the third floor of the library, known as the Allen A. Brown Musical and Dramatic Library. These are among the most valuable gifts ever received by the Boston Public Library, but the original value of the collections has been vastly enhanced by the careful work and oversight that Mr. Brown freely expended on them in the way of arrangement, classification, binding, cataloging, etc., to say nothing of the constant additions he made to both collections.

*Enfield.* The "Sons of Enfield, Mass., From Springfield," who were awarded a silver cup, the prize for the best walking division in the centennial parade on July 4, have presented the cup to the Library Association, to be kept in the library.

*Fitchburg.* The Fitchburg Historical Society has within the past few months received a valuable addition to its library thru the generosity of the Misses Mary L. and Theresa N. Garfield. The gift consists of 975 volumes comprising the historical library of their father, the late James F. D. Garfield, whose constant interest in and great knowledge of historical matters is well known.

*Hyannis.* The plans of the proposed Eagleston Memorial Library were on exhibition in September. The board of trustees and the architect were present to explain the plans.

Mr. John A. Lowe, state agent of the Massachusetts Free Library Commission was present and spoke, as well as a representative of Cram & Ferguson, Boston, architects, for the preservation of colonial architecture. Both favored the retention of the old building. At the end of the meeting an informal vote was taken showing 26 in favor of retaining the old structure on the front of the lot, and 45 against.

*Leverett.* The Field Memorial Library was dedicated Sept. 30. It has been the desire of the donor, Mrs. Judson L. Field, of Chicago, that everything about the library should be homelike, and it is finely realized by the architect, Karl S. Putnam of Northampton. Colonial in style, white with green blinds, it is situated at the crossways, in the corner of an orchard. A cheery fire in the big fireplace opposite the entrance welcomes the visitor, and two settles are invitingly placed on either side of the hearth. The whole lower floor is one room with the hospitable fireplace in the center of one side. Under the mantel is the inscription, "Given in accordance with the wish of Bradford M. Field." The wood is stained a soft dark gray, the walls toned to a soft buff. The shelves, extending around the room, are built into the walls, and are low, so that the books are within easy reach. Reading tables are conveniently placed near the center of the room, and one corner is devoted to the children. A spacious room upstairs is to be used for the preservation and display of articles of historical interest and value.

*Lynn.* A portable building has been erected at 23 Holyoke street to serve as a branch library for people in that section.

*Lynn.* The trustees of the Lynn Public Library have been roundly condemned by the Socialist party of that city for their action in refusing to grant the request of the Lynn Socialist Club that the *New York Call* be kept on file in the public reading room. The condemnatory vote was unanimous.

*Milbury.* Milbury's new library is ready for use. The work of removing the books and equipment from the old rooms in the Town Building to the new quarters was begun late in September. The new library stands upon land on Elm Street given to the town by Miss Delia C. Torrey, aunt of Ex-President William H. Taft. The building cost \$12,500 and the money was given by Carnegie Corporation.

*Wakefield.* The necessity for the removal of the Beebe Town Library from the Town Hall building is recognized, and the purchase of a site for the library has been under consideration for some time. Early in September a popular subscription campaign to raise \$15,000 for the purchase of a suitable site was started, and pledges were taken contingent upon the raising of \$12,000 prior to Oct. 1. On Sept. 30 the pledges had amounted to \$12,041.66, and 1173 contributions had been made.

*Westfield.* The collection of 3000 books left by the late R. B. Robinson to the Westfield Atheneum has just been removed from his residence to the library, and is found to be the finest private collection of books in Westfield. The collection is estimated to be worth \$10,000, and contains many book rarities and fine bindings in cases and cabinets which Mr. Robinson himself fashioned to house his books. The books will be kept for reference purposes only.

*Woburn.* The Public Library trustees have extended the privileges of the public by allowing a patron to take out any reasonable number of works of fiction at one time, with the exception that only one may be a seven-day book. All restrictions were long ago removed from non-fiction books.

#### RHODE ISLAND

*Anthony.* The last report of the Anthony Free Library Association shows that 10,870 volumes were circulated during the year, an increase of 2408 over last year. The library building was recently equipped with a new heating apparatus and new stacks are to be installed shortly.

*Olneyville.* At the annual meeting of the Olneyville Free Library Association early in October, a committee was appointed to confer with officials of the Providence Public Library regarding the advisability of making the Olneyville institution a branch of the Providence Library. This step has been considered before, but after a conference with officials at the Providence Library nothing was done. Now a majority of the active members of the local organization favor the plan and, with the finances in better shape than when the proposition was considered a few years ago, it is likely to be more favorably received. The library now contains 11,358 volumes, and had a circulation of 31,359 last year.

## CONNECTICUT

*Norwich.* Otis L. Imogene A. Cash, lbn. (Rpt.—yr. ending Ag. 31, 1916.) Accessions, 2863; total, 42,921. New registration, 1214; total, 28,941. Circulation, 118,049. Receipts, \$8878.20; expenditures, \$8206.93, including \$3709.29 for salaries and wages, \$2109.36 for books, \$245.19 for periodicals, and \$386.83 for binding.

## Middle Atlantic

## NEW YORK

*Albany.* The Central Y. M. C. A. is planning to install an up-to-date reference library for business men. While the State Library contains much of such material, Samuel Haywood, librarian of the association, believes that the central location of the Y. M. C. A. will make it more convenient for business men to use.

*Carthage.* The cornerstone of the Corcoran Memorial Library was laid Oct. 7, with appropriate exercises, including a number of short addresses touching on the significance of the event to the different elements in the community.

*Endicott.* The Public Library celebrated its first anniversary recently in a novel way. The children in the schools were assigned the library as the subject for their regular compositions, and later several of these compositions were printed in the *Endicott Record*. It is said that they constituted a tribute to the library which might well serve as a campaign document were its adequate support ever threatened.

*Gloversville.* A committee to investigate and report on the feasibility of re-cataloging the books and periodicals in the Gloversville Free Library was named at the October meeting of the board of directors. The committee will report at a meeting of the board on Nov. 14. It is estimated that the work would cost about \$2000 and require three years to complete.

*Ithaca.* Cornell Univ. L. George William Harris, lbn. (now librarian emeritus, succeeded by Willard Austen). (Rpt. 1914-15.) Accessions, 15,615; total, 455,129 volumes and 68,000 pamphlets. Registered uses of the general library included 518 university officers, 618 students, 33 special borrowers, and 74 borrowing libraries. Total recorded use 132,185, including 89,017 volumes in reading rooms and 32,199 for home use. The number of volumes,

pamphlets, and maps cataloged for the general card catalog during the year, was 17,613; for these 15,323 cards were written, and 5453 printed cards were obtained from the Library of Congress, making in all 20,776 cards added to the card catalog. The printed cards of the Petrarch collection was in process of printing during the year, as was also the special catalog of the Runic division of the Icelandic collection. The English collection, given at the close of 1913-14, was classified and accessioned, and was found to contain 3013 volumes. The chief event of the year was Mr. Carnegie's gift of a fire-proof and burglar-proof treasure room for the safer keeping of the most valuable manuscripts and rarest printed books owned by the library.

*New York City.* The report is current in California papers that the famous Huntington collection of rare books, now in this city, is to be removed to Mr. Huntington's home in Southern California, where a special building will be constructed to house the library.

*New York City.* The bulk of the library left by the late Rev. William Jones Seabury is to go to the General Theological Seminary of the Protestant Episcopal Church, his two sons being allowed to choose not more than fifty books. Dr. Seabury left to the seminary the Concordat, a parchment signed by Bishop Seabury, an ancestor of the testator, and three Scottish bishops by whom he was consecrated.

*New York City.* A delegation from the northern part of the Bronx appeared before the sub-committee of the board of estimate on appropriations of funds for the New York Public Library at the city hall Oct. 3. Altho the delegation soon discovered that the meeting was not a public hearing but a committee meeting on the question of funds for library purposes, every courtesy and consideration was shown to the visitors. The views of the city officials, that in the future new public school buildings would be built so that a portion of the structure could be used for library purposes, were explained to the delegation. It was also suggested that an annex might be built to Public School No. 21 at White plains avenue and 225th street for a branch library. The possibility of obtaining space in the Wakefield High School to establish a branch library was presented, and the need of such a branch was emphasized.

*Rome.* At the last quarterly meeting of the Jervis Library Association the enlargement of the stack room, by removing the stair-

case and booklist in the rear, was considered. The question of establishing a branch in East Rome was referred to the library committee to act in conjunction with Miss Stevens, the librarian.

*Syracuse.* "Notable among the recent gifts to the library," says the library's *Bulletin* for September, "is the George K. Collins's military library. This contains the complete file of the reports of the adjutant general of the State of New York, showing the name and address of every man who enlisted in the Union army from the State of New York. It also contains histories of Syracuse and New York State regiments, official lists of soldiers whose remains were buried in National cemeteries, and a unique collection of clippings containing the writings of Moses Summers, editor of the *Syracuse Standard*, who accompanied Sherman on the march to the sea and wrote letters describing that famous foray."

*Yonkers.* The time the library was closed in late August and early September, as a precaution against the spread of infantile paralysis, was a busy time for the library staff. The registration file, which numbered over 43,000 names, had grown too bulky for use, and was carefully revised, leaving active borrowers only. The shelves were carefully gone over and hundreds of books in poor condition were discarded; liberal replacements by new editions and copies were made; the books were thoroly cleaned by the vacuum method, and the entire building was made as fresh and attractive as possible.

#### NEW JERSEY

*Avon.* The cornerstone for the new library building, for which a Carnegie grant of \$5000 was made, was laid Sept. 23. The library, now located in the post office building, has about 1800 volumes.

*Glen Ridge.* Residents of Glen Ridge will vote on a referendum at the coming election on the question of issuing bonds in the amount of \$34,000 for the support of a library offered by Henry S. Chapman.

*Hoboken.* The Public Library has taken charge of the library in the Emerson High School, in West Hoboken, and now administers all libraries and branches in town.

*Leonia.* The Public Library's new rooms in the Darre Building were opened Oct. 3, the first time since quarantine laws were enforced. One week was allowed for the return of the books which were given out when the library was suddenly closed with the coming of the paralysis epidemic.

*Newark.* The will of Vice-Chancellor James E. Howell, who died in Newark on Sept. 26, provides that almost the entire estate is to go to the Newark Free Public Library upon the death of the testator's wife, who is to enjoy the income during life. Mr. Howell was for many years a trustee of the library. The estate is valued at about \$250,000.

*Plainfield P. L.* Florence M. Bowman, lbn. (Rpt.—yr. ending May 31, 1916.) Accessions 2570; total, 54,924. Circulation, 100,320; adult, 75,061; juvenile, 25,259; 64+ per cent. adult fiction; 6066 volumes circulated thru sub-stations, 3136 thru school libraries, 2878 music scores circulated, 2126 from the scientific department, 290 from the department of Americana, 9280 from the duplicate-pay collection, 16,719 Sunday and holiday circulation. Registration, 7040. Receipts, \$15,762.31; expenses, \$13,617.49 (salaries, \$5531.11; books, \$2740.34; periodicals, \$1014.71; binding, \$406.93.) A story hour was instituted during the school year at one of the graded public schools, the story-teller passing from one class room to another and telling a story suited to the children of the respective grade. The teacher, in turn, utilized the story told in connection with the English work.

#### PENNSYLVANIA

*Pottsville P. L.* Flora B. Roberts, lbn. (Rpt.—yr. ending July 1, 1916.) Accessions, 1329; withdrawals, 674; total in library, 11,186. New registration, 1341; total, 6720; population, 22,000. Circulation, 90,365. Receipts, \$6922.81; expenditures, \$6199.68, including \$985.00 for books, \$126.12 for periodicals, \$272.10 for binding, and \$2665.33 for library salaries.

#### DISTRICT OF COLUMBIA

*Washington.* The library of the Georgetown University Law School has received a gift of about 1000 volumes, the law library of the late J. Nota McGill, who was professor of patent law at the school for many years. The library now contains about 7000 volumes. Coincident with the announcement of the gift, Dean Hamilton announced the appointment of four assistant librarians for the year. They are Thomas E. Allison of Washington, D. C.; Robert M. McGauley of Massachusetts, Edward T. Hogan of Rhode Island and Robert E. J. Whalen of Massachusetts. Mr. Allison is private secretary to Chief Justice Shepard of the Court of Appeals and lecturer emeritus on constitutional law. He was formerly librarian of the Bar Association of the District of Columbia. Mr. McGauley was winner of the final prize debate last year. Mr. Hogan

and Mr. Whalen are prominent in class affairs and active in the debating society. All four are honor men in their classes.

## The South

### KENTUCKY

*Carlisle.* The Public Library of Carlisle was opened Oct. 2. The library was started by the Woman's Club of this city. A mass-meeting was held Sept. 29, in the interest of the library, at which time Miss Rawson, of Frankfort, secretary of the State Library Commission, delivered an address.

*Louisville.* Following the success achieved by the libraries installed last year in the Boys' and Girls' High Schools, the Board of Education and the Louisville Free Public Library trustees have installed a library in the Normal School on East Broadway, with Emma J. Shriner as librarian. Under the plans by which the school libraries are operated, teachers or pupils may call for any books in the Main Library and have them delivered at the school libraries on the same cards and under the same conditions enforced at the Main Library. At the Boys' High School Library for 5 months last year 3441 books were circulated and 3642 reference topics were looked up. At the Girls' High School branch 3226 books were circulated and 5120 references were looked up.

### TENNESSEE

*Knoxville.* The new Lawson-McGhee Library is nearing completion, and with the opening of the new building the municipality will assume its maintenance. Henceforth the library, which has hitherto been a subscription library, will be made free to the public. Miss Mary U. Rothrock, the new librarian, will assume her new duties about Nov. 1, and the library will be opened for the public as soon as possible after the work of transferring the books, catalogs, etc., from the old building to the new has been accomplished, possibly about Nov. 15.

## The Central West

### OHIO

*Cincinnati.* The Van Wormer Library of the University of Cincinnati, erected in 1900, now contains about 75,000 volumes and 10,000 pamphlets. In the reference room about 2000 volumes are arranged on open shelves, to which the students have free access. The periodical room contains the current numbers of 400 periodicals. The library is provided

with a card catalog of its own books and also with a card catalog of the books (non-fiction) received since 1905 by the Public Library of Cincinnati. The Historical and Philosophical Society of Ohio has space for its collection of books, pamphlets and other articles in the building.

*Cleveland P. L.* William H. Brett, lib. (Rpt.—1915.) Accessions, 57,642; withdrawals, 31,283; total in library, 542,992. New registration, 37,521; total, 171,610 (population, 639,431). Circulation, 3,173,783 (fiction, 1,439,543). Receipts, \$548,728.59; expenditures, \$405,714.11, including \$35,619.34 for books, \$8312.91 for periodicals, and \$190,419.95 for salaries for library service. The library has 606 agencies for the distribution of books, consisting of 42 branches besides the Central Library, 44 deposit stations, 66 delivery stations, Library for the Blind, Municipal Reference Library, 420 class-room libraries, and 28 home libraries. An important gift of the year was the John G. White collection of folklore. A catalog of this collection was started, and also of the music in the library. Circulation in the Library for the Blind increased from 1932 to 3893, or over 100 per cent. The library and the Cleveland Museum of Art have begun co-operation in the matter of placing before children in the libraries materials loaned from the museum. The material used was chiefly Assyrian tables, weapons, ornaments and basketry from Central Africa, and lace. Interesting notes on the work of the several school libraries are included in the report, and all the illustrations are of school libraries.

*Hamilton.* Lane Public Library's semi-centennial is to be observed in the near future. The celebration will be in connection with the completion of the new addition to the building. It is planned to have a public "open house" when Hamilton citizens will be invited to visit the library and see its growth and development in the 51 years of its existence. Exhibits illustrating this growth are being arranged. Lane Public Library was founded by Clark Lane and opened to the public Oct. 20, 1865, just 51 years ago.

*Oberlin.* The class of 1891, which held its twenty-fifth anniversary at the last commencement exercises, will purchase the Gay Stevens Collender Library, which consists of 2500 volumes on economics, history, sociology, and biology, and place it in the Carnegie Library here. The price of the gift is \$1800. The library was formerly owned by Prof. G. S.

Collender of Yale, an Oberlin alumnus of the class of 1891.

*Toledo.* This city has been chosen as the place for the next convention of the Ohio Library Association.

*Toledo.* Contracts for construction of two of the five Carnegie branch libraries were let Sept. 30 by the library trustees. Those awarded were for the buildings at Greenwood and South Main street, East Side, and at Dorr and Fender streets. Bids have been received for the branch at Galena and Superior streets, North Toledo, and the contract will be let as soon as the city planning commission approve the plans. Ground will be broken and construction started on these branches at once. The East Side building will be under the supervision of M. M. Stophlet, architect, and the Dorr street building will be supervised by Bernard Becker, architect. Bids for the South Side and Collingwood branches will be received within a few weeks.

*Wellsville.* After making various changes in the original plans for the new library building, to conform with the requirements of the state and of the Carnegie Corporation, which has made a grant of \$10,000 for the building, it is hoped that work can soon be begun. The library when built will occupy a site on the corner of Ninth and Main Streets, a portion of the old Reilly estate, which was obtained by the city.

#### ILLINOIS

*Chicago.* A new home for the John Crerar Library will come into existence two years from now if present plans are consummated. The matter was brought up at a meeting of the board of trustees in September when plans for the structure were submitted by Holabird & Roche.

### The Northwest

#### WISCONSIN

*Milwaukee.* Contracts have been let and work will soon be under way on the erection of the Carnegie Library, Tenth and Minnesota Avenues, South Milwaukee. According to Architects Charlton & Kuenzli, who drew the plans, the building will be ready for occupancy by next spring. The cost will be \$13,000. The structure will measure 34 x 66 feet, and will be of solid brick construction with mission brick facing. The roof will be either tile or asbestos shingle. The architecture is a modified Italian Renaissance. The first floor will contain a large general reading room, a children's reading room, a coat room and the

librarian's office. The basement will contain an assembly room with a seating capacity of 150, a small picture booth equipped with machine for showing moving pictures, a committee room and a workroom. A feature of the building will be the large fireplace in the children's room.

#### IOWA

*Central City.* Several years ago J. C. Clegg, of New York city, established a small library here, and gave the rental of 40 acres of land near the town for its support. After his death the land was sold and with the proceeds a new building, one story and basement, 24 x 40 feet, has been erected on a site given by B. G. Henderson. Miss Fannie Porter continues to act as librarian.

*Eagle Grove.* The Library Committee of the Woman's Club collected and sold four tons of old paper and with part of the proceeds a bubbling fountain was placed in the library. It is hoped that the balance and the sale of more paper may yield a sum sufficient to purchase one of the colored panels of the Abbey pictures from the Boston Public Library.

*Hampton.* The Library Club has presented the library with a victrola which has been placed in the club room and will be used for story hours and for recreational purposes at hours when it will not disturb readers in the library.

#### MONTANA

*Butte.* During the year seven sets of views on Montana subjects making 224 views in all, have been added to the collection of stereopticon views in the children's branch. They show Butte mines, Glacier Park, Montana Indians, Montana miscellany, Morrison cave, wild buffaloes and Yellowstone Park, and were prepared by a Butte citizen, Mr. Forsythe, who is doing a real service to educational work by seeing that they are introduced in schools and libraries all over the Northwest.

### The Southwest

#### MISSOURI

*St. Louis.* The Public Library had an exhibit in the grandstand of the St. Louis Agriculture Fair, Oct. 2-7, inclusive. Books were issued from the booth in the regular way, and there was a story-hour for adults scheduled every day at 4 o'clock p. m.

#### KANSAS

*Garden City.* The contract for the construction of the new Carnegie building has been let to the Sharp Bros. Construction Company of El Dorado, Kan. The building is to be one story with a basement, 34 x 50 feet,

built of gray pressed brick with stone trimmings. Work will begin at once and be pushed to as early completion as possible. The site for the building was donated to the city by George W. Finnup. It is at the north end of Main street, and only two blocks from the business end of the street.

*Kansas City P. L.* Sara Judd Greenman, lbn. (Rpt.—yr. ending Je. 30, 1916.) Accessions 2857; withdrawals 919; total 27,434. Circulation 151,446. The notable event of the year was the gift of \$25,000 from the Carnegie Corporation for a building in Argentine, a suburb. This building is going forward rapidly, and the plan is to finish it by the first of November.

#### TEXAS

*El Paso.* The El Paso Public Library opened its deposit stations the first week in October. Three distributing centers where books may be secured and exchanged from 2:30 until 5:30 p. m. are in operation from October until June.

### The Pacific Coast

#### WASHINGTON

*Hillyard.* Efforts to establish a public library in Hillyard are being made by Professor Roy Lipscomb, principal of Hillyard High School, with the aid of the students. The school library now consists of 2000 volumes, but needs more. Two hundred volumes will be added this year. It is now proposed to open this library to the public for one or two days a week and to loan books to the public under conditions similar to those governing the city libraries. In return for the privileges it is proposed to grant the public, voluntary donations are requested, either of books or money. Standard magazines also are desired. They will be bound by the students and kept on file. Donations will be accepted at the high school, or messengers will be sent for books or donations.

*Tacoma.* The trustees of the Tacoma Public Library have under consideration the question of discontinuing the apprentice class which has heretofore been held in the fall of those years when a waiting list of persons eligible to appointment to the less responsible positions on the staff has been needed. If the apprentice class is discontinued the trustees plan to raise the minimum salary to such a point that they may rely upon the University of Washington's Library Department to supply assistants from its Library School.

#### OREGON

*Pendleton.* As a tribute to the memory of Samuel P. Sturgis, benefactor and founder of the Pendleton Public Library, a bronze plaque now rests in the library, a gift from a number of his former business associates and friends. The plaque was designed by Folger Johnson, of Portland, who drew the plans for the new library.

*Spokane P. L.* George W. Fuller, lbn. (Rpt.—1915.) Accessions 4439; lost or withdrawn 1201; total 68,118. New registration 8848; total 39,360 (population 104,402). Circulation 376,902, a drop from 404,923 in 1915. Receipts \$48,803.74; expenditures \$45,639.86, including \$4443.16 for books, \$1673.38 for periodicals, \$1896.06 for binding, and \$19,991.45 for staff salaries. The total number of agencies is 215—the Central Library, 3 branches in separate buildings, 4 stations in separate rented stores but open only 2 days a week, box libraries in juvenile detention rooms, Crittenden home, etc., and in 203 classrooms (total box collections, 207). Six reasons for the drop in circulation are given: small purchases of books, inadequate staff, morning closing the first ten months of the year, closing of two stations, inadequate delivery system between main library and branches, and inadequate stock of books in branches. These were all the results of an insufficient appropriation. The year 1915 was the fourth year in which the library appropriation was \$40,000. In the first three years of this period the work of the library almost doubled, the staff increased from 17 to 34, and the branch system was developed, with three new buildings, four stores and two smaller stations. With the increase in work and service came a corresponding decrease in ability to buy books. When it was clear that no additional book money could be expected for 1915, the board found the \$5000 that was urgently demanded for book purchases by reducing the staff and then cutting the hours of opening to the extent required by the loss of attendants. The salary scale adopted in 1914 was also suspended.

#### CALIFORNIA

*Chico.* As evidence of his interest in the recently organized movement to secure a Carnegie library for this town, W. C. Lewis, local real estate dealer and resident of Chico Vecino, has offered to the residents of his district a site for the proposed building. The property is situated at the corner of Third avenue and Arcadian street, a place which is centrally located as regards population.

## CALIFORNIA

*Los Angeles.* A plan to exchange the city's Temple Block property for the water department's property at the southwest corner of Olive and Fifth streets, in order that the latter site may be reserved for the proposed \$3,000,000 public library fathomed by the library board, was laid before the city council in September. Recently a special committee representing the Library Board and the City Planning Association appeared before the Public Service Commission and urged the latter not to erect an office building on the Fifth and Olive street property. The Public Service Commission authorized its special committee to co-operate with the special committee from the Library Board on the matter.

*Los Angeles.* Formal dedication of the \$35,000 Carnegie Northeast branch library, Workman street and Avenue 26, was made Oct. 5. Miss Zita G. Bailey, branch librarian, presided at the ceremonies. Everett R. Perry, librarian of the Los Angeles Library, Mrs. M. E. Johnson and Charles F. Lummis were among the speakers. The library is constructed as a quadrant and claims to be the only structure of its kind in the United States.

*Los Angeles.* At a meeting of the executive committee of the California Library Association held in September, the Hollywood Hotel was chosen as the place for the annual meeting next year.

*Rialto.* The Women's Club has leased the Winslow building on Riverside Avenue for a year and the library has been moved into the new quarters. One part of the building is fitted up for the club room where all the regular meetings of the club will be held while the front part will be reserved for the library.

## Canada

## ONTARIO

*Hamilton.* The secretary of the library board is authorized to solicit options on property in the east and west district of the city, with frontage not less than 100 feet, to be used for library purposes.

*Toronto.* A valuable collection of maps and plans of the town of York from 1792-1834, and of Toronto from 1834-1916 has been made to the Toronto Public Library by John Ross Robertson, of the *Toronto Telegram*. The collection also includes maps and plans from 1788, in which year a plan for the proposed city of 1792 was made by a military engineer.

## MANITOBA

*Winnipeg P. L.* J. H. McCarthy, lbn. (10th ann. rpt.—1915.) New books cataloged 36,971; pamphlets 1200; books discarded 13,488; total in library 124,460. Circulation 856,564; total use 951,054. New registration 12,385. The library use showed a gain of 42%, largely due to the opening of two branch library buildings in June. Six more schools, making 20 in all, have received school libraries. Small libraries, suitable for the use of the soldiers mobilized in Winnipeg, were put in use at the soldiers' recreation rooms in Broadway Methodist Church, in the Minto Barracks, and at the old Agricultural College buildings. Small traveling libraries of twenty-five books were also supplied to each of the six divisional headquarters of the Greater Winnipeg Water District.

## SASKATCHEWAN

*North Battleford.* A new \$18,000 library building is to be erected here.

## Foreign

## GREAT BRITAIN

The *Library Assistant* for April, 1916, contained a valuable article by Beryl Gill on the progress of the public library movement on the south coast of England. Historical data and information about various special collections are given for the libraries in Brighton, Portsmouth, Hastings, Hove, Worthington, Eastbourne, Lewes, Cuckfield, Littlehampton, and Winchester. The library movement in the south of England has been of slower growth than in the great industrial centers, or in the northern counties, a fact which is probably due to the scattering of population in small towns. Even in the larger Surrey towns, public libraries are rare, while in Hampshire and Sussex they are to be found chiefly in the larger pleasure resorts of the coast.

*Aberystwyth.* An anonymous gift of £5000 has been received by the National Library of Wales.

*Brecon.* The town council has decided to postpone the erection of a library building until the war is over. The Carnegie Trustees had promised £5000 for a building and a site had been purchased at a cost of £1500, raised by subscriptions and by a mortgage on the site. A bequest of £1000 made to the library, to be used either in payment of the mortgage or for general library purposes, has failed because of the recent resolution of the council not to accept the Carnegie grant.

# LIBRARY WORK

Notes of developments in all branches of library activity, particularly as shown in current library literature

ADMINISTRATION. See High school libraries—Administration

BOOKSELLERS AND BOOKSELLING—RELATIONS WITH LIBRARIANS

Librarian and bookseller—comparison and co-operation. Matthew S. Dudgeon. *Pub. Weekly*, My. 27, 1916. p. 1741-1745.

In considering the suggestion that libraries might take orders for books in certain communities, Mr. Dudgeon would limit this function to libraries in communities which have no bookstores, and further, that the orders when taken should be for books at the regular price and should be referred to regular book dealers for filling. The librarian should not handle books for the purpose of retaining a percentage for herself or for her library.

The American book-trade to-day suffers from an insufficient market. "If the average man is addicted to the reading habit (and we find that the reading habit, once established is harder to break than the drinking habit), if he is perpetually book hungry, he is every day and hour of his life a potential and a probable buyer of a book. The trouble is that the average person is not a reader."

Mr. Dudgeon here gave some astonishing results of a house to house canvass in a certain rural district, where not one adult had read a book in the entire year. Great commercial enterprises have been built up by means of broad co-operative impersonal campaigns. Why does not the book-trade profit from their example?

"The old-fashioned librarian has passed out of existence. The new style librarian is not so much interested in the man who comes and wants a book, as he is in the man who doesn't even know that a book is of any use. . . . In other words, it is a librarian's chief function to make a reader out of every man within his reach; to give him an understanding of books; to teach him that there is a book which he ought to have; to tell him what that book is, and to put it into his hands. The most important thing which the librarian does is to transform a non-reader into a reader.

"In Wisconsin there are about forty bookstores. On the other hand, there are one hundred and eighty public libraries in the state. In each of these one hundred and eighty libraries there are employed an aver-

age of three or four persons. In other words, there are at least seven hundred persons in library work in Wisconsin, whose business it is to talk books; to discuss books; to handle books; to show books; to advertise books and to teach people the use of books."

The work of the public libraries in Madison and Chicago, as well as that of the traveling libraries of Wisconsin, was here described, with some statistical detail.

"The librarian is constantly co-operating with the bookseller in making it possible to sell a better grade of books, and there ought to be some way by which a list of the books which are pre-eminently the best books of the various publishers and which are also good sellers, might be published and given publicity similar to that which is given the list of best sellers. . . . Librarians all over the country would co-operate in boosting the sale of these best books."

Considering the possibility of training booksellers, Mr. Dudgeon said in closing:

"We have found that an untrained person cannot be a librarian. We have found that a librarian must know books. Without an intimate knowledge and sympathy with books she cannot buy books; she cannot talk books; she cannot persuade people that they need books; she cannot persuade them to leave her place of business with books under their arms. We find it necessary to carefully train a public librarian in order to make her competent to loan a book; to persuade a person to take a book which costs nothing. Is it not possible that the book-trade will find it profitable to train people to perform the much more difficult task of persuading people to part with money in order to carry away a book?"

BOOKSELLERS AND BOOKSELLING. See Libraries—As booksellers

BOTANY AND PHARMACY LIBRARY

The Lloyd Library of Cincinnati, established and maintained by John Uri Lloyd and C. G. Lloyd, is a legally incorporated company and provision has been made for its indefinite continuance as a live institution in Cincinnati. The library is devoted principally to botany and pharmacy. It contained at the last count 86,058 bound volumes and probably as many pamphlets. It is said that on the subject of botany there are but two libraries that will com-

pare with it, viz., the library at Kew Gardens and that of the British Museum, London. The Lloyd Library has recently enlarged its scope and taken up entomology, ornithology and allied branches of natural history.

BUILDINGS, LIBRARY. See Floors; Lighting

CHILDREN, WORK FOR. See Clubs; Good Book Week; Instruction in use of libraries—Of children

CLASSIFICATION. See Photographs—Care of CLUBS

"An interesting and successful experiment was made at the Girls' Friendly Club, and we hope to repeat it at some other place," writes the assistant in charge of one of the Cleveland Library's stations. "At the suggestion of the head of the Popular Library, Main Library, folders advertising many different trips both at home and abroad, were obtained and taken to the club and the girls invited to join our travel party. After much discussion a trip to California was chosen. The trip was carefully gone over and stop-over cities picked out. Before the next meeting, books and magazine articles on the first cities to be visited were sent to the club, and looked over by the girls. At the second meeting, we visited all the principal points of interest in the first stop-over cities and the country between. The entire trip was covered in this way. The Panama-Pacific Exposition was thoroly discussed and enjoyed. Some fiction which had its scenes laid in and around the part of the country covered was read. The club supervisor says in a letter written a little later, 'There were altogether 20 books of travel, two novels, and three magazines read during the four weeks' trip. Three of the girls had never read a travel book before and I think this result is most gratifying.'

FILING. See Photographs—Care of

FINANCE, LIBRARY. See Taxation for libraries

FINANCIAL LIBRARIES

In her last report, presented before the American Bankers Association, Miss Marian R. Glenn, librarian, said that the original book collection of less than 400 volumes had been increased to nearly 3000, of which only about 700 have been purchased. Where there were only a few unused magazines 5 years ago, there is now a row of vertical filing cases containing nearly 40,000 articles, addresses, pamphlets, pictures and clippings, mounted and classified according to the hun-

dreds of financial subjects which they cover. Information which, five years ago, was unavailable to bankers except at great expense of time and money is now easily supplied from the more than 30,000 card index entries which have been made to periodicals, books, reports and proceedings. Miss Glenn suggested for the consideration of the incoming library committee, the problem of how the library shall acquire that background of previous American experience in money and banking which it should possess, or to which it should have access, if it is to fulfill its function as the representative American financial library. There are several important private collections which will eventually be available for purchase, and which properly belong at association headquarters. Financial provision should be made which will secure an option upon at least one of these collections or permit the purchase of portions of other collections as they come into the market.

FLOORS

The Springfield *Republican* for Oct. 3 records the satisfactory results obtained from the special floor laid in the central library building at the time of its erection.

"When the new City Library was built, five years ago," says the *Republican*, "an experiment in one detail of construction was made that attracted wide-spread attention. This consisted of mixing sawdust in the top layer of cement on the floors for a thickness of about an inch so that the cork carpet or linoleum floor covering could be nailed direct to the cement. Ordinary cement is too hard to permit nails to penetrate, but by the admixture of a due proportion of sawdust, nails or brads may be driven in and will hold. After various trials the proportions of one part cement and two parts of sand and three-quarters part of sawdust were found best, the object being to make the resulting material as hard as possible and at the same time permit the penetration of ordinary nails. If too much sawdust is used the cement is unduly absorbent and is liable to crumble.

"Notices of this experiment appeared in some of the building and engineering magazines and as a result inquiries have been received at the library from time to time from all over the world—the latest inquiry came last week from Australia.

"The period of nearly five years' use has now offered a fair test of the sawdust cement. On the whole it has been satisfactory. There is one small place where the nails have not held well and the cement has shown a

slight tendency to crumble. This was probably due to too large a proportion of sawdust at this particular point. Elsewhere thruout the building, however, the nails have held and the result has been good. Cement is apt to absorb water which runs down the seams in the cork carpet when the floors are mopped, and the sawdust perhaps increases this tendency. It seems probable that a coat of water-proof paint on the cement before the cork carpet was laid would be an improvement."

#### GOOD BOOK WEEK

The Library Commission of the Boy Scouts of America has been distributing a leaflet describing Good Book Week. Besides telling what is meant by Good Book Week, the leaflet gives definite suggestions as to how libraries, schools and other organizations can help. To the libraries it says:

*Hold Book Exhibits. Distribute Book Lists.* Some librarians co-operate with local booksellers in publishing a list.

*Promote Publicity Plans.* Have a Library Day or Week. Mention plans for "Good Book Week" in Monthly Bulletin. Newspaper publicity—editorials, news stories and lists of books. Posters.

*Interest Women's Organizations.* See that the subject of "Books for Christmas for the Children" is discussed at either the November or December meeting, and whenever possible provide speakers.

*Have Churches Help.* Sermons on the importance of children's reading. Have "Good Book Week" mentioned on calendar.

*Co-operate with Bookstores.* Window displays, special exhibit of books approved by library. Posters. Advertising—have bookstores furnish cut of poster, "Watch Your Step" for newspaper advertising.

During the holiday season, some libraries have arranged with bookstores to let an assistant act in their stores as advisers both to clerks and customers.

and may be secured upon request to the Library Commission, Boy Scouts of America, 200 Fifth Avenue, New York City.

#### HIGH SCHOOL LIBRARIES—ADMINISTRATION OF

After two years of experimenting with the joint administration of the high school libraries by the school board and the library board in Tacoma, during which time the supervisory relation of the Public Library had been under the direction of the head of the central lending department, the trustees of the Public Library have voted to place the high school libraries, for the coming year at least, under the general supervision of the assistant librarian, attaching them to no department of the public library. It was originally planned to open one of these high school libraries, at least, to the public as a community branch, but an unexpected cut in appropriations prevented such development. The trustees now feel that, without committing themselves on the much-debated question of whether or not high school libraries should be opened as community branches, this should not be done until the high school library has reached a high degree of perfection in what will always be its primary field, that is, service to teachers and pupils of the school.

#### HOSPITAL LIBRARIES

Libraries and their management in state hospitals. Miriam E. Carey. 4-page reprint from *The Modern Hospital*, D., 1915. Vol. V, no. 6.

The hospital library, as other libraries, needs organization and system before its collection of books becomes a library and each library needs a responsible human being to keep it going. Iowa, Nebraska and Minnesota have adopted the supervisor system in their state hospitals. The supervisor organizes each library, brings it into line with public libraries, then turns over the daily administration of it to some resident of the institution but keeps in close touch with the local librarian and returns at intervals to assist in all extra work. The library is seldom recognized as a separate department and for that reason it is often better to select a patient to take charge of the library than to add its care to the other duties of some one on the hospital staff to whom the work does not appeal and who considers it just that much more than his share of the day's toil.

"The chief object of a library in a hospital is recreation, but certain ethical considerations govern the selection of books and administration of the library in hospitals for children,

## GOOD BOOK WEEK

FOR YOUR CHILDREN.

Posters like the illustration have already been distributed to libraries and bookstores,

the tubercular and the inebriate." The Minnesota State Hospital for the Insane, at St. Peter, is carried on by one of the patients in a large, well-lighted room in the administration building and is easily accessible from any section of the hospital. The state hospital for crippled children near St. Paul has a children's library, where one of the teachers of the institution is librarian. The library in the Orthopedic Hospital, at Lincoln, Neb., is in charge of one of the permanent residents, a cripple, who has taken a librarian's course of training and who carries on the work with much spirit and success. In the State Sanatorium of Minnesota the library is recognized as a distinct department and employs one of the patients to carry it on. Both in Iowa and Minnesota libraries in the state hospitals for inebriates are considered valuable for their diversional qualities, but books on alcoholism, self-control, and general literature have also been in demand.

The value of periodicals in hospitals is unquestioned; they are portable, cheap, comparatively durable and of unchanging value. To overcome the difficulty in keeping magazines circulating the following plan is being worked at Mount Pleasant, Ia. The magazines are covered with stout manila paper and on the cover is pasted a slip of paper with the numbers or names of wards and cottages which are to receive them. When the magazines are sent out the slip is checked accordingly. A certain guidance is thus given the circulation which follows the lines indicated by the slips on the covers.

On Saturdays attendants bring to the library all the magazines on the wards and are given new ones in exchange. After library hours the returned magazines are sorted; those in good condition are issued the following week and the worn numbers are collected for use on the back wards. In this way every ward receives a certain quota of fresh periodicals every week—the newest issues, the best of the older ones, and the partly worn are all kept moving.

In Nebraska the state library commission expends the appropriation for libraries in institutions; they are able to buy most advantageously and to get single books on request. The same "budget system" might to advantage be applied to any group of libraries having one executive officer.

#### INSTRUCTION IN USE OF LIBRARIES—OF CHILDREN

Methods of training children to use the library intelligently. Alice I. Hazeltine. *Pub. Libs.*, Ap., 1916. p. 160-162.

Departmental organization in the elementary schools is increasing the reference use of juvenile book collections. A greater number of titles are being used to answer school questions. It is, therefore, more nearly possible than ever before to stimulate and encourage intelligent and independent use of the library on the part of children. The present discussion is Why, and When, and How.

The obvious answer to the first is "efficiency." The definite training gives a child a knowledge of the library and its resources, the make-up of the books, and the value of reference books. It is also of use to the child in gaining his school education, and in training him to be an intelligent adult user when school days are over, but its chief value is in the development of independence in methods of work and habits of thought.

As to when the training should be given, Miss Hazeltine believes that school and library should share in it. She believes the teacher should give instruction in the use of individual books, and that the librarian should explain their arrangement on the shelves and how they may be found thru by using the catalog. The best place to learn to use the library is in the library itself.

In the Carondelet branch, St. Louis, the librarian has prepared a suggestive program for eight lessons in reference work, to follow an introductory talk. In the Divoll branch, three classes came with their teachers for two 45-minute periods. The first talk covered classification, location of books on the shelves, and use of the catalog. The second was on the use of index and table of contents, and the value and proper use of a few well-known reference books. After the explanations, the children entered with zest into the game of finding answers to questions distributed to them. Opinions on the advisability of this sort of instruction range from a preference for definite and systematic teaching to a protest against formal methods of any kind.

"The September [1915] number of the *Educational Review* contains an interesting article by W. H. Sanders of the State Normal School, La Crosse, Wis., on the high school student and the dictionary. Eleven questions were given to 125 representative high school graduates from 40 different high schools. Fifty minutes were allowed for the test. The summary of results shows that 27 students made a grade below 20 per cent. while only one out of 125 made 50 per cent. Mr. Sanders says, in comment, 'It was interesting to note in connection with this question that those who recorded themselves as not having been taught the resources and use of the dictionary made

equally as good grades as those who had been instructed in the dictionary.' Altho this happens to refer to instruction given in schools and not in the library, it may be well for us to remember it when we are explaining the use of this 'universal reference book.'

"Perhaps the wisest way to meet this problem is to endeavor to arouse interest in the subject in every way possible, to enlist the teacher's co-operation in teaching the use of reference books, to make use of group work as naturally and as informally as possible, and above all, never to lose sight of the individual child."

**LIBRARIES—AS BOOKSELLERS**

Libraries as bookstores and bookstores as libraries. May Massee. *Pub. Weekly*, My. 27, 1916. p. 1737-1741 (including discussion of the paper).

Miss Massee read this paper at the meeting of the American Booksellers' Association in Chicago in May. In it she pointed out the similarity in aim and achievement of booksellers and librarians. Both must be up to date; both reflect the life of the community; both cater to every interest, whether public or individual, in the community; both display their wares where all may see; both know their books and the people they serve; both have various means of approach to interest the public; both aim to develop in their respective institutions an individuality which is the best they and each member of their staff can contribute to this common service. So does each in his own way reflect the life of the community to the end that it may distribute books which the individual pays for, either directly with money or indirectly with taxes.

"To develop such a bookstore requires rare intelligence and sympathy, a large capital and numerous book-buyers so that the capital may be turned over often enough to insure profit on the investment. For this we must presuppose a large community and perforce the small community must go without the ideal bookstore. But there are thruout this country in small communities hundreds, yes thousands, of potential bookstores, all under the charge of persons who know people, know books, know trade tools and how to use them, all provided with well selected stocks of live books, all subsidized by the public moneys—

the public libraries. Why not use these centers of distribution already created?

"Libraries and booksellers have raised three general objections to the idea. First, that it would commercialize the public library which must be free to all the people! Second, that it would interfere with the trade of the general dealer in a small town, who now keeps a small stock of books as merchandise. Third, if it were started in the small town it could not be kept out of the large town or the city where the established bookseller has difficulty in making both ends meet, as it is."

The library of to-day is already a commercial proposition. If it does not give adequate returns in circulation and other service for the money invested it is a failure.

"The dealer in the small town, e.g., the druggist who now merchandises books and magazines, need not feel that his trade will be disturbed, for the library will sell books which he does not know; which he cannot afford to stock; and it will have as customers the occasional buyers who would never be attracted by the ordinary stock.

"For the bookseller who now serves the town at long range I must quote from two of the papers of your last convention:

"'Anyone who is selling books by any legitimate method . . . is serving the public and building up the book business to the benefit of all booksellers,' and again,

"'We are all working to keep on educating the public in the buying of books, and every book sold, no matter in what part of the country, is that much of a gain for the entire bookselling fraternity.'"

**LIBRARIES—SCOPE AND PURPOSE OF**

The ideal public library from the ratepayer's point of view. Wilfrid Hynes. *Lib. World*, S., 1916. p. 64-69.

"The library reader likes freedom and dislikes restriction, since it needs no special knowledge to observe these; he respects literary merit in the library publications, and a tone of culture and education in the members of the staff; and as a ratepayer, he expects sympathetic attention when he states his wants. But above all these things it must be remembered that the usefulness of the library must be the foremost consideration, for if the reader does not find it of use, he will not use the library. His ideal, then, is a library in which the thousand-and-one little inconveniences of most public libraries do not exist. A good catalog will be his evidence that it contains an excellent collection of books, and since he is able actually to handle

the books at the shelves, he will see how usefully and systematically they are arranged. When the catalog and his examination of the shelves fail him, he will be able to enlist the services of a well-informed assistant, who will give him the best the books are capable of. The readers who use neither lending nor reference departments will have the satisfaction of seeing in the reading-rooms their own professional periodicals (in numbers proportionate to the demand) as well as the best literary journals, and the lighter magazines which help in the recreative side of library work.

"When the ratepayer finds all these desirable things in his library his goodwill will be assured, and his public support of more generous legislation will naturally follow. . . . The library millenium will indeed have come—when the ratepayer finds all these desirable things."

#### LIGHTING

The *South Dakota Library Bulletin* for June notes an article in the *Brookings Register* reporting a remarkable saving which the library in Brookings has been able to secure by the use of the new nitrogen electric light globes. The cost of the change from Tungsten to the new lights was \$10.40. The light bill for November and December, before the change, was \$24.48 and for January and February, under the new system, \$8.60, altho more light was used during the latter months.

#### INDEXES—POETRY

Referring to an inquiry in the *LIBRARY JOURNAL* for June, 1916, it should be said that the Pratt Institute Free Library has for many years made a practice of indexing individual poems.

The number of entries is now approximately 17,500. Entries are made under title and first line and refer to the author's name and the collection or collections in which the poem may be found. To a certain extent this index covers the same ground as Granger, as it was begun some years before that useful tool appeared, and the same collections, in many cases, approved themselves to both. In the interval since that time there has, of course, been no duplication.

Lack of time has prevented making the work exhaustive and has limited the choice of books to miscellaneous collections, such as Thompson's "Humbler poets" and similar compilations, and in a few cases to the works of a popular poet, such as James Whitcomb Riley or Eugene Field, whose works appeared at first only in small collections, all of which,

for lack of some such clue, might have to be examined before a desired poem could be found.

No systematic attempt has been made to index magazine verse.

There can be no doubt of the usefulness of such an index, and all library workers will give the heartiest welcome to the promised new edition of Granger when it shall appear.

PHARMACEUTICAL LIBRARY. See Botany and pharmacy library

#### PHOTOGRAPHS—CARE OF

Classification and filing of photographs. Charles W. Stokes. *Printers' Ink*, Ag. 3, 1916. p. 82-86.

This is an account of the rearrangement of a collection of about 3000 photographs belonging to the advertising department of a Canadian railroad. The photographs had been numbered consecutively and pasted into 23 albums of assorted sizes, but with no attempt at arrangement. Deciding that a modification of the decimal classification could be adapted to this collection, Mr. Stokes began work by selecting all the pictures showing agricultural scenes for which he worked out the following scheme:

1. Agricultural.
  11. Crop farming.
    111. Plowing, breaking, etc.
    112. Reaping.
    113. Threshing.
    114. Crops in the fields.
      1141. Wheat.
      1142. Oats.
      1143. Barley.
      1144. Flax.
      1145. Rye.
      1146. Fodder crops and grasses.
      1147. Garden truck.
  12. Stock farming.
    121. Cattle.
    122. Horses.
    123. Sheep.
    124. Swine.
    125. Poultry.

Having succeeded with this group, the rest of the collection was relatively easy to handle. Class 5, Scenery, necessitated a departure from strict rules, and the first subdivisions were made to correspond with the seven divisions of the operating department. Then it was found that 56 (Rocky mountain views) had 900 pictures, and a further subdivision was made by selecting stations or other arbitrarily chosen landmarks, and making them the second subdivision, 561 being from the first landmark to the second, etc. In the classification of cities and towns an alphabetical element was introduced, and if there were pictures of two or more towns beginning with A they were divided into 6A1, 6A2, and so on.

The collection was remounted on 12 x 20 manila sheets, arranged for a loose-leaf system. A page of this size will take two 8 x 10, four 5 x 7, or eight 5 x 3 prints without crowding. The negatives of two-thirds of the collection are in the office; prints of the rest can be secured outside.

"Each print when received is entered in a stock register by title, given the next consecutive number, and pasted into the proper place in the album, the negative being numbered to correspond and the title and number written under the print in the album. The stock-register shows not only where the negative is held, but also the classification index. As each classification grew, a new element was introduced, of paging it, by affixing a hyphen to the classification symbol and then a consecutive number, thus: 1141-7 is the seventh page of section 1141; 56-23 is the twenty-third page of section 56."

After applying this system so satisfactorily to photographs, it was used with equal success for cuts, drawings and copy, and later to government and other publications, and was recommended for correspondence files.

POETRY INDEX. *See* Indexes—To poetry

#### "SAFETY FIRST" MOVEMENT

"Safety first" literature for libraries. Ann D. White. *Pub. Libs.*, My., 1916. p. 211-213.

A few years ago those most interested in accident prevention work organized the National Safety Council, whose object is to promote the conservation of human life. A central Bureau of Information was established, and from this service there developed the Safety library which is accumulating a variety of data relating to the entire field of accident prevention, such as blue prints and photographs of typical safeguards; literature on the organization of safety campaigns; educational lantern slides and moving pictures; lists of safety inspectors, lecturers or consulting safety engineers.

In addition to the work of the library, the Council distributes bulletins which are for the most part based on actual experiences. Poster exhibits are made by mounting the bulletins on large green cards, about six bulletins on a card, grouped according to subject. Another method of promoting the safety idea is thru the safety congresses which are held annually under the auspices of the National Safety Council. The proceedings of the 1915 congress contains over 700 pages of the latest opinions and advice of the safety experts of the country. The council, in order to form safety habits in the children, has directed the

preparation of a safety primer, "Sure Pop and the Safety Scouts," which is intended to be used as a supplementary reader in the public schools.

The National Safety Council is a non-profit-making, co-operative organization, open to any individual or organization interested in promoting the cause of safety, and supported entirely by the dues of its members. In return for the dues, each member is entitled to the service of the Information Bureau and library, and to receive all the publications of the Council—208 bulletins, the annual proceedings, and miscellaneous pamphlet material.

To reach all "chance takers" can be accomplished only by an educational campaign, and the librarian, with his instinct for service, could perform a real benefit for his community by entering into this movement for the conservation of human life. Information regarding this work may be obtained from W. H. Cameron, secretary, National Safety Building, Chicago.

SCHOOL LIBRARIES. *See* High school libraries

SPECIAL LIBRARIES. *See also* references under Libraries

The special library and some of its problems. Ethel M. Johnson. *Spec. Libs.*, D., 1915. p. 157-161.

Prior to 1909 the special library was a negligible factor in the library and business worlds, but there now are more than four hundred libraries of this kind in the country and their number is constantly increasing. Their interests are represented by the Special Libraries Association, affiliated with the American Library Association, and by their own publication, *Special Libraries*.

There is some difference of opinion as to what may legitimately be called a special library. From one point of view any library that limits its scope to a particular subject is specialized. But libraries of this type are not new. Almost from the start large public libraries have had special collections, there have been departmental libraries in large colleges, and there have been separate, independent libraries devoted to a particular field. For the most part these libraries differ only in scope from the general library, and are not truly special. From the definitions given by the leaders in the special library movement it is evident that the most distinctive feature of the special library is not so much its subject matter as its service. It is essentially an information bureau; the function of the general library is to make books available, that of the special library is to make information avail-

able. The stock-in-trade of the special library is often represented, not by books, but by pamphlets, manuscripts, clippings, filing case material and human brains. Of the classes of special libraries, three are discussed: the municipal reference library, the legislative reference library and the business or corporation library. The municipal and legislative reference libraries are similar in that they both have to do with public affairs information. The important function of the municipal reference library, of which there are a dozen in several of the larger cities, is to assist in drafting ordinances. The legislative reference library has a broader field; it deals with proposed and enacted laws of the states, the federal government, with laws of other countries and with government reports. Thirty-four states now have such libraries and it probably will not be long before every state is so equipped.

It is the business library that is given chief consideration in Miss Johnson's article. In appearance and atmosphere the business library is very different from the public library and is more nearly like the business office. In service the business library is active, even aggressive. It keeps in touch with the interests of the managerial force, the directors and heads of departments, and sends them information and material that it knows will be of use to them. The fact that the special library is a strictly business proposition explains many of its characteristics. As speed is the essential factor in business, the library must equip itself for prompt service; no time can be given to unnecessary details; technique must be reduced to its simplest form; cataloging is almost done away with by the use of vertical files arranged alphabetically by subject and carrying numerous cross references. Space is expensive and only material of vital importance and timely interest can be given room. With a very limited amount of material effective service is possible, by communicating with other organizations and individuals for much valuable data.

Requirements for the business librarian include business ability, initiative, adaptability, and willingness to assume responsibility, as well as technical training. There is a greater demand for women than for men, chiefly because they will accept a lower salary than men, but one authority feels that the chances for advancement are better for men than for women. The best field for the special library is in the East just as that for general library work is in the West or Middle West. A drawback in connection with the business

library is its instability; it is very sensitive to general financial conditions. Often, however, tho the library may be discarded, the librarian who has proved himself of value is retained in another position.

#### SPECIALTIES—RECORD OF

As a further step in the line of co-operation, the local libraries in Providence, R. I., have collected and printed in the October number of the Public Library's *Quarterly Bulletin*, at p. 196, a compilation of "Library specialties," the abbreviations entered opposite each subject showing in which of the Providence libraries to look for the best-developed representations of that subject.

For example, while a great number of readers are aware that the John Carter Brown Library is devoted to works on America before 1800, not so many are perhaps aware that one of the specialties of Brown University is "International law," and that music is a specialty at the Providence Public Library.

The following fifteen libraries have co-operated in the preparation of the list, which covers about 150 subjects: Annmary Brown Memorial, Brown University (Main Library and departments), John Carter Brown Library, Park Museum, Providence Athenæum, Providence Public Library, Rhode Island Historical Society, Rhode Island Medical Society, Rhode Island Normal School, Rhode Island School of Design, State Agricultural Department, State Educational Department, State Health Department, State Law Library, and State Library.

#### TAXATION FOR LIBRARIES

The city attorney of Tacoma, Washington, has given an opinion which may be of interest to other libraries. The state law (Section 6973, Remington & Ballinger's Ann. Codes and Statutes of Washington) provides that "taxes in addition to those otherwise authorized" may be voted for library purposes. Section 172 of the city charter states that "the City of Tacoma shall provide in the Ordinance levying the taxes for each year for the levy and collection of an additional tax of not less than one-sixth of one mill for the maintenance of the Public Library." In each of these provisions the levy for library purposes is spoken of as an additional levy, yet paragraph 2, section 4, in Article 1 of the city charter, provides "that all taxes, whether general or special, exclusive of assessments for street improvements and construction of sewers, shall not exceed one and five-tenths per cent. in any one year of the assessed

## Bibliographical Notes

Any library desiring a copy of the pamphlet containing a copy of all measures "proposed by initiative petitions," "passed by the Legislature and referred, by petition, to the people," "proposed to the Legislature and referred to the people," and "amendment to the Constitution proposed by the Legislature," to be submitted to the legal voters of the State of Washington for their approval or rejection at the general election to be held on Tuesday, Nov. 7, 1916, together with all arguments filed for and against said measures, may receive it by sending a two-cent stamp to the Tacoma Public Library.

A list of references on county government was published in the Tacoma *Daily News* for Sept. 15, in connection with the meeting in that city of the Washington State Association of County Commissioners. The list is to be reprinted in the Proceedings of that association. The *News* for Sept. 16, 18 and 19, contained a series of articles on "Charter revision," by the librarian, John B. Kaiser, the third article including an extensive bibliography of the city manager form of government, compiled by Miss Jacqueline Noel of the Tacoma Public Library's reference department.

The American Association for International Conciliation has just issued a symposium of peace proposals and programs compiled by Randolph S. Bourne and entitled "Towards an enduring peace." This book is not being published in the ordinary sense of the term. Since only a limited number of copies is available, it is desired to place them in college and university libraries and in the larger public libraries. Such distribution as will be made will be gratuitous. Requests for the book should be addressed to the secretary of the association, Sub-station 84, New York City.

Effective first aid to librarians who want information about French books is offered by M. Jean Alcide Picard, at one time manager of Scribner's French book department, and recently recalled by the French government from service in the trenches to act as agent in this country for the French publishers. M. Picard, whose address is 26 Gramercy Park, New York City, is anxious to get into touch with librarians, as with all book-people, and will gladly furnish information on the new French publications, advise and assist in the organization and building up of French departments, and suggest the best means of securing the titles selected.

### THE FIRST TRAINING CLASS AT PRATT INSTITUTE

Editor *Library Journal*:

For the sake of historic accuracy I am writing to correct a mistake which occurs both in your editorial appreciation of Miss Plummer and in the obituary notice, also contained in the October number of the *LIBRARY JOURNAL*. Miss Plummer did not start the Library School at Pratt Institute. A course in cataloging was offered at the library in June, 1890, and in October, 1890, a course in library economy as well as cataloging was offered, while Miss Plummer was not appointed

librarian until November, 1890. I remember very well her telling me that she did not know of the existence of the school until she came here and was surprised to find it fully established. The value of her services in developing the school from a training class to an organized school is unquestioned, and in that sense she might be considered the organizer of the school, but to say "That same year [of her appointment] she started a training class in her library, and this class, successful from the first, soon developed into a full-fledged school" is not consonant with the facts. The idea of having a training class in the library must be credited to Miss Margaret Healy, the first director of libraries at Pratt Institute.

Very truly yours,  
JOSEPHINE ADAMS RATHBONE.

*BOY SCOUTS OF AMERICA INCORPORATED*  
*Editor Library Journal:*

As a public librarian intensely interested in raising standards of reading, especially among children, no less than as a member of the Library Commission of the Boy Scouts of America, I wish to ask the help of my professional colleagues in securing the observance of the new federal act incorporating the Boy Scouts of America in so far as it applies to Boy Scout books. This incorporation act provides that the corporation created shall have the sole and exclusive right to have and to use, in carrying out its purposes, all emblems and badges, descriptive or designating marks, and words or phrases now or heretofore used by the Boy Scouts of America in carrying out its program, it being distinctly and definitely understood, however, that nothing in this Act shall interfere or conflict with established or vested rights.

The last clause will make it possible for many books that are travesties of Boy Scouts now published to continue to be marketed. It is, however, contended by the Boy Scout organization that the publication of any more books that similarly misrepresent the movement can be prevented under the law. Will not librarians co-operate with the Boy Scout Library Commission by bringing to our attention books that they believe give a false idea of the spirit and purpose of the Boy Scout movement? Such information should be sent to Mr. Franklin K. Mathews, Chief Scout Librarian, Boy Scouts of America, 200 Fifth Ave., New York.

GEORGE F. BOWERMAN.

Dec. 8-9. Special Libraries Association—Eastern District. New Haven.  
Dec. 28-30. American Library Association. Midwinter meeting. Hotel La Salle, Chicago.

STATEMENT OF THE OWNERSHIP, MANAGEMENT, CIRCULATION, ETC., REQUIRED BY THE ACT OF CONGRESS OF AUGUST 24, 1912, OF THE LIBRARY JOURNAL, published monthly at New York, N. Y., for October 1, 1916.

STATE OF NEW YORK, }  
COUNTY OF NEW YORK, } ss.  
Before me, a Notary Public in and for the State and county aforesaid, personally appeared J. A. Holden, who, having been duly sworn according to law, deposes and says that he is the Business Manager of the LIBRARY JOURNAL, and that the following is, to the best of his knowledge and belief, a true statement, of the ownership, management, etc., of the aforesaid publication for the date shown in the above caption, required by the Act of August 24, 1912, embodied in section 443, Postal Laws and Regulations, printed on the reverse of this form, to wit:

1. That the names and addresses of the publisher, editor, managing editor, and business managers are:  
*Publishers* . . . . . R. R. BOWKER CO.  
241 West 37th St., New York.  
*Editor* . . . . . R. R. BOWKER.  
241 West 37th St., New York.  
*Managing Editor* . . . . . FREMONT RIDER.  
241 West 37th St., New York.  
*Business Manager* . . . . . JOHN A. HOLDEN.  
241 West 37th St., New York.

2. That the owners are:  
R. R. BOWKER CO., 241 West 37th St., New York.  
R. R. BOWKER, 241 West 37th St., New York.  
A. H. LEYPOLDT, 241 West 37th St., New York.  
J. A. HOLDEN, 241 West 37th St., New York.  
FREMONT RIDER, 241 West 37th St., New York.  
W. A. STEWART, 241 West 37th St., New York.

3. That the known bondholders, mortgages, and other security holders owning or holding 1 per cent. or more of total amount of bonds, mortgages, or other securities are:

NONE.

4. That the two paragraphs next above, giving the names of the owners, stockholders, and security holders, if any, contain not only the list of stockholders and security holders as they appear upon the books of the company but also, in cases where the stockholder or security holder appears upon the books of the company as trustee or in any other fiduciary relation, the name of the person or corporation for whom such trustee is acting, is given; also that the said two paragraphs contain statements embracing affiant's full knowledge and belief as to the circumstances and conditions under which stockholders and security holders who do not appear upon the books of the company as trustees, hold stock and securities in a capacity other than that of a bona fide owner; and this affiant has no reason to believe that any other person, association, or corporation, has any interest direct or indirect in the said stock, bonds, or other securities than as so stated by him.

R. R. BOWKER CO.,

J. A. HOLDEN, *Business Manager*.

Sworn to and subscribed before me this 21st day of September, 1916.

E. D. LOSEE,

Notary Public, Queens Co., N. Y., No. 294.  
(My commission expires Mar. 30, 1918.)

[Seal.]

Certificate filed in New York Co. No. 41.  
New York Register No. 6106.

Mary Wright Plummer

# THE LIBRARY JOURNAL

VOL 41

DECEMBER, 1916

No. 12

ON Thursday morning, November 16, there was a notable gathering of nearly a thousand people prominent in art and letters, in the palatial ballroom of the Ritz-Carlton Hotel at the joint session of the American Academy and National Institute of Arts and Letters, at which ex-President Roosevelt made a noble and commanding address on "Nationalism in art and literature." On the same evening there was a gathering of 600 librarians at the "palace of the people," in the Stuart Gallery at the New York Public Library, in memory of Mary Wright Plummer, at which quiet addresses in appreciation of her work and life and influence, were made by men and women whose names for the most part are unknown to the public whom they serve. Yet the latter gathering was in the deepest sense not less American and not less significant. Not that library work, a secondary profession, is as great as work in art and letters, a creative profession, but that the latter meeting commemorated the quiet life of a woman citizen who represented most fully the silent work of a great number of American citizens whose work is not advertised, about which there is no fuss, and in which there is no fame, but which counts in the real development of our great country as truly as the work of the statesman, the artist, or the author. The woman who was commemorated at this meeting represents the silent forces which in life and in all nature are the greatest of forces, and the inspiration of such a meeting in tribute to such a life means more than the greatest and noisiest gatherings of a political campaign or even a congress of arts and letters.

DR. PUTNAM, in paying his tribute to Miss Plummer, took occasion to emphasize

the value of the work in libraries of the women who constitute in America the large majority of the profession and so differentiate it from the library calling of other countries. The names of Miss Hannah P. James, of Mrs. Minerva W. Saunders, and of others who have passed over to the majority, recur at once to the mind of library people as illustrations of the pioneer service of women, and happily there are still with us many, notably Mrs. Elmendorf, the first woman president of the A. L. A., and Miss Caroline M. Hewins, who will always be remembered among the foremost people in the early generation of modern American librarianship. The retirement of Miss Matthews from the Lynn Public Library after nearly half a century in public service on its staff and finally as librarian, removes from library work another woman whose influence, tho less wide than that of Miss Plummer, has been radiant and helpful. Tho in a modest position in a smaller city Miss Matthews' pleasant personality, sympathetic character and library interest made her a welcome member of the conferences and meetings which she conscientiously attended from the first A. L. A. conference of 1876 to that at San Francisco in 1915, where her vigor was shown by the long journey thru northern Canada, which she took on her return. She should be an example to hundreds of others who do not take audible part in library meetings, but who may count nevertheless much beyond their own thought in the inspiration of their presence.

THE growing custom of emphasizing good causes by setting aside a particular day or particular week in which a cause shall especially be brought to public atten-

tion has an important library bearing. The first complete week in December, December 4-9, librarians should be reminded, will be Good Book Week for boys. This is the better title given this year to the Boy Scout endeavor to enlist libraries and the community in general in its work for boys. A special list of "Books boys like best," has been prepared, in revision of a similar list last year, and will be circulated by many libraries, one having taken an edition of five thousand copies for distribution in its city. January 28 is to be Child Labor Day and it will be well for libraries to emphasize that subject about that time by bringing books and pamphlets on this topic to the special attention of the public. Incidentally it may be pointed out that a good deal of good literature may be had on such topics gratis from the national and other societies which issue characteristic publications, and by means of the Multiplex wing frame, used in the Newark and other libraries, or by some extemporized form of vertical rack, much of this material may be put at the service of the public without cataloging or other accession cost. The National Child Labor Committee at 105 East 22nd street, New York, may be addressed for literature on the special topic indicated.

THE accountants of the Committee on Education of the Board of Estimate and Apportionment of New York City, which is really that city's Board of Directors, have presented a compilation of the figures of the library systems of Greater New York for the past ten years, accompanied by the text of laws and contracts relating thereto which form an important contribution to library finance and legislation. The latter section is in some respects incomplete, as it omits two of the most important documents relating to the Brooklyn system, *i.e.*, opinions of the corporation counsel interpreting the provisions of its contract with the city. The figures shown in the tabulations and in charts, are extremely interest-

ing and should furnish material for careful study by all interested in library finance and legislation.

THE difficult problem of the importation of German books thru the British lines for use by American libraries is having the careful attention of the British Embassy, the Librarian of Congress and the A. L. A. committee, and it is hoped that substantial progress has been made toward a *modus vivendi*. We have heretofore recorded the strong feeling of protest generally felt against the attitude of the British government, but accepting this attitude as a fact the thing to do is to find the solution of least resistance in overcoming the difficulty. The British authorities are unwilling to stretch the term "education" to cover all books which in a sense have an educational value in libraries, tho they may be contributions to current history. In fact it is the importation of propagandist material in the interest of Germany, usually innocent of offense on the part of the importer and sometimes included in an invoice, it seems probable, with the intent of forcing a way for such literature, which has made the chief difficulty. The British authorities have the strong impression that importers have at least been careless in this matter and they are disposed to require that the importation shall be made directly by libraries rather than thru an American importer, altho it is understood that some foreign agent abroad, not objectionable to the British authorities, may be used in common by American libraries. This will be a serious detriment, but it may prove the only way out. No definite announcement can be made at this writing of the exact plan of the procedure, but librarians may be assured that attention is being given to the matter by the committee in co-operation with the Librarian of Congress, and it should fairly be added that the British Embassy is doing all that it rightly can to influence its own government in the right direction.

# A LIBRARY LIFE

A SYMPOSIUM IN HONOR OF THE MEMORY AND IN GRATITUDE FOR  
THE WORK AND INFLUENCE OF

## Mary Wright Plummer

September marks the Earth's first slumbering  
But Nature sleeps for strength to build anew,  
And ere the last leaf falls and Summer's thru,  
The ground is pregnant with the unborn Spring.  
We will not mourn without remembering,  
That you who long have worked so well and true  
To do the things your brave heart bade you do,  
Can never cease to be a living thing.

The earthly time allotted Man is brief,  
And we are many who with heartfelt grief  
Now mourn what seems the passing of a friend.  
But years to come shall echo with your praise  
And bring fond memories of bygone days,—  
For friendship such as yours can never end.

FORREST B. SPAULDING.

THERE is a small group of members of the American Library Association to which it owes most of its ideals and much of the guidance which has brought such success to the Library movement in this country.

In this group Mary Wright Plummer held a prominent place. What would it mean if we were to eliminate from its history all she accomplished—all she did for library school training, all her professional papers and text books and, what has counted most of all, the inspiration and enthusiasm with which she passed the torch to her pupils, so many of whom are now

in the front rank of library workers all over the country.

It is not possible to over-estimate our loss, but I would rather dwell upon the thankfulness we feel for having had some association with the richness of her life. It was a revelation of her wide friendliness to hear at the last conference of the Association so many expressions of high regard and affection which came with the expressions of sorrow because of her absence.

So much of what she did, and so much of what she was, still lives abundantly, that it will be a long time before we realize that she is not still with us.

It is a great satisfaction to acknowledge for the American Library Association our indebtedness to her influence, which will long be a very part of library work.

WALTER L. BROWN,  
*President, American Library Association.*

---

\*This symposium includes addresses, revised and condensed, made at the memorial meeting in the Stuart Gallery of the New York Public Library Nov. 16, 1916, of which a report is printed elsewhere. The last portrait of Miss Plummer, which was taken at the close of 1915 and published in the LIBRARY JOURNAL for January, 1916, is duplicated in this number, and may replace the earlier print as frontispiece in the bound volume, or be used for framing.

## SOURCES AND OUTGIVINGS

WE are to do honor and to give thanks for a friend, a helper, and a leader in a great profession; and that honor can best be done by emphasis on the work and the influence which her name means to all of us. I shall therefore not ape the genealogical fiend who is a bane in our libraries, or delve into biography and bibliography in particulars, but an American as well as a Chinaman may honor and revere his forbears, and a student of man must emphasize heredity and environment in the making of character. It is good to know that Mary Wright Plummer came of Quaker and pioneer stock, and that she was born—" 'twas sixty years since"—in that quiet Quaker town of Richmond, Indiana, which has sent forth so many men and women of worth into the larger world. Her quiet manner came from the Quaker stock, her energy and power from the pioneer stock. As you have journeyed down from among the hills, along a river made up of the rills from the mountainside you have come sometimes to a lovely lake, calm and unruffled, mirroring on its placid surface the beauty of sky and shore. Then as you come further down the valley you note where the reserve force from that reservoir is transformed into power, and in these modern days you see next those almost unseeable filaments which convey this power to far-off and varied fields of industry. It seems to me that this is peculiarly a simile and a symbol of our friend and her life, her work with its far-reaching influence, silent and invisible, which all of us know, which we in part only represent in this gathering here, and which will go on far beyond the life which is closed, the life of any of us now and here present.

It was not until the plentitude of womanhood, in fact, until more than half of her years as we now count them, had passed, that Miss Plummer came to her life-calling in this great library profession, which she honored, and in which we have honored her. But earlier she had come into touch with the literary life, for the magazines, at least early in the '80's, were publishing poems from her pen, which were collected

afterward, tho but fifteen of them, in the charming privately printed volume of 1896. Those poems show a depth of thought and feeling, a breadth of view and vision, a height of poetic and felicitous expression that mark her as a real poet; and the few poems reflect very wonderfully the currents of life and of death, of doubt and of faith—those many elements which made her soul. That lovely poem "My own," in which she voiced the tender yearning to touch and mother little children, which is a part of true womanhood, prophesied her interest for children in the library. That exquisite sonnet on life which reaches so high and feels so deeply; and too, the poem on the "Conquest of the air," not there published, but which it is proposed to include in a reprint volume, in which she expresses dread lest the messenger of the air should not be the dove of peace, but the instrument of war—these spring from the depths of her mind. Of course, with her Quaker soul she longed for peace, and yet she was ready to do her part in any valiant fight that might call for her, in any work which she undertook to do, and to which she rose, calling others to the cause. And these poems are but the expression of the great soul facing such life work.

She was a pioneer, as you well know, in library work, for it was only the pioneers who became members of that first class of 1888 in the first library school which called her and fitted her for the library profession. Before the Friends Association, and later before this very club she read, in 1897, a paper which was reprinted in the *LIBRARY JOURNAL* for November of that year, and which prophesied in a wonderful way the purposes and the methods of the children's library of today, in a development which then only the highest imagination could reach. In her library work, as you know, she reaped all honors of achievement and of fulfillment and of the highest usefulness. It was in 1890, after a year at St. Louis, and after her first visit to Europe, that she came to us in Brooklyn, and became associated with the Pratt Institute Library, where she remained either as the Director of the Library or of the Library

School until she came in 1911 to her great work in shaping the Library School of the New York Public Library. In 1891, she was a member of that first party to California, one of the bright and shining members of that pilgrimage, and out of that journey, in a visit, I think, to the Mission of San Juan Capistrano, came a charming little story which represents one of her achievements in another field of literature. I need only recall that she was president of the New York Library Club, of the Long Island Library Club, which was for a time separated from this, of the New York State Association, and of the American Library Association; and even our own country was not the only field for her work.

She was in every way great, a great woman, a great friend, and a great librarian. She was also in her way a great scholar, for she mastered not only French and German, but Italian and Spanish, and made herself so sympathetic with the latter country as to compile the volume from the modern Spanish novelists on "Contemporary Spain," as well as to compile for the children the "Stories from the Chronicle of the Cid." She was a great traveler also, and from her travels in Mexico and Canada came her two books of travel for children, "Roy and Ray in Mexico" and "Roy and Ray in Canada"—not great books, but happy and useful books for the little people she loved so well. You perhaps all know her "Hints to small libraries" and her "Seven joys of reading." It is impossible, however, to follow into the several fields of her work the many details of her achievements. All that and more will be told you, I think, by those who will come to you reflecting the shining from the many facets of her many-sided life.

There is always one thought present in my mind when I come to think of such a life as this. It is the doctrine of the apostolic succession translated into the secular world. In this our friend was a most shining example. We often hear the classic simile of passing the torch on from one to the other. Perhaps in these modern days the simile transforms itself, as I have suggested, into those invisible currents which reach far afield, which no man can see, and

which no man can to the end measure. But I may mention one or two specific instances which will show you how much her life meant in such relation. In this palace of the people, the greatest public library of the greatest library system in the world, where she did the last of her great work, we may well remember that it was thru her suggestion that the present Director of the library made choice of the library calling and ultimately came to this place in association with Dr. Billings, whom we last honored in this room. It was from her lips that he learned of the library profession, and found in it his true calling in turn. And when he went to Pittsburgh, there he started the school for children's librarians, as a specialization from the library school which she had developed from the training class at Pratt Institute. How much that means in library work, this first school for children's librarians in Pittsburgh, you know better than I. But there is a still more striking example. Among the students in Miss Plummer's classes was Miss Wood, whom you know as the Librarian of Boone College in China, a lighthouse for that dark empire, an empire ready to receive, not that civilization of the west which comes by force of arms, but that higher and finer civilization which this profession and this building and Miss Plummer and Miss Wood represent. The Boone College Library became at once the source of library inspiration for China; and last year Miss Plummer had the pleasure of graduating from this school Mr. Seng, who had no sooner got back to China with immense ideals, immense hopes, immense purpose for the deliverance of his people, then came Mr. Hsü who is now a student in this school. There you will see has been a leading out from this one woman, thru one person after another, so that the antipodes are really to be helped and guided in large measure by her influence. Everywhere thru the library world she is known and remembered, for in 1900 she represented us in the library councils of the Paris Exposition. Everywhere in Europe, she had friendships as with Professor Biagi in Florence, her intimate friend, and with others in England, in

France and in Scandinavia. All these count as her friends, catching up her inspiration and extending her work. It is a radiation of influence, this true apostolic succession that I would emphasize to you as the real meaning of this life which is closed after a generation of work.

I speak of the radiation of influence but I think that in her case we should speak rather of the radiance of influence. For it was a shining light which went forth from her into the dark corners, into all parts of the library work, into all parts of the library world. That is a great thing to leave behind. We can scarcely hope for ourselves any greater achievement, any greater thing to leave behind us when we go; and now that she is gone we do not so much mourn her as we rejoice, not in her perfected work, but in the work which will always be perfecting thru the many people who follow her and honor her. Now in her own words, "Life has loosed these fingers from her gown," and she is no more with us. We may well remember the faith that was hers, as expressed in the poems and the life work which were her self. And as I leave this presence, I can do no more than hope for each librarian who is here that he or she, especially in relation with the children, who are the wards of this library profession, may cherish and fulfill the ideals which our friend has left to us.

R. R. BOWKER.

#### AT THE FIRST LIBRARY SCHOOL

THE occasion is notable in that no less than six distinct associations, to all of which Miss Plummer belonged, are vying with one another to do fit honor to her memory. Of these six, three are associations of librarians in the city, in the state and in the nation. The others are the alumni of three library schools. Speaking for the first of these schools, in which she was a pupil, the part that falls to me is to recall her student life.

Her early years had been spent in Richmond, Ind. From a child she was more than fond of books. One of her family speaks of her as a "book hungry" little girl, and adds, that by special dispensation she was admitted to the privileges of the public

library of the town as soon as it was opened. She spent a year in special study at Wellesley College in 1881 and '82. Whether she came in touch with the special library interest that we know to have been active at that place at about that time, we do not know. For the following four years her home was with her family in Chicago and she was busy in giving private lessons. One day she saw an advertisement—it must have been in a Chicago paper—of a school of library economy soon to be opened at Columbia College. "There," she exclaimed, "that is what I'd like to do," and at once, she wrote to New York for particulars.

There were 40 applications for admission, from among which 20 were accepted; three men and seventeen women; and Miss Plummer became a member of the first class in the first school.

The school for library training was an experiment. For years it had been a hopeful dream gradually taking shape. The men behind the great library movement were planning for four things: 1, a journal; 2, an association; 3, a school and 4, a state department to promote and supervise library extension. The journal and the association were secured in 1876. In 1883, Mr. Dewey became chief librarian of Columbia College and asked the trustees to establish a library school. In 1884, they consented to do so on three conditions:

- 1, that it should cost the college nothing;
- 2, that instruction be given by the library staff in addition to their usual duties;
- 3, that the school be held in the library with such accommodations as might be found there.

The librarian was in earnest, the conditions were accepted and notice given that in two years the new department would be opened. This would have been in the fall of 1886. But a fresh obstacle appeared in the form of a great and unreasoning dread of introducing women to the college and the plans, so far advanced, were warmly contested at the last moment on that account. But reason prevailed and the school opened in the first week of January, 1887, for a term of three months.

We should probably consider that first

school a rather crude affair. They had lectures enough but they had little to work with beyond the skill and earnestness of their teachers and their own enthusiasm aided by the college library and a few catalogs and bibliographies. They brought their chairs into one alcove to listen to lectures and carried them back to tables in other recesses and corners where they practiced the library hand and struggled with accession sheets and card slips. The rules for cataloging were not so well settled as they have since become and many were the questions and debates over technical details. Instructors and pupils came into close relations with each other and the students, being anxiously desirous of learning, there can be no question that they learned.

We have on record, in addition to the annual report of the director, four printed statements regarding the work of that first term. The A. L. A. was profoundly interested. The school had been discussed on its platform for four or five years and there was a committee to watch, examine and report upon the progress and character of the school. At the summer meeting of 1887 at Thousand Islands, the committee reported. Each of the three members, Mr. Green of Worcester, Mr. Foster of Providence and Miss James of Wilkesbarre had visited the school. Miss James had spent two weeks with them. With one voice they approved and praised the school, for its thoroughness, its breadth and the spirit of enthusiasm which prevailed. Mr. Green, feeling that some slight criticism was due, ventured to say that the atmosphere seemed to be "slightly feverish."

In order to present to the association a more complete picture, a student was then introduced. Miss Plummer had taken her rank as leader of her class and, with that clear simple way of writing, of which she was mistress, she told the convincing story. "Perhaps," she began, "no body of instructors ever had a more expectant class or one more ignorant of the subject to be entered upon. . . . It is almost a wonder that the ferment of energy and enthusiasm with which we listened to and attempted to follow our instructions did not burst out

the walls of the superannuated building. It was a clear case of new wine in old bottles." She described the several items of the work done and the wonderful spirit shown by the students, adding a word to be remembered. "One feeling," she said, "was common to the class, that, whatever place and whatever division of labor might fall to our lot, we should not be satisfied with less than our best work, now that we had a standard. With the untried enthusiasm of tyros we even yearned for small libraries in straitened circumstances that we might show how much could be done with a little." That spirit of devotion which she then expressed and afterward taught is still the glory of the library work.

The expected term of three months was found insufficient and, on unanimous request of the class, was extended to four months. In the following October, a class of eleven members including nine of the original class of 20, began their senior course of seven months, accompanied by a junior class of 20. Miss Plummer, in her senior year, was also an instructor. One of that junior class, Miss Underhill of the Utica Public Library, has contributed the following letter:

"My recollections of Miss Plummer as instructor are not so distinct as are my remembrances of her personality and her earnestness and enthusiasm. I remember seeing her in frequent consultations with Miss Cutler over disputed cataloging problems and our cards frequently bore red ink traces of her careful scrutiny.

"We used to corral her occasionally when we were struggling with joint authorship, 'sees' and 'see alsos,' the difference between editors and compilers and other problems of equal mystery, because she had a way of making clear such troublesome and bewildering things. All this was in the library room, a part of the old college, in one of the funny little alcoves.

"Her own desk stood in the college library proper not far from the horribly-respected classed catalog, filled with cards of various hues and many colored inks, and close to the shelves weighted down by all the fearful bibliographical tools: and

there again we would refer to her in our puzzled moments, finding her always ready to help.

"Then, too, I know I liked to ask her questions because she was good to look at and always wore pretty clothes.

"There were shelves given to the new books, and I recall how frequently she was to be seen there between duties and after hours. In fact, she is the one, after Miss Cutler and my own special companions, who gave to those early days much of their interest and lent to them happy recollections, not so much for what she did or said but just by virtue of what she was."

At the close of the school year, Miss Plummer was called into the service of the public library in St. Louis and there spent two years as cataloger. Then she came to Brooklyn to the Free Library of Pratt Institute and took up anew the work of training for librarianship; and ever after, when a manual on that special subject was needed, there was no one else who could write so good a statement, so clear, definite and convincing as Miss Plummer wrote. Her very name seemed to stand for thoroughness and for training for that or any other valuable service. She will always be remembered as one who could not be satisfied with anything less than her best work.

WILLIAM R. EASTMAN.

THE LIFE INTIMATE—AT PRATT INSTITUTE

AND then she came to Pratt Institute! It was in the fall of 1890. There was no actual position for her to fill, but she was considered such valuable material that the Institute secured her with the understanding that she should make a place for herself by assisting Miss Miller in the detailed management of the library and by helping Miss Healy in the direction of the library and in the organization and conduct of a class for the training of librarians. In these ways she spent four years, and so well did she do her work and with such skill and tact did she handle a difficult situation that at the end of that period she was appointed to the headship of the library and the library school and was given a year's leave of absence for rest and study

to fit herself more adequately for her new duties. That year, 1894-1895, she spent in Italy. It was, I think, the most delightful period of her life. The charm of an old civilization, the delight of rare companionships, the joy of leisure, and the anticipation of the new opportunities before her were hers, and she never tired of living over again in memory those happy days.

Miss Healy left to be married in the summer of 1895 and, in the September of that year, Miss Plummer returned to the Institute to her new duties and to a place on the Institute faculty.

Mr. Charles Pratt had his own ideas of what an educational institution should be like, and I am sure that no one ever came nearer having a right conception. His theory was that the best way to organize a great school was to put up a building of mill construction, whose outside walls were built in such a way as to stand up by themselves, without the help of interior partitions, so that internal arrangements of floor space could be changed with every wind and wave of educational doctrine. Into this box, he proposed to put just as many men and women of strong personality, ability and genius as he could hire, hoping that, left to themselves, they would work out—even if it were by a method that would put to shame the famous Kilkenny cats—a school with a purpose, a plan and an achievement. He builded better than he knew.

Into this bit of history in the making Miss Plummer came to play no insignificant part. Pratt Institute was young in those days, but it was a lusty infant and taxed its guardians to their utmost.

The members of the faculty met Miss Plummer with a cordial welcome. She was known to them all and had already commended herself to them thru her work in the library. "Helen is my friend and Dorothy's Peter's, but Aunt Mary is everybody's friend," a little kindergarten child said to me the other day, and so Miss Plummer was "everybody's friend."

Art claimed her for its own; *Domestic Science* looked for sympathy and comprehension to so thoro a student and so excellent a housekeeper; *Engineering* knew

that she at least was intelligent enough to understand the value of the expert; the *Kindergarten* felt secure of her co-operation because of her love of children and her interest in general education; while *Domestic Art*, delighting in her interest in suitable and pretty clothes felt certain of justice at her hands. She helped them all. She bought books for their special lines of work; she hunted up needed information; she made reading lists; she lent a sympathetic ear to tales of trouble and of joy, and she gave helpful advice as opportunity offered. She was very wise and just and very generous. In short, her office became a sort of clearing house for all departments. A picture of that so-called office—it was really nothing but a roll-top desk crowded in behind the stack—comes to me as I speak. I recall distinctly how it looked when I first saw it. Mr. Pratt took me to her after hours. She looked up from her writing and welcomed him with her frankly friendly smile, hanging up her glasses on her little gold hook with a quick movement that was very characteristic. She listened to Mr. Pratt's explanation of who I was and what was expected of me. . . . I, too, had been called to make a place for myself . . . and when he added "I want you to take care of her and help her," she took my hand in her two exquisite little hands and looked at me out of her deep brown eyes and I knew—oh, wonderful experience—that I had found a friend. Her adoption of me was no perfunctory manner. For a year I lived in her home and I always—even after I had a home of my own—carried the key to her apartment in my pocket. My summer vacations, too, were spent with her for many, many years. This makes it hard for me, at this time, to separate the professional from the personal in the memories that crowd upon me.

The new Pratt Library building was a hole in the ground when Miss Plummer came back from Italy in 1895. In the spring of 1896 it was a glorious reality. She had been consulted in regard to its plan before she went abroad, and she had full charge of its final arrangements and of the purchase of its equipment. To those

of us who know that library and love it, it seems as if there never were a building so well adapted to its purpose and so charming in its atmosphere. It was the first library to have a children's room and I remember how we all sat in the little chairs to see if they were child-high or child-low, and how we stole peeps into fairy-tales when we should have been about more grown-up business. It was, too, I think the first of the public libraries to set apart so adequate an art-reference collection for general use. In these two new developments, Miss Plummer took an especial interest and pride, rejoiced, too, in the sunny quarters provided for the library school, and the students, who had passed a sort of Mahomet's-coffin type of existence between the literature class-room on the fifth floor and the cataloging department in the basement were glad to find rest and a local habitation.

Miss Plummer blossomed in her new environment and the library and the school developed with her. She insisted on high standards of work. The public was inspired and helped; students were taught to use books; and the library school pupils were given a vision of their profession that sent them out into the world equipped for a wonderful service to their generation.

Miss Plummer had the gift of vision and the practicality to make her dreams come true. In fact, her first impulse upon grasping an idea was to do something to put it into practice. I remember, one fall evening, meeting a chestnut vender, on my way home. It was the end of a glorious day. A marvelous sunset came tumbling up the Lafayette avenue hill, bringing the lure of the autumn and the woods in its wake. When I came in to her, I said, "Isn't this the time of year for a trip up the Hudson and a week-end walk in the Catskills?" Then such an evening as we had, talking about the great, wonderful out-of-doors. She read prose and poetry—and how she could read!—I went to bed perfectly satisfied. What actual experience in field or wood could have compared in any way with that treat of rare memories, wonderful companionship, and vivid imaginings? Can you understand my tumble to earth

the next afternoon when, upon my return from work, I found her at her desk sitting in the midst of time tables, maps of the Catskills, and a boarding house list which she had secured from the Brooklyn *Eagle*? If it was a good thing to sigh for the hills, it was right to take steps to get to them. That Friday the Hudson River boat took us to a week-end that is blessed in my store-house of happy memories. However, one learns by experience, and, after that, I never talked to her of a thing I wasn't really willing to do.

That was what she did for us all. She made us ashamed, if we failed to make a constant effort to make real all of our hopes, our visions, and our plans. She herself was never lazy, never self-indulgent, and never too discouraged to work on.

I never knew a more resourceful person. You could not put her in a position from which she would not think of some plan by which she might extricate herself and all those who put their trust in her. We found ourselves counting upon her in emergencies, still it was with a little surprise that I saw Mr. Perry—in that little fifth-floor office where he, Miss Plummer, Miss Avery, Mr. Hopkins, Miss Beth Hendrickson, and I worked upon the *Pratt Institute Monthly*—take scissors to the galley-proof and cut a word into two parts, and hear him ask Miss Plummer for a substitute word, having five letters and ending in a letter that went down. Without a moment's hesitation, she supplied his need. It was a more adequate word than the original, it had just five letters and it ended in a "g"! I can commend these early copies of the *Pratt Institute Monthly* to you. They are full of worthwhile articles; alive with new ideas; and are printed—thanks to Mr. Perry—in a form that delights the eye.

Not only thru the *Monthly*, but in other ways, Miss Plummer came into the general life of the Institute. She was our "bell sheep"—we sent her ahead of us out into the world to represent us, hoping that the world would judge us by the impression that she made.

She wore herself out in her efforts to interest her fellow-workers in what we all

considered her too Utopian schemes for the social life of the Institute. She longed to put the students in touch with all the wonderful life of a great city and to give them all the cultural opportunities possible during their brief stay with us. But it was the beginning she made and the vision she showed us that has now taken definite shape at Pratt Institute in the Men's Club, the Women's Club, the Rest House, the Free Lecture Courses, the Concerts, the Neighborhood Settlement and the regular morning chapel services.

She longed for a wise satisfying social life not only for the Institute but for her friends, and she never gave up the hope that she could help to make such a life possible. She opened her charming home freely in her efforts to realize her ideals. Some of her social gatherings, of course, were pathetic failures, but some were great successes. She never seemed discouraged or elated. She just kept on, believing that if a thing were worth accomplishing it was worth working for. I shall never forget one of the successful parties, when I chaperoned her and Mr. Crothers at luncheon and listened to talk that was like the *Atlantic Monthly* come to life.

Her conversation was always an inspiration. I have never known anyone who habitually expressed herself so clearly and in such faultless English. She believed, too, that everyone could talk, and talk well, if they would be honest and give voice to their first-hand thoughts, and if they were not too lazy to look after their choice of words. She herself was vitally interested in all topics, and she knew how to draw people out. Her failure-parties came when she made the mistake of asking more than *one* guest and providing no adequate supply of geniuses to look after the surplus.

She was always so vital, so alive, so persistent, that, when she gave herself to a person or to a cause, something was sure to happen.

We were sitting, one afternoon, at the foot of the lower fall at Bush Hill, and I had been thinking of her tremendous vitality, when suddenly she turned to me and asked—"Do you really believe in personal immortality?" I told her I did, and then

she said, "What is to you the 'unanswerable argument for such a belief?'" I looked into those wonderful, deep brown eyes of hers and answered, "You are." "I think it was Emerson," I continued, "who said, 'you may not be immortal, but I am,' but I am far more ready to say, 'I may not be immortal, but you are.' I could never think of you as annihilated or absorbed." She made no further comment, but started up the long climb ahead of us. When we came to the corner of the Cresco Road, "The London Miss James" and "The Wilkes-Barre Miss James" were waiting to carry us off to a porch tea and an evening of talk under a starlit sky. Several years after, when The London Miss James and The Wilkes-Barre Miss James had both left us and stepped out into the unknown, Miss Plummer recalled to me our conversation. She spoke of the two friends whom we had lost, of their dominating personalities, and ended by saying, "Such folk make the 'unanswerable argument,' after all."

So, to-night, let us rejoice that we cannot think of her as dead. Surely in some other realm she is more alive than we ever knew her to be. Our sorrow is not for her—but we grieve that in Pratt Institute, here in the New York Public Library, and in the various organizations that are represented here to-night, we shall have her no more.

It seems to me that this solemn hour should be to each one of us who had the privilege of knowing her an hour of re-consecration. May we not make for her a form of earthly immortality by keeping alive here in our midst the ideals for which she stood. She loved this great city of her adoption; she longed to see its institutions rise to their greatest possibilities; she looked forward to the time when its home-life should be simple and fine; when its amusements should be uplifting and sane; when its public life should be pure; and its social life genuine and inspiring.

To make all this possible she did what she could—surely we, who have known her, cannot now be satisfied to do less than our best.

CAROLINE WEEKS BARRETT.

#### STATE-WIDE INSPIRATION

It was Stevenson who said "There are just two reasons for the choice of any way of life. The first is an inbred taste in the chooser, and the second some high utility in the industry selected." The traditions to which Miss Plummer was heir made inevitable her interest in the freedom, the rights, the equal opportunities for work of the women of America; and her keen and active mind, her broad vision, her fine integrity of character, made certain that she would not hide her talents in a napkin, and that the industry she selected should indeed have high utility. Her wide human sympathies, her rare appreciation of literature, her vision of the possibilities before the library movement, made librarianship appeal to her. We are fortunate that our profession had for thirty years the benefit of her reflective, yet keenly perceptive and creative mind, her quiet spirit, her ideals, so fully realized in her own life, her strong personality.

She was one of the few with sufficient insight to survey and plan the roads thru the wilderness, that most of us can only help to build and repair. But her life will surely inspire some among us to energy and even to a measure of wisdom, in the cause to which she gave herself.

Miss Plummer's influence was more than national, but we in New York are peculiarly fortunate that here among us she lived and worked. We, of our own experience, appreciate her value and benefit by her life. The high standards she set for herself and so nobly attained, the quiet power of her thought and personality, have touched us all. Those who enjoyed the rare privilege of her friendship have received a special inspiration that must tell in their own lives.

Miss Plummer was undoubtedly more closely affiliated with the local library club and the national association than with the state association. But, nevertheless, one perceives in studying the history of the State Association that her thought and action have profoundly influenced its work during the last fifteen years.

She became a member in 1890, the year of its organization. Until the "library week" was started at Lake Placid, in 1900,

the regular annual meetings were for the most part up-state affairs, and the work, outside of the meetings themselves, was almost wholly confined to the upper and the western counties. In the winter of 1895 and for several years thereafter, the association held joint meetings in New York with the New York Library Club, at many of which Miss Plummer was active. At the 1896 joint meeting she read a paper describing the new library building of Pratt Institute, and exhibited building plans. It is interesting to us, who know so well the charm, clearness and force of Miss Plummer's writing, that the secretary reported that the paper "was admirably written, the technical subjects handled with clearness and simplicity, and tautology avoided in dealing with similar details." This recalls the fact that the building she was describing was the first library to include a children's room as part of the original plan, and that it was she who first recognized the need of special training for work with children.

She was usually in attendance at the state meetings after 1900, and always the centre of groups of librarians, who were devoted to her. She served year after year on the resolutions and nominating committees. In 1905 she was elected president. For months before the Twilight Park meeting in 1906 she was in Mexico, and returned just in time to preside. As a program maker Miss Plummer showed marked ability. Those which she planned for the New York Library Club, the Long Island Library Club, and the American Library Association, when she served as president of these organizations, were notable. The program for the Asbury Park meeting last June is a remarkably fine piece of work, showing most careful and intelligent consideration, and constructive ability of a high order. Her address as president at Twilight Park, on the "Functions of a state library association" was an achievement; the sort of address which clarifies everybody's ideas, recommends a definite program of action and puts every one to work. It is interesting to note that at the close of the meeting the Executive Board took definite steps to

carry out every one of the plans she outlined in her address, and many of them have been followed in the state work to this day.

One direct result was the survey which the State Library made of the libraries of the state the following year, an account of which was published in the third annual report of the Education Department, and later reprinted separately. One idea which she developed in her address was the need of library training in normal schools, that teachers might more efficiently manage school libraries and direct the reading of children. Miss Plummer was thereafter, for some years, the head of a committee on schools.

At the Sagamore meeting in 1909 Miss Plummer read her delicately humorous and altogether charming paper "The seven joys of reading," afterward printed in the *Sewanee Review* and later twice issued in pamphlet form. At the 1910 meeting at the Sagamore she made a characteristically delightful address on "Poetry in the children's room," later repeated frequently before various library schools, and which it is hoped may now be printed.

Her quiet but keen humor, the charm of her conversation and the sincerity of her friendliness during those days, will ever be precious memories. It is given to few to combine the rare qualities of mind which were hers with such delicious humor, such appealing humanness, such pervasive charm of manner. To talk with her was a joy, to be her friend a perpetual delight and inspiration.

FRANKLIN F. HOPPER.

#### THE NEW LIBRARY SCHOOL—IN NEW YORK

TEN days before the opening of this building, on May 12, 1911, it was announced that Mr. Carnegie had made possible the maintenance of a library school for a period of five years and that its principal was to be Mary Wright Plummer.

I well remember the expressions of pride, of gratification, and of confidence on the part of chiefs of divisions, branch librarians and members of the staffs of the reference and circulation departments at the announcement.

There were many on this side of the river whose work had been enriched by personal association with Miss Plummer; there were those who had known her long and intimately as a cherished friend as well as a leader and guide in library training and service; there were those who remembered her visits to the Lenox Library and the classes of students she had sent there to work with incunabula; there were children's librarians and branch librarians who had listened to her "Seven joys of reading" at one of their own meetings at Hudson Park; there were even children who remembered her reading of poetry at their story hours in the libraries at Washington Heights and Jackson Square.

There were others who had not known Miss Plummer personally but who had felt the charm of her presence at local, state, or national meetings; who had visited her library to gain new ideas for their work, or had read her varied contributions to library periodicals. And there were to come those to whom she would prove a revelation—to these her later students, now the Alumni of the Library School of The New York Public Library, the years are bringing memories and associations such as came to us her earlier students on the day her coming to establish a new library school was made known.

"We do not meet many of the truly great men and women of the world," is the recent tribute of a children's librarian, "but those of us who knew Miss Plummer feel that she belongs to that company. To have had our work crowned by her interest and sympathy and understanding for so many years will be an inspiration to us always."

There comes back to me with peculiar vividness a long walk and talk with Miss Plummer in Central Park one beautiful spring afternoon, before the announcement of the new library school was made—a talk in which her plans and purposes were projected in broad outline. . . . There came to each of us, in a moment of silence, a vision of what lay ahead in the opening of this building for which New York had waited so long—of what it was going to mean to put behind the service of a great library in a great cosmopolitan city the

spirit of the city itself made personal and effective thru the co-ordination of many forces, the quickening of many intelligences—the shaping of ideals and standards in the midst of bewildering and overwhelming processes of daily routine in libraries and schools.

"It is going to mean a new school for new needs, but we must not limit its field to New York for New York," was her comment. I knew that she was thinking of Europe as well as America, of her graduates in China, in Germany, in Scandinavia.

Two weeks later the new library was opened. No one who lived in it that first summer will ever forget the on-rush of the public, the quick adjustment to a new environment, the challenge to a high standard of personal service in every department.

With the quietude so characteristic of her, Miss Plummer launched the new library school, without faculty, without students, without equipment, without even an environment, for the class rooms were still being used for storage purposes.

Fifteen years before I had seen Miss Plummer direct the moving of an entire library from temporary and inconvenient quarters into a spacious and well equipped building of her own planning. The picture of her in garden hat and apron pausing, duster in hand, in one of the old stacks of the Pratt Institute Free Library to read a letter and calmly advise me, a student, on a matter of minor importance, was now to be matched by others showing even greater poise and calmness in the face of conditions to which she was entirely unaccustomed.

Miss Plummer lost no time in mobilizing all the resources at her command. She knew New York. She knew what she wanted and she knew how to get at it. Before the first three members of her faculty were chosen, she had engaged lecturers outside and inside the library and had begun to shape courses for a "class of ten or fifty" as the case might be. One marvels at the breadth of interests and the intimate knowledge of institutions and the persons who could best represent them displayed in the list of lectures for the first year. . . .

The class numbered 37 regular students, and there were 17 probationers. Miss Plummer says of it: "Too much praise cannot be given to both faculty and student body for the way in which they have ignored inconveniences which were bound to arise from hasty equipment, and have taken the whole thing in the nature of an adventure." . . .

Members of the faculty past and present, speak of her social spirit—her realization that many of the students would come from a distance and would have neither friends nor relatives in the city, and that they would be obliged to live in boarding houses, in surroundings not always congenial. Her definite recognition of this need led to the establishment of informal teas in the class room following afternoon lectures.

Miss Plummer's intimate knowledge of the students and their capabilities was a continual source of wonder. Her power of concentration, her capacity for turning off work, and her ability to plan for future accomplishment, were a daily example. In the planning of her programs, she never forgot to put some of the city into the lives of the students. The theatre, music, art exhibitions, were all thought of. Her reading of poetry, her lectures on foreign fiction, her sense of world interests, her generous sharing with the entire library staff such lectures as those of Dr. Crothers, Alfred Noyes, Vachel Lindsay and Dr. Winchester, have been spoken of by many during the past few weeks.

Her Sunday afternoons at home for students brought the junior and senior classes together in groups, "making us feel," says one of the alumni, "Miss Plummer's interest in us as human beings, not merely as would-be librarians. She always came to all of the student festivities and apparently enjoyed them. I remember a valentine party for which Miss Plummer made a personal valentine for every student and member of the faculty. A witty rhyme of her own took us off to perfection and showed how intimately she knew our interests and characteristics."

But in the minds of faculty and alumni there rises a picture of her Christmas

party or *kaffee klatsch* as she called it. The *kaffee klatsch* was her own party. It was varied from year to year, but there was always a Christmas tree with a little personal gift for each student and member of the faculty, Christmas carols were sung, and a story was told.

Miss Plummer had always loved the children's room at Christmas time, and she was behind the first of the Christmas exhibits as she was behind the library story hour. She was a wonderful listener at a story hour, for she had the rare power of suspending her critical faculty completely. In this, as in other ways, she often reminded me of Dr. Billings.

Respecting Miss Plummer's relations with children and with story-telling, Miss Shedlock, the "fairy godmother" of the story-telling hours, writes:

"When Hans Christian Andersen died they said to him: 'He is not dead: he will live forever in the hearts of children.'

"Miss Plummer will have a large space for her memory. I put the children first because she loved them, and this gave her the special interest in children's librarians, and made her help so valuable to those who had to deal with children. But her influence was not limited to any age, any time, any country, and it will never pass away.

"May I add this little personal tribute—an expression of gratitude for the way Miss Plummer gave the first start to my own modest work in America."

The New York Public Library has lost in Miss Plummer, as it lost in Dr. Billings, a great personality. She was herself very chary in her use of the word personality. Somewhere she has written: "The word personality, as often used now, does not get its full meaning; we forget that it consists not only of what one looks like and sounds like and apparently feels like, but of all that one has made one's own out of the realm of knowledge, and all that one has assimilated and made profitable from one's experience."

Such gifts as hers are not measured by years in life or death. We are deeply grateful that she came to us when she did—that she accomplished in five years the

work of a lifetime—that we may bear her name, and work, and friendship, in our remembrance.

ANNIE CARROLL MOORE.

THE LITERARY LIFE

THO Miss Plummer's literary work forms a single part of her life service, her whole life, in the personal, in the vital, sense of the word, was always a literary life—a life centered in ideals and in thoughts, and in their expression in literature. Hers was the student spirit, that silently, unchangingly, follows the gleam, and for whom the common light of day is always tinged by some prismatic reflection from the heavenly vision. And her literary work—produced during a life absorbed by exacting professional duties—was so markedly the expression of that inner spirit that it may be best appreciated by recognition of the qualities that she brought to it.

It has always seemed to me that Miss Plummer's nature had four controlling currents: her love of humanity, in the larger sense; her love of literature; her love of children; and her inborn sense of humor. Emotional feeling or expression had little part in her Quaker heritage; her gift was reflective and analytic, rather than creative; and like all who cherish a high ideal her own literary work was to her but a ladder to the star. It is both inspiring and beautiful to those who loved her that her last utterance should have been a plea for the pursuit of truth—for that was ever the quest of her own spirit. In her writings these different currents of her nature were evident. Her finest work is the sheaf of verses, gathered into a slender volume printed privately in 1896, as a gift to her father and mother on their marriage anniversary. These poems, a few of which had appeared in different periodicals, she had written during the previous fifteen years. Poetry was always her lodestar, and her own vein of poetic expression was of fine and genuine quality, tho sparing in its yield. It was richest, perhaps, during her youthful years, and the strongest and most striking of her poems is still the first in this collection, written when she was in her twenties, that

moving vision of the wind-swept multitude in the Inferno, drifting,

. . . whirling and turning swift;  
Blown thru the cloud and the rift,  
Whither we know not and list not.

With its pity, there is the stern note that so often marked her uncompromising moral judgments, echoing in the thought that

Love that was uncontrolled,  
Killed by the ceaseless cold,  
Holds like a weight in its arms the  
price of the heaven it sold.

Her deep concern for justice and truth in human affairs is expressed in the fine sonnet on "The divine right of kings," which to her meant the right of the ruler "to sow his land so full of happiness, of peace and justice, love and courtesy;" while the tenderness for children that was one of her strongest characteristics inspired the touching and beautiful poems, "The birthday in Heaven," "My own," and "Inheritance." In later years her verses were even more infrequent, but they never lost their high quality. Her powerful sonnet on "The chosen people," evoked by the Kishenev massacres, will be remembered by many for its intense pity, veiled in ironic questioning.

Among her other writings her essay on "The seven joys of reading," contributed to the *Sewanee Review* in 1910, and later twice separately reprinted, gives us a glimpse of what books had meant in her life and of the wide sympathy and catholicity of her literary tastes. To read this little essay must be, I think, to many of her friends, as it is to me, like hearing Miss Plummer speak. It has the simple, direct quality of conversation, and it has all those familiar little personal characteristics—the quiet manner under which enthusiasm or feeling glowed so warmly, the orderly marshalling of facts or reasons, and the constant whimsical turns of humorous thought or expression, so delightful and so appealing. Her writings never expressed the full measure of her gift of humor; this was rather to be enjoyed in personal intercourse and in her delightful letters. Her constant absorption in her profession, with its unbroken

executive and instructional demands, kept her from the productive work in literature that she would undoubtedly otherwise have done; it turned much of her talent into professional channels, where her "Hints to small libraries" (one of the first manuals in its special field), her various reports and expositions of library training, and her articles on library work for children, have given practical help and inspiration to library workers during a quarter of a century. But this necessary predominance of the practical never narrowed or formalized her intellectual life. Her unceasing devotion to language study constantly widened the range of her reading. Indeed, all foreign literature was of great interest to her, and there are few European countries with whose writers she was not thoroly familiar, either in the original tongue or in translation. It was her delight in modern Spanish literature that led her to the preparation of her little book called "Contemporary Spain," in which she presented extracts from present-day Spanish novelists, hoping to lead other American readers to share in her enjoyment. In her last utterance, her president's address at the American Library Association conference, written in physical suffering and exhaustion only a few short months ago, we can see, I think, how noble a spirit had been fused from the conjoined forces of thought and aspiration; can realize how her firm faith in democracy was rooted in her broad understanding and sympathy for every honest human endeavor, and in her recognition of the fact that, as she says, "in every generation fear and distrust of the mental and spiritual processes of others are the drags on the wheels of the chariot that sets out in pursuit of truth."

Miss Plummer's love for children strongly influenced both her literary and her professional life. All children, from babyhood to youth, wakened in her a warm, affectionate delight, and there was no phase of library work so close to her heart as that which brought children into the magic realm of books. She was always an inspiring force in the movement that within the last twenty years has given the children's department its important place in

modern public library activities. One of the most valuable early contributions to that movement was her article on "The work for children in public libraries," published in the LIBRARY JOURNAL in 1897, where, lightening the carefully marshalled facts and earnest argument, we find the gleam of her joy in the children themselves, as in her reference to the "little squirrel who wriggles to the top of the librarian's chair until he can reach her ear and then whispers into it, 'There couldn't be no library here 'thout you, could there?'" It was this feeling for children that led her, within recent years, to the preparation of her three best known books, the two "Roy and Ray" volumes of travel, in Mexico and Canada, and the "Stories from the Chronicle of the Cid," in which she re-told for young readers the famous romance of Spanish chivalry. In their simplicity, their quiet, matter-of-fact detail, always pleasing to children, and the sympathy with which she drew the figures of her little travelers, the "Roy and Ray" books—which were carefully based on her own Mexican and Canadian itineraries—have made for themselves a worthy place in the children's literature of the day.

In all its interests and manifestations hers was a rich and fruitful life, given unstintedly to service; to the inspiration, for ideals and for work, of the many to whom she was friend as well as teacher, yet given also in full measure to the things of the mind, and ever seeking truth and wisdom for the interpretation of life. The influence she left in her profession is an abiding one; it will reach out to many to whom she herself must be unknown; but we who loved her know that influence as only a part of the warm living personality, the true friend, the lovable woman, the earnest spirit, that for our own comfort we must think of, in her own words, as "journeying on to dip her hands into Truth's fountain."

HELEN E. HAINES.

#### IN DEFENSE OF STANDARDS

WHEN one comes to figure over the influences of the last twenty-five years, I fancy that all of us will be glad to acknowl-

edge that no one person, save Dr. Putnam, has contributed so much constructively to the general elevation and dignity of the library profession in America as Miss Plummer. It has been her steadfast insistence on high ideals in library training and the personal quality which stood for that sort of thing, which has, more than anything else, kept library training from drifting into the frivolities of technique. It wasn't what she did for the learned side, altho her insistence on including at least a symbolic sample of this side in her courses, was, I think, a far-sighted and valuable contribution, but it was her steadfast standing for thro attention to the work in hand and high ideals as to the quality of practical service in its most elementary aspects which contributed to the net result wrought by her own teaching and influence and thru her graduates. It was the combination of having the accomplishment and individuality and the knack or power of having that touch other libraries at the right time in the right way.

E. C. RICHARDSON.

#### THE WOMAN LEADER

No other woman in library work has so merited the devotion and admiration of her colleagues as did Miss Plummer. Her clear and sane vision, her warm and tender sympathy, her wide knowledge, and extraordinary gift for firm and quiet administration, made her easily the chief among women librarians of the world.

It was my privilege to know Miss Plummer intimately for more than twenty years. We were brought together not long after her going to Pratt Institute thru our mutual friendship for Miss M. L. Avery. Personal acquaintance soon ripened into great professional esteem and respect. I sought Miss Plummer's advice and aid on numerous occasions and never found her wanting. What she has been to hundreds of young women who have studied under her is known best to themselves. The library profession in America has lost in her one of its truest leaders, and the coming years will only intensify our sense of loss on the professional, as well as on the per-

sonal side. Miss Plummer was a great trainer of librarians, but she was a greater woman. Careers such as hers give the lie to those gloomy prophets who foretell that men and women cannot work together on the basis of mutual respect and admiration.

She was never too busy to take time to read, to think, to write. She was never too much engrossed in the daily grind to keep clear and sweet her own soul. There is no one to take her place in our admiration and in our affections.

WM. W. BISHOP.

#### THE WOMAN IN THE LIBRARY

I WOULD not willingly have been absent from this meeting, for it is to express our sense of the value of a life unusual in its service and of a character unusual in its qualities. Also, I think, something more: the tribute of our profession as a whole to that group within it whose qualities and whose service distinguish American librarianship from that abroad. I mean, of course, the women students and the women workers. Perhaps the time should pass for referring to women as a group. But I think it oughtn't to pass. For their qualities as workers are not merely supplementary to those of the men: they are absolutely complementary. The material with which we deal, the constituency which we serve, and the service we render has each its feminine side;—a side which can best be interpreted by feminine intelligence and feeling. There have been women—among them Miss Plummer herself—who possessed and have demonstrated abilities—scientific and administrative—supposedly characteristic only of men; but there are no men who have brought or can bring to such work the qualities which are the unique possession of woman. The lack in women of the abilities which have been characteristic of men may be made good by the ampler social and business experience which the times assure; but the lack in men of the qualities characteristic of women, can never be made good except thru the auxiliary co-operation of women themselves.

Fortunate indeed, therefore, it was that

so early in the development of the modern public library amongst us women were brought into the service. The potent agency for bringing them was the professional Library School: which, admitting them into its curriculum on an equal basis, enabled them to prove themselves. Without the Library Schools we might still be subject to the conservatism which abroad for the most part still holds them aloof.

The school gave the opportunity; and the proof was ample. The effect of it has gone beyond the number of trained women whom they have supplied: it has stamped with their authority the capacity of the sex for this sort of work, has given their position in it both dignity and certainty. And the result, due largely to them, has been such an accession of women to the service that they now form a considerable majority within it; and, with this accession, the introduction into the work itself of the qualities which are the distinctive characteristic of library work here as against that elsewhere: a more sympathetic appreciation of what may be termed the feminine side of literature—the humane side and that which affects taste and feeling;—a warmer, more patient, more personal, more suasive commendation and interpretation of this to the public;—an understanding of, and appeal to, portions of the public—especially the young—hitherto neglected; and, in the inner work of the library, the application to routine of similar qualities, especially those of patience, of enthusiasm and of loyalty—which have served to confine chiefly to women that vast mass of detail incidental to the organization of rapidly growing collections into an effective mass, and the equipment of them with efficient apparatus.

But the creation of this opportunity for women,—the effective use of it by them—involved problems requiring wise guidance which could be supplied understandingly only by one of their own sex. Doubly fortunate, therefore, both for them and for the libraries which they were to serve, that in the first class of the first of our library schools was a student who brought not merely the qualities which would assure her personally a successful career in the pro-

feffion, but also in an eminent measure those which would enable her to serve a larger purpose thru the wise guidance of others. Miss Plummer's intelligence was clear, and straightforward. She had always a right sense of scientific values. The least of a pedant—on the contrary, blithe and girlish in spirit, even as a woman of middle age, with quick appreciation of the humorous, and distinctly adventurous,—she had a strict conscience for the truth in study and in work. Pretense and affectation were absolutely foreign from her. She did not denounce them: she was too modest to denounce—and denunciation was not her business. But their approach caused her to withdraw into herself. And such a withdrawal—not by a weak nature, but by one obviously strong—was a disapproval more searching than mere denunciation.

A strong nature, I say, whose strength lay not in aggression of opinion or of expression, but rather in a quiet steadiness of motive and of action; in the application to a particular problem of uncommon "common"-sense; and in a tolerance—where the adverse opinion seemed sincere—due to an essential and controlling humility. For she was under, rather than over-confident of herself; was in fact, diffident. I fancy that this very diffidence must have strengthened the influence of her opinion and her counsel in advising others. For, the trait known, an opinion or counsel advanced with assurance would naturally have the greater weight; and in a person who has both experienced and achieved diffidence is both inviting and convincing.

In any publicity of expression it embarrassed her and had to be overcome by conscious effort. The result was the more creditable in that it gave always the impression of convictions calmly formed and of a character calmly poised. Whatever the perturbations within, her demeanor did not betray them. It was notably placid;—not imperative (for her nature was not) but never needlessly deprecatory. It suggested tranquillity without lethargy.

There have been few in our councils whose opinions were awaited with more respect. We could be sure that, while

modest and tolerant, they would be both definite and sane. Her judgment and her personality were a valuable asset of the Associations whose officers pay tribute to them this evening. But they were also widely influential in our individual relations and problems. They were especially important to us during a period when the enthusiasm of new discoveries and new impulses tempted to hysteria. And their benefit came to us not merely in a direct way but thru the hundreds of women who after preparation under her directorship are now our associates in the affairs and the decisions of our profession. The sincerity, good sense, good humor and gentle breeding which they apply to its technique and its ethics must have been confirmed and fostered in them by contact with her, and by the evidence constantly presented of the authority amongst us which those qualities assured her.

Her influence has thus been a potent, and, as Mr. Bowker has said, a radiant one. To say that its loss to us is irreparable would be not merely superfluous; the phrase itself would be altogether too conventional. Still less could it content any one who knew her personally—who had any intimate touch with a nature at once so mild yet so firm, so friendly yet so just, so warm in its appreciations yet so undemanding for itself. No such loss is, or can be repaired. But the life itself was a gift, which, in passing from her, has gone to enrich others and to add a finer efficiency to a noble public service.

HERBERT PUTNAM.

M. W. P.

Oh! you who falter, hesitate and doubt,  
 Choosing life's paths that promise ease and speed  
 But to forsake them when they chance to lead  
 Thro' ways that, rough and dark, hope's light shut out—  
 Here was a traveler that turned not back,  
 But having chosen went straight to the goal.  
 Who made the paths she needed—whose strong soul  
 Shed its own light when shadows loomed up black.  
 Not as the weary traveler, sad and worn,  
 Regretful of the struggle he has made,  
 Came this, our traveler, to the journey's end,  
 But as a victor who has bravely borne  
 Life's day and fearlessly sees daylight fade,  
 Knowing the peace the heavenly dawn will lend.

E. M. KENNEDY

SONNETS BY M. W. P.

LIFE

Life, we, thy children, cling about thy knees  
 And pray for largess; some are babes that  
 turn  
 Sweet faces, sure of answer, yet to learn  
 That suns may shine and they be left to  
 freeze;  
 And some cast fiercely at thee words that  
 burn,  
 Or all thy steps with bitter 'plainings tease;  
 And some, grown mute from many unheard  
 pleas,  
 Go from thee, looking back with eyes that  
 yearn.  
 What charm is in unmotherly caprice  
 That, rather than be led to endless peace,  
 We court, on bended knee, thy constant  
 frown—  
 Ay, even invite the smiting of thy hand,  
 So we stay with thee? Shall we understand  
 When thou hast loosed our fingers from thy  
 gown?

A REQUIEM SONG

What is this drawing, drawing soft and strong,  
 As it would clasp me to a sheltering breast?  
 What is this rhythmic pulsing, faint and long,  
 As it would chant me to a place of rest?  
 What is this gentle loosening of my hold,  
 On all the treasures gathered thru the years?  
 What is this radiance of pearl and gold,  
 Shining and glowing thru a mist of tears?  
 What is this turning of my eyelids, slow,  
 As they would rest upon some light afar?  
 What is this greeting sweet and low,  
 Wherein at last no sounds of parting are?  
 Whose is the welcoming face that bids me  
 come?  
 Thou? Is it Thou, O Lord? Then, this is  
 Home!

# THE MEDICAL LIBRARY

By MISS F. S. C. JAMES, *Librarian, Mayo Clinic Library, Rochester, Minn.*

THE most valuable medical literature appears in journals. Of some 1500 published before the war, about 500 were important and many others useful. Reprints from these and other journals which any library is complete without, form the second most vital asset. Slipped into covers such as the Gaylord firm supplies, reprints may circulate in place of bulky, expensive journals. Books, except monographs and a few fine systems, come a distant third in desirability. The practice of a large book shop of burning medical texts when five years old is significant of their rapid replacement by new editions or new ideas. The demand for the latest ink-damp news is quite analogous to the public library's demand for the most recent fiction.

Perhaps no other sort of library is so hampered by book committees and restrictions in the selection of purchases. If a librarian of a medical collection is worth shelter, no one is better fitted to choose the books. Periodical subscriptions and the filling of sets should be placed with one dealer to simplify the bookkeeping and correspondence and give more responsible service. Requests sent to the various publishers and dealers in medical books will secure the ephemeral trade lists so necessary to this "fresh every hour" pursuit. The suggestion is under consideration by the *Journal of the American Medical Association* to issue their weekly reviews as a guide somewhat similar to the *A. L. A. Booklist*. At present the ubiquitous book agent and hack reviewer leave as much to be desired in this special as in the general field of literature. At least one of the great medical libraries issues monthly accession lists that are often suggestive. But each institution and community is a law to itself and should be supplied with individual intelligence; each should collect local medical history, hospital reports, programs, clippings and photographs. The university medical school cherishes all that makes up the fascinating history of medicine from

the early folios of Hippocrates to complete files of college and hospital catalogs; the practitioner's collection strives to cut out dead timber and anticipate demands. Few experiences dampen the ardor of a conscientious librarian, not to mention that of a busy and perplexed physician who dashes in for help on a "case," like the confession that the exact treatise needed may be secured in a fortnight. Often doctors would turn over part of their libraries, especially reprints and society reports, if they understood to what better advantage they might use them when cared for by the library than when casually kept in small offices by fleeting stenographers. Much excellent material, notably foreign medical theses, may be had for the asking or for exchange. Gifts should always be encouraged, tho they invariably seem to include a bulky file of some journal whose duplicates already crowd the attic, or a set of some encyclopedic system, old but not rare. There will usually be a nugget, and the giver's good will is always worth the express charges.

Next after checklists of subscriptions and bindery, an authentic and detailed want list of periodicals should be made and a constant watch kept for missing numbers. The Medical Library Exchange in Baltimore sends its subscribers lists of material for distribution, as do also a few large libraries.

In the matter of interlibrary loans the promptness, courtesy and infallibility of the Surgeon General's Library can hardly be overestimated. No deposit is required and for the cost of transportation all but very rare books may be borrowed for a fortnight. The American Medical Association loans its members current medical journals for a few days, but reverses the usual rule by not loaning to libraries. Many large institutions will photograph (a doubtful blessing) or loan material not in too great demand. Co-operative periodical lists such as California and Minnesota have issued

greatly facilitate borrowing and are of value to students planning to visit some center for research.

As bound periodicals are the bulk of a medical library's accessions, a loose-leaf accession book into which duplicate bindery sheets may be inserted has been found a convenience.

Shelving periodicals in one alphabet or grouping alphabetically under languages sounds an even greater heresy than a return to an accession book, but considering them indexed like Poole sets, the idea becomes less radical. The alphabet is one of the few fragments of universal knowledge surviving among people past 30 and even the most ostensibly specialized medical journal contains much of interest to other specialties. The pathologist uses the *American Journal of American Sciences*, the surgeon *The Journal of Pathology and Bacteriology* and the man who would never learn the location of a classified group of books quickly finds his way in periodical stacks with an alphabetic arrangement.

Of the various schemes for classification of medical books and pamphlets, that issued by the Congressional Library seems to me incomparably the best. It is up to date, scientifically correct and provides ample opportunity for expansion. I have found it as appropriate for a collection of 40,000 volumes as for one of 4000. An alteration in the letters serves to make the system a unit for medicine and allied sciences rather than a fragment of a great general system. Letting the numbers of the Congressional arrangement stand as printed, the following letters may be substituted:

- A Periodicals (In the Congressional scheme these are grouped in subjects).
- B Physics, Botany.
- C Chemistry.
- D Natural Sciences. Zoology.
- E Human Anatomy.
- F Physiology.
- G Bacteriology.
- H General Medicine.
- I State Medicine, Hygiene, Medical Jurisprudence and Toxicology.
- J Pathology.
- K (Left for expansion or some specialty of the particular institution.)
- L Practice of Medicine.
- M Surgery.
- P Pediatrics.

- Q Ophthalmology.
- R Otology—RhinoLOGY—Laryngology.
- S Dentistry.
- T Dermatology.
- U Therapeutics.
- V Pharmacy and Materia Medica—Medical and Pharmaceutical Chemistry.
- W Nursing.
- X Eclectic Medicine—Homœopathy—Other schools.
- Y Veterinary Medicine.
- Z Miscellaneous (Used as a preliminary letter to the divisions given in the Library of Congress "Outline for classification" booklet).

From A to G the classes are found in the General Science booklet or Class Q, the others in Medicine or Class R. The only changes made in the numbers occur where two presumably small classes are consolidated, *i. e.*, "Zoology. Museums" would be D 771 instead of QL 71.

The date of publication as part of the call number simplifies the separation of late books. For example, the books published in the last ten years may be shelved on an accessible floor, thus the earlier volumes are automatically retired without requiring a change in the catalog. Typing the call numbers in red tends to abate that human perversity for seizing any obscure or irrelevant number on the printed card. The cards published by the Library of Congress, John Crerar and Harvard University are a great help not only for cataloging but for a bibliographic file.

With a medical library selected and cataloged on tidy cards in oak trays, with bound indexes standing in neat rows on steel stacks, the situation is that of Johnson's "Sir, I have given you the argument, do you expect me to supply the understanding?" When in other libraries a request comes for a more or less accurate author and title or a more or less definite subject, at least no more vague than "Mamma says send her a good book," the card catalog may be trusted to give a clue to the former and the appearance of mamma's infant to the latter. In a medical library one often pursues an unblazed trail. Yet to one jaded with the leisurely meanderings of university and historical library students among runes, paleolithic foot-prints, withered branches of family trees and the like, how exhilarating comes the telephone call, "I'll be up in half

an hour for articles on deamidation," "enlargement of the mesentery," "lymphoedema in facial paralysis," "Brown's operation," "two stage Mickulicz," or "thalein." One responds as to a trumpet! Herein lies that which taxes all alertness, memory and judgment. The requests quoted are selected in their actual phrasing quite at random from the day's work. Some of the words are not in the dictionary, none may be found in the indexes without being, as it were, translated. Have I quite grasped the inquirer's meaning? Is it diagnosis, etiology or therapy he specially desires? Will this obscure writer or that second-rate journal warrant the expenditure of a busy practitioner's time? The indexes are months behind; the really vital article that sums up or disproves all may have appeared within the week.

A firm rock in the shifting bibliographic sands is the Index Catalogue of the Surgeon General's Library. This alone gives cross-references for medical terms, a fact which, with its dictionary arrangement, makes its demands upon the user's intelligence and patience vastly less than those of the more complete and up-to-date Index Medicus. In the latter, many books and most periodical articles have been listed annually from 1879 to 1899 and from 1903 to the present time. The delay in issuing the monthly numbers and the very great delay in printing the cumulative index has led within the year to the institution of two new indexes: The cumulative *Index to Literature on Surgery, Urology, Obstetrics and Gynecology* published by the Indexers of Chicago, and the American Medical Association's *Quarterly Cumulative Index*.

Where the probability is strong that the same topic may be repeatedly studied, it may be profitable to type and file cards of complete bibliographies from the Index Medicus, as few more men have either time or patience to worry out their own bibliographies. A librarian quickly learns the patron's various lines of research and in glancing thru incoming journals is alert to note material for them.

For books not in the library, or in unknown tongues, there are often substitutes among the various abstracts. Very complete and excellent signed reviews are given

each month in the *International Abstract of Surgery*, brief unsigned abstracts appear weekly in the *Journal of the American Medical Association*, while *Zentralblatt für die gesamte Medicin*, *Schmidt's Jahrbucher*, *Revue de Chirurgie* and other journals devoted to special subjects are often sufficient or suggestive.

Much unnecessary trouble may be saved if readers keep careful record of articles intended to be cited in their publications. One private institution has helped to solve this difficulty by furnishing 4 x 6 abstract cards in manilla envelopes. At the top of the card is place for the author, title, journal, year, volume, and page reference, and the name of the doctor for whom the bibliographical entry may be desired. The rest of the card is left blank for the abstract of the article. The envelope bears the following notes upon its face:

#### BIBLIOGRAPHIC NOTES

Name  
Subject  
Date

Please note the following suggestions:

1. Read articles as soon as possible. Remove slips after reading that the book or periodicals may be given to others.
2. Arrange for dictation in advance.
3. Make references complete and accurate on the enclosed cards at the time the articles are read.
4. Submit cards with manuscript of paper, that references may be verified. The cards will be returned.

While the work is in some ways hard, it has objective compensation. To be asked the inventor of a type of gastric resection seen in a foreign clinic, and, armed only with a rough pencil sketch of the operation, to prow through foreign literature of the past ten years and then at almost giving up, to find it! Other people's appreciation, other people's money, never gives that thrill. "To study the phenomena of disease without books is to sail an uncharted sea," writes that prince of literary physicians, Sir William Osler. To help in pricking off the ship, to know there is an immediate practical use made of one's efforts, carries satisfaction. For those already engaged in medical bibliography it has a hold as inexplicable as Kipling's Wanderlust:

"It never done no good to me, but I can't help it if I tried."

# THE DEUTSCHE BÜCHEREI IN LEIPZIG

BY DONALD HENDRY, *Pratt Institute Free Library, Brooklyn, N. Y.*

THE opening, in October, of the Deutsche Bücherei des Börsenvereins der Deutschen Buchhändler, in Leipzig, realized a cherished desire of generations of German writers, scholars, librarians and the book trade, who felt the importance of having some central depot where the entire production of books printed in Germany, German-Austria and German-Switzerland, as well as German books printed in other countries, might be systematically collected and made available for the use of present and future generations. It was also an evidence of the remarkable energy and efficiency of the men who managed the undertaking.

The matter had been agitated in the past, but the present movement had its inception in a paper written in May, 1911, by Dr. Ehlermann, of Dresden, which influenced the Royal Saxon Government, the City of Leipzig and the German Booksellers' Exchange Association, with headquarters in Leipzig, to enter into an agreement on October 3, 1912, which made it possible to proceed with the work.

Under this agreement, the German Booksellers' Exchange Association assumed the management of the institution, the City of Leipzig gave the building site free of cost or encumbrance, also money for administrative and book purchasing purposes to the amount of 1,250,000 marks, payable in yearly instalments extending over a period of ten years. The Royal Saxon Government agreed to erect and equip the necessary library buildings and extend them as became necessary in future years; in addition, the government contributed the sum of 900,000 marks, payable in yearly instalments extending over ten years. At the expiration of the ten years thus provided for, the Royal Saxon Government and the City of Leipzig will arrange for the future maintenance of the Bücherei. This entire property has been conveyed to the German Booksellers' Exchange Association, with the proviso that in the event of the disso-

lution of that association, the whole property, including the collections of literature, becomes the property of the Royal Saxon Government.

The statutes of the Deutsche Bücherei, adopted September, 1912, define the purposes of the institution as follows: to collect, preserve, render available, and catalog according to scientific principles the entire literature in the German and in foreign languages published in Germany, and all literature in the German language published in foreign countries, subsequent to the first of January, 1913. Earlier parts of works in course of publication at that time are to be secured when it is possible to do so. The scope of the collection includes all above mentioned publications whether published for sale or not, including privately printed books; it also includes prints, with or without text, all printed government or other official documents, and transactions of societies. Music and daily papers are excluded. In the case of music the collection is unnecessary for the reason that the Royal Library in Berlin is already making a collection, while the mere bulk of daily newspapers prohibits their collection.

The managers of the institution are divided into three groups: a business committee consisting of eight members; an administrative council of thirty members; and the German Booksellers' Exchange Association. The business committee is responsible for the collections; has control of the funds and endowments; prepares the propositions which are to be submitted for consideration by the executive council; engages and dismisses employes, and has control of the staff. The executive council decides the limitations of territory from which literature is to be collected; the principles according to which the Bücherei is to be administered; the system to be employed in the preparation of a bibliography and in the cataloging of the library, and elects members to the business committee. The Exchange Association examines and

approves the yearly reports and accounts; has control of the budget, and elects members to the executive council from its membership. It is also empowered to amend the statutes. These three boards are made up of high government and city officials, and of leading publishers, librarians, and booksellers of Germany, Austria and Switzerland.

The organization of the institution having been perfected, the administrators were confronted with the problems of securing the co-operation of publishers who would be willing to deposit copies of their publications; the erection of a building to house the collection; and the appointment of a director and staff of librarians and assistants.

When one considers that the present movement was started by Dr. Ehlermann's paper, in May, 1911, that the agreement was entered into between the Government, City and Booksellers' Exchange Association on Oct. 3, 1912, the corner stone of the building laid by the King of Saxony on Oct. 19, 1913, and a portion of the structure sufficient to accommodate the work for the next twenty years formally opened in October, 1916, it speaks wonders for the energy of the men having charge of the enterprise.

All publications deposited in the *Bücherei* are free-will gifts of the publishers or are purchases. The library having no claims on publishers, it was necessary to obtain their co-operation, and to this end the business committee visited or corresponded with the publishers. They met with a hearty response, and by the end of the year 1913, no less than 1811 publishers had entered into a written agreement for ten years to give the *Bücherei* one copy of each of their publications, beginning with the year 1913. In some cases the books are not entirely free. The number of firms contributing has increased considerably since that report was made. At the same time, the publishers of over 5000 periodicals were giving their publications. This number also will have increased largely by this time. The various governments, provinces and cities furnish their publications, and permission has been obtained to have copies of publications which for political or other reasons have

been suppressed, on condition that they be not accessible to the public. In order to trace privately printed books, the head of the German Printers' Association communicated with 10,715 printing establishments, a large number of which agreed to furnish the names of persons ordering such printing done, and the titles of the publications.

The next consideration was the planning and erection of a library building. The site given by the City of Leipzig contains an area of over 12,000 square meters, situated in the southeast quarter of the city, not far from the *Buchhändlerhaus*, which is the headquarters of the German Booksellers' Exchange Association, and quite near the site of the International Book Industry and Graphic Arts Exposition, held in 1914. As already stated, the Royal Saxon Government agreed to erect and equip the buildings. The portion of the building first to be erected, which has just been formally opened, consists of the front building of the projected group, with a rear center extension, and is calculated to meet the needs of the library for the next twenty years. The estimated cost of this portion was 1,750,000 marks. The ground plan of the entire projected group shows a crescent shaped front, with two side wings and a center extension at the rear. The front part is five stories high, the side wings, which will contain the book stacks are to be eight stories. The rear part of the center extension contains the large reading room, and will occupy a central position in relation to the wings when they are erected, thus adding to convenience in obtaining books from the stacks. The building plans look ahead for a century and allow for additions as needed until a total shelving capacity of 10,000,000 books is reached. The part now completed will accommodate the administration offices, shelves for 500,000 books, and the large reading room.

In choosing a director for the *Bücherei*, the business committee selected four from amongst the applicants and invited them to express, in a short verbal statement, their views concerning the organization and development of the library. The choice of the committee fell upon Dr. Gustav Wahl, librarian of the *Senckenberg Library*, in

PHOTOGRAPHS OF THE ARCHITECT'S MODEL OF THE DEUTSCHE BÜCHEREI, LEIPZIG. THE UPPER SHOWS THE CRESCENT-SHAPED FRONT BUILDING, OPENED IN SEPTEMBER; THE LOWER SHOWS THE REAR ELEVATION, OF WHICH THE CENTRAL PORTION IS COMPLETED. THE SIDE WINGS ARE NOT YET BEGUN.

Frankfort on the Main, who entered upon his duties on May 15, 1913. Other engagements were: a librarian; two assistant librarians; 4 secretaries, two men and two women; 7 library assistants; 1 clerk and two office assistants. The director, the librarian and the two assistant librarians are appointed for life. The salary of the director is to be equal to that of the director of Royal Library in Dresden; the librarian's salary begins with 3000 marks a year and will reach 7200 marks; the assistant librarians begin with 2100 and reach 3000 marks; the men secretaries begin with 3000 and reach 4500 marks, and the women secretaries begin with 1800 and reach 3000 marks a year. Employees below the rank of assistant librarian are not appointed for life.

The Deutsche Bücherei is purely a reference library and no books are allowed to be taken from the building. Its use is free to everyone.

#### LIBRARY CONDITIONS IN COLORADO

Two years ago a questionnaire was sent out to all libraries in Colorado, to which only 38 libraries replied. This year, in response to a second questionnaire, 110 replies were returned, and an interesting statement regarding library salaries, qualifications, and working conditions as revealed in those replies, was made by Miss Charlotte A. Baker before the Colorado Library Association at Denver Nov. 3.

Her report showed that there were 43 cities and towns in Colorado with public libraries, and eight towns with library projects started; 39 libraries have a librarian, or one person in charge; four libraries are managed by women's clubs whose members in turn act as librarian. Public libraries in Colorado are open from one to 70 hours a week, and from one to seven nights.

Thirty-five of the public libraries which reported, stated that they had spent \$32,220 on books and periodicals during the year. These same libraries spent \$124,375 for their total expenses. This makes the "up-keep" cost of 75 per cent. of the income, while only 25 per cent. of this income was spent for the purchase of books. The re-

port showed that 37 public libraries have librarians in charge who have had at least high school education. Of the 14 educational libraries with librarians which reported, the "up-keep" cost was 7 per cent. over the amount spent for books. They are open from 30 to 80 hours a week. Forty-three high school and public school libraries reported. Their combined book collections contained 52,551 columns. Twenty-four of them spent last year \$2742 for books.

Miss Baker stated that the report showed that in many small libraries in Colorado no vacations whatever are given the librarian. She urged that the Library Association write to presidents of library boards where the library is open over 30 hours a week and where the librarian has no vacation, recommending that vacations be given as a business measure. "No person can be tied down to the same place day after day without falling into a rut. Where vacations are not granted, the librarian, the library, and the town suffer from such short-sightedness."

Secondly, she recommended that the association work for a library law which would place the minimum salary of the librarian, paid out of public funds, at \$50 a month for 42 hours a week service; that such a worker have at least two weeks' vacation with salary; that she be a graduate of a school with a rank of an accredited high school; that she have either six weeks' training at a summer school for librarians, or six months' apprentice training in a library of not less than 25,000 volumes, or in any library approved by the State Library Commission. Miss Baker urged that where a small town had to pay its librarian less than \$50 a month, less than 42 hours a week be demanded.

Much interest was shown in the appearance before the association, at this same meeting, of R. E. Wright, secretary of the Colorado Survey Commission and of the civic legislative bureau of the Denver Commercial Association. Mr. Wright stated that a library survey of Colorado was planned for the future, but that it could not be undertaken for about eighteen months. He submitted, however, a tenta-

tive outline of a proposed educational code for the State of Colorado. The librarians were concerned in this, since among its various provisions were those for county librarians, the same to be under the State Board of Education. The proposed code gives the state board the right to supervise county district libraries, and gives the county superintendent of schools the power to nominate for appointment the county school district librarian. The code suggests that he be given direct supervision of the county district library.

In the discussion which followed the submission of this report, Mr. Hadley, of the Denver Public Library, objected to any survey touching library affairs without the co-operation and assistance of library workers. The value of school libraries was unquestioned, he said, but he objected to placing public library activities under the control of school officers, and also to spending public money for school libraries other than that provided for by the school tax. He believed that any additional money for library purposes should be applied to the support of public libraries already in existence.

The objection to placing public library activities under school boards, he said, naturally did not come from any intentional antagonism from them, but was based on the fact that school boards do not give the attention to library affairs which they deserve when they also conduct school activities. Consequently, since the number of library employes is small and the money invested correspondingly so when compared to public schools, school boards are inclined to neglect library affairs in their attention to the larger school work.

Mr. Hadley said that many librarians in libraries under school board control, were little more than clerks, that their attendance at a board meeting was most uncertain, and that library affairs submitted to the board consisted usually of presenting statistical reports which, with other library matters, were referred to a committee of the board, and did not receive the undivided attention of the entire board which the library's importance warranted. Public libraries under school boards in small cities

where the library support was inadequate at most, have been obliged at times to spend too much for text books for teachers in the schools, which money should have come exclusively from the school fund.

The school domination over public libraries has gone so far in some cases as to result in school superintendents calmly appropriating the best quarters in a public library building for school offices, and obliging the librarian to accommodate himself to what was left. Another example of this disregard for public library rights is known to many librarians. They were acquainted with a trained librarian of experience who worked vainly for two years under a school board and upon her resignation (this in a city of ten thousand people!) the library janitor was duly appointed her successor by the school board.

Mr. Hadley said school teachers were the public library's staunchest supporters, but he did not consider them capable of handling library affairs with the same success that librarians should have. He called attention to one city where 30,000 books had been placed in school buildings for school use. In a comparatively few years these collections consisted of a depleted conglomeration of broken sets and unclassified and uncataloged books, locked in dusty cases. He objected to investing public funds for books which not only would be inaccessible to the adult public at all times, but also to school children on Saturdays, Sundays and during vacations.

He urged an amendment to the Colorado library law, providing for county support to public libraries in county seats, so that the library machinery and equipment already in existence might be extended and used for the benefit of the entire county, including schools, granges, study clubs and individuals at large.

Mrs. Fannie M. Galloway, president of the Colorado Traveling Library Commission, declared she would oppose any control of library affairs by school officers, because of the too frequent inefficiency of the ordinary school board.

Miss Charlotte A. Baker, of Fort Collins, criticized the provision in the proposed code which did not require the county district

librarian to have library training and experience. She said Colorado teachers were not required to have special pedagogical training for appointment, but that if they could pass an examination in the ordinary school subjects, they were allowed to teach. Teachers might "get away" with this lack of special training, she said, but librarians could not.

Following the discussion, Mr. Wright stated that he would recommend that all matters relating to library work over the state be submitted to library workers for their consideration, and he suggested that the Colorado Library Association appoint a committee from its membership to advise the survey commission in library affairs. The legislative committee of the association recommended to Mr. Wright that the survey commission advocate the consolidation of the Colorado State Library, State Supreme Court Library, Colorado Traveling Library Commission, and the Colorado State Board of Library Commissioners.

Miss Reese recommended, when the library survey was attempted, that this be conducted by library experts accredited by the American Library Association.

---

#### THE MEMORIAL MEETING FOR MARY WRIGHT PLUMMER

THE memorial meeting for Mary Wright Plummer was held on Thursday evening, Nov. 16, 1916, in the Stuart Gallery at the New York Public Library. The meeting was under the auspices of the New York Library Club, in co-operation with the American Library Association, the New York State Library Association, the New York State Library School, the Library School of the New York Public Library and the Pratt Institute Library and Library School of Brooklyn, representatives from all of which associations participated in the program or were present at the meeting. The gallery was filled with a most remarkable and representative gathering of library and other friends of Miss Plummer, to the number of six hundred, including many representatives from distant cities, and greetings were received from many other representatives of the library profession.

The size and character of the gathering was in itself one of the finest tributes paid to the memory of Miss Plummer.

The meeting was under the chairmanship of Dr. Frank P. Hill, librarian of the Brooklyn Public Library, as President of the New York Library Club, who confined himself to very brief introduction of the several speakers. In opening the meeting he said: "To-night we are gathered from far and near to honor the memory of another great librarian, one who for more than twenty-five years stood in the front ranks of the library profession—Mary Wright Plummer. We shall hear from those who have been intimately associated with Miss Plummer for a great many years, in her social life and in her professional life; and it is my first duty as presiding officer to present to you the honored President of the American Library Association, Mr. Walter L. Brown."

President Brown spoke briefly, introducing R. R. Bowker to speak for the American Library Association as well as for the New York Library Club. He was followed by W. R. Eastman, who spoke for the State Library School and gave a picture of the school in those first days at the Library of Columbia College in New York City before the removal of the school to Albany, including in his address a letter from Miss Underhill of Utica, an associate of Miss Plummer in the school. Mrs. Caroline Weeks Barrett, an associate and close friend of Miss Plummer in her early Pratt days, followed with intimate recollections. Franklin F. Hopper, for the New York State Library Association, spoke of Miss Plummer's broader relations in state work. Miss Annie Carroll Moore, an early associate of Miss Plummer at Pratt as well as later in the New York Public Library, spoke of her interest in children, and of her plans and her development of the Library School, to which she gave the best work of her latter days. Miss Moore also read a letter from Miss Marie L. Shedlock, the "fairy godmother" of story-telling, who had been induced by Miss Plummer to bring her story-telling inspiration into the library field. The last address was that of Dr. Herbert Putnam, Librarian of Congress, who paid tribute from a national point of

view to Miss Plummer's eminence in the profession, and emphasized especially the value of her work as a woman and the work of women in the library field, distinguishing the American library profession from that of other countries. Robert Gilbert Welsh read a letter from Miss Helen E. Haines on Miss Plummer in her literary life and also several of Miss Plummer's poems, including that on the "Conquest of the air" published in the *New York Times*, accompanied by an editorial in that journal, and "A requiem song," an unprinted late poem which seemed to remain as the writer's confession of faith. These addresses are given, revised, and with some condensation to avoid repetition, elsewhere in this number of the LIBRARY JOURNAL.

A score or more of letters and telegrams were received which could not be read at the close of the meeting because of the lateness of the hour. Among the more noteworthy were telegrams from Mrs. Margaret Healy Bancroft, who, as Miss Healy, was the predecessor of Miss Plummer at the Pratt Institute and the first shaping of the library school, and from Dr. Julia Holmes Smith, who had been for some years consulting physician of Miss Plummer and earlier of her mother, both of them speaking from the most intimate personal acquaintance. These telegrams were as follows:

"Sincere regrets that imperative duty prevents my sharing in the memorial meeting to honor the memory of Miss Plummer, than whom few women will be more missed from a world made better by her presence. Miss Plummer has thru her noble life been an inspiration to women, a stimulation to men who seek high ideals, and facing expected death with the courage of a martyr, she illustrated the dignity of the great adventure."

DR. JULIA HOLMES SMITH.

"Please express to those gathered at the memorial meeting my deep regret that I cannot pay in person my tribute of admiration and affection to the memory of Mary Plummer. What poise and serenity she always showed, how accurate her knowledge and literary judgment, and with what unflagging zeal and enthusiasm she performed her every task! Her fine character and great expertness in her chosen field made her a beneficent influence on the lives of her pupils and associates. My association with her at Pratt Institute was a continuing inspiration."

MARGARET HEALY BANCROFT.

## HOW ONE COLORADO TOWN GOT ITS LIBRARY

THE men of Milliken, Colorado, have learned in the last year the truth of the old saying:

First, then, a woman will or won't, depend on 't;  
If she will do 't, she will; and there's an end on 't.

Several times during the past few years the question of starting a public library in Milliken had been brought up in the Milliken Woman's Club, and last spring the members of the club decided the time for action had come. How they accomplished the undertaking is told in the *Occasional Leaflet* for October, the quarterly publication of the Colorado Library Association. The account is quoted from a personal letter written by the chairman of the club's committee.

"When the question was again brought up in the spring, they voted me the chairmanship of the same committee, and I selected my own helpers. We immediately began canvassing the town and vicinity for cash donations and promises of labor. Most of the carpenters promised labor, and the farmers were very free with promises of team work, for, to be truthful, they never expected to have to fulfill the promises. We became the huge joke of the community. Men discussed 'those crazy women' on the street corners, laughed at us when our backs were turned, and made plausible promises to our faces.

"Finally we decided to ask for bids, and put an article in the paper asking all those who cared to bid to meet with the committee and get verbal specifications, because we could not afford blue prints. Three men responded. We waited a month for the promised bids, but they never came. Another man then made a bid for \$800. By this time curiosity was rife as to where our money was to come from, and fear was manifested lest, as the men put it, they should help us and get 'stung.' The club had voted us only \$600 with directions to put up a building 20 by 28 feet. We not only had to come within our means, but to add some minor details which had been left to our discretion. This bid was, of

course, rejected, but the man who was courteous enough to give us recognition, we hired by the day to work and to oversee any workers we might be able to send him.

"The question of a bricklayer was the next serious obstacle. It appeared that they too were afraid of us, and either refused outright to come for our job, or asked such tremendous prices as to be prohibitive. A farmer in the neighborhood was erecting a silo and his work required a bricklayer. After the job was finished, his boss gave him permission to work for us while the material for the next silo was being placed. Not expecting to go to work just then, there was not enough gravel on the ground for the foundation, much less the brick work. A farmer had promised to haul the gravel, and a man who owned the gravel banks had given it to us. Like the rest this farmer never expected to have to deliver the goods, and had put off the hauling under the plea that the gravel might be taken. In the middle of summer he was too busy to fulfill his promise. We had to use our mason while we had him. Our Mrs. Mellon had said we might have the use of her team and I called on her and she responded nobly. She and I hauled two loads of gravel from Brown's in one day and did our work besides. The next day the brick came, and we were handicapped once more. Then Mr. Brown furnished a team and Mr. and Mrs. Lee hauled gravel and sand. At this point the grocers lent us a team, one in the morning and another in the afternoon to be used for hauling brick. We notified the rest of the committee and every one responded with work. During the afternoon 10,000 bricks were taken from a 15,000 car and hauled to our lot. We were a very tired bunch of petticoats when night came, and were glad enough when the men took hold after supper and finished the work for us. How much we appreciated their help you can guess when I tell you that we hired the work for the last four loads of sand and paid for it ourselves.

"There was nothing more that the women could do until we came to lath. Here we had to change our plans and omit the porch

and decide on a single floor, to buy the laths. When I called for lathers, you should have seen the hammers and nail aprons make their appearance. One woman who could not work hired two boys, but with that exception our women did all the work. The last week I was too ill myself to go, but the committee were good enough to excuse me from tinting and finishing the wood-work. At this last work some of our women put in a hard week of labor. One donned a pair of overalls to be well equipped for the fray.

"We have \$37 promised towards the porch. The mason has promised to lay the brick pillars for this. The front door has arrived, and a carpenter has promised to hang this. The building is wired for electricity, but so far we have no fixtures. As nearly as we can figure we have a \$1000 building for an outlay of less than \$700. Our lot cost \$46.

"Of course we are in debt, but we are already making rag rugs and 'sich.' I have often wondered if other women's clubs could not help us as clubs, but not as individuals."

---

## American Library Association

---

### CHICAGO MID-WINTER MEETING

Members of the Council and other librarians interested are reminded that the usual mid-winter meeting of the Council will be held at Chicago Dec. 28, 29 and 30, 1916, in association with the several library organizations which will hold meetings during this last week of the year. The headquarters as already announced will be at the Hotel LaSalle, and requests for reservations should be addressed directly to that hotel. It is hoped that the attendance both at the Council and the other meetings may be general.

The Council meetings will be held on the mornings of Dec. 28 and 29, and all interested, whether members of the Council or not, are invited to be present. There will be informal discussion of these three topics: (1) Valuation of library books for insurance; (2) Standardization of library service; (3) What more can the Publishing Board do?

The League of Library Commissions will hold sessions on the afternoons of Dec. 28 and 29. At the first the following topics will be considered: (1) Summer library schools:

training given by library commissions, by Clara F. Baldwin, of Minnesota; (2) Aims and underlying principles of commission work, by Henry N. Sanborn, of Indiana. The certification of librarians (opened by P. L. Windsor of the University of Illinois) may also be considered at this session. At the second session Mary E. Downey will open the discussion of "The relation of the library commission to the large libraries in the state." Reports of officers and committees and the election of officers will follow.

During these three days meetings will also be held by the Bibliographical Society of America, the Association of American Library Schools (probably Saturday morning and afternoon), and the college and university librarians (also probably on Saturday). The Executive Board of the A. L. A. will meet Thursday evening, the 28th, and the Publishing Board some time during the three days. The Chicago Library Club will entertain visiting librarians and friends on Friday evening, the 29th.

The Proceedings of the conference at Asbury Park, published as the July number of the A. L. A. *Bulletin*, was distributed the first week in November, and the Handbook, issued as the September number, was sent out the fourth week of the month.

---

## Library Organizations

---

### SPECIAL LIBRARIES ASSOCIATION

On account of continued illness, Mr. F. N. Morton of the United Gas Improvement Co., Philadelphia, has been forced to resign as president of the Special Libraries Association. To fill the vacancy, the Executive Committee by a referendum vote elected Dr. C. C. Williamson, the vice-president of the association, to the presidency, and O. E. Norman to take Dr. Williamson's place as vice-president. Dr. Williamson, formerly head of the department of economics and sociology of the New York Public Library, has been since October, 1914, municipal reference librarian of New York City, and is president of the New York Special Libraries Association. Mr. Norman was formerly connected with the John Crerar Library of Chicago, going from there to the People's Gas, Light and Coke Co. of Chicago, where he has been librarian for a number of years.

### TEXAS LIBRARY ASSOCIATION

The annual meeting of the Texas Library Association, held in Galveston, Oct. 11-13, was considered by all the librarians in attendance

the most successful in the history of the organization. Twenty-one Texas libraries were represented in the total attendance of forty-one.

At the first session an informal feature, entitled "Library who's who," presented each librarian to the entire body by each arising, announcing his name, his library, and the reasons why he chose library work as a profession. The results showed that some were "reformed" school teachers and club women, others got into the work while they were deciding what life work to choose, and still others were able to earn college expenses while working in the college libraries as apprentices.

Miss Elizabeth H. West, librarian at San Antonio, in her presidential address to the association, summed up in a very pleasing way the activities of the T. L. A. during the past year, indicating the future immediate work for the association to accomplish for the promotion of libraries in the state. Frank C. Patten, librarian of the Rosenberg Library of Galveston, told in a brief way the history of the Rosenberg bequest and its administration. The residue of the Rosenberg estate, out of which the library was founded, has grown from \$400,000 in 1893 to its present value of \$890,000. The library receives its income from approximately \$600,000 of this amount.

J. E. Goodwin, librarian of the University of Texas, announced that President Vinson of the university has shown much interest in the demand made by the T. L. A. for a library school, and the school will be established if his recommendation is followed.

One full session of the meeting was given to the discussion of the Carnegie library situation in the state. Mr. Klaerner, state librarian, read his correspondence with the secretary of the Carnegie Corporation and with the libraries who are delinquent in living up to the terms required of them. The association endorsed Mr. Klaerner's efforts and recommended that he continued his plans for the complete solution of the situation.

Miss Mary C. Gardner read a very able paper on the "Training of apprentices," in which she indicated the extreme care used in the Rosenberg Library to secure persons fitted for library work. She deplored the short term of apprenticeship used there, but the results in the library demonstrate that the rigid basis of selection overcomes the short term to a great extent.

The committee on library legislation presented its report, which showed that its work

was confined to getting an adequate draft for a county library law for Texas. Miss Lillian Gunter presented the results of a year's investigation of the subject. The association has secured from the women's clubs, labor organizations, rural organizations and many local organizations the endorsement of the county library bill, and united effort will be made to pass this good law. The committee is continued with power to suggest further changes that will improve the bill and secure its passage.

The resolutions committee recommended a southern or southwestern meeting of the A. L. A. in the following resolution:

Inasmuch as the librarians in the southwest, so far as represented by Texas find it impracticable because of magnificent distances, to reach meetings of the A. L. A. with any degree of regularity when held in the east, the far west, or the north, therefore,

Be it resolved, that it be the sense of this association that this committee ask the Council of the A. L. A. to consider favorably holding the next meeting in a middle, western, southern, or southwestern city.

Carl H. Milam, director of the Public Library of Birmingham, Ala., made the principal address to the association. His subject, "The library and community service," was inspiring to both the librarian and the lay listener. He emphasized the need of reaching the business men by showing them that the library is a business institution. The service that a library gives was analyzed in the statement: "We are reaching one-third of the community" sounds big. But the same fact stated 'We are failing to reach two-thirds of the community,' puts an entirely different meaning on the problem." Mr. Milam also talked to the Rotary Clubs of Galveston and Houston at the luncheon hour, in which he brought out the business value of the library. Before going to Galveston he addressed a meeting of citizens of Austin who are interested in the establishment of a public library. Attempts will be made to crystallize this interest so that a library will grow into a reality.

The officers of the association elected at the meeting were: John E. Goodwin, librarian, University of Texas, Austin, president; Miss Rumana McManis, librarian, Carnegie Public Library, Tyler, first vice-president; Willard P. Lewis, librarian, Baylor University, Waco, second vice-president; Joseph F. Marron, legislative reference librarian, Texas State Library, secretary; Pauline McCauley, librarian, Waco Public Library, treasurer. The annual meeting next year will be held in Houston.

The trustees, librarian, and staff of the Rosenberg Library of Galveston, were generous in their hospitality and the care shown

to make it pleasant for the visitors was highly appreciated. The visiting librarians were met at the trains by automobile and given a short ride about the city on the way to hotels. Auto rides were also given at other spare times. A sea-food luncheon was very much enjoyed at one of the oyster resorts down the island. A launch ride along the water front thru the harbor and out into the Gulf was provided by the Galveston Commercial Association and was much enjoyed, especially by the "drylanders" of the group.

J. F. MARRON, *Secretary.*

#### NEBRASKA LIBRARY ASSOCIATION

The twenty-second annual meeting of the Nebraska Library Association was held in Lincoln, Oct. 11-13, and proved to be one of the most successful ever held. Following as it did the Library Institute held under the auspices of the Library Commission the first three days of the week, many of the librarians of the new and smaller libraries were in attendance. Fine weather, a varied program and the good attendance combined to make a splendid meeting.

Malcolm G. Wyer, the president, opened the meeting with a few words of welcome and a short history of library work. He also urged the recommendation of the co-ordination and unification of the following four libraries, University, State Historical Society, Legislative Reference Bureau and Library Commission. A resolution to that effect was moved and adopted. Prof. F. A. Stuff of the university gave an inspiring paper on the "Cultural aspect of creative fiction." Miss Nellie Williams told of the institutional libraries of the state. During the roll call the reports of the different librarians showed that much had been accomplished during the year.

On Thursday morning, Miss Mary McQuaid of Fairbury gave an informal talk on "Aids in book selection for the small library"; Miss Frances Morton of Beatrice, on "Magazine selection," and Miss Josephine Lammers of Lincoln on "Government documents for the small library." Prof. H. W. Caldwell of the University gave a splendid paper on "American history books for the public library" with a list for first, second and third purchase. The association voted to have this list published. Thursday afternoon was given over to the problem of the rural school libraries and rural libraries and discussions were led by Miss Anna Jennings, A. V. Teed, Prof. A. E. Anderson of the College of Agriculture, and Miss Charlotte Templeton.

"Interesting the club woman in libraries"

by Mrs. D. E. Wherry, chairman of the library committee of the Woman's Federation, and "Work with the children" by Miss Helen Lobdell of Norfolk, were the subjects taken up at our last meeting. Charles Compton of Seattle, a member of the national publicity committee, told us of the publicity work of the libraries of the Northwest, and of the aims of the national committee. At the business meeting, in answer to the questionnaire sent out by Mr. Utley in regard to the next meeting place of the A. L. A., Colorado received the majority vote altho not listed. Invitations for the 1917 state meeting were received from Nebraska City, Kearney State Normal School, Plattsmouth, Hastings and Omaha. Miss Edith Tobitt of Omaha in her usual efficient manner conducted the round table, and printed lists of questions proved a help in bringing out many things for discussion.

On Wednesday evening, Dr. G. E. Condra of the university with his motion pictures took us a most interesting "Trip thru Nebraska" and showed us many an unknown corner of our own state. The last evening the Lincoln Library Club was host to the association at the home of Mrs. F. M. Spalding, where the University Players under the direction of Miss Alice Howell presented the "Man who married a dumb wife" by Anatole France, with the "Flower of Yeddo" as a curtain raiser.

The following officers were re-elected for the year 1916-1917: Malcolm G. Wyer, Lincoln, president; Annie C. Kramph, North Platte, first vice-president; Kate Swartzlander, Omaha, second vice-president; Mary K. Ray, Lincoln, secretary-treasurer.

MARY K. RAY, *Secretary.*

#### WISCONSIN LIBRARY ASSOCIATION

The twenty-fifth annual meeting of the Wisconsin Library Association was held in Milwaukee October 12-13, the attendance being larger than at any previous gathering. The meeting was opened on Thursday morning by an address of welcome by the president, Miss Delia Ovitiz of the Milwaukee Normal School.

Mrs. A. C. Neville of Green Bay conducted the round table for trustees and librarians, the first speaker being Mr. McLenegan of the Milwaukee Public Library. He spoke of "The librarian, his work in co-operation with the library board" and stated that unless there was active co-operation disaster would surely follow. He referred to the library as a continuation school for the public and of the wonderful opportunities offered to all classes of people. He said that "the

man who does not read is as bad as the man who cannot read."

Miss Deborah Martin of Green Bay told of the indifferent trustee who does not attend the meetings but yet accepts the appointment. She suggested that there be some form of legislation to supervise libraries. This led to a discussion by Hon. W. H. Hatton of New London, who emphasized the responsibilities of the librarian. That the trustees should help in the selection of books for the library was the opinion of Emil Baensch, trustee of the Manitowoc Library in the paper read by Miss Pond, librarian. A. R. Jenecky, trustee of the Racine Public Library, spoke of "How to secure greater appropriations from the council." One of the first things to do is to obtain the confidence of the council; then make known your wants. Hon. J. A. Hazelwood, trustee of Jefferson Library, declared himself in favor of civil service appointment for positions in libraries.

"The library movement in Wisconsin" was outlined by M. S. Dudgeon of the Wisconsin Library Commission. A map was displayed indicating the libraries thruout the state. Twenty years ago there were but 50 libraries and at the present time there are 184.

The Thursday afternoon session was conducted entirely by speakers outside the library profession and was very interesting as well as inspiring. President C. G. Pearse of the State Normal School, Milwaukee, presented an interesting address on "The library's opportunity as seen by the educator." He spoke of the duty of the librarian to entice people to the library and also of the value in training children in the use of the library. The next speaker, Mrs. Victor Berger of the Milwaukee School Board, read a paper on the "Library's opportunity to serve the working class." She outlined the growth of public libraries from the time they were written on clay bricks in Assyria or on leaves of papyrus in Egypt, to the present time. Until recently public libraries' appealed only to the cultured class, but now they have been made a really democratic institution. "When work and economic conditions are such that all men will have more leisure, and brains not too tired and strained by the grind of the day's work, then the librarian need not despair as to how to serve the working class. The working class then will demand service and the library will most willingly and cheerfully serve."

"The library's opportunity as seen by the business man" was discussed by W. D. Con-

nor of Marshfield. He made a strong plea for bettering the conditions among all classes of people.

Miss Lutie Stearns of Milwaukee spoke on the "Library's opportunity from the standpoint of public leisure," stating that labor conditions must be improved before the people can be given leisure to read. She also suggested that libraries be made social centers, with moving pictures or any other form of entertainment which would bring the people to the library.

The "Relationship between the library and bookstore" was the address of F. G. Melcher of Indianapolis. He gave his experience as a book dealer and spoke of how a book dealer could bring good books before the public as well as the librarian, and how the two should co-operate to gain the best results.

Thursday evening an informal reception and banquet was held at the Hotel Wisconsin. Mr. Melcher read a number of selections from the modern poets during the social hour. Miss Lutie Stearns acted as toastmistress at the banquet and after an address of welcome gave an interesting history of the library movement in Wisconsin. Reminiscences were given by the following: Mrs. C. S. Morris, Berlin; Mrs. A. G. Neville, Green Bay; Miss Mary E. Hazeltine, Madison; Dean E. A. Birge, Madison; Hon. W. H. Hatton, New London; and M. S. Dudgeon, Madison. There were 150 in attendance.

Friday morning a round table for school and college librarians was conducted by O. S. Rice of Madison. He emphasized the importance of libraries in schools. Miss Mary E. Hazeltine of the Wisconsin Library School gave an outline of a new course for high school teacher-librarians in the University of Wisconsin. In the discussion Miss Josephine Hargrave of Ripon College told of how she as librarian carried on the work with the assistance of the students. Miss Anne Boyd of the State Normal School, Whitewater, told of the widespread movement in education to teach children in the grades and even students in normal schools how to study and also how to use the libraries. The position of the high school teacher-librarian demands something more than mere librarianship or pedagogic skill. She should have a knowledge of the teacher's problems as well as those of the librarian. She should have had teaching experience and should do some teaching in connection with her work as teacher-librarian, so as to keep the point of view of the teacher. Miss Boyd thought that it would

be better to be short in the technical side than not to be able to meet the more vital problems, from the educator's view. The teacher-librarian should be inspirational as well as a practical guide to recreational reading of the student and to the vocational pursuits. Many librarians took part in this discussion expressing the opinion that the librarian had all she could do in undertaking the duties of the librarians without trying to fill two positions, that of teacher as well as librarian. Miss Stearns suggested that the Board of Education pay for a teacher-librarian as well as special teachers in drawing, music, manual training, etc.

After a short business session, Mrs. Harriet Price Sawyer of St. Louis conducted the round table on publicity. Short talks on the importance of advertising the library were given by Miss Ada McCarthy, Madison; Miss Mildred Coon, Sheboygan; Miss Bertha Marx, Sheboygan; and E. M. Jenison, Fond du Lac.

At the conclusion of the meetings the librarians, thru the courtesy of the Milwaukee Public Library, enjoyed an automobile trip around the city.

Resolutions of thanks to the speakers, of appreciation for courtesies extended to the association by both individuals and organizations, contributing to the success of this meeting, and of loving recognition of the influence which Miss Plummer had exercised thruout the library profession, were adopted unanimously.

The officers for the ensuing year are: President, Mrs. A. C. Neville, Green Bay; vice-president, Kate Potter, Baraboo; secretary, Ada McCarthy, Madison; and treasurer, Callie Wieder, Fond du Lac.

CORA M. FRANTZ, *Secretary.*

#### IOWA LIBRARY ASSOCIATION

Refreshing, inspiring, creative was the 1916 annual meeting of the Iowa Library Association held Oct. 11-13 at Hotel Colfax, Ia. From a practical and from an inspirational standpoint, from editor, club woman, teacher, engineering, business and agricultural expert, we heard of the public library's vast part and privilege in the enlarging life of our state.

Mr. McVey in his talk on "Publicity" gave praise and blame to the library of to-day for its fulfillment or neglect of its ever-increasing part as center of the town's civic, artistic, and educational life. It is our privilege as well as duty to make known thru the columns of the newspapers, thru co-operation

with merchants, schools, and all live interests of the town, the resources of the library. A round table discussion followed Mr. McVey's paper, which brought out many interesting and successful methods of publicity which had been tried in the libraries represented by those present.

A delightful evening was spent Wednesday with Mr. Rush and the "Illustrators of children's books." By the aid of lantern and slides he recalled to our minds the beloved books of our childhood and those since published, reminding us that the crude and often times harmful illustrated newspaper supplement does not appeal to the child who has grown up with Kate Greenaway, Caldecott, Boutet de Monvel and all their fellow illustrators.

Thursday morning's session, given up to a book symposium, was most useful to all present. In this day of demand for the best books along all lines of endeavor, help and suggestions from experts are most welcome. Mr. Smith of the Iowa State College, on engineering books; Mr. Briscoe, University of Iowa, on business books; Mr. Gibson, Iowa State College, on agriculture; Mrs. Towner Corning, Ia., on the club women's need, and Mrs. Barclay, Boone, Ia., on the Bible as literature, all gave us much of value to carry to our various communities.

In the afternoon's address on "Library service," Mr. Albert, ex-president of the International Association of Rotary Clubs, gave us a wonderful interpretation of our high calling as librarians. Similar to his own experience—in being presented with a gold loving cup, his joy in the discovery that it was filled with gold coin, the added joy of planning to spend the contents and the sequel that to this day it is unspent—is the position of the libraries of the United States; our riches of position and privilege, the consequent difficulty in keeping a right perspective and spending ourselves for only the best. Given our well equipped buildings, the most remarkable construction of the present civilization, we, as part of the educational system of America, are developing new functions. The libraries of the old world had as their object the preservation of books, but with the development of social consciousness in America, we have come to be the dispensers of books, and our real problem is to find our greatest use. Belonging to a nation with a passion for education, we have an ever widening field of endeavor, and the quality of service rendered to-day in general is surpassingly good.

Mrs. Meyer of Iowa City and Mr. Frederick of *The Midland*, on Thursday evening gave us still further the civic expert's and editor's view of the public library's place in the life of the community, of Iowa's place in the literature of to-day, and of the part we as librarians may play in helping her to stand still higher in the future.

Friday morning was devoted to a business meeting, followed by Dr. Shambaugh on the "Iowa Historical Society"; Miss Sporleder, Iowa City, on the relations of school and library, the active part the teacher should take in this. Miss Armstrong, of Council Bluffs, provoked a lively discussion with her talk on "Time savers," making one feel that given one enterprising library to try out all these time savers, the rest of us would follow and by so doing gain the time for the larger library service toward which the entire convention pointed the way.

The convention adjourned, some going to Des Moines to visit the libraries there, others starting on the homeward journey, giving a last fond look at the wonderful autumn colors of the surrounding hillsides.

MIRIAM B. WHARTON, *Secretary*.

#### GEORGIA LIBRARY ASSOCIATION

The eleventh meeting of the Georgia Library Association took place on Oct. 17 and 18 in Atlanta on the invitation of the Carnegie Library of Atlanta. The first session was held on Tuesday afternoon in the library of the Georgia School of Technology. This was the meeting of the college and reference section, and resolved itself into a round table discussion of college library problems. Miss Robbins, associate director of the Library School, Carnegie Library of Atlanta, spoke on the printed aids issued by the H. W. Wilson Company. Miss Lucy E. Fay, librarian of the University of Tennessee, led the discussion of "Instructing students in the use of the library." Miss Fay made the point that the college librarian should not have to give such instruction to students, as this training in the use of a library should have already been given in the high school. However, as high school libraries are practically non-existent in the South, the librarian of the college library must assume the work. Miss Fay urged the necessity for colleges to give credit for the course. Mr. R. M. Kennedy, librarian of the University of South Carolina, stated that such a credit course was being given in the University of South Carolina, beginning this year. The course is to be required of all freshmen. Other subjects

that came up for discussion were Handling of reserve books; The student assistant; Division of funds; Co-operative periodical and society list; College library association of the Southeast; How to unearth the pamphlet; The decimal classification in a college library. Mr. Duncan Burnet, librarian of the University of Georgia, suggested that the college librarians of the Southeastern states meet possibly every two years as a sectional meeting of a state association, the meetings to rotate among the states represented. No definite action was taken on this suggestion.

The first general session was held in the evening in the Library School classroom of the library. In addition to the visiting librarians, a number of invited guests were present to hear the speakers of the evening. Chancellor Barrow, of the University of Georgia, and president of the Library Association, made a short address on the "Influence of books." Asa G. Candler, mayor-elect of Atlanta, spoke briefly on the "Place of the library in the community." The principal speaker of the evening was Dr. Archibald Henderson, of the University of North Carolina. Dr. Henderson gave a brilliant address on the "Modern drama as a social force." After the formal program, an informal reception was held.

The third session was held on Wednesday morning in the library exhibit of the Southeastern Fair, which was being held during the week of Oct. 16. Miss Minnie Leatherman, secretary of the North Carolina Library Commission, spoke on "How to meet the library needs of the farm." Miss Leatherman described the work being done by the North Carolina Library Commission thru its traveling libraries and package libraries and debate collections. Mrs. J. K. Ottley, chairman of the Georgia Library Commission, presented the "Work and needs of the Georgia Library Commission." Mrs. Ottley described briefly the work the commission had done for library development in Georgia since its establishment, nineteen years ago, and pointed out the fact that the commission had never had an appropriation from the state and had performed its prescribed functions thru the courtesy of the Carnegie Library of Atlanta. For lack of an appropriation, the commission has not been able to undertake any traveling library work, and Mrs. Ottley emphasized the need of traveling libraries in a state where 80 per cent. of the population is rural and, consequently, must look to the state for books. She outlined the proposed legislation which the commission

will present at the next meeting of the state legislature, covering the following points: (1) a paid trained organizer to carry on the work outlined by the commission; (2) an appropriation from the state adequate to carry on the work; (3) power to establish and maintain a system of traveling libraries. Resolutions endorsing this proposed legislation were adopted by the association.

Miss Lucy Fay next presented the subject of the "Development of school libraries in the South." Miss Fay gave the results of a survey that had been made which showed the need of an active campaign for better school libraries, and looked forward to the time when a well-equipped and well-conducted library would be considered as necessary for accredited secondary schools as laboratory equipment for the study of the sciences. Miss Fay pointed out the fact that, at present, the statement of the requirement was not specific enough, being limited to the general statement of an "adequate library."

C. Seymour Thompson, librarian of the Savannah Public Library, spoke next on "Labor-saving devices for librarians." Mr. Thompson spoke of the work being done by the American Library Association committee, and named those devices that should be within the reach of the average library.

An interesting feature of this meeting was the inspection of the library exhibit at the fair which had been prepared as one of the exhibits in the Liberal Arts Building by Mrs. F. O. Foster. In the exhibit were shown a model children's room, with suitable furniture, books, pictures, etc., and a general collection of library supplies, equipment, furniture, etc. The fair was visited by 164,000 people from many states, so that the library exhibit gave wide publicity to the subject of libraries.

The last session was held on Wednesday afternoon in the Carnegie Library and was devoted to the problems of public libraries. Carl H. Milam, director of the Birmingham (Ala.) Public Library, spoke on "Publicity methods for public libraries." Mr. Milam gave some of the methods that had been successfully employed in popularizing the library in Birmingham. He emphasized the value of studying the business and industrial interests of a community and having a liberal supply of books on the industries represented. The use of printed lists for mailing, and newspaper articles and lists, was emphasized. In the absence of Miss Margaret Dunlap, librarian of the Chattanooga (Tenn.) Public Library, Miss McMillan, of Chattanooga, read a paper on "County library extension," de-

scribing the system as Chattanooga had developed it. The subject provoked considerable discussion, as many of the Georgia towns are considering this system.

Mr. Milam brought a message from the Texas Library Association from which he had just returned, asking for the co-operation of the Georgia Library Association in presenting to the Executive Board of the American Library Association the matter of a meeting of the American Library Association being held in the South. The following committee was appointed to make a statement to the Executive Board: C. Seymour Thompson, Miss Susie Lee Crumley, Mrs. F. O. Foster.

The attendance register indicated that eleven public libraries in Georgia were represented at the meeting and eight college libraries, also the State Library and the Fulton County Law Library; there were present two librarians from Tennessee, two from North Carolina, one from Florida, one from Alabama, one from South Carolina.

The association accepted the invitation of Mr. Thompson to meet in Savannah in 1917. The following officers were elected: President, Dr. David C. Barrow, chancellor of the University of Georgia; vice-presidents, Duncan Burnet, librarian, University of Georgia; H. H. Stone, librarian, Emory College, Oxford, Georgia; Mrs. Eugene B. Heard, Middleton, Georgia; C. Seymour Thompson, librarian, Savannah Public Library; secretary, Miss Tommie Dora Barker, librarian, Carnegie Library of Atlanta.

TOMMIE DORA BARKER, *Secretary*.

#### MASSACHUSETTS LIBRARY CLUB

The Massachusetts Library Club held its autumn meeting of 1916 at Greenfield from Oct. 19 to 21. This was a union meeting of the New Hampshire Library Association with the Massachusetts and Western Massachusetts Library Clubs.

At the first session, Charles R. Green, librarian, Massachusetts Agricultural College Library, spoke on "Agricultural literature and what the state furnishes free."

"The possibilities of contagion in the circulation of library books" was the subject of an address by Dr. Walter H. Brown, of the Massachusetts Department of Health. Dr. Brown stated that the possibility of transmission of disease thru library books is practically nil. To support this point of view, the speaker enumerated some of the results obtained thru careful experiments made at Baltimore and confirmed by an important hygiene worker in Paris. He considered that there was no jus-

tification for the burning of books that had been in houses where there have been communicable diseases. The disinfection of books was considered of doubtful value. "At the present time there is no adequate way to disinfect a book," Dr. Brown maintained, "without ruining it." It was considered that the storage of books is the most that boards of health can reasonably ask. Storage of books for four months was held to be sufficient. Dr. Brown did not wish to have his remarks apply to tuberculosis or infantile paralysis. He did not care to be considered an alarmist, but in the matter of tuberculosis he thought there is a very definite risk when it comes to sending books to people with this disease. He thought every precaution should be exercised. In answer to a question, Dr. Brown said that there is still a lack of definite information on infantile paralysis, but that if books had actually been handled by patients afflicted with the disease the books had better be destroyed.

The session on Friday morning was in charge of the Western Massachusetts Library Club, William C. Stone presiding. James A. Moyer, director of the University Extension Department of Massachusetts, spoke on "University extension and public libraries." Mr. Moyer outlined with some detail the nature of the extension work and the large field offered to public libraries in its development.

Edward F. Stevens, librarian of the Pratt Institute Free Library, spoke on the subject, "Technical literature for the average library." Mr. Stevens outlined a plan, now under consideration, for the Pratt Institute Free Library to compile quarterly lists of the best new technical books, the lists to be printed by the H. W. Wilson Company and made available to libraries at nominal cost. It is proposed that the lists shall be issued in leaflet form and include each time a dozen or fifteen titles, such as the average library would buy. Following Mr. Stevens's paper, there was a series of brief talks on "Technical books: what to buy and how to advertise them." Miss Ella Sawyer, of Worcester, Miss Hazel Benjamin, of Easthampton, Miss F. Mabel Winchell, of Manchester, N. H., George L. Lewis, of Westfield, Miss Mabel Temple, of North Adams, and William C. Stone, of Springfield, were the speakers.

The session on Friday evening was in charge of the New Hampshire Library Association, Miss Mary Lucina Saxton, of Keene, presiding. In the paper, "An architect's library," Robert S. Peabody gave an account of some architectural books of outstanding value

and interest. It was an agreeable picture that Mr. Peabody gave of the architect's happy moments among his morocco-backed friends. N. L. Goodrich, librarian of the Dartmouth College Library, read a paper on "The literature of mountaineering; an essay in passionate bibliography."

At the session on Saturday evening, Miss Cora F. Stoddard, secretary of the Allied Temperance Organizations of Massachusetts, read a paper on the "Literature of the alcohol question." A considerable number of books were mentioned, with special reference to their suitability for general library use. The program was concluded with a paper on "Books for business men" by Ralph L. Power, librarian of the Boston University College of Business Administration.

FRANK H. WHITMORE, *Recorder*.

#### MICHIGAN LIBRARY ASSOCIATION

The twenty-sixth annual meeting of the Michigan Library Association was held in Lansing, Oct. 10 to 12, 1916. While not as large as the meeting in Ann Arbor, there were one hundred and fifty registrations. The representation from the smaller libraries was especially gratifying, and is a most potent testimonial to the splendid work of the library visitor. The larger libraries were remarkably well represented, there being forty-three from the Detroit Public Library, eleven from the University of Michigan Library, ten from the Grand Rapids Public Library, nine from the Jackson Public Library, and six from the Kalamazoo Public Library. All the meetings were held in the Senate chamber of the State Capitol, and the dignity and friendliness of the room added to the success of the meeting.

The first half of the first session was devoted to the reports of officers and committees. The secretary's report of the Ann Arbor meeting was read and approved, and the treasurer's report was read and referred to the auditing committee. Miss Nina K. Preston, state library visitor, gave a brief report of the year's work that showed clearly what a demand there is for just the kind of help which she can give. Miss G. M. Walton, chairman of the round table committee, reported on the round tables for 1916, and after giving a brief history of the round table work of the association, recommended to the association the permanent organization of the work and a sufficient appropriation to make it practical. Mr. Ranck, as chairman of the legislative committee, again advocated that a memorial be sent to the legislature asking it to make better provision for the housing of the State Library, said memorial to be signed

by every member of the association. This suggestion was put in the form of a motion and was carried. Twice before committees have been appointed to wait upon the legislative body to urge some definite action.

Mr. Ranck said that he did not believe that any fire insurance company would permit such conditions to exist in a private library, and, further, that the state authorities would not hesitate to condemn other institutions than the state property with such conditions existing. It was pointed out that much of the stacks, upon which the books and historical collections of books and newspapers were kept, were constructed of soft pine wood and highly varnished.

The second half of this session was devoted to a discussion of work with foreigners. Mrs. E. S. Gierson, of the Public Library of the Calumet and Hecla Mining Co., Calumet, discussed "What the library can do for the foreigners." She showed very clearly how alone the foreigner is when he comes to this country, ignorant of our manners and customs and of our language, and what a wonderful thing it is for him when he finds books and magazines in his own tongue in the public library. Mr. Novak, principal of the Northeastern High School, Detroit, gave a most inspiring address on "The foreigner and the schools." He brought out very vividly the fact that while just living in America does a good deal for the foreigner, an immense amount of work has still to be done before he will become an integral part of our civilization.

At the evening session, the association was addressed by Governor Woodbridge N. Ferris and Edgar A. Guest, of the *Detroit Free Press*. Governor Ferris talked of the "Library and the school or the school and the library." His talk was most stimulating, and for the moment at least filled everyone with the determination to take his advice and go home and read one great book a month, tho his advice supposedly applied to students, not librarians! Mr. Guest's topic was "Column conducting on a Michigan newspaper," but as he himself said, he kept as far away from it as possible. Mr. Guest's readings from his own poems were delightful, and his personality added greatly to the charm of the occasion.

Wednesday morning was left free for visits to the different state departments and the State and City Libraries. At half-past ten about one hundred members of the association enjoyed an automobile ride to the Michigan Agricultural College, where they had the opportunity of visiting the College Library, and were later entertained at a light luncheon in the parlors of the Woman's Building.

At noon the entire association was entertained at luncheon at the Women's Club House by the State Library, the Lansing City Library and Michigan Agricultural College Library.

The Wednesday afternoon session was devoted to work with children. Three excellent papers were given as follows: "Current comment relative to library work with children," Miss Mary Conover, chief of the intermediate division, Public Library, Detroit; "Good pictures for the decoration of children's rooms," Miss Lida Clark, of the department of art, State Normal College, Ypsilanti; "Children's books—twenty years ago and to-day," by Miss May Masseur, editor of the *A. L. A. Booklist*.

William Warner Bishop, librarian at the University of Michigan, gave the address at the evening meeting. His subject, "Large library buildings; an American contribution to architecture," was presented in a most delightful way. He traced very clearly the development of the modern large library, illustrating his points with stereopticon pictures of both good and bad architecture, that is, good and bad from the librarian's viewpoint. The pictures were unusually good and added greatly to the interest of the evening.

At the Thursday morning session the association was favored with short talks by some of the state officers. President F. S. Kedzie, of the Michigan Agricultural College, spoke of the college and some of its problems. Dean Robert S. Shaw, director of the Experimental Station, talked of the Experiment Station publications, their history, classification and distribution. A. C. Carton, secretary of the Public Domain Commission, described the work of that commission and spoke of some of its publications. John T. Winship, the state insurance commissioner, spoke most convincingly and earnestly on the subject of fire prevention, and recommended one or two books which every library should have on its shelves. State publications, which are always a mystery to the layman, were discussed by Miss Olive C. Lathrop, of the legislative reference department. She described in a very lucid way the different publications which the state issues, and pointed out their library value. She also spoke of the different departments which issue the publications, and made clear the methods of distribution. There was also a report from the State Federation of Women's Clubs on the library extension work of the federation. This report was read by Mrs. E. A. Gilkey, of Lansing.

At the business meeting on Thursday morning, the reports of committees were acted upon and officers were elected for the ensu-

ing year. These are as follows: President, Katharyne Sleneau, Public Library, Port Huron; first vice-president, F. L. D. Goodrich, University Library, Ann Arbor; second vice-president, Adah Shelly, Public Library, Sault Ste. Marie; secretary, Constance Bement, State Library, Lansing; treasurer, Elizabeth Pomeroy, Public Library, Armada.

CONSTANCE BEMENT, *Acting Secretary*.

#### ILLINOIS LIBRARY ASSOCIATION

The twenty-first annual meeting of the Illinois Library Association for 1916 took place at Ottawa on Oct. 11-13, with a registration of 132 persons.

The more strictly inspirational and informative features of the meeting consisted of the address of President Mary J. Booth, entitled "A debtor to his profession"; a book symposium in which several modern works of importance were reviewed; a stimulating address upon the literature of the great war by Dr. Lybyer, of the University of Illinois; and a lecture entitled, "The spirit of the pioneer," by Randall Parrish, the Illinois author and historian.

Several numbers on the program related rather intimately to general community progress. The means by which the library as an institution may co-operate with other local agencies was made the subject of a series of papers. One dealt with the devices used by the Jacksonville Public Library to encourage propaganda for hygiene and health education; the second took up in thoro fashion the possible service of the Municipal Reference Bureau as an aid to city and town officials, and told of its practical workings at Galesburg under the direction of a mayor who is also a college professor; a third dwelt upon the value of the library as a high school adjunct, and of the plan by which the Chicago Public Library is extending its system of branches in the city high schools. The president's address and the report of the secretary of the Illinois Extension Commission both emphasized the need for higher professional standards, and as a means to this end the requirement of more thoro training on the part of those who plan to enter library work.

Perhaps the project of greatest importance considered by the association was that involving possible new legislation. The committee working upon this matter submitted that far better results could be obtained by the library forces of the state if the establishment of county and community libraries were permitted by law; also that it might be time to begin urging a measure whereby librarians might be brought under some plan of certifi-

cation. After discussing these matters, the association endorsed the findings of the committee and authorized the pressing of the necessary measures upon the legislature in 1917. It also went on record as supporting the recommendation of the Illinois Efficiency and Economy Committee, in so far as it relates to the centralizing of state library agencies.

The local committee provided a reception for the entertainment of delegates, and the Wednesday evening meeting adjourned about 9.30 to the rooms of the Ottawa Boat Club, in response to the invitation. Following the close of the conference, a boat and trolley trip to Starved Rock State Park, a point of scenic and historical interest, took place on Friday morning. The Alumni Association of the University of Illinois Library School held a dinner, and a luncheon was arranged likewise for former students at the University of Illinois Summer Library School.

Officers for the year were elected as follows: President, C. J. Barr, Chicago; first vice-president, Mabel Thain, Oak Park; second vice-president, Effie Lansden, Cairo; secretary, E. J. Reece, Urbana; treasurer, Adah F. Whitcomb, Chicago; *ex-officio* members of executive board—Mary J. Booth, Charleston, and Anna May Price, Springfield.

ERNEST J. REECE, *Secretary*.

#### COLORADO LIBRARY ASSOCIATION

The twenty-fifth anniversary of the organization of the Colorado Library Association was observed this year in its sessions held in Denver Nov. 2-3. Five years ago, as a section of the Colorado Teachers' Association, it reached a membership of 34, including teachers, and this year as a separate organization, it has a paid membership of 64 librarians. This year's anniversary program was devoted largely to a consideration of Colorado library needs and remedies, and proved what probably was the most discussed program the association has had.

"The need of a summer library school" was first presented by Rena Reese, assistant librarian of the Denver Public Library, who submitted the results of a questionnaire on this topic. She said the time had not arrived for the establishment of a regular library school in Colorado, but the time has come when Colorado should have some adequate opportunity for the librarian of a small library to secure standardized instruction in library science. There is not a large public or institutional library in the state, but that has requests for help. Neither can give what is needed, for the large public library with its

departments and specialized workers, is beyond the scope of a small library, while the institutional library with its limited public, its highly specialized fields of intensive work, and its lack of social service, has not enough general problems to help the small library. A summer library school is needed for instruction in technical work in phases of library administration, such as budget making, etc., and to stimulate professional inspiration among Colorado library workers. The speaker advised shifting the location of this summer library school occasionally, owing to the great size of Colorado, and recommended that it be held in connection with the state's four general educational institutions.

As a result of her investigation, Miss Reese stated the following regarding a summer library school:

First, needs. For standardization of library work in Colorado definite statement to students as to the type and status of library instruction at present given in Colorado institutions; calling attention of trustees and educators in general to the need of trained library workers and informing them in regard to library requirements; placing standards of library equipment and service before library workers so they themselves will feel the need of training.

Second, remedies. Establishing in Colorado a library school, presumably of six weeks' duration in the summer in connection with some state supported schools, this course to be intensive and to meet all requirements of the American Library Association's committee on library training.

The need of "Legislative reference work in Colorado" was discussed by Dr. J. Arnold Lien, assistant professor of political science at the University of Colorado. He called attention to the fact that legislators usually were inexperienced laymen. The severe criticism of their legislative output is partly due to the fact that they are untrained in this work, and partly to the immense volume of legislation placed before them. Twelve hundred and eighty-six bills were introduced in the Colorado General Assembly at the last session. Many of the bills introduced were beyond any legislature to handle. Dr. Lien called attention to a bill introduced in a Western legislature prohibiting any woman 45 years old or more from using paint, powder, or anything that would tend to give a false impression, and also to a bill introduced in the same legislature prohibiting any drinking man driving a conveyance, wheelbarrows and baby carriages being excepted. He said that dupli-

cate bills were passed by the same legislature and one bill was repealed three times in one session of a legislature. Information regarding various legislative matters must be provided, data must be collected before the legislature convenes, and a practical bill drafter should be secured. He urged that a legislative reference department be provided to work with the Colorado State Library, in order to avoid the expense of duplicating library plants. He also urged the consolidation of the Colorado State Library and the Colorado Law Library.

"The distribution of Colorado documents" was discussed by C. Henry Smith, librarian of the University of Colorado and president of the association. He spoke of the defective conditions which make impossible the proper distribution of Colorado documents to Colorado libraries, since libraries get only surplus documents which are not distributed elsewhere. Mr. Smith urged an amendment to the law, making it obligatory on the state printer to provide one hundred copies to be given to the State Library for exchange with other states, the presentation of 50 copies to the State Board of Library Commissioners for distribution to Colorado libraries, and the appropriation of money to the State Library so that the large collection of old documents now stored in the basement of the State House can be sorted.

Miss Charlotte A. Baker, librarian of the State Agricultural College, submitted an interesting statement regarding library salaries and qualifications and working conditions in Colorado libraries. A summary of her statement, together with some discussion of the proposed library survey of the state, is printed in the front of this issue under the title "Library conditions in Colorado."

In presenting the topic "The growing need for a library extension worker," Chalmers Hadley of the Denver Public Library declared that the great library need in Colorado was a personal touch in the state's library affairs. He urged that this be supplied by the employment of a trained library field worker to give assistance to communities, librarians and library board members. He urged that definite library visiting be conducted by this field worker all over Colorado, and also that this worker act in an advisory capacity for the libraries in the various state institutions, which at present lack all library advice and assistance. He urged that the state be divided into four districts, north, central, south and west, for the purpose of library institutes, the same to be conducted by a field worker.

This session was marked by a general and interesting discussion of the various topics suggested.

On the evening of the 2d, the librarians dined together at the Shirley Hotel. A great birthday cake bearing 25 candles for the association's anniversary, was brought in. It was filled with various objects which suggested the type of response to be given, and much merriment was caused by the librarians who were called on. Following the dinner, all visitors were guests of the Denver Public Library at a theater party given at the Denham.

R. E. Wright, secretary of the Colorado Survey Commission, announced that a library survey of Colorado was under consideration, but that it could not be undertaken for about eighteen months. He also submitted a tentative outline for a proposed educational code for the state, and on these two proposals there was an animated discussion, in which Mr. Hadley, Mrs. Galloway of the Colorado Traveling Library Commission, and Miss Baker of Fort Collins, took part.

The rest of this third session of the association was devoted to interesting reviews of new books, given by Manly D. Ormes, librarian Colorado College, Colorado Springs; Rebecca Day, librarian Longmont Public Library; Edith Morgan, librarian State Normal School, Gunnison; Jean Macdonald, librarian, Boulder Public Library; Ethel Helm, librarian La Junta Public Library; Quantrell McClung, librarian Warren branch, Denver; Mary M. Weaver, librarian Rocky Ford Public Library; Elizabeth Selleck, assistant, University of Colorado Library; and Mrs. Homer C. Cushman, assistant librarian, State Teachers' College, Greeley.

Following the adjournment of this session, a meeting of the State Board of Library Commissioners was held and it was announced that a small sum of money was available for its use. By vote of the commission, it was decided to spend \$200 of this in subscribing for the *A. L. A. Booklist* and other printed aids, for free distribution to small Colorado libraries.

The fourth session of the association was made delightful thru the illustrated lecture given by Miss Harriet Vaille, of Denver, on "The Indian lore of the Rocky Mountain Park region."

During the business meeting which followed, the association voted to continue publishing the *Colorado Occasional Leaflet*. A motion was carried that the association's legislative committee prepare an amendment to the Colorado library law, providing for the taxing of

county property outside of the county seat, and in towns lacking library facilities, the application of the same to the county seat library, on condition that it extend its activities throughout the county.

The following officers for the coming year were elected: President, Elma A. Wilson, librarian Greeley Public Library; vice-president, Alice Lambert, librarian Colorado State Library; secretary and treasurer, Mrs. Elizabeth Galbreath, librarian, Denver University; executive committee, Rena Reese, Denver Public Library, and C. H. Smith, librarian University of Colorado.

HELEN INGERSOLL, *Secretary*.

#### BAY PATH LIBRARY CLUB

The Bay Path Library Club held its autumn meeting at the Bigelow Public Library, Clinton, Mass., Oct. 26.

A most interesting report of the M. L. C. meeting at Greenfield was read by Miss Alice G. Chandler. The round table of new books, conducted by Miss Mabel E. Knowlton, of Shrewsbury, brought many valuable books to the attention of those present. The question box, in charge of Miss Edith M. Gates, of Worcester, brought out many questions, and a general discussion of library problems. J. Randolph Coolidge, of Boston, was the speaker of the day, and his talk on "The growth of an interest in books" was most inspiring. Mr. Coolidge had a very practical message for librarians, which was received with keen interest.

The club voted to establish a traveling library of juvenile books to be circulated under the direction of the Woman's Education Association.

FLORENCE E. WHEELER, *Secretary*.

#### SOUTHERN WORCESTER LIBRARY CLUB

The Southern Worcester Library Club held its annual meeting at the Whitinsville Social Library in Whitinsville.

Miss E. Louise Jones, of the Free Public Library Commission, read a paper on the "Opportunities of the Massachusetts librarian."

The following officers were elected for the ensuing year: President, Mrs. Beatrice Putnam Sprague, Uxbridge; first vice-president, Miss Flora B. Brigham, Westboro; second vice-president, Miss Bertha Franklin, Bellingham; secretary and treasurer, Lucy W. Biscoe, Grafton.

LUCY W. BISCOE, *Secretary*.

#### MONONGAHELA VALLEY LIBRARY ASSOCIATION

The Monongahela Valley Library Association, an organization composed of the librarians and assistants of the four Carnegie libraries located at Braddock, Homestead, Duquesne and McKeesport, met Tuesday, Sept. 26, at 10 a. m., in the Carnegie Free Library of Duquesne, Pa. W. F. Stevens, librarian of the Carnegie Free Library in Homestead, presided.

Short talks on the Asbury Park conference were given by Miss Marian Price, of McKeesport; C. E. Wright and Miss Genevieve Ferry, of Duquesne; Geo. H. Lamb and Miss Luella M. Stevenson, of Braddock. Mr. Lamb was present at the N. E. A. meeting in New York, and he gave an address on the subject of high school libraries, showing the rapid development and the opportunities in this branch of library service.

The association has been meeting very irregularly the past two years, and it was decided to discontinue as a formal organization. It is the intention of the members to fall in with the wishes of the Pennsylvania Library Commission and hold neighborhood meetings at frequent times during the year.

LUELLA M. STEVENSON, *Secretary*.

#### MICHIGAN STATE TEACHERS ASSOCIATION

The Michigan State Teachers Association held its sixty-fourth annual meeting in Grand Rapids this year, Nov. 2 and 3. The Library Section met on Friday afternoon, Nov. 3, in the Ryerson building of the Grand Rapids Public Library, and was attended by about 175 persons. Following is the program:

Address—"Libraries in public schools." C. C. Certain, Cass Technical High School, Detroit.

Address—"Library work in the grades." Gladys E. Warren, Buchanan School, Grand Rapids.

Address—"A constructive program for better high school libraries." Mary E. Hall, librarian of the Girls' High School, Brooklyn, N. Y.

Story Telling Hour—May G. Quigley, Grand Rapids Public Library.

Address—"University extension library service." W. W. Bishop, librarian of the University of Michigan, Ann Arbor.

Business Meeting.

Preceding the meeting, a luncheon of those interested in the work of the section was held in one of the nearby churches. Between 50 and 60 persons were in attendance. The old officers were re-elected for the ensuing year, as follows: Chairman, E. L. Miller, principal Northwestern High School, Detroit; secretary, Elizabeth Knapp, Public Library, Detroit.

## NEW YORK LIBRARY CLUB

The first meeting of the year was held in the auditorium of the Society for Ethical Culture, with President Hill in the chair, and an attendance of 215 members and guests. Fifteen new members were elected.

Miss Rathbone, for the committee appointed by the Council to prepare resolutions on the death of Miss Plummer, read the following report:

## MARY WRIGHT PLUMMER

A graduate of the first library school class, Columbia, 1887.

A member of the New York Library Club, 1890-1916. Its president, 1896-7 and 1913-14.

A member of the New York State Association, 1890-1916. Its president in 1906.

A member of the American Library Association, 1887-1916. Its president, 1915-16.

Librarian of the Pratt Institute Free Library, 1890-1904, and director of its Library School, 1895-1911.

Principal of the Library School of the New York Public Library, 1911-16.

*Resolved*, That on the death of Mary Wright Plummer, principal of the Library School of the New York Public Library, and late president of the American Library Association, the New York Library Club desires to record its profound sense of loss to the community in which twenty-five years of her professional life were spent, and to express its appreciation of her distinguished service to librarianship.

Possessed of creative power to a marked degree, as a librarian, as a leader in library training and as a worker in the organized life of the library profession, Miss Plummer's life was one of incalculable influence.

A clear recognition of the place of the library in the field of education characterized her administration of the Pratt Institute Free Library and her direction of the two library schools with which she was associated.

This is best expressed in her own words:

"The library has its own division of labor in the work of education, and that division is the training of people to the use and appreciation of books and literature."

To this end was her insistence upon high professional standards in library training, the fitting of the course of study to meet the growing needs of the profession, and the inspiring of generations of students with her vision of the service of the library to the community.

Her unerring instinct for the best in literature, her cosmopolitan outlook and her sound critical judgment were perpetually exemplified in her selection of books as a librarian, and in her spoken and written appreciations of literature.

She made original contributions to literature in verse and prose. Her love of beauty and appreciation of art in all its forms found expression in many ways, but in none was it more fully revealed than in the children's room of the library built during her librarianship at Pratt Institute. This was the first library to include a children's room as part of the original plan, and it was Miss Plummer who first recognized the need for special training for work with children. She valued childhood and she loved children.

Her humanitarian interests were wide and varied; they also took the form of practical deeds of great kindness. In her human relations, Miss Plummer combined a stern sense of rectitude which entered into all relations with herself as well as with others with gentleness of bearing and great charm of intercourse.

She set a high standard for work and lived up to it. To do a thing as well as it could be done, without haste and with no waste of time in the doing, was the example she set. Her capacity for work and her power of application to the task in hand were extraordinary.

Gifted as a linguist and conversationalist, Miss

Plummer met Europeans on their own ground at home and abroad. She had a rare faculty for discovering persons of real ability and for inducing them, as well as those who were already well known, to give of their best. The programs of the New York Library Club and those of the state and national associations were enriched by these discoveries.

It has been well said, "To know her was a liberal education."

JOSEPHINE ADAMS RATHBONE,  
*Chairman,*

ANNIE CARROLL MOORE,  
SUSAN A. HUTCHINSON.

It was voted that the report be adopted, that it be spread upon the minutes, and that a copy be sent to Miss Plummer's family.

The subject of the addresses of the afternoon was "Library commission work," and the club was fortunate in having the matter ably presented by Mr. Belden, of Massachusetts, Mr. Wyer, of New York, and Miss Askew, of New Jersey. Mr. Belden's paper was a remarkably clear exposition of the work being done by the State Commission in Massachusetts, and will be printed in full in an early issue.

Mr. J. I. Wyer rephrased his topic from "Library commission work" to "Library extension," thus making city and country alike partners in it. He went on to compare the work of the library in the city and in the country, and said, in part: City life fosters co-operation, consolidation, organization, action thru groups and movements. Country life is the apotheosis of the individual. Once started, however, a country library takes firm root, and there is considerable evidence tending to show that small towns and rural communities in time respond more satisfyingly to equally competent and earnest social effort than do large city constituencies. State library commissions have been operating for about twenty-five years, and the work to date has been mainly clearing the ground. In most states the ground has just been scratched, no effort at intensive culture has been made. A good many libraries have been organized and turned adrift to the tender mercies of ignorant custodians. The one fatal defect in rural library work is the poor quality of the personal service which can be had. The remedy for this is to consolidate. When most libraries are suitably housed, then country libraries may turn from externals to the far richer and more fruitful inner growth. "Meantime, as great a measure of strength as possible must go to that inner enrichment which shall make of our libraries, both city and country, more, *much more*, than buildings, filled with books chosen from the A. L. A. Catalog—and equipped with rules."

Miss Askew spoke informally, and, as always, delightfully. Her address was inter-

spersed with a number of anecdotes which brought out clearly the difficulties of the work and how they had been overcome.

A resolution thanking the speakers of the afternoon, and also the Society for Ethical Culture for the use of the auditorium, was adopted. The meeting then adjourned to the basement assembly, where refreshments were served.

ELEANOR H. FRICK, *Secretary*.

#### NEW YORK SPECIAL LIBRARIES ASSOCIATION

The New York Special Libraries Association held its fall meeting, Oct. 18, in the New York Public Library. Following the plan carried out last year, each meeting is devoted to the interests of one group of libraries, this meeting being devoted to the medical group. The libraries represented were as follows: New York Academy of Medicine, College of Physicians and Surgeons, College of Pharmacy, Rockefeller Institute, Rockefeller Foundation, Hunter College, Public Health Division of the Municipal Reference Library, and the Bureau of Laboratories of the Department of Health.

The following topics were discussed in a very informal manner: Best sources of information as to new books and other publications on medical subjects; Standardization of subject headings: is it possible or desirable?; Unsolved problems of medical reference libraries; How to care for reprints; Standard reference books for public health work.

The exhibit of forms in use by the medical libraries was supplemented by the exhibits prepared last year by the financial and business libraries, making in all a large exhibition of the work of special libraries. These exhibitions have become a very important feature of each meeting and are of interest to all library workers.

SARAH B. BALL, *Secretary*.

#### CHICAGO LIBRARY CLUB

The November meeting was held the 9th at the Virginia Library of the McCormick Theological Seminary, Miss Faith E. Smith, president, presiding. Dr. McClure, president of the seminary, and Rev. John F. Lyons, librarian, welcomed the club.

There was a very interesting debate on a union catalog of Chicago libraries. In the absence of Dr. Andrews, librarian of the John Crerar Library, Mr. Barr read his paper, in which he suggested that the Library of Congress depository catalog at the John Crerar Library containing cards from five

other libraries, might form the nucleus of such a union list. Dr. Andrews thought it would not be necessary to make such a catalog complete, as anyone would naturally go for a special subject to the library having that subject within its scope. Finally, he suggested printing in book form a union list of rare books, which might be published in connection with a new edition of the "Union list of serials" in Chicago libraries.

Mr. Hanson said he wasn't sure whether it was Pliny or Cicero or some Babylonian scholar centuries before them who first suggested a union catalog, and yet many professors and others suggested it as a new idea originating with them. He spoke of the great demand there is at the University of Chicago for such a catalog, but thought that each library should get its own collections cataloged up to date before it put any time and money on a union catalog.

Miss Cora M. Gettys, of the University of Chicago Library, said that the desirability of such a catalog was demonstrated almost daily, but it should have a subject as well as an author side. What is needed is a union card catalog in a central place, but she was not prepared to say that it is practicable.

Mr. Roden discussed the question from the standpoint of the Chicago Public Library, saying that the probable benefits that would accrue from such a catalog to their constituency within the geographical limits of Chicago would not justify them in agreeing to assume the financial obligations of their share of the undertaking. He suggested the publication of union lists of special collections.

In speaking from the standpoint of the reference librarian, Mr. Tweedell, of the John Crerar Library, said that a union catalog by authors would be of little use. One like the Surgeon General's Catalog would be of much more service. He suggested that each library compile lists of material in their own collections on different subjects and exchange copies of such lists.

Mr. Carleton, librarian of the Newberry Library, said that a perfect union catalog on cards is an ideal and, therefore, impossible of attainment. He was ready to welcome and file cards from other libraries for material complementary to that in the Newberry Library, as a partial solution of the problem.

Miss Norris, of the Commonwealth Edison Library, said that a union catalog would be of so little use to the special libraries that they need not be taken into consideration.

It was moved and carried that a committee be appointed by the president in consultation

with the executive committee, to consider a union catalog or modifications of one, and report by the end of the club season.

D. ASHLEY HOOKER, *Secretary*.

*DISTRICT OF COLUMBIA LIBRARY ASSOCIATION*

The regular meeting of the District of Columbia Library Association was held on Wednesday evening, Oct. 11, in the children's room of the Public Library, the president, Mr. William A. Slade, in the chair.

The speaker of the evening was Dr. Percy Hickling, of Washington, who spoke upon the subject, "Mental hygiene for library workers." Dr. Hickling began by stating that what he had to say applied to all those whose work is mainly mental, as no investigations had been made for library workers as a class, and no literature on the subject existed. He dwelt upon the need of proper physical conditions of living and working; mental adjustment to those with whom one works; necessity for recreation and rest, and the danger of self-repression and of too great self-concentration.

He said, further, that the function of the human mind is adjustment, and that any friction or nervous tension in the performance of one's work indicates a lack of proper adjustment. That much harm is done by allowing such friction and nervous tension to continue without any attempt to check it; that in such cases a physician should be consulted, as the condition is that of disease of a form that often leads to nervous breakdown and insanity. In spite of the fact that workers often allow such conditions to continue and become deep-seated before asking medical aid, 25 per cent. of actual cases of insanity are cured within one year, while 40 per cent. of nervous cases are prevented from developing into insanity.

ALICE C. ATWOOD, *Secretary*.

*TWIN CITY LIBRARY CLUB*

The Twin City Library Club held its annual fall dinner with the division of public school libraries of the Minnesota Educational Association on the evening of Nov. 2, at the St. John's Church Club in St. Paul, Minn. The toast-mistress was Miss Alice N. Farr, of the State Normal School, Mankato. She introduced C. G. Shultz, state superintendent of public instruction, who gave a short address of welcome.

He was followed by Miss Hazeltine, of the Wisconsin Library School, who emphasized the idea that the "teacher-librarian," or the librarian in the public school, should be the

connecting link between the school and the public library, two of the magic forces in the life of any community.

Miss Curtis, of the Illinois Library School, spoke of the necessity of a librarian becoming better known thruout her community, as the library was the "and Company" of every enterprise started in the community.

Dr. George H. Locke, librarian of the Toronto Public Library, gave a very interesting talk on library work in Toronto and Canada, and told of the great help the library institutes or round tables had been in arousing library interest thruout the rural districts of Canada.

Miss Baldwin, of the Public Library Commission, hoped that library boards could be prevailed upon to ask for larger appropriations for the library, commensurate with the growth and improvements in other departments of the town's activities.

Dr. Johnston, of St. Paul, as the last speaker of the evening, invited all those present to visit the new building of the St. Paul Public Library.

At the close of the program, the Twin City Library Club held a short business session at which the following officers for the coming year were elected: President, Dr. Solon J. Buck; vice-president, Miss Augusta Starr; secretary-treasurer, Miss Amy Cowley.

ETHEL I. BERRY, *Secretary*.

*SPECIAL LIBRARIES ASSOCIATION—EASTERN DISTRICT*

The Special Libraries Association (Eastern District) will hold a meeting in New Haven on Friday and Saturday, Dec. 8-9. The general subject of the meetings will be "Co-ordination." The meetings will be held at the Public Library, and will be presided over by Herbert O. Brigham, state librarian of Rhode Island. Special opportunities will be given to visit the libraries and other points of interest in New Haven and Hartford. Hotel accommodations (\$1.50 and up) may be had at The Taft, The Bishop, The Garde, and The Duncan. The chairman of arrangements is G. W. Lee, 147 Milk street, Boston, from whom additional information may be obtained.

The program of the meetings is as follows:

*First Session, Friday, 4.30 p. m.*

Subject: Specializations.  
The libraries of New Haven. Willis K. Stetson, librarian, New Haven Public Library.  
The special libraries of Yale. Andrew Keogh, librarian, Yale University.  
Library specialties. Informal discussion, led by Herbert O. Brigham.  
Announcement, Opportunities for visiting the libraries of New Haven.

*Second Session, Friday, 8 p. m.*

Subject: Information resources. Survey of the field. George Winthrop Lee, librarian, Stone & Webster, Boston. Information Clearing House of Boston. Lewis A. Armistead, librarian, Boston Elevated Railway. General discussion. Opened by selected speakers.

*Third Session, Saturday, 10.30 a. m.*

Subject: Team work among librarians. Bibliographical co-operation, sponsorships, and other forms of co-operation. Discussion. Opened by Frederick Warren Jenkins, librarian, Russell Sage Foundation Library, and George S. Godard, state librarian of Connecticut. Announcement, Opportunities for visiting libraries of Hartford.

## EASTERN COLLEGE LIBRARIANS

The conference of Eastern College Librarians will meet at Columbia University, in the City of New York, on Saturday, Dec. 2. The meetings will be held in room 305, Schermerhorn Hall, at 10.30 a. m. and 2.30 p. m., and the conference will be welcomed by Provost William H. Carpenter, acting librarian for the university.

Among the subjects suggested for discussion are: Staff manuals for university libraries; What are college and university libraries doing for undergraduate reading?; Staff specialization; The aim of the university library—inclusiveness or exclusiveness?; The A. L. A. cataloging test; How to keep everything cataloged up to date; Printed union lists for college and university libraries.

FREDERICK C. HICKS, *Secretary*.

---

**Library Schools**

---

## NEW YORK STATE LIBRARY SCHOOL

The students' "Round Table" has planned a series of meetings devoted to a discussion of English and Continental library administration. The program as at present planned follows: Nov. 14, England, Misses Cudebec, Adams and Wilcox; Dec. 12, Germany, Misses Harris, Dorrance and Santes; Jan. 9, France, Mr. Hodgson; Feb. 13, Italy, Dr. Mariotti; Apr. 17, Russia, Misses Sauer and Ginsburg; May 8, Scandinavia, Mr. Johansen and Misses Neumann and Schaanning.

The faculty and juniors were entertained on Election Day (Nov. 7) at a picnic given by the seniors on the banks of the Normanskill.

Mr. and Mrs. Wyer are giving a series of Saturday evening "at homes" to the faculty and students.

Lectures by other than faculty members have been given by Dr. Sherman Williams, chief of the school libraries division; Mr. R. T. Congdon, assistant in charge of field

work for the examinations division; Miss Martha C. Pritchard, of the Genesee Normal School Library, and Miss Lutie E. Stearns. The first three formed a part of the series of appointments on work with schools, Dr. Sherman Williams speaking of the elementary school library, Mr. Congdon describing the work of the high school library as seen by the teacher, and Miss Pritchard speaking from her experience as a high school librarian. Miss Stearns spoke on "The library and the new democracy." Her talk was a plea to extend the work of the library beyond the conventional limits into all fields of social life.

Asa Don Dickinson, 1903, talked to the school on Oct. 4, on opportunities for American librarians in foreign libraries. Mr. Dickinson's experience in organizing the University of Lahore and his observations in libraries visited in a trip around the world have convinced him that American methods of library organization are easily the best and that, particularly in the British colonies, Japan, China, and possibly Latin America, there should be excellent opportunities at the close of the war for Americans trained in library methods.

Mr. William R. Eastman has again taken charge of the course on library buildings. In 1915-16, this course was considerably changed because of the failure of the legislature to provide funds. Mr. Eastman, for the first time in many years, gave only part of the work of the course, altho he generously contributed two lectures of the series.

Clara V. Barber, 1912-13, was married Nov. 9 to Dr. Harold L. Palmer of the State Hospital at Utica, N. Y.

F. K. WALTER.

## PRATT INSTITUTE SCHOOL OF LIBRARY SCIENCE

The reception of the Graduates' Association to the class of 1917 was held on Thursday evening, Nov. 2, in the north classroom. Over 90 were present and every class except 1899 and 1907 was represented. With the exception of the class of 1917, 1915 was the banner class, while the attendance of the class of 1898 equaled that of 1916. The latter class held an informal reunion at which letters were read from many of the scattered members. No formal entertainment was attempted, but the pictures of former classes excited the usual amount of interest and amusement.

The school has recently been making a little investigation of the professional activities of its graduates. We find that 65 per cent. of our active graduate body belongs to the American Library Association, while consid-

erably over one-half of these A. L. A. members attended the recent meeting of the association at Asbury Park. Four of our graduates are presidents of state associations, one of a local club, and ten or twelve are acting as secretaries and treasurers of state organizations.

The class of 1917 has elected as president Miss Florence Dewey, who was formerly children's librarian of the Public Library at Waterloo, Ia., and as secretary-treasurer, Frank V. Anderson of Portland, Ore.

The organization meeting of the Library Chapter of the Neighborhood Association was held on Tuesday afternoon, Oct. 31, in the classroom. For some years the chapter has taken an active interest in the music library of the Greenpoint Settlement Music School, and Miss Gibbes, the director, was present at the meeting and gave an informal talk on the work of the Music School. The following officers were elected: President, Helen McCracken, class of 1917; vice-president, Elin J. Lindgren, and secretary-treasurer, Jessie M. Hutchinson, both of the library staff.

The class attended the first meeting of the New York Library Club on Thursday afternoon, Oct. 26, and heard an interesting presentation of library commission work by J. I. Wyer, Jr., librarian of the New York State Library; C. F. D. Belden, chairman of the Massachusetts Library Commission, and Miss Sarah B. Askew, secretary of the New Jersey Library Commission.

#### ALUMNI NOTES

Lena G. Towsley, 1913, has been made an assistant in Clark College Library, Worcester, Mass.

Rosamond McIntosh, 1914, has resigned her position as branch librarian in the New Haven Public Library and has accepted the first assistantship in one of the branches of the Carnegie Library of Pittsburgh.

Dorothy Bemis, 1916, has taken a position in the children's department of the George Bruce branch of the New York Public Library.

Helen Crowe, 1916, who returned on graduation to the staff of the Chicago Public Library, has resigned to accept a position as cataloger in the library of the Chicago Art Institute.

Edwina F. Glenn, 1916, has been appointed to the grade of senior assistant in the Rivington street branch of the New York Public Library.

Estelle L. Liebmann, 1916, is doing temporary work at the Library of the American Geographical Society of New York City.

JOSEPHINE ADAMS RATHBONE,  
*Vice-Director.*

#### LIBRARY SCHOOL OF THE NEW YORK PUBLIC LIBRARY

For the seniors in the administration course, a series of talks on "Branch library administration" has been added. As given the present year, the series includes talks on The general administration of branches; Problems of the branch librarian; The work of the first assistant; Correlation of children's and adult work; Reference and reserve work in the branch; Schedules; Work with foreigners; and Work with schools. The speakers have been selected because of special success in the work covered by the topic upon which they speak.

Miss Annie Carroll Moore has begun her series of conferences upon "Children's work and book selection for children's libraries" with the seniors of the administration and the school and college courses.

The advanced reference and cataloging seniors have enjoyed four lectures by Miss Henrietta C. Bartlett on "Bibliographical cataloging."

Miss Ida M. Mendenhall, librarian of the Geneseo State Normal School, has just finished a course of four lectures on "The normal school library" before the seniors in the school and college course.

Miss Elizabeth C. Stevens is now giving a course on "Historic book-binding."

Special lectures before the juniors have been:

Oct. 23.—Mr. E. H. Anderson. The New York Public Library.

Oct. 27.—Mr. F. W. Jenkins. The library as a civic factor.

Nov. 1.—Mr. H. Rosenthal. The golden age of Russian literature.

Nov. 6.—Dr. H. M. Leipziger. Public school extension.

Nov. 8.—Mme. B. de Baralt. Spanish-American literature.

Miss Maire Kelly has returned to the school and should be added to the list of seniors taking the advanced reference and cataloging course.

The annual report of the school, just issued, contains the following paragraphs concerning Miss Plummer:

Altho the death of Miss Plummer, which occurred at Dixon, Ill., on September 21, came after the close of the year covered by this report, yet it seems only fitting that with this record of her final year of service to the school should also be included mention of her death and an expression of appreciation of her work for the school.

To the New York Library School, Miss Plummer brought a large experience in library work and many years of practice in training library workers. She brought, also, keen insight into the problems of the library world and the vision to see what developments were likely to take place in the future. She was one of the first to see the importance of work with children, and many of the best workers in this field were led to take up that form of library work

thru her influence. The work with high school libraries, too, was in no small degree the result of her suggestions. Because of this far-sightedness and her understanding of library problems, she was unusually equipped to plan and develop a new library school.

To these qualities, Miss Plummer added a mature and well-balanced judgment of people and of the situation in which they could work to the best advantage. This made it possible for her to recommend the right person for any given situation—an invaluable quality in one at the head of a school. As a consequence of this gift, she possessed the confidence of the librarians of the country in an unusual degree.

Her personality added greatly to her other elements of strength; courage, fidelity to truth, and independence were blended with rare love of beauty, delicacy of feeling and fine scholarship. All this gave her power as a teacher and as an inspirer of youth.

These qualities enabled her in the brief five years in which she was permitted to be in charge of the school, to establish it upon broad foundations and with high ideals. Keenly realizing what loss has come to the school in her death, her associates in the work can only endeavor to carry it on in the same large-minded way and with an equally far-sighted vision of the needs of the library world.

AZARIAH S. ROOT, *Principal.*

UNIVERSITY OF WISCONSIN LIBRARY  
SCHOOL  
SCHOOL NOTES

During the first week of the school year the faculty gave a "mixer," which helped to promote acquaintance among the members of the class. The annual fall picnic at the Fredrickson cottage, Maple Bluff, was held early this year, to take advantage of the splendid fall weather, and still further to hasten the acquaintance of the large class.

The schedule of lessons, practice work, required reading, and apprentice work is following the general plan of previous years, with changes of emphasis in the different courses as library tools, texts, and aids improve, and methods become standardized.

Special apprentice work is this year offered in the organization of the library of the University High School, which is in the hands of the Library School. Miss Mary Bell Nethercut, class of 1913, Wisconsin Library School, a graduate also of Smith College, and librarian of Rockford College since her graduation in 1913, has been added to the Library School staff, and is for the present giving most of her time to the organization of the High School Library. The new course for teacher-librarians, announced last month, is dependent on a model school library for fullest results, so that the work of organizing the library is being pushed as rapidly as possible. Meantime, the lessons of the new course in cataloging and classification, with practice work for every lesson, are going forward with Miss Carpenter and Miss Turvill as the instructors.

Already, the larger interpretation of library work is being brought into the regular course by lectures from the outside, as follows:

Oct. 4.—Business correspondence. Prof. E. H. Gardener of the School of Commerce, of the University.

Oct. 9.—Library spirit, by Miss Stearns.

Oct. 13.—The bookseller and the librarian, F. G. Melcher, Indianapolis. Mr. Melcher, for another appointment, read from the modern poets with various comment.

Oct. 14.—A library tour. Mrs. H. P. Sawyer, St. Louis Public Library.

Oct. 28.—Library printing and labeling. Charles E. Brown, Curator, Wisconsin Historical Museum.

Nov. 1.—How history is written. Prof. F. L. Paxton of the University.

Nov. 3.—Story telling. Nina C. Brotherton, Cleveland Public Library.

Nov. 8.—The gathering and preserving of historical source material. Dr. M. M. Quaife, superintendent, Wisconsin Historical Library.

Beatrice Foster, of Macomb, Ill., a member of the class of 1917, died on Oct. 16, from the effect of burns received in her room by accident. She was exceedingly well prepared both by education and by experience in the Public Library of Jacksonville, Ill., and the State Normal School of Platteville, Wis., to undertake a library school course. The work she had already done, during the four weeks after the opening of the school, stamped her as an exceptional student, careful, thoro, accurate, with a grasp not only of the details of the work, but of their fullest import, and with an understanding of the whole meaning of library work. She had also a rare personality that marked her as a true librarian.

ALUMNI NOTES

The publications of our graduates are all ways of interest, and especially so are three bibliographies recently published by the H. W. Wilson Co. These were prepared as graduating bibliographies: "Daily newspapers in the United States," by Callie Wieder, 1914; "Masters of American journalism," by Julia C. Stockett, 1914; and "Some great American newspaper editors," by Margaret Ely, 1915. They were compiled in co-operation with Prof. Willard G. Bleyer of the Department of Journalism, and are intended for college students of journalism and for newspaper workers who are seeking references on various phases of journalism. They are published in pamphlets, varying from 33 to 56 pages.

Marjorie G. Strong, 1910, was married on Oct. 21, at her home in Dodgeville, Wis., to Chester C. Waters. They will be at home at 133 Chiswick Road, Boston, Mass. Miss Strong until her marriage had been librarian of the Alexander Hamilton Institute in New York.

Ruth P. Hayward, 1912, resigned her position as a senior assistant in the cataloging and reference department of the Cincinnati Public Library in September to become assistant cataloger in the Wisconsin Historical Library

on Oct. 10. She succeeds Miss Florence E. Dunton, 1911, who resigned to return to her home in Maine for a year.

Gladys Smith, 1912, writes that she is very pleasantly located in Pendleton, Oregon, where she is developing the work with schools in connection with the county library system of the Pendleton Library.

Gertrude E. Aiken, 1913, has been elected librarian of the Public Library at Geneva, Ill.

Martha B. Burt, 1914, who resigned as assistant in the Eau Claire Public Library in the early summer, has been appointed to a position as assistant in the Borough Park branch of the Brooklyn Public Library.

Louise A. Schoenleber, 1915, has received a promotion to the position of assistant in the Milwaukee Municipal Reference Library. She was formerly at the head of the literature section of the Main Library.

Ruth Worden, 1915, has been appointed assistant in the Missoula (Mont.) Public Library.

Leona Hamilton, special 1916, is head cataloger in the University of Idaho, Moscow.

MARY EMOGENE HAZELTINE, *Preceptor.*

#### UNIVERSITY OF ILLINOIS LIBRARY SCHOOL

The twenty-fourth year of the school (the twentieth since its connection with the university) opened Sept. 18, 1916. Miss Sabra W. Vought, B.L.S., New York State Library School, is a new member of the faculty, and enters upon her courses with enthusiasm.

Forty-four students are registered, one of them as a special. These students come from fourteen states and Russia, and hold bachelor's degrees from twenty-four colleges and universities. The list follows:

##### *Senior Class*

Barnes, Mary Grace, LaFayette, Ind. Purdue University, B.S., 1894.  
 Brennan, Wintress, Ogden, Ill. University of Illinois, A.B., 1914.  
 Campbell, Ella Seaver, Sioux City, Ia. Morningside College, A.B., 1913.  
 Cilley, Lillie, Independence, Ia. Grinnell College, A.B., 1914.  
 Cook, Dorothy Elizabeth, Denver, Colo. Denver University, A.B., 1914.  
 Craig, Florence Margaret, Minneapolis, Minn. University of Minnesota, B.A., 1914.  
 Crouse, Florence, Citronelle, Ala. Tulane University, A.B., 1910.  
 Hammond, Ruth Elizabeth, Springfield, Mo. Drury College, A.B., 1914.  
 Henry, Elizabeth, Quincy, Ill. University of Chicago, Ph.B., 1900.  
 McElroy, Mildred Chernigton, Delaware, O. Ohio Wesleyan University, B.A., 1914.  
 Price, Miles O., Champaign, Ill. University of Chicago, B.S., 1914.  
 Shelton, Wilma Loy, Terre Haute, Ind. University of Illinois, A.B., 1914.  
 Signor, Nelle Marie, Urbana, Ill. University of Illinois, A.B., 1912.  
 Sprague, Cena Lavinia, Grafton, N. D. University of North Dakota, A.B., 1913.

Vaught, Sallie McCormick, Lebanon, Ind. Ohio Wesleyan University, A.B., 1908.  
 Weston, Jessie Beatrice, Urbana, Ill. University of Chicago, Ph.B., 1907.  
 Woods, Lois, Berkeley, Cal. University of California, B.L., 1915.

##### *Junior Class*

Abernethy, Clara Louise, Des Moines, Ia. State University of Iowa, B.A., 1902.  
 Amsterdam, Harry, Russia. Lake Forest College, B.A., 1915; University of Illinois, M.A., 1916.  
 Bergen, Esther Lou, Springfield, Ill. James Millikin University, A.B., 1913.  
 Buffum, Mary Susan, LeRoy, Ia. State University of Iowa, B.Ph., 1905.  
 Colgrove, Vivian Geraldine, Minneapolis, Minn. University of Minnesota, B.A., 1908.  
 Davis, Eleanor, Winona, Minn. University of Minnesota, B.A., 1914.  
 Engle, Jeannette Morrison, Urbana, Ill. University of Illinois, A.B., 1915; M.A., 1916.  
 Fontaine, Everett Orren, Momence, Ill. University of Illinois, A.B., 1915.  
 Glass, Jessie June, Lincoln, Neb. University of Nebraska, A.B., 1909.  
 Grothaus, Julia Ellen, San Antonio, Tex. Southwest Texas Normal School (special).  
 Hedrick, Marie Adaline, Kansas City, Mo. University of Kansas, A.B., 1915.  
 Hitt, Katherine, Chicago, Ill. University of Illinois, A.B., 1915.  
 Klank, Frances Grace, Champaign, Ill. University of Illinois, A.B., 1916.  
 Lichtenberger, Cleo, Decatur, Ill. James Millikin University, B.S., 1911.  
 McCaughtry, Ruth Corrine, Carthage, Mo. Drury College, A.B., 1912.  
 McNeill, Angeline, Galena, Ill. Lake Forest College, B.A., 1916.  
 Nesbit, Maude Elizabeth, Indianapolis, Ind. Butler College, A.B., 1915.  
 Orvis, Caroline, Yankton, S. D. Yankton College, B.A., 1910.  
 Ralston, Harriet Lucile, Pocahontas, Ia. State University of Iowa, B.A., 1916.  
 Runyan, Walter LeRoy, Chicago, Ill. Wabash College, A.B., 1902; University of Chicago, D.B., 1907.  
 Ryan, Charlotte, San Antonio, Tex. University of Texas, A.B., 1910.  
 Sargent, Agnes Ruth, Whittier, Cal. Whittier College, A.B., 1905; Stanford University, A.B., 1906.  
 Shepard, Lola Adeline, Wilmette, Ill. Lake Forest College, A.B., 1902.  
 Spencer, Robinson, Eugene, Ore. Wesleyan University, B.A., 1903.  
 Steidl, Irene Lucile, Crete, Neb. University of Nebraska, B.A., 1915.  
 Williams, Frieda Katharine, Indianapolis, Ind. Indiana University, A.B., 1915.  
 Wintermute, Imogene, Delaware, O. Ohio Wesleyan University, B.A., 1911.

At the annual business meeting of the Alumni Association, held during the A. L. A. conference in Asbury Park, the following officers were elected to serve during the current year: President, Mrs. Bertha S. Baird, Public Library, Mason City, Ia.; vice-president, Genevieve Darlington, The John Crerar Library, Chicago; secretary-treasurer, Josie B. Houchens, University of Illinois Library.

Most of the faculty attended the meeting of the Illinois Library Association, held at Ottawa, Ill., Oct. 11-13, and several had parts on the program. During the meeting eighteen librarians trained at Illinois attended the annual school dinner, and thirteen librarians who have attended the Illinois summer courses enjoyed a luncheon together.

Mrs. Ida A. Kidder, librarian of the Oregon Agricultural and Mechanical College, Corvallis, gave a most inspiring talk to the students on Sept. 25, her address being based largely upon the work of her own library.

Marie A. Hammond, 1909-10, is recataloging the Public Library at Harvard, Ill.

P. L. WINDSOR, *Director*.

#### SIMMONS COLLEGE LIBRARY SCHOOL

We congratulated ourselves a little too early last month on a propitious opening of the college, for on Oct. 10 a case of illness of one of the dormitory students was diagnosed as infantile paralysis, and the corporation decided, as an extra precaution, to quarantine that group of dormitories, tho this was not required by the Boston Board of Health.

Fortunately the patient was treated so early that serious consequences have not resulted and no other case developed, but as the college exercises were carried on as usual, the attempt to produce smooth articulation again in classes where possibly over fifty per cent. had been absent for two weeks, was rather a problem and a strain on students and instructors.

A new feature of college ceremonial this year was the celebration of John Simmons' birthday by a convocation on Founder's Day, Nov. 1, which gave to all the members of the college a much more vivid impression of the man to whom they owe so much, and a special appreciation of his foresight in realizing the importance of the higher vocational education for women so long before it was generally sensed by even the educators of his day.

Lectures have been given by Miss Stearns, on "The library and the ideal democracy," and by J. Randolph Coolidge, Jr., on "Library architecture from the architect's point of view." By the courtesy of the Boston Public Library Miss Blunt was enabled to give one of her lessons on binding in the library, surrounded by an exhibit they had been so good as to arrange for us.

The Brookline Public Library has presented the School with various bound volumes of the *Publishers' Weekly*, a number of unbound bibliographical publications, and about twenty books illustrating points in the binding course.

#### POSITIONS

Della Dunmore, special 1915-16, has been appointed assistant in the Women's Educational and Industrial Union, Boston.

Rowena Edwards, special 1914-15, has been promoted in the Iowa State Teachers' College Library, to have charge of the catalog department.

Mary Nimms, 1916, has been appointed children's librarian in the Watertown (Mass.) Public Library.

Ruth Parker, 1914, is doing a piece of work for the Library Bureau.

Lois Rankin, 1914-15, has been given charge of a branch of the Memphis (Tenn.) Public Library.

Theresa Stuart, 1908, is cataloging a private library.

Florence Sutherland has recently been certified by the civil service of California on the list for county librarians.

May Twitchell, 1916, is cataloging, temporarily, for the Massachusetts State Library.

JUNE RICHARDSON DONNELLY, *Director*.

#### CARNEGIE LIBRARY SCHOOL

Miss Sarah B. Askew, organizer of the New Jersey Free Library Commission, lectured to the school October 19, 20, 21. Her subjects were: "What makes library work a success," "Library extension," and "Commission work."

Miss Anna MacDonald, consulting librarian of the Pennsylvania Free Library Commission, gave a talk on the work of the Pennsylvania Library Commission, November 6.

During the autumn term the following courses are scheduled: Classification, Reference, Book selection, Story telling, Library handwriting and printing, Illustrated book lists and bulletin work, Cataloging (senior), Modern social movements, Games and plays, Seminar for periodical review, Principal's round table, Library work with schools.

Students in the senior class are required to visit each week some Pittsburgh institution engaged in social work. These visits are made in connection with the course in "Modern social movements" conducted by Miss Adah Hopkins, head of the department of social work, Margaret Morrison Carnegie School, Pittsburgh.

Junior students began their practice work at the reference desk Nov. 13. Each student is scheduled for two periods.

The students living at the Students' House were hostesses at a Hallowe'en party the evening of Oct. 31, to which the students living outside the house were invited.

#### ALUMNAE

Margaret Jean Clay, 1914-1915, has been appointed head of the children's department of the Public Library, Victoria, B. C., Canada.

Mary Willson Eccles, 1915-1916, has been made assistant in the children's department, Carnegie Library of Pittsburgh.

Margaret Lathrop, 1910-11, was married to Andrew P. McConnell July 10, 1916.

Harriet Marie McClure, special student, 1912-13, has resigned her position of children's librarian of the Lincoln Library, Springfield, Ill.

Dorothy Rowe, 1909-10, has resigned as librarian of the American Appraisal Company, Milwaukee, Wis.

Virginia Slagle, 1914-1915, has resigned her position as assistant in charge of schools division, Public Library, Tacoma, to become assistant reference librarian of the State University, Pullman, Wash.

Edna Sophia Smith, 1909-10, has resigned her position of children's librarian in the Brooklyn Library, to become business secretary of the Y. W. C. A., Watertown, N. Y.

SARAH C. N. BOGLE, *Principal*.

#### SYRACUSE UNIVERSITY LIBRARY SCHOOL

After a thoro test of two years, the faculty has abandoned an experimental scheme in the distribution of recitations from which only good results were expected. Work which formerly had been given in classes meeting two or three times a week during a semester was condensed into periods of five weeks, the classes meeting daily.

By this arrangement the students were not receiving instruction in so great a variety of subjects at the same time and were not obliged to take examinations in so large a number of courses at the close of a semester. They could concentrate on two or three subjects for a period of five weeks, be examined in them and then take up the next group of subjects. This appeared to be a practical and businesslike plan and was similar in principle to that employed in universities where the year is divided into quarterly periods, all courses being given five times a week for one quarter, instead of continuing thruout a semester or the entire college year, as in the majority of colleges and universities.

The first objection to the new plan was that the number of days for recitations was too much reduced by the frequent examination periods at the close of each five weeks. The second objection was that the more intensive pursuit of a subject during a short period did not, as was hoped, lead to a better comprehension and more lasting knowledge of it. From the standpoint of pedagogy, in fact, less frequent exercises over a long period produce better results than does intensive work on a subject for a short period. The former distribution of work into units of a semester or year has therefore been restored.

E. E. SPERRY, *Director*.

#### WESTERN RESERVE LIBRARY SCHOOL

The practical work of the students in the Cleveland Public Library system for one day each week, began Oct. 11. The first assignment is for loan desk experience for a period of eight weeks and is parallel with the course in loan system given by Miss Harriet E. Howe.

The course of introductory lectures in book selection has been given by Miss Thirza E. Grant of the regular faculty, and the series to be given by Mrs. Julia S. Harron of the Cleveland Public Library began Nov. 7.

The students attended the meeting of the Library Section of the Northeastern Ohio Teachers' Association, Oct. 27, where Miss Bessie Sargeant Smith, supervisor of high school libraries, had charge of the program on high school libraries, and where Miss Mary E. Hall, of Brooklyn, spoke.

At the faculty meeting of the school, Oct. 18, resolutions were adopted on the death of Miss Mary Wright Plummer, expressing grateful recognition of her constructive work and leadership.

The class of 1917 has organized and adopted the student government policy for the year; Margaret Cleaveland was elected president; Mildred Thomas, vice-president, and Ruth Kesel, secretary-treasurer. The class of 1916 was represented at the meeting by four members who brought greetings and suggestions to the new class.

The director entertained the class at her home Saturday afternoon, Oct. 28, and was assisted by her house guest, Miss Margaret Wright Brown of Los Angeles. The reading of "The twelve-pound look," by Norma Harrison Thrower, added to the pleasure of the afternoon.

The annual reception was given by the faculty for the new class on the evening of Nov. 6 in the rooms of the school. The guests were chiefly graduates of the school in Cleveland and immediate vicinity, and friends of the school connected with the Cleveland libraries and the university.

#### ALUMNI NEWS

Alice Williams, 1915, leaves her position as cataloger at Birchard Library, Fremont, O., to become head of the order department of the Public Library, Portland, Ore.

Eva M. Morris, 1912, has accepted the position of cataloger at the Birchard Library, Fremont, O.

Margaret E. Calfee, 1914, has become librarian of the medical department, University of Texas at Galveston.

Katherine Ruth Savord, 1914, resigned her

position in the catalog department, Cleveland Public Library, and is now a student at the University of Illinois, with part time work in the catalog department of the University Library.

Annabel Learned, 1911, has become cataloger at the San Bernardino Free Library, California.

Gordon W. Thayer, 1912, has accepted the position of librarian of the John G. White folklore collection of the Cleveland Public Library.

Ruth Wilcox, 1913, has been granted leave of absence from the Cleveland Public Library, and is a member of the senior class of the New York State Library School.

Cards have been received announcing the marriages of the following graduates of this school, class of 1908:

Florence C. Gilbert to Howard Rual Robinson, of Ocean View, Ore., Oct. 24.

Elizabeth L. Elterich to Dr. Edwin Robert Wiese, of Washington, D. C., Oct. 11.

Luella E. Stollberg to O. A. Leach, Toledo, O.

Alice S. Tyler, *Director.*

#### CLEVELAND TRAINING CLASS FOR LIBRARY WORK WITH CHILDREN

The class of 1915-16 finished the year with eight members, one student, Lena G. Towsley, having dropped out Jan. 1 on account of ill health. Miss Mari Harboe-Lund returned to her former post, head of the children's department, Kristiania, Norway. Miss Bergljot Gundersen also returned to Norway, where she will take up library work with children. The appointments to the staff of the Cleveland Library are as follows: children's librarians, Catherine Head, Ethel Jones; first assistant and children's librarian, Georgiana Mineau; elementary school librarians, Pauline Yager, Amelia Robie, Mildred Moore.

The class of 1916-17 opened Sept. 14 with thirteen students. Ten of the number are library school graduates; the other three have had from four to six years of library experience. Four colleges, a kindergarten training school and two commercial schools are represented, in addition to the library schools at Atlanta, Pratt, Simmons, Syracuse, and Wisconsin, and the St. Louis Public Library Training Class. Nine of the students have had practical library experience; the average per student is more than four years of such experience. The different libraries represented are New York; St. Louis; Buffalo; Cleveland; Madison, Wis.; Whiting, Ind.; West Bend, Wis.; Bergen, Norway; St.

John's, New Brunswick; Acadia University, Nova Scotia.

The students' names and credentials are as follows:

- Andrews, Sirie Margreta, Escanaba, Mich. University of Wisconsin, 1914-15; Wisconsin Library School, 1916.
- Baskerville, Stella Edith, Madison, Wis. University of Wisconsin, B.A., 1914; University of Wisconsin Library School, 1916; Madison Free Library, 1914-1915.
- Chappell, Loretto Lemar, Columbus, Ga. Atlanta Library School, 1916.
- Doty, Nellie Gladys, St. Louis, Mo. Washington University, 1906-10; St. Louis Public Library Training Class, 1912-13; St. Louis Public Library, 1913-16.
- Eastman, Mary Adelaide, Waterville, N. Y. Schuyler Business School, Utica, N. Y., 1915; Pratt Library School, 1916.
- Freeman, Amy Faunce, New Glasgow, N. S. McGill University, 1908-09; Simmons College, B.S., 1916; Public Library, St. John's, N. B., 1913-14; librarian, Acadia University, Wolfville, N. S., 1914-16.
- Long, Hazel Frances, Whiting, Ind. Public Library, Whiting, Ind., 1912-15; Wisconsin Library School, 1916.
- Raid, Erna Monica, Cleveland, O. Cleveland Kindergarten Training School, 1910-11; Cleveland Public Library, general assistant, 1912-16.
- Rolfs, Clara Elizabeth, West Bend, Wis. Librarian West Bend Library, 1910-14; Madison Free Library, 1914-15; Wisconsin Library School, 1916.
- Roos, Jean C., Buffalo, N. Y. Buffalo Public Library, 1910-15; Cleveland Public Library, 1916.
- Ross, Evelyn Townsend, Lincoln, Neb. University of Wisconsin, B.S., 1913; teacher Bassett, Neb., High School, 1913-14; Ainsworth, Neb., High School, 1913-14; Wisconsin Library School, 1916.
- Van Natten, Cora A., Ithaca, N. Y. Syracuse Library School, 1903-05; New York Public Library, 1905-06, 1912-14; Cornell University Library, 1907-12.
- Wing, Hanna Georgine, Bergen, Norway. Tanks Commercial School; Bergen Public Library, 1912-16.

A catalog of the course, and a list by classes of the graduated, will be published in February, 1917.

#### DREXEL INSTITUTE LIBRARY SCHOOL ASSOCIATION

##### ALUMNAE

Florence B. Custer, Drexel 1907, who was in charge of the Passyunk branch of the Philadelphia Free Library, died June 30.

Emma L. Hellings, Drexel 1901, has been appointed librarian-in-charge of the Passyunk branch, Free Library, Philadelphia.

Marion Pierce, Drexel 1914, has been appointed Children's Librarian in the Public Library at Flint, Mich. Miss Pierce is also supervising the library work with the public schools.

Marjorie Test, Drexel 1913, has resigned her position at the Library of the University of Pennsylvania on account of ill health.

#### RIVERSIDE LIBRARY SERVICE SCHOOL

The winter school short course will run from Jan. 8 to Mar. 3. Alice M. Butterfield,

of the Riverside Public Library, will give six lectures on periodicals; Ellen M. Chandler, of the Buffalo Public Library, will teach cataloging and classification; Joseph F. Daniels, librarian at Riverside, will give lectures on business management, library handicraft, library law, documents, book selection, and literary criticism; Lillian L. Dickson, of the Riverside Library, will conduct special work in the catalog room; W. Elmo Reavis, head of the Pacific Library Binding Company, will conduct classes in binding for two weeks; Irene Warren, until recently in the University High School in Chicago, will give lessons on school libraries, general library reference work, indexing and filing.

There will be several lectures in addition to those announced. Among the lecturers will be Dr. Albert Shiels, superintendent of schools, city of Los Angeles. It is hoped also to have Will C. Wood, commissioner of secondary education; Dr. Snyder and Dr. McNaught, E. P. Clarke and others of the State Board of Education. There will probably be one or two more teachers for brief courses of 3 to 6 lectures on topics not otherwise covered.

Dr. Frank P. Hill, librarian of the Brooklyn Public Library, will give two series of lectures beginning Jan. 8, ending Jan. 20. The first series will describe "The librarian at work," and will cover business management, book selection, book buying. The second, on "The library board and the school board," beginning Jan. 15, and continuing one week, will include lectures and discussions on the relation of library service to the work of schools as it affects the governing boards themselves. This second course of lectures is planned especially for the members of school boards and library boards and officials interested. A small fee will be charged for these series of lectures, which may be taken independently of the regular course.

#### UNIVERSITY OF MICHIGAN SUMMER SCHOOL

An Alumni Association of the University of Michigan Summer School was organized during the annual meeting of the Michigan Library Association at Lansing, Oct. 10-12. About fifteen former students (including three or four instructors) gathered at a reunion dinner at the Hotel Wentworth Wednesday evening, and the association was formed with provision for one officer, a secretary-treasurer, and dues fixed at 10 cents per year. Esther Betz, of the class of 1913, and now a cataloger in the University of Michigan Library, was elected to the office.

#### CALIFORNIA STATE LIBRARY SCHOOL

The California State Library School under State Librarian James L. Gillis opened its course for the year Sept. 25 with a class of 12.

The present State Library quarters can accommodate only 12 students, but it is hoped that larger classes can be taught when the new State Library building is completed.

The students are: Edna A. Bell, Fair Oaks; Katharine Cahoon, Berkeley; Elta L. Camper, Berkeley; Virginia B. Clowe, Woodland; Dorothea Davis, Los Angeles; Margaret Dennison, Alameda; Beatrice Y. Gawne, Berkeley; Margaret V. Girdner, Sacramento; N. Ruth McCullough, Berkeley; M. Ruth McLaughlin, Lamanda Park; Marion Morse, Berkeley, and Blanche L. Shadle, Lodi.

#### TRAINING CLASS—LIBRARY ASSOCIATION OF PORTLAND, OREGON

On October 2 the class of 1916-17 came together for its first meeting before beginning the two weeks preliminary practice work in the various branches of the system. There are ten members of the class, of whom all but three have had educational or professional advantages beyond the required high school graduation or its equivalent. Five have had some college or university training, two have had previous library experience, three have taught, two have done social service work, and nine have some knowledge of one or more foreign languages.

During the past year the schedule of class hours has been increased to about 340, while the hours of assigned practice work are approximately 500. This year we are to test out plans for a closer correlating of the practical and the theoretical work of the class, so that each member may derive the utmost possible instruction from both sources of information.

ETHEL R. SAWYER,  
Director of Training Class.

#### ST. LOUIS TRAINING SCHOOL

The Training School reported at the Central Library for class instruction on Sept. 25, after the customary two weeks of preliminary practice at the branch libraries. Of the eighteen candidates who passed the examination successfully, two decided to return to college for another year's work, and a third was obliged for family reasons to continue teaching. A large percentage of the applicants offered more than the required credits, *i. e.*, a high school course or its equivalent.

The curriculum will be strengthened this year by additional courses and the practice work cut down accordingly.

### EASTMAN KODAK CO. RESEARCH LABORATORY.

A numerical classification of photography. Rochester, N. Y. 26 p.

The Research Laboratory of the Eastman Kodak Company, Rochester, N. Y., has issued a "Numerical classification of photography" on a much modified decimal basis. The authors premise that photographic operations involve (1) purposes, (2) materials, (3) operations and (4) processes. These four aspects of photographic work are represented by four systems of symbolization. The main decimal symbolization is reserved for materials, the 100 class being for chemical materials, the 200 class for photographic apparatus and the 300 class for cinematographic apparatus. The process symbolization is also on a decimal base, but with a distinguishing slant line, being divided first into Silver Processes, Iron Processes, Bichromate Processes and Other. The operation symbolization is on a mixed letter and number basis. Also, by special notation, K is used for color photography and X for radiography. The classification is naturally a minute one, there being about 800 subheads and a relative index, in the usual form, taking 11 pages.

The classification may be excellently adapted to the work of the Eastman Company but to the layman it seems formidably complex.

F. R.

---

## Librarians

---

ADAMS, Leta E., B.L.S., New York State Library School 1909, formerly head cataloger at the Rochester (N. Y.) Public Library, has gone to Syracuse to take charge of the library department of Gaylord Bros.

AIKEN, Gertrude, who has been librarian of the Seymour (Ind.) Public Library, has resigned.

ALLEN, Mrs. Philip L., B.L.S., New York State Library School 1911, has been appointed librarian of the College of St. Catharine at St. Paul, Minn.

BABBITT, Grace E., whose resignation from the Public Library in Washington, D. C., was noted last month, died in that city Oct. 29. She was fifty-four years old. For fourteen years Miss Babbitt had been connected with the library, and for several years was reference librarian there. She was much beloved both by her associates in the library and by the public whom she served.

BAILEY, Beulah, B.L.S., New York State Library School 1916, is temporarily engaged in cataloging the library of Russell Sage College of Practical Arts, Troy, N. Y.

BANDMAN, Edna, for six years in charge of the Public Library at Portland, Mich., has been appointed to a regular position on the staff of the Grand Rapids Public Library, where she has been a substitute since June. Miss Bandman took her library training at the Michigan State Normal College at Ypsilanti, of which she is a graduate. She is also a graduate of the University of Michigan, and has had several years' experience as a teacher.

BARBOUR, Helen, librarian of the Bloomington (Ind.) Public Library, has resigned, and was married Sept. 30 to Donald Storey Dixon. Mr. and Mrs. Dixon will live in Dallas, Texas.

BLAIR, Irene E., New York State Library School 1907-08, has resigned the librarianship of the Public Library at Owensboro, Ky., to become librarian of the Public Library in her home city, Sedalia, Mo.

BRIGGS, Elizabeth, a graduate of the Library School of the New York Public Library in 1914, and since then a cataloger in the reference department of the library, has resigned. Miss Briggs will take charge of the township library in Royal Oak, Mich., which is now being reorganized along modern library lines.

CARPENTER, Helen S., New York State Library School 1910-11, formerly assistant in the circulation department of the New York Public Library, has joined the staff of the H. W. Wilson Company.

CARROL, Gladys, has been appointed librarian of the new township library which has replaced the old subscription library in Chilli-cothe, Ill.

CASS, Elizabeth H., B.L.S., Illinois 1913, has been made librarian of the Portland Cement Association, Chicago.

CASTO, George D., has been appointed librarian of Utah Agricultural College in Logan, succeeding Miss Elizabeth C. Smith.

CHAPIN, Esther Susan, Simmons College 1913, has been appointed a cataloger in the Library of the Ohio State University.

CLATWORTHY, Linda, who has been living in Colorado for the past three years, has accepted a position as reference librarian in the State College at Pullman, Wash.

CRUIKSHANK, Alice D., Smith College 1902, New York State Library School 1903-04, has been appointed a cataloger in the Library of the Ohio State University.

CUDEBEC, Bertha M., New York State Library School 1917, began her duties as librarian of the Albany Free Library Nov. 1.

DAY, Mary Bostwick, has accepted a position in the library of the Universal Portland Cement Company, Chicago.

DIPPEL, Clara, has been appointed superintendent of branches in the Indianapolis Public Library, succeeding Ella Saltmarsh, resigned.

DOUGLASS, Jessie, formerly librarian to Senator Nelson W. Aldrich, has been appointed librarian of the Farmers' Loan and Trust Company of New York.

EDWARDS, Edith, New York State Library School 1916, is substituting in the circulation department of the New York Public Library.

EVANS, Vera M., for the past two years librarian of the Elwood (Ind.) Public Library, has resigned her position to accept one in the Public Library of San Diego, Cal.

FORD, Edith, has been appointed librarian in the newly opened library at Minonk, Ill.

FOSHAY, Florence E., New York Public Library School 1915, who has been reference librarian in the Aguilar branch of the New York Public Library since graduation, has recently joined the editorial staff of the United States Catalog series published by the H. W. Wilson Co.

FOSSLER, Anna K., New York State Library School 1900, has been appointed librarian of the technology department of the Portland (Ore.) Library Association.

FOSTER, Faith E., formerly a member of the staff of the University of Colorado, was married in August to Rev. Roy Hills, also at one time on the library staff. Both are graduates of the university.

FRICK, Eleanor H., Pratt 1895, who has been for some years librarian of the American Society of Civil Engineers, has been made secretary of the joint committee on classification of technical literature, a committee of the recently consolidated Engineering Societies.

HAMMOND, Marie, has been appointed to revise and complete the catalog of the Harvard (Ill.) Public Library.

HOLMES, Wealthy A., for the past ten years in charge of the Campello reading room, a branch of the Brockton (Mass.) Public Library, has resigned because of failing eyesight. Miss Holmes has been known and respected by the boys and girls of two generations in Campello and under her manage-

ment the circulation at the Campello Library has grown from 8007 volumes in 1906 to 25,565 this year.

HUNT, Clara Whitehill, has written a book "About Harriet," which tells of the doings of Harriet, a city child, thru all the days of the week. Miss Hunt's purpose in writing this little story is twofold—to make city children feel the interest that lies in the life around them, and also to show to children in the country how the days of city children are passed.

JENNINGS, Mrs. Thomas B., formerly head cataloger at Cornell University, who for the past two years has been assisting in the reorganization of the Randolph-Macon Woman's College Library at Lynchburg, Va., has accepted the position of reference librarian at the Iowa State College, Ames, Iowa.

JORDAN, Mrs. Mary L., a graduate of Radcliffe, has been appointed custodian of the Lawrence (Mass.) Bar Association Library, succeeding Marcia Packard, resigned.

KENT, Irene, of Syracuse University, succeeds Miss Muelendyke in the King's Daughters Free Library in Palmyra, N. Y.

KLINGELSMITH, Mrs. Margaret Center, librarian of the Biddle Law Library in the University of Pennsylvania, is one of the foremost legal writers of the day. To William Draper Lewis' "Great American lawyers" she contributed the biographies of James Wilson and Jeremiah Sullivan Black; and while she was studying the life of Wilson she grew so interested in constitutional law that she began to write articles on that. There is scarcely a country that has not had her articles on common law translated into its legal periodicals. Not content with that she made a specialty of the ancient Norman-French tongue, because there were no adequate translations of certain law books written in that tongue, often no translations at all. The one she has made forms two remarkable volumes.

LEWIS, Mary Elizabeth, Oberlin College 1915, has been appointed a library assistant in the accession department of the Library of the Ohio State University.

LONG, Harriet C., B.L.S., New York State Library School 1910, has accepted the librarianship of the Brumback Library, Van Wert, Ohio.

LOWE, John Adams, the agent of the Massachusetts Free Public Library Commission and formerly librarian at Williams College, is the author of an 85-page pamphlet on "Books and

libraries; a manual of instruction in their use for colleges." The pamphlet is an elaboration of lectures given at Williams and is intended to be put into the hands of students entering college.

MCCOLLOUGH, Ruth D., B.L.S., New York State Library School 1915, has been engaged as assistant in the book selection and study club department of the Wisconsin Free Library Commission.

MCCOY, Edith, a graduate of the Pratt Institute Library School, has charge of the data department of the Association of National Advertisers, New York.

MESTRE, Rose, formerly at the St. Agnes branch of the New York Public Library, is now librarian of the Guaranty Trust Co. of New York. The library is making special effort to gather together information on corporations in every quarter of the world.

MEULENDYKE, Marie, for eleven years the librarian of the King's Daughters Free Library in Palmyra, N. Y., has severed her connection with that institution and taken up Bible Mission work in Rochester, where her parents reside.

MYERS, Caroline, has been appointed librarian of the New Confederate College at Winoona, Ind. Miss Myers was formerly reference librarian of the Lebanon (Ind.) Public Library.

NEWMAN, Etta, an assistant in the Grand Rapids Public Library, has resigned to go to a dryer climate.

PACKARD, Marcia, after serving ten years as custodian of the Law Library at the Court House in Lawrence, Mass., relinquished her position the first of November and has gone to Saco, Me., to live.

PAINTER, Bessie May, children's librarian of the Evansville (Ind.) Public Library, has resigned to become children's librarian in the Carnegie Free Library of Allegheny, Pittsburgh.

POWER, Ralph L., librarian of the College of Business Administration of Boston University, is running a series of twenty or more articles in consecutive numbers of the *Boston University News*. The series is on "Special libraries of Boston and their uses," and covers only the representative collections.

REID, Marguerite McL., of the Providence Public Library, was married Sept. 16 to Dr. Francis W. Wetmore of Pawtucket, R. I., where she will make her home. By her mar-

riage the Providence Library has lost the services of an exceptionally efficient member of its force. Miss Reid was connected with the library for thirteen years, during nearly ten of which she was at the head of the foreign department. It is not too much to say that this department, in its present condition, is a monument to Miss Reid's devotion, keen insight, indefatigable industry and sympathetic methods with readers. It is of interest in this connection to remember that when, in 1912, the American Library Association issued, as one of its series of "Library handbooks," some useful suggestions on foreign departments in libraries, the editors of the series turned to New England for the desired help. The result was the publication entitled "Aids in library work with foreigners," by Miss Reid, of the Providence Public Library, in conjunction with John G. Moulton, of the Haverhill (Mass.) Public Library.

SALTMARSH, Ella, formerly superintendent of branches of the Indianapolis Public Library, has resigned her position and in May, 1916, was married to Richard Neal. Miss Saltmarsh had been connected with the Indianapolis Public Library for twenty-one years.

SHERWOOD, Elizabeth J., New York Public Library School 1916, formerly head cataloger in the State College at Ames, Iowa, has taken a position with the H. W. Wilson Co. as indexer for the Readers' Guide series.

SHINKMAN, Olga, has resigned from the staff of the Grand Rapids Public Library to attend the University of Michigan.

SMITH, Elizabeth C., formerly librarian of the Utah Agricultural College at Logan, was married at Pasadena, Cal., on Oct. 10, to George H. Champ, a Logan banker.

SMITH, Hattie, has been appointed assistant librarian at Utah Agricultural College in Logan, Utah.

SNOW, Evelyn, has resigned from the Public Library at Woburn, Mass., to become a member of the staff of the Watertown (Mass.) Public Library.

TAYLOR, Eva, who has been assistant librarian of the Public Library in Penn Yan, N. Y., has resigned to take a position in the order department of the Cleveland Public Library.

VOUGHT, Sabra W., B.L.S., New York State Library School 1901, is serving on the faculty of the University of Illinois Library School in place of Florence R. Curtis, who is on leave of absence for the current school year.

# THE LIBRARY WORLD

## New England

### MAINE

*Camden.* The Public Library trustees have announced the gift of the Ocean House lot, corner of Main street and Atlantic avenue as a site for a Public Library and public park. The donor was Edward Bok of Philadelphia, editor of the *Ladies' Home Journal*, who has a summer home here. The lot is valued at \$12,000.

*Lewiston.* The experiment of opening Lewiston's Public Library on Sunday afternoons will be tried, beginning the first Sunday in December. The library will be open from 2 until 4 o'clock and people will be welcome to use the reading room. All the periodicals will be at their disposal but the book shelves will not be open, nor will books be put into circulation. The children's room will not be open.

*Wilton.* The new library building, a gift to the town from the late Mrs. Agnes I. Goodspeed and her sons Frank O. Goodspeed and George F. Goodspeed, was opened to the public Oct. 28. The building, 47 x 50 feet, is of gray brick with stone trimmings.

### NEW HAMPSHIRE

*Manchester.* A very handsomely printed and illustrated book descriptive of the Carpenter Memorial Library has been prepared. The history of the building from the purchase of the site to its dedication, Nov. 18, 1914, is given, together with a full account of the laying of the corner stone and of the dedication exercises. Exterior and interior views, as well as many details of the decoration, are shown, together with portraits of Mr. Carpenter, the donor, and of the wife to whom the building is a memorial.

### MASSACHUSETTS

*Cambridge P. L. M. R.* Copithorne, lbn. (57th ann. rpt.—yr. ending Mar. 31, 1915.) Accessions, 8210; total, 106,881. Circulation, 339,176. Receipts, \$35,000; expenditures, \$34,736.19, including \$6873 for books, \$935.83 for periodicals, \$1817.58 for binding, \$18,559.22 for salaries.

*Cambridge.* The first function to be given in the reading room of the new library of the Massachusetts Institute of Technology was the reception to students in the institute coming from other colleges on Friday, Oct. 27.

Under the stress of preparing the absolutely necessary recitation and conference rooms and laboratories, the work on the library has been pushed less vigorously. To those familiar with the main room in Rogers, high studded as it was, the new reading room, with the full sweep of the great dome above, will be a revelation. It was expected to have the reading room stacks and study cubicles ready for regular use by the first of November.

*Easthampton.* Work with the children of the town is just being started and the librarian is raising funds to establish a children's corner in the library building. Tables and chairs are to be purchased and there will be magazines, papers and books for the little folks.

*Fall River.* The school committee, at its November meeting, discussed the feasibility of establishing a library specially for teachers. Superintendent Belisle reported to the committee that to establish such a library would entail a cost of approximately \$800, to furnish between 600 and 700 books for the use of teachers of the schools of the city. He stated that it was the plan to secure the best educational literature possible; that it will be an important step in bringing within the reach of the teacher the best information and the best ideas on education; and that it would stimulate the teachers and open their minds and encourage them in their work. It would be a circulating library, purchased out of the general funds. His plan was to have the boys at the vocational schools make boxes, capable of holding 10 to 18 books, and each box would be kept at a school three or four months at a time. The matter was left in the hands of the finance committee.

*Haverhill.* A branch of the Haverhill Public Library has been installed at the parsonage in Ward Hill. There are over three hundred books in the collection, including adult and children's books. The branch is open on Monday, Wednesday and Saturday afternoons, between the hours of 3-6 and 7-9.

*Lynn P. L.* Harriet L. Matthews, lbn. (53d ann. rpt.—yr. ending Dec. 31, 1915.) Accessions, 4390; withdrawals, 1486; total, 103,302. Circulation, 270,876. New registration, 3066; total, 17,893. Receipts, \$28,000; expenditures, \$27,999.90, including \$4320.88 for books, \$682.04 for periodicals, \$1933.15 for binding, \$10,554.32 for salaries. A series of story

hours, given by members of the North Shore Club and enjoyed equally by the children and ladies, closed at the opening of vacation schools with the promise of a continuation of the work this year. The room for the blind was open 156 days and 511 books were circulated; English Braille was taught to six people, American Braille to one. A gift of \$50,000 from the Carnegie Corporation is being used to erect two branch buildings.

*Millbury.* The new Carnegie Library was opened for public inspection Oct. 12.

*Quincy.* The Fore River Shipbuilding Corporation has established a library which includes fiction and reference books.

*Reading.* Contracts were signed in October for the new library building to be built on the Grouard lot. It is hoped to have the building completed by June 1.

*Somerville P. L.* Drew B. Hall, lbn. (43d ann. rpt.—yr. ending Dec. 31, 1915.) Accessions, 7215; withdrawals, 8475; total, 108,849. Circulation, 422,466. New registration, 4918; total, 15,126. Receipts, \$45,988.62; expenditures, \$44,531.77, including \$7103.76 for books, \$1262.16 for periodicals, \$2262.52 for binding, \$24,975.34 for salaries. The new central building proved more economical in administration than the old and afforded greater comforts to the users of the library, but the branch libraries are very crowded and larger quarters are needed. The rules governing the use of books were made more liberal during the summer, and except for seven-day books and unbound periodicals, of which only one may be taken at a time, any reasonable number of other books may be taken.

*South Deerfield.* The dedication of the Tilton Memorial Library took place Tuesday evening, Nov. 14, with music and a number of appropriate addresses.

*Springfield, City L.* Hiller C. Wellman, lbn. (Rpt.—yr. ending Ap. 30, 1916.) Accessions, 19,978; withdrawals, 5424; total, 214,588. Circulation, 813,921. New registration, 6150; total, 33,945. Total receipts, \$83,693.09; expenditures for the library and its three branches, \$64,028.25; for the art museum, \$7059.59; and for the museum of natural history, \$2238.21; total expenditures, \$83,608.96. Three and one half months before the end of the year, the restriction of one work of fiction at a time on a card was abolished, and readers were allowed to borrow any reasonable amount of fiction as of other books,

except the current novels of which the supply is inadequate. Nevertheless, the proportion of fiction borrowed by adults was slightly less than in the year previous, and of the books borrowed by both adults and children from the main library, fiction formed only 52½%, the lowest figure ever recorded here. Expenditures for the rental collection were \$1548.07, and the receipts \$1841.81. A special music number of the library *Bulletin* in October increased the music circulation almost 20%. The picture collection now has more than 150,000 prints and photographs. A guide to this collection giving a conspectus of seven hundred of the chief subjects represented has greatly facilitated its use; and the number of pictures borrowed increased nearly 50%, 59,872 having been called for. Saturday mornings parties of children have been taken thru the Art Museum, and other groups from schools have visited the Museum of Natural History. In the latter institution courses of lectures on astronomy, geology and ornithology have also been well attended by the general public; numerous field excursions have been arranged; and informal talks to groups of visitors on Sunday afternoons have proved especially satisfactory. These two museums are housed in buildings sharing the same lot with the library, and all three are administered by the City Library Association.

*Waltham.* The reading room of the Public Library will be open Sundays during the winter from 2 to 6 p. m. No books will be issued on that day. To keep order among the large number of adults and high school pupils using the reading room on winter Sunday afternoons and among the children attending the story hours in the lecture hall, the police department will keep an officer in and about the building. Children of primary and grammar school age are not allowed in the adult reading room.

*West Springfield.* The new Carnegie building was opened Oct. 24 with an informal reception. There were no special dedication exercises. The family of Daniel G. White, former librarian for many years, have presented the library with a fund of \$500, the income from which is to be used to purchase books of nature study for a library which will be known as "The Daniel G. White Nature Library."

*Worcester.* The Worcester County Law Library, unlike other county law libraries, circulates over 90 per cent. of its books if so desired in any part of the county, and publishes annually an illustrated report of its

work. In the latest report, for the year ending Mar. 1, 1916, Dr. G. E. Wire, deputy librarian, shows that the library now contains 33,481 volumes. During the year 3262 readers used 23,735 books. The last pages of the report are devoted to an extended report on the backing of cloth and leather bound books.

#### RHODE ISLAND

*Pawtuxet.* Dedicatory exercises in connection with the opening of the new Public Library were held Oct. 27 at the Commercial Street School. The exercises were conducted under the auspices of the Pawtuxet Parent-Teachers' Association.

*Providence.* A delivery station of the Public Library on Livingstone street has been in operation for several years and is maintained with the help of the Local Council of Women, Christian Endeavor Union, Immigrant Education Bureau and the Local Council of Jewish Women. A few months ago, when the city council was considering plans for the erection of a recreation house on the Livingstone street playground, a strenuous effort was made by the societies interested to have an additional room included in the building which could be used as a home for the library. This plan was blocked, however, largely thru the efforts of the park commission, with the result that the library is now quartered in a store on Livingstone street. A movement is now on foot to secure a Carnegie building and make the station a regular branch of the Public Library.

#### CONNECTICUT

*New Haven F. P. L.* W. K. Stetson, lbn. (Ann. rpt.—yr. ending Dec. 31, 1915.) Accessions, 12,417; withdrawals 4412; total, about 125,000. Circulation, 521,880. New registration, 13,610; total, 26,246. Receipts, \$45,450.25; expenditures, \$43,361.93, including \$9247.81 for books, \$1152.70 for books and periodicals, \$2564.64 for binding, \$17,758.03 for salaries. Congress branch was opened in the only available building. It was far too small and was found very inconvenient, but, in spite of discomforts to users of the branch, 75,191 volumes were issued there for home reading.

*New Haven.* The Winchester Repeating Arms Company is fitting up for use as a branch of the Public Library the store at 213 Division street and will turn it over to the city temporarily. The library board, at its last meeting, voted to accept the offer of the Winchester Company and will use the store until the new permanent building can

be erected. The sum of \$2500 for a site and \$20,000 for a building are already at the disposal of the library board.

*New Haven.* The first of the new permanent homes for the branches of the Free Public Library will be started very soon. Fair Haven gets the building, and bids on construction of building were due November 15. The new building, which probably will form a standard type of local branch libraries, is to be one of very high story with a large basement. Set back some 50 feet from Grand avenue, on a terrace, the building will be reached by a five-foot walk and a flight of wide steps. The building itself will be 48 feet square, of brick with Stony Creek granite trimming.

*West Hartford.* The construction of the building for the Noah Webster Memorial Library is completed, and as soon as the rest of the subscriptions are paid the D. A. R. committee in charge could see its way practically clear to completing the library, including furnishings and adequate bookstacks. There are outstanding, however, three pledges aggregating over \$2500, and unless these are redeemed it will be necessary, in the opinion of the committee, to ask the town to appropriate sufficient funds for this purpose.

## Middle Atlantic

#### NEW YORK

*Akron.* The contract for the new Denio Memorial Library and hall has been awarded to the Cold Spring Construction Company and the work of grading is under way. The building will be 36 x 56 feet and will occupy the lot at the corner of Franklin and John streets. The building will be of tapestry brick. The contract calls for the completion of the work by July 1. When the building is completed it will be turned over to the board of education.

*Binghamton.* Talks on "How to become an American citizen," by S. J. Koerbel, were inaugurated in the Binghamton Public Library Nov. 9. Cards printed in English and Italian, announcing the course and with a place for registration of those desiring to enroll for the lectures, have been distributed by the library.

*Brooklyn.* A branch of the Brooklyn Public Library has been established at the Polytechnic Institute. The English department has charge of the library, which is open all day Friday for the distribution of the books to the freshmen, sophomores and evening men.

*Delmar.* The foundation for the Delmar Free Library building has been laid and the cornerstone will be placed soon. The building will be ready about Jan. 1.

*Greenport.* Thru the generosity of Miss Grace Floyd, Greenport will soon boast of a fine Public Library. The building is to be erected on the corner of First and North streets, on what is known as the Congregational Church property, where once stood the Greenport Congregational Church, which was burned some fifteen years ago. The plans, as drawn, show a stone building constructed of cut field stone, which will be taken from the Floyd homestead property on the North road. The design is to resemble the old Floyd homestead and its base dimensions are to be 48 by 30 feet. Besides furnishing a room for the library, Miss Floyd has provided for a lecture room, a children's room and a reading room, so that the building can be used as a community center. The construction work is to be started at once and will be completed by spring. The village every year votes an appropriation of \$300 for running expenses of the Library Association.

*Johnson City.* The work of altering the Brigham mansion, in Main street, into a public library and indoor recreation center for the people of that community was pushed during November so as to be ready for the dedication on Thanksgiving Day. The only feature of the original interior that has been retained is the ornate fireplaces. The first floor is to be used as a reading room, the second floor as a rest room for women and also for the administration offices, and the third floor as a smoking room for men. There are to be four entrances, one on each side, and on the west side is to be a sun parlor, built of glass and brick. A double-decked veranda on the front and one of the sides of the building is also to be constructed. On the first floor the ceiling will be broken with elliptical arches, and the sides of the room will be built on the alcove plan.

*Lyons.* The women of the Lyons Civic Club in one week in October raised \$825 for the running expenses of the Public Library. Last year, in the same length of time, a full \$1000 was raised.

*New York City.* The order department of the New York Public Library and its methods of handling book and magazine purchases, is described by Franklin F. Hopper in the *Bulletin of Bibliography* for October.

*New York City.* M. W. Dominick, formerly of Dominick & Dominick, stockbrokers, has arranged to equip and endow the new Medical Library of the New York Medical College and Hospital for Women, at 17-21 West 101st street. Mr. Dominick offers this library as a memorial to his son, the late George Carleton Dominick, M.D., who recently died at sea.

*New York City.* The documents division of the New York Public Library now has probably the most complete collection of material on port and harbor development in the city. Items to the number of 2200, including books, magazine articles and documents, are included in the catalog. Under "United States" there are probably 500 cards, each representing some phase of this important subject related to some city in this country.

*New York City.* Preliminary to consolidating the libraries of the American Society of Civil Engineers and the United Engineering Society, following last summer's vote to unite the two societies, a careful comparison of the two libraries has been made to determine the number of duplicates. With a total of 88,938 books, pamphlets, maps, etc., in the Civil Engineers' Library, 21,696 duplicates, or about 24.4 per cent. of the whole collection, have been found, leaving 67,242 new items for the consolidated library. The United Engineering Society has about 65,000 volumes, most of them bound, whereas only about 26,000 bound volumes belong to the Civil Engineers' Library, but still it seems surprising that the latter library, after taking out its duplicates, should have a larger list of titles to bring to the United Engineering Society Library than its total resources at the present time.

*Pulaski.* A movement is on foot to secure a Carnegie grant of \$10,000 for a library building. The village has been divided into districts, which will be canvassed by special committees to see if the necessary support can be guaranteed. A site for the building has been offered.

*Schenectady.* The Schenectady Free Public Library will probably come into a joint bequest of \$12,000 as the result of the will of Mrs. Catherine J. Oothout, who died in 1889, leaving her estate to her sister, Cornelia Veeder, during the latter's life and providing that thereafter it should revert to the city of Schenectady to build and maintain a free hospital or be used in some other way to the advantage of the city. The surviving sister died in

1915, and left part of her estate to go with that of her sister to the city, recommending that it be applied to the use of the library as the total amount would be far under the sum needed to found and maintain a hospital. The original Oothout bequest now amounts to \$7587, and the additional amount left by Cornelia Veeder brings the total to about \$12,000.

*Syracuse.* Tho not yet in full operation, the branch of the Public Library in the University Library building is proving a great success. Hundreds of volumes of popular fiction, poetry, and books for general reading, which are unobtainable at the University Library, are being eagerly sought by the students and residents of the university section alike. There are no restrictions in the loaning of books from the branch, and the same general rules applicable in the downtown branch are in force at the university.

*Syracuse P. L.* Paul M. Paine, lbn. (Ann. rpt.—yr. ending Dec. 31, 1915.) Accessions 9545, withdrawals 2770; total 121,186. Circulation 422,841. New registration 25,796. Receipts \$50,180.43; expenditures \$48,644.14, including \$10,816.43 for books, \$1683.31 for periodicals, \$3625.89 for binding, \$20,633.33 for salaries. The interior of the Carnegie building was redecorated during 1915, and among other changes in the building, a system of indirect lighting was installed in part of the library. It was proposed to extend this system to the whole building during 1916. The first library station, installed in West Genesee street, was transferred to the Porter School, and another opened in McKinley School. The library now has two branches, ten stations, and nineteen other agencies, besides the Main Building. Supplementing the formal report, four pages are used to tell "How to find a book in the library."

#### NEW JERSEY

*East Orange F. P. L.* Louise G. Hinsdale, lbn. (13th ann. rpt.—yr. ending Dec. 31, 1915.) Accessions, 5182; withdrawals, 628; total, 46,836. Circulation, 252,479. New registration, 2770; total registration, 29,748. Receipts, \$22,002.13; expenditures, \$21,998.90, including \$2406.84 for books, \$1271.20 for repairs and renewals of books, and \$11,853.88 for salaries. An addition to the main library, made possible by a gift of \$40,000 from the Carnegie Corporation, was completed during the year. The enlargement made it possible for the first time to have classes from the public school come to the library for part of the instruction in the use of the library. Talks

were given by the reference librarian to the eighth grades in five schools, followed by eleven visits to the library for practical work.

*Glen Ridge.* By a referendum vote the voters of Glen Ridge have authorized a bond issue for the purchase of a site for erection of a public library, the gift of Henry S. Chapman. The building will cost in the neighborhood of \$40,000 and the land approximately \$34,000. The land will contain sufficient space for the future construction of a municipal building.

*Jersey City.* A branch of the Jersey City Public Library will be opened soon in Greenville, as the result of agitation started by St. Paul's Holy Name Club some months ago. The old store building on Danforth avenue, near Old Bergen road, is being remodeled for the new library branch. Partitions being removed will make a large double room for the branch, and plenty of light and air is promised. The library board is now preparing a catalog of 4000 to 5000 volumes, and will install bookcases and furniture as soon as funds are available.

*Long Branch.* By a vote of 1720 to 343, the referendum calling for the maintenance of a free public library, to cost \$25,000, exclusive of lot, was ratified by the voters at the November election. The proposed site, which the women of the Long Branch Circulating Library will give for the building, adjoins the city hall. It is hoped that with these assurances of support the Carnegie Corporation will make a grant of \$25,000 for a suitable library building. The library figures its lot and books that it will turn over to the city worth \$10,000.

*Newark.* In the will of Vice Chancellor James E. Howell, which provides that the bulk of his estate shall eventually go to the Newark Public Library, it is provided that the income from this library fund shall be used for the purchase by that institution of books in any language "belonging to the class known to librarians as history and biography." The will provides that for the first 100 years of the fund only 85 per cent. of the income is to be expended for these books. In that time the remaining 15 per cent. is to be added to the principal. At the end of 10 years and thenceforth the entire income is to be used for the purchase of books in the designated class. The bequest is estimated at about \$250,000.

*Newark.* Branch libraries in Lafayette and Cleveland Schools were reopened Nov. 2, at the request of the Board of Education, on the same condition as heretofore, namely, that the

board furnish a room properly equipped, including light and heat, and the Public Library furnish books and a competent librarian. Over a year ago the library equipped and opened these two school libraries, but an impression got abroad that the Public Library was trying to get the Board of Education to spend money for something which should come out of library funds, and a special committee of two was appointed to conduct an investigation. This did not get very far, for the library refused to be investigated, the branch libraries at Lafayette and Cleveland Schools were closed and the books returned to the Public Library. At the same meeting when their reopening was requested, another resolution was adopted, which prepares the way for a more general ingrafting of the school branch library plan upon the public school system. It was as follows:

Resolved, That the city superintendent be requested to prepare for submission to the trustees of the Free Public Library a working plan for establishing, from time to time, branch libraries in the public schools of this city, and that this plan, together with a statement of the estimated cost of installing such branches and of the estimated annual cost of maintaining the same, together with a statement of the present cost of obtaining books from the library for the use of the various schools, be submitted to the committee at its next meeting.

*Princeton.* At the meeting of the board of trustees of Princeton University, on Oct. 26, it was announced that through the generosity of Mrs. Archibald D. Russell, M. Taylor Pyne, 1877, and Percy R. Pyne, 1878, the children of the late Mrs. Percy R. Pyne, the donor of the Pyne Library building, the equipment of the south wing of the building as a book stack is now under way. This will provide additional room for about 250,000 volumes, and will increase the total capacity of the building by 65 per cent. For this much needed improvement to meet the marked growth of the library collection, the university is once more indebted to the family whose constant generosity thru many years has met so many of Princeton's wants.

#### PENNSYLVANIA

*Harrisburg.* Opening of the school libraries by the Harrisburg Public Library in November resulted in requests for the establishment of more such branches. The library now has six branches, which are in charge of the principals of the schools and some splendid work has been done. Requests for an equal number are on hand, but in the present state of the finances it will be impossible to do more this winter.

*Philadelphia.* During the past few months Dr. James H. Penniman has been constantly

making additions to the Library of Education, which he first established about a year ago in the School of Education, University of Pennsylvania, as a memorial to his mother, Maria Hosmer Penniman. The first two large gifts to this library aggregated some three thousand volumes. This latest gift amounts to about two thousand volumes and ranges thru the entire field of educational literature. There are works in Greek, Latin, German, French, Spanish, Italian and other foreign languages, as well as English, and their dates run from the days of the late Middle Ages to the present moment.

*Philadelphia F. L.* John Ashhurst, lbn. (20th ann. rpt.—yr. ending Dec. 31, 1915.) Accessions, 70,028; withdrawals, 20,869; total, 494,992. Circulation, 2,730,173. New registration, 58,017; total, 165,648. Receipts, \$342,508.53; expenditures, \$294,818.33, including \$53,854.39 for books and periodicals and \$178,203.17 for salaries. The library maintained 30 branches and during the year sent traveling libraries to 34 fire stations, 5 police stations, 1 telegraph station and 25 other addresses; it continued to administer the library of the Pennsylvania Home Teaching Society. The addition of 137 new borrowers to the blind department brought the total number of borrowers for 1915 to 832, 291 of whom resided in Philadelphia, 226 elsewhere in Pennsylvania and 315 in other states. The department continued co-operation with the Pennsylvania Institution for the Instruction of the Blind in joint use of the library building. It also administered the library of the Society for the Promotion of Church Work Among the Blind.

*Wallingford.* The Helen Kate Furness Free Library at Wallingford, made possible by a gift of \$5000 in the will of Dr. Horace Howard Furness, the eminent Shakespearean scholar and author, was opened Nov. 4 with appropriate exercises. Dr. Joseph H. Swain, president of Swathmore College, and Dr. John Wesley Carr, principal of Friends' Central School in Philadelphia, were the speakers. Both had known Doctor Furness intimately and had taken great interest in his work and his writings, and both paid high tribute to his worth as a writer and a citizen. While to Doctor Furness's gift is due the fine little stone building which bears the name of his wife, the library was started some years ago in the Wallingford school, and now has 2000 books. Dr. William H. Furness, 3d, gave the land upon which the library is located, and Dr. Horace H. Furness, Jr., gave \$1000 to the fund.

## MARYLAND

*Baltimore.* The technology department of the Enoch Pratt Free Library, instituted last June, has been popular, its registration increasing from 1306 in June to 2100 in October. Its success is proved by the recognition and indorsement that the Engineering Club of Baltimore has given it. The club has not only been making constant use of this branch of the library, but has acknowledged its usefulness by featuring it with articles and editorials in the last issue of its journal.

## The South

## WEST VIRGINIA

A Library Commission bill to be submitted to the West Virginia Legislature at the coming session in January, was presented at the third annual session of the West Virginia Library Association in October. The bill provides for the appointment of a commissioner to encourage all work of the existing libraries of the state, as well as the establishment of many more. This library commission is to have full charge of all library work in the state, and especially the establishment and strengthening of traveling libraries.

## SOUTH CAROLINA

*Saluda.* An effort is being made by the Saluda School Improvement Association to enlarge the local school library. It is planned to raise \$30 here, thus entitling the school to the same amount from both the state and county board, making \$90 in all with which to buy new books. The pupils of the school recently organized this improvement association and it is doing much for the betterment of the school.

## GEORGIA

*Savannah.* The new Public Library building, erected at a cost of \$150,000, was opened for public inspection Oct. 31, and the issue of books began the following day. C. Seymour Thompson, formerly assistant librarian in the Public Library at Washington, is the new librarian in charge.

## ALABAMA

*Birmingham.* Mrs. A. O. Lane has presented a thousand volumes of standard works to the Public Library. They are given in the name of her husband, the late Judge A. O. Lane, who died a little over a year ago.

*Montevallo.* The Alabama Girls' Technical Institute, which has a library of about 9000 volumes, is planning to erect a separate library building, of which the first unit will be planned

to hold about 12,000 or 15,000 volumes, with suitable rooms for reading and reference and administration purposes.

## KENTUCKY

*Lexington P. L.* Florence Dillard, lbn. (16th ann. rpt.—yr. ending Dec. 31, 1915). Accessions, 2761; withdrawn, 535; total, 30,133. Circulation, 76,014. Registration, 8572. Receipts, \$9584.02; expenditures, \$7707.82, including \$2497.84 for books, \$291.14 for periodicals, \$415.35 for binding, \$2815.00 for salaries. A supplement to the report contains 11 pages of notes on "Historic shrines in and around Lexington."

*Louisville F. P. L.* George T. Settle, lbn. (Rpt.—yr. ending Ag. 31, 1916.) Circulation for home use was 1,074,360, an average of more than five times per volume. Estimating the population of the city at 237,012, this was more than 4½ volumes per capita. Fiction read was 608,546, or 56 per cent.; non-fiction 465,814. New registrations 10,318; total 52,890, or over 22 per cent. of the population. In the reference department 61,469 more important questions were asked and topics looked up, an increase of 14,722. There were 303 bibliographies and reading lists compiled. The new newspaper and civics room had 34,071 visitors, 3343 more important questions were asked and topics looked up; 1561 pamphlets were classified and 5893 clippings from newspapers, 685 about the library, were filed. Accessions 22,078; total 195,424, a net increase of 16,079 volumes. Meetings in the assembly and classrooms numbered 1234. Total receipts, with the balance on hand last year, \$103,655.09; current maintenance, with interest on loan and interest on mortgage, was \$103,355.65. Maintenance expenditures included the following: Books \$20,899.17; salaries, staff, \$41,738.86; janitor service and other labor \$7149.70.

## TENNESSEE

*Knoxville.* The purchase of a site for a library for negroes was authorized at a meeting of the city commission Nov. 7. This property is located at the intersection of Nelson street and E. Vine avenue and is priced at \$3000.

*Memphis. Cossitt L.* Charles D. Johnston, lbn. (22d ann. rpt.—yr. ending Dec. 31, 1915). Accessions, 12,782; withdrawals, 2222; total, 120,263. Circulation, 401,796. New registration, 18,431; total, 20,201.

## LOUISIANA

*New Orleans P. L.* Henry M. Gill, lbn. (2-yr. rpt.—1914-1915). Accessions, 10,110;

withdrawals, 1404; total, 144,638. Circulation, 420,013. New registration, 7253; total, 89,699. Receipts, \$44,861.11; expenditures, \$44,136.08, including \$6287.68 for books, \$1117.03 for periodicals; \$685.34 for binding, \$25,019.85 for salaries. The use of the auditorium has diminished each year, and in 1914 it was hardly used at all. If the board would grant fixed dates throughout the year to societies, so that they would not have to ask each time for the use of the hall, the auditorium might be more generally used. The story hour which had been carried on by volunteer story tellers was discontinued because the library felt it could not call indefinitely on volunteers. Not only in the juvenile department but also in its other departments, the library is working under the disadvantage of having a staff untrained in library work. The public has been annoyed by the closing of the library on holidays which were announced by the Board at the last minute and of which no proper notice could be given. Much work was done by the staff to make the library more useful to the schools and the librarian co-operated with the school officials in speaking in all parts of the city to further the "Stay in school campaign."

## The Central West

### MICHIGAN

*Detroit.* The James E. Scripps branch of the Public Library is briefly described by Maude Ware Bush in the November number of *The American City*. Two pictures show the exterior of the building and a bit of the surrounding grounds.

*Detroit.* At the suggestion of the Detroit Museum of Art, the Public Library has established a branch at the museum. This branch is in charge of Miss Isabel Weadock, who is now engaged in making a list of the books in the museum library. When this list is completed, Library of Congress cards will be bought for the museum catalog. Ultimately all works on art in the Detroit Library will be listed in the museum catalog.

*Detroit.* The voters of the city at the November election authorized the bond issue of \$750,000 for the completion of the new library building. Bids for the remainder of the work will probably be asked for about Dec. 1 and work may be resumed by April 1. Two years will be allowed for the completion of the building which will cost when finished approximately \$1,350,000. It is estimated that with the rapid rise in cost of structural steel and of labor in the last two years, the steel framework

of the building, if erected today, would cost at least \$100,000 more than was paid when it was put up in the winter of 1914-15.

*Grand Rapids P. L.* Samuel H. Ranck, lbn. (13th ann. rpt.—yr. ending Mar. 31, 1916.) Accessions 14,950; withdrawals 1313; total 160,308. Circulation 432,322. New registration 7119; total 26,385. Receipts \$79,605.90; expenditures \$63,747.43, including \$11,937.50 for books, \$2454.31 for periodicals, \$32,036.16 for salaries. The opening of the branch library in the new South High School building in September, 1915, and the full-time opening of the branch libraries in the Alexander and East Leonard Schools in January, brought the number of branch libraries to 11. The purchase of three lots adjoining the West Side branch for expansion at this point, and the establishment thru the activity of the civic music committee of the Grand Rapids Association of Commerce of a collection of music scores for circulation, were other important new things of the year's work. There were 191 volumes in the rental collection at the time of the report, as compared with 203 in 1915; 117 volumes were purchased and 170 withdrawn; 3274 were issued for home use. Of the books removed, 38 were missing from previous inventories. Of the 94 remaining, 47 had paid for themselves out of the earnings and showed a profit of \$19.41, while the other 47 did not earn their cost. At the 100 lectures given at the library and the branches, there was an attendance of 17,039. Work was finished on the catalog of books in the library by Catholic authors, and this was published by the Federation of Catholic Parishes in Grand Rapids.

### OHIO

*Cincinnati.* An illustrated "Handbook of the Public Library of Cincinnati" has been published by the library. The first half of the book describes the history, organization, and operation of the library, and the privileges it offers to the public. In addition, a page is devoted to the Main Library Building and to each branch, showing a cut of each at the top, followed by tabulated data on its construction, capacity, cost, etc.

*Cleveland.* Together with the other offices at the City Hall, the Municipal Reference Library has been moved to its new quarters in the new City Hall. It is housed in two adjoining rooms, fairly central in location, and there is every indication of a greatly increased usefulness. It is planned to extend the scope of the work by providing a circulating collection for the employes in the City Hall; this collection

will include general literature as well as books and periodicals more definitely along municipal administration lines.

*Cleveland.* The size and growth of Adelbert College Library, which is the central library of Western Reserve University and occupies the Hatch library building, are described in the annual report of the librarian, just published in the September *Bulletin* of Western Reserve. The library contains 88,000 volumes, of which 72,000 volumes are in the library building. Over 3000 volumes were added to the library last year. Twelve thousand volumes were drawn for home use during 1915-16, as compared with 11,000 in the previous year.

*Cleveland.* The announcement was made on Nov. 6 that the Library Board had selected the firm of Walker & Weeks, of Cleveland, as architects of the central building of the Cleveland Public Library. During the week of Nov. 6 the plans of the winning firm, together with those of the seven other firms admitted to the contest, were exhibited to the public in gallery 8 of the Cleveland Museum of Art. On Sunday, Nov. 12, these plans were transferred to the Cleveland Public Library on the sixth floor of the Kinney and Levan Building, where they will remain on exhibition for some weeks. The decision of the Library Board in appointing Walker and Weeks as architects of the new building does not bind them to accept the plan submitted by this firm. Their design will probably be largely modified when the building of the library is planned in detail. The competitors included two Cleveland firms beside Walker and Weeks, Abram Garfield and Hubbell and Benes; three New York firms, Robert D. Kohn, architect of the Lindner building, Cleveland, John Russell Pope, and Edward Lippincott Tilton, architect of several of the library branches; one Boston firm, Allen and Collins, and one Chicago firm, Holabird and Roche. By a provision of the contest each firm admitted received \$1000 for his plan.

*Columbus.* The Ohio board of library commissioners has authorized the establishment of a summer library school to be conducted at Ohio State University next summer. J. H. Dice, library organizer of the State Library, and his assistant, Miss Amy Allen, have been at work on the project. They will have charge of the school. The exact date of the opening session has not been set as yet. President Thompson of the university has granted the use of a room at the university for the library school.

*Dayton.* The geological collection gathered

together by Attorney O. F. Davisson, and variously estimated to be worth from \$5000 to \$10,000, has been presented to the Dayton Public Library and Museum. If the proposed municipal university materializes, the entire museum, now located at the library, will be transferred to the university.

*Fremont.* The Birchard Library was closed Nov. 14 for at least two weeks, during which time some of the partitions were removed and the interior remodelled.

*Mansfield P. L.* Helen J. Fox, lbn. (Ann. rpt.—yr. ending Dec. 31, 1915). Accessions, 1241; withdrawals, 213; total, 19,564. Circulation, 79,785. New registration, 1428; total, 6004. Receipts, \$3931.22; expenditures, \$3931.22, including \$375.48 for books, \$262.57 for periodicals, \$101.16 for binding, \$1860 for salaries. The library was closed for nearly two weeks during August while the building was being redecorated.

*Oberlin College L.* Azariah S. Root, lbn. (Rpt.—yr. ending Ag. 31, 1915.) Accessions 16,411; total 291,879. The library was open 305 days; the total number of readers was 228,832; circulation 61,590. Registration 3012. Receipts \$15,033.97; expenditures \$26,671.80, including \$5262.57 for books and periodicals, \$1299.77 for binding, \$8859.80 for salaries. Loans were made to 54 persons outside Oberlin and to six libraries; books were borrowed from six libraries. A gift of \$40,000 was used to install two additional floors in the stack room, but the extra equipment was expected to give only temporary relief from crowded conditions. The rising cost of books decreased the purchasing power of the income for books.

#### INDIANA

A codification of the library laws of the state, and better provision for rural extension work, will be the main features of a bill to be introduced at the next session of the legislature. A discussion of this proposed bill is given in the *Library Occurrent* for October, and was also a feature of the recent joint meeting of the two state library associations. The associations also propose to introduce into the legislature, either as a separate bill or as a part of this codification bill, a provision for the certification of those hereafter appointed for the first time to the librarianship of any library with a possible income of \$1000 or more.

*Gary.* The Froebel School is so crowded that the branch of the Public Library located in the building will soon have to be moved.

The library board is now making plans for the erection of a \$15,000 branch library building in the vicinity of the school.

*South Bend.* The new library building for the University of Notre Dame, which was begun in May, will be one of the most modern college libraries in the country. Edward L. Tilton of New York City is the architect and the building is expected to cost about \$250,000 when completed.

#### ILLINOIS

*Chicago.* A definite step toward establishing branches of the Public Library in the schools was taken in October when a special committee on libraries met with city Librarian Henry E. Legler. It was moved that he should confer with the architect and committee on buildings and grounds with a view to including in new school buildings space for such libraries.

*Chicago.* In view of the interest aroused in Illinois history by the approaching celebration of one hundred years of statehood, a large relief map of Illinois has been installed on the fourth floor of the Main Building. Preparations are also under way for an extensive exhibit, to be located on the same floor, of old publications, prints, illustrations, maps, and other graphic material touching upon the history of Illinois. These will not be restricted to the period of statehood, but will comprise as well historic and picturesque episodes in territorial days. In addition, it is proposed to assemble for the use of clubs, organizations and schools, a collection of stereopticon slides which may be borrowed without charge on suitable conditions for local lectures.

*Chicago.* *John Crerar L.* Clement W. Andrews, lbn. (21st ann. rpt.—yr. ending Dec. 31, 1915.) Accessions 16,889; withdrawals 633; total 353,394. The Laufer purchase of about 14,000 volumes and the Gerritsen purchase of something under 1600, have their own catalogs, but have not yet been entered. A room for current periodicals, to take the place of the old periodical alcove, was provided, Oct. 1, by a rearrangement of the treasurer's office. The increased accommodations in the main reading room, due to the removal of the periodicals, resulted in a great increase in attendance; the increase from 1914 in calls for the first nine months was 13,246, and for the last three would normally have been 4415, but really was 5888. The library has started a collection of trade catalogs; it has discontinued the use of Harvard and Royal Library

of Berlin cards in the public catalogs; it has simplified and made less liable to unintentional neglect the process of replacing lost and mutilated books. The Senn collection on the medical sciences, still in process of adjustment, was consolidated, so that it occupied 375 shelves, 335 with books and 40 with pamphlets. The addition of periodicals and 33 volumes to the collection purchased from the Gradle Fund brought the total number of volumes and pamphlets in the collection to about 1450. The 547 books in the Chanute collection on aviation have been reclassified and cataloged, together with about two-thirds of the 300 pamphlets and 2000 clippings. The Cremation Association of America has presented to the library its books on cremation, and has made provision for the future development of the collection. An increase in the admissions to the stack from 2472 in 1914 to 4013 in 1915 was due chiefly to three special investigations carried on by the U. S. Industrial Commission, the Interstate Commission, and the city of Chicago. The increase in calls for books from the stacks from 176,368 in 1914 to 195,502 in 1915 was out of proportion to the increase in the number of visitors. The loans for use outside the library increased; 462 requests for 634 volumes from 94 libraries and 866 requests from 261 individuals were granted and 12 requests refused, as against 1077 loans and 2 refusals in 1914. In 16 cases the books loaned were asked for while out; nearly all loans to individuals were for short periods, chiefly over night or over Sunday. Orders for cameragrams numbered 142, requiring 1725 sheets, for which charges amounting to \$195.50 were made. A "List of books on the history of industry and industrial arts," a work of 486 pages, giving some 2800 titles, was issued by the library in November. The distribution of printed cards amounted to 273,362, of which 75,678 were sent to the depository libraries, 1799 sent as gifts, and 195,885 sold or sent in exchange. The library's share of books collected by Dr. Lichtenstein on his South American trip amounted, after eliminating duplicates and material not wanted, to 1733 volumes and 2366 pamphlets. The purchase was weak in books of science and technology, but contained much useful material on social and economic conditions. The total cost, exclusive of transportation, was \$7679. An important purchase of 23 incunabula and one manuscript dealing with medicine and the natural sciences was made from Olschki, of Florence, at a total of \$2683.71.

*Chicago. Univ. of Chicago L.* Ernest D. Burton, director. (Rpt.—1914-15.) Comple-

tion of the Classics Building, Hiram Kelly Memorial, in March, 1915, and of Julius Rosenwald Hall in December, 1914, provided quarters for the classical department, with its library of about 39,000 volumes, and the geology and geography departments, with a departmental library of about 11,000 volumes. Of the collections purchased during the year, may be mentioned the library of George Emery Littlefield, consisting mainly of early English and American textbooks, and the Boggs-Lyle collection, chiefly early American newspapers and periodicals, supplementing, therefore, the so-called Durrett collection purchased in 1912. The accessions of the year include 28,280 bound volumes, the total number of bound and accessioned volumes in the libraries amounting at the end of June, 1915, to 458,616. There were also received a large number of pamphlets and bound volumes not as yet accessioned and cataloged, the total number of uncataloged volumes being estimated at 113,000 to 120,000. According to the report of the cataloging department, there were cataloged during the year under the new system 60,440 volumes, representing 30,506 titles. Under the old system, the number of volumes cataloged was 5341, representing 4446 titles. Of the 458,616 volumes on the shelves, 195,801, or a percentage of 42.7, now stand under the new classification, an increase of 10.1 per cent. over the preceding year. There were purchased from the Library of Congress printed cards representing 14,035 titles. Only 563 titles were printed by the University of Chicago Press, as against 6418 multigraphed in the library. The total number of cards in the various catalogs of the libraries (exclusive of the union catalog) is estimated at 1,573,549. A test on the cost of cataloging, covering 100 titles, 60 of them being in foreign languages and the majority representing rather difficult books, showed an average cost per title of nearly 60 cents. A later test, in which a larger percentage of the books were in English, and representing, on the whole, a smaller proportion of difficult books, showed an average cost of 26 cents per title, exclusive of the cost of Library of Congress and other printed cards, and 37 cents with the cards. The total number of readers in the General Library (Harper Memorial Library) was 335,542, as against 290,874 in 1913-14; the circulation of books outside the library was 116,123, as against 94,429 in 1913-14. In the Library of the School of Education, the total number of readers for the year was 170,743, as against 156,736 for the preceding year. Complete figures of readers and circulation in other departmental libraries are not available.

*Chillicothe.* The new township library was opened with appropriate services the first week in September. The books belonging to the Association Library have been turned over to the new library and many new books have been purchased. Miss Gladys Carrol has been appointed librarian. The building is the gift of the Carnegie Corporation.

*Gilman.* The reception and dedication of the new township library occurred Oct. 28. Hurbert Phillips, president of Grand Prairie Seminary, Onarga, made the principal address. He spoke especially of the library as an educational institution. Miss Price, secretary of the Illinois Library Extension Commission, followed with a talk on the extension work throughout the township. The library at Gilman was established in the year 1870 by a Library Association. In 1902 it was turned over to the city and the city council voted a tax support. Two years ago the people of the township voted a two mill tax and the city library was merged into a township library. It is now housed in a beautiful building, the gift of the Carnegie Corporation.

*Griggsville.* The new Carnegie-Brakefield library building has been completed and formally opened to the public.

*Minonk.* Some few years ago David Filger left by will, a lot and \$20,000 to the city of Minonk for a library building. The building has now been completed and many people attended the dedicatory services Oct. 10. Mr. Simpson, the first speaker, told of Mr. Filger's life. Judge Fort gave an address on the library as an educational factor. He also spoke of Mr. Filger, and of what his gift of the library may mean to the city. This was followed by a speech by Judge Kennedy, in which he emphasized the value of the library. The last speaker, Miss Price, secretary of the Library Extension Commission gave many practical suggestions as to how the library may be of use to the people. All the speakers brought out the idea that the library must be used by everyone in order to be a success and that it belongs to everyone. Miss Edith Ford has been appointed librarian.

*Springfield Lincoln L.* Henry C. Remann, lbn. (30th ann. rpt.—yr. ending Feb. 29, 1916). Accessions, 5893; total, 65,883. Circulation, 193,409. New registration, 5107; total, 9670. Receipts, \$23,945.88; expenditures, \$17,771.21, including \$3075.02 for books, \$334.93 for periodicals, \$704.68 for binding, \$8570.31 for salaries. Two important changes were made in the rules and regulation of the library. The

first permitted the issuance of all books (except seven-day novels and works for class study) for a period of four weeks instead of two; the second increased the number of books issued on one card from two to five. A regular system of stations was established from which books might be drawn by adults; the library board allowed \$1400 for the purchase of books, and the Board of Education granted permission for the establishment of stations in four schools in the outlying districts which were open certain nights for community center work.

## The Northwest

### WISCONSIN

*Marinette.* Stephenson P. L. Gladys May Andrews, lbn. (38th ann. rpt.—yr. ending June 30, 1916.) Accessions 1113; withdrawals 545; total 15,326. Circulation 61,490. New registration 1560; total 4784. Receipts \$4739.94; expenditures \$4703.25, including \$1025.44 for books, \$217.18 for periodicals, \$124.36 for binding, and \$1998.26 for salaries. Circulation has increased nearly 500 per cent. since 1912, when it was only 13,682.

*Superior P. L.* Blanch L. Unterkircher, lbn. (27th ann. rpt.—yr. ending June 30, 1916.) Accessions 4126; withdrawals 861; total 32,665. Circulation 144,489. Receipts \$27,211.32; expenditures \$15,106.92, including \$3788.74 for books, \$474.86 for periodicals, \$765.70 for binding, \$6966.80 for salaries. Three new deposit stations were organized, making a total of seven stations served by the library.

### MINNESOTA

*Duluth.* Duluth has been presented with the valuable musical library owned by the late Horace W. Reyner. The presentation was made by the Matinee Musicale, which organization received the library from Mrs. Reyner. It includes 18 biographies, 150 chorus selections and oratorios, about 20 music manuals and books of instruction, 1 history of music, 52 organ selections, 75 miscellaneous books on music, groups of French songs and a large number of vocal and quartet selections.

*St. Paul.* Several months ago Dr. Johnston of the Public Library proposed establishing a branch library in the City Hospital, and the plan met with Superintendent Ancker's approval. On investigation he found he had no available room for use as a library branch, however, and it was not until recently that he was able to obtain quarters. The branch will be opened in a few weeks.

*St. Paul.* The order and catalog divisions of the Public Library moved into the new building last May, the branch and school divisions in September, the reference, circulation and juvenile divisions on Nov. 1. The work of the library was not interrupted in this removal. A feature of the moving of the juvenile division was the appearance of representatives of the different Boy Scout troops of the city to transfer the books from the old library to the new. The basement only of the new building is being occupied at present. Specifications for the furniture for the building are now ready. The advertisement for bids was published Nov. 11. It is hoped that the furniture will be installed and the entire building, including the Hill Reference Library, will be ready for use in the autumn of 1917.

### IOWA

*Marshalltown P. L.* Anna Maude Kimberly, lbn. (18th ann. rpt.—yr. ending Dec. 31, 1915.) Accessions 1064; total 17,087. Circulation 77,295. New registration 915; total 5328. Receipts \$5320.59; expenditures \$5470.42, including \$877.88 for books, \$134.10 for periodicals, \$205.31 for binding, \$2230 for salaries. The reclassification of the 16,000 books of the library was accomplished during the last seven months of the year. The books were reclassified, recataloged, and all the cards were typed and filed.

### NEBRASKA

*Lincoln City L.* Lulu Horne, lbn. (Ann. rpt.—yr. ending May 31, 1916.) Accessions 3084, withdrawals 521; total 40,562. Circulation 212,731. New registration 2648; total 11,932. Receipts \$14,249.70; expenditures \$13,017.07, including \$2946.81 for books and \$5295.10 for salaries.

*Plattsmouth.* The new Carnegie Library here was formally opened Nov. 1. The building was erected last summer from the donation of \$12,500 by Andrew Carnegie to the city of Plattsmouth. The principal address was given by Malcolm G. Wyer, librarian at the University of Nebraska, who spoke on "The library in the community."

### MONTANA

*Missoula.* The trustees of the Missoula Public Library and the Missoula county commissioners are to meet soon to draw up and sign a contract by which the use of the library will be extended to all the people of the county. As soon as the contract is signed

preparations will be started to carry out the plan. Funds for the extension purpose are expected to be available Dec. 1.

## The Southwest

### MISSOURI

*Jefferson City.* This city has been chosen as the next meeting place of the Missouri Library Association.

*Kansas City.* Another branch of the Public Library was opened in the Kensington School Nov. 3. Miss Jeanette Maxwell, formerly at the Main Library, is to be in charge. On a recent visit of inspection in Kansas City schools, Prof. George D. Strayer of Columbia University made a special point of investigating these branch libraries in schools. He gave them his hearty endorsement, calling the plan "the most perfect method of correlation of education and the library" he had ever seen.

*Liberty.* William Jewell College L. Ward H. Edwards, lbn. (Rpt.—yr. ending June 3, 1916.) Additions 1124; withdrawals 53; total 27,900; the sum of \$300 was spent for books during the year. No record is kept of books used in the library itself; 6063 were circulated. The librarian conducted classes in freshman and sophomore English during the year. The library bindery handled 666 volumes for the library, and also did some work for outsiders.

*St. Joseph F. P. L.* Jesse Cunningham, lbn. (26th ann. rpt.—yr. ending Apr. 30, 1916.) Accessions 6909, withdrawals 1665; total 77,022. Circulation 285,290. Registration 18,656. Receipts \$27,805.13; expenditures \$27,690, including \$4444.21 for books, \$1096.21 for periodicals, \$1838.22 for binding, and \$13,933.36 for salaries.

*Sedalia F. P. L.* Frances Fordice, lbn. (21st ann. rpt.—yr. ending Apr. 30, 1916.) Accessions, 1219; withdrawals, 329; total, 17,897. Circulation, 75,988. New registration, 1535; total, 4275. Receipts, \$8195.57; expenditures, \$5814.97, including \$997.14 for books, \$216.97 for periodicals, \$259.40 for binding, \$2300 for salaries. Library service to farm homes in Pettis county was developed thru the parcel post and by co-operation with teachers in county schools; 103 schools have been reached and books were sent out with no charge except the payment of postage. The library had an exhibit in the Parcel Post booth at the State Fair in the fall.

### KANSAS

According to statistics compiled by W. H.

Kerr, librarian of the State Normal School, Emporia, Kansas, eighteen new libraries have been started since October 1915. All are privately supported—that is, by library associations, women's clubs, W. C. T. U., etc. In five cases (Atwood, Rugoton, Liberal, Neta-waka, and Syracuse), these new libraries are the first in their respective counties; and four of these are in the western third of the state. According to reports, there are now 26 Kansas counties having no public libraries, either privately or tax-supported; 22 of these are in the western half of the state. In the same time five public libraries have changed from private to public-tax support. According to reports, there are now 74 tax-supported public libraries in the state, and 75 privately supported.

*Horton.* Three of the women's organizations of the city have commenced a campaign to secure a free library and reading room. During the winter the town will have a free reading room equipped with twenty or more current magazines and daily newspapers. The city commissioners have granted the use of a room in the city hall for this purpose. Donations of books, and money for the purchase of books are now being solicited.

*Leavenworth F. P. L.* Irving R. Bundy, lbn. (16th ann. rpt.—yr. ending Dec. 31, 1915.) Accessions, 1678; withdrawals, 429; total, 24,549. Circulation, 73,845. New registration, 1501; total, 4747. Receipts, \$6561.89; expenditures, \$6150.20, including \$1564.57 for books, \$210.10 for periodicals, \$465.21 for binding, \$2500 for salaries.

### TEXAS

*Austin.* The authorities of the Library of the University of Texas intend to establish a school in connection with the university library for the training of librarians as soon as the appropriations from the legislature permit. The establishment of such a school would fill a long-felt want in the Southwest, especially in the smaller Texas libraries, as the nearest training schools for librarians are in Georgia and Illinois. The proposal to establish such a school was given hearty support at the recent meeting of the Texas Library Association at Galveston.

*Belton.* "Library week" for Belton closed Oct. 28, and resulted in an addition of nearly two hundred books collected and promised for the Carnegie Library as addition to the present supply. It also resulted in provision being

made for keeping the library open several hours at night for the benefit of those who work during the day.

*Fort Worth.* Texas Christian University Library, of which Nell Andrew is librarian, now contains about 14,000 volumes, 7000 being government publications. The library is crowded into four rooms, and a separate building is now under consideration. Besides the accessions secured from the regular book appropriations, within the past few months the student organizations, consisting of the 1916 seniors, laws, music, home economics, and art seniors, have contributed over \$300 worth of new and carefully selected books. Dr. F. D. Kershner, a former president of this institution, presented over 600 volumes of travel, foreign literature, history, etc. To the "L. C. Strange Memorial Library," \$67 worth of new Latin and Greek books were added, and a prohibition library, to commemorate the lifework of Braxton B. Wade, an alumnus of the university, has just been founded. Mr. Wade's family started the fund with \$100 and the gift of his personal library on prohibition, and a public presentation of this library was made at Thanksgiving time. The "Brite College of the Bible Library" has been established in the new Brite Building, which is one of five buildings on the T. C. U. campus. Two librarians are in charge, and more than 2000 volumes are ready for use.

*Galveston.* The children's department of the Rosenberg Public Library, and especially the story telling work, is made the subject of a full-page illustrated article in the *Galveston News* of Nov. 5.

#### COLORADO

*Boulder.* The University of Colorado Library has received from E. M. Pease, 1883, of New York City, the gift of his private classical library. Mr. Pease was professor of Latin many years in Leland Stanford Junior University. The three thousand titles in this donation include texts in language and literature, files of classical periodicals, dissertations and doctoral theses.

*Denver.* Closer relations with the schools are being established this year by the Public Library. The library has arranged to put in each room of six or seven grade schools which are distant from any of the branch buildings a class room library of fifty or sixty serious books, such as history, biography and travel. Another experiment this year will be that of loaning a librarian for a half day to the East Denver High School. The school authorities

have agreed to pay half her salary. A carefully arranged loan library will be conducted, special attention being paid to providing the reference books needed for classroom themes, debates and special studies. Pupils at the Opportunity School also will be given special opportunities for borrowing books from the library. Books suitable and interesting to the students, many of whom are adult foreigners, will be sent to the school weekly for distribution and several nights will be set aside on which the different classes will visit the library. On these nights, librarians who speak German, Russian and Yiddish will be in charge and will show the students how to use the library catalogs, how to take out cards and borrow books. In Globeville a branch library at Forty-sixth and Washington streets will be opened. Last year there was such a demand for books that in the hour and a half a librarian spent at the Globeville Day nursery each day more than 9000 books were distributed. The library, therefore, decided to establish a branch, which will be open on Mondays and Thursdays from 2 to 9 p. m. Books in Polish, German and other foreign languages, books on truck gardening, chicken raising and household arts will be a specialty. There will be story hours also for the children.

#### The Pacific Coast

##### WASHINGTON

*Langley.* A Public Library will be opened here soon. A small building adjoining the office of the *Langley Islander* has been secured and completely renovated and equipped for the library. The inauguration of a library here is due to the efforts of the Ladies' Civic Improvement Club.

*Seattle.* For the first time since the establishment of the Public Library the board in October invoked aid of the criminal law in the protection of its property, when a complaint was made charging Allen Pinckney Smith with keeping books overtime. A warrant was issued and Smith, if convicted, is subject to a fine of not less than \$1 or more than \$25 or imprisonment in the county jail not exceeding six months. The complaint alleges that Smith had in his possession on October 15 four volumes belonging to the public library, which were due to be returned in April, 1915. The library authorities assert that they have repeatedly written and sent messengers to Smith, receiving repeated promises, but no return of the volumes. The statute declares a patron guilty of a misdemeanor who shall keep books thirty days after notice in writing.

## OREGON

*Hood River.* At a meeting of the new library board in October the budget adopted for the ensuing year provides for items that will require \$4040 to meet. The board asks that the salary of Miss See, librarian, be raised from \$75 per month to \$85, and that the salary of the assistant librarian be raised from \$50 to \$55. Under the new joint contract between the city and county, each will be required to pay one-half of the amount asked for by the budget committee. It is expected that the raise in the librarian's salary will meet with opposition as the former split between the city and county over library matters hinged on the salary paid to the former librarian, which was \$90. The city council and county court have power to reduce any item in the budget.

*Portland.* The new Vernon branch library was formally opened Oct. 23.

## CALIFORNIA

*Exeter.* Exeter's new Carnegie Library was formally opened to the public by a house warming at the building Friday evening, Oct. 6. The library was finished and occupied about a month before. It is situated in the northwest corner of the public park, and is of white stucco and cement, with red brick roof and trimmings.

*Los Angeles P. L.* Everett R. Perry, lbn. (28th ann. rpt.—yr. ending June 30, 1916.) Accessions 36,405, withdrawals 6294; total 277,634. Circulation 2,027,673. New registration 42,113; total 110,388. Receipts \$197,680.69; expenditures \$191,358.08, including \$32,389.05 for books, \$4196.25 for periodicals, \$11,309.79 for binding, and \$99,073.81 for salaries. The Vernon branch moved into its new building in September, 1915, and Boyle Heights branch was completed and occupied before the end of the fiscal year. Plans were made for the erection of the North East branch and the Caluenga branch. The catalog department cataloged 36,358 books, recataloged 6196, filed 45,595 Library of Congress slips in the depository catalog, ordered cards for 3946 titles, and typed 109,472 cards. This department now exercises a general supervision over the taking of the inventory, and each department must make a "lost card" for each book missing at inventory. Books not found within three years are considered permanently lost and are so stamped on the official shelf list. The use of foreign literature from the circulation department declined, attributed to loans to branches and difficulty in replacing worn-out

stock, and the enlistment of some foreign-born readers. Armenian books were added to the foreign collection, but there were unsatisfied inquiries for Servian, Syrian, and Bohemian literature. Night schools created a demand for text books in French, German and Spanish. There was felt a need for an attendant in the circulation department with some knowledge of foreign languages to assist in book selection and to wait upon readers. The department had 8010 books in foreign languages having a circulation of 30,483. The juvenile circulation increased 19 per cent. over that for 1914-1915, and was 52 per cent. of the total increase. Thirty-three talks on "How to use the library" and "Books for pleasure" were given to children in the public schools, with 25 return visits to the nearest branch. Several indexes are being made in the library. To the index of Handbooks on Robert Browning, not yet completed, were added 11 new books; to the Poetry index, containing author and title entries of verse published in *Current Opinion*, six volumes were added. The annotated bibliography on California source material for the Spanish period proved helpful, and it was planned that a continuation of the bibliography, covering the Mexican period and the period of American invasion, would be completed during 1916-1917. A catalog of the Luther A. Ingersoll collection of California portraits and pictures of pioneer buildings and historic scenes was begun in December, and a card index to periodical articles relating to public affairs in Los Angeles, was started. In the art and music department, it was found by actual count in November that there were 9787 pictures; from December to June 30, 699 mounted pictures were added. The picture circulation for the year was 12,675, as compared with 6283 for 1914-1915. Composers living in the vicinity were asked to help build up a musical section devoted to California composers; it is proposed to have one copy of each composition bound for reference and another for circulation.

*Merced.* At a special meeting of the city trustees in October, a conference was held with representatives of the city library trustees and the county supervisors relative to the proposed change from a city to county library system. As a result of the conference the city trustees passed a motion asking the supervisors to reconsider their recent action in withdrawing their yearly contract patronage with the city, whereby county money has been appropriated for library service in the rural branches, and to continue as heretofore

for another year. This means that in case the supervisors do as requested the library will remain a city institution instead of becoming a county institution. The plan of changing the administration of the library from a board of library trustees to the supervisors was entered upon at the advice of the state librarian, having the approval of the library trustees and the supervisors. Later the city attorney opposed the move, arguing that it was unlawful and against the interests of the city. The city trustees' motion passed last night was in accordance with the city attorney's advice.

*Oakland.* By unanimous vote, the library trustees on Oct. 13 decided to close the Municipal Reference Library room on the first floor of the city hall. It will be removed to the Main Library building at Fourteenth and Grove streets.

*Riverside.* Under the title, "The civic work of a public library," Joseph F. Daniels describes in the November *American City* the various lines of work carried on by the Riverside Public Library.

*Sacramento.* All contracts for the construction of the new Public Library building at the southwest corner of Ninth and I streets have been awarded, and work has been commenced. It will be a three-story terra-cotta and reinforced concrete, fireproof structure, 150 feet long and 74 feet deep, facing I street, with a garden and terra-cotta balustrade in front. Loring P. Rixford, of San Francisco, is the architect. If the work goes forward as planned, the library will be able to move in about the first of next September.

*Stanford University.* Orders have been issued to the architects to prepare plans for the \$500,000 library building that will be erected by Leland Stanford Jr. University on the campus here. Bakewell & Brown, of San Francisco, will have the plans ready soon after the first of the year, but the bids on the structural steel will be called for earlier than that. The library will be of class A construction, three stories and basement. The exterior facing will be of cut stone.

## Canada

### ONTARIO

*Toronto.* The new High Park branch was opened Oct. 31.

*Toronto P. L.* George H. Locke, lbn. (32d ann. rpt.—yr. ending Dec. 31, 1915.) Acces-

sions, 31,615; withdrawals, 4911; total, 257,411. Circulation, 892,161. New registration, 12,801; total, 66,653. Receipts, \$185,713.42; expenditures, \$142,565.58; including \$27,021.65 for books, \$2699.59 for subscriptions to periodicals, \$514.71 for binding, \$67,608.62 for salaries. The war brought to the library new opportunities of service and the reference department was especially busy. Great interest was shown in the relief map of northern Europe where, on a scale of 18 feet to the inch horizontal and 5000 feet to the inch vertical, the east and west fronts of the struggle could be followed. To the soldiers in many of the camps cases of books were sent, and a branch library was established at the permanent training quarters in Toronto. A library of music containing 2000 titles was opened in the circulating room of the Reference Building. The accommodation at the College Street Circulating Library was doubled and as a result, the circulation for the year increased by 26,000 books. A department which has grown beyond its accommodation is the J. Ross Robertson collection of historical Canadian pictures. The collection contained 2873 pictures by the end of 1915 and had been visited by 12,392 people during the year. With the present gallery overcrowded and additional pictures in prospect, the librarian urges in his report that an extension be built to the present Reference Library in which suitable room could be given the collection. Three branch buildings were begun during 1915 and were to be paid for with a gift of \$50,000 from the Carnegie Corporation. In the new branches traditional library architecture was abandoned; the plans followed the Collegiate Grammar School type of the seventeenth century in England.

### QUEBEC

*Montreal. McGill Univ. L.* C. H. Gould, lbn. (Rpt.—yr. ending Aug. 31, 1915.) Accessions 5194, withdrawals 133; total 151,361. Circulation 16,144. Attendance 27,812. The Canadian Regional Bureau of the International Catalogue felt keenly the effect of the war by the loss of many experts, and, as a result, the output of cards in certain subjects was temporarily stopped. The financial stringency caused by the war induced the library to discontinue for 1915 its summer course in library training. Traveling libraries, whose circulation exceeded 12,000 volumes, to which 65 sets of stereoscopes, 126 lectures with lantern slides, and 13 wall pictures, should be added, were sent to 88 different places. During the year, 6106 volumes were cataloged and 1254 bound or repaired.

# LIBRARY WORK

Notes of developments in all branches of library activity, particularly as shown in current library literature

## ADMINISTRATION—BY COMMISSION

At this time, when the question of the commission form of government of cities is receiving much attention and is being tried out in a number of places, it may be interesting to librarians to know that a library was governed, and governed well, by a commission from May, 1914, to September, 1916.

When the librarian of the Ohio State University was granted leave of absence in the spring of 1914, she recommended to the president of the university that, instead of an acting librarian being appointed, there should be created a library commission composed of the heads of the departments of the library, *i. e.*, the two reference librarians, the accession librarian and the head cataloger. She recommended that this body of four elect a chairman from its own number, the chairman to represent the library in the Library Council (which, in the Ohio State University, is composed of the president, the deans and the librarian) and to act as the executive officer of the commission. The recommendation of the librarian was approved by the president, and on May 19, 1914, the commission was organized. It was composed of Maud D. Jeffrey, reference librarian; Gertrude K. Kellicot, accession librarian, and Bertha M. Schneider, head cataloger. Mr. Reeder was elected chairman. In this body was vested the administration of the library, subject to the regulations of the Library Council, and at its weekly meetings all matters of administrative detail were decided. This proved to be an admirable arrangement. The members of the commission brought to their work a knowledge of library and university conditions which only those could have who had been in the library, and they gave most loyal and efficient service.

Now that the librarian has returned to active duty, the commission, as such, goes out of existence, but she has asked the commission members to become her cabinet, meeting with her regularly once a week. The regular meetings of the whole staff will be held as usual once a month.

ADVERTISING, LIBRARY. See Publicity

## ANTS

The 1915-1916 report (p. 59) of the Grand Rapids Public Library describes the method

which the library used to rid its book cases of ants.

"Last August the library made an unusual discovery in the catalog room: namely, that some of the book cases were infested with white ants. It appears that they got into the room thru cracks in the concrete floor where wood had been laid for nailing down the cork matting. As a result of the campaign against them every piece of wood and furniture in the whole basement was moved and carefully examined, and wherever it was discovered that the ants had infested a piece it was burned. Several hundred dollars worth of oak book cases were destroyed in this way. Fortunately, very few books were damaged—only four. It appears that the ants attacked the wood where there was no paint or varnish, and that they worked almost entirely behind the varnish line. In other words, where the wood was painted or varnished it was seldom that they came or went thru. The cases that were put back were varnished and the bottoms covered with tar, for the purpose of catching any straggling ants. It is planned to move this furniture and examine it at regular intervals for several years so as to be sure that the ants have been wholly exterminated.

"It was found in dealing with them that when a piece of wood literally alive with them was moved, and they began to run in all directions, the best way to dispose of them was to sprinkle them with ammonia, which had the effect of curling them up and killing them instantly. Kerosene, gasoline, formaldehyde, and turpentine were also tried, but with little or no success. It also appeared that in no case did they attack a piece of furniture or shelving which was slightly raised from the floor so as to be accessible to light and air: in other words, the creatures worked only in the dark and more or less closed-in places. The new cases that have been put in these rooms have all been raised from the floor about an inch.

"Some of the oak cases infested by the ants were literally honey-combed. From the outside they looked as substantial as ever, but one could run a knife right thru an inch and a half piece of what was presumably solid white oak. Enough of the wood remained so as to keep the cases from collapsing from

the weight upon them, but some were in such a condition that they would soon have crumbled from the weight upon them had we not discovered the ants."

BIBLIOGRAPHY. See Medical bibliography

#### BOOK BUYING

In response to the query, "Do you advise purchasing the cheaper reprint editions of popular copyright fiction?" LeRoy Jeffers, of the order department of the New York Public Library, writes as follows in the October number of the *New Jersey Library Bulletin*:

"It seems probable that some libraries are unacquainted with the facts concerning the reprints of popular copyright fiction. In the case of lower priced editions bearing the imprint of the original publisher, they are of course printed from the same plates as the regular edition. This is likewise the case with a large number of titles bearing the imprint of publishers of reprint editions. The entire book is manufactured by the original publishers, being printed from the same plates, bound by machine in the same manner, and differs from the regular edition only in a somewhat less expensive paper and in a cheaper cloth for the cover which is not lettered in gold.

"A fair comparison of the regular with the reprint edition on each title will determine whether one is warranted in expending the difference in their cost for the purchase of the more expensive book. It should be noted whether the type shows thru the paper and whether sufficient ink is used for a clear impression. If the cover design of the cheaper book is offensive, the sheets may be rebound at once in buckram at less total cost than that of the regular edition in publisher's covers.

"In the actual number of circulations obtained from regular and reprint editions before they have to be rebound, we have found surprisingly little difference. After they are rebound in full buckram statistics show that the reprint continues to give good service. About three copies of a reprint may be purchased for the same total cost as one copy of the regular edition, and far more circulations may be obtained in this way. In the matter of cleanliness three copies of the same title in reprint form, purchased successively as the sheets become soiled and ready for discarding, will give better service than reliance on one copy in the original form which is retained for the same number of circulations.

"Classic fiction should rarely be bought in the form of reprints, and juvenile titles intended for reading room collections are often

best purchased in the original elaborately decorated covers, for their æsthetic value."

BOOK SELECTION. See also Children's reading—Selection of; Non-fiction—Stimulating interest in

#### CARD CATALOGS—INSTRUCTION IN USE OF

Cards like the following were devised by Charles R. Green, librarian of the Massachusetts Agricultural College, to facilitate the use of the public card catalog in his library, and the same idea has been adopted by the City Library of Springfield, Mass. The cards are about three-eighths of an inch higher than the regular catalog card, and are scattered thru the drawers, where their extra height makes them conspicuous.

##### How to Use This Catalog

Cards for authors, subjects and in many cases titles of books are filed here in one alphabet.

Look just as you would for a word in the dictionary—  
under Lloyd, John W. Productive vegetable growing.

or Productive vegetable growing by  
Lloyd, J. W.

or Vegetable gardening. Lloyd, J. W.  
Productive vegetable growing.

Copy from the card all of the call number in the upper left hand corner; including the volume, year or bulletin number if needed.

The words, *Botany department, Reference collection, Office, Zoology department,* and others which appear on some cards indicate that the books are in special collections.

Per as part of the call number refers to the collection of general periodicals.

The sign + after some call numbers, indicates a book too large for its regular place which may be found in a collection of quartos and folios near by.

If you cannot find what you want, do not hesitate to ask for assistance.

#### CHILDREN, WORK FOR. See also Reading circles

Jewish children in the public library; their love of reading and the books they read. Celia Silbert. (*Amer. Jewish Chronicle*, O. 13, 1916. vol. I, p. 701-702.)

A popular account of the work with Jewish children in the New York Public Library.

#### CHILDREN'S READING—SELECTION OF

Standards in children's literature. Effie L. Power. *New Jersey Lib. Bull.*, Ja., 1916. p. 10-15.

Never before has so much thought and effort been lavished on children's books, and the book problem to-day is one of selection. For convenience in discussing standards, Miss Power divides child life into three periods: the period of early childhood, or the first seven years; the later period of childhood, between eight and twelve; and the adolescent period, between twelve and sixteen. The literature of early childhood consists of nursery songs, rhymes, story poems and folk-tales

which appeal primarily to the ear. Next come the cumulative nonsense tales. Folk-tales, with their direct, impersonal style, are told chiefly to amuse, but they do also enrich and direct the imagination, train the attention, increase the child's use of words, and give inspiration to learning to read.

As soon as the imagination is sufficiently developed for the child to picture situations, the realistic story, descriptive poem and heroic folk-tale take their places among his books. Most modern nature books fail at this point, but Kipling's jungle books are splendid examples of an imaginative treatment of nature interests. Even young children like a scientific treatment when looking for facts. Their reference books should be concise, not too technical, well arranged well indexed, and pictorially illustrated. Most of the modern books available for use with little children are lacking in literary quality, but they may teach manners and customs and suggest ideas of conduct. The longer folk-tales bring out the cardinal virtues of childhood, and when properly selected establish moral sense and tend toward a constructive philosophy of life. They introduce a heroic ideal which is later developed in myth, saga, legend, and biography. As a boy grows older his life becomes active and objective, and he immediately imitates his heroes. If you can choose a boy's heroes at this age, you have given his life its trend, since his instinct toward hero worship is the strongest factor in his development. As he passes into the adolescent period the social feeling moves him. This is the age when the gang spirit develops, and along with an excess of animal spirits comes a rapid awakening of his spiritual nature. He is more than ever a hero worshipper, but he wants the facts of wide experience. Stories of adventure at sea, books of travel, historical adventures, biography and travel become popular.

The girl reads fairy tales far into the years of later childhood. She develops emotionally more rapidly than the boy and may be more easily led to poetry and the higher forms of great world literature. She is more personal in her attitude toward life in books and out of books, and needs a sympathetic leader. She is also much more limited in her range of interests than the boy. The best love stories for girls from twelve to sixteen are the stories of romantic adventure. Well-selected adult fiction may be given her, but beware of the modern girl's novel, in which a self-conscious girl heroine occupies the center of the stage. We need never be afraid of great works of fiction. They present life broadly, but in right perspective.

CLUBS. *See also* Reading circles

COMMISSION GOVERNMENT. *See* Administration  
—By commission

#### FIRE PROTECTION

Fire protection in libraries. Sidney J. Williams. *Wis. Lib. Bull.*, O., 1916. p. 344-346.

Mr. Williams is the state building inspector, and the suggestions he gives for fire protection are all for fire prevention. He warns against the accumulation of floor sweepings, oily rags, waste paper or other inflammable material; the storing of ashes in anything except metal, brick, or concrete receptacles; and against the careless handling of matches. All woodwork less than two feet from boiler or furnace, smoke pipe or hot-air pipe, should be protected with heavy asbestos paper covered with sheet metal. All wiring should be done by an experienced electrician. Fire extinguishers approved by the Underwriters' Laboratories should be provided and those in charge should have practice in using them.

In all but the smallest libraries at least two exits should be provided. A basement assembly room should have two separate exits to the outside. If a library is on the second floor, it is well to have two inside stairways at opposite ends of the building, the second stairway forming a safer emergency exit than an outside fire escape. The latter should be confined to old buildings where only one inside stairway has been provided, and should be of the stairway type, not ladders. They should be kept clear of snow and ice in winter and the exit to the fire escape should be a door wherever possible.

In the library a general fire drill is not practicable, since the occupants are continually changing, but the librarian should think out and practice all the different actions she would perform if fire were discovered. These would include (1) getting the occupants out of the building; (2) calling the fire department; and (3) putting out the fire herself with the extinguishers if possible.

#### GENEALOGICAL RECORDS

A special file has been developed at the library of the society, Sons of the Revolution, in Los Angeles, for the accommodation of the members and their friends, whereby those seeking information relative to early ancestors may register the names of those persons, or such other persons as they may desire. It is advised that all known emigrant ancestors, and others, be registered. Such registration brings together those who are

seeking facts along similar lines, and forms a basis for mutual exchange of information.

As far as possible the following facts are recorded about each person:

Name in full.

Location first known of—date.

How many generations worked out in this country.

How many generations worked out in Europe and where, if any.

What parts of the country the descendants have gone to, with dates.

Names and addresses of others also interested.

Published references, genealogies, etc., about the line.

Remarks.

Date, name of person making registration, address.

HIGH SCHOOL LIBRARIES. *See also* Instruction in use of libraries—In high schools

#### —STUDY HELPS

Opportunities for study in the high school library. Irene Warren. *Wilson Bull.*, O., 1916. p. 139-141.

To meet the generally accepted practice now in vogue with most educators, of supplementing each text-book used in high school subjects with outside reading, high school librarians and teachers have prepared lists of *required* readings further supplemented by lists of *advised* readings. The estimated number of titles needed for work of this sort in a high school library varies from three to eight thousand, exclusive of duplicates necessary. To this should be added magazines and newspapers, together with large quantities of "visualizing material"—pictures, maps, lantern slides, post cards and museum specimens.

Comparatively few schools have such libraries, and where they do exist the pupils often get only glimpses of the material. The libraries are often small and space for special exhibits is inadequate; the pupils must get written permission to go to the library, unless they are assigned there for one or two periods a week. If the required reading cannot be done in the brief, irregular times usually allowed, they are expected to go to the library after school and borrow the books for home use.

Meanwhile, the pupil is spending one or more study periods each day in classrooms or assembly halls, where he has only his text-book to study. If he is to be expected to supplement this with the material in the library, it seems obvious that the study and library rooms should be in closer relations. They might be in adjoining rooms, if

the library proper is too small for a study room, or trucks with the recommended books might be sent to the study room.

"It is, however, plainly to be seen that the best plan is to give the pupils every study hour in a room fitted up with the material carefully chosen for the purpose by the joint efforts of the special teachers and the librarian. This means a combination of the study-room and library in some such fashion as is now in operation at the University High School (University of Chicago).

"The librarian in charge of such a high school library should have her technical library work well in hand, be a special student of the study habits of high school pupils, know intimately the best literature for them in all lines and be thoroly familiar with the details of the course of study.

"If the teachers will then systematically cooperate with her, to lay out such material for each subject as pupils will need for a week or more, the supervised study hour in the library may become more vital at times to a pupil's progress than even a recitation period."

Good study habits mean good class-room work. The study room librarian can plan for a progression in the pupil's study habits, and check up the amount of reading or studying he does each day. She can also equalize the time spent in preparation of each lesson, by calling individual teachers' attention when necessary to the fact that they are taking more than their proportionate time. Study periods should be as carefully planned as recitation periods are, and some high schools have even given a mark for study habits as they do for various subjects.

A small slip on "How to study" was given to pupils in the University High School in Chicago, to be pasted into their note-books and text-books. Excellent practical results came from the use of this slip [printed in LIBRARY JOURNAL, vol. 40, p. 450], which Miss Warren has expanded into the following:

#### HOW TO STUDY

##### *Suggestions for High School Students*

*Lesson Assignments.* Be sure to record accurately the following items for each class:

- (a) The lesson assignment.
- (b) The teacher's suggestions for the preparation of the lesson.
- (c) The reading references, starring (\*) those of the greatest importance.

*When to Study.* Arrange for yourself a daily program. Assign a definite time of the day for the study of each subject, in the same manner in which the school assigns recitation periods.

*Making Ready for Study.* Don't fritter time while getting ready to study. Lay out pencils, paper, pens, ink, ruler and other materials needed for the lesson in hand. Sit down and begin at once. Each day aim to get your lessons not only better, but in less time. Slowness is usually a habit.

*How to Study.* Keep yourself fit for study by leading a wholesome life. Attack your work with

cheerfulness and determination. Concentrate on it. Read directly thru the lesson assignment once. Learn to sweep thru a paragraph for the important points in it. Re-read to master the details. If it is a foreign language to be translated, read thru the assignment to see how much you can understand before translating in detail with the help of a vocabulary. If it is a problem, make certain the question to be solved is understood, before attempting to solve it. Every day prepare each lesson assignment. Once a week review your lesson. Once a month review the accumulated lesson. This will clear up points not plain at first and give you a broader grasp of a subject than when it is studied in small portions only. Form the habit of looking up words, phrases, places, and people unfamiliar to you. Study alone. It strengthens your ability concentrate and to form independent judgments.

*External Aids to Study.* Examine each new textbook and learn the use of the devices placed in it for your assistance—table of contents, index, appendix, vocabulary, maps, illustrations, footnotes, marginal notes. Form the habit of using these. Other books have these same devices. Use them. Save time by studying where you may easily consult the best dictionaries, encyclopedias, atlases, and other special reference books, and where you may also consult the library catalog for other good books on a given subject.

*Practical Application.* Apply the facts you learn in school to your daily life where possible. Discuss them with your family and friends. Keep track of what the newspapers and magazines say about the subjects you are studying in school. It is now of greater importance that you learn how to study, where to get information that you want, and how to organize data, than that you should master many subjects.

#### INDEXES—TO SONGS

An index to the songs included in the 300 odd volumes of collected songs, in the Grace Rumrill department of music in the City Library of Springfield, Mass., has proved itself one of the most useful of the indexes in the institution. Kindergarten song books are not indexed as Miss Quigley's printed index covers that field. Neither are hymnals indexed, nor volumes containing songs all by one composer; but for each song title appearing in all other collections a card is filed bearing title of song, names of composer and author of words, and number and name of each volume containing that song. The City Library will gladly answer inquiries sent on return post cards.

#### INSTRUCTION IN USE OF LIBRARIES

A printed circular on "The use of the Public Library," based on the Central Library building and its resources, is being distributed by the English teachers of the high schools in Birmingham, Ala., to the members of the third and fourth year classes. It is to be filed by them in their note books for future reference. At the time the circular is distributed, the teacher makes the necessary explanations and assigns to each pupil certain problems that can be answered only by intelligent use of the catalog, the indexes to periodicals, and the encyclopedias. The pupils do not go by classes to the library, but go individually to work out their own problems.

LIBRARIANS AND ASSISTANTS. *See also Vacations.*

#### —QUALIFICATIONS OF

"During the year a general scheme of service analysis for employes of the library was worked out, and adopted by the board," says the librarian in the 1915-1916 report of the Grand Rapids Public Library. "The blanks used in this analysis, after being graded, serve also as a record of efficiency. The following are the main headings: Health, Personal qualifications for work, Relations with public and with fellow workers, Attitude toward the library and its work, Ability in the use of books and knowledge, Skill in professional work, Improvement during period of this record, Specially good points, Specially weak points, Remarks. Under the first six headings there are a number of subdivisions indicating the most desirable things for our work.

"The general plan of the analysis is to secure the co-operation of the employes for their own advancement by indicating the elements that enter into good service, and thus arrive at a basis for a greater degree of perfection. With this end in view each employe analyzes his or her service, as do also the department heads for each person working in the department, and the whole is checked up and adjusted by the librarian in conference with the heads of the departments and with the persons directly concerned. In short, the whole plan is designed to bring out the best in each person by getting his active co-operation thru a better understanding of the elements of good service, rather than by superimposing a mere paper system of efficiency records. It is believed that such a service analysis may be made an important factor in the administration of the library."

#### —TRAINING OF

In the report of the Cleveland Public Library for 1915, the value of the Training Class for Library Work with Children is discussed at some length. "With graduates of three consecutive classes at work," says the report, "it is now possible to arrive at some definite conclusions as to the value of the training class to the library from the angles of the service the students render while in training, the types of positions they fill acceptably and the cost to the library of maintaining the class, in relation to what the library is getting out of it.

"Nineteen out of thirty-three graduates are on the library staff. They are filling positions of branch librarian, children's librarian, school librarian, first assistant and children's librarian. Other libraries of high standing have

tions, as head of children's department, branch librarian, school librarian, children's librarian.

"The value of the student body is evidenced by the fact that as individuals they have been able to meet the demands of assignments which carry with them considerable responsibility. If less capable people were assigned to these positions, the number of such people would have to be considerably increased over and above the number of students we now have, and even then the results would be less satisfactory.

"One other general result of having a student body available is that it has practically eliminated the necessity of trying out numbers of young women who are immature, without general library experience or background for work with children; the last resort as other sources of supply fail. Such service is the most expensive of any in relation to what is accomplished, and to have reached a definite solution of the problem of filling the minor vacancies is a marked advantage to the entire branch system.

"The factors that enter into any consideration of the true cost of the class are as follows: The cost of giving instruction; the amount paid in salaries to the students for their actual services rendered; the probable cost of filling positions now occupied by the students by outsiders who could do the work as acceptably. While this last factor must be largely suppositional, the expense of conducting the department in the past without a training class gives some definite conclusions on which to base the estimate. A carefully figured estimate indicates that economy is effected by the department by maintaining the training class. The amount of economy, however, depends upon the standard of admission; in other words, the higher the qualifications of the students, the larger the number of students which can be used with advantage to the library and with economy as well. It is noteworthy that the qualifications of the applicants accepted for the first three classes, worked out on an average per class, is as follows: Of every 11 students (average per class) five had had full or partial college training; the 11 students had had experience in library work in seven different libraries, averaging per student, two and one-third years of library experience; in addition to this, eight of the 11 had received professional training in one of five different library schools. Without doubt, the employment of a student body with such qualifications makes for a considerable economy.

"The number of class periods for the year

placed our graduates in equally important positions 1914-15 was 148. Lectures and courses were given by 32 librarians, social workers and teachers; 24 of these were members of the library staff. The class of 1914-15 finished the year with 12 members, nine of whom were appointed to the staff of the library."

—DEVELOPING AND MAINTAINING INTEREST IN. See Publicity

#### LIBRARY SCHOOLS

More and more states are planning summer library schools for those librarians who are unable to attend accredited library schools. It is reported that Ohio State University will start a summer school next year. Texas University will establish a library course if it can be assured of proper support, and the need of a more or less peripatetic summer school, to be held in different parts of Colorado in different years, was discussed at the annual meeting of that state association.

LOAN DEPARTMENT. See also Readers, Rules for—Number of books; Reserved books

#### —SERVICE TO READERS

Because of the confusion resulting from diversity of classification systems and catalogs, lack of adequate shelving, and the necessity of depending to a large extent on catalogs and classifications made by untrained students working without supervision, the service of books to readers has left much to be desired in the University of Chicago Library. A three-weeks' test in the fall of 1914 showed that only 95 per cent. of the books called for were delivered inside of ten minutes, the remaining 5 per cent. representing books, the majority of which were supplied in from ten to twenty minutes. The installation of new book stacks in the basement of Harper Library, permitting proper shelving, and the completion of the recataloging and reclassification of some of the most important collections, *e. g.*, English literature and philology, has, according to a recent test, reduced the percentage of books not produced inside of ten minutes to less than 1 in 100, the average time for each being less than five minutes.

#### MEDICAL BIBLIOGRAPHY

Medical literature as a specialty. F. Robbins. Repr. from *Med. Record*, My. 27, 1916. 8 p.

Since 1904, Dr. Robbins has made a specialty of the literary side of medicine, or, in other words, the profession of medical bibliographer, following it exclusively and uninter-

ruptedly, and he here offers some practical suggestions to future workers in the field.

"Those who contemplate the adoption of this specialty, men or women, should take careful stock of their assets, meaning their general fitness and special qualifications for this work. . . . Medical literature is exacting in its demands, and requests the unflinching devotion of its followers. . . . The devotee must be willing to pursue untiringly the host of incomplete or erroneous references which many a careless writer in the more or less remote past has planted in his path. . . .

"A thoro knowledge, not a mere smattering, of at least two modern languages, besides English, is imperative for even a modicum of success in medical literature. French and German are barely sufficient, and a reading knowledge of Italian and Spanish, as well as of the Scandinavian languages, is extremely desirable. The acquisition of Russian or Japanese will place a literary specialist of the future in an enviable position by himself. To have recourse to the brief and often belated abstracts provided by American periodicals, instead of tapping the spring itself, is to cripple the work from the start. Deficient linguistic equipment of physicians has already led to the invasion of this field by what for want of a better term may be called the quack in medical literature. Our libraries are invaded by a host of understudies, recruited from the ranks of nurses, clerks, stenographers, secretaries, governesses, and what not, who in the long run are bound to discredit this side of the profession. Medical literature, like other specialties, belongs by rights to those alone who have devoted years of their youth not only to the winning of the medical degree, but to the cultivation of that fine sense of personal responsibility, and the *esprit de corps*, which is perhaps nowhere so well developed as among the disciples of Hippocrates. Only a brother practitioner will serve the patron's interests in the most efficient way, and with absolute self-effacement."

The bibliographer of the future must aim at such high standing in his specialty that the fact of his being responsible for a compilation of cases of a given disease will serve as a sufficient refutation against the statements of a non-specialist, no matter how high his rank as a surgeon or clinician, who claims in a discussion the existence of a series of cases not included in the list.

Next to his linguistic accomplishments, a medical bibliographer needs perseverance. "Make it a rule to be found day after day at a given hour (and for many hours to come) in the same place, so that your personality

becomes identified with your chosen occupation." Good health is an important asset in this work, and residence in one of the few cities having large medical libraries, is imperative. If possible, the bibliographer should live within a stone's throw of library and post office, for time is often at a premium. Punctuality in form of immediate replies to correspondents and unflinching deliveries of material on the promised date is extremely important in this specialty.

"Ambition as to personal fame, *except as a bibliographer*, must be curbed in the interest of this retiring specialty. Not only must the abstract-maker and compiler of medical literature apparently have no view of his own, or, at any rate, reveal no bias, but he may be asked to merge his own personality altogether in a paper that he has prepared for publication under another name."

#### NON-FICTION—STIMULATING INTEREST IN

The reading of non-fiction—how to increase it. Mabel Kingsley Richardson. Proceedings of the South Dakota Educ. Assn., 1915. p. 308-315.

Readers to-day may be divided into two classes—readers for pleasure and readers for profit, with all the intervening exceptions. One engaged in pressing mental work may find relaxation in almost any light reading, nor is this harmful in itself. The danger lies in the growing tendency to read the new and the trivial to the exclusion of the good and old, and the abnormal circulation of fiction in many public libraries demands far more serious consideration than it is receiving. It is the world-old hunger for a story, but we must insist that this story shall be sane and healthy.

In order that non-fiction shall have its fair chance in its appeal to the reading public, we must begin with the publisher. Too often the reasonably priced editions of the classics and works of non-fiction are presented in bindings that repel rather than attract. If the "English men of letters" series were presented as attractively as "Get-Rich-Quick Wallingford," they would have a fair start at least. In advertising, likewise, all the color plates and full-page ads are for "Pollyanna" and "The honey bee."

"Why may we not have gay posters of Homer in his bathing suit, Chaucer riding to the hounds, Jane Austen and her favorite make of toilet preparations? Less than a year ago every girl had to have a 'Mary Pickford' auto bonnet and a 'Castle' haircut. Why not a 'Lucy Larcom Locket,' 'Kipling's Krisp Breakfast Flakes,' and 'Jane Addams Safe, Sane and Sanitary Soaps and Scrubbing Pow-

ders'? 'Alice' blue and 'Helen' pink have had their day. Why not a 'Riley' red? Where is the 'Merry Widow' sailor of yesteryear? A 'Tagore' turban should prove a more conservative and enduring fashion.

"It is not true that the great books of the world have not been appreciated by the multitude. If they are neglected it is because they are not properly brought to the public attention. In any fair system of competition, the great authors will be the most popular authors. The fact that they are still read so widely, despite all the influence to the contrary, is sufficient proof of the truth. We frequently hear the criticism that the only copies of the good old classics to be had at the public libraries are soiled, dog-eared, broken-backed and generally disgraceful in appearance. It seems extravagance to the librarian nearing bankruptcy to rebind books so little called for, and the result is that they are not called for at all. Every classic in the library should be in presentable condition. New copies are often almost as economical as rebinding, and they have the added charm of immaculate freshness. We should be willing to stake our chances on the ability of the old masters to hold a place in the hearts of the people. Neither is it necessary to assume that the only good authors are dead authors. There are modern writers of merit, whose works are all but unknown to the majority of readers."

With the desirable books as attractively published and as effectively advertised as the gay "best seller," the librarian's problem is to know what to buy. Clean, wholesome books that amuse should be purchased, but not at the expense of those that instruct and uplift. In place of fiction, buy books that are of immediate interest to the community. Begin at home and work outward to foreign countries. Begin with topics of timely interest, and work backward in history, science, art and all the fields of knowledge. Keep up the files of the best periodicals.

To help the public select its books from the library shelves, many librarians paste in their volumes short notes of evaluation, typed or clipped from good reviews. "If nine-tenths of the current fiction found in the average public library were plainly labeled, and honestly, as 'Fair,' 'Mere trash,' 'Not worth while,' 'Mush,' and so on, and the desirable books were as distinctly and as truthfully labeled, 'Good,' 'Worth while,' 'Unusually interesting,' as the case might be, few readers would carry away the book with the adverse criticism."

Timely notes in the newspapers, and work with clubs and literary societies, will also help the average reader to choose wisely from the wealth and diversity of books.

"There are a large number of people who are willing and anxious to read seriously if they can only be advised to read intelligently. The efficient library in care of the efficient librarian not only supplies books to its readers, but offers guidance in the choice of books. The public will welcome such guidance if it is courteously given and is of merit. The librarian deserving his title should be a professor of books, and his patrons should recognize his leadership in his calling as unquestioningly as underclassmen learn from their college faculty."

ORDER DEPARTMENT. See Book buying

#### PRISON LIBRARIES

In the October *Occasional Leaflet*, published quarterly by the Colorado Library Association, F. E. Cain, chaplain of the State Penitentiary in Canon City, writes of the library in that institution: "We are adding to our library from time to time from the 'library fund' which is sustained from the gate receipts of those visiting the institution. During the last three months we have purchased about \$300 worth of books covering a wide range of subjects such as fiction, travel, biography, sociology, economics, education and technical books. Among the travel, we bought the Stoddard Lectures.

"We now have in round numbers 6000 volumes. All prisoners who are not on lost privileges (and there are not many at the same time) are entitled to draw three books each week, and if they are doing special reading they are given the right to take as many as they want. They make their selections from catalogs that are placed in all the buildings, entering their choice on slips. These are sent in to the librarian who sees that the books are delivered. We are also continually receiving magazines and periodicals that are passed on from one to the other. In this way our readers get a large amount of material. Practically everyone who can read uses the library. Our circulation for the month of September just passed was 2500 volumes aside from the magazines."

#### PUBLICITY

Five thousand copies of the card printed below were sent to residents of St. Louis by courtesy of the City Club, the Civic League and the Business Men's League with their regular communications to their members:

**You are Paying for the Services of your Public Library thru Taxation**

*In Return It Offers You, as a Business Man:*

THE LATEST BOOKS on Commerce, Transportation, Salesmanship, Advertising and Accounting.

THE OPPORTUNITY to consult these at the library, to take most of them home or to order then sent to you by messenger or post.

TELEPHONE SERVICE for answering all kinds of tough questions, or for ordering or renewing books.

A SPECIAL ROOM for business men and those interested in the industries—engineers, inventors, builders, etc. (northwest corner downstairs).

COMMERCIAL ART collection with hints and personal aid for advertisers, catalog-makers, designers and architects.

DIRECTORIES of other cities; maps in a special room; information regarding addresses, locations and the local peculiarities of other cities.

CITY HALL bureau Room 206 for gathering and disseminating all sorts of information about city legislation and administration, here and elsewhere.

**READERS, RULES FOR—NUMBER OF BOOKS**

The extension of privileges to borrowers in public libraries is growing in favor. One large library after another is finding that no injustice is done to anyone by increasing the number of books a borrower may take at one time, while it often proves a great convenience to patrons. Beginning Oct. 16 the Chicago Public Library now allows five books (fiction or non-fiction) to be drawn on a reader's card issued to any adult user and two books on a juvenile card. The issuance of non-fiction cards is discontinued.

As heretofore, books, except those labeled "seven-day," may be retained two weeks, and renewed for two weeks longer. In justice to all concerned, no second renewal, and no transfer to another card will be allowed. Seven-day books are not renewable. Telephone renewals will not be taken. Books must be presented with the card to secure renewal.

A fine of three cents a day, plus postage expended in notices, is charged for overdue books on regular cards. For books on juvenile and vacation cards, one cent a day, plus postage, is charged for overdue books, and in all cases where it is necessary to send a messenger to secure the return of the book an additional charge of 25 cents is made.

In Providence, R. I., the "vacation plan" in vogue the past three years, of lending any reasonable number of books desired, is to be continued the whole year round. Exceptions are the newest books (fiction or non-fiction), periodicals, and books in special demand or a group of books on special subjects. With these exceptions, the books may be kept four weeks, and renewed for two weeks more if no reserves are held on them. Beginning with Sept. 18, 1916, the "teacher's class card," heretofore used by all teachers, will be used only by the teachers in the grades below the high schools. All other teachers will use the or-

inary borrower's card, on which they (in common with all other readers), will be able to take as many books as they desire (with the exceptions named above). The system of deposits of books at the school buildings will be continued.

READING. See Children's reading—Selection of; Non-fiction—Stimulating interest in

**READING CIRCLE**

The 1915 report of the Cleveland Public Library describes a reading circle for boys started in one of the branches: "In all 16 readings were given with a total attendance of 224. These meetings were much enjoyed by the boys and looked forward to from week to week. The selections read were taken from the boys' intermediate collection, in order to stimulate their interest in these books. The boys who attended the readings were not primarily readers, being ardent devotees of the cheap moving picture theaters, of which there are several in the district. One boy, when invited to come to the meeting, said that if the stories read were as good as the moving picture plays he had seen, mentioning two or three lurid Western dramas, he would come every time and save his money. Taking into account the boys' interests as well as their mental capacity, the first reading selected was from Johnston's 'Famous Scouts,' called 'Wild Bill Hickok: fearless gun fighter.' After the reading it was suggested that a scenario be made. A spirited discussion followed concerning the various scenes which should be included, the boys almost coming to blows as to whether or not the inscription on the stone which marked Wild Bill's grave should be allowed to stand. It is a long step from this 'movie' thriller to Seawell's 'Little Jarvis,' there being as much difference in the way the story is told, as in the quality of courage displayed, but the latter was enjoyed fully as much as the former. This small beginning has proved how important and necessary it is to 'open the book' to these young people."

REPRINT EDITIONS. See Book buying

**RESERVED BOOKS**

In connection with the reserved book system in the University of Chicago Library, it was customary to display a large number of books (nearly 8000 volumes in certain quarters) on open shelves. The losses during 1914-15, however, were so extensive that it was found necessary to withdraw the open access privilege for the great bulk of these books. In order to reduce somewhat the use

of the reserved books, the experiment has been tried of purchasing sets of books representing all the required reading in certain courses, particularly in English literature, and renting these sets for a fee of \$3.00 a quarter. This experiment has proved very successful and is being extended as rapidly as funds will permit to other subjects and other courses.

#### SAFETY AND SANITATION LIBRARY

The library organized by the committee on safety and sanitation of the Milwaukee Merchants and Manufacturers' Associations, mentioned in the October issue of the *LIBRARY JOURNAL*, is now well along towards completion. Under the caption "A library for the manufacturer," the library is briefly described in the October *Civics and Commerce*, published monthly by the association. The article says: "Hundreds of books, pamphlets, photographs and drawings have been gathered from the manufacturers who have made their plants safe and healthy. State and Federal reports have also been secured. This mass of information has been carefully classified and indexed and is now available.

"If the superintendent of some Milwaukee factory desires to publish a little monthly magazine for his workmen, he can find in the Safety and Sanitation Library material on all phases of the subject of safety and sanitation. From them may be secured suggestions regarding features which have proven most successful in such publications. If he desires to organize an efficient first aid department, or to know the experience of other companies regarding physical examination of employes, or if he is interested in employes' sick benefit associations, or any one of a hundred other subjects pertaining to safety, health and efficiency in shops, he can secure from the library the latest and best experience. In brief, this is a library of experience. Every member of the association with his superintendents and foremen is urged to make use of this valuable collection of information. Reference to it will save the cost of experimenting and supply the latest and most approved methods in connection with safety work.

"Among the activities of the committee is the conducting of the safety round table during the coming winter. The library will prove a most valuable adjunct to this phase of the committee's work. From the file's exhibits of guards, posters for bulletin boards, safety rule books, etc., may be secured the material to assist in the round table discussions. The committee on safety and sanitation has the honor of organizing the first safety round

table in the United States, and now it claims an added distinction thru its establishment of its safety and sanitation library, the first of its kind to be organized under the auspices of a commercial organization."

SCHOOL LIBRARIES. See also Children's reading  
—Selection of; High school libraries

#### —ARGUMENTS FOR

A plea for the library in public schools, Florence M. Hopkins. *Education*, S., 1916. p. 35-41.

A survey of commercial exhibits shown at any educational convention could scarcely fail to impress one with the fact that America is making a great effort to have her schools excel in equipment as well as in scholarship. Such an exhibit visualizes recent progress in an impressive and interesting way, and is apt to leave one wondering if there is anything left to be developed in the field of education. Yet no one is completely satisfied.

"Is there any one medium of education, except the library, which touches all possible interests? Books are needed at every step of life, from the earliest days of picture books to the declining days of philosophy and reflection. . . . Tho the primary work of the public library is to serve the public, it has shared its resources most generously with the school. Few normal schools have given to teachers the systematic training in children's literature that is given to children's librarians. The work of the story hour is a veritable movement for the development of a taste for the best literature and therefore for American national life. . . . The school should do its share in this development.

"The public libraries have been pioneers and missionaries for the schools. They have done great work in encouraging and in supplying supplementary reading; they are doing a great work in connection with all of the schools all of the time, but the field has grown and is one which is growing, probably more rapidly than any other one field in school life, and, like all other large modern activities, should be divided. The modern library is a laboratory, and like other laboratories should have its material at hand in the school building and under the immediate direction of one trained to handle it. If the school librarian is in every sense a faculty member, one in position, authority, opportunity, compensation, with other teachers of the local system, she has a hold upon the situation which could never be gained by one not so connected."

"'Go to the library and look it up' is an easy direction for a teacher to give a class,

but a very difficult one for individual members of a class to follow and for the librarian to fulfil. . . . Not infrequently a class of 30 or more will be sent to a library which contains only one book for a required lesson on the reference desired; many times the teacher herself has drawn that book out. Such conditions as these are discouraging to the pupil, detrimental to the class work, and unjust to the librarian. . . .

"The place of the library in the work of all departments is one of increasing importance. . . . Every new student should be required to take some course in which is given definite practical instruction in the handling of library tools. Such a course should not only be required, but it should constitute a definite part of the work required for a degree. . . .

"A school library would occupy much less space in a school building than is now generally given to a gymnasium and a swimming pool. It would cost less for equipment than do the engines and tools and benches and sewing machines and laundry tubs and food supplies of the manual training and domestic science departments; it would require much less expenditure to maintain the teaching and reference work in connection with it than is now allowed for athletics and gymnastics; and yet in face of all other recent developments the school library is given very little consideration of a really constructive order, by school men. It usually is either very weak or supported in part or whole by the public library, or dependent upon teacher and student helpers instead of being under the direction of trained workers in its own field. It is seriously hampered by a lack of an understanding of the kind of work it could and should do for the school.

"Many of the high schools of the country now have independent school libraries with a librarian, and often assistants also, giving uninterrupted time to the work. Many of these libraries are giving systematic instruction in the use of books, in regular classes. A school librarian in connection with the grammar grades is still quite unusual, tho the field is as rich here as in high and normal schools. Instruction in the use of dictionaries, indexes to general reference guides, as well as the development of the cultural side of general reading thru the story hour and reading circles should be begun in the grades and carried thru the high schools under a continuous developing program, cordially supported by trained workers, adequate assistants and sufficient equipment."

SONG INDEX. *See* Indexes—To songs

SPECIAL COLLECTIONS. *See* Genealogical records

STATISTICAL LIBRARIES—UNITED STATES DEPARTMENT OF COMMERCE

The *Washington Star* of Sept. 17, 1916, contained an extended write-up of the statistical library maintained by the Department of Commerce. The library has been in the charge of Anne Gunnell Cross since it was organized in 1914, when the libraries belonging to the various bureaus of this department, with three exceptions, were incorporated as one library for the greater benefit of the whole.

The libraries thus combined were those of the bureaus of the census, foreign and domestic commerce, navigation, lighthouses and steamboat inspection service. Those not included were the libraries of the bureaus of fisheries, standards, and the coast and geodetic survey, which are situated at some distance from the Department of Commerce, to which they belong. Comprising some 90,000 volumes, the libraries incorporated were brought together in a room on the tenth floor of the Department of Commerce building, and they form to-day one useful, well arranged, combined library of statistics. It now has about 103,000 volumes and over 1000 periodicals. The library is intended primarily for the use of the department, but many special students use it, and business men come to it for helpful trade statistics. To further its usefulness the catalog has entries not only for book titles, but for special articles and chapters in books which it is believed will be of service to the statistician and the student pursuing special investigation.

#### VACATIONS

"The experiment of closing the cataloging department of the Cleveland Public Library (in conjunction with the order department) for the vacation period of four weeks in July and August proved a decided improvement on the old method of distributing the staff vacations from May to October," says the 1915 report of the library. "The work of the department was benefited thereby and no serious inconvenience was felt by the rest of the system. The first assistant remained on duty to take care of emergencies. Members of the staff not entitled to a full month's vacation either requested the extra leave of absence necessary to make up the month, or profited by a brief experience in some other department of the library or in some outside library work."

---

### Bibliographical Notes

---

A second edition of F. F. Hopper's pamphlet on the "Order and accession department," revised in August, 1916, has been published by the A. L. A. Publishing Board. This is a pre-print of chapter XVII of the "Manual of library economy."

"The library situation in Mississippi," by Whitman Davis, is the title of the July *Bulletin* of the Mississippi Agricultural and Mechanical College, and is the result of a survey begun by Mr. Davis in October, 1915, as the first step in an effort to improve library conditions in the state.

In a recent number of the Toronto Public Library *Book Bulletin*, the subject of suitable books for Canadian boys is discussed, and the discussion, together with the list of titles finally chosen, is reprinted in the Canadian *Bookseller and Stationer* for October.

The Wilmington (Del.) Institute Free Library has a copy of Amos and Elizabeth S. Satterthwaite's "Genealogy of the Satterthwaite family descended from William Satterthwaite," which it will give to the first library applying for it.

The Chicago Public Library is soon to issue a new edition of its handbook, long out of print. The descriptive material in the earlier edition will be enlarged with fuller information about the details in some parts of the building.

The Library of Congress is revising its mailing list of libraries receiving the annual report of the librarian. Any library or institution not at present on the mailing list, and having a definite need for or interest in the report, should communicate at once with the librarian.

The librarian of the Essex Institute, Salem, Mass., writes that the institute has duplicates of college catalogs and educational periodicals, hymn books and missionary magazines and reports of charitable societies, which it will be glad to give to any library whose files are incomplete.

The "Plan of organization for small libraries," prepared by Mrs. Minnie C. Budlong for the North Dakota Public Library Commission, is being reprinted in the quarterly *Bulletin of the New Hampshire Public Libraries*, beginning with the September number.

The John Crerar Library in Chicago has just published in a 7-page pamphlet some "Cataloguing rules," supplementary to those compiled and published in 1908 by committees of the A. L. A. and the British L. A., and to the supplementary rules issued on cards by the Library of Congress.

The Carnegie Library of Pittsburgh has compiled from books and newspapers of the period, located in the library, various notes and sketches which together form the subject-matter of the 75-page pamphlet, "Pittsburgh in 1816," compiled as the library's contribution to the celebration of the one hundredth anniversary of the granting of the city charter.

Following in the footsteps of the Municipal Reference branch of the New York Public Library, with its weekly *Municipal Reference Library Notes*, the Municipal Reference Library of St. Louis in October started a semi-monthly *Bulletin* in mimeographed form. If the *Bulletin* succeeds in its purpose of arousing greater interest in the library among city employes, it will be printed.

The *Iowa Library Quarterly* for July-September reprints from "Iowa Day," 1916 (issued by the Department of Public Instruction) an article on "Literary Iowa," by Johnson Brigham, state librarian. In it Mr. Brigham has gathered together notes on the present-day writers of the state, grouping together those who are best known for their poetry, those whose work is chiefly fiction, and those who write on scientific, historical, or economic themes.

A reading course on foreign trade has been prepared by the Business Training Corporation of New York. The course is under the direction of Dr. Edward E. Pratt, chief of the Bureau of Foreign and Domestic Commerce, who has designed it to meet the need for systematic means of training men to handle export work. In preparing the course, Dr. Pratt has had the co-operation of men prominent in the various phases of export activity.

In preparation for the celebration in Illinois of one hundred years of statehood, the Chicago Public Library has begun the compilation of a serviceable bibliography of materials in print, both books and pamphlets being represented. Anticipating the demand from students of Illinois history, schools, and citizens interested in a general way, duplicates of the material possessed by the library are also being acquired.

The old monthly *Bulletin* of the Pasadena Public Library has been expanded into the *Pasadena Library and Civic Magazine*, with notes on books old and new, as well as articles signed and unsigned on civic enterprises of general interest. In size, shape, typography and illustration the new magazine is a great improvement over its predecessor, and well worth its subscription price of fifty cents a year.

"Aids in high school teaching; pictures and objects," by J. C. Dana and Blanche Gardner, is one of the latest numbers in the series on "Modern American library economy" as illustrated by the Newark, N. J., Free Public Library. This pamphlet is devoted particularly to the material which may be borrowed from libraries and museums and used in teaching English literature, Greek, Roman and English history, and Latin. A contemplated revision will include many other subjects.

Our attention has been called to a misprint in the "Library list for the United States" in the 1915-16 edition of the American Library Annual. A transposition of lines in the "Name" column has resulted in an unfortunate mix-up of libraries and librarians in Tyler and Waco, Texas. The entries should read: Tyler—Carnegie Public Library—Doris M. Hanson; Waco—Baylor University Library—Willard P. Lewis. The entry for the Waco Public Library is correct as printed, as are also all figures in their respective columns.

The New York State Library has published, as History Bulletin 9, volume 2 of the "Early records of the city and county of Albany and colony of Rensselaerwyck." The records were translated from the original Dutch by Jonathan Pearson, late professor of natural philosophy in Union College, and have been revised and edited by A. J. F. Van Laer, state archivist. The material included in the present volume is rich in source material for the social, personal and political history of colonial New York.

The first bound volume of the *Athenaeum's* "Subject index to periodicals" for the year 1915, has just reached this office. This index, which is issued at the request of the Council of the British Library Association, contains entries for 13,374 articles in 420 English, American, and continental publications. The edition is small, and few copies will remain on sale after publication. It is intended to cumulate the 1915 index into that for 1916, and 1916 subscribers will receive the

consolidated volume, together with an interim number which it is hoped will be issued before the year is out.

The Annals of the American Academy of Political and Social Science, of September, 1916, is devoted entirely to a series of discussions under the general subject "New possibilities in education." Several of the articles deal directly with the public library, and several more indirectly. Of those dealing directly are the following: "Children, libraries, and the love of reading," by Annie Carroll Moore; "The library extension movement in American cities," by Dr. Arthur E. Bostwick; and "Library work in the open country," by Sarah Askew. Librarians will find this whole number worth while.

In "The booklover and his books," which the Boston Book Company promises for delivery early in December, Harry Lyman Koopman has gathered together twenty-four of his essays. These essays have been printed independently in various magazines, mostly those of the printing world, but they are all related in thought and are interested and intimate talks by one who loves good books and who can convey to his readers much of his own pleasure in their beauty. The book will be in itself an example of the ideal of which Mr. Koopman writes, and for its form as well as content will be worthy of a place of honor in every booklover's library.

In anticipation of the meeting of the Michigan Teachers' Association in Grand Rapids during the week of Oct. 29, the Grand Rapids Public Library published in its October *Bulletin* a list of books called "Home reading for high school pupils." It also published a second edition of the little pamphlet "The library and the schools in Grand Rapids," describing the work of the library with and for both children and teachers in public, parochial and private schools in the city. The pamphlet, which is attractively printed, is the work of the boys in the printing department of the Junior High School.

In view of the sixtieth anniversary of the opening of the Norwich (England) Public Library, which will take place in March, 1917, Geo. A. Stephen, the city librarian of Norwich, is preparing for publication by the Public Library Committee a historical and descriptive account of the old City Library and the present Public Library which was opened in 1857. Norwich occupies a unique place in the history of British libraries. It has the distinction of having established in 1608 one

of the earliest public libraries in England, and it was the first municipality to adopt the first Public Library Act, 1850. This forthcoming book should therefore form an interesting chapter in the history of British libraries.

The new Bookshop for Boys and Girls established by the Women's Educational and Industrial Union of 264 Boylston street, Boston, has issued an uncommonly attractive purchase list of "Books for boys and girls." An introductory sketch of "Early juvenile bookstores" is contributed by Miss Caroline M. Hewins of Hartford, and the bookshop director gives thanks in her preface for the personal help she received in compiling the catalog from Miss Hewins, Miss Alice M. Jordan of the Boston Public Library and Miss Clara W. Hunt of the Brooklyn Public Library. The shop will well repay a visit from children's librarians and all who are interested in children's books.

Evidence of an increasing appreciation of the value of books to business men is shown in the growing number of bulletins and lists of business books. The Town Criers Club of St. Paul published in October volume I, number 1 of *Business Books*, "an index to recent books and articles in magazines of interest to business men," issued in the interest of the business men's division of the St. Paul Public Library. In its four pages it calls attention to articles of business interest in the current periodicals on file in the library, and supplements this with a short but comprehensive list of books on advertising and its application. A practical list on some division of business will be given each month under the heading "Books for the busy man."

The first volume, "New York City," of the new series of American guidebooks under the general editorship of Fremont Rider, published by Henry Holt & Company, has just appeared. It is on the Baedeker order, containing no illustrations other than maps and plans, but aiming to include every scrap of authenticated information that the traveler may legitimately require. "Rider's New York City" is a sizable little flexibly-bound volume of about 600 pages. One notes, among the many names listed in the preface as collaborators, two well-known librarians: John Cotton Dana, who assisted in the compilation of the Newark section, and Edmund Lester Pearson, who prepared the extensive section on the New York Public Library. Among further volumes of the series announced for publication during 1917 are Washington, D. C., and Boston. The completeness of the material in these

volumes and their detailed indexes should make them of value as library reference tools as well as for tourists.

### CLASSIFICATION OF LOCAL HISTORY MATERIAL

Editor *Library Journal*:

I write to inquire if you know of, or can put me on the track of, any classification scheme for all literature in a town or city. I refer to such a condition as where a library decides to group all its local material in one place, or where a local historical society wishes to keep everything together. Such a scheme must include city or town documents, geology, botany, railroads, schools, institutions, business, health, literature, clubs, biography, history, maps, local imprints, etc., all in one group and not scattered all over the stack, as would be the case were the Decimal, Cutter, or any other regular classification scheme be used.

The question comes up in connection with the classification of the library of the Bangor Historical Society, which is housed in our building.

Yours truly,

CHAS. A. FLAGG.

Bangor Public Library.  
Bangor, Maine.

BUREAU OF ASSOCIATED MOUNTAINEERING CLUBS OF NORTH AMERICA

*Editor Library Journal:*

During the summer of 1915, I visited the mountaineering clubs and geographical societies of the country and suggested the formation of an association for the furtherance of common aims, and for the establishment of headquarters in New York where mountaineering information might be collected and made available. The plan was outlined as follows:

It was proposed to form an association of clubs and societies, each of which shall cooperate thru its secretary and transact its business by correspondence with the general secretary. Each club shall send its printed matter, which will be added to the collection of mountaineering literature established in the New York Public Library. An annual bulletin of information on the membership, officers and activities of the leading organizations shall be issued. The secretary of each club will notify the general secretary of the movements of local members who have interesting slides, and who can address the members of the association at such times as they may be in different parts of the country.

One of the most important features of a club's activities is that of its library. Members should be encouraged to read what is being done in the mountaineering world, for education in this direction is as essential to a true appreciation and enjoyment of mountaineering as is the work in the field. Copies of many of the new books on mountaineering will be sent to each club for review in its annual publication and bulletins, thereby materially assisting in the growth of its library.

It is believed that the existence of this association will have a valuable influence in many directions, and, occupying the field, its activities may expand as experience and occasion make desirable.

Meeting with a favorable response to the above ideas, I sent out a preliminary letter and received unofficial replies in approval of the plan. At the annual meeting of the American Alpine Club, held at the New York Public Library on Jan. 8, 1916, I presented these letters and asked that the councillors of the club be instructed to consider the plan and to send out an official letter to each club inviting it to become a member of the proposed association.

After due consideration, the councillors of the American Alpine Club sent such a letter in March to the leading clubs asking them to join in a bureau of associated mountaineering

clubs of North America. Securing a majority of acceptances, they declared the plan in operation on May 2, 1916.

The first official act of the bureau was the publication in May of a bulletin containing statistics of the membership, officers, and activities of the leading mountaineering clubs and geographical societies of the continent. The present membership of the bureau comprises the following organizations (some others await the annual meeting of their directors):

American Alpine Club.  
 American Geographical Society.  
 Appalachian Mountain Club.  
 British Columbia Mountaineering Club.  
 Colorado Mountain Club.  
 Fresh Air Club of New York.  
 Geographic Society of Chicago.  
 Geographical Society of Philadelphia.  
 Hawaiian Trail and Mountain Club.  
 Mazamas.  
 Mountaineers.  
 Prairie Club.  
 Sierra Club.  
 United States National Parks Service.

A valuable reference collection of mountaineering books has been formed by the New York Public Library in the main building at 476 Fifth avenue, and we have secured the deposit of the library of the American Alpine Club. The combined collection promises to become one of the most important in existence. A collection of photographs and enlargements of mountain scenery in all parts of the world is also being made, and contributions of mounted or unmounted views will be appreciatively received.

LE ROY JEFFERS,  
*General Secretary,*  
*Librarian American Alpine Club.*
