MISS MARY WRIGHT PLUMMER, PRINCIPAL OF THE LIBRARY SCHOOL OF THE NEW YORK PUBLIC LIBRARY AND PRESIDENT OF THE AMERICAN LIBRARY ASSOCIATION

# THE LIBRARY JOURNAL

VOL. 41

JANUARY, 1916

No. 1

LIKE its predecessor, the library year 1915 was uneventful. But "happy is that nation which has no history" is peculiarly applicable in the war year which has left America untouched. A significant feature of the year has been the interest in our American library system evident in France and elsewhere on the part of those who recognize that in the future development of the peoples of Europe toward an abiding democracy, a library system modeled on the American plan will be of large importance. The establishment of professorships of library economy and bibliography in the Dutch universities of Amsterdam and Utrecht, is a step in a like direction. Of course, library progress was checked in the several warring countries, though our English brethren this year resumed their annual national conference, holding it at Caxton Hall, Westminster. Our own conference at Berkeley, California, was chiefly important for the commingling of East and West and for the pre- and post-conference journeys, which enabled the Eastern visitors to come into direct contact with so many libraries and librarians in Canada as well as in the states through which they passed. The usual Atlantic City meeting and "Library Week" in the Catskills, as well as other state and local meetings throughout the country, especially the second Summer Conference in Wisconsin, were of nearly as much practical importance as the A. L. A. Conference itself. The A. L. A. exhibit at the San Francisco Exposition proved stimulating and probably led a good many visitors to be further interested in library progress, and its seed-sowing may bear fruitful harvest in the future. A notable feature of the year was the many gatherings of teachers in which special attention was concentrated on library work, such as

the National Education Association at Oakland, with its library section and library papers at many other meetings; the Southern Conference for Education at Chattanooga, also with a library section; the conference at the School of Education of the Chicago University; and the meeting which Miss Mary E. Hall arranged in Brooklyn for interesting teachers of English in library methods.

THE growth of interest among schools was reflected in the additions to the list of library organizations, for in 1915 there were organized the New Jersey School Librarians' Association and the California School Library Association, setting an example which may be usefully followed in other states. Library sections, as already indicated, were developed in several educational associations or gatherings. The Association of American Library Schools was also organized with a function planned to be somewhat different from that of the Library Training Section of the A. L. A., though there seems to be danger of duplication. There has been no addition to the list of state commissions; but the work of the North Dakota Library Commission has been re-shaped to become a part of the educational system under a Board of Regents on the New York State plan, under the direction of the same director and secretary for library work and with the same staff and increased rather than lessened functions. It proves, however, to be an error to speak of the Board of Regents of the University, as North Dakota has no supposititious university such as in the Empire state exists only in name, while its real State University bears the same relation to the Board of Regents as the library commission work. North

Dakota is one of the states in which the state librarian is only the librarian of the law library, which is now put also in relation with the general library situation. South Carolina has added a state association to the forty already existing. The District of Columbia Association has set on foot a plan for interstate meetings to include Maryland and Virginia and possibly West Virginia, which latter state has no commission and has large opportunity for progress. The Special Libraries Association held a special meeting in Boston to consider co-ordination of library work; and the New York Special Libraries Association was organized in the spring to promote a better knowledge of the special libraries and their resources in New York and vicinity.

---

THE record of the Carnegie Corporation benefactions for public library buildings is not yet ready for 1915, but it is interesting to note that when Mr. Carnegie celebrated his eightieth birthday on Thanksgiving Day, having special reason to give thanks for an old age of happy outgiving and effective usefulness, he had succeeded in rendering himself poorer by gifts approximating \$325,000,000. A large part of this sum has been given for library buildings, and the \$125,000,000 endowments for the Carnegie Corporation will insure the permanent continuance of library benefactions. Up to the close of the corporation year Sept. 30, 1915, grants for 2657 library buildings had been made by or for Mr. Carnegie, 1796 within the United States. Of those in the United States approximately 1350 have been completed, the others being under construction, or planned, or indefinitely postponed; while of 154 granted for Canada approximately 110 have been built. Although Mr. Carnegie has been unwilling to include in his library giving a pension scheme for librarians, many librarians are to-day enjoying Carnegie pensions as ex-members of college

faculties under his gifts through the Carnegie Foundation for college pensions. The report of Prof. W. G. S. Adams of Oxford University on Carnegie libraries in the United Kingdom brought out the suggestions that towns should avoid asking for larger library buildings than they needed or could well support, and that greater attention might be given to supplying rural committees with library centers. Mr. Carnegie's giving has not discouraged personal gifts for libraries from other quarters, but rather the contrary, as witness the Widener gift at Harvard, J. J. Hill's great gift to St. Paul, and the three memorial libraries in Providence; and the example of such gifts as that of Mr. Clarence M. Burton to the Detroit Public Library of his collection of Michiganiana will, we may hope, be followed increasingly elsewhere.

---

IN new buildings the notable event was the completion and opening of the great Widener Library building, supplanting historic Gore Hall, and giving Harvard University a worthy library edifice. The fine library building provided for St. Paul by J. J. Hill is approaching completion for housing both the public library and his gift of a reference library. For the most part the year was one of beginnings. San Francisco and Detroit have their buildings well under way, Indianapolis and Savannah have let contracts, and Sacramento has started an architectural competition for its Carnegie building. Besides the remarkably successful enlargement of the Boston Athenæum, remodeling and enlargements at Milwaukee and Toledo have been completed, and plans for the extension of the Boston Public Library have been under discussion. The University of Missouri has built the central portion of its building for immediate occupancy; Michigan University has obtained an appropriation of \$350,000 for rebuilding in connection with the old stack, and Barnard College in New York has planned to make a library

floor a feature of its new Student Building. Brooklyn is assured an appropriation of \$210,000 which will provide for the ground floor of the Flatbush Avenue wing and there house the treasures of the Montague Street collection and the administrative work. A great number of Carnegie and other branch library buildings have been completed or under way, Brooklyn rounding out its full twenty though it has saved money for two more when the city furnishes sites, Toledo having four, and Oakland, Cal., an equal number. Canada reports excellent progress in the approaching completion of the Municipal Library in Montreal, a building to cost half a million dollars, and in the occupation at Victoria of the fine library annex to the Parliament Building.

---

THE profession has lost by death the veteran John Edmands, of Philadelphia, one of the few persons to whom Carnegie pensions were granted before Mr. Carnegie decided to devote his library funds exclusively to library buildings, except as college librarians are pensioned as professors. Bowdoin College lost its librarian and the association a valued member by the death of Dr. George T. Little. Erastus S. Willcox, of Peoria, Ill.; Dr. Luther Livingston, the first appointee for the Widener collection; Dr. Winfred Robert Martin, librarian of the Hispanic Society of America, and Dr. Anthony Woodward, first librarian of the American Museum of Natural History, must also be counted *ad majores*. Francis A. Crandall, once superintendent of documents and more recently editor of the *Monthly Catalog of Government Documents*, was so closely associated with the library interests that his death should be recorded here.

---

CHANGES in library personnel during the year have not been many, but the reinstatement of State Librarian Galbreath in Ohio has given general satis-

faction as a rebuke to partisan appointment for such positions. Dr. Theodore W. Koch's retirement from the University of Michigan has involved the transfer of W. W. Bishop from the Library of Congress to that post; and George P. Winship's appointment to the Widener Library at Harvard has resulted in the designation of Champlin Burrage as his successor at the John Carter Brown Library. Harvard has also claimed and Trinity lost Walter B. Briggs, who takes the position of reference librarian with his Alma Mater, and gives place to Prof. Arthur Adams as his successor. George W. Harris has been made librarian emeritus at Cornell, Willard Austen becoming his active successor, and Dr. Ezekiel Mundy has been retired with like honor from the Syracuse Public Library. Marriage has for the third time removed the librarian of the Carnegie Library at Atlanta, Mrs. Percival Sneed having become Mrs. Blewett Lee, and retired from library work. Asa Don Dickinson has gone abroad as an American library missionary to do through the University of Lahore like work to that which Mr. Borden accomplished in Baroda.

---

THE year was not notable for bibliographical publications, though the issue of Charles Evans' eighth volume of his comprehensive American bibliography brings that work up to the year 1792, inclusive. But at last the library profession has the record of its special census in the special bulletin of the United States Bureau of Education, scheduling "Public, society and school libraries" to a total number of 13,686, the statistics being either for 1913 or 1914. A select list of libraries to the number of about 1300 is also included in the bulletin of the bureau known as the Educational Directory. Special note may, however, be made of the increasing volume of publications in library literature which have crowded the review columns of the Jour-

NAL during the past year. The union "Catalogue of technical periodicals in New York City libraries" is a useful local contribution, and in England should be noted two endeavors toward an English Poole's Index—Mr. Piper's "Index to periodicals" and the first portions of the L. A. U. K. Index, published by the *Athenaeum*. Contributions to the literature of cataloging and classification have been made in Miss Hitchler's "Cataloging for small libraries" in its enlarged edition, and Mr. Sayers' "Canons of classification." But the special book activity of the year has been with respect to library work for children, including Miss Hunt's "What shall we read to the children?," Miss Hewins' revised edition, and Miss Shedlock's "Art of the story teller." Dr. Garrison's life of Dr. Billings was equally a contribution to library and general literature, and the same may be said of Dr. Bostwick's "Making of an American's library."

---

As the time comes for annual reports the proposal of the American Library Association for uniform statistics, the schedule for which was adopted by the Council at its Chicago midwinter meeting, and printed in our issue for February, 1915, should be borne in mind. An increasing number of libraries are adopting the calendar year for the library fiscal and statistical year, which is a wholesome change, although college libraries naturally end their year with the close of June. Nearly a hundred libraries have already adopted the A. L. A. system, several of them having adopted the scheme of making the A. L. A. schedule an appendix to, instead of a feature within, their annual report. It is to be hoped that the custom will become general, as comparisons may thus more easily be made and a real benefit be gained from statistical information. It is proposed to include in the *American Library Annual* for the new year

the gist of such uniform reports from a number of leading and typical libraries, and certain other information regarding the larger library systems not hitherto available in any systematic way. We bespeak from our library friends prompt attention to the request for this information, and trust that they will take this present hint as a reminder for preparing their figures on the A. L. A. plan.

---

It is none too soon perhaps to sound a note of protest against a feature of library meetings, of which much was made at the Catskill gathering, in contrast with the library contributions proper. This is the plan of inviting outside people of more or less note in the world of letters to show themselves to the library clientele and illuminate librarians from outside sources of radiance. It is well indeed to see ourselves as others see us, but often times those talking about us have not even taken the trouble to learn what we are actually thinking and doing in the library world of today. In discussing Mrs. Gerould's paper in the *Atlantic*, Mr. Kent said truly that it might have been written ten years ago, and many a writer and speaker urges upon librarians plans and practices which have been in operation for years as though they were discoveries or novelties. At previous library meetings there has been like waste of time, and at the Massachusetts meeting at Northfield a lady professor from a woman's college indulged in a "comparative study" of two sex-problems which involved quotations and discussions equally unsuitable for library audiences and college classes. On the other hand such inspiring and helpful addresses as that of President Richmond of Union College more than balances speeches and lecturings of the other kind. The moral of which is that outsiders should not be put on the program of library meetings without a fairly close knowledge of how they are likely to discourse.

# LIBRARY LEGISLATION IN 1915\*

BY WILLIAM R. EASTMAN

DURING the current year the legislatures of 43 states have been in session. Your committee has written to each of these states; to the library commission or its equivalent, wherever possible, or to some prominent librarian to ask for the facts and meaning of any library legislation secured or attempted. The following report is made up from the replies received, together with a careful examination in most cases of the particular bills.

It appears from these returns that a total of no less than 103 bills affecting libraries were offered in the legislatures of 31 states and in the Congress of the United States, of which number 58 were finally enacted and approved, leaving 45 other library propositions stranded upon the treacherous shoals of indifferent or critical legislatures, or else exposed as victims of a governor's veto. The failures were almost as many as the gains. But these were not all failures, neither were all of them of a character to deserve success. They were efforts, experiments and postponements, but they signify progress. The lost propositions will appear again in better form, and the best features of them will win in time.

## APPROPRIATIONS

The number of acts given above does not include all the appropriations made in general bills for the support of government.

In Maine, \$2000 was voted for high school traveling libraries.

In Vermont, the usual appropriation for the Library Commission is increased by \$700 a year for expenses.

In Massachusetts, the provision for expenses of the State Library is increased to \$14,000 a year [formerly \$11,010], and \$5000 was given for a card catalog.

In Connecticut, the increase of funds for the Public Library Committee to \$4000 [formerly \$3250] a year, which was noted in the report for 1913, was made permanent by law.

In New York, the amount given for the

year for free libraries was advanced from \$35,000 to \$37,000, and that for books for traveling libraries from \$5000 to \$6000. A "legislative library" was established, with a salary of \$3600 a year for the librarian.

In Delaware, an advance for commission work to \$3000 [formerly \$2000] was made as a result of general appreciation of the good work of the "book wagon" in the southern counties and of the traveling libraries.

In North Carolina, the amount for commission work was increased to \$4000 a year [formerly \$3000].

In Iowa, the sum of \$4000 was added to that previously given for the Library Commission, and the salary limit of their office staff was raised to \$9000 [formerly \$7380].

In North Dakota, there was an increase to \$17,235 [formerly \$16,000] for two years, which added to the salaries of the legislative reference librarian and of one clerk.

South Dakota also reports an increase of appropriation for the commission to \$4000 [formerly \$3000].

In Wisconsin, the annual appropriation for the State Library was \$7125 [formerly \$8000], but the amount for buying books of law and political science was \$3000 [formerly \$2000]. The annual allotment to the Free Library Commission, not including the department of legislative reference, was \$29,000 [formerly \$29,725], and for books, cases, etc., for traveling libraries, \$3000 [formerly \$4360]. For the State Historical Society an annual appropriation of \$50,000 is made [formerly \$54,353] for their general work, and \$780 [formerly \$200] for repairs and maintenance. The amount for books and property is unchanged at \$8200. The Historical Society is also recognized in the bill for public printing.

There may have been other changes under this head which were not reported.

## GENERAL LIBRARY LAW

In West Virginia, a general law was enacted allowing a municipal corporation

\*A report presented to the New York Library Association by their committee on legislation, September 28, 1915.

to establish and maintain a public library by tax.

No other general library law was adopted by any state, although earnest efforts to that end were made in Pennsylvania and Indiana.

In Pennsylvania, the special object was to supersede an accumulation of some twenty library laws enacted at various times in the past fifty years. The new bill was carefully drawn and skilfully advanced. It was voted by the legislature but vetoed by the governor on the ground that its provisions were "too drastic." Under the act, libraries could be established by the local authorities, library property of every sort was to be exempt from taxation if the income was used for the library. Money could be borrowed under a bonded indebtedness and sites obtained by condemnation. It would have made public libraries more independent of the school boards than they now are.

In Indiana, a like attempt was made to codify existing laws. The bill first offered passed the House by a vote of 85 to 7, but was stopped in a committee of the Senate, who said the Library Commission wanted too much power in their own hands. Special objection was raised to one section of the bill which provided for a committee of examination to issue certificates of qualification to librarians. After this bill was abandoned, another act, repeating in substance the provisions for county and township libraries, was introduced and passed the Senate, but in the House it was lost in the final rush of business.

In New York a bill was introduced to insert in the Education law a new article of 21 sections relating to museums. This would have brought out more distinctly the provisions already in the law which "apply equally to libraries and museums," and the establishment, encouragement and inspection of local public museums on the same basis as public libraries would have been more prominently before the public. The legislation was thought to be unnecessary and was not reported.

#### LIBRARY COMMISSIONS

There was no addition to the number of state commissions. West Virginia intro-

duced a bill for a library commission which failed to pass, owing to a lack of agreement as to its terms on the part of its promoters.

Oklahoma offered a like bill and, after the section providing financial support had been cut out, it passed both houses, only to be vetoed by the governor, who explained that he was committed to the policy of abolishing offices, not creating new ones.

Washington tried, but also failed, to change the character of its commission which is now almost exclusively a commission for law libraries, with an advisory board for public library interests. The change proposed was to create a commission for the care of the state and public libraries and to make the law library interest distinct. This desirable arrangement was defeated by strong personal influences in the legislature.

The one instance of affirmative legislation under this head was in North Dakota, where, indeed, the library commission of five members was abolished, but the work is continued by the same official staff under the director reporting to a state board of five Regents newly created, with a commissioner of education, to supervise all the educational institutions and interests of the state, including the care of libraries. This puts them on the same footing as in New York and makes for unity and economy.

This tendency to unification was shown also in Illinois, where a comprehensive bill of 56 sections was offered to create a state department of education which would consolidate under one board the management of the University, the State Normal Schools, a commission on natural resources, the State Library, with a library extension division, and the State Historical Society. In the face of opposition from many interests, it failed to pass.

#### LIBRARY FOUNDING AND GOVERNMENT

Legislative action under this head was in the form of amendments to existing law.

In Connecticut, the power to maintain a public library, held by all towns, boroughs and cities, was extended to fire-districts.

In Iowa, the law was changed to allow to each city council its choice of the number of five or seven or nine trustees

of its public library instead of the fixed number of nine, as formerly required. There was strong opposition from the libraries to any requirement as to the number of trustees.

In South Dakota, the number of trustees was increased from three to five, of whom two must be women, and not more than one trustee a member of the appointing body. This was done at the request of the state association as a step toward preventing the careless transaction of business and incompetent or interested service.

In Arizona, the present law does not permit cities of less than 5000 to maintain libraries. A bill, modeled on the Oregon law, was proposed to give this power to all incorporated cities and towns, and also the right to provide by contract for library facilities. The bill passed the House and was amended in the Senate to include the support of any existing library and to limit the library tax rate. So amended, it passed the Senate on the day of adjournment, but failed to reach the House in time for final action.

In Minnesota, it was proposed to amend the library law so as to allow townships to maintain libraries, but this was overshadowed by other matters and lost.

In Oregon, an amendment was offered giving to school districts the power to establish public libraries, making the school trustees themselves the library board and reducing the number of library trustees in cities from nine to seven, but in cities of less than 3000 from six to five. It was further provided in the bill that no library director should, directly or indirectly, in any way whatever be interested in any work or labor done or material furnished for the library on penalty of fine and forfeiture of office. These proposals were all indefinitely postponed.

In Ohio, it was proposed that the right of annual contract for library facilities, already assured as between school and free library boards, should be extended so that one such library might contract with another library for additional facilities. The bill died in committee.

The public library of Milwaukee is managed by a trustees board of nine members; two are *ex officio*, three are members of

the common council, and four, called "citizen members," are chosen by their fellow members in the library board. A bill was offered in the legislature of Wisconsin to give to the mayor power to appoint these "citizen members," with the concurrence of the common council. This amendment was not adopted.

#### TAXATION

In Kansas, the tax limit for libraries in cities of less than 40,000 was set at one-half of a mill on the dollar [formerly four-tenths of a mill]. In cities of more than 40,000 the limit was placed at one-fourth of a mill.

In New York, the library tax levy of the town of Pike, in which some irregularity was discovered, was legalized.

Among the bills which failed were two of special interest from New York. One of these, applying to all educational, charitable and religious corporations, including churches, proposed to exempt from tax the personal property of each to the amount of \$100,000. Since, under the present law, all their personal property is exempt, this amendment would have made subject to tax all personal property above the amount named. The bill died in committee. The other bill proposed to exempt from tax the entire property, real and personal, of a library free to the public. Under the present law, the real estate is exempt only so far as it is actually used for library purposes. The bill passed both houses, but, after the final adjournment, was vetoed by the governor, probably for the reason that so broad a privilege would be liable to abuse.

In Ohio, a proposal was offered to allow a city council to assess and levy a tax of one-half of a mill for the maintenance of the public library of the city, and such levy was not to be subject to any limitation of tax rates or maximum rates provided by law if the combined rate for all taxes in any year should not exceed fifteen mills. This was not adopted.

#### THE COUNTY LIBRARY

Provisions for county libraries were adopted in two states—Texas and Montana. Bills for a like purpose were offered in eight other states. In Ohio and Oregon,

amendments to existing county laws were adopted, but in Pennsylvania, Indiana, Michigan, Illinois, Missouri and Arizona the county bills failed of passage. Some details of these laws are of considerable interest in their bearing upon the peculiar difficulties attending the practical working of a law of this kind where local libraries are already in operation. In Texas, the law says that a county library is "for that part of a county lying outside of incorporated cities and towns maintaining free libraries." This outside territory alone is taxed for its support. Others may join the system if they wish, but, in any case, the management rests with a board which represents the entire county.

In Montana, the law puts the case the other way. The county commissioners may establish a library for the county and, after that, any city or town may, without assigning a reason, withdraw from the system. Thus, in Texas, no community in the county can avoid the obligation of supporting a library to some extent; but in Montana a city or town can absolutely decline if they wish. These two, in Texas and Montana, were the bills that were enacted. Of those which failed, the Missouri bill was, like that of Texas, for the outside territory alone, except as others might come in. By the Indiana bill, a county library would have been possible only where there was no free, tax-supported library in any city or town, unless an existing library should consent to become a county library. In Pennsylvania, also, there was to be no power to set up a new library if a free, non-sectarian library was already in the county; and, in that case, aid must be given to the existing library to enable it to become a county library. The Michigan bill offers the alternative of a new library for the county or a contract with an existing library. The Arizona bill is of a general character and does not appear to recognize the possible presence of another library in the county, and the supervisors are required to act when directed by the people.

The county bills generally recognize the power of contract. Such a bill is already the law in Missouri, but the privilege is not used.

By an amendment adopted in Oregon, the county court was authorized to accept gifts of land, buildings or money for public library purposes and to erect buildings for branches.

An Ohio amendment provided for establishment and maintenance of county libraries when provided by gift or bequest.

In the state of Washington, the word "county" was dropped out of the library law by mere inadvertence in copying. An amendment to add "township" to the law was under consideration when this accident occurred. But for the present no county library can be established. The power of contract still remains.

A proposition for county libraries in Illinois was lost.

It is said that the Texas law will be inoperative because of the narrow limit set for taxation, which is but six mills on one hundred dollars, that is, .06 mills on the dollar.

There are now 14 states in which county libraries are recognized by law, and six others in which the proposition has been offered and lost. In seven of the 14 (New York, Maryland, Nebraska, Texas, Montana, California, and Oregon), the county may establish a library. In the other seven (Ohio, Wisconsin, Iowa, Minnesota, Missouri, Wyoming, and Washington), it may adopt an existing library or make a contract with it.

#### TRAVELING LIBRARIES

A bill was offered in Ohio authorizing the Library Commission to appoint an assistant to be known as library organizer, who, in addition to duties previously assigned by law, should have charge, under the direction of the state librarian, of the traveling library department. This bill was reported but failed to pass.

#### TESTS FOR LIBRARIANS

The Library Commission of Massachusetts, desiring to aid in reorganizing small libraries, find the demand for help greater than their own agent is able to meet. They then call upon neighbor librarians for occasional service in this line and pay them from state funds. The state, therefore, claims the right to examine these outside helpers. A new law provides that the

commission may examine and register librarians as to qualification, experience and previous success and keep a list from which they may not only provide helpers in their own work, but also aid libraries seeking approved librarians.

In Montana, candidates for the place of county librarian are eligible only if graduated from a library school or having had one year's practical experience in library work.

In other states tests were proposed by bills which failed of adoption. In Missouri, a county librarian was to have been examined by a board of three—the librarian of the State University and of the Public Libraries of St. Louis and Kansas City.

In Indiana, all librarians of counties and of cities or towns having an assessed valuation of \$1,000,000 were, after a certain date, required to hold certificates of qualification as a condition of tax support for the library. An examining board, appointed by the state commission, was to establish grades of service, prepare examination papers, and hold examinations, and might accredit library schools. Some thought that this provision in the bill accounted in part for its failure.

In Missouri, the county librarian, before entering upon his duties, was to be required to file with the county clerk the usual oath of office and a bond for faithful service. In Montana, the county librarian must do the same before entering upon the duties of *her* office.

#### THE STATE LIBRARY

The state of Arizona established a State Library, to be under the direction of three curators appointed by the governor with the consent of the Senate. The duties of the librarian are stated at length in the enabling act, and, by an amendment, his name was inserted.

An assistant was added to the staff of the North Carolina State Library. In the same state, a bill to increase the salary of the state librarian passed the House but failed in the Senate. Another bill to increase the appropriation for books passed the Senate but died in the House.

In Nevada, the State Library was taken out of the hands of the secretary of state

and placed in charge of a library commission consisting of the members of the Supreme Court.

The state of California has come into possession of a collection of rare books and manuscripts as a gift from the heirs of the late Adolph Sutro. The action of the trustees of the State Library in accepting the gift and establishing, in the city of San Francisco, a branch of the State Library to be known as the "Sutro Library" was approved and validated by law.

In Michigan it was proposed to give to the state librarian power to fix the compensation within certain limits of assistants and clerks, but the bill died in committee.

In New York, the papers of the abolished office of the fire marshal were placed at first in the State Library and, by another bill, distributed to other state departments.

In the same state, by an amendment to the Legislative law, the libraries of the Senate and Assembly were consolidated in a "Legislative Library." This has no connection with the State Library. Its material consists of legislative records, department and court reports and public documents generally. It is in the Capitol and open throughout the year in charge of a librarian and two assistants. It is not a bureau of "legislative reference," as that term is understood by librarians, and all work hitherto done by the state in this line is continued by the State Library.

#### LEGISLATIVE REFERENCE

A legislative reference library was created in North Carolina under the appointment and control of the State Historical Commission. Its reports, bulletins and other publications are to be printed by the state and an annual payment of \$5000 is appropriated to carry out the purposes of the act.

In Nebraska, the appropriation for legislative reference was attended by the condition that none of the money should be used in the compilation of the State Blue Book nor for the drafting of any bill or resolution unless requested by a member of the legislature.

In Georgia, a legislative reference department in the State Library was estab-

lished by the legislature of 1914, but was overlooked in the committee's report for that year.

A bill was offered in Ohio to provide that, in case of the failure of the State Library Commission to employ a director of the legislative reference department, the state librarian should be *ex officio* director and perform all the duties without additional compensation. This was not passed. A bill to abolish the legislative reference bureau in Ohio and to transfer all its records and property to the clerk of the House also failed.

In the appropriation for legislative reference in the Library of Congress the language of the law was changed to express more fully its special purpose. Formerly it was "to prepare such indexes, digests and compilations of law as may be required for Congress and other official use." Now it reads, "to gather, classify and make available, in translations, indexes, digests, compilations and bulletins and otherwise data for or bearing upon legislation and to render such data serviceable to Congress and committees and members thereof."

In the legislature of Wisconsin, two bills were offered to repeal the provision in the law for a department of legislative reference connected with the Free Library Commission and to transfer all such reference work to the State Library. One of these bills appropriated annually \$3500 in place of \$21,800 previously paid for this service. Both were promptly killed; the latest by a vote of 19 to 7 in the Senate.

#### STATE DOCUMENTS

No changes in the rules for distributing documents have appeared.

In Kansas, a bill was introduced to give copies of session laws and of the revised statutes to any public library or library club applying for them, but this was not adopted. Bills in Missouri and New York making changes in the distribution of documents failed to pass.

#### LAW LIBRARIES

In California, the "law library fund" in each county is to receive an addition of not more than \$100 a month from the fees collected by county clerks, at the discretion of the county supervisors.

In New York, the law libraries at Watertown and in Nassau county were placed more fully under the control of the courts and court officers, instead of the county supervisors.

A bill to replace sets of statute laws in circuit court libraries that had been burned was offered in Michigan but died in committee.

#### SCHOOL LIBRARIES

An appropriation of \$2000 for traveling libraries for high schools in the state of Maine has been already noted.

In North Dakota, a library expenditure of from \$10 to \$25 a year is required of each school district till the single room school shall have 200 books selected from the lists of the state superintendent. After that, \$5 a year must be spent till the whole number of volumes becomes 300. No more are required but losses must be made good.

In South Dakota, the Free Library Commission is empowered, upon request, to render assistance to county superintendents and county library boards in selecting books for school libraries.

In the same state, any school board and board of library trustees may unite the school library with the public library of the place.

In California, high school boards were authorized to enter into contracts with county libraries for library privileges and, by another act, the school authorities of any city were empowered to enter into like library contracts with the public library in their own city.

In the same state, the "library fund" for the schools in cities has heretofore received not more than an annual appropriation of \$50 for 1000 children of school age. This has been changed by amendment to the school law so that counties also, or city and county combined, may have such a fund, but upon a far more liberal scale. In the cities, upon written request of the school board, the fund shall receive annually at least 40 cents for each pupil of average attendance and, in counties, not to exceed 80 cents per pupil. This increase from five cents per child to a minimum of 40 cents and a maximum of 80 cents is noteworthy.

By another amendment, the advance estimate on which the tax for maintaining high

schools is levied must include, as a distinct item, an estimate for books, magazines and apparatus.

In the state of Florida, the governor, in his annual message, recommended the passage of a law to require county boards of public instruction to provide circulating school libraries, not less than one for each ten schools, to be exchanged among the schools of the county under supervision of the county superintendent. It does not appear that any action was taken by the legislature.

In Wisconsin, the provisions for buying books for school libraries were amended to require a town, village or city clerk, when buying books for the schools, to send to the county clerk not merely a report of books received but the full list of books ordered for each district with those received in good condition noted thereon. In case of error in filling the order, the said town, village or city clerk must within ten days notify in writing the firm making the sale and also report to the school superintendent and, in case of failure to give either of the above notices, the clerk becomes liable to a fine of five dollars.

#### PENSIONS

In Ohio and Michigan bills were introduced to give retired pay or pensions to

employees of public libraries, but in neither state did the bill come to a vote.

According to the Ohio bill, any library employe, wishing to receive such pay on retirement, would be required to agree to a deduction of three per cent from each salary payment and, after 20 years' service and with the consent of the library trustees, would become eligible to receive thereafter two per cent of the average salary of the last three years. After 30 years' service and attaining the age of 60 the right to receive a pension would become absolute.

#### NEW BUILDINGS

In Minnesota, a building for the State Historical Society is to be erected at a cost of \$500,000 now appropriated.

#### CONTAGIOUS DISEASES

A bill was presented in Massachusetts to require public libraries to disinfect or sterilize every book returned from circulation before offering it to another borrower. Leave to withdraw was the verdict.

In New York, a proposition to require any one having in his possession a book from a public library to give prompt notice to the library if any contagious disease is discovered at his home, was offered but failed of enactment.

## THE LIBRARY AS A CONTINUATION SCHOOL\*

BY BERNARD C. STEINER, *Librarian, Enoch Pratt Free Library, Baltimore*

In these days, we hear much of the duty of the State to instruct all its citizens, to carry on their training into their maturer years, to give opportunity, through such agencies as night schools, that those who have been obliged to leave school at an early age may carry on further the education which was broken off through the necessity to earn a living. We have held up to us the example of the Germans in their continuation schools and we find in the example much that is worthy of imitation, but are we not in danger of forgetting that we have worked out for ourselves a system of

education for all the people at every age, which in some respects is more efficient than is to be found any where else in the world? No other country has developed the public library so thoroughly as the United States and nowhere else is the function of the public library as a part of public education so clearly recognized. The Federal Census Bureau, in its classification of the expenditure of municipalities, places side by side, as the two divisions of the department of education, the Public School and the Public Library and one municipality after another, by adopting that classification, gives it an official approval. The National Educational Association

\*Read before the Library Section of the N. E. A. at Oakland, California, August 24, 1915.

would not be complete without a library section. The small boy enters the library and asks the "teacher" to give him a "pretty book" and thus recognizes the kinship of the librarian to the school teacher. The tens of thousands of borrowers in each of the large cities use the library not alone for pleasure, but rather in large measure, to gain information and to improve their minds.

Let us now turn our attention for a few minutes to some of the ways in which a library serves the community as a continuation school, taking up the topics in no logical order, but so as to show, by the enumeration of one subject after another, how valuable a service is given in this way to the people by the public library.

1. The public library is an educational institution in the nature of a school through the expert guidance which it gives those who come to it for the information which is contained in the books on its shelves. A volume could be written upon this subject alone. When one considers the endless variety of questions asked at the delivery desk and the more complex and erudite problems placed before the employees of the reference department, one feels like the old hymn writer and is "lost in wonder, love, and praise" at the beneficence of the library. Men and women, trained in the walls of the library for many years, after having received a careful course of instruction in the schools, possess a marvellous facility in finding out what the books under their control contain and exemplify the truth of the old distich:

"Though index knowledge makes no scholar  
pale  
It holds the eel of learning by the tail."

That slippery eel may get away from the unlearned man, but the experienced librarian holds him with so firm a grip that he cannot escape. Daunted by an endless array of volumes, the reader can have the desirable ones for his purpose selected for him and the wisdom of the ages, upon the subject he studies, laid at his feet, by those who have acquired a *flaire* which enables them to obtain for him speedily what he needs. One can never tell who will wish information on any subject and this ex-

pert aid must be given to most unlikely persons. One of the leading bankers of our city, recently wrote me: "Thank you ever so much for your bibliography on 16th century pottery. If I only could get through half of it! However, I'll try to take advantage of your kindness, I trust to my own benefit." The cumulative effect of many applications is most clearly seen and there is frequently in the reference desk, or in the head of the reference librarian, a list on the subject of which the inquirer is in search; because some one else, it may be months or even years ago, asked information upon that very subject, or one very similar to it.

2. The library acts as a continuation school, by permitting borrowers to have access to books themselves, whether this access be to a carefully chosen collection of reference books such as that which one sees in Bates Hall of the Boston Public Library, or to an equally well selected standard open shelf room as that in the Providence Public Library, or to a less rigidly selected list of books which one will find on the shelves of any branch of a large city public library. One of the most valuable parts of my college course was the education which I obtained from browsing among books in the Yale library. The libraries of Linonia and Brothers in Unity, at the dissolution of the two literary societies, had been given to the college and the combined collection was kept up to date by the purchase of good, popular, new books. I had never entered a public library until I was a Freshman, and revelled in the examination of the books in that library of about 25,000 volumes, to which free access was given the students for a couple of hours every afternoon. Later in the course, through the kind offices of a professor of Greek, two of us were given access to those shelves of the main University library, from which students were ordinarily barred, and the memory is very precious to me of the thrill of delight which came to us, again and again, as we wandered through those silent, vast rows of volumes and called to each other's attention some new wonder, which like Keat's planet had "swum into our ken." Merely to know what has been written upon a sub-

ject is an education. When that great teacher, Prof. Edward S. Dana, closed his course of lectures upon physics before our college class, he said, "Young gentlemen, twenty years from this time, I shall not be surprised, nor greatly disappointed, if I find that the majority of you have forgotten most of the facts which I have taught you; but, I shall have failed in my teaching, if you will not remember how to find out for yourselves again the facts which you have learned here." This is true, not only as to information gained from class instruction, but also as to that gained from glancing over books, reading their tables of contents, or even merely perusing the titles upon their backs. Dr. Johnson knew the value of this knowledge and Boswell tells this story of him: "No sooner had we made our bow to Mr. Cambridge, in his library, than Johnson ran eagerly to one side of the room intent on poring over the backs of the books. Sir Joshua observed (aside): 'He runs to the books as I do to the pictures, but I have the advantage; I can see more of the pictures than he can of the books.'

"Mr. Cambridge upon this politely said, 'Dr. Johnson, I am going with your pardon to accuse myself, for I have the same custom which I perceive you have. But it seems odd that we should have such a desire to look at the backs of books.'

"Johnson, ever ready for contest, instantly started from his reverie, wheeled about, and answered: 'Sir, the reason is very plain. Knowledge is of two kinds. We know a subject ourselves, or we know where we can find information upon it. When we inquire into any subject, the first thing we have to do is to know what books have treated of it. This leads us to look at catalogues and the backs of books in libraries.'"

3. In some of the larger libraries the call of vocational guidance for the mechanical tradesman has been heard and answered, not merely by buying good books on applied arts and kindred subjects, which all librarians do; but also by the establishment of especial technological departments, in which all books dealing with such topics are segregated, placed in a separate portion of the building, and given into the

care of clerks, who devote their whole time to the ascertainment of the proper answer of every request for technical information. It stands to reason that a particular type of mind, brought into constant contact with these books, can extract from them information far more quickly, more exactly, more exhaustively, than can be done by any staff of a general reference department, no matter how skilled they may be. In Pittsburgh, for example, this technological department has guided many a man, interested in trade or manufacture, to become more skilled, more efficient, better educated for his work.

4. The aid of the reference department is multiplied, both in extent of the area covered and in the permanence of its work, through the issue of reading lists and bulletins on special subjects. The man in the street fails to realize how much time is consumed in the preparation of such bulletins and how valuable are their results. When one enters the library halls, he is almost sure to see in a conspicuous place a bulletin board, bearing one or more lists of books and magazines, upon subjects of popular interest, or upon those to which the library wishes to turn the interest of the borrower. The activity of the library in preparing such lists does not stop there. Sometimes lists are sent to the daily newspapers for publication; again mimeographed lists may be mailed to persons known to be interested in a given line of books, as for example the Enoch Pratt Free Library recently sent a list of titles of books upon plumbing to every one of the 400 master plumbers of Baltimore; yet again a post card, or a letter, may convey a typewritten list to some one borrower known to be interested in a subject; and when the library can save a few cents from its meagre funds, or secure the opportunity to print, through the shrewdness of a business man who is willing to advertise in such a bulletin, you shall see the appearance of a printed bulletin, which is sometimes annotated, as is the sociology bulletin of the Brooklyn Public Library, or sometimes merely a classified list of titles as those the Enoch Pratt Free Library issued in the summer of 1914 upon the Great European War. These bulletins may be sold or dis-

tributed freely at the library counters, or may be used by book merchants as advertisements to be placed in every volume sold by them; but, in whatever form they reach the reader, they serve as guide posts to lead him to scenes of higher improvement. Full many a man, reading such a list, has become interested in some subject and, beginning to read therein, has concluded by becoming a considerable scholar in that department of knowledge.

5. Not only through its own lists and bulletins does the library guide its readers, furnishing an Ariadne thread through the labyrinthine maze of books, but the same service is rendered through a wealth of bibliographical apparatus, provided by the lists of other libraries sent in exchange, and through books, which have been prepared by co-operative effort, or which have been sent forth by publishers who have felt that the demand for such works would be such as to compensate them for the necessary outlay in placing the books upon the market. The open sesame to the cave in which lies the wealth of articles printed in our magazines was first discovered by the venerable Nestor of librarians, Mr. John Edmands of Philadelphia, when he was librarian of the Brothers in Unity Society at Yale in 1847 and his work was expanded by his successor, Wm. F. Poole, into that invaluable Index which bears his name and which was first issued in 1853. Revised and greatly enlarged by the edition of 1881, it will remain a *monumentum aere perennius* to call forth the blessings of many a student. By Supplements, annually and quinquennially, it was continued until 1907 and its work is now very efficiently carried on by the *Readers' Guide*, which was begun in 1901. To guide the student through the vast forest of books, we have the compass to be found in such works as the Catalogue of the A. L. A. Standard Library issued in 1893, revised in 1904 and brought to date by a supplement in 1912, or such other works as Sonnenschein's "Best Books" and Nelson's "Standard Books," to say nothing of the useful "A. L. A. Index to General Literature." The forest has paths also leading through some of its darkest groves, where the trees stand in close multitudes: e. g.,

C. K. Adams "Manual of Historical Literature," Larned's "Literature of American History" and the annual volume of "Writings on American History," point out to the traveller how to win his way in one direction; several evaluated guides of fiction aid those working their way elsewhere; while the *Engineering Index* and the *Industrial Arts Index* do for a restricted field, what Poole did for the general reader. The Federal Government publishes an Index to its public documents, and all these guides are to be found, with many another, on the shelves of libraries, accessible to all borrowers, so the wayfaring man need not err therein. Then too the education must not be forgotten, which is to be gained from a search over the cards of such a dictionary catalog as stands in the delivery rooms of our libraries, giving the inquirer information as to what books a given author has written, what books have appeared under a remembered title, or what books the library contains upon almost any subject under heaven.

6. To seize the attention of the passerby and induce him to become interested in books, so widening his intellectual horizon and informing his mind, the windows of the library may be used, when they are sufficiently near the street to render conspicuous books displayed therein. Thus, in the annex of the main building of the Enoch Pratt Free Library, there are two windows close to the sidewalk and at such a level that objects placed in them meet the eyes of those who walk by the building. Upon glass cases in those windows, we place collections of books upon topics to which we desire to call the attention of the people and we change these collections every week or so. In this manner, not only are men led to think of the desirability of reading these books or similar works on the same subjects; but also there comes into one's mind the subtle suggestion that, if the library contains useful books on the subjects so displayed, it must also contain equally useful books, dealing with other subjects, upon which one wishes to be informed, and thus men are led to look to the library for help and education.

7. The public library acts as a continuation school in a most important way, when

it is fortunate enough to possess a lecture room within its walls, wherein the people may be brought to listen to the spoken word of the man who is an authority upon any subject. Sometimes the aural appeal of the spoken word is re-enforced by the visual appeal of the picture and always there should be the endeavor to induce the listener further to inform himself upon the theme treated by the lecturer, through reading books contained in the library. It cannot be emphasized too strongly that the library is the home of the book and that anything which is not definitely connected with the intention of aiding people through the use of books is not a part of the library's sphere. Consequently, with each lecture, we may well look for the posting upon the bulletin board of a list of books upon the subject covered by the speaker and for a definite attempt to secure the circulation of those particular books at that time.

8. We have long known of the attempt of libraries to supplement the schools by providing reading clubs, story hours and debating clubs for school children, and the effort is now being made to carry like institutions to the persons of maturer years who use the libraries. At one of the branches of the Enoch Pratt Free Library, for example, a reading club of women, numbering now some thirty members, has met weekly for two years to read and discuss standard English novels, those of the women who desire to do so bringing knitting or fancy work with them, to complete while the reading is going on. A similar club, at another branch, has devoted itself to the reading and discussion of Dr. Huckel's translations of Wagner's operas. There are almost boundless possibilities of good in the way of improvement of literary taste and impartation of useful knowledge through such clubs.

9. All the above forms of educational work may be carried on in the great majority of libraries and as part of the essential work of the institution. When the library has associated with it a museum as at Springfield, Massachusetts; or an art gallery, as at New York City; or a gallery in which exhibitions may be held, as at Worcester, Massachusetts, or Newark,

New Jersey; the scope of the work is further widened and it is possible for the institution to serve as a continuation school in many other ways.

Last of all, it must be said that the most important feature of all in the work of the library as a continuation school is the culture which it gives men through introducing them to the great men of all ages of whom the books tell and by whom the books were written. Through reading the books from public libraries, full many a man has been transported from the narrow limits of time and space which hedge him in. One day I went into a store to have an umbrella repaired. The proprietor took my name and address and then said: "I have always been a patron of the Library." "Indeed," I replied, "what kind of books do you chiefly draw?" "Those on ancient Egypt," was the response which surprised me. "I think I have read everything on that subject which you have in English. I have one of the volumes in my back work room now." When I questioned him further, I found that what he said was literally true and that from his back room on a busy Baltimore street the soul of that man walked forth and held converse with the Pharaohs.

Well says one of the characters in John Fletcher's play "The elder brother,"

"Give me leave to enjoy myself; that place  
that does contain  
My books, the best companions, is to me  
A glorious court, where hourly I converse  
With the old sages and philosophers;  
And sometimes for variety, I confer  
With Kings and Emperors, and weigh their  
counsels;  
Calling their victories, if unjustly got,  
Unto strict account, and in my fancy,  
Deface their ill-placed statues. Can I then  
Part with such pleasures to embrace un-  
certain vanities?  
No—be it your care  
To augment your heap of wealth; it shall be  
mine  
To increase in knowledge."

Sometimes the library, when used as a continuation school, leads the user to augment his "heap of wealth," always it gives him a sure "increase in knowledge."

—  
"He that loves reading hath everything  
within his reach."

# BENEFITS OF LIBRARY TRAINING\*

BY IONE ARMSTRONG, *Librarian of the Free Public Library, Council Bluffs, Iowa*

It is hardly possible to appreciate thoroughly any blessing unless we have some time known the lack of it. Those who spend their evenings in the gently diffused radiance of an electric light cannot compare the flickering dimness of tallow candles and kerosene lamps. There are men and women who unconsciously accept our modern street cars, automobiles and telephones. They have never known the dark ages of the mule car, the one-horse chaise and the pony express. Their only chances for real thrills are limited to airships, submarines and "jitneys." Most blessings like hair and teeth and eyesight are not valued until some realization comes of their absence.

So I claim it is with the benefits of a library school. For a full appreciation it is necessary to have had a library position of some responsibility without any technical preparation. Then imagine holding this position in a place remote from library centers with only rare and fleeting glimpses of visiting librarians; struggling along with only vague ideas of what other librarians were doing and with a dim realization of the goal. Spending hours in fruitless discussion of the best way to do some simple thing and then doing it with the same perplexing uncertainty. Sometimes hitting the right way by a lucky accident or sheer common sense, but more often finding the right way only by the conflicts. Conscious always of so much wasted time and filled with an uncomfortable feeling of inefficiency. Groping about in this sort of twilight fell to my lot for six years. Hence, I speak on the subject of library training with strong feeling, from first hand knowledge and with at least some understanding of Helen Keller's awakening.

Any summary of these results or benefits naturally it seems to me must fall under two heads, the inspirational and the practical, though there is a borderland where the one merges into the other.

Perhaps we go to library school for the practical details, but I am not sure but the

most valuable thing we carry away is the inspiration—that fine enthusiasm that we like to appropriate and call "library spirit." To have entered with only indifferent interest and to have this gradually changed to intelligent zeal is perhaps the best result of any course. To find a group of men and women who could have been successful in any calling deliberately making the preparation of others their life work adds a dignity to the profession hardly realized before.

Then seeing and hearing some of the great librarians of the country is an inestimable benefit. I particularly remember one who came in our senior year. Her poise and charm and capability became a legend among us. I don't remember much of what she said but I have never been able to think of her without a thrill of enthusiasm. And so it was as they came and went. The idea insisently grew that it was worth while for us to follow—afar off it may be, but still to follow. Perhaps in all of us there is a little spark of missionary zeal that only needs this encouraging contact to become a real force. This effect of personal influence that I am struggling to express is just the thing that cannot be acquired by a correspondence school, no matter how systematic its courses may be. Nor can it be secured from library meetings or library periodicals, for these are conducted primarily for those already trained. While not denying that much can be gained by the diligent seeker and recognizing the great librarians who never attended a library school, yet for most of us it has been the surest and easiest path to any degree of efficiency.

You will hardly question that it is the surest and safest, otherwise you would not be here, but I know only too well that there have been days when you have doubted its being the easiest "way out." But after six years of stumbling along the way and in the light of experience afterward, I know that the two years' course of training is infinitely easier as well as surer and safer. I am thinking particularly now of the in-

\*An address delivered before the students of the University of Illinois Library School.

THE RED HOOK BRANCH, BROOKLYN PUBLIC LIBRARY

spirational part, although the same is true of the practical details to be considered later. Misguided zeal in any cause is historically dangerous and the library is no exceptional field. So in full view of our responsibilities it behooves us to gain whatever we can in the way of advice and guidance.

But perhaps not less important is the growing vision that comes to us of a library's possibilities, and what is expected of the one who aspires to its keeping.

That a book is of no value in a community until it is read by the right person. That the library has only begun its mission in buying and sheltering this book, but the real test comes in making the connection between the book and its reader. Then multiply this effort by the number of people in the community. This is our library problem. If means can be devised by which this can go on continuously, then we might hope to realize that high ideal of "enriching the whole community." Glimpses of this sort are given to us occasionally, like a view of the "promised land"—a place where we, like Moses, may never enter but traveling toward the shining mountains is never without hope.

Perhaps I was more benighted than others with library aspirations but this function of a library never came to me with any degree of fullness until I attended library school. Even then it was not a sudden revelation but a gradual awakening. With it came the realization that each course in the training school was only a means to this end. Why was so much time put on book selection except that we might get the right book for the people who needed it? Why give such careful attention to the order routine except that the right book once chosen might be secured? Why go into all the details of cataloging except that this book might be more surely and quickly available for the right person? If you have ever failed to find a book through a mistake in the catalog then you know the value of accuracy in details. With the reader before you and the book in the library and the clue to its location lost, then have you tasted the bitterness of inefficiency. "Enriching the community" can never come this way, and at such times the

view of the "promised land" recedes. And then it is you long for a training school for the person who made the catalog.

Doubtless in the beginning of the course most of us were quite overwhelmed with the mass of details. There seemed to be no end. The great purpose was obscured. We couldn't "see the town for the houses." But like laying an intricate pattern of mosaics we added to the design bit by bit until we had the full view of a library complete in its plan and equipment. Then studying its place in the community we caught the right perspective and realized that this had been the end in view from the beginning.

Another result not to be despised in maintaining efficiency for the day's work is the personal satisfaction in knowing the approved methods. As Marden says in one of his books on success, "There is no tonic quite so good as the feeling at night that you have done your best." After a library course it is not your best alone but what those with experience have found to be the best. A tired librarian needs all the tonic of this sort that can come to her. Then if she does know her work it soon becomes evident to her board of trustees. They may not be learned in the technical details or be conversant with library terms, but they are shrewd critics of results. Their opinion of the librarian and her work soon reaches the little world outside. A favorable report, reinforced with natural civic pride in their own library, stimulates interest among the people. A favorable atmosphere is created. The wheels turn smoothly, and everybody is happy. Could any tonic do more than this?

Working with others in the library school brings with it a sort of stimulus that working alone cannot easily create. As the months go on this influence cumulates into an enthusiasm that surmounts all ordinary obstacles. We may not be able to rise to the heights that "welcome each rebuff that turns earth's smoothness rough," but we can face the day's work unflinchingly.

Now, another advantage that belongs in that borderland between the inspirational and the practical is the confidence you have somehow gained in your ability to meet a situation. I do not mean any undue egotism, for the liberal and constant supply of

red ink administered daily serves as a most effectual check to over-estimation. But I do mean that perfectly legitimate confidence that you have earned by hard work and that justly belongs to you. Perhaps it is, after all, not so much a gain of confidence as it is a loss of fear.

The most vivid example of this in my own experience came in the senior year. At a call meeting of the class which had escaped my notice, I was chosen library school reporter on the *Illini*. I assure you no blessing was ever more effectually disguised. I felt limp and helpless and hopeless. The regular work was already heavy. This seemed a veritable last straw. I tried every way of escape, but there was no dignified exit. Describing an event in a family letter, and describing that same event for the circle reached by the *Illini*, was so distinctly different that I was terrified by the thought of it. After a sort of confessional interview with the director, I came away with a faint hope and a definite promise of revision. But even so, the first attempt was most laborious composition, attended with visions of being quoted in the *Lin-o-type*. The second was but little better. Yet as time went on the dread grew less, and Mr. Windsor's patience never failed. What I wrote was most commonplace, and I only mention it because by forcing myself to write these little notes I overcame this foolish fear.

Hardly anything in that year's course has been of more practical benefit. Writing "library notes" has become a regular, and by no means unpleasant, feature of the week's work. I am under no misapprehension as to their quality, but neither have I any doubt as to the value of such notices, crude as they are, in advertising a library. It is not so much a question of brilliancy as it is of constancy. Whatever success mine have had, I trace back to those senior struggles with the "notes" for the *Illini*. Then it was that I "cast out fear."

This is only one illustration. Much the same thing may happen in any course. The privilege of doing a difficult piece of work under the direction of some one who knows how makes it a comparatively easy task ever after. Whether it is what our Christian Science friends call "casting out fear,"

or whether it is gaining confidence, it does not really matter. But, whatever it is, this feeling is a valuable asset in practical work and is directly due to the training you have so labored to acquire. If this feeling of confidence has any justification, it somehow communicates itself to your associates without any effort on your part, and your opinions and decisions are respected.

Another result that is a mental state, at least in some degree acquired at library school, is adaptability. For if we have learned anything in a two years' course of library training, it is that there is generally more than one good way of doing the same thing.

As an example of this, I went to the library school with strong feeling that the only good way to stamp a book for circulation was with the date due. Another member of the class had equally strong feeling about the date of issue. Between ourselves we argued the question exhaustively. After a year's experience as librarians we met again, and my friend confessed she charged all books by the date due, and I admitted using only the date of issue. We had convinced each other that it was possible to use either method satisfactorily.

This difference in adaptability is particularly evident between trained and untrained assistants. The new girl with training seems to find herself at home in a strange library almost in one day's time. She may never have used your particular charging system, but with one explanation she can use it without difficulty. On the other hand, the untrained girl has to find her way step by step, and feels some irritation that all libraries cannot be just like the one she has known. She finds it hard to adjust herself. She doesn't know enough of the theory to grasp the main purpose back of the details. I have found it necessary to warn girls about becoming set in their ways of doing things. "Never get so old that you cannot adapt yourself to new conditions."

Now, I wish to speak of some of the practical benefits as I have found them. Those of you who have had experience in a public library know that you never learned anything in your life but what came into good use some day. It may have been a nursery rhyme or a foreign phrase, a fairy

story, an historical event, a mechanical device or the pure food law—there is really no end to the possibilities. On the other hand, I have tried to think what course of study or what bits of knowledge would be useless in a public library, and I never have been able even to make a beginning of the list. I can think of nothing that seems to me a greater waste of time than playing solitaire, but when you sort the cards after a big day's circulation you need a skilful manipulation that might be acquired in that way. Yet with nothing against those who find this amusement enjoyable or helpful, I should hardly advise a course in solitaire in order to secure this efficiency.

But if all sorts of general information and such accomplishments as playing solitaire are useful in a library, how much more will be the specialized knowledge gained in library training? In taking up these specific things, I wish first to refer to the notes taken in the classroom. In taking these notes, I know all about how hard it is to sift out the important points and the memory chances you all take and the bewilderment that comes over you when you run through the pages before an examination. I know, too, about the weariness that makes a bibliographical institution look like a public document, and trade bibliography like the end of the world. But as Henry James would say, "You can take it from me" that these notes will be a lifeboat to you some day. When you are miles away from any library authority and a problem must be solved, then you will appreciate these notes. In nearly every case will they help you out of the difficulty. My first experience came a few weeks after the close of the senior year, when I taught cataloging in a summer school. Before leaving the university here I revised all my notes, simplifying them for the short course and adding sample cards for all possibilities. These cards, with the original set, made a package of no small size. I did not dare to pack them in my trunk and take chances on never seeing them again. In my handbag I carried them, and wherever I went there my catalog notes went also. No jewel casket could have been guarded more carefully. It was well that I took no chances, for teaching the cataloging was hard enough with the best of notes

—without them it would have been utterly impossible. These same notes have been used many times since and are now in a drawer of my desk. With them I can show any apprentice in a few lessons the main principles of cataloging.

Near my desk in one drawer of a pamphlet case are all my library notes—each course in a separate file and all labeled. I call it my "Library of ready reference." One instance will show that it has some claim to this title. At a meeting of the trustees it was decided to place library signs in the public buildings. One of the trustees agreed to see that it was done. To my great surprise, and with perfectly unjustifiable faith in the librarian, this trustee said he would wait while I made the sign and take it to the printer at once. This was in a state where speed is not particularly good form, except on the racetrack.

Well, I simply copied the sign I had made here in the library school, changing the name and adding the suggestion written across one corner by the reviser, and, behold, my sign was ready! That trustee knew nothing of the three long hours I had spent in making the original. This is one reason why I call these notes my "Library of ready reference."

Another instance occurred in this same library. We were presented with \$500 to buy books for the children's room. One of the conditions was that the librarian submit a list to the donor within a few days. Here was responsibility as well as work, for Miss Lyman's course had impressed us with the perils of the wrong book. Her lists were pressed into service, and from them and the "Pittsburgh catalog for children," our list was made and approved. Not an Elsie or a Stratemeyer appeared, nor anything else that I would be ashamed to have on the shelves to-day. What might have happened is not a pleasant reflection.

Most of us owe nearly all we know of children's literature to this short course. When you study the statistics of public libraries and realize the number of juvenile readers and the part they play in the total circulation, then you realize its importance. Even short as the course is, you get something of what effect reading has on character building. It becomes quickly evident

that here is a matchless opportunity for enriching the community for all time to come, and with it equally evident is the responsibility of the choice of good and evil for these young readers. A librarian has no place in a public library without some understanding of children and their books, and the more she knows the better.

In going back to the notebooks, it would be hard to say what part had been most used. In planning lessons for an apprentice, they are invaluable. For example, the lessons in alphabeting are ready, with hardly a change. I have taught at least forty-five girls how to alphabet cards from the notes and lists that were given here at library school.

Another set of notes that has been of constant help is the reference set. I can subdue a book agent in less time and give him more wholesome respect for the librarian by reading him a few lines from these reference notes than in any way I've yet found. One extra bold youth wanted to copy all the notes I had on reference works, but I quietly told him the handwriting could not be deciphered by anyone else—a perfectly true statement. A few weeks ago, when I was urging the purchase of the "Annals of the American Academy of Political and Social Science," I produced the note taken down in the class. We now have the set.

When I first went to Council Bluffs the whole staff took a course in the use of reference books. Then the notes were of the greatest help, even the problems being ready to use. At a time like this you forget all about how hard it was to make that eight o'clock class, and how your fountain pen flew to keep up with the lecturer.

For the dark days of trade bibliography, I can offer this consolation: In real life all other hard days will seem easy by comparison. You will never again have so many difficulties listed on one small slip of paper. And then, after that course passed into history, with it will go all fear of those trade catalogs, and you will handle those formidable volumes with the ease of your favorite encyclopædia. Verily, "sweet are the uses of adversity," and every cloud does have its silver lining even in the gloom that surrounds trade bibliography.

And now for "Book selection." In a medium-size library this work necessarily and rightfully falls to the librarian, and it is hard to see how anything she does exceeds this in importance. The value of her library to the community depends on the wise selection of the books she places on the shelves. And I believe that most of us, on entering a library school, have less preparation for this particular work than any other we attempt. What did we know of grasping contents or judging the merits of a book? Of comparative criticism or annotations? Where would we have learned to use the *Booklist*, the *Book Review Digest*, *Reader's Guide*, and the *Publishers' Weekly* and to distinguish between their value? Book reviews and annotations I know are a source of weariness to the flesh and the cause of sleepless nights. But have you ever suffered more in writing them than you have in listening to a long-drawn-out story of a book by some talkative friend? Then, did you compare this tiresome description with a crisp, clear annotation that tells all you need to know in three or four short sentences? Then did it come to you that this is what is expected of any trained library worker? That this is really what the person before the desk wants and has a right to expect? How can this faculty be acquired except through a systematic course? And where are we likely to get such a course except in a training school? No, rather than shorten the time in book selection, I should advise doubling it. And so will you, whether you are a librarian or desk assistant.

Coming back to the notes in this connection, I have found these reviews, outlines and annotations a very special help in writing book notes for the newspaper. Many of mine have been assembled and published in almost the same form as they came from the reviser. If you are expected to send in these weekly lists, and the day arrives with no time to do it, then you will find these notes a very present help in time of trouble.

You must not misunderstand the value I place on the notebooks. Of course, the most valuable thing you obtained in this course or in any other was not what you set down on the paper, but the skill you acquired for similar work in your own library.

Closely associated in actual work with

book selection is the order routine. I combine the two to such an extent that I hardly know where one ends and the other begins. If the selection is made through the *Booklist* or the *Book Review Digest*, where all trade details are given, these are at once recorded. If you have learned a complicated order routine it is an easy matter to simplify for a smaller library and yet retain all the essentials.

And now for that library stumbling block—"Public documents." Where can we get any systematic instruction as to their use except in a library school? Do you suppose any librarian has ever completely overcome her confusion and awe before this ever-increasing collection, even with training plus experience? Has even Miss Adelaide Hasse no sinking of the heart when starting out on a seemingly hopeless quest?

I have often wondered, too, if any other class in this library school has ever been so consumed with zeal over public documents as ours. In my notes there are pages and pages closely covered from four different instructors with as many sets of problems. I have never known whether the faculty had considered us especially worthy of so much attention or so much more hopeless than other classes. Whatever it was, we were as dauntless and full of valor as the German army. Whether we met defeat or victory, we knew no respite and renewed the attack the next morning at daybreak. Not unlike the Polish battlefields, the same ground was taken and retaken as often as the call came forth. What led to terms of peace I never knew. Certainly there were still more worlds to conquer, and equally certain there was no sign of surrender in the attacking force. But we did learn something about public documents. We could use the checklist and the indexes with some degree of intelligence. And we did get an idea of what sort of information to expect from these long rows of uniform volumes.

Later this became the greatest help to us when our staff meetings one winter were devoted to the use of public documents. Ours being a depository library, we had the documents and were expected to use them. The assistants regarded them with the same helpless awe that I understood only too well. Then it was that my "Li-

brary of ready reference" again saved the day. I culled what we needed most from the four sets of notes, and followed each lesson with problems from my ample store. It was hard to believe that anything once so difficult could ever be so easy. It was the difference between a little knowledge and much ignorance. The staff almost caught the zeal of our senior class and declared the indexes not much harder to use than "Poole."

And so it has been with nearly all the courses. My particular experience has not been wide enough to cover all the subjects included in the two years' work, but that is no fault of the library school, and certainly no reason for complaint on my part. It is better to have learned a few things that may never be needed than to need a few things you have never learned. For, as I said in the beginning, it is hard to imagine any superfluous knowledge on the part of a librarian.

I believe you will all agree with me that the greatest trial in the work of a library school is the endless succession of details. These details begin on the first day and continue without remission to the end. They range all the way from every sign and symbol of punctuation through all the intricacies of subject headings and cross-references. Life becomes a confused nightmare of perpetual mistakes.

But I have found a nightmare worse than this: a library of perpetual mistakes, a library where details had been disregarded, where you couldn't depend on the records. In one there had been a trained librarian, with a vision of wonderful things that went no farther in their accomplishment than a beginning—a librarian who couldn't bear the day of small things that would mean the realization of her original plan. This aversion to the details made the difference between success and failure.

One mistake in a call number is a small thing, but it places a book in the wrong place. A card filed out of its order becomes useless. Careless order routine or book-keeping become serious drawbacks. No mistake ever seems effectually buried, but rises up to confront you at the most unseasonable time.

So don't despise the details and think they

are only trivial matters. If you have that feeling and can't overcome it, then don't become a librarian. If you do, your successor will not rise up and call you blessed.

I remember so well in our senior year we heard glowing accounts of what a young library school graduate had accomplished. Her library, apparently dead, had taken on new life and was becoming an active force in the community. It was all true. But what had she done? Simply this: she had installed the library machinery. With skill enough to use it, she had pressed the button. Once in motion the work went on. Those outside the secret felt that a miracle was being performed. Really she was only making a local application of library methods. The response on the part of the people was a perfectly natural result. This particular young woman had learned her lesson and was able to apply it. She was not exceptional; neither was the community. The comfort and encouragement this was to me I am glad to pass on to you. This bit of history may repeat itself endlessly. These are some of the things that library training makes possible.

But it may be well to note a few of the things that no library school can do. It can teach methods that have been found successful, and it can make available the cumulated experience of the profession. If this were all that makes a successful librarian, then any good school could insure success. But we all have to admit the value of personal qualities where a library school is as helpless as it is irresponsible. We are told much about tact and good temper, but a library school can no more create tact than it can change leopard's spots. Turning an ugly disposition into an agreeable one is no more possible at the library age than transmuted lead into pure gold. Even forcing indolence into industry can hardly be made a habit in two years' time, and a relapse is almost a certainty. So it is with many of these essentials to good librarianship. They are qualities not likely to be acquired in mature years. When failures occur with trained librarians they are much more likely to be due to a lack of these personal traits than to any fault in the technical training they have received.

Raising the grade of library work all over

the country is directly due to the influence of library schools and training classes. Library history of the past twenty-five years clearly proves this and makes, as one has said, "not a comparison, but a contrast." Of course, no amount of training can ever make a genius, and no one has ever laid this responsibility on a library school. And yet we may well believe that some of our great library geniuses might have left less criticism behind them if they had known more of systematic routine. We do know that the influence of trained assistants in all the large libraries and at least trained librarians in the smaller ones has lifted our work to the dignity of a profession. As one librarian has said: "This is, after all, the truest raising of the grade—not adding to the height of the mountains, to be sure, but filling in the valleys so that there comes much nearer being a level, not a dead level of conformity, but a very much alive level of attainment and usefulness apparent in the library work all over the country."

#### A NEW DUTCH UNIVERSITY LIBRARY

BESIDES the four famous universities of Amsterdam, Leyden, Utrecht, and Groningen, the eleven provinces of the Netherlands maintain four special academies: an agricultural at Wageningen, a technological at Delft, and two sectarian universities. To this number—decidedly respectable for a country of the size of New Jersey and with a population of a little over five million—a ninth university has been added: the Commercial University at Rotterdam. The recent development of the study of economy, political, financial, commercial, and sociological, necessitated this specialization, and the support this new institution and its new library are receiving from all sides, is the best proof that it fills a long-felt want.

At the opening, the library, whose librarian is Dr. T. P. Sevensma, had at its disposal 5000 volumes, 250 current periodicals, and a so-called "Economisch Archief," containing a collection of reports, communications, documents, etc., relating to commerce and industry. The library enjoys the effective assistance of the various chambers of commerce and similar institutions.

## RUMINATIONS OF A BIBLIOLATER

THE year is about over and in assuming the vocational it is well that we make a few resolves, so that our next year may be better worth while and that we may be conscious of a record of accomplishment.

Being engaged in library work, it is well that we should review the triumphs and failures of the past year and so analyze our actions that we may become even more agreeable, even more helpful, even more efficient than in the past.

In the first place. A visit to the library is not a social call. It may be presumed that the citizen has come to secure some definite book or to secure some definite information. Otherwise he might come to look over the shelves in the hope that some interesting presentment may meet his jaded vision. In any case it is not necessary to discuss the weather with him nor to compare the relative comforts of the present state of the atmosphere with that of last summer when your brother-in-law had typhoid fever. I recently observed a poor devil who had asked for a dictionary perspiring helplessly in the clutch of a kindly soul who was pouring upon him the precious ointment of her family affairs to such an extent that it spread a hopeless inertia over his whole being.

Secondly. When a borrower has chosen a volume and is evidently absorbed in its contents, do not rush up to him with a novel which some one else may have thought interesting and insist upon the victim's listening to a second-hand panegyric upon its virtues. I have seen saintly souls who have entered the institution with the expression of angels retire with murder in their hearts when compelled to break their trend of thought to listen to the vapors of an assistant who invariably has her hat on ten minutes before relieving time and who gives little thought to things literary until the next morning, when she is fifteen minutes late. I am not, of course, speaking of those who naturally fall into good library habits. They greet patrons with a bright smile or a "Good-morning" and then go on with their work until asked for information. A few bashful people

will require some further approach and these cases are easily recognized. The library is a place for quiet study. Even the delivery desk should not present the attributes of an afternoon tea nor should loud laughter greet the mild wit of the influential citizen. I recently heard an ordinarily kindly man leave a law library muttering something about "corrosive sublimate" as he deserted a disquisition on Magna Charta.

It is an ever mooted question as to how, when and where a telephone should figure in the daily life of a library assistant. In the majority of cases no rule would be necessary and in many others the excessive use of the 'phone may be charged to zealous and inconsiderate friends who care not for the time and place but seek only the girl. Incessant calls with nervous laughter and inane conversation on the part of the few make the instrument a menace to the work in hand. If the 'phones are in the open the result is noise and if stalls are provided the conversation is prolonged.

One of the great disappointments of library management is the awakening to the facts that so many of the assistants are so little affected by their daily environment. Very few take any thought of their life-work away from the building. Slang, movies, soda-water fountains take the place of the association with the best literature of the ages. I don't wish to present an exaggerated picture, for the young women who work in libraries are exceptionally well-behaved and are alert in mind. As compared with their sisters in other fields they more than hold their own; but I am often astonished that the influence of environment, which is so evident in the lower animals, is not potent enough to maintain their full interest and active zeal in the intellectual delights which surround them. There has been a change for the good in the average which is especially marked where the merit system prevails, but the average is still low. Then again—oh! but what's the use. Nobody's listening. Let's go to lunch!

T. L. M.

## HIGH SCHOOL LIBRARIES IN OAKLAND

THE department of public instruction of Oakland, Cal., has published as a board of education bulletin a little pamphlet describing the high school libraries which are so well administered in that city. The account is so interesting and so full of suggestion that we are reprinting it practically verbatim.

"Libraries have grown into the High School system of Oakland in answer to a persistent demand," says the writer of the article. "They were established first by the English and history departments, but have extended their service to all departments, and are now looked upon as indispensable parts of school equipment. Their aim is to supply the rapid, highly specialized book service necessary in schools, while preserving the thoroughness of the best public library methods. They secure efficient library aid for the faculties and provide special library instruction for the pupils, besides filling the immediate daily book demands of our High School-going public of some four thousand boys and girls.

"Each of the city's high schools—Oakland, Fremont, Technical, University and Vocational—has a library in its own building. The first three have trained librarians in charge. The libraries are supported from the school fund, and the librarians are elected by the Board of Education, each librarian becoming a member of the faculty of the school to which appointment has been made, with a salary standard of an instructor of three years' experience. Only trained and experienced librarians are employed who hold a college certificate in addition to their library credentials.

"Methods of administration, including terms and manner of loans, are decided upon by the librarian of each school according to the size of the library, the necessity for the repeated use of certain books and the average time required by pupils of that school for accomplishing their outside reading. In one school the term of a loan may be for one week or for two weeks, while in another school most of the books may circulate as period or over-night loans. In schools where books circulate on period

loans, the same book may be borrowed and returned seven to nine times in the day. This, of course, requires special loaning arrangements that are almost impossible under public library methods. The greatest freedom is given the librarian in adapting the work to local conditions. One of the schools has a book collection of eight thousand volumes, another has five thousand, while others have smaller numbers. It is the plan to increase the collection in each school until it shall reach the ten thousand mark and then to make only such purchases as shall keep the libraries replenished and modern. All book buying is done after consultation between heads of departments and the librarian, and regular library prices are obtained on purchases. Reading lists, again, are made out through the united work of teachers and librarians.

"The circulation of books from the school libraries is large. In a school of a thousand pupils it is not unusual to circulate five hundred books a day. Besides this circulation the same school will handle three hundred and fifty reference workers, bringing the total of actual book users in the day up to eight or sometimes nine hundred. In schools of larger attendance or where the nine-period system is in operation, the circulation rises accordingly.

"This book delivery, however, is only a part of the work done. Special reference material is collected for students from all departments, who bring to the library the endless questions arising in the preparation of work for the classroom. When fifty boys and girls are in the library during a study period, their questions will dive, seemingly, into all things knowable, from the Greek drama to the habits of humming-birds, and from the principles of the spectrum to the characteristics of furniture in the reign of Queen Anne."

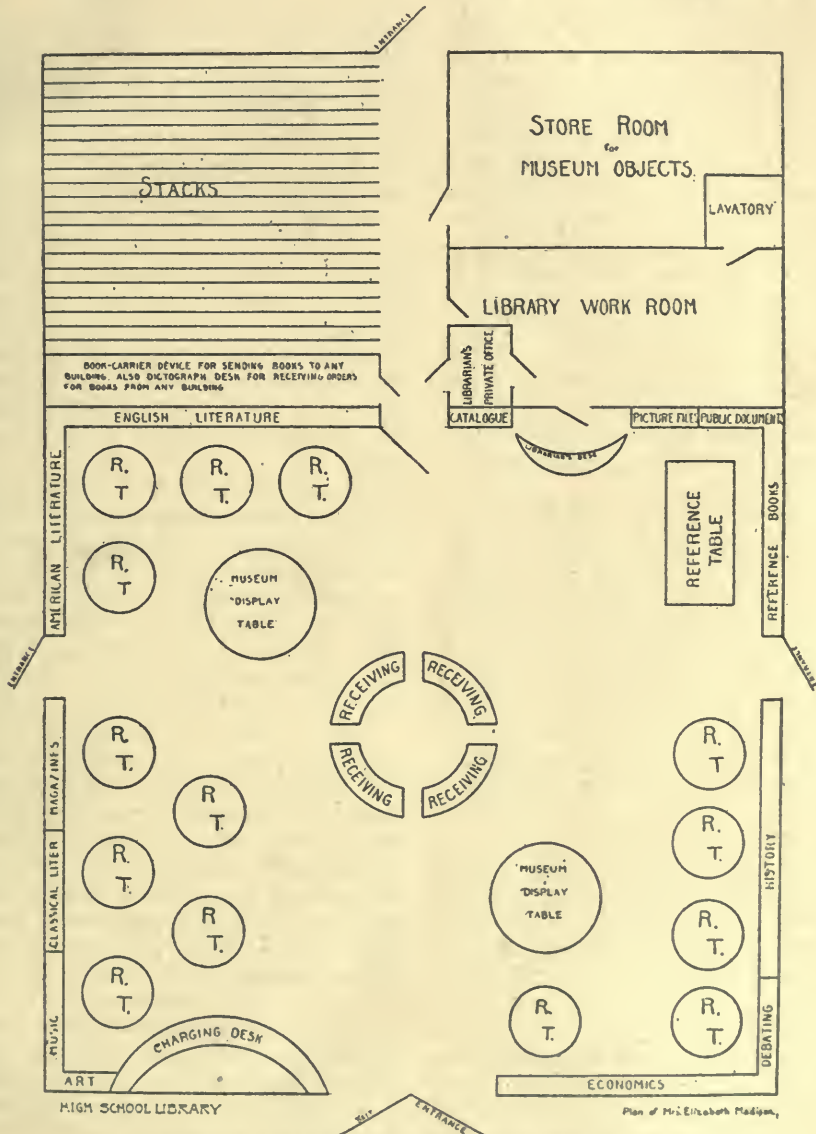

"Back magazines are preserved, and with the help of *Readers' Guide*, much valuable reference material is daily supplied from this source.

"Bibliographies are made out for the use of both teachers and students. It is a great saving of time to the teacher to have reliable lists of all sources of library material upon a given subject. If the teacher wants quickly an outline of the places where the

best information can be found upon chivalry, let us say, or forestry, or Roman costume, or Gothic architecture, or the construction of the cotton gin, the library will supply the required lists. Teachers who have been accustomed to spend several hours on the "hunting up" work on a given subject in a High School without a library service find that they can prepare the same work in a few minutes in an organized school library.

"Exhibitions of pictures and other material are assembled from time to time and displayed in the library as the classroom work brings this or that subject to the fore in the term's course of study. Stereopticons and lantern slides are filed and assembled in the same way for special talks to classes in history, science or English.

"Some of the libraries are making beginnings towards appropriate museum collections. Rare newspapers of historical

A SUGGESTIVE ARRANGEMENT FOR A HIGH SCHOOL LIBRARY

interest, manuscript letters relating to adventures in early days in California, specimens of old currency and such other material of curious value are frequently contributed by students whose interest in such relics has been stimulated by seeing exhibits in the library and who are glad to give such things from their family collections when they know that they will be properly cared for in the permanent collections of their school.

"In one of the schools the librarian does several hours of story-telling each week. In other schools lectures are given by the librarian on the selection of an individual library, how to buy, how books are made, how to judge of the value of certain classes of books, and on the history of bookmaking in relation to the history of civilization. Another librarian lectures on magazine literature of the day and on current poetry.

"Newspapers are handled in some of the schools in the usual library way, while in other schools they are introduced through clippings which are posted daily covering the great world events, and representing also the legislative work in federal and state matters and important local affairs as these topics are brought out in the classes in current history.

"Handsomely bound and illustrated editions of the classics are purchased occasionally and kept in the libraries for reference only. Every day some of the young people ask to examine one or more of these volumes, for they delight to see the characters whom they have studied in the ordinary text-book spring up into vivid life and color from the page illustrated by some master artist. It is hard to overestimate the cultural value of a few finely published books.

"Instruction in the use of libraries and in the 'short cuts' known to the trained reference worker are taught in all the high schools. Catalogs of the best professional standard are made or are being made for all the school libraries, so that all familiarity gained with these book aids in the high school may be applicable in university or city libraries. The universities say that the high school pupil trained in library methods when he enters the university can save three months of his college time over

his less prepared competitors. This work is usually required as a part of the English course, about three lectures a term being obligatory as well as three written papers on the subject of library use.

"Technical library training for those who wish to enter the work as a profession is taught to certain selected students. Several of those who have taken these courses have made a professional beginning already, although these courses have been established only about a year and a half.

"In none of our high schools is the library used as an assembly or a study hall. It is always reserved entirely for borrowers or reference workers. The best equipment is necessary in a school library, and the safest policy has been found to be 'build slowly and build well.' Special effort is made to render the library attractive by the selection of good pictures, appropriate furniture and simple decorations. In some of the schools the student body has been so interested in the library that it has provided extra adornments in the way of flowers, potted plants, window curtains and occasional small pieces of statuary or exceptionally good prints to hang on the walls.

"In cases where a Students' Activity Credit is recognized, it has been found practicable to allow a quarter of a credit a term for one period of work done in the library as student assistant. The pupils take pride in seeing members of the student body in these positions, and seem to feel more surely than ever that the high school library is 'our very own library.'"

Some statistics on the pamphlet's cover show the average daily attendance in the Oakland High Schools to be 3089, and the number of high school teachers 160. The High School Libraries collectively contain 18,376 books, the daily average circulation of books in the libraries being 1620. The estimated daily reference work in all the High School Libraries is 1109, and the estimated daily book use, 2729.

"A home without books is like a hearth without fire, a cupboard without stores, a purse without money, a life without love, a world without a sun, a universe without a God, a negation without an antithesis."

THE LIBRARY OF THE KANSAS  
STATE NORMAL SCHOOL.  
AT EMPORIA

In a paper read in 1899 before the Kansas State Historical Society, President A. R. Taylor reviewed the history of the State Normal School at Emporia. Regarding the library he said:

"No single feature of the school has grown more rapidly than its library. In 1884 there were scarcely 1000 books in the library, everything having gone with the fire in 1878. Now there are nearly 14,000 volumes on the shelves, the average increase being nearly 1000 volumes per year. The books have been selected with great care, and as a working library it has few superiors. Four large and well-lighted rooms accommodate the library, and they are usually crowded with students."

When Professor Holmes E. Sadler, who is listed in the catalog of 1881 as "librarian, natural science and elocution," took charge of the library in September 1880, he found "170 books in the store room, a few remaining from the old library, but mostly donations since the fire."

According to the printed records, the librarians since 1880 have been: 1880-1882, Holmes E. Sadler; 1882-1884, Viola V. Price, librarian and English; 1884-1886, Margaret A. Mack, student; 1886-1887, Mary L. Berkey, student; 1887-1888, Mrs. Louise Fox, student; 1888-1889, Rose Blanton, student; 1889-1892, Mary A. Whitney, librarian and assistant in history; 1892-1910, Elva E. Clarke, librarian; 1910-1911, Grace M. Leaf, acting librarian; 1911—, Willis H. Kerr, librarian.

To-day the library occupies the beautiful Kellogg Library building, completed in 1902-1903 at a cost of \$60,000. It has more than 37,000 classified and cataloged volumes, and more than 4000 classified pamphlets. It is growing at the rate of 3000 volumes per year. It receives and preserves files of 300 periodicals; in addition it receives 300 Kansas newspapers. It is open for use 75 hours each week. The average hourly attendance of readers is nearly 100, or about 1200 daily. Its staff numbers nine trained library workers and five student assistants. The average number of books checked for use outside the

library is 200 daily throughout the year. The reference use within the library is uncounted and uncountable.

Some of the special features of the library are:

*Reference Department:* An unusually strong equipment of up-to-date book tools, question-answerers, keys to all other books. In vertical file, instantly available by topic, are thousands of clippings, affording material not elsewhere available, often the latest. Also in vertical file are reading and reference lists on more than a thousand topics, suggesting best sources of information. Government documents are systematically filed, indexed, and available.

*School Department:* The purpose is to make this a model public school library in equipment, selection, and atmosphere. It occupies its own two rooms on the first floor of Kellogg Library. It has its own librarian and assistant on full time, its own catalog, and two thousand recommended books. Its collection of several thousand mounted pictures, filed by topic in vertical file, and its post card collection, are in constant use. Its facilities are eagerly used by pupils of the Training School, practice and supervising teachers, and visiting teachers and parents.

*Extension Service:* The library began its extension service in January, 1913. Books, pamphlets, and clippings are sent through the mails to responsible parties, for high school debates, orations, and essays; for papers and addresses by teachers and school officers; for papers by club women; and for correspondence study courses conducted by the school. During the year September 1, 1914, to August 31, 1915, there were sent out 647 packages. This department also answers many questions on library organization, issues two series of library information circulars (*Kansas Library Newsletter*, and *Library Extension Circular*); and the librarian has made addresses or visited libraries for advisory purposes in seventeen Kansas towns within the past year.

Libraries are the wardrobes of our literature, whence men properly informed might bring something for ornament, much for curiosity, and more for use.—J. DYER.

## CUMULATIVE PRINTED CATALOG FOR LARGE LIBRARIES

At the fall meeting of the Eastern College Librarians some interest was shown in the mention by Mr. Leach, the librarian's assistant at Princeton, of the careful experiments which have been made there as to the possibility of a cumulative, title-a-bar catalog kept up to date. The following memoranda are in reply to a request of the editor of the *LIBRARY JOURNAL* for the facts as to these experiments.

The principle of the title-a-bar catalog is precisely the principle of the card catalog. By making a bar long enough to contain the essentials of a catalog entry on a single bar, that bar can be used with all the interchangeableness of the card in the card catalog, and almost the same facility.

In this fact lies the germ of a revolution in library cataloging almost as radical as that effected by the card catalog itself. It points to a return of the printed catalog, and there are those who believe that the time is not very far distant when it will be as discreditable for a large library not to have at least a printed author index catalog as it is now not to have a card catalog. At present, however, after twenty-five years of experiment the matter must be regarded as still in a tentative stage.

In theory the whole matter is very simple and would seem to call only for a little courage and carrying out. The method has been applied and carried out successfully commercially in the indexes to periodicals familiar to all librarians, and in address lists and many other cases where matter needs to be revised and reprinted frequently. The possibilities are best suggested by the modern telephone book, which contains in a single light, handy volume enough title-a-line references to author catalog a university library of half a million volumes on the basis of a 50-letter bar. The "United States catalog," which has a bar of about this length, would provide in a single volume on a strict title-a-bar basis, an index author catalog for a library of 2,000,000 volumes. In short, it is possible to provide a brief title, index, author, title-a-bar catalog of even the very largest library, say 3,000,000 entries, in a single volume not larger than some in customary active use

in the library. Even if the longer title or 100-letter bar is used, a single volume might still provide for 1,500,000 entries.

Everyone confesses that a printed catalog, kept up to date, would be a convenience and an economy in many ways; the question is simply one of cost, and no one has been bold enough as yet to try it out on the only basis which could give a full test of the advantage of the method, *i. e.*, one which had at least author reference to every book in a large library. The reasons for this are, first, the chances of unknown pitfalls; second, doubts whether practical details of form have been yet settled; third, some large libraries have made experiments in cumulation and have declared that the mechanical difficulties of a complete cumulated catalog are insuperable.

Nevertheless, the method has been in use in minor ways, and it has been possible for libraries to make practical experiments to a certain point.

The Princeton experiments have been based on the fact that some twenty department and seminary libraries here demand special catalogs, first of the department collections, and then for all the books in the library relating to their subject. It was found that most of these requests would be satisfied by a simple author catalog, and it was estimated that ninety-five per cent of the questions asked of a catalog in the small classified libraries would be answered by a simple author catalog with 100-letter entry.

It was figured that to supply and keep separate card catalogs would cost as much if not more than this method, in any event, while there was a positive help towards the proposition in the fact that it was necessary on other grounds to print several special catalogs, some of which were paid for by interested outsiders, and their bars were available without expense. It was decided, therefore, first to combine the special catalogs, then to add in other seminary or department libraries as fast as time and means would allow. The result is a joint list of the seminary and department libraries, which now includes most of the outlying libraries. It now contains about 30,000 entries and affords a good basis for real experiment.

For several years now the additions to the seminary and department libraries have been printed as a weekly bulletin, posted in the various libraries, and cumulated into the collected volume from time to time. Last year the experiment was made of cumulating into this catalog every two weeks. 1566 titles were added and filed into 319 pages of type, 22 cumulated editions were published in twenty copies and distributed among the special libraries at a total cost for composition, filing, paper, ink, and interest, of \$163.85. The methods developed in this work, however, are such as to suggest that this catalog could be made and kept up to date each day at a cost of

the monthly supplement. The cost of filing these in and printing 30 copies of this cumulated catalog of 60 pages was \$1.27. As the same bars are used as for the weekly bulletin, composition for this is a by-product. This points to a 200-page supplement of 15,000 titles, costing about one cent per title, exclusive of composition and paper.

One of the most interesting aspects of this method is its use for special lists. The author list once extant in bars, arranged by pages, special lists out of this can be printed at astonishingly small cost. If there were a catalog of a whole library, all the multitude of select lists for the various

AN EXACT REPRODUCTION OF THE FIRST ENTRIES IN THE PRINTED CUMULATIVE AUTHOR FINDING LIST FOR THE PRINCETON UNIVERSITY MATHEMATICAL SEMINARY

not more than six or seven cents per title of 100 letters added.

This year the main volume, instead of being cumulated again, has a cumulated supplement. The weekly bulletin of accessions is cumulated monthly, forming a supplement up to date once a month, so that complete reference requires consulting the main volume, supplement, and from one to three weekly bulletins. At the end of the year it is proposed to cumulate this supplement, together with two or three special collections which are now being put into type, into the main volume.

The cost of this weekly bulletin with monthly cumulation, apart from the cost of composition, and cost of metal to be kept standing, runs something as follows: November 5, 1100 bars were cumulated into

courses for which books are laid out could be drawn out and printed. Several experiments were made last year in this line, *e. g.*, a list of all the books in the Mathematical Seminary. The occasion of this mathematical list was the visit of an English government official in behalf of the universities of India. He found the selection of books in this seminary so advantageous for his purposes that he asked to have a copy of the catalog typewritten for him. Instead of doing this, bars were withdrawn and a neat catalog containing 3500 titles printed at a total cost, for composition, printing paper and binding, in an edition of twenty-five copies, of \$7.00—the itemized records totaled just \$6.99.

Then these same bars were rearranged to form a classified catalog, or rather a classi-

fied shelf list and another classified finding list printed, the cost being almost identically the same as that of the other, so that for less than \$15 there was printed a complete author and classified list of 3500 titles. This cost was considerably less than the cost of typewriting, and the matter cataloged equivalent to a library of 5000 volumes.

Two or three minor experiments in similar lines cross-check this experiment as substantially sound under the economical conditions prevailing here at the present time.

The experiments here tend, in the first place, to show that there are no real mechanical difficulties which cannot be overcome. There is no intrinsic reason why a catalog in twenty copies should not be cumulated daily like the card catalog. It involves substantially reprinting a page in twenty copies for every new title added and inserting these in twenty loose-leaf catalogs, but inserting and printing a page hardly consumes more time than typewriting, and inserting a page no more than inserting card in the card catalog.

Experiment goes to show that the essential elements are (1) that there shall be no exception to the single-bar title rule; (2) that the length of the page shall be variable and cumulation made without regard to various length of the page; (3) that printing shall be attempted only on one side of the page; and (4) that some simple fixed form of loose-leaf binder be employed, since a somewhat bulky series of volumes results from printing only on one side and with a thickness of paper convenient for loose-leaf work.

It is estimated that a complete author catalog of the Princeton University Library would require 300,000 bars, and might, printed on both sides and in the fashion of the "United States catalog," be contained in a single volume half the size of the latter. In loose-leaf style this might be contained in three volumes, but would work better in six. It is estimated that to add 20,000 titles to this yearly would cost \$1500. This is a tidy sum, but only a small fraction of the actual annual expense of cataloging.

Of course, this, like everything else of

its sort, depends on its methods, and in this case it is chiefly the methods of handling the bars, printing only on one side of the paper so as, with soft background, to be careless of impression and general methodical work, which makes the thing economical. It would be easy enough to spend two or three times as much on doing the same work unless these details are rigidly attended to.

It might be argued that even if the expense of such a catalog was in addition to the present expensive cataloging, it would be justified on the ground of the vastly increased facilities offered to professors and students in the department libraries; but at most it would not, in any case, be all additional expense. In the case of university libraries which have these subordinate libraries, it would have many compensatory savings, and in every library there would be very large time savings in purchase, cataloging, and reference divisions.

There remains still, so far as these experiments go, the open question between these bulky catalogs cumulated monthly, weekly, or even daily, and a more compact catalog printed annually, supplemented by cumulations during the year. A catalog of this latter type requires looking up a given title twice, but gives partial use with greater facility. In the case of a large city library, this system, with a copy of the cumulated catalog and supplement in each of the branch libraries, should be worth the whole cost of admission for branch library use alone.

When it comes to the questions of inter-library loan, or inter-branch loan, the useful possibilities of such catalogs multiply. While, therefore, this library is not prepared to plunge into a matter which others have held to be mechanically impracticable, its experiments do suggest that there are no mechanical difficulties which cannot be overcome practically. Its experiments suggest that the main reason for failure of previous experiments has been in the admission of many-bar titles, a point at which cost and confusion begins to be unlimited. Accepting the need of violating esthetic satisfaction in the matter of presswork, and especially the various length page,

there really does not seem to be any reason to suppose that the method could not be applied even to the largest libraries with great increase of usefulness and possibly with economy.

It is not likely that this method will ever wholly supersede a central card catalog, although there is a possibility even of that. The short title entry contemplates some source of fuller cataloging where the user of the library can get all the bibliographical details. There is nothing, however, to forbid the possibility that alphabetical subject and classed catalogs of even the biggest libraries should be printed in this form. The fact that bar machines can produce a second, third, or fourth bar, at about one-fourth the cost of each of the first bars composed, suggests economic possibilities in this direction. It is possible that such a catalog would be quite sufficient as to the subject catalogs, reducing the card catalog to a single author catalog of full titles and doing away with duplicate official catalog and department catalogs altogether; but it would be a bold librarian who would venture to appeal to his trustees for this program at this present stage of experiment. On the other hand, there is already grave doubt as to whether librarians are justified in not taking up very seriously the matter of a simple author finding list of the cumulated type.

The logic of the present situation would lead to brief-title, cumulated index catalogs—author, subject, and classed—with a single author catalog having very full bibliographical details back of it. This would consist of Library of Congress and other printed cards, together with short-title cards giving bibliographical references to where full-title information can be found, in cases where there are no printed cards.

E. C. RICHARDSON,

*Librarian, Princeton University.*

Book love, my friends, is your pass to the greatest, the purest, and the most perfect pleasure that God has prepared for his creatures. It lasts when all other pleasures fade. It will support you when all other recreations are gone. It will last you until your death. It will make your hours pleasant to you as long as you live.—TROLLOPE.

## THE SAFETY FIRST EXHIBIT OF THE NEW HAVEN PUBLIC LIBRARY

EARLY in the month of November, the library had an offer from the Industrial Department of the Y. M. C. A. of the loan of the United States Steel Corporation Safety Exhibit. This was the birth of the library's exhibit, for from this offer plans were made at once to enlarge upon the original loan.

Inasmuch as the Safety First movement is largely one related to industries, it was quite logical that the planning and general direction of the enlarged exhibit should be undertaken by the technology department. Such was the case.

With the hearty co-operation of Mr. A. B. Dickson, industrial secretary of the Y. M. C. A., and formerly with the Y. M. C. A. in the Canal Zone, plans were laid for the enlarged exhibit.

A careful survey of the field and well-directed inquiries soon brought in valuable material. As a result of the campaign, over forty firms sent material, either as a gift or a loan. The list shown herewith will give some idea of the extent of the canvass.

 Whitner Safety Device Sales Co., New York City. Panel with safety window-cleaning devices.  
 Winchester Repeating Arms Co., New Haven, Ct. Diagrams and forms.  
 World Book Co., Yonkers, N. Y. Literature.

In general, the exhibit has been arranged by subject or classes as safety on steam railroads, street railroads, the exhibit of the National Safety Council, U. S. Steel Corporation special exhibit, safety in machine and industrial shops, miscellaneous, highway, safety and children, automobile devices, Southern New England Telephone Co., elevator safety, and a general table devoted to literature of the subject.

Naturally, much of the material was in the form of photographs and posters. However, there were many pieces of apparatus. Among such were the special safety devices shown by the Otis Elevator Co., the Pulmotor and Lungmotor people. A spe-

cial demonstration was held on one of the nights showing the working of the pulmotor. Window-cleaning devices, automobile safety devices, a special electrical fuse shown by the telegraph department of the N. Y., N. H. & H. R. R., and the only one of its kind in use, sanitary drinking fountains, safety belt shifters and safety treads, and non-slip horseshoes.

The library hopes and expects to act as a clearing house of information in relation to safety in the future, and to that end much literature has been gathered. From the gifts to this exhibit, a permanent Museum of Safety, similar to those already established in Europe and this country, is planned for the coming year. The Museums of Safety have done wonderful work in the conservation of human life in Germany and Belgium. In fact, they have been one of the strongest instruments of the movement. Inasmuch as the present library and the library of the future is to be not only a collector of printed information, but a clearing house of information, there is no reason why a library should not undertake such a plan.

Already requests have come from different sources for this exhibit. One from the chief motorman of the street railway company, has expressed the wish that we take suitable material from this exhibit and send it around to the various cities in this state. It is quite likely that there will be a suitable exhibit of posters made up to send around to libraries interested. For mechanical devices and the obtaining of same, information will accompany the traveling exhibit.

To make anything a success, publicity is needed. To that end the Y. M. C. A. Industrial Department had several hundred invitations printed and these were mailed to people of importance, and others were distributed freely among the shops and car-houses. The New Haven Sunday *Union* gave us a splendid write-up and published with the article two photographs taken of the exhibit. All visitors to the exhibit were good advertisers. The vice-president of the street railway company very kindly consented to our request to have a suitable sign placed on the cars relating to the safety movement. Signs were placed on

THE OPEN-AIR READING ROOM AND MAIN READING ROOM, RED HOOK BRANCH, BROOKLYN PUBLIC LIBRARY

suitable vestibule windows worded as follows: "Be Careful. Safety. Always Wait Until This Car Stops." The vice-president further added to our request by offering of his own free will to put special posters on the dashboards. This was done. The library's branch windows were utilized for this purpose of advertising. Duplicate material from the main exhibit was placed in the window for the week.

Whether or not this exhibit has been a success in numbers we have no way of knowing. Suffice to say that as one man of this city said, "If this exhibit has been the means of saving one life it will have accomplished no small task."

KENNETH C. WALKER.

#### THE WORKERS' EDUCATIONAL ASSOCIATION

"ONE of the most interesting of the meetings held in connection with the recent National Eisteddfod at Bangor," says a writer in the *Cardiff Libraries Review* for September, "was the one in which Mr. Lleufer Thomas gave an account of the Workers' Educational Association, or the W. E. A., as it is familiarly known among its members. The W. E. A. is a successful attempt to adapt the old university extension movement to democratic ideas. The association is a federation of working class and educational bodies. By 1915 it consisted of 953 trade unions, councils, and branches, 388 co-operative committees, 341 adult schools and classes, 15 university bodies, 16 local education authorities, 175 workingmen's clubs and institutes, 65 teachers' associations, 151 educational and literary societies, making a total of over 2500 organizations in all. Wales forms one of the districts into which for administrative convenience the country has been divided.

"The association can perhaps best be described as a missionary organization specially concerned to bring existing educational agencies and workmen into vital touch with each other. It voices the intellectual demands of working people on the one hand, and tries to persuade the universities, on the other, to meet these demands from their rich mental resources. One of the special means devised to bridge the gulf between the supply and demand is the

tutorial class. The idea is quite simple. A group of earnest students are discovered who are prepared to attend for three years through the winter months a weekly class conducted by a tutor of university standing, and to write essays regularly for him. There are now about 150 of these very serious classes in the country, with some 3500 students. There is no restriction as to the subject to be studied, but in practice it is found that the demand is mainly for economics or history or literature. The class meets for two hours weekly, one hour being devoted to the lecture and the other to discussion. The classes are financed partly by grants from the Board of Education and partly from funds raised locally by a joint committee, consisting of representatives of workmen and of the University College of the district. The competitive spirit is rigorously excluded from the classes, but they are reported on by the inspectors of the Board of Education. Among incidental by-products of the classes are summer rambles and a week or two in the summer school at Bangor, where the W. E. A. students foregather to meet fresh tutors from various parts of the country.

"In addition to the tutorial classes, pioneer classes are arranged on more popular lines, and occasional lectures. Thus last winter the Cardiff branch arranged an admirable series of free lectures at University College by experts on the various nations at war. The branch, which has 21 societies affiliated to it, will hold a similar series during the coming winter. The course was opened on September 24th by the popular president of the W.E.A., the Rev. William Temple, M.A. There will follow lectures on Italy, Russia, and the Balkans. The association is giving various help in military camps, and it has recently published a valuable pamphlet on 'Child labour in relation to the war.'"

Books are delightful when prosperity happily smiles; when adversity threatens they are inseparable comforters. They give strength to human compacts, nor are grave opinions brought forward without books. Arts and sciences, the benefits of which no mind can calculate, depend upon books.

—RICHARD AUNGERVILLE.

## WHAT MAY THE LIBRARY DO FOR THE SCHOOL?\*

EVIDENT more and more frequently is the new appraisal of the library as a definitely contributing part of the educational scheme. In the schools of today, and not merely in the schools of tomorrow, is the library to come into its own.

This afternoon we are asking, What is the definite contribution of the library in the schooling of a boy or girl? What may the library do for the school?

It is just as well, at the outset, to remember that the conception of the school has changed and is changing. We have heard of the "tragedy of education," of "what is and what might be" in our schools, and now we are reading of the "new education" and of the "schools of tomorrow." I think we are coming to believe that the school is life, not mere preparation for living. The child is learning to live by living. According to this view, the school is a social group where natural interests are fostered and real problems are met. The following up of these problems involves the use of the tools of learning, such as reading, writing, language, and arithmetic. Continuing this process of fostering natural interests and meeting real problems through high school and college, the result is education. And education, remarks Mr. Gustav Stickley very wisely in the September *Craftsman*,—"Is it a decoration,—or is it something we strive for because it illuminates life, enables us to accomplish more clearly, wisely, and completely our destiny?"

What is the part of the library in this school? What may it do for this social group of natural interests and real problems?

The library in the school must be part of the school. It must help the school do its work. It must lend itself as a tool to be used in the following up of problems.

That sounds very formal, very utilitarian. Probably nine-tenths of the school people of this country have no such conception of the library in the school. Some of them think it's a nice thing to have, it helps amuse the children, and "it makes them

love good books." And then they do one or both of two things, or rather all three of three things: first, they buy sets of Gibbon and Macaulay for elementary school libraries; second, they buy the latest fiction, of the type described by Mr. Bacheller last night; third, they require certain doses of reading, with outlines, analyses, and written reports, "book reviews." Some school people do that.

Many more school people (and some librarians) refer to the library in the school as "a collection of books for supplementary reading." This view assumes that the vital part of school is in textbooks learned by rote; supplementary reading is a mere virtue of repetition. Just as well say that the Utica mechanic who found the solution of his structural problem and the restoration of his job in a Utica Public Library book was doing "supplementary" reading. Was he not doing vital reading? Was he not using the library as a tool to meet a real problem? Moreover, neither the school child nor the Utica mechanic is particularly attracted by a "collection of books." Both of them fly to the organized active form of service which meets them on the ground of their interest and helps them solve their problem.

In his notable article on the administration of university libraries (*LIBRARY JOURNAL*, May, 1915), Mr. Frederick C. Hicks employs the phrase "composite textbook" as descriptive of the new use of libraries in education; and in his address (*School Review*, June, 1915) at the University of Chicago, in April, 1915, Mr. Bostwick added to the effectiveness of the phrase. Except for our aversion to the word "textbook," isn't it satisfactory to say that the library in the school is a great composite textbook used to foster natural interests and to meet real problems?

A possible objection is suggested by Mr. Stickley's article above referred to. He warns against confusing education with books, saying that "in books we are studying all the while to find out about other people's experiences," whereas true education requires a large basis of personal experience. We all speak occasionally of "bookish" education, meaning impractical education. Farmers are prone to describe

\*Read before the twenty-fifth annual meeting of the New York Library Association, Squirrel Inn, Haines Falls, N. Y., October 1, 1915.

graduates of agricultural colleges as "book farmers."

However, I think it is possible to use the composite text-book as a means of practical personal experience for boys and girls, and even for college men and women. Further, I think that until the library in the school so disposes itself toward the school purpose, it is a failure. It may be a collection of books, it may furnish supplementary reading, it may be the means of forcing students to read good books,—but vital force in educating its readers it lacks until an understanding personality brings the spark of life into that library.

At least two personalities are necessary for the proper educational use of the library. The composite textbook must be assembled—text, illustrations, charts, maps, index, table of contents, dedication, and introduction—and bound together with strong cords of understanding personal service. That is work for the most gifted, the best trained, of librarians. The textbook once assembled as a fit instrument of service, inspiring interests and answering needs, its pages must be turned. Some chapters are to be omitted, some pages stir so many interests and answer so many questions that they are dwelt upon for days. And when all the pages of that composite textbook are turned by a loving, patient, understanding human leader, shall anyone dare say that schooling is bookish, or that the library is only an ornament in that school, or that boys and girls have not the love of good books in their hearts? We love that which helps us live more and better.

It is coming—nay, it is here—this assembling and turning the leaves of the composite textbook by far-seeing souls. In certain schools of Pittsburgh, they have thrown away the geography books; and the other evening, in the East Liberty branch, I saw the composite textbook and the eager personality that assembled it. In other schools, they are throwing away the readers, and I have seen the keen delight of the assembler of a composite reader. Science becomes absolutely practical and at the same time amazingly cultural through the use of this composite textbook. Have you seen the composite United States his-

tory now used in the schools, beginning with the third grade? A wonderful array of myth, legend, story, picture, maps, documents, facts, handwork models! History is going back in part to its first glory, when it was handed down with poetry and philosophy, in picture and song and story. It turns out to be fairly good history, too. Where is the civics textbook used by the Newark schools? It was assembled by a far-seeing thinker in the Newark Public Library.

This, then, is the first service, the *sine qua non* of the library for the school: That it take its place as an organized personal factor in stirring natural interests and in meeting real problems.

Only two other forms of service need now be mentioned:

First, teacher and supervisor and scholar ought to be able to come to the library in the school with confidence. The library that fails in this service is indeed a failure. Implicit trust in the service of the library means the banishment of laziness, for confidence is born of the belief substantiated by experience that all which is humanly possible has been done to meet the school needs. Further, trustworthiness is based upon respect for honest scholarship and wideawake interest. Hand in hand with industry and scholarship and alertness goes a certain tolerance of spirit and belief, without which the confidence of the school in its composite textbook is impossible.

The other form of service is negative. I have in mind a certain inscrutability of materials and methods, a certain lack of finality. The school library should stir interests, meet needs, inspire confidence,—and beckon the boy onward. Never should the composite textbook be regarded as the definitive edition. There is always more beyond, another revision, another volume in the set. The final word has not been written. There is no greater tragedy of education than the self-sufficient, completely educated man. Upon the school library this projection of interests is a heavy responsibility. In fulfilling this service, the school library will certainly send the boy on to that best of schools, the public library. No one need fear that the effective

school library will subtract from public library opportunities. Furthermore, in beckoning the boy onward, the library in the school is contributing to another new duty of the school, its "wider use." Within its field of school service, the school library in hundreds of communities may well serve as the community library, and in hundreds of others may co-operate faithfully with the public library and social center organizations.

I have mentioned three things which the library may do for the school. Its fundamental service is a definite part of the educational facilities and powers of the school. Accompanying this, is the contribution of confidence in the integrity of the thought material used by the school. As a capstone in its service, the library in the school projects its influence, sends the boy or girl along with wholesome tastes and the power always "to accomplish more clearly, wisely, and completely his destiny."

There is at least one corollary, it seems to me, which may be frankly stated as the view of many practical school men: To render the service above described, the school library should be a part of the school organization, but naturally in close co-operation with the public library system. A library in every rural and town and city elementary school, a library in every high school, a library in every college and university: to which division of the school process shall we deny its own library, organized and administered for its particular educational work? An element of greatness in the modern idea of libraries is its applicability to any special work or situation. If banks and department stores and industrial corporations are to have special libraries, administered by them for their special uses, why not the same facilities for all schools? Why not take the library influence right into the school?

Of course there are objections and difficulties. The cost of a system of elementary school libraries (estimated by Mr. Legler as more than \$4,000,000 first cost and \$500,000 annual maintenance for the city of New York alone) will mount to a stupendous figure for the whole country. Convince the school people what the library will do for them, and the money will come for li-

braries as well as for playgrounds, laboratories, auditoria, and moving pictures.

To object that we should not think of libraries in elementary schools because the New York school libraries of fifty years ago were scattered to the winds, is failure to recognize the advances of fifty years in library and school administration.

To object that the schools will fail to appoint capable trained librarians is overlooking the fact that in the main schools are maintaining high standards of qualifications for all special fields, as manual training, music, physical training, fine arts. It is true, however, that there may be places where political influences are such that for the present the proper standards cannot be set.

A difficulty urged is conflict of authority if the school attempts to maintain a library as part of its organization. Which is more likely to bring about conflict: A library maintained by the school, administered by a capable trained librarian (perhaps nominated by the public library) who is a member of the school faculty and who is in thorough sympathy with the public library and indebted to it for many loans of material; or a library maintained in the school building, administered by a capable trained librarian who is a member of the public library staff but working under the general direction of the principal so far as the school aspect of the work is concerned, supported in book funds by both organizations? Under which system is your librarian more likely to feel that she has a permanent work to do, that she "belongs," and that she may assemble her composite textbook most effectively?

I do not wish to magnify any of these objections on either side, for there is much to be said on both sides. But we may as well face the facts and the difficulties, and solve the problem. The important thing is to provide a library for every school, however administered,—a library presided over by trained understanding, tactful ability, and unselfish service. Then our question will be, What *can't* the library do for the school?

WILLIS H. KERR,  
Librarian, State Normal School,  
Emporia, Kansas.

## PUBLIC LIBRARIES IN HOLLAND.

The "Centrale Vereeniging voor Openbare Leesalen en Bibliotheken" (Central Association of Public Libraries in the Netherlands), consists at the present time of 26 public libraries scattered all over the country. The president is Jhr. E. A. van Beresteyn and the secretary, Dr. H. E. Greve. The seventh annual report gives the following account of these libraries:

**ALKMAAR.**—P. L. (est. 1908.) Secretary A. A. van Rijnbach. Subsidies: state 600 florins, provincial 300, municipal 600. Number of books 4866; readers 11,739; total expend. 2523 fl.

**AMERSFOORT.**—P. L. (est. 1913.) Secretary J. Hovens Greve. Subsidies: state 1125 fl., municipal 1500. Number of books 7768; readers 23,381; total expend. 5467 fl.

**AMERSFOORT.**—Catholic P. L. (est. 1913.) Secretary J. J. Thien. Subsidies: state 500 fl., municipal 500. Number of books 7543; readers 12,469; total expend. 1665 fl.

**APPINGEDAM.**—P. L. (est. 1911.) Secretary Dr. W. A. Vermeer. Subsidies: none. Number of books 1150; readers 6350; total expend. 1860 fl.

**APELDOORN.**—Ref. L. (est. 1912.) Secretary J. Vermaat. Subsidies: state 600 fl., municipal 600. Number of books 3841; readers 21,850; total expend. 2200 fl.

**BUSSUM.**—P. L. (est. 1914.) Secretary Mr. J. P. C. van der Burgh. Subsidies: state 1200 fl., provincial 600, municipal 1300. Number of books 7000; readers 18,500; total expend. 5050 fl.

**DORDRECHT.**—P. L. (est. 1899.) Librarian Dr. Th. Stoop. Subsidies: state 1750 fl., municipal 1800. Number of books 13,770; readers 96,000; total expend. 11,650 fl.

**FRANEKER.**—Ref. L. (est. 1913.) Secretary A. H. van der Hoeve. Subsidies: state 400 fl., municipal 400. Number of books 2300; readers 7900; total expend. 2730 fl.

**THE HAGUE.**—P. L. (est. 1906.) Librarian Dr. H. E. Greve. Subsidies: state 1500 fl., municipal 10,000. Number of books 12,000; readers 73,500; total expend. 15,000 fl.

**GRONINGEN.**—P. L. (est. 1903.) Secretary T. J. Slemens. Subsidies: state 1400 fl., municipal 1400. Number of books 9576; readers 96,400; total expend. 8245 fl.

**DEN HELDER.**—P. L. (est. 1913.) Secretary J. L. Redeke-Hoek. Subsidies: state 500 fl., provincial 400, municipal 850. Number of books 2650; readers 16,430; total expend. 2140 fl.

**HELMOND.**—Catholic P. L. (est. 1913.) Librarian A. Raymakers. Subsidies: municipal 500 fl. Number of books 1200; readers 7500; total expend. 3120 fl.

**HILVERSUM.**—P. L. (est. 1910.) Secretary J. Ek. Subsidies: state 1200 fl., municipal 1200. Number of books 20,190; readers 27,466; total expend. 8000 fl.

**LEEWARDEN.**—P. L. (est. 1905.) Secretary J. Kardux. Subsidies: state 875 fl., municipal 875. Number of books 12,418; readers 13,000; total expend. 4228 fl.

**LEIDEN.**—P. L. (est. 1910.) Secretary N. Brouwer. Subsidies: state 450 fl., municipal 450. Number of books 8780; readers 34,000; total expend. 3183 fl.

**MIDDELSBURG.**—P. L. (est. 1912.) Secretary Dr. H. van der Kemp. Subsidies: state 300 fl., municipal 300. Number of books 3532; readers 8613; total expend. 2145 fl.

**ROTTERDAM.**—Ref. L. (est. 1907.) Librarian J. A. Vorder Hake. Subsidies: the municipality furnished three buildings. Number of books (?); readers 137,850; total expend. 23,213 fl.

**SNEEK.**—P. L. (est. 1910.) Librarian E. D. Alma. Subsidies: state 650 fl., municipal 650. Number of books 7112; readers 16,030; total expend. 2732 fl.

**TILBURG.**—Catholic Ref. L. (est. 1913.) Secretary J. Brouwers, Jr. Subsidies: state 900 fl., municipal 790. Number of books 2250; readers 7900; total expend. 3460 fl.

**UTRECHT.**—Ref. L. (est. 1892.) Secretary A. E. B. Meijer. Subsidies: state 3180 fl., municipal 3180. Number of books 10,746; readers 54,060; total expend. 17,700 fl.

**VEENDAM.**—Ref. L. (est. 1913.) Secretary G. J. J. Pot. Subsidies: state 1200 fl., municipal 1200. Number of books 4740; readers 21,131; total expend. 3466 fl.

**VLISSINGEN.**—Ref. L. (est. 1913.) Secretary J. C. Heine. Subsidies: state 450 fl., municipal 475. Number of books 1200; readers 14,630; total expend. 2060 fl.

**WEESP.**—P. L. (est. 1913.) Secretary T. S. van der Ley. Subsidies: state 300 fl., municipal 300. Number of books 2355; readers 3500; total expend. 1000 fl.

**ZAANDAM.**—P. L. (est. 1913.) Secretary C. Keg, Jr. Subsidies: 1000 fl., municipal 1290. Number of books 1546; readers 8200; total expend. 3830 fl.

**ZEIST.**—Ref. L. (est. 1912.) Secretary M. Versendaal. Subsidies: state 300 fl., municipal 300. Number of books 2335; readers 6300; total expend. 1625 fl.

**ZUTPHEN.**—P. L. (est. 1908.) Secretary Dr. P. de Koning. Subsidies: state 500 fl., municipal 550. Number of books 5400; readers 13,000; total expend. 1860 fl.

## THE RED HOOK BRANCH, BROOKLYN PUBLIC LIBRARY

We print in this issue exterior and interior views of the Red Hook branch which was opened in Brooklyn last May. It is built of stucco, with red-tiled roof, after the style of an Italian villa. The children's and adults' departments are both on the first floor, together with the staff room and librarian's office. An unusual feature is the reading room on the second floor, which in

summer time can be opened to all the breezes and in the winter is enclosed by glass. The illustrations show the interior of this reading room, the delivery room, and an attractive view of the exterior of the building.

### THE HIGH SCHOOL AGRICULTURAL LIBRARY

THE selection of the books of the high school agricultural library will be governed by four guiding principles. First, the books of the library should supplement the usual high school texts; to do this, they should be more exhaustive in their treatment of agricultural topics. Second, the books should be within the range of adolescents, both in respect to their contents and the style in which they are written. Third, they should be interesting; to do this they should faithfully portray and elucidate the common daily environments of the pupils. Fourth, they should be safe in regard to the ideals of agricultural and rural life that they imply or express.

The number of suitable books that have been issued by American publishers is still small, but this limitation will doubtless be removed in time. In view of the principles enunciated, I herewith present the following list of books:

Wilcox and Smith's "Farmers' cyclopedia of agriculture," Orange Judd Co.  
Halligan's "Fundamentals of agriculture," D. C. Heath & Company.  
Brooks' "Agriculture," three volumes, The Home Correspondence School.  
Wilson and Warburton's "Field crops," Webb Publishing Company.  
Livingston's "Field crop production," Macmillan Company.  
Shoesmith's "The study of corn," Orange Judd Company.  
Hunt's "The cereals in America," Orange Judd Company.  
Shaw's "Weeds and how to eradicate them," Webb Publishing Company.  
Shaw's "Grasses and how to grow them," Webb Publishing Company.  
Plumb's "Beginnings in animal husbandry," Webb Publishing Company.  
Harper's "Animal husbandry for schools," Macmillan Company.  
Robinson's "Our domestic birds," Ginn & Company.  
Warren's "Farm management," Macmillan Company.  
Smith and Thomas' "Farm accounts," Laurel Book Company.  
Davidson's "Agricultural engineering," Webb Publishing Company.  
Vivian's "First principles of soil fertility," Orange Judd Company.  
Whitson and Walster's "Soils and soil fertility," Webb Publishing Company.  
Bailey's "Garden making," Macmillan Company.  
Green's "Vegetable gardening," Webb Publishing Company.  
Bolte's "The back-yard farmer," Forbes & Company.

Green's "Popular fruit growing," Webb Publishing Company.  
Osterhout's "Experiments with plants," Macmillan Company.  
Fuller's "Propagation of plants," Orange Judd Company.

#### SUPPLEMENTARY

Fisk's "The challenge of the country," Association Press.  
Butterfield's "Chapters in rural progress," University of Chicago Press.  
Sterne's "Neighborhood entertainments," Sturgis & Walton.  
Harris's "Health on the farm," Sturgis & Walton.  
Coulter's "Co-operation among farmers," Sturgis & Walton.  
Hart's "Educational resources of village and rural communities," The Macmillan Company.  
Betts and Hall's "Better rural schools," Bobbs, Merrill & Company.  
Bricker's "Solving the country church problem," Jennings & Graham, Cincinnati.  
Harris's "Joe, the book farmer," Harpers.  
Hopkins' "The story of the soil," Badger.  
Atkinson's "Johnnie Appleseed," Harpers.  
"Report of the Commission on Country Life," Sturgis & Walton.

I realize that the above list of books is very incomplete, but the high school that makes a beginning with these volumes will have a standard of agricultural reference reading that may be judged comparable with the reference books in other fields of learning, usually found in the best high school libraries.

GARLAND H. BRICKER,

*Professor of Agricultural Education,  
Ohio State University.*

### A CALIFORNIA DINNER PARTY

A VERY successful reunion of the eastern members of the party who went to Berkeley last spring was held Dec. 4 at La Chorrera, a Spanish restaurant on Pearl street, in New York City. The arrangements were made by Mr. Brown, of Brooklyn, and Mr. Spaulding, of the New York Public Library, and a very characteristic and appetizing Spanish dinner was served. Cordial greetings met each member of the well-remembered party on *hiser* arrival, and if there were any ice to be broken it had disappeared by the time the preliminary "snake-walk" promenade around the tables was ended.

Picture post cards of the Panama-Pacific Exposition were used as place cards, and Mr. Faxon had collected all the songs used by the party on its pre- and post-conference journeys into a very attractive illustrated booklet. The A. L. A. glee club was present to lead the singing, and the "hymnal" was in constant use both during and be-

tween courses. Mr. Bowker was called upon to preside over the tables and keep things merry, and in the course of the evening there was much impromptu speaking and telling of stories. Mr. Hafner had his usual abundant supply of chocolates for everyone, the twins and their nurse were exhibited again for the entertainment of the guests, and it was generally agreed that next to the conference journey, the after-conference-journey dinner was one of the pleasantest accompaniments to the A. L. A. meetings of 1915.

#### THE VALUE OF FICTION

THE following excerpt from an address by the editor of the *Detroit Saturday Night* to the Library Associations of Wisconsin and Michigan is of interest in the light of the recent discussion in New York City of the propriety of purchasing fiction:

Librarians are usually given to worrying about the large circulation of books of fiction as compared with other forms of literature. Speaking strictly of the effect of fiction on public opinion there is really little to worry about. What is a public library for? It is primarily an instrument of public education. What is education for? Primarily, to teach civilization how to walk on two legs instead of four. A fair argument might be advanced against the civilizing and educating of mankind; but we Americans long ago committed ourselves to the promotion of civilization in a democracy. Having faith in democracy, we must have faith in the freest possible play of the human spirit in thought and action. We must believe with Macaulay that the only cure for freedom is more freedom.

Nor can we refuse to apply that theory to our public libraries. We cannot refuse to allow people to read what interests them most—and for two reasons. First, because we should not, and second, because we can not. This is not to say that every public library should equip itself with those books which are obviously obscene or vicious or filthy; these by common consent can be relegated to the garbage can where they belong. Nor is it to say that the conscientious librarian should not aim to encourage the reading of wholesome books; by the exercise of a wise and sympathetic discre-

tion the librarian can do a great deal towards raising the standard of public reading. But no librarian can prevent people from reading what they like best. If they cannot get the books they want in the public library they can get them elsewhere, and get them cheaply; and if they can not get the books they want, they will as a rule not get any.

How are these people to be guided? A censorship is frequently stupid, and always irritating, if not intolerable. The people who patronize the public libraries, and more especially those many millions of people who have not yet learned to patronize public libraries, and whose enlightenment is essential to the future success of American democracy, are best guided by working out their own salvation in the broadest possible fashion. It is better for the readers of Mr. Hearst's mendacious newspapers to read them, or to read nothing? Even in reading Mr. Hearst's lies they are attaining some intellectual activity. And intellectual development is an integral part of our American doctrine of progress. Later they will probably learn to read something better. In the meantime, they are likely to read Hearst or nothing.

It will be argued, of course, as usual, that intellectual development may be arrested, or altogether destroyed, by such reading; that public opinion will be poisoned by such reading. To some extent, yes. And that is exactly the price we must pay for democracy, for perfect freedom. We must expect to count wrecks as well as prizes in our intellectual and cultural advance. That is the way of humanity. We must expect defeats as well as victories; but we must fight it out, or else turn back. It is so with the public library. Fiction molds public opinion. "The inside of the cup," by Winston Churchill, creates public opinion on the meaning of religion. "The turn of the balance," by Brand Whitlock, creates public opinion on criminality. "V. V's eyes," by Sydnor Harrison, creates public opinion on our industrialism. Let our people read fiction. Let us help them to read the best fiction; but above all, let them read, read, read, to the end that they may think and give expression to their thoughts in citizenship and self-government.

## TWELVE THINGS TO REMEMBER

- The value of time.
- The success of perseverance.
- The pleasure of working.
- The dignity of simplicity.
- The worth of character.
- The power of kindness.
- The influence of example.
- The obligation of duty.
- The wisdom of economy.
- The virtue of patience.
- The improvement of talent.
- The joys of originating.

—MARSHALL FIELD.

## KANSAS LIBRARY ASSOCIATION

The Oklahoma Library Association at its recent meeting in Oklahoma City, in connection with the state teachers' convention, voted unanimously to accept the invitation of Kansas to meet in joint session with the Kansas Library Association at its next meeting, in October, 1916, in Arkansas City, Kansas. Arkansas City on the southern boundary line of Kansas is centrally located for such an interstate meeting and is as accessible by railroad to Oklahomans as it is to Kansans. This will be the first joint session of these two neighboring library associations.

J. LUCHT, *Secretary.*

## MAINE LIBRARY ASSOCIATION

The twenty-first meeting of the Maine Library Association was held at the Bangor Public Library, October 28, the first time since its organization that the association has met in that city. Over 60 were in attendance. An exhibit was made of the publications of the A. L. A., and those of the Bangor Library were distributed.

Mr. C. A. Flagg, librarian of the Bangor Public Library, and president of the association, in an opening address, referred to the Handbook just published and ready for distribution, prepared by authority of the executive committee. Mr. Flagg outlined the immediate needs of the association, laying special emphasis upon the following: an active association, based on recognition of the dignity and value of our work; the entire time of one paid employe of the Library Commission; and the publication of reports for all Maine libraries similar to those of the Bureau of Education for libraries of above 5,000 volumes. The work of the past year was reviewed, and attention called to the appointment of an additional assistant in the State Library, a portion of whose time is to be used as a library organizer under the direction of the Library Commission. This was made possible by action of the last legislature, which made an appropriation also for the inauguration of traveling school libraries.

Mr. J. W. Taylor, agent for secondary education of the State Department of Education, spoke on library conditions in the schools, showing that they are far from satisfactory, but indicating the appreciation of the needs by the state department and its efforts to bring about improved conditions. Few ele-

mentary schools outside a few large places have libraries adequate to their needs, but a considerable number have made a beginning. The state superintendent has issued a brief list of books recommended for rural school libraries. Attention is given to the library in the inspection of high schools. Specified requirements for high school libraries have not yet been formulated. According to the records of the department, forty high schools have libraries regarded as adequate to their present needs, and 25 more have made fair beginnings, but there are 133 high schools that have no library worthy of the name.

Mr. H. E. Dunnack, the new state librarian, spoke interestingly upon the relations of the State Library to other libraries and librarians of Maine. Mr. Dunnack pledged the support of the State Library to all the efforts of the association and indicated his desire to make it of service to all other libraries, offering to have it purchase any volume any other library desired to borrow if it were not already in the State Library.

A question box was conducted by Mr. Ralph K. Jones, librarian of the University of Maine, after which luncheon was served by the trustees of the library.

At the afternoon session, Professor W. H. Hartshorn, professor of English literature at Bates College, chairman of the Maine Library Commission, delivered an eloquent address on the life and services of Professor George T. Little, librarian of Bowdoin College. After outlining the professional and educational career of Doctor Little, Professor Hartshorn said:

"Dr. Little was a scholar; a scholar, not of the German specialist type, but one in whom exact learning of an extended range had been enriched with gleanings in many fields. He was deeply versed in the classics, in modern languages and their literatures, and in history, especially in colonial history and that of his own state. His knowledge of art bespoke his interest in all phases of that subject. He was an ardent lover of nature and knew much of her ways. In short, the quality of his mind, the extent of his knowledge, the variety and nature of his interests, made him a remarkable example of a man of true culture.

"He believed in books. He loved them. He knew the kernel as well as the husks, the spirit as well as the body of the books he handled. Thus he met the first condition of true librarianship.

"Dr. Little's modesty could not fail to impress all with whom he came in contact. Blessed with a mind of native power, enriched with the fruit of deep learning and extended culture, with a knowledge and grasp of his profession unequalled in our state, secure in an honorable position in his college, his state, and his country, and realizing as he must have done the importance of that position, yet never by word or act or hearing did he indicate that he considered himself in any respect superior to the humblest librarian in our state.

"He made no demands upon the public; he sought no honors, offices, position. When called upon to serve the broader public as a writer, speaker, or counselor, he did it with a diffidence that was beautiful and that did not detract from the value of his services.

"He was a man of innate refinement, feminine in its quality, such a refinement as is rarely found even

among men of the highest culture. He shrank instinctively not from common men, not from common toil, from nothing honorable, however distasteful, but from the slightest touch of indelicacy, of indecency, of vulgarity, of unnecessary coarseness. The refinements of life in art, music, literature, character, and conduct, were his natural heritage.

"Kindness and helpfulness were remarkably developed in Dr. Little's character. They were born with him, they grew to manhood with him, they kept pace with all his intellectual development. No matter how burdened with duties, how worn or weary, how pressed for time, he was always ready and eager to give assistance, important or trivial, to the humblest person who had or had not any claim upon his attention. Only let there be a need, real or fancied, and his heart went out to that need and he did his utmost to meet it. Thus he went through life aiding and blessing all with whom he came in contact.

"No one who knew Dr. Little could fail to note his extraordinary conscientiousness. The thought of duty was ever present. He was ever fearful that he might do some slight injustice, not in act, for that was inconceivable, but in thought or in some unconscious bias of mind to some of his fellow men.

"Dr. Little was a Christian gentleman, one who never thought of separating his religion from even the most trivial things of life. Thus he lived; thus he died; following to the last the light that was in him, living close to his highest ideals.

"Our state is poorer to-day; our association is less efficient to-day; our hearts are mourning to-day for the loss of him that has gone. But our hearts are light to-day, our faith is purer, our relief in man is stronger, our ideals are higher, our consecration to service is truer for the life he lived and the cherished memories that survive.

"The poet says:—

The evil that men do lives after them;

The good is oft interred with their bones;

"The evil that Dr. Little did will not live after him, for he did no evil; the good was not interred with him for it has become a part of the warp and woof of the education, the culture, the refinement, the civilization of his native state."

Mr. Robert K. Shaw, librarian of the Free Public Library, Worcester, Mass., spoke informally and interestingly upon library opportunity to-day, and Mrs. Mary H. Curran, formerly librarian of the Bangor Public Library, now associate librarian, presented an entertaining paper of library reminiscences. Mrs. Curran was the only person present still a librarian, who helped organize the association in 1892.

A committee was appointed to prepare a union list of periodicals in the larger libraries of the state, of which Mr. Ralph K. Jones and Mr. C. A. Flagg were made members, with others to be added later.

It was voted that hereafter the association shall hold two meetings a year, one in the fall at the same time and place as the Maine Teachers Association, and the other, the annual meeting, in the spring.

Mr. Flagg suggested the publication in the *Bulletin* of the Maine State Library of outlines of local library history, exhibiting one prepared by him on Bangor libraries.

The officers of the association were re-elected to serve until the annual meeting in the spring.

RALPH K. JONES, *Secretary*.

VERMONT LIBRARY ASSOCIATION AND  
VERMONT FREE LIBRARY COM-  
MISSION

About 60 librarians and library trustees met in Burlington at the "get-together" supper, given by University of Vermont and Fletcher Free Library trustees at the Van Ness Wednesday evening, Oct. 20. An informal reception in the parlors introduced new and "old" librarians to each other and started the exchange of experiences and questions which is one of the main objects of the meeting.

After the excellent supper, Mr. George Dana Smith, president of the V. L. A., introduced Judge Mower of Burlington, trustee of the Fletcher Free Library, and one of the hosts. Following Judge Mower's welcome, Mr. Smith called for reports from the six second vice-presidents about their counties. The problems are still "lack of money, lack of interest, too much fiction read," etc.

Thursday morning, "V. L. A. day" at the Billings Library, some 70 people were welcomed by Dr. Guy Potter Benton, president of the university. The committees reported on work done during the year, and then a "round table" was held.

Mr. Merritt D. Chittenden, superintendent of Burlington city schools, read an interesting paper on "Work with teacher-training classes." He emphasized the following points: 1, the great importance of reaching children in the schools; 2, the 31 libraries in towns where there are teacher-training classes should be "practice-schools" in library work for those classes; 3, the great drawback to getting the most out of children's books in schools is the ignorance of many teachers about such books; 4, all normal schools in all states should have training in library methods and use of reference books as a regular part of the required course; 5, co-operation between teachers and librarians should be developed by having librarians present at teachers' meetings; 6, the V. L. A. should stand for better-trained teachers with culture, a broad literary background, and a knowledge of library methods; 7, pupils in the teacher-training classes should read aloud or tell stories to groups of children in libraries; 8, a brief list of 12 books for each year in childhood should be made to help the teacher who must guide the pupil's reading; 9, librarians should get acquainted with their district school superintendents; 10, the State Free Library Commission should have a school traveling library for a few weeks at each teacher-training class, show method of charging, etc.; 11, there should be a 10-week

course in our two normal schools showing the value of books to the students and to school children. Those present were glad to have a district superintendent emphasize from his point of view many things which for years librarians and library commissions have laid stress on from their side.

After Miss R. W. Wright's paper on "Book selection" (which will be printed in a later issue of the *Vermont Library Commission Bulletin*), Miss E. J. Chamberlain of Vergennes told how she made pictures and clippings useful, stored in Detroit filing cases. She had found that tailors' sample books, the samples torn out and pictures pasted in their places, made excellent scrapbooks; and recommended separate books for different ages. She files her pamphlets, clippings, and pictures in one alphabet under subjects. Club women have helped her mount pictures for use in district schools. The library has exhibited pictures illustrating special geography lessons being given at the school; an invitation was sent to the school asking the children studying South America to come to the library and there somebody was present to explain the pictures.

Miss E. S. Lease, of Montpelier, then read Mrs. F. B. Davis' paper on "Flowers in the library," telling about Waitsfield's 1550 specimens last summer; its collection of specimens of trees, and local curiosities. Miss E. C. Hills of Lyndonville told about her annual flower show, lasting two to three days, which next year she plans to hold open on a Sunday. Miss F. M. Pierce of Ludlow reported an exhibit held Saturday and Sunday; the men and their wives came Sunday.

After the V. L. A. education committee had stated that a list of books to be read aloud in school is to be made, Mr. Smith read invitations from Waterbury, Rutland, and St. Johnsbury libraries for the 1916 meeting-place.

In the afternoon Professor G. H. Perkins, state geologist, showed the treasures of the university museum.

The following officers for the coming year were unanimously elected: President, Miss Fanny B. Fletcher, Proctorsville; vice-president, Miss Eleanor Eggleston, Manchester; secretary-treasurer, Miss Elizabeth C. Hills, Lyndonville; second vice-presidents, Miss Ruth E. Richmond, Orleans, for Orleans, Essex, Caledonia; Miss Anna E. Mower, Morrisville, for Franklin, Lamoille, Grand Isle; Miss Vera A. Griffith, Danby, for Rutland and Bennington; Mrs. Abba D. Chamberlain, Woodstock, for Windsor and Windham; Miss Katherine Mathieson, Barre, for

Washington and Orange; Miss Edith J. Chamberlain, Vergennes, for Chittenden and Addison.

Miss Corinne Bacon, of the H. W. Wilson Co., White Plains, N. Y., then read a paper on "What it means to be a librarian," after which Rev. I. C. Smart of Burlington read a paper on "A simple reader and his Shakespeare." He outlined favorite characters, their strength and their weakness; quoted some of the best-known lines; suggested a few of the less familiar plays and characters, and made all his hearers desire to read the plays and know them better.

In the evening, under the joint auspices of the Vermont Library Association and the State Free Library Commission, Mr. Richard T. Wyche, of New York City, spoke on "The meaning and value of story-telling." To illustrate the method of story telling Mr. Wyche told in brief outline the Hiawatha cycle and two of Harris' "Uncle Remus" stories.

Friday morning, Oct. 22, the State Free Library Commission continued its program with a delightful talk by Miss Clara W. Hunt, director of the children's department of the Brooklyn Public Library, on "Library work for children." She told actual happenings to show how difficulties may be overcome. Prof. J. W. Abernethy of Burlington then read a paper on "Comparative values of classical and current literature for school and library." He said that the library and librarian are responsible for the salvation of society in these modern times when the "goddess of getting on" is the only ideal of most and when vocational training pushes into the background all classical and literary training; when the cheap and ephemeral take first place everywhere. Tastes and sympathies in reading determine character and the issues of life. Therefore, important as current events may be, let us not sacrifice everything to the newspapers and the weeklies with predigested summaries of thought. The classics, which have stood the test of time, should not be shouldered aside. The reader of mere current literature has no background, no perspective, of gradual development, of the causes of civilization, no sense of proportion between past and present, no cultivated critical taste for the best in literature and art, no fine sense of values.

Resolutions were read thanking the Burlington libraries' trustees for their generous welcome and hospitality; also resolutions of sorrow for the loss to Vermont by sudden death of two librarians, Miss Josephine M. Keeler, of Bennington, and Miss Ellen F.

Dewey, of Fair Haven. The joint annual meeting then adjourned.

REBECCA W. WRIGHT, *Secretary,*  
*Vermont Free Public Library Commission.*

#### KEYSTONE STATE LIBRARY ASSOCIATION

The fifteenth annual meeting of the Keystone State Library Association was held at Butler, Pa., Oct. 21-23. The meeting was well attended, the register showing 51 libraries represented, and 106 names on the roll, though the actual attendance was greater than that. The Hotel Nixon was the headquarters, and the meetings, at which W. F. Stevens of Homestead, the president, presided, were held in the Masonic Temple and the High School auditorium.

The first session was a business session at which the reports of the treasurer and the various standing committees were received. At the close of the business meeting the social committee took charge. After music by some ladies of Butler, a merry half-hour was spent in hunting "the elusive librarian" in a game invented for the occasion to increase sociability and obviate introductions. The evening closed with very delicious refreshment provided by the Congress of Women's Clubs of Butler.

"Children's reading" was the topic of the second session, conducted by Miss Sarah C. N. Bogle, chief of the children's department, Carnegie Library of Pittsburgh. It was treated from the standpoint of the home, the library, the school, and popular reading. Miss Ellis, librarian of the South Side branch, Pittsburgh, in "Children's reading and the family" emphasized the social importance of the family, the need of fostering high ideals, and the libraries' duty in the present transitory state of low standards. In "Reading in the library," Miss Engle, chief of the department for children, Free Library of Philadelphia, told what kinds of books are read. She said that in the library children read what they like, and from statistics what they like has been found to be chiefly fiction, then history, practical science, and handybooks, literature, travel, and nature stories. Dr. Davidson, superintendent of Pittsburgh schools, gave an interesting talk on reading and literature in schools, and Dr. Robertson, director of University Extension, University of Pittsburgh, in his talk on popular reading of children urged the gathering of statistics by age and book titles for a study of the best books for children from the child's point of view.

There was no session Friday afternoon, and various places of interest around Butler, in-

cluding the Country Club and the barracks of Troop D. Pennsylvania State Police, drew visitors. Several librarians with story-telling ability visited the local schools to have "story-hour" for the children. This innovation in library meetings was highly appreciated by the people of the town.

Friday evening, after addresses by Judge Reiber of Butler, and Field Scout Commissioner William H. Weisheit of the Boy Scouts, Mr. John Foster Carr, secretary of the Immigration Publication Society, gave a lecture on the "Library and the foreigner." Mr. Carr spoke of the immigrant as simply a working-man, in this country for "a job," and told of his need of English and correct information about this country and the American ideals, and of the work of the Immigration Publication Society toward supplying this need. The address was followed by very interesting lantern views of foreigners in libraries, in cities and in agricultural communities.

The last session was devoted to reference work in various special libraries, Miss Willard reference librarian, Carnegie Library of Pittsburgh, presiding. Miss Shutterly described the courses in reference work and library training given at the California State Normal School, California, Pa. The work of the Legislative Reference Bureau of Pennsylvania, was presented by Miss Irma A. Watts, a member of the staff, and Mr. Holmes, of the technology department, Carnegie Library of Pittsburgh, the "first municipal library to establish a department for special reference work in the field of pure and applied science," read a paper by Mr. E. H. McClelland, the librarian, on the work of that department.

After discussion of the various papers, the question of getting up-to-date encyclopedias for little money was discussed very practically and helpfully, and with suggestions for the next year, a most enjoyable meeting was brought to a close.

HELEN D. SUBERS, *Secretary pro tem.*

#### INDIANA LIBRARY ASSOCIATION

The twenty-fourth annual meeting of the Indiana Library Association was held at Gary, Ind., on Nov. 10-11. One hundred and fifty members and many visitors were present. Many features of interest, including exhibits of Japanese prints, book-plates, photographs, posters, etc., were in readiness for the visitors at the Gary Public Library where the meetings were held.

The morning of Wednesday, Nov. 10, was taken up with a business meeting, at which reports of the legislative, salaries and vacation, pension funds and publicity committees

were read. A resolution was passed requesting the Council of the A. L. A. to employ a publicity expert to survey the library field and to give advice in library advertising.

The afternoon session was opened with an address by Miss Jayne, the president, who emphasized the need of extending library service into rural districts and the desirability of a better organization of trained workers to this end. Mr. J. J. Pettijohn of the Extension Division of Indiana University, spoke on "The wider use of the lecture room," showing the great possibilities of developing a public lecture system in connection with the libraries of Indiana, so that one might supplement the other. Later a committee was appointed to plan for this work.

A symposium on rural library extension brought out some workable ideas. Miss Bertha Joel of Valparaiso spoke of the necessity for an active personal campaign on the part of the librarian in pushing rural extension work. Acquaintance with the people through their clubs and gatherings, advertising at county fairs and by posters, sign cards, etc., and co-operation with the schools were pointed out as valuable aids in this work.

Miss Mayme C. Snipes, of Plainfield, told of successful work in using the school as the social center. Miss Lula M. Miesse, of Noblesville, continued the discussion. Mr. Henry N. Sanborn, who was prevented from reading his paper because of the lateness of the hour, showed by the aid of a colored map, the centers as well as the distribution of rural extension work in libraries.

Wednesday evening was occupied with an address by Mrs. H. B. Burnett, of Indianapolis, on the "Library Art Club of Indiana," and an excellent address by Dr. W. Dawson Johnston, of St. Paul, on "The new social spirit in library service." The evening ended with a social gathering at the handsome building of the Y. M. C. A.

On Thursday morning the members of the association, with a large number of visitors, had the privilege of seeing the "work, study and play" system of Gary actually in practice at the Emerson School. Mayor Johnson then welcomed the visitors to Gary. The co-operation between the library and the schools was explained by Miss Orpha M. Peters. Later the visitors were taken through the city in automobiles, visiting Froebel School and the Hobart Branch Library.

The last session, in the afternoon, was taken up for the most part by round table discussions. The college and reference section, in charge of Mr. Arthur Cunningham, reported an interesting discussion in which

the difference in organization and management of college and public libraries was taken up. At the close of the meeting Dr. Foik, the librarian of the University of Notre Dame, presented the plans of the handsome new library that that institution is about to construct at the cost of two hundred thousand dollars. In general architectural appearance it will somewhat resemble the Boston Public Library. The stack will occupy the heart of the building and be surrounded by the reading rooms and administration departments.

Other papers read during the afternoon included "The efficient assistant," by Carrie E. Scott, assistant state organizer of the Public Library Commission, Indianapolis; "Staff meetings," by Ruth Wallace of the Evansville Public Library; "Advertising the children's room," by Marian A. Webb, of the Fort Wayne Public Library; "Human element in the desk assistant's work," by Ethel G. Baker, South Bend Public Library; and "Book element in the desk assistant's work," by Faith E. Smith, of the Chicago Public Library.

The round table of the trustees and librarians was conducted by Mrs. Elizabeth Claypool Earl, of Connersville. After the round tables, the members came together for a final session. Mr. Arne Kildal, librarian of Bergen, Norway, gave an interesting illustrated lecture on the "Development of libraries in Norway." Mr. Harlow Lindley's report on "The Indiana centennial" completed the program.

The election of officers and acceptance of the treasurer's report brought the meeting to a close. The following officers were elected: President, Miss Margaret M. Colerick, Fort Wayne; vice-president, Mr. Henry N. Sanborn, Indianapolis; secretary, Miss Winifred F. Ticer, Huntington; treasurer, Miss Mary H. Roberts, Indianapolis; alternate to A. L. A. conference, Miss Nannie W. Jayne.

#### MONTANA LIBRARY ASSOCIATION

The opening session of the ninth annual meeting of the Montana Library Association took place in the Palm Room of the Hotel Rainbow in Great Falls, Nov 22 at 3 o'clock, p. m., when Prof. Coffman of the University of Montana gave an interesting talk and reading on "The modern drama and life." This was followed by a delightful informal tea at the library. The evening session was held in connection with that of the State Teachers' Association at the Opera House, where Prof. C. E. Rugh of the University of California delivered an able address on

"Moral motives in education," and Prof. E. A. Ross of the University of Wisconsin talked on "This man-made world." Later a reception was held for the librarians and teachers by the citizens of Great Falls at the Hotel Rainbow.

Tuesday, Nov. 23, the meeting was called to order at 9.30 a. m., by the president, Miss Fernald of Great Falls. The address of welcome was given by Dr. Barth of the Great Falls library board, who spoke particularly of the value of county libraries for the great farming communities of our state. In his response Mr. Davies of the Butte Public Library traced the development of the modern library movement from its inception in 1876 to the present day, and prophesied the further growth of the library as the great forward movement of the twentieth century. Miss Fernald gave a splendid address on "The spirit of the pioneer in library work," showing that we are even now in the pioneer stage in library work in this state, and tracing the steps we must take in the development of the library system of the new territory. This was followed by a discussion, on roll call, of the particular problems facing the various libraries in the association. The meeting was closed by a most inspiring address by the Rev. G. G. Bennett of Great Falls on "The effect of reading, or the lack of it, on the growing mind," based on his experience as a teacher of English in a boys' preparatory school.

The afternoon session was opened by an exposition of the principal provisions of the recently enacted county library bill with a report from the legislative committee which worked for its passage. Then followed reports from various counties where attempts have been made to establish county libraries. A very interesting account of this work was given by Mrs. McLeish of Choteau county, where such a library is already established. Mr. Blanchard of Cascade county talked briefly on the co-operation which the county agriculturists expect from the library. It was moved, seconded and carried after discussion that a new legislative committee be appointed to investigate the chances of getting a bill passed providing for a library commission or a library supervisor for this state, to report at the next general meeting of the association.

The final session was held Wednesday morning, Nov. 24. The book symposium was led by Miss Stoddard of Missoula. Papers were contributed to it by Miss McCord of Bozeman, on "Vocational books," Miss Haley of Helena, on "Recent refer-

ence books," Miss Main of Lewistown, on "Books on the war for small libraries," and Mrs. Homans of Havre, on the "Best novel of the year." This was followed by general discussion. An interesting paper by Miss Steadman of Livingston on "Juvenile book week and the Christmas exhibit of books" was followed by short talks by Miss Dickerson of Helena on "Legislative reference work" and by Miss Buckhous of Missoula on the proposed Montana Library School.

A report of the committee on resolutions was read, after which the following officers were elected for the coming year: John F. Davies, president; Miss Main, vice-president; Miss Ruth V. Steadman, secretary; Mrs. Homans, treasurer.

The executive committee was empowered to affiliate this association with the A. L. A. if the funds permit. It was also moved, seconded and carried that the thanks of the association be formally expressed to Senator Byrnes of Lewis and Clark county for his assistance in passing the county library bill. The meeting then adjourned.

AGNES DICKERSON, *Secretary*.

#### TEXAS LIBRARY ASSOCIATION

The annual meeting of the Texas Library Association was held in San Antonio, Oct. 13-15. The evening sessions were held in the tapestry room of the St. Anthony Hotel, association headquarters, and the morning and afternoon sessions in the auditorium of the Carnegie Library. The registration book showed an attendance of thirty-three.

Dr. Constance Pessels, chairman of the board of trustees of the Carnegie Library of San Antonio, welcomed the association, and the response on behalf of the association was made by the secretary, Mr. J. E. Goodwin, librarian of the University of Texas. The president, Miss Elizabeth H. West, librarian of the Carnegie Library of San Antonio, then read her address. A strong current of enthusiasm pervaded the sessions, and the discussions were informal and animated.

Miss Lillian Gunter, of Gainesville, presented the subject of "County libraries," and provision was made for a committee, with Miss Gunter as chairman, to study the needs of Texas library interests and formulate plans for needed legislation. Papers on "Library advertising" were presented by Miss Octavia F. Rogan, of the State Library, and Miss Pauline McCauley, of Waco. Miss Dora Schmieding, manager of the book department for a large San Antonio firm, read a paper on "How the local dealer can co-operate with

the library." Mr. Willard P. Lewis, librarian of Baylor University, Waco, presented the subject of "Library binding."

The local committee entertained the association with a trip by automobile to the several Spanish missions in the vicinity of San Antonio. Another feature of the entertainment which the librarians greatly enjoyed was a real Mexican supper at the "original Mexican restaurant."

A resolution was adopted urging the establishment of a permanent library school at the University of Texas. It was also agreed to fix the time of the regular annual meeting in October or November.

Officers were elected as follows: President, Miss Elizabeth H. West, San Antonio; first vice-president, Miss Lillian Gunter, Gainesville; second vice-president, Mr. W. P. Lewis, Waco; secretary, Miss Octavia F. Rogan, Austin; treasurer, Miss Martha Schnitzler, Houston.

J. E. GOODWIN.

#### NEW YORK LIBRARY CLUB

The second meeting of the year was held in the Metropolitan Building, in the auditorium of the Metropolitan Life Insurance Company, Thursday, Nov. 11, at 3 p. m.

The first address was made by Ralph Dunbar, librarian in charge of the traveling libraries department of the Brooklyn Public Library, who spoke on "Traveling library work in factory and store." Of all the various fields of traveling library activity, in none, perhaps, can be performed such effective, needed and valuable service as in this work with the industrial and commercial concerns. The reason for this lies in the character of modern industry, by which the worker is reduced to a mere cog in the machine. To counteract this deadening condition is a rôle which the library can play and is playing by giving ideas and inspiration to the workers through the medium of books.

The traveling library is well adapted for this work, although at first the management is not always favorably disposed towards the idea. It is here that the traveling library canvasser must be in a measure a traveling salesman and persuade the manager or superintendent that traveling libraries are a "good line of stock to carry." And that these managers and superintendents can be convinced is seen in the fact that the industrial and commercial concerns are taking advantage of the privilege in ever-increasing numbers. In Brooklyn alone there are now about forty such borrowing organizations obtaining traveling libraries regularly, including stores, glove

factory, shoe factory, wholesale order houses, machine shops, paper-box factories and even candy factories.

Traveling library methods have been made so simple that when necessary a worker in the factory or store can be appointed custodian. The main question, however, is "What use do the employes make of the books?" Normally, the great demand is for light fiction, and this is not to be wondered at when we consider the education of the workers, their home conditions and their working conditions, improved though they are under this humanitarianism in industry. But there are encouraging signs. Some employes have realized in a measure the true value of books and are requesting books to help them in their work, books to give them ideas and inspiration.

Here is the great opportunity of the traveling library. Besides sending boxes of books, it must do some educating work; it must devise plans whereby intelligent use can be made of the books. Talks to the employes by speakers who love and know books and who can present their subject attractively; annotated lists, not too long; striking posters; and the co-operation of the welfare workers at the factory and the store, all help to accomplish this.

The second address was by Miss Gertrude Beeks, director of the welfare department of the National Civic Federation, to whose hospitality the club was indebted for its meeting place. Miss Beeks' address on "Humanitarianism in industry" was splendidly illustrated by lantern slides. Miss Beeks defined the National Civic Federation as an educational movement, whose purpose is to aid in crystallizing the most enlightened public opinion, the greatest force in solving our national, social and industrial problems. There are a number of departments—industrial conciliation, workmen's compensation department, social insurance department, etc. The welfare department, whose work was shown in the lantern slides, is composed only of employers. Its object is to induce them voluntarily to improve the conditions of employes, taking as a basis uninterrupted employment, an equitable wage and as short a work day as a given industry will permit. It thus supplements the efforts of the trade unions.

The views exhibited on the screen portrayed some of the best examples of sanitary workplaces, opportunities for recreation, educational plans, homes rented or sold to employes, and industrial insurance and lending and savings schemes. Contrasting views also were given to make graphic "before and after" conditions.

After this address the club adjourned to the thirty-fifth floor of the Metropolitan Tower, where tea was served and opportunity given for an examination of the many pictures displayed by the National Civic Federation illustrating welfare work in industrial institutions. An unusual and beautiful view of the city was afforded those who descended to the thirty-third floor. There were about 345 members and guests present.

ELEANOR H. FRICK, *Secretary.*

NEW MEXICO TEACHERS ASSOCIATION—  
LIBRARY SECTION

The third annual meeting of the Librarian's Section of the New Mexico State Teachers Association was held in the High School building at Albuquerque, N. M., Nov. 24, 1915, at 9 o'clock. Meeting was called to order by Miss Cole, chairman.

At the business meeting the section voted by acclamation to have the old officers hold over another year; Miss Myrtle Cole, Raton Public Library, chairman; Miss Pauline Madden, Albuquerque Public Library, secretary. The following were elected for the executive council: Miss Della Sisler, State University Library, three years; Mrs. Redic Cloudercroft, two years; Miss Floy E. French, State College, one year. A lively discussion followed on the question of library legislation in this state. It was agreed that best results could be obtained from working with the women's clubs of the state for the county library and extension work through the University Library.

The following program was carried out:

"How the library and the teacher may aid the New Mexico rancher and farmer," Floy E. French of the State College. Miss French was unable to be present but her paper was read by Miss Fulchum. It contained excellent suggestions as to the use of the free bulletins from the Department of Agriculture for the farmer and miner, and also called attention to the free pamphlets from the state and forestry departments. A lively discussion followed, in which was mentioned the free outlines sent out by Miss Ross, state leader in domestic science, which are suited for club work.

"The child and his book," was discussed by Mrs. R. F. Asplund, of Santa Fé, who gave an interesting talk of her own experiences as child, teacher, librarian, and mother. A good discussion was provoked, made more interesting by the presence of a Chinese who was in this country in the interest of a school in China. Mention was made of the "Safety First Week" for boys which F. K. Mathiews of New York inaugurated to

improve juvenile reading. Booklets sent out from the Boy Scout office were distributed by Miss Madden.

"The teacher and the library" was the topic taken up by Dr. F. H. H. Roberts of the Las Vegas Normal. Dr. Roberts said that the teacher lives in the past, in the world of books. Therefore the librarian must bring the good of the present day fiction and poetry to the teacher and the school, and help to do away with the lack of interest in English "outside reading" by the child. He stated that every one should read widely and then use what he gets in that reading in his own life—dramatize it for himself. For this reason, teachers and librarians should be most careful what books are given to boys and girls. The time was so short that discussions were not called for and the meeting adjourned.

PAULINE MADDEN, *Secretary*.

NEW JERSEY SCHOOL LIBRARIANS'  
ASSOCIATION

The first fall meeting of the New Jersey School Librarians' Association was held Oct. 9 at the library of the East Orange High School, East Orange, New Jersey. Miss Mary L. Sutliff of the Library School of New York Public Library addressed the members of the association on "The most useful reference books for a high school library." Her talk was followed by an informal discussion of the subject by all present.

The sixth meeting was held in the East Orange Public Library, Saturday, Dec. 11th at 2 p. m. Miss Julia A. Hopkins, principal of the training class of the Brooklyn Public Library, addressed the members of the association on "Courses of library instruction in high schools." Miss Hopkins' talk was followed by an informal discussion of the subject by the members present.

DOROTHY KENT, *Secretary*.

NEW YORK SPECIAL LIBRARIES  
ASSOCIATION

The New York Special Libraries Association will hold its next meeting in the rooms of the Municipal Reference Library in the Municipal building on Wednesday, Jan. 19, at 8 p. m. The program will be in charge of the financial libraries in the city and will be devoted to their interests. An exhibit of forms and methods in use in financial libraries will illustrate the administration of this class of special libraries.

CHICAGO LIBRARY CLUB

The December meeting was held on the ninth at the Chicago Public Library. The club was fortunate in having Miss Kathleen

O'Brennan of Dublin, who spoke on "Personalities in the Irish literary movement." A writer and critic herself, Miss O'Brennan told in a most intimate and interesting way not only the significance of the movement, but also the contribution to it of such poets, novelists and dramatists as "A. E.", Stephens, Synge, Lady Gregory, Yeats, and many others. Not the least inspiring part of her talk was her characterization of the group who gather at the Abbey theatre, for she gave us such vivid impressions of her friends and associates that we shall think of them no longer as celebrities merely, but as live people, doing splendid work in the literary world.

A. H. SHEARER, *Secretary*.

UNIVERSITY OF TEXAS LIBRARY CLUB

The staff of the University of Texas Library, numbering twenty-five, have organized a library club and will hold regular monthly meetings. Other library workers in Austin may join them later.

---

## Library Schools

---

NEW YORK STATE LIBRARY SCHOOL

The faculty have unanimously voted to have the school year begin hereafter on the third Wednesday of September and close on the second Wednesday of June. This earlier opening will permit much greater elasticity in the schedule and will permit other changes of advantage to the school.

The seniors are engaged in preparing study club outlines under the direction of Mr. C. F. Porter of the traveling libraries section. The subject for the year is Spain. The outlines include suggested programs for clubs as well as lists of suitable references for such programs, and when completed are used by the traveling libraries section in its work with organized study clubs throughout the state.

The shelf practice of the juniors, under the direction of Miss Woodworth, is this year largely devoted to work in the many different collections of library material which are located in the library school rooms. The result has been, not only a very great variety of material and methods available for practice, but a much better knowledge on the part of the students of the unusual resources available in the many special collections arranged by Miss Woodworth.

The students received, through the courtesy of the Drama Society of Albany, free tickets to a lecture given Nov. 23, by Granville Barker on "The new ideals of the drama." Through the Drama Society, the students receive special rates to many of the

best productions appearing in the city. Among these already given have been "Androcles and the lion," "The man who married a dumb wife," and "Pygmalion."

About twenty-five of the students who stayed in Albany over the Thanksgiving holiday, held a holiday dinner at the Nev' Kenmore on Thanksgiving night. Misses Hawkins and Sanderson of the faculty were guests.

The Christmas recess will begin Dec. 22 and end Jan. 2.

A post-card from Asa Don Dickinson, 1904, states that he has organized a library training class of 21 members at the University of the Punjab, Lahore. Several of the members of the class will be retained on his staff to organize the library of the university.

F. K. WALTER.

LIBRARY SCHOOL OF THE NEW YORK  
PUBLIC LIBRARY

Dr. Frank Weitenkampf of the staff spoke to the juniors on November 12 and 17, on "Prints," accompanying his lectures with slides. Framed and labelled examples of the etching, line and wood engraving, lithograph, mezzotint, and colored lithograph, have been hung on the walls of the lecture-room as a permanent exhibit. The school was fortunate in securing a talk from Mr. J. I. Wyer, on "Librarianship, its work and its ideals," and from Mr. W. W. Bishop on "Cataloging as an asset," during their brief visits to the city. Mr. Herman Rosenthal gave the juniors his address on "The Golden Age of Russian literature," on November 24. This address wins always an added interest because of Mr. Rosenthal's personal acquaintance with several of the greatest literary personages of Russia. Mr. Andrew S. Edson, associate superintendent of schools for the greater city, spoke to the class on November 29, on "Some educational experiments in New York City schools." Naturally the one occupying most of the speaker's attention was the "Work-study-play school," now being tried in Bronx borough. Miss Mary O. White gave a lecture on "Book-reviews" to the juniors, on December 1. Mr. F. W. Faxon, of the Boston Book Company, being in town on December 3, was invited to speak to the junior class on the work of that company in completing sets of periodicals. Miss Annie C. Moore of the staff, described the work of the New York Public Library for children, on December 8, accompanying the description with slides. Mr. H. W. Kent, of the Metropolitan Museum, gave the last junior lecture of the term, December 10, on "The modern museum."

The juniors have formed their class organ-

ization and elected the following officers: Perrie Jones (Minnesota), President; and Mabel Bien (Washington, D. C.), secretary-treasurer.

Senior lectures have been as follows, since the last report:

*School and college library course:*

Nov. 15, 16, 22, 23, 29, 30. Andrew S. Keogh. College library administration.

Nov. 16, 30, Dec. 7. Elizabeth C. Stevens. Illustrative processes.

Dec. 6, 13. Visits to local college libraries, and report on same.

Dec. 14. Visit to Miss Stevens' bookbinding studio.

Dec. 20. Catharine S. Tracey. School and college library charging systems.

Dec. 21. Ms. division. Instruction in calendaring Ms.

*Advanced reference and cataloging course:*

Nov. 3, 10, 16, 17, 23, 24. Catharine S. Tracey. Cataloging of incunabula.

Nov. 10, 24. Henrietta Bartlett. Bibliography, and quiz.

Nov. 16, 30, Dec. 7. Elizabeth C. Stevens. Illustrative processes.

Nov. 16, 23, 30. Andrew S. Keogh, College library administration. (Optional.)

Dec. 1, 8, 15, 22. Problems in cataloging room, public catalog room, and main reading room.

Dec. 14. Visit to Miss Stevens' bookbinding studio.

Dec. 21. Ms. division. Instruction in calendaring Ms.

*Administration course:*

Nov. 18, Dec. 2, 9, 15, 22. Annie C. Moore. Selection of children's books, and test.

Nov. 18, Dec. 2, 9, 15, 22. Practice in selection.

*Children's librarians' course:*

Nov. 4, 11, 18, Dec. 2, 9, 15, 22. Annie C. Moore. Selection of children's books, and test.

Nov. 4, 11, 18, Dec. 2, 9, 15, 22. Practice in selection.

Dec. 3. Visits to children's departments in bookstores.

Dec. 10. Visits to children's book exhibits in libraries.

Dec. 17. Reports on visits.

On October 16, Misses Van Valkenburgh and Sutliff guided a considerable number of the new class to their favorite picnic grounds on Staten Island, and in November all were invited to a picnic supper at the apartment of one of the Faculty. The Principal's Christmas party, on December 15, was given, as usual, for the Faculty and both classes.

The Alumni Association and senior class

welcomed the entering class at a Hallowe'en party the evening of October 30.

Samuel Seng, of the senior class, has recently been honored with a scholarship awarded by the Chinese Government to enable him to continue his studies for the coming year. It is interesting to know that these scholarships are made possible by the return to China of the indemnity granted the United States after the Boxer troubles. The amount has been put into an Indemnity Fund, and is used for scholarships in the United States. Mr. Seng is taking unpaid practice at Columbia University Library.

Mr. Ralph Gossage, a junior, who gave up his work temporarily, to go to the front, writes from Holland, where he is helping in a camp of Belgian refugees, mostly women and children, under the auspices of the War Victims' Relief Committee of the Society of Friends. He says, "The only service open to me was in Holland, in service of Friends' War Victims' Relief Committee for Belgians. So here I am at Uden, a camp of five thousand and homeless Belgians. Fifteen hundred of these are children. The Danish Government has provided cottages for them. These houses are collapsible and will be taken by Belgians into their own country when the war ceases.

"Our work is largely directing and beginning crafts of all sorts. Four women workers and two men workers for so large a camp find themselves very busy. The Belgians are like children. To-day, I completed a mat-weaving loom and succeeded in getting two men trained into its use. Other machines will be built when this model has proved itself. Our broom and brush-making is getting on well. We have several fair-sized orders for brushes, placed in military camps in Holland and with concerns in England. Toys have begun to take shape—clowns, French poodles, funny little pigs, a large engine; many varieties of dolls lend a charm to our great work-room. The women do many very remarkable bits of work. Old garments are transformed into many useful smaller articles.

"There are many interesting features in the arrangement of this great camp out here among the canals and windmills. The camp is well arranged into all the divisions found in a small city. Here you have post offices, church, hospital, stores where points (paper money) are currency, and a theatre which is run by the Belgians, general schools, one technical school, and several clubs. The Flemish language in rather its lower form is spoken; some few speak French. The camp

is really a military camp. A very proper Dutch Colonel acts as burgomaster. He is very much pleased with the work done with these people. This is one of four such camps in Holland and is probably the largest. The other camps are at Gouda, near Rotterdam, Eda, and the newest at Nunspeet on Zuyder Zee."

The juniors prepared a box of Christmas cards and made toys to send to Mr. Gossage for the Christmas festivities of the camp.

George S. Maynard (1905) has been engaged for temporary work by the Library of the American Society of Civil Engineers.

Mignon Tyler (junior, 1914) has been engaged as children's librarian by the Los Angeles Public Library.

Theodore Avé-Lallemant has been appointed to the staff of the Research Division of the National Americanization Committee, with headquarters in New York.

From the 16th to the 22nd, reviews and examinations were the order of the day. The Christmas vacation begins at noon, on December 22nd, and school reopens January 3rd.

MARY W. PLUMMER, *Principal*.

#### UNIVERSITY OF ILLINOIS LIBRARY SCHOOL

The annual meeting of the Illinois Library Association held in Urbana November 3, 4 and 5, brought back to the school a large number of alumni and former students; 74 of these attended the alumni dinner and reunion, and in addition the following invited guests were present: Director and Mrs. Windsor, Miss Curtis, Mr. Reece, Mr. Carlton, Mr. Legler, Mr. Utley, Miss Masseur, and Mr. Barr. Mr. Adam Strohm, of the Detroit Public Library, president of the Alumni Association, was toastmaster, introducing the following speakers: Director Windsor, Miss Fanny A. Noyes, 1911-12, Mrs. Carrie Patton Clark, 1913, Miss Louise B. Krause, 1898, and Miss Kate D. Ferguson, 1916. The committee making the arrangements for this dinner (Miss Josie B. Houchens, 1905, chairman), deserves especial praise; in particular everyone appreciated the kodak portrait of Miss Simpson which formed the frontispiece of the menu booklet. The beautifully decorated dining-room and tables won high praise for Miss Parsons of the Household Science faculty of the university. At the close of the dinner the committee appointed some time ago to arrange for a memorial for Miss Katharine L. Sharp, the founder of the school, reported that it had been decided to try to secure a bronze bas-relief portrait of Miss Sharp for presentation to the school and university. Subscriptions have already been

received amounting to \$930, much of which has been paid, and committees were appointed to collect the remaining subscriptions and to secure an artist to execute the bas-relief.

Students in the school did much to help in carrying out all of the arrangements for a successful state meeting. Classes in the school were dismissed and each student was required to write reports of certain of the sessions which she attended.

Mr. Wilfrid M. Voynich exhibited at the University of Illinois his collection of rare manuscripts and books during the week of November 8; the school was fortunate in having him give a most instructive and interesting talk on early printing illustrated by books and manuscripts from his exhibit.

Mr. W. W. Bishop, librarian of the University of Michigan, visited the university Oct. 26, and gave the school a stimulating address on cataloging.

Mr. George B. Utley, secretary of the American Library Association, visited the school Dec. 2 and 3, giving two lectures, one on "The work of the A. L. A." and the other on "Recent tendencies in library work."

Miss Mary E. Hall, librarian of the Girls' High School, Brooklyn, N. Y., gave one of the principal addresses at the annual High School Conference held at the University of Illinois, and under her general direction an exhibit of material and methods in high school library work was gotten together. All students in the school heard her lecture on "The new high school library" and gained much also from the exhibit.

#### ALUMNI NOTES

Grace Barnes, 1913-14, has been appointed cataloger in the University of Illinois Library.

George A. Deveneau, 1914-15, has been appointed assistant in charge of the Agriculture Library of the University of Illinois.

Elizabeth Cass, B.L.S., 1913, has accepted a position in the library of the Commonwealth Edison Co., Chicago.

Agnes Cole, B.L.S., 1901, is a temporary cataloger in the John Crerar Library, Chicago.

Irene Warren, Armour, 1896, has resigned her position as librarian of the School of Education, University of Chicago.

Nellie R. Roberts, B.L.S., 1915, has been appointed assistant in charge of the English Departmental Library, University of Illinois.

P. L. WINDSOR, *Director.*

#### SIMMONS COLLEGE LIBRARY SCHOOL

The Thanksgiving recess and the Christmas holiday, extending from December 21 to January 4, render this season of the year well

beloved, but make school work rather fragmentary.

The library economy class enjoyed a visit to the factory of the Library Bureau, where they saw both uniformity and variety of supplies, and they also had a glimpse of the busy work with foreigners in the North End and East Boston branches of the Boston Public Library during their hours there one afternoon.

In their class work they are encountering the difficulties of alphabeting, as, armed with a syllabus on the subject by Miss Hyde, each struggles with a set of cards as full of snags as can be devised. Accession and shelf are also part of the month's schedule.

Miss Mary Hall gave a stirring talk on the possibilities of work in the libraries of high schools, which was supplemented the next week by a timely exhibit of the material illustrating this topic which was prepared for the New Jersey Library Commission, to whom the school is indebted for the loan of it. The fact that many of the students are doing some of their practice work in the Girls' Latin School Library will make this a more vital topic to them.

#### APPOINTMENTS

Margaret Ridlon, 1912, has resigned her position as assistant in the Simmons College Library, to accept that of assistant in the catalog department in the University of Chicago Library. While the College Library and the School will regret Miss Ridlon's loss, all wish her good fortune in her new work, which is in her home city.

Ruth Eaton, 1915, is engaged in reorganizing work in the South Natick Library.

Jennie C. Frost, 1914-15, is reorganizing the library of the Normal School for training teachers for the feeble-minded, at Waverley, Mass.

Margaret Gilman, 1904-05, who has been specializing in art, is doing private work for the Director of the Fogg Art Museum.

Lucy Luard, 1915, is cataloging public documents in the State Library in Boston.

Elizabeth Putnam, 1911, has been appointed children's librarian in the Salem Public Library, to succeed Ruth Shattuck, 1910, who has resigned on account of her health.

Elfriede Sander, 1902-05, has resigned from the Arnold Arboretum Library to join the reference cataloging staff of the New York Public Library.

Edna Winn, 1906, has accepted the position of librarian of the Research laboratories of the General Electric Company at Schenectady.

JUNE RICHARDSON DONNELLY, *Director.*

## WESTERN RESERVE LIBRARY SCHOOL

The students have had various points of view of the library field presented by the lecturers of the past month. Mrs. Eleanor Ledbetter, librarian of the Broadway branch of the Cleveland Public Library, whose library is located in the midst of a varied foreign population, spoke on "Our foreign citizens and their European homes." Mr. Arne Kildal, librarian of the Public Library of Bergen, Norway, told of "Library work in Norway," and illustrated his talk with lantern slides of the new library building being erected in Bergen and other Norwegian library buildings. The subject of "The great war and the humanities" was interestingly presented by Mr. J. I. Wyer, Jr., director of the New York State Library School. "The non-technical side of library work" was discussed by Mr. Adam Strohm, librarian of the Detroit Public Library. Through the courtesy of the Cleveland Public Library Training Class, Mrs. Gudrun Thorne-Thomsen was heard in her presentation of the comparison of the classic and modern fairy tales.

The director lectured at the University of Illinois Library School on Dec. 10.

A number of enjoyable social functions, which have afforded a pleasant diversion from the regular routine, have been given during the month. On Nov. 20 the director entertained with afternoon tea at her home. Miss Norma Harrison, formerly head of the public speaking department of the University of Iowa, gave several delightful readings. The faculty, students and friends have been finding it very pleasant to call on Miss Howe at her home on the "first Saturdays." The school had as guests, Dec. 2, Miss Margaret Mann and Miss Bertha Randall, of the Carnegie Library of Pittsburgh. Both gave interesting and practical talks about their work, after which an informal tea was given. Preceding the Thanksgiving recess, a social hour, planned by the six Cleveland students in honor of the out-of-town members of the class, was given in the lecture room of the school.

Alice S. Tyler, *Director.*

CARNEGIE LIBRARY OF PITTSBURGH—  
TRAINING SCHOOL FOR CHILDREN'S  
LIBRARIANS

The principals and teachers of English and history in the Pittsburgh High Schools were guests of the Training School Nov. 22, when Miss Mary E. Hall, librarian of the Girls' High School, Brooklyn, N. Y., gave a talk on "The administration of a high school library." Dr. Davidson, superintendent of Pittsburgh schools, and Mr. Craver presided at the meeting. November 23 Miss Hall

lectured to the Training School on "The work of the Girls' High School, Brooklyn." "Librarianship, its ideals and meaning" was the subject of a talk given by Mr. James I. Wyer, Jr., director of the New York State Library School to the school Nov. 24.

The junior class attended the address given by Dr. Henry S. Pritchett, president of the Carnegie Foundation, on "Andrew Carnegie," Nov. 24, in the Carnegie Music Hall. The address was part of the exercises held by the Carnegie Institute of Technology in celebration of Mr. Carnegie's 80th birthday.

Miss Effie Power presented a paper on "Training for library work with children" at the Elementary and Normal School Section of the National Council of Teachers of English at Chicago, Illinois, Nov. 26.

Mrs. Gudrun Thorne-Thomsen of Riverside, Illinois, gave ten lectures on story-telling to the Training School Dec. 6-11.

Miss Anna MacDonald, consulting librarian of the Pennsylvania Free Library Commission, lectured Dec. 13 on "The work of the Pennsylvania Library Commission."

Students in the junior class were scheduled during December for practice work in the Reference Department.

Dec. 21 to Jan. 1 the Training School will be closed for Christmas recess.

## ALUMNAE NOTES

Dorothy Flower, special student, 1912-13, was married to Paul Benjamin Livingston, November 20, 1915.

Helen Edith McCracken, 1915, has been appointed assistant-in-charge of the children's room, Soho Baths Settlement, Pittsburgh, to fill the vacancy caused by the resignation of Martha Rodes Carter, 1913.

SARAH C. N. BOGLE.

PRATT INSTITUTE SCHOOL OF LIBRARY  
SCIENCE

Story-telling has never had a place in the curriculum of the school, though some more or less regular work was formerly carried on by volunteers at the Greenpoint Settlement as part of the work of the Library Chapter of the Neighborhood Association. This year, however, more systematic work has been undertaken. During the first part of the term each student attended one of the regular story hours in the children's room to see what it is like. After all had seen a story hour in operation, an elective course in story-telling was offered to those who inclined toward children's work. Eight elected the course which includes opportunity for each student to conduct two or three story hours for small groups of children under Miss

Cowing's supervision, while the class as a whole meets each alternate week for suggestions and discussion. So though they do not hear each other's stories they all have the benefit of the discussion and criticism of methods. The north class-room with the partition down is used for the story hours. Shortly after this work had been started the class had the privilege of attending three lectures on story-telling given by Miss Marie Shedlock at Columbia University, through the courtesy of Mr. Milton J. Davies, assistant to the director of the Columbia University Institute of Arts and Sciences.

Mr. J. I. Wyer, Jr., director of the New York State Library, gave the class a very inspiring talk on "Library ideals," on Tuesday afternoon, Nov. 16.

Miss Sarah B. Askew, class of 1904, organizer of the New Jersey Public Library Commission, spoke before the class Nov. 30 on "Opportunities of the commission worker." The class was also invited to attend a story hour given by Miss Askew at the Young Women's Christian Association that same evening and a number availed themselves of the opportunity of hearing her again.

Dr. Frank P. Hill gave the school his annual talk on the Brooklyn Public Library system on Dec. 7.

Miss Edith Wynne Matthison read before the student body of the Institute on Thursday afternoon, November 18. Her selection comprised the balcony scene from Romeo and Juliet and the work of a group of representative modern poets.

Mr. Louis O'Neill, assistant librarian of the Insular Library of Porto Rico, who spent three months at the school in 1912, visited us Dec. 8, bringing with him the plans for their new library building.

The vice-director went to Trenton Nov. 12 and spoke to the staff of the Public Library on "The relation between personal and professional life."

#### ALUMNI NOTES

Lillian Burt, 1902, cataloger at the Pacific Unitarian School for the Ministry at Berkeley, California, has gone for a year to the Rosenberg Library, Galveston, Texas, as head of the loan and reference department.

Adeline Cartwright, 1913, was married Nov. 3 to Lieutenant George Bayly, of the 3rd Battalion, Canadian Expeditionary Force. Lieutenant Bayly was wounded at Ypres in April and invalided home. His leave expires in January and Mrs. Bayly expects to sail with her husband to England early in the new year.

Mildred MacCarthy, 1915, who has been doing a temporary piece of work in the cataloging department of the library, has been appointed to the cataloging department of the Philadelphia Public Library.

JOSEPHINE ADAMS RATHBONE.

#### DREXEL INSTITUTE LIBRARY SCHOOL ASSOCIATION

The annual Philadelphia dinner of the Drexel Institute Library School Association was given at the College Club Thursday evening, Nov. 18, 1915. There were 25 members present. After a very pleasant social time, a business meeting of the association was called to order with the president, Miss Fulton, in the chair. Minutes of the previous meeting and the treasurer's report were read and approved. A letter from Miss Bacon was read and enjoyed. The luncheon committee then explained the plans for the monthly luncheon at the College Club on the first Thursday of each month. A vote of thanks was extended to the committee, including Miss Shoemaker, for their efforts in furthering the luncheon scheme.

The officials elected for the new year are: Elizabeth V. Clark, president; Florence B. Custer, vice-president; Katherine M. Trimble, secretary; Caroline B. Perkins, treasurer. The executive committee are Miss Fulton, Miss Hellings, Miss Wood, Miss Stiles.

Miss Mary Zita Cruice, 1896, is in charge of the package libraries of the H. W. Wilson Company, White Plains, N. Y.

#### LOS ANGELES PUBLIC LIBRARY TRAINING SCHOOL

School opened Oct. 4 with sixteen students in attendance. The following colleges were represented by eleven members of the class: University of Chicago, Wellesley College, Vassar College, Occidental College, University of Minnesota, Drury College, Milwaukee-Downer College, and the Los Angeles Junior College.

The following students compose the class:

Mrs. Nellie Bezoier, Pomona, Cal.  
 Mrs. Saxon Brown, Pasadena, Cal.  
 Elizabeth Connor, Ph.B. (University of Chicago), Pasadena, Cal.  
 Marian Dinsmoor, B.A. (University of Minnesota), Long Beach, Cal.  
 Maria Deutschbein, Bloemendaal, Holland.  
 Iona C. Eddie, Pasadena, Cal.  
 Elizabeth K. Ellsworth, Hollywood, Cal.  
 Gladys Glenn, Hollywood, Cal.  
 Grace Hammond, Los Angeles, Cal.  
 Betty T. Lord, B.A. (Milwaukee-Downer College), Milwaukee, Wis.  
 Reth Pasko, Los Angeles, Cal.  
 Helen M. Rowland, Pasadena, Cal.  
 Abbey T. Stewart, Los Angeles, Cal.  
 Susan M. Talmage, Pasadena, Cal.  
 Margaret E. Vinton, Springfield, Mo.  
 Elizabeth Walker, B.A. (Occidental College), Long Beach, Cal.

A few changes have been made in the curriculum. Miss Helen Haines will teach book selection in addition to the courses conducted by her last year. Miss Britton's course in library work with children will be extended to twenty lectures. An announcement of outside lecturers engaged for special courses, will be made at a later date.

A number of improvements, in part made possible by an increase in the tuition fee, make the outlook for a successful year more promising than ever before. The course has been extended in length from eight to nine months. Miss Doris Crawford, a member of the class of 1915, has been appointed as reviser and assistant to the principal, and some much-needed equipment in the way of books, typewriters, filing cases, etc., has been added.

The following special lectures have been given during the fall months: Mrs. Gudrun Thorne-Thomsen, "The adaptation of the story"; Dr. Benjamin Stelter, "Contemporary American poetry"; Mr. H. A. Linscott, "School text books"; Miss Laura Cooly, "Spanish collections" and "Spanish literature."

An enjoyable introduction to the series of library visits which will come later in the school year, was a visit to the Hollywood branch to attend a meeting of its Drama Club. After a morning devoted to readings from Tchekoff, an out-of-door luncheon was served by Mrs. Jones and her staff to members of the class.

On Dec. 13 the class attended a reading of his own poems given by Alfred Noyes in the auditorium of the Hollywood High School. Another treat was a visit to the home of Mr. and Mrs. George Millard, where a most delightful hour was spent inspecting their book treasures.

At a recent meeting the class of 1916 elected the following officers: President, Grace Hammond; secretary-treasurer, Helen Rowland.

THEODORA R. BREWITT, *Principal*.

#### ST. LOUIS PUBLIC LIBRARY—TRAINING CLASS

The training class reported for school work Sept. 27, with twelve students. Two others were accepted, but returned to college after finishing the two preliminary weeks of required practice work.

In addition to the usual fall schedule of lectures, the students have attended the monthly book review meeting of the staff. They have also had the benefit of an extra course in typewriting, two hours a week, under the supervision of a trained stenographer. This

will be followed by practice in copying the soiled cards from our public card catalog.

The students are sent to various departments at the Main Library and in the branches for ten hours' practice work each week throughout the school year, the assignments being changed every month. This not only gives a chance for practical training, but gives each one an opportunity to observe library conditions and variations in the different sections of the city.

Mr. Samuel H. Ranck, librarian of the Grand Rapids Public Library, addressed the class and members of the staff on the extension work of that library in October, and Miss Elizabeth B. Wales, secretary of the Missouri Library Commission, recently lectured on the work of the commission.

### Review

---

JOHNSTON, R. H. Special libraries. Preprint of "Manual of library economy": chapter 8. Chicago: American Library Association Publishing Board, 1915. 19 p.

MUDGE, ISADORE G. Bibliography. Preprint of "Manual of library economy": chapter 24. Chicago: American Library Association Publishing Board, 1915. 25 p.

Dr. Johnston's contribution to the A. L. A. manual is a succinct survey of the special library movement, its rapid rise and its present status. The wide scope of the somewhat unsatisfactory term "special libraries" is indicated by some account of the many kinds of libraries—business, insurance, legislative and municipal reference, technical, and other—represented in the membership of the Special Libraries Association, and reference is made to libraries typical of each class. The word "library," as used in this connection, "must be made to include," says Dr. Johnston, "manuscript reports, models, plates, photographs, as well as the trade catalogues, city directories and telephone books which, while present in a great many libraries, do not assume the importance they attain in these small collections." It is a chapter written mainly for persons coming new to the subject, but special librarians will do well to read it, for the sake of the clearer perspective it will give them of the special library field and of their relationship to their fellow-workers therein.

The object of Miss Mudge's chapter on bibliography, as stated by herself, "is to show the meaning of the words bibliography and bibliographer in their original, derived, and present use, to define in detail the forms and scope of modern practical bibliography, to show the

value of a knowledge of such bibliography in all branches of library service, and to survey briefly the work in bibliography done by libraries, bibliographical societies, learned institutions, government departments, and by organized co-operative effort." It is not intended, we take it, to be a desk guide for bibliographical workers, such as was Mr. Cole's well-known pamphlet. It is, on the other hand, a thoroughly scientific treatise on the field it seeks to cover, and, despite its brevity, an amply sufficient text-book for the library school student or manual for the librarian. A more satisfactory treatment of the subject within the limits laid down could not be asked.

### Librarians

---

ALLSEBROOK, Miss A., of Denver, has been placed in charge of the Coronado (Cal.) Public Library, to succeed Mrs. Mary G. Valentine.

BURGER, Dr. Combertus Pieter, Jr., librarian of the library of the University of Amsterdam (Universiteits Bibliotheek te Amsterdam) born at Gouda, 1858, has celebrated the twenty-fifth anniversary of his present position. *Het Boek* gives in one of its recent numbers a biography of this prominent Dutch librarian, followed by an extensive bibliography of his historical and bibliographical works, compiled by Dr. B. M. van der Stempel. This bibliography comprises approximately 200 works and articles by Dr. Burger, published between the years 1884 and 1915.

CENTER, Mrs. Jennie F., librarian of the Litchfield (N. H.) Public Library since its establishment, died Dec. 9 in the Memorial Hospital in Nashua.

CLIFFORD, Mrs. Margaret, has been appointed to the position of assistant librarian at the Manitoba Legislature Members' Library, taking the place of the late Miss Bella Norquay. Mrs. Clifford for some years has been employed in the Winnipeg Carnegie Library.

CLARK, George L., legislative reference librarian of the Michigan State Library, Lansing, has been granted six months' leave of absence, which he will spend in Washington, D. C., as private secretary to Congressman P. H. Kelley. Miss Olive C. Lathrop, assistant in the department, will have charge during his absence.

CLARKE, Edith E., N. Y. State Library

School, 1889, has gone to California to assist in the Riverside Winter Library School which will be in session from January 10 to March 4.

COLWELL, Emily K., daughter of Dean R. S. Colwell of Denison University, has been given a position as assistant in the State Library. She formerly was connected with the library at Somerville, Mass., and later with the Troy High School Library. She attended Vassar college and studied for two years in the New York Library school at Albany.

COY, Alice, the new librarian of the Mercantile Library of Cincinnati, assumed the duties of the position Nov. 15, on the occasion of the eightieth anniversary of the founding of the library. Miss Coy succeeds R. M. McCurdy, who has accepted a position in New York.

CRAIG, Jennie A., B.L.S., Illinois 1909, for the past four years assistant in charge of the English departmental library, University of Illinois, has accepted the position of catalog reviser in the general library.

DARROW, Anna W., for several years an assistant in the Bristol (Ct.) Public Library, has resigned, the resignation to take effect Jan. 1.

DAY, Ida, formerly a library science student at Kansas State Normal School, Emporia, and recently a member of the Emporia Normal library staff, has been elected librarian of the public library at Hutchinson, Kansas, succeeding Miss Amy Cowley.

DOUGHTERTY, Harold T., librarian of the Deborah Cook Sayles Library in Pawtucket, R. I., since 1910, has placed his resignation in the hands of the trustees. He is to become librarian of the Newton (Mass.) Free Library, succeeding Miss Elizabeth P. Thurston, early in January. Mr. Doughterty's library experience started at the Cambridge Public Library. He was also in the Library of Congress and Documents Library of Washington from 1900 to 1907. From 1907 to 1910 he was librarian of the Waltham Public Library. He is serving his fourth year as president of the Rhode Island Library Association.

EAMES, Wilberforce, has asked to be relieved of the administrative duties connected with his position as chief of the American history division of the New York Public Library, in order to devote a part of his time to the completion of Sabin's "Dictionary of books relating to America," the editing of which he was forced to discontinue some

years ago by pressure of library duties. Mr. Eames will continue to give a portion of his time as bibliographer to the library, which he has served so faithfully for thirty years. The change is effective Jan. 1.

EARL, Mrs. Elizabeth Claypool, of Connersville, Ind., has been elected to the presidency of the Public Library Commission of Indiana, to succeed Mr. Jacob P. Dunn, the former president. Mrs. Earl has been a member of the commission since its establishment in 1889, and has been active and devoted in her service.

FRASER, Viola C., Illinois 1912-13, resigned her position as loan desk assistant in the University of Illinois Library and was married to Dr. Lynn B. Vaughn, November 16, 1915, in Downer's Grove, Illinois. Dr. and Mrs. Vaughn are at home in Hurley, South Dakota.

HENLEY, Eunice D., former librarian of the Wabash (Ind.) Public Library, has resigned her position in the Willows branch, Glenn County Free Library, California, and has returned to Indiana to organize the Columbia City Public Library.

MACPHERSON, Maud, who was for a long time connected with the Washington State Library at Olympia, has been appointed librarian of the Public Library at Boise, Idaho, beginning Jan. 1.

PALSITS, Victor Hugo, has been chosen to succeed Wilberforce Eames as chief of the American history division of the New York Public Library. He will also continue to hold his present position as keeper of manuscripts.

PREVOST, Marie Louise, assistant librarian of the Free Public Library of Elizabeth, N. J., has written a little pamphlet called "The library adventures of Bob and Elizabeth," which gives in story form simple instruction on the use of the children's room with its catalog and books of reference.

RETVEDT, Ragnhild, N. Y. State Library School, 1914-15, who returned to Norway in September to become an assistant in the technical high school library at Trondhjem, has received an appointment as assistant in the new public library at Drammen.

RIGGS, Winifred, N. Y. State Library School, 1904, has been appointed first assistant in the East Cleveland Public Library.

SCHAANNING, Maja, N. Y. State Library School, 1912-13, has resigned the librarian-

ship of the public library at Kristiansand, Norway, to become librarian of the newly organized public library at Drammen.

SHEDLOCK, Marie, the story-teller, has been in Toronto for a course of five lectures under the auspices of the children's librarians. The course was a great success from every standpoint. The librarians limited the attendance to three hundred so as to preserve the story-telling atmosphere, and they could have sold out the house twice over. There was not a course ticket available a week previous to the opening lecture. At the close of the series Miss Shedlock offered to give an afternoon to the public who could not get tickets for the course, the proceeds of which were to be devoted to a patriotic purpose. The University Women's Club took charge of this, and the result was a substantial increase to their University Base Hospital Fund.

THOMPSON, Elizabeth H., B.L.S., New York State Library School, 1915, resigned her position in the book selection section of the New York State Library, to go to Trinity College Library, Hartford, Ct., as cataloger.

WAUGH, Florence, has resigned from her position as supervisor of the libraries in the Nebraska state institutions, and was married in October to Grant Humphrey of Ocean Springs, Miss.

WILKIE, Florence, N. Y. State Library School, 1914-15, has received an appointment as assistant in the library of the U. S. Bureau of Mines, Washington, D. C.

WILLIAMS, Lizzie H., aged 58, oldest assistant in point of service at the Brockton (Mass.) Public Library, died Dec. 18, after an illness of several weeks. About Nov. 1 she was kept from her duties at the library by an attack of diphtheria and complications developed, causing her death. In the early days of the library she was assistant to Miss Myra F. Southworth, and her work at the library extended from 1879 over a period of thirty-seven years until her last illness. The library was first located in a small building on Green street and later occupied rooms in Satucket block, from which it was removed to the City Hall, thence to the new library building. Miss Williams had charge of the circulation of books to the schools and later had charge of the delivery desk.

WILLIAMS, Nellie, has been appointed to succeed Miss Florence Waugh as supervisor of the libraries in Nebraska state institutions.

# THE LIBRARY WORLD

## New England

### MAINE

*Lewiston.* The library of French literature collected by the late Dr. Isaac L. Rice of New York City has been offered to Bates College. The library contains about 1800 volumes, including many rare editions.

### NEW HAMPSHIRE

*Manchester.* The City Library has recently received from Capt. Charles H. Manning the gift of 115 volumes dealing with the United States navy. Of these, 47 volumes contain the proceedings of the United States Naval institute from its organization in 1873 to date, 46 comprise a complete file of the Journal of the American Society of Naval Engineers since its organization in 1902, and the remaining 22 the transactions of the Society of Naval Architects and Marine Engineers to date.

### VERMONT

*Waitsfield.* The trustees of the Joslin Memorial Library have been the recipients of a life-sized portrait of the donor, George A. Joslin of Omaha, Neb.

### MASSACHUSETTS

*Boston.* Purchase of three plots of land in Blagden street, to be used for the erection of an annex to the Boston Public Library, has been effected. The sum paid was \$122,500, and the three parcels comprise 6800 square feet.

*Boston.* *The Electric Railway Journal* of December 4, 1915, pages 1118-1119, contains a description of the Boston Elevated Railway Company Library. It gives the methods of developing and indexing the library, and the resources of the library are described. One of the interesting things in connection with this library are the methods of co-operation with the other special libraries in and around Boston.

*Brockton.* The Russian Labor Group of Montello, an organization of the Russians of Brockton, Stoughton and Bridgewater, is planning a series of tableaux, in conjunction with a ball, to raise funds to finance educational work and to establish a library. Meetings have been held every Sunday under the direction of the immigration secretary of the Y. M. C. A. The organization has

been formed about two years and has been growing steadily. The membership now numbers about 70.

*Lawrence.* Public library books will be delivered by Western Union messenger service hereafter to those patrons who are willing to pay a small fee for the accommodation.

*Springfield City L.* Hiller C. Wellman, lbn. (Rpt.—yr. ending Apr. 30, 1915.) Accessions 18,820; withdrawals 4794; total 200,804. Circulation of books, 797,905; pictures 40,286. Fiction at the main library was 53.8%. In February, 1914, a new series of borrowers' cards was started; during the year 25,376 new cards were issued, and a large number of the old cards are still in use. Total receipts \$776,663.14; expenditures \$77,643.98.

*Stoughton.* The sum of \$500 has been bequeathed to the Public Library by the late Cassendana L. Phinney.

*Waltham.* The Francis E. Buttrick Memorial Public Library was dedicated Dec. 11, on the 50th anniversary of the establishment of a free library in that city. The site of the new edifice is that once occupied by the Central House, an historical landmark which stood for years on Main street, between Exchange and Spring streets. Mrs. Augusta M. Buttrick, widow of the donor, unable to attend the dedicatory exercises, presented two paintings of Mr. Buttrick and herself, which will be hung in the main reading room. At the exercises held in the main reading room Col. George H. Doty, chairman of the library building commission, made a brief address in turning the keys over to Mayor Thomas F. Kearns. He in turn transferred them to the care of Nathan A. Warren, chairman of the library board. The building then was thrown open to public inspection. The first petition relative to the new library came from a number of Waltham women requesting that the reading room be kept open on Sunday from 2 to 8 p. m.

*Williamstown.* The chemical laboratory of Williams College was completely destroyed Dec. 7 by fire. The loss is placed at \$100,000. Insurance covered only \$40,000 of the amount. The department library, containing several thousand volumes, was destroyed.

*West Springfield.* The concrete foundation for the Carnegie Library building at the cor-

ner of Park and Elm streets, is now in and the brick for the structure has begun to arrive. The building is 80 feet by 35. Arrangements are made to care for 15,000 books, but the capacity can readily be doubled. The contract price for the library is \$21,400.

*Worcester.* Need of more room at the Free Public Library through the building of an addition on the property on Pearl street adjoining the present site is shown by the fact that 90,000 volumes in the circulation department of the library, according to an article in the *Worcester Gazette*, are stored in the old building in stacks which are so close together that it is impossible for the library authorities to throw that section of the building open to the public and hardly permits of free use of the stacks by library attendants. The Worcester District Medical Society Library of 9,000 volumes is stored in an attic room in the old building and four rooms which have been set off in the cellar of the old building are now so crowded with books that more room is imperatively needed. It is necessary under present conditions to use parts of three floors in the old building for the circulation department which should be on one floor and because of the cramped conditions in all parts of the library plant it is impossible for the authorities to set aside special rooms for study of building and mechanical publications, or for other general library research work along lines on which it is pursued in other cities.

#### CONNECTICUT

The latest report of the Connecticut Public Library Committee is for the two fiscal years ended Sept. 30, 1914, and compares present conditions with those existing when the committee was first appointed. In 1891-2 there were 111 libraries in the state, only 52 of which were free libraries. There were 57 towns without libraries of any kind. In 22 years the number of libraries has increased by 74, the number of free libraries by 114 and the number of towns without libraries has decreased by 31, so that in 1914 there are 185 libraries in the state, 166 of which are free, and there are 26 towns without libraries. The traveling library department was instituted in 1899, and during the last biennium 789 libraries were sent out, with a circulation of 44,165. The book wagon during the same period made 740 calls on 228 families and lent 4309 books, 1.1 per cent being in foreign languages. The report of pictures shows 350 sets of related subjects, 127 framed pictures, and 2167 unframed pictures lent to

individuals, schools, and libraries. 21 stereopticon lectures, mostly travel, were used 390 times, 3 lectures on birds were used 45 times, and 3 lectures on United States history were used 65 times. The 30 libraries specially selected for granges have been little used, only 18 having been sent out. Two library institutes were held, one in Hartford in 1913 and one at the Danbury Normal School in 1914. The enrollment in 1913 was 34 and in 1914, 30. The amount paid by the state for books in 1913 was \$9418.98, and in 1914 it was \$10,621.92.

*Hartford P. L.* Caroline M. Hewins, lbn. (77th ann. rpt.—Je. 1, 1915.) Accessions 8215; withdrawals 2514. Circulation 240,399. New registration 3379; the triennial registration started over a year ago, now shows 10,319 names, and the whole number of outstanding cards is about 18,000. Receipts \$29,610.47; expenditures 27,110.47, including \$15,217.20 for salaries, \$6455.17 for books, \$978.44 for periodicals, and \$1912.67 for binding. The revision of the card catalog, under way for several years, was nearly completed during the year.

*Unionville.* Ground has been broken for the new Carnegie Library, which is to be built in Unionville, and with the erection of the new building, the end toward which many local people have worked for over a year will have been realized. The building is to stand on the lot between the schoolhouse and the former home of Charles G. Bill. The architect of the building is Edward L. Tilton of New York, and Richard F. Jones of Hartford has the contract for construction work. The contract price is about \$8,500.

*Wethersfield.* In the State Prison here is a library of 10,000 volumes for the use of the inmates. The tastes of the men are said to incline to philosophy, history and memoirs rather than to fiction.

#### Middle Atlantic

##### NEW YORK

*Brooklyn.* A fund of \$210,000, sufficient to erect one wing of the main building on Eastern Parkway and meet the immediate needs of the Brooklyn Public Library system, has been voted by the Corporate Stock Budget Committee of the Board of Estimate. For months officers of the library have been trying to get the city to make such an appropriation. In addition to furnishing a housing place for the valuable volumes owned by the library and now kept in the Montague branch, the new building will accommodate

the administrative offices of the Brooklyn Public Library, which are now in a building at 26 Brevoort place. The size of the wing, which will be completed with the appropriation, is 44 feet by 180 feet, and it will contain about eight thousand square feet. This space will accommodate the administration offices, the catalog department, the book order department and also a stack capacity for two hundred thousand books.

*Brooklyn.* In making up the budget for 1916, the Board of Estimate and Apportionment of the City of New York decided to discontinue the appropriation for the Albany Heights branch of the Brooklyn Public Library for the coming year, and recommended that this branch be discontinued because of its proximity to the new Eastern Parkway branch. The news of the intention to close the branch was met by vigorous protest and decisive action on the part of the residents of the Albany Heights section. A mass meeting was held on Wednesday, Dec. 1, at which the value of the library to the community was strongly attested. The attitude of both speakers and audience was a strong testimonial to the effective work which had been done by this branch, the second oldest in the library system, in its community, and was extremely gratifying to the library authorities. A committee was appointed to present the protest of the residents of the community against the closing of the branch to the Board of Estimate and Apportionment and a hearing on the subject was promised for a date later in the month.

*Brooklyn. Pratt Inst. F. L.* Edward F. Stevens, lbn. (Rpt.—yr. ending June 30, 1915.) Accessions 5933; withdrawals 3117; total number of volumes 109,098. Registration 10,072. Circulation 221,825; 84,131 persons used the library for reading and study. Salaries amounted to \$25,334; books \$5882; periodicals \$1008; binding \$1436; other maintenance expenses are included with the general administration of Pratt Institute.

*Kingston.* An anonymous gift of \$1000 for the purchase of books for the City Library has been secured through the good offices of Superintendent of Schools Myron J. Michael.

*New Berlin.* The village has been notified that Nathaniel Somers Beardslee has left a bequest of \$15,000 for a library building.

*New York City.* The Rand School of Social Science has recently organized a de-

partment of labor research which will contain a reference library on labor questions and publish concise reports on investigations of labor problems.

*New York City.* A list of books on health instruction has been approved by Dr. Charles F. Bolduan, head of the Bureau of Public Health Education, and with the aid of the public library all the books named will be placed at the disposal of the public, with the particular idea of circulation among high school pupils. In all seventy-two books are recommended. The first twenty in the list are under the heading of health; there are four on good food; four on food and cooking for the sick; seven on first aid to the injured; six on diseases; eight about the home nurse, and twenty-three on the care of babies.

*New York City.* In his report for the year ending Sept. 30, 1915, Frederick W. Jenkins, librarian of the Russell Sage Foundation Library, presents some interesting comparative statistics. Of typewritten bibliographies prepared by the library he writes: For the year ending September 30, 1911, 61 bibliographies were made. This is actually less than the number made for the month of March, 1915, when 66 such bibliographies were made. During the year, 315 typewritten bibliographies have been made for individuals and institutions in 30 different states. Of the growth of use of the library he says: For the year ending September 30, 1911, 4470 books were circulated; for the year ending September 30, 1915, 6911 volumes. The average number of readers per month for the year 1910-11 was about 300; the average number of readers per month for the year 1914-15 has been 1169 per month, or a total of 14,033 for the year. In one month, January, the number of readers reached a total of 1893. Gain in the use of the library by people other than students of the School of Philanthropy and members of Russell Sage Foundation staff shows also the wider field of usefulness for the collection. For the year ending September 30, 1911, 681 readers outside of the School and the Foundation borrowed books from the library—an average of about 57 per month. The average number of such borrowers now is over 200 per month.

#### NEW JERSEY

*Cranbury.* As a memorial to her father, L. L. Schultz and her brother, Wilbur F. Schultz, who were born in Cranbury, Mrs. Gertruude S. Schultz of Apponagansett, proposes to build, equip, and endow a free public

library in this town. The institution will be known as the Schultz Memorial Library. Mrs. Schultz has always taken an active interest in Cranbury and has made several gifts of books to the library already established there. She plans to present her own collection of books to the village when the new building is completed. It will be constructed of ornamental brick and will be fireproof.

*Camden.* A public library building to cost about \$130,000, is to be given to the city by Eldridge R. Johnson, president of the Victor Talking Machine Company, who addressed his offer to the city of Camden, the board of public library trustees and the park commission. The building is to be located in Cooper square, between Front and Second, Cooper and Penn streets, the site of the present Cooper Library.

*New Providence.* After having been discontinued for several years the library in connection with the Lincoln School of this place has been reopened. It is being conducted by the school civic organization. The library is situated on the second floor in the small room originally intended for that purpose. It will be open for circulation two days in the week, Tuesday and Thursday. The young people have for several weeks been preparing for the opening. There are more than 1000 volumes in the library.

#### PENNSYLVANIA

*Philadelphia.* With brief exercises, the Duhring Memorial building, which serves as an annex to the Library of the University of Pennsylvania, was dedicated Dec. 13, the ceremonies taking place in the library building. A memorial tablet to Dr. Louis A. Duhring, the gift of Dr. Joseph G. Rosengarten, who also furnished two seminar rooms, erected at the entrance of the building, was unveiled. Dr. Morris Jastrow, Jr., the librarian, and Dr. Rosengarten, chairman of the library committee, made brief addresses, and Provost E. F. Smith accepted the new building on behalf of the University. The annex is a memorial to the late Louis Adolphus Duhring, at one time professor of dermatology and honorary curator of the dermatological collection, who left more than \$1,000,000 to the University. It extends across the southern end of the library building. The exterior is of red terracotta and brick work, and the design is in harmony with the old library building. It was originally planned to use the new building for the storage of books, but alcoves are provided where students may study, and

on the lower floor two seminar rooms have been provided at the east and west ends.

*Sewickley.* It is announced that the land has been purchased upon which a \$50,000 public library is to be built. The donor is William Lewis Clause, president of the Pittsburgh Plate Glass Company. Sewickley has a library at present, and has had for a long time, but it has been a library of books only, crowded into a section of the Sewickley High School. The library contains over 13,000 volumes and there has not been space for the proper care of the books nor room for the comfort of patrons.

*Williamsport.* On Oct. 16, the James V. Brown Library opened a station in the extreme west end of the city. This is the third of the stations to be established by the Brown Library since it commenced operation in 1907. The three stations, which are operated through the aid of other organizations, are treated as branch libraries, the collections of books not being changed.

#### MARYLAND

*Baltimore. Peabody Inst. L.* John Parker, lbn. (Rpt.—yr. ending May 31, 1915.) Total number of books 187,139; pamphlets 31,176; and maps 1471. In the reading room 20,705 persons used 88,320 volumes and 5135 periodicals. There were 6855 visitors. No record is kept of the many requests for information answered by telephone and by mail. Expenses for books, periodicals, etc., were \$9137.07; for binding (1465 volumes), \$1362.35; and for salaries \$10,360.82. Total expenses \$21,518.06.

### The South

#### VIRGINIA

*Richmond.* A movement has been started among the colored people by the Neighborhood Association for the establishment of a circulating library. It has been roughly estimated that it would take from \$1200 to \$1500 to start and maintain the library the first year, and various clubs and schools have pledged their support to the undertaking.

*Richmond.* At the meeting of the State Teachers Association in November resolutions were adopted that a petition be presented to the next general assembly recommending the alteration of the present State Library building for office purposes and the erection of a separate fireproof building for the State Library and the Supreme Court of Appeals, and opposing the proposition to erect a new state office building, which will

leave the State Library in its present non-fireproof, inconmodious, dangerous and inconvenient quarters.

#### NORTH CAROLINA

*Greensboro.* A campaign is in progress for subscriptions to buy a lot as a site for a Carnegie library for negroes. The Carnegie Corporation has offered a grant of \$10,000 for a building, on the usual conditions.

#### GEORGIA

*Savannah P. L.* William Harden, lbn. (Rpt.—1914.) Accessions 4267; withdrawals 96; total 53,690. Registration 18,819. Circulation 112,428, including the duplicate pay collection. Receipts \$12,279.69; expenditures \$10,763.71, including \$5460 for salaries, \$132.52 for binding, \$3862.37 for new books, and \$274.90 for periodicals. The Carnegie Colored Library (P. A. Denegall, lbn.) added 405 books during the year, giving a total of 2656. There were 445 cards issued, 1605 books to readers, and 2056 visitors. Receipts were \$381.08, and expenditures \$238.53. The two reports are issued together.

#### KENTUCKY

*Louisville.* The first fire that the Louisville Free Public Library system has experienced in the ten years of its existence on Dec. 19 damaged the Highland branch to the extent of about \$1000. It is believed to have originated from overhead conduits leading from the furnace through the floor under the reference room. The loss is covered by insurance.

*Louisville.* Nearly 1000 boys and girls attended the entertainment given in celebration of the tenth anniversary of the opening of the children's department at the Louisville Free Public Library. The program, which had been arranged by Miss Bernice Bell, head of the department, consisted of stories supplemented by selections from the opera, "Hänsel and Gretel." Speaking of what had been done by the department, Miss Bell said that the close co-operation which had always existed between the department and the teachers of the schools had made possible the splendid work which had been accomplished and had brought about a close relationship between the book, the teacher and the child.

*Louisville.* A fully equipped library for the Louisville Boys' High School, under joint control of the board of education and the board of trustees of the Louisville Free Public Library, is being planned. A com-

mittee of three from the library board has been appointed to meet with a similar committee from the board of education. The conditions under which the library board wishes to establish the high school branch are as follows: First, that the selection of books be made by someone familiar with books in general, with the recommendation of members of the school faculty; second, that the selection be made in such manner as to avoid duplication of books already in the free libraries and unnecessary expense; third, that the librarian in charge of the high school library be trained to the methods of the free libraries and also be made a member of the high school faculty in order to invest him or her with power to act in all matters involving pupils of the school; fourth, that the board of education pay \$1000 a year toward the management of the library, the expense of cataloging and the order department to be paid by the library board of trustees; fifth, that the library board will open the high school library and put it in operation if the board of education agrees to the conditions.

### Central West

#### MICHIGAN

*Ann Arbor.* Work on the construction of the new University of Michigan library will be begun early next summer. The \$350,000 appropriation added to the present equipment will represent a building worth approximately \$500,000. The new library will conform in architecture to the newer campus buildings, Hill auditorium and the Natural Science building. It will be a four-story structure, with a stack room in the rear six or seven stories high. The main reading room, 50 x 170 feet, will occupy the second floor and will accommodate 375 persons. A smaller reading room, 50 x 72 feet, will be provided on the first floor for freshmen and sophomores. It is estimated that all the reading rooms will accommodate 1000 students, thus making them large enough for a university with an attendance of 14,000 students. The capacity of the book stacks will be 600,000 volumes, with convenient arrangements for increasing the size as occasion demands. The basement will contain the bindery.

*Grand Rapids P. L.* Samuel H. Ranck, lbn. (Rpt.—yr. ending Mar. 31, 1915.) Accessions 9640; withdrawals 1581; total 147,671. Circulation 401,421. New registration 7294; total 25,647. Receipts \$58,264.83; expenditures \$53,748.08, including \$7680.74 for books, \$2169.02 for periodicals, \$2364.11 for

binding, and \$29,105.01 for salaries for library service. Besides the main library in the Ryerson building, the library has 10 branches, 24 stations, 36 agencies in schools, 12 in institutions, and 8 in homes.

*St. Clair.* A letter from the Carnegie Corporation to the city officials here states that it has been decided to appropriate \$10,000 for a library in this city, provided the city will maintain the structure after it is built.

#### OHIO

*Cleveland.* By a unanimous vote, the city council has approved legislation to buy land at Central and Collingwood avenues and at Dorr and Fender streets for Carnegie branch library sites.

*Cleveland.* Plans for a campaign to raise several hundred thousand dollars for a new building to house the Cleveland Medical Library were proposed at the annual meeting of the Library Association in December. The report of the finance committee showed \$226,000 now in the association's endowment fund for maintenance. Of this sum \$203,000 was received during the last year in a bequest from the late Dr. Dudley P. Allen. Officers elected were: Dr. B. L. Millikin, president; Dr. H. F. Bigger, Sr., vice president; Dr. H. L. Sanford, secretary; Dr. W. E. Bruner, treasurer; Dr. C. A. Hamann, directing librarian.

*Hamilton.* The trustees of the Lane Public Library have adopted plans for the wing to the library, estimated to cost \$6000, and George W. Barkman is appointed as architect. The plans call for a lecture room in the basement of the new addition and a new boiler, besides additional space on the first floor.

*Maumee.* The Carnegie Corporation has promised a grant of \$10,000 for a library building, the village has donated the grounds of the old courthouse for a site, and the county commissioners have voted \$2500 a year for maintenance.

*Toledo.* To increase the efficiency of clerks the local retail merchants' board has had 300 books on subjects pertaining to every line of business installed in the Toledo Public Library. Every branch of business is treated in these books. It is announced that 10,000 lists of the books and their subjects are being printed and when completed a copy will be placed in the hands of the 6000 clerks employed by the members of the retail merchants' board.

*Toledo.* The Scott High School Library was opened for student and faculty use Nov. 17. There are 3000 books on the shelves, of which 2500 are new. When Central High School was closed the library was taken to Waite High, so that the accumulation of a library at Scott has been almost wholly dependent upon raising money within the school. Most of it was cleared in a postcard campaign, during which more than 28,000 postcard pictures of the building were sold by students and faculty at five cents apiece. The English department donated about \$230 from the receipts of a lecture given by Prof. Sherman of Oberlin; the French department turned over \$100 from the receipts of the annual French play and through the activity of Miss Ada Ritchie several interested patrons donated checks for \$100. Various organizations donated smaller amounts, so that by the united effort of student body and faculty \$2600 was raised in one year—a measure of the splendid loyalty and energy of all concerned. The volumes were selected by the teachers in the various departments, with the definite idea of specific reference work. Miss Eloise Witker is librarian.

#### INDIANA

*Indianapolis.* A committee from the Indiana University School of Medicine has offered to contribute a bronze tablet to be placed in the new Public Library building in commemoration of Dr. John S. Bobbs, who was a well-known physician and benefactor. The suggestion has also been made that the school children of Indianapolis be permitted to make contributions to a fund for the purchase of ornamental bronze doors for the library as a tribute to James Whitcomb Riley.

*Newcastle.* Newcastle's new \$25,000 library will be opened to the public about Jan. 1. The building is in colonial style, which is carried out in the furnishings. The main floor consists of a reading room and two rooms for the shelving. Below the main floor is an auditorium with 250 seats and four small rooms. A campaign will be launched at once to raise a fund for new books, as there are now only 4000 volumes in the City Library. Eight clubs of the city have formed a city federation with the slogan, "A Better Newcastle," for the purpose of promoting civic reforms, and the first work to be undertaken will be the raising of the fund for books for the library.

*Orleans.* The new Carnegie Library, built here at a cost of \$10,000, was dedicated Oct. 15. The new building is built of Hytex buff

mat brick, with stone trimmings. The roof is of red tile. The basement contains an assembly room, with a stage and anterooms, a township restroom and toilet, workroom and boiler and fuel space. The main reading room on the first floor is 56 x 36 feet. It is handsomely equipped with an open fireplace and quartered oak furniture. A steam heating plant and water system is in the building. Wilson B. Parker, of Indianapolis, was the architect.

*Seymour.* Field representatives of Hanover College are making a canvass in an effort to raise a library endowment to be known as the E. B. Thompson Memorial Library Fund. Mr. Thompson, whose home was in Seymour, lost his life on the ill-fated *Lusitania*. Mrs. Thompson has made a donation of several thousand dollars to the fund and this contribution will be used as the basis for the permanent endowment.

*Winamac.* A contract has been signed and work started on the new Carnegie Library, at a cost of \$7983. The building is to be completed by April 1 next. The building will be of brick, trimmed with stone. In the main floor will be three reading rooms, one for children, one for adults and one for general use in reference work. The basement floor will include an auditorium 25 x 30 feet and a heating plant.

#### ILLINOIS

*Chicago.* The report of a special committee of the Chicago Public Library, made at a meeting of the directors in December, recommends reclassification of the central collection of 600,000 volumes, and changes in the establishment of branch libraries and reading-rooms. It is proposed to establish the branch libraries in business centers instead of the residence districts, in order to afford business men and school students better facilities. The special committee reported further that it would not be possible to build any branch buildings during the ensuing year, although the library at the present time has but three buildings of its own for the thirty-four branches which it maintains. In this connection radical recommendations were made for a new type of library branch building, differing entirely from those which have been erected in other cities. Book purchases were proposed to an amount double that for 1914 and three times as great as for 1915, the home circulation alone having increased in the period covered by these years from 2,900,000 to 4,500,000.

*Oak Park P. L.* Mabel A. Thain, lbn.

(Rpt.—yr. ending July, 1915.) Accessions 2917; withdrawals 1312; total 27,136. Circulation 140,140. Total registration 9985. Receipts \$16,620.39; disbursements \$9,582.73, including \$4122.25 for salaries, \$2248.55 for books, 640.01 for binding, and \$235.20 for periodicals. In the school libraries it is planned to have one book for each pupil, the collections being exchanged from time to time. Visits were made to 102 rooms during the year. In the sixth, seventh and eighth grades blackboard talks on the use of the catalog were given, and this information was put into practice by the introduction of the "catalog game." In the first five grades stories were told, and simple talks were given on the library. The total school circulation was 13,270, an increase of 815 over last year.

## The Northwest

### WISCONSIN

*Stone Lake.* It is reported that J. F. Cargill of Pittsburgh, who has large land interests, is to equip a public library here, two other wealthy men contributing the site and the building.

### MINNESOTA

*Black River Falls.* The new \$10,000 Carnegie Library was opened to the public Nov. 1, and was visited by hundreds. Dedication services in the evening included addresses by Mayor McGillivray, Assemblyman Hull, the Rev. Mr. Marvick, state library secretary, and the Rev. Mr. Harding. Miss Anna Wylie is librarian.

*Minneapolis.* Moving pictures in the Minneapolis Public Library for the benefit of child patrons is the announcement of Miss Gratia Countryman, the librarian, as a feature to be installed in the near future. Two branch libraries have already been fitted up for the exhibition of pictures and it is hoped shortly to have an appropriation for film rentals and other expenses.

*Minneapolis.* The library board has decided to equip with books and magazines a reading room at the municipal lodging house. The new \$25,000 branch public library at Twenty-second and Central avenue, N. E., was formally presented to the city of Minneapolis by the library board through President T. B. Walker, spokesman, Nov. 15. Miss Countryman has announced that a small building in the rear of the New York Life building will be used for a business men's branch of the Public Library. Mrs. Mary W. Dietrichson, now in charge of the municipal

reference department of the public library, will be at this new branch.

*Proctor.* The need of a public library for Proctor was discussed at a meeting of the Business Men's Club in December and a committee of three was appointed to ascertain what steps can be taken to obtain such an institution.

*St. Paul.* All the contracts for the new building of the State Historical Society have been let, and the work of razing the old Lamprey residence at Cedar street and Central avenue where the new \$500,000 library is to be located, is already begun.

*St. Paul.* "The business reference librarian," is the title of an article by Harry S. Thompson of this city in the December number of the *Rotarian*. In the article he describes the library recently established by the Town Criers.

*St. Paul.* The officers of the Monday art and history class have presented to the public library two portable stereopticons. These are available for the use of schools and clubs which need them in connection with illustrated lectures. The library's lantern slide collection numbers about 600 slides.

*St. Paul.* A committee of the Civil Engineers' Society of St. Paul has completed arrangements for turning over to the Public Library the society's library valued at about \$6000. Owing to the crowded conditions of the present Public Library, the actual transfer will not be made until the new library at Fourth and Market streets is opened. The engineers' library is now housed in the Old Capitol.

## The Southwest

### MISSOURI

*Joplin.* It is expected that the addition to the Public Library will be finished about Jan. 1.

*St. Joseph.* The board of education has set aside \$500 to equip a library at Benton High School. The books will be cataloged by Miss Martha Brown, librarian at Carnegie branch library, and a number of books from the Carnegie Library will be borrowed. There will be about 700 volumes all told. The library will be in charge of a teacher at the Benton school, and at times an assistant from the Carnegie Library, or the library at Central High School, will help with the work.

*St. Joseph.* Plans for the proposed addition to the main library building, for which bonds have been voted by the school district, are under consideration. The addition will be to the north and west of the main building, and will be three stories, to match the rest of the building. The main library building belongs to the school district and in addition to the offices of the school board, contains the main library of St. Joseph. The addition will cost \$25,000, and in this it is also proposed to place a museum, besides extending the library quarters. The museum has already had promises of gifts and loans of collections worth about \$100,000.

*St. Louis.* Archbishop Glennon has turned over to the Catholic Woman's Association the Catholic library of 6000 volumes, which was accumulated by the late Miss Katharine Riley, who had collected the books, making them the property of the archdiocese. The library is now being classified by Miss Margaret Carolan librarian of the Catholic Woman's Association. The association's library will be consolidated with the other and all maintained as a free Catholic library.

### KANSAS

Not to make the situation in Kansas appear worse than it really is we wish to correct the statement in the December JOURNAL that 1,509,000 citizens have no access to public libraries. The correct figures are 1,059,000, and we are glad to take this opportunity to restore these other 450,000 to their enjoyment of library privileges.

### TEXAS

*Houston.* A check for \$500 to buy books for the use of children in schools has been given to the Public Library by N. S. Mel-drum.

*Houston.* Nearly 1000 books will be added to the collections in the public schools as a result of the annual library day collection taken in November, when pupils contributed \$500. In the grammar schools the money will be used for the purchase of sets of books which can be used as collateral reading with the work undertaken by the class. In the high schools the money will be spent for books of reference. As far as possible the books will be secured for the classes that made the contributions.

*San Antonio P. L.* Elizabeth H. West, lbn. (Rpt.—yr. ending May 31, 1915. Accessions 3869; withdrawals 184; total 40,829. New registration 4090; total 12,719. Circulation 101,432. Receipts \$31,196.76; disbursements

\$14,107.22, including \$6379.88 for salaries, \$2739.94 for books, \$568.05 for periodicals, \$575.34 for binding.

*Waco.* An addition which would cost about \$12,500 is desired by the Public Library, and the Carnegie Corporation has signified its willingness to consider donating the amount if the city will assume the cost of altering the present structure.

#### COLORADO

*Denver.* The trustees of the State Library will protest to Governor Carlson against the proposal to reduce the room of the library, on the third floor of the capitol building, in order to create a hearing room for the state public utilities commission.

### The Pacific Coast

#### OREGON

*Hood River.* The law suit between the county court of Hood River county and the library commission, appointed by the city of Hood River to take charge of the affairs of the Hood River County Library, built by Andrew Carnegie at a cost of \$20,000, has been settled. Under the settlement plan the county court agrees to pay the balance of the salary of Miss Della Northey to make her salary equal to \$90 per month. A new contract provides that hereafter no member of the county court or city council shall be eligible to serve on the library commission, to consist of three members appointed by the county court and three members appointed by the city council, who shall elect the seventh member, to be president of the commission, but not entitled to a vote unless on a tie ballot. Every member of the present commission is eliminated from the first commission under the new contract, in the interests of peace. Women were made eligible to serve on the commission.

#### CALIFORNIA

*Dimuba.* Plans for the new library building have been approved by the Carnegie Corporation.

*Oakland.* As a result of a storm of protest the matter of the proposed abolition of the Municipal Reference Library has been reconsidered. The move was proposed by the library board at the instigation of the mayor in order to save about \$1500 with which to aid in the establishment of an art gallery. The protests were from many people who have occasion to use the library for information of municipal affairs as conducted elsewhere.

*Sacramento.* Plans for Sacramento's \$100,-

000 Carnegie Library, to be located on the corner of I and Tenth streets, in the heart of the proposed civic center, have been officially accepted and approved by the city commission, and Loring Rixford of San Francisco was made the official architect of the building. The library will be of Italian architecture, with an imposing front elevation three stories in height. A grand staircase will be one of the features of the structure. Special attention has been paid to the lighting facilities by the architect. The structure will be in steel, concrete, granite, brick and tile.

*San Francisco.* To serve the residents of the Noe Valley section another branch of the Public Library has been provided by the trustees at the request of the Mission Promotion Association and property owners of the section. This new branch is to be known as the Noe Valley Branch Library. The site for the building has been graded, plans and specifications have been completed and approved, and the contract for its erection has been awarded. The cost of this branch will range in the neighborhood of \$37,500, and the money necessary for its erection will be appropriated from the Carnegie fund. It is expected that the building will be completed and ready for occupancy inside of four months.

*San Francisco P. L.* Robert Rea, lbn. (Rpt.—yr. ending June 30, 1915.) Accessions 26,091; withdrawals 10,687; total 159,763. New registration 27,181; total 49,881. Circulation 1,098,858. Total receipts \$141,816.49; disbursements \$106,054.24, including \$26,741.27 for books, \$2121.53 for periodicals, \$659.40 for catalog cards, \$2543.23 for printing, \$8114.88 for binding, and \$52,148.08 for salaries. There is no more shelf room in the temporary headquarters building, and some material has already been stored in the basements of the branches. The greatest difficulty has been experienced in the conduct of the music department. This department has received such wide publicity, both through the press and musicians, that the demand on it is always very heavy and this year so many visiting musicians have made use of the collection that the need for a music room has been felt more than ever. The book expenditure was the largest of any single year, and made it possible to fill out many of the classes with works that had not been replaced since 1906.

*Yreka.* The new \$8000 Carnegie building was opened with a reception the latter part of October.

## UTAH

*Salt Lake City.* Steps are being taken for the establishment of a model school library, from the first grade to the last year of high school, in the library of the state department of public instruction. The selection is being made by the state board of education, and it already includes many of the best works on education. It will be housed in the State Library for which a beautiful room of the Capitol has been designated and furnished, and will be under the direct charge of Miss Mary E. Downey. The books will be loaned to educators of the state, and every effort will be exerted by the state board to so interest those educators as to induce them to begin the accumulation of private professional libraries.

*Salt Lake City.* To facilitate moving the Supreme Court and the State Library to the Capitol, the library was closed for a week last month. As the city's law department will require access to a law library to some extent, the city commission considers the matter of sharing with the county a portion of the cost of maintaining the county library. Heretofore the State Library, now moved to the Capitol, has served both city and county. It is suggested that about one-fifth of the cost of maintaining the library should be paid by the city.

## Hawaiian Islands

An interesting letter from Major-General William H. Carter was printed in the *Milwaukee Wisconsin* of Dec. 1. An appeal was made in the *Wisconsin* some months previous for books for the United States soldiers stationed on the island of Oahu, Hawaii. A building to house the library was constructed by the soldiers and dedicated Oct. 27. "When the movement to assemble the library was inaugurated by me by writing to a number of personal friends," writes General Carter, "I had no idea of receiving such generous responses, and it was only after some 10,000 volumes were received that it was determined to make an effort to erect a better building than had been contemplated, so as to make the library the most attractive place in the vicinity. The spirit of comradeship among the troops is very much shown in the construction of this building, for there was no stone on the mountain side twenty-five miles from Honolulu for the purpose. The blue lava stone was collected by the garrison at Fort Shafter, some twenty miles away, and generously sent to their comrades at Schofield barracks. This enabled a per-

manent structure to be erected which should last indefinitely, and be a worthy home for the books."

## Canada

## ONTARIO

*Toronto.* Three new branches of the Toronto Public Free Library are approaching completion and will be opened early in the year. The new branch library at the military camp was opened during November. It will be operated in exactly the same manner as any other of the thirteen branches.

*Toronto.* The circulation library of music was opened at the College street branch in November. It contains over 2000 titles and is likely to be popular if one may form a judgment based on the large number of enquiries being made concerning its opening. There are hundreds of books on music, and two thousand books of music are being added.

*Toronto.* The assistant librarians have been working for the Red Cross Society and the staff meetings have been given up lately to that work. They have raised also a large amount of money, each member contributing proportionately to the salary received and also to the interest felt in the cause. From this fund, money is being sent to help individual needs.

## Foreign

## CENTRAL AMERICA

The *Bulletin* of the Pan-American Union for November noted that the Francisco Morazan Library, the property of the Union Society of Tegucigalpa, in Honduras, was inaugurated for public use in October. On Sept. 14, the Children's Library in the city of San Salvador, founded by the director and faculty of the Father Delgado School of the Federal capital, was opened to public service.

## GREAT BRITAIN

A recent issue of *The Dial* contains an article on "The literary stagnation in England," the burden of which is that "in the intellectual way she is completely stagnant." In this connection, the following paragraph from one of the English journals, regarding the expenditure of a certain Borough Council in the London district, sounds an ominous note: "One per cent is the amount expended under the Public Libraries Act, and, small as that amount is, it might be suspended during the war. If every public library in the Kingdom were closed while the war lasted the amount saved would be considerable, and

the loss of their favorite anodyne to thought might bring home to many the fact that we really are at war. Moreover, this is possibly the only item under the control of the borough on which they can economize without danger to the public health or injury to business."

*Ayr.* The town council has agreed to make a grant of £500 to the Ayr Carnegie Library for building a children's reading room and library.

*Birmingham.* Some time ago, Mr. George Tangye presented to the city a valuable collection relating to the famous Birmingham engineers Matthew Boulton and James Watt. The collection was entrusted by the City Council to the custody of the Free Libraries Committee and was opened to the public Oct. 22. It includes the original working drawings (about 36,000) of the firm, their correspondence, and business books (including the very interesting letter books) accumulated from the beginning of the Soho factory in 1762. The autograph letters of many great engineers and other notable men are of special importance. The collection also includes a large number of documents relating to William Murdock, original working models of engines and other mechanical objects, portraits, models, coins and tokens minted by the firm, books, pamphlets, magazine articles, newspaper cuttings, etc.

*Coventry P. L.* Ernest A. Savage, lbn. (Rpt.—yr. ending Mar. 31, 1915.) Accessions 3383; withdrawals 1296; total 77,721. Registration 19,792. Circulation 359,591, an increase of 76,613. Reference use, 43,409, a decrease of 1607.

*Croydon.* On Saturday afternoon, Nov. 30, the members of the Croydon Libraries Committee and a few friends met in the chief librarian's office and presented a gold watch to the chief librarian, L. Stanley Jast, who has resigned to become deputy librarian at Manchester. A handsomely bound volume containing the signatures of the committee and friends and the official resolution of regret passed by the libraries committee accompanied the watch. Speeches were made by several members of the committee in appreciation of Mr. Jast's work in Croydon.

*Leeds P. L.* Thomas W. Hand, lbn. (Rpt.—1914-15.) Accessions 15,374; withdrawn 6701; total 327,210. Circulation 1,326,411, a decrease of 41,669, partly attributed to the less, and that several branches were closed for repairs. Reference use was 120,481 volumes, as against 127,464. In the news rooms it is estimated the visitors numbered 1,868,889, against 1,239,142 the previous year. Total registration is 33,512.

*Manchester P. L.* Charles William Sutton, lbn. (63d ann. rpt.—1914-15.) Accessions (net) 6088; total in Reference Library 189,136, in the 24 Lending Libraries 261,131. New registration 40,248; total 66,828. Circulation for home use 1,957,454; volumes used in Reference Library 406,664; adding in the volumes used in branch reading rooms, the total recorded use, exclusive of the 95,901 books, etc., issued from the Henry Watson Music Library, was 2,740,897. Estimated number of visitors to the 24 news rooms is 4,313,976. The issues of books for home use have not decreased, but use of the Reference Library has fallen off considerably. So many of the assistants have joined the army that the Reference Library hours have been decreased, the library being closed an hour earlier each night and all day on Sunday, while the Watson Library hours were also reduced. Eighteen assistants and six porters have been or are on military service. The libraries have been used for many purposes. They received applications for relief from the Distress Fund; juvenile rooms were temporarily used for relief stations by the Soldiers' and Sailors' Families Relief Committee; in one a special lounging room for recruits was arranged; in two or three cases the libraries have been used as stations for the enrollment of special constables; and many applications for permission to sell tickets or display posters for charitable purposes have been granted. A library of about 1000 volumes, managed by the Y. M. C. A., was established at Heaton Park for the soldiers in camp there.

#### DENMARK

*Aalborg.* The Public Library at Aalborg reports for 1914-15 that its circulation was 28,174, fiction 17,748, and non-fiction 10,426. There were 830 reading cards issued. Frequenters of the reading room numbered 9903, of whom 7849 were men, 122 were women, and 1932 children under 15.

# LIBRARY WORK

Notes of developments in all branches of library activity, particularly as shown in current library literature

[At the suggestion of several readers of the LIBRARY JOURNAL we are with the new year initiating a change in the arrangement of "Library Work." Despite the obvious advantages of the classified arrangement of this material hitherto used it had equally obvious disadvantages. A dictionary arrangement, making the department in effect a current cyclopedia of library progress, will henceforward be followed.—ED. L. J.]

ADMINISTRATION. *See* Codification of routine; Reports.

## ADVERTISING

The Public Library of Waco, Texas, employed a unique method of advertising at the Cotton Palace Exposition in November. Instead of fitting up a booth with books, pictures, reading tables, etc., as heretofore, placards listing books at the library were placed in other booths. These placards not only listed books, but invited the public to borrow them, stressing the fact that there was no charge attached.

For example, "dog owners" were invited to make use of the books on dogs. The list in the booth belonging to the Texas Power and Light company called attention to books of interest to electricians. Carpenters and painters were reminded of books on the trade of each. Automobile owners, of books on "Automobile troubles and how to remedy them." The better babies exhibit contained a placard entitled, "Library babies are better babies," followed by a list of the best books on the care and feeding of babies. In the agricultural building were shown three bulletins, one each on the growing of cotton, corn and fruit. The livestock exhibit also had three bulletins. In the poultry show the poultry man was reminded that his hens would be more profitable if he would take advantage of the books at the public library on poultry. In the woman's department the booths devoted to ceramics, curios, arts and crafts, china, fancy work, cooking and art each had attractive bulletins listing books on the subjects treated in the respective booths.

## ANALYTICS

In his 1915 report, the librarian of the Russell Sage Foundation Library writes thus on the need of analytical entries in such a library:

"Even on a conservative basis, fine analytics and many cards are necessary in the catalog of the special library. As example: the number of cards made for four small sets may illustrate: For the United States Report on

Condition of Woman and Child Wage-Earners in 19 volumes, 82 cards were made; for 4 volumes of the National Child Labor Committee publications, 375 cards; for 8 volumes of the Russell Sage Foundation pamphlet publications, 396 cards; and for 9 volumes of the New York State Charities Aid Association publications, 514 cards. A single book occasionally requires many cards to bring out its contents properly in the catalog. The 'Child in the city,' published under the auspices of the Chicago Child Welfare Exhibit, required 88 cards, while for Kelynack's 'Defective children,' 82 cards were made."

BOOK SELECTION. *See* Evaluation—Of fiction; Foreigners, work with; Spanish books.

## BOOKLISTS—CO-OPERATIVE

Through the interest of David Bendann, a Baltimore dealer in pictures and other art objects, the Enoch Pratt Free Library and the Library of the Peabody Institute in that city have been enabled to publish jointly an attractive little pocket folder giving a selection of popular works from their art collections. No technical works have been included. The initials (PI) or (EP) placed before the book number designate the library in which the volume is to be found. The Peabody books are for reference use only; the Pratt books may be borrowed subject to the usual conditions.

BORROWERS' RULES. *See* Fiction.

## BRANCHES—IN HIGH SCHOOLS

The Omaha Public Library has established its first high school branch. This occupies a room on the first floor of the high school building.

At a meeting of representatives from the board of education and the library board, an arrangement was agreed upon whereby the board of education should supply the library room, properly furnished, pay the salary of the librarian and purchase all strictly reference books, and that the library board should purchase books for circulation and attend to all the details of cataloging and preparing the

books for the shelves. The library is also to attend to the matter of the transportation of books to and from the school. By action of the board of education this library was placed under the management of the city librarian, with Miss Zora Shields, formerly of the department of English of the High School, as High School librarian.

The library was opened at the beginning of the school year, Sept. 7. As action for the establishment of this branch was taken late in the summer, the necessary equipment was not available, but the response from both teachers and pupils has far exceeded all expectations. Although this library is only six blocks from the main library, those in charge believe that it will soon surpass in usefulness any other outside agency. In former years the main library served regularly less than one-fourth of the student body of the high school, which numbers two thousand. It is expected the new library will win every student in the school.

BUILDINGS. *See also* Club rooms.

#### —REMODELLED

Plans have been completed and work commenced for remodelling the Janes house in Waterbury, Vt., which was willed by the late Dr. Henry Janes to the Waterbury Public Library Association. An addition is being built on the north side of the house, 16x24 feet, which will be part of the stack room. This will have shelf room for 1,600 volumes. The two rooms in the front part of the house will be reading rooms. These will contain large fire-places, and will have magazines and reference books upon low stacks around the walls of the rooms. At the left of the hall will be a children's reading room, 11 by 14 feet. On this floor will also be the librarian's room and cloak-room. On the second floor the partition separating the two large bedrooms in the front of the house, and over the two reading rooms, will be removed making one large room to be known as the music room, or small assembly hall. This will seat from 75 to 100 people. On the second floor over the children's room will be the historical room, which will contain the many interesting historical relics formerly belonging to Dr. Janes, and it is hoped that other historical collections will be presented for exhibition from time to time. The ell part of the house will be made into a tenement to accommodate the janitor and family. A modern steam-heating plant will be installed and the whole building will be lighted by electricity.

CHILDREN. *See also* Fines—In children's rooms; Story-telling.

#### CHILDREN, WORK WITH

A feature of the Saturday afternoon story hour in the Public Library of Redlands, Cal., has been the hike or tramp taken every fourth Saturday by the older boys. Out of "Tramp Saturday" grew the "Story Hour Hiker's Book" and "Hiker's Shelf." In the Story Hour Hiker's Book are kept a record of the story of the tramps, map of the route taken, pressed specimens of flowers found on the tramp and a series of camera pictures telling the story; also a list of the trampers. On the Hiker's Shelf are various curios found during the tramps.

CIRCULATION. *See* Deposit stations; Fiction—Circulation of; Pictures—Circulation of.

#### CLIPPINGS

Concerning the material in its newly organized civics division, the November *Bulletin* of the Detroit Public Library says:

"Although the civics division possesses a fair collection of the latest or most authoritative books on subjects within its field, by far its most important material consists of pamphlets and clippings. Much valuable material, the result of painstaking research and investigation in colleges and universities, business houses, social service bureaus, and other agencies, is available in pamphlet form long before it is reprinted in books. A systematic effort is made to obtain such material for the clipping collection. About fifteen daily newspapers, representing various sections of the country, are regularly clipped for items bearing on the subjects mentioned. At the present time this 'box material,' so-called from the manner in which it is cared for, is available through a broadly classified index, but a minute subject index, planned for the near future, is expected to make the collection much more valuable.

"This material has already proved its usefulness. Practically the only material on the much-discussed 'Seamen's bill' has appeared in the magazines and newspapers, and, in clipping form, has served several persons making a study of the reception of this measure. Questions on the Anglo-French loan, on the short ballot, brought again into prominence through the constitutional convention of the state of New York, on the Ford peace plan, on recreation in Detroit, on various phases of industrial welfare, and on many similar topics, have been answered through

this 'box material.' A teacher in one of the high schools of the city was so much impressed with the collection that she sent her entire class in English to look it over, with instructions to write a short paper on some subject represented."

The New York Public Library has installed a clipping collection in the main building at Fifth avenue and Forty-second street for the use of persons wishing to inform themselves on current civic, industrial, commercial, social welfare and kindred subjects. There are booklets, pamphlets, circulars and clippings from the daily papers.

From the nature of the collection, the material may be consulted only in the building, where it is at the service of all applicants. It contains 45,600 pieces.

One important part of the collection relates to co-operation between employers and employees concerning all phases of welfare work, including profit sharing, benefits, savings, co-operative buying, building and loan plans, insurance, industrial education, lunch rooms and recreation.

Valuable pamphlets on South America were obtained for the collection at the Pan-American Financial Congress in Washington last May. There are 3025 pieces on the European War, 2750 on New York City, 100 on the State Constitutional Convention, of which the proceedings are kept in separate files.

Child labor, cost of living, the minimum wage, workmen's compensation, industrial insurance, immigration, commerce of various countries, increase in the army and navy and material on the Federal Reserve banks are among the subjects available.

The collection gives much information concerning the dyestuff shortage caused by the war, the price maintenance of retail goods, use of coupons in retail trade, liquor license statistics and the agricultural credit banks of Germany. It has been started to meet demands of visitors who could not find in reference books or elsewhere the up-to-date information they wished.

#### CLUB ROOMS

The clubrooms of the Virginia (Minn.) Public Library are becoming generally used as a community social center. Several social clubs hold weekly or semi-weekly meetings in the clubrooms, and occasionally the rooms are used by the church people for receptions or social gatherings. The night class in agricultural work meets in the auditorium on Monday and Thursday evenings of each week. Last spring educational motion picture pro-

grams were given twice each week in the auditorium free of charge. These were well attended by both adults and children and it is probable that similar programs will be given during the coming winter.

#### CODIFICATION OF LIBRARY ROUTINE

At the Public Library of the District of Columbia there has just been completed what may be called, for want of a better name, a codification of library routine. This first draft is a somewhat detailed descriptive outline of the routine processes now employed in the various activities of the library's work.

The need for such an outline had long been felt, particularly in the instruction of training classes and new assistants. Visiting librarians not infrequently express a desire to make a minute study of one or more phases of the work of the library and to have a description of these processes to place in their hands will, it is believed, prove an economy in time to them and to library officers.

These detailed statements have been prepared by the heads of all library departments. They consist of concise but explicit descriptions of departmental routine fully illustrated by blanks, forms, circular letters, etc. Such statements have been typewritten in triplicate on loose-leaf sheets, 8 x 10½ inches in size. One complete set in a binder, furnished with index guides, tables of contents, etc., will be kept in the librarian's office; another similar complete set will be kept in the secretary's office for the instruction of staff members and visitors; the third set will be split up into sections and the part describing each department's routine will be kept in that department. In addition all staff rules and regulations of a general nature, so far as they are somewhat permanent in character, will find a place in the two complete sets and in each of the departmental sets.

As this piece of work has only just been completed it is too early to predict its utility. It is however, believed that the very act of describing methods of work in systematic form will of itself clarify ideas and tend to greater system and perhaps to simplification of method. By the use of loose-leaf sheets all changes (and in an active, progressive library like this they will be many and frequent) can be easily noted by the copying and insertion of extra sheets, thus keeping the outline strictly up to date. Such a code should also insure continuity in the case of absence or sudden withdrawal of responsible officers of administration.

CO-OPERATION. *See also* Booklists—Co-operative.

—CAMPAIGN FOR

A campaign has been started for increased patronage of the Dallas Public Library. It was inaugurated at the October meeting of the board of directors of the library when J. M. McCormick introduced a resolution inviting the superintendent of schools, presidents of universities and colleges, and principals of private schools resident in Dallas, secretaries of the Y. M. C. A. and Y. W. C. A. to offer suggestions looking to a more extended use of the library and the popularization of it among the youth of the city.

Members of the board and the librarian are anxious to extend the benefits to as many people in Dallas as possible. It is believed that this official invitation which was adopted unanimously by the directors will bring about some means of creating a stronger sentiment for the privileges of the Public Library.

DEPOSIT STATIONS—IN FACTORIES

The Hartford Public Library, in co-operation with members of the Young Women's Branch of the Women's Christian Association and with factory managers, has undertaken an extension of its service for the benefit of women factory workers by maintaining branches for the circulation of books at factories in which women are employed in considerable numbers. By the plan adopted, the factory manager furnishes accommodations, the members of the association the service, and the library the books. A beginning was made with the Hart & Hegeman Co., The Arrow Electric Co., and The Johns-Pratt Co., with the most satisfactory results. Preparations are being made to follow soon on a larger scale with the Underwood Typewriter Co. This enterprise appears to have much promise in it, and, thanks to the young ladies who volunteered their services in the care and delivery of the books, it is being accomplished at a minimum cost.

DISCARDED BOOKS. *See* Prisons, work with.

EDUCATIONAL LIBRARIES

What will be the largest library of educational documents in Kansas is being formed by W. H. Kerr, librarian of the Kansas State Normal School at Emporia. Mr. Kerr has organized a system for collecting educational documents in Kansas and the United States, which will enlarge the present educational library at the Normal School one-third.

Letters have been sent to all the cities of Kansas, and all the county superintendents of

Kansas, requesting copies of all educational documents published in the district, and offering in exchange the Normal School educational journal, *Teaching*. Four hundred cities outside of Kansas will receive like requests. Mr. Kerr's plan is to make the Normal Library a center for research in educational documents.

EVALUATION—OF FICTION

Fiction while it is fresh is a slogan of the Minneapolis Public Library now.

A new system has been devised by Miss Gratia Countryman, librarian, to get books from the publishers as fast as they are out. It involves reading advance copies of new books by the staff assistant librarians. In the first week, which witnessed the inauguration of the new plan, the librarians had to consider 45 books.

The new scheme works like this: As soon as a local dealer or publisher has a batch of new books the library is notified and a representative looks them over and chooses what the library would be likely to want. The books are parceled out to the staff and every Wednesday morning a staff meeting is held and reports given. Classifications are made as follows:

<i>poor,</i>	<i>good,</i>
<i>trivial,</i>	<i>sentimental,</i>
<i>trashy,</i>	<i>pleasant,</i>
<i>cheerful,</i>	<i>unpleasant,</i>
<i>inspiring,</i>	<i>morbid,</i>
<i>sensational,</i>	<i>moralizing</i>
<i>worth while,</i>	<i>dull,</i>
<i>important,</i>	<i>interesting,</i>
	<i>pernicious</i>

The new plan will result in getting books to library patrons much quicker than the library has had them before and will, make library assistants familiar with the library stock.

FICTION. *See also* Evaluation of fiction; Non-fiction.

—CIRCULATION OF

In February, 1915, those in charge of the Pratt Institute Free Library removed all restrictions on the number of novels that may be taken on a single card, and thus set forth their position in the 1915 report:

"Assuming that our adult borrowers come to the library with an intelligent purpose, we have made our Free Library still freer by a

liberty of choice and action as to which of the books, offered with ostensible freedom on our shelves, the borrowers may elect to read to satisfy their own requirements in reading. The books are placed on our shelves to be taken away and read. Who shall say that it is wiser for a reader to take more of one sort or another at a particular time?

"It happened that the first borrower to approach the charging desk, after the new freedom went into effect, was a school teacher sated with the study and improvement of mind which it is the higher purpose of the library to make possible. She brought to the desk five novels, chosen to meet her immediate need of diversion, and asked which she might have. When told that she could take any or all as she preferred, she discovered for the first time the full significance of a free library to an intelligent user of books.

"This indulgence does not mean that the newest novels widely in demand by the reputation of their first advertising can be appropriated by handfuis by a single individual. The 'seven-day' books are still issued only one on a card in justice to all comers, the duplicate pay collection providing for the impatient. Furthermore in this respect as in others, we feel that immature readers should not be given quite the same liberty as the older users of the library. Young people under eighteen who have been admitted to the general library now have their cards stamped Y, and with these the limit of two novels at one time still holds.

"But the separation of fiction from 'non-fiction,' as the goats from the sheep, no longer prevails in our fellowship of books. Nor does the maintenance of a low 'fiction percentage, by artificial restrictions seem deserving of further anxiety."

Turning to the report of the circulating department, we find this interesting comment on the year's circulation figures, which amounted to 221,825 volumes.

"When the year 1914-1915 closed, the total figures for the whole library had reached a new summit, 14,038 higher than the previous year's ascent and 80,322, or nearly 57 per cent, above 1904-1905. Withdrawing the general restriction on fiction after the year was half over might be supposed to have contributed some impetus to the circulation and helped to secure our new record. But the tendency toward the unprecedented had already been established long before, and it is interesting to note that the 'fiction percentage' for the year was not affected by the new liberality. The average proportion of

fiction read during the five years 1908-1913 had been 52 per cent, a year ago it was 52 per cent, last year again 52."

#### FINANCE

Adopting a plan launched by the principal, Miss Alice Lusher, to build up the library of the Sophie B. Wright High School in New Orleans, the girls of the three classes have elected members of a library board. The office of this board is to see that the books of the library are thoroughly circulated, and well taken care of. They are also to collect one cent per week from each of the 830 girls. Miss Agnes Collins, school librarian, says that the \$332 collected in this way will be used to buy 500 or more new books.

The library of the Sophie B. Wright School is already the largest high school library in the city. At present it contains 3225 volumes.

In Edgemont, N. C., a movement is on foot to secure a circulating library in the graded school.

The movement for a library was started at the close of last year, and it was the original plan to work through the pupils of the school to raise the money.

This year, however, the principal, Prof. W. M. Upchurch, has decided to work through a different method, and is calling upon the business men of the suburb to finance the library.

The idea is for each individual merchant to pay for as many books as he feels able and to put an acknowledgment in the back of each book he contributes which will be worth its purchase price to the contributor as advertising. Each 50 cents contributed by a merchant will entitle him to an interest in one book. If he contributes \$5, ten books will be purchased and each will contain an acknowledgment of the donor in the back.

The merchants endorse the plan, both because it is a profitable advertising medium and because it is something which will be of permanent benefit to the community. Some books will be purchased immediately and the number will be increased later as the money comes in. The library contained about 75 books when the campaign began.

#### FINES—IN CHILDREN'S ROOMS

"A procedure in the case of children who have had overdue books and failed to pay the fees has been worked out satisfactorily," says the 1915 report of the City Library of Springfield, Mass. "It seemed undesirable to deprive a child of the use of the library because of his neglect, and yet to remit these fees would

discourage children from paying them and lead to consequent carelessness in returning books on time. In occasional instances, children have been allowed to balance the charge by giving an equivalent of work in the library, but in more cases the payment of fines by installments has proved beneficial. At least one youngster was heard to announce that he had given up the 'movies' so that he could save the money to redeem his library card."

#### FOREIGNERS, WORK WITH

A unique plan for educating foreigners through the public library is suggested by Miss Frances Earhart, librarian of the Public Library of Duluth. It is to procure the services of a purchasing agent, who is familiar with the best literature of all the foreign countries represented in the population of Duluth and the ranges. One of the most difficult features of the work among foreigners, she declares, is to obtain suitable books for them, and to keep in touch with the new literature of their countries.

The library is now putting forth its best efforts to educate the foreigners in this city and on the Iron Ranges, thus co-operating with the public schools and the Young Men's Christian Association, which are conducting night schools. This is done by the circulating of books for foreigners around a circuit of libraries, within the Duluth district.

"There are six cities and towns in this exchange circuit," said Miss Earhart, "Books in the foreign languages, most appropriate for the classes of people we have to deal with, are sent around this circuit, each collection remaining in one place three months. These books are written in Swedish, Norwegian, Finnish, Italian, Croatian, and other languages and include both translations from the best French and English authors as well as their own writers.

"Our lists of books for foreigners are growing right along, and we shall soon have a large collection of them. With the securing of a purchasing agent, who could take over all this exchange work, we would be going a long way toward getting at the very bottom of the whole situation.

"In engaging such a person, though, great care would have to be exercised because of the great responsibility such an agent would have. Good character, knowledge of languages and literature, as well as good judgment would be necessary."

#### FORESTRY EXHIBIT

A forestry exhibit from the U. S. Forestry Department was shown in the Public Library

of Greensburg, Ind., during the month of August. This exhibit consists of samples of almost every timber grown in America, and full details of its commercial uses; also maps and diagrams showing where the timber is found, and elaborate photographic work. The collection is so arranged as to be of technical value to the student, and also of popular interest to the general public.

FUNDS. See Finance.

#### HARVARD COLLEGE LIBRARY

The September number of the *Harvard Graduates Magazine*, volume 24, contains two articles on the Harvard College Library. The first one, under that title, is by Archibald Cary Coolidge, in which he discusses the plans, resources, and tasks of the library, and the three phases of its activity, as follows:

1. The work of the ordering and the accession department.
2. The classifying and the cataloging of the books.
3. The circulating department.

The following quotation is from the last paragraph of Prof. Coolidge's article:

"The dark side to the picture is the staggering cost of running, and running efficiently, as well as in a liberal manner, such a library as Harvard now possesses. You can live as simply in a palace as in a cottage, but you cannot keep it lighted and cleaned at the same price. The treasures of learning, like other treasures, are expensive things to take proper care of and to make useful to the community."

The same number contains an article by Senator Henry Cabot Lodge, on "The meaning of a great library." Senator Lodge's article is a feeling tribute to books by the true book lover. According to Senator Lodge:

"True lovers of books are a goodly company one and all. No one is excluded except he who heaps up volumes of large cost with no love in his heart, but only a cold desire to gratify a whim of fashion, or those others who deal in the books of the past as if they were postage stamps or bric-a-brac, as if they were soulless, senseless things."

HIGH SCHOOL BRANCHES. See Branches—In high schools.

#### INSTRUCTION IN USE OF LIBRARIES

Four years ago John A. Lowe, then librarian at Williams College, started a series of six lectures to the freshmen. The course of lectures was made an integral part of the work in first-year English. In addition to the lectures practical library problems to be

worked out by the students in the library in the same manner that a laboratory is used in scientific courses were assigned to the students as a regular feature of their English work. In the final examination in the course there are two or three questions connected with the library work that must be answered and graded on the same basis as the remainder of the year's work.

These lectures, which were given by Mr. Lowe, who is now connected with the Massachusetts Free Public Library Commission, are not to be discontinued, for they are to be delivered to the freshmen, as in the past, by one of the professors.

#### LOCAL HISTORY, TREATMENT OF

Mrs. Minnie S. Kellogg, head of the local history department of the Syracuse (N. Y.) Public Library, is working upon a chronology which will be altogether different from anything ever known in Syracuse before and will be of practical and valuable service about 365 days out of every year.

Mrs. Kellogg is going over the newspaper files in the library from 1848 down to the present time and making a list of the local events which happened every day, according to the news columns. Weddings, deaths, births, fires, accidents, fatalities of all kinds for whatever reason, important social gatherings, the building and opening of new buildings or business houses, the visits to Syracuse of great speakers, actors and actresses—all these things and many more are recorded with any notes of special interest which may be necessary.

Already more than ten years of the chronology has been gone over, but it is not yet ready for use and will not be until it has been typewritten and put into shape.

No records of vital statistics were kept in the city prior to 1871 and in the towns until a considerably later period. And often when a clergyman moved out of town to another charge he would take his records with him. Therefore, the newspapers give practically the only official record of marriages for many years.

Mrs. Kellogg's local chronology is, so far as is known, different from anything which has been put together in other cities and will be a unique and interesting volume of local history.

#### MEDICAL LIBRARIES

For many years the librarian of the Royal College of Surgeons of England has been compiling a card catalog of the library of that institution; the war has caused a decrease in

the number of readers, so that the work of the staff has been considerably lessened. This opportunity has been taken advantage of, with the result that the card catalog is now practically complete. The stock of the library exceeds 67,000 volumes, including a great number of rare works, and unique manuscripts, while the entries number some 160,000. There have been various catalogs attempted and published by previous librarians of the Royal College of Surgeons; the first being issued in 1831; then a classed catalog was prepared, used in manuscript for some years, and published in 1843. This was followed by an index of subjects in 1853, and four supplements to the original author catalog were published between 1840-60, and a list of the transactions, periodicals, and memoirs was issued in 1890.

NON-FICTION. *See also* Fiction.

#### —STIMULATING INTEREST IN

Non-fiction reading—how increase it? Julia Rupp. *Mich. State L. Quar. Bull.*, J1.-S., 1915. p. 53-54.

Since the greater part of a library's book fund goes for the purchase of books other than fiction, a corresponding effort should be made to introduce these books to the public and to justify the shelfroom accorded them. It is not lack of appreciation so much as lack of knowledge that keeps the public from these books.

Every assistant must know and love the books, and should have on the tip of her tongue the titles of a few books in each class which she can recommend.

In one library members of the staff reported at the weekly staff meeting on the results of individual effort to increase the reading of non-fiction, and the keeping of the record brought forth a friendly rivalry and also a certain watchfulness for opportunity to meet or to create a need for better reading.

A small collection has a great fascination for the casual reader, and should be frequently changed. Catchy placards or quotations on books may be placed above the shelves, and the same idea of frequent changes should be carried out here. Special subjects can also be advertised to good advantage by placing a few books on a subject on a small table or on the charging desk. Call each new applicant's attention to the rules governing the circulation of non-fiction, and be sure to make the rules as elastic as possible. Remove all restrictions, if necessary, to accommodate the student as well as the general reader.

A short list of books with annotations that show the personal touch, if published in the

daily papers will always attract attention. A slip pasted at the end of a book of fiction or non-fiction, referring the reader to the books of history or biography of the period and suggesting further reading along the same line, is an experiment that has been tried successfully.

Students of the high school often depend on their teachers for suggestions in regard to their reading; and as we all know that teachers are busy people, a short list of appropriate titles sent occasionally to the school or to the individual teacher will be appreciated.

#### PARCEL-POST SERVICE

A parcel-post library system. Fred L. Holmes. *Amer. Rev. of Rev.*, D., 1915. p. 729-730.

A short description of the library service furnished by the state libraries of Wisconsin to people in all parts of the state who will pay parcel-post transportation charges. The service goes to the remotest parts of the state, sometimes 250 miles from the libraries, and in many cases the books are borrowed by the teacher or leading business man and by them circulated throughout their community.

"The relative ratios of the character of books ordered are at variance with city library statistics generally. With the latter fiction comprises 70 per cent of the books loaned. Of the first 743 orders received, which is characteristic of recent orders, 251, or 34 per cent, were fiction; 181, or 24 per cent, were for books on agriculture and home economics; and 311, or 42 per cent, related to history, science, biography, and travel.

"Applicants must sign a statement, to be verified by the postmaster, teacher of the rural school, or some other responsible person, that the book will be carefully protected and will be returned after fourteen days unless an extension of time has been granted."

#### PICTURES—CIRCULATION OF

One thousand pictures illustrating American history have recently been added to the Springfield (Mass.) City Library's lending collection of pictures. These new accessions are inexpensive prints measuring five by seven inches. They form a considerable increment to the general collection which is used extensively by teachers in the public schools. Besides this collection, which includes historical scenes, geographical views, manners and customs, various industries, etc., the library has a special collection of portraits, a large collection of pictures illustrating the Bible, and still a third group including art subjects, not only painting, but architecture

and the various minor arts. The picture collection now numbers about 150,000 pieces of varying quality, all the way from original etchings and engravings to cuts clipped from newspapers and magazines.

#### —EXHIBITS OF

During the past year the Wisconsin Library Commission has loaned to libraries in the state 80 exhibits from its picture collection. This includes the itinerary of the pictures of the Scott country, a collection of beautiful photographs made for the Caledonian edition of Scott's works by Mr. C. S. Olcott and loaned to the commission by Houghton, Mifflin Company. These pictures have already been sent to twenty-eight libraries, and reports show that they were a means of arousing interest in the reading of Scott, as well as a source of pleasure and inspiration in themselves.

The list of other picture exhibits which the commission is ready to lend to libraries in the state includes The Holy Grail series in Copley prints; Alexander's Evolution of a book; hand colored pictures of Bre'r Rabbit; Civil war series; German and French colored prints; Hiawatha pictures; Historical and descriptive colored pictures, postals and posters of America; Longmans' English history wall pictures; lumbering and logging scenes in Wisconsin; Reproductions of some of Michelangelo's paintings in black and white; Mother Goose colored pictures; Russell and Remington Western scenes; Costume posters and postals; Group of Jessie Willcox Smith pictures; Turner prints, a collection of reproductions in brown of some of the masterpieces of paintings, buildings in Europe and some historical scenes; U. S. army colored plates; William Penn pictures; Woodcuts of English and Scottish cathedrals; Copley prints of a few of the works of Blashfield, Puvis de Chavannes, Boutet de Monvel, Sargent, and Vedder; Photographs of England, Scotland and Wales; Canadian postals; Sane Fourth postals; Postals of Washington, D. C., Richmond, Hampton and Williamsburg, Va.; Japanese prints and a set of unmounted masterpieces of art in brown reproductions.

A group of reproductions of American artists, the originals of which hang in American galleries, has been added this fall and will soon be ready for circulation.

#### PRISONS, WORK WITH

The Minneapolis Public Library is planning to extend its service to the city and county jails. Men and women temporarily detained in the jails have never had the service of the

Public Library, and Miss Countryman, the librarian, thinks it a field that should be covered. While she believes that fiction will be mostly in demand, high class fiction, she thinks, would have a good influence.

The jails will get the same service the workhouse is now getting from the library, that is, books that have been considerably used but are complete and contain good reading material. Bound magazines a few months old will also be included in the service.

Besides the workhouse, the poor farm, the city hospital, the Boys' Detention Home at Glen Lake and Bethany Home are getting books from the Public Library.

PUBLICITY. *See* Advertising.

READING. *See* Fiction; Non-fiction.

#### REPORTS—BLANKS FOR

The Indiana Library Commission has recently had printed and from now on will distribute a new form of annual report blank believing that if the reports of libraries printed in the commission's report are to have any significance, the statistics reported must be made according to the same method. On the report blanks to be sent the Indiana libraries, have been printed the notes, definitions, rules that the A. L. A. Council adopted as to branches, distributing agencies, volumes, additions, and circulation. The monthly report blank was also revised last spring so that the desired information can be transferred from it to the annual report blank. In addition to the items required by the A. L. A. Council, the commission has included other items formerly on the annual report forms which are essential for purposes purely local in Indiana.

REVIEWS. *See* Evaluation.

#### SPANISH BOOK SELECTION

The increasing interest in Spanish has apparently kept ahead of the publication of convenient lists of books in the Spanish language for beginners. Secretary Utley of the American Library Association, in recent articles describing the A. L. A. exhibit at the Panama-Pacific International Exposition, has voiced the appeal for more lists of this type, and it is in reply to that appeal that the following list is presented.

The list was prepared by Professor Benjamin P. Bourland, head of the Department of Romance Languages, Adelbert College, Western Reserve University, one of the leading Spanish scholars in America. Professor Bourland's remarks on the list follow:

"It is strictly a learner's list as you can see,—and with one exception, it is purely modern. The exception, the Spanish 'Gil Blas,' is so very easy that it may properly be put here.

"A word about the books—9, 12, and 15 are grammars; 9, the most complete and careful we have had as yet in this country; 8 is a collection of very easy stories. Of the others, 1, 5, 7, 11, 13 and 17 are the easier; 2, 6, 14, 18, and 19 the more difficult. All, I think, have vocabularies. 7 is a play, the others pure fiction."

19. Valera y Alcalá Galiano, Juan. El Comendador Mendoza, ed. Schevilli. 1905. Amer. Bk. Co. . . . . .85
20. Vida de Gaspar Nunez de Balboa, ed. Brownell. 1914. Ginn. . . . . .65

The college entrance requirements for the year 1915 in Spanish include Carrión, Valdés, and Alarcón (No. 1), above, and in addition the selected short stories of Pedro de Alarcón or Antonio de Trueba. Also:

- Perez Eschrich, Enrique. *Fortuna*. 1907. Ginn. .50  
 Valera, Juan. *El Pajaro verde*. 1901. Ginn. .40

The requirements in Spanish follow the form and spirit of the recommendations made for French and German, by the Committee of 12 of the American Language and are based on recommendations made by a committee of that association in December, 1910, and recorded in the *Publishers' Weekly*, July 24, 1915, p. 158-59.

#### STORY-TELLING

Story-telling has been made a definite feature of library work in Leeds, England, and during the library year 1914-15 stories were told to a total attendance of over 5000 chil-

dren. A number of models and illustrations were prepared and placed on exhibition, and these proved of much interest and enabled the children to better understand the subjects of the talks. Many of the children were encouraged to contribute accounts in their own words of the stories they had listened to, and of the illustration of the principal characters or events; also their favorite story and why, or suggestions for future talks, and over 2000 written papers were sent in and deposited in the boxes provided for them.

#### TRAINING, LIBRARY

At the last meeting of the Minnesota Library Association Miss Barden reported the result of investigations made by the association's committee on library training. This committee had made a study of the present educational equipment of librarians in Minnesota and of the possible extension of library training in the state. A questionnaire was sent out in March, including a register blank for the report of the education and experience of each librarian and library assistant above clerical grade. Questions were asked relative to professional reading, attendance at library meetings and the need of opportunity for further library training in Minnesota. The tabulated results of the register of Minnesota librarians, show that of the 170 librarians and library assistants, 34% are college graduates and 30% have had partial college courses or normal school training, making a total of 64% whose general education has included some advanced work. The statistics of special library training show a similar total—65%, of which 29% represents library school graduates, and 36% those who have taken summer school or training class courses. Although these figures are encouragingly high, they indicate professional training which is extensive and superficial rather than intensive and thorough, for, if we take as the ideal of adequate training for librarianship a full college course followed by a course in an accredited library school, only 17% of the librarians included in this report measure up to the ideal. The need, then, in Minnesota is for more thorough training of those librarians whose professional study has been limited to summer school courses, and of better opportunities for those who are preparing to be librarians.

A beginning in specialization in the Summer School has already been made. This year a special course was offered for school librarians given under the direction of Miss Wilson, supervisor of school libraries. There seems

to be no reason why further special and advanced courses cannot be given in the Summer School if there is sufficient demand for them. The committee recommended that a motion be made placing the Minnesota Library Association in favor of the immediate addition of advanced courses to the Summer School.

Individual efforts toward the increased efficiency of assistants are being made in the larger libraries by apprentice classes in St. Paul and Duluth. Staff meetings are reported by Minneapolis, Duluth, and Winona. The systematic reading and discussion of current library periodicals might well receive more attention.

Regular attendance at library meetings is reported by about 50% of the smaller libraries, with the librarian's expenses paid in most cases. In the larger libraries time is granted to assistants.

This report is submitted as covering only part of the subject of library training in Minnesota, and the committee recommends that this subject be given further consideration by the association and that a constant effort be made to increase the opportunities for professional study among the librarians of the state.

#### TRAVELING LIBRARIES

New methods of bringing traveling libraries to the attention of the people of the state have been considered by the Maine Library Commission. As one means to this end the state librarian has prepared and sent out to the manufacturing establishments of Maine a letter which sets forth in detail the work of the commission and which suggests the advisability of placing traveling libraries in the offices of these establishments for the use of their clerks and operatives. The letter asks for suggestions relative to the selection of the books.

Under a resolution of the last legislature, appropriating \$2000 for the purpose, the commission is preparing to issue traveling libraries to high schools in towns where no public library is maintained. The books will be selected from a list recommended by the State Superintendent of Schools and will contain material on practically all the high school subjects with the addition of a group of miscellaneous books chosen for their peculiar interest to young people. It is expected that this combined effort of the library and educational state departments will stimulate in the smaller high schools a greater interest in books and perhaps result in the foundation of permanent school libraries.

## Bibliographical Notes

The Christmas list issued this year by the New York Public Library differs from that of previous years. Instead of being a buying list of good books it is a list of "Stories, legends, songs and plays for the Christmas holidays," and in place of annotations it gives illustrative paragraphs from the selections chosen.

The *Athenaeum* "Index to periodicals" has not yet appeared in book form but several class lists, including Sport, Music, Fine arts and archaeology, Modern languages and literature: bibliography, etc., Classical languages and literature, Science and technology, European war, and Education and child welfare, have already been printed as supplements to the *Athenaeum*.

The Educational Directory for 1915-16, issued by the Bureau of Education at Washington, is slightly larger than last year. One of the new lists added is that of the librarians of public and society libraries—about 1300 names—giving also the name and location of the library and the number of bound volumes it contains. This list has also been printed as a separate pamphlet.

Volume 3 of the revised edition of the Standard Cyclopedia of Horticulture, by L. H. Bailey, 1915, has an extensive article on the literature of horticulture extending from pages 1520 to 1562. One of the most interesting features of this article is an excellent alphabetical list of American horticultural books to the close of 1914. It is followed by a special index to the list. There is also a list of reports of state boards and of horticultural societies, together with a list of North American horticultural periodicals, both extant and extinct.

In the form of a card index, the firm of DeWitt & Snelling, booksellers, of Oakland, Cal., propose to issue a catalog or bibliography of the printed books on California, and, incidentally, the whole western part of the United States. It is intended to publish the cards in sets of 10 at the rate of two series a month. About seventy-five titles have already been prepared. The books selected cover no particular period or writer, but are of a general character, and both the new books and those long out of print will be included. The entries are printed on 3 x 5 gray cards, punched, and are compiled and annotated by Frederic M. DeWitt.

A comprehensive bibliography on the more or less new form of community improvement, the social survey, has just been published by the Russell Sage Foundation Library. The bibliography includes references to all important documents and reports having to do with the purpose and method of such surveys, as well as references to reports presenting the data gathered in the various surveys made in many parts of the United States and Canada. Some of the special groups under which the reports are classified are: Charities, delinquency and corrections, health, housing, industrial conditions, mental hygiene, municipal administration, recreation, schools, and vice. The bibliography was compiled by Zenas L. Potter of the Department of Surveys and Exhibits, Russell Sage Foundation, in co-operation with the library, and is published as Bulletin No. 14 of the Russell Sage Foundation Library.

The proceedings of the first library conference, held in this country in 1853, which have hitherto been inaccessible to the majority of librarians, have been reprinted by the Torch Press of Cedar Rapids in a limited edition. The meeting was called in New York on the 15th day of September, 1853, and among the members present were many whose names afterward became great in their chosen departments, and they came from widely diverse parts of the country. Some of the notable names included in the roll call are R. A. Guild of Brown University, W. F. Poole of Boston Mercantile, S. Hastings Grant of the New York Mercantile, Prof. C. C. Jewett of the Smithsonian, Hon. Henry Barnard of Hartford, Daniel C. Gilman, then representing Yale College, George H. Moore of New York Historical Society, Dr. S. S. Purple, Frederick Vinton of St. Louis, and many others. The complete list of delegates is printed, together with Prof. Jewett's presidential address followed by the Reports from most of the important libraries and a discussion concerning the card catalog system of the Smithsonian. At about this time the question was being agitated for a Central National Library which has later been developed at Washington, and the distribution of public documents was discussed.

### THE BOOK LINE

RIVINGTON STREET BRANCH, THE NEW YORK PUBLIC LIBRARY

Come, ye that despair of the land  
Which the Future shall know—  
Who doubt what the years that expand  
In their fullness must show—  
Who grasp not the thing which shall be  
When deliverance comes

To millions in bondage—and see,  
 At the verge of the slums,  
 These foreign-born children that march  
 In their hundreds and more  
 In sunshine and storm, through the arch  
 Of the library door!  
 Their race? Ah, what matters their race  
 To our generous Mold  
 Of Nations! Yet, if ye would trace  
 All the record unrolled,  
 Take heart from the days that are dead:  
 For the fathers of these  
 With Leif or with Eric the Red  
 Braved mysterious seas,  
 Or followed Yermak through the snows  
 Of a boreal dome,  
 Or gave to the eagles the foes  
 Of Imperial Rome;  
 Or tented with David, or ranked  
 In the Balkans those swords  
 That bulwarked all Europe, unthanked,  
 From the Ottoman hordes.  
 Aye, old at the time of the Flood,  
 Still the law is the same;  
 The Builder shall spring from the blood  
 Whence the Warrior came.  
 They trail through the alley and mart  
 To this Palace of Tomes—  
 Wee urchins, red-hatted and swart  
 As their underworld gnomes,  
 And hundreds of quaint little maids  
 Wearing ribands of green  
 Or scarlet on duplicate braids,  
 Quick-eyed, orderly, clean,  
 And silent. Some take from the shelves  
 Of the volumes a-row  
 Those legends of goblins and elves  
 That we loved long ago;  
 Yet more choose the stories of men  
 Whom a nation reveres—  
 Of Lincoln and Washington, then  
 Of the bold pioneers  
 Who ploughed in a blood-sprinkled sod,  
 Whose strong hands caused to rise  
 That Temple which these, under God,  
 Yet shall rear to the skies!

—ARTHUR GUITERMAN in the *New York Times*.

#### REISSUES UNDER NEW TITLES

*Editor Library Journal:*

A circular has recently been distributed over the imprint of Artemus Ward, Publisher,

50 Union Square, New York City, advertising the "Encyclopedia of Foods and Beverages." This seems to be the same as the "Grocers Encyclopedia" published in 1911. Both works have the same number of pages. Both are advertised and published by Artemus Ward, and the price on the sample pages and illustrations is the same in each case.

BROOKLYN PUBLIC LIBRARY.

---

*Editor Library Journal:*

The autumn book sale list of Himebaugh & Browne, and Clearance Catalog no. 39 of the Charles W. Clark Company, both of New York City, offer for sale at \$.35 per volume certain of the publications of the Bay View Reading Club of Detroit, including among others James Bryce's "South America," listed by Himebaugh as "Macmillan 1914" and by Clark as "revised ed., 1914." Nothing is said in either list to indicate that the text is incomplete; the assumption from the entries is that a reprint of the revised 1914 edition of Bryce's "South America" is offered for \$.35.

As a matter of fact the Bay View Reading Club Edition consists of xxii+453 p. as against xxiv+611 p. in the regular trade edition. The preface, introduction and the first eleven chapters appear to be page for page the same. Chapter thirteen of the trade edition forms the twelfth chapter of the Reading Club edition, and chapters twelve, fourteen, fifteen and sixteen of the trade edition as well as the notes, index and maps are omitted entirely. As far as I have been able to discover there is nothing in the Reading Club volume to indicate that the text has been cut. The title-page bears the inscription "Published for the Bay View Reading Club, Central Office, Boston Boulevard, Detroit, Michigan, by The Macmillan Company," and the copyright notices are the same.

Is it not about time that respectable publishing houses ceased to lend themselves to this sort of thing?

HAROLD L. LEUPP.

Vol. 41

FEBRUARY, 1916

No. 2

THE mid-winter meetings at Chicago were among the most satisfactory yet held. The large and representative attendance in connection with the several organizations which met there made a conference of good size, and as the Council held its meetings with open doors, its sessions assumed almost the proportions of a national conference, though discussion was naturally confined to its membership. The Council is now the proper field for the discussions and decisions for which the national meetings are too large, and not a little good work was accomplished this year. Perhaps the one criticism may be made that the papers and discussions were not confined to questions on which the Council should reach decisions on behalf of the association, for if this limitation is permanently disregarded, the Council meetings will be less useful and effective.

THE most salient question discussed was the Stevens Bill, re-introduced into Congress as the Ayres Bill, in its relation to library book-buying, and the important report of the book-buying committee is given in full in this issue. The resolution adopted by the Council and Executive Board does not oppose price maintenance and the general principles of the bill, but asserts the rights of libraries as buyers of an exceptional sort, usually in wholesale quantities. The bill as originally drafted disregarded any such rights or claims on the part of libraries. It is gratifying to state that through conferences in New York between the book-buying committee members and the proponents of the Ayres Bill, an understanding was reached which will prevent the necessity and trouble of appeal to individual members of Congress from libraries throughout the country. It

was arranged to exempt public libraries and like institutions from the scope of the bill under the same conditions and to the same extent in which the Tariff Bill relieves them from the payment of duties. The measure as redrawn was introduced Jan. 21 as a substitute bill by Mr. D. V. Stephens of Nebraska—Mr. Stevens, the original mover, being no longer in Congress, but now counsel for the Federal Trade Commission—and it contains the clause as arranged for. The bookbuying committee is accordingly notifying librarians that it is not necessary to make protest against the bill. But the library interests should watch the progress of the bill with care, so that fair treatment to libraries shall be assured when it comes to final passage.

NEW JERSEY will be specially favored with library meetings this year, in view of the determination to hold the American Library Association conference at Asbury Park, June 26-July 1, 1916, and the approaching spring meeting which has made Atlantic City famous in library circles. Asbury Park was selected for the national conference because of the desirability, after the expensive journey to California, of selecting a meeting place within easy and economical reach of the great body of library workers. The fact that the National Education Association will meet in New York City the week following furnishes additional reason for bringing library folk together at this place and time. It is to be hoped that the conference will rival previous beach conferences at Magnolia and Narragansett Pier as a banner meeting, and that many of our California and Canada friends will take the opportunity to make return calls on their Eastern

brethren. The Atlantic City meeting, March 3-4, presents the usual wide invitation to librarians other than those of New Jersey and Pennsylvania, who are the hosts.

ONE of the monumental works in American bibliography was the great dictionary of Joseph Sabin, on whose death in 1881 only thirteen volumes had been completed. The remaining material was placed by his son, Joseph F. Sabin, in the hands of Wilberforce Eames, and under his capable editorship, seven more volumes were issued, bringing the work into S. The last of these volumes was published in 1892, and since that time no progress has been made in the printing of the work. Mr. Eames has been relieved, at his own request, from his executive responsibilities as head of the American history division of the New York Public Library, in which he is succeeded by Victor H. Paltsits, though the library has been unwilling to let him go altogether and retains his partial services as Bibliographer. This enables Mr. Eames to carry out his intention of resuming work upon and completing the Sabin bibliography. It has seemed a pity that so important a work should be left like Aladdin's tower, and as Mr. Eames has material in hand and in his new leisure has the missionary spirit of bibliography to do his part in completing the work, what is now needed is material support. It seems proper to put the question before the library profession, whether it will not now insure the completion of this important work by coming to its aid. The financial returns on the remaining volumes, when published, will scarcely do more than compensate for the actual cost. It will be recalled that it is a dictionary of Americana, in the widest sense, covering all books relating to America and all books printed in America as far as the nineteenth century. The last field is also covered or to be covered in Mr. Charles Evans' work, but as his is chronological, while Sabin's is alphabetical, the two supplement each other.

YALE has lost, in the death of John Christopher Schwab, one of its most loyal, able and efficient servants—a man devoted first of all to his university and to the library of which he was director as a part of the university. It was because of his concentrated devotion to Yale interests that the library profession knew less of him at its meetings and in its councils than of any other member of the profession of equal rank. On the retirement in 1905 as librarian emeritus of Addison Van Name, who had built up a scholar's library but was not notably a business executive, Prof. Schwab was transferred from the chair of political economy to the directorship of the library, for the purpose of effecting a systematic organization of the latter, other work for the university having shown his executive abilities. It was a complete transfer, for he never did any teaching after that year. Thenceforth he devoted himself exclusively to this work for the library, although both he and the assistant librarian, Andrew Keogh, ranked as full professors and were given professorial salaries. The relationship between the two officials, named librarian and assistant librarian, was practically that later adopted at Chicago and Harvard under the names director and librarian, corresponding to the president and general manager in corporations where these two officers are differentiated. At Yale this difficult relationship worked out excellently; the one official representing the library in its exterior relations, the other in its interior relations chiefly. Prof. Schwab is described as "a big man, a thorough gentleman, always kindly and considerate of others," and it was this very bigness which made the relationship indicated valuable as well as possible. It is to be regretted that other members of the library profession saw so little of their Yale colleague, but he contributed substantially to library progress by the admirable organization which he developed at Yale and which will make the way clearer for his successor.

# SOME REFERENCE BOOKS OF 1915

BY ISADORE GILBERT MUDGE, *Reference Librarian, Columbia University*

THE aim of this present article, like that of the similar surveys of reference books for previous years, is not to present a complete list of the new reference books of 1915, but rather to indicate, from the point of view of the general library, some of the more important, useful, or interesting of the new reference publications. While most of the works referred to have been published during the year 1915, mention is made also of some books of 1914, principally foreign publications, which were either issued, or received in this country, too late in 1914 to be examined in time for mention in the survey of reference books of that year. It has been necessary to omit certain foreign reference books of 1915 which probably should be recorded here, because, on account of the delay in importation due to the European War, copies have not yet been received in the various libraries to which the writer has access, and examination of such books was therefore impossible.

## PERIODICALS AND NEWSPAPERS

Of special interest is the number of union lists of periodicals which have been published within a year. Of these, the most useful to American libraries is the "Catalogue of technical periodicals in libraries in the city of New York and vicinity, compiled and edited by Alice J. Gates with the assistance of a committee of the New York Library Club." (New York: Library Board of the United Engineering Societies. 110 p. \$3.) This catalog, which is issued as Bibliographical contribution no. 1 of the Engineering Societies Library, lists with exact statement of files and considerable cataloging detail, the periodicals contained in five libraries in New York City and two libraries, the Plainfield (N. J.) Public Library and the Stevens Institute Library, outside the city limits. A new Italian union list is the "Elenco alfabetico delle pubblicazioni periodiche esistenti nelle biblioteche di Roma e relative a scienze morali storiche filologiche belle arti ecc., con saggio di indice

sistematico per quelle dedicate a discipline teologiche, bibliche e orientistiche (Roma: Pontificio istituto biblico, 1914. 406 p.) This work lists the periodical sets in 45 libraries in Rome, but is of special interest in American libraries not because of its location of sets but for the information which it gives about titles, dates, etc., of the Italian periodicals included. Two new German union lists are: "Rheinischer Zeitschriften-katalog, im Auftrage des Verbandes rheinischer Bibliotheken bearb. von Paul Hirsch" (Bonn: Georgi, 1914. 343 p. 15 m.), which lists the periodicals in the 60 libraries of the Verband, and the more ambitious "Gesamt-zeitschriften-verzeichnis, hrsg. vom Auskunfts-bureau der deutschen Bibliotheken" (Berlin: Königliche Bibliothek, 1914. 355 p. 10 M.), which is a union list of 17,190 periodicals in some 357 German libraries. A notable new list of newspapers which is already proving itself very useful is the "Check-list of newspapers and official gazettes in the New York Public Library," comp. by D. C. Haskell (New York Public Library. 579 p. \$1.80). This check list is in three sections, a main check list arranged by names of cities and two subordinate lists which furnish a chronological and a title index to the main list.

Several new indexes to periodicals, some so recent as to be still in the experimental stage, should be mentioned. The "Index to dates of current events" published from 1911 to 1914 by the R. R. Bowker Co., New York, was discontinued at the end of 1914 and its place taken by a new publication entitled "Information, a digest of current events, including index to dates" (New York: R. R. Bowker Co. Monthly \$3 a year, quarterly \$2 a year, monthly and quarterly together \$4). "Information" which comes in two forms, a monthly issue in which each number covers the events of one month, and a quarterly issue which combines the events of three months is, like its predecessor, an alphabetical index to current events, but differs from the old

"Index to dates" partly in the fact that it makes a certain selection of material to be recorded and groups this material under somewhat broader classes but principally in the fact that it furnishes a fairly detailed digest of the subject or event recorded so that in many cases reference to newspapers or other publications is not necessary.

An entirely new index somewhat similar to "Information" in its general plan and form but with its scope limited strictly to one subject is the "International military digest, a review of the current literature of military science" edited at West Point by Colonel C. DeW. Willcox and Lieutenant-Colonel E. R. Stuart. This also is issued in two forms, monthly and quarterly, which may be subscribed to separately or in combination. (New York: Int. Mil. Digest. Monthly or quarterly \$3 a year, both together \$5). This index aims to furnish a synopsis of the current issues of all the leading military periodicals of the world and to that end indexes all articles in more than 40 military journals and all articles on military science or practice in about 20 general periodicals. Of the military periodicals about half are American, English and Colonial, and the rest are French, German, Italian, Spanish, and Japanese. The special feature of this new index is that in addition to indexing an article it furnishes a digest of its contents varying in length from a sentence or two to several pages, as the nature of the article demands. Such an index is naturally of greatest use to the military institution or specialist, but under present conditions it is also of great value in the large general library which attempts to do much reference work on subjects connected with the European War.

A general index which is still too new for its value to be finally passed upon is the "Athenæum subject index to periodicals, issued at the request of the Council of the Library Association" (London: Athenæum. £2, 10s. per yr.). According to the publisher's announcements the annual volume for 1915, to contain some 10,000 entries selected from about 350 English, American and Conti-

ental periodicals, will be issued early in 1916 and will be preceded by a series of 12 class lists which will later be combined to form the annual volume. Of the 12 class lists, three, Sports and games, Fine arts and archaeology, and Hygiene and preventive medicine, were issued late in 1915. As far as one can judge from these three class lists and from sample lists which were issued during the year in occasional numbers of the *Athenæum* itself, the index will prove a valuable addition to the list of such books and will furnish a very satisfactory indexing of many valuable periodicals not now covered by the existing American indexes, but a final estimate of its value cannot be given until after the first annual volume has been issued.

New volumes in two important indexes should be noted. The Royal Society "Catalogue of scientific papers" has been extended by the publication of volume 15 which covers the letters C—Fittig, of the period 1884-1900 (Cambridge [Eng.]: University Press. 50s.) A new volume of the "Catalogo metodico degli scritti contenuti nelle pubblicazioni periodiche italiane e straniere," published by the Library of the Italian Chamber of Deputies, has also appeared. This volume, which is numbered as new series volume 1, covers the years 1907-12 and indexes some 11,282 biographical articles in more than 300 periodicals in different languages. In an American library its chief value is for the Italian and French material indexed.

#### DEBATES

Several new handbooks on debating deserve mention. The "Debaters' manual" compiled by Edith M. Phelps, is a new volume in the Debaters' Handbook series which, while it follows the general plan of the series in its inclusion of bibliography and selected reprinted material, differs from all other volumes in the series in that it deals with the general subject of debating and not with selected subjects for debate. (White Plains: Wilson. \$1.) Other new titles in the Debaters' Handbook series are: "Immigration" by M. K. Reely, "Mother's pensions" by E. D. Bullock, "National defense" by Corinne Bacon, and "Single tax" by E. D. Bullock.

New editions in the same series are "Child labor, 2d ed. enl." by E. D. Bullock, "Compulsory arbitration of industrial disputes, 2d rev. and enl. ed." by L. T. Beman, "Federal control of interstate corporations, 2d enl. ed." and "Recall, 2d rev. ed.", both by E. M. Phelps. (White Plains, N. Y.: Wilson. \$1 each.) A new annual which promises to be very useful is the "University debaters' annual, constructive and rebuttal speeches delivered in the intercollegiate debates of American colleges and universities during the college year 1914-15" edited by E. C. Mabie, instructor in public speaking at Dartmouth College. (White Plains: Wilson. \$1.80.) This annual, which gives all speeches included verbatim and not in summary, does not at present conflict with the somewhat similar annual "Intercollegiate debates" (Hinds & Noble) as the 1915 volume of the latter records debates of 1913-14 whereas Mr. Mabie's compilation prints those of 1914-15. Finally, mention should be made of "Kleiser's complete guide to public speaking, comprising extracts from the world's greatest authorities upon public speaking, oratory, etc." compiled and edited by Grenville Kleiser. (New York: Funk. \$5.) As the title indicates this is principally a work of compilation but the extracts are well arranged, alphabetically, and well indexed and the compilation should often be useful. In addition to the quoted matter the work includes also brief biographical sketches of well-known speakers and orators.

#### ENCYCLOPEDIAS

The second edition of the "New International encyclopedia" mention of which was made in the survey of reference books of 1914 is still in process of publication, volumes 9-16, carrying the alphabet to "New Forest" having been issued by the end of 1915. An interesting experiment in encyclopedia making, or encyclopedia popularizing, is the issue in reduced size and type and at a much lower price, of the eleventh edition of the *Encyclopædia Britannica*. This has been done by photographic reproduction of each page at a reduction of one-third in size. The result is of course an exact word for word reproduction of the expensive edition, in

type which is small but very clear. The illustrations in the text are reduced in proportion and lose somewhat in the process but the maps and plates are not reduced at all, as it was found possible, by folding the maps and dividing the illustrations which were formerly grouped on one plate so as to form two, to keep these illustrations of the same size as in the original edition. This reduced edition is planned especially for the private purchaser and cannot be recommended for a library which can afford to purchase the work in its original form, but to the small library with a book fund which does not admit the purchase of the original edition this reproduction offers a fairly satisfactory substitute. It is published in several bindings and on both India paper and ordinary paper but for library purposes the ordinary paper edition at \$48 is to be preferred.

One effect of the war is seen in the case of the new Spanish encyclopedia "Enciclopedia universal ilustrada" which is in process of publication. Volume 20, published early in 1915, carried the alphabet nearly through E, and volume 29, recently issued, begins the letter L. The intervening volumes, it is announced, will not be issued until after the war.

#### DICTIONARIES

Of first importance as a valuable addition to the by no means long list of good Italian and English dictionaries is "An Italian dictionary" by Alfred Hoare. (Cambridge [Eng.]: University Press. 663 p., cxxxv p. 42 s. \$12.) This is in two parts, a very full Italian-English dictionary and a brief English-Italian vocabulary. The Italian-English dictionary forms about five-sixths of the whole book and is the valuable part of the work. In fullness of vocabulary, correctness of definition, abundance of illustrative quotations this dictionary has been pronounced an improvement upon its predecessors and will probably be indispensable in libraries using much Italian material. A new edition of a standard dictionary is the 14th ed. of the Spanish Academy's "Diccionario de la lengua Castellana," (Madrid: Hernando, 1914. 1080 p. 22 ptas.), which supersedes the 13th edition, 1899.

## YEAR BOOKS AND DIRECTORIES

A provincial year book of value is the new "Statistical year-book" of the Province of Quebec prepared by the recently created Bureau of Statistics of that province (Quebec, 1914. 455 p.) The first issue (1914) is more than an ordinary annual, however, as it contains, in addition to the ordinary current statistical and descriptive matter, a good deal of historical data. Another new Canadian annual, now in its second year, is the "Imperial year book for the Dominion of Canada" edited by A. E. Southall and C. H. Moody (Montreal: Lovell. \$1.50). This year book, while it duplicates some of the statistical and other material contained in the older annuals such as the "Canada year book" or "Heaton's annual," approaches the subject from a different point of view, that of furnishing a year book of the British empire from the colonial standpoint. While the bulk of the statistical and other material included relates to Canada, the book gives also such information about the British empire and the separate British colonies as is of special interest to Canadians. A new European annual also in its second year is "Statistisk årsbok för Sverige (Annuaire statistique de la Suède)" compiled by the Swedish Bureau of Statistics (Stockholm, 1915). Much useful reference material of a commercial and statistical nature is to be found in special consular report no. 72 "British India, with notes on Ceylon, Afghanistan and Tibet," issued by the U. S. Bureau of Foreign and Domestic Commerce. (Washington: Govt. Printing Off. 638 p. \$1.) The same bureau has also published, as miscellaneous series no. 22, a "Trade directory of Central America and the West Indies" (Washington: Govt. Printing Off. 256 p. 60 cts.), which furnishes a useful companion volume to the "Trade directory of South America" issued in 1914. The "Japan Gazette Japan year book" noted among the new reference books of last year has been discontinued, although the older "Japan year book" still survives. Much up-to-date governmental and statistical information about Japan is contained in "Japan as it is, compiled by H. I. J. M.'s commission to the Panama-Pacific international exposition." (Tokyo, 1915. 529 p.)

## LAWS AND CONSTITUTIONS

A new index to meet the needs of legislative reference librarians and other research workers who have to do with current legislation is the "Official cumulative index to state legislation, a complete record and a numerical and subject index to all bills introduced in all state legislatures." This index, which is compiled and published for the co-operating state libraries and legislative reference departments under the direction of the joint committee on national legislative information service of the National Association of State Libraries and the American Association of Law Libraries, is in two parts, a general or numerical index, and a subject index which refers to the numerical index. It is issued bi-weekly with constant cumulations up to June 1, after that date continued by weekly supplements and reissued in a final annual cumulation in September. One annual cumulation has appeared so far. The work is too expensive for anything but the very large or highly specialized library but for such is of prime importance. (New York: Law Reporting Co. Subscriptions in odd years \$250 a year, in even years \$100 a year.)

A third volume in the series of legal bibliographies which the Library of Congress is preparing has been published. This is a "Guide to the law and legal literature of Spain" prepared, under the direction of E. W. Borchard, by Thomas W. Palmer. (Washington: Govt. Printing Off. 174 p. 50 cts.) In plan and arrangement this new volume follows the "Guide to the law and legal literature of Germany" published in 1912. A useful feature is the glossary of Spanish legal terms, p. 143-163, which gives many words not found in the ordinary Spanish-English dictionaries.

The New York State constitutional convention of 1915 was the cause of much preparatory compilation and publication, and some of the compends prepared for use of members of the convention have considerable general reference value for libraries. Of these various convention handbooks the one of most general interest undoubtedly is the "Index digest of state constitutions" prepared for the Convention Com-

mission by the legislative drafting research fund of Columbia University. (New York: State Const. Conv. Com. 1546 p. Distributed by clerk of the commission.) The work is an alphabetical subject index with careful reference under each heading to every state constitution which contains any provision on that subject, and a digest of each provision sufficiently full to obviate, in ordinary cases, the need of referring to the text of the constitution itself. Other publications of the Convention Commission which have a more local reference value are: "Government of the state of New York, a description of its organization and functions" (768 pages) and "New York state constitution, annotated; part 1, text in force April 6, 1915, with notes; part 2, Amendments adopted and proposed 1895-1914." This latter was prepared under the direction of the New York State Library and like other publications of the commission is distributed by the clerk of the commission.

#### MUNICIPAL AFFAIRS

The growing interest in questions of city government and city conditions is met by several new reference works in this important field. First in value to American readers at least is William Bennett Munroe's "Bibliography of municipal government." (Cambridge, Mass.: Harvard University Press. 472 p. \$3.50.) The compiler's aim was to make "from the entire mass a selection of those materials which seemed to be most likely to prove of service to the general reader and to the special student of municipal affairs." The result is a selected bibliography of some 5000 titles well classified and indexed with occasional annotations. Brook's "Bibliography of municipal problems" (1901) though once very useful has been for some time badly out of date and this new list now supersedes its American sections. A new German encyclopedia of the subject begun in 1914 and still in process of publication is the "Handwörterbuch der Kommunalwissenschaften." (Jena, 1914-15. 1-6. lfgn. M3.50 each.) The Munroe bibliography describes this as the "best of all local government encyclopedias." From England comes a new compilation of municipal statistics. This is the London County

Council's "Comparative municipal statistics, 1912-13, vol. 1." (London: King. 156 p. 5s.) The comparative statistics are for some sixteen great towns of the United Kingdom and are accompanied by several good maps.

#### SCIENCE

The British Museum "Catalogue of books, manuscripts, maps, and drawings (Natural history)" which was begun in 1903, has been completed by the publication of volume 5 covering the letters Sa-Z. (London: Dulau. 20s.) Aside from its value as a list of a fine collection of books in its subject, this whole catalog has considerable value as a cataloger's aid, especially in the matter of the periodicals, transactions, and similar publications included. A new medical dictionary which is suitable for the general library is "Appleton's medical dictionary," edited by Smith Ely Jelliffe, M.D., and Caroline Wormeley Latimer, M.D. (New York: Appleton. 945 p. \$3.50.) This work is practical, well up to date, contains various useful tables and the dictionary of terms is full though less complete than the new edition of Stedman's "Practical medical dictionary" published last year.

#### USEFUL ARTS

Two new publications of value for reference work on the history of the various useful arts should be mentioned. The John Crerar Library's "List of books on the history of industry and the industrial arts" prepared by A. G. S. Josephson (Chicago: The Library. 486 p. 25c., mail 50c.) furnishes an excellent though of course not a complete bibliography of the subject and forms a companion volume to the same library's "List of books on the history of science" issued in 1911. It is compiled on the same general plan as the science list, but includes a larger proportion of biographical material. An admirable small encyclopedia, alphabetically arranged, is "Die Technik der Vorzeit, der geschichtlichen Zeit und der Naturvölker, ein Handbuch für Archäologen und Historiker, Museen und Sammler, Kunsthändler und Antiquare," by F. M. Feldhaus (Leipzig: Engelmann, 1914. 1400 col. M32.50). Both articles, bibliographies, and the many illus-

trations in this work, are excellent. A small dictionary of value to textile workers or students is "Dictionary of silk terms." (New York: Clifford and Lawton. 93 p. \$1.) which defines many terms not found in the general English dictionaries or encyclopedias. A new edition of a useful handbook is the fourth edition revised of the "Standard handbook for electrical engineers," edited by F. F. Fowle (New York: McGraw-Hill. 1984 p. \$5.)

#### LITERATURE

Of first rank among new reference books of its type is Professor Charles G. Osgood's "Concordance to the poems of Edmund Spenser." (Washington: Carnegie Inst. 997 p.) This concordance is complete according to the modern standards of concordance making, that is, all words used by the poet are included, and all occurrences of each word are listed except in the case of 174 very common words, for which only selected references are given. The work is based upon the text of Richard Morris's edition (Globe edition, 1869) corrected by the text of Professor R. E. Neil Dodge's edition (Cambridge edition, 1908) with record also of all variants in the Oxford edition, 1909-10. It is interesting to note in this connection that the Carnegie Institution has in press two other concordances which it plans to publish during 1916—a complete Horace concordance by Professor Lane Cooper and a Keats concordance by L. N. Broughton and M. R. Thayer.

Several new reference books on the subject of fiction have appeared. Of these the one most generally useful is Miss Ina Ten Eyck Firkins' "Index to short stories" (White Plains, N. Y.: Wilson. 374 p. \$6), which shows where the short stories of a selected list of some 472 authors may be found, whether in collected editions, separate volumes, periodicals or composite collections. As this index is an author and title list with the full index information under authors' names and cross references from titles of stories, it may be used to answer questions of authorship as well. While all stories indexed are in English the work is not a guide to English fiction only, as of the 472 authors included only 352 are English and American,

the remaining 120 being foreign writers whose works are available in English translation. A somewhat similar work is the "Index to fairy tales, myths and legends," compiled by Mary Huse Eastman (Boston Book Co. 311 p. \$2.75). This is a title index, with entry under best known title and plentiful cross references from variant titles, to the fairy tales and legends included in a large number of collections of such stories. While the primary purpose of the index is to show where a given story or myth can be found some aid to selection of material is given by the use of the asterisk to indicate stories suitable for young readers. The main use of the index will be in public libraries and as a help to the children's librarian, but the material indexed covers so wide a field that the work will be of some value also to the special student of folk lore and popular tales. A new reference book on characters in fiction is "Heroes and heroines of fiction: classical, mediæval, legendary," by W. S. Walsh (Philadelphia: Lippincott. 370 p. \$3). This is a companion volume to the author's "Heroes and heroines of fiction: modern," published in 1914, and does for the fiction of the period before 1500 what its predecessor did for the modern period. It will be useful for quick reference, as it brings together in handy form a good deal of previously scattered information, but must sometimes be supplemented and verified. A review in the *Athenaeum* for December 11, 1915, points out some unfortunate omissions and inaccuracies.

In the field of drama there are several small reference books of considerable use. "British and American drama of to-day, outlines for their study," by Barrett H. Clark (New York: Holt. 315 p. \$1.50), is a companion volume to the same author's "Continental drama of to-day," which was published in 1914 and gives various useful suggestions and outlines for the study of selected typical plays of 16 English, 5 Irish and 9 American dramatists. The main reference value of both this book and its predecessor is not in the critical material included, which is not of first importance, but in the lists of plays which give dates and places of first American performances.

While these lists of performances are by no means complete they do bring together a good deal of information which is often very difficult to find. A small book of dramatic synopses which should occasionally prove useful is "Führer durch die Dramen der Weltliteratur, ausgewählte Bühnendichtungen im Auszug," by Ernst Linde (Leipzig: E. H. Mayer, 1914. 826 p. 5M.). This gives brief outlines of plots of 166 German and Austrian dramas and 82 dramas of other countries. A useful book of synopses of musical dramas is the new edition of J. W. McSpadden's "Opera synopses" (New York: Crowell. 461 p. \$1) which differs from the first edition (1911) by the addition of outlines of the plots of 24 operas not previously included. A useful bibliographical tool for the study of modern drama is "Modern drama and opera, vol. 2" (Boston Book Co. 255 p. \$2) which both brings up to date the bibliographies contained in vol. 1, 1911, and adds new bibliographies. In all 675 works by 39 authors are treated and there is a full title index which is useful in answering questions of authorship.

#### BIOGRAPHY

A new edition of "Lippincott's universal pronouncing dictionary of biography and mythology" (Philadelphia: Lippincott. 2550 p. \$10) has been issued. This is printed from the same plates as the last edition and so does not represent an entire revision, but older articles have been altered by the addition of later information such as dates of death, etc., and by the occasional excision of minor material room has been made for the inclusion of new articles on recent names, so that altogether the new edition contains a good deal of new material. There is also a new edition of "Who's who in New England" (Chicago: Marquis. 1192 p. \$12.50), which is much enlarged from the edition of 1909. While this duplicates some of the material in "Who's who in America," issued by the same publishers, the duplication is comparatively small, as out of the 12,844 biographies in the work 10,065 represent names not included in "Who's who in America." Unfortunately this edition is issued only in full leather binding, which adds to the cost

of the book and is actually less satisfactory than the substantial cloth binding of the 1909 edition. A "Who's who" in an entirely new field is "Who's who of the colored race, a general biographical dictionary of men and women of African descent, v. 1, 1915," edited by Frank Lincoln Mather (Chicago: Mather, 5052 College Grove av. 296 p. \$7.50). The cost of the book is rather out of proportion to the amount of material included, but the work seems well done and the book will probably be useful in some libraries, although it will not be needed in all. Mention should be made of two library publications in the field of biography. The Carnegie Library of Pittsburgh has issued "Men of science and industry, a guide to the biographies of scientists, engineers, inventors and physicians in the Carnegie Library of Pittsburgh" (Pittsburgh: The library. 189 p. 20 cts.). While this is only a catalog of the biographical material in one library it contains so much analytic material in the way of references to collective biographies, periodicals and other composite works that it should be useful in many other libraries also. From the Michigan State Library comes a third edition revised of its "Biographical sketches of American artists" (Lansing: State Library. 279 p. 50 cts. outside the state). A new work of a different type is "Baptist authors, a manual of bibliography, 1500-1914," by Willard Esra McIntyre (Montreal: Industrial and Educational Press, 1914-15. pts. 1-3, 60 cts. each). This is being issued in parts, of which three carrying the alphabet into D have appeared so far. It is compiled, of course, from the denominational standpoint and for the important names is no more satisfactory than many existing standard works, but it undoubtedly contains many less important names which it is difficult to find in more general works and should be useful in the large or special library. While the majority of the names included are English or American the book includes the continental Baptists as well.

An important addition to the large number of good local dictionaries of French biography is "Dictionnaire de biographies Roussillonnaises," by the Abbé J. Capeille (Perpignan: J. Comet, 1914. 724 p. 20 fr.).

This is a comprehensive work with good concise biographies and excellent bibliographies and should be a distinct addition to the large library or to one which specializes in French local history or literature. A new work of English local biography is to be found in the "Biographical supplement to the Bibliographer's manual of Gloucestershire literature," described farther on in this article under the heading Bibliography. The theological, historical or large general reference library will find much valuable biographical material on ministers of the Church of Scotland in the new edition of Hew Scott's "Fasti ecclesiae scoticanae," now in process of publication (Edinburgh: Oliver and Boyd. v. 1).

#### NAMES

A new edition of a standard work on personal names is "Die deutschen Familiennamen, geschichtlich, geographisch, sprachlich, von Albert Heintze; 4. verb. und verm. Aufl. hrsg. von P. Cascorbi (Halle: Buchhandlung des Waisenhauses, 1914. 298 p. 10M.). This adds about 1500 names or name forms to the number included in early editions. Two new dictionaries of English place names which should be mentioned are: "Place-names of Cumberland and Westmorland," by W. J. Sedgfield (Manchester University Press: Longmans: 208 p. 10s. 6d.) and "Place-names of England and Wales," by James B. Johnston (London: Murray. 532 p. 15s.). This latter is the most extended and ambitious work on English place names which has yet been published and will be very useful in many instances. For names of Celtic origin, however, it may have to be used with some caution. A review by Henry Bradley in the *English Historical Review*, July, 1915, points out that its Celtic etymologies are inaccurate.

#### FLAGS

Two books of special service and interest at the present time are the new edition of "Flags of the maritime nations," issued by the United States Bureau of Construction (Washington: Govt. Printing Off. 75 colored plates. \$1.50) and "Flags of the world, past and present," by W. J. Gordon (London: Warne. 256 p., 32 plates. 6s.).

#### HISTORY

A valuable new reference collection of source material, of which the first volume was published in 1915, is "Records of civilization, sources and studies," edited by James T. Shotwell. The aim of this series is to make accessible in English translation certain important sources of the history of western civilization and to furnish such explanatory treatment and bibliographical references as will make the work a guide both to the original sources and to modern comment on those sources. The initial volume, "Hellenic civilization," by G. W. Botsford and E. G. Sihler (New York: Columbia University Press. 719 p. \$3.75), gives about 250 source extracts, some presented in English translation for the first time, which are of prime importance for any real study of Hellenic society, politics, government, law, science, industries, education, etc., from the earliest period to about 30 B. C. The explanatory and bibliographical material is of great value, and the volume forms a reference aid which will be indispensable in the college or university library and very useful in the public library which attempts to do anything more than elementary reference work in ancient history.

The most important historical bibliography of the year is undoubtedly the new edition of the late Professor Charles Gross's "Sources and literature of English history from the earliest times to about 1485," which has been prepared under the direction of a committee of the Department of History of Harvard University (London and New York: Longmans. 820 p. 24s. \$6). This new edition, which is larger by some 200 pages than the first edition, follows the general plan and arrangement of the original work and adds the new material published to the end of 1910 with notes of occasional publications later than 1910. It is, of course, an indispensable work of reference in any college library or in any public library which has much material on English history or attempts to do much reference work in that subject. Of importance also, though naturally of less general use in American libraries, is a comprehensive new bibliography of Swiss history, "Bibliographie der schweizer Ge-

schichte enthaltend die selbständig erschienenen Druckwerke zur Geschichte der Schweiz bis ende 1912," compiled by Dr. Hans Barth, librarian of the Stadtbibliothek, Zurich (Basel: Geering, 1914. v. 1-2).

Historical bibliographies of special current interest but less permanent value include two recent bibliographies of Latin America and three lists of books on the European war. The Latin American lists are: "A brief bibliography of books in English, Spanish and Portuguese relating to the republics commonly called Latin American, with comments," by Peter H. Goldsmith, director of the Pan American division of the American Association for International Conciliation (New York: Macmillan. 107 p. 50 cts.), and "Books and magazine articles on Latin American description and history received in the Columbus Memorial Library of the Pan American Union: Supplement no. 2, 1909-1914" (Washington, 1914. 136 p.). Mr. Goldsmith's bibliography is strictly selective and has annotations of some length, while the library list includes practically all the recent literature of the subject which is of any importance, but has no annotations. The war bibliographies include an English list, "Books on the great war," an annotated bibliography of literature issued during the European conflict, compiled by F. W. T. Lange and W. T. Berry (London: Grafton. v. 1-3. 2s. 6d. each), a German list, "Die deutsche Kriegsliteratur" (1-3. hft.), reprinted from the index of Hinrichs' Halbjahrs-Katalog, and an American list, which is being published in the *Bulletin* of the New York Public Library. While this last is only the record of books on the subject in the New York Public Library it is in many ways the best bibliography of the subject, as it is a very carefully cataloged record of what is perhaps the finest collection of war literature which is being accumulated in this country.

#### PUBLIC DOCUMENTS

Only one new document index of importance is to be recorded this year. This is Miss A. R. Hasse's "Index of economic material in documents of the states of the United States: New Jersey, 1789-1904" (Washington: Carnegie Institution. 705 p.

\$8.). This forms the twelfth volume in Miss Hasse's series of indexes and follows the plan of the volume immediately preceding, *i. e.*, Ohio.

#### BIBLIOGRAPHY

An important change in one of the standard national bibliographies is to be recorded. Both Kayser's "Bücher lexikon" and Hinrichs' "Fünfjahrskatalog" have been discontinued and in their stead one new publication, "Deutsches Bücherverzeichnis der Jahre 1911-14, eine Zusammenstellung der in deutschen Buchhandel erschienenen Bücher, Zeitschriften und Landkarten," is being issued. (Leipzig: Börsenverein der deutscher Buchhändler.) One part, covering the letters A-Bahnspediteur, has already appeared.

Several new lists of value as contributions to the record of the national bibliography of Great Britain have appeared. "A handlist of English books in the library of Emmanuel College, Cambridge, printed before 1641" (Cambridge, Eng.: University Press. 182 p. 5s.), while recording in large measure material already listed in the Cambridge University catalog of "Early English printed books, 1475-1640" contains also some titles or editions not contained in the larger catalog. A new work in a hitherto almost untouched field is "Typographia Scoto-Gadelica, or, Books printed in the Gaelic of Scotland, 1567-1914, with bibliographical and biographical notes," by Donald MacLean (Edinburgh: Grant. 372 p. 16s.). The "Bibliographer's manual of Gloucestershire literature," by F. C. Hyett and William Bazeley, originally issued in three volumes, 1895-1897, is being completed now by the publication of a biographical supplement, of which part one, A-L, has already appeared (Gloucester, printed for subscribers by J. Bellows. 8s. 6d.). This gives brief biographical sketches, refers to other sources of biographical information and adds lists of books, often giving information about minor writers not obtainable in the "Dictionary of national biography," "English catalogue," etc. Other new bibliographies of use for more special purposes are: "List of catalogues of English book sales, 1676-1900, now in the British Museum, 1915" (London: Milford. 12s. 6d.),

and "Bibliography of unfinished books in the English language," by A. R. Corns and A. Sparke (London: Quaritch. 10s. 6d.). A very useful new dictionary of bibliographic terms is "Technical terms used in bibliographies and by the book and printing trade," by Axel Moth (Boston Book Co. 263 p. \$2.25). This gives separate lists of English, Danish, Dutch, French, German, Italian, Latin, Spanish and Swedish terms and forms a valuable companion volume to the similar work by F. K. Walter.

The most important bibliographical publication issued by the Library of Congress during the past year is the fine "Catalogue of the John Boyd Thacher collection of incunabula," compiled by Frederick W. Ashley, chief of the order division of that library. This is important both as a record of a rich collection now accessible to the research worker and because of the quality

of the cataloging and the bibliographic notes.

The "American book trade manual, 1915" (New York: Bowker. 334 p. \$5.) is a new publication which takes over and expands some of the lists formerly included in the "American library annual." Important lists in the new manual are library and book trade periodicals, organizations, etc., private book collectors, directory of book-sellers, etc. A small book which will be very useful to the translator or reader of foreign library literature is Axel Moth's "Glossary of library terms, English, Danish, Dutch, French, German, Italian, Spanish, and Swedish." (Boston Book Co. 58 p. 75 cts.) This gives separate lists for each language, with definitions and all foreign equivalents in the English lists, and English equivalents, but no definitions in each foreign list.

## A LIBRARY EXPERIMENT IN PRISON WORK

By ELIZABETH D. RENNINGER,

*Chief, Traveling Library Department, the Queens Borough Public Library.*

As chief of the traveling library department of the Queens Borough Public Library, in August I received a call from Philip Klein, of the New York Prison Association, the object of which was to ascertain what the library could do for the prisoners in the Queens County Jail, Long Island City.

I suggested that the one satisfactory way of solving the problem for the real help of the prisoners was to place in the jail a carefully selected collection of books (five hundred or more), the same to be administered by trained library assistants from this department. I then outlined the scheme of service I had in mind, stating that, while favoring this form of service, before recommending it to the chief librarian I must be satisfied that the assistants sent to the jail would be properly safeguarded—subject to no annoyance.

The proposed plan delighted Mr. Klein, who assured me I need feel no hesitancy about sending my girls to the jail. However, we agreed that before making a decision the best plan was for us to visit the

jail, meet the warden, and talk things over on the spot. In pursuance of this plan, a few days later Mr. Klein, Warden Robert Barr, the acting chief librarian, and myself met at the jail, where again the details of the scheme were outlined, the possibilities discussed.

We found the warden unusual; a man who inspired confidence. Rigid, yet sympathetic, he heartily endorsed our plan for supplying the prisoners with books, recognizing among other things that it would greatly help him in the discipline. Anxious for the books, ready—both himself and his staff—to meet our ideas of successful library administration at all points, as we toured the prison to settle practical details, we found him most helpful; moreover, he agreed to be personally responsible for the girls, assuring us that we need feel no more hesitancy about sending them to the jail than elsewhere.

As a result of the conference, it was decided to recommend the placing of two separate collections in the jail: one in the women's ward, in a room just off the sew-

ing room; the other in the corridor, just outside "the Cage," or men's ward—the women to receive their books personally from the assistants; the men to be served through the gratings, lists of the books having been previously checked to indicate their choice.

All this having been at last decided, as he left us at the end of the conference, Mr. Klein exclaimed fervently: "God bless Queens Borough!" If the prisoners had known the part played by Mr. Klein in securing them their new privilege, they would have shouted: "God bless our friend Klein!"—for that is just what he is to the prisoners—not of Queens Borough alone.

Informed through Mr. Klein of the scheme of service possible for the jail through the Queens Borough Public Library, within a week application for the same was received by the chief librarian from Dr. Katharine Bement Davis, commissioner of correction of the city of New York. It was of course granted and the selection of two live collections of books became our next interest.

Facing our problem of book selection, from data secured at the jail, we learned the following: the prisoners were short-timers; largely from the common walks of life—a number of foreign-born and hybridized Americans being included. There were, too, a number of penitentiary men—housed at the jail because of crowded conditions on Blackwell's Island; also the court prisoners.

Considering these determining facts, we began reaching out for the right kind of books, keeping well in mind the following principles of selection: (1) The books must be recreational, practical, inspirational; (2) they must be cheerful; (3) there must be no dead wood; (4) the collection must include a fair number of carefully selected, well illustrated juveniles (largely for foreigners); (5) also foreign books. Since we had been warned that at first we might lose a number of books, considering, too, the fact that the prisoners were short-timers, we decided that in the initial collections it would be wise to send partly worn books, leaving them at the jail until ready for discard.

Having gathered in our books, in addition to a generous allowance of live fiction, the men's collection contained: Books of adventure and travel (in the polar regions, the gold fields, the jungle, round the world); out-door books; books on animal life (Bostock, Hagenbeck, Vivian, Thompson); physical culture books, including hygiene and athletics; books covering practical farming, gardening, poultry raising, the self-supporting home; books of discovery and invention, including automobiles, airships, submarines; mechanical, electrical and scientific books; patriotic and civic books, including poetry; books of heroism and chivalry; books on ethics (social, business, personal); easy books for foreigners, including primers and dictionaries; books covering practical sociology and the problems of the day; humorous books (Clemens, Dooley, Shute, Wilder); books suggesting social activities (magicians' tricks, puzzles, conundrums, etc.); books on western life, including the Indian, the pioneer, the trapper, the cowboy; life in the army, navy, at West Point; books on Panama and the Canal; books covering Italian, Irish, German, and American life and character; lives of Boone, Columbus, Custer, Damien, Edison, Lincoln, Perry, Steiner, Washington, etc.; together with much attractive collective biography and history, etc., etc.

The women's collection included: Books on sewing, dressmaking, knitting, crocheting, lacemaking, and basketry; domestic economy, including cooking, serving, and waiting; books on gardening, poultry culture, the self-supporting home; books on child study and infant care; hygiene and beauty books; books on ethics; humorous books; books of romance, legend, and chivalry; books about animals; astronomy, popular science, and books on music; puzzles, charades, and other social activities; poetry; lives of Queen Elizabeth, Mary Queens of Scots, Empress Josephine, Queen Victoria, Florence Nightingale, etc.; love stories of famous people; work in the world done by women; books about New York old and new; together with books of travel, history, general literature, collective biography, and fiction.

The opening day, September 10, was hard but most interesting. Arrived at the

jail, we found our corner of the women's ward upset because of repairs; but, the prisoners lending a hand, the cases and boxes of books were quickly carried to their destination and placed, a temporary table was set up in an adjoining room, the books were unpacked and arranged upon it—the titles reading from each side of the table. Then our charging outfit arranged, floor by floor the women were sent in to us, first registering—giving name and cell number—then selecting and having their books charged. Thus in an hour's time we registered 88 women and gave out 87 books, allowing on this occasion but one book to each borrower—judging this to be wise until we saw in what shape they were returned at the end of the week.

The women—old, young, colored, foreign—all seemed delighted with the books and eager to read. It was amusing to hear their comments. Picking up a life of Florence Nightingale, one woman said to me: "How charming! Is this book as interesting as the 'Lives of the queens?' Have you the 'Lives of the queens'? I'd like to read that book again." Then, to her companion: "Oh, here is 'Helena Ritchie'! It's fine. It was played, you know . . . Let's see, Sally! Oh, you have 'Keeping up with Lizzie.' That's great fun . . . Here, Maude, take this one—'One year of Pierrot.' If you don't like it, I'll swap with you. I tell you this is a dandy collection of books!"

Having finished in the women's ward, and the books not circulated having been put away safely in the case by the women prisoners deputed by the matron, at once we hurried down stairs to the men's ward. Here we found the case placed and filled with books, the residue in the open boxes lined up in the corridor.

While we dispatched the work of the women's ward, Mr. Klein, according to program, distributed lists to all the male prisoners, requesting them to check the titles preferred. Consequently, when we came downstairs the checked lists awaited us. Realizing, however, that in the limited time at our disposal it would be impossible to circulate the books as planned—since they were neither arranged nor all unpacked—we decided, for that day at least,

to give out the books as we had in the women's ward. But the real question was how to work at all in such very limited space.

However, two small tables were placed, and "the Cage" door being unlocked, the men filed out, registered, selected their books as best they could, had them charged, made room for the next in line. It was slow, unsatisfactory work—even the warden recognized that. Fortunately, the men were orderly, patient, helpful, and so somehow we got through. In an hour and a quarter we registered 130 men and circulated the same number of books. Many specific titles were asked for as suggested by the lists, the men's interest having been caught by books on electricity, mechanics, history, science, wild animals, and life in the open—the most popular book, as indicated by the checked lists, being the "Prisoner of Zenda."

Having finished with the men, the warden, Mr. Klein, and myself held a second conference. Realizing that we could not work either efficiently or comfortably in the space available outside the men's ward, the warden invited me to take a look at the court inside the Cage. He had not suggested it before, he said, because he understood my responsibility to the girls and how we would feel about going into the Cage; but it would be all right; and, unfortunately, at present, it was the only available space in which we could work effectively. Later there would be a new wing where things could be made more comfortable.

As a result of this second conference, it was decided that we would come to the jail one afternoon a week; that the books in circulation should be collected prior to our coming; that we would try serving the men *inside* the Cage.

Having bearded the lion in his den, never shall I forget our experience of September 17. Imagine an oblong open court covered with a skylight, the two narrow ends largely window surface, the walls on the long sides rising five stories high, each story a tier of cells, each cell opening out upon a narrow balcony or passageway, the balconies enclosed from floor to skylight with strong iron-bars, the floors connected near one end by a steel staircase.

So much for background. Now, on the main floor, picture to yourself a long, improvised table extending practically the length of the court to the stairway; upon the table one hundred and fifty books being placed and arranged by a half dozen prisoners; two librarians busily engaged in slipping them. As one of those librarians, glancing up, never shall I forget the sight. Out on the balconies, gazing at us curiously through iron bars—yes, as far as the eye could carry—what a human zoo! It was appalling. Nor did it help much to drop the eyes, since all about us striped figures met our gaze, seated on the benches about the walls—these the occupants of the first-floor cells. Suffice it to say we glanced up seldom; simply worked busily away, watched over by a keeper stationed near the entrance.

But, the books being slipped, presto, the scene changed. Like magic the balance of the books were brought in from the case outside, lined up on the table—a row of titles reading from each side—the foreign books bunched at one end. Then, preliminary preparations completed, abandoning the long table to the prisoners, we established ourselves at the charging table near the entrance, and the men were sent in to us by the keepers—tier by tier, floor by floor, surrounding the table, selecting their books, falling into line, presenting themselves at the charging table where—stating cell number and name—their borrower's pockets (filed by cell number) were given to them, the books being charged by a second assistant, the line filing steadily by until all were served. Then, the last man having selected his books, like magic books and table disappeared, so that, the last book charged, turning, one of my assistance cried out to me in wonderment: "But . . . Miss Renninger! Did they take *all* the books? And where is the table?" Gone, and 185 volumes given out satisfactorily in less than an hour. As preparations for supper begin at 4 p. m., this dispatch delighted the warden, since it meant that the routine of the prison need not be upset.

Moreover, we too were pleased, since we recognized that, with the exception of minor details, the problem of successful admin-

istration was now solved. Yes! for with lists of the books posted in all the corridors, a bulletin board in the court posting announcements, privileges, etc., the books themselves comfortably accessible to a large number of men at one time without crowding; a small cabinet case containing dictionaries, an encyclopædia, primers, etc., available at all times for prisoners with student inclinations; prisoners at our disposal for page work—surely all this pointed unmistakably toward efficient civic service.

And here, just a word about the prisoners as library helpers. Keen to work, eager to do things, in a few weeks they became amazingly efficient; in the work of slipping, separating the fiction, arranging the non-fiction by class number, keeping the library assistant supplied with slipping material, deftly removing the books when slipped to the far end of the table; also hunting up the few delinquents, bringing in the books from the case outside, later removing those not circulated—all this satisfactorily and apparently of their own volition, thoroughly enjoying the work, saving us one assistant.

So much for the administrative problem. Aside from that, one of the most interesting, as well as gratifying, features of the experiment has been the number and character of the books circulated. Open ten times, almost every book registers from two to eight or ten circulations; the classed books showing a remarkably good use—almost every book in the men's collection having circulated at least once; most of them four, five, and six times.

Roughly summarized, the following books in the men's ward have circulated every time: Fiction—"Prisoner of Zenda," "Man without a shadow," "Adventures of Gerard," "Hound of the Baskervilles," "Taming of Red Butte Western," "Trimmed lamp," "Lucky seventh," "The mystery," "The Virginian," "The Squaw man"; non-fiction—"Masters of fate," "Land of the long night," "Story of the cowboy," "Story of the wild west," "Indian fights and fighters," "Careers of danger and daring."

Other popular titles having circulated almost every time are as follows: Fiction—"Long trail," "Big league," "Mystery of

the lost dauphin," "The barrier," "Street called straight," "Brewster's millions," "Lost leader," "Bob Hampton of Placer," "Gold brick," "Kidnapped," "Mysterious island," "Study in scarlet," "To have and to hold," "Simpkins plot," "Between the lines," "Simon the jester," "White fang," "Arizona nights," "Under the red robe," "Captain Macklin," "Man who could not lose," "Better man," "20,000 leagues under the sea," "Gentleman of France," "Captain of the Grey Horse Troop"; non-fiction—"Scientific ideas of to-day," "Beasts and men," "Daniel Boone," "Two spies," "Famous Indian chiefs," "Book of discovery," "Mr. Dooley says," "Magician tricks," "Rough riders," "California the golden," "Blue jackets of '98," "Border fights and fighters," "Ranch life and the hunting trail," "Wild life at home," "Adventures of hunters and trappers," "Story of Grettier the Strong," "True story of the United States," "Irish life and character," "In African jungle and forest," "All about airships," "American battle ships," "With the battle fleet," "Winning out," "Fire fighters and their pets," "Heroes of modern Africa," "Tenderfoot with Peary," "Red book of heroes," "Heroes of the crusades," "Famous cavalry leaders," "Famous frontiersmen," "Heroes of the navy in America," "Story of the American Indian," "Among the great masters of oratory," "Romance of mechanism," "Electricity of to-day," "Innocents abroad," "Romance of modern chemistry," "Manual of practical farming," etc., etc.

Among the women, fiction is liked best. Aside from that, biography, poetry, and the love stories of noted people seem to be most read. Among the most popular books, we note the following: Fiction—"Turn of the road," "Lady with the rubies," "Thelma," "Girl of the Limberlost," "Shepherd of the hills," "Prisoners of hope," "Daughter of Eve," "Cardinal's snuffbox," "Heart of the hills," "Pandora's box," "Molly Make-believe," "Only a girl," "Prodigal judge," "Simon the jester," "Right of way," "At the foot of the rainbow," "Love me little, love me long," "Master's violin," "Romance of Billy Goat Hill," "Rebecca of Sunnybrook Farm," "Calling of Dan Matthews"; non-fiction—"Florence Night-

ingale," "Home life in Italy," "Story of my life" (Keller), "Fairy Queen," "Shakespeare story book," "Love affairs of Mary Queen of Scots," "Love of an uncrowned queen," "Prisoners of the tower of London," "Stories from Dante," "Why men remain bachelors," "Social life in old Virginia," "Woman's way through unknown Labrador," "Charles Dickens," "Sunnyside side of the street," "Wagner's heroines," "English poetry," "Through the gates of old romance," "Life of Queen Victoria," "Some famous women," "Story of my life" (Terry); "Lincoln's love story," "What all the world's a-seeking," "Practical sewing and dressmaking," "Twentieth century puzzle book," "Great books," "Nature in verse," "Dames and daughters of the young republic," "New York old and new," "Making of a housewife," "Smiling round the world," "Girls' life in Virginia before the war," "One I knew best of all," "Courtship of Queen Elizabeth."

In addition to the English books, we have had urgent calls too for foreign books. In response to the demand, we have supplied and circulated French, German, Italian, Polish, Yiddish and Hungarian books, the largest proportion being Italian and German.

A number of interesting interchange requests have come to us from both departments at the jail. The chief demand of the male prisoners has been for English dictionaries—the request coming again and again. Requests have also been made for a cyclopedia, a dictionary of legal terms, the *World Almanac*, an advanced arithmetic with answers, English for Italians, books on drawing, German for Americans, a Turkish Bible written in Greek letters, an English Bible, requested by a negro, etc., etc.

In the women's ward we have had requests for primers (in order to learn to read), Longfellow's, Burns', and Milton's poems, "Legends of Sleepy Hollow," books to read aloud, book of rag-time songs (wanted by a negress because she got so tired and wanted to amuse herself); also from a certain mother and daughter the following requests: Books on gardening, pigeons, poultry raising—the Philo

system preferred; "In tune with the infinite," Farrar's "Great men," F. Hopkinson Smith's "Normandy," Emerson's "Essays," Milton's "Paradise lost," an astronomy—Herschel preferred, Mrs. Schuyler's book on the breeding of toy dogs—"an English publication, you know!"

Upon our arrival at the jail one afternoon we were informed by the warden that we were to have our pictures taken—a flashlight—for Commissioner Davis. We had thought of having a picture taken for the library, but were afraid it was impossible, so had not mentioned it. Strange to say, the men did not object at all to the picture; wished to be in it. We were particularly amused at a certain young Italian, one of our helpers, who so entered into the spirit of the occasion that he deceived even us. Bringing his books gravely to the charging desk, he held them out, but when Miss P— tried to take them, he held back, explaining with great naiveté that he was just *pretending* to have his books stamped, so the picture would be natural. And then, alas, one of life's little ironies! In the picture he is completely blotted out by another man. The picture, unfortunately, gives no idea of length; unfortunately, too, a life-sized colored gentleman blots out the warden; otherwise it is fairly satisfactory, as picturing one corner of the court.

As, systematically and efficiently, we developed our scheme of library service for the prison; as time passed and there was opportunity to gauge somewhat the effect of the books on the prisoners, the satisfaction of the warden became ever greater.

Apropos of going into the Cage, he said to me one day: "You have no trouble, have you?—no annoyance of any kind? In the first place, the men are too pleased with the books and what you are doing for them to try any foolishness, and, in the second place, they know better, because the least nonsense would settle the book question for the perpetrators and they are too keen on them to take chances; and, anyhow, they don't want to."

I assured him that we had absolutely nothing to complain of—not the least thing! Only—as I could not come over every time after the work was thoroughly

systematized, I still felt reluctant to send the girls alone into the Cage—not through fear of annoyance, but . . . oh, well! I just did not like it—all those men staring at them curiously from the balconies while they were slipping the books.

At this the warden smiled, and said: "Yes, I understand, but it will not be for long. Now you are a novelty, and of course the men notice what you have on and what you do, but there is no disrespect about it, quite the contrary, and pretty soon we will have the new wing completed; then we can manage it differently." That is all he said, but after that, while the slipping was being done, I noticed that the balconies were comparatively empty, many of the men, I imagine, being sent into the yard at that time, or to the other end of the court.

That the prisoners in both wards appreciate the books is shown conclusively by the care they take of them as well as the large number read. Due to Mr. Klein's warning, in the beginning, before sending the books to the jail, we tipped on the first page of each book a slip which read: "If you wish another book next week, take good care of this one. It must be returned in good condition."

Consequently, although many of the books were partially worn, as yet we have done no mending. Considering the fact that all the books have circulated, being read not once each time circulated, as shown by our records, but a number of times—by cellmate and friends along the same corridors—this is certainly noteworthy. But neither have we lost any books—not a single volume; and of this the warden is very proud—he or his head-keeper clearing up the delinquent list each time the station is open; also seeing to it punctiliously that the prisoners discharged or transferred leave their books in the office before going out.

Considering all this, it may be fairly claimed, I think, that our experiment in prison work has justified itself; will perhaps eventually become a potent force in civic and social betterment.

—  
"A book should help us either to enjoy life or to endure it."—SAMUEL JOHNSON.

# COLLECTING MAGAZINES FOR REFERENCE FILES

BY MARY ELIZABETH DOWNEY

In the eastern and middle west states it is the pride of every librarian, even in the smallest library, to make as complete a collection of standard magazine files as possible for reference. This collection forms a large part of many a library and is the main source of its reference work. There are various steps in building up such files, and the dealer in old magazines should be used as the final resource.

In some of the states, as Iowa and Wisconsin, one is accustomed to find the state library commission collecting duplicates from all the libraries and then distributing them as the libraries send in their want lists. In Ohio the State Department of Library Organization used the bookplate collection plan, making a list of all the libraries having duplicates and asking them to mail their want list to each library in turn. I developed the following outline, called "Periodical Exchange." Each library should make out its list of wants arranged alphabetically under name of magazine and numerically by volume; the number of broken volumes also should be given. These want lists may be sent out and checked as missing numbers are found. Duplicates should be arranged alphabetically under name of magazine and numerically by volume. When want lists come in it is easy to take desired numbers from the duplicates. Each library should pay freight on what it receives, so all shipments may be made C. O. D. The best results will be obtained from generous exchanges where each library will send on all it can to meet each request, regardless of what it receives from that particular library. One library may thus greatly benefit another from which it receives little, but be helped in like manner by some other library to which it may give small return. If the libraries let it be known that they want old magazines there can be usually a constant flow to the library from patrons. Because of this continual change it is not practical to print a list of duplicates and wants, as it would be out of date at once. Library attics and basements

in all parts of the state are filled with duplicate magazines, so this free interchange will be most helpful. There is, perhaps, no way in which a given amount of money can be better spent for reference material, after the essential encyclopedia, dictionary and atlas are bought, than in collecting and binding files of magazines, and supplying them with the Poole and Readers' Guide indexes.

This outline was sent to eighty-one Ohio libraries, many of which were assisted in completing files through this medium of exchange.

In Utah was found an altogether different situation, and the method which has been successfully used to meet it would no doubt be of special interest to all these inter-mountain states from Canada to Mexico and from the Mississippi valley to the coast states, where library conditions are much the same. Not only in these states can this be said, but also from a recent study made of the eastern and middle west states, where the opportunity for completing files is rapidly changing, for reasons given later in this article, I believe that the same plan as here outlined can be used to advantage.

One of the distressing needs I saw in my first visit to libraries over the state was the total lack of periodical files for reference. Only five libraries in the state had collections of any value: University of Utah, Brigham Young University, Agricultural College, Salt Lake Public Library, and Ogden Public Library. I could not rest till a collection was started in every library, and saw that it was going to take heroic measures to bring it about. The problem here is so different from what it has been in the east and middle west. There, people hoarded old magazines in their homes till a library could get a fine start toward complete files in almost any small town, so that, by exchange of duplicates with other libraries, it would soon have a splendid collection. Here, everything in the way of periodical matter, in the small town, is sent off to the ranches,

miners, and sheep herders, a worthy cause, but it plays havoc with this valuable reference part of any library. Another difficulty is to get a library board and sometimes the librarian to see the value of periodicals for reference. An old magazine is simply an old magazine, and it is hard to realize that, after it has served its purpose of current reading, it is still worth all and more than it cost, for reference. Nor do they always know of the indexes, Poole and Readers' Guide, till they are told. Of course, the periodicals are useless without the indexes, and *vice versa*. In one library I found the indexes thrown away in the basement, but was happy to find them, even there, and when they were resurrected, and a respectable collection of periodicals assembled, and the board tactfully led to use them, there was no longer any question as to their value. A visiting board member was likewise initiated into their use and at once begged me to help them get a periodical collection and wanted to know where to get the indexes.

The binding is another problem. Most of these libraries have too small funds, and are yet too much in need of books to consider binding periodicals. Even the expensive filing cases are out of the question. However, the H. Schultz Company, 519 Superior street, Chicago, furnishes a case, holding a volume of the standard-sized magazines, at \$6.00 per hundred when ordered by the hundred, and these are so inexpensive that even the smallest library can afford all it needs, and when the cases are properly marked with the name of the magazine and number of the volume alphabetically by name of magazine and numerically by volume, and arranged on the shelves they look as well as though they were bound volumes. After the first one hundred are on the shelves, it is no trouble to have as many ordered as needed. These periodical files, with the Readers' Guide, together with an atlas, dictionary and an encyclopedia, give to the small library an opportunity to do fair work in the way of reference.

The magazine campaign week in the various towns over the state has done as much to arouse interest and to add to the resources of the libraries as anything we

have done. It started in Salt Lake before the holidays. I saw that the nucleus for periodical reference files in libraries over the state must come from Salt Lake, Ogden, and Provo. So we got the co-operation of the superintendent, principals, and teachers of the city schools and for a week had the children in the thirty school buildings of Salt Lake collect old magazines from the homes. We did not limit what they should bring, as we wanted to feel the pulse of the periodical reading of the city. I presume such a collection was never before brought together in such a way. There was a contest to see which building, room, and child would gather the most. The children counted what they brought from time to time, and the teachers put the number on the blackboard, where everyone enjoyed watching it grow from day to day. One building collected over 30,000 numbers, and one child had more than 700 numbers to his credit. It was a common sight to see a boy on the streets with his little sled load and hear him calling to some other child the number he had already brought. It worked like magic. Everybody's house was visited a number of times, and so thorough was the collecting that by the end of the week I doubt whether even a Sears Roebuck or a Montgomery Ward catalog, or a last year's almanac, or a fashion book could have been found in a home of Salt Lake. The next problem was a place to have them brought and sorted. The beautiful reading and study room of the State University Library was offered and a church considered, but finally the L. D. S. High School library rooms were accepted as being the most central place. Draymen were busy for several days hauling the magazines, and I spent a week at hard labor sorting, filing and packing, begging everyone I could to help, as there was no money for this part of the work. The public library kindly loaned members of its staff, the librarian of the university came for half a day, three stenographers in the state superintendent's office each came a day, and other friends helped. On New Year's Day we had a corps of workers.

A few facts might be of interest as to the material collected. About half of it

was *Saturday Evening Post*, *Leslie's*, *Collier's*, *Ladies' Home Journal*, *Woman's Home Companion*, and the fashion magazine type; half of what was left was the wood-pulp paper, dime-novel type in periodical literature; and what was left, about one-fourth of the whole collection, was what we were seeking for reference use in the libraries. There was plenty of it and with duplicates, so that fairly complete sets could be made up for each library. Only the last few years of any magazine had been preserved, however. So I think most of the small libraries in Utah will have to be satisfied with files going five years back. But these, with the last five-year volume, 1909-1914, and current issues of *Readers' Guide*, will give the beginning and encouragement for future continuation of the files. In giving subscriptions for current periodicals, this point will, of course, be given attention. Care will be taken also to subscribe for magazines listed in the indexes, so they may serve a permanent purpose. I had hoped that files might be completed from duplicates I know in middle west libraries, but cost of transportation to such a distance makes this impossible for the very small library. The libraries benefiting from the collection we made paid the drayage, and each library paid freight on what it received. We distributed what was not used for the primary purpose to the usual places—hospitals, jails—and the Salvation Army hauled away tons. A number of books were given which were sent to children's homes and to the libraries.

Aside from obtaining this valuable material, and discovering the caliber of periodical reading, other results of which we had not dreamed were accomplished. Children had talked "library" in every home and set people thinking. The children felt the importance of having done something to help the library cause in the state. The hearts of the school people were warmed by being asked to co-operate, so that they were ready to respond to other things we wanted to bring about. I was invited to give a series of talks before the principals' meetings, and so was able to show them what the conditions in Salt Lake were: that the schools were not providing books for gen-

eral reading, and that the public library had but one child's book to five children in the public schools. They were told what the circulation of children's books was in comparison with the number of children in the city, and shown that the children of Salt Lake were going through the public schools without learning how to read. So we had a wonderful awakening. The principals, in turn, invited me to speak before their parent-teachers' associations, so that I have now covered half the buildings and will visit them all as fast as I am in Salt Lake to accept invitations. The superintendent said to me not long ago: "You are always welcome. You come with a message which everybody can understand and put into practice. When you say 'a book for every child in the public schools, suited to his grade and in the hands of the teacher, and each child to read an average of at least two books a month,' it appeals to everyone of us as a practical, possible thing." So the principals and teachers, all over the city, are asking the public library for books, and they are being provided as fast as the funds will allow. They have been placed in three buildings, the parent-teachers' association has undertaken to put the books into a fourth school, and I am assured by the superintendent, who is on the library board, that the work will continue till the books are in every building.

Seeing what was begun in Salt Lake, we are following the same plan in every town in the state, and the results are more rapid in the small towns, in many cases, than in the city, for the books can be ordered for the whole school system at one stroke.

While the magazine collection, through the schools of small towns, is often meager for the reason given, the children take just the same interest, and by the end of the week everybody in the community, young and old, is talking library. Sometimes the contest between competing grades grows so warm as to become a town affair. In one of the last towns to make the collection, the little second and third grades were winning, and each would again and again surpass the other. The feeling became so intense that those defeated refused to speak to the others who were boastfully gloating

over them. In the end, the second grade won and the teacher gave them a talk on how the victors should treat the conquered, while the superintendent of schools told the third grade the way to take defeat. In Ogden, where one of the buildings gathered over 31,000 numbers, the children also brought some unusual books which had to be sent home. One little girl brought a beautiful morocco-bound volume of Whittier's poems, another child brought a book from his father's law library, while a third little girl brought the family Bible, saying they never read it any more at home, and a fourth brought a Methodist hymnal. The State Industrial School, located in Ogden, co-operated in the hauling. The superintendent sent an automobile and two boys, who helped us collect what we wanted for reference from each building, while other boys followed with a wagon and gathered up the rest of the material for the Industrial School, taking four immense loads. In Provo the surplus was sent to the State Mental Hospital. Here the children in one school building grew so interested in collecting that they drove to neighboring towns to gather magazines. In addition to using little sleds, when the snow was on, the children in other towns used their wagons, and even wheelbarrows.

From these collections seventeen libraries have the beginning of periodical reference files, and the value of what has been gathered and distributed may be conservatively estimated at \$3000. If as much more can be accomplished in the next year every library in Utah will have the nucleus of such a collection for reference.

On my return trip from the east, last summer, I made a study of present conditions for completing magazine files in several states—New York, Ohio, Indiana, Iowa, and Wyoming—and found that they were changing rapidly. For example, opportunities for making such files in Ohio are not at all what they were four or five years ago. Even the attics and basements of libraries where I had seen duplicates stored were all empty. The reason is as follows: The paper mills of the country have various agencies gathering them up at a few dollars a ton, to be ground into pulp and again made into paper.

In our densely populated states or cities, the Salvation Army has a network of vans going all over them. I fear the women who so generously and religiously give of their best magazines, thinking that they go to the poor who cannot afford them, are very much mistaken, as anyone will see who takes the trouble to visit some of the places where the Salvation Army people are baling them to be sent to the paper mills.

Another scavenger of this material is the man who drives by the city door calling, "Paper, rags, old iron," but perhaps he gets less that is really valuable, because people clearly understand what he does with it.

In many old, thrifty, conservative communities, where a few years ago whole sets of magazines might be had from the attics in people's homes, the women's church organizations have swept and garnished the whole neighborhood, gathering up a carload or more of old material that can only be had once from the same locality and much of which is simply invaluable to the library. I have several times seen the women of a church so zealous in robbing Peter to pay Paul that no amount of persuasion could bring them to let the librarian go over the material and take what was valuable to the library before it was sent to the paper mill.

In like manner I have known files of standard magazines to be scattered to the four winds for a pittance at a rummage sale.

Nor is the small community the only one to suffer from this taking away of all it contains in the way of fine old periodical literature, but also will the progressive librarian of any city branch system to-day find difficulty in completing files for his spiderweb of branches—for the reference file of magazines is just as important to the branch librarian as it is to the main library or to any independent library. And yet one is often surprised in visiting a branch system in a large city to see how little has been made of this asset, so valuable to any library. In one such branch having a few bound volumes, the librarian telephoned any subject she needed to the main library, where the index references were telephoned back to her. I wondered

how much time used in this way it would take to pay for indexes so much needed by the branch. It certainly would pay the librarian of any city library to learn the storing places of the various agencies making a business of gathering old magazines, to sort out the valuable material and pay for it, even at a little higher rate than is paid by the paper mill. If this is not done the library system will either be deprived of such files or finally have to pay an almost prohibitive price to secure the copies needed to complete them.

The people of any community, even in a large city, may be so educated as to pre-

serve what is valuable to be used in this better way. The co-operation of the schools could be so enlisted as once every year to have a magazine campaign week whereby the school children would bring to the schoolroom from the homes all the old periodicals to be sorted and distributed where they will do the greatest good. The publishers of magazines having the largest circulation, and hence making the greatest business success, are using the schoolboy as a distributing agency. Why should not the modern librarian use the same facility to gather up the fragments for making his reference files?

## PIONEER LIBRARY WORK IN LABRADOR

BY MARIAN CUTTER, *Children's Librarian, Saratoga Branch, Brooklyn Public Library.*

LIBRARY work in Labrador and Newfoundland is real pioneer work. The idea took form in the spring of 1914 as a new phase of Dr. Grenfell's work in the far north, and in its beginning the publishers of New York city, together with numerous friends, proved a mainstay, giving life and success to the undertaking. It was decided to start with a collection of juvenile books as a foundation. Contributions were received from Doubleday Page, Century, Macmillan, Houghton Mifflin, American Book Co., Revell, Dutton, Baker & Taylor, Ginn, and Heath, also Chiver's bookbindery and many individuals, so that we were able to sail for the north with six hundred volumes early in July. This collection included some of the best recent editions of the juvenile classics.

The books and a small library equipment were sent to St. Anthony, the headquarters of all Dr. Grenfell's activities. Here the library was established on the second floor of the school house in a large room, which also served for many other purposes. With the greatly appreciated assistance of Miss Burnite, of Cleveland, about one thousand useable books were selected from a miscellaneous collection which had previously been sent to Dr. Grenfell. It was a miscellaneous collection, indeed. For example, there were two sets of the "Popular Mechanics Encyclopedia," edited in 1820, and

three sets of the ninth edition of the "Encyclopedia Britannica." Of what value could these be to a people who must be reclaimed from the past and awakened to modern existence? However, they did prove of service in one instance—if not in the advancement of knowledge—for one morning all such large books were found piled in rows across the room. In utter amazement the worker asked for an explanation and was told that the local military organization had drilled there the evening before and the captain, anticipating active service, had needed the books for trench practice! Entertainments were occasionally given in this room and when this occurred the audience sat on long boards supported by piles of books. Was it heartless to place before the book shelves, doors of wire netting, with lock and key?

One month was spent in sorting, classifying, accessioning, shelf-listing, and preparing the books. As quickly as this was accomplished and all records made, the books were taken in traveling libraries of fifty volumes each by Dr. Grenfell on his hospital ship, the *Strathcona*, and distributed at the outports along the coast.

Dr. Grenfell's parish covers Newfoundland north of the railroad from Bay of Islands to Lewisport, the Strait Settlements and the Labrador coast. These people are descendants of Welsh, Scotch,

French and English who settled along the coast of this desolate country, attracted by the fishing opportunities. Having no means of advancement, they have been at a standstill for several generations. An illustration of the various nationalities appears in the French names of the towns of Griquet and Kirpon which retain their French spelling, but are always pronounced Cricket and Karpoon!

The schools are very poor, being supported by heavily burdened denominations, and it is not uncommon to find two or three struggling in a little hamlet of two hundred inhabitants. A teacher stopping off at the St. Anthony Hôpital was about to begin his winter work with but one arithmetic, one reader and one speller, staying three weeks in each settlement and covering twenty miles on the Labrador. Imagine his delight at the prospect of a box of fifty elementary school books.

At the close of the summer it was necessary to leave the library in the hands of temporary and inexperienced workers. Several requests from neighboring outports for boxes of books had been received and there were scarcely two hundred books left on the shelves to supply the demand. Nevertheless, books were solicited and obtained from England and America by Dr. Grenfell, with the result that with the aid of a detailed outline of the routine at St. Anthony a systematic circulation of traveling libraries has continued which by self-advertisement has grown despite the lack of supervision and guidance.

In season the fishing industries keep all hands busy, the women and children taking an active part as well as the men, but when the winter shuts down the people crave and enjoy reading and treasure anything that is sent to them. Their eyes, trained to farsightedness and often weakened by the glare of the snow, find the small print tedious and very difficult to read. For this and other reasons, in the library work stress is laid upon obtaining good print, good and numerous illustrations, and above all the very best that has been published on all subjects. Being largely dependent upon donations, many books of the old-fashioned type—two columns to a page and with the finest print—have been received, probably

because the average person believes that poor fisherfolk, having nothing else, would be glad to have them. The poor fisherfolk do find them better than nothing, but with poor education, poor sanitation, and poor food, is it not justifiable that the library should draw a line at poor books?

The task of bringing higher standards of living to a worthy people is urgent, and although so many years have been lost they should be able to reap the benefit of our years of progress. It is essential to broaden the outlook of these simple, honest people, and in order to accomplish this the first need is that the very best literature be supplied in an attractive form. The juvenile books are greatly appreciated by them and are best suited to serve as stepping stones to the fulfilment of this purpose.

Reading rooms are another need for which the library should make provision. There are a great number of fishing schooners along the coast which constantly put into one outport or another, and their crews, together with the men of the settlement, having no place to go, generally stand about the small store or resort to drink in order to pass the time away. It is expected that by the summer of 1916 the room at St. Anthony will be opened as a reading room and if funds are forthcoming it will not be difficult to add another room to the existing buildings at each one of Dr. Grenfell's stations. These would also serve as deposit stations from which small collections of books (under fifty) could be loaned to meet the local demand, the resident doctor, nurse, or worker, taking charge.

The crying need toward developing the opportunities of the library is for a permanent librarian, a person in sympathy with the project and able to develop the juvenile side of the work as well as to give the personal touch. This is specially important in helping the women, who become sordid with their abundance of work and lack of pleasures. This, of course, would make it necessary for the librarian to visit the various outports during the summer and in her absence it is probable that an able young girl who has completed her schooling at Dr. Grenfell's orphanage could be trained to manage the mechanical details of the work at St. Anthony.

South of the line of the railroad Newfoundland is also without a library, except at St. Johns, the capital, where there are two circulating centres in department stores supplying the demands for recent fiction, and a reference law library in one of the government buildings.

The southern portion of the island is fairly prosperous and requests for books have been sent by several of the towns all the way to St. Anthony, with offers to pay all expenses. So it seems that this whole section must be included in the library scheme. The idea has been suggested that headquarters for the south be made at the Seamen's Institute which was founded in St. Johns by Dr. Grenfell. This building, conspicuous for its modern construction and equipment, is similar in all respects to our Young Men's Christian Association buildings. Of course it contains a reading room and a small library. The collection of books was given by Mr. Carnegie, Mr. Henry van Dyke and Mr. Francis Sayre, and is made up of standard works and well chosen fiction. However, as there is no one to supervise their use and no fund to assure rebinding, they have not served their full purpose and the reader for the most part has been confined to the use of magazines. With the Institute collection as a nucleus and a little money, it would be possible to open a circulating department to the people of the city and also to develop the department of traveling libraries supplying books to the towns and the many ships of all kinds plying to and from St. Johns.

The desired permanent worker would spend the winters at St. Johns carrying on the work in the south. In order that the work of this section may be self-supporting, the towns sending for books would pay a fee sufficient to cover running expenses.

It seems incredible that this island on the very borders of Canada should be only now awakening to the realization of the modern library's existence. But the rapid growth and appreciation of what has been done shows the eagerness of the people to take their place in the library field. Until such time as the government is able to assume the responsibility of the library, Dr. Grenfell hopes through the aid of good

friends in the United States to maintain the work in the north and guide the work of the south.

The writer expects to return to the north in September to prepare a working basis of this enlarged plan and we hope that by January 1917 all will be in readiness. It is interesting to note that this work, begun solely for the poor fishermen on the Labrador, has been extended further and further south to meet the needs of the entire island of Newfoundland.

#### A LIST OF BOOKS BY AMERICAN TWENTIETH-CENTURY POETS

Two lists of books by representative American poets of to-day have been printed in the *LIBRARY JOURNAL*: the first which was intended to cover the period from 1900 to 1913, appeared in the number for February, 1914; and the second, which represented practically the year 1914, was printed in the number for May, 1915. These selections are made by a committee of the Poetry Society of America, and the lists having been found useful in the library service, the annual custom is now continued with a group of the most notable books by American poets of the year 1915.

The lists are intended to contain titles that should be found in every public library in the country; from these lists, also, it is thought that owners and makers of private libraries may safely choose and feel that they are keeping in touch with the poetic movement in their own country. There is now a widespread interest in this aspect of our national literature and no library, public or private, can afford to be without an adequate annual addition to the poetic shelves. The list contains books by poets of established reputation together with a selection from among our new poets, such books as seem to the committee to contain finished artistry, fresh impulses, a real contribution of thought, and hence considerable promise. This is the aim. But poetry is not all published by well-known publishers, and is not always easy to get hold of. Omissions of valuable material may sometimes be made. The committee does not claim to be infallible. The desire is, however, to keep tally upon all the

BEGINNINGS OF LIBRARY WORK IN LABRADOR—A LIBRARY CENTER OF THE PRESENT AND SOME READERS OF THE FUTURE

worthy books of poetry that are printed in this country. In order to do this perfectly the committee needs the co-operation of lovers of poetry everywhere; they will be glad to have their attention called to any privately printed or other books of poetry that might otherwise escape their search. Address the chairman of the committee on Library Lists of American Poets of Today, Mrs. Martha Foote Crow, Tuckahoe, New York City.

Two collections are added this year as being specially pertinent. Following "The little book of modern verse" which covered the period from 1900 up to two years ago, Miss Rittenhouse now gives us "The little book of American poets" which begins at an earlier period and brings the story up to the date of the printing of the first of these two admirable little anthologies. Mr. Braithwaite's "Anthology of magazine verse for 1915" forms a significant milestone to show the direction the poetic spirit in this country is pointing out. Burton Stevenson's Anthology, which was so bulky and so expensive (if invaluable), is now accessible in eight small volumes. From these anthologies and from the lists given out by this committee it is thought that the poetic department in all our libraries may be adequately and happily replenished.

A complete compilation of the three annual "Lists of books of poetry by American twentieth-century poets" will be printed in the *Bulletin* of the Syracuse Public Library, Syracuse, N. Y., and may be obtained by writing to that address, enclosing five cents.

 Rittenhouse, Jessie B. A little book of American poets. Houghton.

## APPLICATION FORMS FOR FOREIGN BOOK IMPORTATIONS

DR. HERBERT PUTNAM has suggested the use of uniform forms by libraries for making application for permits to import foreign books under the arrangement described in the *LIBRARY JOURNAL* for December (p. 869). Accordingly he has prepared the following forms, marked No. 1 and No. 2, and makes certain suggestions as to their use, in a letter sent with the blanks.

"No. 1," he says, "is to be used where the application is direct from the institution (university, college or public body) placing an order abroad. No. 2 is to be used where the application is from an importer acting as agent for a group of institutions.

"The forms will of course require modification in detail, where (under No. 1) the order is to be placed with an importer or where (under No. 2) the application is in behalf of a single institution.

"Application (No. 2) by the importer or agent must be accompanied by an affidavit, as indicated. Those direct need not be.

"In preparing the application it will be well to consider carefully the limitations within which alone the permits are to be granted, and to conform strictly to them."

## SPECIMEN FORM NO. 1

Application for permit for the shipment to the United States from countries hostile to Great Britain, of certain books of a philosophical, scientific, technical, or educational character, specifically destined for universities, colleges or other public bodies.

.....191....  
 To the Honorable  
 The Secretary of State.  
 Respectfully represents the  
 undersigned:—

1. That he is.....  
 of the.....

2. That such institution is a { University  
 College  
 Public Body

3. That it requires for its use from a country now hostile to Great Britain the books whose titles are shown on the attached list marked A, comprising in all.....titles, and the number of copies stated respectively.

4. That he believes there is no one of the said books which may not truly be described as "philosophical, scientific, technical, or educational in character."

5. That in behalf of the said { University  
 College  
 Public Body

he has placed [proposes to place] an order for the shipment of the said books from [Germany] with the firm of..... located at ..... and that the shipment will be made through the port of [Rotterdam] or some other neutral port.

Wherefore he prays the good offices of the Department of State to secure from the British authorities exemption from interference with the said shipment or detention of the said books while in transit to the United States.

Signed.....

[Below is the form of endorsement proposed]  
 The Library of Congress,  
 Washington, D. C.....191..

**Endorsement:**

I am satisfied that the within application is genuine and that the volumes covered by it are in fact destined for the use of the University }  
 College } named.  
 Public Body }

.....  
 Librarian of Congress.

**SPECIMEN FORM NO. 2**

Application for permit for the shipment to the United States from countries hostile to Great Britain, of certain books of philosophical, scientific, technical, or educational character, specifically destined for universities, colleges or public bodies.

.....191....  
 To the Honorable  
 The Secretary of State:  
 Respectfully represents the firm of.....

.....  
 doing business as importers of books and periodicals, with principal place of business at..... Street  
 City:

1. That the books whose titles are shown on the attached list, marked A, comprising in all.....titles, were ordered from us by the several universities, colleges and public bodies named in the attached list marked B; that the actual orders therefor are of record in our office; that the number of copies specified on list A is the number actually required to fill such orders; and that the importation thereof by us is solely for the purpose of filling such orders, and not for stock, or for any purpose or destination whatsoever;

2. That it is our purpose to gather the said books in [Germany] for shipment to the United States from the port of [Rotterdam] or some other neutral port;

3. That upon the arrival of the said books in [New York City] it is our intention to despatch them immediately to the several institutions or public bodies named; and we guarantee that this shall be done.

4. That we believe there is no one of the said books which may not truly be described as "philosophical, scientific, technical, or educational" in character;

5. That the customers for whom they are destined, as named in said list B, are either universities, colleges or public bodies.

Wherefore, in behalf of such customers, whose agents we are, we request the good offices of the Department of State to secure from the British authorities exemption from interference with the shipment of the said books or detention thereof while in transit to the United States.

*Affidavit*

.....191....

.....ss.  
 Before me personally appeared the above named .....  
 and made oath to the truth of the facts stated and the good faith of the representations made in the foregoing application by him signed.

.....  
 Notary Public.

(Seal)

*Proposed Endorsement:*

The Library of Congress,  
 Washington, D. C.....191..

I am satisfied that the within application is genuine, and that the volumes covered by it are in fact destined for the use of the institutions or public bodies named.

.....  
 Librarian of Congress.

**SPECIAL ADDENDUM WHERE THE LIST IS OF PERIODICALS, OF OTHER SERIALS, OR OF BOOKS PUBLISHED IN PARTS**

*Special:*

[periodicals]  
 and as the said books are published  
 [numbers] [number]  
 in parts of which only a single part

is issued at one time or can be included in a particular invoice, though the [subscription] order for them placed with us covers the [year] entire work, we further request that such permit as may be issued for such exemption shall cover subsequent shipments comprising the parts or numbers issued hereafter, until the completion of the publication [until the expiration of the current subscription year.]

N. B.—*It is recommended that applications for current periodicals shall be kept distinct from those for books.*

### STATUS OF THE NORTH DAKOTA LIBRARY COMMISSION

IN the hope of finally clarifying the situation as to the standing of the North Dakota Library Commission in its own state, we quote below several paragraphs from a letter written in December by Mrs. Budlong, the secretary of the commission, to Mr. Eastman, in response to inquiries made in the preparation of his article on "Library legislation in 1915" for the January issue of the LIBRARY JOURNAL.

"First let me say that your statements explaining library commission matters in North Dakota seem to me exactly correct for the date at which they were written," writes Mrs. Budlong. "To understand the situation here, one must know a little of the history of the changes. A bill passed late in the session (March) did 'abolish the library commission,' transferring the supervision to the state board of regents. Then followed an interval of several months before the organization of the board of regents in July, during which period it was impossible to anticipate what might be the action of the regents and all questions concerning the status of the library commission must be answered in terms of the phraseology of the bill. It was during that interim that I sent you the page from the *House Journal* and stated in my letter that the commission had been abolished. The board of regents clearly had power to reduce the commission to a department and to give it another name which might indicate dependency, but the first action of the regents regarding library work was to vote that the name 'Public Library Commission' be continued

'on account of the advertising done and identity established under this caption.' Instead of reducing the independence of the organization, additional authority was given the secretary and the director. This is easily understood within the state, 'abolishing of the commission,' meaning here simply that five people have been deprived of the honor of a position as library commissioners and the five constituting the board of regents have taken over their duties. The debate concerning our standing outside the state will turn on the question of what constitutes a library commission. Is it the five members holding the title of library commissioners, or is it the staff, the office, the policy and the work done throughout the state which can undergo a change of supervision without any noticeable change in any other direction. There has arisen no question in North Dakota but that the board of regents had a legal right to continue the use of the name, 'Public Library Commission' even after the bill mentioned abolishing the commission. . . . I should like at some time to take up the legal points of this question, discussing the new meaning which this action of our board of regents gives the term 'commission,' and settling the question of whether this state is longer entitled to membership in the League of Library Commissions. The editor of the Government Educational Directory thinks not unless my last letter has been able to convince him.

"Our letterhead was prepared after a consultation with the board of regents and its official secretary, and shows plainly their opinion of our present status. I enclose also the letterhead used by the members of the state board of regents which shows the relation of the library commission to the other educational institutions of the state. It seems to me a very decided advance in our position that we have been recognized as a part of our great educational system, entitled to consideration and supervision by the same heads as are our higher institutions. We agree with you that the old commission belongs to the pioneer days and that we have stepped onto a much higher level in this unification of educational work."

## JOHN C. SCHWAB

YALE University was shocked on Wednesday, Jan. 12, to learn of the death of John Christopher Schwab, librarian and former head of the department of political economy. Prof. Schwab died of pneumonia, following an illness of about a week. For twenty-five years Prof. Schwab had been connected with Yale, joining the faculty about four years after his graduation. For fifteen years he was connected with the department of economics, and for the last ten years he had been at the head of the university library.

He was born in New York City in 1865, the son of Gustav and Eliza von Post Schwab, and was graduated from Yale in 1886, having prepared for college under private tutors in New York city. He pursued graduate studies in political economy and taught German at the Hopkins Grammar School, receiving an M.A. in 1887 from Yale. He went abroad the same year and entered the University of Berlin for several months, going from there to the University of Göttingen. He returned to New York in August, 1888. He received the degree of Ph.D. from Göttingen in 1889.

In 1890 he lectured at Yale on political economy. The following year he was made instructor and from 1898 to 1905 was professor.

Dr. Schwab was the author of two books, "The history of the New York property tax" and "The Confederate States of America." He contributed to many economic periodicals, and edited the *Yale Review* from 1892 until its recent reorganization. He was a member of the American and British Economic Associations and the American Library Association, the Century Association of New York City and the Graduates' Club in New Haven. He was chairman of the Yale Bi-Centennial Committee in 1901, and was to have been secretary of the committee which is arranging for a pageant next fall in celebration of the 200th anniversary of the coming of Yale to New Haven.

Dr. Schwab was married in 1893 to Miss Edith A. Fisher of Cincinnati, Ohio.

His brother, Gustav H. Schwab, a banker and shipowner of New York, died last year.

## REPORT OF THE LIBRARY OF CONGRESS FOR 1914-15

THE annual report of Dr. Herbert Putnam, librarian of Congress, for the year ending June 30, 1915, was submitted to Congress Dec. 6. Included with it, as usual, are the reports of the superintendent of the building and grounds and that of the register of copyrights, and the whole makes a book of 221 pages.

One of the most important events of the year was the organization of the legislative reference service, for which an appropriation had been voted the preceding year. Full organization of the staff was deferred till the opening of the regular session in December, though preliminary work was done in anticipation of the probable demands. On subjects of legislation clearly in prospect source material was assembled, or at least identified, though only in relation to the budget systems in foreign countries was an attempt made to draw off and digest the data. In addition the field of each of the major committees of Congress was assigned to some member of the staff for special study and for special responsibility for its treatment. A more complete index than existed for the federal statutes was imperative, and a special group of indexers was organized and has worked steadily on these indexes as part of the necessary permanent apparatus of the division. The range of subjects covered by the service has been broad, of major importance being the questions involving foreign or international law, and those arising out of the war. No provision for bill drafting was made in the organization of the service as authorized by Congress, and the organization as a whole was not maintained after the close of the session, though such a diminution means the loss of much expert service. It is a matter of regret that James D. Thompson, who organized the division, was obliged, for reasons of health, to resign from it at the session's

close. Provision for the continuance of the service another year has been made by an appropriation of \$25,000.

The vacancy left by the death in October, 1914, of Bernard R. Green, superintendent of building and grounds, was filled by the appointment in April of Frank Lloyd Averill. Since the close of the year the superintendent of reading rooms, William W. Bishop, has resigned to assume the librarianship of the University of Michigan, his Alma Mater. His place has been temporarily filled by the transfer of Frederick W. Ashley, for some years chief of the order division. In November the library suffered a serious loss in the death of Arthur Jeffrey Parsons, chief of the division of prints since 1900.

The total appropriation for the work of the library and the copyright office for 1915 was \$544,935.53, and for building and grounds \$106,205, making a grand total of \$651,140.53. Expenditures for 1915 were 542,993.54 for library and copyright office and \$102,181.54 for building and grounds. The 1916 appropriations for the former are \$549,460 and for the latter \$110,645, making a grand total of \$660,105. In addition \$200,462.10 was expended for printing and binding, and the 1916 allotment for this purpose is \$200,000. Slight increases in salaries in 197 positions, totalling \$23,140, were recommended for the present year, but were not granted. The recommendations will be renewed.

In the copyright office \$111,922.75 were received and applied for fees; the total number of deposits received was 203,767, and the total number of registrations, 115,193. The expenses of the office amounted to \$103,773.39, making a net cash earning of \$8149.36. In addition to the cash fees the copyright business brings each year to the government many thousands of dollars' worth of property in the articles deposited. A branch office was opened at the Panama-Pacific Exposition in San Francisco, but practically no registrations were made.

The total contents of the library at the close of the year were as follows: 2,363,873 books, 147,553 maps and charts, 727,808 volumes and pieces of music and 385,757 prints. Comparative tables of the accessions of 1914 and 1915 show a decrease of

12 per cent in the net total, due largely to the European war, not only through the diminution of publications in the belligerent nations, but to the detention in the Far East of large purchases. The HARRISSE library, bequeathed to the library in 1910, was finally delivered in August, 1914, and consists of 220 volumes and pamphlets (203 by HARRISSE himself) with some packages and boxes of manuscript material. The collection is devoted largely to the period of discovery and exploration of America, and is specially rich in material relating to Columbus. Large purchases of Chinese literature secured the delivery during the year of 10,741 volumes, bringing up the East Asiatic collection to over 45,000 volumes. The special effort begun three years ago to build up a strong collection of the literature of the fine arts has been sustained by careful purchases. The SIMKHOVITCH collection of about a thousand books and periodicals on social revolutionary movements in Europe during the last century, and additional source material on native languages of Spanish America, collected by Dr. Rudolph R. Schuller, were also noteworthy acquisitions. Transfers from governmental libraries in the District brought in 31,060 volumes and pamphlets, 35,050 periodical numbers and 194 maps and charts, while 8722 surplus copyright deposits were transferred to these libraries. In addition 5054 of these duplicates were sent to the Public Library, and smaller lots to several other institutions.

For the division of manuscripts the work of transcribing public documents in the English archives relating to American history has been continued, and these transcripts now number about 175,000 folios. Similar work is planned in France, Spain, Mexico and Russia. Some of the work in France and Spain has already been done, and it is still in process. Conditions in Mexico have temporarily halted the work there. In all these countries free permission for the work has been given, and every facility afforded, facilities in most cases far surpassing those in our own archives. Several interesting groups of papers, including the diary and other papers of Gideon Welles, have been given to the library, and several deposits have been

made, perhaps the most valuable being the Thacher autograph collection of royal documents. The Force correspondence, supplementing his library of Americana, bought in 1867, is another notable accession to this department.

During the year the division of documents handled 46,043 volumes and pamphlets, as compared with 42,064 of the previous year. The library has an international exchange list of 92 countries, from whom regular consignments are received, and in addition shipments in response to special requests have been received from 25 countries. Special effort was made during the year to perfect the files of official gazettes of foreign governments. The number of duplicates turned over to the order division for exchange with other libraries was 10,253 volumes and 17,436 pamphlets.

In the law library accessions numbered 4337, making the total contents 168,719. Limited space has necessitated the rearrangement of the collection and has increased the part of the library housed in the main building. Deficiencies in the material covering the countries of Latin America suggested special effort to collect such material, and accordingly the law librarian was commissioned to leave in June for a six-months' trip to South America. The literature and information secured will be used in the preparation of a "Guide to the law and legal literature of Latin America," similar to the one recently published for Spain.

In the division of maps and charts 5336 pieces were accessioned during the year, making a total of 147,553. There are in addition 276,256 sheets in the Sanborn insurance collection and the British Ordnance and Egyptian surveys. Circulars similar to those sent out in 1902 were again sent to surveyors of all the counties in the United States, with the result that 141 county maps were presented and 145 purchased, with returns still coming in. These county maps are frequently consulted.

In the music division 22,120 volumes and pieces of music, 913 volumes of the literature of music and 820 volumes on musical instruction, a total of 23,853 pieces, were accessioned, making the grand total of re-

sources 727,808. The periodical division received 8184 current periodicals, including second copies from the copyright office and 1622 separate titles received through the Smithsonian Institution. This number does not include the large number of serials received. The number of newspapers received is 965 (849 American and 116 foreign); the number held for binding is 312 (218 American and 94 foreign). During the year 1517 volumes of papers and 4795 volumes of periodicals were bound. Readers in the main reading room alone used 7641 volumes of newspapers and 11,628 volumes of periodicals. Rules of procedure have been formulated, outlines drawn and work started on the "List of serials in the library." Progress on this is necessarily slow, as the records are centralized only in the reading room catalogs, where it is not feasible to search through the hundreds of thousands of cards for periodical titles.

The print collection now totals 385,757 pieces, of which 8945 were received during the year. Several exhibitions have been arranged and attendance was 382 more than last year, an increase in service of 2087 books, 782 periodicals, 27,270 photographs and engravings, 14,682 stereoscopic views and 250 lantern slides. Use of the Semitic division is likewise growing steadily, if slowly. During the year over 10,000 books and pamphlets in the two Deinard collections were bound, lettered and arranged, and a special title catalog giving the original title, name of author and imprint has been prepared. A list of Hebrew books relating to medicine was prepared for the Surgeon-General's Library. Arabic books were supplied the Department of Agriculture and duplicate books in Yiddish dealing with America were forwarded to the Public Library, where they are in continuous circulation.

The number of volumes bound was 29,505, most of the work (28,324 volumes) being done in the branch bindery in the library. For practically all the work either "acid-free" leather or the best library buckram was used.

The total number of volumes cataloged was 99,860, of which 72,539 were new accessions and 27,321 recataloged. There has been a marked increase in the receipt

of masses of minor publications and a method of collective entry has been devised for its handling, sample forms of entry being shown. The number of volumes classified was 101,095, of which 76,739 were new accessions and 24,356 were reclassified. The number of volumes shelved was 88,984 (70,413 new accessions). The reclassified portion of the library now contains in round numbers 1,457,500 volumes, the decrease in accessions permitting more time for this work. A special feature of the year's work has been the preparation of classification schedules for printing. Several have been completed and others are in process.

During the year the number of subscribers to the printed cards increased from 1986 to 2120. Cash sales, including subscription to proof sheets, amounted to \$59,379.64, an increase of about 8½ per cent over 1913-14, while the value of the cards shipped was increased over 12 per cent. Cards for about 35,000 different titles were added during the year, including about 5000 printed for libraries in the District and 2500 for other co-operating libraries. The whole number of titles in stock is approximately 657,000, and cards in stock about 46,000,000. There are now 49 depository libraries.

The library published lists of references on Europe and international politics, prison labor, cost of living and prices, deep waterways, negro suffrage, the initiative, referendum and recall, parcel post, railroads and trusts; classification schemes for classes P and Q; Monthly list of state publications; Guide to the law and legal literature of Spain; Journals of the Continental Congress, 1774-1789; Calendar of the correspondence of George Washington with the officers; Catalogue of first editions of Stephen C. Foster; Catalogue of the John Boyd Thacher collection of incunabula; besides the librarian's annual report and some small pamphlets and sets of rules.

The A. L. A. subject card catalog, started by the division of bibliography the previous year, was brought to a state of working completeness and has proved a great time saver. It represents the books selected by the A. L. A. for purchase by the smaller libraries. The typewritten lists compiled

numbered 206, with a total of 1094 sheets, as against 162 lists and 868 sheets the previous year. Social and economic subjects led, with history second. Only three regular lists were published, but several shorter ones were printed in *Special Libraries*, and other lists have appeared in various organs.

Publications from the Smithsonian Library for the Smithsonian Deposit numbered 24,713 pieces, as follows: 3043 volumes, 1179 parts of volumes, 1763 pamphlets, 17,410 periodicals, 594 charts and 724 parts of serials to complete sets. This includes complete sets of inaugural dissertations and academic publications from 12 universities and technical high schools from all parts of the world.

In the reading room for the blind 707 items were accessioned, and the collection of books, etc., in all types now numbers 3174. The number of active readers was 233, while 1321 blind persons and 9949 others visited the rooms.

The library had a special exhibit at the Panama-Pacific Exposition, to which several medals and other awards were made.

THE LIBRARIES AND THE  
STEVENS BILL

IN accordance with the resolutions of the Council of the American Library Association, the book buying committee of the association prepared a circular to libraries, urging the necessity of joint action to secure an amendment to the Stevens bill which would exempt libraries from the provisions of the bill. The committee also had in view other action looking toward the same end. A conference was arranged with Mr. Whittier, of the American Fair Trade League, which seems to be the organization energetically backing price maintenance legislation. Mr. Whittier informed the committee that a new bill was about to be introduced which would replace the old Stevens-Ayres bill. He offered his co-operation in obtaining a clause in the bill exempting libraries. The new bill was introduced by Representative Stephens, of Nebraska, January 21 (H. R. No. 9671). The bill contains the following clause:

"The provisions of this act shall not apply in cases of sales of such article or articles of commerce to the United States, or in cases of sales of such articles to any state or public library, or to any society or institution incorporated or established solely for religious, philosophical, educational, medical, scientific or literary purposes, made in good faith for use thereof by such society or institution."

It would appear that all objections on the part of librarians, as such, to the old bill

are obviated by the introduction of the new bill, and that no further action on the part of libraries and library organizations will be necessary if the second section is retained.

The clause reinforces the principle laid down in the tariff law that libraries which are supported by public taxation for educational purposes, and which are practically wholesale buyers, should not be on the same plane as the private individual.

The book buying committee is grateful for the hearty co-operation it has received from librarians in all parts of the country. The progress of the bill, of course, will be carefully watched.

CHARLES H. BROWN,  
*Chairman Bookbuying Committee,  
American Library Association.*

#### THE MODIFIED STEVENS BILL

WE print for the benefit of librarians interested the full text of the modified Stevens bill, as reintroduced on January 21 by Congressman Stephens of Nebraska. New matter is in italics and the old matter which has been excluded from the new bill is in brackets.

##### A BILL

[To prevent discrimination in prices and to provide for publicity of prices to dealers and to the public.]

*To protect the public against dishonest advertising and false pretenses in merchandising.*

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That in any contract for the sale of articles of commerce to any dealer, wholesale or retail, by any grower, producer, manufacturer, or owner thereof, under trademark or special brand, hereinafter referred to as the "vendor," it shall be lawful for such vendor, whenever the contract constitutes a transaction of commerce among the several States, or with foreign nations, or in any Territory of the United States, or in the District of Columbia, or between any such Territory and another, or between any such Territory or Territories and any States or the District of Columbia, or with a foreign nation or nations, or between the District of Columbia and any State or States or a foreign nation or nations, to prescribe the [sole] uniform prices and manner of settlement at which the different qualities and quantities of each article covered by such contract may be resold: Provided, that the following conditions are complied with:

(a) Such vendor shall not have any monopoly or control of the market for articles belonging to the same general class of merchandise as such article or articles of commerce as shall be covered by such contract of sale; nor shall such vendor be a party to any agreement, combination, or understanding with any competitor in the production, manufacture, or sale of any merchandise in the same general class in regard to the price at which the same shall be sold either to dealers at wholesale or retail or to the public.

[ (b) Such vendor shall affix a notice to each article of commerce or to each carton, package, or other receptacle inclosing an article of commerce covered by such contract of sale stating the price prescribed by the vendor at the time of the delivery of said article as the uniform price of sale of such article to the public, and the name and address of such vendor, and bearing the said trade-mark or special brand of such vendor. Such article or articles of commerce covered thereby shall not be resold except with such notice affixed thereto or to the cartons, packages, or other receptacles inclosing the same.]

[ (c) (b) Such vendor shall file [in the Bureau of Corporations] at the office of the Federal Trade Commission a statement setting forth the trade-mark or special brand owned or claimed by such vendor in respect of such article or articles of commerce to be covered by such contract of sale, and also, from time to time, as the same may be adopted or modified, a schedule setting forth the uniform price of sale thereof to dealers at wholesale, and the uniform price of sale thereof to dealers at retail from whatever source acquired and the uniform price of sale thereof to the public, and upon filing such statement such vendor shall pay to the [Commissioner of Corporations] Federal Trade Commission a registration fee of \$10. *Prices set forth in such schedule and made in any contract pursuant to the provisions of this act shall be uniform to all dealers in like circumstances, differing only as to grade, quality or quantity of such articles sold, point of delivery and manner of settlement, all of which differences shall be set forth in such schedule;* [The price to the vendee under any such contract shall be one of such uniform prices to wholesale and to retail dealers according as such vendee shall be a dealer at wholesale or a dealer at retail,] and there shall be no discrimination in favor of any vendee by the allowance of a discount, *rebate or commission* for any cause or by grant of any special concession or [allowance or by the payment of any rebate or commission or] by any other device whatsoever.

(c) *Such contracts for the sale of such article or articles of commerce may provide for seasonal disposal sales, twice yearly at appropriate times, by dealers at retail, during*

which periods duly set forth in such statement or in such schedule of prices as shall be filed by such vendor, such dealers at retail may sell such article or articles of commerce for a price other than the uniform price as set forth in the schedule provided in the preceding paragraph B: *Provided, That such article or articles of commerce shall have first been offered to the vendor, by such dealer at retail, by written offer, at the price paid for the same by such dealer, and that such vendor, not less than thirty days prior to the date set forth for the next seasonal disposal sale, after reasonable opportunity to inspect such article or articles, shall have refused or neglected to accept such offer.*

(d) Any article of commerce or any carton, package, or other receptacle inclosing an article or articles of commerce covered by such contract and in possession of a dealer may be sold for a price other than the uniform price for resale by such dealer for such quality and quantity as set forth in the schedule provided in the [next] preceding paragraph B [c]. First, if such dealer shall cease to do business and the sale is made in the course of winding up the business of such dealer, or if such dealer shall have become bankrupt, or a receiver of the business of such dealer shall have been appointed, provided that such article or articles of commerce shall have first been offered to the vendor thereof by such dealer or the legal representative of such dealer by written offer at the price paid for the same by such dealer, and that such vendor, after reasonable opportunity to inspect such article or articles, shall have refused or neglected to accept such offer, or, second, if such article of commerce or contents of such carton, package, or other receptacle shall have become damaged, deteriorated, or soiled: *Provided, That such damaged, deteriorated, or soiled article shall have first been offered to the vendor by such dealer by written offer, at the price paid for the same by such dealer, or, at the option of such vendor, in exchange for similar articles not damaged, deteriorated or soiled, and that such vendor, after reasonable opportunity to inspect such article or articles, shall have refused or neglected to accept such offer, and that such damaged, deteriorated, or soiled article shall thereafter only be offered for sale by such dealer with prominent notice to the purchaser that such article is damaged, deteriorated, or soiled, and that the price thereof is reduced because of such damage.*

*The provisions of this act shall not apply in cases of sales of such article or articles of commerce to the United States, or in cases of sales of such articles to any state or public library, or to any society or institution incorporated or established solely for religious, philosophical, educational, medical, scientific or literary purposes, made in good faith for use thereof by such society or institution.*

## OLD-TIME LIBRARY RULES

An interesting sidelight is thrown on one of Boston's early circulating libraries in the discovery in a book (dated 1801) in the Medford Public Library of a printed slip setting forth the "Condition of the Shakespeare Circulating Library, No. 25, School Street, C. Callender's," which ran as follows:

I. Subscribers are entitled to *four volumes* at a time, paying *in advance*:

PER YEAR—SEVEN DOLLS.

HALF YEAR—FOUR DOLLS.

QUARTER—TWO DOLLS. 50 CTS.

MONTH—ONE DOLLAR.

II. Subscribers have the privilege of changing their books once a day and not oftener; and no book to be kept out longer than one month.

III. The money to be paid at the time of subscribing, and at the renewing of each term.

IV. Subscribers retaining any books after their time expires, or leaving any account unsettled, are considered as renewing their subscription.

V. Subscribers lending their books, will be charged for them as non-subscribers, separate from their privilege as subscribers.

VI. NON-SUBSCRIBERS to pay for each volume as returned; for a duodecimo or smaller volume per week 6¼ cents, and after the third week 12½ cents; for each octavo 12½ cents; and after the fourth week 25 cents per week.

VII. Every volume not returned within one week enters on a second, and so on till returned.

VIII. The value of the books to be deposited when required.

IX. Books lost, written in, torn, leaves turned down, or otherwise damaged, must be replaced, or paid for; and if they belong to a set the whole must be taken, or a reasonable compensation made.

*This article applies also to subscribers.*

A library is the scholar's workshop; it is the teacher's assistant; it is the professional man's chief outfit. To the true book lover it is much more; it is a paradise of delights wherein are contained those things that inform the mind, stimulate the understanding, cultivate the heart, and uplift the soul. Any good collection of books may give pleasure—may contain the means whereby you can add to your knowledge. But you can never know the true value of such a collection, you can never experience the wealth of happiness which books can give, until you possess a library that is all your own.—BALDWIN, *Book Lover.*

## American Library Association

### COUNCIL

The Council met at the Hotel La Salle, Chicago, Wednesday morning, Dec. 29, with Miss Plummer presiding and 37 members present.

The first business was the reading of a report on fire insurance rates by Matthew S. Dudgeon of Wisconsin. Mr. Dudgeon said that his committee was not yet ready to make a final report on the subject of fire insurance, as there are three points upon which more time is needed. The first point to be elaborated is the method of fire prevention; the second is the elaboration of a written clause to be inserted in a policy of the usual form, protecting numerous articles common to libraries which the printed form usually excludes from the loss; and third, time is wanted to consider the possibility of drafting a purely library policy for use in states which will permit its substitution for the standard policy. In policies insuring card catalogs, indexes, etc., there should be either a fixed value, as the value of replacement or of production, or there should be a clause something like "Including the value of the work and labor required in producing." Putting in a general clause that is elastic is probably the best method. The library in a city which insists on carrying its own insurance is likely to find itself, in case of fire, without any specific funds on hand with which to rebuild. It is for all practical purposes without any insurance, and will be faced with the necessity of a campaign of publicity to make possible a specific appropriation. The final report is expected not later than next summer.

Following Mr. Dudgeon, Dr. Clement W. Andrews, of the John Crerar Library, read a most instructive paper on "The economics of library architecture." Dr. Andrews declared that while there had been excellent guides prepared on the planning of library buildings, except in the case of certain details the subject has not been treated distinctly from the economic standpoint, and he had recently been occupied in applying the principles embodied in the concrete case of the examination of plans for a proposed building for the John Crerar Library. A comprehensive survey must take in the expenditure of money by the library both for construction and maintenance of the building, of time and effort by the staff, and of time and effort by the readers; and these considerations must apply to every line of the library's service. The

relative importance of the library's varied functions changes so in different institutions that uniformity of plans is impossible. The first question to consider is that of size and of the time for which provision shall be made. It is comparatively easy to calculate the growth of the library's collection, but the ground plan of the building is less likely to be considered from the economic standpoint.

Dr. Andrews then proceeded to compare the economic advantages and disadvantages of the different ground plans represented by the public libraries of Boston, New York, Chicago, and St. Louis, the Library of Congress, Columbia University, and the New York State Library, where is found "the minimum of initial cost, the maximum of compactness and accessibility of storage, and with a suitable arrangement of the rooms a minimum of maintenance expense." He also discussed the height of rooms, their arrangement and juxtaposition, the amount of space to be given to stacks and to corridors, and the need of improved systems of ventilation and cleaning. In closing he referred briefly to the esthetics of library architecture and expressed the conviction that "simplicity and unity of plan are not incompatible with dignity of style, beauty of design, or suitability of material."

The discussion of this paper was opened by Dr. W. D. Johnston, librarian of the St. Paul Public Library. He advocated "fewer and larger" reading rooms in public libraries, and would shelve in separate quarters only those collections which because of their character or use might almost as well be in a separate building. Other closely related collections he would shelve in the same room, facilitating use of the collections, giving greater space for readers and books, and providing greater flexibility of administration.

Mr. Wyer followed Dr. Johnston with a report on the correspondence he had carried on with the Carnegie Corporation relative to the style of building and the choice of site which it would approve. He said he found Mr. Bertram "unwilling to agree that the corporation concerned itself very much, except in the case of small libraries, with buildings and that it concerned itself almost none at all with sites." The objection of the corporation to approving plans which provide auditoriums on the main floor, thus requiring additional foundations and roof, was discussed. It results in putting the auditorium in most small libraries in the basement and putting the service floor from six to twelve

steps above the sidewalk, an arrangement most librarians and commissions feel to be uneconomical.

The last subject of the morning was "Publicity," and the paper on "Publicity methods for libraries," prepared by W. H. Kerr, had been distributed in advance to all the members. Mr. Kerr added some information received after the printing of the paper, and in discussion led to strongly urged recommendations: that the association continue the publicity work already begun on its behalf, as outlined in the 1915 A. L. A. publicity committee report, and that the publicity committee be instructed to study and report a comprehensive publicity policy for the American Library Association, the state library associations and commissions, and local libraries. Mr. Kerr stated that publicity is particularly a small library problem. A good many of the library problems before larger libraries come from the smaller libraries just as the population in our cities and larger towns is recruited from the country. The effectiveness of library work in the small towns and in the country has considerable bearing upon what is expected from public libraries in the cities. The news bulletin issued occasionally by the American Civic Association, and that of the University of Minnesota "Extension Press Service" were exhibited as interesting samples for possible features of the future work of the publicity committee.

Charles H. Compton of the Seattle Public Library discussed Mr. Kerr's paper, at the latter's suggestion giving special consideration to the question of co-operative publicity. So far as he knew the only co-operative publicity has been the compilation of five co-operative lists by Joseph L. Wheeler, and the 2000 posters sold to 20 libraries by the publicity committee of the Pacific Northwest Library Association. He quoted figures showing the saving made by doing this printing in quantities, but felt the emphasis should rather be placed on the saving in time to individual libraries and on the increased effectiveness of the publicity material. Present-day library publicity is largely unattractive, ineffective, and unnecessarily expensive, and he felt a careful inquiry should be made of the expense that would be incurred and the support that might be expected if a central bureau for co-operative publicity were established. His suggestions of some of the work which a publicity expert might do included the preparation of co-operative publicity material suitable for all localities; the final editing of co-operative lists, with introductory para-

graphs; the giving of advice and suggestions to librarians on local publicity problems; the preparation of short articles for free and general use in local newspapers; the systematic attempt to secure national publicity for library work through magazines and city papers; and the constant following-up of publicity methods now in use or worthy of adoption by libraries.

Mr. Ranck described the publicity methods used in the good roads campaign in Michigan last year, from which he believed librarians might get many good suggestions.

Mr. Dudgeon said that he believed library publicity to be successful should consist of 99 per cent. of knowledge of publicity methods and one per cent. knowledge of library activities and possibilities, and that up to the present exactly the reverse had been the case. He doubted the advisability of the co-operative method of publication, and whether mature consideration is given to the nature and form of material that should go into the co-operative production, and felt that for publicity work a librarian, with his training and traditions, is seldom a success.

The president stated that a letter had been received from H. C. Wellman regarding the threatened danger to libraries in the price-fixing bill, introduced as the Stevens bill in the Sixty-third Congress and reintroduced as the Ayres bill in the present Congress. Mr. Roden, a member of the book-buying committee, was called on. He read the bill, commented upon it, and read resolutions which he had, at the request of the president, drawn up to be presented for consideration of the Council.

Owing to the hour it was necessary to postpone further consideration until the next session, and the meeting adjourned.

#### SECOND SESSION

The Council was called to order for its second session, Thursday morning, 9:45, December 30, First Vice-president Brown presiding.

The first report read was that of the committee on union list of serials, presented by Dr. Andrews, the chairman. Very little progress was reported, as the Library of Congress, which it was hoped would prepare the union list, had so far been unable to prepare even the list of serials to be checked. The committee hopes to have the Library of Congress issue a tentative list pending the completion of the permanent edition.

This report was followed by that of the committee on ventilation and lighting, pre-

sented by Samuel H. Ranck, chairman. As there seems to be developing a new science and a new art of both these subjects, with a consequent revolution both of ideas and practices, the committee recommended the preparation and publication in the *A. L. A. Bulletin* a series of reports to embody its studies to date, and that after these reports are published the association create a standing committee on ventilation and lighting, such a committee to report the new developments in these fields from time to time for the benefit of the association. To the duties of such a standing committee there might appropriately be added the subject of heating, and possibly, also the consideration of other problems relating to the physical equipment and operation of library buildings.

Among the sections of such a serial report the following, among others, may be mentioned for special treatment:

The physiological effects of temperature.  
Humidity.  
Odors and their elimination.  
Dust, and its elimination.  
Bacteria and contagion through ventilation or the lack of it.  
Carbon dioxide.  
The psychological element in ventilation.  
Natural ventilation and ventilating machinery.  
The real problem of ventilation—that of people rather than of rooms or a building.  
An attempt to define perfect ventilation.

With reference to lighting the following subjects, among others, may be mentioned as being worthy of special treatment in the series of reports outlined above:

Natural lighting.  
The quantity of light.  
The effect of color in lighting and the psychological effect of both color and light.  
Artificial lighting.  
The effect and place of shades and reflectors.  
Direct, indirect, and semi-indirect lighting.  
An attempt to define perfect lighting in terms of a lighting code.

The first paper on this morning's program was Dr. E. C. Richardson's discussion of the "Place of the library in a university." As printed copies of the paper had been previously distributed it was not read at the meeting, but Dr. Richardson amplified certain portions and emphasized certain points. In his paper he defined the modern university, discussed its trend, and described the various classes of students and methods of teaching in vogue. Many methods are now accepted as true ones and the question of the library's place is the question of where it belongs among the various organizations—colleges, schools, laboratories, museums, etc.—formed to promote this teaching. To help decide this he formulated a definition of a library as a collection

of books intended for use, consisting of three factors, books, building and librarian, existing for the double purpose of teaching the present generation and handing down books for posterity. The library does its teaching by its very existence as a separate organization, by its books, by its exhibition and laboratory facilities, and by its staff, and the question of its place in the university, according to Dr. Richardson, will in the end be determined by this matter of methods in which it fulfils its teaching function. With little uniformity among universities in actual practice, the tendency is to recognize the library as an organic teaching unit in the university, with branches in every department, and serving every department, but with its own methods of instruction and its own instruction staff, assisted in its operation by every other teaching staff, as well as assisting their operations.

The discussion of Dr. Richardson's paper was opened by Prof. A. S. Root of Oberlin, who said he thought the statements made by Dr. Richardson as truisms were not generally so accepted by the educational world, and that the first duty of librarians was to press them home. The relative functions of the faculty library committee and the librarian are often under discussion. The most effective argument for the librarian to use in such discussion is to liken the library to any other individual department in which the internal management is left to the man at its head, while the faculty committee may properly determine the general policy of the library, make recommendation to the proper authorities regarding the library budget, and pass in general on recommendations for appointments to the library staff, that they may be in harmony with the general university policy. A great problem of to-day is to find men of the type at once able and willing to go into university library work, and it should be the duty of every college librarian in particular to search among the students for such men, and to set before them the importance of the service which college and university librarians can give.

In discussing "The municipal reference library and the city library," or the public library in its relation to the city government, Samuel H. Ranck of the Grand Rapids Public Library, formulated the opinion that: "Important as a municipal reference library is to the city official, its most important function is the service it gives to the citizen as an aid to the formation of public opinion." The large general collection of the public library therefore, is frequently in a better position to give

this service than is the small specialized technical collection in the so-called municipal reference library, as separated from the public library. As a matter of fact the municipal reference library, when it is in the city hall is constantly overlapping into the general public collection, for new problems are coming up all the time which reach into every department of printed literature, both ancient and modern, and for that reason it is impossible for a municipal reference collection in and of itself to take care of all the demands that may come to it. Making the municipal reference library a branch of the public library makes possible greater co-operation and less overlapping by putting both of these under the same general administration. The city library should be the general reserve, so organized that all the information on any branch of knowledge may be sent at the shortest notice to the municipal reference department in the city hall, or wherever the information may be needed, and then retired when public interest is transferred to some other subject.

Just as in municipal government it is far better to enlarge the functions of existing boards than to create new ones, so in municipal reference libraries the great need is not so much the establishment of new libraries or departments as the establishment of a central bureau of municipal information for the whole country—possibly in the Library of Congress. The difficulty of keeping track of all material published on municipal affairs would be considerably lessened, and this centralized bureau of information, together with the preparation of a municipal year book, have been urged by the National Municipal League and the Special Libraries Association.

The discussion of the subject was opened by Mrs. Mary W. Dietrichson, municipal reference librarian of the Minneapolis Public Library. That library has just made arrangements to transfer its municipal department, which has been in cramped quarters in the main building, to a ground floor room in the heart of the business district, one block from the city hall. Here a combined business and municipal branch will be opened, and it is anticipated that not only city officials but the general public will use it freely.

Dr. C. C. Williamson, librarian of the Municipal Reference Library in New York City, continued the discussion, saying he believed the general public library in relation to the city government should consider the work for and with citizen agencies and public-spirited citizens as its primary function. On the other hand, the specialized refer-

ence department should consider that its main function is to work with and for the city officials and employes, not neglecting the other, but making it quite secondary. Advantages of having the municipal library a branch of the public library rather than organized as a part of a city department, are not only the avoidance of duplication of material, but its divorce from politics and the securing of greater continuity of development and generally speaking a more efficient technical administration. Dangers to be guarded against are a possible lack of flexibility and adaptability in meeting conditions, and the failure of the chief librarian to appreciate its needs, as in the library system where the municipal reference library was forbidden to collect engineering material.

Before the close of the session the Council, on motion of Mr. Ranck, endorsed the recommendation of the National Municipal League that the Library of Congress be granted a special appropriation for the establishment of a municipal reference division to serve as a central co-operating agency for such libraries and similar organizations throughout the country.

Lack of time prevented the reading, except by title, of the record of her "Experience with municipal reference work," sent by Mrs. Caroline L. B. Kelliher, municipal reference librarian of the Portland (Ore.) Library Association, of which an abstract will not be out of place. In her introductory remarks she described visits to leading municipal reference libraries on the way from the Atlantic to the Pacific Coast, a practice she considers of great importance, giving personal acquaintance with the various staffs, people with whom one corresponds continuously. Then followed a very interesting description of working conditions at the Portland library, where the municipal reference library is a branch of the Public Library, located in the city hall. The attendance is never great, as the men are at work in their offices. Attendance for the year only amounted to 3,758 and the library is usually open from 8 a.m. to 5 p.m. with a half holiday on Saturday. The total amount of material circulated, however, is considerable. With a collection of about 3600 books and pamphlets, during the last fiscal year there were used 15,836 pieces, made up of 5764 periodicals, specifications, etc., and 10,072 books and pamphlets, all along the line of the men's work. The correspondence seeking information was also considerable in 1914, numbering 3555 communications, letters and postals, and the year previous 4076 communica-

tions. Books and pamphlets received by gift or municipal exchange are cataloged by the branch, which also handles the exchange and distribution of municipal documents for the city.

On behalf of the committee on library administration, a report on labor saving devices was presented by C. Seymour Thompson of the Public Library in Washington. In response to the questionnaire sent out to 800 libraries last February, 158 replies have been received, and most of the information has been tabulated. A plan for the continuance of the work on a more permanent basis was submitted. This plan provides for the completion of the investigation now being conducted; for the dissemination among the members of the association, by the establishment of a "loose leaf information service" of all available information, and for the establishment, as a permanent feature, of the clearing house of information which constituted an important part of the original plan for this investigation. The functions of the clearing house would be threefold: to give out in correspondence information which it may seem unnecessary or inadvisable to include in the printed reports; to continue to gather all possible information, concerning all kinds of devices and equipment, which can be obtained from other librarians, from manufacturers, or from examination and testing of different devices; and, whenever new information of sufficient value has been obtained, to have it printed on sheets which will either supplement the existing report or replace certain sheets of that report.

An approximate estimate of the probable cost of printing the loose leaf sheets showed that the first distribution to libraries could be made by the A. L. A. for \$300, including postage. It was thought necessary to send only to subscribers, \$1.00 per library would cover the first printing provided 200 subscribed. With only 100 subscribers the cost would be about \$1.50 each.

Consideration was next given to the Stevens-Ayres bill, brought forward from the previous session. Mr. Roden read a letter from C. H. Brown, chairman of the bookbuying committee, which ran as follows:

#### REPORT OF THE BOOKBUYING COMMITTEE

To the Council of the American Library Association:

The Committee on Bookbuying of the American Library Association begs to call the attention of the Council to the so-called Stevens Bill now pending in Congress. This

bill was first introduced in 1914 and was not at that time reported out of committee. The bill has now been re-introduced by Mr. W. A. Ayres, of Kansas, at the present session of Congress with excellent support, and has been referred to the Interstate Commerce Committee. The bill is being energetically pushed by the United States Chamber of Commerce, the American Fair Trade League and other organizations. The American Fair Trade League is a league composed practically of manufacturers of patented articles. A so-called lobby supported by these organizations is reported to have canvassed the members of the House with favorable results. Both those who are in favor of the Bill and those who are opposed to the Bill have informed members of the Committee within the last month that the Bill has an excellent chance to become a law.

The effect of this bill on the bookbuying of Public Libraries will be extremely serious. The bill fixes three prices for the sale of all articles manufactured or published under a fixed price system; one price to the wholesalers or jobbers, a second price to retail dealers, and a third price for the general public, including libraries. The bill prohibits any discount whatsoever from these three prices for all articles manufactured under a fixed price system. This fixed price holds perpetually at the pleasure of the manufacturer and not for a year as in the case of the former net price system for books. It means that a library will receive no discount and will pay the same price as an individual buying one book a year. It makes no difference whether the library pays cash or purchases books to the amount of \$10,000 or \$100,000 per year. There will be no discount whatsoever. To quote from the bill:

"There shall be no discrimination in favor of any vendee by the allowance of a discount for any cause, by the grant of any special concession or allowance, or by the payment of any rebate or commission, or by any other device whatsoever."

Books bought by Public Libraries will in all probability cost us, if this proposed bill becomes a law, from ten per cent to forty per cent more than at present.

The opposition to the bill seems to be centered in New York. It is confined at present mainly to the National Dry Goods Association and various department stores. The magazines and some of the newspapers in the larger cities are in general favoring the bill. It is of course a fact that manufacturers of patented articles are large advertisers in our magazines, although there may be no con-

nection between the advertising pages and the editorial policy. It is obvious that such advertisements will be largely increased, should this bill become a law.

The following possible methods of opposing the bill have occurred to the Committee and we beg to submit them to the Council for consideration:

A. The passage of resolutions by the Council in opposition to any bill favoring a fixed price system; such resolutions to be forwarded to the proper Committees of the House and Senate.

B. The possibility of personal letters from librarians throughout the country to their own representatives in Congress in opposition to the Stevens bill or any other similar bill.

C. The passage of resolutions by Library Boards of Trustees throughout the country to be forwarded to local representatives in Congress.

D. The insertion of articles in the daily press giving publicity to the bill and what the bill will accomplish, not only by the A. L. A. Committee on publicity but also by librarians in their own towns and cities as far as possible.

The Committee has recommended to the Executive Board the granting of authority for representation at any hearings to be held in Washington on the bill.

Respectfully submitted,

CHARLES H. BROWN, *Chairman.*

In accordance with the above letter the Council adopted the following resolution:

*Resolved:* That the Council of the American Library Association, acting for said Association and representing the public, educational, scientific and institutional libraries of the country, most earnestly ask that such libraries be exempted from the provisions of the H. R. No. 13305. They ask this because such libraries are large purchasers of books and are operated entirely for the benefit of the public and for general educational purposes, and are supported in the main by public taxation.

*Voted:* That the Bookbuying Committee be requested to secure and compile as promptly as possible, statistical and other material in support of the position taken by the Council on the Stevens Bill, and that such material be at once distributed to all libraries affected by the provisions of the Bill.

EXECUTIVE BOARD

The Executive Board met at the Hotel La Salle, Chicago, Wednesday evening, Dec. 29, 1915, with Miss Plummer and Messrs. Brown,

Craver, Dudgeon, Ranck, and Bostwick present.

The report of Carl B. Roden, treasurer, was read in his absence by the secretary and was accepted as audited. The report was as follows:

REPORT OF THE TREASURER—JAN.-DEC., 1915.

<i>Receipts</i>	
Balance Union Trust Company, Chicago, Jan. 1, 1915.....	\$3,792.80
Membership dues.....	7,902.97
Trustees Endowment Fund, interest.....	399.60
Trustees Carnegie Fund, interest.....	4,500.00
A. L. A. Pub. Board, installment on hdqrs. expense, 1914, balance.....	500.00
A. L. A. Pub. Board, installment on hdqrs. expense, 1915.....	2,000.00
Interest on bank balance, January-December, inclusive.....	69.43
	\$19,164.80

<i>Expenditures</i>	
Checks nos. 65-79 (vouchers nos. 1023-1223) .....	\$10,707.23
Distributed as follows:	
<i>Bulletin</i> .....	\$1,413.86
Conference .....	741.32
Committees .....	864.10
Headquarters:	
Salaries .....	5,260.00
Additional services .....	600.00
Supplies .....	364.18
Postage, telephone, express .....	400.00
Miscellaneous .....	450.00
Contingencies .....	88.77
Travel .....	350.00
Trustees Endowment Fund (Life memberships) .....	175.00
A. L. A. Publishing Board, Carnegie Fund income.....	4,500.00
	\$15,207.23

Balance, Union Trust Co., Chicago.....	3,957.57
G. B. Utley, balance, National Bank of the Republic .....	250.00
Due from Publishing Board, 1915 account .....	500.00

Total balance..... \$4,707.51

<i>James L. Whitney Fund</i>	
Principal and interest, Dec. 31, 1914.....	174.55
Interest, Jan. 1st, 1915.....	2.55
Fifth installment, Jan. 20, 1915.....	23.78
Interest, July 1, 1915.....	2.94
Sixth installment, July 19, 1915.....	23.07

\$226.89

Respectfully submitted,

C. B. RODEN, *Treasurer.*

Chicago, Dec. 27, 1915.

FINANCE COMMITTEE

The following report of the Finance Committee was presented by Harrison W. Craver, chairman, and duly accepted:

The finance committee, in accordance with the provisions of the constitution, have considered the probable income of the association for 1916, and submit the following estimate, showing also the estimate for 1915 and the actual result for 1915:

	Estimated 1915	Actual 1915	Estimated 1916
Dues .....	\$8,000.00	\$7,902.97	\$8,300.00
Income Carnegie Fund, 4,300.00 .....	4,300.00	4,500.00	4,300.00
Income Endowment Fd. 375.00 .....	375.00	399.60	375.00
Interest .....	75.00	69.43	70.00
Sales of publications.....	13,000.00	12,967.02	11,000.00
	\$25,750.00	\$25,837.02	\$24,045.00

The committee are prepared to approve appropriations to the amount of \$13,045.00, and also the appropriation to the use of the Publishing Board of the total amount of sales.

The committee has designated Dr. C. W. Andrews to audit the accounts of the treasurer and secretary as assistant treasurer, and Mr. F. O. Poole to audit those of the trustees. Dr. Andrews has examined the accounts referred to him and finds them correct and properly vouched for so far as can be determined before the receipt of the report of the trustees. His final report and that of Mr. Poole will be made part of the formal report of the finance committee to the association at its annual meeting.

THE 1916 BUDGET

The following budget was adopted for the year 1916:

<i>Estimated Income</i>		
Membership dues.....	\$8,300.00	
Income of Endowment Fund.....	375.00	
Income of Carnegie Fund.....	4,300.00	
Interest .....	70.00	
Appropriation from Publishing Board .....	2,500.00	
		\$15,545.00
<i>Estimated Expenses</i>		
Bulletin .....	\$1,500.00	
Conference .....	600.00	
Committees		
Public documents.....	\$10.00	
N. E. A.....	25.00	
Library administration.....	75.00	
Library training.....	25.00	
Bookbuying .....	50.00	
Bookbinding .....	25.00	
Federal and state relations .....	15.00	
Travel .....	50.00	
Work with the blind..	10.00	
Cost of cataloging....	50.00	
Code for classifiers...	15.00	
Publicity .....	100.00	
Work in institutions..	50.00	
Miscellaneous .....	50.00	
		550.00
Salaries:		
Secretary .....	\$3,000.00	
Assistant secretary..	1,300.00	
Stenographer .....	960.00	
		5,260.00
Additional services .....	800.00	
Supplies .....	400.00	
Postage, transportation, phone.	500.00	
Miscellaneous .....	450.00	
Income Carnegie Fund to Publishing Board .....	4,300.00	
Contingencies .....	885.00	
Travel .....	300.00	
		\$15,545.00

On motion of Mr. Ranck it was voted that there be appropriated for the use of the Publishing Board the income of the Carnegie Fund estimated at \$4300 and all proceeds from sales of publications, estimated at \$11,000, excepting the amount of \$2,500 agreed upon by the Publishing Board as its appropriation towards the support of the executive office of the association.

COMMITTEE APPOINTMENTS AND REPORT

The nominating committee of five in accordance with Section 2 to the By-laws of the Constitution was appointed as follows: W. W. Bishop, librarian of University of Michigan; W. R. Watson, chief of Div. of Educational Extension, University of State of New York; Sarah C. N. Bogle, chief of children's department and director of Pittsburgh Carnegie Library Training School for Children's Librarians; E. C. Richardson, librarian of Princeton University; and A. S. Root, librarian of Oberlin College.

The question of the appointment of an advisory committee on expansion in the Decimal Classification which had been laid on the table at the last meeting of the board was taken from the table at the request of numerous members of the association and reconsidered. A communication on the subject was read from Mr. A. Law Voge, of the Mechanics'-Mercantile Library, San Francisco. It was voted that the secretary be instructed to communicate with Mr. Dewey, proprietor of the classification, in regard to the feasibility of such action and as soon as a satisfactory answer be received that the president appoint such a committee. Under date of Jan. 3 Mr. Dewey approved appointment of this committee, writing as follows: "The proposal for an advisory committee on Decimal Classification was submitted to me in advance of the circulars and has my very cordial approval. It would secure in a more systematic way from users the co-operation that we always invite and greatly need. We hope the plan will be carried out." The president will appoint this committee shortly.

A letter was read from Mr. J. C. Dana on the subject of publicity, calling attention to the recommendations in a report of a committee on publicity in 1906 of which he was chairman, stating that no attention had been paid to these recommendations. The report referred to by Mr. Dana was taken up by the board and discussed in detail and the fact brought out that many of the recommendations had been carried out in part. It was voted that to the committee on publicity for 1916, which the president was hereby authorized to appoint, be referred all previous A. L. A. reports on the subject of publicity. It was also voted that the recommendations in the paper of Mr. W. H. Kerr be adopted, namely: that the A. L. A. publicity committee be instructed to study and report a comprehensive publicity plan for the American Library Association, the state library associations and commissions and local libraries. The president appointed

as chairman of the publicity committee Mr. W. H. Kerr, with power to name other members. Mr. Kerr has named other members as follows: Charles H. Compton, Frederick C. Hicks, Samuel H. Ranck, Charles E. Rush, William F. Yust, Joseph L. Wheeler, and Mrs. Elizabeth Claypool Earl. It was voted that \$100 be appropriated to the use of the publicity committee, this amount being drawn from the balance standing in the contingency fund.

The following report was received from the Panama-Pacific Exhibit committee on the ultimate disposition of material, recommending: (1) The return of Library Bureau furniture to the Library Bureau agency in San Francisco. (2) Return to the publishers of expensive technical books loaned by them. (3) The return to libraries sending material such material as they have specifically requested should be returned. (4) That the popular books be donated to the library at Thane, Alaska, in charge of Mrs. Whipple. (5) The gift of such remaining material as may be desired to the Commissioners of the Young Men's Christian Association of China to form an educational exhibit to be shown in the leading cities and educational centers of China. The secretary informed the board that the chairman of the Panama-Pacific exhibit committee had expressed the opinion after being informed that the board had voted to appropriate for the use of the committee the \$365 remaining in the 1915 contingency fund that it would be better for the money to remain in the possession of the treasurer of the A. L. A. and be subject to approved bills of the committee. It was therefore voted that this amount, namely \$365, be brought forward from the 1915 budget for the above specified use and so be not allowed to revert to the general balance but be available for the above express purpose.

It was voted that the president appoint a committee to attend the National Conference on Immigration and Americanization to be held in Philadelphia on Wednesday, Jan. 19, and Thursday, Jan. 20, 1916, and that this committee be requested to report to the Executive Board any recommendations as to the possible activities of libraries in connection with this conference. The following were appointed: Robert P. Bliss, Emma R. Engle, and Mrs. E. N. Delfino.

A report of progress was received from the chairman of the committee on the cost and method of cataloging, Mr. Aksel G. S. Josephson.

The question of the best method of printing the information which the committee on

library administration is to prepare on the subject of library labor saving devices, whether at the expense of the association, or by a subscription from the libraries receiving such material, was considered, and it was voted that a reasonable subscription price for this material be charged to subscribers.

#### PLACE AND DATE OF CONFERENCE

The final subject for consideration by the board was the place and date of the 1916 conference. It was voted that the place of meeting for 1916 be fixed at Asbury Park, N. J., and that the board recommend that the secretary and officers of the association make every effort to find a suitable meeting place in the Middle West for 1917. It was voted that the date of the meeting be fixed for Monday, June 26, to Saturday, July 1.

#### SECOND SESSION

A second meeting of the Executive Board was held at the Hotel La Salle, on Thursday, Dec. 30, with Miss Plummer, Messrs. Brown, Dudgeon, Ranck and Bostwick present.

Matters relating to the Stevens-Ayres Bill discussed by the Council, and referred to the Executive Board (see minutes of the Council, meetings of Dec. 29 and 30, 1915), were the subject of consideration.

On motion of Mr. Dudgeon it was voted that the book-buying committee in co-operation with the committee on federal and state relations be authorized to arrange for a representation of the American Library Association in reference to H. R. No. 13305 and that the expenses incurred be authorized from the association.

The meeting then adjourned.

#### PUBLISHING BOARD

Three members of the board, Messrs. Legler, Bostwick, and Dudgeon, were present at the meeting in the Hotel La Salle, Chicago, Dec. 29.

The report of the treasurer for the year 1915 was read and accepted. The report follows:

#### REPORT OF THE TREASURER—JAN. 1-DEC. 31, 1915

##### Receipts

Checks no. 64 to 75 (vouchers no. 1426 to 1688) .....	\$17,551.20	
Sales of publications.....		\$12,967.02
American Library Association, Carnegie Fund income .....		4,500.00
Interest on bank balance, January to December, 1915.....		4.24

\$18,571.47

*Expenditures*

Checks no. 64 to 75 (vouchers no. 1126 to 1688) .....	\$17,551.20	
Distributed as follows:		
Salaries .....	\$4,600.08	
Publications .....	7,241.44	
Supplies .....	388.07	
Postage and express .....	1,142.50	
Advertising .....	457.75	
Incidentals .....	882.00	
Travel .....	339.36	
A. L. A. .....	2,500.00	17,551.20
Balance, Union Trust Co. ....		1,020.27
G. B. Utley, balance, National Bank of the Republic .....		250.00

Respectfully submitted,

C. B. RODEN, Treasurer.

Chicago, December 27, 1915.

## BUDGET FOR 1916

The following budget was adopted for 1916:

*Estimated Income*

Balance, December 31, 1915....	\$ 1,270.27
Carnegie Endowment Fund, interest .....	4,300.00
Sales of publications .....	11,000.00
Accounts receivable, December 27, 1915 .....	1,340.25
Sale of books—review copies...	900.00

\$18,810.52

*Estimated Expenditures*

		1915
Salaries .....	\$ 4,600.00	\$4,600.00
Printing Booklist and Index...	2,000.00	1,901.81
Periodical cards:		
Printing .....	\$800.00	651.07
Editing .....	150.00	138.05
Clerical .....	50.00	36.60
Advertising .....	500.00	457.75
A. L. A. appropriation, 1916 ...	2,500.00	2,500.00
Express and postage.....	1,000.00	1,142.40
Supplies .....	400.00	388.07
Incidentals .....	700.00	583.54
Travel .....	500.00	339.36
Balance available for printing, publications, etc. ....	5,610.52	4,513.91

\$18,810.52

Miss Massee presented an oral report on the progress and work of the *Booklist*.

The secretary reported that "Buying list of books for small libraries," compiled by Zaidee Brown and revised by Caroline Webster, was out of print and that the New York State Library were unable to supply additional copies, although they could still supply moderate needs in their own state. The secretary was authorized to take steps to secure either a new edition or some other similar work to take its place.

Various matters which came before the Board at its meeting at Haines Falls were reported on by the secretary.

(a) Miss Isom reported that Miss Harriet Wood would be unable to undertake the preparation of a pamphlet on county library work until spring at least.

(b) Mr. Wyer, chairman of the Manual committee, informed the secretary that the

committee had considered including a chapter on library advertising in the Manual and that this question will be reconsidered. The Board were of the opinion that Mr. Rush's proposed handbook on library advertising might take such form as to be suitable as a chapter in the Manual if this met with the approval of the Manual committee.

(c) The Massachusetts Free Library Commission report that they have been delayed in issuing Madam Haffkin-Hamburger's "List of Russian books" but they expect to have it ready within a short time.

(d) The secretary reported that the editor of the periodical cards, Mr. Merrill, and himself had nearly completed the revision of the list of serials and that the list and the terms upon which cards can be supplied would soon be sent out to subscribers.

(e) Mrs. George F. Bowerman has agreed in response to a request of the Board to prepare a list of modern French books. This list to be chiefly books in the class of belles lettres, fiction, etc.

(f) Miss Margaret Mann's "List of subject headings for a juvenile catalog" is now in press and will probably be issued during January.

(g) Mr. W. L. Brown, of Buffalo, informed the secretary in response to the inquiry of the Board that without doubt arrangements can be made for the Publishing Board to handle the sale of a part of the edition of the Buffalo Public Library's "Open shelf catalog," that, however, the catalog will not be issued for some time.

(h) Mr. Mattice and Miss Laws, of the Library of Congress, are proceeding with the preparation of a selected list of detective, ghost and mystery stories with the understanding that if the list meets with the approval of the Board it will be published by it.

(i) Mr. D. C. Buell, of Omaha, who had been invited to prepare a list of books on railways and railway operating at the suggestion of Dr. Bostwick has agreed to prepare such a list and hopes to have it ready in a few weeks.

(j) The secretary reported that the printing of short popular reading lists with a view to their being purchased in bulk by libraries with their respective imprints thereon have been delayed by press of other work, but that four of these lists are now being printed and will be advertised early in January.

(k) Mrs. Ledbetter, of the Cleveland Public Library, recommends to the secretary that the Bohemian list prepared by her be not printed at the present time in view of the impossibility of securing Bohemian books from

abroad and because later the list is liable to require radical changes because of the change in European conditions. The Board agreed.

The secretary reported correspondence with Mr. H. G. T. Cannons, of Finsbury, London, author of "Bibliography of library economy." In reply to inquiry Mr. Cannons stated that appreciation of the Bibliography among English librarians did not seem to be such as to warrant the preparation of a supplement, upon which the secretary inquired whether Mr. Cannons would look with favor upon preparing such a supplement for issuance by the A. L. A. Publishing Board provided mutually satisfactory arrangements could be made. Mr. Cannons replied that he would look with favor upon such a proposal and doubtless would be able to prepare manuscript, if desired, some time during the course of the year 1916. The Board was inclined to look with favor upon the subject and instructed the secretary to negotiate further with Mr. Cannons.

G. B. UTLEY, *Secretary.*

#### SCHOOL LIBRARIES SECTION

The School Libraries Section met Friday afternoon and evening, Dec. 31, 1915, at Hotel La Salle, Chicago. The opening hour, for general reports and discussion, was presided over by Miss Martha Wilson, in the absence of Miss Mary E. Hall, chairman of the section. About sixty were present for the afternoon.

#### GENERAL REPORTS

The treasurer's report showed \$2.75 in the section treasury as a result of voluntary contributions of 25 cents per member at Berkeley. Three more contributions were received at Chicago, making a total of \$3.50.

A greeting and message from Miss Hall was read by Miss Rachel Baldwin, of Brooklyn. Miss Hall recounted the rapid growth of interest and activity in school libraries, evidenced by the recent successful meetings and exhibits in California, Illinois, Ohio, New Jersey, New York, New England and the South. Concerted effort was urged for the appointment of trained supervisors of school libraries in all states. A telegram of greeting and appreciation to Miss Hall was voted and sent.

Miss Martha Wilson reported active work in progress on the list of books for school libraries, to be published by the United States Bureau of Education.

The new department of "School Library News" in the *Wilson Bulletin*, published by

The H. W. Wilson Company, was explained by Mr. Willis Kerr, who, with Miss Hall, is editing the department.

A permanent school library exhibit, to be kept at A. L. A. headquarters for loan as needed, was suggested. Ordered that a committee of three, including the chairman of the section, be appointed to prepare such an exhibit.

The report of F. K. Walter, chairman of the committee on professional training of school librarians, was presented, explaining the purpose of the committee to investigate how large a demand exists for trained school librarians. The trend of discussion by several library school directors and representatives of various states present, was that the demand for trained librarians for schools is increasing, that sometimes it is difficult to find suitable candidates, and that the library schools are beginning to offer special work in this field.

A discussion of the function of the A. L. A. committee on co-operation with the National Education Association called forth the explanation from Mr. Kerr, chairman of the committee, that the committee in no way duplicates the work of the School Libraries Section and that there is a distinct advantage in having an official committee representing the American Library Association as a whole to co-operate with the N. E. A. and other educational bodies and officers.

Miss Irene Warren, president of the N. E. A. Library Department, outlined the plans for the meeting and exhibit at New York, in July, 1916.

#### NORMAL AND ELEMENTARY SCHOOLS

Miss Irene Warren presided over this part of the program.

The comparative merits of supervision of school libraries by state library commissions and by state departments of education were discussed by Miss Ruth Woolman, of the Missouri Library Commission, Mr. Kerr and Mr. O. S. Rice, of Wisconsin.

The lack of adequate textbooks for required courses in children's literature was presented by Miss Mary B. Day, of the State Normal School at Carbondale, Illinois.

The importance of a thoroughly equipped children's library department in all normal school libraries was described by Mr. Kerr and Miss Effie Power.

Miss Grace Rose, of Davenport, Iowa, told of the plan for certification of the reading and library knowledge of teachers who have not had normal school training.

Miss Helene Louise Dickey, of Chicago Normal College, read a comprehensive paper on "The need of library facilities in city training schools."

The work of the N. E. A. Library Department committee on normal school libraries was discussed, the opinion being that effort should now be made for more generally adequate funds and staff for normal school libraries. W. H. KERR, *Secretary pro tem.*

#### HIGH SCHOOL LIBRARIANS' ROUND TABLE

The High School librarians, with about thirty in attendance, met in an informal round table Friday morning, Dec. 31. In the absence of Miss Mary Hall, Miss Florence Hopkins, of Detroit Central High School, acted as chairman. Miss Fanny Ball, of Central High School, Grand Rapids, Mich., was secretary.

Various topics in regard to the management of high school libraries were discussed, such as courses in cultural reading in informal groups, and lectures, under the organization of the library, which should be open to pupils and parents together, on such subjects as music, biography, and civic life. The possibility of library work as a vocation was brought up, with the suggestion that courses of study in the high school be outlined for the guidance of pupils, as is the case in other vocational subjects. The need of training pupils in the use of the library and of reference books was also thoroughly talked over.

Miss Warren, formerly of the School of Education, Chicago University, spoke of the necessity of having librarians in high schools who had the training of the teacher as well as that of the librarian, and maintained also that the library should be worked up as a separate department of the school. The general tone of the meeting was to the effect that the high school library has proved its right to claim an integral place in the regular school system.

Mr. Rice, of the Department of Education, Wisconsin, offered the following resolution, which was adopted:

"We recommend that the necessary equipment be provided in high schools for instruction in the use of books and libraries, and that such instruction be put upon the same basis, by the various states, as other required high school subjects."

The discussion of the resolution clearly indicated that there was no intention of introducing technical training into the high school, but rather to give in some dozen or twenty lessons the instruction needed to enable pupils to make intelligent use of the library.

FANNY D. BALL, *Secretary.*

#### ROUND TABLE OF UNIVERSITY LIBRARIANS

The University Librarians met in the La Salle Hotel for both morning and afternoon sessions on Friday, December 31, 1915. Owing to the absence of Mr. Severance and the other members of the Executive Committee, Dr. Walter Lichtenstein, librarian of Northwestern University, was elected chairman pro tem of the meeting. Mr. W. W. Bishop, of the library of the University of Michigan, gave an interesting account of the plans for an addition to the present library building of the University of Michigan. The rest of the morning was taken up by a detailed report by Mr. J. C. M. Hanson, associate director of the University of Chicago Libraries, on the problems connected with departmental libraries. Mr. Hanson had made a careful investigation of this question, and the matter aroused so much interest that the discussion was continued in the afternoon. Mr. Hanson was requested to continue his investigations, and the hope was expressed that a part of this report might some day be printed. The rest of the afternoon was chiefly taken up with a discussion concerning the methods of teaching freshmen the use of the library. It was voted to appoint a committee to investigate this question.

WALTER LICHTENSTEIN,  
*Chairman pro tem.*

#### ROUND TABLE OF SMALL COLLEGE LIBRARIANS

The meeting of mid-winter conference of College Librarians at the Hotel La Salle, Chicago, December 31, 1915, was conducted as a round table by A. S. Root. The meeting opened at 9:30 a.m., beginning with the subject "Academic rank of college librarians and members of the staff." The feeling was that the librarian should have pursued enough graduate work to accord himself to a place ranking with that of a college professor. It is the usual thing to find that the college librarians have a place in faculty meetings and are members of various committees.

The second topic "Work of the librarian and his opportunity for study" was led by A. S. Root. This topic brought out the facts that a librarian cannot obtain rank with a college professor, or cannot prove that his profession is scholarly without showing that he is an authority on certain subjects. The rank of the library profession can only be raised by the work of the individual librarian. Mr. Skarstedt, of Augustana College, made a point of not labelling everyone connected with a library as a librarian. He said he found it to be the case in many communities to call

anyone librarian who had two hands and who could deliver books over the counter. He said, we must be jealous of the title Librarian if it is to mean anything. Concerning the study of a librarian, Mr. Root spoke of his own personal experience. He said that when he began his own library career he found that he knew little of the history of books and began an exhaustive study, reading first books written in the English language. References led him to discussions by German writers, later he found that he had to study Japanese, and still later Dutch, to get a complete knowledge of the subject. He said that from the very beginning it had been his habit to spend a regular amount of time on this work. Mr. Dickerson in speaking of his experience said that he found that the best way for him to pursue an extensive study was to spend an hour every two weeks in an adjacent university in a class discussing the subject he was interested in. Miss Margaret Reynolds, of Milwaukee-Downer, said she was interested in Bible study, modern poetry, and in the last word on pageants. Others spoke of more or less desultory reading or of not reading at all.

The third discussion, "Best division of work in library with staff of two to five members," was led by Mr. Dickerson who believed in a division of work and in placing responsibility on the various assistants. He said that assistants were glad to have responsibility and their work was the better for it. He thought a desk assistant should have some piece of work not relating to desk work to take at least one hour per day as keeping up to date periodicals and continuations. He said that he thought every cataloger should have some desk work. Several hours a week possibly at the close of the day or an afternoon a week. He said he expected his student assistants to put every minute of their time on library work while on duty and that he paid from twenty to twenty-five cents an hour for such work. He also said, that he believed in shifts of two hours. Miss Reynolds here raised the question as to whether student assistants should be given credit for library work. She said the question had been brought up at Milwaukee-Downer College, two students having come there from the Wisconsin State Library School. The consensus of opinion was that credit should not be given to labelling, etc., possibly for higher forms of library work. This might involve the librarian into giving too much time in preparing instruction.

The fourth paper, "New requirements in

reference work," by G. F. Strong, was the one given at the Ohio Library Association meeting this fall. The meeting was then adjourned until the afternoon.

The first topic in the afternoon "The best thing in my library" was led by Miss Margaret Reynolds. The most significant thing in the library at Milwaukee-Downer is the library "atmosphere." Miss Reynolds said, that the good decorum of the college students at Milwaukee-Downer is due to the honor system, two students having charge of the library discipline. She said, that a reprimand was sufficient to restore order and that no student had to lose her library privileges. Some librarians spoke of their new book table as one of their best features. Mr. Root said, that the best thing in his library was that the students came and came in such numbers. Mr. Dickerson spoke of the work of the library in rejuvenating literary societies. The programs and literary activities had fallen below par and the library was now assisting these societies in planning their programs and getting bibliographies for the different subjects.

The second subject "Introducing the public to the library" was introduced by Miss Marie Hammond. She spoke of what Miami has been doing in the way of instruction in the use of the library. She spoke of lectures to freshmen, the regular semester course on Library Economy, of help in making bibliographies, and of work with adjacent county normal schools. Miss Grace E. Herrick of the Western College for Women spoke of lectures to students and faculty and insisted on advisability of having instruction in high schools so that students would come prepared. She spoke of making lists of the most pertinent articles in the new periodicals, of making extensive bibliographies for certain faculty members, and of informing faculty members of current articles relating to their subject not published in their own department magazines. Mr. Root spoke of his bibliography courses.

This closed the program of the day. At the business meeting which followed a committee of three composed of Mr. S. J. Brandenburg, Miss Margaret Reynolds and Miss Grace E. Herrick was appointed to have charge of the meeting in 1916.

MARIE HAMMOND.

## Library Organizations

---

### LEAGUE OF LIBRARY COMMISSIONS

The thirteenth annual meeting of the League of Library Commissions was held at

the Hotel La Salle, Chicago, Dec. 30-31, 1915. There were present one or more representatives from the library commissions or extension departments of Alabama, Georgia, Illinois, Indiana, Iowa, Kentucky, Michigan, Minnesota, Missouri, Nebraska, New York, North Dakota, South Dakota and Wisconsin, and the attendance at each session, including many other library workers, averaged about 75.

The first session was held in the Rookwood room Thursday afternoon, with the president, Miss Fannie C. Rawson, Kentucky, in the chair. In the absence of the secretary, Miss Clara F. Baldwin, Minnesota, was appointed secretary *pro tem*. The minutes of the annual meeting at Berkeley were approved as printed in the *A. L. A. Bulletin* for September, 1915. The president announced that, according to changes in the constitution adopted at the Berkeley meeting, the midwinter meeting has now become the annual meeting, and the first and second vice-presidents, secretary-treasurer and one member of the executive board were to be elected at the present meeting. She then appointed as a nominating committee Miss Robinson, Miss Templeton and Mr. Dudgeon.

Miss Robinson read a paper on "Progress of rural library extension work in the United States and good laws for county and township extension," confining the discussion to a résumé of existing laws and their operation and the essentials of a good working county library law. She called upon representatives of states having a county law to give (1) a brief outline of the law, stating whether it is the original law or amended, and how long it has been in operation; (2) whether or not it is satisfactory or what changes would seem advisable; (3) the number of libraries operating under the law and how long they have done so.

After brief summaries of their respective county laws by those present, and a review of the laws of other states by Miss Robinson, she submitted for discussion the following:

#### SUGGESTED PROVISION FOR A GOOD COUNTY LAW

*Support.* Tax levy adequate for maintenance—exempting towns with free public libraries.

*Government.* Library board (5 or 7) selected from residents of the county by county officers—for a stated term (3 to 5 years) or a contract with an established library.

*Power of Library Board.* Should be clearly defined.

*Initiative.* By county (or township) officers with or without a petition signed by a majority of resident taxpayers.

*Location.* County seat or elsewhere.

*Building.* By tax or gift. Erection in hands of library board.

*Period of existence.* Terminated only by majority vote of taxpayers, and definite terms by contract.

*Extent of service.* Whole or part of a county, another county—excepting communities with public libraries established.

*Method of service.* Direct loan, branches, stations, schools, libraries, book wagons, etc.

*Librarian.* Qualifications required open to discussion, but appointment and removal should rest with library board, and regular reports required to library board and state library commission.

*Operation.* Even with best possible law the help of commissions is needed to give information, arouse interest and promote county library progress.

Mr. Henry N. Sanborn, Indiana, read a paper on "Commission helps in book selection." There seem to be but two ways in which a commission can aid in book selection; directly by supervision or actual choice for the individual library, and indirectly by distribution of lists and general advice, or by instruction.

The direct methods are so individual that they cannot be profitably discussed. The great advantage of direct aid is, of course, that it gives the state some control of the book-selection, and this is obviously important in the case of fiction. If commissions could double the money spent by the library for fiction on condition that only a certain per cent of the library's book fund should be spent for fiction and that the commission should approve the list of all the fiction bought, we might do much to raise the standard.

The indirect ways of helping in book selection are more numerous. The commission bulletins, aside from any book lists they contain, are of first importance—a paragraph emphasizing some principle of book selection, such articles as Miss Robinson's "Stretching a small book fund," outlines for study, such as the apprentice course in the Wisconsin *Bulletin*, or outlines for library institutes published in *New York Libraries*, cannot fail of good results. The commission may also serve in a negative way by giving warnings against inferior sets of books and series. The district meeting or library institute and the summer course are also most effective, through the close touch established with small and even larger libraries. The students naturally turn to the commission for help in many matters, and almost every mail brings an inquiry about this book or that set. Distribution of special lists is another useful aid. In this connection, Mr. Sanborn deplored the unnecessary duplication of lists which has prevailed and urged that as a *League of Library Commissions* more active co-operation should be accomplished.

He then reviewed the development of the *A. L. A. Booklist* and compared it in scope and character with the special book lists recently undertaken by several commissions. To ascertain whether the *Booklist* is fulfilling its purpose as an aid to small libraries a questionnaire was sent to Indiana libraries

and a tabulation of replies had been made. After a frank discussion of the criticisms the conclusion was reached that the *Booklist* is the best solution of the commission problem of furnishing help in book-selection; that while not perfect, it is admirable, satisfying the needs of the small library better than any other list and that it has been constantly growing and improving since its start.

As a League of Library Commissions, we, if true to our name, must stand for co-operation. At the inception of the *Booklist* we pledged our support, with the tacit understanding that any complaints should be made known to the Publishing Board, giving them an opportunity to make recommended changes. Such recommendations have always been cordially received and often adopted, and the Publishing Board and editor will welcome criticism, if the *Booklist* is not meeting our needs.

Miss May Masee, editor of the *Booklist*, followed with a clear presentation of the method of preparing the *Booklist*. The *Publisher's Weekly* and publishers' lists are checked. Titles under consideration are printed on galley sheets, which are sent to 53 large libraries and library commissions. These are checked + or — and returned. These titles are also listed on cards, on which the votes as received are entered. The chief English and American reviews, and 100 special periodicals are indexed and abstracts of reviews filed with the cards, also the notes from libraries. There is a corps of 50 special readers.

In the choice of fiction it is obvious that no two persons can agree. There are perhaps a half a dozen books in a month which we would all agree upon, but the rest are mediocre and it is a matter of selection.

The note writing is done by three people, the exact phrases from library notes are used, and quotations from reviews whenever possible.

Miss Masee made a forceful plea for co-operation, since the *Booklist* is the only co-operative work of the A. L. A. as a whole, and as such our most important work. It is furthermore the organ of communication between publishers and libraries, as publishers are watching to see if their own books are included and also the type of books recommended.

In the discussion that followed Miss Ahern gave a humorous account of a library staff meeting, where new books were discussed, which bore out the contention that no two people could agree in the selection of fiction.

Mr. Dudgeon explained that the Wisconsin

Commission is still sending the *Booklist* to every library and urging its use, and that their own list was issued only to supplement the *Booklist*.

At the second session held in the ballroom, Hotel La Salle, Friday morning, Mr. Dudgeon opened the discussion on the United States Bureau of Education reading courses. He stated that Wisconsin had its own reading circle, which the commission had endorsed and for which it was supplying books. They were, however, glad to co-operate with the Bureau of Education in furnishing books required as far as their resources would permit.

Reports from several states showed that considerable interest was manifested in the lists and that the commissions were willing to supply the books and recommend their use. Miss Wilson, of Minnesota, urged that there was a great opportunity for work with teachers in small towns who had considerable leisure and few opportunities for diversion.

The reports of committees were then called for.

No formal reports were made by either the committee on aid to new commissions or the publication committee, but Mr. Watson stated that the former committee had been of some assistance to states securing new legislation and that the publications committee had plans under way for providing material which will give a clear statement of method of procedure in establishing commissions and what can be accomplished with a definite sum of money.

Miss Borresen presented the report of the committee on foreign books for traveling and public libraries. The committee has made an effort to secure printed or type-written lists already compiled by public libraries and library commissions, to ascertain the names of compilers of these lists, and if possible formulate some plan for standardizing them and providing English annotations so that they would be useful to the small library. In response to a circular letter sent to 34 public libraries and 10 library commissions, a considerable amount of material had been received, including lists of books and addresses of compilers. A digest of the replies was appended to the report. Correspondence with Henry G. Leach, secretary of the American-Scandinavian Foundation, would indicate that assistance in Scandinavian lists may be hoped for from that source. The present condition of the foreign book market makes the printing of lists impracticable at the present time, but the material collected by the committee was submitted as a basis for future work.

In the discussion of the report, Mr. Dudgeon expressed his opinion that printed

lists were useless and that the urgent need was an authority who would be able to furnish lists of additional titles needed to balance collections.

Mr. Watson offered a resolution urging the translation into foreign languages of books relating to the history, customs, government and institutions of this country, which are designed to meet the needs of immigrants who are without a knowledge of the English language.

Mr. J. I. Wyer, jr., presented his correspondence with the Carnegie Corporation of New York relating to the 10 per cent requirement for maintenance of library buildings. While it was not deemed wise to raise the requirement, the Carnegie Corporation is glad to emphasize the fact that 10 per cent is considered merely as a minimum, and has printed the correspondence with the League as a separate leaflet to be mailed as an enclosure with each promise of a library building hereafter made by the corporation, and to all libraries which have heretofore received such buildings.

A talk on "Commission aims and achievements" was given by J. I. Wyer, jr. Heretofore library commission aims have been merely extensive. The effort has been for more libraries, more books, to reach more people. But hereafter commission aims will be increasingly less extensive and more intensive. This does not mean that the pioneer work is all done. But enough of the original pioneer work has been finished in some states not only to suggest a revision of earlier aims and methods, but to compel us to differentiate more and more sharply between valid methods in the different states.

These future commission aims must be more different in different parts of the country than is usually allowed or appreciated. Our major aims are of course similar in the large, but in the ways through which these aims are attained there is bound to be wide variation, and perhaps there ought to be more variation than there actually is.

The future aim of library commissions will be (1) the unification of agencies for educational and library extension. A recent instance is the establishment of a Board of Regents in North Dakota to supervise all the higher educational institutions of the state.

(2) A more active and specific effort to increase tax support for local libraries, through an active propaganda, which is a logical sequence to the earlier one for free public libraries.

(3) A more thorough and effective organi-

zation of libraries, including the adherence to legal formalities in organization, the requirement of legal reports and observing legal formalities if a library is closed. This thorough and effective organization is often hindered or entirely prevented for lack of power.

(4) A more effective and thorough reaching out and getting together of library workers through institutes. The State Library Association should be associated with the Commission in such work.

The achievements of library commissions have been detached and in the aggregate considerable and impressive, and yet relatively and considered in connection with what yet calls to be done, slight. There are a few book wagons, a few thousand traveling libraries, but we have barely scratched the ground and are not even thoroughly agreed as to methods.

One impressive and gratifying presentation of commission achievements is shown by the statistics of libraries in commission *vs.* non-commission states. Library commissions have steadily advanced in public favor and appreciation, appropriations have steadily increased, libraries, buildings, books and traveling libraries have multiplied prodigiously through commission efforts.

Mr. Dudgeon, as chairman of a special committee on the Stevens bill, submitted the following resolution, which was adopted:

*Whereas*, federal price fixing legislation is pending which may result in decreasing the number of books which can be placed at the disposal of the public through the library, thus seriously crippling an important educational agency.

*And whereas*, we believe that clear reasons exist for placing books in a class apart from other merchandise and for distinguishing between libraries which purchase large quantities of books in wholesale quantities on the one hand and the individual who purchases a single book on the other.

*Resolved*, that we protest against such legislation in its present form as unjust to the patrons of libraries and injurious to the educational welfare of the public and calling for an increased burden of taxation upon every community in the country supporting a public library or purchasing books for use in its schools.

A motion presented by the committee was also adopted:—That a committee of three be appointed by the chair to arrange a comprehensive method of fully informing the commissions, the libraries and the departments of education of the respective states as to pending federal price fixing legislation, making possible a protest from such libraries and commissions against such legislation as far as it affects the price of books to libraries; that such committee be authorized to arrange for representation at hearings on such legislation and to incur expenses chargeable to the League of not to exceed \$100.

Upon recommendation of the nominating committee the following officers were elected for the coming year:—First vice-president, Miss Sarah B. Askew, New Jersey; second vice-president, Mrs. A. J. Barkley, Iowa; secretary-treasurer, Mr. Henry N. Sanborn, Indiana; member of executive board, Miss Anna May Price, Illinois.

The president announced standing committees as follows:—*Publications*—Mr. Asa Wynkoop, New York; Mr. Henry N. Sanborn, Indiana; Miss Clara F. Baldwin, Minnesota. *Committee on Aid to New Commissions*—Mr. W. R. Watson, New York; Miss Julia Robinson, Iowa; Mrs. Minnie C. Budlong, North Dakota. *Committee on Books in Foreign Languages for Traveling and Public Libraries*—Miss J. Maud Campbell, Massachusetts; Miss Anna A. MacDonald, Pennsylvania; Mr. M. S. Dudgeon, Wisconsin, and Miss Lilly M. E. Borresen, La Crosse, Wis.

CLARA F. BALDWIN, *Acting Secretary*.

#### UTAH LIBRARY ASSOCIATION

The Utah Library Association held its fourth annual meeting in Salt Lake City, Dec. 21-22, 1915. The Tuesday afternoon and evening meetings were joint sessions with the Utah Educational Association.

On Tuesday afternoon a symposium, "Reading for the child," was conducted in Barrett Hall, at which the following topics were considered. In discussing "The book and the individual child," J. Challen Smith, principal of the Sumner School, Salt Lake City, brought out the importance not only of having books in the grades, but also of having the book suited to the individual child. Many children may be doing good upper-grade school work who have come from homes having few books, and who have not had general reading advantages from school or library to enable them to read books chosen by grade. Such children should still have the foundation of their reading and later education established by being led through lower grade books, till able to read books suited to their grade in school. He also emphasized the importance of placing books for general reading through the grades of the public schools. In her discussion of this topic, Miss Rachel Edwards, teacher of the eighth grade in the same school, showed how developing the reading habit in the child depended largely on the way reading was taught in the public schools, and told how children coming into her grade without the habit were led to read by giving them lower grade books and asked to read them in a short time. "A book to a child through the grades of the public schools" was advocated by Supt.

L. E. Eggertsen, of the Provo schools, who told the wonderful effect of placing one book to a child down to the third grade of the Provo schools, and said that the library board had now given the order for books to be placed through the first three grades. Principal T. J. Worlton, of the Poplar Grove school, one of the three schools of Salt Lake City to have the books from the fourth grade through the eighth, gave some very enlightening statistics, based on what had been accomplished through his school, of what could be done for the children if books were put in all the grades of the Salt Lake schools. He showed also, through tests given in his school, how rapidly of reading and getting the thought go together, and brought out the idea that good readers develop good thinkers. In the absence of Supt. J. M. Mills, of the Ogden schools, Miss Downey told how the city commission had given the Public Library an additional thousand dollars this year to put books through the eighth and sixth grades of the Ogden schools, and said the plan was to work systematically from year to year till they had books for all the grades. Miss Jennie Crabbe, teacher of the sixth grade, Whittier School, Salt Lake, discussed "The child's general reading with the study of United States history," developing in a charming way the fine literature to which the child may be led through his study of United States history. "The schoolhouse as a branch of the public library" was made a thing "devoutly to be wished" by Principal D. R. Coombs, of the Riverside School, Salt Lake. He was followed by Miss M. June Bierce, principal of the Mound Fort school, Ogden, who told how successfully such a branch of the public library had developed in her school as a result of co-operation between the school and the library. Supt. C. A. Johnson, of the Grand county schools, could not be present, so Miss Downey told about "Placing books throughout the grades of the county schools" of Grand county, which is the first county in the state to do this as a whole. She spoke of the two great objects of the state library work: to have a tax-supported public library in every community, and book to a child suited to his grade in every schoolroom in Utah, and expressed the hope that every county in the state would soon follow the example of Grand. Principal G. A. Weggeland, of the Garfield schools, outlined the methods he was using for raising money for a school library, and told of the interest the parents and children of his school were taking in the movement. The need of teaching the child the care of books in the grades was shown to be the duty

of every teacher by Miss Emma J. Mitchell, teacher in the Junior High School, Salt Lake. Through being taught the proper care of books, she led the child to care of person and public interests, and finally to be a useful citizen. The desirability of "Turning over the fifteen-cent fund provided by law to the public library for purchase of children's books" was discussed by Supt. E. T. Reid, of Manti, where the public schools and library are located on the same grounds, making it convenient for the children to come directly from the schools to the library. Dr. E. G. Gowans, state superintendent of public instruction, spoke on the "Legality of spending the fifteen-cent fund," stating that the old law had been repealed by the last legislature merely to be combined with another law to go into effect January 1, 1916, and expressed the hope that the board of education of every county would see that the law was enforced.

On Tuesday evening, in the Assembly Hall, was held a joint meeting of the Utah Library Association and Utah Educational Association, which was a session of "special messages." Supt. Orson Ryan, of the Jordan District, ably showed how "The new athletics" developed a strong body to enable the mind to do its most efficient work, and emphasized the fact that a certain amount of healthful play is essential to continued good work. Miss Mary E. Downey gave an address on "The live library." Presupposing good building, equipment, organization and administration, she gave the qualities necessary to the board and librarian to create a live library. She then outlined the essentials of registration, circulation, and the use of various departments of a library which show that it is rendering first-class service and ended by giving a constructive criticism of things needed to be done to make Utah truly alive as a library state. Dr. E. G. Gowans, through "The citizen and the school," made a strong appeal to keep military drill out of the public schools. He told how athletics and patriotism should be taught in other ways to develop good citizens. Dr. Gowans' address was heartily approved by Prof. Elwood P. Cubberley, of Leland Stanford University, who, under the subject, "The new patriotism," discussed the resolutions of the N. E. A. relating to military training in the public schools.

Wednesday morning the librarians met at the Packard Library. The president of the association, Mr. S. P. Eggertsen, trustee of Provo Public Library, presided. In the opening address he gave reminiscences of early library days in Utah, and showed how things were gradually progressing. Miss Mary E.

Downey, library secretary and organizer, gave a survey of present conditions over the state, dwelling especially on the things accomplished in the last year. Miss Esther Nelson, librarian, University of Utah, told "What the small library can do to prepare the high school pupil for college." She illustrated how the student in high school might be taught the care of books, given a knowledge of reference work, and shown how to use a library so that on coming to the university and college he need lose no time in becoming acquainted with the library. Miss Johanna Sprague, librarian of the Packard Library, gave a résumé of "The 1915 meeting of the American Library Association," and named some of the advantages which the individual library gains from the A. L. A. A. C. Matheson, ex-superintendent of public instruction, followed informally with encouraging words to the librarians and spoke of the great service which the library movement was rendering the state. Miss Hester Bonham, librarian of the Provo Library, in a paper called "Revolution of the Provo Public Library," showed how, with the help of the state library secretary and organizer, the Provo Library had been practically made over and doubled its service in the last year. Miss Grace Harris, librarian of the Ogden Public Library, discussed "Making a picture collection." She gave sources of obtaining material, methods of mounting and filing, and subject headings, and illustrated the various ways of using pictures.

The business meeting followed. After voting to send a fee for affiliation with the American Library Association, the nominating committee reported the following officers, who were elected for the ensuing year: President, Howard R. Driggs; first vice-president, Mrs. Annie L. Gillespie; second vice-president, Elizabeth Smith; secretary and treasurer, Grace Harris; members of the Executive Board, Esther Nelson and Johanna Sprague. It was decided to invite the Idaho and Wyoming Library Associations to a tri-state meeting in Salt Lake some time in the spring. The meeting adjourned to a delightful luncheon at Hotel Newhouse.

MARY E. DOWNEY.

#### IDAHO LIBRARY ASSOCIATION

The Boise *News* of Dec. 30 contained an extended report of the first annual meeting of the Idaho Library Association held in that city Dec. 29. There were in attendance representative librarians from a number of the leading cities of the state, the meeting being called by Miss Margaret Roberts, state traveling librarian. All of the librarians present

gave personal reports on their work and the activity in their particular section along library lines.

The address of welcome was given by Joseph H. Peterson, attorney general, president of the State Library Commission. Dr. E. O. Sisson, commissioner of education, delivered an interesting address on the subject, "The place of the library in the educational work of the state." Mrs. Melvin, formerly of Shoshone, now of Boise, discussed the subject, "Benefits to be derived from the State Library."

Miss Roberts discussed the work of the State Library Commission. She surprised her hearers by stating that the traveling library now has 18,000 volumes and in the past year had 200 sets of traveling libraries in circulation in Idaho, which reached every village and hamlet, no matter how isolated. The demand, she said, is so great for the libraries that it is difficult to provide them to all. She also stated that she had made arrangements whereby any responsible citizen of the state can secure any book included in the catalog by paying the postage each way, with the privilege of keeping the book two weeks. The catalog has been issued in pamphlet form and can be secured by writing to the librarian.

Among the greetings forwarded to the association was one from Miss Mary Downey, librarian, secretary and organizer for Utah. Plans are being formulated by Miss Downey for a joint meeting in Utah in April or May, to include the states of Montana, Idaho, Wyoming and Utah.

The day's session was followed by a reception held in the state traveling library room.

The following officers were elected: President, Miss Gretchen Smith, Idaho State Technical Institute, Pocatello; vice-president, Mrs. Mary I. Breigleb, librarian, Mountain Home Library; secretary, Snowden Reed, assistant librarian, Idaho traveling library, Boise; treasurer, Miss Lalla Bedford, librarian Carnegie Library, Caldwell. The place for next convention to be decided later.

#### CHICAGO LIBRARY CLUB

The Chicago Library Club entertained the librarians who were in the city for the mid-winter meetings at the Hotel La Salle on the evening of Dec. 30. A social hour was followed by a program of Norwegian readings by Mrs. Borgny Hammer and songs by Mr. Rolf Hammer. A large company was present to enjoy the entertainment and the refreshments and opportunity for conversation

which followed. Miss Pearl I. Field, chairman of the social committee, made the arrangements for the evening.

A. H. SHEARER, *Secretary.*

#### NEW YORK LIBRARY CLUB

The January meeting of the New York Library Club was held in the John Wanamaker auditorium on the afternoon of January 13, 1916, President Jenkins in the chair. Four hundred members and guests were present. At the business meeting, 80 new members were added to the club. On motion of Mr. Spaulding, a vote of thanks was extended Mr. Wanamaker for the use of the auditorium. The unflinching courtesy of employes and the various arrangements made to make the meeting a success, were subjects of much pleasant comment.

The address of the meeting was given by Dr. Otto Kinkeldey, chief of the music division, New York Public Library, the subject being "Music and the library." Practical illustrations were furnished by Dr. Kinkeldey, Miss Emily Gresser, and Mr. Alexander Russell. Many of those present had read with interest Dr. Kinkeldey's contributions to the music number of the LIBRARY JOURNAL last August, and were especially interested in his paper. The illustrations both vocal and instrumental were thoroughly enjoyed and most instructive. At the close of a delightful hour, on motion made by Miss Theresa Hitchler, by a rising vote, the club manifested its appreciation of the time and thought which Dr. Kinkeldey had put into the preparation of the program. The thanks of the club were extended to him, to Miss Gresser, and Mr. Russell. The meeting then adjourned, and an informal reception was held in the House Palatial.

The next meeting will be held in the Russell Sage Foundation building, Mar. 9, at 8 p.m., with Kate Douglas Wiggin as speaker. This will be, in a way, the first time this beautiful building has been opened for a public gathering, and members of the club may congratulate themselves on the opportunity to enjoy the privilege.

ELEANOR H. FRICK, *Secretary.*

#### ATLANTIC CITY MEETING

The twentieth annual meeting of the Pennsylvania Library Club and the New Jersey Library Association will be held at Atlantic City, March 3 and 4.

There will be three sessions at the Hotel Chelsea as follows:

Friday, March 3, 8.30 p. m., under the direction of the Pennsylvania Library Club.

Saturday, March 4, 11 a. m., under the direction of the New Jersey Library Association.

Saturday, March 4, 8.30 p. m., a general session.

A special meeting of the New Jersey Library Association will be held on Friday, March 3, 3 p. m., as follows:

Chairman, Miss Margaret A. McVety, chief of lending department, Newark Public Library, president New Jersey Library Association.

"Twenty-five years of the New Jersey Library Association," Dr. Frank P. Hill, librarian, Public Library, Brooklyn, N. Y.

"How to use fiction as reference material," Miss Maud McClelland, New York Public Library, New York City.

"The small library helping the teacher with her geography and history lesson," Miss Marion G. Clark, head of history department, State Normal School, Newark, N. J.

"Why continue the fines system?" Miss Agnes Miller, librarian, Public Library, Princeton, N. J.

The first session of the joint program, under the direction of the Pennsylvania Library Club will be as follows:

Chairman, Frederick N. Morton, librarian United Gas Improvement Co., Philadelphia, Pa., president Pennsylvania Library Club.

"The connection between books and music," Constantin Von Sternberg, president, Sternberg School of Music, Inc.

"Early American children's books" (illustrated by lantern slides), A. S. W. Rosenbach, Ph.D., of the Rosenbach Company, Philadelphia.

The program of the second and third sessions will be announced later.

The rates at the Hotel Chelsea will be as follows:

One person in a room (without bath)...	\$3.50 per day
Two persons in a room (without bath)	
each .....	3.00 per day
One person in a room (with bath)....	4.50 per day
Two persons in a room (with bath)...	4.00 per-day

Persons desiring to obtain special rates for a week or longer are requested to correspond with the proprietor.

Members of other library clubs and friends in adjacent states are cordially invited to be present and to take part in the meeting.

JEAN E. GRAFFEN,

*Secretary Pennsylvania Library Club.*

#### AMERICAN LIBRARY INSTITUTE

There will be two sessions of the American Library Institute at Atlantic City, March 3-4. one of which will be devoted to papers on various aspects of research and teaching, exhibition, and literature of library science, and the second to a plan of co-operation among learned libraries. The provisional program contains the names of Messrs. Dana, Hill, Root, Richardson, Lichtenstein, and Andrews, and Miss Isom.

The institute is being reorganized somewhat on the line of a learned society like the American Historical Association, as distinguished from a professional association. This meeting is intended to discuss the field for such an association, and it is expected that the president and secretary of the American Library Association will speak also on the relation of the two associations.

## Library Schools

### NEW YORK STATE LIBRARY SCHOOL

Miss Caroline M. Hewins has sent, as a Christmas gift to the school's collection of juvenile literature, sixteen volumes of older American children's books, among them several early issues of the Rollo books.

A notable addition to the book plate collection has been made by W. S. Biscoe, who has presented about 1500 plates, most of them from the celebrated Blackwell collection. Mr. Biscoe's gift also included 36 sale catalogs and the scarce E. D. French memorial volume by Ira H. Brainerd. In the gift are 392 early American plates, 76 by E. D. French, 20 by J. W. Spenceley, 22 by W. E. Fisher, and many others by well-known American designers. The school collection now includes 100 of the 299 plates designed by E. D. French. It is of interest that his first listed plate was designed for Miss Helen E. Brainerd, his sister-in-law and a member of the class of 1890 of the New York State Library School. At the suggestion of President Finley it is proposed to put special emphasis on book plates of residents of New York State. Contributions of this sort will be welcomed by Miss Florence Woodworth, custodian of the collection, who is devoting much of her time to the acquisition and arrangement of the ex-libris collection.

Lecturers other than the regular faculty have been as follows: Dec. 1, A. W. Abrams, "Visual instruction" (illustrated by examples, good and bad, of educational lantern slides); Dec. 16, Royal B. Farnum, "Books on the fine arts"; Jan. 8, Mary E. Hall, "High school libraries"; Jan. 12, Elizabeth B. Wales, "Library work in Missouri."

Field practice work in libraries outside of Albany will begin March 6 and extend to about April 1. Regular school exercises will be suspended during this time.

### ALUMNI PUBLICATIONS

About the usual number of periodical articles seems to have been contributed to dif-

ferent magazines during 1915 by former students. More than thirty separate publications have also come to the attention of the school and it is probable that there are others which are not listed below. As is usually the case, most of the books or pamphlets, as well as the periodical articles deal chiefly with library matters. General literature is represented by Edna A. Brown's juvenile "Arnold's little brother" (Lothrop); "The lure of San Francisco," a guide book in the form of a romance by Mrs. Elizabeth Gray Potter (1912) and Mabel Thayer Gray; "More Arabian nights," by Frances J. Olcott and "The jolly book for boys and girls," of which Miss Olcott is joint compiler; and Miss Clara W. Hunt's suggestive book "What shall we read to the children?"

In bibliography and library economy may be noted the following A. L. A. publications: "Book selection," by Elva A. Bascom; "Bibliography," by Isadore G. Mudge; "The state library," and "Government documents," by James I. Wyer, Jr.; and Margery C. Quigley's "Index to kindergarten songs."

In the Debater's handbooks published by the H. W. Wilson Co. appear two by Corinne Bacon on "National defense"; five by Edna Dean Bullock dealing with "Agricultural credits," "Child labor," "Mothers' pensions," "Short ballot" and "Single tax" respectively (Miss Bullock has also compiled a subject index to the senate and house bills of the Nebraska legislature); and Katharine B. Judson's "Selected articles on government ownership of telegraphs and telephones."

Margaret A. McVety and Mabel E. Colegrove have contributed the "Vertical file" to J. C. Dana's American Library Economy series. Jennie D. Fellows' "Cataloging rules" (L. S. bull. 36) has had a large sale and has been warmly commended by catalogers. "Instruction in the use of books and libraries," by Lucy E. Fay and Anne T. Eaton, is a genuine contribution to the literature of school libraries. Mary W. Plummer's "Seven joys of reading" has been reprinted in pamphlet form by the H. W. Wilson Co. J. I. Wyer, Jr., again contributed the section on Libraries in the American Year book. "Modern drama and opera," v. 2 (Boston Book Co.) has among its contributors J. Howard Dice, Mary Louise Davis, Alice Thurston McGirr and Frank K. Walter. The last has also contributed a section to Mr. Axel Moth's "Technical terms used by the book and printing trades." Among foreign items should be noted Arne Kildal's "Boker og skrifter til Bergens historie (1914)."

F. K. WALTER.

PRATT INSTITUTE SCHOOL OF LIBRARY  
SCIENCE

The first term closed Dec. 18 with examinations in cataloging, classification, shelf-arrangement and alphabeting. In the last-named subject the class-room procedure has been modified this year. Instead of dictating examples of the alphabeting rules to the class for arrangement, the entries were typewritten, mimeographed in sheets, and then cut up into slips of index size. These were distributed after each lesson and the students filed them cumulatively, until, at the close of the course, they each had a carefully revised set of about 250 slips including all the probable snags in arrangement. For the examination each student was given a carefully disarranged set of the same slips to alphabet correctly.

The annual Christmas party was held Dec. 16 in the north class-room, where a gaily decked Christmas tree and amusing games made a very pleasant afternoon.

The vice-director attended the A. L. A. Council and represented the school at the mid-winter meeting of the Association of American Library Schools. She visited the Carnegie Library of Pittsburgh on her return and spoke to the school on "Children's work in some of its relations." While she was in Pittsburgh, Miss Bogle invited the Pratt alumnae in the city to meet her at dinner at the Shenley.

The first lecture of the second term was given by Miss Theresa Hitchler, head cataloger of the Brooklyn Public Library, who gave the class some advice as to the cataloger's attitude toward her own work and toward library work in general, and also told them of the organization of the catalog department of the Brooklyn system.

The students attended the January meeting of the New York Library Club held at the Wanamaker Auditorium, the discussion being the subject of music in libraries.

ALUMNI NOTES

Lorette Jenks, 1913 and 1914, has been made an assistant in one of the branches of the Chicago Public Library.

Word has been received of the marriage Dec. 2 of Maude W. Fowler, 1914, to Clarence John Russell at Boston, Mass.

Grace B. Morgan, 1915, who returned to the staff of the Cincinnati Public Library, has been made cataloger of the Mercantile Library of Cincinnati.

JOSEPHINE ADAMS RATHBONE,  
Vice-Director.

LIBRARY SCHOOL OF THE NEW YORK  
PUBLIC LIBRARY

The winter term began January 3, with all but one junior student present and the addition to the class of Mrs. Jessie Scott Millener, who will finish the work of the course begun and interrupted last year. Some vacancies in the senior ranks proved to be due to grippe, but even these were few.

On the first morning's program, Miss Murray's demonstration binding and repairing lecture was given, preliminary to Mr. Arthur F. Bailey's lectures on "Binding material" and "Binding procedure," on January 5. The students had the pleasure of meeting Mr. Bailey socially after the lecture.

Miss Isadore G. Mudge's lecture to seniors of the school and college library and the advanced reference and cataloging courses began January 3.

On January 5, students of the latter course had a lecture from Miss Sarah Harlow, librarian of the Botanical Garden, on the "Literature of botany."

Mrs. Frances Rathbone Coe opened the term for the seniors in administration by a talk on "Publicity for libraries." The following day these and the students of the children's librarians' course visited grades 1-3 of the public schools, going to the schools nearest the branch library in which they have practice. On the 7th, the latter class visited the children's rooms in some of the upper west-side branches.

The annual Christmas party took place on December 15.

The school was represented by its principal at the meeting of the Association of American Library Schools in Chicago, in December.

PERSONAL NOTES

Miss Ruth McLaughlin, junior, 1913, is now a member of the Chicago Public Library staff.

Miss Nora Cordingley, junior, 1912, has accepted a cataloging position in the library of the State Agricultural College at Ames, Iowa.

Mr. Ralph Gossage, junior, 1915, now working in the Belgian concentration camp in Holland, has recently had the experience of helping to convoy British prisoners from Germany back to England and German prisoners from England back to the German frontier.

MARY W. PLUMMER, *Principal*.

CARNEGIE LIBRARY OF PITTSBURGH—  
TRAINING SCHOOL FOR CHILDREN'S  
LIBRARIANS

The Training School opened for the second term Jan. 3, on which date the class had the

pleasure of hearing a talk by Miss Josephine Rathbone, vice-director of Pratt Institute Library School, on "The development of the library work with children."

Beginning Jan. 10 the students of the junior class are scheduled ten consecutive Monday mornings for practice work at the lending desks of the system. Each student during this period receives experience at three different lending desks.

The courses scheduled for the second term are:

JUNIOR

Administration of children's rooms  
Annotations  
Book numbers  
Book selection  
Cataloging  
Classification  
Lending systems  
Library work with schools  
Plays and games  
Reference work  
Round table  
Seminar for periodical review  
Shelf listing  
Story telling

SENIOR

Book selection  
Cataloging of children's books  
History of libraries

ALUMNAE NOTES

Ruth McGurk, 1913, has been appointed librarian of the new West End Branch of the Cincinnati Public Library, Cincinnati, Ohio.

Muriel Rose Samson, junior student 1913-14, has resigned her position as assistant children's librarian on the staff of the New York Public Library to accept the position of assistant children's librarian in the Wylie Avenue branch of the Carnegie Library of Pittsburgh.

Amelia T. Pickett, junior student 1914-15, has been appointed librarian of the Green Free Library, Wellsboro, Pa.

SARAH C. N. BOGLE, *Director*.

LIBRARY SCHOOL OF THE UNIVERSITY OF  
WISCONSIN

The work of the school during the weeks preceding the Christmas vacation covered the usual drill in technique. A regular schedule with daily lectures, recitation and practice work, with accompanying revision, comment and criticism is most necessary for professional background, but does not lend itself to a picturesque report.

Two lectures from the outside correlated with regular courses, giving a broader point of view, which must always be considered. Mr. Herbert Quick gave a stimulating lecture on "Reading for rural communities," and Prof. Chester Lloyd-Jones of the political science department discussed a "Selected list

of books in political economy," rounding out the topic as given in the book selection course.

The topic, "Book-making and publishing," given in eight lectures, correlating with Trade Bibliography, Book-buying and Book Selection, ended with a Christmas exhibit conducted by the students for the Madison Free Library, Dec. 2-5. The students had the exhibit entirely in charge, attending to the publicity, including press notices, posters and general invitations; the gathering and arranging of the books, and serving in turn as attendants at the exhibit, meeting the five hundred and more people who came to see the books, many of them to get suggestions for Christmas gifts.

The students assembled after vacation, Jan. 3, a day before the schedule time, in order to have the opportunity of hearing Mr. J. I. Wyer, Jr., who had been attending the mid-winter meetings in Chicago. Mr. Wyer spoke in the morning on "Librarianship, its aims and ideals." In the afternoon the class met Mr. Wyer informally and for an hour were delighted to hear him discuss modern poetry, with many readings from the new poets to illustrate his points. In the evening, in the lecture room of the school, a group of readers, almost entirely professors from the university, gave a spirited dramatic reading of "Captain Brassbound's conversion" in honor of Mr. Wyer.

Correlating with the course in children's literature, two lectures have been given: "Teaching eighth grade pupils how to use the library," by Miss Mary A. Smith of the Madison Free Library, and the "High School branch," by Miss Ruth Rice, librarian of the branch.

On Jan. 8 the announcements for field practice were made. The assignments are made under the broad divisions of

1. *General work.*—The public libraries of Ashland, Baraboo, Black River Falls, Fond du Lac, Fort Atkinson, Madison, Oshkosh, Shawano and Viroqua receive students to help in all parts of the work during February and March. There are three new library buildings in this group and the students will assist in getting the work started in the new buildings.

2. *Cataloging and other records.*—For this work the public libraries of Barron, Beloit, Chippewa Falls, Hudson, Janesville, Rice Lake, Spooner, Stanley, Stevens Point and several offices in the Capitol have opened their doors.

3. *Assistance for special work.*—Fox Lake, Lake Mills, Superior, Waterloo and offices in

the Capitol, offer problems of inventory, children's work, subject headings, classification, publicity, picture collections, etc.

4. *Organizing* will be done at Laona and Stone Lake, two communities in the northern part of the state that are just starting libraries.

5. *Reorganizing* will be undertaken at Thorp and Waukesha.

6. *Reclassification*, changing from the Expansive to the Decimal Classification will be continued at the Beloit Free Library; it was commenced last year by a group of students.

Just before the holiday vacation the class of 1916 elected officers as follows: President, Helen E. Farr, of Eau Claire, Wis.; vice-president, Vivian G. Little, of St. Louis; secretary, Gertrude L. Ellison of Duluth, Minn.; treasurer, Stella E. Baskerville of Madison.

Mr. Dudgeon, Miss Hazeltine, Miss Carpenter and Miss Humble of the Library School Faculty attended the meetings of the Association of American Library Schools and other meetings which were held in Chicago during the holidays.

Miss Susie Lee Crumley, head instructor of the Atlanta School, was a visitor at the school on Jan. 3.

Miss Mary E. Dow, 1911, librarian of the Saginaw (Mich.) Public Library, presented the school as a Christmas gift with an appropriate pedestal for its cast of the Winged Victory.

MARY EMOGENE HAZELTINE, *Preceptor.*

#### WESTERN RESERVE LIBRARY SCHOOL

The first assignment for practical work in the Cleveland Public Library system ended with the Christmas vacation. An innovation was made this year in that the students worked one full day each week instead of two separate half days. The course in loan systems was carried on during the same period. The students who had had experience in the Cleveland Library system were assigned to college library work, either in Adelbert College or the College for Women. During the year each student is given the opportunity to attend one of the staff meetings for book selection at the Cleveland Public Library. This experience is particularly helpful in connection with the book selection course; much is gained from the book reviews there given, and opportunity is also afforded the student of observing something of the *esprit de corps* of the Cleveland staff.

By action of the board of trustees, the director has been given the additional designa-

tion of professor. Mr. Strong was promoted to associate professor and Miss Howe to assistant professor in the university.

It has been voted by the faculty to require for entrance to the school a knowledge of typewriting.

Mrs. Edna Lyman Scott will give a course in library work with children January 17-29, being chiefly a study of children's literature. Miss Burnite will, as heretofore, give lectures on the administration of children's rooms.

The students of the Library School gave a Christmas party Dec. 18 in the rooms of the school, to which the members of the faculty were invited by a very clever announcement. A Christmas play was presented by four members of the class.

The Christmas vacation lasted two weeks, beginning Dec. 23 and extending to Jan. 6. During that time, the dean, the director, and the secretary attended the meeting of the Association of American Library Schools and also the other mid-winter library meetings in Chicago. The first class period after the holidays was given over to a report of this mid-winter meeting and also reports by students on the various libraries visited during their vacation, which included Baltimore, Pittsburgh, New York, and Chicago.

Alice S. Tyler, *Director*.

#### SYRACUSE UNIVERSITY LIBRARY SCHOOL

The courses in book selection have been strengthened by the addition to the school library of 150 volumes for use in that work.

The seniors gave a reception on Friday, December 17, to the members of the other classes. About forty guests were present, including the members of the faculty and of the library staff.

The faculty of the College of Liberal Arts has voted to allow credit toward the A.B. degree for the hours of work taken in the Library School. By this action the same recognition is given to the Library School as to the seven other technical and professional schools of the university.

Miss Elizabeth French, 1915, who has been in the cataloging department of the University Library since last September, has resigned, to accept a position in the Syracuse Public Library. Her position in the University Library is being filled temporarily by Miss Elsie Johnson, of Point Chautauqua, N. Y., also a graduate of this school. E. E. SPERRY, *Director*.

#### LOS ANGELES PUBLIC LIBRARY TRAINING SCHOOL

On Jan. 7 Miss Irene Warren, president of the Library Section of the N. E. A., gave the

following talks to the Training School:—"Campaigning for better school libraries" and "When the high school library comes into its own."

During the week of Christmas vacation Miss Betty Lord commenced the work of shelving the Sierra Madre Public Library. The completion of the shelving and the general re-organization of the Sierra Madre Library will be carried on during the spring months by the students in the Training School as part of their regular practice work.

Miss Louise Peck, chief of the cataloging department of the San Diego Public Library, is visiting the school for six weeks of special instruction in cataloging.

THEODORA R. BREWITT, *Principal*.

#### UNIVERSITY OF CALIFORNIA—SUMMER LIBRARY COURSE

Owing to building operations to be begun in the spring, which will render the greater part of the library building untenable for several months, the summer course in library methods, which has been offered for four years past, will be omitted in the summer of 1916.

HUNT, CLARA WHITEHILL. What shall we read to the children? Houghton Mifflin, 1915. 156 p. \$1 n.

From Chapter I, "Fathers, mothers and children's books," to Chapter XII, "Buying the library," Miss Hunt has reflected a rich personal experience of childhood as well as the long and intimate contact of a librarian with parents and children.

Her opening sentence "The book agent was a very persuasive talker" is a genuine touch of that nature that makes kin of the whole world of parents, teachers and librarians and affords a starting point of understanding and comradeship which is sustained throughout the volume.

"What I like about Miss Hunt's book," said a young mother of three children under seven years old, "is its simplicity. She makes reading seem so possible and such a help in the daily care of children by her practical suggestion for deepening associations and creating a background for memories."

This mother, a college woman, and before her marriage a teacher of domestic science, is typical of many intelligent women who have no time to spend in libraries or mothers' meetings who are inclined to regard chil-

dren's reading as something a little removed from daily experience—something in which one would "take a course" if possible.

Miss Hunt indicates very clearly that the child himself is the person with whom to take a course in children's reading and wisely sounds a warning about choosing the right time for introducing poetry, fairy tales, Bible stories, travel and history stories and stories that might be true.

"Children," she says, "enjoy an infinite number of things which they do not understand; they understand far more than they can express; their understanding grows by leaps and bounds if we foolish adults do not interfere." No great book has yet been written in "first reader" English, nor yet in "second reader" or third reader" is her comment on simplified Bible stories.

The chapters richest in suggestion for associative values in relating reading in childhood to adult experience are those dealing with poetry, travel and history. "Let us put the country into the memories of the men and women to be. . . . All through my happy travels I kept finding that the things I enjoyed most were those I had known about and loved when I was a child. In the tired dog dragging a milk cart through the streets of Brussels I beheld the original of the dog of Flanders."

In this drawing freely upon incidental personal experience, Miss Hunt has humanized the subject of the reading of younger children for the teacher, the student in training, and the general library assistant, as well as the parent and the children's librarian.

The divisions by age of the list of books suggested for purchase are open to some question. Jacob Abbott's *Franconia Stories* and Mrs. Ward's *Milly and Olly*, if read at all, would be more likely to be read to children over five years old. Boutet de Monvel's *Joan of Arc* and Kipling's *Just So Stories* defy an age limit.

The final chapter "Books for older children" contains some salutary comment on mediocrity in children's books: "I am not half so fearful for children of good homes, of the blood-and-thunder adventure story as of the quantities of 'safe' juvenile books published to-day. The commonest fault of children's books in good homes is insipidity."

It is to be hoped that Miss Hunt will enlarge this chapter to a companion volume on the reading of the older boys and girls. Such a book would be a distinct contribution to the present stage in educational progress.

A. C. M.

WARD, GILBERT O. The high school library. Preprint of the "Manual of library economy." Chapter VII. A. L. A. Pub. Board, 1915.

All working in this pioneer field of library extension welcome this clear, concise, general survey of what has been done in various high school libraries. While very suggestive, it does not attempt to go into detail about many items.

The vital problems discussed are: book selection; records; the guidance of reading; discipline; relations with the public libraries; and the qualifications of the librarian. An excellent bibliography makes it possible for anyone interested to read further.

There are a number of problems in high school library work upon which opinions vary. Mr. Ward advocates "selected works of poetry because usually more attractive and often quite adequate for any probable reference use." It would seem better to have the complete works of all great poets in order to encourage further reading. Many times students are unaware of anything outside of the required list.

The selection of magazines for a high school library also requires careful thought. Many of the popular magazines contain mediocre fiction undesirable in the high school. Most students have access to the reading rooms of public libraries, and it would seem best to purchase for the high school only those magazines that students need to be encouraged to read, such as the *Atlantic* and the *Nation*.

Under the subject of classification, Mr. Ward omits the chief reason for using the same system in the high school and in the public library, which is to facilitate the use of the public library by students, many of whom will depend upon the public library as a continuation school. Those students who are confronted with a different classification in college will be under competent librarians and teachers, and will have little difficulty in finding their way about the college library, while the teacherless students and the indifferent high school graduates will need every encouragement to go on with their education. "Economy and expedience" are incidental to this main educational advantage. The numbering of cases is advocated as a method of handling a rush at the circulation desk. High school libraries are always small choice collections, and, with a good catalog and adequate instruction in its use, students have no difficulty in finding the books without depending upon arbitrary mechanical advices.

The guidance of the pupils' reading is a subject that might be more extensively treated

to advantage. Emphasis should be placed upon the librarian's part in encouraging the reading of the classics. While vocational guidance is serious, the most serious and the most delightful work of the library is helping the students to appreciate real literature. It is true that "in large schools with busy libraries" the personal influence of the librarian is too seldom brought to bear upon the reading of the students. A carefully planned schedule for a staff of reliable student assistants releases the librarian from the routine for more valuable service and furnishes very desirable training in system and order, a great lack among high school students. Book talks to the entering pupils make them realize the real function of the librarian.

The discipline in high school libraries is greatly affected by the organization of the school. It is a difficult matter to preserve the right atmosphere in the library in schools without study halls. In such schools, permission to leave the library when reference work is finished helps to solve the problem. Otherwise students may do a minimum of reference work and a maximum of other work.

An advantage of public library administration of high school libraries, not mentioned, is the release of the librarian from cataloging and other record work. "The chief disadvantage," Mr. Ward states, "is that the public library can rarely afford to pay the high school teacher's salary which the responsibility justifies, and which is necessary to insure a librarian of the necessary training and experience." This objection can surely be overcome by arousing public sentiment in favor of placing librarians' salaries in public libraries on the same basis as the salaries of other educators in the community. An immediate solution can be reached by an agreement between the library board and school board to share the expense.

In the discussion of high school libraries as public libraries, Mr. Ward brings out most clearly "the peculiar problems which confronts a double-duty high school library." The idea of combining these two kinds of library work overwhelms the librarian now trying to solve the many problems of the high school library. If the high school library is unhampered in its training functions as a laboratory for students, the public library will surely reap the benefit.

The qualifications of the librarian are fully described and fittingly serve as a climax. The success or failure of the high school library depends chiefly upon the personality and educational equipment of its presiding genius.

HARRIET A. WOOD.

---

## Librarians

---

BABCOCK, Mrs. Julia G., who has been librarian of the Yolo County Free Library at Woodland, Cal., will hereafter be at the Kern County Free Library in Bakersfield in the same state.

BALDWIN, Rachel, Pratt, 1908, who has been for the past year reference librarian in the Girls' High School in Brooklyn, has been appointed first assistant in the children's department of the Carnegie Library at Pittsburgh.

BLASL, Henrietta M., New York State Library School, 1910, has resigned her position in the catalog division of the Library of Congress to become secretary to the superintendent of the Orthopedic Hospital in New York City.

CARVER, Helen, New York State Library School, 1914-15, was married to Hugh Lester on Jan. 8, at her home in Cambridge, Mass.

CONE, Jessica G., New York State Library School, 1895, has been appointed assistant in the library of Goodwyn Institute, Memphis, Tenn.

ELLSWORTH, Frances, who has been in charge of the branches of the Madison (Wis.) Public Library for several years, has been forced to resign because of serious trouble with her eyes.

GALLAGHER, Martha, who has been an assistant in the Carnegie Library of San Antonio, Texas, since 1912, resigned in November and on the 22nd of that month was married to Wallace W. Votaw, of Marshall, Texas.

GARNEAU, Hector, lawyer, journalist, and litterateur, has been appointed librarian of the Montreal Public Library, now in process of organization. It is announced that the salary to start with will be \$2000, while the preparatory work of collecting and cataloging the books is in progress, but afterwards the regular amount of \$5000 a year set aside for this purpose will be expended. It is not expected that the new building now in process of construction at a cost of close on half a million, will be finished for another year, though work on the interior will be started in the spring.

GRAUMAN, Edna, and Mary Brown Humphrey have been elected librarians of the Boys and Girls High Schools respectively, of Louisville, Kentucky. These libraries will be conducted as high school branches of the Louisville Free Public Library under joint control of the Board of Education and the Library

Board. The librarians have been elected members of the faculty and remain on the staff of the Public Library. Miss Grauman is a graduate of the Louisville Girls High School and in addition completed a special course in German, French and European history at the University of Louisville, and has been connected with the Louisville Free Public Library since September, 1911. Miss Humphrey is a graduate of the Louisville Girls High School and the Semple Collegiate School and in addition completed a special course in French at the University of Louisville. She has been connected with the Louisville Free Public Library since June, 1915.

GRENSIDE, Adelaide H., New York State Library School, 1914-15, entered the central lending department of the Carnegie Library of Pittsburgh, Jan. 10.

GROUT, Edith N., B.L.S., New York State Library School 1913, has received an appointment as assistant in the Minneapolis Public Library.

HENLEY, Margaret, of the Illinois Library School, has been appointed assistant librarian of Coe College Library, Cedar Rapids, Ia.

KEOGH, Andrew, who has been reference librarian at Yale University, has been made acting librarian pending the appointment by the university authorities of a permanent successor to Prof. Schwab, whose death on Jan. 12 is recorded elsewhere in this issue.

LEGLER, Henry E., librarian of the Chicago Public Library, has been made chairman of a committee of eleven to evolve a plan for co-operation between schools and libraries in Illinois.

LOUNSBURY, Caroline O., for many years librarian in Morristown, N. J., died on Monday, Dec. 6, being in her seventy-seventh year. When the old library and lyceum building burned, Feb. 23, 1914, Miss Lounsbury watched the conflagration from the windows of her home. With the dying down of the flames her life work ended, for the shock brought on heart trouble to which she finally succumbed. Miss Lounsbury became librarian twenty-seven years ago, and resigned the position Nov. 30, 1914.

MARSHALL, Mrs. W. F., of Union county, Mississippi, has been elected state librarian in place of Miss Mattie Plunkett, who has held the position for sixteen years. This is the only state office in the state of Mississippi that can be held by a woman and the contest was a spirited one.

NUNN, Dorothea, of Salem, Mass., has been chosen reference librarian in the Cedar Rapids (Ia.) Public Library.

OLCOTT, Frances Jenkins, brought out for the holiday season "More tales from the Arabian nights," a companion volume to "The Arabian nights' entertainments," which she edited in 1913. The present volume is illustrated in colors by Willy Pogány, and besides containing some of the old favorites has a number of delightful stories that are new to most children.

PERRY, Rachel Craig, who was in the traveling library office of the New York Public Library for several years, resigned Jan. 1, and will go to Wallingford, Ct., to live. Miss Perry has been connected with the New York Public Library for sixteen years, being librarian in charge of the Aguilar branch prior to her work with traveling libraries.

SCHOEDSACK, Benvenuta, who was granted four months' leave of absence from the Council Bluffs (Ia.) Public Library last fall, has resigned, and will remain in California where she has been for some time.

SHEDLOCK, Marie L., is giving a subscription series of story-telling evenings in New York City, from Jan. 26 to Feb. 23. The first three evenings will be devoted to Hans Christian Andersen, with discussion of his work and stories to illustrate the qualities described; the fourth evening's program will include stories from legends of the saints and animals; and the last evening will be devoted to "humor in education" with illustrations from "Alice in Wonderland" and other stories.

STEFFA, Julia, B.L.S., New York State Library School 1907, has resigned her position with the Los Angeles County Free Library to accept the librarianship of Ventura County Free Library.

STURBLEFIELD, Gail, formerly reference librarian of the Cedar Rapids Public Library, has joined the staff of the Davenport (Ia.) Library as desk assistant.

WEITENKAMPF, Dr. Frank, chief of the art division of the New York Public Library, was one of the speakers at the annual meeting of the American Historical Association in Washington in December, his subject being "Pictorial documents as illustrating American history."

WHITALL, Mary Louisa, has resigned her position as cataloger in the Library of the Bureau of Chemistry in Washington, the resignation taking effect Jan. 1.

# THE LIBRARY WORLD

## New England

### MAINE

*North Bridgton.* An attractive library building, built and furnished through the efforts of the members and townspeople, is that of the North Bridgton Library Association, which is now being used. It is open on Tuesdays and Saturdays and is also used for various community purposes, such as social afternoons and for the women's club. It is of plain design, painted brown with white trimmings, and so arranged that every particle of room is utilized. The interior is finished in cypress, giving a light and pleasant effect as one steps through the door into the square hall, with a room on either side. To the right is the reading room, with a most attractive fireplace, while in the room to the left are the librarian's desk and the books of the library. There is an excellent feature connected with the association, called the social branch. The purpose of this is for the members to meet to prepare work for the annual fair to further the interests of the library, and to increase the social and community spirit.

*Winslow.* Miss Margaret Kennedy, of Vassalboro, has given to the Winslow Public Library, a collection of 500 books, the award to her as the result of a competitive contest in which she was interested. The books were received by the library during the summer and comprise sets of the best literature, including a variety of fiction, comparatively few of which were duplicates of books already in the library, which contained about 2300 volumes.

### NEW HAMPSHIRE

*Hinsdale.* Charles A. Jones of Keene and Fred H. Jones of Los Angeles, Cal., have offered to the town the sum of \$500 to be held in trust and the income therefrom to be used for the purchase of periodicals, magazines and pamphlets for the public library. The gift is made in memory of their late brother, Henry Abbott Jones, who was a constant patron of the library for many years. The fund will be turned over to the town upon its formal acceptance by vote of the citizens at the annual town-meeting in March.

### VERMONT

The December *Bulletin* of the Vermont Free Public Library Commission contains a list of 95 libraries in the state which do not

limit the number of books per borrower, while a note states that 32 others limit a borrower to two books.

*Cornwall.* The Samson memorial building, a gift of Mrs. W. T. Porter of New York to the Mary Baker Allen Chapter D. A. R., with a room for the Cornwall Free Library, was dedicated with fitting ceremonies December 18.

*Montpelier.* Bids on proposals to furnish and set the granite to go into the new state library to be erected near the capitol were opened Dec. 30. The lowest bid submitted was \$59,600 on the building complete or \$50,600 on granite cut and delivered, Barre granite being specified.

### MASSACHUSETTS

*Amherst.* Announcement was made at the annual dinner of the Amherst Association of New York, Jan. 21, of the gift of \$250,000 for a new library building. The giver's name was not disclosed. He is not an Amherst man, but he had a brother in the class of '67, and it is in his memory that the building will be erected. Contract for the design is already in the hands of McKim, Mead & White, and work upon the library will be begun in the spring.

*Lanesboro.* At a special town meeting Jan. 7, it was voted to appropriate \$1800 to be used toward the construction of the Newton Memorial Library, which is nearing completion. This action was taken from the fact that some of the bonds in the \$15,000 bequest of Mrs. Newton, are not at present available, although it is expected that in a year or two they will be. Rather than wait that length of time, the town decided to appropriate the money for present use, relying on the availability of the bonds later on for reimbursement.

*Lynn.* Ground will be broken early in the spring for two new branch libraries, the buildings having been made possible by the gift of \$50,000 from the Carnegie Corporation received a year ago. One will be erected in Wyoma Square, while the other will be placed in ward six on the western side of the Breed School lot on Hood street. It is further planned to establish a playground between the two buildings. None but architects who are residents of Lynn will be allowed to submit plans and the two libraries will have

different features according to the needs of the localities. The work may be finished so that the dedication exercises can come by Jan. 1, 1917.

*Palmer.* The room in Memorial Building, which has been used by town officials for many years, and has been vacated by them, is being fitted up for library purposes. The walls and ceiling have been redecorated and the woodwork renovated, and appropriate furnishings bought. The extra space was needed by the library to take care of the increase in library work which has been made possible the last two years through the increased appropriations from the town.

## Middle Atlantic

### NEW YORK

*New York City.* The Ash prize of \$100, given each year by Mark Ash, a member of the circulation committee, to the librarian whose branch has been kept in the best condition, was awarded this year to Miss Ida Simpson, who is in charge of the 96th Street branch.

*New York City.* The library of the Metropolitan Museum of Art now contains about 29,000 volumes, besides all the important periodicals pertaining to archæology and the fine and industrial arts, and a large collection of photographs and prints. The library is solely for reference use, open to all, and is unusually rich in modern books on fine arts.

*New York City.* The last report of the General Theological Seminary Library shows that 1910 volumes were added during the year and 49 were withdrawn, making 59,691 the total number of volumes in the library April 30, 1915. Reference readers, day and evening, numbered 8494; day loans, 4216; evening loans, 1696; and overnight loans, 1142.

*New York City.* The Naval History Society, of which Rear Admiral C. F. Goodrich, U. S. N., retired, former commandant of the Brooklyn Navy Yard, is president, formally opened the John S. Barnes Memorial Library, Jan. 12, in room 1618 of the Aeolian Hall Building. The library is for the use of members of the society and consists of a collection of 3000 volumes, original manuscripts, prints, and souvenirs relating to the United States navy and merchant marine of this country. The collection was originally assembled by Captain John S. Barnes, U. S. N.,

and was given to the society by his son, James Barnes. New books and more souvenirs and prints will be added by the members.

*New York City.* The libraries of the city are arranging to do their part in the city-wide celebration of the tercentenary of Shakespeare's death. In March there will be a great loan exhibition in the main building of the New York Public Library, including valuable manuscripts, first editions, and prints. In the branch libraries special collections of books have been put on special tables, and books on the subject have been sent to the libraries in the public schools. Typewritten bibliographies are being posted in the libraries to call attention to the Shakespeare books. Little talks have been given to many of the younger librarians to familiarize them with the subject, so as to render them of assistance to the public in view of the great interest in Shakespeare that is already manifesting itself. At the main library a collection of pamphlets has been made.

*Oneonta.* An expenditure of \$6000, by the city of Oneonta, for a public library building and site was approved by the taxpayers at a special election Dec. 23. George B. Baird gave \$250 to the library fund when it was announced that the proposition had been carried.

### PENNSYLVANIA

*Philadelphia.* The Philadelphia Free Library is to have two new branches. They will be known as the Nicetown and McPherson branches and will supplant branches already in existence in less handsome structures and without up-to-date facilities. Like the 18 branches already built these two new ones are to be erected out of the money provided by the Carnegie Corporation while the city has supplied the land and will maintain them. It may be a year before the work on these buildings is completed. The McPherson branch will be erected on the site of the old one in the centre of McPherson Park. The old building is being torn down and the library is being continued in a temporarily rented building at Kensington avenue and H street. The old Nicetown branch which will be used until the new one is ready for use, is at No. 4015 Germantown avenue in a reconstructed building, converted for the purpose. The new one will be erected at Hunting Park and Wayne avenues. The architects for the new buildings are Wilson Eyre and John T. Windrim.

## The South

### FLORIDA

*Tampa.* The Carnegie Library building was completed and accepted by the board of public works June 30, 1915. Trustees were elected by the city council, an action protested by the mayor, who claimed the right of appointing the board, and the case is now being tested in the courts. Meantime a request for \$15,000 for furnishing and maintaining the library for a year was cut by the council to \$5,000, with the result that the library has not yet been opened for public use.

## Central West

### MICHIGAN

*Grand Rapids.* Within two years, if the present rate of increase continues, the Ryerson Public Library will be filled to capacity, is the statement made by the Grand Rapids *Herald*. Librarian Samuel H. Ranck, and the members of the board are said to be considering fitting up the attic of the library for storage of books to prevent congestion. It will be necessary to build additional shelves in the reference room during the year, and the walls of the two study rooms on the top floor will be shelved, the space between the windows being utilized as well as the main walls. When this has been done and the stacks are filled with books the capacity of the present building will have been reached. According to a rough estimate, the attic would hold 50,000 books. It would cost about \$2,000 for the necessary shelving. It was thought, when the building was erected in 1904, that its capacity would be ample.

### OHIO

*Cleveland.* Three new branch libraries costing about \$25,000 each are to be built by the library board in 1916 from Carnegie funds. Only one site—E. 105th street near Superior avenue—has been chosen.

*Toledo.* Through an error the item in the January issue concerning the approval of branch library sites was entered under Cleveland instead of this city.

### INDIANA

*Boonville.* The Carnegie Library was recently completed, at an approximate cost of \$15,000. George W. Breckenridge, of San Antonio, Tex., a former citizen of Boonville, gave the library a Christmas gift of 500 new

volumes. The library is situated one square from the courthouse. Mrs. Anna Isley is in charge as librarian.

## The Northwest

### WISCONSIN

*Milwaukee.* Fourteen librarians for the new extension of the city library to the county of Milwaukee have been appointed by Paul W. Huth, county superintendent of schools. Because the librarians of Wauwatosa, South Milwaukee and Cudahy have not responded to the letters sent by the county superintendent of schools, no branches will be established there. They will have to wait until the next appropriations are made by the county board, which will not be for about a year. The county agricultural school has asked for an extension library, but it will have to wait until the next appropriations are made, because its application came in too late.

*Plymouth.* Miss Lutie E. Stearns was the principal speaker at the dedication of the Carnegie Library in Plymouth, Dec. 16. Miss Stearns said the Plymouth Library was the realization of a dream of fifteen years. She helped to start the library fifteen years ago, going to Plymouth to address a meeting, and then returning a few months later and staying for two weeks, to organize a library. The dedication of the library building was postponed a week so that Miss Stearns might attend. It cost in the neighborhood of \$12,500, much of the spending of which Miss Stearns superintended, as she chose the architect and looked over the plans with a committee of Plymouth people.

*Superior.* Plans are on foot to secure a regular branch of the Public Library to replace the station now maintained in a drugstore in the East End, which has become inadequate to the needs of the residents.

### MINNESOTA

*Minneapolis.* The new Sumner branch library at the corner of Emerson and Sixth avenues north was opened to the public Dec. 16. Children were invited to the afternoon program at which E. V. Foulk gave a reading, in costume, and Miss Wessberg, librarian of the Sumner branch, spoke. At the evening entertainment, a program in which E. C. Gale, T. B. Walker and Mayor Nye, representing the library board, were the speakers, took place. Dr. J. C. Gordeon acted as interpreter of the addresses to the audience. The Sumner

branch is a Carnegie Library. It has tables at which children may play games and has an assembly hall for meetings of the community.

#### IOWA

*Des Moines.* For the assistance of readers at the Public Library, Miss Ella McLoney, librarian, has installed an information and reference desk for the circulation department. An attendant will be in charge of the new bureau to aid puzzled patrons to select books and to distribute general information.

#### NEBRASKA

*College View.* The Carnegie Library, for which the Carnegie Corporation donated \$7500 more than a year ago, is still unfinished, though July 1, 1915, was the date set for its completion. The trouble seems to have grown out of the inability of the library board and the contractor to come to terms as to final payments and to a failure on the part of the town and village boards to agree on their responsibility in the matter.

### The Southwest

#### KANSAS

*Garden City.* Plans have been started for a \$10,000 Carnegie Library. The structure will be one story high with a basement and will be of brick construction with stone trimmings. It will be 32 feet wide and 50 feet long. The floors will be of oak and the interior finish of oak. The roof will be composition. A steam heating plant will be installed.

*Leavenworth.* The new library building, known as Wagner Hall, for the army service schools at Fort Leavenworth, was formally opened Dec. 28. This building was put up at a cost of \$56,000. It is connected by two tunnels with the main group of school buildings. The military library here contains over 30,000 books and pamphlets. Most of them are devoted to history and military topics.

#### OKLAHOMA,

*Tulsa.* It is expected that the new building will be opened about Feb. 15.

### The Pacific Coast

#### WASHINGTON

*Seattle.* The Columbia branch of the Public Library, which will provide reading facilities for the residents of Rainier Valley, was dedicated Dec. 30. The cost of the library

was \$35,000, which was donated by the Carnegie Corporation. The style of architecture is Georgian. The interior of the building is somewhat different from other branch libraries erected in Seattle. It is on the one-room plan, which has proved satisfactory for branch buildings in many Eastern cities. The branch contains 6670 books. Miss Laura Meissner, who has been in charge of the Columbia branch library since 1914, will have charge of the new library.

#### CALIFORNIA

*Calxico.* Architects are preparing working plans for the Carnegie Library building to be erected here. The preliminary plans have been approved by the Carnegie Corporation. The building will be one story with a basement to contain an assembly hall, work rooms and heating plant.

#### UTAH

*Brigham City.* The library board has accepted the new Carnegie building from the contractor and the library has been moved into the new quarters which will soon be dedicated with appropriate exercises. The building and equipment cost \$12,500, which amount was appropriated by the Carnegie Corporation.

*Murray.* Murray's new \$10,000 Carnegie Library was formally opened Dec. 15, when Miss Mary Downey, state organizer, and several speakers of local prominence took part in the program. The building is a buff pressed brick structure with cement cappings and trimmings, and has two stories. The basement, besides the laboratories, and other accessories, has a good sized hall that can be used as a lecture room. The entire upper floor is given over to the library proper. About \$3000 worth of books are on the shelves and this collection was augmented on the night of the dedication by many volumes donated by the public.

### Foreign

#### GREAT BRITAIN

*Lincoln.* The committee of the Public Library has announced its willingness to set aside a room in the library to become a home for a collection of Tennyson manuscripts, early and other editions of his poems, portraits, busts, personal relics, etc. An appeal for such material for a memorial museum was printed in a recent issue of the *London Times*, and lovers of Tennyson are requested to communicate with the librarian at Lincoln, A. R. Corns, regarding any gifts or loans they may wish to make.

# LIBRARY WORK

Notes of developments in all branches of library activity, particularly as shown in current library literature

[At the suggestion of several readers of the LIBRARY JOURNAL we are with the new year initiating a change in the arrangement of "Library Work." Despite the obvious advantages of the classified arrangement of this material hitherto used it had equally obvious disadvantages. A dictionary arrangement, making the department in effect a current cyclopedia of library progress, will henceforward be followed.—ED. L. J.]

## ADVERTISING. See also Publicity

At the December meeting of the trustees of the Free Public Library in New Bedford, Mass., the following regulations for the use of the lecture room were adopted:

"The use of the lecture room shall be granted for lectures or conferences on education, artistic, literary and allied subjects without charge, provided that no tickets of admission or money shall be taken at the door. Admission to such meetings shall be entirely free.

"Societies or clubs of similar aims, but of restricted membership, may be granted the use of the hall, but no tickets of admission or money shall be taken at the door, nor shall such meetings be advertised in the public press.

"In all cases, application for use of the hall shall be made to the librarian, who shall have the power to grant the privilege subject to revision by the committee on the library.

"(In granting the privilege to societies of restricted membership, it shall be understood that admission shall not be refused to any person who seeks entrance.)"

The New Bedford *Standard* questions in an editorial the right of the library to impose any restriction on the advertising in the public press of meetings to be held by societies within the library building.

"As we read the rules," it says, "an individual or group of individuals may have the use of the room for lectures or conferences on educational, artistic, literary or allied subjects, provided that admission shall be free and the lectures or conferences open to the public. The promoters of such a meeting may advertise in any way they please. But if a society or club 'of similar aims but of restricted membership'—say a club composed of ministers, or doctors or students of astronomy—wishes to give a lecture of an educational character and desires the public to come and hear it, the rule forbids its advertising the lecture in the only effective way such a thing can be advertised. The society of re-

stricted membership, if it uses the room, must admit anybody who seeks entrance, but cannot, through the newspapers, invite everybody to come. It could, apparently, advertise its lecture by means of hand bills, or window cards, or on the bill boards, or in souvenir programs, or in the street cars, or on a banner suspended on Purchase street from a kite, or on sandwich boards—in any way, in fact, except the natural and effective advertisement in the press. To most people this will look like a queer and rather foolish discrimination."

## ANGLING COLLECTION

The making of an angling library and a short account of some of its treasures. Daniel B. Fearing. *Harvard Graduates Mag.*, Dec., 1915. p. 263-274.

Mr. Fearing has just presented his wonderful collection of books on angling, fishing and fish culture, of over 12,000 volumes and pamphlets, in twenty different languages, to the library of Harvard University, where it is regarded as one of the most important single gifts ever received by that library. This article is a fascinating account of the making of this library, and of some of the important things in it. It began in 1890 in the form of a scrap book on trout and trout fishing, and gradually expanded to the dimensions referred to above.

To give some idea of the wealth of this library it may be mentioned that of the 170 different editions of Walton's "Compleat angler," the collection possesses over 160. The collection also contains the original probate copy of Izaak Walton's will. There are no less than fifteen incunabula in the collection.

Another interesting feature of the library is that it has been the policy of the collector, whenever possible, to obtain a presentation copy of each book, and where this has not been possible to insert, when they could be found, autograph letters from each author, as well as interesting newspaper clippings such as notices of the books, obituary notices of the author, etc. Of books published in the

last half dozen years or more many of the authors have been kind enough, knowing the reputation of the library, to send complimentary autograph copies to it.

The library contains what is said to be probably the greatest number of laws on the subject of fisheries ever brought together in a single library. These consist of English, French, Danish, Dutch, Norwegian, German, and Swedish, with a few Russian and Finnish acts. It also contains a practically complete set of the publications of the United States Bureau of Fisheries, and also an almost complete set of the different state publications on this subject.

#### ANALYTICS

Charles A. Flagg, librarian of the Bangor Public Library has presented the Maine Historical Society a set of analytical cards, making a complete index to all of the different series of publications of the society. Mr. Flagg at the same time has prepared a similar set for the Library of Congress.

AUDITORIUM. See Advertising

BINDING. See also Labels

At the public library of the District of Columbia, experiments are being made in search of an improved method for binding the class of books impossible to overcast where the sections are too large for the size of the book, and the paper thick, porous and spongy. The sections are first stripped inside with jaconet, when necessary; the books are sewed on twine instead of tape, so that the swell at the back can be reduced; a strip of paper is glued over the back first, and the usual canton flannel back is added. So far, the results have proved all that were anticipated.

BISBEE, MARVIN DAVIS

Biographical sketches of librarians and bibliographers. VIII. Marvin Davis Bisbee (1845-1913). Frederick Warren Jenkins. *Bull. of Bibl., O.*, 1915. p. 212-213.

A warm tribute to the memory of Prof. Bisbee who was librarian of Dartmouth College from 1886 to 1910. Before going to Dartmouth, Prof. Bisbee had spent seven years in the Christian ministry, and five years as associate editor of *The Congregationalist*. Mr. Jenkins records twenty-four years of Prof. Bisbee's splendid services as librarian and states that to his unlimited patience, to his personal zeal, hard work and enthusiasm, are due the results in standard library economy, in valuable collections, donations and legacies, which have left an indelible mark on Dartmouth College library. An early estimate of Prof. Bisbee by an associate worker in 1886 describes his completed life:

"A man whose modest bearing, friendly spirit, sound judgment and wide interest in human and Christian affairs made him respected and influential wherever he went."

BOOK SELECTION. See Children—Books for; Dutch book selection; Shakespeare—Selection of editions

#### BOOK STACKS

Library book stack. William A. Borden. *Off. Gaz. U. S. Pat. Off.*, Dec. 28, 1915. p. 1112-1113.

A book stack construction comprising a plurality of rows of metal uprights each formed of a transverse web plate and flanges projecting upon opposite sides and having a series of notches for supporting the book shelves. A cantilever truss extending from said uprights at the top of each story comprises a horizontal arm and a diagonal brace formed integral with the web plate. Twelve claims are made for the patent of which 1 to 5 only are printed in the *Gazette*.

#### BOOKLISTS

At the request of the Retail Merchants Board of the Toledo Commerce Club the Toledo Public Library has compiled a list of books in the library on the subjects of the lines of business engaged in by their members. The list comprises books on advertising, salesmanship, and show-card writing as well as the subjects of the articles of merchandise. The expense of publication was borne by the Retail Merchants Board, a rare example of this particular line of co-operation. The lists have been distributed to six thousand employes of retail stores and the library is already noticing a greatly increased demand for the books.

#### BORROWERS' PRIVILEGES

Privileges of patrons of the Detroit Public Library have been extended by new rules adopted by the library commission in December. It is not necessary now to return a book to the same branch from which it is drawn, but it may be delivered to any branch, or the downtown library. Any books for adults, excepting recent works of fiction and books reserved for study purposes, may now be retained for four weeks instead of two weeks as formerly, but without the privilege of renewal. This new rule is expected to do away with inconvenience to library patrons, the collection of fines for books overdue at the end of two weeks, and the clerical work made necessary by the renewal system.

On Jan. 1 the New York Public Library withdrew all the special cards which had been

issued to students. These entitled the reader to 12 books at one time, to be kept four weeks on the first drawing and renewable monthly for six months. About 16,000 of these cards had been issued, though only about 10,000 were in active use. It was found that the average number of books issued on these special cards was only four or five, while on the regular card which permitted the use of four books at one time, 92% of the readers were satisfied with two books. It was accordingly felt that if the number of books allowed on the regular card were increased to six, both the general reader and the special student would be served satisfactorily, and at the same time an economy in administration would be effected. With the single condition that only one of the six books may be of the "new and popular" class, there are no restrictions as to the kind of books which may be borrowed, and magazines and opera scores may be had in addition. The only inconvenience which the former holder of a special card may suffer under the new arrangement will be the necessity for renewal every two weeks instead of every month, but this renewal may be made either by postal or by telephone.

#### CHILDREN'S BOOKS

The development of a taste for literature in children. Orton Lowe. *The Child* (London), D., 1915. p. 133-136.

The author is assistant superintendent of schools of Alleghany County, Pa., in the Pittsburgh district. He maintains that suggestion is the "master method" for instilling a taste for good books, and that "the indulgence of a child in reading only what he likes and as much as he likes, if carried out in many phases of his activity, will result in mental and moral confusion."

#### CHILDREN'S BOOKS—EXHIBITS OF

The Hartford Public Library holiday exhibit of children's books. Caroline M. Hewins. *Bull. of Bibl., O.*, 1915. p. 214-215.

An interesting description of conditions affecting the collection and buying of children's books for the annual holiday exhibit. Besides the books procured through local dealers and during a visit to New York, sale catalogs are watched all the year so as to buy wherever possible, books that often cannot be afforded at the first price; Mary Mac-

gregor's "Story of France," for example, reduced to \$1.50, and the "Baby birds," "Baby beasts," and "Baby pets" for about the same amount. Books are also shown that have been published for several years, like Scudder's "Children's book," to remind mothers who think it expensive, that it is a good investment as a gift to the whole family. When the stock is collected, press notices of the date and scope of the exhibit are written, and postcards of invitation are sent to mothers' clubs and libraries in nearby towns. Several of the libraries have book displays of their own for a few days or a week in December, and the members of a little informal club of children's librarians within fifteen miles often come to see the exhibition before ordering their own new books. The exhibit makes leading and guiding suggestions of the most practical and useful order, including a special exhibit of suggested—not required—reading for every one of the school years; recent editions of Shakespeare's plays with colored plates, published separately, and suggestive of the tercentenary commemoration of April 23, 1916; and the Everyman editions of general literature. The father and mother of school children, who have small incomes, and the country minister and his wife, college bred and lovers of the best, who have five dollars or less to spend for Christmas books, are borne in mind. The exhibit is open from nine till six on week-days, and from two till six on Sunday afternoons, when fathers sometimes like to browse among the books. Miss Hewins gives as much time and personal supervision as is possible, and is always ready to suggest names of books or give opinions on their value. Besides lists for reference, there are special lists for free distribution and also the "Pratt" and "Wilson" lists for sale.

#### COUNTY LIBRARIES—VALUE TO SCHOOLS

It is significant of the growing interest in libraries and library work on the part of educators that in his annual report to the state board of library commissioners, County School Commissioner A. M. Freeland, of Kent county, Michigan, recommends the establishment of a county library system. In Kent, according to Mr. Freeland's recommendation, the library in Grand Rapids would be the cen-

tral one, with branches in all the large villages which would be the centers of distribution for the smaller districts.

"The chief fault with our rural libraries," says Mr. Freeland in his report, "is the small number of books in each library and the lack of variety. In districts having a one-room school the library is almost a fixed quantity. An average of ten to twenty books are added to the library each year. In a library having about 250 volumes it is not long before the pupil has read all the books that are of particular interest to him or her. This condition would be remedied by the county plan.

"Under this system the library funds of the county, including the city, would be handled by a central board. As it is now, the library funds of Kent county are divided into 199 parts, controlled by as many different boards, and, as a consequence, there is a great waste in duplication of books.

"Kent county, with 205 school districts, has 197 district libraries and one township library. Lowell is the only township still maintaining the township library."

#### DUTCH BOOK SELECTION

The Public Library of The Hague (not the same as the Royal Library of the same city) has published some interesting statistical data of the most popular works of Dutch fiction, based on the public demand for such works. The result of this compilation gives the following list, which may be considered a fair guide to the most popular authors in present day Dutch literature and their works:

Aletrino. Zuster Bertha.  
Borel. Het recht der liefde; Het jongetje; Het zusje.  
Boudier-Bakker. Kinderen; Het beloofde land; Machten.  
Brusse. Boefje; In de nachtbuurt.  
Chapelle-Roobol. De speelbal.  
Cohen. Vêr van de menschen.  
Couperus. Eline Vere; De stille kracht.  
Van Eeden. De kleine Johannes.  
Eigenhuis. De jonge dominee.  
Feith. Op het dievenpad.  
Goedkoop-de Jong. Hilda van Suylenberg.  
Van Gogh-Kaulbach. Moeder.  
Heijermana. Sabbath; Wat niet kon; De roode fibustier; etc.  
Hoyen, Therese. Met verlof; Nonnie Hubrechts; Naar Holland en terug.  
De Meester. Geertje; Een huwelijk.  
Noordwal, Cornelia. Ursule Hagen.  
Reyneke van Stuwe. Het kind; Het leege leven; Zestien.  
Querido. Menschenwee.  
Robbers. De bruidstijd van Annie de Boogh.  
De Savornin-Lohman. Vragensmoede; Uit Christelijke kringen.

#### ENTERTAINMENTS

A happy original thought of the social committee of the Keystone State Library Associa-

tion at its last annual meeting was the game of "The Elusive Librarian."

Each guest was given a card upon which to write his name and library (or address), with the request that he wear it conspicuously as a means of identification. Then were distributed small envelopes containing cards, all blank except twelve which bore a cryptic "Keystone." Those who received the Keystone cards kept that fact secret, as they were the "elusive librarians."

The object of the game was to discover which they were, and a prize was offered to the one who first secured the names of all twelve of them.

The elusive ones could divulge their secret only to those who asked "Are you the Elusive Librarian?" to which question their reply was "Keystone." Upon hearing that word the happy questioner would record the elusive one's name on his card and hasten on to inquire for the eleven others.

This hunt and general questioning proved such an effective and pleasant method of introduction that those who completed their lists of twelve first felt that they were fully rewarded even before receiving the beautiful flower prizes.

#### EXTENSION WORK

Library extension was given special consideration at the recent meeting of the Colorado Library Association in Colorado Springs. An appreciation of more definite work in library extension over the state has been growing for several years, and it was made particularly pertinent this year through a library exhibit collected by the Denver Public Library. This showed what could be done through library extension and what was lacking in Colorado. Several posters were borrowed from New York illustrating the extension of library facilities into the rural districts of that state. With this exhibit was hung a map of Colorado showing that over half of the state was without a public library of any type. The counties which lack all library facilities are those in the mountainous sections of the state and along the extreme eastern border in the dry farming belt. Colorado public libraries are grouped along the eastern slope of the Rockies, and many of them are doing what extension work they can, but with no financial help from the districts outside the municipalities in which the libraries are situated. It was recommended at the meeting of the library association that the Colorado law be amended making county seat libraries county

institutions. It was urged by several that the law permit the levying of a small tax on county property in return for this county service. Usually there are many hamlets and mining camps in each county which could serve as branch libraries, and distributing centres from the county seat libraries to the remoter sections of the counties.

#### EUROPEAN WAR—CAMPS LIBRARIES

The work of the Camps Library. Col. Sir E. W. D. Ward. *Lib. Assn. Rec.*, Oct.-Nov., 1915. p. 433-438.

A brief outline of the successful labors of a band of women volunteers who undertook at the beginning of the war the task of providing literature for British soldiers. The Camps Library owes its origin to the desire of the people of the homeland to prepare in every way for the arrival of their oversea brethren to join the great Imperial Army. An appeal through the press asked the public to send books and magazines to lighten the long autumn and winter evenings of the oversea soldiers who were to encamp on Salisbury Plain, before proceeding to the front. Within a very short time the 30,000 books asked for were obtained. The Association of Publishers sent large contributions of suitable literature. The books and magazines as received at headquarters in London were sorted and distinctively labelled "The property of the Overseas libraries." A division of the books had to be made afterwards for the soldiers in Egypt. Under the guidance of the senior chaplain, the chaplains of the Canadian Expeditionary Force undertook the care and distribution of the books on Salisbury Plain. The method of distribution was simple—merely a manuscript book in which each man wrote the name of the book, the date on which he obtained it, and his signature, the entry being erased on its return. The results were in every way satisfactory, as also with the supply of books and magazines sent and distributed under similar conditions to the Australian and New Zealand troops encamped near the Pyramids in Egypt.

This first plan having been put in successful operation, a much larger enterprise, the necessity for which had become apparent during the overseas work, was undertaken. This was the provision of libraries for the camps of the territorial and new armies all over the United Kingdom. The problem, numerically, was much more difficult. The appeal to the public again met with generous response, but while the supply of books was ample at first, with success came daily increased demands from troops in every part of

the United Kingdom, and it was necessary to consider and test almost daily fresh fields from which a literary harvest could be reaped. Especially, as a demand for books and magazines, even more urgent than that of the troops at home, came from the men in the trenches and in the convalescent and rest camps at the front. A system was organized under which once a fortnight boxes of books were sent to every unit in the Expeditionary Force, in proportion to their strength. The post-office department also lent valuable aid. The post-offices throughout the country are now collecting depots for books and magazines. The daily receipts average approximately 20,000. The weekly collection of contributions from places outside the London metropolitan postal area, amounted on a recent occasion to over 160,000. These numbers though large, however, are only just sufficient to meet demands which flow in continuously and increasingly.

At the request of the postmaster-general the Camps Library organization also became the distributing agents for other institutions which were carrying out similar functions: the "War Library" which has the supplying of literature to the men in the hospitals and hospital ships; the Chamber of Commerce, which has undertaken the needs of the fleets; the Prisoners of War Help Committee which forwards books to the unfortunate brethren who come into this category; and all organizations for books and magazines approved by the Admiralty and War Office. Over a million books and magazines at the date of writing had been sent to the soldiers.

#### —FUNCTION OF LIBRARIES

What public libraries can do during and after the war. L. Stanley Jast. *Lib. Assn. Rec.*, Oct.-Nov., 1915. p. 439-445.

A paper read before the thirty-eighth annual meeting of the Library Association in Caxton Hall, London, Aug 31, 1915, and also published separately by resolution of that meeting. The special contemporary functions of the public library are stated to be three in number: 1. The public library can help the British fight intellectual as well as material Germany, by providing literature which will enable the people to understand the causes of the present conflict, the meaning of the civilization for which the Allies stand, and the values of the various ideas and conceptions of the human mind. The library can also help in a vital way by supplying practical books which enable the people to see the happenings of the moment in true perspective, so as to defeat the campaign of mental sug-

gestion, which Germany is carrying on with a thoroughness and on a scale never before attempted in the world.

2. A time of war is necessarily a time of great emotional stress which creates a most favorable environment for the appreciation of the literature of active power. In this phrase is acknowledged De Quincey's celebrated division of the literature of knowledge and the literature of power, the latter being further subdivided into active and placid power, with Byron and Wordsworth as exemplars. The library can therefore supply this literature so that the people shall understand it better and sympathize with it more, when wrought to an abnormal emotional temperature by the play of great destructive forces in the world.

3. The public library can provide avenues of escape from too much thinking about the war,—from "obsession" with which the mind can easily become diseased. If people would put a strict limit on the amount of attention which they give to the daily press, and devote some time every day to the reading of a good book, there would be not only a steadier, but a far more effective national state of mind. A large increase in the work of the Paris municipal libraries, since the beginning of the war, is pointed out as one of the beneficial effects of the great struggle. Parisians have rediscovered the old truth that "Books are real friends; they bring consolation where everything else fails."

The libraries may mitigate the unfortunate political and social party strife which was rampant in the nation before the war. It is often said that nothing in the world will be the same after the war as it was before it. That is an exaggeration. Many issues will be changed, but many of the old problems will remain. Toleration and mutual understanding can only come by a widened intellectual outlook, and the mass of the people should seize the present opportunity to read the best literature on either side of such subjects as electoral reform, woman's suffrage, the land question, poverty and unemployment, work and wages, housing and town planning, divorce, trade, and those questions of politics and history which are concerned with the present and future conditions of Europe. All conflicts in their fundamentals are conflicts of ideas. It is a few books which are at the present moment changing the face of Europe. The real war is not between the forces of the Allies and of the Central Powers, it is a war between antagonistic ideas. The forces now engaged in bloody decision in so many parts of the world, are brought into being, governed and inspired, by ideas.

The real difficulty in making the public libraries effective in the particular direction indicated, is the old difficulty of the very large number of books, which confuse and frighten off many a prospective reader. What the ordinary citizen wants is a very select list of one or two only of the best and most suitable books dealing with all the questions mentioned above. Then each citizen should read most carefully and pay most attention to the books on that side of each question which is antagonistic to his own views, if he has any views at all. One of the greatest and most common mistakes that most make is to read far too much along the lines of individual temperamental outlook—for outlook is far more a matter of temperament than of anything else. No one really knows the extent of personal knowledge, until individual beliefs have stood the shock of their contraries.

Acting on this suggestion, the following resolution was unanimously passed by the meeting: "That the Council be instructed to prepare and publish as soon as may be a short list of selected books on subjects deserving of special study during the war." A footnote states that no reference has been made to the part which the public library should take in the development of trade and manufacture after the war, by the adequate provision of technical books and papers, and the collection of information as to markets, and so forth. The United States (it adds) has already seen the vital importance of library development in this direction.

#### —LITERATURE

Literature of the war: origins, causes and inspiring ideas, Ernest A. Savage; Histories and descriptions of operations, A. Hilliard Atteridge; Economics and international law, J. E. G. de Montmorency; Medicine and hygiene, Percy Dunn; Pure literature, Ernest A. Baker; Bibliography and select lists, R. A. Peddie. *Lib. Assn. Rec.*, Oct.-Nov. 1915. p. 446-480.

Under the heading, "The great war of German aggression," Mr. Savage suggests a short list of books which covers modern European history, German expansion, the inspiring ideas, and the immediate causes of the war. "Anybody who reads them carefully," he says, "is qualified to form an opinion on the origins of the catastrophe."

"A fairly complete and definite history of the war," Mr. Atteridge grants, "cannot be written while the war is in progress, nor indeed for many years after its close,—as history must deal with certainties." He gives the qualifications for an ideal war history and

makes critical reference to the various publications now appearing as histories and summaries of the war.

Although "the general war literature on economics," says Mr. de Montmorency, "has not been particularly inspiring or fruitful," he mentions several publications as "practical books of considerable value" which amplify the innumerable pamphlets and articles that have for months endeavored to make the British nation realize that probably they are the most wasteful of people.

"The war," he also adds, "will create a new sanction for international law," and, commenting on several works on the subject, remarks that "it is a melancholy reflection that our keenest thinkers should have prophesied in detail and correctly how the aggressors would behave in the war."

Mr. Dunn states that "no medical book upon the war has been published by an English author. . . . The only medical war book which has been issued since the war is that by Edmond Delorme, the well-known medical inspector-general to the French army."

"War is rarely or never the inspiring cause of literature," says Dr. Baker, and "the great war has not yet brought forth much of the first importance in the realm of literature."

Of the early bibliographies which began to appear after the war started, Mr. Peddie says the most valuable list was that issued by the Library of Congress at Washington. Of national bibliographies, the German is by far the largest.

#### —SIGNIFICANCE OF TO LIBRARIANS

Presidential address of J. Y. W. MacAlister, F.S.A., to the Library Association [England], Aug. 31, 1915. *Lib. Assn. Rec.*, Sept. 15, 1915. p. 405-408.

Reference is made to the fact that out of the total of about 3000 persons engaged in library work in the British Isles, nearly 400 are under arms. Several library men have been wounded, and at least three have given the last pledge of their loyalty to their country. Beside the overwhelming and absorbing interest of the war, all other interests, including the work of the Library Association are *and ought to be* secondary and almost negligible, President MacAlister declares. After referring to the burning of the Library of Louvain, and the campaign of destruction which has overwhelmed Europe, the causes which produced the war are clearly analyzed from the standpoint of a librarian of Allied interests. A telling illustration of American origin, concludes a forcible and serious address, which has been reprinted by resolution

of the annual meeting of the Library Association and may be obtained in pamphlet form.

#### FINANCE

In Malvern, Ia., the proprietor of a moving-picture theater donated the receipts of two evening entertainments to the fund being raised to furnish the new Carnegie library.

The Wednesday Study Club of Anniston, Ala., carried on a brick-selling campaign to raise money for the public library. The real campaign began on Alabama Day, Dec. 14, when the first brick sold was again sold, and sold successively until the highest figure was reached. Each purchaser was considered as having been an owner of the brick, and entitled to honor on that account. There were three places in the city where bricks could be purchased—and they cost whatever the purchaser chose to give—from one cent up. Each purchaser was given a tag in lieu of the actual brick to prove that he had made a purchase.

#### FINES—IN CHILDREN'S ROOMS

A new system of fines has been proposed for the juvenile department of the New Bedford (Mass.) Public Library. Instead of taxing small boys and girls who keep books out longer than the allotted time, two cents a day, it is proposed to penalize the juveniles by refusing them card privileges. If books are kept out a day longer than allowed, the card will not be recognized for two days; if books are returned two days overdue, no books can be taken out for three days, and so on. Children will be permitted to read books in the reading room during that time, but no books may be taken from the building.

#### FOREIGNERS, WORK WITH

A course of lectures to prepare aliens for citizenship was started in November in the Public Library at Lynn, Mass. It is estimated that there are over 2000 foreigners in the city who have taken out their first papers. A large number of these men hoped to attend the next session of the court for naturalization, which was held in this county the second Monday in January. The speaker for the first meeting was Philip Emerson, principal of the Cobbet school, who is now in charge of the educational work for foreign-speaking people conducted by the public schools. Mr. Emerson spoke upon "The meaning of American citizenship." The second lecture was given by Frank E. Marble, on "The requirements for naturalization," and the third lecture was by Commissioner Roy F. Bergengren, who spoke upon "The government of Lynn." Seven other talks will be

given upon state and national government, American history, and biography.

FUMIGATION OF BOOKS. See Infection from books

HARVARD COLLEGE LIBRARY. See Angling collection

#### HIGH SCHOOL LIBRARIES

The efficient high school library. Emma J. Breck. *Amer. School Master*, D., 1915. p. 453-456; also in the *Catholic Educational Rev.*, Ja., 1916. p. 45-47.

The author is head of the English department of the University High School, Oakland, California, and the paper was read at the fifth annual meeting of the National Council of Teachers of English. Among the principles considered are the following:

First: The book must be taken to the reader, not the reader expected to see the book.

Second: The individual reader, once inside the school library, must be welcomed by an atmosphere of cheer and homelikeness.

Third: The inexperienced reader must be helped:

- a. To find what he wants
- b. To want constantly more and more
- c. To want ever better and better.

The author also believes that the school library must be for the school only, open neither to the street nor to the general public. She believes that it is impossible for the same collection of books and the same librarian satisfactorily to serve both the community and the school.

#### INFECTION FROM BOOKS

The risks from tuberculous infection retained in books. Henry R. Kenwood and Emily L. Dove. *Lib. Assn. Rec.*, Sept. 15, 1915. p. 409-415.

The results of a few experiments undertaken as a basis and guide to advice sought by a large public library on the policy which should be followed in reference to books returned from houses in which cases of consumption had been recently reported. These experiments were designated to test the risks of transmission of the disease by books. There does not appear to be on record any case of tuberculosis transmitted by means of books. In 1899 Flügge sought to show that consumptive patients spread infection by means of the minute droplets of tuberculosis sputum discharged ("sprayed") in the act of coughing, sneezing and speaking. This theory has not met with general acceptance and is seriously discounted by the more recent experiments of Chausée and others.

Although it is rare to find tubercle bacilli in the saliva of the consumptive patient, the habit of wetting the thumb to facilitate the turning of pages is likely to convey infection to books, for the patient's hands become infected from the handling of handkerchiefs, etc. There is experimental evidence, however, that if tubercle bacilli survive at all, their virulence is lost in a few days after drying and exposure to light; and speaking generally, infective organisms (however introduced) which survive in books must be few in number and of reduced vitality, owing to drying, exclusion of air, or a saprophyx existence at unfavorable temperatures. The procedure and results in several experiments are given which warrant the conclusion that although a library book may be grossly infected by the cough of a tuberculous patient, and while that infection may remain active for at least a few days, the infection does not survive a period of one month. These experiments confirm the results obtained by certain other workers, although in conflict with those obtained from some of the soiled books of the Berlin Municipal Library similarly tested a few years ago. In a final summary the authors state that the following conclusions appear to be warranted:—

1. There is probably no material risk involved in the reissue of books recently read by consumptives, unless the books are obviously soiled. Even then the risks are very slight.

2. Nevertheless, it is desirable to provide against a possible risk, however slight. This will be secured if dirty books recently received from houses in which there is a consumptive reader are not re-issued until such books have been either disinfected or placed "in quarantine" in a separate room for the period of a month. It will be desirable to disinfect such a room from time to time. When such books are very dirty they should be withdrawn from circulation. The loss involved would be much reduced in time if the borrower could be temporarily deprived of his right to borrow when a book is brought back in a badly soiled condition.

3. It would be well to demand (upon a printed and gummed slip) the following precautions of all readers: (a) Not to cough into a book; always to cough into a handkerchief. (b) Not to moisten the fingers when reading; the hands should always be dry and clean. (c) Always to keep the book closed when it is not being read.

4. Moist heat is a simple means of destroying the infection of tuberculosis on those library books which are not likely to be injured by such a method. For this purpose

it is not necessary that the temperature should reach 100° C., although it should approximate to that; nor that the exposure should exceed thirty minutes.

It is proposed to extend these experiments with the object of learning if hot moist air can be efficiently employed for disinfecting purposes without causing injury to well-bound books.

#### LABELS

George E. Wire, librarian of the Worcester (Mass.) County Law Library and always interested in the improvement of bookbinding methods, has a note in the *Bulletin of Bibliography* for October, 1915, on fixing the ink on book labels so that it will not run. The call number is written with Carter's Koal Black ink, after which the label is vaselined. The ink then does not run when the back of the book is varnished, and the plan has proved uniformly successful during the several years it has been in use.

#### LOCAL PUBLICATIONS—EXHIBITS OF

A collection of the books which may be said to have been "made in Lowell" has been assembled by the librarian of the Lowell (Mass.) Public Library for exhibition at the Board of Trade show, and there will be found to be a surprising number. These books are all written by Lowell men and women, and they are of all sorts and sizes.

The earliest, was a book dated 1840. The latest perhaps is the little book on Belgium by a refugee who has gone into business there since the war began. The whole collection fills full four three-foot shelves in a small bookcase in Mr. Chase's office.

#### MAGAZINES—SHELVED WITH BOOKS

The Public Library of the District of Columbia says in its 1915 report:

"Because the public has so often to help itself we have made every endeavor to simplify the arrangement of material so that all periodicals and books on like subjects are together. To this end all magazines, which previously had been arranged alphabetically, were roughly classified and placed with the books on the same subjects. This has proved a valuable help, because it has placed before the public much current material, often the very best, that they would have failed to get if the periodicals had not been at hand."

#### HOSPITAL LIBRARIES

Medical libraries for modern hospitals. Grace Whiting Myers. *Mod. Hospital*, N., 1915. p. 341-343.

Miss Myers, librarian of the Treadwell Library in the Massachusetts General Hospital in Boston, shows clearly that a medical library in a hospital is not a luxury but a necessity; an adjunct that should be regarded of as much value to the hospital as the laboratory, or any other accessory department; and that the position of librarian is most important. The administration, the visiting staff, the resident staff, the nurses and the students attending clinics, must all study constantly, and must always have available the latest current literature. Along every line they need the assistance of books and of the librarian who keeps abreast of the times and can give "first aid" in all emergencies. "Statistics," says Miss Myers, "name not more than twenty hospital libraries in the world. Eleven of these are in the United States and four in or near Boston. The largest is that at the Johns Hopkins Hospital, Baltimore, which contains 14,000 volumes, and has an average daily attendance of 100 or more. The Treadwell Library of the Massachusetts General Hospital is next in importance. It contains over 9,000 volumes and serves the special needs of about 150 doctors."

An interesting fact noted is that the oldest hospital library in this country is the library of the Pennsylvania Hospital in Philadelphia. It was established in 1763 primarily for the use of students who were at that time required to pay each year "six pistoles" (from \$15 to \$20) as a gratuity for the privilege. For 130 years this library was active in the life of the hospital, but since 1893 has acquired few books, though it continues a subscriber to some 60 periodicals. Its historic value is now supplemented by the growth and activity of the large library of the College of Physicians of Philadelphia. Up-to-date library methods in effective operation at the Treadwell Library are interestingly described and should prove a guide of value to the medical student and reader using the library.

#### MUSIC—SPECIAL COLLECTION

The collection of music recently purchased by the Louisville (Ky.) Public Library, containing opera scores, librettos, vocal and instrumental music, etc., and books about music and musicians, with other material on the subject in the library, has been placed in the open shelf room.

The collection has been entered as usual in the public card catalog under composer, author of words, title, kind of music, instrument and other subjects. In addition, a separate composer and title index has been made for the open shelf room of the songs and compo-

sitions in the books and scores of the entire collection. This index of more than 10,000 titles of vocal and instrumental pieces with the card catalog, makes the collection most valuable to the public. The collection is for the use of pianists and organists, teachers and classes, choir leaders and singers, professional and amateur musicians and all music lovers.

A very attractive printed list has recently been issued to acquaint the public with the material to be had at the library and to assist in making selections for home use. The list is divided into two general heads—"Music scores" and "Books about music"—and these subdivided for quick reference. The library board, in issuing this printed list, has taken another step to show the resources of the library and to encourage its use, and musicians and music lovers of Louisville have been helpful with suggestions in preparing the list for purchase.

#### NEWSPAPER LIBRARIES

Model newspaper library: The *Indianapolis News* efficient system of indexing. W. F. McDermott. *Fourth Estate*, Feb. 6, 1915, p. 6; Feb. 13, 1915, p. 17; Feb. 27, p. 19.

"The modern newspaper library," says Mr. McDermott, "is a higher development of the old-fashioned 'morgue.' What the 'morgue' did in a haphazard, desultory way, the library attempts to do thoroughly and systematically." The *Indianapolis News* Library was organized after studying other newspaper and public libraries, selecting what appeared to be the best features of each, and converting them to the requirements of a daily newspaper. The plans thus conceived are in operation at present and have proved generally satisfactory. The purposes of the library may be stated as:

(1) Be prepared to furnish on instant notice reference to anything the editors may have on hand at any time.

(2) Be prepared to furnish without delay comprehensive material for the study of any person or subject required.

(3) Be prepared to furnish at short notice either cuts or photographs of any person or place that may have come into prominence or spring suddenly into publicity.

This calls for the closest co-operation with every other department of the paper and means extending assistance to individual members of the staff and acting as an information bureau for the general public.

The news library at this time cares for about 6000 books of reference, 250,000 photographs, 250,000 clippings, and 50,000 cuts to which additions are constantly being made. Four persons are employed in carrying on the work. Under the headings: The library,

Photographs, Cuts, and Clippings, the methods employed in indexing, classifying and filing are described, the Dewey system of classification and indexing by Library Congress cards being employed with some modifications to suit requirements. "Every story saved," the subdivision of "War news," "Government makers," "Miscellaneous subjects," "Sketches of persons," and the "Condensation method" whereby a hundred envelopes can be replaced by one with a consequent saving in space, are all interestingly described. This scheme also allows for the removal of dead matter as regularly as the filing of new material.

#### PUBLICITY

The Public Library Committee of the Toledo Commerce Club is hard at work on plans for a Library Publicity Week some time in February. The purpose of the campaign is to call the attention of the citizens at large to the opportunities offered them by the Public Library and by increasing the use of the library's resources to promote wider and better reading. The campaign itself will include the placing of large display circulars in every street car, the distribution of circulars through the boxes provided for the purpose in the street cars, exhibits of books and posters in some vacant store windows, the running of slides in moving picture shows, the printing and distribution of special lists, and general newspaper publicity, including a special library number of the *Commerce Club News*, a four page weekly bulletin which reaches nearly 4000 Toledo business men. Some of the printed matter will no doubt be sufficiently general in its make-up to be used by other libraries. Librarians who may be interested in securing some of this material for use in their cities are invited to ask for samples with a view to some co-operative printing at low cost. Suggestions as to methods of publicity, copy for signs and circulars, will be appreciated. If any libraries have slides which have been used in moving picture shows and which they are willing to loan the Toledo Library would be very grateful for their use. As this campaign is being largely financed and put through by the Commerce Club the advertising matter will probably be less conventional than is usual with library advertising but it should have a correspondingly greater appeal.

#### —EXPERT SERVICE

A publicity expert for public libraries. *Pub. Libs.*, D., 1915. p. 469-471.

On the plea that "a publicity expert employed by the American Library Association would be of the greatest service in increasing

the use of libraries throughout the country," the committee on publicity of the Pacific Northwest Library Association sent out a letter dated Sept. 1, 1915, to 33 representative libraries in 20 different states asking them to urge their state library associations to pass resolutions recommending that the A. L. A. employ such an expert. "Librarians," it is contended, "who are such sticklers for trained service in the library profession ought to be the first to want and demand the assistance of the best talent available in a task so difficult as modern advertising. Libraries are now spending no small amount on various kinds of publicity, lists, bulletins, etc., and it is doubtful whether the results obtained from a large part of this warrant the expenditure of time and money. It would be a long step toward economy as well as efficiency if there were some one directing library publicity who really knew what he was doing. It does not seem to be a question of lack of funds, but rather one of directing funds into a new channel."

Answers to the letter were received from 22 librarians in 17 states. Of these answers one was unfavorable, 6 non-committal, and 15 favorable. If the opinion expressed in them is representative of the majority of librarians, it would seem that such a publicity expert would fill a long-felt want. "In considering the whole proposition the one thing that needs constantly to be kept in mind," writes Mr. C. H. Compton, of the Seattle Public Library, chairman of the Pacific Northwest Library Association committee on publicity, "is—that it is not for most libraries a question of spending more for publicity, but probably less, and that more wisely."

As an experiment in co-operative publicity the Pacific Northwest Association recently prepared some co-operative posters, of which 2000 copies were sold to 20 libraries in the Pacific Northwest at a cost of 4 cents each or \$17.50 for 500. "The cost of 25 posters if printed alone would have been \$4.50 instead of \$1," comments Mr. Compton, "while the cost of 100 would have been \$7 instead of \$4. Naturally the big saving was for the small libraries, but there was some reduction for the large libraries, as the cost of 500 if printed alone would have been \$21.75 instead of \$17.50."

#### RELIGIOUS LIBRARY

Suggestions for a working library in religious pedagogy. C. H. B. (In *Bull. of the Gen. Theol. Sem.*, O., 1915. p. 100-104.)

Discusses about a score of the books which would be most useful to teachers in Sunday schools.

SCHOOL LIBRARIES. See High school libraries

SCHOOLS. See also County libraries—Value to schools

#### —RELATIONS TO LIBRARIES

Library work and the public schools. Charles Hughes Johnston. *Pub. Libs.*, D., 1915. p. 457-460.

A paper which reflects the typical attitude toward library service of the progressive, up-to-date public school man. Mr. Johnston is professor of secondary education at the University of Illinois, and the paper was read before the Illinois Library Association, at Urbana, Nov. 5, 1915. "The American high school," says Prof. Johnston, "is perhaps our most typical as well as our most promising American institution to-day. Its dreams of various curriculum extensions, of incorporation of fascinating new social features, the new conceptions that are fermenting in the minds of its leaders, make of the modern high school an institution which arrests the attention of all serious students of our civilization. In painful contrast to this, from the point of view of a librarian, we see in these modern high school buildings, perfectly appointed in many respects, but a motley array of old and useless and dirty text-books, out-of-date encyclopedias and reference works, and an unkempt array of old black volumes of reports of departments of agriculture, 'attic books,' gifts often of friends who wish to clean up their attics, and get their names in local papers. If one attempts to vision the whole 'reading horizon' of high school pupils, one is struck with the meagerness of the entire field. From an analysis of unit costs for different items of construction of a typical high school," Prof. Johnston adds, "one would judge that the *making of a user of books* was not one of its purposes." Some of the factors figuring in the growing modern emphasis upon a better high school library service are enumerated, and the suggestion is made that as "the ordinary expanding high school cannot afford, of course, to add an expert wherever a new need develops, a natural and gradual solution will be to combine in one person several functions, as the supervised study director, the teacher, the vocational guider, and also the high-school librarian, and this would appear to be an opportunity for the person with some library training."

Several plausible and partial solutions of the problems involved in extending and vitalizing expert library service in high schools are offered for consideration, prominent among which are: the official working out by the association of a conception of the

minimum instructional equipment and other sorts of library support which in its opinion any public high school should enjoy; suggested courses of study in the "Elements of library mechanics," the "Use of the library by high school students," the constitution of a desirable "Teacher's professional library and reading-room," the securing of proper working connection between the public-school library and the high school; the encouragement of local surveys to determine the reading facilities and reading habits in the home; the adoption by state reading circles of a reading-circle book treating of all the ideals for which the association stands; and the preparation for the county superintendents of an authorized and adequate list of speakers who can go before the county institutes and explain effectively to the rural teachers the aims and needs of librarians in rural schools.

#### SCRAP BOOK

A patent has been granted to Irving R. Allen, of Chicago, for a scrap-book which is illustrated and described in the *U. S. Patent Office Gazette*, vol. 220, p. 1250, Nov. 23, 1915. The scrap book comprises the usual pair of covers with a number of single sheet leaves bound and adapted to receive printed and illustrated descriptive matter. The feature of the patent is an ingenious double extensible sheet bound with the single sheets. This extensible sheet is scored—and reinforced by fabric strips at the score line—so as to permit the extensible portion to be folded down to lie within the space occupied by the book. The advantage of the extensible sheet is to receive printed pictorial and other illustrative matter of larger area than any single or double leaf of the book.

#### SHAKESPEARE—SELECTION OF EDITIONS, ETC.

What can be done by Illinois libraries for Shakespeare year. D. K. Dodge. *Pub. Libs.*, D., 1915. p. 460-462.

Suggestions for making the celebration of the great tercentenary of April 23, 1916, effective among small libraries. Contained in an address by Prof. D. K. Dodge, University of Illinois, Champaign, delivered before the Illinois Library Association, Nov. 3, 1915. "The selection is made not from the viewpoint of a teacher of literature," says Prof. Dodge, "but to consider the needs of the general reader, members of women's clubs and high school pupils." For the sake of clearness a classification of Shakespeare's works is adopted, beginning with: 1. Editions. While every university library and every large public library will have a set of the

Cambridge Shakespeare, the standard critical edition for the serious student, at the smaller library, where only one edition is needed for the general reader, it should be annotated and should contain a vocabulary. Among such editions, the best are the Rolfe (rev.), the Hudson (new), the Arden, the Dowden, the Temple, and the Tudor. Of inexpensive one-volume editions are the Globe, and the Oxford or the Cambridge Poets' (Neilson). For the use of the high school depending upon the public library, volumes of the Furness Variorum edition should be procured of the plays studied in the English course.

With various volumes recommended under each subject heading, the classification is thus extended:

2. Contemporaries of Shakespeare.
3. History of the Elizabethan drama.
4. Biography.
5. Critical works.
6. Topography.
7. The Elizabethan stage.
8. Modern stage interpretation.
9. Miscellaneous.

While far from being exhaustive, the list of books given is claimed to be "ideal" in its entirety: "It contains no titles that might not properly find a place in any general collection of Shakespeariana."

SPECIAL CARDS. *See* Borrowers' privileges

SPECIAL COLLECTIONS. *See* Angling; Music; Teachers' libraries

SPECIAL LIBRARIES. *See* Medical libraries; Newspaper libraries; Religious libraries

#### TEACHERS' LIBRARIES

The state superintendent of schools for Maine, Payson Smith, is sending out information cards in relation to teachers' professional libraries. The Maine State Library has a limited number of traveling libraries of professional books for teachers. These libraries of 25 volumes each are available for the use of teachers' clubs and for groups of village or rural teachers. Each library has books dealing with the various phases of educational activity and will appeal to teachers of all grades and secondary schools. A small fee to cover transportation charge is the only expense for use of a library for a period of six months.

#### TELEPHONE SERVICE

The Public Library at Seattle has installed a special telephone service for the answering of miscellaneous requests for information. All over the city neatly printed notices

have been posted inviting the public to make use of this service in their daily work.

#### TRAINING—NEED OF HIGHER STANDARDS

Universities and librarians. W. N. C. Carlton. *Pub. Libs.*, D., 1915. p. 451-456.

An address given before the Illinois Library Association, Nov. 4, 1915, at the University of Illinois. After deductions from local conditions at Urbana, and interesting reference to library conditions of the 13th century in Oxford and Cambridge, showing that history amply illustrates the association of library economy with the university, Dr Carlton emphasizes the point that library progress and development will be guided more and more by influences originating in our institutions of higher learning, and that training and preparation for librarianship will more and more be conducted under university direction and in ever closer association with the library activities of a university. The pioneer period, the self-taught stage of American librarianship, is rapidly passing. In the future we shall turn increasingly to the universities for the men and women best qualified to meet the ever widening and always exacting demands made upon our libraries. Suggestions are made for future advanced library training, the studies for which should parallel those of candidates for doctor's degrees in history, literature, language, philosophy, etc. The products of such training would be men and women with well-stored and disciplined minds, with educational foundations lasting, broad, human, and scholarly, and with a mastery of general principles and methods applicable to any type of library and to any scale of operation. The college and university libraries are the institutions which most need this highly trained type of men and women for their staffs. Present library conditions in the university world, it is pointed out, are—unfortunately—not always as happy as they should be. One reason is, that in some institutions the tremendous importance of the library is not fully recognized by the higher authorities and consequently adequate financial support is lacking. In such a case it is obviously the duty of the president to convince his trustees that, to quote the words of Dr. Koopman, librarian of Brown University, "the college library is generally admitted to be the most important element in the students' academic training, and indispensable to the operation of all the rest." A well-equipped library is a fundamental necessity for both teacher and taught. Wherever to-day a poor and ill-equipped college library is found, a dry, inefficient, indifferent and

antiquated instruction will almost certainly be found prevailing in the adjacent classrooms. Other varieties of present-day university library trouble are described and remedies suggested. A clear summary recapitulates the arguments advanced and in concluding Dr. Carlton maintains that it is to the universities that librarians must chiefly look for leadership in standards, example and practice. . . . Upon the universities is placed the largest responsibility for the future welfare, progress, and rise in rank of library work.

TUBERCULOSIS. See Infection from books

#### UNIVERSITY EXTENSION THROUGH LIBRARIES

The public libraries of California will be one of the agencies through which the newly created bureau of visual instruction will help to carry on university extension work. The bureau enters upon its work with a collection of 90 motion picture reels, more than 1000 stereopticon slides, and a number of complete cases of traveling exhibits.

#### WALL DECORATIONS

The walls of the children's room in the Public Library of Huntington, West Virginia, have been decorated with silhouette figures, so cut and arranged as to illustrate fairy stories, myths and legends, and nursery rhymes, such as are familiar to the youngsters. Many of the stories thus illustrated have been told to the children at the story hours which are conducted each Saturday.

The design is an elaborate one and required several weeks for execution. The plan was conceived and executed by Miss Edith Hall, with some assistance from other workers in the library. Among the illustrations are the following:

The Mad Hatter; the Rabbit; The Cheshire Cat—Alice In Wonderland.

Little Miss Muffet; Jack and Jill; The Old Woman Who Lived in a Shoe—Nursery rhymes.

The Pied Piper of Hamelin—This is a frieze extending for some distance along the cornice of the room.

The Lion and the Mouse—Æsop's fables.

Europa and the Bull—Western mythology.

Seigfried and Lohengrin—Norse myths.

Hiawatha—Longfellow.

Little Red Riding Hood.

Sinbad the Sailor; Hans and Gretel; Mermaid; Narcissus; The Ugly Duckling; Cinderella.

The decorations have already attracted much attention from the children and have brought visitors to the department to see them. The children are much interested in seeing how many they can identify.

---

## Bibliographical Notes

---

The November issue of the *Bulletin* of the Rosenberg Library of Galveston, Texas, is devoted to a description of the library's work with schools, and to a select list of references on education and classroom aids.

The *Classical Journal* for November, 1915, Vol. 2, pages 115-119, contains several short reports on the "Relation of the organized library to the school." One is on a minimum classical library, giving a list of books; another, periodicals and recent articles of interest to teachers of Latin; and a third, on the teaching of Roman antiquities in the high school.

Beginning January 1916, the Russell Sage Foundation Library discontinued its free mailing list for its bibliographical bulletins. This was made necessary by the rapidly increasing mailing list. These bulletins are now sent to libraries on an exchange basis but to others the charge of 25c. for the year's six numbers is made. This is simply a nominal charge to cover cost of printing.

The *Town Planning Review*, October, 1915, p. 77-100, contains an interesting article on "Town planning literature," by P. Abercrombie, giving a brief summary of its present extent. The article is arranged under principal headings, and calls attention to the leading books and other writings on the particular subjects discussed. It will prove very useful to anyone interested in collecting material of this sort.

The Proceedings of the American Library Institute at the Atlantic City meeting, March 5, 1915, have just been printed in pamphlet form. The discussion considered "The limits of co-operation," and the points made are summarized here. The pamphlet also contains an extended communication from Dr. E. C. Richardson on "The field of the American Library Institute," together with its constitution, and the list of fellows.

The *Modern Hospital*, a periodical of wide influence in its field, has added a new department "Institution Libraries" thereby showing the appreciation of its editors for the place of the library in institutional progress. With such departments as Nursing, Life Extension, Philanthropy and Public Health, Social Hygiene, etc., the new department "Institution Libraries" is in good company. It should have no difficulty in proving its right to the position.

The Bureau of Railway Economics in Washington has recently prepared two noteworthy bibliographies. One is a list of references on railway motor cars, filling 37 type-written and mimeographed pages, and the other is a trial bibliography on the New York, New Haven & Hartford Railroad which runs to 144 pages. Both lists will be of very great value to libraries interested in transportation.

Two pamphlets intended to help in giving instruction in the use of a library, have lately come to hand. One, from the Wisconsin state department of public instruction, is entitled "Lessons on the use of the school library" and was prepared by O. S. Rice, supervisor of school libraries; the other, called "Lessons in arrangement and use of library for high school students," was prepared by George H. Lamb, librarian of the Carnegie Free Library of Braddock, Pa., to make that library of greater service to pupils in the public schools.

A Handbook of the Maine Library Association for 1915 was printed for distribution at the annual meeting in Bangor. It contains a chronology of Maine library history, a list of members in 1891 when the association was organized, a complete list of the membership from 1891 to 1915, and statistics of Maine libraries. The latter list gives, so far as possible, the name of the town, the library, the number of volumes, the book expenditure in the last fiscal year, and the name of the librarian.

The third edition of Alfred Claghorn Potter's "The Library of Harvard University: description and historical notes," contains, besides the history of the library, its organization of departmental and special libraries, book funds, and extended bibliography, a description of the building of the new Widener Memorial Library and an interesting table showing the arrangement of the library in the new building and the number of volumes in each class. The book was specially revised for issue at the time of the opening of the new building.

In "Learning to Earn" John A. Lapp, the editor of *Special Libraries*, and Carl H. Mote have written a book which, as the title page says, is "a plea and a plan for vocational education. It includes an analysis of the failure of education as it is to meet the living needs of living men and women. It provides the definite plan of an education for all the people, adjusted to their actual conditions, qualifying them for their life work, fitting them for a

complete life." One chapter is devoted to "The library and the worker," and describes the part the library may take in universal education, serving, if it is properly organized, every class in the community, with quite as much stress on the literature of local trades and industries as on the humanities. The establishment of industrial branches of public libraries in business houses and of special libraries for the collection of material in limited fields is also touched upon, and the opportunity of the library as a vocational counselor and guide is pointed out.

Three folio publications have been issued from the Manchester (Eng.) University Press, pertaining to special collections in the John Rylands Library. One is devoted to the library's Sumerian tablets from Umma, with ten plates and transcriptions, transliterations and translations of the inscriptions by C. L. Bedale, with a foreword by C. H. W. Johns. The second is volume II of the "Catalogue of the Greek papyri" in the library, devoted to the documents of the Ptolemaic and Roman periods (nos. 62-456). The Greek text and English translations fill 487 pages, and there are 23 plates at the end. Dr. Arthur S. Hunt of Oxford, assisted by J. de M. Johnson and Dr. Victor Martin of Geneva, has had charge of the editing of the present volume. The first volume was published in 1911, but it is hoped that less time will elapse before the issuing of a third volume dealing with the documents of the Byzantine period. The third publication is a portfolio of interesting "Woodcuts of the fifteenth century," reproduced in facsimile with an introduction and notes by Campbell Dodgson, keeper of prints and drawings at the British Museum. This is the fourth issue in a series of facsimile reproductions of unique or rare books in the John Rylands Library, and made for the two-fold purpose of rendering these possessions more accessible to students and of averting the loss to scholarship which would result if the collection should be destroyed by fire or other disaster.

This office has received the final 1915 number of the "Official index to state legislation," which is published by the Law Reporting Company of New York City in co-operation with the state legislative reference departments and libraries represented in the National Association of State Libraries and the American Association of Law Libraries, and under the direction of the joint committee on national legislative information service of those associations. This index furnishes a ready reference to all state legislation, and

is corrected and cumulated weekly to include all changes in position and new bills introduced during the week. Its arrangement is (a) by subjects, alphabetically; (b) under each subject, by states, alphabetically; (c) under each state, the Senate first and then the Assembly or House; and (d) under each house, the bills first and then the resolutions, numerically, by introduction numbers. The entry for each bill and resolution gives, (1) the bill number, (2) the date of introduction, (3) the name of the member introducing the bill, (4) the subject, (5) the effect of the proposed legislation or the "short title" of the bill, and (6) the position or status of the bill, on the date shown at the head of the column. In 1916, until June 1, the index will be cumulated and published weekly, and each new issue will contain everything that previous issues have contained, with changes in position of bills and new bills introduced subsequent to the previous issue. Weekly supplements will be issued from June 1, until the publication of the complete annual number, about August 1, in which will be shown the status of bills when the legislatures adjourned. After the issue of the complete annual number, weekly cumulative supplements will be issued when any legislature is in regular or special session. Such a comprehensive legislative index, covering every bill pending in every state legislature, has long been needed, but the labor and expense necessary to give such a service is so great that it could not be done even now without the co-operation of the state legislative reference departments and libraries, who furnish the material and information required, and the national trade associations, public libraries and corporations, whose subscriptions cover the cost of compiling, editing and publishing. Only generous support from all interests concerned with state legislation can make the index permanent.

MARCH, 1916

No. 3

THE plan for co-ordination in specialization prepared for the American Library Institute by Prof. E. C. Richardson, now its president, seems especially practical because, while it is comprehensive and ideal in its ultimates, it can be entered upon piecemeal, so that any part undertaken by any one library will with proper foresight become an integral portion of the larger plan. Most of the great schemes have failed because they were so big and so ideal as to be discouraging for the present, and thus many have been left for revival in the library millennium. So much library interest is now centered in specialization and Mr. Lee's scheme of sponsors for knowledge, that Prof. Richardson's plan has a special timeliness. What he is doing at Princeton is an illustration of what can be done in the near future by prevision and co-operation. In brief, he proposes that the important libraries which have or may develop specialties in collection, in bibliography, or in administration, shall come into such consultation and co-ordination with each other as to make an integral system, which will avoid the waste of duplication and put the riches of each at the service of all. In this field even the small library can do its part, for if a local library develops a good collection of local history and other local data, the largest library may take this fact into its scheme and be able to refer scholars and readers to the local library for such local information. Such a plan may serve the secondary purpose of giving the American Library Institute something to do and some reason for continuing existence, although it is by no means evident that it may not be as well carried out through the Council or through some special committee as part of A. L. A. work. The proposition to increase the membership of the Institute to 200 might,

we fear, result in making the A. L. I. and the A. L. A. rival bodies and give up altogether the original scheme of the Institute.

ONE of the many committees for foreign war relief, the Belgian Scholarship Committee, now makes a special appeal to librarians in a proposal with which all must sympathize. This is that at the close of the war we should be ready to give our aid in rehabilitating Belgian libraries, especially those of the universities, by sending books, notably those relative to America and presenting American ideals, which can be made of service to the Belgium of the future. In the whole course of the war no country has more appealed to world sympathy than little Belgium, and we are sure that American librarians will be glad to do their part in co-operating with their Belgian brethren in the way proposed. When the State Library at Albany was destroyed by fire, American libraries spontaneously came to its assistance by donations of books, now forming a substantial part of the new library which has risen phoenix-like from the ashes of the old. The precedent may well be applied in the foreign field. It is not proposed that books be sent now, but that lists should be made now of books which could be sent later. The only objection to this is that lists made now may prevent desirable disposition of some of the books meantime, and perhaps the better way will be for libraries to indicate to the committee, whose promoter and secretary is Dr. George Sarton, 309 Wilkins Building, Washington, D. C., their willingness to contribute when called upon. We hope individual libraries will in some way respond promptly to the appeal so that our sympathy with Belgium may be made manifest in this as in other ways.

THE library development of Canada goes on despite the demands and embarrassments of the war, though necessarily it must be slowed down. Few Americans on this side of the border realize how much progress has been made in the province of Ontario, which is at once the Massachusetts and New York of the Canadian provinces, especially in library development—thanks in good part to the energy of the inspector of public libraries of the province, Walter R. Nursey. In Ontario all public libraries, that is, those which have received governmental aid on the basis of actual work, are co-ordinated in a general governmental system. Of these no less than 409 are already in being, and though many of them are small, they are the germs of great potentiality in the future. In the other nine provinces of the Dominion public libraries are few, probably not more than 30 in all, but the library system is pieced out by libraries which are the gifts of private persons—Mr. Carnegie leading the list—and by the libraries of institutions. Montreal will presently rival Toronto by the development of a municipal library system of the first order, and it is to be hoped that the province of Quebec, of which Montreal is the capital, may after awhile enter the race with Ontario in library progress. The American Library Association has always desired that Canadian libraries should be considered an integral part of the American library system, has already held two conferences in Canada, has one Canadian on its list of past presidents, and has representation on its Council and committees at least proportionate to Canadian interests and activities in its work. The proposal that one of the vice-presidents in the next administration should be from Canada is certainly not unwelcome to any of the members from "the States."

---

CATALOGING is a division of library work which sometimes seems as polemic a field as religion, but on the whole there is a decided tendency toward standardization

and agreement. The several recent books on the subject, as those of Mr. Bishop, Miss Fellows and Miss Hitchler, are not, however, in full agreement, and Miss Hitchler's book has been the subject of considerable question in library circles, although it appeared as a publication of the American Library Association, and therefore has the imprimatur of standard authority. Some of the criticisms seem to be not without foundation, and they are at least useful in opening the way to new discussion, which will clarify practice on certain points. It is to be hoped that from such discussion, whether in print or by a round table in the cataloging section, books like these may profit, so that as opportunity comes for their revision and re-issue they may be as free as possible from critical objection, and the cataloging novice and the librarian of the small library may not be bewildered by the confusion of tongues.

---

As we go to press, word comes of the death of the veteran John Thomson, whose name for nearly a quarter of a century has to the library profession represented Philadelphia and has to Philadelphia represented effective librarianship. His portrait and an appreciation from a near friend must be deferred till the April number, but we must at once express the large sorrow of the profession and the closer sorrow of many intimate friends in the loss of one who will never be forgotten by those who knew him. He was known in so many fields of scholarship and work that it is impossible in a brief paragraph to suggest his career. But next to his general library work, that for the blind was a distinctive feature of his life interest. One of those who came to us from England in middle life, he became a thorough American, and his devotion to the American ideal of the free public library has been worked out in the great institution in Philadelphia from the days of its modest beginnings. The meeting at Atlantic City will be clouded by the remembrance of his loss.

# THE A. L. I. PLAN OF CO-OPERATION BY SPECIALIZATION\*

BY DR. E. C. RICHARDSON, *Librarian, Princeton University*

THE A. L. I. plan for co-operation starts from the standpoint of specialization in learning. It proposes that certain libraries shall definitely adopt certain specialties and engage to undertake one or all of the following matters:

- (1) To build up in these lines,
- (2) To prepare and publish a joint list of each specialty adopted,
- (3) To prepare or secure printed cards of all books in these lines which are likely to be found in many libraries and which are not to be had in the Library of Congress or other published cards,
- (4) To analyze and publish cumulated, short-title catalog of all books in the collection which call for analysis,
- (5) To be responsible for either:
  - (a) Lending to other libraries, or
  - (b) Indicating on request some library from which copy can be borrowed, or
  - (c) In case of unique works, or works so rare as to forbid any lending copies, to provide or secure photostat copies for lending,
- (6) To be responsible for having type-written or photostat extracts made from these books, and, when practicable, for having researches made in the subject, for reasonable compensation, according to the sponsorship idea of the special librarians,
- (7) To be responsible for an effort to organize the libraries having like specialties so as to secure that there shall be at least one reference copy and one lending copy (either original or copy) of all books on the subject in each of seven localities of the United States.

The bottom idea of this plan is to produce something concrete, however small, which shall be a contribution towards the recognized co-operation problems and in the recognized methods, instead of waiting longer for regional libraries or endowed

foundation to undertake them. There is nothing new about the plan except for a slight emphasis on specialization and the gathering together in one, of the several familiar elements of the co-operation problem—building up, cataloging, inter-library loan, reference sponsorship.

Not all the functions will necessarily be undertaken by one library, nor will they necessarily be wholly uniform in method for publication, but the plan points towards narrowing the field of specialty and performing all the functions, rather than doing less for a bigger subject, and it looks towards recommending methods for uniformity within certain limits.

To make this matter concrete, it may be said that the Princeton University Library has chosen collections of standard English drama commonly mentioned in the bibliographies: (1) it has acquired all but about ten and is prepared to purchase or photostat most or all of the remainder; (2) it has prepared titles for a joint list; (3) it will prepare or secure printed cards for all those which cannot be had in the Library of Congress cards; (4) it has analyzed and prepared short-title references for a title-a-bar cumulated list, and it will insert in this list analyticals for the other collections as fast as they can be had by purchase or borrowing from other libraries; (5) it will be responsible for either lending these to other libraries, or, if they are in too much demand at home for lending, will secure from some smaller library use of its copy for lending, or, in some cases of rarity, it will provide a photostat copy for lending; (6) it will be responsible for copying of references by typewriter or photostat, and, in a limited way, for having researches made for reasonable compensation, when these researches are carefully defined so that they can be assigned to someone without too much overhead work on the part of the reference librarian; (7) it will attempt to secure that there shall be at least one

\*Discussed at the meeting of the American Library Institute at Atlantic City, March 4, 1916.

reference and one lending copy of all books in this field in each of seven regions of the United States.

This library can very well afford to undertake several other small things immediately, and look forward to undertaking several more on a considerable scale later; *e. g.*, it could undertake (1) Cruikshankiana, (2) editions of Horace before the year 1800, (3) editions of Virgil before 1800, (4) catalogs of manuscripts—perhaps of all the literature of ancient books and writings, or even all the literature of books and writing, except special bibliographies; (5) classical Festschriften, (6) mathematical Festschriften. It could undoubtedly undertake (7) some aspects of international law, and later probably, (8) the literature of railway finance, (9) the Bannatyne Club, and later, many similar clubs. On all of these matters, this library is already exercising some of the functions named, and it will necessarily do much work on all of them for its own use. In many cases, the work will be done anyway in such way that it will serve the uses of other libraries. It will not be hard to systematize the work so as to secure nearly all the points aimed at, and it will be very thoroughly justified for any additional expense, incurred by adapting to general use, if as many as two or three other libraries adopt specialties of equal scope.

It is recognized in this plan that a national library with sublibraries or depositories in each of six or more localities or an endowed system of regional libraries or an endowed foundation for co-ordinating the common interests of libraries in several localities would be a far and away better solution for the recognized problems and that something of this kind is the inevitable final solution. It is recognized, farther, that some libraries may be reluctant or unable to co-operate by checking up a large number of joint catalogs on account of time cost. Nevertheless, something is better than nothing: there has already been too much waiting for a solution on a large scale. The more libraries willing to co-operate, either by undertaking a specialty or by aiding with check lists and loan, the better, but even a few will be a positive con-

tribution in which every stroke of work counts and many librarians welcome every joint list as doing for their libraries more than they do for it.

The plan recognizes again that many contributions are being made by other agencies and it does not assume to direct or make pretension to incorporate these efforts, but it contemplates noting such matters in its publications and taking account of them in applying the plan to other matters. These other efforts include the sponsorship movement among special libraries, the American Historical Association joint list of collections, the A. L. A. periodical cards, the printed cards of the Library of Congress and the John Crerar Library, etc., etc. The plan simply means that the A.L.I. will try to get some more useful systematic contributions.

The plan does not aim to prescribe the exact form of publication, but recommends uniformity within certain limits as the result of library experiment. It was a good many years ago that Mr. Dana pointed out that the essentials of a cataloging entry could be confined to a single type-bar of right length to be printed on standard cataloging card. Much experiment since then has shown that the 29-em bar was in fact practical for full title and called for by size of standard card. Experiment has shown farther that in using a long-line title, quickness and legibility are better served by a finer type with a rather broad spacing to guide the eye clearly than a larger type with less spacing; *e. g.*, an 8-point line un-leaded is actually less legible in ordinary reference than a 5½-point on an 8-point body, while the latter also gives an increased number of letters to the bar. It has been recommended that a 10-point, 29-em bar should be adopted for the text of these proceedings, and a 5½-point on an 8-point body for any titles printed in the title-a-bar form in the proceedings. If adopted for this purpose it would doubtless be recommended for cumulated catalogs. This matter will be discussed by the Board—perhaps by the Institute—and a general recommendation made, but it is likely that the same flexibility can be admitted as in the form of printed cards.

It is coming rapidly to be recognized that the invention of the linotype machine and the photostat has radically changed the old premises as to cataloging, and still more the premises as to inter-library co-operation. Through the mere fact that type can be kept set up and in a form which can be handled with much the readiness of a card in the card catalog, printed catalogs and cumulative indexes, which are the essentials for inter-library co-operation, have been made

possible. The photostat has likewise revolutionized methods of copying references and reprinting rare books and manuscripts, and has shown itself capable of making revolutionary improvements in methods of cataloging for inter-library purposes. The A. L. I. plan aims to utilize modern methods to make real the methods of co-operation which considerations of economy have hitherto seemed to make unpractical of realization.

## BOOKS FOR MEN\*

BY HENRY N. SANBORN, *Secretary and Organizer for the Public Library Commission of Indiana*

"Books for men," chosen as a subject for discussion, seems in itself an admission that our public libraries are far from interesting men as we should like. A decidedly bookish male friend of mine, who is a state insurance agent and who visits almost every town in Indiana, tells me that he, while waiting for trains, always visits the public library of a town, and that invariably he finds there a few school children, a few younger children, and a very few adult females, but never any men. Although it would be very easy, and fairly accurate, to meet his insinuations with the suggestions that the men read the books which the women and children take home from the library, it would be the height of folly for us to maintain that the books of a public library—certainly a town or village library—reach anywhere nearly so many men as they do women and children. Too many of our libraries select their books, unconsciously, as a rule, almost wholly for women and children; or at best for the very small majority of men whose tastes are primarily literary or artistic. A little over a year ago I was twice called to a city by the commercial club to help discover why the library of the city was not reaching the men and the working classes as well as the highly cultivated class of inhabitants of which this city had more

than the average number. One very evident reason of this condition was the fact that the library had an unusually fine collection of books on art, belles lettres, and philosophy—but almost no books on useful arts, sociology, or science, although the city had several large manufacturing plants. The books had been bought for the purely bookish part of the community. I do not wish to be understood to imply that men will not read art, poetry, or philosophy; in fact, I am not sure that men are not the greater readers of these classes of literature, but I do mean that a larger number of men are interested in science, useful arts and sociology, and that the individual man who will not read "North of Boston" or "Crack o' dawn," may be an eager reader of "Pan-Germanism," a book on the submarine, or Bailey's "Fruit-growing." These books deal with the evident actualities rather than the invisible spirit of life, and so appeal more to the average person.

Since we have seen fit to separate men and women, we seem forced to discover some psychological differences between men and women which make their reading tastes different.

Judging from the facts that more women than men attend the serious dramatic productions, attend church, play some musical instrument, study art, and do settlement work, it is probably safe to repeat what

\*Being notes for a round table talk made at the Summer Conference of Librarians at Madison, Wis., July 26, 1915.

everyone says, that women are more emotional, certainly more sentimental, than men. If this is true, then we naturally expect women to read more or at least different fiction, more poetry, and more literature devoted to alleviating undesirable social conditions. But some librarian says: "It is the women and not the men in my town who want books on eugenics, world politics, history, economics, industrial education." Unquestionably this is true in many towns, but it perhaps indicates a difference rather than a similarity between men and women. The average woman—not the specially college trained woman—reads these books because her club is studying the subject or because she feels that she should know something of these subjects to attain her desired goal of intellectual breadth and culture. A man, I believe—the average man—when he reads these books, does so because the subject itself interests him. The saying is that a man loves a woman, but that a woman loves love. In the same way, we will say that a man gets information because he loves the subject, but a woman gets information because she loves to have information. One other psychological difference, at least, I believe we can make; and that is that women are more interested in mental vivisection than are men, at least in psychological studies that tend to the morbid, the abnormal, or the degenerate. Undine Spragg, or "Jude the obscure," are more attractive to women than to the ordinary man novel reader. Such novelists as Edith Wharton, Margaret Deland, Alice Brown, will appeal to fewer men than women. Men do not object to psychology if it depicts men and women who are optimistic, and morally on the upward path in life. The characters may be criminals, degenerates, or undesirables of any kind, as long as the chief interest is in their strong, good, healthy characteristics. Bret Harte, John Fox, Norman Duncan, Ralph Connor, or Henry Knibbs in his "Sundown Slim," interest a man of untrained literary taste as George Meredith, Eden Phillpotts, or Thomas Hardy will not. Bearing in mind, then, this greater emotional nature of woman and her conscientious desire for culture on

general principles, we are ready to think about reading that will appeal to the masculine mind.

Before considering, however, the adaptability of individual books or classes of books to the needs and tastes of the male reader, it seems necessary first to classify men as readers. When we speak of "books for men," do we mean laboring men, business men, professional men, or gentlemen of leisure? Certainly it is improbable that all classes of men will get benefit or amusement from the same classes of books; if, indeed, we concede that every class of men reads books or even that all men should read books. It is commonly taken for granted these days that the reading habit is a virtue or at least a desirable habit. There is, nevertheless, opportunity for strong argument against the assumption that all should become readers. We have allowed too many people to feel that to read anything and to "just love books" is a mark of superiority. If you hunt up the figures for the circulation of the *Woman's World*, the *Saturday Evening Post*, or a dozen other periodicals, you will realize that the American people are the greatest readers in the world. Commercial publishing has made us a nation of readers, but not proportionately a nation of thinkers. With many, reading is a pernicious vice. The old New England farmer, quoted in Henry Cabot Lodge's "Memories," was in a measure right when he said, "We don't want no public library; reading rots the mind." Unless we can make our reading—at least a good part of it—a stimulation to thought, we had better not read.

In spite of this digression, let us come to the consideration of our classification of men. In any community, the greatest number of men are laborers or business men; the professional men and the gentlemen of leisure comprise only a small proportion of the male population. If these men read at all, they read for information, recreation, or what is akin to both of the others—inspiration; and all three of these may be the result of any one of these as a purpose. Except where the reader is merely after definite facts as facts, it is next to impossible to separate these three motives.

In considering reading for the man who works with his hands, one at once is taken with the idea of supplying this man with books devoted to his own line of work—books that will make him a better workman at his craft. Admitting at once that every important industry in any community shall be represented in the library by at least a few of the best books on that industry, one will have to admit as quickly that such books will not hold a man as a permanent user of the library. At best they can be used as means of attracting the man's attention. None but the exceptionally ambitious man will be interested in reading extensively about his trade. The Grand Rapids Public Library has a large and valuable collection of books on furniture, but in answer to my inquiry, Mr. Ranck once told me that few except the designers or foremen used the books. Very often the manual or unskilled worker wishes books that take him away from his occupation rather than those that continue to keep it in his mind. What is true of the laboring man is to a less degree true of the business and professional man. A live business man, however, will read much more on his own vocation or on business methods in general than will the laborer; and the lawyer or doctor of very necessity must read professional literature.

Books on business the library can and must have. It must be ready to serve the business man at any time and ready to ask the help of the business man. Nothing can do more to convince the men of a town that the library is something more than a feminized institution than to have material which will be of use to them, and then to get the men to use this material.

In buying vocational literature for a public library, one must take particular thought that the books purchased are not above the heads of the men one wishes to read them. Very likely the best book on any subject may not be the best book for the librarian's purpose, for it may be so technical or so assuming of educational background that the ordinary workman will find himself beyond his depth. I believe that this is a serious mistake, too often made by librarians in choosing books in these vocational and business classes.

One possible collateral use of books of this nature should be realized by every librarian. It will often be found that what is vocational reading for one man is avocational reading for another. The farmer among your rural borrowers may not care to read your book on raising small fruits, but the banker who has a place on the edge of town may find it intensely interesting. One of the best ways to get a man interested in the books of a library is to find out what his hobby is—whether it be golf, gardening, dogs, stamp collecting, or what not.

When the library attempts to supply professional literature for lawyers and physicians, it attempts what is virtually impossible. All that a library can do in a small city or town is to care for the libraries of the local bar and medical associations. Many small libraries do this very successfully, and I believe gain much from the added interest which these two professions take in the library.

If, then, the libraries cannot hope to hold men permanently as readers through vocational and professional literature what kind of books will men read; and may the library with dignity and proper idealism have these books?

It is probably as true of the male untrained reader as of the untrained female reader that the librarian will generally have to select most of the books read, and on the ability of the librarian to make a happy and fitting choice will depend whether the reader becomes a constant user of the library. Such selection is not always direct, but what is even a more delicate problem, indirect through the children sent to the library to bring home something for father to read.

As a general statement, it can safely be said that men will read heavier and more serious books than women. An examination of a single copy of the periodical which I consider the almost faultless answer to the question of what the average American man will read—I mean the *Saturday Evening Post*—will prove this. If we compare this journal with the *Ladies' Home Journal*, we shall see pretty well the differences between the men and women who make the great majority of American

readers. There are no other periodicals published that feel, as do these two, so constantly and so successfully the pulse of the public. It seems as if every man and boy in the country reads the *Post* regularly. The last number of the *Post*, for example, has an article, "A billion-dollar business," an account of Uncle Sam's war orders, "Pounds vs. Marks"—the "Battle of giant banks," "Your porter," "Walking with Samuel," about buying army horses, "Boycotts vs. bayonets," by Norman Angell, and crisp, short editorials on timely topics and several interesting middle-class stories. Sometimes there are also popular and hackneyed articles of travel and description.

As fiction readers, men do not as a rule care for subtle character studies as such, though they will read them if there are the proper elements of adventure, success, or romance, as in Joseph Conrad or Kipling. However, it will not be possible to start the non-reading man with these authors. As subjects for fiction, big business, the sea, the West, any adventure, love in its fiercer and more elemental phases, and mystery and detection of crime, are favorites. Sentimental love stories are for women. A few good writers of fiction that occur as examples of authors covering these subjects are: Arnold Bennett, Conan Doyle, G. K. Chesterton, E. P. Oppenheim, Rider Haggard, Anna Katherine Green, for mystery and detective stories.

Norman Duncan, Ralph Connor, John Fox, Jack London, Zane Grey, Francis Lynde, Frank Spearman, Stewart Edward White, for out-door adventure, and stories of bravery and elemental strength.

Marion Crawford, Sir Gilbert Parker, Anthony Hope, Stanley J. Weyman, for romance often founded on history.

Arnold Bennett, George Birmingham, O. Henry, Wm. Wymarck Jacobs, Joseph C. Lincoln, William J. Locke, H. G. Wells, for humorous studies of life.

Joseph Conrad and Wm. W. Jacobs and Morgan Robertson for the sea.

O. Henry, Booth Tarkington, H. G. Wells, for pictures of society.

Zane Grey, Henry K. Knibbs, Owen Wister, as examples of writers of western stories.

Frank Norris, for big business.

This list has not included classic or the older novelists, as Bret Harte, Poe, Marryat, Cooper, Scott, who will appeal to men after the reading habit is partly formed.

Travel, next to fiction, is perhaps the most popular subject with men. The *National Geographic Magazine* is always enjoyed, and is an indication of the popularity of such literature. Arctic exploration, hunting and exploration, voyages, and description of the peculiar social life and customs of foreign peoples, are favorite subjects. Men do not care, as a rule, for travel books that give description of buildings, art collections, or are written in a consciously literary style; as Edith Wharton's "Motor flight through France," or Howell's "Spanish travels," or Lucas's "Wanderer in Florence."

A few books that have proved popular, are:

Franch. "Vagabond journey around the world."

Slocum. "Sailing alone around the world."

London. "Cruise of the Snark."

Borup. "A tenderfoot with Peary."

Conrad. "Mirror of the sea."

Collier. "England and the English."

"Germany and the Germans."

"The West in the East."

Ross. "The changing Chinese."

Bennett. "Your United States."

Brooks. "As others see us."

Flandrau. "Viva Mexico!"

White, Stewart Edward. (Any of his books.)

Biography is also a popular subject with men. Confidentially, I will whisper in the ears of the lady librarians present that men are fully as fond of gossip as women, and that gossipy autobiographies, especially those confessing weaknesses of the flesh, are "as good as a novel" for any man. I once found that the Countess of Eppinghoven's "Secret memoirs of the Kaiser and Kaiserin" was in constant demand by men. Casanova, Cellini, and even George Moore's literary "Ave," "Salve," "Vale," will appeal to men for this reason. Men of action are also popular subjects for biography. Napoleon, Bismarck, Grant, Wellington, Henry M. Stanley, are good examples.

As the *Saturday Evening Post* suggests,

social questions, as labor, commerce, big business, politics when popularly treated, are interesting. Such books as Carleton's "One way out"; Irvine's "From the bottom up"; Steiner's "On the trail of the immigrant"; Wilson's "New freedom"; Weyle's "New democracy"; Brook's "Socialism"; Howe's "The American city," will appeal to men of varying degrees of education and intellectuality.

Philosophy is, of course, for the more cultured, but probably it appeals to more men than women. Bergson, Eucken, Tyrrell, James, Figges as in "Christianity at the cross roads," and Bouck White, are instances. Books on the occult also, as those by Sir Oliver Lodge, will always find readers.

Poetry, too, can maintain its position on the shelves of the men's section. John

Masefield, Robert W. Service, William Drummond, Vachell Lindsay, can be placed here with success.

To make a long story no longer, we may consider that although men as a whole prefer, perhaps, travel, biography, and sociology, there is almost no class in which books cannot be found which they will read. The secret of getting men to read is to know men, to realize what it is in their magazines that they like, and to find the particular hobbies of individuals. An alert librarian, by inadvertently calling attention to a book, can often get a man to take it. Men, like women, like to be or at least to seem well informed, and often our weaknesses and vanities are the vulnerable spots through which enter the instruments that will prove destructive to our ignorance and narrowness.

## FACTS IN FICTION\*

BY MAUD McCLELLAND, *Assistant in the 125th Street Branch, New York Public Library.*

THE year 19— had been a very hard one on books, especially on those leading the busy life of a public library book. Worn out by old age and overwork, many of them perished, so that a large number of book-souls found themselves one morning in the great council chamber across the Styx, gathered there to await the decision of the judge. There was considerable nervousness among the books, for it was rumored that the judge this year was a new one, and that he would hold each book to a strict account for its life-time spent upon the earth. The days when a book might trust in its grace and charm of style were long past. This year each book would have to give evidence, not only of the actual number of times it had been read during its earthly life, but would also have to show just what facts each reader had carried away with him after finishing its perusal. And upon the evidence thus presented would depend the future career of the book—its consignment to oblivion, or its resuscitation in a new and better

edition. The new judge, it was rumored, stood firmly for a strict business administration. Each book must show exactly what it was worth in dollars and cents. No longer must the earth be encumbered with a host of irresponsible book-folk, whose only claim to usefulness lay in a certain contemptible power to entertain. It was high time such a disgraceful state of affairs ceased, proclaimed the judge from his high bench, and the books heard and trembled, for most of the company that morning belonged to the tribe known as "Fiction." Small claim had they to the sternly practical qualities prized by the just judge; though to be sure, each could show a large balance-sheet of readers, many of them running up into the thousands. But, alas, mere numbers mattered little, if none of that great army of readers had carried away an improved or chastened mind. The books fluttered about in great alarm, separating into little groups that passed snap judgment upon each other, after the manner of folk whose great destiny it is to be judged themselves. Certain books, old in years and in honor,

\*Read at Atlantic City, March 3, 1916.

suddenly found themselves confronted by the finger of scorn; the dread words, "inaccurate," "misleading," were whispered about; the room suddenly buzzed with argument and refutation.

Trouble seemed imminent. Then the judge entered, and the books became silent as he spoke. He warned them first, that each book must be very careful about what it said, as incriminating admissions might be used against them. Furthermore, he warned them not to try to exert any of their powers of fascination over him, for he being a strictly practical man, was immune to such foolishness as literary style or charm. There would be but two things which a book could reasonably present as evidence in its favor. First, the fact that a large number of people had thought it worth while to spend the amount of time necessary to read it. Second, that some of these people had gained accurate and useful information from it, such information as would entitle the book to a legitimate place in the large Decimal Classification which the judge kept open upon his desk. One of the books timidly asked how they might be expected to know these things. Of course, any moderately intelligent book could tell whether a reader was interested in it or not; and any conscientious book, in this age of library statistics, could tell just how many readers it had had. But how could the books tell just how much information these readers had gleaned. The judge frowned for a moment; finally he said that if any book, doubtful about this last point, could open to a page and show thereon certain authenticated facts, it would be accepted as evidence in its favor. If the reader had failed to perceive it, that was his own fault. A sigh of relief swept through the hall. Well the books knew that readers of fiction were not apt to be influenced in their choice of books by any utilitarian principles. But they also knew that much useful information had been scattered here and there through their pages by writers who in their careless prodigality little imagined that upon these small hard grains of fact the entire destiny of the book might sometime rest.

Then the books began to take council to-

gether, and to choose from among themselves the characters that in their opinion might represent them most fitly. Jean Valjean, Don Quixote, Père Goriot were names whispered about. But in the midst of this selection, the judge rapped smartly upon his desk, calling the room to order. Opening the Dewey Decimal Classification at the first summary of classes, he asked all novels considering themselves entitled to a place among the 100's to come before the desk. There was a tremendous rush for the platform. Evidently about two-thirds of the novels in the room thought that their chief claim to distinction lay in their psychological excellence. In the very forefront appeared Mr. Hyde, grinning triumphantly as he dragged forward the unwilling Dr. Jekyll, who, ashamed to be seen in such company, was making a frantic effort to escape. Even the judge seemed to cower a little as Mr. Hyde, stamping the platform in front of him, thundered out the words, "Dual personality,"—then without waiting for a decision, stamped away, bent on further deeds of darkness. The books glanced at each other. "Dual personality, indeed," they seemed to say, "the scoundrel had much better plead guilty outright, and place himself under the classification Crimes and punishments." The judge hastily drew a line through the 100's, saying that the remainder of this class, also the 200's, would be judged later, when he had more time.

As he began the 300 class, a large number of volumes of statistics rushed forward. Evidently through some misunderstanding, or over-conscientiousness, perhaps, these books had been brought to classify themselves as fiction. But the judge speedily set their minds at rest. Nothing, he assured them, could be of greater value to the world than long rows and columns of straightforward, matter-of-fact figures. It mattered little whether or not they adhered to the line of strict rectitude. That could not always be expected of mere statistics. But people would always have a great respect and reverence for them, and at least as long as he was judge, they could feel sure of honored places in the world. Emboldened by this panegyric on figures, Gottfried Kel-

ler's little story, "The smith of his own fortunes" stood up and began to declaim from one of its pages, "It was in the year 17—, when it was a prosperous year. A pitcher of wine cost 7 florins; cider  $\frac{1}{2}$  florin; 1 measure of brandy 4 batz; a two-pound loaf of white bread 2 batz; 1 ditto rye bread  $\frac{1}{2}$  batz, and a sack of potatoes 8 batz." "Hold on a minute," cried the judge, "can you tell me the exact year, and have you any proof of these figures?" The book hung its head. Then from out a group that had been slowly forming on the other side of the room, a shadowy figure sprang to the aid of the harried book. "Your honor," it exclaimed, "this little story is of great value to any person who contemplates going in for genealogical research. It tells how two enterprising yeomen, innocent alike of brains and pedigree, determine to invent a noble family history. They repair to the nearest tavern, and there, fortified by innumerable cups that cheer, they succeed in building up a magnificent family tree, their only tools a pen and a bottle of ink. Think of the inspiration contained in that notable achievement—and the saving in expense," he added after a look at the countenance of the practical judge. "Before deciding this case," said the judge, looking at the interloper, "may I inquire who you are?" "I," said the figure proudly, "am a reader. My comrades and I," pointing to the other visitors, "were sent here from the earth to help plead the cause of the books." "The mere likes and dislikes of readers," said the judge, "will not be permitted as evidence. Next case."

Mr. Pickwick came forward, waving the papers of the famous trial, *Bardell vs. Pickwick*. "These," he shouted, "I submit as proof that I am well within my legal rights when I claim the classification 340 instead of fiction." Impressed by the celebrated Pickwickian manner, the judge nodded, and 340 was scribbled in the note-book. Following Mr. Pickwick came *Oliver Twist*, but shy and backward, he came at so lagging a pace that Bill Sykes, rushing forward, pushed him aside. "If any bloomin' reader," began Bill, "wants to know how to commit murder——" A shudder of horror went round the room, and the judge, calling an officer, told him to throw Bill out of

court. "But," shouted back Bill, as he was being hustled out, "aren't most of the people on earth murdering each other now?" The judge drew himself up. "That is war," said he, "and war, everyone knows, is an ancient and honorable profession, very different indeed from common murder." No sooner was Bill safely out of the way than the Artful Dodger gayly stepped up, offering to teach the judge the latest and most approved methods of picking pockets; whereupon the judge read him a severe lecture upon the evil of his ways, paying little heed to the Artful Dodger's plea that lots of people on earth spent their time stealing from each other. "One must learn to discriminate between stealing, which is a crime, and shrewd business practice, which is a virtue," said the judge, as he delivered the Artful Dodger over to an officer. By this time, *Oliver Twist* was so overcome with shame that he would have withdrawn from the court, if it had not been for a friendly reader who told the judge of *Oliver's* noble work in reforming the orphan asylums in England. "Very well, then," said the judge, "enter him under Charitable institutions."

A host of other novels standing for great social reforms,—Turgenev's "Annals of a sportsman," whose work helped free the Russian serfs; "Uncle Tom's cabin," the champion of the negro slave in America; Jacob Riis's "Children of the tenements,"—all were ready to testify, but the judge waved them aside, saying that their cases would be taken up later.

"Four hundred," he called, and *Borrow's* "I avengro" and "Romany rye" came forward, basing their claim to philological distinction upon their knowledge of the Gipsy language. "I'll pen how we drab the Baulo," they sang, "I'll pen how we drab the Baulo." And much as the judge might disapprove of such a shady transaction as the poisoning of a pig and then begging its body from the bereaved farmer, yet he could not gainsay the correctness of the language in which the ballad was couched. Though he thought the books might really belong in 390, with *Manners and customs*.

While the judge had been parleying with the Gipsies, a motley crew had been assembling on the other side. Books of

nature-study, they called themselves, all anxious to claim a place among the 500's. It was hard to choose among them. A great many, scientifically accurate, were impossible if viewed from the standpoint of literature, while those whose literary antecedents were respectable, were apt to be shamefully misleading as to fact. A hard situation, truly. From the throng, "The wonderful adventures of Nils," by Selma Lagerlöf, stood out pre-eminently,—accurate as to fact, absorbing in interest.

Meanwhile the books considering themselves entitled to a place among the Useful arts were growing impatient, and many of them now hurried forward, eager to show their practical use in the world. "New lives for old" by William Carleton, the story of the rehabilitation of an old New England community through awakened interest in theoretic agriculture, mixed with applied industry and grit, won the badge 630.

In the background was a sad little company,—novels of a medical turn of mind, expert in the sorrowful and sinful diseases of mankind. Haltingly, Mme. Bovary stumbled out the details of her death from arsenic poisoning, accurate and scientific in every particular. Was not her author, Flaubert, the son of an eminent physician? And Elsie Venner, fingering a necklace so high and so tight that it almost choked her, gasped out the story of the evil fate that had followed her from birth. Under the subject-heading, Medicine, both were placed, though it was evident from their air of deep dejection that both would much rather be classed as fiction and relegated to oblivion, than to live again under the old stigma.

Very different indeed from these heavy-laden ones were the sturdy laughing books that next answered the judge's call. Mark Twain's "Life on the Mississippi" justified itself as being a valuable treatise on the difficult art of navigating the Mississippi River, and "Tom Sawyer abroad," encouraged by the success of the transportation idea, offered itself as an authority on balloon navigation. But the judge, wary by this time, politely requested Tom to show his aeronaut's license. This seemed to embarrass Tom. For a few minutes, he fumbled wildly in his pockets, producing

nothing, and was just giving up the search when a reader who had been paying great attention to the scene came forward and asked if he might relate a little incident from his own experience. "Many years ago," said he, "I happened to go into a library. I had to go somewhere, as I was being pursued by a band of hungry lions, and a library was the first shelter I came to. When I explained my predicament to the librarian, she immediately turned to page 81 of "Tom Sawyer abroad," and showed how Tom had escaped from a group of hungry lions simply by getting into his balloon and sailing away from them. A very practical suggestion, or it would have been if I had had a balloon, and one that certainly should entitle Tom Sawyer to a place among the books containing valuable reference material." The judge was convinced. Tom Sawyer emerged triumphant.

About the entire next section, the Fine arts, the judge seemed somewhat puzzled. He doubted whether anything connected with fine arts could be of real practical value, but upon having called to mind Jean Christophe, whose author Rolland is a musician, and Trilby, written by an artist, Du Maurier, he decided that their authors might have had something of value to contribute to their professions, even through the medium of fiction.

Rapidly, he turned the pages,—then announced, History, Travel, and Biography. A torrent of novels streamed before the desk,—historical fiction; novels of local color; character sketches of great men. It seemed as though the novel as reference material was just coming into its own. A veritable army of readers had leaped into view, all eager to defend their favorites. There were small boys, most of whose enthusiastic, if one-sided, ideas of English history had been gained from an ardent perusal of the works of G. A. Henty; young women whose opinion of Frederick the Great and Napoleon was largely moulded upon that of Louisa Mühlbach; men, whose thrilling reminiscences of the highly spiced life of the French court all owed their being to Alexandre Dumas. There were readers willing to take oath upon the accuracy of New England scene and character as de-

picted by Sarah Orne Jewett; devotees of the mining-camp a la Bret Harte; worshippers at Thomas Nelson Page's shrine of ante-bellum chivalry. For every book, a host of supporters sprang up. The judge, as he looked over the assemblage, muttered something about eternity itself being entirely too short a time for the task set before him. Then, closing the book, he announced that the court would adjourn till the next day, when the remainder of the books would be taken up logically and in due order of their classification.

[This paper was prepared to serve as an introduction to a discussion of the use of fiction as reference material, at the meeting of the New Jersey Library Association at Atlantic City, Mar. 3. To facilitate this discussion, the following suggestions were given in outline.]

- I. Ways of making fiction available for reference use:
  - a. By use of bibliographies, such as Baker's Guide, etc.
  - b. Adding subject cards for fiction to the library catalog; *i. e.*, card headed Middle ages. Fict. for Reade's Cloister and the hearth.  
Many libraries are now doing this.
  - c. Experiment made by Wagner Institute Branch of Free Library of Philadelphia in classifying fiction. (In Philadelphia, Free Library of. Bulletin no. 5.)
  - d. Advisability of providing indexes to books of fiction containing reference material.
  - e. Professions of writers of fiction as casting valuable light on the accuracy of material in their books that may be used for reference.
2. Classes of fiction most used for reference.
  - a. Historical

Bulwer-Lytton. Harold (Norman conquest).  
Cervantes. Don Quixote (Spain) (Chivalry).  
Churchill. Richard Carvel (Amer. revol.)  
Dickens. Tale of two cities (French revol.)  
Dumas. Three musketeers, etc.  
Eckman. Conspect of 1813 (Franco-Prussian).  
Ebers. Egyptian princess (Ancient Egypt).  
Eliot. Romola (Florence).  
Hewlett. Queen's quair (Mary, queen of Scots).  
Jensen. Karine (Swedish).  
Mitchell. Hugh Wynne (Amer. revol.).

Page. Red Rock (Reconstruction per.)  
Scott. Ivanhoe (Crusades).  
Sienkiewicz. Quo vadis (Early Christians).  
Etc.

#### b. Studies of social conditions:

Dostoevski. Buried alive (Siberia).  
Edgeworth. Castle Rackrent (Ireland).  
Churchill. Inside of the cup (America; present day).  
Gogol. Dead souls (Russia).  
Reade. Put yourself in his place (England; Trade-unionism).  
Riis. Children of the tenements (New York; East Side).  
Turgenev. Annals of a sportsman (Russia, Serfdom).  
Etc.

#### c. Novels of local color:

Barlowe. Irish idylls.  
Barrie. Auld licht idylls (Scotland).  
Björnson. Happy boy (Norway).  
Hearn. Kokoro (Japan).  
Kipling. Plain tales from the hills (India).  
Irving. Legend of Sleepy Hollow (Catskills).  
Loti. Iceland fisherman (Brittany).  
Mérimee. Colomba (Corsica).  
Marks, Jeannette. Welsh stories.  
Hardy, Thomas. Return of the native (Wessex).  
Also novels dealing with different sections of the United States, as the works of Bret Harte, Thomas Nelson Page, George W. Cable, Joel Chandler Harris, Mary E. Wilkins, etc.

Even if good literature entirely lost currency with the world, it would still be abundantly worth while to enjoy it by one's self. But it never will lose currency with the world, in spite of momentary appearances; it never will lose supremacy. Currency and supremacy are ensured to it, not indeed by the world's deliberate and conscious choice, but by something far deeper, by the instinct of self-preservation in humanity.—MATTHEW ARNOLD.

When thou makest presents, let them be of such things as will last long; to the end they may be in some sort immortal, and may frequently refresh the memory of the receiver.—FULLER.

# THE RUSSELL SAGE FOUNDATION LIBRARY

BY FREDERICK WARREN JENKINS, *Librarian, Russell Sage Foundation*

A SMALL collection of books has furnished often the power of suggestion resulting in a great institution. A library—perhaps in a minister's study—has been the real origin of more than one college and university. If, however, the first demand was for the institution, the second was for the library as a necessary corollary, so that it is not surprising to find again and again that a library is as old or older than the institution which it serves.

The Russell Sage Foundation Library, a collection of books on the various phases of social work, charity and allied subjects, is as old as organized charity in New York City. The first meeting of the Committee on the Organization of Charities of the City of New York was held early in the year 1882,—the realization of the need of a library had taken tangible form as early as October of the same year, for the records of that date make mention that the "nucleus of a library" had been collected for the use of the workers in the society. This collection is, therefore, as old as the New York Charity Organization Society, to whom it owes its origin, and fifteen years older than the institution of which it is now a part.

Of its early history, little is recorded; the second and third annual reports of the Charity Organization Society make brief comment on the new library and its usefulness, but from that time on for ten years or more, no mention whatever is made—enthusiasm was needed evidently for other efforts of the society. The library's early history is only a repetition of the history of many another worthy endeavor,—launched with enthusiasm and left to live or die according to the exigencies of the time.

The appointment of Samuel Macauley Jackson as a member of the library committee gave a new lease of life and usefulness to that meagre collection of books and any history of it, no matter how brief, would be incomplete did it not pay tribute to his endeavors to make a library worthy

of the name. In his report for 1897-1898, there is a certain grim humor, even if unintentional, in his statement "that the library has been much neglected in the past, and no member of the society has yet been found who was sufficiently *enthusiastic* and *intelligent* to give it voluntary care." Needless to say, he set about remedying these defects, and help came from an unusual donation of "gems." That the discovery of America was made possible by the sale of Queen Isabella's jewels may be romance; that the first real start given to this library was brought about by the sale of jewels, is history, for Mr. Jackson continues his report in these words: "It (the library) was until this year entirely dependent upon the gifts of its very few friends. Now, however, it has a small endowment from the sale of the gems given to the society by a donor who with a modesty matching his generosity requested that his name be not publicly disclosed. The interest of the fund thus accumulated will enable us to add a few books every year." At this time, fifteen years after it had been started, the library consisted of about 2000 books.

The founding and growth of the N. Y. School of Philanthropy increased the demands made upon the library and consequently widened its field of usefulness. The next seven years were years of growth. A report of Mr. Paul M. Warburg who succeeded Mr. Jackson as chairman of the library committee, is interesting in its entirety as showing what had been accomplished in these years. This report of the library committee is a part of the 23rd annual report of the Charity Organization Society for the years 1904-1905. He says:

"Notable advance was made by the library during the past year by the acceptance of the offer of the State Charities Aid Association to combine their valuable library with that of the Charity Organization Society, thus increasing the usefulness of both libraries. This addition now installed in new stacks, contains hundreds of rare old books and pamphlets both foreign and American, which are available in no other place. Many of these are

historically valuable as the sources of inspiration for the many social reform activities started in this city by the State Charities Aid Association.

"Recognizing the value of this unique collection of 5000 books, reports, and pamphlets as well as the increasing use made of them both by the students in the N. Y. School of Philanthropy and those taking the courses in social economy at Columbia University, the Charity Organization Society combined with the School of Philanthropy to appoint on May 1st a librarian of college training and practical experience in philanthropic work to give her entire time to reorganizing and making available the resources of the library.

"The committee has arranged for binding together the pamphlets of both collections as much of the best thought in philanthropy has been and still is published in this form. Many duplicates have been presented to Columbia University and to the United Hebrew Charities, which society is starting a similar library in its own building.

"In the spring of 1905, Dr. S. M. Lindsay, professor in the University of Pennsylvania, and lecturer in the School of Philanthropy, who planned to spend the summer in England, was commissioned by the school to purchase books for the library. He has fortunately succeeded in bringing back to us a collection of valuable English books, some new, some old and rare.

"The general magazines and papers as well as all special sociological publications, home and foreign, may be consulted in the library, which has also a separate clipping service, aiming to keep on file those clippings which are of pertinent or permanent value to the various philanthropic interests of the day.

"The object of the committee is to make this library the best place in the country for the study of practical social problems and it is now equipped to keep abreast of all really valuable material published in its particular field. At present the School of Philanthropy occupies the library during the morning hours, but on any afternoon except Saturday the librarian will be glad to assist students or interested readers in special branches of social inquiry. It is especially desired that the library be increasingly utilized by all the social workers of the community, professional and volunteer."

This interesting report\* states truthfully the value of the "unique collection of 5000 books, reports and pamphlets," but it says nothing of their condition when "a librarian of college training and practical experience in philanthropic work" was appointed on May 1, 1905. The books were for the most part uncataloged and inac-

cessible, closets were filled to overflowing, duplicates were shelved to the displacement of books of real value—the library was unique in more ways than one. Out of this chaos was order made, and the foundations laid for a real library. Duplicates were exchanged, the beginnings of valuable sets of proceedings and periodical publications acquired, important pamphlets and periodical literature cataloged and preserved, new books of value to round out certain collections added, in short the library was put first on a good working basis so that wider usefulness for it might later be assured. At this time, the library was first opened to the public daily, except Sundays and legal holidays.

The next four years were spent in the development and reorganization of the collection. During the year 1909-1910 the library was enlarged materially by additions made to it by the Russell Sage Foundation which began at this time to meet all administrative expenses. The reading rooms were opened to the public and circulation privileges given to a limited number of social workers engaged in research and investigation, an extension of privileges which resulted in a steadily increasing number of readers and borrowers.

In May, 1911, the library was made available to the public and closer relations were established with other libraries of the city, so that the collection might be an integral part of the library resources of the City of New York. A wider use was the immediate result, the circulation for the year 1911-12 showing a gain of 73 per cent. over that of 1910-11. Crowded space soon made necessary a rearrangement, which nearly doubled the seating capacity for readers. The library at this time occupied five large rooms on the ninth floor of the United Charities Building.

Realizing that the library was not doing its full work in simply meeting the needs of those who came to the library, it took advantage of the only effective means by which a library may reach those who cannot come to it, the bibliography. The first bibliographical bulletin on "Farm colonies" was issued in October, 1911; the second series of this bulletin is now published bi-

\*Page 100, 23rd annual report, July 1904—Sept, 1905.

monthly. By means of these bibliographies, the individual or group of individuals may keep in touch with the best books on the various phases of social endeavor. The wide use of these selected bibliographies is proof of the need.

#### THE COLLECTION

Late in 1912, the Russell Sage Foundation began the erection of its building at 130 East 22nd street, and space was provided for ample library facilities. Realizing the duplication of effort involved in maintaining several libraries on social problems, the various organizations concerned unanimously decided to present to the Foundation their respective collections to be owned and administered as one library in the new Russell Sage Foundation Building. The present library is therefore a consolidation of the collections formerly maintained by the New York Charity Organization Society, Association for Improving the Condition of the Poor, State Charities Aid Association, New York School of Philanthropy and the Russell Sage Foundation. This union of the various collections was an especially opportune time to reclassify and recatalog the entire library which was begun on November 1, 1913, and is now nearing completion. This catalog is in itself a most valuable piece of social bibliography.

More than twenty-five years ago, Mr. Paul Leicester Ford, in an article in the *LIBRARY JOURNAL*\* deprecated the indiscriminate duplication of book purchases by New York libraries, and suggested as a possible remedy some agreement between librarians whereby each library should have assigned to it a specific and definite field for its activity. Ten years later, Dr. Billings, in defining the policy of the New York Public Library, stated among other things his intention "to buy comparatively little in departments which are well covered by other professional or technical libraries in the city." The wisdom of that policy is realized to-day, and especially in New York where inter-library relations are mutually profitable. To the student, the question is not "Where is the library?" but "Where is the collection?" A summary of

the material available in the Russell Sage Foundation Library is, therefore, of interest to all who would use it.

First of all, it is a special collection so called, in that it files and makes available the literature of a special class—sociology, and omits entirely whole classes of books to be found in a more general type of library such as the ordinary free public library. Its purpose necessitating this specialization has been expressed admirably by the custodian of a similar collection "whose aim is to bring to the service of every social enterprise, the knowledge and wisdom of the leaders in social effort; and the recorded experience of other such enterprises and other communities."

The library is intended first of all to be of service to social workers either professional or volunteer, as a statistical laboratory for all who would analyze and study social problems and methods for their amelioration. As charitable relief, however, is closely related to the idea of prevention, the library must collect material on all projects for municipal and industrial betterment. The need for a correlation of library resources at once becomes evident. Opportunities furnished by other special collections for the advanced student of public health, sex problems, socialism or city planning for instance, are too well known to need comment, and yet all these subjects, being problems of the social worker, must be represented at least by a selected number of the best books in any library on applied sociology. This may explain the need for breadth of selection even in a special library like that of the Russell Sage Foundation Library. For convenience of description the resources may be divided into five classes: I. General books; II. Periodicals; III. Reports, federal, state, municipal, and institutional; IV. Conference proceedings; and V. Clippings.

I. General books: New books of value relating to social problems are so far as possible added as soon as published. The collection on charities, including books on poverty, administration of relief, history of charitable institutions, child-saving and medical charities, is especially strong and comprehensive, containing not only the most recent material on these subjects, but

\*Volume 15, p. 7-9.

A CORNER OF THE BEAUTIFUL ROOM THAT HOUSES THE RUSSELL SAGE FOUNDATION LIBRARY IN NEW YORK CITY

through years of careful collecting, represents in itself the history of modern charitable endeavor. It is first of all a valuable collection on charity with, naturally, a large amount of material on crime, criminology, and correctional institutions.

Church socialization, denominational work, the institutional city church and the problem of the rural church are subjects well represented by recent literature. The library of the Union Theological Seminary contains many additional titles made available to our readers by inter-library loan privileges. Again, effort has been made to procure the best material possible in such branches of education as vocational and industrial training, school social centers, school feeding and problems of school socialization, medical inspection of school children and continuation schools. Another field of endeavor well represented by a large number of books is that relating to city problems, civic improvement and civic welfare. The laws, charters and ordinances of various cities may be found readily at the New York Public Library, division of documents, while a very fine collection on civic art and city planning may be consulted at the Avery Library, Columbia University. A selection of the best books on all these subjects may be found, however, at the Russell Sage Foundation Library. On such problems as public baths, comfort stations, municipal recreation and recreation centers, and the administration of parks, the material is unusually complete.

One of the finest collections in the library is that on public health, with a large number of books, old and new, on tuberculosis and its prevention, the housing question, housing sanitation, improved housing, model villages and garden cities. These subjects are well represented by the best that has been published. By special arrangement, readers have access to the library of the New York Academy of Medicine and its exceptionally fine file of medical reports and periodicals.

A large part of the library is given over to books on labor conditions and problems including employment, child labor, women in industry, wages, hours of labor, indus-

trial betterment, welfare work, remedial loans, co-operation, unemployment, insurance, employers' liability, old age pensions and other forms of social insurance. Still another field in which the library has gathered carefully all material available is the literature of social surveys. These are but examples of the intensive character of the collection. Other representative subjects taken at random from the catalog, and on which the library has collected much material, are immigration, race problems, profit sharing, strikes and lockouts and industrial arbitration, farm and labor colonies, dangerous occupations and industrial diseases, vagrancy, charity organization, family rehabilitation, feeble-minded and defective classes. The total number of such books or treatises is about 14,000 volumes.

II. The periodical list represents several years of careful study and consideration of the various demands made upon periodical literature as a source of information on social progress. Periodicals are of strategic importance in a special library. They give the latest results, a matter of moment at a time when so much is being accomplished in the social world. The library is fortunate in having complete sets of several technical magazines which are no longer published but which contain articles of the greatest value in tracing the history of certain charitable endeavors. Two hundred and fifty periodicals are received regularly, the technical magazines being bound, and articles of value from the others clipped and filed. Magazines not indexed by the Readers' Guide to Periodical Literature and its Supplement are indexed by the library, such entries appearing in the general catalog. The Readers' Guide to Periodical Literature, Readers' Guide Supplement, Book Review Digest, Cumulative Index, Industrial Arts Index, Index to Dates of Current Events, *New York Times* Index and Index Medicus are on file.

III. Reports: The collection of reports, local, federal, state and institutional, relating in any way to social work, is very comprehensive and numbers about 23,000 volumes. In many cases the long files of reports represent the history of some social endeavor, and are therefore of the greatest

historical value. Among such may be mentioned the reports of park and playground commissions, of state boards of charity, of state boards of health and prison commissions, and current reports of over 3000 miscellaneous institutions, both American and foreign. For the entire collection, a check list has been made, making its contents readily accessible.

IV. The library has especially valuable files of the Proceedings of all national and international conferences related in any way to social work which are for the most part complete from the beginning.

V. Vertical file: Much valuable material for a sociological library appears as pamphlets. The reports of the majority of investigating commissions appear originally in this form. These, because of their permanent value, are bound in boards and treated as books, making them more readily available and capable of wider use. The pamphlets of ephemeral service, but of real value temporarily, the articles clipped from some popular magazine which may later appear in book form, a collection of pamphlets on the current year's legislation, to be supplanted by the following year's cumulation, newspaper clippings, programs of conferences, advance papers included later in the proceedings of the conference, plans and platforms, circulars of information, and such elusive literature, are all kept in the vertical file. Frequent examination and the elimination from time to time of material which has been supplanted keeps the number of pieces fairly permanent—about 3000.

Such in brief is the Russell Sage Foundation Library as a collection, but these brief notes may show, also, how closely correlated are the various libraries of the city and how easy it is to use the combined library resources when exhaustive study requires.

#### THE PRESENT QUARTERS

In September, 1913, the library was moved into its present quarters in the Russell Sage Foundation Building, at 130 East 22nd street, which contains the various offices of the Foundation, and with the exception of the first and eighth floors, is a typical high-class office building. The first

floor is given over to a lecture hall and exhibit gallery, while the library occupies the entire upper floor.

In planning the floor space for the library, three definite aims were kept in mind: to furnish accommodations ample, well lighted and well ventilated for readers; to provide adequate storage space for books not only for the present, but for years to come, and to make the entire collection readily accessible; and finally to so arrange books and readers that the library might be a quiet place for serious study. The location of the library at the top of the building made sure, at the outset, an abundance of light and the elimination of all street noise, while the following brief description will show how the various needs have been realized.

The library is reached by three electric elevators of the most approved type, which open into the main public corridor on the upper floor. This hall is a pleasing bit of Florentine work with its vaulted ceiling and oak wainscote, at the east end of which is the main entrance to the library. At the left of the elevators is a well lighted work room 16 feet x 23 feet, with seven large windows; the corridor and stairway being between this and the public rooms, the noise of typewriters never reaches the readers.

Directly in front of the elevators, extending half across the front of the building, is the periodical room containing bound files and current numbers of the magazines. Five great windows glazed after the Florentine manner with copper rondels, open out to a loggia, extending the full length of the room. The barrelled ceiling, 19 feet in height, is supported by Kingwood stone columns and pilasters, with carved caps symbolizing some of the activities of the Foundation. The wood in this room is Colima oak, a Mexican product, and the floor of red Welsh quarry tile.

At the west end of the periodical room is a door opening into a small study, to be used when occasion requires by people who may wish to converse about their work. This also has a tendency to keep the reading rooms more quiet. Beyond this room is that of the librarian.

The main reading room with the stack, occupies the entire Lexington avenue side of the building and is 65 x 24 feet. The ceiling is vaulted and supported by columns and corbels of Tennessee marble, the general color scheme being a warm grey-blue with blue and gold harmoniously blended in walls and ceiling. An abundance of natural light comes through eight windows, while at night the lighting by the indirect method is at once abundant and peculiarly restful to the eye.

The present arrangement in this room provides for 50 readers, two at a table, arranged so that every reader has the light over his left shoulder and sits next to an aisle, no reader facing another. The public catalog is in an alcove on the west side of the room. This arrangement allows free conversation without disturbing those at work at the tables. The main charging desk is at the south end of this room, back of which is the three-story open steel stack with a capacity of 50,000 volumes. The arrangement is such that the reference librarian and the readers have the entire resources of the library, together with the key to the collection, the catalog, at close range. Around the walls of the reading room are general reference books, annuals, dictionaries and encyclopedias.

Opening from the west side of this room is a comfortable study for students of the New York School of Philanthropy. Here are books reserved for required readings, and in this room is the vertical file for clippings. The main reading room, as well as this study, have cork tile floors, making them noiseless. The woodwork and furniture are of white oak finished in silver gray.

The heating of the library is ample and well distributed from radiators concealed by bronze grilles, and controlled by thermostats. Artificial ventilation, also, has been provided, arranged so that air may be supplied to the rooms at the floor and exhausted at the ceilings, or vice-versa, as conditions of temperature and humidity may require.

Thus, splendidly housed, the library is in a better position than ever before to render effective service. From its special nature,

it will never have a large circulation. It is primarily a library for study, for reference and for investigation, where people will come and read and use reports and reference material in great quantities, many of whom may seldom take a book for use outside the building. And the true test of a library, after all, is not in its circulation—it is in its use.

Measured in terms of service, the library has just closed the most successful year in its history. It is encouraging as indicative of what may be done when funds permit and when the period of reorganization is finished.

---

### CIVIL SERVICE OPENINGS

ANNOUNCEMENT has been made of examinations to be conducted by the United States Civil Service Commission, April 12, 1916, for the purpose of filling vacancies which may arise in the libraries of the departmental service in Washington or elsewhere. All qualified persons between the ages of 18 and 40 are urged by the commission to enter the examination, for it is frequently difficult to maintain an eligible list sufficient to meet the needs arising from resignations and promotions.

The entrance salaries of these positions range from \$720 to \$1000 a year. The examination includes three papers; one in library economy (30 points); one in cataloging, classification, and bibliography (35 points); and one in translations from German and either French or Spanish (10 points). Education, training and experience count for 25 points. Candidates must have had at least one year training in a library school or two years' experience in actual library work.

The examination will be held in all cities marked E in section 2 of the Spring Manual of Examinations, which may be obtained from the Civil Service Commission, Washington, D. C. Requests for application blanks should be addressed to the commission and should state the title of the examination, "Library assistant, departmental service."

---

Literature is the greatest of all sources of refined pleasure.—HUXLEY.

## A. L. A. GENERAL SCHEDULE OF STATISTICS—REVISED\*

(Each library using this schedule is expected to omit all headings which have no reference to its work, and to condense all which to them are insignificant under the nearest general heading. In the form as issued by the A. L. A. an attempt has been made to suggest typographically the most desirable general headings.)

- Annual report for year ended....., 19

## REPORT OF THE ROYAL LIBRARY IN BERLIN, 1914-1915

THE moving of the great collections of the Royal Library into its handsome new building in the summer of 1914 was interrupted, and somewhat hampered, by the breaking out of the war. The immediate result was to withdraw a number of the official staff of the library from their duties, and the completion of the decorating and furnishing of the new rooms was further delayed by the shortage of skilled workmen due to the mobilization. The loss of a number of the trained librarians and attendants was felt keenly in the utilization of new and as yet untried machinery in the circulation and other departments. But little by little the work was done and by the end of November, 1914, the splendid new library was open to the public in all its branches, with its exchange and traveling library department working for all German towns and for as many foreign towns as could be reached.

A number of new activities were made necessary by the war, which more than offset the diminished frequentation, and gave plenty of occupation to the decreased force of trained workers. During the term covered by this latest report over seventy librarians and attendants had been called to the colors, not including many men workers in the bindery and machine rooms, as well as cleaners, etc. Several women librarians left their positions to take up active service for the Red Cross. Since the issuing of the report nearly a dozen more of the library force have been called away. The training of a number of new workers, and the opening of new departments incident on war activities made the year a very busy one for the Royal Library, although its statistics show a decrease in both circulation department and reading room.

The new accessions for 1914-1915 number 53,802 as against 61,897 for the preceding year. The greatest decrease was in the list of foreign publications, which numbered only 10,083 as against 18,396. The new foreign books were acquired by purchase or donation, the war having cut off the supply of obligatory copies or official

publications. The total number of periodical accessions was 917, of which 221 were purchased, 110 donated and 586 obligatory copies. Of these periodicals 745 were in the German language, 52 were English, 34 French, 21 Scandinavian, 24 Italian, 11 Spanish, and the rest divided among Dutch, Russian, Portuguese, Polish, Rumanian, Bulgarian, Greek, Sanskrit, Armenian, Arabian, Esperanto, and the Lithuanian, Czech, Finnish, Hebrew, and Wendish tongues. The report shows that 107 publications have gone out of existence, seven among them newspapers from the open files.

The year's expense for binding done within the library amounted to 60,716 marks, which includes the cost of labor and materials. Expense of binding books sent to outside shops, 21,317 marks.

Figures of circulation for 1914-1915 are: Borrowers' cards, 12,122; Reading room cards, 8310; Applications for waiting list, 11,045, of these, cards given out to 9511. During the year 411,372 order cards were written, of these 297,808 books could be given out. 190,451 books were lent to local borrowers, 27,950 sent out of town. 18,391 books were sent out on the exchange list to other libraries and 421 received from these libraries. This list does not include the exchange of valuable parchments or manuscripts.

The reading room frequentation was greatly decreased by the delay in moving into the new quarters. The figures for this report are 236,598 for main reading room, periodical room and music room combined, as against 278,872 for the main reading room in the previous year. Notable is the increase in the number of women visitors to the reading rooms the figures being 19,183, over three thousand more than in the previous year. The average of visitors was 819 a day.

There are no special figures for the periodical rooms this year as all are included in "reading room" statistics. The new periodical room has open shelves for 2200 journals, 500 more than had place in the old quarters.

Among the important accessions in the Music Department is the musical library

of Princess Amalie of Prussia, sister of Frederick the Great. The library was the property of the Joachimsthal High School in Templin, and has been loaned to the Royal Library for an indefinite period.

The figures of greatest increase in accessions and cost thereof, as well as in frequentation, are shown in the map and atlas department. The war awoke an interest in this sort of literature which is not usually found in times of peace, and the library rose nobly to the demand. 8882 new pieces (maps, charts, pictures, atlases), were added to the collection. Of those 1335 were donations, and 7547 purchases. Visitors to the collection, for purposes of study, numbered 2366 persons. This does not include the many who came to see the exhibition of maps, charts and pictures dealing with the present war, set up in the vestibule of the map rooms. Some of the appropriations for the map collection were spent in the purchase of material concerning the present war, until it was found necessary to set apart a special department and a special appropriation for this purpose.

The Royal Library has set itself the task of making an authoritative and complete collection of all documents, pictures, maps, etc., dealing with the war, including all publications on the subject, foreign or domestic. Prof. Walther Schultze was made chief of the new department, and a general call issued to all libraries, publishing houses, civil and military authorities, and made public through all newspapers. The response was most satisfying. Material of all kinds is coming in in such masses that a considerable force is needed to sort, catalog, and place that which is useful and valuable. Material of all kinds is included in this special War Collection, except the songs or other musical selections inspired by the war. These are placed in the Music Room. It was found impractical, from reasons of space, to preserve several copies of all daily papers, domestic or foreign, so that a special clipping bureau, under the direction of Dr. Moeltzner, was appointed. One copy of every paper is preserved whole. Of two other copies the most important articles bearing on the war are

cut out and indexed for scrap-book and file collections.

Another new duty the war has imposed upon the Royal Library is that of a clearing house for books sent to the front or to the hospitals. An entire wing of the old building was given over to this purpose. The work, done by voluntary help from outside as well as by a number of the regular library force, was under the supervision of Department-Chief Dr. Paalzow. The books collected and sent out by the library were those which came from Berlin or its immediate vicinity. When the report went to press the library had sent out 600 bundles, or altogether 122,560 volumes. This does not include bundles of periodicals or small pamphlets. Many of these were the rich gifts donated by the publishers. A relief fund for soldiers' families is being collected by the library from which a notable donation to the Red Cross has been made.

The women librarians have made up a committee to care for the women left at home, arranging sewing clubs and classes and supplying clothing and other gifts to the members of the library or house force who are in the field.

The shortage of skilled workmen, as well as the diminished house force, made it necessary to postpone the completion of certain parts of the interior of the new building. But both library force and visitors are grateful for the comfort and space offered by the fine new building. A sign of the times is that the new applicants for library positions who took the examinations this year were 26 women and 6 men, an unprecedented percentage of women.

His Excellency, Councillor von Harnack, General Director of the Royal Library, is the head of a force of 258 people immediately concerned in the library work as librarians and attendants. Of these 85 are in the field though still carried on the rolls. The names of three librarians have been cancelled by death in battle. These lists do not include the large house force in binding and machine rooms, cleaners and the like, of whom many are also on the battle line or in other branches of the army.

### THE WALTHAM PUBLIC LIBRARY

THE new Waltham Public Library building, the bequest of Francis Buttrick, was dedicated and opened to the public on Dec. 11, 1915. There was a large attendance at the very simple exercises.

The building, designed by the architects Loring & Leland of Boston, as fitting in a Massachusetts town is of colonial design. It is of carefully selected brick, bricks selected not for their trueness in shape but their roughness and their varied coloring, with trimmings of Indiana limestone. It has a beautiful setting on the Main street, which is the main route from Worcester to Boston. There is a wide lawn in front, with trees and shrubs artistically arranged, while in the rear is a wide lawn and parking space. The entire building is of fireproof construction. The floors are reinforced concrete finished with marble in the delivery room and "battleship" linoleum in all the other rooms. The linoleum is of German manufacture and as war was declared just after awarding the contract for the building, it became necessary to decide immediately on the floor covering to be used. The architects found it would be possible to get just enough for the building in New York, so this was purchased, insured and put in storage until this fall when it was needed.

The interior design is in keeping in every detail with the type of old Massachusetts buildings, which accounts for its simplicity and coloring—buff of different tones with white woodwork. The main door leads past the delivery desk, the narrow spacing giving complete control while all the larger rooms may be observed by the custodian there. The children's special door to the department reserved for them, makes it unnecessary for the children to go into the other rooms.

The reading and reference room is a large one extending the width of the building. The furniture which is mahogany throughout and the electric lighting which is the indirect method with fixtures designed especially for the building and adapted to it, make this room a beautiful one. At the right of the delivery room is an open shelf room: a large bright sunny one with a great

deal of space where people may browse among the books and make their selection. The heating is by steam, the radiators being concealed so that no piping is visible on the main floor.

In the children's room, fiction room and lecture room, heat and ventilation are also provided by means of an auxiliary fan system. The outdoor air is filtered through bags, heated and driven by a large fan through the building at a velocity of approximately 500 feet a minute. The ducts were so designed that the amount of air to be supplied is ample to provide every person in the library with 30 cubic feet of fresh air a minute. The catalog room and librarian's offices are on the main floor, located on opposite sides of the delivery hall and opening into it, making them most convenient. The lecture hall has its own entrance. This room will seat about 150 people and has a platform and two ante-rooms. This is in the basement as are the locker rooms and the lunch rooms for the staff. The directors have a room for their use on the mezzanine floor, where also is an additional work room.

The cost of the building, which was defrayed by the Buttrick bequest, was about \$125,000. The site was furnished by the city at a cost of \$60,000, making its total cost \$185,000. O. C. D.

### REUNION OF THE NEW ENGLAND CALIFORNIA PARTY

ON Feb. 17, at the Windsor Café, Boston, nineteen New England California A. L. A. members gathered for a reunion dinner. Mrs. Frederick W. Faxon acted as hostess, and the company at the long table in the center of the restaurant was evidently the envy of all other diners. The decorations were pinks, relieved here and there by yellow A. L. A. tags, "first sitting" cards, and unused "meal coupons." Place cards of California poppies and Shasta daisies were appropriate to the occasion, and a timely appropriate menu in the form of a time table was provided by Mr. Faxon.

Although none of the famous chorus were present, nor even the milk-fed baby, their silence was partially made up by the

READING AND REFERENCE ROOM IN THE BUTTRICK MEMORIAL LIBRARY, WALTHAM, MASS.

café orchestra and beautiful soloist, and by the liberal supply of ripe olives which so quickly disappeared.

At 7.45, when the "Royal Gorge" was past, just after the "Great Desert" was "in our midst," the party adjourned to the rooms nearby of Mr. and Mrs. Faxon, where until the wee sma' hours all told of experiences and compared photographs of the never-to-be-forgotten scenes of last May and June. Merry times along the "Zone" were described which were hard to believe when one considered that librarians, ordinarily truthful, told of being among the participants.

The party broke up after a Travel Committee announcement of plans for a personally conducted sail to Asbury Park next June.

#### LIBRARIES IN NEW YORK STATE

REPORTS received for the past year by the Education Department from the libraries of the state, just summarized and compiled for submission to the legislature, show no signs of recession in the remarkable rate of growth that the free library system of the state has enjoyed in recent years. Not only are the libraries still expanding in their facilities and service, but in several respects the expansion of the past year is the most notable of their entire history. The year's progress, not including school libraries, is briefly indicated in the following summaries:

Libraries reporting increased in number from 576 to 625.

The number of free circulating libraries reporting increased from 493 to 536.

The number of libraries directly connected with the state library system increased from 537 to 559.

Volumes in all the libraries reporting increased from 9,873,962 to 10,503,152.

Volumes in free circulating libraries increased from 5,074,650 to 5,330,826.

Circulation of books increased from 22,918,026 to 26,003,009 volumes.

New libraries were incorporated in eighteen communities and twelve other libraries or branches were brought into the state's library system by official registration.

New library buildings were completed and occupied in twelve communities, representing a cost of \$335,200.

Gifts of \$100 or 200 volumes or over were received by 152 different libraries, such gifts amounting to \$347,569 in money and 124,006 volumes of books.

Total expenses of library maintenance, including purchase of books, increased from \$3,409,849 to \$3,733,283. The only item showing practically no increase is that of local taxation for libraries, which amounted to \$1,877,072 in 1914, and \$1,883,963 in 1915.

Disregarding institutions which lack sufficient life to make the annual report required by state law, the state now has forty-three more free libraries in operation than a year ago, it has 256,176 more volumes in its free libraries, it circulated last year 3,084,983 more volumes into the homes of the people than the year before, it devoted \$323,434 more for library maintenance, and it has \$335,200 more invested in library buildings. The gain in the number of volumes circulated is greater than that of any other year, and in itself represents a larger figure than the entire free library circulation of the state twenty-one years ago.

The gain of thirty in the number of free libraries and branches formally allied with the state library system is the largest increase in a decade. In 1905 there was an average of one free library to every 21,342 of the population; at present there is on an average one free library for every 17,269 of the population.

Of the new libraries added last year, 20 are located in small towns or villages and 10 in cities. Since 1905 there has been an increase from 135 to 189 in city libraries and from 243 to 370 in village and rural libraries.

The year's net gain of 256,176 volumes in free libraries results from a gross addition of 740,622 and a deduction of 484,546 books worn out and discarded. The figures for books discarded indicate that on an average a volume is issued about 60 times before being worn out. Of the total new additions, 124,000 volumes were received as gifts and 616,616 were purchased. Libraries in Greater New York added 430,360 to

their collections, in other cities 195,679, in villages and rural communities 114,583. The free libraries in the cities of the state now have 3,940,355 volumes in stock and those outside of cities, 1,390,000 volumes. This means that for each 1000 of the population in cities there are 545 volumes in free libraries; for each 1000 outside of cities, 572 volumes. In twenty years the population of the state has increased about 45 per cent.; books in free libraries have increased 500 per cent.

But great as has been the increase in the supply of books, the increase in the recorded use of books is even greater. Not once in the last twenty-two years have the libraries shown a decline in circulation; not once have they failed to show a substantial increase. The smallest gain at any time reported in that period was 379,432 volumes, the largest being that of the present year, more than 3,000,000 volumes. In ten years the annual issue of books from public libraries has increased from 12,086,816 to 26,003,009 volumes, or 115 per cent.

As divided between city and rural communities, by far the greater gain in circulation has been made in the cities, due both to the notable expansion in city library facilities and to the expert professional service which these libraries are able to command. Of the entire circulation for the past year, 65 per cent., or 16,899,799 volumes were issued from the libraries of Greater New York, 5,937,833 from the libraries of other cities, making a total city circulation of 22,837,638, as compared with a total of 3,165,377 outside of cities. Greater New York, with a little more than twice the population of the villages and rural parts of the state, has five times more library circulation.

Statistics relating to public support and material equipment are hardly less impressive or significant than those of circulation and supply of books. The libraries of the state had for operating expenses last year a total of \$3,928,437, of which \$1,883,963 was from local taxation, \$660,324 from permanent endowments, \$577,221 from balances of previous year, \$209,673 from the state (including \$135,560 for the State Library), \$151,470 from gifts, and

\$445,783 from entertainments and miscellaneous sources. The total sum exceeds that of the preceding year by \$220,942. The increase in the amount received from local taxation was only \$6891. In Greater New York there was an actual decrease of \$26,857 in city appropriations. In other cities there was a gain of \$32,087 in public library appropriations and outside of cities a gain of \$1600.

The total amount of money provided by the state treasury for the aid and encouragement of free libraries and the maintenance and development of its great central State Library was \$209,673. Of this, the greater part was for the State Library, leaving \$74,113 for all other library purposes, including law and supreme court libraries, prison libraries, traveling libraries, free circulating libraries, and the expenses of state supervision and inspection.

Analyzing the figures for operating expenses, it is found that \$2,020,816 was for personal service, \$963,879 for books, periodicals, and binding, and \$748,543 for all other expenses, including light, heat, rent, repairs to building, etc. Salaries thus represent 54 per cent. of the total, books and magazines 26 per cent. In Greater New York, salaries represent 58 per cent. of the total library expenditures, in other cities 49 per cent., and outside of cities, 35 per cent.

The new library buildings completed and occupied during the year bring the number of such buildings now in the state to 353. The total value of buildings and sites, based on reports of actual cost or estimates made by the libraries themselves is \$51,161,888. Of this amount, \$32,725,540 is credited to the New York Public Library system, with its great central building and site and its forty-one branch buildings. Other library buildings in Greater New York are estimated at a total of \$10,265,000 of which \$2,450,000 is credited to Brooklyn and \$330,000 to Queens Borough. Library buildings in cities other than Greater New York represent a value of \$5,405,040; buildings in villages and country districts, \$2,766,388. Of the latter sum, \$546,000 is credited to colleges, universities, seminaries, etc., and \$2,220,308 to public libraries.

Of the immense sum now represented in library buildings in the state, 88 per cent., or about \$45,212,000, has been acquired in the last twenty years, and 72 per cent., or a total value in buildings and sites of \$37,003,000, has been dedicated to library use in the last ten years.

Village and rural libraries have received more, including both endowments and buildings, in the past ten years than in all the previous history of the state and its library benefactions.

Adding the value of endowments to that of buildings and sites, the libraries of the state have, exclusive of their books and furniture, a total property of \$64,957,075. Including their \$10,503,152 books, they represent a total investment of not less than \$75,000,000, or about \$8 for each resident of the state. Of this amount \$30,962,500 has been provided by local taxpayers, and \$42,918,000 by private donors. Outside of New York city, 90 per cent. of the property represented in libraries is the gift of individuals.

Among the several activities of the state in the extension of library facilities, there is perhaps none more effective, at least in the village and rural communities, than the work of the traveling libraries section of the state education department. Last year 62,610 volumes were sent out in small collections, averaging thirty-eight volumes each, to 1612 institutions or groups of people. In the twenty-four years that the work has been in operation, 753,551 volumes have been sent out to the different sections of the state.

Total circulation from public and society libraries in all the states, as reported by the Bureau of Education, was 106,700,461. The circulation in New York from this class of libraries last year was 26,003,009, or nearly one-quarter of that amount. Thus, with 10 per cent. of the population of the whole United States, New York has about 20 per cent. of the books in the public and society libraries of the country, 24 per cent. of the circulation, 22 per cent. of the library income, 39 per cent. of the value in buildings and grounds, and 38 per cent. of the total value of library endowments.

ASA WYNKOOP.

## THE BELGIAN SCHOLARSHIP COMMITTEE

THE two-fold aim of the Belgian Scholarship Committee, as stated in a recent letter from the secretary, Dr. George Sarton, is to act as a clearing bureau between the American universities and other educational institutions and Belgian scholars and artists, victims of the war, and to raise a fund for the reconstruction of Belgian universities, museums and libraries after the war.

The committee was founded a year ago in Washington by Dr. Nevil Monroe Hopkins. At first it confined its activities to the District of Columbia, and its aim was simply to collect money for destitute scholars, but its scope has become broader and broader. The committee includes among its members the presidents of the following universities: Johns Hopkins, Princeton, Missouri, Leland Stanford, Pennsylvania, George Washington, State of New York and Nebraska—and many other leading personalities of this country.

It is now preparing and studying plans for the reconstruction and reorganization of the Belgian libraries and is appealing for books to all the American libraries, with the earnest hope that most of them will be willing to give some of their duplicate copies. It also hopes to receive free sets of their publications from the educational institutions and learned societies. Lacking money enough to write a personal letter to each librarian, it is hoped that the present appeal will reach them all and be understood. It may be well to recall that a similar work has been successfully undertaken in England by the John Rylands Library of Manchester in behalf of the University of Louvain. There is every reason to believe that our efforts will be even more successful in this country—the country of libraries.

The committee cannot afford to store and keep the books until the end of the war. Therefore, it does not ask for books, but rather for promises of books.

"We suggest that the whole business be managed in the following way," writes Dr. Sarton. "Each library would simply send us a list of the books that it is willing to

give to Belgium. This list would contain all bibliographical information that is necessary to identify the books without mistake (author, title, number of volumes, date and place of publication, editor). We would acknowledge receipt of these lists, and enter them on a duplicate list on cards. After the war as soon as circumstances permit, the Belgian Scholarship Committee would write a letter to all the libraries, recalling their promise, and asking them to send all the books to some central storehouse in New York City, from where they could easily be shipped to Belgium.

"It would be better to concentrate our efforts upon the making up of a collection of American books—books published in America, or relating to American affairs. We should thus be able to offer to Belgium, soon after the war, an American library: no gift would be more appreciated or would do more to bring about a better understanding of American conditions and ideals, and greater international friendship.

"Of course, books given by publishers and authors will also be welcome. We would suggest leaving in each book its former ex-libris, a short note being added to show how and when the transfer to Belgium was made. Dedications by the authors would be also much appreciated. The value of the collection would be in this way considerably increased. It would really constitute a lasting souvenir of America's generosity and sympathy."

SUMMARY OF LIBRARY BUILDINGS, 1915

In the statement of Carnegie library gifts for the year 1915, which was printed in the February issue of the LIBRARY JOURNAL, an error was made in finding the total amount of increases to previous gifts in the United States, though the individual entries were correct. Since this error would affect the summarized statement which followed, we reprint below the entire summary of library buildings, in its corrected form:

United States, 77 new gifts, including 80 new buildings .....	\$823,000.00
United States, 16 increases to previous gifts including 2 new buildings.....	161,529.67
Canada, 3 new gifts, including 3 new buildings .....	22,900.00
U. S. Africa, 1 new building .....	30,000.00
	<hr/>
	\$1,037,429.67
81 new gifts, including 84 new buildings. 16 increases to previous gifts including 2 new buildings.	
Total amount granted, including 86 new library buildings .....	\$1,037,429.67
Library gifts for 1915 total \$1,037,429.67, as compared with \$1,834,395 for 1914.	
The total library gifts to date, Dec. 31, 1915, granted by Mr. Carnegie personally or by Carnegie Corporation of New York:	
2659 public library buildings.....	\$60,051,597.17
116 college library buildings .....	3,776,199.27
	<hr/>
2775	\$63,827,796.44

FOREIGN BOOK IMPORTATIONS—  
FURTHER REGULATIONS

THE LIBRARY JOURNAL has received from Dr. Putnam, of the Library of Congress, a second circular referring to importations by libraries from certain belligerent countries. The Librarian of Congress has been notified of certain additional requirements by the British authorities in the applications for permits. These appear in part in a circular which he has recently addressed to such institutions as seemed likely to be interested, and of which a copy is appended.

Since the issue of this circular, one further requirement has been communicated to him. This is that in each application, the precise number of volumes applied for, the value of each, and the total value

be furnished, *in triplicate*. The second circular letter is as follows:

*Library of Congress, Washington.*

MY DEAR SIR:

Referring to my communication to you in December last with reference to the importation of books from certain belligerent countries:

I have just been notified of an additional requirement which the British authorities find necessary in order to handle properly the applications for permits. It is that the applications and the lists of books and periodicals appended shall be in *triplicate*; this, in order that one may be kept at the embassy here, a second sent to the Foreign Office in London, and a third to the British Consular Office at Rotterdam. This will mean typewriting the application (in *triplicate*) instead of using the printed form.

Also, the lists appended must be clear lists, containing no items not covered by the application. Copies of order sheets with partial checks will not answer.

Where the titles are few, they should be incorporated in the body of the application itself; where there are too many to be so incorporated, they may be extended upon a separate sheet, provided this is secured firmly to the application.

Please note also: (1) that the only shipments can be out of Rotterdam, and (2) that the *number* of applications are to be kept within as narrow limits as possible. For this purpose, it would be desirable to group as many items as possible in each application.

The above information is sent to you on the chance that you may be intending to file an application for a permit.

Very truly yours,

HERBERT PUTNAM,  
*Librarian.*

#### THE HENRY E. HUNTINGTON PRIVATE LIBRARY

HENRY E. HUNTINGTON of New York has purchased, for a price given as \$750,000, the great library of Frederick R. Halsey, Wall street broker and bibliophile, the intermediary being George Smith, a dealer in rare books. Mr. Huntington will add it to his own collection, already the best on this side of the Atlantic and comprising the cream of the famous Robert Hoe library, the Duke of Devonshire's Caxtons and Shakespeare quartos, the Beverly Chew books and other large acquisitions.

Mr. Huntington possesses the only duplicates in America of some of the rarest of the Halsey books. These duplicates he will probably dispose of gradually, since it is

said to be his intention never to sell his whole collection, but to make it public property after his death. The price he paid for Mr. Halsey's books is said to be less than the value of the books taken separately, because Mr. Halsey preferred to dispose of the collection as a unit to some one who he knew would keep it practically intact.

The distinctive thing about Mr. Halsey's library was not so much its value, or the rarity of its contents, as their literary appeal, and his collection was rich in English and American authors who are universally read. He gathered complete sets of the first editions of Fielding, Dryden, Dickens, Pope, Thackeray, Poe, Hawthorne, Lowell, Emerson, Whittier, Longfellow, Oliver Wendell Holmes, Bret Harte and Tennyson. He took pains to get complete first editions of the moderns—Rossetti, Swinburne, Kipling, Meredith, William Dean Howells. He also got first editions of all the works of the Elizabethans—Beaumont and Fletcher, Marlowe, Peele, Ford, Ben Jonson and Dekker. The result is a library almost unique in one respect—it is not only full of rare, costly books, but these books are readable.

The most important item in the collection is, of course, the four Shakespeare folios. All are there—the first folio of 1623, the second of 1632, the third of 1663, the fourth of 1685. Marsden J. Perry paid £10,000 (\$50,000) for the four in London not so long ago. Even better than the folios is a perfect copy of Shakespeare's "Sonnets," worth about \$25,000. Only four perfect copies are known—one in the British Museum, one in the Bodleian Library, a third already in the possession of Mr. Huntington, and this copy. Mr. Halsey had also many of the Shakespeare quartos, which followed the folios.

Next to the Shakespeares is the Poe collection, of which Mr. Halsey had the only complete set of first editions in existence, including "Tamerlane" (Boston, 1827), worth \$5000 alone. There is also one of the three known first editions of "The murders in the Rue Morgue," for the Maier copy of which the late J. P. Morgan paid \$3800.

Mr. Halsey had the best collection of Cruikshank drawings in America and what is said by experts to be the finest collection of first editions of Dickens in the world. The Dickens collection is worth \$40,000 to \$50,000. It even contains the rare "A strange gentleman," with original drawings.

By the acquisition of this collection, Mr. Huntington's library is now said to outclass any private library in existence, and has been surpassed by very few in the history of book collecting. And yet it contains only about 50,000 volumes. The test of greatness is not in numbers.

"In the line of Caxtons and early manuscripts, the Morgan library is undoubtedly the strongest in the world, in private hands," writes George H. Sargent in a long illustrated article on this library in the *Boston Transcript*. "Where libraries contain unique items, no comparisons are possible. Both the Morgan and the Huntington libraries contain so many books of which only one copy is known that it is difficult, even if advisable, to make comparisons. But outside of these lines—and the late Mr. Morgan was passionately fond of the works of England's first printer and of illuminated manuscripts—there can be little doubt that the Huntington collection is the stronger. Not merely in numbers, but in character of the volumes, does this strength consist." The gems of this library, as selected by Mr. Sargent, are as follows: The Gutenberg Bible—the first book printed from movable types.

Thirty-four books printed by William Caxton, England's first printer.

Twenty-three variants of the Folios of Shakespeare.

The Bay Psalm Book—the first book printed in English America.

The Book of St. Albans—the first English book printed in colors.

The only known copy of the first laws of Massachusetts Bay.

Benjamin Franklin's autobiography, in his own handwriting.

The first description of New York printed in English.

The first Bible printed in America.

The first Latin letter of Columbus announcing his discovery of the New World.

The first book printed in Boston.

The finest collection of New England Primers in existence.

First editions of the world's famous writers.

## American Library Association

---

### FIRST CALL FOR PUBLICITY MATERIAL

For the work before it, the A. L. A. Publicity Committee should receive regularly copies of all library bulletins, booklists, reports, circulars, posters, programs, and other printed matter, issued by libraries, library associations and clubs, and library commissions. Suggestions and inquiries are welcomed.

Please help by putting the committee on your special mailing list for all such material. Address, Mr. Willis Kerr, Chairman A. L. A. Publicity Committee, Emporia, Kansas.

---

## Library Organizations

---

### SPECIAL LIBRARIES ASSOCIATION

At a meeting of the Executive Board of the Special Libraries Association, held in St. Louis, on January 19, it was decided to hold the annual meeting of this Association at Asbury Park, New Jersey, on June 27, 28, and 29, 1916, in connection with the annual conference of the American Library Association.

JESSE CUNNINGHAM, *Secretary*.

### MASSACHUSETTS LIBRARY CLUB

The winter meeting of the Massachusetts Library Club, which was held on Jan. 27, opened with a morning session in the Treasure Room of the Harvard University library. About three hundred members were in attendance. A greeting was extended by Professor Archibald C. Coolidge, who on behalf of the university library, welcomed the members of the club to the oldest of Massachusetts libraries.

A report of the committee of five on children's work, submitted by Lucy B. Crain, of the Somerville Public Library, summarized the work so far accomplished of securing data regarding work with children in various libraries in the state and recommended the employment by the State Commission of "a thoroughly competent librarian, acquainted with children's work" to organize and develop work with children throughout the state. A vote was passed in support of the recommendation of the committee.

William C. Lane, librarian of the Harvard College Library, gave a brief description of

the Harry Elkins Widener Memorial Library. George P. Winship, librarian of the Widener Library, spoke of the special Widener collection. Mr. Winship referred to many of the features in which the collection is strongest and he urged that libraries generally should allow their rare books to occupy a central position in their collections.

"Reorganizing a card catalog" was the subject of a paper by T. Franklin Currier, assistant librarian, in charge of the shelf and catalog department of the Harvard College library. Mr. Currier reviewed the progress of the work in changing over the public catalog at the Harvard College Library from indexed cards to one on standard sized cards, and he summarized the policy pursued in meeting the needs of the undergraduate, the student in training to become a specialist, and the trained worker.

At the conclusion of the morning session the members of the club were given the privilege of inspecting the Harvard College Library. After luncheon, which was served at the Hotel Vendome, John Jay Chapman read an interesting paper on "The schoolmaster."

The afternoon session was held at the Museum of Fine Arts. An address of welcome was given by the director, Mr. Arthur Fairbanks. FitzRoy Carrington, curator of the department of prints, spoke on "The appreciation of prints." Mr. Carrington regarded it as an encouraging sign that the matter of prints was the subject of discussion by librarians and on the basis of this interest he addressed himself to the practical question of how each library may best get together such a collection of prints as shall be of real service in a community. Mr. Carrington referred to important print collections in the Library of Congress, New York Public Library, the Albright Gallery, the Boston Museum of Fine Arts, and he spoke at length of the collection in the Newark Public Library and of its general utility. He outlined with some detail, through quotations from the *Print Collectors' Quarterly*, which he regarded as highly important for library use, the growth of the print collection in the Newark Library and urged the formation of a department of illustration in libraries. The resources of the museum, in the way of lending material, were outlined.

At the close of the afternoon session the members of the club were, through the courtesy of the museum staff, conducted in groups through the different departments of the museum.

FRANK H. WHITMORE, *Recorder*.

#### DISTRICT OF COLUMBIA LIBRARY ASSOCIATION

The District of Columbia Library Association held its bi-monthly meeting on Wednesday evening, Feb. 9. The speaker of the evening was O. G. Sonneck, chief of the music division of the Library of Congress. Under the title of "Opera, some observations from the point of view of a librarian," Mr. Sonneck read the major part of the preface to his new work, now in manuscript, "Catalogue of full scores of dramatic music in the Library of Congress."

The lecture opened with a discussion of the historical principles governing the library's interest in the earliest operas. Mr. Sonneck then described the situation confronting the collector of opera, and the difficulties in the way of an organic development of such a collection, both as to manuscript and printed scores.

The survey of actual conditions and difficulties, Mr. Sonneck said, furnishes the only basis for a fair and intelligent estimate of the resources of the Library of Congress, which are now unrivalled, the library possessing almost 3000 orchestral scores of operas, ballets or other musico-dramatic works.

After his paper, Mr. Sonneck acted informally as interpreter of selected orchestral scores, exhibited for the purpose of calling professional attention to problems peculiar to the cataloger of music, as, for instance, the technique of music publishers' plate numbers and the sundry processes used for printing music.

ALICE C. ATWOOD, *Secretary*.

#### KEYSTONE STATE LIBRARY ASSOCIATION

The officers elected at the annual meeting at Butler in October were as follows: President, O. R. Howard Thomson, Williamsport; secretary, Miss Flora B. Roberts, Pottsville; treasurer, Miss Anna A. MacDonald, Free Library Commission, Harrisburg.

#### MISSISSIPPI LIBRARY ASSOCIATION

In response to a call issued in December, 1915, librarians of the state met in the Carnegie Library of West Point, Jan. 8, for the purpose of reorganizing the Mississippi Library Association, which has not held a meeting since February, 1911. A new constitution was adopted and the following officers were elected for the year 1916: President, Whitman Davis, librarian, A. & M. College; vice president, Mrs. Pearl Travis, librarian State Normal College; secretary, Miss Lucy Evans Heard, librarian Carnegie Library, West Point; treasurer, Miss Culberson, librarian Industrial Institute and College.

The association has been inactive for several

years due to the fact that the number of librarians was not sufficient to justify the effort to do organized work. Several libraries have been built since 1911 and others are being erected, which is evidence of the increased interest in public libraries.

LUCY EVANS HEARD, *Secretary*.

#### CHICAGO LIBRARY CLUB

The February meeting of the Chicago Library Club was held at Fullerton Hall at the Art Institute, Feb. 9, and was addressed by Dr. Frank W. Gunsaulus, president of Armour Institute, and pastor of Central Church, on "Collections and collecting with special reference to Chicago." As Dr. Gunsaulus has been known as a collector for years, with no field too obscure or distant for him to master, his lecture had the weight of an authority. Some of the large number of Chicagoans whom he has started on the collector's way were present. As he varied the talk with exhibition of collector's specimens, with pictures on the screen, and with opportunity to examine a rare manuscript, the occasion was delightfully informal. The manuscript which was examined was a Persian copy of the Koran, very finely done, exhibited by Mirza Ali Khan, N.D., commissioner general of Persia at the Panama-Pacific Exposition, to whom Dr. Gunsaulus gave an opportunity to make some remarks on Persian rarities.

Dr. Gunsaulus spoke of differing values of various articles gathered in the same place, of the necessity of learning one's subject, and of the advantage of beginning a collection before any one else, thereby attracting the attention of others and enhancing values. He spoke reminiscently of the collectors in Chicago in the '70's and early '80's, especially Eugene Field, and called attention to some valuable collections now in Chicago, and to some "finds" made by collectors in Chicago homes, such as a portrait of Burne-Jones by W. M. Rossetti, and a papal bull at Blue Island. He also spoke of Judge Clearwater of Kingston, N. Y., with his collection of church steeples and church silver, and John G. Johnson of Philadelphia. Then after giving some general rules for collectors, he read from the manuscript "The temptation of Friar Gunsaul," Eugene Field's tale in 16th century English of his own temptation as a book collector.

A. H. SHEARER, *Secretary*.

#### MISSOURI VALLEY LIBRARY CLUB

The Missouri Valley Library Club held its February meeting in the assembly room of the Kansas City Public Library, the evening

of Feb. 9. This is the club's one social meeting of the year. During the first half of the evening a library farce, written by Miss Kathryn Gentry of the Swinney branch, was given by members of the staff and created much merriment. Afterward refreshments were served in the library lunch room, which was gayly decorated with American flags.

"Modern short story writers" will be the subject of an address by Mrs. M. H. DeVault before the members of the club in March. Mrs. DeVault is a member of the Athenaeum, the largest woman's club in Kansas City.

GRACE BERGER, *Secretary*.

#### ROCHESTER DISTRICT LIBRARY CLUB

How to make "the book a tool and the library a working laboratory" for every teacher and child in our schools, was the principal theme of a talk given at the January meeting of the Rochester District Library Club, by Mr. Jasper H. Wright, of Mechanics Institute. In November a committee, with Mr. Wright as chairman, was appointed by the library section of the State Teachers' Association to find means of increasing the attendance at the library section, and of bringing before the educational authorities the importance, both for teachers and pupils, of teaching the use of books as tools and libraries as working laboratories. The library section is now made up mainly of librarians, and has failed therefore to accomplish the purpose for which it was formed. Yet it is only too evident that teachers are not trained in the knowledge and use of books, and libraries do not show the proper interest in them. To remedy these conditions, Mr. Wright made the following recommendations:

1. The library section shall have an important place on the general program of the State Teachers' Association, and a live, enthusiastic speaker, and shall send into as many other sections of the association as possible enthusiastic speakers, with the intent of getting into the discussion.

2. The library section proper shall be confined to a brief business meeting of reports, etc.

3. A survey of the library equipment, organization, staff, instruction given, etc., of all the high schools, normal schools, and colleges in the state shall be made, and a selected list showing good examples of work done in this or other states.

4. An attempt shall be made to have a competent organizer of school libraries added to the state education department.

5. A minimum requirement in library methods shall be added to the English course

in high schools, as well as in schools training teachers, and appropriate examinations shall be given for it as for other subjects.

6. The results of the survey shall be brought before the state education department in the attempt to gain the other points, and if necessary a campaign of publicity resorted to.

The question was brought up whether or not the library section was regarded by the teachers as a section for librarians and not for them; for this reason they have heretofore failed to attend its meetings.

Principal Hawley of city school no. 23 briefly outlined a projected plan whereby credit could be given in the schools for reading done by the children outside of school hours. A local graded list is being prepared, from which the reading is to be selected. It is possible that an actual percentage in school reading can be given for this outside work.

The chairman of the nominating committee submitted names of officers for the ensuing year and the following candidates were elected: President, Miss Margaret Weaver, West High School; vice-president, Mr. J. H. Wright, Mechanics Institute; secretary-treasurer, Miss Margaret Becker, University Library.

MARGARET E. BECKER, *Secretary*.

#### TORONTO LIBRARY INSTITUTE

The annual meeting of the Library Institute for the City of Toronto was held in Victoria College, when Professor A. E. Lang, the librarian of the college, gave the presidential address on "Library co-operation in Toronto," and Mr. George Locke spoke on "Early printing in Canada." There was an exhibition of some of the rare Canadiana belonging to Victoria, and afterwards the 106 delegates were entertained in the great dining hall. The officers for 1916 are: President, R. A. Gray, of Oakwood Collegiate; vice-president, Miss Charlton, of the Academy of Medicine; secretary, Miss Davis, of the Public Library; executive committee: Professor Keys, of the Canadian Institute; Mr. Prendergast, of the Normal School; Professor Kittredge, of Trinity College; Principal Wright, of Lansdowne School; and Mr. Hardy, of the Sunday School Association.

GEORGE H. LOCKE.

#### NEW JERSEY SCHOOL LIBRARIANS' ASSOCIATION

The seventh meeting of the New Jersey School Librarians' Association was held in the Reid Library, Passaic, Feb. 12, at 2 p. m. After a short business session, Miss Elizabeth B. McKnight, of Bay Ridge (L. I.) High School, gave a talk on "The best magazines for

high school libraries," which was valuable because of the speaker's wide experience. A helpful discussion followed and tea was served.

A. M. HARDY, *Secretary pro tem*.

## Library Schools

### NEW YORK STATE LIBRARY SCHOOL

Lectures by others than the regular faculty have been as follows:

- Jan. 15. Edward F. Stevens, librarian, Pratt Institute Library. Making the library of practical use.  
 Jan. 21. Royal B. Farnum, specialist in art education, State Education Department. Artistic bulletin making.  
 Jan. 22. Randolph T. Congdon, specialist in English, State Education Department. The school library and the teaching of English.  
 Jan. 24. Harriet R. Peck, librarian, Rensselaer Polytechnic Institute. The technical school library.  
 Jan. 28. Herbert P. Whitlock, state mineralogist. Lettering and the use of lettered signs.  
 Feb. 1. Myrtila Avery, curator, Fire Arts Museum, Wellesley College. The acquisition and care of art material.  
 Feb. 7. Leonard P. Hatch, chief statistician, State Labor Department. Literature of labor.  
 Feb. 8. Avery W. Skinner, specialist in history, State Education Department. Historical material and the library.

The lectures by Mr. Congdon and Mr. Skinner were a part both of the elementary reference course and of the seminar course in work with schools.

Notice of the following 1915 items has reached the school since the publication last month of the brief list of alumni publications: "Books for Christmas for the children" by Corinne Bacon (H. W. Wilson); Asa Don Dickinson's "Children's book of Thanksgiving stories" (Doubleday); and A. G. S. Josephson's "List of books on the history of industry and the industrial arts" (John Crerar Library).

Through the courtesy of the New York State College for Teachers, the students and faculty received an invitation to a brief course of lectures on "Modern drama" by Prof. George P. Baker of Harvard University.

A collection of 114 post card views of libraries (many of them hitherto not represented in the school collection) has been presented to the school by Sibyl Browning Greenwood through Silas A. Greenwood. The collection of library views and plans lost in the 1911 fire has never been adequately replaced and contributions, particularly of plans, either original blue prints or in reproductions, will be gratefully acknowledged.

The regular school exercises will be suspended from March 3 to April 13 or 14. Field practice will occupy the time until April 1. An unusual demand for student help in reorganizing some of the smaller libraries of

the state has greatly reduced the number of students assigned to larger institutions. Nine libraries of the state will be aided by student help. Other students have been assigned to libraries in New York, Brooklyn, Newark, Utica, Rochester, Springfield, Hartford, Worcester, Brookline, Northampton, Somerville, Washington and St. Louis. Other libraries generously offered opportunities which could not be utilized this year.

#### SUMMER SESSION

The annual summer session will begin May 31 and close July 12. It will be divided into two sessions of three weeks each, beginning respectively May 31 and June 21. The first three weeks will be devoted to reference work (bibliography, public documents, and the use of reference books); the second will include cataloging and classification. As only a limited number can be admitted, early application for admission is desirable. Admission is limited, as usual, to those holding *paid* library positions. Library workers in New York state are charged nothing for tuition. To others, the fee is \$10 for each three weeks' course. A special circular giving fuller information is in press and will be sent to any one interested. All requests for admission blanks or other information should be addressed to The Registrar, State Library School, Albany, N. Y.

F. K. WALTER.

#### PRATT INSTITUTE SCHOOL OF LIBRARY SCIENCE

The annual luncheon of the Graduates' Association took place Jan. 27, at the Hotel Webster, where the function has been held for several years. Every class was represented, from 1891 to 1916, with the exception of the class of 1902. 1915 was the banner class and next to it, 1898, with six in attendance. Besides those from New York City and the adjacent regions—New Jersey, Westchester County, and Long Island—a number were present from a distance, including Mrs. Mildred Collar Gardner, 1896, from Newport, Anna A. MacDonald, 1908, from the Pennsylvania State Library Commission, Katharyne Sleneau, 1910, librarian of the public library at Port Huron, Mich., and Mary T. Atwater, 1915, who has been spending the winter in New Hampshire. It is very gratifying to see that the tendency is growing among the graduates to time their winter visits to New York with a view to attending the luncheon. The president, Franklin F. Hopper, 1901, presided. He urged that the association set itself a definite piece of work to do for the school, such as raising a fund to lend to students

needing help to complete the course. This could be done, he said, either by raising the dues or by individual pledges, and he asked that the graduates communicate to the executive committee their reactions to this suggestion. The director, Mr. Stevens, reported on the improvement to the library grounds, of the removal of the row of shops on DeKalb avenue and the extension of the park to that street. The vice-director told the story of the Pratt pilgrimage she made along the Pacific coast and in the Middle West last summer, and Miss Plummer, the guest of honor, gave a delightful forecast of the meeting of the American Library Association at Asbury Park next summer. The following officers were elected: President, Donald Hendry; vice-president, Mollie V. Leavitt; secretary, Norma B. Bennett; treasurer, Mildred G. Lovell; and member of the Executive Board, Elizabeth D. Renninger.

Miss Clara W. Hunt has given a course of three lectures on children's work (Jan. 18, 28, and Feb. 3), including problems of discipline, the arrangement of a children's room, and how to plan the work of a room. The second of these was given at the Brownsville Children's branch of the Brooklyn Public Library where the class spent a delightful morning. Miss Mary Casamajor, librarian of the Prospect branch of the Brooklyn Public Library, gave two talks on branch library work on January 25 and February 1, the first being "The branch in relation to its neighborhood" and the second, "The practical administration of a branch." As nineteen members of the class are doing practical work in the Brooklyn Public Library branches on alternate Friday afternoons and evenings, these lectures on branch work have been of especial interest and value.

Prof. William Lyon Phelps, of Yale University, gave a delightful talk on Jan. 20, on "Culture and happiness" before the Institute students.

Katharyne Sleneau, 1910, librarian of the Port Huron Public Library, visited the school on Jan. 22. Miss Sleneau gave an impromptu talk that might have been called "Making the library of use to the community"; it was one of the most helpful and inspiring talks we have had this year, and as one of the girls said, "We all want to have a library just like yours."

Two informal evenings have been spent by the vice-director reading modern poetry aloud in the Library School's room at the Women's Club. It was distinctly not a class exercise

and the first occasion was tried as an experiment, but it met with gratifying response and the second was by request.

The most constructive and humanly interesting form of war relief that has been brought to our attention is the work of the Orphelinat des Armées, an organization to secure to the orphans of French soldiers education in their own homes. Through this organization the annual sum of \$36.50 a year will give an efficiently trained child to the new France. The Library School has become interested in this work and the class of 1916 has decided to pledge itself to the support of one French orphan. The headquarters of the American committee of the Orphelinat are in Room 336, Fifth Avenue Building, New York.

#### ALUMNI NOTES

Miss Flor-Etta Kimball, 1914, who has been since graduation first assistant in the Public Library at Madison, N. J., goes to Pittsburgh, March 1 as first assistant in one of the larger branches.

Janet Gump, 1915, has gone to the Montague branch of the Brooklyn Public Library for three months.

JOSEPHINE ADAMS RATHBONE,  
*Vice-Director.*

#### LIBRARY SCHOOL OF THE NEW YORK PUBLIC LIBRARY

Lectures by the Director of the Library; by Miss Moore, supervisor of the library's work with children; Mr. Adams, chief of the circulation department; and Mrs. Maltby, librarian of the Tompkins Square branch, have been scheduled for the juniors since the last report.

Miss Euphemia Corwin, librarian of Berea College, Kentucky, spoke to the juniors on February 9, on "A mountain college and its library," giving a most interesting insight into the life of the mountain people.

On February 11, several graduates met the juniors to impress upon them the constant need of foreign languages in advanced cataloging, order and reference work, and the advisability of keeping up their study of languages after leaving the school.

The seniors began their work in technical Italian on February 15. The work runs almost to the end of the term.

A number of the juniors plan to attend the Atlantic City meeting, March 3 and 4. The class has been allowed to choose between the usual spring trip to visit libraries and the conference of the American Library Association, and is about evenly divided between the two. The former will cover the libraries of several New England cities.

The usual alumni meeting on February 12 was turned into a party for the juniors and, considering the weather, was well attended. Instead of valentines, charades founded on the names of students and alumni formed the principal entertainment.

The seniors have had the following lectures:

#### *School and college library course—*

Jan. 21. Annie C. Moore. Work with schools.

Jan. 31. Mary E. Herr. Libraries in private schools.

#### *Advanced reference and cataloging course—*

Jan. 12. Susan A. Hutchinson. Literature of art.

Jan. 16. C. H. A. Bjerregaard. Literature of philosophy.

Jan. 19. Otto Kinkeldey. Literature of music.

Feb. 2. V. H. Paltsits. Literature of American history; Work of the archivist.

#### *Administration course—*

Jan. 12. Mary K. Simkhovitch. Work of settlements for adults.

Jan. 13. Visits to public school grades 4-5.

Jan. 19, 26. Albert Shiels. Education of adults: Some experiments in New York public schools.

Jan. 14, 21, 28. Anna C. Tyler. Storytelling.

Jan. 20. Visits to work-study-play schools.

Jan. 27. Annie C. Moore. Work with schools.

Feb. 2. Charlotte E. Wallace. Library schedules.

Feb. 3. Franklin F. Hopper. Library administration (to continue through February).

#### *Children's librarians' course—*

Jan. 13, 14, 20, 21, 27, 28. Same lectures as above.

#### ALUMNI

George S. Maynard, 1915, is engaged in reorganizing the library of the Yale Club, New York City.

Helen Greene, junior, 1915, has been engaged as assistant in the Ferguson Library, Stamford, Ct.

Eleanor Hiitt, junior, 1913, has become librarian of the Yolo County Library, California.

Ella G. Simonds, junior, 1913, is engaged in cataloging the library of Mrs. Willard D. Straight.

Ruth McLaughlin, junior, 1913, is reported as a member of the staff of the Chicago Public Library.

Nora Cordingley, junior, 1912, has accepted the position in the State Agricultural College Library, of Iowa, recently vacated by Irene E. Smith (1915) who went to the State Library, Salem, Oregon.

Ena Robb, of the senior class, has accepted a half-time appointment in the Columbia University Library, while finishing her school-year.

MARY W. PLUMMER, *Principal.*

#### UNIVERSITY OF ILLINOIS LIBRARY SCHOOL

The annual inspection visit of the students took them this year to the libraries and printing establishments of Decatur, Springfield, and St. Louis, and occupied the whole week beginning Monday, Feb. 7. The party was in charge of Mr. E. J. Reece and Miss Ethel Bond,

instructors. As is always the case, the greatest hospitality was shown the party by librarians and others, and the school is under a debt to all those who gave so freely of their time in showing and explaining the equipment and methods of their libraries. Mr. Remann, of the Springfield Public Library, kindly arranged a visit to the Lincoln Home which will always be remembered by the students. The staff of the St. Louis Public Library entertained the school most delightfully on Wednesday evening at the library, and on Thursday afternoon tea was served by the staff of Washington University Library.

Dr. E. C. Richardson, librarian of Princeton University, gave two lectures before the Library School, Jan. 4 and 5. In his first lecture he set forth the desirability of paleography as a study for librarians, and in the other he described various unusual devices and routines used in the Princeton University Library.

With the beginning of the second semester Feb. 7, the following additional students have registered for all or a part of the course: Vivian S. Colgrove in the junior class; George A. Deveneau, Susan T. Benson and Mary Grace Barnes in the senior class.

The following students are not returning for the second semester's work: Nelle U. Branch, who completed the work of the senior year and will receive her degree in June, 1916; Mary G. Johnston, who withdrew early in the semester; Katharine Davis, who withdrew shortly before Christmas; and Alice Brown, who remained through the first semester but will not return.

The University of Illinois library Club at its meeting February 1, listened to a delightful address by Professor L. M. Larson on "Ibsen." Selections from Peer Gynt were played by Miss Clara Ricketts, a member of the staff.

The committee in charge of the memorial for Miss Sharp reports subscriptions amounting to nearly \$1000, largely paid in.

#### ALUMNI NOTES

Effie Abraham, 1914-15, has been made head cataloger of the Miami University Library, a promotion.

Florence M. Craig, 1915-16, is assistant on one-third time at the University of Illinois Library.

P. L. WINDSOR, *Director.*

#### WESTERN RESERVE LIBRARY SCHOOL

Between the Christmas holidays and the end of the first semester, the course in trade bibliography was given by Miss Howe. Immediately following this the lectures on book-

buying and on publishing houses are given by Miss Anna G. Hubbard, head of the order department of the Cleveland Public Library.

The somewhat intensive course in library work with children, given the last two weeks in January by Mrs. Edna Lyman Scott, was made possible by providing longer class periods for the reading of a selected list of children's books and class discussion of them. This had been preceded by lectures by Miss Caroline Burnite, head of the children's work in the Cleveland Library system, on the administration of children's rooms; one of which included stereopticon views of the various children's rooms in the Cleveland system. Miss Burnite also lectured on "Sequences in children's reading." The students were assigned to their practical work in the children's rooms following this course, each student being scheduled for one-half day each week for four weeks.

The schedule of the second semester provides several new features for the students: the visits to the various distributing centers of the Cleveland Library system under the direction of Miss Eastman; the public library and community welfare course by the Director; and Professor A. S. Root's course on the history of the printed book. The regular work of the school for the first twelve weeks of the second semester constitutes the open course, to which special students are admitted. Three additional students are enrolled for this period.

Miss White, the secretary of the school, has been ill since the Christmas holidays. Her cheery presence and valued services have been greatly missed by faculty and students, but her return early in March is anticipated.

#### ALUMNI NOTES

Evelyn C. Hess, 1913, has resigned her position as children's librarian of the Fort Washington branch of the New York Public Library to become children's librarian of the East Cleveland (Ohio) Public Library.

Althea M. Hayman, 1914, has been promoted to first assistant in the Glenville branch of the Cleveland Public Library.

Blanche Coveney, 1914, has been promoted to librarian of the Glenville High School Library in Cleveland.

ALICE S. TYLER, *Director.*

#### CARNEGIE LIBRARY OF PITTSBURGH—TRAINING SCHOOL FOR CHILDREN'S LIBRARIANS

Miss Eleanor Fitzgibbons, secretary of the Pittsburgh center of the Drama League of America, spoke to the School, Jan. 20, on the work of the Drama League.

"Story interests of children at ranging stages of their development" and "Poetry" were the subjects of the talks given by Mrs. Edna Lyman Scott of Oak Park, Ill.

Examinations in reference work and classification were given in January.

The school regrets the loss from its faculty of Miss Hannah Carver Ellis, who resigned in February.

Miss Edna Whiteman, instructor in story-telling, is giving a course of lectures on story-telling in the University of Pittsburgh.

George Alexander Macbeth, vice-president of the Board of Trustees of the Carnegie Institute and of the Board of Trustees of the Carnegie Library, died at his home in Pittsburgh, Feb. 11. Mr. Macbeth was a life trustee of the library and also chairman of the library committee since its formation. In Mr. Macbeth's death the Training School has suffered a severe loss and one which will be keenly felt by faculty, alumnae and students. Since its organization in 1901 the school has had no warmer friend, no more loyal supporter and no wiser counselor than Mr. Macbeth. His unusual knowledge of the library world, his shrewd judgment, his active interest in all matters pertaining to the school, together with his broad human sympathy, made him a much valued adviser and a rare friend.

#### ALUMNAE NOTES

Edith Endicott, 1914, has resigned her position of children's librarian in the Washington County Free Library of Hagerstown, Md., to accept a position on the staff of the New York Public Library.

Frances Jennings Rhoades, a student in the school, 1914-15, was married Feb. 2, in Ann Arbor, Mich., to Hermann Weigand.

Martha Josephine Sands, 1915, resigned her position of assistant in the Training School, Feb. 1. Lida B. Young, 1914, has been appointed assistant in Miss Sand's place.

Ethel Pierce Underhill, 1910, has been appointed children's librarian in the Reuben McMillan Free Library, Youngstown, Ohio.

SARAH C. N. BOGLE.

#### LIBRARY ASSOCIATION OF PORTLAND, OREGON—TRAINING SCHOOL

March 1 marks the completion of the series of bibliographical lectures given to the school by various members of the faculty of Reed College of this city. This course was included in the regular extension courses of the college, and was given in response to a request from the library. It was called "Best books in special fields," and consisted of seventeen bib-

liographical lectures on the following subjects: physics, chemistry, biology, sociology, economics, dramatic literature, literary criticism, education, American history, European history, French literature, German literature, government, psychology, commerce and finance, mathematics.

These lectures were given by the professors in charge of the respective subjects and were conducted as somewhat informal talks about the books to be considered, lists of which had previously been made and put into the hands of each student, ready for annotations during the lecture.

In order to make these talks as widely useful as possible, the classes were thrown open to the public, and the library staff was also invited to attend. That this invitation was appreciated is attested by the attendance which ranged from about 20 (exclusive of the class) to 90, with an average of from 35 to 40.

ETHEL R. SAWYER,  
*Director of Training Class.*

## Reviews

MOTH, AXEL. Technical terms used in bibliographies and by the book and printing trades. Boston: The Boston Book Company, 1915. 263 p. (Useful Reference Series No. 14.)

The title page does not indicate the polyglot character of the work, which gives first the English term with its equivalents in Danish, Dutch, French, German, Italian, Spanish, and Swedish, and then in separate alphabets the terms in each of these languages with the English equivalent. In some cases a definition of the English term is given, but in most cases it is assumed that the person using the work is familiar with the meaning of the English word. Yet it is not apparent why it should be assumed that "interlined composition" or "leaded matter" requires a definition and "spaced composition" does not, and it is surely misleading to give only the entomological meaning of "book-worm," omitting any reference to its figurative meaning, even if the latter is commonly known, and then give as the Swedish equivalent a word which is used only for the second.

Again, while "copy" is defined as a "single book" or "set of books," and again as a "duplicate of a manuscript," no mention is made of its meaning, at least equally common, as "the material to be copied by the compositor." There are also too many cases where the English terms given as equivalent under the foreign terms do not agree with the

foreign terms under the English. Thus under "out of print," the German equivalent is given correctly as "vergriffen," but under "vergriffen" the English equivalent is given as "suppressed."

Although it is clearly stated on the title page and in the preface that this is a supplement to F. K. Walter's "Abbreviations and technical terms used in book catalogues and in bibliographies," nevertheless it would appear most inadvisable to exclude from it the definitions of terms used frequently in the book and printing trades, even if they are given in the earlier work. They will naturally be sought for in this and should be found in it. For instance, the difference between the word "library" in English and the similar words "librairie," "libreria," etc., in the Latin languages is omitted entirely in this, although not brought out adequately in the other.

Unfortunately, these instances can be multiplied almost indefinitely, and the work must be carefully revised before it can be depended upon by those who are unfamiliar with the subject matter and the languages. To those who are, and who merely need to refresh their memories, it may well prove, even now, a useful tool.

It should be added that the typography is beautifully clear and distinct, and that the proofreading appears to have been done with care.

C. W. A.

KATALOG över böcker som folk- och skolbibliotek samt riksförbund som bedriva biblioteksverk samhet kunna erhålla i statsbidrag. På uppdrag av kungl. ecklesiastikdepartementet utg. av Fredrik Hjelmqvist. Grundkatalog 1915-16. Första häftet. Stockholm 1915. 112, 24 p.

In Sweden there has recently been issued the first volume of an annotated catalog, containing about 2300 titles in the Swedish language. It is edited by Doctor Fredrik Hjelmqvist, chief of the State Library Commission, and is the official catalog for the state supported libraries. This means that the books which the government distributes (furnishing the books directly instead of the money) are to be chosen by the libraries from this catalog.

In view of the great influence this catalog (the first of its kind) is bound to have on the book-selection of all the public libraries of Sweden, it has been compiled with great care. The "Riksdag" in 1912 voted 20,000 kronor (\$5300) for its preparation, and in February, 1913, the work was begun. The selection and annotation of the books have been made by experts in the various subjects,

the fitness of each book for a public library being considered.\* Finally, the lists have been revised at the office of the State Library Commission and, as far as possible, put in uniform shape.

The volume now issued is intended to be one-third of the complete catalog. It contains as mentioned before about 2300 titles. As the last volume will contain also an author and title index and a subject index the whole number of books included can be estimated at about 6000.\*

In make-up and general arrangement the A. L. A. catalog has in a large measure served as a model. The decimal classification has, however, not been used as it is not, so far, adopted to any large extent in the Swedish libraries. The contents of the volume at hand are instead grouped according to the following classes:

Book arts, library science, collections, general periodicals (90 titles); religion, including religious fiction (294 titles); philosophy with esthetics (163 titles); education (107 titles); philology (156 titles); history of literature and literary criticism (84 titles); Swedish fiction, poetry and drama (688 titles); old Norse literature (9 titles); Norwegian, Danish and Finnish literature in translation (82 titles); German literature in translation (138 titles). The next volume will begin with English literature.

An appendix contains 572 children's books in the classes corresponding to those above mentioned; the adult books suitable for children also are marked with an "u" (= *ungdom*); those books are not taken up again in the appendix, but reference is made in some important cases.

Degrees of fitness are indicated otherwise throughout the catalog in the following way: \* and \*\* ("especially recommended" and "strongly recommended" for all libraries), † (only for large libraries). The prices are given in Swedish kronor. The commercial valuation of the krona is about 26 cents; taking freight rates and, in some cases, duty on imported books, into consideration, one may as a rule figure the cost of books, if purchased for American libraries, on the basis of 1 krona equal to 35 cents. Swedish books are mostly sold unbound, and the prices refer to unbound books, when not otherwise stated. (*Inv.* before the price standing for bound). The price for the catalog (unbound) if or-

\*The only restriction made by the "Riksdag" was that immoral books should be excluded; otherwise different opinions should as far as possible be represented.

dered through Bonnier's publishing house (561 Third Ave., New York City), is 55 cents. The two succeeding volumes will be published during 1916 at the same price.

I have ventured to mention and dwell upon the features of this catalog in *THE LIBRARY JOURNAL* not only because it may interest American librarians to learn that Sweden, too, has become alive to the great significance of library work in that spirit in which the United States is leading the way, but particularly because I thought that it might serve as a guide also for American librarians, especially in the Middle West, where Swedish books are in demand and where some Scandinavian member of the staff (or one of the public) will presumably be available for translation as occasion requires. Of course, an English translation, particularly one covering the Swedish literature section, is highly desirable and is, I believe, already under consideration. In the meantime, I shall be very glad to give any additional information as well as assistance in the use of the catalog that may be desired.

GRETA LINDER,

*Former Secretary of the State Library  
Commission of Sweden.*

Address: Library School of the  
New York Public Library.

---

## Librarians

---

A committee of six has just been appointed by the executive committee of the National Municipal League to promote the centralization of municipal information and the coordination of existing agencies. The members of this committee are: Dr. Charles C. Williamson, municipal librarian of New York, chairman; John Cotton Dana of the Public Library, Newark, N. J.; Dr. Horace E. Flack of Baltimore; John A. Lapp of the Indiana State Library, Indianapolis; Samuel H. Ranck of Grand Rapids, Mich., and Clinton Rogers Woodruff of Philadelphia.

BAIGRIE, Alison, Pratt 1907, librarian of the Chatham Square branch of the New York Public Library, was married on Jan. 8 to Elias Alessios. Mrs. Alessios purposes continuing her work for the present.

BAKER, Adeline M., B. L. S. Illinois 1902, has been appointed catalog reviser in the Newberry Library, Chicago.

BENDIKSON, Dr. L., who has been a reviser in the reference catalog division of the New York Public Library for several years, has

resigned to take a position as bibliographer in the private library of Henry E. Huntington of New York City, entering on his new work March 1.

BOLTON, Charles Knowles, of the Boston Athenæum, was recently called to Cleveland, Ohio, by the death of his mother, Mrs. Sarah Knowles Bolton, well known to librarians through her long list of children's books.

BUNDY, Irving R., New York State Library School, 1911-12, has resigned his position as librarian of the Leavenworth (Kan.) Public Library and will go to Kirksville, Mo., to take charge of the First District Normal School Library.

CLATWORTHY, Linda M., who has been spending three months reorganizing the county libraries in Uinta county, Wyoming, and the library at Fort Morgan, has returned to Denver.

CLENDENIN, Susan R., Pratt 1901 and 1904, has resigned her position as librarian of the Falls of Schuylkill branch of the Philadelphia Public Library, because of illness at home, and is taking charge for three months of the Public Library at Harrisburg, Pa.

CODDINGTON, May, has been appointed librarian of the San Bernardino (Cal.) Public Library, in place of Estelle Hadden, who recently resigned.

CULBERTSON, Mrs. Marie, who was for twenty-five years librarian of the New Orleans City Library, when the library was located in the city hall, died Jan. 9, at the age of 78 years.

CUNNINGHAM, Jesse, librarian of the State School of Mines at Rolla, Mo., has been appointed librarian of the Free Public Library at St. Joseph Mo., to succeed Charles E. Rush, who has resigned to become librarian at Des Moines, Ia. Mr. Cunningham will assume his new duties Mar. 1, though Mr. Rush will not leave St. Joseph till Mar. 20, devoting the intervening time to acquainting his successor with the St. Joseph system. Mr. Cunningham was graduated from the University of Nebraska in 1906 and received his B.L.S. degree from the New York State Library School at Albany in 1910. He has had varied library experiences, organized the municipal reference branch of the St. Louis Library, and has been librarian at the School of Mines since 1912.

DAMON, Lalia M., first assistant librarian at Forbes Library, Northampton, Mass., has resigned her position, the resignation to take

effect on March 1, when she will enter upon similar duties in the library at the Massachusetts Agricultural College at Amherst.

DARWIN, Miss B. N., who has been in the Regina (Sask.) Public Library for four years, resigned in December and started for England, to become the bride of a Regina man now serving at the front.

ELLIOTT, Agnes M., Pratt 1896, recently reference librarian of the Newark Public Library, was married on February first to John Macfeely Rhey. Mr. and Mrs. Rhey will live at Carlisle, Pa.

HADDEN, Estelle, for fourteen years assistant and then head librarian in the San Bernardino (Cal.) Public Library, has resigned.

HUFF, Ruth D., for five years the librarian of the Wonewoc (Wis.) Public Library, has resigned.

JETTINGHOFF, Mabel E., Pratt 1913, who has been since graduation first assistant in the East Liberty branch of the Carnegie Library of Pittsburgh, has been appointed to the position of annotator and classifier in the cataloging department of that library.

LOWRY, Elizabeth, New York State Library School, 1912-13, has been appointed librarian of the Public Library at Idaho Falls, Idaho.

MCNEIL, Norah, until recently chief of the reference and loan department in the Rosenberg Library, Galveston, Texas, has been appointed first assistant in the readers' department of the Berkeley Public Library.

McLONEY, Ella M., chief librarian of the Des Moines Public Library for the past twenty-five years, has resigned, her resignation to take effect April 1. Miss McLoney will assume the less arduous duties of assistant in charge of the branch maintained on Twenty-fifth street in University place, which is rapidly growing in importance. As librarian, she has seen the Des Moines Public Library increase from 6000 volumes, employing two assistants, to 90,000 volumes, with a force of thirty people. She was for eight years secretary of the Iowa Library Association, and for four years both secretary and treasurer. Later, she held the office of president of that organization.

MARRON, J. F., legislative reference librarian of Texas, has recently been elected one of the five directors of the Texas Public Health Association. This association is principally engaged in anti-tuberculosis work, but is actively interested in all public health problems.

MONTGOMERY, Thomas Lynch, the Pennsylvania state librarian, was the guest of honor at

a testimonial dinner given at the Harrisburg Club, Feb. 3, by more than 100 of his friends and admirers. The dinner was in celebration of the thirteenth year of Mr. Montgomery's service as state librarian.

OSBORNE, Maud, B. L. S. Illinois 1911, is a member of the editorial staff of the *Mother's Magazine*, Elgin, Illinois.

PLUMMER, Honor, B. L. S. Illinois 1912, has been appointed an assistant in the Library of the Kansas State Agricultural College, Manhattan.

ROBSON, Laura, has resigned her position as first assistant in the readers' department of the Berkeley Public Library, and has been appointed to the catalog department of the California State Library at Sacramento.

RUSH, Charles E., B.L.S., New York State Library School 1908, since 1910 in charge of the Public Library of St. Joseph, Mo., has resigned, to go to Des Moines, Ia., to take charge of the Public Library in that city.

TAPPERT, Katherine, Pratt 1910, at present head of the circulation department of the Davenport Public Library, has been made vice librarian of the Washington County Free Library at Hagerstown, Md.

THAYER, Ethel, formerly librarian of the Public Library of Morris, Ill., has taken charge of the children's work in the new Wichita (Kan.) City Library.

UNDERHILL, Ethel P., who has been children's librarian in the Worcester (Mass.) Free Public Library since 1910, has left that institution and gone to Youngstown, O., where she will complete the organization of the children's department in the Public Library in that city. Miss Underhill is a graduate of Vassar and of the Carnegie Training School for Children's Librarians at Pittsburgh. Miss Underhill was in the Children's Department in Brooklyn before going to Worcester.

VIRGIN, Edward Harmon, for eleven years librarian of the General Theological Seminary in New York City, has resigned.

WARREN, Theodosia, a resident of San Diego, who for a year has been employed at the San Diego (Cal.) Public Library, has been appointed acting librarian to take the place left vacant by Mrs. Hannah P. Davison, resigned. Miss Warren began her duties Feb. 1, the date Mrs. Davison's resignation took effect. She is a graduate of the University of Chicago, and the University of Wisconsin, at Madison. She had two years' experience in one of the branch libraries in Chicago before going to San Diego.

# THE LIBRARY WORLD

## New England

### MAINE

*Corinna.* The stack room and the children's reading room in the Public Library have been newly decorated and the woodwork varnished. The main reading room is soon to have a new steel ceiling and the walls redecorated.

*Portland.* Announcement was made at the annual meeting of the Cumberland Bar Association that the law library bequeathed to it by Hon. Henry B. Cleaves, together with \$50,000 for its upkeep and the purchase of new books, had been placed in storage and insured for \$6000, pending a decision as to where it shall be located. The will specified that it should be housed in the Federal building, but no room is available there. At the annual meeting of the Greenleaf Law Library, held on the same day, it was reported that 600 volumes had been added during the year, and that the membership is now 161, the largest in the history of the organization.

### NEW HAMPSHIRE

*Nashua.* The will of Rev. Edward Cooke Strout, superintendent of the Manchester M. E. district, leaves his library to Tilton Seminary.

### VERMONT

*Swanton.* The new Public Library has been completed and was dedicated Feb. 9. In the afternoon Miss Rebecca Wright, secretary of the State Library Commission, gave a talk to the children. Following this was an informal reception in the audience room with music and refreshments. The dedication exercises were held in the town hall in the evening with addresses by Miss Mary Saxe of Montreal and Frederick Tupper, professor of English literature of the University of Vermont. The library will be open three days every week and the reading room will be open every afternoon and evening.

*Waterbury.* The Public Library has moved into its new quarters in the remodelled Janes homestead, where it kept "open house" on Feb. 5.

### MASSACHUSETTS

*Acton.* By the will of the late Luke Tuttle of this town, \$200 is bequeathed to the Acton Memorial Library.

*Amherst.* Library prospects are very much in the minds of Amherst citizens at present. The new \$250,000 library building for Amherst college will add much to the appear-

ance of the town, especially if it is located at the east side of the common, on or near the site now occupied by Hitchcock hall. In the fall of 1914, President Meiklejohn named a committee to prepare plans for a new library building, although it was not known where the money was coming from. The committee appointed was composed of President Meiklejohn, Prof. H. DeForrest Smith, Prof. John F. Genung and Librarian Robert S. Fletcher. They employed the firm of McKim, Mead & White of New York, who have prepared plans which, however, are yet to be accepted by the trustees. It is expected that construction work will be begun in the early summer, and that the building will be completed by June, 1917, in order that the books may be transferred from the old library to the new building during the summer vacation. The town of Amherst is also soon to have a new library building of its own. Work on it may be begun this year. It is expected that there will be an article in the warrant at the coming March town-meeting relative to securing a lot for the building. Many sites have been proposed, but the most practical one now seems to be the so-called Gates lot, situated just east of Sweetzer park and opposite the First Congregational church. The town has a little over \$30,000 for library purposes from the Munson estate, and something over \$1200 from the Cook estate, and it is hoped that additional contributions will be received. The trustees of the Massachusetts Agricultural College have also asked the legislature for \$230,000 for a library, and while it may not get it this year, it is bound to get it some time.

*Boston.* For the use of Massachusetts organizations engaged in pushing legislative measures for social and civic betterment the library of the Women's Educational and Industrial Union has a card catalog of members of the General Court giving their home addresses, biographical sketches, roll-call record on selected measures, and towns included in their constituencies. The library also has lists of educational, social and religious organizations throughout the state presumably interested in supporting social legislation.

*Malden.* The two-story addition made to the Converse Memorial Public Library was opened to the public Jan. 27. The addition was first planned to provide for the growing need for more room in the children's department, but the plans grew until it was decided to

make the two-story addition, with more room for the growing art interests of the library. The whole cost of the enlargement was about \$25,000. In mass the addition is a hexagon, opening on the second floor out of the old art gallery and out of the cataloging room, and on the lower floor out of staircase passages. The art gallery has a large skylight for day illumination, and a border of electric bulbs to provide reflected illumination at night. The children's room is finished with gray tinted plaster walls, with cases, tables and chairs of quartered oak, like the doors. Two corners are boxed off for the smaller children. The cases range around the walls. Numerous windows provide plentiful daylight and the artificial illumination is by the "indirect-direct" system. The ceiling is heavily beamed in a geometrical pattern. There is a separate outside entrance for the children.

*Northampton.* There has been much discussion in the local papers of the proposal to consolidate the Clarke Library with the Forbes Library. This would probably effect some slight saving to the city in the matter of maintenance, though the appropriation for the Forbes Library would undoubtedly have to be increased at once. The income of the John Clarke fund is about \$2660 a year, and this could be used for maintenance purposes. The maintenance fund at the Forbes Library has always been inadequate as compared to the book fund, and the need of an extra appropriation of \$20,000 for steel stacks has been regularly presented to the city for some twenty years. At present about 25,000 volumes are stored on the basement floor, for lack of other accommodations.

*Pembroke.* In the will of Augusta B. Cheney of Kingston, there is a bequest to the town of Pembroke of \$1000 for the erection of a free Public Library to be called the Briggs Library, provided the town will appropriate at least \$1000 for the same purpose. The will also gives the books in her private library to the proposed library.

*Wakefield.* As a result of the efforts of the Kosmos Woman's Club of Wakefield, a free circulating library for the use of the people of the Italian quarter of that town has been opened at the office of C. Bonfanti. Members of the club will act as attendants, and the library will be open every Thursday evening.

*West Newbury.* A report was current early in the year that the four Misses Emery, residents of this town, were to buy the old Hotel Albion, and erect on the site a memorial

library. The report said the offer was made to the board of selectmen of the town, who planned to present the matter of its acceptance at the spring town meeting. A protest was made against the offer by certain citizens, since in March, 1902, the town accepted a gift of \$2400 from the Major Boyd Post, G. A. R., on the understanding that it should be used as the nucleus for a fund to erect a memorial building in the town, the building to contain the town library. This fund now has reached about \$5000. The deed of gift of the fund stipulated that the building should be erected within 200 yards of Postoffice square, and as the lot the Misses Emery planned to erect a library on is some distance away from the square, the fund set apart by the G. A. R. could not be utilized in this connection. The latest report states that the Misses Emery have withdrawn their offer.

#### CONNECTICUT

*New Haven.* The committee which has been raising funds for a site for a branch building in Fair Haven, has succeeded in raising \$1500, the sum specified by the city library board. Subscriptions were given for various amounts, ranging down to pennies by the school children in that section. The city has appropriated the sum of \$3500, and with the \$1500 added will purchase a plot of land on the south side of Grand avenue, opposite Bright street, from the estate of Joel Bradley. The Carnegie Corporation agreed some time ago to build the library, provided a suitable site is provided.

#### Middle Atlantic

##### NEW YORK

*Castleton.* The Public Library Association has appointed a committee of fifteen to choose and buy grounds for a new public library.

*Delmar.* The Public Library, organized in 1913, and now containing about a thousand volumes, is outgrowing its quarters in a room in the public school building. The women of the Progress club act as librarians, taking their turn according to a regular schedule without receiving any compensation for their services. The present need is a library building, and the trustees of the association have been authorized to proceed with plans. Two sites have been offered by residents, a Delmar architect will give his services and the location is to be solved in the near future.

*Elmira.* The Carnegie Corporation has voted to appropriate \$70,000 for a new library

building in this city. Several sites are under consideration, but the two which are receiving the most attention are the property at the northeast corner of State and Church streets, and the Reynolds property at Lake and Church streets. The latter site is nearer the street car lines and if a price acceptable to the owners and the prospective purchasers can be agreed upon, it will probably be the one chosen for the new library. The Steele Memorial Library, whose building is now crowded beyond its capacity, will become a part of the new library and move to that building, turning over its 23,000 volumes to the new library. At present extra space is rented in an office building for the children's department.

*Farmingdale.* In planning the New York State School of Agriculture on Long Island much importance is being attached to the selection of a library, not only for the students' use, but for general public reference purposes.

*New York City.* The bureau of fare research, formerly maintained by the American Electric Railway Association, was discontinued Jan. 1.

*New York City.* A collection of approximately 14,000 prints, from the estate of the late David McNeely Stauffer, has been given to the New York Public Library. At least a third of the number are American engravings, of which he had made a special study, embodied in his notable work on "American engravers upon copper and steel," issued in two volumes by the Grolier Club in 1907.

*New York City.* The Library of the General Theological Seminary now contains over 60,000 volumes, exclusive of pamphlets, and receives currently nearly 200 periodicals. It is especially strong in liturgics, patristics, Old Testament literature, including the Semitic languages and Biblical archæology, and in American and Anglican church history. Persons not connected with the seminary may consult the library at any time, but are not permitted to borrow books.

*New York City.* A library still relatively unknown in library circles is the Missionary Research Library at 25 Madison avenue. This library was organized in June, 1914, under the supervision of a committee representing the mission boards of all denominations in the country with Miss Hollis W. Hering as librarian. It is devoted, as its name indicates, to works bearing on mission problems, and at the present time contains in round numbers 11,000 volumes and 3000 pamphlets. It is a reference library only, to which all students interested in missionary research are welcome.

*New York City.* Property said to be worth \$200,000 will come into the possession of the New York Public Library through the death, Feb. 20, of Mrs. Emma Louisa Thompson Black, wife of George Ashton Black. Before she was married to Mr. Black, in 1883, Mrs. Black was the widow of Henry Panton, a brother of Mrs. Margaret W. Duyckinck, widow of Evert A. Duyckinck. Much of the property left to the library came from Mr. Panton's estate and the estate of George L. Duyckinck. The Duyckinck family had been previously identified with the libraries of this city, the old Lenox Library receiving 15,000 volumes collected by the two brothers, Evert A. and George L. Duyckinck.

*New York City.* At a meeting of the library and social house committee of the Alumni Association of the College of the City of New York, it was resolved that the committee proceed with the collection of a fund for the purpose of erecting a library building for the City College. If a sufficiently large sum is raised facilities will be provided for social features, so that some of the advantages of a social house may be combined with the library. It is planned to have a dining room and a social meeting hall as a part of the library. The sum needed for the purpose is \$150,000, of which more than \$50,000 has already been pledged to the library committee. The committee is now engaged in drawing up plans for raising the additional sum of \$100,000 needed to make possible the commencement of building operations.

*Norwich. Guernsey Mem. L. N. Louise Ruckteshler, lbn. (Rpt.—yr. ending July 1, 1915.)* Accessions 1022, withdrawals 184; total 12,334. New registration 301, total since July, 1906, 3900. Circulation 44,224. Receipts \$4068.75; maintenance expenditures \$3017.26, including \$656.01 for books, \$143.80 for periodicals, \$76.46 for binding, \$971.76 for staff salaries.

The text of the report tells of its routine and special work, among which is the extension work wherein 41 district schools and 7 stations in homes and general stores throughout the county are served; a publicity campaign crying the library's wares by 56 columns in the local daily; and the firm establishment of the Saturday afternoon story hour during the school year.

*Ossining.* At the "experience meeting" arranged and carried through in New York City by sixty members of the Mutual Welfare League of Sing Sing prison, on the night of Feb. 14, a big and enthusiastic audience greeted

the speakers, and bore testimony to the increasing interest in the betterment of prison conditions. Copies of the *Mutual Welfare League Bulletin*, the league's weekly publication, were distributed, and among other articles of interest was one setting forth the plan for enlarging the use of the prison library. There are over 10,000 books in the library, and books may be kept for two weeks or may be exchanged daily. The library is open at all hours of the day, but it is desired that the men who want books secure them during recreation hours. This is a change from the former practice of issuing only two books a week, to be exchanged on stated days. Instead of waiting until library privileges are asked by the inmates, cards will now be issued to every man as soon as he enters the institution. Rev. William E. Cashin, the prison chaplain and also the librarian, is always ready to help readers in the selection of good books. The Mutual Welfare League also has a small library of its own, distinct from the large Sing Sing collection, all its books and magazines being gifts from various friends.

#### NEW JERSEY

*Caldwell.* The board of trustees of the Caldwell Free Public Library have decided to build the proposed library building at Arlington and Bloomfield avenues, on the Grover Cleveland Birthplace Memorial property. This site is subject to the approval of the directors of the Memorial Association. When the property, formerly the Caldwell Presbyterian Church manse, was acquired by the association several years ago, it was understood that a free library site would be given to the town.

*Camden.* By unanimous vote, the Assembly at Trenton has passed Assemblyman Wolverson's bill which will enable the city of Camden to consent to the erection of a library building in one of its public parks without cost to the municipality. President Johnson, of the Victor Talking Machine Company, has given \$150,000 for the erection of the building, provided it be placed in one of the parks or squares.

*East Orange.* The enlargement of the Public Library has been completed by the building of an addition in the rear, to the improvement of all departments. The library no longer has an assembly room in the basement, the high school auditorium having met that need since the erection of the first building. A corner of the basement has been set apart as a committee room, which is used for small

gatherings; another part has been partitioned off for the installation of a heating system. The more readily observed benefits of the expansion are the wider aisles between the bookstacks, the separation of the reading and reference departments, to the greater efficiency of both, and a larger children's room in the basement. The space heretofore given over to the youngsters is now an exhibit room, which promises to be an interesting feature of the library work. Back of the new reference room are the workrooms, and the library staff room is in the basement. A comparatively new feature of the reference department is the civics collection. In the same room are educational collections and a file of newspaper clippings pertaining to local municipal happenings.

*Hamburg.* The executive committee of the People's Free Lecture Course announced in January, that it proposed opening a public reading room and library in the central part of town, provided the support of the public can be obtained. Tentative plans of the committee call for the yearly payment of \$1 to become members of the Library Association. The reading rooms will be supplied with several hundred volumes of the best books, and magazines and newspapers. It is expected to have the room open three evenings each week.

*Montclair.* The trustees of the Montclair Free Public Library have arranged for a book distributing station in the south end of the town. A year ago the Carnegie Corporation gave funds for the erection of a branch library in the north end of the town.

*Newark.* Under the title "Literature on the job," James H. Collins has an article in the *Saturday Evening Post* of Jan. 15, describing the work of the business branch of the Newark Public Library, mentioning some of the sources of information by which the library keeps its material up to date, and giving specific instances by way of illustration of the many and varied kinds of questions which the library is able to answer.

*Verona.* A resolution requesting the Carnegie Corporation to contribute \$11,000 for the erection of a public library building in Verona, and pledging the provision by the town of at least ten per cent. of that sum annually for maintenance, was adopted, Feb. 1, by the Verona Borough Council. The book collection of the Verona Free Public Library is now kept in one of the rooms of the public school building. The school and public library were recently merged. Prior to the placing of the books in the school they were kept at the home

of the person appointed as librarian. Because of the rapid growth of the school it is believed that the room now used for library purposes will be needed next September for class purposes. It is hoped to have the proposed building ready before that date. At the request of the library commission \$1100 was provided in the budget this year for library purposes.

*West New York.* The creation of a board of commissioners for the establishment of a free public library is under consideration by the mayor. The library is to be started in one of the larger rooms in the municipal building.

#### PENNSYLVANIA

*Millersburg.* There is prospect that work may be started before the year is over on the Johnson Public Library and gymnasium. When H. J. Johnson died in 1909 he left a bequest of \$75,000 for the purpose, which sum the trustees allowed to lie at interest until it should increase to \$100,000. It is understood that the plans are practically completed for the building, which it is hoped to erect at a cost of about \$35,000 or \$40,000. The property at the southern corner of North and Walnut streets, opposite St. Paul's Lutheran church, has been bought and it is here that the library will be built.

*Pottsville.* It has been announced here that the Carnegie Corporation has given \$45,000 for the establishment of a free library in Pottsville. The fund will be used for the erection of the building. The site will cost \$23,000. This amount already has been paid by Pottsville residents. A three-story building with stone front will be erected.

*York.* The City Council has taken the initial steps toward the erection of a library building for which a fund of \$185,000 was provided in the will of M. D. Martin. It is planned to build the library on Penn common. The administration of the affairs of the library will be in the hands of seven trustees to be appointed by the court. It is said \$125,000 will be expended in the erection of the building, and the interest on the remaining money will be used for its upkeep.

#### DELAWARE

*Wilmington.* Much pleasure was felt in Wilmington early in February over the report that a wealthy resident had made possible the securing of a suitable site for the new library building so greatly needed. The property in question was in the center of the city facing Court House square, and was to be leased

from the First Presbyterian church for a term of 200 years. Subsequent investigations showed that this procedure would entail so many obligations on the library that unless the property can be purchased outright it seems unlikely negotiations will be carried further along this line.

#### MARYLAND

*Baltimore.* The *Municipal Journal* for Jan. 28, published twice a month by the city government and devoted to a record of the city's various departments and activities, contains a summarized report of the Enoch Pratt Free Library for the year 1915. Besides the Central Building, there are 15 branches (with plans completed for a new one to be erected in the spring), and two stations in rented quarters. The library contained 334,366 volumes upon January 1, 1916, 199,724 in the Central Library, and 134,642 in the branches and stations. In addition to the permanent points of distribution, boxes of books were sent during the year to 55 institutions. There are 44,929 registered borrowers, by whom 696,111 books were drawn for use at home; in addition to this number, over 150,000 books of which no exact account is taken, were used in the branch libraries, and in the reading room of the Central Library. During the year, a standard open shelf library, comprising over 3000 volumes was opened, at 404 Cathedral street; the books, especially adapted for children, as well as those in the classes of Natural Science and Industrial Arts, will be removed from Central to 400 Cathedral street, in 1916, where they will be made more accessible to the public than before, and administered in separate departments. The city's appropriation for library purposes for 1916 is \$52,000, in addition to the annuity of \$50,000 established by the city, in return for Mr. Pratt's gift to the city for library purposes, which amounted to about \$1,150,000.

#### DISTRICT OF COLUMBIA

*Washington.* The Public Library has recently started a collection of Scandinavian books, about a hundred volumes forming the nucleus. A meeting which was attended by an audience which packed the lecture room of the library, was held in January, in order that the Scandinavians of the national capital might show their appreciation of the collection. Addresses were made in English, Norwegian, Danish, and Swedish, and a musical program was given.

*Washington.* By the will of the late Miss Stephanie de Cous Schisano, of Norfolk, Va., a valuable collection of nearly 9000 volumes

of French literature, mostly of the eighteenth century, and in original editions, has been made to the Catholic University Library. There are also some very rare Franco-American magazines and publications of the first half of the nineteenth century. The bequest of Miss Schisano is one of the largest received by the university library, and is particularly welcome to the professors and students of the department of modern languages.

*Washington.* A hearing was held, Feb. 1, before the House Committee on the District of Columbia on a bill to give the commissioners of the district the right to make appointments and removals of employes in the Public Library. Under the law creating the library the commission appoints the trustees, the trustees appoint the librarian, and the latter appoints his assistants. The new bill is a part of a so-called "unification" scheme which would also give to the commissioners the power to appoint the superintendent of schools, all teachers and other school employes, instead of the members of the Board of Education alone, as at present. The president of the board of library trustees and Dr. George F. Bowerman, the librarian, appeared before the committee and presented their arguments against the proposed shifting of the power of appointment, and at the close of the hearing the House committee voted unanimously to postpone the bill in question indefinitely.

## The South

### VIRGINIA

*Richmond.* After many years of useful work the Rosemary Library permanently closed its doors to the public of Richmond, on Tuesday, January 25. Owing to the fact that the funds received by the library were insufficient for its maintenance it was decided by the board of directors of the institution to close, and with its closing passes a landmark in Richmond's library annals. The library was founded by Thomas Nelson Page.

### SOUTH CAROLINA

*Greenville.* The Chamber of Commerce has taken the preliminary steps toward securing the establishment of a free public library in this city. It is understood that some special legislation may have to be secured before the way will be entirely clear to secure the desired institution.

*Kingstree.* Bids for the erection of the Carnegie Library have been opened and the contract let for \$5150. The library will be

located at the corner of Hampton avenue and Mill street, the site of the old Kingstree school building.

### GEORGIA

*Gainesville.* The Gainesville Chamber of Commerce is behind a movement to secure a Carnegie library building, a committee being appointed to co-operate with a committee from the Gainesville Library Association.

*Quitman.* Final arrangements have been made with the Carnegie Corporation for the gift of a \$10,000 library to Quitman. Mayor Davis and the city council have complied with all the requirements and the proposition is now in the hands of a local board of trustees, which has already begun the work of securing plans, which will immediately be forwarded to the Carnegie Corporation for approval. The city of Quitman has bought a lot fronting on the court house park.

### FLORIDA

*Daytona Beach.* Capt. C. A. Young of this city recently made known his intention of building a new public library building in Daytona Beach in memory of his deceased wife. The building will be erected on the corner of Vermont avenue and Peninsula Drive in Daytona Beach, and is to be of concrete and brick. Its approximate cost will be \$8000. It will be named the Sarah Cornelia Young Memorial Library, and in the original plans, now in the hands of the contractors, there are, besides the library rooms, attractive and ample rooms set aside for the town council and chamber of commerce meetings.

### LOUISIANA

*New Orleans.* The New Orleans Advertising Club is arranging for permanent quarters and the installation of what it proposed to make "the finest library of business and advertising books in the South."

*Shreveport.* For the purpose of creating public interest in the library needs of this town, the local women's clubs invited Miss Lutie E. Stearns to give a lecture in the First Baptist Church, Sunday afternoon, Feb. 13, on "Shreveport's greatest need." The question of starting a public library has been much discussed here in the last few months, and the women hoped that Miss Stearns would make definite suggestions out of her experience that would help them to a practical method of accomplishing their plans. Miss Stearns will tour Louisiana in the interest of free libraries. Her trip will take her to DeRidder, Lafayette, Jennings, Lake Charles, Ruston and other towns in the state.

## The Central West

### MICHIGAN

*Detroit.* As a tribute to Divie B. Duffield, retiring president of the library commission, that body has voted to give the name "Duffield library" to the new branch being erected at West Grand boulevard and Dunedin avenue. A vote of recognition of Mr. Duffield's services during his 12 years as library commissioner also was accorded the former president. Addresses commending him for his work were made by Librarian Strohm and several members of the board.

*Saginaw.* The Butman-Fish Memorial Library, presented to the schools and public by W. S. Fish, two years ago, and for which ground was broken on the northeast corner of the John Moore school plot in April, 1914, was completed and opened in January. The first floor of the building is given over entirely to library purposes, with a spacious lobby backed by metal stacks, to the right being the large reading room for adults and to the left one of equal size designed and equipped for children. In each of these rooms are large fireplaces. At the rear of the children's reading room is a private office for the librarian, while in the rear of the adults' reading room is a small room equipped especially for research work. The second floor, which is reached from the building entrance by stairways winding from the left and right of the main entrance stairs, is planned for use as an art gallery or museum.

*St. Johns.* The Woman's Club, the King's Daughters, the Musical Art Society and several other women's organizations are eager to have a Carnegie library erected in this city, and they will petition for such a building.

### OHIO

*Cleveland.* A bequest of \$25,000 has been made to the Cleveland Medical Library Association by the late Dr. Benjamin L. Milliken, professor emeritus at Western Reserve School, who died Jan. 6. The money is to be known as the "B. L. Milliken endowment fund."

*Youngstown.* The Public Library has changed its fiscal year from May to the calendar year, so that it will coincide with the city fiscal year. This change was made to save much confusion and unnecessary work. The library hours have been changed from 8:30 to 9:00. On Feb. 1 the Newark charging system went into effect. This included not only the recarding and pocketing of all the books in the library, but the reregistering of the library card holders. Readers were

not required to make out new application blanks. A station of the library has been opened in the Hippodrome Arcade, which runs through between the two main streets of the city. The library consists of two double bookcases with glass doors. These cases stand in the center of the corridor, close to the entrance of the Hippodrome Theater. The station is open from 9:00 in the morning until 9:00 at night, in charge of library trained assistants. It is doing a heavy business as it catches the shopping and theater crowds. A stock of 1200 volumes is replenished by daily deliveries from the central library. Books may be borrowed and returned interchangeably by the readers. Arrangements have been made to open a station in the foreign department of one of the down-town banks. Books in several languages will circulate, as well as manuals of citizenship and easy English books. The Republic Rubber Works have arranged to keep someone constantly in charge of a station which will be opened in their club house, March 1. This will serve not only the 1500 employes but the entire neighborhood, as the club house is the social center for the surrounding district.

### INDIANA

*Indianapolis.* The corner stone for the new \$500,000 Central Public Library, opposite St. Clair Park, will be set in place the first week in March.

*Mooresville.* Demarchus C. Brown, of Indianapolis, was the principal speaker at the dedication of the Public Library here, Jan 27. The library is a brick structure with capacity for 6000 volumes.

*Newcastle.* Newcastle's new Public Library was opened and dedicated Jan. 17. Demarchus C. Brown, state librarian, gave the principal address. The library was made possible by the untiring efforts of Miss Lois Compton, who started the movement which resulted in an appropriation of \$20,000 from the Carnegie Corporation.

*Rockport.* The Public Library board has received a letter from the Carnegie Corporation offering \$17,000 for a library building on the usual conditions.

*Rockville.* The new Rockville Public Library, dedicated Jan. 14-15, was built in part with a donation of \$12,500 from the Carnegie Corporation, the women of the Current Literature Club being instrumental in obtaining the appropriation nearly three years ago, and in making the tax levy and having a library board appointed.

## ILLINOIS

*Chicago.* The Cremation Association of America has established a nucleus of cremation literature at the John Crerar Library. Offers of books, pamphlets, and periodicals on the subject should be addressed to the president of the association, Dr. Hugo Erichson, 240 Chandler avenue, Detroit, Mich.

## The Northwest

## MINNESOTA

*Minneapolis.* How many people know that the Public Library of Minneapolis had its start through Bayard Taylor? It seems that in 1859, according to an account in the *Minneapolis Journal*, Mr. Taylor sent word to Minneapolis that he would come to the place—then only a pioneer town—and lecture if his expenses were paid and the surplus taken in was used for library purposes. The town had no library at that time but the balance received at the lecture, a sum of about \$85, was used in organizing the Minneapolis Atheneum, the predecessor of the Minneapolis Public Library, so that the latter institution may really be said to have had its origin in Mr. Taylor's interest and generosity.

*St. Paul.* St. Paul will soon get between \$100,000 and \$150,000 for the use of the Public Library and a free medical dispensary. The money is to come from part of the estate of Judge Henry Hale, who died Dec. 7, 1890, and provided in his will that a portion of his estate should be given to the city at the end of 25 years. About \$25,000 will soon be turned over to the city and the balance will become available upon the sale of property belonging to the estate known as the Hale block, between 3d and 4th streets, facing Jackson street. Trustees to decide on the disposition of the money given to the city are the mayor, city attorney, city comptroller, judge of probate and oldest member of the county commissioners. They will decide whether the portion going to the library shall be used in equipping the library building now being erected, and if the part for the dispensary is to be used in improving the present dispensary or building a new one.

## IOWA

*Council Bluffs.* The will of the late Gen. Grenville Mellen Dodge, who died Jan. 3, set aside \$50,000 for the establishment of a library or reading room, with bathing accommodations, for the use of the large number of railroad men who "lay over" in this city at the end of their run on one or another of

the different railroads. The provisions of the will seem to indicate that General Dodge had in mind some such institution as the railroad branches of the Y. M. C. A., and the choice of a location that will accommodate the men on all the roads bids fair to be a difficult matter.

*Iowa City.* The board of trustees of the Carnegie Library has decided to install additional low stacks in the north room. They will accommodate about 3400 volumes.

## NORTH DAKOTA

*Bowman.* The new library building erected for the use of the Bowman Public Library, by Hon. J. E. Phelan, as a memorial to the late Clara Lincoln Phelan, whose work in building up this library was but just begun when she passed away more than two years ago, was formally opened to the public in January.

## MONTANA

*Hamilton.* The Carnegie Library constructed here has been approved by the Carnegie Corporation, a check for the last of the labor and material for the building having been received by the library committee. As soon as the furniture is installed the building will be ready for occupancy.

## WYOMING

The Uinta County Library, at Evanston, has been undergoing a three months' period of reorganization under the leadership of Linda M. Clatworthy of Estes Park, Colorado. The county, formerly a very large one running from the Utah line up to the Yellowstone National Park, had for ten years maintained a system of traveling libraries among its towns, mining camps and ranches but at the time of the division of the county two years ago many of the books were lost and the popularity of the system died out. Now a new plan is being tried—that of a county school traveling library for the rural schools found to be usually destitute of books and eager for them. Toward this plan the various school district boards are contributing their book fund (heretofore unexpended), the county library promising to administer the fund and conduct the exchanges. Direct book service by parcel post from the main library was announced by circular letter to all the county tax-payers, insuring them much fresher, more vital connection than by the old system of a fixed traveling library collection, selected without intimate knowledge of the readers' tastes. In Lyman, the one other incorporated town in the county, fifty miles away and

twelve miles off the railroad, a full-fledged branch library is opening, in a room of its own on the Lincoln Highway, equipped by the town people and in charge of a young woman, Ethel Guild, trained at Evanston. A permanent traveling library station has been installed at Mountain View and others will be started as books and service become available. In the selection of county librarian a competitive examination was held, open to all young women of the county with the necessary educational and personal qualifications. Miss Marguerite Cameron, who ranked highest on all counts, a recent graduate of the University of Utah and a successful high school teacher, was chosen to be librarian, and because of her "love and reverence for library service as a distinct force in the community" she resigned a more remunerative teacher's position to train for eight weeks with Miss Clatworthy. The county commissioners have promised to double the library levy next year.

## The Southwest

### MISSOURI

*Belleville.* The Carnegie Library, at Jackson and East First streets, for which the Carnegie Corporation granted \$45,000, was dedicated Jan. 20, with ceremonies, which consisted of addresses and a musical program. A public reception was given in the evening in the library by the board of directors, Mayor Duvall, and all the women of the Civic League, at which souvenir post cards of the building were given away.

*St. Louis.* Arrangements have been made for the merging of the Catholic Diocesan Library of 5000 volumes, with the St. Louis Public Library. In taking over the Catholic collection, Dr. Arthur E. Bostwick, librarian of the Public Library, agrees to allow the books to remain at the Catholic Women's Association downtown headquarters and to establish a branch station there with a member of the trained staff of the library in charge. The 5000 volumes of Catholic literature are now at the Central Library, being rebound and cataloged. This is the largest collection of books ever taken over by the Public Library from an individual or organization. The library belonged to the Archdiocese of St. Louis, and was started many years ago by the late Prof. Wright as a private charity.

### KANSAS

*Wichita.* The Fairmount College Library which was started with a basket of books

brought by one of the women of the Library Club now contains 36,000 volumes and it is a depository for government publications. The library is open to citizens of Wichita as well as to students of the college. Miss Alice M. Isely is librarian.

*Wichita.* The interior of the new Public Library building, dedicated last September, with the fine mural paintings by Mr. Covey and the attractive color scheme by the late Mrs. Murdock, has attracted the attention of various publications. The Philadelphia *Record* had a full page illustrated article on the new building last May, and this was followed by a similar article in the Kansas City *Star*. The *International Studio*, for November, has a brief description of the mural paintings with two illustrations, and the March number of the *Ladies' Home Journal* has a page of pictures.

### TEXAS

*Houston.* Enlargement of the Carnegie Library may follow repairs which the city is planning for the front wall of the building. The city architect's office is preparing temporary plans for increasing the size of the building and giving more stack room, but no action has been taken by the council relative to building any addition to the library.

*Marshall.* At the instigation of the City Federation of Women's Clubs, the City Commission has begun a correspondence with the Carnegie Corporation looking to the erection of a library building in this city to cost in the neighborhood of \$40,000. The City Federation owns an unusually large tract of ground, valued at \$15,000, just outside the business section of the city, which it purchased some years ago with a view of using it for library purposes. This was offered the commission as a site for the library.

*Port Arthur.* Mrs. John W. Gates has announced her intention to donate approximately \$60,000 for a memorial library building to the city of Port Arthur. Of this amount, she said, about \$35,000 would be required to build and equip the building, and \$25,000 would be invested as an endowment to maintain the library.

### COLORADO

*Denver.* The library of the Medical Society of the City and County of Denver, which was located in the Metropolitan building, moved into larger quarters in the same building, in December. At present the library contains about 17,525 volumes and subscribes to 213 periodicals. It is open every day, excepting Sunday, from ten until six.

Books are lent only to members of the society, but the library is open to all physicians and students for reference work. During the past year many books and periodicals have been lent throughout the state.

*Denver.* The Equitable Law Library is a private enterprise with full privileges extended to the lawyers of the building. The nucleus of every American law library is the reports of cases decided in the federal and state courts of the United States, and this collection of about 10,000 volumes includes large and valuable files of statutes, reports and digests. The text-book section is unusually complete. In addition, there are the usual standard encyclopedias, and a varied selection of legal periodicals. The foreign collection includes files of English reports and some Canadian publications. The library is open from 8:30 a. m. to 12:30 p. m. and 1:00 p. m. to 5:00 p. m. A few offices in the building have keys for evening use. Lawyers, outside of the building, have the privilege of reference.

## The Pacific Coast

### WASHINGTON

*Seattle.* Construction of a main entrance to the public library building from Fourth avenue, underneath the stairway now leading to the building, was discussed at a meeting of the library board in January, and the board architect was directed to prepare plans for the proposed improvement. The plans call for the establishment of a public comfort station underneath the stairway, and to that extent the city council will aid in the construction work.

### CALIFORNIA

*Dinuba.* The contract for the new Carnegie Library building has been let to a local contractor for \$7291. The Carnegie Corporation recently appropriated \$8000 for the building and furnishings. In the specifications it is stated that the contract may use \$250 for furniture and \$150 for light fixtures, and the present bid leaves a balance of \$341 for additional furnishings and equipment. The books will be furnished by the Tulare County Free Library. The new building will be located on the city water works block and will be approximately 40 feet by 65. It will be one story and basement. The interior finish will be entirely of oak in antique finish. The ground floor will be used for regular library purposes, while the basement will contain an auditorium, rest rooms and store room.

*Los Angeles.* Plans are practically completed by Architects Hibbard and Cody for

the branch library building to be erected in East Los Angeles, at the southeast corner of Avenue Twenty-six and Workman street. It will be a one-story and basement structure, semi-circular in shape within tangents 96 x 96 feet. There will also be an open-air reading garden in the rear. It will cost about \$30,000.

*Los Angeles.* President John Willis Baer of Occidental College has announced that the trustees of the college are to erect on the new campus a library to be called the Stimson Library, to continue perpetually the remembrance of Charles M. Stimson, who ten years ago erected a college library on the Highland Park campus. That building, with others on the old campus, is to be sold. The preliminary plans call for a building which shall eventually cost nearly \$100,000. It will probably be put in two main wings. The first wing to be built will be the Charles M. Stimson wing, and will probably cost between \$40,000 and \$50,000. The site for the new building has been selected, opposite Fowler Hall, facing the main quadrangle.

*Sacramento.* The plans of Architect Loring P. Rixford for the Carnegie Library will be reduced approximately \$25,000 in order to come within the appropriation the Carnegie Corporation has agreed to make for the building. This was the decision of the City Commission following the receipt of a letter from the Carnegie Corporation, in which it was stated the plans of the building as presented by the city called for a structure to cost, complete, \$130,000, when only \$100,000 was available. Investigation of early correspondence revealed the fact that the \$100,000 is to cover equipment and everything. Therefore, the cost of the building must be cut to \$75,000, allowing \$25,000 for equipment. The city had planned to put the whole of the \$100,000 in the building and furnish it out of city funds.

*San Francisco.* The new Mission branch of the Public Library, corner of Bartlett and Twenty-fourth streets, has been finished at a cost of about \$75,000, toward which the Carnegie Corporation made a grant of \$49,500.

*Santa Barbara.* Active preparations are being made for the new \$50,000 Carnegie Library soon to be built. The residence at 29 East Anapamu street, now owned by the library association, will probably be moved to the detention home site, to be used for such a home. The building at present occupies part of the property on which the new library is to be erected.

*Santa Monica.* The Carnegie Corporation will be asked for a gift of \$10,000 to \$15,000

to build a branch library in South Santa Monica, also for enough more to enlarge the present Carnegie Library and to remodel the basement into a social center for young men. About \$1500 will be expended. These plans are in accordance with an announcement made by Commissioner Berkley, who said they had been agreed on by the members of the council. The \$1500 for the improvement of the basement will be taken from the library fund. If Mr. Carnegie should not respond to the appeal the voters will be asked to approve a bond issue for the enlargements and the branch.

*Turlock.* The Carnegie Corporation has approved the plans submitted for a building not to exceed \$10,000 in cost, and as soon as the city council furnished the usual guarantee of support bids will be solicited.

#### UTAH

*Fairview.* A committee has been appointed to negotiate with the Carnegie Corporation for a library building. There has been some talk of combining a library with a school building or gymnasium, but this proposition will not be pushed if a Carnegie grant can be secured.

*Mount Pleasant.* At a special meeting called by the library committee, Jan. 22, a unanimous sentiment was expressed toward the taking of immediate steps for securing a \$12,000 Carnegie library for this city. It was suggested that the Mormon church might donate a site for the proposed building. The matter was referred to the present library committee with instructions to take the necessary steps at once.

*Salt Lake City.* The city commission as a board of estimates and apportionment, decided at a meeting held Jan. 24, that under the law the Public Library must be allowed the full amount of the revenue raised from a 1-3 mill levy. Instead of the \$29,000 asked, it is estimated the library will receive about \$64,000. The situation results from the fact that when the state legislature decreased the levies in proportion to the increased basis of assessment, the library levy was left unchanged. The extra money will be used to increase the number and resources of the distributing centers in the grade schools of the city. It is also proposed to erect an addition to the present building to cost from \$10,000 to \$15,000, to be constructed on the rear of the present building, two stories in height with a basement. The addition will be used for reading rooms, library extension work, shelving space and similar purposes. The basement reading room now used for children

will be done away with, and a room provided in the addition.

#### ALASKA

The library leaven is spreading even to Alaska. In the report issued by the Bureau of Education on its work for the natives of Alaska in 1913-14, the second part is given over to reports of teachers on the work done in individual schools. The teacher in charge of the public school at Wainright, on the shore of the Arctic ocean, after describing the teaching of the elementary branches and the working of the Wainwright School Republic says: "Our school and village library is a great blessing. The industrial class made a case for the books, which were classified and numbered by the librarian, elected by the school republic, and 128 books have been loaned for a period of a week at a time. We have some diligent and intelligent readers." Likewise the teacher of the public school at Igloo, on Seward peninsula, Northern Alaska, writes: "The native children are adepts in paper cutting and in drawing, which enables them to illustrate very nicely their language and reading lessons. In teaching reading to the lower grades, exercises made here were mostly used, as the textbooks treat of objects with which Eskimo children are not familiar. The textbooks in reading were used as supplementary reading for the older pupils. The library books which were sent here last summer were a great help. Not only did the pupils find interesting reading in them, but we also used some of them for class work. The pupils copied the stories in 'composition' books, illustrated them with their own drawings and paper cuttings, and then studied the stories from these 'composition' books. I believe that the money spent in buying textbooks on arithmetic, language, and spelling would bring better results if spent in the purchase of suitable library books. Reading these books will do much toward clearing the minds of the natives of childish fancies and of many superstitions. In history and geography, selections were read and studied as reading lessons. Local geography was studied chiefly by means of map drawing."

#### Canada

##### ONTARIO

*Ottawa.* Fire which started at 9 o'clock on the evening of Feb. 3 did great damage to the Parliament buildings here. At first it was believed that the books in the library were ruined, but in a report on the library losses presented to the Commons Feb. 14, Dr. Martin

J. Griffin and Dr. A. De Celles, joint librarians, stated that the loss is not so great as was first supposed, and that in most cases the damaged books or bound periodicals can be replaced. The more notable losses include an extensive collection of rare editions of the Bible, a large collection of English pamphlets, a valuable collection of Church literature and law, large collection of bound reviews, magazines and periodicals, principally from Great Britain and the United States, many valuable donations from the Imperial Government, and a fine collection of the reports of the American Bar Association. The report states that although millions of gallons of water covered the floor of the library while the fire was at its height, and poured out through the doors, hardly any found its way to the basement, where thousands of books were stored. The volumes which were damaged by water are now being dried out and little loss is feared. The librarians declare that the prompt closing of the iron doors by the library officials prevented the inrush of smoke and flames from the corridor leading into the reading-room where the fire started. Had this action not been promptly taken, it is stated that several lives might have been lost by the persons in the library at the time attempting to escape through the usual exit.

*Toronto.* At a special meeting of the library board of management held the latter part of January, the need of greater accommodation was emphasized. Dr. George H. Locke, the librarian, proposed that the present Reference Library building be extended north on St. George street, the upper story to be constructed as a modern historical art gallery, and the lower to be divided into a children's room, a circulating library and reading rooms.

## Foreign

### GREAT BRITAIN

*Manchester.* The John Rylands Library reports that already over 5000 volumes have been either received or definitely promised for the reconstruction of the library of the University of Louvain, and there are other equally generous promises of help yet to be realized.

### NORWAY

A feature of the last meeting of the Indiana Library Association was an illustrated lecture on "Development of libraries in Norway," given by Arne Kildal, librarian at Bergen, Norway. The libraries of Norway, the lecturer said, have experienced a wonderful growth in the last ten years. There are

now over 1000 state supported libraries, and by the establishment of a central bureau, the librarians are kept in touch with new methods and devices. In the city libraries such features as delivery stations, children's reading rooms, and classroom collections for schools have been adopted. A library association with a membership of 600 has been formed, and a permanent summer course for those who wish to study library methods is being planned.

*Christiania.* The report of the Deichman Library for 1914-15, shows accessions for the year were 16,236 volumes, bringing the total in the library up to 140,426. Of the new books 1664 were donations, the rest purchases, costing altogether 16,740 kroners. 1584 lost or damaged books were replaced at a cost of 2,038 kroners. New or renewed bindings were made for 11,763 books at a cost of 14,387 kroners. Several important private collections, in all 4675 volumes, were purchased during the course of the year. As everywhere, so the influence of the war was strongly felt in the Deichman Library. A majority of the new books purchased or donated dealt with the war, and books of other sorts, ordered from foreign countries, were not sent, or were lost in transit. Many foreign newspapers could not be obtained except occasionally and irregularly. The opening of two new branches in the eastern quarter of the city (one this year, one last) has made little difference in the circulation figures of the main library. For the term covered by the report there were noted 10,818 new borrowers for the main library and its three chief branches, bringing the total for the year up to 656,855, an average of 2175 a day. Of these 440,366 came to the main library, an average of 1458 a day (the circulation department being open 302 days during the year). The reading room for adults, in the main library, was open 347 days during the year with a total attendance of 83,982, while the reading room for children was open 255 days with an attendance of 32,302. The appropriations for the main library and its branches for this year amounted to 124,200 kroners, of which 121,291 were spent. The new branch in Grunerløkken was opened on Oct. 25. It was erected at a cost of 107,000 kroners, which does not include the item of about 16,000 kroners for new furnishing and equipment. The reading room for adults has 54 seats, that for children 66. The branch library opened with a stock of 2618 books, and its circulation for the eight months since the opening figures up to 55,235. Victor Smith is the director of the new branch. Astrid An-

erson is librarian in charge of the circulation department, with Laura Stang Lund in the children's room. Dr. Arne Arnesen is librarian in chief of the entire library system, with a corps of 27 librarians and assistants.

#### DENMARK

In a United States Bureau of Education bulletin, on "The Danish people's high school," which includes a general account of the educational system of Denmark, Martin Hegland, president of Waldorf College, has compiled a table showing the prevalence of state-aided libraries in that country. Though the figures given are for 1910-11, they are still of considerable interest. Of public libraries there were in the rural districts 655, with 305,000 volumes and recorded loans of 564,000; while 50 public libraries in cities had 122,000 volumes which circulated 394,000 times. There were 554 libraries in rural schools, with 57,000 volumes and a circulation of 368,000, and 91 city school libraries, having 39,000 volumes and making 337,000 loans. Teachers in the rural communities had the use of 10,000 volumes in 361 libraries; urban teachers had access to 17,000 volumes in 95 centers. These comparative figures are of special interest in view of the fact that 40 per cent of the population of Denmark is in the cities. In addition to the public library facilities practically every home has a well-chosen library of standard authors. In 1884 there was organized a committee for the publication of cheap and instructive books of moderate size. Among other achievements the committee has published thousands of pamphlets on scientific subjects, popularly presented, at an average price of 2½ cents a copy. These books have been of immense importance in spreading general intelligence among the working and agricultural classes in the country.

#### GERMANY

*Halle.* The University Library reports for the winter of 1914-15 a loss of 5000 marks income in fees, etc. The circulation and reading room figures show scarcely one-half the numbers of the preceding year. There were 45,638 books borrowed as against 91,681 the year before; 14,913 visitors to the reading room instead of 30,945 during 1913-14. Necessary rebuilding operations, for which plans had already been accepted, were postponed until more fortunate times. Like all university towns, the Halle Library shows the effects of the war in diminished attendance more than the larger cities with a more general population.

#### AUSTRIA

*Lemberg.* The Library of the Royal University of Lemberg was one of the important Austrian libraries most affected by the war. Lemberg was in the hands of the Russian invading army from Sept. 4, 1914, until May 22, 1915. Before the invasion the library's chief treasures had been placed in fire-proof vaults from which they have not yet been removed. A number of the librarians who had families to care for, joined the flood of emigration of the civil population, which took place in the days immediately preceding the invasion, from the 31st of August to Sept. 2. The General Director, Dr. Mankowski, with seven other librarians and five attendants, remained at their posts, while two librarians and five attendants were called to the colors. The invading army authorities treated the library as a part of the university, and did not disturb it in any way. The library was compelled to participate in the closing order issued to the university in the early days of October. It remained closed, as did the university, until the end of October, when the Russian governor permitted both institutions to open for the state examinations. No damage was done to the library rooms or collections. Other important libraries in Lemberg had the same fortunate experience, with the exception of the rich and immensely valuable collections of the "Stauropigian Institute" which were packed up during May and carried off to Kieff. The Library of the Government Archives, comprising scientific and official documents, was broken up and sold or thrown away during the invasion. All Lemberg libraries suffered considerable loss in books from the sudden flight of the population in the days when invasion threatened. The University Library sent out searching parties to the forsaken homes and recovered about one thousand books in this way. At one time there was danger of a quartering of one hundred and fifty soldiers in the fine library rooms, but the director managed to convince the Russian army authorities that the library offered little comfort or even convenience as a lodging place and the order was repealed.

#### COLOMBIA

According to an item in the *Brooklyn Eagle*, Consul Isaac A. Manning writes from Barranquilla, Colombia, that the Colombian Congress appropriated \$5000 for the initial steps in organizing a Congressional Library at Bogota, and a running appropriation annually of \$12,000 for binding the archives of Congress.

# LIBRARY WORK

Notes of developments in all branches of library activity, particularly as shown in current library literature

ADMINISTRATION. See Organization

## ARCHIVES—PRESERVATION OF

The following information about the situation with reference to public archives in various states of the Union is gleaned from the report of the public archives committee of the National Association of State Libraries, published in the *Bulletin* of the American Library Association for July, 1915. The last California legislature appropriated thirty-five hundred dollars for the purchase and installation of equipment to be used for the filing and preservation of documents in the state archives (*Statutes*, 1915, ch. 354). About one third of the probate districts of Connecticut have deposited their files in the State Library, and a part of these, numbering three hundred and fifty thousand manuscripts, have been repaired and classified so that they are now easily accessible. Legislation has been secured to enforce the use of permanent inks and papers for the making of records throughout the state. The regular appropriation for archives work has been increased from fifty-five hundred to sixty-five hundred dollars. In Iowa an index in the form of an inventory has been prepared for nearly all of the seventy thousand boxes and bound volumes of manuscript material which have been classified and filed by the archives department. A more detailed index of the papers of the territorial assembly is in course of preparation. The secretary of the State Historical Society of Nebraska reports that the society is charged with the care of the archives of the state, but has accomplished nothing as yet because of lack of space. In New York several towns have recently sent their older records to the division of public records of the State Library for permanent preservation. Many counties, cities, towns, and villages have been forced by state law to purchase safes or otherwise to make provision for the preservation of their records. Similarly in Rhode Island the state record commissioner has induced a number of towns to purchase fireproof receptacles for their records. In general the report shows that the importance of state and local archives is coming more and more to be recognized, but there is still a deplorable lack of attention to the subject in a number of states.

## AUTHORSHIP

A corporate Maecenas. Th. Eby. *New Republic*, Jan. 8, 1916. p. 244-246.

The author makes a plea that the libraries of the country should assume the function toward literature that was performed in ancient Rome, as typified by Maecenas. The following quotations indicate the author's point of view:

"Democracy robbed the private library of its vitality, and social democracy, as represented by the public library, administered the cup of euthanasia. The ownership and care of books is becoming socialized, to the gain of mankind, on the whole, but not without offsetting costs.

"Much of our high-grade production follows specifications prescribed by the retailer in the interest of his customers. This ought to be more commonly the case with the librarian than with the grocer and the haberdasher. Unfortunately, the librarian does not take his duty to the public so seriously as the grocer and the haberdasher.

"Let the librarians of the country form an association for the promotion of authorship. Such an association could easily create an efficient organization of critics, to whom any author might submit manuscripts for appraisal. Let books that are crowned with approval be published at the expense of the association for library use. And let the author be given a generous honorarium. Can any one doubt that the libraries would direct the attention of the reading public toward books thus brought out under their auspices? Or that this combination of material and immaterial reward would prove a great stimulus to solid literary production?

"The objection may be raised that such an association, like an academy of letters, would fall under the domination of a dry classicism. Not necessarily. Representing the interests of the general reading public, it could not afford to place the stamp of approval on books no one could be induced to read. It could resist popular whim, but it would be forced to yield obedience to the vital spirit of the age."

BOOK SELECTION. See Spanish book selection  
BUILDINGS—CLEANING

The general routine in the campaign against dust employed in the University of Colorado Library is described as follows in the *Occasional Leaflet*: At the end of the school year a squad of ten cleaners commences by wiping the books with dry rags, then all furniture, steel stacks and fixtures, except light globes,

are gone over with oiled rags, followed by a thorough mopping of the floors, which upon drying are oiled. Early in September all books are vacuum cleaned, then follows fumigation. Calking up the windows, doors and ventilators requires a half day. Saturday evening is selected for the ordeal of fumigating, allowing a thorough airing Sunday.

The general system employed has been to burn a combination of potassium permanganate and formaldehyde, costing about \$30 for material to saturate the 300,000 cubic feet of air space. War prices have made this process too costly, present estimates being \$160 for the same amount of material, consequently '80 No. 2 formaldehyde candles were used this year at a cost of \$16. Books receive a second vacuum cleaning during the spring vacation.

#### —SMALL LIBRARY PLANS

The country library *versus* the donor and the architect. Alice G. Chandler. *Mass. L. Club Bull.*, Mr., 1915. p. 10-17. Also issued in an illustrated pamphlet by the Massachusetts Free Public Library Commission.

Miss Chandler is a trustee of the Lancaster Town Library and an advisory visitor for the state commission, and has visited much among the smaller libraries of the state. Many of them she finds contain "a lofty hall, occupying the whole height of the building, with reading rooms on either hand. The latter may be partly separated by low partitions and handsome columns, sometimes of real marble with carved capitals, on which, with the beautifully decorated ceiling, much money has been expended. Everything is most elaborately finished, and to put up a list of books without a Florentine frame or stretch wire for a row of pictures would seem a desecration. Now, as none of us country folk live in marble halls, and never even dream that we do," she continues, "would it not be more in keeping with the character of a New England village to have these apartments of the height and general style of a comfortable private sitting-room?" Attractive and cosy reading rooms can be more easily arranged, the rooms in the second story will be useful, and the cost of heating will be much reduced. The question of lighting should also be more carefully considered in many cases. Skylights in low rooms should be avoided as much as possible, and generous ventilation provided, and windows should be placed with reference to their usefulness rather than their appearance on the outside.

The provision of a single large room with

shelves around the walls and tables and chairs in the middle is an excellent arrangement for a small library, provided a small corner is provided somewhere for the librarian's personal use. Sufficient room for expansion is seldom provided in small libraries, and in too many cases the librarian is not consulted about plans, though often the person best qualified to give them intelligent consideration.

Miss Chandler ends her article with the following admonitions:

"Don't put a Greek temple or the Pennsylvania Railroad station in a New England village for a library.

"Don't have a reading room look like an institution, but like a home.

"Don't forget that winters are long and cold, and if your building will need fifty tons of coal to heat it, provide funds to pay for this.

"Don't forget that daylight is more pleasant to read by than any other light, and that there should be plenty of it.

"Don't forget that a library is a building for books, and that they will continually increase.

"Don't forget that nothing furnishes a room as handsomely as books, and a panelled wainscot is not as useful nor as ornamental as a bookcase.

"Don't forget that it is for the public interest to have a library comfortable and convenient for the librarian.

"Don't forget to consult the librarian frequently as to the plans, and heed the opinions given.

"Remember to show your plans to the Free Public Library Commission for criticism and improvement."

#### BUSINESS LIBRARIES

Organized information in the use of business. John A. Lapp. *Spec. Libs.*, Ap., 1915. p. 57-61.

The idea of organizing information for the managers and men who are doing things in varied lines of industry and business has been an inevitable result of industrial and commercial growth, and the library so organized may contain few books but many pamphlets, clippings, charts, drawings, catalogs, etc. Upwards of a hundred large concerns have such libraries, extensively equipped for dividend-paying service. On the theory that the true test of efficiency is not what a man knows but what he knows where to find, the Burroughs Adding Machine Co., is planning to prepare a classified index to its collected data and give a vest pocket copy to every employe.

As a developer of the human factor in business the organized information bureau or library promotes personal and business efficiency, and therefore national efficiency. Another practical application of the special library is in the field of industrial and chemical research, where a careful record of past experiments would be of inestimable value.

Handling a large circulation in an office library. Mari Fay Lindholm. *Spec. Libs.*, Ap., 1915. p. 61-63.

The library of the Public Service Commission for the First District, New York City, is referred to. The commission regulates gas, electric, and transportation companies, and is planning a system of rapid transit subways for the city. It has 2000 employes, mostly engineers. In 1907 a library was established, which now contains about 5000 books and 14,000 single articles and pamphlets.

To reach the employes, the library distributes three stencilled bulletins weekly to all employes, 1200 copies being made. Two of these include references to current periodicals, pamphlets, special reports, and new books of interest. The third is an instalment of a subject catalog of the material in the library.

The forms used in charging books and making reserves are reproduced, and the rules governing use are described. No fines are imposed, but lost books must be paid for if responsibility of loss can be directly placed on the borrower.

Besides the main offices occupying seven floors of the Tribune building, there are 45 sub-offices in different parts of Greater New York, and delivery of material is handled by messengers, in most cases by the library's own special messenger.

In 1914 the circulation increased 53% and the reference use 90%. The combined circulation and reference use for 1913 was 15,322, while for 1914 it was 23,561.

Libraries in business houses. Frank Chitham. *Lib. Asst.*, N., 1915. p. 172-175.

Mr. Chitham is a director of the great London department store of Selfridge & Co., and at a joint meeting of the Library Association and Library Assistants' Association, held on Oct. 13, 1915, gave an address in which he emphasized the fact that business men usually read with some practical object in view. In business the great aim and object is to eliminate wasted effort, and this principle is applied to their reading. The knowledge which

merchants wish to acquire is the knowledge of the merchandise which they distribute. A complete technical knowledge of the various processes of manufacture is not needed. Business men are almost solely concerned with a complete and thorough knowledge of the finished article. This knowledge is called "selling points," and is the means of valuable education to the sales staff, and of assistance to customers. Information such as this is not found in text-books: and it cannot be prepared in any permanent form, because conditions governing merchandising are constantly changing. To meet these changing conditions and to keep quickly informed, the great trade papers were established, and it is there that the most useful results are looked for from what may be called the trade library.

No less than 86 copies of these trade papers, covering and dealing with 24 trades, are subscribed for by Selfridge's. There is also a small reference library, in which books dealing with the technical processes are kept, but Mr. Chitham finds that they are very little used, and is surprised that they are not used more. The experience is similar to that of other great houses where the staff lives out. In places where the staff lives in, house libraries are provided, usually of good standard fiction and some technical works. The former are freely used, but there is little demand for literature of a heavier kind. In America, a more ample provision is made. The libraries are larger and contain a good collection of works dealing with the manufacture of the various products sold. The American stores are proud of their house libraries, but, "without being unkind," says Mr. Chitham, "I think it is a pride of possession rather than of usefulness. As lending libraries, they are little used, but the books are freely used in connection with the educational systems that are operative in the great stores. In Wanamaker's, Philadelphia, for instance, whose school is now a branch of the American University of Trade and Applied Commerce, these text-books are used by the teachers to illustrate the various points in connection with the merchandise that is sold. They are of very great value in this respect, and I think in this direction lies the future of technical libraries in business houses, both in this country and in America."

#### CATALOGING

In the report of the Librarian of Congress for 1915 is described the new method of handling, in the cataloging department, the increasing masses of minor publications, un-

bound material, announcements, programs, lists, statements, etc., of societies, universities, schools, and other institutions, departments of government, etc., briefs and other records of law cases, and separates of periodical articles of varying degrees of value. Some of this material is noted in scientific bibliographies and indexes and is of interest to investigators. Little headway can be made in attempting to treat it regularly, cataloging and shelf listing each item individually. By a method of collective entry by means of which it can be brought out under (corporate) author and under subjects in the catalogs, and shelf listed and marked, it is made fairly accessible. The method had not been in use long enough to affect the statistics of the past year, but long enough to promise appreciable results, and it will be extended to other groups besides the classes of publications covered by the specimens subjoined.

International harvester company of New Jersey, *defendant*.

(United States, *plaintiff*)

Action brought under the Sherman anti-trust law of 1890.

CLUB ROOMS

On page 70 of the January number of the LIBRARY JOURNAL, under the heading, "Club rooms," the town should be Chisholm, Minn., instead of Virginia.

COPYING PROCESS

Copy process for printed matter without use of photography. Walther Blumenthal. *Zentralblatt für Bibliothekswesen*, Leipzig, Oct.-Nov., 1915. p 321-326.

Article describing a new process, already patented for the German Empire, by means of which any student can make copies of text pages, tables, drawings, or any sort of pictures from library reference books without any damage to the books, and at a very slight expense to himself. No machinery or similar apparatus is necessary, merely sheets of a particular sort of paper, prepared by chemicals which can be produced by any photographic or dye-making establishment at slight cost.

The chemical process depends on the effect of gas from volatile oils on the page to be copied, a slight pressure only (which can be produced by leaning or sitting on the book) being necessary to print the copy.

The original work is not damaged, which is of course an important consideration where rare and costly books are concerned.

The prepared paper has successfully endured a number of difficult tests, a fact vouched for, in a postscript to the article, by Dr. Paul Schwenke, editor of the *Zentralblatt*.

Should the cost of making the copy paper prove as low as is supposed, the new process would be a great boon in saving of time and labor to thousands of students of technical or scientific subjects. The saving of time in the one matter of the copying of pages of statistics would be incalculable.

EDUCATIONAL LIBRARIES

The Marja Hosmer Penniman memorial library of education. Frank P. Graves. *Journal of Education* (Boston), Ja. 6, 1916. vol. 83, p. 6-8.

This article by the dean of the School of Education of the University of Pennsylvania, is a description of the memorial library of education presented to this school by Dr. James Hosmer Penniman, in memory of his mother, the late Mrs. James Lanman Penniman. Although the newest school of education in the country, the library in connection with it compares alone with the educational libraries of Harvard and Columbia. There

are over 6000 volumes in the library, many of them very rare. The author describes a number of these rare books in some detail.

#### EUROPEAN WAR—CLASSIFICATION

The classification of war books; a few notes. W. C. Berwick Sayers. *Lib. World*, N., 1915. p. 132-134.

The purpose of these notes is to discuss the eventual disposal of war books. In the first year of the war Messrs. Lange and Berry cataloged in their "Books on the great war" about 2000 separate works, but obviously did not include all foreign books, as the October *Hibbert Journal* mentions that 4518 works were published between August and May in Germany alone.

A setting out of a few of the many schemes of classification devised by librarians and others to arrange these books, and an attempt to adjust them to existing notations, are given. "The only satisfactory class in which to place them," says Mr. Sayers, "is in General History of Europe at the chronological place. A new period division, a new epoch in the world's history, began in 1914, and every classification hereafter must have a sharp line of cleavage at that date." Mr. Sayers suggests that 940.915 (Dewey) should be the "attracting" heading, and that sub-division should be made by an arbitrary alphabetic notation.

Where this is considered undesirable, the books may go into their usual places in the classification, by subject. This undoubtedly, will be their eventual place, but it does not focus them on the war, and a classification which does not do this has failed in its "essential purpose." These books should therefore, be brought together in the catalog. One prominent librarian has used the usual places on the shelves in this way, but in his name card catalog has brought all their entries together under the general heading, European War.

A similar method by which the books, which cannot be said to have any geographical character, are placed in their usual divisions of the classification, but by which those which have are drawn out of their usual geographical place, is used in the Pittsburgh Public Library. It is as follows:

- 940.91 European War.
- .9101 Allies.
- .9102 England.
- .9103 Germany and her Allies.
- .91036 Austria.
- .9104 France.
- .9105
- .9106

- .9107 Russia
- .9108
- .9109 Belgium, Servia
- 940.911 Political History. Causes.
- .912
- .913 Special campaigns and battles.
- .914 General military history.
- .915 Naval history.
- .916
- .917
- .918 Personal narratives.
- .919 Illustrated material.
- For Diplomatic History, *see* 327.
- Foreign Relations, *see* 327.
- Military Art and Science, *see* 355.
- Pan-Germanism, *see* 325.3.
- Ethics of War, *see* 172.
- Discussion of Peace and War, *see* 172.

Mr. Sayers also quotes an arrangement under the Brown system, and considers either one satisfactory. He believes the ideal, however, would be a complete and separate classification of all material which in any way touches the war, and not this dispersal of material at 900 and at 300 and 100.

#### EXAMINATIONS

The Library Association examinations: the L. A. education committee's report. [A discussion.] James Ross. *Lib. Asst., Ag.,-S.*, 1915. p. 141-143.

Following a protest made in 1913 by the Library Assistants' Association and by branches of the Library Association, a special education enquiry committee of the Library Association was appointed. This committee recommends the provision of adequate and comfortable accommodation and the necessary books for the use of candidates during examinations, but little attention is given to the question of supervision at the various centers. Mr. Ross believes it to be desirable to secure the services of men outside the profession to supervise the giving of the examinations, and to hold the examinations in buildings other than public libraries.

The introduction of a preliminary test in English grammar and general information is approved, as eliminating at the outset undesirable candidates, but Mr. Ross raises the question how this will affect senior assistants of several years' experience, who may wish to proceed to the technical sections.

The committee realizes the importance of organizing classes for teaching in connection with libraries, universities, and technical schools. To ensure uniformity of teaching, lecturers are to be asked to adhere to the lines of the official syllabus. The correspondence

classes are approved, and the hope expressed that they may be extended to include other subjects. It is agreed that henceforth in the examination in classification students will be permitted to consult the indexes to whatever system is under discussion.

Candidates who take honors in four subjects, in addition to presenting a thesis of distinction, henceforth will be awarded a diploma with honors. Then why not also a diploma with merit, to distinguish it from one obtained by six pass certificates, asks Mr. Ross.

EXHIBITS. See Toy exhibits

#### FURNITURE, COLLECTIONS OF BOOKS ON

The Grand Rapids Public Library contains one of the notable collections in the United States of books on furniture and interior decoration. For example, it now has more books on furniture than the Library of Congress. It is the ambition of the board of library commissioners, as stated in the plans formulated and adopted in 1903 (before the Ryerson Library building was occupied), to make this collection the best of its kind in America, and ultimately in the world. With this end in view, the library, as its funds permitted, has been systematically purchasing books on these subjects, and almost every year since then has seen important additions to the collection.

The theory of the library board in establishing and building up its collection is that furniture is essentially an art industry. The cornerstone of an art industry is a widespread feeling for and a thorough knowledge of artistic principles, and a collection of the best books relating to it is one of the essential means of producing the proper atmosphere. Since furniture books are usually expensive, it is only natural that an institution such as a public library should recognize a leading local industry by building up a collection of books relating to it, presenting the opportunity to workmen, students, and designers to get the best experience of the best men of all times about the design, construction, and manufacture of beautiful furniture.

As an aid to the intelligent purchase of books on this subject in December, 1904, the library board appointed an advisory committee of furniture designers to work with the librarian and the book committee in the selection of the material for purchase. The members of this committee appointed at that time were Mr. A. W. Hompe, of the Royal Furniture Company, the late Mr. D. W. Kendall, and the late Mr. Adrian Margantin. On the

death of Mr. Kendall, Mr. Henry J. New, of the Nelson-Matter Furniture Company, was appointed in his place, and after the death of Mr. Margantin, Mr. Henry W. Frohme, editor of *Good Furniture*, was appointed.

The first great purchase on furniture was everything relating to it in the exhibition of the French book trade at the International Exposition at St. Louis in 1904. This was the largest purchase ever made at one time, and immediately attracted wide attention. Ten years earlier, in 1894, a beginning was made in buying fine books on furniture for the library. Many of these works in the St. Louis collection were, of course, in the French language, and French designs naturally predominated. At the present time, however, the number of titles on furniture in the German language is almost equal to that of the French, and the combined number in German and French is a little over one-third of the whole collection. Nearly all of the rest are in English.

On Dec. 31, 1915, there were in the library 716 titles on furniture and interior decoration, more than two-thirds of them being on furniture proper. This does not include a large number of furniture periodicals not yet bound. Of these volumes, 84 are portfolios of plates, containing from a dozen to 500 plates, some of them in colors. The average is about fifty plates per portfolio, so that the total number of separate, loose, or detached plates is between four and five thousand.

The number of books mentioned above does not include technical books on glues, paints, stains, varnishes, woodworking machinery, and other subjects very closely related to the manufacture of furniture, although they are an essential part of the technology of the furniture industry. If all the books directly and indirectly related to the industry were counted the number of volumes would exceed one thousand.

The collection includes books on style and costume, with contemporary furnishings of the home, on household art, the simpler side of interior decoration, as well as the furniture of the various periods and of countries. There are a number of books on colonial furniture, on church furniture, and books on the furniture of great buildings, such as Windsor Castle, French palaces, and the castles of Berlin and Potsdam. Most of the books deal with the furniture of England, Germany, and France, but there are also special books on the furniture of Belgium, Spain, the Tyrol, Flanders, Russia, Scotland, Ireland, and Holland. Another group of books contains the illus-

trations and descriptions of the furniture at the great exhibitions, such as those at Turin, Brussels, London, Paris, and great collections such as the Hoentschel collection in the Metropolitan Museum of Art, in New York City.

Many of the books are for the advanced special student, but there are a large number of readable books on all phases of the subject for the beginner and the general reader. A number are of considerable interest as works of the printer's art, as specimens of engraving and general design. It has been the custom of the library for many years to display some of the recent things it has added to this collection, in connection with the semi-annual furniture exhibitions. All the exhibition space in the upstairs corridor was filled during January with plates which have recently come to the library, one of the most beautiful collections illustrating Japanese textiles in colors, some of which are used in upholstering modern furniture.

Closely related to the books on furniture are those on architecture, for the study of architecture is the foundation of a correct knowledge of furniture. The library has a considerable number of books on architecture, many of them portfolios of plates. The books on architecture, however, are not counted as a part of the furniture collection.

Some day the library hopes to print a descriptive, annotated catalog of its furniture books. This was a matter in which the late Mr. Margantin took much interest, and he left a considerable number of notes on books to be used for such a purpose.

HIGH SCHOOL LIBRARIES. See School libraries

#### HOSPITAL LIBRARIES

Supplementing last month's summary of Grace Whiting Myers' paper on "Medical libraries for modern hospitals," it may be of interest to give more in detail some of the practical points in administration which her experience has proved useful.

The hospital library will seldom be a large library, but it should be very much alive and in easily accessible quarters. A comparatively small collection of books, with periodicals, government documents, and reprints, usually furnishes material sufficient for the required service. The periodical literature is most valuable, and the great indexes to medical literature should be provided to make it easily available.

The classification used by the College of Physicians of Philadelphia is recommended

as the best in use. This was published complete in volume 1 of the *Bulletin* of the Association of Medical Librarians in 1902. The Library of Congress classification is also approved, but the Dewey system, despite its minuteness and even when used with its amplification in the *Bibliographica Medica* (a French publication, 1900-1902), is still considered by the writer deficient on the subject of medicine and surgery. Some libraries have made satisfactory classifications of their own, but a standardization of practice is desirable.

The hospital library should collect all matter relating in any way to the individual institutions; lists of all publications by staff members should be kept and reprints of articles obtained and kept; reviews of their books should be noted and references kept. Topics of current interest should be brought to notice by means of bulletins posted conspicuously, with periodical references, and if space is available, files of hospital reports should be collected.

Some libraries bind reprints, grouping either by author or subject, but filing in pamphlet boxes or in vertical files is considered more satisfactory. If duplicates can be obtained and space permits, one may be filed under author and the other under subject, obviating the need for cataloging where time is limited. An arrangement of hospital reports first by state, second by cities in the state, and third, alphabetically by name of hospital in the city, has proved a good method in the Treadwell Library.

A dictionary catalog containing both author and subject cards is the best for general use, and the Index Catalogue of the Surgeon-General's Library is universally accepted as the finest example of medical subject classification. Printed cards for many items may be obtained from the Library of Congress and "The Indexers" of Chicago.

Collections of portraits of men of the profession will be found interesting, as well as reproductions of famous pictures dealing with medical subjects, furnishing good material for an occasional exhibit to attract attention to the library.

Easy access to all material should be allowed, but readers should be forbidden to return books to the shelves.

#### INSTRUCTION IN USE OF LIBRARY

In discussing "What Miami has done in the way of instruction in the use of the library," at the round table of small college librarians in Chicago, Miss Marie Hammond described what that college has done towards teaching

the use of the catalog, towards instruction in the use of the library in general, and towards giving help in specific cases where only one kind of help is needed.

The need of instruction in the use of the catalog was especially apparent at the summer sessions, where many of the students had never had access to any large collection of books. A short talk on the catalog at chapel time was given, and made a noticeable difference in its use. During the regular school year various methods have been tried. Lectures have been given to freshmen in both the Normal and Arts colleges, supplemented by group inspection of the card catalog and stack room. Three years ago a more comprehensive elective course for one semester was organized, and there are always a few anxious to take the work, for which credit is given. Where it is impossible to get a period regularly set aside for library economies, the librarian is frequently able to get some of the classes when the regular instructor is absent. In an hour's instruction he gives twenty minutes to periodical indexes, ten to classification, and the rest to the catalog. To make the catalog better understood, he had a student assistant make enlarged cards of bristol board, 28 x 17 inches, with the printing of corresponding size so that the cards can be readily deciphered in the big lecture room. There are cards for author, title and subject, author, title and subject analytics and cross-references.

The freshman manual training class is required by the professor in charge to start a professional bibliography at once, and in this the library staff is expected to co-operate with information as to form and method. The librarian plans to make a circuit of the seven county normal schools in the southwest corner of the state at their expense, and will give an hour to each school on libraries, library facilities, and on organizing libraries.

#### MAGAZINES—STORING IN PAMPHLET CASES

In a number of small libraries in which the lack of funds prevents the binding of magazine files, a satisfactory substitute has been found in the pamphlet cases sold by H. Shultz & Co., Superior and Roberts Sts., Chicago. They cost seven cents apiece including the freight and are made of strong pasteboard covered with green cloth at the back and corners. In order to make them a little stronger and prevent the corners from breaking, paste or glue a narrow strip of buckram or any kind of binding cloth along the open edge. The size 10 by 7 by 3 inches will hold a volume of the ordinary size magazines such as

the *Atlantic*, *Harper's*, or *Everybody's*, while the 4-inch will hold a whole year of such magazines as the *Bookman* and *St. Nicholas*, or six months of the *Outlook*. The name, date, and volume number may be written on the backs of the cases, and the latter arranged on the shelf as though they were bound. Thus they are always in order, easy to find and no trouble to return after they have been used.

#### MUSIC ROLLS

Donations of perforated music rolls, for use in mechanical piano-players, have been received by the St. Louis Public Library from a number of persons. These rolls are being classified and cataloged like the printed music and will be shelved with it. They will be circulated precisely like books and under the same conditions. The type of piano-player for which each roll is adapted, will be noted on the catalog card, and the rolls of each type will be shelved separately. In all, 436 have been received.

The Star Piano Company in January offered 500 music rolls for player pianos to the Birmingham Public Library, and announce that a committee appointed by the Music Study Club is now selecting the first installment of rolls. Probably only 200 rolls will be chosen at once, and the other 300 will be added from time to time, after the tastes of the public have been learned. The selection will include popular as well as standard music. The rolls are to be circulated, one or two at a time, for one or two weeks, in the same way that books are now circulated.

NORMAL SCHOOL LIBRARIES. See School libraries

#### ORGANIZATION

Notes on matters connected with the organization of libraries. [I.] Thomas Aldred. *Lib. Asst.*, D., 1915. p. 188-196.

Though really practically synonymous, the term organization is generally restricted to the establishment of a system of management, and administration to the maintenance of the established system. The qualifications essential in a librarian Mr. Aldred lists as knowledge, administrative ability, judgment, initiative, enterprise, and determination.

Putting aside consideration of the planning of buildings, and systems of classification and issue, Mr. Aldred considers in turn the questions of additions to stock, loans, and personnel. Concerning gifts, he says: "To catalog, retain, or put on the shelves a book which no one is ever likely to want, or a book in which the data is obsolete and therefore misleading,

is waste of time and money because every addition to stock occupies valuable space, and by its presence on the shelves causes labor. Conversely, books should be selected very largely according to the needs of the locality"; but he finds the comprehensive works usually recommended for libraries are seldom consulted by the artisans who have but little theoretical knowledge, and to follow the advice of a specialist will frequently result in the omission of the popular books which many readers want.

In buying for a library system, seasoned judgment and knowledge of markets is necessary, and the librarian should have authority to buy when and where he can do it to the best advantage. The purchase of books should be controlled by the central library, where allocation should be settled and justice done to reference, central, branch, and juvenile libraries.

Mr. Aldred proceeds to describe in some detail the system he follows in Hackney, covering the ordering of supplies and books, the preparation of the latter for use, and the regulation of issues and fines. It has been found advisable not to favor specialization of different classes of literature at the different branches, but to carry such special collections in the central library, making the branch collections practically identical. Borrowers are registered at any branch and their cards are good in any other branch. Duplicate registration occurs so seldom that a union registration list is not considered necessary. The cards are numbered progressively at each library, adding a letter to indicate the branch of issue, and expire at the end of two years.

In a library there should be at all times a responsible officer in charge, preferably a senior officer in each department, and accountability and responsibility must be secured.

PAMPHLET CASES. *See* Magazines—Storing in pamphlet cases

PLANS FOR LIBRARY BUILDINGS. *See* Buildings—Small library plans

POSTALS. *See* Preference postals

PREFERENCE POSTALS

The Minneapolis Public Library is seeking to extend its usefulness by getting into personal touch with more readers through a larger mailing list. Since the tastes of the individual cannot always be determined by his vocation, a special postcard has been designed to record readers' preferences on technical subjects. On the face of the card, besides the library's address, is the invitation: "Let us keep you posted on the new books as soon as

they are acquired by the library. If you will mark a cross opposite those subjects in which you are interested and return this card we will, without cost to you, place your name on our mailing list for new book announcements."

On the reverse is a long list of technical subjects, many of them with several subdivisions, arranged in four columns, with place for checking at the sides, lines for additional subjects at the end, and space for the reader's name and address at the bottom of the card.

If this card is successful, similar ones will be designed for other departments—the art book room, the business branch, and the general circulation department. Though the idea is not a new one in the business world, few of the large libraries have adopted this method of extending personal service to their readers.

#### PRINTED BOOKS, INSTRUCTION IN HISTORY OF

A half-course in the history of the printed book, conducted by George Parker Winship, librarian of the Harry Elkins Widener Memorial Library at Harvard, is offered by the division of the fine arts of that university. The course is open to students at Radcliffe as well as to the Harvard undergraduates, and at present about a dozen are taking the course, which, as the catalog states, "is intended for men who are interested in books as objects of art, and who desire to possess or to produce beautiful books. The lectures on the history of printing and its subsidiary crafts will be supplemented by discussions of the characteristic qualities which affect the excellence and the value of any volume. The physical make-up of a book and the conditions governing its manufacture will be explained with sufficient detail to provide a basis for sound judgment of the quality of any piece of work.

"The lectures will treat of book production from the period of the illuminated manuscripts to the present time. The work of the men who made noteworthy contributions to the advancement or the deterioration of the art of fine book-making will be studied historically and technically. Considerable attention will be given to the presses which are now producing good work.

"The incidental aspects of the subject which affect the collecting of books will be considered. An important object of the course is to train the taste of book-buyers, and to cultivate a well-informed judgment of the value of rare and attractive volumes. The methods by which books of moderate importance are made to seem desirable will be explained. Old and modern examples of good

and bad book-making will be shown. There will be opportunities to examine volumes belonging to members of the class and to express opinions as to their fundamental and commercial value."

The class meets in the Widener Memorial room and the lectures are illustrated by examples from the Harry Elkins Widener Library as well as from the other special collections and the Treasure Room of the Harvard Library. The class will visit the Boston Public and other near-by libraries to examine the literary and bibliographical treasures which they contain, and also some of the private libraries in the neighborhood. In addition to the required reading, each student will be expected to prepare a written report upon the bibliography of some subject of especial interest to him.

The following six questions constituted the mid-year examination in the subject, with a note that satisfactory answers to the first three questions would be sufficient.

1. Describe bibliographically a fifteenth century book. Add, in the form of readable notes, any information you may have about the book or its printer. State what other facts would be desirable, and where you would expect to find them.
2. Criticise the typographical appearance of a piece of modern printing, suggesting changes which might improve its appearance. Specify the type-letters which seem well or badly designed, stating reasons.
3. What were fifteenth century books about?
4. How would you distinguish a block-book from a Costeriana?
5. Which is the more important book, the Thirty-six or the Forty-two line Bible? Why?
6. What was accomplished by Peter Schoeffer; Nicholas Jenson; Colard Mansion; Henry Bradshaw; Robert Proctor; W. A. Copinger.

#### PUBLICITY MATERIAL

Librarian Charles E. Rush, of the Public Library in St. Joseph, Mo., believes in leaving no stone unturned in his efforts to promote the use of the library. He has recently sent to the JOURNAL a package of material which included all sorts of lists. There is a vacation reading list on "Heroes and heroism" for children, and to every child who reads ten books on the list is offered a diploma from the library. A bookmark list of a dozen books on "Preparedness?" has a picture of John Paul Jones at the top. Another pocket-size list on "Better babies, better parents" is attractively printed. The postal announcing that a new reader's library card is ready contains also a form to be filled out by the reader interested in pursuing a course of reading. Place is provided for the subject of the course, books already read, and for a list of recommended books to be suggested by the library.

The overdue postal, with the caption, "The value of a book lies in its use," has a note on the front saying that "It is a kind and neighborly act to tell others how they can increase their earning power and joy in life—reading library books."

Besides distributing copies of the co-operative list on "Business books of to-day," compiled last fall by the Los Angeles Public Library for fifty American libraries, the St. Joseph Library has distributed attractive lists of business books prepared by Appleton's, McClurg, and the Ronald Press, with the comment, printed on the cover with rubber stamp, that "You can find nearly all of these books in your public library."

The library collection of books on business was recently revised and enlarged, and when some fifty-five or sixty of the new books on banking methods, currency, accounting, etc., were ready for the shelves, arrangements were made to have them taken bodily behind the cages of six of the leading banks, where Mr. Rush personally demonstrated the practical value of the books to all the employees of each bank from the officers down to the newest employe. It served to emphasize the practical relationship which might exist between each man and his public library, and in the presence of the officers it served to impress upon each young man what a good thing it might be to inform himself upon the general principles and newer ideals in his daily work. These books were carried from bank to bank in this way, and at each place copies of the list were distributed to each man. For the business man a book in the hand is worth much more than two in the library. The results of this plan thoroughly demonstrated its value. Mr. Rush has arranged to take other classes of these new business books in the same way to the meetings and luncheons of the local Commerce Club, Rotary Club, Advertising Club, Press Club, etc.

READERS' INTERESTS. See Preference postals

#### SCHOOL LIBRARIES

The annual reports of the inspector of state graded schools and of state high schools, in Minnesota, contain in each case a report by Miss Martha Wilson, supervisor of school libraries, on the library conditions existing in each class of schools. In each she gives a tabular list of the schools showing the number of books at the beginning of the year, additions, and total, and the expenditure for books, magazines, and total. These numbers are not wholly accurate in many cases, as all

accession books are not carefully kept, but they give at least an approximate idea of the school library resources.

The list of high school libraries includes 209 names. Forty-five have a library room on the first floor, 130 on the second, 5 house the library in the superintendent's office; 15 use hall, assembly or classrooms; and 6 have no general library room, scattering the books throughout the rooms. Rooms vary greatly in size, only 26 reporting rooms as large as or larger than classrooms. Open shelves are used in 88 schools, and 140 provide reading tables.

The Dewey classification is used in 125 libraries, 28 report original systems, and 46 are unclassified. One hundred and sixty-seven report accession books, 111 have card charging systems, and 60 use book records. Few schools have adequate card catalogs.

Library service is rendered by teachers in 113 schools, by superintendent or high school principal in 18, by normal training department in 4, students in 13, superintendent's clerk in 9, and school librarians in 25. Of the latter, 10 give full time to the school library. Sixteen schools depend upon the public library for all but classroom reference books, and Redwood Falls, Sauk Center and Virginia have made definite contracts with the public library for service. Eighty-two schools attempt to give some public library service, and Ada, New Ulm and Osakis house the books belonging to the public library association. South High School, Minneapolis, maintains a deposit station of the Public Library, and Hastings and St. Louis Park have combination school and public libraries, jointly supported by the town and the school with good library rooms and librarians.

Compensation for library service, exclusive of teachers' work, is reported by 31 schools. Professional training for school library work is reported by 13 persons in charge of school libraries who have taken summer school library courses, 12 who have attended lectures in normal or other schools, and 7 who have served as public library apprentices or assistants.

Opportunity in Minnesota for training for school library work is offered by the summer school course given at the university under the direction of the Minnesota Library Commission and the Department of Education, and the course to be given at the College of Education, University of Minnesota, beginning September, 1915.

The orders for library books filed in the office of the state superintendent show that the state school library lists, books for ele-

mentary and rural schools and books for high schools, have been more closely followed than formerly, thus insuring for the schools standard books thoroughly usable with boys and girls of school age.

Teacher training department libraries are a feature of school library work in Minnesota. They are usually maintained as separate collections housed in the training department rooms and used exclusively by the normal cadets. Many of them include good collections of standard children's books.

Analysis of the report on grade school libraries shows that they exist in some form in 243 schools. Few of them, however, contain a thousand volumes, the average seeming nearer 500. Thirty-six report a library room on the first floor, 149 on the second, 3 on the third, 11 in hall or classroom, 2 in the principal's office, and one in a cloakroom. Six schools scatter the books among the different rooms. Open shelving is used in 94 school libraries and 50 have reading tables. Eighty-two use the Dewey decimal system or a modification of it, while 18 have original systems. One hundred and sixty-eight report accession books, 48 use card charging systems, and 142, book records.

Library service is rendered by teachers in 107 schools, by principals in 31, students in 11, and two schools have librarians on full time. The services rendered by teachers appears to be in addition to full time teaching work. The high school board rules now require that teachers in charge of school libraries may not teach more than six hours.

Nashwauk and Keewatin maintain public libraries in the school house. The library rooms are well planned with separate out-door entrances and heating arrangements, and can be entirely closed off from the rest of the building in the evenings. They are well equipped, have good collections of books and are administered by trained librarians. In each town, the village contributes \$500 annually for books, and all the other expenses are borne by the school. Mountain Iron will combine its collection of books with the new public library recently opened. Several schools report some service from public libraries in nearby towns.

#### SCHOOLS—RELATIONS TO LIBRARIES

The relation of the organized library to the school. *Classical Journal*, N., 1915. p. 115-119.

Among the reports presented to the classical group for consideration in this the central topic for discussion by all departments of the Educational Conference of Academies

and High Schools with the University of Chicago in April (1915) were three entitled:

I. A minimum classical library, by Harry F. Scott, University High School.

II. Periodicals and recent articles of interest to teachers of Latin, by Clara Sullivan, J. Sterling Morton High School.

III. The teaching of Roman antiquities in the high school, by Mary Zimmerman, John Marshall High School.

Mr. Scott presented a suggested list of twenty standard works. Miss Sullivan made the following suggestions as to the use and selection of material from periodicals: (1) Actual Latin phrases and expressions gleaned from magazines; (2) English words derived from Latin; (3) paragraphs with words of Latin derivation, underscored; (4) use of advertisements in magazines; (5) pictures and articles pertaining to ancient Greece and Rome; (6) analogies between ancient times and the present. The recent articles of interest comprised 31 different papers from magazines and periodicals of 1913 to 1915.

In the teaching of Roman antiquities, Miss Zimmerman sought to broaden the scope of the Latin course; to enrich it by appealing to the imagination of the pupil, and by giving him a feeling of kinship for a civilization closely related to his own. The following topics taken from Professor Francis W. Kelsey's "Fifty topics in Roman antiquities" (Allyn and Bacon) were assigned to the most efficient pupils of the Cicero class:

1. The Roman home-life and family.
2. The Roman house.
3. The Roman dress.
4. Roman education.
5. Slavery among the Romans.
6. Trades and practice of medicine among the Romans.
7. Roman books and their publications.
8. Roman public architecture.
9. Roman architecture of transit.
10. Roman religious architecture.
11. Roman commemorative architecture.
12. The Roman Forum.

The papers prepared from these subjects by the pupils and submitted for suggestion and criticism show how they vitalize the work, and that it is an indifferent pupil, indeed, who does not derive some benefit from ten or twelve such exercises.

#### SPANISH BOOK SELECTION

In the paragraphs on Spanish book selection in the January JOURNAL (p. 76), Professor Bourland is quoted as saying that Hills and

Ford's "Spanish grammar" is the "most complete and careful we have had, as yet, in this country." His comment to that effect was intended to apply to Ramsay's "Text-book of modern Spanish," mentioned farther on in the list.

SPECIAL COLLECTIONS. See Furniture, Collection of books on

SPECIAL LIBRARIES. See also Business libraries; Educational libraries; Hospital libraries

Special reference work and the municipal reference library. Wyndham Morgan. *Lib. Asst., O.*, 1915. p. 157-163; *N.*, 1915, p. 176-178.

Mr. Morgan, reference librarian of the Cardiff Public Libraries, was, at the time of printing, on active service in the European war. The paper was read before a meeting of the Library Assistants' Association in May.

In this paper the author states: "I have drawn largely upon American theory and practice for materials, for the simple reason that the American movement has been well written up. Our own special libraries, or, to be precise, the newer forms of special libraries have received relatively little attention. It is quite possible that one is inclined to overestimate the importance of the American movement from the reading of American periodicals. You will, of course, form your own opinion upon this point."

"The value of research work, based on accumulated knowledge and experimental work, is gradually being recognized in the United Kingdom," says Mr. Morgan, and he indicates some of the ways in which British public and private libraries are being adapted for reference and research work, citing especially the case of information on coke-oven by-products—tar, ammonia, gas from which are produced hydrocarbons, and from them aniline dyes and the bases of explosives. Before 1882 no by-product plant was in use in England, although they had been introduced into France and Germany twenty years earlier. "Results such as these are not due to experimental work alone. However new a problem may be, someone else has worked or is working upon it. It is essential that the original worker should know what has been and is being done in his particular field, and for this purpose the special library has been evolved. Of course, it is not altogether a new idea; with the older forms—theological, legal, medical, etc.—all are quite familiar. It is to the newer forms—engineering, finance, banking, insurance—that attention is now being

directed. Every large library can already cite instances where business men and manufacturers have been saved time and money by information supplied. The gain to the community by the greater efficiency of technical and other special students is also an important item."

The work of the Solvay Institute of Sociology at Brussels, the Special Libraries Association of America, the Co-operative Reference Library in Dublin, the Royal Library at Berlin, the Cardiff Public Library and its special collections, the Municipal Reference Library at Toronto, are briefly described, and Mr. Morgan asks for more information on the special libraries of Great Britain. He suggests a report on the various special collections to determine, in the case of any collection of unusual importance, its completeness, rarity, local interest, and the unique copies it includes. Proprietary libraries of importance need special attention. Prof. Adams, in his recent report to the United Kingdom Carnegie Trust, considered the possibility of aiding special libraries.

Collections on special subjects can often be attracted to a library with very little expense, and a system of co-operation, based on a knowledge of the resources of the collections in different libraries, might be advantageously worked out.

#### SURVEYS, LIBRARY—STATE

Decision to undertake a comprehensive survey of all library activities in the state was reached by the State Library Advisory Board at its first meeting, held in Olympia, Wash., Jan. 21. Unanimous approval of this undertaking was given by the State Library Commission, which consists of the governor, attorney-general and justices of the Supreme Court. Librarian John B. Kaiser, of Tacoma, was elected president of the board, the other members of which are Mrs. Josephine Preston, state superintendent of public instruction; Mrs. O. K. Williamson, of Prosser; Mrs. Sarah McMillan Patton, of Hoquiam; and Mrs. Henry McCleary, of McCleary, with State Librarian James M. Hitt *ex-officio* secretary. Mrs. Preston was elected vice-president. The survey is to be under the direction of the members of the advisory board as chairman of special committees. Each head of a department of library activity will have a place on the committee investigating that activity, together with an expert who may be called in. The work will require a year or more, and the board's report will be made to the commission. The survey is to cost nothing

except the expenses of the board members.

The following subjects will come within the scope of this survey either because specifically mentioned as subjects the advisory board should advise upon, or because of their relation to the work of the departments specifically named:

- The state library.
- Is a legislative reference division desirable for the state library?
- Is a library organizer needed in the state?
- What aid can be rendered small town libraries?
- Traveling library department; can the advisory board help develop it?
- How can further co-operation between existing libraries and the public schools be fostered to the advantage of both?
- Can the county school circulating libraries be aided?
- The problem of instruction in normal schools in the use of libraries and a knowledge of children's literature.
- The county library question. The last legislature by an error altered the law unintentionally.
- Can and should the state aid the libraries in the state charitable, penal and reformatory institutions?
- What should be the relation of the state university library to the other libraries maintained by the state?
- Is a summer library school desirable under the auspices of the state library commission or the state university?
- How can the extension department of the state university aid in the solution of the state's library problems?
- What legislation, if any, is recommended by the advisory board?
- Work with foreigners.

#### TOY EXHIBITS

During the pre-Christmas season, a rather unique exhibit was held at the Binghamton Public Library, which, together with the usual Christmas exhibit of books for children made a fairly complete guide for anyone playing Santa Claus to a child. This was an exhibit of carefully selected educative toys, games, pictures and books held by the Binghamton members of the American Institute of Child Life. Libraries may very well co-operate with this association whose purpose is "to serve the home"; and thus add to their own scope of service.

TRAINING. *See also* Examination; Instruction in use of library; Printed books, Instruction in history of

First steps in library routine. W. B. Thorne. *Lib. Asst.*, Aug.-Sept., 1915. p. 135-141.

The aim of this article is to provide the simplest possible introduction to the ordinary routine work of a library, suitable for placing in the hands of new assistants, for the purpose of giving them a general idea of the duties as a whole, and to render unnecessary many of the usual explanations commonly demanded when new assistants are appointed. Argument has been entirely avoided and direct state-

ments have been employed to prevent confusion arising in the minds of the uninitiated. While it is not expected that the instructions laid down will fit every case, it is believed that no difficulty will be found in introducing modifications or amplifications where they may be considered desirable.

Mr. Thorne, who is honorary secretary of the Library Assistants' Association, describes concretely the departments of a general public library, so that every newly appointed assistant shall endeavor to form in his mind a clear idea of the work connected with each department. He divides the library into the lending department (with sometimes a separate department for children), the reference department, and the reading room or rooms. Occasionally there is a lecture hall in addition. The details of procedure for the open access system, the indicator system, the card charging system of the lending department, are given at length, and also of the work required of the assistant in the reference and reading rooms.

Mr. Thorne states that "accuracy and carefulness are the two most important virtues an assistant can possess; a healthy share of these, combined with an interest in the work, are the principal factors that lead to advancement. A neglectful and careless assistant dislocates the working of a whole system, and his removal is inevitable as soon as his delinquencies are known. A wise assistant will seek instruction from his seniors when in doubt upon any point, and will never act independently in matters out of his province." A number of books on librarianship are recommended, and the assistant is also advised to secure particulars of the examinations held annually by the Library Association, with a view to enter for them in due course.

#### VOCATIONAL GUIDANCE

"Talks to help you choose a career" is the heading of a card issued by the Binghamton Public Library and listing eight talks for high school students on vocational opportunities in the new High School building. Students attending these talks showed a real interest by asking many questions.

---

### Bibliographical Notes

---

The list of accessions to the San Francisco Public Library during 1915, printed each month in the library's *Bulletin*, have been cumulated in one author list that runs to 136 pages—or cxxxvi pages, as the library prefers to put it.

The "List of references on railway motor cars," prepared by the library of the Bureau of Railway Economics in Washington, and issued Nov. 30, 1915, is being published in the *Locomotive Firemen and Enginemen's Magazine*, beginning with February, 1916, issue, p. 130-132.

The October, 1915, number of the *Pennsylvania Magazine of History and Biography* publishes several "early documents of the Library Company of Philadelphia, 1733-1734." The most interesting of these is a memorandum of agreement between the board of directors and William Parsons, librarian, who was engaged in March, 1733, as librarian at the salary of six pounds per annum. In the agreement the duties of the librarian are defined.

The Seattle Public Library has started publishing a *Library Poster*, to be issued weekly and to tell about some recent publications of importance on current topics. The first number, which appeared Jan. 26, contained a short annotated list of important books on municipal affairs published in 1915, and the first few numbers will be confined pretty closely to material on social problems, municipal affairs, education, and similar topics.

The Public Library of Syracuse, N. Y., has added to its list of regular publications *The Junior Bulletin*. This will do for the young folks who use the library what the *Bulletin* does for the grown folks. Volume 1 no. 1, just issued, is a small pamphlet bound in blue. It contains a complete list of all the books that have been added to the young people's department since last March, with explanatory notes telling what the books are good for.

The Russell Sage Foundation Library, in co-operation with experts in the field, has just issued a bibliography on "Feeble-mindedness." From a large amount of material, about 50 authoritative books and reports have been selected. Careful evaluation and critical annotations make this an important contribution to a subject in which there is nation-wide interest. An American authority on feeble-mindedness, to whom the bibliography was submitted in manuscript, commended it with these words: "I have gone over it carefully. I think it remarkably good. It is not too long to be practical. It covers all the different viewpoints and it gives me pleasure to recommend it unreservedly."

The chapter on "Library activities" in the 1915 report of the United States Commission of Education (volume 1, p. 513-537), was prepared by Dr. John D. Wolcott, chief of the

library division of the Bureau of Education. After describing in some detail the legislation in the various states, which was generally toward the extension of library facilities, Dr. Wolcott devotes the rest of the chapter to Public library extensions, County library systems, State-wide use of university libraries, Library service to immigrants, Library exhibits at the Panama-Pacific Exposition, Meetings of associations, and Recent books on library administration and technique. The chapter has been issued in a separate pamphlet also.

There are a few libraries where Miss Byington's "What social workers should know about their own communities," has not been used to good advantage. Many copies have been distributed by librarians desirous of arousing community interest and at the same time of showing the kind of help the library may give to all who would know their town or city. Two editions of ten thousand copies each have been prepared, but for several months the pamphlet has been out of print. A third edition just published by the Charity Organization Department of Russell Sage Foundation has been delayed long enough to give the whole a thorough revision—not so much with a view to enlargement as to dropping everything that could be dropped, and substituting the up-to-date data that social work experience during the last five years has found to be essential.

Two college library publications of interest have recently appeared. One is a handbook of Vassar College Library, issued in a trial edition, and intended to give general information about books and libraries that will be of use to any student and increase facility in using the library. It lists briefly the libraries available to members of the college, and what are the conditions and resources of each; describes the workings of the common library aids—classification, catalogs, reference books, bibliographies, indexes—and the duties of the library staff; and closes with some brief suggestions about bookbuying and books on note-taking, author's manuals, and books about reading and about books. The second publication is a booklet describing with some detail the new library building of the University of Missouri, of which the central portion has been completed and opened for use. Floor plans and exterior and interior views illustrate the text. The library building has been in use this college year, but the formal opening was not held until Jan. 6.

Watson, Edward William, D.D. Life of Bishop John Wordsworth. Longmans, Green. 6 p. bibl. \$3.75 n.

larged edition, completely revised and brought up to January, 1915" by J. Ellis Barker.

That the two works with the same title, but presumably by different authors, were written by the same author is evident from the fact that in each the introduction and several chapters were identical. The later edition of "Modern Germany" is, as its author claims, "an encyclopedia of German affairs," and is well worth buying; but the librarian who already has the original work should be made aware of the fact that O. Eltzbacher and J. Ellis Barker are one and the same. I find in the London "Who's Who" that Mr. Barker was born and educated in Cologne. Ellis Barker is evidently an anglicization of Eltzbacher, and possibly a concession to English prejudice against German names.

Respectfully,

JOHNSON BRIGHAM.

Iowa State Library, Des Moines.

COWHIDE VS. BUCKRAM

Editor Library Journal:

In the second edition of Library Handbook No. 5, "Binding for libraries," recently issued, the A. L. A. Committee on Bookbinding advocates the use of cowhide in binding fiction and juvenile books. Unfortunately the war demand for cowhide has caused the price to advance and the quality to deteriorate. The committee, therefore, suggests that buckrams meeting the specifications of the Bureau of Standards, or other cloths equally as strong, be substituted for cowhide in all cases. When the price and quality again become normal this policy should be reversed.

A. L. BAILEY, *Chairman*,

A. L. A. Committee on Bookbinding.

# THE LIBRARY JOURNAL

VOL. 41

APRIL, 1916

No 4

THIS number of the LIBRARY JOURNAL gives special attention to bookstacks and new library devices, in connection with Mr. Thompson's paper regarding the progress of the work of his A. L. A. committee. This committee on labor-saving devices showed its first fruits in its excellent exhibition at the Washington conference, which is to be repeated as a feature of the Asbury Park conference this year. It has not attempted to cope with the bookstack problem, which will be always with us, but the competition of manufacturers in this field may be depended on to insure steady improvement in this *sine qua non* of library fittings. The rivalry is as much between two systems as between rival manufacturers—the standard system, which has the merit of rigidity and certainty, and the bracket system, which has the merit of convenience and adaptability. Mr. Borden claims to have found the happy medium between both out of his experience as a librarian, but his solution has yet to be tried out in practical experience. The metal bookstack as developed by Mr. Green for the Library of Congress, the original of the Snead stack, and by other inventors and adapters for the Library Bureau and other forms of stack, is especially an American product, which is being increasingly accepted in foreign library use.

AMERICAN ingenuity is also responsible for a large share of modern library devices, but we must admit that American invention is not responsible for all the triumphs of peace in library economy or elsewhere, or all the mechanical horrors of war. It was Herbert Spencer, while an engineer, who invented the first paper clip, as is illustrated in the story of his life; the first vacuum cleaner known to Americans was shown to them in 1897 in an English library, where, apparently, it originated; and, as we have previously pointed out,

Japan originated the revolving bookcase a few centuries before Danner, and President Eliot's invention of the mausoleum had been in use several decades among the Yankees of the East. Library devices are many and manifold, some useful only in the largest library systems, others useful everywhere. The alert librarian should be on the watch for everything that will save time and increase convenience, but must not become too mechanical and try to run everything by machinery. A hundred dollars may wisely be spent in library devices, if two hundred dollars' worth of time can thus be spared for more important work. It is not always possible to prove to trustees an actual money saving, because that means the saving of one person's full time, at least a single salary; and it has been the general experience, as, for instance, with the Library of Congress cards, that it is not easy to do this through co-operative help except in large library systems. If, however, the librarian or assistant can save time from mechanical work for vital work with library users, that will abundantly justify the purchase and use of additional library devices. Real labor saving is always one of the best of economies.

PRESIDENT RICHARDSON supplemented his plan for the practical development of the American Library Institute, published in our March number, with a second paper giving a bird's-eye view of the whole field of library work and scholarly research, which was an interesting feature of the successful spring gathering at Atlantic City. His scheme for making the Institute specifically an instrument for research and an inspiration for higher or specialized teaching within the library field, met with general approval and resulted in a more friendly feeling toward the possibilities of the Institute among several who had been its critics either in its inception or since.

It will be interesting to see this plan put to the test, especially as it can be co-ordinated later with the work of the Council of the A. L. A., as well as with the "sponsors for knowledge" plan. Attention was called during the discussion to the tendency in the Council of the A. L. A. to give time to the reading of papers rather than to the discussion and decision of questions in library economy and administration, as somewhat far afield from the function planned under the revised A. L. A. constitution.

---

THE best part of the Atlantic City meetings, the two sessions devoted to live discussions, reminded the old-timers of the best days of the A. L. A. If the same practice were followed of opening a discussion with a wide-awake paper on a mooted practical question, following that with brief written discussions and thus opening the way for a live debate occupying the rest of an hour, there would seem to be no reason why one or two sessions of even a large A. L. A. conference could not be brought back to this happy and inspiring interchange of views. A delightful evening of entertainment was occupied with an amusing series of musical humoresques (which had nothing, however, to do with the connection between books and music programmed as the subject), and with lantern slide illustrations of early books for children; but it was generally admitted that the daytime debates, really relating to library subjects, were more enjoyable as well as more useful to librarians as such. But others may think that "all work and no whirl, makes Jane a dull girl," and that it is worth while to make time for "librarians at play."

---

How much of the public's reading is supplied by public libraries was a conundrum which afforded text for one of the most wide-awake discussions at the Atlantic City conference, led by Miss Louise Connelly, the "educational expert" of the Newark Public Library, a lady of extraor-

dinary common sense, wide sympathy and infinite wit, whom Mr. Dana has promoted from the ranks of the teachers into a new library service. Her amusing calculation of the habits of commuters and other inhabitants of New Jersey, resulted in the conclusion that three-fifths of the reading of the community, especially the commuting community, was of newspapers and periodicals, and that of the more solid reading less than one-half, or one-fifth of all, came from public libraries. Naturally, people who have private libraries make comparatively little use of public libraries, and if the trustees present had been asked how many books they drew from their respective libraries, the figures would have been strikingly small; but about these readers the libraries need not worry. Their mission is to induce better reading, more effective reading than that of newspapers and flashy periodicals, among those whose reading is mostly of this kind. Miss Connelly's talk and the ensuing discussion indicated how extraordinarily large is this unworked field.

---

THE New Jersey Commission and the Newark Public Library made an interesting graphic exhibition at Atlantic City of library methods and results, and Mr. Dana presented a paper at one of the Institute meetings on "Exhibition methods of instruction." One of the Newark exhibits presented an interesting solution of the problem of cheaply bound books, which cost from 10 cents to 25 cents, but would cost 30 cents or 35 cents more if cataloged and shelved in regular course. The solution consisted in placing these books uncataloged on Multiplex display wing frames, where the public might select at their will, and their honesty was trusted to bring their selections to the charging desk for inclusion in the circulation. This seems an idea worth adoption in other libraries, small and large, and it is a good example of effective economical use of a new library device, described elsewhere in this number.

# BOOKSTACKS IN THEORY AND PRACTICE

BY W. R. EASTMAN

THE construction of a library bookstack presents problems which have received much careful study at the hands of librarians, architects and manufacturers. Certain conditions must be met. Books must be assembled in vast quantities; each book must be perfectly accessible and kept in the best possible condition. The structure must also be durable.

## THE PLAN

The first condition of success in planning is to provide ample shelf space. The extent of this can be determined only by counting and measuring the books, estimating as nearly as possible the additions and losses for the next twenty years and then adding a generous allowance of room for various practical purposes, such as receiving new books, convenience in handling, disposal by classes, the care of oversize books, temporary selections, special collections, and the accommodation of the unexpected. It should be borne in mind that all the books of the library are not to be in the stack, so that when the book capacity for the building as a whole has been fixed, the capacity of all the reading rooms and work rooms must be deducted from the total and the stack will then be planned to take care of the remainder.

It is a common rule, when the desired capacity of the stack has been named, to provide a foot of shelf space for every seven or eight books. Since it is possible for ten average books to stand in the space of a foot, this rule makes an allowance of one-fifth or three-tenths which is to be left empty. This margin is none too large. Indeed it may be questioned if it is large enough to meet the needs that are sure to arise. A safer rule, in the opinion of many, is to allow an average of one-third of every shelf to remain unused. The calculation can then be readily made by adding one-half to the total number of the books to show the desired capacity and then to reckon at ten books to the foot. This will be the same as six and two-thirds books

in the running foot. For example, a bookstack to hold 100,000 books should have a capacity of 150,000, at ten books to the foot.

When the total capacity is determined it must be distributed among the several floors or decks. In a building of one story there may be three of these decks—one below, one on the main floor and another in the open space between this and the ceiling. In a building of two stories there should be five levels in the stack. In the case supposed, with a capacity of 150,000, there will be, for each of five floors, an allotment of 30,000. Cases to provide for this number must now be furnished. If each case will hold 2000, the number of cases will be fifteen, the exact dimensions of which are known and these, or their equivalents, may be grouped at proper intervals. The width of aisles will vary from two and a half to four feet according to the use expected; the wider passage being needed in case of general public access. The cases or ranges being plotted in their places, space must be allowed for stairs, lifts, tables, desks, or other furniture and thus the size and shape of the floors of the stack room can be determined, subject, of course, to the conditions required to fit it to the rest of the building. Sometimes cases radiating from the delivery desk are found convenient in a book room, but, in a stack of several stories, the radial arrangement shows no advantages and would be more expensive to build.

A true stack rests upon its own foundation. Two stories of stack, however, may be carried upon a substantial floor supported by side walls. It is often found convenient in building a small library to put cases on the main floor for immediate use, providing a similar arrangement of cases in the basement beneath and to postpone the placing of the third story for books till the filling up of these two floors shall make the addition necessary.

In a public library it is desirable for ac-

cess and supervision that the ranges shall run from front to rear behind the delivery desk and be lighted at the back. In a large closed stack the cases may very properly stand at right angles with the line of approach, receiving light from windows on both sides in a room which may afterward be extended to the rear.

#### MATERIAL

It will be generally conceded that some kind of iron must be used for structural strength, for economy of space, for openness of construction promoting cleanness and also for the sake of using non-combustible material. But there is sharp contention between the advocates of cast iron and sheet steel. It is claimed for cast iron uprights that they are at once solid and open; that they have no hollow chambers for gathering unwholesome dirt; that the castings are uniform and readily replaced; and that their pattern is such as to provide the most complete ventilation and light and opportunity for inspection. It is further noted that cast iron will resist rust and fire better than any form of wrought iron or steel. The castings are painted after being put in position and a better result is claimed also on that account. In reply to all this the rival makers say that cast iron is not only rough on the surface but liable to have concealed bubbles and blow-holes which endanger the strength of the structure at critical points, and that the roughness of it is unsightly, a collector of dirt and a damage to the bindings of the books.

When sheet steel is used for uprights it is first cut and enameled and then bent into a hollow flattened form showing numerous narrow slits to receive the sliding shelves or else, in the case of bracket shelving, there is a hollow post upon which the brackets are hooked. Either form of hollow chamber is charged with being the lurking place of much unsanitary dirt and, in some cases, in reply to this criticism, the stack builders pierce every upright with a half-inch hole through which a vacuum cleaner can suck out the last vestige of dust.

But, as the years pass, the arch enemy of a metal stack is rust, and the continuing

strength of a stack would be more certainly assured if there were no concealed surfaces open to insidious attack. So much can be said against either kind of metal upright that the purchaser may well feel compelled to make a choice of evils and is inclined to make his decision, not upon the merits of iron or steel, but mainly upon grounds of appearance and cost. It is to be noted, however, that the champions of cast iron do not hesitate to place wrought steel columns as the others do at the center of their cast uprights whenever four stories or more of book stack are required to be built.

Book shelves in a stack are usually of sheet steel, rolled at the edges for strength and enameled to provide a surface than which no better can be found. One stack, the one with the cast iron uprights, has a shelf of open hollow bars of enameled steel, very light, yet of ample strength. In some ways it is a very convenient shelf and admits the use of a simple and excellent book support which is caught between the bars. One of its most remarkable merits, as claimed, is that dust cannot lodge upon it to grind the bindings but that, with every movement of a book, dust will fall off. The case of the books below has scant recognition.

Wooden shelves are sometimes used with iron brackets, but a bracket shelf is generally made of a piece of enameled sheet steel turned up at each end in the form of a bracket with hooks at the back of each upright piece which catch into holes in the side of a square hollow post of steel or else with pins projecting from the side of each bracket to be caught by notches upon the post. The weight is thus carried by the brackets. The weak point is at the angle where the sheet is bent and is apt to bend again in handling and become difficult to adjust. A new form of shelf attempts to remedy this by scoring the sheet metal at this point with two deep grooves, thus stiffening it and fastening it at a true right angle. Unless the front edges of every bracket are made blunt and wide there is danger that books will be split or their leaves torn when carelessly thrust into their places.

## FIREPROOF BOOKSTACKS

It is too much to expect of a bookstack that it shall be proof against fire. It has been a habit, perhaps not wholly outgrown, of the makers of stacks to advertise them as "fireproof," "thoroughly fireproof," and "fireproof throughout." In past years, some have gone so far as to announce themselves as "specialists in fireproof stack construction."

The dictionary meaning of "fireproof" might perhaps justify this, for the definition is given as "of incombustible material," and an iron or steel bookstack is not likely to burn. But the popular and better definition includes protection against fire for the contents of the building.

The architects say that fireproofing requires not only incombustible material, but a "fire-resisting design." A bookstack is anything but that. It is in its nature of a fire-inviting design. Books are loosely spread along its shelves which stand at regular open intervals. If the design of the stack was intended to create a draft for flame and insure complete combustion of its contents, it could scarcely be better adapted to its purpose. When the whole framework is made open to admit light and promote cleanliness, the path for the fire is also made open. An open-barred shelf is about as fireproof as the grate bars of a furnace, and is much more likely to collapse and drop its load. It is possible that a bookstack might be made safer by dividing it into many closed compartments by metal partitions.

In some cases the bottom shelf of each tier, the "diaphragm shelf," is treated as a "fire stop" and the desk slit in front of it, while kept open for air, is covered with fine wire netting with fire protection in view. The serious menace of crossed electric wires still remains. In general we may say that in proportion as we follow the idea of open construction we are increasing the danger from fire. Real protection can be secured only at the price of eternal vigilance and a claim that any bookstack is fireproof is a delusion.

## ADJUSTABLE SHELVES

Shelves are adjusted in many different ways corresponding to the pattern on which

the stack is built. Cast iron uprights are cast with great projecting notches in front from the bottom to the top upon which the protruding horns at the side of the shelf may be laid while the back of the shelf is caught upon a hook at the rear and so made firm in its place. When hollow sheets of steel are used the sheets are cut by frequent slits into which the thin ends of the shelf may slide. The brackets catch upon their proper places by hooks that enter holes prepared in the sides of hollow posts, or else in notches or in the narrow projecting side of a solid post. At one time we heard of shelves that were "absolutely adjustable" which could be fastened at any desired height. This was done by brackets slipping in a groove and fastened by a set screw, or else by shelf ends slipping upon hanging metal bands and fastened by a screw wherever the librarian might wish. The theory was excellent but the practice was impossible because it required a machinist with a spirit level to produce an even appearance.

In the modern bookstack every shelf is movable, except, of course, the shelves at the bottom of each tier. The many ingenious devices for free and easy changes determine the character and appearance of the stack, for this one thing, the facility for adjustment, is counted essential both to the profits of the maker and the convenience of the librarian. Yet, sometimes, a question will occur to one who is impressed by the proportions of the stack question. Is it all worth while?

We walk through the long passages of an enormous stack with the rough, projecting, great iron teeth grinning upon us from every side, and wonder why it must be so? We ask the attendant how often the shelves are changed? He stares at us amazed. He doesn't remember. In fact, the vast majority of shelves have been exactly where they now are ever since the library was built. The only answer is that the call for change may come at any moment and we must be prepared. It is a huge and costly case of preparedness. But is it really impossible to look far enough ahead, to study the size of the books by their classes and to fix upon a plan for some parts of our col-

lection, such as fiction for example, according to which, if liberally provided for at the outset, they may stay in their places undisturbed and unadjusted? Can we not know beforehand of some stack territory which need never be changed? If this can be done those parts at least would have stronger, cheaper and better shelves than even these marvels of ingenuity.

But if it cannot be, because we must in some places, as in reading rooms, have adjustment ready to hand and because, perhaps, a new librarian will appear some day, who will want things done differently,

or because some like contingency may overtake us, can we not, at least, have invented for us some other mechanism of adjustment which, if not wholly concealed, will be less conspicuous, will not stare upon us with remorseless and obtrusive insistence and will not force upon us the impression that adjustment is the great purpose for which the library exists, the books being quite subordinate. In truth the libraries owe a debt of gratitude to inventor and manufacturer. They have tried to pay what they owe. But they are quite willing to be delivered from bondage.

## BOOKSTACKS: THE LIBRARIANS' VIEWPOINT

A RECORD OF EXPERIENCE AND OPINION FROM DIFFERENT SECTIONS OF THE COUNTRY

### THE NEW YORK PUBLIC LIBRARY

THE New York Public Library has in its central building the Snead standard stack in the main stack room and in all special reading rooms except (1) about 7000 feet of metal shelving in the suite of six rooms at the southeast corner of the third floor, and (2) the main reading room, the Stuart room, and the central circulation room. In the main stack room are about 334,530 feet of Snead shelving and in the special reading rooms about 63,000 feet, a total of 397,530 feet.

The first exception noted above arose because the shelving plans of these rooms were not ready at the time the stack contract was let. This shelving was included in a later contract—for the interior finish—and the contract for its installation was given by the John Peirce Company, to which this contract was awarded, to the Jamestown Metal Company (now the Art Metal Furniture Company), as a sub-contractor. In a public contract no particular make of stack could be specified and the Peirce Company and the Snead Company could not agree as to price. The library would naturally have preferred uniform shelving. The problem was further complicated by the fact that doors were required for all shelving in these rooms, which apparently were not easily hung on the standard Snead stack.

The second exception was due to the feeling of the architects that wooden shelves in the main reading room, the Stuart room, and the central circulation room lent themselves to a better architectural treatment than steel shelving.

In the branch libraries the shelving is, in general, wooden. The Ottendorfer branch (built in 1884) has in the rear a two story steel stack with wooden shelves. The Yorkville branch—opened December 13, 1902, as first of the Carnegie buildings—has Art Metal Company steel shelving. The Chatham Square branch—opened November 2, 1903, as second of the Carnegie buildings—has Library Bureau steel frames with wooden shelves. In all the other branches wooden shelving is used entirely, its cost being much less than metal shelving, and its general appearance more pleasing. Steel shelving is undoubtedly best for stack storage of books, but with comparatively low wall shelving or free standing shelves wood has many advantages for reading rooms.

H. M. LYDENBERG,  
*Chief Reference Librarian.*

### HARVARD COLLEGE LIBRARY

It has been interesting and profitable to watch the construction of the stack in our new library, and to study its possibilities now that it is finished. The Snead stack

has been installed and we are well satisfied with the general result. Three points in which the construction differs from what has been done before deserve mention.

In the first place, except for a slight variation in the height of the successive stories, the construction is uniform throughout, whether the shelving is to be adapted to octavos, folios or newspapers, the result being that although the newspaper collection may be kept for many years in the place assigned to it on the plans, it is quite possible at any time to increase its extent there or to transfer it to any other part of the building. The same is true in regard to the shelving for octavos and folios.

The aisles are  $31\frac{1}{2}$  inches in width. The double rows of shelves between the aisles are 19 inches wide, but the solid bottom shelves are wider, increasing the stack width to 26 inches, and diminishing the aisle width on the floor from  $31\frac{1}{2}$  inches to  $26\frac{1}{2}$  inches. The shelves for octavos are 9 inches in width, but 12-inch shelves are also provided which fit equally well into the stack frame, but project 3 inches more into the aisle than the narrow shelves, making the aisle width about 26 inches, or about the same as the width of the floor space.

We had expected to concentrate our folios in certain sections or rows at the beginning of each subject group, and therefore required perfect liberty in assigning any row to books of one size or the other. Now that we are completing the distribution of our books, we are inclined to stretch our folios along the broad lower shelves and place the corresponding octavos over them; but here and there, as in Church History, Fine Arts and Music, the folios are too numerous to be accommodated on the lower shelves alone and two or more folio shelves in each section are used, so that we have not so much need for the 12-inch shelves as we expected to have. Those that we do use prove satisfactory, although when fully loaded with very large books they are a little bent in the middle, but the deflection is very slight. For newspapers and portfolios a special shelf with wider folios between the parallel bars is used, and the volume, lying on its side, runs through

from one face of the row to the opposite face of the next row. Some economy of space is sacrificed, because shelving designed especially for newspapers need not be 36 inches or more in width, but the advantage of uniform construction we think outweighs this.

The second point to be mentioned is the position of the opening for ventilation,—the deck slit, as the constructor calls it. In all previous stacks I believe this has been introduced into the *floor*, close up to the face of the shelves. In our stack it is transferred to the vertical *base* of the fixed lowest shelf, giving us a floor continuous from one face to the other, and preventing the loss of pencils, papers and even books through the opening. The purpose of the slit—ventilation and distribution of heat—seems to be equally well accomplished by the new arrangement. The base in which the opening is made is  $3\frac{1}{2}$  inches in height, and diminishes by so much the vertical space available for books, but it is not well for books to come clear to the floor, and the space is not entirely sacrificed since it helps out by so much the space available on the upper shelf of the deck below.

On the third point characteristic of the new Harvard stack, so much has already been said that it does not need to be further dwelt upon—I mean the provision of stalls around the outer edge of the stack for the use of readers. There are 300 of these stalls provided on six floors of the stack around three sides of the building. Each is well lighted, and will have a convenient, specially designed table, a comfortable Windsor chair and a hanging electric lamp adjustable as to height and position.

I have already referred to the varying heights of the stack stories. This variation is due, not to choice, but to the exigencies of the architecture. The lowest two stories have a clear 6 feet 10 inches from floor to ceiling, the next five, 7 feet 2 inches, while the top story, upon which the upper floor of the building rests, somehow manages to gain an additional two inches.

The teeth of the stack frame, upon which the shelves rest, are  $1\frac{1}{8}$  inches apart. Allowing for the base of  $3\frac{1}{2}$  inches and

for a slight lack of adaptation at top and bottom amounting to a fraction of an inch, we may say that the clear height of the three varieties is measured by 70, 73 and 75 points, respectively, meaning by point the inch and one-eighth adjustment provided for the shelving.

Having these three heights of story to work with, it has been interesting to consider which gives the best result, and whether a still better result might have been obtained by some slight modification of the dimensions. In a closely classified collection where it is necessary to be able to introduce new books at any point, shelving of standard height is essential,—shelving which will receive all books up to a certain height, larger books being placed on special folio or portfolio shelves. This standard may perhaps be modified in special classes, but uniformity, particularly at the beginning, contributes greatly to simplicity. A shelf of 11 points proves to be the best for general use here. This gives us a clear  $11\frac{5}{8}$  inches ( $11 \times 1\frac{1}{8} = 12\frac{3}{8} - \frac{3}{4} = 11\frac{5}{8}$ ). This is a good shelf to hold all books 11 inches or under, but is just too low to take books of 30 cm., which is the usual upper limit for "large octavos," yet a 12-point shelf, which would give  $12\frac{3}{4}$  inches clear, is unnecessarily high. Eighteen or twenty points is good for folios, 18 points giving  $19\frac{1}{2}$  inches clear ( $18 \times 1\frac{1}{8} = 20\frac{1}{4} - \frac{3}{4} = 19\frac{1}{2}$ ) and 20 points giving  $21\frac{3}{4}$  inches clear. We find a good disposition for our purposes is one 18 or 20 point shelf below with five 11 point shelves in each section, making up the 73 or 75 points available in our upper six stories, but in the lower stories of 70 points we have to diminish either the folio shelves or the octavo shelves to get in the same number of shelves. Seven 11-point shelves, which we should often like to use, is also not practicable. Theoretically, one would expect to get seven 11-inch shelves in  $81\frac{1}{2}$  inches. On these floors we have  $82\frac{1}{2}$  and  $84\frac{1}{2}$  inches clear, and we expected before moving in to use seven octavo shelves to a section throughout a large part of the stack. But the measure of adjustment,  $1\frac{1}{8}$  inches, does not happen to make the space fully available. This makes it interesting

to inquire whether a slightly different measure would have been better. If we were to adopt 11-16 inches for the measure of adjustment, and, for the clear height of the story, 85 inches, which is only  $2\frac{1}{2}$  inches more than we now have on our five principal floors, we should get a somewhat better result. 85 inches permits 80 points of 11-16 in. each; 12 of these points between shelves give 12 inches clear ( $12 \times 11-16 = 12\frac{3}{4} - \frac{3}{4} = 12$ ), which easily covers a 30 cm. book; 20 points gives  $20\frac{1}{2}$  inches clear, which takes a 20-inch or a 50 cm. book easily; 10 points gives  $9\frac{7}{8}$  inches, which is a very little more than 25 cm., the usual dividing line between octavos and large octavos. The 80 points available would permit us to divide the space into four folio shelves of 20 points each; or one folio of 20, plus five large octavos of 12 points each; or eight shelves of 10 points each; or one folio shelf of 20 points, plus six shelves of 10 points. We could get seven 11-point shelves with 3 points to spare, but the clear height of the shelf would not take easily a full 11-inch book. One or another of these arrangements would suit well in the different divisions of the Library. In a class where few books fall between 25 cm. and 30 cm. in height, a 10-point shelf would be advisable, throwing what are usually called large octavos among the folio volumes; in other classes a 12-point shelf would be preferable, permitting everything up to 30 cm. to be kept in the main series. These considerations suggest that in planning a stack careful attention must be given to the mathematical details, and those dimensions should be adopted which give the best practical results.

WILLIAM COOLIDGE LANE, *Librarian.*

#### THE JOHN CRERAR LIBRARY

NEARLY all the 370,000 volumes of The John Crerar Library are shelved on stacks of four different types: the all wood cases advocated by Dr. Poole, adopted by The Newberry Library, and acquired with the medical collection from that institution; the older form, vintage of 1895, of Library Bureau "commercial" bracket stack with wooden shelves; the later form of the same stack, also with wooden shelves, and the

all steel bracket stack of the Art Metal Construction Company. There are also a few sections of the all steel Library Bureau "Parsons" bracket stack.

Besides these the library has installed for experimental purposes single tiers of several other makes, notably the Green (Snead) standard, the Art Metal standard, the Van Dorn bracket, the General Fireproofing standard, the Stikeman bracket and two local makes. While the latter possess points of interest, they are not on the market, nor is the Stikeman, and the General Fireproofing stack does not fit our needs.

From our experience we draw the following conclusions:—

I. In a library of our character, the proportion of books too large for the regular shelves varies so greatly in the different subjects, even in closely related ones, that if any considerable rearrangements are to be possible, the stacks must permit the installation in each section of as many wide shelves as are needed, from one to all. This necessitates the use of either the bracket stack or a standard stack which will allow the use of projecting shelves as in the new Harvard library. It further determines the minimum distance between stack centers as four feet six inches.

II. That while the wooden shelves do not allow the thin books to slip as much as the steel shelves, we have found no confirmation of Dr. Poole's view that they are kinder to the books, and on the whole their advantages do not out-weigh the great disadvantage of placing so much combustible material in the stack room.

III. That an adjustment to one inch is usually all that is required, especially if space over the books on each shelf is to be allowed for dusting.

IV. That each of the types most used in libraries at the present time has its advantages but that these are not sufficiently marked to warrant any considerable difference in cost.

V. That if price is to be disregarded the Parsons stack seems to offer the greatest combination of advantages for our needs.

CLEMENT W. ANDREWS, *Librarian.*

#### THE THEORY OF BOOKSTACKS

At the present time there are many types and varieties of book-stacks on the market, from which, as his own time for building approaches, the librarian is required to choose; and this choice must satisfy not only himself, who considers mainly the question of convenience in the practical work of the library, but the architect as well, who studies the question from both the artistic and the engineering stand-points.

The most important requirements a book-stack must satisfy are those relating to its convenience for the regular work of the library staff and the library patrons. The primary object of a stack is to hold books and to hold them in such a way as best to serve the convenience of all the people who use them.

Next in importance are the questions of safety, both of the books themselves and of the people using them.

Then comes the question of artistic appearance; and this is put last because, if the stack meets the other requirements, but fails to satisfy the architect's ideals, he can either disguise it or hide it behind something that does satisfy him.

From the standpoint of convenience the important requirements are as follows:

First: The height of the cases should be such that a reasonably tall person would be in no danger of striking his head against the cross braces and a person of ordinary stature be able to reach any book without leaving the floor.

Second: Space within the limits of the main stack is expensive and all of it not absolutely needed to insure safety and to allow access should be available for the storage of books. The passage ways of the stack should be as narrow as the proper handling of the books will allow, and books in constant use should be shelved in wall cases or floor cases in the rooms in which they are most used, so far as an orderly arrangement will warrant, and not in the stack where crowds cannot be conveniently handled. The width of the double-faced rows, taken in connection with the width of the passage ways between them, is of great importance. If these widths can be so

economized that the rows space but a shade over 46 inches between centers one can place 26 rows of cases in every 100 feet of stack. Much room is often wasted between the different cases in the row, and valuable book room is always wasted between the top shelves of each story of the stack and the bottom shelves of the story next above. Careless planning and inadequate construction in regard to these three points often mean a loss of one-fifth of the possible capacity of the stack.

Third: The design of the stack should allow the shelves to be interchangeable throughout the entire library, so that but one type of shelf need be kept in stock.

Fourth: The design should allow the shelves, with the books on them, to be easily adjusted to height in the cases and as readily moved from one case to another or to any part of the library. A shelf of books should be a unit, to be placed or replaced wherever most needed.

Fifth: The stack should accommodate any ordinary width of shelf and any desired spacing between shelves wherever the convenience of the library indicates.

In order to insure the safety of the books the stack should meet several other requirements:

First: It should be as nearly fireproof as possible. Books are slow burning, and the stack should contain no inflammable material, nor any non-burning material so punctured as to allow the fire to run up through the shelves. An effectual fire-stop should be introduced between all the stories of the stack so far as that can be accomplished without interfering with proper ventilation.

Second: So far as it can be accomplished without unduly increasing the fire-risk, the stack should be open to the free circulation of air, dry air preferably, pure air certainly. It should be protected from direct sunlight, and recent authorities are inclined to discourage daylight as well.

To fully insure the safety of the people using the stack there are many important requirements, fully as important, perhaps, as those pertaining to library convenience:

First: The structure must be strong enough to sustain its maximum load with

plenty of margin for safety. If the stack is built of mild steel, as most stacks are, its greatest load should not subject that material to more than a 16,000 pounds fibre strain, which is considered the limit of absolute safety. If the material is cast iron half that strain is the limit. The upright posts of a stack, the posts that sustain the weight of the books on the shelves between them, and of all the other posts, books, and passage ways above them, are struts, or columns, in engineering language, and their ability to support a superimposed weight is not measured by the resistance of that amount of steel against crushing, but by the resistance the smallest diameter of the column would offer against bending near the center, which is quite a different matter.

Second: The structure must be absolutely rigid against sway in any direction. This sway to be resisted is not confined to that caused by unequal loading, nor to the pushing the individual cases might be subjected to by heavy bodies falling against them; as explained above, the ability of a column to sustain weight is measured by its strength against bending; a tall stack is composed of a number of separate posts joined end to end, each post carrying a heavy load of books. If each joint is not adequately braced the combined column will bend, or sway, at the weak place and the whole structure collapse. It will thus be seen that the rigidity of a stack is fully as important as its strength; in fact, its strength lies in its rigidity.

Third: The structure must not only be strong, but it must be so built as to remain strong. Parts subject to wear must be attached in such a way that they can be replaced. Parts liable to rust should be exposed in such a way that the rust may be detected and the part painted. Theoretically enamelled steel will never rust. The theory is perfect, but one cannot say the same for the ordinary shop practice.

Whether or not all these requirements are met by any stack now on the market, or likely to be offered for some years to come, is not a question affecting the validity of the requirements, which are founded upon good library, and good engineering, practice.

WILLIAM ALANSON BORDEN.

*QUESTIONS OF COMFORT AND CONVENIENCE*

OF all the difficulties which beset library workers, none presents more obstinate perversity than those which respond only to physical laws. Human opposition can be combated through education and zeal, the inert mass of books in a library has been made to yield up its treasures through the librarian's technical skill, but the metal skeleton of the stacks which carry these books refuses to be flexible and rigid at the same time. It is the desire to compel this combination which causes trouble.

In addition to questions of a stack's proper location and general arrangement, it would seem that the time had come when comfort and convenience in a stack might also be considered.

For several years, library architects have been placing the stacks in a less valuable location in the library building than along the outside wall, since all the natural light possible should be received for reading rooms. This has been possible through the development of artificial lighting which has robbed an inside or under-floor location for the stack of its terrors.

Since natural light is no longer necessary in many stacks, why continue to use glass floors in book stacks? In an artificially lighted stack, they are without excuse. In the first place, glass floors are exceedingly noisy and few students at work in the stack can withstand this annoyance. Also, they are so slippery as to be unsafe, and frequently cork carpet or rubber mats have to be placed at the top of steps and at other dangerous places on the glass floors. If sunlight reaches these glass floors in the stack, the reflected glare is most trying. Then too, they crack either through expansion or contraction, or else because a metal shelf has fallen on them. Another disadvantage of glass floors, in a dry climate at least, comes from the putty used along the joints and edges. This soon dries out and is loosened by the constant walking on the floor. The result is that not only are the books and floors constantly powdered with putty dust, but small putty fragments have a penchant for dropping down the necks and into the eyes of readers and workers in the stacks.

There are many composition materials on the market, any one of which would seem to be desirable for stack floors where translucency was unnecessary. Not only do they have strength and quietness, but some of them lack weight as well, which in itself is desirable. Damages to such material are much more easily repaired than to glass floors.

The usual design for stack floors shows openings three or four inches wide between the glass floors and the book stacks themselves, which extend along the entire length of the stack. Doubtless these openings are designed for heating and ventilating purposes, but as placed at present, they have decided disadvantages, especially in book stacks open to the public. It is a frequent occurrence for readers and attendants to drop books or book cards through these openings, which means a descent of many steps and a search for the missing article. These openings are edged with a raised metal flange which holds the glass floor slabs in place. In stacks open to the public, it is quite usual to see some reader skimming through a book while in the meantime he unconsciously uses the projecting metal flange as a boot scraper. The result is that books and shelves underneath are covered with mud and litter from above. It is sometimes necessary in public stacks to have these openings covered to protect the books below. If, in addition to the stairways in the stacks, it is still necessary to have these openings in the stack floors for heat and ventilation, it would seem preferable to have them at the end of the cases instead of extending lengthwise with the stacks.

Some few difficulties are apparent in the book shelves also, the remedying of which would be gratefully received. If shelves fit in tightly, they are difficult to adjust. If loosely fitted, they are liable to be knocked out. Those that fit loosely also have a disadvantage in that they leave a small opening between the shelf's end and the uprights. With nothing to support the book covers over these cracks, bindings on heavy books are strained.

Why cannot a book shelf be devised to be attached to the uprights by means of

one hook at each end? If such shelves were made with closed ends to keep the books from falling out, the entire shelf of books could then be easily carried about the stack and adjusted wherever desired.

Another improvement would be a book support that could not fall from the shelf and that could not be slid about or toppled over by heavy books, as now happens with supports on polished metal shelves.

A small device that would save many steps to the catalog or the Dewey decimal

classification book, would be a frame placed at the end of a book case on each stack floor, to hold a chart or key to the first one hundred or so sub-divisions of the classification system. Unless one constantly works with the classification system, its sub-divisions are easily forgotten and frequent trips from the stacks to the catalog are made necessary. Such a metal frame to hold a classification chart would be a convenience.

CHALMERS HADLEY.

## LIBRARY EQUIPMENT AND LABOR-SAVING DEVICES

By C. SEYMOUR THOMPSON, *Assistant Librarian, Public Library, Washington, D. C.*

A LITTLE more than a year ago the librarians of the country were requested to contribute to the A. L. A. committee on library administration all the information they possessed concerning library equipment and labor-saving appliances. It was a large request, but approximately 20 per cent of the librarians who received it have responded in a most gratifying spirit of co-operation. It is earnestly hoped (and believed) that it need not be inferred that the 80 per cent who did not respond are without interest in the investigation which the committee has been conducting. Some forgot to reply, others could not take the necessary time, and some mistakenly thought that there was nothing which they could contribute, but it is believed that there were few who were unwilling or entirely without interest.

To all, therefore, the committee wants the results of its investigation to be of value. The work is now sufficiently advanced to justify a prediction that within a few months some definite results may be made accessible to all who want them. Before the end of the present year, certainly, librarians will again be invited to co-operate; not, this time, by contributing information, but by allowing the committee to pass on to them all the information which it has been able to gather. The questionnaire of last year was a success because as many as 20 per cent of those who received it replied, but it is hoped that a far greater number will respond to the next appeal.

The writer therefore wishes to offer a brief explanation of the work which has already been done, of the plans for making the results of the work valuable to the greatest possible number, and of the nature of the co-operation which is still needed. First, however, it may not be out of place to give a brief review of the general question of mechanical appliances in library work.

From the earliest days of the organized library movement considerable attention has naturally—or necessarily—been given to questions of suitable equipment and useful mechanical devices. The relation of the Library Bureau to the early history of the American Library Association, and the attention given by Mr. Dewey to matters of equipment as well as of method, are too well known to require comment. At the first conference of librarians, in 1853, various forms of tables, step-ladder chairs, and book-rests were exhibited by one of the librarian delegates. Similar informal exhibitions have been made by manufacturers, with the consent but not under the auspices of the association, at many of the A. L. A. conferences. In 1914 was held the first exhibition on a comprehensive scale, and the first which was planned and held under the auspices of the association. Plans are now being made for a similar exhibit at the Asbury Park conference, of which more detailed announcement will be made in the next issue of the LIBRARY JOURNAL.

Among early attempts to bring mechan-

ical devices to the aid of the librarian, one of the most interesting is the method adopted by William F. Poole in compiling statistics of daily circulation. As described by Dr. Poole in the 1876 Report issued by the Bureau of Education (p. 503), "the plan is to have a tin box made 16 inches long, 3 inches wide, and 3 inches high, divided into eight compartments, seven of which have a funnel-shaped cover; and the eighth, which is larger than the others, is an open receptacle for peas. The seven have these inscriptions on the front: Fiction and Juveniles; History and Biography; Voyages and Travels; Science and Art; Poetry and Drama; German and French Literature; Miscellaneous. As each book is delivered, the attendant drops a pea into such compartment as the book properly belongs to in its classification. There is a slide in each compartment on the back side of the box, by which the peas are let out. At night they are counted, and a record of each classification is kept."

Possibly Dr. Poole's device (strikingly similar in fundamental purpose to the "telephone counters" now used in a few libraries in registering circulation) may have met with ridicule from some of the contemporary librarians, as it certainly would to-day from not a few. For there is by no means universal agreement concerning the amount of attention which should be given to labor-saving devices. There are few paths along which it is not possible to travel so far that it becomes advisable to turn and go back, and many librarians believe that we have gone too far along the paths supposed to lead to efficiency. The very word "efficiency," so often overworked and misused, has caused many to groan in despair. Some of the protests against over-emphasis on mechanical appliances are so important, if well-founded, that they should receive careful consideration.

At the London International Conference of 1897 Mr. MacAlister, speaking of "Some tendencies of modern librarianship," said "A librarian who wants to distinguish himself is driven to mechanical inventions, designed to save either the time of himself or his readers. My critics will tell you that the more time-saving apparatus is

used the more time the librarian will have to cultivate his intellect and discourse with his readers on the beauties of Browning or of Byron. But is the time saved by mechanism used in this excellent way? I am afraid not. The taste for such things grows on what it feeds, and the librarian who has invented an appliance for supplying his readers with the books . . . by means of an automatic ticket-in-the-slot machine will not be happy, or spend any time in reading Browning, until he has invented one which will, by the touching of a button, shoot the book into the reader's home, and so save for the busy librarian the time lost in opening the library door. . . . If a new machine comes to be wanted very badly, it will be produced; but let us wait for an imperative demand, instead of cogitating how we can, by clipping off the corner of a card, or sticking in a new pin, or even by calling an old spade an agricultural implement, secure fame for ourselves as original inventors." (2nd International Conference, Proceedings, p. 10-11.)

These sentiments were echoed in 1898 by Mr. Jast. "A hindrance to library progress is to be found, it seems to me, in the great prominence given at the present time to the subject of mechanical appliances for libraries. . . . The amount of time and attention that is now bestowed upon this side of library work, to the inevitable detriment of its higher and nobler sides, is astonishing and lamentable. Now there is a subtle and fell fascination about these things, which if once allowed full play becomes a positive disease. It may begin quite innocently in the purchase of some book-supports; these you discover scratch the shelves, so you get others which take up too much room; from a book-support to an automatic step—well, is only a step; then you get a dictionary holder, and a dusting machine, and all kinds of binders, and various card outfits; and the fascination grows with what it feeds on, until the funds of the library, and time and thought of the librarian, are frittered away in the pursuit of these mechanical accessories. I have nothing to say against these things in themselves; it is a question of perspective with which I am concerned; I want them

put into the background of librarianship, which is their proper place, and not in the very foreground, where they have no business." (*Library Association Record*, v. 2, p. 83-84.)

Without inquiring closely into the conditions prevailing eighteen years ago in English libraries, we cannot help suggesting that, in painting these forbidding portraits of the mechanically-crazed librarian, Mr. MacAlister and Mr. Jast were allowing their imaginations to "grow with what they fed on." Hyperbole and sarcasm are often amusing, but seldom convincing. But their views are held, at least in part, by some librarians to-day. One of the best known American librarians recently wrote: "Many of the so-called labor saving devices would not be labor saving in a library outside of the city of New York. Among the useless methods for libraries I would include adding machines, addressing machines, billing machines, book typewriters, cash registers, copying machines, dictating machines, folding machines, mail openers, printing presses, sealing machines, and stamp affixing machines. There may be others. A lot of nervous energy is wasted in consideration of such devices, which are really not needed in even the largest public libraries, with possibly one exception." And still more recently we have been entertained by a serio-comic controversy over the relative merits of various paper clips, with mock depreciation of "poetry, and other minor literary matters" as compared with "those larger fields of efficiency and equipment, which are of such real importance to the librarian," and in which co-operation is necessary in order that we may "achieve the educational ideal, and make the library the true university of the people."

Unquestionably, it would be deplorable if the "higher and nobler" sides of librarianship were relegated to the background in the pursuit of new and improved mechanical appliances. But it is decidedly questionable whether anyone could cite any library in which such a state of affairs has existed. Both time and money have been wasted in many libraries in the purchase of equipment which was either unnecessary or poorly adapted to the purposes for which it was

purchased. But it is also true that many libraries, without undue expenditure of time or money, could improve their present methods by the wise purchase of certain apparatus. The unwise expenditure of time and money does not furnish an indictment of all time and labor saving appliances. It is, rather, an indication of the difficulties surrounding the librarian in every effort to purchase the equipment which he needs and to refrain from buying that which is not needed or is not well adapted to his work.

To relieve librarians so far as possible from these difficulties is the present aim of the committee on library administration, and with this purpose it is endeavoring to bring co-operation to bear on all problems of equipment and mechanical appliances. It ought to be, and we believe it is, easily possible to obtain book supports which neither scratch the shelves nor take up too much room, and to have the necessary binders, card outfits, and many other mechanical accessories, including even the most satisfactory paper clips, without subordinating the library's true functions. But in order to make this most easily possible co-operation is needed, not that through the efficiency of our office appliances we may achieve the educational ideal, but that each librarian may have the equipment best suited to the business needs of his institution without devoting to their acquisition attention and energy and money which might better be expended on its professional needs.

To some extent standardization of certain kinds of library equipment has been possible. But in most questions of equipment, as of method, so much depends on the size and nature of the library or on various local conditions that no effort to effect complete standardization could be successful. Equipment which is an absolute necessity in one library might, in another, be an unjustifiable luxury, and that which saves time for one might, for another, be a source of nothing but annoyance. But there are a number of well-established principles which, interpreted in the light of local conditions, may serve as a useful guide. A brief statement of some of these principles, well-known and perhaps axiomatic as they are,

may aid in explaining both the need of co-operation and the nature of the co-operation which is desired.

There are some appliances and some kinds of equipment which are indispensable in all libraries, or which can be dispensed with in so few that their use may be considered an almost universal necessity. Most important of these is the typewriter. Many others might be mentioned, such as inkpads, inkwells, floor covering, book supports, and paper clips. With reference to such equipment, questions concerning the desirability of purchase may be eliminated, and the librarian has only to decide which of the available forms is best adapted to his purposes. Obviously, the importance of the decision varies with the importance of the article under consideration. The purchase of an inferior typewriter, for example, would be a more serious matter than the purchase of unsatisfactory inkpads. Many librarians can testify, however, to the unsatisfactory results which follow the purchase of inferior inkpads, and it seems almost self-evident that in the purchase of all equipment, however slight its relative importance, care should be taken to get the best.

The effort to decide on the best involves consideration of the following points: (1) durability; (2) ease of operation or convenience of use; (3) quality of work produced or attractiveness of appearance; (4) cost. In individual cases there may be others, but these are the fundamental points, some or all of which must in all cases enter into consideration. The question of cost we place last, for in very few cases, unless the competing articles are equal or nearly equal in all other respects, should the cost be the determining factor. Financial conditions may make it necessary to give chief consideration to cost, but in such cases it is seldom that the best can be obtained,—although the cheapest may, of course, be also the best; it is rather a question of obtaining the best which can be purchased with the money available. The question of cost, too, is usually relative, to be considered in connection with durability or other points.

A second class of equipment includes

many devices which are not now used in as many libraries as could, we think, use them to excellent advantage. Of the libraries heard from, only a very few report having used any pencil sharpeners or any moistening devices. Here are two very simple appliances, which can be obtained at trifling expense, which might be used to good advantage in practically every library in the country, provided care is taken to get the best. The same could be said of many other devices, now little used, by which the routine business functions of the library could be more satisfactorily performed at no expense to the professional and educational functions.

A third class includes adding machines, addressing machines, billing machines, folding and sealing machines, and many other devices which would be entirely or nearly useless in many libraries but are of great importance in others. Such equipment is sometimes purchased where it is not needed, and sometimes (what is nearly as unfortunate) is overlooked in other libraries where it could be of value. In considering equipment of this kind, before attempting to decide which of various competing firms offers the best, the following questions should be answered concerning that class of equipment in general. Will it save time, by enabling us to do certain work more quickly? Will it save money, by enabling us to do it more cheaply? Will it conserve mental or physical strength, by enabling us to do it more easily? Will it promote accuracy, thereby eliminating expensive and aggravating errors? Will it promote neatness and uniformity, thereby making a better impression on those who use the library? And finally, will the gain along any or all of these lines be sufficient to justify the cost of purchase and upkeep?

This last question is the most important of all, and the one most easily overlooked. All statements concerning the value of any device must presuppose a sufficient amount of work to keep it profitably employed, and also the intelligent use of it for those purposes, and only those purposes, for which it is designed. A page who waits for the elevator and a book-truck to carry six books up two stack floors is not making

either the elevator or the truck a paying investment. A typewriter would be a poor investment if it were used only one or two days a month. An adding machine insures against inaccuracy, but it does not follow that all libraries have enough mathematical calculations to perform to make an adding machine desirable. A manifolding machine is not profitable when it would be quicker to typewrite or cheaper to print, or if the occasions when it can be profitably used are very infrequent. All matters of cost and saving, and all considerations of what is the best, are relative questions, the answers to which must depend very largely on local conditions governing not only the library's financial resources but also the volume of work for which the device under consideration could be profitably used.

It must also be kept in mind that in library use very few devices are capable of effecting a *direct* saving of money. A manifolding machine may do so, in comparison with what the cost of printing would otherwise be; a non-evaporating inkwell may effect a slight saving in the purchase of ink; in a very large library an addressing machine may, perhaps, save the salary of a stenographer or typist. But in general it is possible to save money only indirectly through a saving of time or strength or through eliminating mistakes. With this qualification, it will be seen that a few devices meet all the conditions named above, and others meet only some of them. The typewriter, the oldest and best-known labor-saver, saves both time and strength, and promotes both accuracy and neatness. The adding machine may save time and strength, and promotes accuracy. The dictating machine saves time. The manifolding machine saves time when substituted for the typewriter, and saves money when it avoids a printer's bill for work which can just as well be manifolded. Once more it may be emphasized that each librarian must decide for himself, considering both his finances and his work, how much saving of any kind an appliance could effect, and how important, relatively, such saving would be.

By what methods can a wise decision on all these questions be reached, and the

selection of what seems the best be made? The easiest course is along the line of least resistance, and this line is too often pointed out by the persuasive salesman of an inferior article. Even with the salesman eliminated, decision is often difficult. Much correspondence and preliminary investigation may be necessary in order to get in touch with all the competing devices which should receive consideration. The librarian may then devote a large amount of time to examining and testing these devices. He may also, or as an alternative, endeavor to obtain the advice of others who may have had experience with such devices. Either method is costly, and leads to results of uncertain value. How easily, for example, can *you*, by personal investigation, arrive at an intelligent conclusion concerning the merits of the leading typewriters? How easily can you obtain satisfactory statements from other librarians, on which you can base your choice of a typewriter or a manifolding machine or a vacuum cleaner? Would it not be easier to decide on all such questions if you had convenient access to an up-to-date statement, framed after careful investigation and much correspondence, giving the essential facts on which your decision should be based?

A manual containing such statements will be ready for distribution, it is confidently expected, before the close of the present year. In the past year information has been sent to 40 librarians concerning 29 kinds of equipment, and the committee on administration, acting permanently as a clearing house of information (or, in line with Mr. Lee's idea, a "sponsor for knowledge"), will continue to send to librarians, on request, the best and latest information it can obtain on all questions of equipment and mechanical devices. But more than this is necessary if the results of the investigation are to be as far-reaching as the committee wishes. If the librarian wants to strengthen his book collection on any subject, he can very readily obtain reliable information to guide him in his decision. The committee wishes to make it as easily possible for him to secure helpful information which will

facilitate wise decisions on the purchase of all library equipment and appliances.

In the proposed manual will be given the best obtainable information of this nature. In order that it may always be up to date the manual will be issued either in loose-leaf form or as a pamphlet which can be readily revised whenever necessary. If the loose-leaf form is adopted new sheets will be issued whenever necessary, after the first sheets have been distributed, either to replace earlier sheets or to supplement them. If the pamphlet form is adopted the arrangement will be such that the entire manual can be issued in a revised edition whenever it is desired to make important changes or additions. To keep the work more strictly up to date, new information on any specific subjects will be sent as often as received, in advance of the revision of the manual, to all subscribers who signify a special interest in those subjects.

The subscription price of this manual cannot be stated definitely until the work of preparation is further advanced. It will depend to some extent, too, on the number of subscribers. The committee's present estimate, which is, however, subject

to some revision, is \$1.00 if not less than 200 subscribers are received. The subscription price will entitle subscribers to the complete manual as first issued, and to all subsequent revisions for at least one year following the first publication. Thereafter, the annual cost to each subscriber would not be more than a few cents. Subscribers will also be invited to file with the committee lists of any equipment, as indicated above, concerning which they are especially interested in having the most complete information available for reference at all times.

Subscriptions will be invited by the secretary of the A. L. A. as soon as the preparation of the manual is completed and the cost is definitely known. In the meantime, advance subscriptions will be welcomed as a partial indication of the support which may be expected. Those who wish to encourage the efforts to make this work a success, will therefore aid very materially by writing at once to the association's secretary, expressing their willingness to subscribe at a price not to exceed \$2.00, with the understanding that the price will probably be considerably less than that amount.

## FICTION AS REFERENCE MATERIAL\*

By ELLA B. COOK, *Reference Librarian, Trenton, New Jersey, Public Library*

### THE SEQUEL

It would be cruel indeed, after such a pleasant sojourn in this imaginary land of books, to drop you suddenly into a practical world. That is why I shall attempt, though in far less vivid fashion, to prolong your stay by showing the results of the books' successful pleadings.

So many won their cases that there was consternation in the reference department on the day when they were supposed to arrive in their new quarters. The shelves were over-crowded, tables, chairs, trucks were loaded, all with volumes and volumes of fiction to be used in reference work. There was nothing for it but to enlarge the room.

But what is the use of a room full of books about language and lawsuits, persons and places, nature and science, no matter how thoroughly sugar-coated, if one cannot find the information in a reasonable time?

Unfortunately, patience being a virtue, it is of slow growth. Consequently the people demanded greater service and the reference librarian more tools and more assistants, so that now the reference department has at least five trained women, an incredible number. And the tools have grown in the shape of an immense catalog, brilliant with subject headings and analyticals. The staff of catalogers rose up in revolt, but no matter, the public must be served, the books must be pacified. Like all ambitious people the more they had the more they wanted, so, not satisfied with being let into the department as reference

\*This paper immediately followed the one by Miss McClelland (printed in the LIBRARY JOURNAL for March) at the meeting of the New Jersey Library Association at Atlantic City, March 3, 1916.

material, each volume of fiction demanded that its every page be examined and made the subject of an analytical.

There were descriptions of castles and costumes, of knights and ladies, of table manners in the Middle Ages, of customs in Egypt and America, of witchcraft and inquisition, of houses and scenery and people. Nothing was omitted.

"Graustark" demanded to be given a card on the teaching of etiquette! "Quo vadis" called loudly for a place under bull-fights. "Les misérables" must have a heading for the battle of Waterloo. "Romola" demanded that Savonarola's sermon be "brought out."

Fortunately the Wilson Company came to the rescue by publishing a "Readers' guide to current fiction," arranged somewhat after the plan of the periodical index and appearing at similar intervals. The joy of the public knew no bounds. Even club-women could use the index and were able to find their own material. The sole excuse for the librarian's superior knowledge was the creation of atmosphere.

By this time study in the reference department had become such a delightful pastime, that advertising posters, street car signs, bulletins, and the like, were no longer necessary. Statistics grew by leaps and bounds. Whole clubs begged to be invited to study in such an attractive place. The library's praises were sung everywhere. It was not long before the library became the leading institution in the community, and all because a few hundred volumes of fiction clamored to be used as reference material!

\* \* \*

Seriously, there are three questions which suggest themselves as soon as one tries to think how fiction can be used as reference material.

1. What are meant by the terms reference material and reference work?

2. What fiction shall be used? Shall all classes of fiction take their places in the reference department, or shall some kinds be omitted? How shall we determine what shall be used and what rejected?

3. If fiction is used as reference material, how will its use affect the reference department, other departments, and the public?

1. Every librarian knows what is meant by reference material, but for clearness let us say that it is information about any subject in the entire range of human knowledge, that the information must be true, that it must be clearly and generally concisely stated, and that it must be accessible, either through its own position in the book, or by means of catalogs and indexes. If in addition it has literary style, well and good. I have omitted supplementary reading and am dealing with the subject only in its narrower sense. Reference work is, briefly, finding the information.

Fiction has nothing inherent in its own nature which can be called reference material in the generally accepted sense of that term. Of course it can be so used, but in order to use it, our definition must be enlarged to include works of fancy as well as fact, and in the definition of reference work "finding the information" we must put the emphasis upon "finding," rather than upon "information."

2. Having enlarged our definition to include fiction, what shall determine our selection?

Suppose there is accurate information about ginseng in "The harvester," shall that book be used in the reference department? Shall we include Oppenheim and McCutcheon because court life and society manners are described? Will "The secret garden" suffice for a treatise on robins and spoiled little girls, and "The girl of the Limberlost" for one on moths? Or when fiction is to be used for serious study must we not have a higher standard for choice than when it is used merely for pleasure to be cast aside and forgotten in a short time? Obviously we must use it because it is artistic, not primarily for its information. Many examples from the better class of fiction will occur to you. I shall mention only a few.

There is a class of fiction containing sketches of famous men and women, such as Savonarola in "Romola," Washington in "The Virginians," Nero in "Quo vadis," Richard and Saladin in "The talisman," Mary Queen of Scots in "The queen's quair" and in Charlotte Yonge's "Unknown to history," Oliver Goldsmith in Moore's

"Jessamy bride," Alexander Hamilton in "The conqueror," Eleanor of Aquitaine in "Via crucis."

In these and many others there are descriptive passages which might well be made available for reference use, such as the plague and famine in Manzoni's "Betrothed," the battle of Waterloo in Hugo's "Les Misérables," the storming of the Bastille in Dickens' "Tale of two cities." Others might be cited, but we must hurry on to the next point.

3. How will the use of fiction affect other parts of the library and the public?

It is impossible to think of the question "How to use fiction as reference material" without thinking of its effect upon the whole. That is, will it work, and how?

We may agree that much fiction contains reference material, whether we use it for its beauty or its facts. That is not sufficient. It must be made available. There are but two ways to accomplish that end, one through the librarian and her assistants, the other through catalogs and indexes. It would be very delightful to go to a library where the reference librarian and her assistants were able to select the novels containing just the information desired, but catalogs and indexes are still in fashion.

Not only subject headings but analyticals as well will be necessary to bring out the choice bits. To spare the catalogers, analyticals could be made in the reference department. Members of the staff and intelligent readers might be asked to jot down useful passages as they read. Warner's "Synopsis of books" could be used when time was too short for more thorough work. Brewer's and other literary handbooks give suggestions for suitable selections. Some of the rhetorics and books of prose selections contain passages which might be brought out. To save time and expense these could be copied upon spoiled catalog cards and filed in the reference catalog of miscellaneous notes.

Having chosen a selected list of standard fiction and having made it accessible by means of subject headings and analyticals, what is the next step? If the reference department is a separate department in a different room, and if certain works of fic-

tion are to be used as reference material, they must be shelved in that room if they are to be really useful and if we are to keep to our question. If they must remain in the other department, whether it is called the circulation department or fiction department, and used there for reference, our question must be changed from "How to use fiction as reference material" to "What reference work shall be done in the fiction department?"

Finally, whichever way we interpret the question what will be the effect of the use of fiction as reference material upon the public? Several years ago there was much talk of the ruinous effect of teaching poetry by requiring the student to analyze every part. Is there any danger that the student will develop a distaste for fiction if we analyze it for him and require him to read this bit of exposition or that paragraph of description? Perhaps at last we have discovered a way to decrease the circulation of fiction!

Suppose, on the other hand, this serious study of fiction sharpens his taste, making him a keener judge of excellence in style. Will he then become more discriminating in his choice of non-fiction, possibly creating a demand for improved literary quality in our books of travel, biography and history?

The benefits to be derived from any very general use of fiction as reference material scarcely compensate for the time, labor and expense necessary to make so much material available. If fiction is to be used, let it be only the best, included gradually, added slowly and selected with discrimination, because it is honestly believed to contain the best material upon the given subject. Why spoil a work of art, such as is found in fiction, by trying to make it useful? Has it not a far higher and more legitimate use in its own field? If we use it because it is beautiful, well and good, but we shall be compelled to change our conception of reference work.

---

Books should to one of these four ends  
conduce,

For wisdom, piety, delight, or use.

—SIR JOHN DENHAM.

## BOOKSTACKS AS DESCRIBED BY THEIR MANUFACTURERS

THE following descriptions of the better known models of library bookstacks have been prepared by their respective manufacturers, to each of whom the same request was sent. An effort has been made to confine each to a concise descriptive statement of the principal points of construction, leaving the librarian to make his own comparisons and draw his own conclusions.

### LIBRARY BUREAU BOOK SHELVING

LIBRARY BUREAU quartered oak unit shelving in wall and double freestanding type is designed for reading, reference, periodical and open shelf rooms, and is used frequently in stack rooms where a single story height only is required. This shelving is supplied in children's height 4 feet 6 inches, and in adults' height 6 feet 10 inches, both being made in 8 and 10-inch depth of shelf. Where used for magazines, newspapers, etc., 12-inch depth shelving is supplied, furnished with sloping shelves of different depths for current magazines and storage cupboards for old or reserve copies, and with racks to receive newspaper files.

The section may be fitted with removable hinged bulletin boards when desired. This shelving is built throughout on the unit or sectional principle; the unit or section is 3 feet wide on centers, and the initial unit, complete with ends, is the basis of a range of any length. The component parts of

Library Bureau unit wood shelving are paneled end uprights, plain intermediate uprights with base, cornice and shelves for each section. All shelves are adjustable, and the front of each shelf is grooved to receive labels without the use of a label holder.

### BRACKET STEEL STACK

The bracket type of bookstack in use in a very large number of libraries is the most

practical form for either single-story or multi-story installations. Its supporting steel uprights are 2-inch square tubes, formed of heavy-gauge steel, and minimize the obstruction to light and air; and as the upright has an inner reinforcement for multi-story installations, the same form of upright is used up to ten stories in height. The shelves are formed of cold-rolled plate steel, with square-turned edges which form a 3-angle truss, producing the strongest and most rigid shelf possible. The shelves are made with a solid surface so that dust cannot pass through to the top of books underneath, and also to give a perfectly even surface for the books to rest on, preventing the abrasion of book bindings. The brackets, which are of plate construction and attached to the shelf without bolts or screws, are fitted with adjustment hook at the top which fastens into the rectangular holes punched in the stack upright. A safety lug locking into the same series of holes prevents accidental dislodgment of the shelf. The standard book shelves are made in 8-inch, 10-inch and 12-inch depths. Special shelves of extra heavy construction, 18 inches deep, with inverted brackets for close adjustment, are furnished for bound newspapers or folios which must lie flat. All

shelves are adjustable on inch centers and are interchangeable. One distinct advantage of the bracket type of stack is the fact that shelves of varying depth may be used interchangeably in the same section.

**SLOTTED STEEL STACK**

Another form of steel bookstack is the slotted upright type with U-shaped uprights or supporting columns of cold-rolled plate steel, reinforced with inner steel bars and tees. These uprights are slotted front

to back on inch centers to receive the shelves which are of the same construction as for the bracket stack, but finished with notched projecting ends which engage in the slots in the stack uprights. This type of stack is furnished in single and multi-story installations commonly with the 8-inch depth of shelf. All stack is finished in baked enamel of olive-green color, furnishing a smooth, even surface at all points. Special colors of enamel are furnished where desired.

**SNEAD STANDARD STACK**

THIS work is generally built to order to meet the particular requirements of each building, economy being secured by using standardized manufacturing methods, dies, fixtures and patterns. There are three unique features of this stack, namely, the form of the shelf supports, construction of the shelves and the method of finishing the metal.

The shelf supports are made of fine gray iron castings, reinforced, if necessary, by structural steel columns. Simplicity and compactness are gained by making the shelf

supports serve several purposes: to support the adjustable shelves, to hold the books upright, to carry the deck floor of the tier above, and to carry the shelf supports of the superimposed tiers. The shelf supports have rows of rounded blunt teeth on their front edges and strip steel horn locks riveted to their central stiffening ribs to lock the shelves in place automatically and allow of their easy adjustment at intervals of about 1 inch.

The gray iron uprights are made either open work to permit circulation of light and air or solid paneled for architectural effect. They are compactly made without hollow

spaces so that the ends of the shelves are about 7/16 inch apart and all available space can be occupied by the books. All edges and corners are rounded to prevent scratching. Great stiffness is secured by compact ribs behind the back corners of the shelves. Each casting is carefully tested so that the stability of every stack is absolutely assured.

The adjustable shelves are of the ordinary solid plate type or preferably of the Snead open bar construction, and are designed for convenience, lightness, strength, perfect adjustability and to give the books thorough ventilation. The bars are curved

**OPEN-BAR SHELF**

on top so that they will leave no impression on the books. They are made of bright polished strip steel with a surface as smooth as glass and they have a certain flexibility which allows them to rest on all four points of support without rattling. The rear supports are in the form of a simple gravity lock effectually preventing the accidental displacement of the shelves and yet allowing their adjustment without withdrawing them from the compartment. Every shelf is complete in itself without any loose parts or brackets which waste space and are

liable to be bent out of square. Over-size shelves can be inserted wherever required. These are generally used in connection with wide fixed bottom shelves, which, in the case of multiple tier construction, extend over and protect the ventilating slits in

DETAIL AT FLOOR LEVEL  
SHOWING VERTICAL  
PROTECTED DECK-SLIT

the stack deck floors, thus preventing objects from dropping through as well as providing accommodation for big books. The adjustable shelves are finished with baked enamel at the shop. The fixed parts of the construction are painted by hand after erection and finished with air drying enamel or bronze. By this method, any part of the stack may be refinished or touched up whenever required and assurance is given that a stack will begin its work with the finish in good condition and that the finish can be easily, economically and satisfactorily maintained.

The deck framing is generally so secured to the shelf supports and stackroom walls as to tie together both the building and the stack. The flooring material is preferably white marble for the sake of brightness, appearance and good walking surface.

DETAIL AT FLOOR LEVEL SHOWING HORIZONTAL  
DECK-SLIT

Snead stacks are designed to meet all kinds of engineering problems, such as bridging over empty spaces, carrying overhead loads and floors and suspension from roof trusses. Accommodation for heat-

ing, lighting and ventilating equipments and arrangements for future extension, either horizontally or vertically, are readily provided.

TUBULAR STEEL BRACKET STACK

For the sake of economy this stack is made entirely of sheet steel without the use of any gray iron castings. The uprights are of winged tubular form with adjustment holes at one inch intervals and have sections of varying strength for use in stacks of any required height. The security of

LARGE SCALE TRANSVERSE SECTION  
SHOWING DECK FRAMING FOR TWO TIER STACK.

DETAILS OF BRACKET STACK CONSTRUCTION

the shelves is trebly insured by three hooks that engage the slots in the uprights. The shelf brackets are flanged on the front and top edges to prevent straddling the books and are interlocked with the shelves in a secure but easily removable manner. The shelves themselves are made of smooth, cold rolled steel, triple flanged along the front and back edges for stiffness and single flanged at the ends where fastened to the brackets. Both shelves and uprights are finished with baked enamel.

SPECIAL CASES AND SHELVING

The Snead & Co. Iron Works also manufactures steel cases with glass and metal doors used for valuable collections, museum cases of steel or bronze and miscellaneous steel shelving for all purposes.

ART METAL LIBRARY STACKS

The Art Metal Construction Company, of Jamestown, N. Y., has within the last

three years developed a very neat and efficient bracket shelf. The brackets are fastened to the shelves by a special method, the flange on the end of the shelf slipping into an open fold on the bottom of the bracket. This has engaging lugs to hold

the two rigidly together, eliminating any unsightly bolts. This also enables the company to ship its brackets and shelves in the

flat, thereby saving crating and bulk in shipping, and the assembling of the bracket to the shelf is a comparatively simple matter that is quickly done. The standard stack is furnished with both cornice and base, and a cornice can be arranged for the bracket stack also, though it is not usually furnished.

Both standard and bracket types are so designed that at any time future installations may be made. This case is parallel to the ability to add stories to a building at any time, provided the structural features of the initial section of the building are made heavy enough to carry the load of the additional stories.

The Art Metal finish is extra strong enamel and in every way in keeping with the rest of the work.

VAN DORN LIBRARY SHELVING

The Van Dorn bookstacks are made in four styles, the bracket type, the closed

type, plain and simplex shelving, by the Van Dorn Iron Works Co., Cleveland, O.

The bracket type shelving consists of post uprights carrying shelves fastened to brackets by bolts, and the brackets are equipped with a lug and hook as the means of attaching to the upright. The hook slips into the slots in the post and provides a secure yet movable shelf. This type of shelving may be erected in any number of tiers in height, with intermediate floors and stairs.

The closed type shelving is constructed of sheet steel uprights re-inforced with

angles, and with slots for adjustment of the shelves. These adjustments are placed on one inch centers and the entire stack is equipped with base and cornice. A peculiar feature of the Van Dorn shelf is in the small blister on each shelf which prevents accidental withdrawing of the shelf with the books. This type of shelving may also be erected in multiple tiers as well as single tiers.

Van Dorn plain stock shelving consists of solid uprights, backs and shelves, adjustable every inch. The shelves bolt through the intermediate uprights and hook into the end uprights. The uprights are either 6 feet 11 inches, or 9 feet high.

There are two sizes of shelves—24 inches wide by 14 inches deep, or 36 inches wide by 14 inches deep. The bases and tops are 3 inches high and a shelf is necessary for each top and base. If a solid back is not wanted, a pair of back stays is necessary between each pair of uprights.

Simplex shelving consists of a rigid skeleton shelving, consisting of 2 inch by 2

inch channel posts and solid re-inforced shelves adjustable every 3 inches. This shelving is easily put together without tools. The stock sizes of the posts are 7, 8, 9, 9½, or 10 feet high.

#### GENERAL FIREPROOFING COMPANY

The General Fireproofing Company, of Youngstown, Ohio, emphasizes in its manufacturing of metal library stacks, the popularity of standard slotted shelving. Its adjustment of shelves is on .97 of an inch, instead of the one inch adjustment found on the average type of shelving, which means that this type of book stack permits the average woman to reach the top row of books without the necessity of a stool. The shelves lock in, making a rigid and durable stack, as well as a good looking one.

This type of shelving can be designed to carry any number of additional stacks in height, and heating and ventilating ducts, as well as electric wiring, can be carried up in the ends of the stacks out of sight.

Some of the little refinements to which the manufacturers call attention are adjust-

able shelf label holders, several types of book stops, double label holders on ends of double faced stacks, number plates, etc.

#### THE BORDEN CANTILEVER BOOKSTACK

ALTHOUGH this stack, patented Dec. 28, 1915, and manufactured by the Borden Bookstack Company, Westport, Ct., differs from others in several points that have been suggested to the inventor in his

long experience as a practical librarian, the most important difference between the Cantilever and other bracket stacks lies in its system of bracing. Architects know, and librarians who have had engineering experience also know, that when such heavy weights as books are to be supported, in multi-story arrangement, by a compara-

tively small column of steel, that column must be so adequately braced from every direction that it cannot be bent at its weakest points, which are where the different stories of the stack are joined together.

An overweighted column does not yield by crushing, but by bending. The lowest joint of a ten-story stack must hold true under a load of from seven to ten tons; rather too large a weight for anything short

of the most scientific bracing. Each lower post of a four-story stack must support nearly three tons.

Each post of every story of the Cantilever stack is braced *along* the line of the rows by a system of horizontal and diagonal braces common to most stacks. *Across* the line of the rows each Cantilever post is fastened to the post opposite by an arched cantilever truss of steel. This combination of braces renders every post immovable and makes each story of the stack a solid foundation for the story above. The only limit to the height of a Cantilever stack is the point at which the entire stack becomes a column and is subject to the engineering restrictions that limit the height of columns.

The braces of the Cantilever stack are so placed that they do not infringe upon the book space of the stack. The presses extend in an unbroken length from the bottom of the stack to its extreme top (they are not interrupted at the top of each story); the shelves may be hung at any inch of this space, thus increasing the capacity of the stack by ten per cent. or more.

In this stack, also, the hollow post of the ordinary bracket stack has been turned inside out, decreasing the width of the double-faced cases by nearly two inches and thereby increasing the number of rows in the stack room. This change of form converts the hollow post into a solid one, bringing all surfaces liable to rust out into the open where that rust can be detected and remedied.

When the posts of the Cantilever stack are used *in* the stacks the ends carrying the cantilever trusses are at the top of each story; when these posts are used in the wall cases and floor cases of the reading rooms they are turned upside down, bringing the cantilevers to the bottom where they form broad bases on which the cases stand securely without any further cross bracing. The shelves of the reading rooms and the stacks are thus made interchangeable.

Both the floor cases and the wall cases (as well as the stack cases) will take any width of shelf, up to twenty-three inches,

and in any of these positions the shelves may be spaced within a fraction of an inch of each other, if so desired.

The shelves of the Cantilever are ordinary bracket shelves, with the brackets reinforced against bending, and the hooks so staggered that they cannot hit each other when inserted into the same slot from opposite sides of the case.

Every part of the Cantilever stack, or of the reading room cases, is made by machin-

ery and is interchangeable; the manufacture of the various parts is carried so near completion that the erection of the stack in the library is only a matter of inserting the bolts in holes already punched for them; any good mechanic can do it; the same degree of intelligence can also take them down again, re-erect them in another building, or store them away for future needs. The stacks are furnished in baked enamel, in paint, or in the raw steel (the library to complete the finish after erection). Or the manufacturers will erect, if so desired.

Every piece of steel introduced into the Cantilever stack is put there to meet some

definite stress and to meet it adequately. While the Cantilever is lighter than any standard stack it is also heavier than some others of the bracket type, though not without a very good reason.

#### AN ENGLISH SHELF STACK SYSTEM

THE *Librarian and Book World* of London, in its February issue, describes a system of bookstacks invented by Alexander J. Philip of the Borough Library of Gravesend.

"The essential feature of the new shelving and stacking," says the *Librarian*, "is steel tubes of greater or less weight according to the use to which the shelving is to be put. That is, for a library the tubes would be comparatively light, but for storing metal ingots in a foundry they would be appreciably heavier. The outside of the tubes may be grooved with a shallow, flat-topped worm.

"Four of these tubes form a single stand joined together by cross-ties of tubing at top and bottom. The top jointing is by means of right-angles which screw on to the worm of the tube, the bottom joins a tube with a screw circle going over the tube to the desired height. This bottom bracing is unnecessary in a library. The ends of the upright tubes fit into feet on the floor. The support for the shelf is a grooved collar, running on the wormed tube, with a loose lip.

"The collar (four to each shelf) is strung on the upright. It is moved round, running up or down the worm of the upright, to the required height, carrying the lip, which revolves on the collar, with it. The lip is upright to carry a small tube for the support of a steel shelf falling on the tube. For books, which are lighter, the shelf may be all flat resting on lips.

"This is also the form to be used for wooden shelves.

"This is the essential feature of the new shelving. It fulfills the ideal conditions in the following way:—

"(1) Reduced cost: being a tube, made in one operation in any length, the cost is very much less than in the usual standard in which there is considerable handwork.

"(2) It is mechanically perfect because there is no spring throughout, to fail at odd moments, to lose its elasticity, and to suddenly jump.

"(3) The adjustment is microscopically exact, and yet for use in warehouses, shops, etc., where the shape of the articles stored makes it desirable, the back of the shelf can be lowered to produce a slope.

"(4) For lowering the shelf there is no need to remove the contents. For raising it, however, the weight must be taken off the collar. If there are fewer shelves needed than the collars provided, the unused collars may rest on the next shelf or be turned to the bottom.

"(5) The four standards with the bracings produce an absolutely rigid structure, capable of resisting any pull or shock in any direction. The base need be no wider than the body—in most stands it is necessary to make the base stand wide—because the weight is distributed over the square instead of being thrown on to a centre upright.

"(6) The weight to be carried by reason of the distribution over the square is unlimited.

"(7) Expansion is unlimited. One of the T or right-angular pieces for jointing must be the key, after that any length in any direction can be added. If a single has to be made into a double-fronted case or stand, the juncture is effected with T's.

"If a second stand has to be added to one existing a double-angled joint is used to connect up.

"If a shallow stand has to be made into a deep one, another upright is connected with similar joints.

"If two straight stands have to be made into a corner shape, the joints only need to be changed.

"In fact, there is no practical limit to the extension of the casing in any direction, including upward.

"(8) Portability. To remove the whole stand and dismantle it, the only operation is to disconnect the joints.

"(9) Simplicity in design. The spiral of the worm produces a pleasing design in the four chaste uprights. The square of the four uprights makes a complete structure

without any appearance of being a skeleton—even when the shelves are empty.

"(10) Increase of decorative effect. If, however, something more ornate is desired, the field is without any restrictions. The most simple addition is scroll work attached to the corner joints; this can be of any size and design reaching from top to bottom. If something still more advanced is desired, a whole sheet of steel can be hung in the same way, or a case of steel can be built up round it, although in practice it will be found that such extension of ornament is not necessary except where it is desired to give the appearance of wood. Bronzed, silver or gilt, or even black or green, the uprights look handsome.

"(11) The simplicity of manipulation does not require demonstrating.

"(12) Stack system. This has had its greatest development in America and is very little used in this country. In principle it may be described as building each floor with book-cases resting on book-cases on the floor below. This new shelving can be carried up story upon story by joints with a floor in place of a shelf.

"(13) The healthy conditions under the system are obvious. As there is (unless desired) no base, and there is a clear space under the last shelf, no dust gathers. In warehouses and libraries it is desirable to have the lowest shelf at least a foot from the floor. This can be regulated according to the condition of the stock, its nature, and the demands made upon the shelving at particular times. The top is covered in by throwing up a top shelf.

"(14) Libraries require three degrees of stands: the cheapest and most simple for stacks, something perhaps a little more ornate for the lending, and something handsome for the reference library.

"(15) For use in factories or warehouses the shelving lends itself admirably, as wooden shelves can be readily transferred for transporting from one place to another without unpacking."

---

A GOOD book is the precious lifeblood of a master spirit, embalmed and treasured up on purpose to a life beyond.—MILTON.

## LABOR-SAVING DEVICES

To stimulate interest in the practical adaptability of various labor-saving devices for library uses, the LIBRARY JOURNAL offers herewith short descriptions of a few of recent development or in standard use. This schedule does not attempt to be comprehensive, nor is inclusion in this list to be construed as a special endorsement, on the part of the JOURNAL, of the appliances described.

### UNIVERSAL PASTING MACHINE

The Universal pasting machine made by A. G. Prior, 136 Liberty Street, New York City, is a saver of time, labor and paste. The cost of size no. 1, which is the size best adapted to most library purposes, is \$10. The cost of up-keep is practically nothing, for the construction of the machine is extremely simple and it can be used for several years without the replacement of any parts. The machine may look to some like an ingenious plaything, but those who have subjected it to a careful comparison with the old method of pasting by hand, have demonstrated that it is an important saver of time and strength.

The base of the machine contains a reservoir into which a suitable amount of paste mixed to the right consistency is placed. When the book plate, dating slip, or card pocket is fed between the rolls by means of the crank, a thin layer of paste is evenly distributed over the surface and it is ready for inserting in the book. If the paste is of the right consistency the rolls cannot deposit too much paste on the surface of the paper and the paste is necessarily distributed evenly. If, as in the case of dating slips, it is desired only to tip the slip in instead of pasting it over the entire surface, this can be done by feeding the slip the desired distance through the machine and then reversing the roller. This results in getting the upper roller somewhat covered with paste, but it is readily cleaned.

The care of the machine requires but little time. The machine can be used to good advantage every day if there are on an average 25 or 50 or more books to be pasted, or in smaller libraries it can be

saved for occasional use when a large number of rebound books come to be prepared for circulation.

### MULTIPLEX DISPLAY FIXTURES

Few devices are known by a more truly descriptive name than the *multiplex* display fixtures made by the St. Louis Multiplex Display Fixture Company. These fixtures are made in many different styles, and the uses to which they have been put in many libraries are manifold. For the display of pictures, posters, bulletins, maps, reading lists,—in short, for the display of *anything*, there is a Multiplex fixture.

The essential features of the Multiplex are a main frame or standard, to which are attached a number of swinging leaves or wings. The main frame is made in many sizes and styles, and may be placed on a base attached to the floor, or may be placed on a desk or counter, or fastened to the wall, to the end of a bookstack, or a table. The leaves are pivoted to swing easily, and

open out so that the exhibit on each leaf is readily displayed to view. If desired, they are so pivoted that they can be brought to any position or angle, and two adjoining leaves can be shown to full view at the

same time. This style of Revolving Multiplex, shown in the first cut, is excellently adapted for use by lecturer and for many exhibition purposes.

Another style very useful in libraries consists of standards attached to the wall or a table, equipped with wings on which is narrow shelving, with guards, and adjustable to any height, for the convenient display of book lists and other printed matter intended for distribution. Other similar standards have wings covered with glass, for the better protection of fine pictures which it may be desired to display. Some libraries have made an interesting combination of these two styles, having some glass-

covered wings for small exhibits of pictures, and some wings with the shelving, on which are placed reading lists and bulletins bearing on the subjects illustrated by the pictures.

One of the newest styles of the Multiplex

is designed for filing lantern slides. It carries 27 leaves, each leaf having a capacity of 56 slides, giving a total capacity of 1512 slides. In this fixture the leaves, instead of being pivoted to revolve about a fixed point, slide into a cabinet. The second cut shows how readily the slides can be brought into view, 56 at a time, by drawing the sliding leaf from the cabinet. A covering of tracing linen diffuses the light so that the slides, when exposed, are protected. The rest on which the leaves are drawn out for inspection of the slides becomes a dust-proof door when the leaves are all in place in the cabinet.

These few examples are fairly typical of what the Multiplex fixtures can be used for in libraries. All of the many different styles contain the same essential features and meet the same purpose of displaying exhibits compactly, conveniently, and attractively. The flexibility of the Multiplex system is such that new styles are being frequently brought out, designed to satisfy special needs.

#### VISIBLE INDEXES

The visible index made by the Index Visible, Inc., of New Haven, Ct., is in use in a number of libraries where comparatively short lists are needed for quick reference, as for listing periodicals, new books, coming events, the "black list," and an alphabetical list of manuscripts in process of chronological compilation. Cards are mounted on aluminum strips in such a way that they overlap, leaving the top line visible on each, and the strips, whether hung on rods or on a wing device, leave every key word visible. A device similar in appearance, though with some points of difference in construction, is manufactured by the Rand Index of North Tonawanda, N. Y.

#### CLIPLESS PAPER FASTENER

The Clipless paper fastener, for fastening together three or four sheets of paper as in a correspondence file, is made by the Clipless Paper Fastener Company of Newton, Iowa. It is in two styles, one operating like an ordinary perforator and the other like an ordinary punch. The latter is a specially useful little tool, saving time in

preparing letters for filing and space in the file itself. The fastener simply cuts a hinged tongue from the paper itself, bends

it back and inserts the tongue in a slot, locking the papers together easily and securely.

#### INDEX STAMP HOLDER

The Index stamp holder is made by the Index Stamp Holder Company, 6313 Harper Avenue, Chicago, in four different styles and many sizes. Style no. 1, the style best adapted to library purposes, is an ornament to any desk rather than a disfigurement and has the further advantages of enabling one to locate a desired stamp instantly. Whether the holder contains 12 stamps, or 36, or more, every stamp is in full view at all times. The index cards on the base of the holder supply a key to the arrangement of the stamps, so that there need never be any groping about to find the desired one. The Index also enables one who is not familiar with the arrangement of the stamps, to find any one which he may desire without trouble.

The metal parts of the holder are finished in hard rubber enamel and the top of the base is covered with glass to keep the index cards clean and visible.

#### AUTOMATIC COUNTERS

As it is desirable to make suitable records for statistical data of the various classifications of books placed in circulation by libraries, some means of tabulating this must be employed. The Veeder Mfg. Co. of Hartford, Ct., market three types of automatic counters for this purpose.

The counters may also be used as attendance registers, recording the number of persons entering or consulting the books in a certain department. They are customarily used in groups—one counter for each record or classification it is desired to obtain.

#### FABRIKOID FOR BOOK-BINDING

With the increasing shortage of hides, users of leather are looking to other quarters for material that will take its place. During the last few months the increasing cost of skivers and buffings for book-binding has caused many binders to consider giving artificial leather a trial. Book-finish Fabrikoid, manufactured by the E. J. Du Pont de Nemours & Co., is one of these artificial leathers under consideration, and is the result of a practical binder's experience. Some of its advantages and features as set forth by the manufacturer are that it has the leather effect in any grain or color; it comes in rolls and thus eliminates waste in cutting; it has just the needed degree of pliability, neither too soft to work well in a case-making machine, nor too hard to stand the bending of the joints; it is water-proof and washable, and book-covers of Fabrikoid can be washed; it is vermin-proof; and its cost is less than real leather.

#### ENAMELED STEEL SIGNALS

Smith's enameled steel signals, made by Charles C. Smith, Exeter, Neb., are designed for follow-up work of all kinds

either in ledgers or on card records. In library use they are especially well adapted for the purpose of following up over-due periodicals or keeping a record of outstanding book orders. The signals are made in different sizes and colors and are fur-

nished either plain or with printed guides. They therefore have an adaptability which suits them for many different purposes. In a small library an extremely simple system could be installed at slight expense, whereby there could be more satisfactory supervision of the outstanding book orders and of delinquent periodicals. In the larger libraries where the records are necessarily more extensive and the needs of supervision more urgent, a more elaborate system of signals could be installed which would simplify the work of keeping all records up to date.

The signals are made of two plates of tempered steel firmly welded together.

There is nothing to break or wear out and they are easily attached to the card or the ledger, while at the same time, they are clipped so closely to the card that they cannot accidentally become detached.

NEW CLEANING METHOD

The "Lang Method" of scientific library cleaning, recently perfected, was originated by William W. Lang and was first tried out in the Yale University Library. Since then it has been adopted by a number of libraries in New York City. It makes use of the vacuum system, but through the use of new devices for handling books, pamphlets and unbound material, together with special brushes for taking the dust, the work is done in a convenient and systematic manner and without causing injury or disarrangement.

The operation includes removing all books, etc., from shelves and cleaning both with a special vacuum brush, after which the shelves receive treatment with a special dust absorbing brush. Pamphlets and loose material are cleansed with a contrivance which renders them dust-free. Atlases, bound newspapers, portfolios, etc., are conveniently handled with another device.

A knowledge of the "method" is as necessary as the equipment. Mr. Lang makes a contract to clean the library once and by studying conditions is enabled to adapt the various devices and to instruct operators so that the outfit furnished is adapted to the particular conditions and needs of the individual library where the "method" with its apparatus is installed. Regular employes of the library can easily do the cleaning thereafter. It is claimed that with this innovation, one man can accomplish from three to five times as much as under ordinary conditions and get a far better general result.

SCHAPIROGRAPH MULTICOPIER

A duplicating machine which has been found useful in a number of libraries is the Schapirograph Multicopier, made by the Schapirograph Co., 228 West Broadway, New York City. It consists of a band or film of duplicating material, stretched across a platform in a box, wound on a spool at either end. The copy to be duplicated may be written either with typewriter or pen, the handwritten copy being capable of producing more copies. This is placed face downward on the band and left for two minutes, producing a negative from

which the duplicates are made. When enough are printed the film is wound up until a new copying surface is in position. The old ink will be absorbed so that the film can be used a number of times before it need be replaced.

### JOHN THOMSON

JOHN THOMSON, for twenty-four years librarian of the Free Library of Philadelphia, has passed away, and with him has departed another of the splendidly equipped men of books who are seldom found in the later generations. Librarian, actor, musician, and even prestigitator, he brought a marvelous versatility into his labors for the building up of one of the most popular educational institutions of this time.

Mr. Thomson was a self-taught man. Although he had but the beginnings of an education in a London Latin School, he deciphered the most difficult text or elucidated the dimmest of manuscripts with comparative ease. His first work in America was in connection with the library of Mr. Clarence H. Clark of Philadelphia, and those who are familiar with Mr. Thomson's catalog of that collection will think of it as the most important production from his pen. His work in the library of Jay Gould was not so interesting on account of the restrictions as to the subject matter of the catalog.

The Free Library of Philadelphia was chartered in 1891, but it did not open its doors to the public until 1894, when three rooms in the City Hall were awarded to it. In the meantime a series of branch libraries had been built up under the supervision of a committee of the Board of Education, and these two institutions were ultimately joined in one system. Mr. Thomson, therefore, began his active work in 1894, and for about ten years thereafter the writer saw and consulted with him nearly every day in the year. Indomitable in industry he would work from early morning until half past six at his desk, and then, after a hasty lunch, travel to some suburban library or institute to lecture upon one of the many topics in which he was interested, or to take part in some

local function, more or less in line with the library work. Although a man of firm convictions on very many points, Mr. Thomson was always willing to listen and to profit by the advice of his friends. In fact he was more than remarkable in this respect.

It was largely owing to his efforts that Mr. Widener presented to the institution the wonderful collection of incunabula which is now in the Widener branch, and he conducted alone the negotiations with Mr. Carnegie which led to the presentation of the \$1,500,000 for the branch libraries. While he delivered many lectures and wrote a number of treatises he will always be best remembered by the marvelous breadth of his interest in his conversations with his friends.

He was an organist of no mean ability. Thoroughly familiar with the church music of all time, he delighted in Mrs. Thomson's enthusiasm in hymnology. He would tell with the greatest pride of her having composed more hymns in the present Hymnal than any other living writer. He was thoroughly versed in the ceremonial of the church, and could not only give you the reasons therefor, but would describe the difference between it and the ceremonials of other churches.

He was associated with Dr. William Pepper in the foundation of the Philobiblon Club, and had a great deal to do with the success which attended its development.

He had hosts of friends in the Franklin Inn and the Art Club. He received honorary degrees from the University of Pennsylvania and Ursinus College—tributes which gave him the greatest satisfaction. He will be missed by his friends for what he was, and by a large constituency in the city of his adoption for the many kind acts that he took pleasure in doing. His indomitable energy was never better shown than in his final struggle.

The portrait of Dr. Thomson which appears as the frontispiece of the issue, was painted by Henry Rittenberg. Mr. Rittenberg had only two sittings for this portrait at the end of June and the beginning of July, 1915. Mr. Thompson had al-

ready, at this period, been confined to the house for some months, only going down town at rare intervals. Sick as he was, he wished to be painted standing, and his erect, seated position in the picture suggests his strength of will. The large volumes with clasps, and the opened volume back of them, are sixteenth and seventeenth-century liturgical books, placed there to indicate his interest in books, music, and matters ecclesiastical. Over the corner of them is thrown the doctor's gown. This painting, which measures 40 by 50 inches, will hang in a place of honor in the new main building in Philadelphia.

THOMAS LYNCH MONTGOMERY.

### A CLIENTELE OF MEN\*

THE National Cash Register Library is now passing through the metamorphosis every collection of books passes through before it becomes a well-organized library.

The books accumulate. A custodian, a factory employe without library training, was appointed. The fiction collection grew rapidly and became very popular. Little or no discretion was used in the selection of books. Any book requested was purchased. The employes were pleased and satisfied. The factory was a convenient place to borrow the latest stories. There is no objection to this. Recreative reading is essential. The trouble lay in the fact that the library was a corporation library. Its service was giving no material gain to the company. That is the first step to be considered in a library supported and maintained by a business.

The company has an organization plan which provides for the arranging of the departments in groups called pyramids. About two years ago the library was transferred from the welfare pyramid to the educational pyramid. It soon became evident that a radical change was necessary to make the library fill its proper mission under this pyramid. The company hesitated a long time between appointing a practical business man or a woman with library training.

The library is under the direct supervision of the bulletin department. This department has carried on the real reference work for the company; subjects and books were analyzed; digests made; lectures compiled; newspaper articles written; research work carried on. The head of this department, with his complete understanding of this phase of library work, and I have worked hard on the construction of plans for a business library that will suit business methods and library technic. The reorganization of the library is still under way and will be for some years to come.

The purpose of the library to the company differs from the regular business library. We do not have collections of books on how to construct cash registers. The library resembles the college library more than the highly specialized business library. The collection of books is general, but we are rapidly developing special classes, such as business organization, buying, selling, salesmanship, advertising, accounting, auditing, and practical psychology for the men in the offices and on the sales force, and metallography, metallurgy, tool-making, mathematics, etc., for the men in the shop.

Our greatest effort is made to arouse the interest of the men in the shop. They are skeptical about finding anything in books that will prove of practical value in their work. We are working on the same five fundamental principles that the sales force uses in the selling of cash registers. First, attract the attention; second, arouse the interest; third, create the desire; fourth, gain the confidence; and, fifth, close the sale.

And now, how to put these into effect in the library? It was necessary that the library have some direct point of contact with the men in the shop. And to get this point of contact, the library purchased two complete sets of "The Machinery Reference Series and Data Sheets." I shall use these series to illustrate this method.

The men were told about the sets. But they did not use them to any extent until we issued a descriptive pamphlet of the sets, in pocket-size edition, copies of which were inserted on the *N. C. R. News*. This

\*Being extracts from a paper read at the annual meeting of the Ohio Library Association, Oct. 5-8, 1915.

is the factory paper. Each employe receives a copy. In the pamphlet we tried to reach several types of men with the information about how to obtain these books from the library. The simple arrangement of the sets was explained for the benefit of the men who like to find their own material. Information as to the length of time books may be kept, and library hours, was given for those who had never come to the library. For the men who do not have time, or for some reason do not want to come to the library, the use of the department clerk is permissible. That was our first attempt to attract the men in the shop.

Many men who had never been near the library are now our regular patrons. As soon as a man signs an application we know the type of books in which he is liable to be interested. The application shows the name of the applicant, the department in which he works and his check number.

It is easy to pick out the newcomers from the large number of persons who use the library at noontime. The newcomer approaches the desk, and, in rather a frightened manner, asks for R68 or R71 of the Machinery Reference Series. He is given special attention. He is taken to the collection and the books are found for him. While looking through one he feels more at ease. His interest has been aroused by finding something in the book with which he is familiar. A new member never leave the library without fully understanding that we know his knowledge of the work is so much more complete than ours, and that possibly the book we have given him will not be of use to him. In that case he is not to hesitate to return the book and, frankly tells us it is not the one he wanted, and we will try again. He leaves the library with his interest thoroughly aroused. When he returns the book, we know by the department he is from and the book he returns, what to recommend. He is shown several books on the subject in which he is interested. The desire to know more about the subject, or to read what other people think about the subject, is created.

The confidence of the man has been gained by not failing him on his first visit

to the library. By these methods we gain new members, who become constant visitors to the library. Individual work with the people is the secret of success in building up a clientele in a business library. We have attracted his attention, aroused his interest in the library, created his desire to know more about his work, gained his confidence in the ability of the library to help him, and closed the sale by having a satisfied user of the library.

Another method is the special and prompt attention give to the reference questions that come by telephone, messenger, or from persons who have no time to wait. Here I want to mention the great amount of assistance received from the reference department of the Dayton Public Library. In gathering data on a subject, all available information is collected and carefully marked. Business men have no time to search through contents and indexes to find what they want. If the question is too technical, we refer it to the department where it best can be answered. For instance, a difficult question on diseases is referred to the hygiene department, on chemistry to the test department, on law to the legal department, on electricity to the electrical engineering department, etc.

It will be necessary to do this until every book in the organization is entered in the central catalog at the library. Many of the offices have collections of books that especially pertain to the work in their departments. By cataloging and marking the cards with the name of each department having the books, and filing the cards in the library catalog, these books will be made available to any employe in the organization. These collections will supplement and greatly strengthen the general library collection.

Supplementing the work of the educational department is another important function of the library. The company has about one hundred and fifty young men attending classes of the Co-operative School at Stivers High School and the University of Cincinnati. The instructors as well as the students come to the library for research work. We use the usual library system of reserving a space for books on the subject which is being studied.

The system used by the company to instruct these apprentices is far-reaching. The foremen of the departments are given lists of questions by the instructors of the Co-operative School. With these as a guide, they are to give assistance to the apprentices in their departments. Many of these men come to the library as a last resort. They are practical men, who understand how to do their work perfectly, but have to have assistance to be able to explain the theory. The course in business English given to the clerks reaches the men in the offices in the same manner.

Many of the heads of departments are organized into classes and receive a general business course based on the Alexander Hamilton Institute books. Every six months, classes are held at the Agents' School for the training of salesmen.

All these courses are outlined and planned in the bulletin department. Rough drafts are mailed to the library. Lists of books supplementing each lesson are returned to the bulletin department and the books held until after the classes have met. Last year we had one special table for the English students. Every noon hour the men spent some time looking up antonyms, synonyms, and the definition of words.

The National Cash Register Company have long contended that in order to build the best machines, they must also build the men who are to build these machines; hence, we have a real reason for the existence of hygiene departments, rest rooms, gymnasiums, lecture halls and educational work. The library is part of this man-building work at the factory. And there lies our only excuse for existence.

EDITH PHAIL, *Librarian, National Cash Register Company, Dayton, O.*

#### THE PUBLIC LIBRARIES OF PARIS: TO-DAY—TO-MORROW

THE library situation—or at least the public library situation—of Paris was described last year in a paper of approximately 14,000 words by E. Coyecque which was printed in two parts in the *Bulletin de l'Association des Bibliothécaires français*, (Jan.-April, 1915, p. 9-22; May-June, 1915, p. 49-61). In this paper he gives an ex-

haustive analysis of the subject from all viewpoints.

From it we learn that Paris has 82 libraries, created, endowed and maintained by the municipality. These may be divided into two groups, the *arrondissement* or district libraries and the *quartier* or ward libraries; 20 of the former, 62 of the latter. The *arrondissement* library is installed in the district municipal building. It is open twice a day and offers loan and reading and reference facilities. The staff is selected either from employes in public offices, or from retired members of these offices. The *quartier* library is installed in a boys' primary school, and is a loan library only, open once a day. The school director and an assistant instructor fill the positions of librarian and assistant-librarian. These are the general characteristics with a few variations. The 11th *arrondissement* library opens eight hours a day; the 16th *arrondissement* library besides loan and reading departments has historical, topographical and literary collections which are memorial legacies.

These 82 municipal libraries were not founded at the same time. Some date from the Second Empire; the greater number date from 1878; the oldest have been in existence fifty years; the majority have been in operation for twenty, twenty-five or thirty years. "This chronology," says the author, "raises the question; 'During this long period have the municipal libraries kept pace with the great law of evolution?' In other words, 'What should be the status of a municipal library in the City of Paris, of our epoch?'"

Under the sub-heading "The library of to-morrow" the author then details extensively the functions of the up-to-date library, and emphasizes that under the modern conditions specified, "the municipal library becomes transformed. It is no longer 'popular' only; it becomes 'public,' because 'tooled' or directed to serve all,—it is useable and it is used by all. Thus, in England, in America and even already at Levallois-Perret, are the functions of the modern public library understood. Is not the public library the most excellent of post-graduate institutions? that which becomes the companion of the grown-up

even before leaving school, to accompany them throughout life, and to leave them only at the threshold of the tomb? . . . The time then has arrived to modernize the municipal library, and this does not mean to increase the library budget, but to employ to better purpose the social capital already devoted to the purpose, so that it may produce real—*commercial*—results."

"The author then proceeds to demonstrate how these results can be best obtained, elaborating the details with much historical, interesting and lively comment under the headings: Location; Books; Publicity and catalogs; Hours; Home loans and reference reading; Free shelves in the free library; Administrative organization; Administrative council and general director; Local agents and local commission; Feminism in the library. All the suggestions are made along the lines of the most up-to-date American library methods.

Part II of the article is devoted to "The library of to-day," and the opening paragraph typifies its contents: "If with the ideal library, the library of to-morrow, of which the essential features have been indicated, is compared the actual condition of the municipal libraries of Paris, one finds unfortunately that the differences are still very great."

Illustrative of these conditions is the paragraph: "The great trouble (*désastre*) with French libraries," says our confrère Eugene Morel, "is that they are always shut. Of the 82 Parisian libraries, 14 open two and a half months a year; 67 others open only a month and a half a year; one only, that of the 11th *arrondissement*, the dean of the libraries, dating from the Second Empire, is open three months in the year. Let it be understood that the 14 open twice a day for the two-hour sessions; and the 67 once a day for two hours. As a contrast, the library of the Place Voltaire opens from 11 to 17 hours." The recommendation will appear somewhat strange to American eyes that "in the district libraries the work of assistant librarians could be usefully confided to women," and that "in all other libraries, women are quite capable of filling

the functions of attendants." And will the American mind agree with the author that "an increase of the library budget is not needed to produce better commercial results" when we read in "The budget of municipal libraries" that in 1915 the total expenses for operating 83 municipal libraries amounted to 287,200 francs (\$57,440) while the fixed annual salaries ranged as follows:

#### *Librarians*

28 of the 1st class at 1000 francs ea.=\$200.

26 of the 2nd class at 800 francs ea.=\$160.

27 of the 3rd class at 700 francs ea.=\$140.

#### *Assistant Librarians*

34 of the 1st class at 650 francs ea.=\$130.

34 of the 2nd class at 600 francs ea.=\$120.

35 of the 3rd class at 500 francs ea.=\$100.

#### *Attendants*

58 of the 1st class at 500 francs ea.=\$100.

60 of the 2nd class at 450 francs ea.=\$90.

### REPORT OF THE NEW YORK PUBLIC LIBRARY

THE report of the New York Public Library for the year 1915 shows a continuance of the steady growth which has been a feature of its existence each year. Some comparative figures brought together in the report of the trustees show what this growth has been in the past five years.

The number of visitors to the Astor and Lenox libraries in 1910 was multiplied more than tenfold in the number of visitors during the past year to the central library. The number of those who called for and consulted books in the reference reading rooms in the central building has grown from 232,506 to 827,644. The total number of books and pamphlets belonging to the corporation has increased by nearly half a million—or from 1,919,982 to 2,410,379—of which a large proportion are now exposed on open shelves for the indiscriminate use of all visitors. The total number of employes of all classes has increased from 732 in 1910 to 1248 in 1915; that is, it has almost doubled.

All of this, it must be noted, has been accomplished without any corresponding increase in the invested funds of the corporation or in its income. For the first complete year of occupation of the Central building, the expenditures of the reference department were \$473,579.42, but these had increased in 1915 to \$617,704.43, an in-

crease of only 23.38 per cent. The expenditures of the circulation department increased still less—from \$656,685.10 in 1910 to \$806,026.42—a growth of only 22.74 per cent. The income for circulation is almost entirely derived from an appropriation by the city.

The five years for which Mr. Carnegie provided a maintenance fund for the library school have expired, but his contribution has been continued for another year. Its continued existence, however, is a matter of serious concern.

During the year 2,558,717 persons entered the Central building. Of these 827,664 registered as readers, and were supplied with 2,289,436 volumes. The most popular class in the main reading room was literature; the next was economics and sociology, and the third, history. The circulation from the branches amounted to 10,384,579 books.

In the American history division considerable research work has been done, and a large number of American and Canadian maps have been added to the map collection. The manuscript division became a separate division during the year. An unusual number of readers were noted in the genealogy and local history division, due to the increased interest in anniversaries of cities. Readers here numbered 26,129, and they consulted 154,863 volumes. People came to the art and prints division for all sorts of information, as well as to view the exhibitions there displayed. In the music division work was begun on the revision of the catalog as well as on the card index of characters, scenes and stage settings of operas. An unusual number of books and pieces of music were added to the collection. The economics division, which now includes the documents division, had 21,446 readers and added 21,728 pieces to its collection. The effects of the war in Europe have been seen in the character of the investigations pursued here, and the selection of material has been influenced by the increased interest in economic and sociological problems.

In the science division there were 24,712 readers. During the entire year there was an unusual demand for books on optics,

more especially on the manufacture of lenses and the physical properties of optical glass. As in the preceding year, the European War increased the number of inquiries about pharmaceutical products. To facilitate the search for information, and to help those who read only English, much time was spent in selecting and indexing articles in the *Philosophical Magazine* and in the *American Journal of Science*. In the technology division, the war brought many investigators to the library to study the opportunities afforded for new industries, notably in the coal-tar and petroleum products. The toy makers sent their agents to learn how to make dolls, mechanical toys, and Christmas tree ornaments. Annotated lists of new technical books printed separately and in the library publications have proved useful and popular. There were 85,326 readers in the technology and patent rooms, 70,282 coming to the technology division. This was an increase of 64 per cent. for the latter and 13 per cent. increase for the patent room.

The oriental, Jewish and Slavonic divisions all report an increase in number of readers, but a serious decrease in the number of foreign books, magazines, and newspapers possible to obtain by importation, and readers have had to depend more than usual on the publications in foreign tongues printed in this country.

In the new manuscript division 375 applicants registered and were supplied with 776 volumes, 183 boxes, 5 packages, and 1082 separate pieces of manuscript. Many more persons, who were not registered, sought advice and information pertaining to books, articles, or addresses, upon which they were engaged, or else they submitted manuscripts for an opinion as to their genuineness or intrinsic value. The most important accession was the papers of William Smith, the historian of New York, covering the period from 1763-1783.

The collection of about 60 war periodicals has had many readers in the periodicals division. Trade journals were also much in demand. Thus, a representative weekly journal dealing with the subject of advertising was called for 646 times during the year; one dealing with drygoods, 902 times; one

on architecture, 973 times; one on hotels, 259 times; and one on jewelry, 279 times. There were 549 calls for a certain weekly dealing with railways, 1693 for one about real estate, and 1919 calls for a journal on the subject of moving pictures. There were 161,185 readers who signed slips for periodicals during the year—an average of 445 a day, taking no account of the use of over ninety periodicals on open racks.

During 1915, the order division received, for the use of the reference department, 46,411 volumes, of which 15,479 were purchases and 30,932 gifts. The number of pamphlets was 66,181, of which 10,895 were purchases and 55,286 gifts. Gifts were received of 4667 volumes and 2518 pamphlets for the circulation department. In the reference accessions division 35,406 volumes and 2665 pamphlets were accessioned. Of this number 18,508 volumes were purchased or were received on exchange account and 16,898 volumes and 1278 pamphlets were gifts. Included in this record are 1315 "pamphlet volumes" made by binding together in single volumes 1408 unbound volumes and 15,129 pamphlets, grouped so as to make volumes of about two inches in thickness, relating to a single subject.

The number of volumes newly cataloged in the reference department was 22,596; of pamphlets, 19,419; of maps, 233. The cataloging of 783 volumes and 694 pamphlets was carried on by adding to entries already existing. There were 10,165 volumes and 1670 pamphlets recataloged; and 7829 volumes and 1600 pamphlets cataloged by the use of cards purchased from the Library of Congress.

Of works serial in their form, magazines, society publications, etc., there were cataloged 2722 volumes and 4681 pamphlets, a total of 7403. In addition, 14,241 volumes and 12,079 pamphlets were added to entries already in the catalog. There were recataloged 1452 volumes and 903 pamphlets. In all, 59,788 volumes, 41,001 pamphlets, 233 maps were handled, making a total of 101,022 items.

In the library printing office 62,875 titles were set, from which 655,541 catalog cards were printed, a decrease of 171 titles and 39,482 cards from 1914. Of miscellaneous

stationery forms 11,193,486 were printed, and of publications 696,000 copies, each group being a considerable increase over the preceding year. In the bindery 55,183 volumes were bound, 1831 repaired and 17,336 miscellaneous pieces handled.

Use of the Municipal Reference Library, in the Municipal building, has steadily grown. The total number of books and pamphlets received was 12,685. The number of inquiries answered, including those received by letter and by telephone, was 8023. During the year, 6693 persons borrowed 10,836 books. The *Municipal Reference Library Notes* was published weekly except during July and August, and about two-thirds of the 200 periodicals on file are received by gift or in exchange for the *Notes*. The library also prepared a new edition of the Municipal Year Book.

In the circulation department 10,384,579 books were borrowed for home use, an increase of 868,097 over 1914, and representing a circulation of 3.4 per capita. The number of volumes in the department was 1,100,952, of which 1,029,996 were for home use, 112,834 being in 27 different foreign languages. The book order office purchased 197,816 volumes. In addition, 4667 volumes and 2518 pamphlets were received as gifts and sent to the branches. The custom of receiving new books on approval has continued, and of the 7194 new titles examined, 5452 were added to the library. Of these, 1,630 were in foreign languages. Subscriptions have been placed for 3805 magazines and 371 newspapers for 1916. In addition, 1162 magazines and 274 newspapers are received as gifts. The number of magazines bound was 1136. In the cataloging office 191,297 books were handled, an average of 638 per day. A year ago it became apparent that a picture collection for lending was desirable in the circulation department. Consequently the cataloging office began to gather, classify, and prepare pictures for circulation, until, at the end of the year, there were 17,991 pictures, more than half of them mounted, and the rest in folders. A surprising number of these pictures came from unbound magazines and old books, which might otherwise have been sold for old paper. The collection also con-

tains 5444 post-cards, 3500 of which were presented early in the year.

Fifty per cent. of the books supplied in 1915 by the interbranch loan office reached the applicant within three days after he had made his request. During the year, 95,184 books were supplied, out of a total of 127,598 asked for. An additional 6571 were lent as "sets" for temporary reference use, etc., making, altogether, 101,755 titles lent between branches.

The total attendance in the adult reading rooms in the branches was 1,224,526, a loss of 43,353 from 1914. The greatest use of reading rooms was at the Seward Park and Hamilton Fish Park branches on the lower East Side. One reason for the loss in total attendance is because fewer men have been out of work. The Sunday attendance in the five adult reading rooms which were open was 38,694.

In the Library for the Blind, the total circulation, including magazine and music scores, was 31,528. Three embossed sections of the catalog were issued early in the year. The home teacher gave 280 lessons, paid 476 visits, and exchanged 318 books.

The traveling libraries office had 952 stations, through which 962,355 volumes were circulated.

The number of children coming into the children's rooms of all the branches was 1,608,753. The circulation of books from children's rooms was 3,938,031. The total circulation of books to children, including the figures recorded by travelling libraries, was 4,415,794, or 42 per cent. of the total circulation of the library. Systematic work with elementary schools has been developed as the limited resources of the library permit, and the children's librarian of the traveling libraries office was unusually busy.

Exhibitions both for adults and children have been held in the Main building and in the branches, and have included paintings, etchings, engravings, and museum exhibits designed to stimulate interest in certain classes of books.

One new branch building was opened during the year. This was the George Bruce branch, moved from West 42d street to a

location on Manhattan street when the Central building and the West 40th street branches were opened.

#### ANNUAL REPORT BROOKLYN PUBLIC LIBRARY

A GRATIFYING record of progress in all departments is revealed by the annual report of the Brooklyn Public Library for the year 1915, which has just been made public.

The most interesting event of the year was the action of the Board of Estimate and Apportionment in voting the issue of \$210,000 of corporate stock for continuing the work of building the Flatbush Avenue wing of the new Central Library Building. This wing, when completed, will provide fireproof quarters for the rare and valuable reference collection now housed in the Montague branch, and will accommodate the various administration departments now located in rented quarters at 26 Brevoort Place.

The cost of books purchased in 1915 was \$95,003, only seven per cent. of which was spent for new works of fiction published less than a year back. The circulation of all fiction was 3,977,998 volumes, of which about nine per cent. represented novels published within a year. This would seem to indicate that the percentage of money spent in the purchase of new fiction is not sufficiently large to arouse adverse criticism.

One new branch library was opened during the year. This was the Red Hook branch, the last of the twenty buildings to be erected from the Carnegie fund. In this connection it is noted that there is still sufficient money remaining in this fund to erect two additional buildings, provided the city furnishes the sites. Tentative suggestions for the location of these two buildings are made in favor of the Ridgewood section and the Tompkins Park neighborhood.

The number of books owned by the library at the end of the year was 862,112. The library received as gifts during the year 4,706 volumes and 10,717 pamphlets.

The circulation of books for the year was approximately 6,000,000, the exact figures

being 5,875,190. This circulation represents an increase of 880,309 over that of the preceding year, and is the largest annual circulation recorded in the history of the library. The circulation is fairly well distributed over the entire area of Brooklyn. In the past year nearly every branch in the system reported an increase in circulation, ranging from 63,494 at the Montague branch, 47,503 at Bedford, and 46,098 at East, down to 139 at the Library for the Blind.

The reference department at Montague branch not only serves readers who come in person to that branch, but also renders assistance to persons who apply to other branches for information. Thus, in the past year, 4,177 questions which could not be adequately answered by means of the limited reference collections at the other branches, were forwarded to the reference department at Montague and satisfactorily disposed of there.

The work of the department of sociology is likewise growing steadily. As the resources of this department become more generally known, an ever increasing number of ministers, doctors, social workers, and students rely upon it for help in the solution of their various problems. The development of this department is therefore a convincing argument in favor of the specialization in reference work.

The very liberal policy of the board of trustees in regard to the use of the library auditoriums is greatly appreciated by the public. Assemblies of all sorts meet in these halls, while story hours and study-club work are conducted in the smaller study rooms by members of the library staff.

In spite of the unusual increase in circulation, money was not available for a corresponding increase in the staff of the library. Resignations, deaths, and new appointments produced many changes in the personnel, but the actual increase in the number of persons due to the increased amount of work was only five.

#### CONFERENCE ON COMMUNITY CENTERS

A NATIONAL conference on community centers and related problems, called by about one hundred leaders in the work in

all parts of the United States, will be held in New York City beginning Wednesday, April 19, and continuing through Saturday morning, April 22. The following will be the main divisions of the conference: The financial support of community center work; the community center and recreation; the community center and immigration; the community center and public health; the demands of community center work on the city plan; co-operative art in the community center and the application of art forms to rural life. There will be reports and discussions on all these subjects, and it is believed that the vital contact between workers which this conference will bring about, will do much to clarify the philosophy of the community center movement.

So many libraries to-day are centers of community work, and the correlation of their activities with the wider use of school buildings and playgrounds and parks is so important, that librarians should follow closely the progress of this conference. The organization headquarters are at 70 Fifth avenue, New York City, and the secretary, John Collier, will be only too glad to give fuller information regarding the plans for the meetings.

#### THE ATLANTIC CITY CONFERENCE

THE coming conference of the A. L. A. at Asbury Park, N. J., in June, in no wise affected attendance at the annual bi-state meeting at Atlantic City, Mar. 3-4, unless it can be said to have focussed the attention of librarians upon New Jersey. The record of attendance surpassed all previous years, with 330 names on the hotel register for all or part of the conference.

A special meeting of the New Jersey Library Association was held Friday afternoon, Mar. 3, with Miss Margaret A. McVety, president of the association, in the chair. The reading of the minutes was dispensed with, and the treasurer's report was given in very brief form. Receipts for the year amounted to \$240.53 and disbursements were \$143.79, leaving \$96.74 now on deposit. The association has a membership of 227 at the present time. The president appointed the following committee on nomi-

nations: Dr. Richardson (who afterwards withdrew), Miss Peters, Miss Winsler, and Mr. Hughes. At a short business meeting after the session Saturday morning, this committee reported the following nominations, and the candidates were unanimously elected: President, Dr. E. C. Richardson, librarian of Princeton University; first vice president, Edward L. Katzenbach, trustee of the Trenton Public Library; second vice president, Adeline J. Pratt of the Asbury Park Public Library; secretary, Norma B. Bennett, librarian of the Madison Public Library; and treasurer, Elizabeth White, librarian of the Passaic Public Library.

Dr. Frank P. Hill of the Brooklyn Public Library was the first speaker Friday afternoon, his subject being "Twenty-five years of the New Jersey Library Association." New Jersey's library law was introduced in the legislature in 1884 by William Prall, and passed in the same year, its passage being followed within a few years by the establishment of public libraries in Paterson (where Dr. Hill was librarian), Passaic, Newark, Jersey City, and Hoboken. The first meeting of the state association was held in Trenton in 1890, in the rooms of the Union Library Association, and the association was organized with 26 members, though a larger number were present at the meeting. Mr. Prall was the first president, Dr. Richardson vice president, and Dr. Hill secretary. The commission bill was not passed until 1900, and the commission had no appropriation until the next year. The first Atlantic City meeting, planned by Dr. Thomson of Philadelphia, and Dr. Hill in 1896, was held with about 125 present, and the meetings have been held each year since that time.

Following Dr. Hill's reminiscences, Miss Maud McClelland of the New York Public Library opened a discussion on the use of fiction as reference material, with the paper printed in the *JOURNAL* last month. She was followed by Miss Ella B. Cook of the Trenton Public Library, whose general conclusion was that while fiction may sometimes be used to advantage to make more vivid the information derived from other less appealing sources, the benefits derived will scarcely compensate for the time,

labor, and expense necessary to make it available in most libraries, and that its introduction should be gradual.

Three-quarters of to-day's novels are not written for enjoyment, but for the discussion of some problem, and so require greater mental effort on the part of the reader than many a book classed as "literature," was the opinion of Miss Corinne Bacon. If novels were to be classified by kind, not by use, one group would contain those which were purely recreative; in another group would go the ones distinctive for their literary workmanship; a third would include the novels written not to instruct or for propaganda, but solely as "slices of life"; a fourth would take in the novels of inspiration. None of these would be especially useful for reference purposes. Novels which might be adapted for reference use would be those giving information through the introduction of real characters of history or through the careful picturing of the life of some particular place or period. Novels written as social propaganda also often contain valuable reference material, but to try to classify all information which may possibly be included in fiction involves much useless work.

Inexpensive material that would be good for teachers, especially of history and geography, was described by Miss Marion G. Clark of the Newark State Normal School. She also urged the librarians to get the advice of teachers when selecting books for school use, in order to get just the right material for the different grades. With a little encouragement, the teachers would be willing to make notes of material in the educational journals, suitable for "special day" programs. If one drawer in the catalog could be reserved for these notes, in the course of a year or two an index to much valuable fugitive material would be provided. She also urged letting the children collect and mount the picture collection; letting them write, as a language lesson, letters ordering inexpensive material for the library; interesting both children and parents to bring curios for exhibits of local interest; getting parents to give travel talks to children on places they have visited; greater co-operation with the school dis-

tract in the purchase of reference books for the use of schools; and the co-operation of manual training classes in binding pamphlets and public documents.

Miss Louise Connelly, educational expert of the Newark Public Library, closed the session with an exhibition of pictures chosen from the Newark Library's collection to illustrate the differences between the Scandinavian and Greek peninsulas. The pictures were chosen by children for a geography lesson on the two peninsulas, and included a comparison of customs, architecture, costumes, literature, civilizations, and mythology. Several librarians joined in the discussion, and told of various sources of pictures and pamphlets which they had found valuable.

Some of these papers were printed in a pamphlet, "Atlantic City topics," which was distributed in advance of the meeting. A bibliography of fifty titles on "Municipal government" by Prof. W. B. Munro of Harvard was included in the pamphlet, and a mimeographed list of publishers of inexpensive geographic material, compiled by the Newark Public Library, was also distributed.

The Friday evening program was provided by the Pennsylvania Library Club, and was presided over by Frederick N. Morton, the president of the club and librarian of the United Gas Improvement Company of Philadelphia. In the absence of Mayor Riddle, the city solicitor welcomed the librarians to Atlantic City. Constantin von Sternberg, president of the Sternberg School of Music of Philadelphia, spoke briefly on "The connection between books and music," and advised the librarians to add not only more music, but more books treating of the ethics and esthetics of music, to their collections. He followed his remarks with several amusing selections on the piano, ending, in response to repeated applause, with a more serious composition. Dr. A. S. W. Rosenbach, of Philadelphia, followed with an interesting talk on "Early American children's books," of which he has a considerable collection. The lecture was illustrated with lantern slides, and the quaint pictures of these early primers brought home forcibly the great change

which a century has brought about in juvenile literature.

Saturday morning the second of the joint sessions was held, Hon. Pierre P. Garven, a director of the Bayonne Free Public Library, presiding. The meeting opened with a general discussion of the value of the fines system. Miss Agnes Miller, of the Princeton Public Library, upheld the system, saying it is generally regarded by the public as being both legitimate and necessary. Miss Hill, of Summit, read a paper prepared by Miss Flor-Etta Kimball, who has recently gone from the Madison Library to Pittsburgh. She believes fines to be unnecessary and undesirable with children, laying the burden on the parent rather than the child, and suggested withholding the card as an alternative. A paper by Miss Catherine Van Dyne, of the Newark Public Library, was read by Miss Herber of Bayonne, after which there was a warm discussion by those present as to the extent to which fines should be allowed to mount up, and how rigid the librarian should be in the application of the rules.

Miss Louise Connelly then discussed, in her own inimitable way, the question "What part of all that is read in New Jersey is supplied by libraries?" By various devious methods, not always entirely clear to her listeners, she arrived each time at the general conclusion that only about one-fifth of the printed words read in the state during a year were read from library books. She suggested that any skeptical person who might question these figures should consider the members of any group of people whose reading habits were known to him, and ask what per cent of their reading was from library books, what from non-library books, and what from papers, magazines, circulars, etc. The library seems to be facing the same problem that confronts every teacher: Shall it continue to live up to the standard set for itself for the sake of the few who appreciate it, or shall it drop to the level of the majority now, in the hope of lifting the mass later?

Saturday evening's meeting, with Dr. Richardson in the chair, opened promptly at 8.30. By a rising vote the members present expressed their concurrence in the

following appreciation of Dr. Thomson, of Philadelphia:

The members of the Pennsylvania Library Club, and of the New Jersey Library Association, have learned with sorrow of the death, on Feb. 23, 1916, of John Thomson, A.M., Litt.D., librarian of the Free Library of Philadelphia.

Dr. Thomson was one of the founders of the annual meeting, at Atlantic City, of these two organizations, and frequently presided at its sessions.

His industry in providing the speakers, and his personal interest in the proceedings, had much to do with the success of these annual meetings.

His genial presence, his friendly greeting, and his definite personality, will be long remembered by the members of the two organizations with which his name has been so closely connected.

THOMAS L. MONTGOMERY, *Chairman.*  
JOHN ASHMURST.  
EDWARD J. NOLAN.

The first speaker of the evening was George F. Deiser, librarian of the Hirst Free Law Library in Philadelphia, who talked on "Legal parchments," illustrating his remarks with numerous stereopticon slides. He pointed out many curious characteristics of the writing on the old manuscripts. He was followed by E. M. Sterling, vice president of the George L. Dyer Company of New York City, who summarized reports made on the question "What libraries can learn from the methods of promotion and education of the Curtis Publishing Company," by Martha A. Burnett, librarian, Dover Free Public Library; Irene A. Hackett, librarian, Englewood Public Library; Louise G. Hinsdale, librarian East Orange Free Public Library; Edith C. Moon, head of loan department, Trenton Free Public Library; and Marie L. Prevost, assistant librarian, Elizabeth Public Library. The library, as the Curtis Company tries to do, must find out the public need and work to make it the public desire, while endeavoring to provide the means of satisfying that desire. It must follow the Curtis policy of making its organization personal and human and a helpful influence in the community, and may well adopt as its own the four principles governing the Curtis policy: (1) Expansion by promotion or growth; (2) aggressive action in taking printed matter to the possible reader; (3) persistent and intelligent advertising; and (4) timeliness in all its offerings.

Saturday afternoon the usual delightful tea to the visiting librarians was given by the Atlantic City Public Library. This year, attendance at the meetings having

grown so large, it was decided not to hold the reception in the library building, but to go instead to the Belvedere room in the Hotel Traymore, with its beautiful outlook over sea and city. There were the usual New York and Drexel dinners Saturday night, and the Pratt graduates who stayed over Sunday had a post-conference luncheon Sunday noon.

#### AMERICAN LIBRARY INSTITUTE

THE Institute held a preliminary business meeting Friday morning, March 3, in the small banquet room of the Hotel Chelsea at Atlantic City, which was attended by seven members, President Richardson in the chair and Miss Ahern arriving from Chicago just in time to take her place breathlessly as secretary. The secretary made a report on the questionnaire and nominations submitted by mail to the forty-nine members of the Institute, from whom thirty-five replies had been received. Of these thirty-two were assentive to all the proposals on the paper, while three split their vote. The proposition to increase the membership to two hundred called out some comment in the replies unfavorable to the plan, and the opinion of those present was decidedly in the same direction, so that a motion to lay the proposal on the table was made and carried, with the understanding that consideration might be assumed at a larger and more representative meeting.

The following additional members of the Institute were elected through affirmative answers to the nomination paper: Louis N. Wilson, A. C. Coolidge, W. N. C. Carleton, Adam Strohm, A. S. Root, Andrew Keogh, Walter Lichtenstein, Victor Paltsits, Ernest D. Burton, Willard Austen, Walter B. Briggs, W. L. R. Gifford, Genevieve M. Walton, Matthew S. Dudgeon, George S. Godard, Horace G. Wadlin, W. E. Henry, J. C. M. Hanson, George Parker Winship, Charles K. Bolton, and Wilberforce Eames.

There was considerable discussion as to the continuance of the Institute and its relations with the A. L. A. and other library organizations, in which each person present took part. The general sentiment was that the plan outlined by the president gave a field for the work of the Institute which

perhaps would differentiate it usefully from other library organizations, but it was thought best to have this question more definitely treated, and a motion was carried to the effect that the board be directed to formulate plans as to methods and field of the Institute in co-ordination with other library organizations, which might later be submitted to the members for full discussion. It was also decided that those elected to membership who had not taken up their membership or had suffered it to lapse, might become members in full standing on payment of current dues.

The second meeting was held in the same room, with a good attendance of a score or more, on Saturday morning at 9:00 o'clock at which hour the prompt president promptly called to order the one prompt member then present. President Richardson read his comprehensive analysis of the possible field for the Institute in the direction of "learned society development," with a special reference to scholarly work and the teaching of bibliography and library science in general in universities and to advanced students desiring to specialize in paleography and like topics. This led to a further discussion of much interest as to possibilities before the Institute, which was presented by Miss Plummer, as president of the A. L. A., and by many of those present. The trend of the discussion was in favor of "trying out" the plan proposed by the president, and Miss Ahern at this as at the previous meeting, specially emphasized the desirability of having an organization which would not be limited in scope or method by regulations necessarily covering and limiting the Council of the A. L. A.

The third session was held Saturday afternoon at 2, the general subject for consideration being the field of co-operation between libraries of learning. Preliminary to this discussion letters were read from several library schools on "the best book on library economy published in 1915," opinion being about equally divided between Fay and Eaton's "Instruction in the use of books and libraries" and Sayers' "Canons of classification," with scattering votes for several other volumes.

Dr. Andrews summed up in an admirable

paper, to be printed later in the LIBRARY JOURNAL, the "Recognized needs and proposed solutions" in the field of co-operation. Dr. Hill reported on a circular sent out in February to libraries in this country asking for information looking toward the preparation of a joint list on Civil War collections, the answers showing the location of much unsuspected material. Mr. Montgomery cited the many uses to which photostat copies of rare and valuable books and documents could be put, and suggested the preparation of a general list of material available to other scholars in photostat form. Dr. Gould, of McGill University, raised the question whether an institution should always have the privilege of obtaining reproductions of any material in another institution, with the understanding that copies should not be made from the copy and that proper credit should be given to the institution owning the original. It was the general opinion, with one dissenting voice, that while ordinarily such privilege should be accorded, under certain circumstances an institution might properly refuse the privilege. Dr. Lichtenstein, discussing historical periodicals, spoke of the need of more general co-operative lists, and discussed their possible scope and the ways and means of publication. H. S. Leach of Princeton reported briefly on two English department specialties in that library, the drama collections and the publications of the Bannatyne Club. Reports on early American newspapers, by A. E. Morse, and on American travels, by Dr. Steiner, were included in the proof copies of papers distributed to all in attendance.

---

#### STATE SUPPORTED LIBRARY ACTIVITIES—INFORMATION WANTED

THE Washington State Library Advisory Board is making a state-wide survey of all state supported library activities and seeks the co-operation of all who have heretofore been connected with work of this kind, or who may be at present engaged in it. The board wishes to profit by the experience of previous workers in this field.

The members have access, of course, to

the Nebraska Legislative Reference Bureau Bulletin on "State supported library activities in the United States," the publications of the Department of Surveys and Exhibits of the Russell Sage Foundation, and the reports of recent state commissions on economy and efficiency which have discussed state supported library activities.

As the Washington survey will include the whole field of the relation between libraries and schools, normal school instruction in library use, county libraries, the state library, legislative reference work, libraries in state charitable, penal and reformatory institutions, the relation of the state library to the other libraries of the state, traveling library work, library extension, etc., any special reports made on the subjects named will be of definite value to the board.

#### COMMITTEE ON SOUTHERN HIGH SCHOOL LIBRARIES

THE committee on high school libraries of the Southern Conference for Education and Industry, has organized local committees in nearly every southern state. Up to the present time the committee has endeavored to secure the co-operation of educational organizations of all kinds and to give as wide publicity as possible to the library needs of southern high schools. In order to gain a direct knowledge of library conditions in the high schools of the South, the committee has sent out a questionnaire through the National Bureau of Education. After a survey of the general conditions has been completed with reference to southern high school libraries, a definite program of constructive work will be taken up. Some of the problems to be studied are:

- (1) What are the duties of the high school librarian and what should be her qualifications and salary?
- (2) What kind of library equipment is needed in southern high schools and how much money should be appropriated annually for the maintenance of the high school library?
- (3) Under what conditions is public library control preferable to school board control?
- (4) What can be done to improve conditions through state legislation?

(5) What general state supervision is needed in order to secure the most efficient use of high school library facilities?

(6) How should instruction in the use of books and libraries be given high school students?

The future work of the committee will be directed along lines determined upon through the survey now being made in co-operation with the National Bureau of Education. This survey will cover sixteen states. The following is a partial directory of local committees by states:

#### CITY HIGH SCHOOLS

*Kansas:* Willis H. Kerr, chairman, librarian Kansas State Normal School, Emporia; Mabel Parks, Hutchinson High School, Hutchinson; Hazel Howes, Wichita High School, Wichita.

*Texas:* W. T. Doughty, chairman, state superintendent of education, Austin; Mrs. Lizzy Litsey, High School, Fort Worth; J. C. McIlhannon, English department, Baylor University, Waco; Laura Alexander, Dallas High School, Dallas.

*Oklahoma:* Anna LeCrone, chairman, North Western Normal School, Alva; Ruby Canton, State Normal School, Oklahoma City; Maggie Delo, High School, Oklahoma City; Adelia Clifton, High School, Oklahoma City; S. B. Lippincott, High School, Oklahoma City; Mrs. Anna Burk Love, county superintendent, Oklahoma City.

*North Carolina and South Carolina:* Louis R. Wilson, chairman, University of North Carolina, Chapel Hill, N. C.

*Virginia:* Dr. S. A. Steger, chairman, principal of Benford Junior High School, Richmond.

*West Virginia:* Walter Barnes, chairman, head of department of English, State Normal School, Fairmont.

*Maryland:* Dr. Edward F. Buchner, chairman, professor of education and psychology, Johns Hopkins University, Baltimore.

*Louisiana:* Mrs. Esther Finlay Harvey, chairman, Sophie Newcomb Memorial College, New Orleans.

*Missouri:* Prof. Mark Burrows, chairman, State Normal School, Kirksville.

*Arkansas:* J. L. Bond, chairman, Department of Education, Little Rock.

*Kentucky:* Fannie Rawson, chairman, secretary of the Kentucky Library Commission, Frankfort.

*Tennessee:* Harry Clark, chairman, University of Tennessee, Knoxville; Marilla Wait Freeman, librarian Goodwyn Institute, Memphis.

*Alabama:* C. C. Certain, chairman, Alabama Polytechnic Institute, Auburn; Olive Mayes, librarian, Girls' Technical Institute, Montevallo.

*Florida:* Amelia Kendall, chairman, Cres-

cent City; Prof. J. N. Thackston, state high school inspector, Gainesville; I. I. Himes, West Palm Beach; Dr. Kelley, county superintendent, Gainesville; Marshall Moore, county superintendent, Tampa; James Hatcher, DeFuniak Springs; Pearl Bellamy, Micanopy; Herbert deWolf, Pensacola High School, Pensacola; T. R. Coot, Live Oak; O. R. Heweth, Glendale.

*Georgia:* Ralph Newton, chairman, superintendent of public schools, Fort Valley.

#### RURAL HIGH SCHOOLS

*North and South Carolina, Virginia, West Virginia, and Maryland:* Dr. J. L. McBrien, chairman, school extension agent, Bureau of Education, Washington, D. C.

*Kansas:* Etta Joe McCoy, chairman, superintendent of Franklin County, Ottawa; J. F. Shoemaker, rural school inspector, Topeka; Prof. H. M. Culter, Normal School, Emporia; Prof. H. L. Kent, Agricultural College, Manhattan; W. H. Kerr, librarian, Normal School, Emporia; S. R. Rowland, county superintendent, Hutchinson; Hattie E. Woods, county superintendent, Garnett; Nettie E. Barber, county superintendent, Phillipsburg.

*Arkansas:* J. L. Bond, chairman, supervisor of rural schools, Little Rock; Eva Reich, 1201 Welch Avenue, Little Rock; L. M. Redwine, Greenwood; D. A. Bowen, Brinkley; W. R. Edwards, Bentonville; Mrs. R. T. Milwee, Clarendon, Little Rock.

*Louisiana:* M. L. Bonham, chairman, department of history, Louisiana State University, Baton Rouge; Sallie Brooke, Homer High School, Homer; Dr. E. L. Stephens, president, Industrial Institute, Lafayette; C. E. Byrd, superintendent of Caddo Parish, Shreveport; H. L. Garrett, White Castle.

*Missouri:* Prof. Mark Burrows, chairman, Kirksville.

*Oklahoma:* Charles Evans, chairman, Edmond.

*Texas:* E. L. White, chairman, county superintendent, Brady; Ernest Keeling, county superintendent, Jourdan; Mrs. E. L. Walker, county superintendent, Brownwood; W. C. Martin, county superintendent, Roby; W. S. Ely, county superintendent, Waxahachie.

*Kentucky, Tennessee, Alabama, Mississippi, Georgia, and Florida:* Mrs. Pearl Williams Kelley, chairman, department of public instruction, Nashville, Tennessee.

C. C. CERTAIN.

## American Library Association

---

### ASBURY PARK CONFERENCE

Plans for the Asbury Park conference are going forward, although definite announcements cannot yet be made. The president, the secretary, and Miss Edna B. Pratt, chairman of the local committee, visited Asbury Park, March 5 and 6, looked over a number of the

hotels and discussed the conference with their managers.

Headquarters will be at the New Monterey and the Columbia. These two hotels are directly across the street from each other and together will house about 950 people, assuming a reasonable amount of "doubling up." We will have the *exclusive* use of both. There will probably be an attendance of from 1200 to 1500, so perhaps it will be the largest conference in the history of the A. L. A. Therefore an overflow from the two headquarters hotels is expected and being planned for, and with the co-operation of the local committee, arrangements are being made with a number of other hotels in close proximity to headquarters. There are hotels in abundance in Asbury Park, and so there will be plenty of room, no matter how many come.

Rates at the headquarters hotels range from \$3.50 to \$5.00 a day, American plan, according to number occupying room, location, size and bath. Definite information as to rates for all recommended hotels and directions as to making of reservations will be made about May 1, through the library periodicals and the *Bulletin* of the A. L. A. In order to preserve absolute impartiality, the rule will be observed that those applications received by the hotel managers before the date announced for making reservations will be considered as having been received on the opening date for making such reservations. There is small likelihood that any who apply within reasonable time after receiving the directions in the *May Bulletin* will fail of accommodations at the headquarters hotels.

The general sessions will be held in the Convention Auditorium, occupying a city block, just across the street from the New Monterey and the Columbia. Sections and affiliated societies will meet in the parlors of the two hotels, and the larger groups in the Auditorium.

Recreative features abound—there are tennis courts close by the New Monterey to which we shall have access, there is a golf course on the edge of town, there is a fresh-water lake with boats and canoes two or three hundred yards away, so near the ocean that it seems as if the waters of the two must mingle; there is the boardwalk, somewhat similar to the famous institution at Atlantic City, there are auto drives, a good dancing floor at the New Monterey, which will be duly utilized, and last, but not least, there is the ocean. The New Monterey is right on the beach, and bath houses are close at hand. The local committee is preparing a pamphlet on "What to

do at Asbury Park," which will be distributed free to all at the registration desk at the conference. The local committee will maintain a desk at headquarters to give information, arrange drives, boating parties, and the like.

The president is arranging an exceptionally appropriate and helpful program for the general sessions, and the officers of the sections and affiliated societies are also planning good specialized group meetings.

The National Education Association will meet in New York the week following our conference at Asbury Park, and it is hoped that this close proximity of date and place will enable many teachers to attend the library meetings and many librarians the teachers' meetings.

A preliminary statement by the travel committee regarding transportation is given in this issue, and a final report will be made in the next number.

Special attention will be paid to exhibits. The committee on library administration plans to conduct an exhibit of library labor-saving devices similar in many respects to that held in Washington in 1914, which proved so very popular.

Altogether, it seems conservative to say that the Asbury Park conference bids fair to be one of the best in the history of the association. The place is easy of access, the dates are probably as convenient for the majority as any which could be chosen, there is an abundance of first-class hotel accommodation at reasonable rates, there is the ocean and many other recreation features, and we are promised a good program. Ought not this combination give us an exceptionally good conference, and one of which in after years you will be glad to have been a part? G. B. U.

#### PRELIMINARY TRAVEL NOTICE

Asbury Park, N. J., is easy to reach from all parts of the country, and reduced round-trip summer excursion rates will be available.

From New York City, an unlimited round-trip is offered for \$1.75, good either by rail or by boat and rail. (To this, 20 cents must be added if start is made from the Pennsylvania Station.) The routes from New York City are: (a) Sandy Hook boat to Atlantic Highlands, connecting there with train for Asbury Park. (b) Pennsylvania Railroad. (c) Central Railroad of New Jersey.

From Philadelphia, a choice of routes and tickets is offered: (a) Five-day excursion *via* Monmouth Junction, \$3.00. (b) Sixteen-day excursion same route, \$3.75. (c) Sixteen-day excursion *via* Elizabethport, \$3.75. (d) Sixteen-day excursion *via* Seaside Park, \$3.25.

Although the rates for June are not yet all available, the travel committee feels assured they will be practically the same as those given in the following table.

From New England, the North Atlantic states (exclusive of New York City, Philadelphia, and surrounding local points which have special rates), and from Southern points (south of Washington and west of New Orleans) excursion tickets will be on sale—good either for six months or until Oct. 31, according to locality.

From the Middle West—Chicago, St. Louis, Cincinnati, Detroit, etc.—a thirty-day ticket will be available (also in most of these places a slightly higher-priced rate, good until Oct. 31, will be made). It should be noted, however, that Cleveland and Columbus, Ohio, are to be reckoned with the North Atlantic states points, as they have an all-season ticket available at minimum price.

From Colorado, and from Missouri river points—Omaha, Kansas City, etc.—also from Minneapolis and St. Paul, round-trip tickets will allow a sixty-day limit returning. From Texas excursion tickets will be good until Oct. 31.

Pacific coast delegates will buy to New York City, good for return until Oct 31, or good for nine months. No rate is made from the coast to Asbury Park.

Prices of excursion tickets from New England and the North Atlantic states are from five to nine per cent. less than double the one-way fare. From the Middle West there is a slightly greater saving.

From Southeastern territory, Texas and Colorado, the reduction amounts to about 20 per cent.

Western tickets should be purchased including New York City, as nearly everyone will wish to visit that city.

A personally conducted party from Chicago and the Middle West will be arranged by John F. Phelan, of the Chicago Public Library. A Pullman train will be run from Chicago to Asbury Park without change.

From New England, F. W. Faxon will conduct a party, *via* Sound line boat to New York and thence by Sandy Hook boat to Atlantic Highlands, only 40 minutes from Asbury Park by rail.

The post-conference trip will be omitted this year.

No personally conducted parties will be planned returning, but the travel committee will make reservations for any wishing to return together, and will be glad to give all information required.

## PROBABLE ROUND-TRIP RATES TO ASBURY PARK

New York City	.....	\$1.75—\$1.95
Philadelphia (5 days' limit)	..	3.00
" (16 days' limit)	..	3.75—3.25
Boston (all rail)	.....	12.25
" (Sound lines)	.....	9.75
Washington	.....	10.55
Pittsburgh	.....	21.25
(There is also a 16-day excursion rate of \$12.00, good leaving only Thursdays.)		
Buffalo	.....	19.65 (Differential, \$17.75)
Cleveland	.....	26.20
Detroit	.....	31.70
Grand Rapids	.....	31.70
Indianapolis	.....	33.00
Chicago	.....	35.00 (Differential, \$31.70)
Cincinnati	.....	32.00
Louisville	.....	34.00
St. Louis	.....	40.00 (Differential, \$37.00)
Memphis	.....	43.00
Atlanta	.....	37.55
New Orleans	.....	54.55
Forth Worth	.....	58.75
Denver	.....	72.85

From Middle Western points and Buffalo, by traveling over "differential" lines, a saving of from \$2 to \$3 on the round-trip may be made. This is shown, for example, from three points in table above.

F. W. FAXON, *Chairman Travel Committee.*

## Library Organizations

### CONNECTICUT LIBRARY ASSOCIATION

The twenty-fifth annual meeting of the Connecticut Library Association was held Feb. 24, in the lecture hall of the Mattatuck Historical Society at Waterbury.

The president, Miss Helen Sperry, introduced the Hon. Martin Scully, mayor of Waterbury and president of the Silas Bronson Library Board, who welcomed the association to Waterbury. A letter from Rev. Joseph Anderson, D.D., president of the Mattatuck Historical Society, was read, expressing his regret at his inability to be present at the meeting and extending a welcome in behalf of the Historical Society.

The first paper of the morning was by Miss Mary H. Davis, librarian of the Connecticut College for Women, who described briefly Connecticut College as it is to-day and outlined the course in library training which is a part of its curriculum. Referring to the demand for librarians trained in practice as well as theory, she said that the Connecticut College for Women aimed to combine these essentials in their Library School; and added that the librarians of the state could greatly aid by providing the students with opportunities for practice work in their libraries.

Henry W. Kent, assistant secretary of the Metropolitan Art Museum, gave an interesting address on museums. He traced the history of museums from the earliest times, point-

ing out that the curiosity of the Crusaders was the foundation upon which the museum idea was built. The public museum as we understand it to-day, we owe to Queen Victoria. With the museum at South Kensington, educational museums really began.

The early American museums were established chiefly by schools and societies, the one founded at Bowdoin College in 1811 being the first. To-day the museum is of great importance in supplementing the work of the public schools.

Mr. Kent said that librarians might learn much from museums concerning the value of exhibition. Everything connected with book making, prints, etchings, etc., should be shown, and they should not be content with bulletins composed of magazine pictures, but should provide reproductions of higher artistic merit. He considered it an important duty of libraries to create a respect for books and teach people how to buy wisely. One of the results of the war has been the development of a special interest in the use of the collections of fabrics and jewelry by designers who formerly obtained their designs abroad. Librarians, he thought, should strengthen their departments of art and design, for after the war there will be an increased demand in this line by manufacturers who must prepare to compete with foreign manufacturers.

The Silas Bronson Library entertained the association at luncheon and after luncheon at the invitation of Mayor Scully, the members inspected the new city hall.

Many visited the exhibition of children's books at the Silas Bronson Library and listened to an informal talk by Miss Caroline M. Hewins of Hartford, on foreign picture books, supplemented by a splendid collection of these books from the Hartford Public Library.

At the afternoon session, resolutions of regret were offered on the death of Prof. John C. Schwab, Mr. Walter Learned and Mrs. Lillian Gunn Smith.

The following officers were unanimously elected for the ensuing year: President, Miss Anna Rockwell of New Britain; vice-presidents, Frederick W. Edgerton of New London, Miss Anna Hadley of Winsted, Miss Laure H. Philbrook of Middletown, Miss Fanny Brown of Danbury, and the Hon. Martin Scully of Waterbury; secretary, Mrs. C. H. Bissell of Southington; treasurer, Miss Esther B. Owen of Hartford.

A delightful talk entitled "Recollections of a Goethe collector" was given by William A. Speck of Yale University and was illustrated

by many rare and valuable specimens from his collection of Goetheana, which now numbers 3000 items and is one of the most complete in the world. He explained his methods of collecting in Weimar, relating numerous anecdotes of his experiences and mentioning his occupancy in Weimar of the room where Goethe spent much time.

Miss Anna Hadley of the Gilbert School, Winsted, gave an account of the meeting of the Library section of the Association of Classical and High School Teachers in Hartford, Feb. 12.

The meeting adjourned with a vote of thanks to the Mattatuck Historical Society and the Silas Bronson Library.

ELEANOR M. EDWARDS, *Secretary*.

#### NEW YORK LIBRARY CLUB

The fourth meeting of the year was held at the Russell Sage Foundation Building, March 9, at 8 p. m., President Jenkins in the chair.

Mr. John M. Glenn, director of the Foundation, graciously welcomed the club in a brief address and Miss Theresa Hitchler gave voice to the feelings of all present by moving that a vote of thanks be extended to the Foundation for their cordial welcome and most hospitable reception.

The membership committee under the chairmanship of Mr. Ralph Dunbar, has been working vigorously to enlarge the club. At this meeting ninety-eight new members were elected.

After the usual routine business, the president introduced Mrs. Riggs (Kate Douglas Wiggin), who delighted the audience by readings from her own stories. Admirers of Dickens rejoiced in the glimpse of a most lovable man given in "A child's journey with Dickens." Equally pleasurable was the reading from the pathetic story of "A village Stradivarius." For the last reading Mrs. Riggs permitted her audience to choose between a Rebecca story and the struggles of the Ruggleses in preparing for that never-to-be-forgotten Christmas dinner, and the Ruggleses won by a large vote.

It was a gracious act on the part of Mrs. Riggs to give so generously her talent, particularly as she was just recovering from an illness. The unusual treat was greatly appreciated by the members of the club. This was shown by the large attendance of more than five hundred.

At the conclusion of the meeting, on a motion made by Mr. H. W. Wilson, the club expressed its pleasure in Mrs. Riggs's readings by a rising vote of thanks. The club

then adjourned to the library, where refreshments were served.

ELEANOR H. FRICK, *Secretary*.

#### CHICAGO LIBRARY CLUB

The Chicago Library Club met March 9 at the Newberry Library upon the invitation of the latter. About one hundred were present, of whom thirty-five had dined together beforehand. The second vice-president, Miss May Masee, of the *Booklist*, took the chair in the absence of both Mr. Hanson and Miss Forstall.

The subject of the evening was "Some special libraries in Chicago." The speakers were authorities in their lines, had made special investigations, had summed up their information, and presented it in an interesting way so that the meeting was profitable and enjoyable. An extended account of the information given will be printed in the *JOURNAL*.

After the formal discussion was over, three minutes were allowed for a suffrage speech, and then the meeting adjourned for inspection of exhibits and for refreshments provided by the Newberry Library.

AUGUSTUS H. SHEARER, *Secretary*.

#### MISSOURI VALLEY LIBRARY CLUB

The regular monthly meeting of the Missouri Valley Library Club was held in the Assembly Room of the Kansas City Public Library, Monday evening, March 13. The meeting was addressed by Mrs. M. H. DeVault of the Kansas City Athenæum, who spoke on "Modern short story writers." Mrs. DeVault traced the history of the short story, beginning with the cave man, who first pictured the story and then told it. The four greatest short story writers, according to Mrs. DeVault's classification, are Poe, Hawthorne, Mérimée and Gautier. In the writing of short stories, America takes first rank—not only because of her two great masters but more because of the uniform excellence of her short story writers. Mrs. DeVault enlivened her talk with the plots of many short stories told very briefly but so artistically as not to lose their spirit or their effect upon the audience. The meeting was most interesting and profitable.

The April meeting will be the annual question box conducted by Miss Florence S. Smith, head of the reference department of the Kansas City Public Library. This will be preceded by a paper on the Wyandotte Indians by Mrs. Sarah Judd Greenman, librarian of the Kansas City (Kan.) Public Library.

GRACE BERGER, *Secretary*.

## OKLAHOMA LIBRARY ASSOCIATION

The Oklahoma Library Association has accepted the invitation of the Kansas Library Association for a joint meeting at Arkansas City, Kansas, in October, 1916. The exact dates of the meeting will be decided on later.

JULIUS LUCHT, *Secretary.*

## TORONTO LIBRARY INSTITUTE

The annual meeting of the Library Institute of the City of Toronto was held in Victoria College, when Professor A. E. Lang, the librarian of the college, gave the presidential address on "Library co-operation in Toronto," and Dr. George Locke spoke on "Early printing in Canada." There was an exhibition of some of the rare Canadiana belonging to Victoria, and afterwards the 106 delegates were entertained in the great dining hall. The officers for 1916 are: President, R. A. Gray, of Oakwood Collegiate; vice-president, Miss Charlton, of the Academy of Medicine; secretary, Miss Davis, of the Public Library; executive committee—Mr. Prendergast, of the Normal School; Professor Kittredge, of Trinity College; Principal Wright of Lansdowne Public School; and Mr. Hardy, of the Sunday School Association.

EVA DAVIS, *Secretary.*

---

**Library Schools**

---

## PRATT INSTITUTE SCHOOL OF LIBRARY SCIENCE

For the second time the school has had the privileges of the J. P. Morgan Library extended to it, and the class of 1916 enjoyed to the full the experience of seeing and actually handling the treasures of that wonderful collection. The Golden Gospels (a manuscript of the time of Charlemagne), Queen Elizabeth's prayer book, Mary Queen of Scots' school geography, the original letters of Catharine de Medici, the Gutenberg Bible, the manuscript of Dickens' "Christmas Carol," were among the priceless treasures the students were allowed to lay reverent hands upon.

Advantage was taken on February 17 of a triple attraction at the American Art Galleries—the exhibition of the Lambert collection of old masters, the J. S. Morgan engravings, and a library of rare books—to attend one of the auction sales at which first editions of Dickens and other English authors were sold.

The Library Chapter of the Neighborhood Association has for several years past appropriated money for the library of the Music School at the Greenpoint Settlement. Miss Gibbs who has charge of the school invited the class to her studio on St. Nicholas Avenue

on the afternoon of Washington's Birthday. A visit was paid to the Jumel Mansion nearby, after which some children from the Greenpoint Settlement danced the minuet in costume in token of their gratitude for what the Chapter had done for them.

Miss Annie Carroll Moore, superintendent of children's work in the New York Public Library, gave the class two lectures on Feb. 8 and 15, one on the history of children's work and the other on book selection for children. Mr. Edwin H. Anderson, director of the New York Public Library system, lectured Tuesday afternoon, Feb. 29, on the human aspects of the administration of a large library. On Tuesday afternoon, March 7, Miss Mary E. Hall gave her annual lecture on the opportunity of the high school librarian, which, as usual, met with enthusiastic response from the class. Mr. Andrew Keogh, librarian of Yale University, lectured on March 14 on the problems of college library administration.

The school was represented at the Atlantic City spring library meeting on March 3 and 4 by Miss Gooch. A Pratt dinner was held on Sunday at which there were 14 in attendance.

The students attended the March meeting of the New York Library Club held at the Russell Sage Foundation Building, at which Mrs. Kate Douglas Wiggin Riggs read from her own works.

Plans are in the making for the spring trip which it to include a group of New England libraries. A full account of it will be given next month.

## ALUMNI NOTES

Elizabeth M. Sawyer, 1914, has been made assistant to the supervisor of smaller branches and high school libraries of the Cleveland Public Library.

Mary T. Atwater, 1915, is working temporarily in the children's room of the Columbus branch of the New York Public Library.

Janet E. Gump, 1915, has been made a senior assistant at the Montague branch of the Brooklyn Public Library.

Edith M. McWilliams, 1915, who has been since graduation in the Cincinnati Public Library, has been appointed librarian of the National Association of Advertisers in New York.

JOSEPHINE ADAMS RATHBONE,  
*Vice-Director.*

## SIMMONS COLLEGE LIBRARY SCHOOL

The second term of the year divides itself into two sections, separated by the spring recess, March 23-April 4.

In the first division, just ended, the out-

standing special feature was the "reference week," Feb. 21-28, under Miss Elisa Willard. Before her coming, the upper class students began to get into the spirit by looking up questions which had recently been asked in the Carnegie Library of Pittsburgh. The preliminary lecture was given to all the upper classwomen together but for the rest of the week Miss Willard met them in two smaller sections daily, and by the end of the week they were far richer in the appreciation of the joys and the spirit of reference work, and of the value of department team work, as well as in an increased knowledge of methods and aids.

The school was fortunate also in having a visit from Miss Annie Carroll Moore, who spoke to the class in library work with children on Feb. 28.

Both Miss Moore and Miss Willard were guests that afternoon at a tea in the Students' room, where the girls had an opportunity to meet them off the platform.

Visits of special interest during January-March have been those made to the Boston Book Company, and to the Somerville and Brookline Public Libraries.

Simmons was very glad to welcome some of her fellow library schools on their trips to New England libraries, and regretted that the vacation made it impossible to be as cordial as she would have wished. On March 30 the School of the New York Public Library made its first visit, and New York State is expected early in April.

As usual, the courses in children's work, under Miss Jordan, and in documents, under Mr. Belden, run through the entire second term.

#### SUMMER SCHOOL AND CONFERENCE

The summer course in library science will be held this year from July 3 to Aug. 11. Following the practice which has been found to work well for two years past, the work will be given in two three-week periods, either of which may be taken alone, though both are usually carried by the majority of those who register.

The general course from July 3 to July 21 will be one called "Cataloging and classification," which will include also book numbers, shelf-work and accessioning. There will be thirty class periods, two a day throughout the three weeks, followed by practical work. Miss Mary E. Hyde, the instructor in cataloging in the regular courses, will conduct this course.

The second general course, from July 24 to August 11, will be called "Reference work

and library economy," and will be in charge of Miss Susan Crampton of Boston, recently reference librarian in the Tacoma Public Library. Special lectures will assist Miss Crampton on library economy topics. It is planned to have several talks devoted to the problems of those who are either connected with school libraries, or have public library work in co-operating with the schools.

A new feature of great interest is the opportunity given the college to co-operate in the conference for librarians of Massachusetts, to be held at Simmons College under the auspices of the Massachusetts Free Library Commission, for the three days, Tuesday, Wednesday, Thursday, July 25-27.

The program, of which details will be given later, will be under the direction of the commission, and promises to be very much worth while. This conference will be open to members of the summer class, and on the other hand the regular summer school reference lectures for those days will also be open to all visitors. As this comes just at the beginning of the second three-week period, it will be conveniently placed for those who wish to take either course, or both.

The course in "Library work with children" will be repeated this year, July 3-21, and will again be in charge of Miss Alice Higgins. Last year several of those who carried this course the first three weeks found it profitable to enter the reference courses the second three weeks.

#### GRADUATE NOTES

Rowena Edwards, 1914-15, who has been engaged in organizing work in the Gammons Theological Seminary, Atlanta, Georgia, has been appointed on the staff of the State Teachers' College, Iowa.

Jennie C. Frost, 1914-15, has been appointed an assistant in the Simmons College Library.

Minnie Pert, 1914-15, is working on the Bradley bibliography at the Arnold Arboretum.

Ruth Eaton, 1915, is employed in cataloging in the Harvard College Library.

Charlotte Norton is the librarian of the Scoville Memorial Library, Salisbury, Conn.

Alice Poor has been appointed to take charge of a library to be organized in Norfolk House, Roxbury, by the trustees of the Fellows Athenæum Fund.

Mabel Williams, 1909, has resigned as the librarian of the High School branch of the Somerville Public Library to join the staff of the children's department of the New York Public Library.

Laura Stealey, 1911-12, has been appointed in the Seattle Public Library.

Mary I. Haskell, 1910, is in the Extension department of the College of Agriculture of the University of Maine.

Marian Jones, 1908, is the visitor for the Social service bureau, Denver, Colorado.

The engagement has been announced of Edith Watson, 1907, to John A. Lowe, agent for the Massachusetts Free Library Commission.

Grace Hewett, 1908, has been married to H. A. Watkins. Mr. and Mrs. Watkins are living in Washington, D. C.

Katherine Stegmaier, 1908, is now Mrs. Edmund H. Sears, and is living at East Dennis, Mass.

JUNE RICHARDSON DONNELLY, *Director*.

LIBRARY SCHOOL OF THE UNIVERSITY OF WISCONSIN

The opportunity offered the students of the school to hear speakers of national fame at the University Convocations has always been appreciated. In January, Dr. Burton, president of Smith College, spoke on "The educated person." Dr. Burton spent several days in Madison and upon invitation very graciously consented to speak at the Library School. He spoke in a most compelling way on realizing ideals, saying that the ideal must be absolutely unattainable to be worth striving for, yet some of it can be reached every day. Both faculty and students appreciated the opportunity of hearing Dr. Burton and meeting him personally.

Several special lectures preceded field practice. First, "Foreign fiction" by Prof. Campbell of the English department. This lecture finished the work in fiction, which had been the topic under discussion in the book selection course for several weeks, and was a most suitable conclusion, pointing the way to the masterpieces from other countries that should be in every library. Second, Miss Bernice Ehler, head of the art department of the Madison High School, lectured on the "Principles of composition," showing many pictures and bulletins to illustrate her points. This lecture was in preparation for the making of picture bulletins. Third, correlating with the regular lessons in publicity, Prof. Bleyer of the School of Journalism gave a helpful lecture on "Newspaper publicity," the students going to the quarters of the school for the lecture, and at its close under the guidance of Prof. Bleyer, inspecting the equipment of the department, learning much in a brief time of the things that go into the make-up of a newspaper. The extension

department of the university was also visited, the greater part of the time being spent in seeing the manner of making up, filing, and mailing the package libraries. The students have opportunity to test the lessons in publicity during their field practice, and enthusiastic reports are being received of newspaper "stories" that have brought results, of store windows lent by public-spirited merchants for a library display, of posters put in conspicuous places, of visits to schools, etc., all to spread the "gospel of good books."

The first semester closed with the usual examinations, and Feb. 1 found the students at work in the several libraries of the state, to which they had been assigned. The faculty spend the months of suspended schedule, February and March, supervising the work of the students in the field, and in office work, completing records, revising courses of study, etc.

March brought Dr. Samuel McChord Crothers to Madison for a series of lectures and sermons. All the faculty and students who were in residence were invited to hear his lecture on "The literary clinic."

ALUMNI NOTES

Mary Watkins Dietrichson, 1909, has been placed in charge of the business branch of the Minneapolis Public Library, which was opened Feb. 1. She had previously been at the head of the municipal reference work, which will be transferred to the new branch.

Maude Le Roy, 1912, received appointment as assistant in the Minneapolis Public Library in January.

Leila A. Janes, 1913, librarian of the East Side branch, Evansville (Ind.) Public Library, was granted two months' leave of absence in January for a trip to South America.

Leone Hamilton, special student first semester 1915-16, has accepted a position in the cataloging department of the Wisconsin Historical Library for the remainder of the year.

MARY EMOGENE HAZELTINE.

CARNEGIE LIBRARY OF PITTSBURGH — TRAINING SCHOOL FOR CHILDREN'S LIBRARIANS

Miss Mary E. Ahern, editor of *Public Libraries*, lectured to the school March 8 on "Public libraries."

"Mrs. Dodge and fifty years of Hans Brinker" and "The New York Public Library," were the subjects of two talks given March 11 by Miss Annie Carroll Moore, supervisor of work with children, New York Public Library. The second talk was illustrated by lantern slides.

George B. Utley, secretary of the American

Library Association, spoke March 14 on the work of the A. L. A.

As a part of the course in "Lending systems," junior students were required to visit circulating libraries maintained by book stores and report on the methods followed in lending books.

#### ALUMNAE NOTES

Mary Abbie Goding, 1903-04, died February, 1916, in Philadelphia. Miss Goding was children's librarian of the Free Library of Philadelphia from 1904 to 1911.

Eva I. Cloud, 1912-13, has been appointed chairman of a state committee on publicity by the Illinois Library Association. Miss Cloud is librarian of the Public Library, Kewanee, Ill.

Mabel Harlow, 1910-13, has resigned her position as assistant in the children's department of the Carnegie Library of Pittsburgh, to accept the position of children's librarian in the Carnegie Library, Oberlin, Ohio.

SARAH C. N. BOGLE, *Director.*

#### WESTERN RESERVE LIBRARY SCHOOL

Bookbinding is the subject of absorbing interest to the students at present. This course is given by Miss Gertrude Stiles, supervisor of binding in the Cleveland Public Library, and began Feb. 28. Lectures on social psychology by Professor Gehlke, of Adelbert College, began on the 10th of March, and will continue for ten weeks. In the book selection course lectures have been given recently by Mr. G. O. Ward, of the technology department of the Public Library, on the technical books, and Professor Arbuthnot, of Adelbert College, discussed the literature of economics. For the remainder of the year each student is assigned to some one department or branch of the Public Library for one evening each week. This gives opportunity for direct work with the public and for such duties as might be assigned to a regular member of the staff.

The school had the pleasure of welcoming Mrs. H. L. Elmendorf, Feb. 23, when she spoke on the "Function of the public library in democratic society." A social hour followed the lecture when the class had the further pleasure of meeting Mrs. Elmendorf. Geo. B. Utey, secretary of the A. L. A., spoke Mar. 1 upon the work of the A. L. A., in such an interesting manner as to stimulate the interest of the students in becoming members of the association. The presence of Mrs. Utey was appreciated. On the same day Elwood Street, of the Cleveland Federation for Charity and Philanthropy, gave a talk on the work of that organization, illustrating it by moving pictures shown on the Pathé portable moving

picture machine. The machine itself, as well as Mr. Street's pictures, proved of great interest.

Miss Mary Eileen Ahern was another welcome visitor who spoke at the school March 9. Her inspiring and splendid presentation of the qualities entering into well-balanced library service were keenly enjoyed by the students. The visit of Miss Annie Carroll Moore, March 13, added yet another to the list of notable women librarians whom the students have recently had the opportunity to hear.

#### ALUMNI NOTES

Mary Marshall, 1914, has resigned her position in the catalog department of the Cleveland Public Library to accept the position of cataloger at the Akron Public Library.

Hazel Clark, 1914, has resigned her position in the circulation department of the Detroit Public Library to accept the position of organizer with the Iowa Library Commission.

ALICE S. TYLER, *Director.*

#### SYRACUSE UNIVERSITY LIBRARY SCHOOL

The curriculum of the Library School has been strengthened by the addition of a new course in the binding and repairing of books. It is given by Miss Mary Ketcham, Professor of Design in the John Crouse College of Fine Arts. Prof. Ketcham has studied the art of book making in the best English studios and also in American binderies. She is accordingly well equipped for the work both in its artistic and commercial aspects. The course is given two hours a week for the second semester.

Miss Elizabeth Smith of the Library School faculty has made an innovation which adds interest and diversity to the work of the school. Under her direction Bernard Shaw's play, "Arms and the man," was read on February 10 by students of the Library School with the assistance of instructors from the English department of the College of Liberal Arts.

The purpose was to show that good plays can be entertainingly presented without action and to give the students training in dramatic reading. Those who later become librarians in small towns where only inferior plays are offered, will be qualified by such training to assist in cultivating the taste of the public for good plays.

There was an audience of seventy-five present, including students, the staff of the University Library, and some invited guests. Miss Smith plans to continue the work and a second play is now in course of preparation.

Miss Ethel Knight, '10, who has been an assistant in the cataloging department of the University Library, goes on March 1 to a position in the Bureau of Education at Washington.

E. E. SPERRY, *Director.*

#### RIVERSIDE LIBRARY SCHOOL

The winter school at the Riverside Public Library opened Jan. 10 and ended Mar. 4. There was an advance registration of 36 students, of whom 31 reported at the beginning of school. The course included lectures in documents and reference work, by Edith E. Clarke; cataloging and classification, by Mrs. Jennie Thornburg Jennings; school libraries and the relation between libraries and schools; binding, by W. Elmo Reavis; and library law, administration, etc., by Joseph F. Daniels. In addition there were lectures by representatives of different publishing houses, and by several of the leading educators of the state.

The 1916 summer school announcements will be out in April. The following instructors may be announced at this time, others later: Miss Theresa Hitchler, head cataloger of the Public Library, Brooklyn, N. Y., will teach cataloging and classification; Miss Helen Evans, assistant librarian of the San José (Cal.) Normal School, will teach documents, library law, and reference; W. Elmo Reavis will have two weeks of half-day sessions in the bindery; Mr. Daniels will teach business management; Miss Alice Butterfield will teach periodicals and serials. Two others are to be announced, besides a long list of lecturers who will be with us for a single period. Mr. W. C. Tanner will give six Saturday lectures on fine arts.

#### PERSONALS

Alvan W. Clark, 1916, leaves about April 1 for a position with the H. W. Wilson Company, White Plains, N. Y. Mr. Clark is a graduate of Leland Stanford, Jr., University, a resident of San José, Cal., and has made an exceptionally good record in the library service school. He has the distinction of being the first man to take the work in this school.

Nelle Sanord, 1915, has been employed as head cataloger at the Public Library, Bakersfield, California.

Mary Griffin, 1916 winter school, has been employed by the Ames (Iowa) Public Library, beginning in March.

Pansy Bolton, 1916, winter school, will not return immediately to her position in Strathcona, Alberta, Canada, but will visit with her parents in Youngstown, Ohio.

Mrs. Geraldine V. Carlisle will not return to Aberdeen, S. D., for the present but will

continue in the Library Service School at Riverside.

Mrs. Mabel Faulkner will return to the Raton, New Mexico, Public Library, after an extended visit to coast cities, the San Diego Exposition, and an experience of two weeks in the Pacific Library bindery in Los Angeles.

Esther Leiser of Missoula, Montana, will return to her position in the Public Library of Missoula after an extended visit in Santa Monica and other coast cities.

Five members of the 1916 winter school and of the long course also have applied for special certificates for high school work.

JOSEPH F. DANIELS.

#### UNIVERSITY OF ILLINOIS LIBRARY SCHOOL SUMMER SESSION

Announcement is made by the University of Illinois Library School that a summer course of training in library methods will again be offered in 1916. The attendance at the courses given in the last five summers seems to indicate a demand for this form of instruction. In these years one hundred and eleven students have registered, seventy-nine of whom have come from Illinois libraries. The course this year will extend from June 19 to July 29.

The purpose of the summer course is to help persons engaged in library work in Illinois who feel the need of training but who are unable to take a regular library school course. The only requirements for admission are that the applicant be a high school graduate actually engaged in library work either as a librarian, library assistant, or teacher-librarian. No fee is required of persons from within the state of Illinois. For those coming from outside the state the tuition charge is twelve dollars. Board and room in Champaign or Urbana for the six weeks of the summer course cost ordinarily not over \$36. The only other expenses are those for books and materials, which do not exceed \$8.

The course is under general charge of P. L. Windsor, director of the University of Illinois Library School. The principal instructors are Ethel Bond and E. J. Reece, members of the Library School faculty. Eva Cloud, librarian of the Kewanee, Illinois, Public Library, will give the instruction in children's work and literature. Various members of the university faculty will present the literature of their respective subjects.

The general university summer session offers many incidental opportunities which students in the summer library course find at-

tractive. Among these may be mentioned lectures, concerts, religious services, social gatherings, and trips to points of interest on the campus. Every effort is made by the university authorities to render the summer session a source of inspiration as well as of instruction.

A circular describing in detail the subjects treated in the summer course of library training has recently been issued. Requests for this as well as general inquiries may be addressed to P. L. Windsor, Director University of Illinois Library School, Urbana.

*PENNSYLVANIA FREE LIBRARY COMMISSION  
—SUMMER SCHOOL*

The Summer School for Library Workers will open its sixth year at State College, June 26, for a six weeks' term in connection with the summer course for teachers. Admission will be limited to those who are already in library work or are under written appointment to library positions. No entrance examination will be required but the work will be such as needs a high school course, or its equivalent, as preparation. Credentials showing that the applicant either holds a library position, or is under appointment to one must be presented with the application.

Besides the usual courses for librarians, a library course for teachers will be given.

Tuition will be free to all residents of Pennsylvania. Others will be expected to pay a fee of \$20 at registration. For application blanks, write to the Free Library Commission, Harrisburg, Pa.

*COLUMBIA UNIVERSITY—SUMMER LIBRARY COURSES*

At the summer session of Columbia University, July 10 to Aug. 18, courses in library economy will be given, with regular university credit. The work will include courses in bibliography, under Miss Helen Rex Keller; school library administration, under Miss Mary E. Hall and Miss Ida Mendenhall; cataloging and classification, Miss Gibbs and Miss Campbell, of the Columbia Library staff; public documents, and legislative and municipal reference work, Miss Imhoff, Mr. Hicks and Miss Lyle. Full information will be supplied on application to the secretary of the university.

---

## Review

LIBRARY PLANNING, book stacks and shelving. Jersey City, N. J.: The Snead and Company Iron Works, Inc. 271 p. Q.

The Snead Company issue this enlargement of their "Bookstacks and shelving for li-

braries" published in 1908. The work has been entirely rewritten. It has grown from 160 pages to 271, and in completeness of treatment and lavish illustration is a great advance upon the first. The former standard of elegance in paper and press work is more than maintained. The earlier issue gave pictures and floor plans of 26 libraries covering 60 quarto pages. The present book gives 125 pages to the illustration of 96 libraries, presenting in convenient and attractive form a collection of some of the foremost and most instructive examples of modern library design which are anywhere to be found. This feature alone gives to the book an important library value for reference. The change of title also marks the introduction of four notable articles by recognized authorities on library planning. These are by Prof. A. D. F. Hamlin, of the architectural department of Columbia University; Theodore W. Koch, until recently librarian of the University of Michigan; Edward L. Tilton, an architect of experience; and the late Bernard R. Green, who designed the original Snead stack for the Library of Congress. Three of the four articles are reprints of papers published elsewhere, but fully in line with this publication. In none of them is to be found any word of praise or dispraise of any particular kind of stack.

But, with full appreciation of the value of the book as a study of library planning, we cannot overlook the fact that, so far as the book stack is concerned, its purpose is avowedly commercial. The book is costly. No expense has been spared to make it attractive. The nominal price is \$5. But it is intended, as we learn, "for distribution among architects, librarians and trustees." The likelihood of business developing is the actual price.

Now, it is conceivable that the company might be aware of some slight infelicity attaching to the use of their particular stack, but, if so, no one would expect them to mention it. Whatever can be said in favor of the Snead stack is to be said. Other systems when mentioned can be dismissed with a phrase. This tendency appears in more places than one and sometimes leads to inconsistency.

It will, however, be noted with general satisfaction that the claim of a "thoroughly fireproof" book stack, which was asserted in earlier editions and which has been repeated, till very recently, in various forms of advertisement, is no longer urged. This is doubtless due to a recognition of the fact that protection against fire cannot be assured by the use of incombustible materials alone unless there is also a "fire resisting design" and that

the very openness of construction which is important for ventilation and cleanness offers the best facilities for the rapid spread of fire. Here, as elsewhere, real protection is and must be the result of unremitting care.

The book is arranged in three parts: the first for business; the second for instruction or suggestion, and the third for illustration, showing not the stacks, but the buildings in which the stacks have been placed.

In the first part, covering 92 pages, there are set forth at length, under no less than 28 heads, the principles of the modern book stack, the history of its development and the fitness of the Snead construction, with profuse illustrations on almost every page. One not familiar with the subject is amazed at the infinite complexity and minute nicety of detail requisite to the production of satisfactory results on such an enormous scale as the growth of great libraries demands. The mere reading of these descriptions must create a profound respect for the stack builder who has met the conditions of the problem with so great ingenuity and is able to offer to the libraries the finished product.

The cost of shelving is given on page 73 as varying from 40 cents to one dollar or more per lineal foot. This is not definite. In each case this is a matter of contract and depends on style, finish and, possibly, competition.

The second part of the book, taking 17 pages, treats of various aspects of library planning. The articles are valuable. In the main, they apply to large libraries. One of them is written from the librarian's standpoint, the others from the architect's. They have no connection with one another and necessarily fall short of giving a complete treatment of their subject. Hence this present volume cannot take the place of a manual of library planning as the title of the book would suggest. One paper which treats specifically of "Scientific planning" offers at the outset a carefully worked out formula based upon the appropriation as a fixed fact as if the amount of money was the first thing to be ascertained. This may, very properly, be the architect's point of view, but the real scientific planning begins with the public need. It must count the books and the readers before it counts the dollars.

A bibliography of the subject of library buildings is given on page 120, followed by a list of 201 libraries which have received Snead installations. This list includes a few duplicates, such, for example, as Columbia University, which are also on the list of other stack builders. No doubt these libraries are using more than one kind of shelf.

The third part of the book consists of a very interesting collection of pictures of library buildings with floor plans. As said above, 96 libraries are here represented on 125 quarto pages. Four monumental libraries head the list: the Library of Congress, the New York Public Library, the Columbia University Library and the more recent Widener Library at Harvard. The illustrations of these are very full, completely showing the plan of each building. There are also many small libraries, city branches, village libraries, college and professional libraries and government buildings at Toronto and Victoria. This part of the book is most attractive. It displays not so much the results of the Snead Company's work, as the quality of the patronage which they have secured.

W. R. E.

---

## Librarians

---

ASHHURST, John, has been elected librarian of the Free Library of Philadelphia to fill the vacancy caused by the death of Dr. John Thomson. Mr. Ashhurst was graduated from the University of Pennsylvania College Department in 1887 and had charge of the West Philadelphia branch library from 1895 to 1898. Then he served one year as assistant at the main library and went to the Mercantile Library from 1901 to 1903. He returned to the Free Library as assistant librarian in 1904, and has held the post continuously until the present time.

BICKFORD, Frances H., Smith 1909, Simmons 1913, for the past five years connected with the Free Public Library of New Haven as assistant in the children's room, head of Fair Haven branch, and for the last two years as head of the school department, has resigned her position to take up work April 1 as librarian of the Bridgeport (Ct.) High School Library.

CLAXTON, Mrs. P. P., wife of the commissioner of education, and before her marriage one of the prominent librarians in the South, read a paper on the development of libraries in the United States before the Second Pan-American Congress, held in Washington in January.

GODDARD, Wm. D., who has been librarian of the Naval War College at Newport for the past seven years, assumed his new duties as librarian of the Deborah Cook Sayles Public Library of Pawtucket, R. I., Feb. 1, succeeding Mr. Dougherty, who has gone to Newton, Mass.

HAMLIN, Louise, Pratt 1909, has become assistant at the Morris High School Library in the Bronx.

HOWSON, Roger, who has been a bibliographer at Columbia University for some time, was formally appointed assistant librarian at the last meeting of the library trustees.

JETTINGHOFF, Mabel E., Pratt 1913, who has been since graduation first assistant in the East Liberty branch of the Carnegie Library of Pittsburgh, has been appointed to the position of annotator and classifier in the cataloging department of that library.

KEOGH, Andrew, who has been acting librarian at Yale University since the death of Prof. John S. Schwab, was made librarian at the meeting of the Yale corporation, Mar. 20. Mr. Keogh was born in Newcastle-upon-Tyne, England. His college studies were at the Durham College of Science and he holds the degree of Master of Arts from Yale. He was reference librarian at the Newcastle Public Libraries from 1892 to 1898. Since 1899 he has been at Yale and since 1904 has held the position of reference librarian with the rank of professor. He has been librarian for the Elizabethan club at Yale since its organization and is a member of many important library and bibliographical associations of both America and England.

McKILLOP, Samuel, librarian of the South Side branch of the Milwaukee Public Library for about twenty-three years, has been appointed director of extension by the library trustees. The new office will control all branch libraries, including school libraries, in Milwaukee county. Mr. McKillop started his library in a corridor of the old South high, when he was a freshman in that school, and when the South Side Educational Society became interested in a library for that section of Milwaukee. At the start this library was limited to the use of high school pupils. In two years it became a circulating library and was opened to the public, being moved from the corridor to a room in the building. It is now the second largest library in Wisconsin, located in a model building.

ROBERTS, Louise, Atlanta Library School 1915, has resigned her position as librarian of the West End branch of the Birmingham Public Library to become children's librarian in one of the branches of the Portland (Oregon) Public Library.

ROBESON, Julia G., Pratt 1904, has been made librarian of the newly opened Richmond Hill High School Library.

RUSH, Charles E., who has gone from the Public Library of St. Joseph, Mo., to Des Moines, Ia., was the recipient of a testimonial volume expressing the good will of the members of the library board and staff. The book is bound in limp brown morocco, with silk lining, and is the work of the library force. The marginal illuminations are beautifully wrought, and the scroll work is of a high order. In the volume are photographs of the three libraries in St. Joseph, a number of verses and quotations, the resolutions adopted by the library board, and the signatures of the board and staff. In the front is a reproduction of the private book plate of Librarian Rush, and at the end is one selected from the library collection of plates. A dinner for Mr. and Mrs. Rush and Jesse Cunningham, the new librarian, was given by members of the library staff, Mar. 9, and a farewell to Mr. Rush and a welcome to Mr. Cunningham was a feature of the Commerce Club luncheon Mar. 8.

SQUIER, Nellie, has resigned the librarianship of the Monson (Mass.) Free Library, a position she has held for twenty years.

STONE, Rachel N. T., has been appointed librarian for the new library to be opened in West Springfield, Mass.

SUTHERLAND, Florence, B.S., Simmons 1908, has resigned her position as first assistant librarian at the Seward Park branch of the New York Public Library, and has accepted the appointment as cataloger of the Kern County Free Library, Bakersfield, Cal.

SWEET, Maud, who has been connected with the Brooklyn Public Library for the past ten years, has been appointed librarian of the Public Library in Monson, Mass., her home town.

TILTON, Asa C., B.A. and Ph.D., Yale University, has been appointed assistant in the manuscript division of the New York Public Library, beginning March 1. Dr. Tilton was with the Wisconsin State Historical Society from 1904 to 1910, and at the Library of Congress from 1913 to 1915.

WILEY, Dr. Edwin, M.A., Ph.D., has been appointed librarian at the Naval War College in Newport, R. I., to succeed William D. Goddard, who has gone to Pawtucket, R. I. Dr. Wiley has been connected with the libraries of Vanderbilt, Tennessee and California Universities and assistant at the Library of Congress.

WILLIAMS, Mary, Pratt 1898, has been made medical librarian on the Laboratory Staff of the New York State Department of Health.

# THE LIBRARY WORLD

## New England

### MAINE

*Waterville.* Plans for a new library reading room have been submitted to the trustees of Colby College.

### NEW HAMPSHIRE

*New London.* The will of Amos H. Whipple of Boston leaves \$15,000 and a lot of land in trust for his mother's use during her life. On her death the trust is to terminate and the money and lot are to go to the inhabitants of the town of New London for the establishment of a public library, provided the town votes to accept it. The money must be used for the building, equipment and establishing of a library, on the Nelson lot, and to be known as the Whipple Memorial Library, in memory of his parents, Dr. Solomon Mason Whipple and Henrietta Kimball Whipple. In the event that the town does not accept, the fund reverts to the estate.

### VERMONT

*Burlington.* The report of the librarian of the Fletcher Free Library, George D. Smith, shows that during the year there has been a circulation of 93,186, which is the largest in the history of the library and a gain of 6145 over 1914. The average daily circulation was 306, and 1293 new borrowers were registered during the year. There was a total of 1192 new books purchased.

*Montpelier.* Bids on the new State Library building were opened in February, but as the lowest bids exceeded the appropriation of \$150,000 the plans must be altered before any award can be made.

*Townshend.* It was voted at the town meeting in March that no money be appropriated for the library this year, save that required by law. This means that no new books can be bought during the entire year and that either the rooms must be opened for a fewer number of hours, as the small sum required by law (\$25) is not nearly sufficient to pay the present salary of the librarian, insurance, etc., or a small reserve intended to be used for necessary bookcases must be used for these current expenses. About 2000 books have been given out from the library the past year.

### MASSACHUSETTS

*Athol.* The original Carnegie grant to this town of \$15,000 for a library building has been raised to \$22,000. The present library is in

a vacant store in the Lyric building. L. S. Starrett, president of the L. S. Starrett Company, has offered the town a site for the library near Starrett Square. There is some opposition to this place by persons who are in favor of the town taking over the Sally Fish property in the rear of the Pequog Hotel, where municipal buildings can be erected in time.

*Brimfield.* A suitable approach to the library building has been constructed with the money given by Mrs. Mary Knight Hyde of Ware, a former resident of the town. The approach includes a walk of flat stones from Brimfield hillsides, entirely in keeping with the character of the building, which is of field stones, and is an enduring memorial of the interest in the library of one who has previously been its generous benefactor.

*Cambridge.* The Widener Library of Harvard has received a very valuable collection of Horace, the gift of William Cross Williamson '52, who died two years ago. The 105 volumes that constitute the collection were given to the library by his daughter, Mrs. Edes. The volumes range in date from 1501 to 1900. The bindings are exquisite and include the handiwork of many famous binders.

*Gardner.* The trustees of Heywood Memorial Library are planning to open a new and larger branch in West Gardner, to replace the branch recently destroyed by fire. An appropriation of \$1000 for doing the work was asked at the March meeting. The trustees have opened negotiations with Thomas Brazell for quarters on the second floor of his building at Vernon and Parker streets. These quarters are in the heart of the business district, and more centrally located than those formerly occupied by the branch.

*Hancock.* By the will of Miss Jennie A. Taylor of this town the sum of \$6000 is left for the erection of a concrete or brick building to be used as a public library and to be known as the "Taylor Library Building."

*Leverett.* The sum of \$3500 for a library building and \$1500 for its maintenance has been given to the town by Mrs. Judson Curtis of Chicago in memory of her father, Bradford Field. Karl Putnam of Northampton has prepared plans and it is hoped to begin construction in the spring.

*Lynn.* Plans for the new West Lynn Carnegie Library, as announced by the architect,

C. Vernon Burgess, provide for a one-story and basement flat roof building of second class construction. The walls are to be of tapestry brick. The building is to be laid out in cruciform plan with reading rooms on the right and left, off the central delivery hall. A store room, librarians' room and staff room are provided. A lecture room in the basement will accommodate 290 persons. Mr. Burgess expects the building to be erected by Sept. 1. It will be 74 feet long by 60 feet deep.

*Northampton.* A gift of four portraits in oil, three oil paintings and a collection of 48 miniatures, known as the Holland House collection, have been given to the Forbes Library by Mrs. Frances Sarah Bates of Boston. The portraits are all of members of old Northampton families, and have been hung in the reference room; the paintings and miniatures have been placed in the reading room.

*Rehoboth.* The Goff Memorial Building has been finished and dedicated. The building, which cost about \$40,000, contains a large hall and the library room on the main floor, a well equipped kitchen and dining-room in the basement, and two historical rooms on the third floor.

*Williamstown.* To house the collection of rare books which he presented to Williams College last May, Alfred C. Chapin, of the class of 1869, now proposes to erect a special fireproof building, and the entire matter has been referred to the committee on grounds, buildings and improvements, in conference with Mr. Chapin, with power to act. Since, in the opinion of the authorities, the building should be physically connected with the main library, the question of site and the style of the new building involves the question of a complete new library building to take the place of Lawrence Hall. No action upon an entire new structure has been taken, however. To fulfill the purposes of the giver, it is expected that the small building provided by Mr. Chapin for his collection will be about 50 feet long by about 25 feet wide, of fireproof construction and so arranged as to display and at the same time to protect the rarer books.

#### CONNECTICUT

*Bridgeport.* It is hoped that a few months' time will see the Bridgeport High School Library tripled in size. The present collection of books in the school library is a memorial to the late Alexander Wheeler, a graduate from the school in the early '90's. In the will of the late Edward Hallen, former judge of probate and member of the board of educa-

tion, \$500 was left to the city to be used as a fund for a memorial, and a Hallen collection in the new High School Library is suggested as a fitting reminder of his interest in the schools. An effort is also being made to raise a fund for a Somerset memorial section in the library, to commemorate the work of the late Miss Margaret Somerset, French teacher in the school. Although nothing has been determined, it is likely that the Somerset memorial will be of French literature and the Hallen memorial of technical books.

## Middle Atlantic

#### NEW YORK

*Auburn. Seymour L.* Elizabeth Porter Clarke, lbn. (Rpt.—1915.) The report shows a decided increase in the number of persons using the library. The number of card-holders is now nearly 7000, or more than one-fifth of the population. The circulation of books for the year was 82,184, and the reference use in the building 33,580, making the total use of books for 1915 of 115,764. The circulation of books from school and other stations also shows a large gain, nearly 10,000 volumes having been taken from the schools to the children's homes. This includes the books loaned from the Y. M. C. A. and the Woman's Union. The library also lends books to the rural schools. Over 150 Italians are drawing books from the collection in their own language. 1614 volumes were added to the library, making the total number of volumes in the library 27,625. The library has grown to such an extent that a new stack is much needed to shelve books for which there is no place on the over-crowded shelves. The addition of an upper stack seems a necessity and is under consideration. The project of opening the reading room on Sunday afternoons is also under consideration of the trustees.

*Carthage.* It is announced that the Corcoran Memorial Library will be built next spring and summer. The sum of \$15,000 was left in the will of the late Martha J. Corcoran for the building. The building will be erected on the site in Budd street purchased by the association early last fall.

*Herkimer.* The remodeling of the present library building in such manner as to double its book capacity is under consideration. The building, which was the residence of the late Judge Robert Earl, was bequeathed by him to the village for library purposes in 1895.

*Highland.* A free library was opened in January with a collection of about 600 books.

*Ithaca.* Fire destroyed Morse Hall, seat of the chemistry department of Cornell University, on Feb. 13. The loss is estimated at more than \$300,000. Valuable research work, the product of years of study, was consumed, and chemicals and apparatus were also lost. Several hundred students saved 5000 books from the library on the first floor, and the records of the department. The building was erected in 1890, and in 1891 Andrew Carnegie gave \$60,000 for an addition. It was valued at about \$200,000. The university carries that amount of insurance.

*Lowville.* A legacy of \$3000 has been left to the free library by the will of Mrs. Mary L. Chambers, conditioned on the purchase of a lot and the beginning of a library building within three years of the date of her death. A second legacy of \$1100 is provided for the library in the will of the late Mrs. W. L. Scott, subject to a life interest in behalf of a brother.

*Marlboro.* The entire stock of books and other property of the free library was destroyed by fire on Dec. 7, 1915. Fortunately the association had a good balance of cash in the treasury, and this, together with \$300 received from insurance, will provide for the immediate restoration of the library and its activities.

*New Paltz.* A site for a new library building has been given to the Free Library Association by the Huguenot National Bank.

*New York City.* The private library of the late professor of Greek, Fitz Gerald Tisdall, consisting of approximately a thousand volumes of historical, linguistic, and classical interest, has been donated to the City College by Mrs. Tisdall. These volumes are distributed among the Greek, Latin, history, and English departments. The collection is the work of a lifetime devoted to study and research. A bust of Professor Tisdall is included in the donation to the college.

*New York City.* Announcement was made that more than \$70,000 had been raised toward a new library for the College of the City of New York, at the alumni dinner of that institution held in the Savoy Hotel, Mar. 4. Pleas were made by several speakers for an additional \$80,000 which is necessary before the trustees of the college can take advantage of the city's offer of a site for the building. An anonymous donor has agreed to give the last \$30,000 needed to complete the desired \$150,000.

*New York City.* *United Engineering Soc.* L. W. P. Cutter, lbn. (Rpt.—1915.) Acces-

sions 2535 books, 621 pamphlets, 58 maps; total books and pamphlets in library, 62,446. Total attendance was 12,820, and about 3000 inquiries were answered over the telephone. A Library Service Bureau was organized in May to care for the increasing demands made by members for reference lists, translations, and photostat copies, and each of the three Founder Societies contributed \$250 for its establishment. For this kind of service during the year there were received 307 requests for reference lists, 71 for translations, and 301 for photostat copies involving the making of about 2500 prints at a cost of \$600. During the year the library published the "Catalogue of technical periodicals" in preparation for three years, the cost of preparation and of printing and binding 1000 copies being \$1200. A plan of joint administration was adopted, by which each of the Founder Societies agrees that the future current purchase of books, periodicals, etc., for addition to the Joint Library shall be made and paid for by the United Engineering Society. Each society may still make additions to its own library under its own bookplate, and continuations of serials bought by the United Engineering Society shall carry the same bookplate and be the property of the society possessing the earlier numbers. The library made a study in March and April of the method in use for handling periodicals, which is described with some detail in "Library work" in this issue. The need of an index to technical literature is discussed, and the annual cost for publication is estimated at \$11,700 for salaries for the editorial staff and \$11,340 for publication expenses. No estimate of postage, stationery, and office supplies needed for the work is included.

*Oneonta.* A large lot on Ford avenue has been bought for a possible future site for a new library building. An indefinite option has also been secured on adjacent property. The building on the lot just purchased is being remodelled for a temporary home for the library.

*Schoharie.* Through the efforts of Schoharie Chapter, D. A. R., this village will have a free library. The committee appointed to solicit has raised \$125 in cash and at present time has over 600 books ready for the library.

*Seneca Falls.* Plans for a new library building have been adopted and contracts authorized. It is to cost about \$12,000, having a frontage of 63 feet and a depth of 35 feet. The cost is provided for in the award made for damages by the state in the construction of the new barge canal.

*Southampton.* The building of the Rogers Memorial Library is to be largely remodeled, transforming the large auditorium into two spacious rooms, one to be used as a children's room and the other as a room for the collection and exhibition of local history antiquities, relics and mementos. Special efforts are to be made to induce residents of the village to give or loan such articles and documents to the library. There has been provided for the proposed changes and improvements \$7455, of which \$3000 is from the village corporation, \$700 from entertainments, and \$3755 from individual donors.

*Spencerport.* The hundredth anniversary of the founding of the "Farmers Library Company of Ogden" (the early name of the town), was celebrated last December. It culminated in a large public banquet in the village hall served by the women in the town and attended by about 400 persons. Music was furnished by the village band and by other local talent. Addresses were made by W. F. Yust, head of the Rochester Public Library, J. R. Slater of the University of Rochester, and Judge John D. Lynn; letters were read from the State Education Department, and the veteran writer, J. T. Trowbridge, who has dwelt on the enjoyment he derived during his boyhood from the books in this collection, in the pages of "My own story"; and a comprehensive history of the library was read by its former president, Chauncey Brainerd.

#### NEW JERSEY

*Collingswood.* An appropriation of \$15,000 has been made by the Carnegie Corporation for a library building, and several sites are already under consideration.

*Dover.* The trustees of the Public Library are discussing the importance of a new building, as new quarters must soon be secured to accommodate the present library books and patrons. Many of the books are kept in the cellar and stored away in other places because of lack of proper shelving.

*Elizabeth.* Permission to use a portion of the Branch Library at Elizabeth avenue and Erie street for school purposes was granted the Board of Education in February at a meeting of the Board of Library Commissioners. The Board of Education requested the use of the south section of the first floor of the Branch Library in which to establish two classes for the remainder of the term. About seventy pupils comprise the two classes and the granting of the request will enable them to have school full time instead of part time.

*Long Branch.* Title to the Edward R. Slocum estate was taken Mar. 9 by the Long Branch Free Reading Room Association. The property has a frontage of 104 feet on Broadway and is more than 200 feet in depth, and adjoins the city hall. It is planned to build a Carnegie Library on the site and move the old homestead. The Library Association is willing to deed the land to the city if it will maintain the library.

*Plainfield P. L.* Florence M. Bowman, lbn. (Rpt.—yr. ending May 31, 1915.) Accessions 2430; total 52,580. Registration (new) 5829. Circulation 99,607; adult 73,901, juvenile 25,706; 64 per cent, adult fiction; 3717 volumes circulated through sub-stations, 3166 through school libraries, 3279 music scores. Receipts including balances on hand, \$19,213.24; disbursements \$11,499.65, including salaries \$5203.75; books \$2653.96; periodicals \$782.22; and binding \$344.67. The endowed scientific department numbers 9355 volumes; the endowed library of Americana 1237 volumes; the department of music 1924 volumes, and the law department 1857 volumes.

#### PENNSYLVANIA

*Pittsburgh.* The Conrad Dietrich estate has offered to build a branch library for the people of the North Side and to rent the building to the city for a nominal sum, \$600 a year. The Dietrich site is at Woods Run avenue and Brighton road. The sub-committee of the city council has under consideration five other sites that have been proposed. In the 1916 budget \$4500 was appropriated for the equipment of a branch library.

*York.* The Martin Library Association has been incorporated. Under the will of the late Milton D. Martin the sum of \$125,000 is now available outright for the purposes of the association, while \$60,000 additional is placed in a trust fund, the income of which is to be applied for the maintenance of the library. An additional \$8000 in cash is payable to the association after the death of Lizzie Harline, who receives the income during her life.

## The South

#### GEORGIA

*Atlanta.* The South branch of Carnegie Library at Capitol and Georgia avenues, was occupied on March 1. The exterior is in the Spanish style of architecture, built of light pressed brick, with projecting red tile roof, window casements and frames of Pompeian green. This is the second of the four branches to occupy its own building, the other being

the Anne Wallace branch on Luckie street. The Oakland City branch occupies rented quarters and the Uncle Remus branch has quarters in the Uncle Remus home. The South branch had its beginning in November, 1914, when L. M. Dodd, of 162 East Georgia avenue, offered the library space in the back of his store to place a deposit of books. From this little deposit in the rear of a store over 30,000 books have been circulated in the last year. The Carnegie Corporation gave \$17,000 for the building, thus making a total of \$177,000 that the city has received from the Corporation for library buildings.

*Savannah.* Construction of the new library is progressing satisfactorily, according to H. W. Witcover, architect, who states that the building will be completed and ready for occupancy during the month of June. All of the exterior granite walls had been completed in February, and work on the interior finish was commenced in March. The building is two stories high, with a basement. The entire building is of fireproof construction. The floors and roof are of reinforced concrete and the partitions are of brick and terra-cotta blocks. The total cost of the building, including furniture and equipment, will be about \$80,000. The building will accommodate 60,000 volumes. The present library has more than 50,000 volumes of which 28,000 will be turned over to the new library.

#### ALABAMA

*Huntsville.* The new Carnegie Library which cost \$12,500 was opened to the public Feb. 29 with a book shower which was largely attended. The number of books contributed, with the previous donations, gave the library a fairly good start. Miss Carolyn Burke has been placed in charge as librarian.

#### TENNESSEE

*Nashville.* The new negro Public Library was formally opened Feb. 10 in the presence of a large audience. G. H. Bandy of the negro board of trade presided. Addresses were made by G. H. Baskette, president of the board of directors; by Alfred E. Howell, a member of the board, Miss Margaret Kercheval, librarian, and others. Music was furnished by students from Fisk University, Roger Williams and Pearl High School. The new building, which is located on Twelfth avenue, north, opposite St. Joseph's church, was erected at a cost of \$25,000, the money being provided by the Carnegie Corporation. This is the second branch library and the first for the colored people.

#### MISSISSIPPI

A bill to encourage the establishment of county free libraries in Mississippi has been introduced in the lower house. The measure bears the indorsement of the Mississippi Library Association, and is very similar in its provisions to the California state library law.

*Biloxi.* A movement for the establishment of a Carnegie Library is being urged by a number of citizens. The city needs a public library but has none, excepting the one operated by the King's Daughters.

*Gulfport.* Those interested in securing the establishment of a Carnegie Library here have petitioned the county board of supervisors for the lot at the southwest corner of the county court house site. The matter has been taken under advisement by the board.

*Laurel.* In order that a donation may be secured for the erection of a Carnegie Library, it is probable that the city commissioners will arrange for a new census of the city of Laurel. The last federal census, taken in 1909, gave Laurel 8862 people, and it is believed a careful census will now show somewhere between 13,000 and 15,000 population.

*Yazoo City.* Mrs. Fannie J. Ricks has presented a building valued at \$8000 to the Yazoo Library Association. She has already given the \$20,000 building and several other substantial gifts to the city.

#### LOUISIANA

*Monroe.* Following a conference with Miss Lutie Stearns as adviser, a committee of business men announced that they would personally guarantee the first year's salary of a trained librarian to be chosen by Miss Stearns. It was understood that at the end of that time the city will take full control of the library, providing for the salary of the librarian.

*Opelousas.* A movement to secure Opelousas a Carnegie Library is being vigorously pushed. The nearest approach to a public library here is that maintained by the High School for the benefit of the pupils.

### The Central West

#### MICHIGAN

*Detroit P. L.* Adam Strohm, lbn. (50th ann. rpt.—yr. ending June 30, 1915.) Accessions 36,012; total 329,675. New registration 35,156; total 100,204. Circulation 1,491,034. Receipts \$554,392.27, including a bond issue for \$314,336.19 for the new main building. Expenditures for maintenance \$208,684.58, in-

cluding \$39,987.25 for books, \$3500 for periodicals, \$10,657.39 for binding, and \$114,577.01 for staff salaries.

The report is prefaced by a detailed exposition by the president of the library commission of the history of the new main building from the first agitation nearly fifteen years ago, to the starting of work on the foundations early in 1915, and the application for an additional bond issue of \$750,000.

#### OHIO

*Cincinnati.* The Cincinnati Chamber of Commerce is planning to establish a reference library of information about export trade, tariffs, etc. Miss Helen Waldsworth, principal assistant in the foreign trade department of the chamber of commerce, has spent several weeks in Washington, making a study of the methods of the bureau of foreign and domestic commerce in promoting export trade.

*Paulding.* The new Paulding County Library was opened early in March, with 4000 volumes on the shelves.

#### INDIANA

*Albion.* The Carnegie Corporation has granted \$10,000 for a new library building. The present library was founded eighteen months ago and now has more than 2000 volumes.

*Carlisle.* A Carnegie building costing \$10,000 is to be erected here for the town of Carlisle and Haddon township. Plans are now being drawn and the building will be erected this summer.

*Fort Wayne.* The children's department of the Fort Wayne Public Library has grown so fast in the past year that the librarians in charge have found themselves cramped and unable to develop the full efficiency of the department in their present quarters, and as the result a large workroom for the children's director and her assistants has been installed in the basement floor and a new stairway built to connect it with the children's room. Other improvements in the library building include the placing of new files and tables in the reading rooms on the second floor devoted to government documents and newspaper storage.

*Owensville.* The town of Owensville and Montgomery township, Gibson county, have reached an agreement to maintain a Carnegie Library, for which a grant of \$12,500 has been made. The library building will be erected in the middle of the park which forms the public square at Owensville. It will be of dark Rugby brick with Bedford stone trimmings

and red tile roof. In the basement will be an assembly hall and public comfort stations. The main floor will contain juvenile and adult reading rooms. The building will be 39 by 59 feet.

*Rockport.* Not waiting until the \$17,000 Carnegie building is erected the library board has opened the library in temporary quarters in the rear of the Farmers' bank. The library started with close to nine hundred volumes.

*Vincennes.* The Carnegie grant of \$30,000 for a public library building has been increased to \$35,000. The increase resulted from appeals made to the Carnegie Corporation by the city officials and the school board, who cited the fact that Vincennes had grown more in the last year than in 10 years previous, and that a slogan of "Fifty Thousand by 1920" had been adopted. The city intends to purchase a lot at a cost of \$18,000, if the city council votes the annual maintenance of \$3500 for the upkeep of the building.

*Winchester.* The Carnegie Library building was opened to the public for the first time, Feb. 21, when the Indiana traveling art exhibit was displayed by the Woman's Club. The schools of Randolph county also had displays of their manual training and domestic science.

#### ILLINOIS

*Lockport.* A petition was in circulation here in February to have the new two-mill tax assessed for library purposes. This would yield \$7000 annually, enough to provide site and books and maintenance for the building the Carnegie Corporation might grant.

## The Northwest

#### WISCONSIN

*Shawano.* The new \$10,000 Carnegie Public Library was dedicated Feb. 22, with exercises at the library assembly room. M. S. Dudgeon of Madison, secretary of the State Library Commission, made the principal address. The library building is 32 x 60 feet. The basement floor has an assembly room, directors room and a kitchen, and it will be generally used by societies for various gatherings. The library proper is on the main floor.

*South Milwaukee.* Plans for the Public Library granted by the Carnegie Corporation have been completed by Charlton & Kuenzli, architects. It will cost \$15,000, will be of brick with stone trimming, one story and basement, 34 by 66 feet. On the first floor there will be a general reading room, a chil-

dren's room, the librarian's office, delivery and cloak rooms. There will be an assembly hall, 35 by 31.6 feet; recreation, boiler and work rooms in the basement.

*Superior.* The city council has authorized the purchase of four branch library sites, and bonds for \$40,000 have been sold to the sinking fund trustees.

#### MINNESOTA

*St. Paul.* Plans are being made to establish a branch of the St. Paul Public Library in Merriam Park. Fifty business men of that section have decided to appoint committees to purchase a site and raise funds. The proposed site is on the north side of Marshall avenue, between Fairview and Dewey avenues.

#### IOWA

*Davenport P. L.* Grace D. Rose, lbn. (13th ann. rpt.—yr. ending Dec. 31, 1915.) Circulation, 192,098, an increase of 17,823 over 1914, and an average of 4 books per capita of the population. New readers registered, 1997; total registration 11,341, 24 per cent of the population. Library contains 42,669 volumes. Income for the year \$26,169.49, of which \$4186.58 was spent for books, \$1158.35 for binding, \$7549.90 for salaries. A special feature noted was the observation of "Boys' book week" in November when special books were exhibited and an entertainment given for the boys in the library club rooms. Two new deposit stations were opened during the year.

*East Moline.* The possibility of securing a new library building through the Carnegie Corporation is under discussion here. The library now contains about 900 volumes.

*Greenfield.* The contract for the new library building has been let to Lloyd D. Willis of Omaha.

#### NEBRASKA

*College View.* After a delay of seven months the new Carnegie Library was dedicated Feb. 5.

*Omaha P. L.* Edith L. Tobitt, lbn. (Rpt.—1915.) Accessions 6052; total 105,870. Circulation 418,154, exclusive of single plays, pamphlets, stereoscopic pictures, plates from reference books, or stereopticon slides, all of which were lent freely upon request. The circulation of books in foreign languages was 14,672, including French, German, Danish, Italian, Yiddish, Bohemian, Spanish, Swedish, and Russian. Registration 27,101, 12% of the population of Greater Omaha. There were 86,727 visitors to the reading and reference rooms. The two most prominent features of the library's work during the year were the

establishment of the High School branch library and the adjustment of the South Omaha library system to that of Omaha, following annexation. The High School branch is supported jointly by the Board of Education and the library board and is for the use of the pupils and teachers of the High School. The work is under the supervision of the library board. The South Omaha branch is situated close to the business center of the South Side and within a short distance of several of the largest public and parochial schools and is well placed to obtain the greatest use by the people of the locality. The classroom at the Majn Library had almost daily use and the lecture room at the South Omaha branch was used frequently by the Woman's Club and various musical organizations. Both rooms are available for the free use of the public for all educational purposes.

#### NORTH DAKOTA

*Bismarck.* Bismarck went on record emphatically in favor of a public library at a special election Feb. 28. The board of education must now select a library board, in which will be vested the management of the institution. An appropriation has been provided in the budget in anticipation of this election which becomes available as soon as the board is formed. It is likely that a meeting of the school board will be held soon to name the board so that no time will be lost in employing a trained librarian to take charge of the temporary quarters established in the Commercial Club rooms. This ends an agitation begun many years ago and assures some kind of a library for the city. There is a strong sentiment in the city in favor of accepting the Carnegie offer of a \$25,000 building, the city to provide a site and appropriate at least \$2500 a year for its maintenance.

#### SOUTH DAKOTA

South Dakota had 143 traveling libraries in the field the first of January, and expected to add 20 more within a short time. A glance at the directory for the traveling libraries reveals some interesting facts about the system. Forty-five libraries are located in residences, twenty in stores of a general nature, sixteen in schools, ten in drug stores, eight in public libraries, seven in post offices, and the remainder in banks, parish houses, club rooms, newspaper offices, hotels, town halls, and general offices. The most unique location for a traveling library, however, is in the car belonging to the county agent of Codington county. At his own suggestion, a library was sent to

A. W. Palm, which he takes with him on his trips around the country, exchanging books wherever they are wanted. In this way, without additional expense to the Commission, good reading is taken to the very doors of the farm houses. Mr. Palm is not a trained librarian, but he knows his people, and he knows good books, and he is enthusiastic about bringing the one to the other.

*Flandreau.* During the meeting of the State Federation of Women's Clubs last October, so much enthusiasm for a public library was aroused that rooms were secured in the county court house, on condition that the library be free and accessible to all citizens in the county. The library is known as the Moody County Public Library, and opened with over 800 volumes. Mrs. George Chorpensing was made librarian.

#### MONTANA

*Plains.* The town council has been requested to take over the Public Library now supported entirely by public subscription, and the proposal will be put before the voters at the regular spring town meeting.

### The Southwest

#### MISSOURI

*St. Joseph.* Bids for the addition to the main library building were asked for, March 15. The addition is to be 68 x 62 feet, three stories, and all but one room will be used for museum purposes. A reading room for the library will be on the second floor, just north of the room now used for this purpose, and west of the stack room. The reading room will be 50 x 30 feet. The present reading room will be used for other library purposes, the main library now being crowded for room.

#### KANSAS

*Topeka.* Members of the Masonic Grand Lodge, whose sixtieth annual communication closed Feb. 17, raised the amount to be spent in erecting a new library and administration building at Eighth and Harrison streets to \$100,000. Plans already prepared by New York architects for a building costing \$75,000 were exhibited to the grand lodge by means of stereopticon slides. Dismantling the old building will begin early in April.

#### TEXAS

*Vernon.* The Carnegie Corporation has approved the plans submitted for a library building, and has made a grant of \$12,500 for its construction.

#### COLORADO

*Denver.* Four new distributing stations have

been opened by the Public Library, to keep pace with the growing demand for library books.

### The Pacific Coast

#### WASHINGTON

*Tacoma.* A petition has been circulated among residents of the North End, asking to have the old Mason Library reopened. It has been closed since the removal of Whitworth College to Spokane two years ago.

#### OREGON

*Portland P. L.* Mary Frances Isom, lbn. (Rpt.—yr. ending Oct. 31, 1915.) Accessions 31,916; total 225,560 volumes, 18,998 pamphlets. New registration 22,141; total 80,317. Circulation 1,385,964. Receipts \$206,604.85; expenditures \$157,781.74, including \$23,754.84 for books, \$6,236.75 for binding, \$3,050.24 for periodicals, and \$100,745.70 for salaries.

Besides the Central Library, there are 16 branches, 1 municipal reference library, 37 deposit stations, 4 high school libraries, 692 class room libraries in school district No. 1, and 91 class room libraries in rural schools. The circulation records show an increase of 101,462 or 7.8% over 1914. Stated in another way, the circulation increase was 2% at the Central Library, 14% in the branches, and 24% in the deposit stations. A total of 2483 lectures and meetings were held in library buildings, with an approximate attendance of 108,926. The pressing need of branches in three districts is mentioned, in anticipation of the preparation of the 1917 budget.

#### CALIFORNIA

*Berkeley.* The University of California Library, of which the first portion was built some years ago, at a cost of \$684,000, met by bequest from Charles Franklin Doe, is now to be completed. The regents of the University of California have further contracts for this work to the amount of \$381,000. The total cost of completing the library, including steel bookstacks, will be approximately \$525,000, this cost being defrayed from the university building bonds voted by the people of California a year ago. The plans for the completion of the building include increase of the shelf capacity from three hundred to five hundred thousand volumes; the provision of space in which additional bookstacks for another half-million volumes can eventually be installed; the building of a reading room large enough for about three hundred readers; provision of space for a library school, and provision for a large number of additional seminar rooms.

*Gridley.* The new Public Library was formally dedicated and opened to the public March 15.

*Riverside.* Ernest S. Moulton, member of the Board of Directors of the Riverside Public Library, died February 4. As president of the First National Bank of Riverside, and a leader in civic affairs, he was probably the best known man in this community, and to his influence was due much of the success of the Public Library here.

*San Francisco.* The concrete work and steel frame of the new Public Library building were practically finished the first of February and it is expected to have the granite work finished by August. January, 1917, should see the building in use, unless unexpected delay occurs.

*Sanger.* The trustees accepted the new Carnegie library building from the contractor early in March, and have made arrangements for the removal of the books from the old building, which is located across the track. The new library cost \$10,000, and is built upon standard lines for modern libraries. It is of pressed brick, with cement trimmings.

*Turlock.* The contract for the Carnegie Library has been awarded for the sum of \$8350. Bowen & Davis, of Fresno, are the architects. The building will stand at the corner of North Broadway and Spring streets. The money for the purchase of the site, \$1950, was raised by public subscription through the efforts of the Woman's Improvement Club.

#### UTAH

*Salt Lake City.* A county library bill similar to those in effect in Ohio, Wyoming, and California will be introduced in the next legislature, if plans set on foot by Miss Mary E. Downey have a chance to mature.

### Canada

#### ONTARIO

*Guelph P. L.* A. M. Harris, lbn. (Rpt.—1915.) Accessions 801; discards 993; total on shelves 17,404. Circulation, adult, 52,122, juvenile, 15,878; total 68,000. Registration 2586 (\$12 juvenile). Receipts \$4,662.57; expenditures \$4,584.43, including \$1,602.75 for salaries, \$543.55 for books, \$270.22 for periodicals, and \$199.35 for binding.

### Foreign

#### GREAT BRITAIN

*Aberdeen.* A collection of chamber music, said to be the finest of its kind in Scotland,

has been added to the music section of the library, thereby greatly increasing its usefulness.

#### DENMARK

*Copenhagen.* The report for 1914-15 of the Copenhagen City Public Library shows a circulation for the year of 568,651 books to 13,315 borrowers. The reading room was visited by 150,100 persons. The year's expenses were 90,092 kroners of which 28,634 went for new books and bindings, and 59,213 kr. for the running expenses. The city gave an appropriation of 82,160 kr. The library has ten branches and lending stations. Mayor Dybdal is chairman of the Board of Directors, City Librarian J. Aarsbo is librarian in charge, with 22 assistant librarians, eight attendants and assistant pupils. The report does not give the number of accessions for the year, but an interesting account of certain lines of books most called for is added. In the list of favorite English fiction, Conan Doyle with "The adventures of Sherlock Holmes" and Jack London with "The call of the wild" lead, while Kipling's "Jungle books," Jerome's "Three men in a boat" and Dickens' "David Copperfield" run them a close second. "De profundis," by Oscar Wilde, is also a favorite. The report adds that the proportion of women who visit the library is still only half the number of men, and that women still ask mainly for books that entertain. But an improvement in this condition is slowly gaining ground, attributed by the librarians to woman's greater participation in public life, awakening her interest in instructive literature. The proportion of women visitors to the reading room is still very small but the librarians are endeavoring to awaken the interest of school girls in the lower grades and accustom them to what the library offers for their study and their entertainment.

#### GERMANY

*Munich.* The Royal Court and State Library has opened new and better rooms for its music and map collections. The latter is housed in a fine new reading room where the shelves are much more convenient than before, and the facilities for study vastly improved. A novelty in the map department is its inclusion of the works of the State Geodetic Survey, by which publications of the survey are open to students with much less expense and inconvenience than when they are to be had only from the government itself. The music collection of the library is particularly rich in valuable manuscripts. It now has its own particular "war collection" of music inspired by the war.

# LIBRARY WORK

Notes of developments in all branches of library activity, particularly as shown in current library literature

## ADMINISTRATION

The internal working of a public library. Arthur E. Bostwick. *Pub. Libs.*, F., 1916. p. 56-57.

"What is here set down is in response to a request from the editor for an expression on certain topics, the first of which is 'the present state of professional interest among library assistants.' In the first place, is librarianship a profession? Shall we restrict the profession to holders of library-school degrees? At any rate we may assert that if librarianship is a profession not all, or perhaps not many, assistants are members of it. But hair-splitting aside, how many library assistants take genuine interest in their work? Rather more, I believe, than workers in other occupations. The very fact that they are underpaid tends to assure this. But taking them by and large, the majority are still untrained, despite our library schools and training classes, our institutes and meetings, although our higher grades are now pretty fit for their work. The great cause of weakness is inability to rise above routine; failure to see that fresh ideas, initiative, sympathy with one's work, and a desire to improve and extend it are what every live administrator is looking for, what he is anxious to reward. We would rather reject a dozen impractical suggestions, restrain a dozen false starts, for the sake of encouraging and accepting a single one. The Boss is not fulfilling his obligations if he simply holds every one down to an iron system of his own, under the false impression that he has created an ideal machine, and that the duties of the members of his staff begin and end with being simply the cogs and wheels of it."

The internal affairs of a library. Chalmers Hadley. *Pub. Libs.*, F., 1916. p. 57-59.

"I know of no other workers to-day," says Mr. Hadley, of the Denver Public Library, "aside from those in religious fields, where more zealous, cheerful, disinterested service is given than by the great body of library assistants in this country. There is no goal in library work toward which any assistant cannot legitimately aspire, and those lacking the formal, technical training of the library school may have compensations through an unusual endowment of native ability, the power to work, and common sense. Criticism has been passed on the library assistant who changes positions solely for an increase in

salary. With few exceptions library workers are given no protection against poverty-stricken old age, and no librarian should object to an assistant going elsewhere if he cannot compete with salaries paid. Just criticism, however, can be passed on the increasing number of library assistants who repeatedly embarrass the library and its head by their craze to change positions, seemingly for the sake of change. This desire seems especially to have afflicted library school graduates. In combatting this restlessness a librarian will do well, particularly when increased salaries cannot be administered as a tonic, by giving a change in work to the various departmental assistants.

"The relations between a library employe and her fellow workers will become strained if she comment on the institution or its staff to any member of the library board. This is permissible only when information is officially requested."

## AMERICAN LIBRARY INSTITUTE

The field of the American Library Institute. A letter to the fellows of the Institute, by Dr. E. C. Richardson of Princeton, the newly-elected president. From the printed proceedings of the Atlantic City meeting, 1915. p. 7-12.

Dr. Richardson, according to this statement, "was hardly in favor of the foundation of the Institute, and has all along been somewhat at a loss to grasp any definite reason for its being. Its casual discussions have been pleasant and profitable to those sharing in them, but at best they have merely duplicated a function of the American Library Association now more naturally and better performed by the A. L. A. Council. On looking into the matter, however, on Dr. Hill's suggestion, it seemed possible that the trouble was functional rather than organic. The constitutional object of the Institute is the 'study and discussion of library problems,' and it is only necessary to emphasize *study* to give a real field and object for the Institute. Once emphasize the study side, and there is a field almost untouched by the A. L. A., but clearly recognized in all branches of the educational world. It is nearly the difference between study and teaching, research and application, learning and technology, science and method. It is the difference between the American Historical Association and an As-

sociation of American History Teachers; it is the difference between the American Philological Psychological, Oriental, Modern Language, etc., Associations, and the National Education Association. The A. L. A. stands for library economy, or library technology, or applied library science; the A. L. I. might stand for library science as science, and for learning, but learning, of course, as to the most useful as well as ornamental library matters. If the object of the A. L. I. were paraphrased to read 'to promote research, literature, learning and higher education in the book sciences and to assist in the organization of co-operative methods for reference libraries,' this would provide a definite aim along recognized lines of actual usefulness, and one differentiated from the work of the A. L. A. There is just as great a line of higher education tasks in the book sciences as there is in any of the lines taught in the universities. Even palaeography, which is one of the few higher learning matters taught, is not very much taught in the universities, and when taught is not at all co-ordinated with the book sciences. Moreover, such teaching as there is, in the matter of book illustration, prints, book binding, the bibliographical history of science in all its departments, and many other things, is undeveloped and unsystematic. In the matter of research, why is it not as creditable and desirable that research be carried on in the field of libraries as that it should be carried on in the other recognized lines? Take, again, the matter of archaeology. The mass of material gathered in anthropology, Oriental, Greek and Roman archaeology in the last twenty-five years is full of information relating to the nature and forms of books, the history of their transmission and their keeping in libraries, and this is almost wholly untouched as yet, although it is of fascinating interest to one who is at all concerned in the unfolding of the human mind in civilization. Many of the highest co-operation tasks are in the field of the learned rather than the popular libraries. The demand in this field is getting more definite, and will in itself produce a new association if the Institute does not take the field."

#### ASSISTANTS

The trials and tribulations of an assistant. Martha J. Brown. *Pub. Libs.*, F., 1916. p. 76-77.

"Usually the assistant hardly dares to breathe the fact that she has such things as trials. I am going to tell the impolite truth.

Almost all library troubles come from within the library itself. A lack of co-operation to my mind is the greatest cause of trials and tribulations, and I mean the kind of co-operation that extends from the librarian down to the janitor. How often the well formulated plans thought out by the librarian are never communicated in any way to his staff, who are left groping in the deepest ignorance of what they are supposed to be working toward and yet intelligent service is expected of those assistants! Neither all librarians nor all assistants are easy to work with, and it is too bad that librarians ever have to inherit their assistants from a board. They should be allowed to select them, so that they can take into careful consideration personality, temperament, etc. To welcome suggestions probably does more than any other one thing to help an assistant to a larger view of the work. Nothing looks like a blessing to an assistant who has worked too many hours or been kept too long at one kind of work. And then there is the much-bemoaned small salary, and the much-talked-of A. L. A. troubles, which are first cousins to the salary troubles. There are large troubles and small troubles, but a sympathetic co-operation does much to lessen the more enduring kind."

#### —PERSONAL LIFE

Some aspects of our personal life. Josephine Adams Rathbone. *Pub. Libs.*, F., 1916. p. 53-56.

The vice-director, school of library science, Pratt Institute, Brooklyn, prepared this paper as the basis for a talk to the staff of the Public Library of Trenton, N. J. "It is a great mistake," says the writer, "to draw the sharp distinction between our personal and our professional life that many do. The happiest and most efficient lives are the most completely unified. Success in our work is only a by-product of our personal life. It may be safely said that with due attention to the laws of health, with proper food, sleep, air and exercise, any normal human being can keep fit. Therefore to keep fit is a duty. For example, the cataloger needs more regular, carefully planned exercise than the circulation department worker or children's librarian, and probably less food, or at least less meat and heavy food. She also probably needs more variety and social life. But all, whatever their work, will be better all days for a few simple setting-up exercises—five minutes is enough—each morning, just to start the circulation. So simple a matter as the drinking of water morning and night is of great benefit. But the sound body is chiefly of

value as the home of a sound mind and as the instrument of a vital, informing spirit. I am not going to take up your time by trying to prove that you all ought to read during your leisure. It really isn't a matter of duty, but of pleasure. But I do want to emphasize this one thing: try to make vital connection between your reading and your work. If you are working among Italians, read up about Italy, its wonderful history, its art, its great men; read stories of life in Italy—Verga, Fogazzaro, Serao—that you may have a more sympathetic understanding of the people, their natural characteristics, their civilization, their background. If your contacts with books are largely technical, develop an interest in books as books. Or take up book illustration and you will find your interest wandering out and embracing all the arts of reproduction, engraving, etching, lithographing, photopresses—there is simply no end to the variety and extent of the lines of interest that center in the book."

#### —RELATIONS WITH LIBRARIANS

What an assistant expects of a librarian. Lenore Weissenborn. *Pub Libs.*, F., 1916. p. 73-75.

"Many interesting and helpful papers have from time to time been read on that inevitable subject, 'What the librarian expects of an assistant.' Revenge is sweet. I invite you, Librarians, to sharpen your mental pencils and be prepared to jot a bit in your mental notebooks those hints which may be of value in rendering your assistant's lives more happy ones. If a veil of secrecy is thrown over the doings and sayings of our superiors and directors we cannot be blamed for whispering in the stacks. We must divulge everything to the inquiries of our institutions, must answer a why for this and a wherefore for that—we must even divulge our own true ages to the records. We ask in return that we may not be left standing as some deluded audience to wonder what is going on behind the scenes. We like to be confident that we can go to our executive in a perfectly free and frank fashion, and tell him our troubles and perplexities, and that he will listen in a friendly way without thinking us fault-finding and discontented. Let us assistants share your responsibilities, Librarians, but bear in mind that we cannot do it until you have laid low the unsurmountable wall of monarchial aloofness which most of you have built around yourselves.

"It is only natural that an assistant in a

well governed library should look upon as her ideals many of the qualities which she daily admires in her own executive."

ASSOCIATIONS AND CLUBS. See American Library Institute

#### BIBLIOGRAPHY

Unselfish nature of bibliographical labor in the last century. Raymond C. Davis. *Pub. Libs.*, Ja., 1916. p. 1-3.

Prof. Davis, who is librarian emeritus of the University of Michigan, has been led to a consideration of the "labor of love" manifested in bibliographical literature, by a recent reading of Dr. Poole's preface to the 1882 edition of his "Index to periodical literature," in which it is stated that "persons who look only to pecuniary reward should never engage in this kind of work." Dr. Poole felt himself well repaid by the satisfaction he experienced, although his toil was utterly unrequited in any material way.

"Dr. Poole's case is not without parallels," says Prof. Davis. "Of a similar nature was the experience—with additional sad features—of the authors of some of the best known catalogs of the last century." He quotes M. Paul Deschamp, who supplemented the work of Brunet, the creator of the *Manuel du Libraire*, to the effect that the bibliographer's toil is "ill considered, profitless, hard, evil spoken of." Prof. Davis adds that what has impressed him most in the careers of Dr. Robert Watt and Lowndes is that their labors were performed under difficulties, their pecuniary profit was practically nothing, and their fame posthumous. The compiler of Lowndes' "Biographer's manual" died in England in 1843, a mere wreck, mentally and physically. And Dr. Watt, who created the *Bibliotheca Britannica*, "died a martyr to bibliography" doing his last work on his death bed. Prof. Davis says that we, too, have had our martyr to the same cause in Mr. Frederick Leyboldt of New York, whose 1876 "American catalog" started "that fairly adequate and continuous record of American books that ever since has made the buying and selling of them so satisfactory." His death resulted, in 1884, from his many unselfish labors.

But "the old order changeth." The extraordinary increase of libraries and the alliances formed by them with the educational work of the country have modified conditions. One might even say now that such work *paid*. However, "the greater efficiency of

the present should not be permitted in any way to obscure the fine fibre of which these men were, and what they brought to pass."

BINDING. *See also* Periodicals, Handling of.

—PAMPHLETS AND PERIODICALS

The issue of the *Bodleian Quarterly Record* for the fourth quarter of 1915, describes briefly on page 209 the four ways of treating books or pamphlets now in use at the Bodleian Library.

"Nearly all the substantial volumes, and all books likely to be much used, are bound in the usual way, with variations of material, color and style. But large-sized periodicals which are not likely to be much called for are 'cased,' that is, inserted unbound in a framework resembling a volume, of which the back and lower edges are wood, the front open, and the sides mill-board.

"This is filled without regard to the period covered; it may be a year's numbers, or more, or less; the facts are noted on the back. For smaller sizes of periodicals and for pamphlets these cases are not found to be much cheaper than binding, and this class is 'boxed,' i.e., placed loose in cardboard boxes of five or six standard sizes, costing about 3d each on the average; in this matter we have borrowed the idea from Cambridge. Lastly the British Museum has shown us a system of 'self-binding,' in which two cardboard sides, and a flexible back of cloth are adapted to receive one, or at most two, pamphlets, by having attached to the back two gummed guards. You open the cover, moisten the gummed surfaces, place the pamphlet or two pamphlets between the gummed surfaces, close the cover, and lay it aside till dry. The advantage of doing this within the walls of the library is obvious, and the system may be recommended to private collectors who wish to reduce their binding bills. The cloth can be so chosen as to allow a written title on the back."

BOOKSTACKS

Library stack construction. Illustrated and described in the *Official Gazette* of the United States Patent Office. Feb. 26, 1916. Vol. 223, p. 941.

Eight claims are allowed for this patent, five of which are printed in the *Gazette*. The patent has been assigned to the Art Metal Construction Company of Jamestown, N. Y.

Rules for

BRANCHES—IN SCHOOL BUILDINGS

In a lecture before the Milwaukee Library Club in February, Purd B. Wright, the librarian of the Kansas City Public Library, told of the branch libraries in school buildings in Kansas City.

"We now have, besides our main library, four blocks from the business center, twelve branch libraries," he said. "Of these, two are settlement libraries, one for colored people, and a new experimental one is in Little Italy. As most of these libraries are attached to schools, they cost little compared to your branch in Bay View. We pay only for the square feet we occupy. We have our own entrance, and our own lighting and heating systems, so it is not necessary to light and heat the entire building on those days when we only open the library. All libraries, except the main one, are open Sundays.

"These branch libraries are of distinctly different types. The first is the 'minor civic center library,' so near the business district that business people will drop in. The second is the 'neighborhood branch.' These, together with the 'settlement branches,' in Jewish and Italian districts, have become regular social centers. One of our branches, in a district where there are seven hospitals, makes it a business to cater to the nurses. The colored library is near a vocational school for colored people, and the demand we have from these pupils for the different vocational books can hardly be supplied.

"We are now making slides to show what the libraries are doing. These slides will be shown at women's clubs, before men's societies, etc., and we expect to get the adults of Kansas City to come to the library by this method.

"Eight out of ten of these libraries were built with \$2,000,000 from a \$4,000,000 bond issue. The branch library, built in connection with a school, costs less than if built like your Bay View branch; in fact, you can build several for what that cost and cover a larger territory and reach many more people."

BUILDINGS. *See* Bookstacks

BULLETIN BOARDS

One means which an Ohio library has found effective in securing new patrons is a bulletin board at the entrance to the building. On this are placed the best photo reproductions from newspaper supplements illustrative of current events. Books dealing with the same subjects are placed in a nearby rack. This combination of pictures and books brings new readers into the library.

CATHOLICS, BOOKS FOR. See Index Librorum Prohibitorum

CHILDREN, WORK WITH

An interesting experiment has been tried in the children's room of the library at Wellesley, Mass. Picture covers of books purchased during the year, the titles being removed, have been placed on the bulletin boards three at a time for a few days and the children have been allowed to guess what book is represented. They could look on the shelves constantly to help decide and each child could vote once. At the end of the contest a book was presented to the boy and the girl guessing the largest number.

A Library League has been formed in the Lowell (Mass.) Public Library through the efforts of Miss Bertha G. Kyle, the children's librarian, to promote and foster the love of good reading among children; to encourage the purchase of the best books for children; and to co-operate with the city library toward these ends.

At the present time there are over one hundred members in the Library League, 26 of these members being adults. Those under fifteen years of age who join the league pledge themselves to handle all library books carefully; to be quiet and orderly in the children's room or in any part of the city library; to invite others to join the Library League, and to try to interest them in good books.

The active members of the league must be registered as card holders at the library. There is also a clause, or an agreement, for associate members (young people over fifteen and adults) which reads as follows: "The object of the Library League meet with my approval; and I will lend it my support in some of the ways indicated over my signature."

Those who sign the agreement stipulate one or more of the following things:

I agree to interest residents of neighborhood in objects of Library League.

Obtain information concerning the best literature for children.

Observe the kind of books children are reading. Use influence in promoting the sale of the best juvenile literature in Lowell.

Assist in making the best children's books popular throughout the city.

Advocate careful book-buying at Christmas time. Encourage children to begin carefully chosen libraries of their own.

Read aloud to children. Take an interest in children's reading matter in hospitals and institutions.

Introduce topic of children's reading in club or social circle.

Encourage children and parents to visit the children's room in the city library.

Take charge of a "Home Library" group.

Give talks on literary topics.

Conduct story hours.

Interest Library League groups in nature study, and act as guide on "hikes."

Assist in bringing a knowledge of books to blind children.

Take interest in Sunday school library.

Circulate city library book lists.

Make lists for library, of good books read.

Assist the city library in work among foreign children.

CONTAGION AND DISINFECTION

The Montclair Public Library has adopted the following rules for subscribers: "First, do not cough or sneeze into the book; always use a handkerchief. Second, do not moisten the fingers in turning the pages; the hand should always be clean and dry. Third, always keep the book closed when it is not being read." As an additional precaution against germs the library books are sterilized.

COUNTY LIBRARIES

Rural library service for millers. H. Winslow Fegley. *The American Miller*, F., 1916. p. 121-122. Illustrated.

A brief historical account of the Washington County, Maryland, Free Library, and its delivery service. The article emphasizes the use of the service by millers.

FINANCE, LIBRARY. See Taxation

FOREIGNERS, WORK WITH

The "intermediate section" of the circulation department of the Public Library in Portland, Oregon, cares for the reading of students in the trade schools and also of the large dependent class of readers, those who "don't know what to read," or who are selecting books for others. Within supervision of this section are books in foreign languages, with volumes on citizenship and on learning the English language. The use of these books practically doubled during 1914-15. With the co-operation of the county clerk's office, the names of applicants for naturalization papers have been secured from time to time and circular letters of invitation, which emphasized the help the library could give in preparing for examinations, mailed to these prospective citizens. Many of the letters were brought to the library later as introductions. In an effort to appeal to the new citizens, dodgers were distributed in large numbers in Multnomah Field on Americanization day. One of the dodgers gave the location of the library and its branches and the other the number of languages represented in the book collection. Huge banners bearing similar legends were placed conspicuously on the field.

Personal life

#### HIGH SCHOOL LIBRARIES

High school libraries of California. Ella S. Morgan. *Pub. Libs.*, Ja., 1916. p. 8-9.

A paper which shows the rapid development of the high school library in a state that "comes very near leading all others in the number of high school librarians." It was originally read before the Library Department, N. E. A., at Oakland, Aug. 24, 1915. In January of 1903 the first high school librarian in the west was appointed at the Los Angeles High School. There were then 143 high schools owning 70,997 books. Last year 241 high schools owned libraries with a total of 340,000 books, not including pamphlets or periodicals. There were 33 libraries. The demand for persons of special fitness for these positions has caused library training schools to give special attention to this branch of endeavor. In the University of California library course last summer lectures were given by a high school librarian. "Instruction in use of books and the library is now given," says the author of the paper, who is attached to the Lincoln High School, Los Angeles, "in all the schools having librarians. This, and the regular use of the library required in daily preparation of lessons, is giving high school pupils knowledge which is bearing fruit in colleges and out. Academic instruction in library methods is given in 8 or 10 schools. Pupils are thereby given an opportunity to learn whether or not they care to go to a library school for training. Several positions are now filled by young women who first learned their aptitude for the work in this way."

Two of the Los Angeles high schools are used by summer sessions and evening schools. In the evening people of the neighborhood are also welcomed. Several high schools in country districts likewise offer the privileges of the library to the towns people. About 75 high schools are receiving the benefit of county library service in greater or lesser degree.

This paper is followed in *Public Libraries* by an outline of an 8-weeks' course in reference work given by the librarian of a small town library to the high school pupils.

#### INDEX LIBRORUM PROHIBITORUM

*America*, "A Catholic review of the week" for Feb. 19, 1916, (volume 14, pages 439-441), contains an interesting article by J. Harding Fisher, S.J., on the "Index librorum prohibi-

torum." This is a descriptive and historical account of the "List of books that have been explicitly and officially condemned by the Catholic church, and are strictly forbidden to Catholic readers." It does not include all books that the church regards as reprehensive, nor even the worst books, but only such as have been denounced to Rome, examined, and officially condemned.

The laws of the church on this subject are contained in a single volume of two parts. The first part consists of general discussions which forbid the reading of certain general classes of books on the part of Catholics. The second part is made up of a catalog of particular ecclesiastical decisions that prohibit the reading of particular authors whose works are condemned either in their entirety or in part. There have been a number of editions of this work, which are described in the article. This last edition is published by the Vatican Press, and can be obtained for a nominal price from any Catholic bookseller.

LIBRARY ECONOMY—INSTRUCTION AND TRAINING. See Training

#### —NORMAL SCHOOL COURSES

A special course in library economy is given in the Western Illinois State Normal School at Macomb, supplementing the regular two-year normal work. The special certificate for the course is based upon thirty-five hours a week for one school year of practical work. A standing of not less than B in the prescribed course in library economy is a prerequisite to this course.

The candidate for his certificate shall do work which is outlined as follows:

a. He shall have charge of some particular department of library work—*e. g.*, circulation, receiving of periodicals, binding—and be responsible for the phase of work assigned.

b. He shall practice in all phases of the routine of library work—selecting of books, ordering, receiving, classifying, accessioning, cataloging, including both classed and dictionary catalogs.

c. He shall have practice in reference work through assigned problems involving use of general and special reference books, through finding material for practice teachers and other students in the school, through assist-

ing in finding material for debates and other work of the literary societies of the school.

d. He shall have charge of and be responsible for the order in the reading room and for the general reference work during at least one busy study period each day.

The regular courses in library economy, for each of which one credit is given, cover instruction in the use of reference books, the making of bibliographies, the organization, care and use of school and class-room libraries and the school use of public library, and a course in children's reading, discussing books valuable for children's reading outside of school, the teacher's responsibility for this reading, the influence of good and bad books, and standards for judging the value of books.

In the State Normal School at Geneseo, N. Y., a general course in library methods is required of all professional students.

The aim of this course is not to train librarians, but to acquaint teachers with library indexes and helps invaluable in the preparation of their work, to prepare them for selecting books for supplementary work, for directing the children's reading, and making the school library valuable to pupils.

The first course of ten lessons on the use of the library, is given the entering class and includes the making of a bibliography on some topic used in the regular work, and a study of general reference books and of those especially valuable to teachers.

The senior class has a course of ten lessons on the use and care of books, to be given pupils during the school course, and practice in giving these lessons to children in the Training School, is provided. The principles that guide in the selection of books for children, some of the best book lists, the use of pictures in school work, how to direct the children's reading, and the help the teacher should get from the public library and from the state, are also discussed.

—HANDLING OF

During March and April, 1915, a study was made of the method employed at that time in

handling the periodicals in the library of the United Engineering Society in New York City. A report of the result of this study was printed in the annual report for that year.

The library had in its reading room the current numbers of over 1000 periodicals. After they ceased to be current the numbers were removed and filed in a store-room. When the numbers of a specific periodical constituted a completed volume with index and table of contents, these were taken out and prepared for the bookbinder. This preparation consisted in removing the wire staples which held the sheets together, in separating the advertisements from the reading matter, in collating the volume to see that all pages were present and in proper place, and in tying up in a bundle. A standard "blue slip," containing directions to the bookbinder as to the material and character of the binding and as to the content and location of the exterior lettering, was then filed out in somewhat the form of a code. An entry was made, recording this volume and the directions to be conveyed to the bookbinder by this blue slip, upon a "binding card," there being one such card for each periodical. The binding cards were retained for reference in the library. The preparations thus far made were inspected and, if necessary, revised, by the assistant librarian before the bundle with others was packed in a box for delivery to the expressman sent to the library by the bookbinder. A letter of transmissal, listing in alphabetical order and identifying each volume, was sent with each shipment. In order that the books of a set should be uniform in binding, lettering and spacing, the binder had on file a "rub" or picture of the back of each set of periodicals. New rubs were taken and sent with the letter of transmissal.

Upon return of the bound volumes from the bookbinder, the boxes were unpacked, the volumes checked against the list given in the letter of transmissal, and the binding and lettering compared with the blue slip directions. A book plate was then inserted, the volume accessioned by having it entered upon either the gift-list, the exchange-list or the purchase-list, its presence noted by a checking or by an entry in the union-list and on the shelf-list, and it was then put away on the shelves.

A study was made of the labor costs involved in the handling of each volume. The individuals involved received respectively per hour of rendered service \$0.500, \$0.465, \$0.435 and \$0.395, and are represented by the letters A, B, C, D, in the tables that accompany the report. The first table gave the labor costs

per volume of periodicals during the time that they are current. The study covered a month's time during which 1437 numbers were received, 32 hours of C service and 62 hours of A service, or a total of 94 hours being required.

non-residents and to study clubs outside of Pittsburgh. Library cards are now issued to two classes of non-residents:

(1) Taxpayers in Pittsburgh, and (2) persons who pay an annual fee of one dollar.

TABLE 1: LABOR COST PER VOLUME OF CURRENT PERIODICALS

Item	Number copies per volume						
	1	4	6	12	26	52	
1. Unwrapping and stamping .....	A	0.0095	0.0380	0.0570	0.1140	0.2470	0.4940
2. Checking receipt .....	C	0.0085	0.0340	0.0510	0.1020	0.2210	0.4420
3. Claiming numbers not received .....	C	0.0012	0.0048	0.0072	0.0144	0.0312	0.0624
4. Filing on current shelves .....	A	0.0083	0.0332	0.0498	0.0996	0.2158	0.4316
5. Filing in storeroom .....	A	0.0042	0.0168	0.0252	0.0504	0.1092	0.2184
Total cost while current .....		\$0.0317	\$0.1268	\$0.1902	\$0.3804	\$0.8242	\$1.6484

The second table gave the labor costs per volume expended by the library in preparing the number to be sent to the bookbinder and in placing the volumes on the shelves in service after receipt from the book-binder. The study extended over one month, during which 84 volumes were bound, the bookbinder's bill amounting to \$137.10, or \$1.634 per volume.

Persons employed or attending school in Pittsburgh may furnish the guaranty of a resident tax-payer instead of this fee. These cards entitle the holder to the same service as that provided for residents of Pittsburgh. Holders are expected to call in person for their books.

Non-resident card-holders who find it inconvenient to call in person can arrange to

TABLE 2: LABOR COSTS FOR BINDING, CATALOGING AND SHELVING PERIODICALS

Item	Cost per volume	Grade of service	Total hours
1. Selecting for binding—writing for missing parts.....	0.0565	D	12
2. Destapling, tearing up, collating and tying in bundle .....	0.1693	D	36
3. Listing on binding card, rub and blue slip, and transmissal slip and list....	0.0476	D	8
4. Inspection and revision.....	0.0119	A	2
5. Packing .....	0.0029	B	0.5
6. Unpacking .....	0.0057	B	1
7. Checking bill and comparing with blue slip.....	0.0660	D	14
8. Book plating.....	0.0114	B	2
9. Accessioning .....	0.0105	C	2
10. Cataloging and entries in various lists.....	0.0179	A	3
11. Placing on shelves.....	0.0050	B	1
Total cost of library labor per volume.....	\$0.4047		81.5

With a view to increased efficiency, changes were made in the method of handling the periodicals, after the completion of this study. Arrangements were made with the bookbinder to assume the task of destapling. A half dozen iron-bound shipping boxes with reversible tops bearing the address of the library on one side and of the bookbinder on the other were put in service and used to contain the books in transport between the library and the bookbinder. These changes, together with the orderliness of arrangement during storage of the unbound non-current issues, made possible by the installation of new shelves on another floor, made it possible to reduce materially the cost per volume.

PUBLICITY. See Bulletin boards

READERS, NON-RESIDENT—RULES FOR

The Carnegie Library of Pittsburgh has recently revised its rules for lending books to

have books sent them by post or express. An additional charge of one dollar a year will be made for this service, and a deposit of one dollar, to cover transportation charges and fines, must be made and renewed when necessary.

Library cards are issued to study clubs outside Pittsburgh upon payment of an annual fee of three dollars. A deposit of two dollars to cover transportation charges and fines, must be made and renewed when necessary. These cards may be used by any member of the club, but the total number of books charged to the club shall not exceed fifteen at any time. Applications to the library for books which are to be sent by mail or express must be made by the club secretary or librarian, and books will be sent only to her. Individual members, if they prefer, call at the library or send a messenger for books.

Most books may be kept for twenty-eight days, but recent books and those in great de-

mand are issued for seven or fourteen days only. This includes the time consumed in transit. The date when each book is due at the library is stamped on the charge slip inside the cover. A fine of two cents a day is charged on each volume after that date.

#### SPECIAL LIBRARIES

The library of the Public Service Corporation of Newark, N. J., of which William Harper Davis is now the librarian, contains about five thousand volumes. These books are for reference and for the technical and business education and, to some extent, for the general education and recreation of employes of the Public Service Corporation as a part of its welfare work. The library also subscribes to literature pertaining to medical and other subjects bearing upon accidents, to many publications of special interest to women on the lines of household economy, to publications on municipal management, private ownership of public utilities, and a wide range of subjects of general interest. The library is open to other libraries, to organizations and to individuals, properly introduced, at all times. The books, magazines, pamphlets and other publications are kept in constant circulation in the home office building in Newark in the car barns, in the shops, the power stations and the commercial offices of Public Service in whatever section of the state they may be located.

#### SPECIALTIES—PROPOSED RECORD OF

General intermediary for investigators, correspondents and collectors. Eugene F. McPike. *Pub. Libs.*, F., 1916. p. 67.

"The serious student of bibliography today feels the need of some means for direct correspondence with others interested in like subjects. An attempt to meet this need is to be made by Mr. Max Bellows of 'Wheatridge,' Gloucester, England, who has issued a circular giving the names of the first hundred subscribers to a proposed monthly magazine devoted to the immediate interests of its readers wherever English is understood. The magazine would give in each issue the names and addresses of subscribers with an indication of the subjects of special interest to them. It would aim to become the official organ of

the International Society for Intercommunication, details of the organization of which have not as yet been definitely determined. The subscription price is only five shillings for six months. The entire plan seems to possess merit and promise good results."

SPONSORS FOR KNOWLEDGE. See Specialties—Proposed record of

#### STAFF MEETINGS

Staff meetings. Ruth Wallace. *Pub. Libs.*, F., 1916. p. 60-63.

The writer thinks "it is not an overstatement to assert that staff meetings are not only valuable, they are actually necessary to the best service. As a rule it is the progressive, the broad-minded, the really efficient librarian who not only approves them but makes a conscientious effort to conduct these meetings in the most effective way. Staff meetings should help the assistant to grow professionally. It is an educative process to form the habit of looking at the different departments of work as related rather than separated. Then there is the great advantage of good feeling or good fellowship. There is almost sure to be a humorous side, too, when experiences are related, such as the quest of the boy who wanted the Montezuma book for his sister, which turned out to be the Montessori method, or the high school boy, who insisted on having something about Corny Jack, meaning the coinage act.

"In the average library the twice-a-month meetings seem to be the most popular. The reading of articles or papers should be the exception rather than the rule. A few enthusiastic remarks about an article will send every member to read it for herself. In the Providence Public Library as early as 1896 magazines or journals were assigned to different ones to report on; at Gary the members respond to roll call with news items of strictly professional interest. Probably the most common study is that of book reviews. In our staff meetings in Evansville last year assistants were called on to report on their recent reading, giving estimates of both fiction and non-fiction. This winter the 11 members of our staff have chosen for special study the following subjects: journalism, ethics, socialism, education, history of literature, poetry and drama, travel, biography, South America, history, and what Miss McCollough says can best be expressed only by the number 331.8. Another 'choose one' suggestion is the study of publishing houses, for which an outline was prepared by Miss Hazeltine some years

ago. Still other suggested topics are special libraries such as the Carnegie at Pittsburgh; the Astor and Lenox, New York; John Crerar, Chicago, etc., their history and specialties."

#### TAXATION

The *Municipal Journal* of London, Feb. 4, 1916, p. 101-102, contains the paper read before the annual meeting of the Northwestern Branch of the Library Association at Bolton, on "War finance and public libraries" by Geo. T. Shaw, chief librarian of the Liverpool Public Library. This is an interesting article not only from the English point of view, but also from the American point of view, inasmuch as it suggests arguments for the justification of taxation for public libraries, and why even in stress of war times the incomes of library should not be reduced.

#### TRAINING

Opportunities for college women in library work. Mary Emogene Hazeltine. *Bookman*, F., 1916. p. 685-691. Illustrated.

Miss Hazeltine states the qualifications and opportunities of various classes of library work; public libraries with all their varied activities, such as administration, heads of departments, children's library work, branch librarian and assistants; the reference work; libraries as business aids; the library commission work; teachers of librarians.

Conditions and requirements for public library assistants. Marilla W. Freeman. *Pub. Libs.*, F., 1916. p. 80-81.

This paper was used in the New York State Library School in presenting a course in administration of small libraries. The writer summarized the qualifications for acceptable library service as follows: "Assistants must have at least a high school education or its equivalent; a fair knowledge of books, good health, courteous manners, neatness in appearance and in work; accuracy, speed, reliability, general intelligence, and good judgment. They should be between 18 and 30 years of age. The selection of regular assistants, excepting such as may be required for special duties, shall be made from those who have passed an examination in general information, history, and literature, to be given by the librarian at a date to be duly advertised. Papers submitted by candidates shall form the basis of the recommendation to the Board of Trustees by the library committee and the librarian for the position of assistants, although other qualifications must also be taken into consideration. Previous

to being given said employment, applicants will further be required to take a course of training in this library, training to include five hours of daily service, without salary for six months. This apprenticeship period is one of probation and if, at the end of a month, an apprentice is found to be unfitted for the work, she shall not be continued in the training class. For the present year those applicants accepted after examination and training, will be required to attend, at their own expense, the summer school for library training, in June to August. Tuition will be free to residents of the state."

#### VACATIONS

Vacations and holidays. Harry Lyman Koopman. *Pub. Libs.*, F., 1916. p. 64-65.

"In referring to holidays," says the writer, who is librarian of the John Hay Library, Providence, R. I., "I have in mind the weekly half-holidays even more than the less frequent legal holidays. Historically, vacations in educational institutions, of which libraries are an offshoot, go back for many centuries, but the general vacation in all sorts of occupations is very recent, and many of us have seen its entire development. As a feature of the standard of living, vacations and holidays should be granted by the employer out of respect to himself as to one not willing to lower the standard of living in his community. A few years ago one would have had to deal painfully with theories and probabilities in urging the importance of rest periods to efficiency; but the wonderful investigations made in the past few years, showing the increase of output produced by changing from steady work to work interspersed with intervals of rest are our warrant that these breathing times not only do not detract from the week's or the year's output, but actually contribute to it in quantity as well as quality. This is not an argument that can be pushed to the limit. It does not follow, if fish is a good brain food, that one will become a Shakespeare by eating a whale."

---

### Bibliographical Notes

---

The Library of Congress has printed as manuscript its classification scheme for Class C, Auxiliary sciences of history.

The *South Dakota Library Bulletin*, which started its second volume with its February issue, is now issued from the office of the South Dakota Library Commission in Pierre.

"A library primer for Missouri high schools" by Henry Ormal Severance, librarian of the University of Missouri, has been issued as No. 7 of the library series of the university *Bulletin*.

The latest one of the classified lists for the *Athenaeum's* "Subject index to periodicals, 1915" covers science and technology, with special reference to the war in its technological aspects.

The New York Public Library has issued a list of reports of American cities of which it has duplicates to offer to other libraries on exchange account. About 250 cities are represented by one or more documents.

The Carnegie Library of Pittsburgh has reprinted from the *Monthly Bulletin*, with some additions, the second supplement to its Debate Index, covering the period from December 1913 to December 1915.

The American Highway Association has turned over a lot of its publications to the Public Library in Washington, D. C., for distribution, the particular items being listed under "Books offered" elsewhere in this issue.

The Chicago Public Library has reprinted two useful lists from recent issues of its *Book Bulletin*, one on William Shakespeare, and one a list of "Actable one-act plays," compiled by Samuel Kaplan of the library staff.

A list of the books on the European War to be found in the Deichman Library in Christiania, has been compiled by Arne Arnesen, the librarian, and published in a pamphlet of 39 pages with the title "Literatur om verdenskrigen."

The excellent summary of the work being done in various parts of the country for the preservation of public archives, printed in the department of "Library work" last month, should have been credited to the *Minnesota History Bulletin*, from which it was copied.

The third English edition of John Foster Carr's "Guide to the United States for the Jewish immigrant," the "little green book" so useful in libraries where a foreign population is to be served, has been issued with some slight revision.

The 1916 edition of the "Staff manual" of the Bodleian Library of Oxford has been contracted to 39 pages, only the calendar, the schedule of regular duties and the lists of the staff being printed in full. The rest consists

of corrections of, and additions to, the 1915 issue.

A "Supplément nécessaire d'une bibliographie allemande de la guerre de 1864," by Erling Stensgård, is published in Aarhus, Denmark. It corrects numerous typographical inaccuracies in the German bibliography and discusses at some length the selection of Scandinavian titles included in the list.

The Circulating Library of the Alliance and the American Unitarian Association of Boston has issued a printed catalog of its books. They are for free use and will be sent to any person interested in church work who desires them. Books may be kept three weeks, the borrower paying return postage upon them.

The story hour program for 1916, issued by the Jacksonville (Fla.) Public Library, is as attractive as last year. The cover is reproduced from the Rand, McNally edition of the "Pied piper of Hamelin," and short poems and other quotations alternate with the programs and brief suggestive reading lists.

For the sixteenth year the Western Massachusetts Library Club is distributing in a four-page circular its annotated list of the best books of the year for small libraries to buy. The list was first printed in the *Springfield Republican* and was discussed at the club's midwinter meeting.

The collection of Parliamentary papers in the Public Reference Library of Newcastle-upon-Tyne, England, has been indexed by Joseph Walton, sub-librarian, and the reports of various royal commissions included, are shown to contain much valuable information on many questions of vital and present-day importance.

The annual cumulation of the numbers of the 1915 *Open Shelf*, published by the Cleveland Public Library and appearing about March 25, takes the place of the January 1916 number. This cumulation has been fully annotated, with scheme of classification and author and title index. The price to non-subscribers and to libraries not on the exchange list will be 25 cents.

Miss Margaret Mann's "Subject headings for use in dictionary catalogs of juvenile books" has been published by the A. L. A. Publishing Board. The subjects and references are those used in the catalog of juvenile books in the Carnegie Library at Pittsburgh, though arranged in the same form as the larger A. L. A. list.

The Public Library of Toronto has published a catalog of the books and pamphlets published in Canada up to the year 1837, of which copies are to be found in the library. The list was compiled by Miss Frances Staton, head of the reference department, and it is hoped that it may be the forerunner of a series of contributions to Canadian bibliography issued by the department.

A bibliography of "Australasian Shakespeareana" has been compiled by Percy J. Marks, the treasurer of the Shakespeare Society of New South Wales. While it is not expected that the list as published is complete, it does contain in its 34 pages an important record of the books, pamphlets, magazine articles, etc., that have been printed in Australia and New Zealand, dealing with Shakespeare and his work.

Now it is the State Normal School at Los Angeles that has gotten out its "Library handbook," in a neat little pocket edition. The system of numbering the books, their classification and arrangement, and the card catalog are all briefly explained, and the location of the most used groups is given. The booklet also includes explanation of the important reference book aids, and the pamphlet, picture, and children's collections.

The address delivered by Dr. Henry S. Pritchett in honor of the eightieth birthday of Andrew Carnegie and the tenth anniversary of the opening of the Carnegie Institute of Pittsburgh, has been privately printed in Cleveland. The frontispiece is a reproduction of the portrait by Howard Russell Butler, now in the possession of the Cleveland Public Library, and the cover bears a picture of the entrance to the Carnegie South branch of the Cleveland Library.

The first volume and number of the "Journal of the National Institute of Social Sciences" is published by the Boston Book Company, and contains papers by men and women which are intended to "gather up and report movements, endeavors, and enterprises which express the abounding life of the nation." The volume is indexed in the Magazine Subject-Index, and is the successor to the "Journal of Social Science," whose final issue was the volume for 1909.

The second annual report of the Carnegie United Kingdom Trust, for the year ending Dec. 31, 1915, was submitted to the trustees in February. In addition to the regular report of the year's work, there are several ap-

pendices, including the text of the trust deed, statistics compiled from Professor Adams' report, a description of the North of Scotland rural library scheme and of similar schemes applicable to England and Wales, both local and general, and a statement of accounts for the year.

The New York Charities Directory for 1916 has adopted a different type which reduces the volume by some 200 pages, though still easily legible. The directory this year describes 1252 distinct organizations controlling over 3000 institutions in Greater New York; it lists 1449 churches of all denominations, and gives the names of over 5000 persons connected with social service in the city. Name and topical indexes, and an alphabetical arrangement of the text, make the volume easy to use for reference purposes.

A selected list of "Stories to tell to children," with stories and poems for holiday programs, compiled by Miss Edna White-man, supervisor of story-telling in the Carnegie Library of Pittsburgh, is a recent publication of the library. There are some prefatory pages on story-telling in general and as carried on in Pittsburgh in particular, and these are followed by the lists of stories arranged by ages and by special days. There are also lists of the books referred to, arranged by authors, and classified and alphabetical lists of the stories, the whole making a pamphlet of 68 pages.

The Library of Congress has published the "Notes on the cataloging, care and classification of maps and atlases" by Philip Lee Phillips, chief of the division of maps and charts. These "Notes" are amplified from the ones originally contributed to the fourth edition of Cutter's "Rules for a dictionary catalog," and describe the methods in vogue and experience gained in connection with the collection in the Library of Congress. At the back of the pamphlet is a list of the publications compiled in the map division and published by the library.

Alfred Bingham is the editor of the second volume of the Handbook of the European War, published by the H. W. Wilson Company. As volume one dealt largely with the events leading up to the war, this volume is chiefly concerned with the effects of the war, as reflected by the words of the leading authors and statesmen. Events of the war have been practically ignored, to keep the size of the book within bounds. The work is divided into three sections: Germany and her allies, Great Britain

and her allies, The United States and the war. An effort has been made to observe absolute neutrality in making choice of the material.

The Illinois Library Extension Commission has made a collection of forty slides, illustrating the exhibit of the Springfield Survey, which was made under the direction of the Russell Sage Foundation. The slides selected represent city and county administration, schools, social center, play grounds, city planning, health department, recreations, juvenile court, etc., all of which may be quite as applicable to other communities as to Springfield. A description or explanation of the slides accompanies the collection. A smaller collection has been made containing only 17 of the slides which relate to the public schools, correctional system and municipal administration. A special lecture describing this part of the work of the survey is sent with this collection. Either collection will be loaned for two dollars and expressage.

A librarian sends us the following note: "It seems worth while to call to the attention of any librarians who may have overlooked it, 'A short history of Italian painting,' by Alice Van Vechten Brown and William Rankin, published by Dutton in 1914. In some 400 well-printed octavo pages is condensed a remarkable amount of information, simply written, embodying the now generally accepted judgments and including some artists not often adequately treated elsewhere. There are illustrations, bibliographies, and references to first and secondary sources. Throughout the text exact reference is constantly made to fuller information to be found in these authorities. The index, an alphabetical arrangement of artists, notes the location in church or gallery of each work listed. The page references are, unfortunately, not specific. The book has proved very useful in the Utica Public Library, and the author would welcome suggestions for making a second edition more accurate and useful."

## Library Calendar

---

- April 19. California School Library Association. San Francisco Civic Auditorium, 2.30 p.m.
- May 8. Pennsylvania Library Club.
- June 26-July 1. American Library Association. Annual conference, Asbury Park, N. J.
- June 27-29. Special Libraries Association. Annual meeting, Asbury Park, N. J.
- July 3-8. National Educational Association. Annual conference, New York City.

THE NEWSPAPER AND MAGAZINE ROOM OF THE PUBLIC LIBRARY AT HILVERSUM, HOLLAND

THE A. L. A. conference at Asbury Park promises to outrank the attendance of 1018 at Magnolia in 1902, if indeed it does not prove the banner conference by distancing the 1366 total at Washington, where representation from many government libraries brought the figures to high water mark. President Plummer has outlined a distinctive and attractive program, whose keynote will be "democracy and education," and the nearness of so many library centers to the place of meeting, should make it easy for an unusual proportion of staff members to be present with their chiefs. At the Asbury Park conference it is proposed to hold a critical symposium on work with children as a feature of the meeting of the Children's Librarians Section under the inspiration of Miss Gertrude Andrus of Seattle, chairman of the section. It is planned to put some of the contributions in type previous to the meeting and to furnish them in advance from A. L. A. headquarters; and it is especially desired that those who are to attend the meetings of this section will carefully read these contributions beforehand, so that all time possible may be saved for free discussion on the spot. Criticism is the purpose of the symposium, but criticism of a constructive rather than of a dispiriting sort. Work with children has been so appreciated of late years that some features have become almost a fetich; and it is none too soon to make a careful review of the trend of development with the purpose of checking excesses and of guiding in the best direction. The story-telling hour, for instance, has been one of the best features of modern library practice, but not all stories nor all story-telling is really useful, educationally or inspirationally, and where story-telling is a feature of school work it may not be desirable to offer premiums of candy (or chewing gum?) or

otherwise to corral children for the library story-telling hour. A discussion on such topics as this should certainly be both helpful and enjoyable, as proved to be the case at the Atlantic City meeting.

ONE of the practical questions discussed at Atlantic City and one which gave rise to a spirited debate, was "Why library fines?" The question was raised because fines which debar a reader from a library are thought by some to discourage or indeed prohibit the attendance of the very class of users whom the library most desires to encourage, those in whom the reading habit and the habit of responsibility have yet to be developed by help of the library. Another consideration was the continuous increase of the fine until it out-reached the value of the book and permanently disheartened the debtor from again attempting the library. There was little stress laid on the financial results from fines, which in the larger library systems are a substantial source of revenue. This showed a wholesome appreciation of the vital rather than the money side of the question. The general sentiment seemed to be that while some fining system was necessary to prevent wild waste in general carelessness, fines should not be excessive and should be limited by discretional common sense. A casual suggestion that the children themselves, boy scouts or others, should be used as library messengers to collect overdue books, incidentally resulting in the training of these very children, seemed to awaken interest as opening a new possibility of library service. One of the short papers discussing this question, prepared by Miss Catherine Van Dyne of the Free Public Library of Newark, is printed in this issue, and gives an admirable summing up of the points considered.

THE material of the Institut de Bibliographie at Brussels, including several millions of cards, is still intact and unharmed, so far as known, but there is no little anxiety lest this invaluable repertory should share the fate of the Louvain treasures. At a recent meeting in Paris of those representing the Institut and kindred enterprises, this serious danger was discussed and the hope was expressed that America might come to the rescue. This could be done in one of two ways, either by transferring the repertory bodily to this country, which besides involving undue risk would probably be impracticable, or by a duplication of the cards for a second repertory for permanent preservation here. In the latter case the Library of Congress or the New York Public Library or the A. L. A. headquarters would be the natural place for such duplicate repertory. We can assure our friends of the Institut that there would be entire willingness in America to accept the responsibility for such a duplicate set of cards, but there are problems both of housing and of finance which would be difficult to meet. Mr. Carnegie has done so much for libraries that he is regarded the world over as the Maecenas and guardian angel of all library enterprises, but whether he or any other American philanthropist could be expected to solve this problem is very doubtful. Nevertheless it is well that the question of duplicating this valuable collection should come up as one of the after-war items with which the world has to deal. For the present we can do no more than assure our foreign friends that there is general sympathy here both with their enterprise and their anxiety for its safe and permanent insurance, probably by some method of duplication, expensive as that would be.

THE round table at library conferences has proved so interesting a feature that we are adopting the plan for the development in the LIBRARY JOURNAL of a department which will promote informal discussion from time to time in the freest way of

library questions of current interest. The "Open Round Table" is intended to go somewhat further and to bring before librarians the flotsam and jetsam of library discussion, including notes, queries and answers on subjects which come up in staff discussion and in personal conversation. Librarians are invited to contribute "bits of talk" from any of these sources which they think will interest the profession generally, and the most heterodox opinions may find welcome at this open table. If it is fully availed of it will prove of general interest, and the only question is whether like the proverbial camel's head, it might not crowd all other features of the LIBRARY JOURNAL out of the tent.

A VERY serious dilemma confronts librarians and publishers at the moment. It is generally considered that rags are the element of paper manufacture which ensures permanence, and for catalog cards the proportion of rags runs as high as 80 or 90 per cent, which is the standard of the New York Public Library. One of the results of the world war, in its curious and minute ramifications, is to make choice in this respect impossible for the moment. The LIBRARY JOURNAL has always made a point of obtaining a permanent paper containing, with that in view, a substantial proportion of rag, but now rags have been bought up all over the country by the manufacturers of explosives and none can be had for the paper mills. Paper manufacturers therefore decline to make quotations at any price on rag paper, and the LIBRARY JOURNAL for the next year or two may be printed on a chemical wood fibre paper, with practically unknown chances of permanence. The difficulty is world-wide and one of the possibilities of the future is that the literature of 1916-17 may have no existence in the libraries of the year 2000 or thereafter. We mention this in our own case as a matter of candor, but "what are we going to do about it?" Practically nothing can be done.

# RELATIONS BETWEEN GENERAL PURCHASING DEPARTMENTS AND LIBRARIES

BY DR. W. DAWSON JOHNSTON, *Librarian, St. Paul Public Library*

THE importance of the purchasing department in industrial organization is indicated by the publication of two books upon the subject within the last year. One by C. S. Rindsfoos, entitled "Purchasing," was published by McGraw-Hill; the other by H. B. Twyford, with the more elaborate title "Purchasing: its economic aspects and proper methods," was published by Van Nostrand. Being the first books on the subject they necessarily deal with the question in a general way—and say comparatively little with regard to municipal buying and practically nothing whatever in regard to library buying or book buying.

Yet the establishment of general purchasing departments in more and more cities and their general possibilities as adjuncts to efficient library administration makes it desirable that their relation to the library should receive consideration by librarians and from the library point of view.

Some librarians may object to what seems a curtailing of power by the transfer of duties from the older office to the newer; but the majority will, I am sure, perceive that in general such a transfer is in the interest of both efficiency and economy, and that in as far as a general purchasing department may secure wholesale prices where the library may be able to secure only retail prices, or in as far as the library may be able to secure through a general purchasing department expert assistance in buying machinery, furniture, office supplies, printing, or the thousand and one other things which the library must have and must buy in the cheapest market, in so far the library is bound to welcome the establishment of the new department. It will not only guarantee the library better equipment at less cost, but it will give the library staff more time to do the things which it is especially trained to do and especially interested in doing.

While, however, it is desirable to get

other municipal departments to do as much of the library work as possible, we have still to discover what duties can properly be transferred to other departments, and particularly with reference to the purchasing department, (1) what library buying can be done with greater economy by that department, and (2) how the library can serve it in turn in the buying of articles of which a librarian is bound to have expert knowledge.

## PAST EXPERIENCE

The following list of cities having central purchasing departments has been given me by F. S. Staley, director of the Bureau of Municipal Research of the Minneapolis Civic and Commerce Association. The cities are New York, Chicago, Philadelphia, Cleveland, St. Louis, Baltimore, Minneapolis, Cincinnati, Los Angeles, Milwaukee, Dayton, Rochester and St. Paul.

Correspondence with the librarians of these cities shows that in only one of these thirteen cities is the library making all its purchases through a general municipal purchasing department. In one city the library has tried to make its purchases in this fashion, and three cities are planning to do so.

When the public library was established in Rochester, a little over three years ago, Mr. Yust reports, all library buying was done through the city purchasing department. Last year, however, the law was changed so as to permit the library to buy everything directly from the dealer. "This new arrangement," he says, "is a great improvement over the old one. Most of the things which we buy we have more specific knowledge of than does the purchasing department, so that we can buy in most cases to better advantage. Our new arrangement also facilitates the receiving and checking and paying of bills which formerly had to pass through the purchasing agent's hands."

In Milwaukee the library authorities have planned to make the experiment of buying some articles through the general purchasing department and ascertain whether there are any advantages to be derived from a change. In Los Angeles the library places orders for general supplies with the city purchasing department in the same manner that it does with business concerns. Five per cent. is added to the bills from the city store to cover administrative expenses. A new city charter has been drawn up by a board of citizen freeholders to be voted on next June, which provides that all library purchases, including books, shall be handled by the purchasing department of the city. In Minnesota a law was passed in 1911 authorizing cities of the first class to establish a purchasing department. This was amended by a law of 1915 to provide for the extension of the powers of the purchasing department to the several boards of the city, excepting, however, from the provisions of the act the purchase of books, periodicals, pamphlets, works of art and other like supplies for the library board, and arrangements are now being made in Minneapolis providing for the purchase of library supplies through the new department established in that city.

In St. Paul the charter which became effective June 1, 1914, provided for the establishment of a purchasing department and made it the duty of the purchasing agent to make all purchases whatsoever for the city. It further provided that (a) informal purchases, that is purchases or contracts under the sum of \$100 shall be made in such manner and from such persons as the purchasing agent may determine; (b) purchases of not less than \$100 or more than \$500 shall be made upon such informal bids, not less than two, as the purchasing agent may procure, notice of such proposed purchases to be posted in the office of the purchasing agent for not less than one day; (c) purchases in excess of the sum of \$500 are to be made only upon competitive sealed bids and after advertisement therefor in the official newspaper for at least once a week for two successive weeks.

#### PRESENT PROBLEMS

From the foregoing it is obvious that experience does not at present warrant any conclusions as to what form of purchasing organization and procedure is desirable. Definition of the problem, however, is desirable, and, in as far as it will help to define the problem, a summary of present library opinion with regard to it is desirable also.

Although, as indicated above, the Rochester Public Library abandoned the purchase of library supplies through a general agent, Milwaukee and Minneapolis are looking forward to purchasing through a general agent, and St. Paul, Los Angeles and Philadelphia are actually doing it, and expect to continue to do it. There is, of course, some fear that in emergencies and in cases where the purchasing officials are more careful of the prerogatives of the office than of its service the new arrangement may be unsatisfactory, but on the whole the feeling is that where the purchase of supplies by the library has not already been systematized the library should gain by the new arrangement, and that where it has it cannot very well lose and may gain. Supply records, exact specifications, and a store-room are desirable in any case and should do away with delays in securing supplies. As good prices, if not better, may be secured through a general office, and the expense to the library of buying in this manner should not be greater and may be less. In Los Angeles, for example, where office supplies and janitors' supplies are purchased in this manner, although 5 per cent. is added to bills from the city store to cover its administrative expenses, the library estimates that a saving of from 5 to 10 per cent. is effected in these purchases. Finally, it is conceivable that a general purchasing department administered as an integral part of the city government, as an adjunct to other departments rather than as a separate department, may be able to secure for the library better equipment and better supplies. There is no library which can afford an expert buyer for each and every kind of purchase which it must make, nor is it always in a position to

turn to the expert in another department whose advice it needs. The general purchasing department, however, has both the authority and the power to secure this advice, and with the assistance of the experts in the various departments of the city government should be in a position to guarantee the purchase of the best of everything, from office stationery to office furniture, and from typewriters to automobiles.

On the other hand the purchase of supplies used only by the library, and particularly the purchase of books, is a distinct problem and one to be solved, it seems to me, only by leaving this class of purchases to the library or by detailing a member of the library staff to serve as a deputy of the purchasing agent. Our experience in St. Paul—which is the only city now buying books through a general purchasing department—has led me to this conclusion. If the purchasing department had not done everything in its power to be of service to the library, and the library, on the other hand, had not welcomed the additional service promised by the new system I would feel that it was not the system that is at fault but individuals.

As it is I am convinced that bookbuying cannot be done advantageously by a general purchasing department except by the employment of library assistants as deputies; and as I examine our own experience the reasons why it cannot seem to succeed resolve themselves into three: (1) the necessity for more rapid service than a general purchasing department can give; (2) the desirability of buying at lower prices than it can secure; and (3) the desirability of administrative economy in buying.

In purchasing books for a public library rapid service is important. First, because many questions are asked which cannot be answered by reference to books already in the library, and if those who ask these questions are to be helped at all the books containing the information must be purchased without delay. Second, because the majority of the reference books in a large library are to be obtained only in the sec-

ond-hand book market, and must be ordered immediately, particularly when they are offered at a low price, if they are to be obtained before other libraries or collectors secure them. Third, because the majority of the books for circulation in a large library can be purchased advantageously only in the remainder market, or at clearance sales. Fourth, new books are most useful when they are being reviewed in the newspapers and magazines, and should be secured while they are still new. It is obvious, therefore, that the library service must suffer great embarrassment as long as book orders wait their turn in a general purchasing office and as long as orders are placed with dealers incapable of filling them promptly if at all.

The second reason why a general purchasing department cannot buy books advantageously is because it cannot buy them as cheaply. This is partly because it cannot act with the promptness with which a library can, as already pointed out, and partly because it lacks the expert knowledge which the librarian has, or, at least, should have. Book prices are a matter of expert knowledge. An acquaintance with them involves not only familiarity with books old and new on all subjects and in various languages, but also familiarity with the book market in all the book centers in this country and abroad. In the pricing of books, therefore, a general purchasing agent can only act either as a formal supervisor, as a clerical assistant, or as an office of record.

The third reason why a general purchasing department cannot buy books advantageously is because it involves increased administrative expenditures without increased efficiency.

The system of book buying now followed by us in St. Paul involves the following routine:

#### I. *Ordering of books.*

1. Orders searched and missing data supplied.
2. Orders carded, and arranged in alphabetical order.
3. Orders requisitioned, four copies being made, as follows:

- a. Purchasing department.
- b. Commissioner's office.
- c. Public Library.
- d. Library of Congress.
4. Requisitions verified with order cards.
5. Order cards filed.
6. Requisitions forwarded to purchasing department.
7. Order sheets received from purchasing department and checked up with order cards.
8. Books received, checked with order cards and date of receipt stamped on card.
9. Books checked with order sheets and order stamped with date received.

## II. Routine for invoices.

10. Invoices received and compared with order sheets.
11. Requisition number, order number and date of receiving books recorded on invoices.
12. Purchasing department's copy of orders received, checked with library copy, and alterations in price corrected.
13. Comptroller's copy checked with library copy, alterations in prices corrected, stamped with the date the books were received and the name and office of the chief of order department at the Public Library.
14. Purchasing department's and comptroller's copies or orders received returned to the purchasing department.
15. The date of the return to the court house recorded on the Public Library duplicate copy.

If the exchange of memoranda and the checking of records involved in this system secured better books for the library and at lower prices than the library could obtain, or secured them more expeditiously, or saved the time of library assistants it would be justified, but as it is it takes time in record keeping which should be spent in bookhunting, it adds to the already great burden of the purchasing department duties which are wholly alien to it, and involves additional labor in the library instead of less.

For these reasons I am persuaded that either the library should do its own book-buying, or that library assistants acting as deputies of the general purchasing department should handle this class of purchases.

And—that I may be logical in my argument for expert municipal buying—I am further disposed to feel that all the book-buying of the city departments should be done through the library. So far as I know no city library is doing this, although many are lending books to city departments either through a municipal reference branch or otherwise. I have no doubt that there are many cases in which department funds should be used for the purchase of books rather than library funds, and that in most if not all cases books could be purchased more advantageously through the library than otherwise.

These are only a few of the interesting questions raised by this interesting subject, but, perhaps, enough has already been said to indicate some of the services which a well organized general purchasing department may render the library as well as some of the problems which may be raised by an imperfectly organized department.

It does not matter what department does the library purchasing or who signs the orders, but it does matter whether the library gets what it needs, gets it when it needs it, gets it at the lowest price and at the least possible administrative cost.

---

## STATE AID THREATENED

STATE aid for many libraries in Wisconsin will be withdrawn if the recent decision of Circuit Court Judge E. C. Higbee is upheld. On Apr. 7 Judge Higbee refused to grant a writ of mandamus, compelling the city treasurer of La Crosse to pay over to the library board \$6000 appropriated by the City Council for the support of the library. The latter is an endowed institution managed by a self-perpetuating board.

The judge refused the writ on the ground first, that the charter limits the appropriations for this purpose to \$2000 and second, that it is unconstitutional to appropriate public money to any endowed institution. If the Supreme Court takes the same view the appropriations for the State Historical Library, twenty or more city libraries throughout the state and other quasi-public institutions will be affected. The library will appeal the decision.

# THE FIELD OF CO-OPERATION BETWEEN LIBRARIES OF LEARNING\*

BY CLEMENT W. ANDREWS, LL.D., *Librarian of the John Crerar Library, Chicago*

THE question which I have asked myself and which I have tried to answer in this paper, is the very general one of the possible extent of co-operation among libraries, with regard simply to usefulness and without regard to cost, except so far as that would limit the usefulness, and without regard to the means of meeting this cost. It will be largely a re-cast and crystallization of the suggestions of the meeting of 1915.

Mr. Cutter defined the functions of a library as to get, to keep, and to use, counting as part of the last the preparation for use. While co-operation cannot affect these functions equally, it may help in each to an extent not fully realized by any one library or librarian, and it seems to our president and to me that it might be well to take a survey of the field of these possibilities as an introduction to the consideration of the questions of how many can be realized with our present means and how these means can be increased to realize others.

The first step in getting books for a library is the decision as to what to get, and the basic question of all is the character and extent of the collection to be made. Right here there opens a vista of opportunities in co-operation only very partially appreciated or made use of at present. Notwithstanding the obviousness of these opportunities, the success of the efforts which have been made and the many years during which the subject has been before librarians, very few cities having more than one library open to the public have a consistent scheme of differentiation of field among these libraries, and it is safe to say that none have carried out consistently whatever scheme does exist. Believing that Chicago has the most consistent scheme and that its libraries have

carried out the scheme with at least as much consistency as any, and knowing how much the execution there has fallen short of the possibilities, I make the statement without fear of contradiction.

When the question is co-operation between libraries in different cities, it may be said that it has not been discussed and hardly mentioned. The opportunities are fewer and their results less significant, yet they do exist. Why, for instance, should the John Crerar Library have 14,000 volumes of Orientalia, even if they are on subjects within its scope, if the Library of Congress is making a collection which must in the nature of the case be far more complete and be the first resort of Oriental scholars; or if the former has had a favorable opportunity to acquire such a collection, why should not this be transferred to a place where it would be more useful? There may be good and valid reasons why it should not, but the question is at least worth consideration; and there are many like this.

For many libraries, the whole scope is determined by their character and income, so that the point just mentioned is not of any interest to these, but for all the question of the selection of individual works for purchase is one of very much importance. Even if the field of a library is so limited and its income so large that it seriously undertakes to get everything within its scope, still the question arises whether a given work is within it. For all others the question of replacing the old standard text-books and reference books by newer ones, and still more that of replacing earlier editions of the same work by the newer, and the desirability of new original works, are those of everyday occurrence. Now, the A. L. A. has shown us the possibility of answering these questions for the smaller public libraries, and I suggest the desira-

\*Read before the American Library Institute at Atlantic City, March 4, 1916.

bility of securing a similar service for the larger libraries, particularly the university, college and reference libraries.

Would not a bulletin giving the information needed to answer the questions mentioned be a most useful tool? Such a bulletin should cover at least all the important works published in Europe and America, giving one or two competent opinions as to the character of each work, particularly its value relative to older standards and older editions. A bulletin of this character would have a limited circulation and would cost each subscriber much more than the *A. L. A. Booklist*, but the cost and price might well be kept within the means of the libraries for which it would be intended, especially if its publication were made a part of the work of furnishing catalog cards, a matter to be considered later.

Even the next step, that of ordering, which at first sight might appear of necessity a matter for each library individually, may perhaps be aided by co-operation. For instance, if the bulletin just suggested is issued in loose leaf form, classified according to subjects, as these are usually divided among the departments of a university; then a library might take several copies, send one to each of the professors interested, send one properly marked to its agents as an order, and keep as many as needed for its own records. This would simplify the work of ordering for most libraries more than a little.

The purchasing, or, more broadly, the obtaining of books, offers more possibilities for co-operation. Recognizing most gratefully the services of our present agents in the book trade and their interest in our work, and also and most especially the services rendered by the Smithsonian Institution in receiving for us the many gifts coming from abroad, still one cannot help feeling that better results could be obtained by a co-operative bureau of the scholarly libraries of the country extending and complementary to these agents. Why should not such a bureau keep a carefully revised list of such libraries, with notes of what they can offer in return or of the extent to which

they are willing to pay for material, and secure the necessary number of copies of works published outside the regular trade, of works not in trade and of foreign public documents? The work would be but an extension of what is being done by Mr. Wilson for the Public Information Service. Such a bureau would also keep us informed as to the changes and irregularities in the publication of periodicals and other serials.

Finally, as to this portion of the subject, there is the possibility of a saving in the cost of transportation by such a co-operative bureau. Composite packages could be sent to it at a minimum of cost for freight, insurance, drayage, custom house fees, etc. Then, these could be broken up and sent as directed by each subscriber. There would probably be a saving in time as well. This work would be but an extension of a not unsuccessful experiment of certain libraries of Chicago and vicinity.

Next comes the work of keeping the books. The program calls for a discussion of President Eliot's plan of a storage reservoir for books rarely used. This has value undoubtedly as a remedy for certain cases, but I doubt its general applicability. It presupposes the continuance of the old methods of storing books; but no newly built libraries find, under the present conditions as to the use of artificial lighting, any great difficulty in providing economically sufficient space for this purpose. On the other hand, the objections to the plan are obvious and have been confirmed by those libraries which have been obliged to give it a partial trial. Improved means of transportation in the future may lessen these objections, but for the present the question would appear to be a local one.

A field more promising for immediate cultivation would be a means of making known more generally and more promptly the results of the many new experiments in the methods of keeping books, pamphlets, maps, and other library material. This could best be done, perhaps, by the *A. L. A.* headquarters, if only it could have the space to show them and the of-

fice force required to make them available. A library museum is certainly a great desideratum.

Naturally, however, it is chiefly in the use of the books and the preparation for their use that the greatest opportunities for co-operation lie. The program mentions several, and last year's discussion brought out a number of others. On reviewing the subject, but one or two additional topics have occurred to me. The most important of these are the cataloging and the classification of foreign books not treated by the Library of Congress. Some of these it does furnish cards for through co-operation with various American libraries, but the omission of all in which it is not interested limits the value of the service quite materially. A central bureau would not improbably relieve the Library of Congress of considerable trouble and expense, but would also furnish its subscribers with a wider range of titles. It would also relieve the John Crerar Library to nearly the same extent and would furnish a more prompt and efficient substitute for our cards. If stereotype moulds be used for reproduction as needed, the cost might be kept down to very near the present, even after allowing for the initial cost of cataloging. Connected with this is the classification. Here the present service of the Library of Congress and the John Crerar Library could be most advantageously supplemented. Subscribers to other cards learn only the classification chosen for shelving. Sometimes, perhaps frequently, this is determined by the set to which the work belongs, rather than by the subject of the work itself. Would it not be useful to give the classification needed for added entries also?

Here also belongs the question of how we shall get the much-needed comparative key to the D. C., C. D., E. C. and L. C. classifications. The A. L. A. Publishing Board ought to issue this, but will it? Or, perhaps, I ought to ask, can it? Its interest is largely in assisting the smaller public libraries, and it is doubtful if it could pay for the preparation of such a key, though it might publish it if prepared by others.

The other lines of co-operation in the use of books were quite fully discussed last year, and all I shall do now is to restate some of the more important deductions that I have made from that discussion.

Every library or group of libraries offering assistance to scholars should have a joint catalog of the more important works, and, as far as possible, notes of where they can be consulted and whether they can be obtained on inter-library loans. For future publications, and perhaps even for future accessions, the bulletin proposed at the beginning of this paper would furnish a working basis for such a library. Every such library or group of libraries should make provision for the copying by photography of such material as the libraries are willing to have thus reproduced. From the experience of the John Crerar Library, it may be stated that this service will not be limited to rare and expensive works, but will be of even more use in making available articles in current periodicals and new books too much in demand to be allowed to go out on inter-library loans, or in saving expense to the borrowing library, as often the cost of the copies of the articles is less than the cost of transportation of the complete volumes. There should be a convenient codification of the practice of inter-library loans. This code should state the general principles which should govern requests, the limitations under which requests should be granted, if possible an agreement as to the maximum time desirable, and the discussion on this code should include the question of charging a small fee, in addition to the cost of transportation, to cover the cost of the correspondence. The code might well give desirable forms and instructions for the correspondence.

There is great need for joint lists on special subjects, and also for check lists on special classes of books. Again, the Publishing Board might publish some of these if furnished the copy. It has been hoped that the Library of Congress would undertake the most important of those proposed, the check list of serials, but unfortunately this hope will not be realized.

As one of the committee having this matter under consideration, I now suggest issuing this list in sections. If Dr. Lichenstein can promise the co-operation of historical societies in preparing the historical list, perhaps the Smithsonian Institution would undertake a new edition of Bolton to include the technical. In this I am sure the Engineering Societies and the John Crerar Library would help. That would leave only the theological, sociological, philological and literary and fine arts lists to be provided for. There should be no difficulty in getting assistance for the sociological, and the others could perhaps best be provided for

in a general list, which would not be too much for the A. L. A. to undertake.

As to the means of carrying out these plans, or as many as may seem worth while, direct subscriptions for each by the libraries interested would appear to be the most feasible. If the services can be obtained only by subscription and the cost is not excessive, most governing boards would authorize the expenditures. Of course, the Publishing Board cannot give exclusive service, and co-operation in the preparation of copy for it would have to be voluntary. Such details offer a large field for discussion.

## WHY CONTINUE THE FINES SYSTEM?\*

BY CATHERINE VAN DYNE, *Free Public Library, Newark, N. J.*

ONE reason we continue the fines system is because fines are a library tradition. We know that at one time some one devised fines as a means of securing the return of books. It was a system devised to protect the general public against the individual delinquent. It was not devised as a means of revenue. To-day we have reached the point where we look with disfavor on the fines system because of the following disadvantages:

1. The fines system secures the return of books but unpaid fines prohibit the circulation of books. Thus it interferes with and limits the usefulness of a well-intentioned public institution.

2. An inability to pay fines is proof of an inability to buy books. The borrowing of books presupposes a desire for literature. As the public library was originally conceived for the benefit of those who desire books and cannot afford to own them, librarians are sacrificing ideals to rules when they insist on fines.

3. The fines system discriminates against a particular class—the poor. People of wealth or moderate means pay fines as they buy postage stamps. If poor people pay fines they may be denying themselves bread or shoes. Usually they prefer the

bread or shoes, which accounts very largely for the great number of fine slips in our registration files and the idle cards.

4. The fines system should not admit of exceptions, yet is it quite fair to charge the third grade child and the foreigner with the same responsibility in returning books that we expect from the most intelligent adult? We encourage the use of the library by both children and foreigners, yet often fail to safeguard them as we should, for in the neighborhood where both abound, it is often impossible to take time to make sure our instructions are thoroughly understood.

5. "A rule that in numerous instances must be relaxed to avoid injustice is surely ill-suited to its purpose." The following are instances of such concessions. In 1907 the Boston Public Library substituted six months' loss of library privileges for payment of fines, provided the offender is under sixteen years of age. In 1911 the Chicago Public Library reduced children's fines from three cents to one cent a day. The Newark Library has recently adopted a cancellation scheme for fines at the expiration of periods, the length of which is commensurate with the size of the fine. In many libraries fourteen days has been adopted as a suitable term after which fines may not accumulate. Otherwise the fine

\*Notes contributed to a general discussion at the Atlantic City meeting of the New Jersey Library Association, March 3-4, 1916.

soon exceeds the value of the book and the borrower's indignation grows apace. Do not these makeshifts indicate a tendency toward a radical change?

6. The fines system is "bad business," partly because we adhere to it so strictly. Most libraries have come to the pass where they "have a few good rules which are rigidly enforced." When libraries have a few good rules, which are enforced or disregarded according to circumstances, we shall have progressed even farther. With our present prejudices, quarantine and fire-without-insurance are the only loopholes of escape for the borrower and these are rather unpleasant alternatives. We interview all delinquents, rich and poor, old and young, intelligent and illiterate, and tell them politely but firmly that, while we very much regret the fact that their husbands are without jobs, that their babies are sick or that death has stricken their relatives, books are due on a certain date and fines charged at the rate of two cents a day in case of overdues. Present-day business houses do not employ these methods. To prove it here is a story vouched for by the *New York Tribune's* "Ad-Visor" column. This winter a young man took a young lady to one of the Shubert theaters in New York to see Lou Tellegen in "The Ware case." At the end of the first act they were obliged to leave the theater since the girl felt too ill to remain. Both were very much disappointed and the young man decided to see what the management would do about it. In reply to his letter came a courteous note regretting their unfortunate experience and offering to exchange the stubs of their tickets for two seats whenever they found it convenient to come again. There was not even an intimation that the management could not be held responsible for the indisposition of its patrons.

It is true that in urging the discontinuance of the fines system we are opposing both tradition and practice. This fact alone, at least from the standpoint of our opponents, should place us at an unmistakable disadvantage and perhaps entitle us to a freedom in presenting our side of the question, not otherwise permissible. On

that account serious arguments in favor of fines have been purposely ignored and only the undesirable features considered. The views expressed are unconventional, even radical, but they cannot be proved impractical without a trial.

How would we set about securing the return of books? By an efficient follow-up system of postal, letter and messenger such as we now employ. How effective would notices prove if the fear of a steadily increasing fine were removed? Only experience will show. If we are to judge by past experience we must acknowledge that the anticipation of changes in our library routine has presented far greater difficulties than the realization justified. Think of the passing of "Silence" placards, the turnstile, the accession book! Think of the perfect arrangement of our stacks before the day of the open shelf! Think of the raising of restrictions in regard to the number of books allowed to one cardholder! We remember them all without a regret.

---

#### A NEW MUSIC INDEX

No other books offer quite so many technical difficulties in cataloging, shelving and circulating as music, and these difficulties are increased in a library that cannot have a separate music room with special attendants. The way the Louisville Free Public Library solved the difficulties of making the collection easy to use for both the public and the staff may help someone else with the same problem before them.

All our scores, both sheet music and bound collections, and all books about music, including a recent purchase of a thousand volumes, were placed in the open shelf room. For the use of the public and the open shelf attendants we made a composer and title card index to all the compositions in the library and placed the cabinet near the wall where the music is shelved. This contains over 22,000 cards and indexes some 10,000 compositions.

We decided last summer to make this index for the music we were then cataloging and the music that was already on

our shelves. So far as we knew no other library had a similar index, and it seemed a tremendous undertaking for the department that must meantime keep up its regular work of cataloging the weekly additions to the library. Yet we completed the task in four months with the extra assistance of only one typist for seven weeks. The enthusiastic appreciation of the public and the circulation department has more than repaid us for the extra pressure of work during those four months.

A composer and title card was made for each piece of sheet music. For the collections, a card for the compiler and title of the collection was made, and in addition a composer and title card for each composition in the volume. The analyzing of these collections represents the bulk of the work for one undertaking to make such an index. Often indeed we made several hundred cards for such a set as Oesterle's "The golden treasury of piano music" or "The family music book," but it is such analyzing that makes a music index invaluable. The best and the most called for music lies hidden in these volumes, often poorly arranged and unindexed, sometimes with no page numbers; and without careful and complete analyzing, it is impossible to get the utmost use of everything in the library. We considered filing these analytic cards in our public catalog which is across the hall from our open shelf room, but after consultation with our circulation department, it was decided to make a separate index which could be placed near the music, and the time, temper and steps saved have justified our decision. The cards were as short as possible with only call number, composer's name in subject fullness, short title and compiler and title of collection. When a composition had a title in two or more languages, title cards were made in each language. Often titles were inverted to be filed under the best known words, or a composition was entered under the several titles by which it might be known; and, of course, many compositions were found in many different collections, in different forms and for different instruments.

Separate entries were made for each of these.

All books about music have an author and title card which are filed in one alphabet with the cards for the scores. Thus we can find in a second every volume in the library that contains any composition called for, be it folk song, kindergarten song, hymn or aria, concerto, dance, opera, libretto or treatise.

In addition to the index the music was cataloged and entered in the general public catalog as usual under composer, librettist, kind of music, instrument and title. These cards give information as to key, opus number, transcriber, contents, instrument, etc., including many items not on the title page, since music title pages are notoriously inadequate and misleading. We found it necessary to extend the classification in Miss Hooper's "Select list of music" to meet the needs of our growing collection. We inserted special subdivisions for such subjects as: Easy piano music; piano duets in partitur; orchestra symphonies, operas, overtures, preludes, etc.; and violin and piano concertos.

Many guides were written for our class shelf list and this was also placed in the open shelf-room and serves as a class index.

Special shelves have been made for the music with upright pieces about four inches apart. Over each of these alcoves a label was placed giving class number and kind of music to be found below. These labels preclude the necessity of subject cards in the index. Finding it impossible to teach the users of the music to return volumes to their right places, we have printed signs over the collection reading "Please do not replace any music score or book taken from these shelves. Use bottom shelves for the purpose."

The sheet music was stripped with Success binder and sewed into pressboard binders. Volumes to be bound were placed in Holliston Mills library buckram, using tan in both cases as distinctive from other colors in use in the library. Sheet music and bound volumes are filed together on the shelves.

All scores circulate for fourteen days

with renewal privileges for an additional fourteen days.

Lastly, but most important of all, in an effort to make our music collection attractive and easy of use for our musical public, we issued a printed list of all music in the library for home distribution. This list has proven the most useful we have issued and with our music index, has overcome most of the difficulties attendant upon the circulation of a large collection of score music.

MAY WOOD WIGGINTON,  
Head Catalog Department,  
Louisville Free Public Library.

### HENRY TALBOTT

HENRY TALBOTT, chief of the index division of the Interstate Commerce Commission, Washington, D. C., died in that city on February 28, at the age of 64. In the death of Mr. Talbott the government lost a faithful employe of 40 years' standing. A native of Waterloo, Ill., he was given an excellent private education by his father, and had just registered at the Harvard Law School when he was called to Washington in 1876 by Congressman William R. Morrison to become clerk of his committee on ways and means. Here he inaugurated a system of indexing for its proceedings which is still in use. He was secretary of the Congressional committee that investigated the Louisiana election frauds of 1876, and on Jan. 2, 1890, he became a law clerk in the Interstate Commerce Commission, following his chief, Morrison, who had left Congress to become chairman of that body. He created and became the head of the Index Division of that important branch of the public service, and his enormous labors in this division resulted in the creation of what is perhaps the best highly specialized catalog in this country. In this catalog of three quarters of a million cards is to be found in detail every utterance of the Interstate Commerce Commission in its decisions, conferences, conference rulings, orders, etc., and a complete index of every decision ever

rendered by any court in the United States, Canada, and Great Britain, relating to railroads. Every possible angle of these decisions is carded in detail by parties to suits, commodities, places, etc.

Aside from this, Mr. Talbott was widely traveled in this country and abroad, was an omnivorous reader, and was an active member of many literary and scientific clubs. Besides his papers that appeared in the printed proceedings of the Biological Society of Washington and articles in *Forest and Stream*, he left little to record his monumental work in many fields. He was very modest about his writings and it is believed that he published much without using his signature. The following pamphlets are known to have been written by him:

- Tariff from the White House. Extract from the messages. Washington, 1888. 109 p.
- Letter to Hon. George M. Bowers, Commissioner of Fish and Fisheries, from the Executive Committee of the Game and Fish Protective Association of the District of Columbia, requesting an opinion as to the area covered by the written permit to catch bait with nets in the District of Columbia. Washington: Jan. 20, 1900. 15 p.
- Report on the pollution of rivers, by Henry Talbott, Chairman of the Committee on River Pollution to the Game and Fish Protective Association of the District of Columbia. Washington: Gov. Ptg. Off., 1898. 63 p.
- Pollution of water supplies. February 19, 1900. (Senate Report No. 411, 56th Congress, 1st Session.) 14 p.
- First annual report of the Game and Fish Protective Association of the District of Columbia, 1901. (Report on river pollution, p. 25-40.)
- The invasion of the Potomac. Reprint from transactions of the American Fisheries Society. 1909. 6 p.
- Fishing up and down the Potomac. In *Forest and Stream*, Feb. 23 and March 9, 1901. (Principally on George Washington as a fisherman, as gathered from Washington's diary.)

No brief sketch could do justice to the memory of a man who was an expert in every line he touched, and whose signature to a law brief or an opinion of any sort was the last word. His knowledge of American history and politics was remarkable, and nothing that transpired in Congress for the past forty years escaped his attention or his memory. He was as remarkable in this respect as the late Dr. Spofford of the Library of Congress, and his vast fund of information was readily at his command for the benefit of the individual and the public. Firm in his opinions as he was, he was kind and gentle, loved a good joke and had a new one every morning to begin the day with. He never married, and leaves an aged mother to

mourn the loss of an only child, and thousands of friends from Maine to California.

LERoy STAFFORD BOYD.

#### HENRIETTA ST. BARBE BROOKS

THE death of Henrietta St. Barbe Brooks, librarian of Wellesley College, which occurred at Wellesley, March 16, has taken from the college and from the library profession one whose service to both can be adequately estimated only by those most closely associated with her. After graduating from Wellesley College with the class of 1891, she was an assistant in the cataloging department of Harvard College Library for a short time, and then went to the New York State Library School for a year's training. From there she went to the Carnegie Library in Pittsburgh as chief cataloger, and was closely associated with Mr. Edwin H. Anderson in solving the problems of the organization of that library. In 1903 she accepted the position of assistant librarian at Wellesley College, and in 1910 succeeded Miss Caroline F. Pierce as librarian.

One who knew her and the library well has said of her that the essential quality of her personality was expressed to an unusual degree in the library administered by her. Method and system were there, and the reins of administration were held with a firm hand. But the purpose for which method and system exist, to serve the reader and student, was never forgotten, and rules were never so strict that they could not be relaxed when occasion demanded. Her breadth of view, her quick comprehension of relative values and grasp of essentials, her ability to penetrate at once to the heart of a problem or situation, to lay her finger on the weak point of a proposition, were characteristic of her and molded her policy as librarian.

The last two years of her life were spent in a struggle with an incurable disease; a struggle carried on so quietly, so courageously, so cheerfully and even so happily, that when her tenuous hold on life relaxed at last, the news came almost as a shock to friends who had known the end was inevitable. For a year she had not taken any active part in the

administration of the library, but her interest in it never flagged, and her counsel and advice were always ready and marked by the same sanity and sound judgment she had always shown.

In the quickly shifting college community individuals are too soon forgotten outside the inner circle of close friends. But influence is lasting and measureless, and the imprint of such a life will always remain on the college library and so on the college life.

E. D. R.

#### FIVE YEARS OF WORK IN THE NATIONAL LIBRARY OF BRAZIL

Two years ago the annual reports of the National Library of Brazil for 1907 and 1908, the latest then available in this country, were reviewed in the LIBRARY JOURNAL (L. J., June, 1914, p. 484). Since then the annual reports for 1909-1913, all published in 1914, have been received. At least two of these, and probably all, appear also in another form as part of the series *Annaes da Biblioteca Nacional*.

It will be remembered that the National Library moved in 1909 into a magnificent new building, favorably located not far from the southerly end of the Avenida Central, in Rio de Janeiro, in the near vicinity of the National School of Fine Arts, the Municipal Theater and the Monroe Palace. The report for 1909 contains a most interesting account of the removal of the books to the new location. The method of emptying the old building by means of a temporary lift, and the transportation of the books in boxes designated to particular shelves, recalls, in a measure, the moving of the old Astor and Lenox collections to the present New York Public Library building. One feature of particular interest may be noted: Prior to removal a set of plans of the old building was carefully prepared, showing the exact occupancy of all the shelves; upon a similar set was indicated, each day of the moving period, the shelves from which books were removed and the number of the boxes containing them; upon another set was indicated what books arrived at

the new building; and still other sets, showing the correspondence between the old and the new locations, accompanied the books in transfer. The entire labor of moving was done by regular employees, with the addition of one chauffeur, two elevator operators and six laborers, and was accomplished within the special appropriation of 20,000 milreis (about \$6000). A pleasing contrast to the perfunctory tone of most American library reports is noticeable in the generous personal recognition made of the services of those members of the staff who had charge of various parts of the moving process. The moving was done gradually, covering the period Sept. 1, 1909 to Feb. 21, 1910. Up to Dec. 14th it was possible to keep the library open daily until 3 p. m.; and although service was interrupted for the remainder of the period, the interruption was not absolute, since even then "the limits of the possible were always accorded to readers who sought the library." Clearly the National Library of Brazil, thanks to the genius of its able administrator, Dr. Silva, is animated by a very modern library spirit.

The formal dedication of the new building took place Oct. 29, 1910, in the presence of the President of the Republic and other dignitaries. The address then delivered by Dr. Silva recites briefly the history of the movement which resulted in the present noble structure. The report for 1910, which gives an account of this ceremony, also describes the principal features of the new equipment. The metal work, it may be noted, was supplied by two firms in the United States. The capacity of the stacks is estimated at 400,000 volumes. A book-carrier and a pneumatic tube service similar to that in the Library of Congress were installed, as well as intramural telephones and a vacuum cleaning system. The statement that the book-carrier, "an apparatus unknown to the mechanics who set it up, required constant repairs and replacement of pieces before it would work properly," will be read with sympathy by American librarians who have suffered similar experiences. To go further into detail regarding the building and equipment would be out of place here, but it is hoped that a

full description may be presented in the LIBRARY JOURNAL at some future date, in the series of articles on national libraries.

The year 1911 was made notable by Government Decree no. 8835, reorganizing the internal administration of the library and introducing several innovations tending to broaden the scope of its activities. Daily hours were extended to 10 p. m. and Sunday opening provided for; limited borrowing privileges were granted to readers; literature courses were established; and a division of bibliography and documentation was created to take charge of the cards of the International Institute of Bibliography at Brussels, 200,000 of which were received during the year. Provision was made for a course in library training, but various difficulties made it impracticable to commence this work. In this connection it is somewhat surprising to discover that apparently the entire personnel of the library is of the masculine sex; at least it is certain that no woman's name appears in any of the reports. During 1911 also, the library was the recipient of the valuable Benedict Ottoni collection, consisting of 9480 volumes relating to the early history of America, especially of Brazil. The report of the section of prints and maps shows intelligent progress. One important piece of work was the thorough indexing, on cards, of portraits, prints, maps, etc., contained in volumes throughout the library.

The report for 1912 recounts the difficulties which still prevented the organization of the training class. Public lectures, however, were begun, and in 1913 there were three series: one of a general nature, one on the history of civilization, and one on folk-lore. The use of the assembly room was granted also for several outside lectures and meetings. During 1913 also, a sub-librarian was sent to all the most important cities of Brazil, to visit printers, publishers, and postal officials in the effort to obtain more effectual compliance with the decree of 1907, requiring a deposit in the library of a copy of everything printed in the country, a mission of most successful results.

Principal statistics for 1913 follow: Sec-

tion 1 (books): added, 13,386 vols., 370 music scores; 77,103 readers consulted 113,554 vols. and 27,692 periodicals and newspapers. Section 2 (MSS.): added, 1466 pieces; 166 readers consulted 37,581 pieces. Section 3 (prints and maps): added, 10,917 prints, 12 vols. of illustrations, 308 reference vols., 229 maps, 66 atlases; 803 readers consulted 715 prints or vols. of prints, 582 maps and atlases, and 213 reference volumes. Section 4 (coins and medals): added, 604 pieces, 11 reference vols.; 217 visitors examined 24,213 pieces and 203 vols. Volumes bound by the Office of Printing and Binding, 3232. Copyright entries, 694.

These figures record a striking increase over those for 1908, given in the review referred to above, and indicate an advance in library service in the Brazilian capital which will be gratifying to all who have at heart the widest possible development of library usefulness in America, south as well as north.

W. N. S.

#### LIBRARY COURSES AT CONNECTICUT COLLEGE FOR WOMEN

At the meeting of the Connecticut Library Association at Waterbury Feb. 24, Miss Mary H. Davis, the librarian of the new Connecticut College for Women in New London, spoke on the plans and ideals of the college, and of the library in particular. The question of the feasibility of introducing certain vocational courses into the college curriculum, and the possibility of combining cultural and vocational studies during the college years, is one which Connecticut College is trying to answer satisfactorily.

In the library proper, as in other departments, much still remains to be done. In Miss Davis's own words, "A college without a library is a workman without a necessary tool, but an ideal college library cannot be made in six months.

"The first nucleus of the college library was a gift of 2000 volumes from Mrs. Thomas Harland of Norwich, Ct. Other gifts came rapidly. The Connecticut State Library through Dr. Godard has been most helpful and generous. Yale, Vassar, Wellesley and the Blackstone Library of Bran-

ford, Ct., have given of their duplicates. Individuals and libraries from many places have given freely. We now have about 6000 volumes. A good start for the first months of the first year, but how small for the needs of a growing college with visions of courses in library economy!

"Perhaps you have wondered why a college should try to give library training when there are good special schools, or how it could do it in the four years and still give the broad cultural training which is so essential to good library service. Is the so called 'technical training' of librarians a thing apart from college studies? If you make a careful study of the courses offered in the library schools you will be surprised to find how many of them from their titles would seem to belong with a college course. Would courses on Continental literature, Current sociological material, History of books and printing, History of libraries, Book selection and evaluation, be outside of a conception of cultural training? Even the majority of the technical courses—cataloging, classifying, and reference work—are of a type of work that one would expect to find in a college. Many colleges offer courses in pedagogy and the graduates in a very large proportion become teachers whether they are fitted for the work or prefer it. Why should not other lines of educational work be open to them? . . .

"The requirements for a degree at Connecticut College are based on a four years' program of studies. First there is the broad group of required studies including English, foreign languages, history, social science, two courses in science, hygiene, and physical training. A second group of required studies consisting of some one main subject with its allied subjects is called in college parlance, the "major group." Majors in fourteen subjects are now open. These two required groups cover about two-thirds of the college course and one-third is left for electives. These may be scattered over a broad field or some of them may be grouped around some chosen line which make a "vocational minor." It is such a "vocational minor" which is planned for students wishing to specialize in library

ONE OF THE BUILDINGS OF THE NEW CONNECTICUT COLLEGE FOR WOMEN, IN WHICH THE COLLEGE LIBRARY HAS TEMPORARY QUARTERS

work. The group of required studies for the library minor will consist of the general course open to all students, followed by a series of technical courses given chiefly in the junior and senior years. Certain courses given by the English department, as courses on contemporary literature and literary forms, will be required. Practice work in the college library, and during the summer in some approved public library, will be part of the regular course, with credit allowed. The long summer vacation gives ample time for the girl interested in her chosen vocation to gain practical knowledge that will make more real the theoretical instruction of the school year. One month of practice work before her junior year and one before her senior year, in different types of libraries, added to her work in the college library, would give her rare opportunities of practical experience.

"There is a demand for librarians thoroughly trained in theory and practice. With the co-operation of the librarians of Connecticut, with the utilization of the natural vocational instincts of the students, and with the educational value of the college environment, the vision can be made true and the graduates of Connecticut College choosing the library minor can be sent out into the field of librarianship with a combination of theory and practice that will meet this demand."

The library is located on the second floor of New London Hall, the building shown in the accompanying illustration. Eventually this whole building will be devoted to science, but at present it contains library, lecture, and administration halls as well as laboratories. Since the photograph was taken the builder's débris has been cleared away and the grounds graded, to the great improvement of its appearance. All the college buildings stand on a hill, looking over the city of New London and the river Thames to Long Island Sound.

#### UNLOCK THE BOOKS

SOME very interesting letters have come back to this office from Asa Don Dickin-son, who has gone out to India to organize the library of Lahore University on modern

American lines. Concerning this particular work he writes in his most recent letter:

"Our immediate task of reorganizing the University Library is well in hand. Some budding librarians are receiving practical training in the process. Several of the affiliated colleges have ordered up-to-date supplies from home. By the time these arrive my apprentices will consider themselves *pukka* librarians. It will then be my pleasant task to 'plant' each in a position, going with him to his new surroundings and helping him plan the organization of his library.

"After four months' observation I would describe the average Punjab library as a place where books are kept locked up, the average Punjab librarian as a book gaoler or turnkey. This condition of affairs is doubtless a survival from a day comparatively recent here, when books were manuscript—precious jewels some of them that had been polished and embellished with the loving labor of a lifetime. To-day books are impersonal things, in India as elsewhere, turned out in millions by machinery, mere bricks for use in constructing and enlarging the social edifices of modern civilization. How absurd to treat these commonplace utensils like the rare and precious specimens of a museum!

"I have so far preached this doctrine to Indian librarians with but indifferent success. Though hospitable to most Western ideas and ideals of library management, they are all for keeping books safe. Having them used interests them little. There are to-day thousands of books crumbling into dust in the *almirahs* of Punjab libraries that have not been touched for half a century. Their leaves have not even been cut.

"Suggestions to unlock the *almirahs*, to open wide their doors, to invite readers to use their contents, are met with dismay or with smiles and shrugs.

"'You don't know Indian students.'

"'The dust-storms!'

"'The insects!'

"'The heat!'

"'The dampness!'

"One is strongly tempted to reply with another exclamation, 'Rubbish!' In Amer-

ica too we have book-thieves and dust and book-worms and heat and wet. I believe that air—even Indian air—is good for books, for I have compared books that have stood for ten years in the open with those that have been dead and buried in glass coffins for the same length of time. The condition of the emancipated books compares very favorably with that of those which have remained *purdah*. I am exhorting Indian librarians to *unlock the books*,—to let them be worn out by the human association which is their only excuse for being—rather than as at present become a prey to worms and mould. They think me radical when I say, ‘Place the books on open shelves and then,—*take care of them*. Arrange the library rooms so that the librarian may oversee his charges. Place his desk close to the single combined exit and entrance, and tell him to be unobtrusively, inoffensively vigilant. This is a faculty which may be cultivated.’

“In season and out I urge the people here to keep the books on open shelves, and go over them periodically. One of the first things the Western librarian notices about the Indian libraries is the number of nondescript persons under pay but with ample leisure who are squatting about the floor in secluded nooks just where the unwary visitor is most likely to stub his toe against them. Every Indian library is blessed with at least one of these interesting ornaments. Suppose he were given an hour’s exercise each day with a dust-cloth. He should be able to attend to two hundred books a day or one thousand a week, allowing him two days in each week in which to recuperate. This means that in a library of 13,000 volumes each book would receive attention four times a year. There is no doubt at all that under these conditions the books would thrive better than when shut away behind glass doors, often with dampness and insects for company.

“In Indian libraries books are too apt to be hoarded and readers neglected. They do not appear to realize here that readers can get along without books surprisingly well, while books without readers are a pitiable spectacle, all too common in Indian libraries.

“Here is my golden rule for oriental librarians: *Make no library regulation except for the purpose of increasing the usefulness of the books, and remember that no book is useful except it be in the hands of a reader*. It is a common mistake here to deny a book to A on Monday on the bare chance that Professor B may possibly want it on Tuesday or Wednesday.

“The educational people are surprised to learn that it is the usual practice among American colleges and university libraries for professors to draw as many books as they require and keep them as long as they have use for them, with the understanding that all books are subject to recall should a definite need for them arise at the library. And they are shocked when I tell them that graduates and undergraduates enjoy much the same privileges as professors except that they are usually required to return books within a definite period.

“It is quite a new idea to place the burden of proof upon the librarian who would refuse to loan a book rather than upon the student who wishes to borrow it.

“The evils of text-book instruction in India are quite generally recognized and the sight of innumerable grown men in the parks of a Sunday getting their lessons by rote is to Western eyes one of the strangest phenomena of Indian life. One deplores the silly misuse of time, while admiring the studious diligence of these men. How well they must know their subject as reflected by a single mind, but how craven-spirited to be content to accept as gospel any one man’s thought! It is a characteristic of the Indian student to desire to sit at the feet of one trusted and beloved master,—a lovable characteristic, but a dangerous one, which is being too surely fostered by shutting the student away from all but a single text-book. If he were encouraged to browse in the history alcoves and among the different schools of political and economic thought, how much broader would he become, and how much less probably would he be led astray by the shallow sophistries of the demagogue and the mischievous half-truths of the seditious pamphlet.

"Let me confess that a year ago I knew next to nothing about India, but supposed vaguely that England's dominion was if anything advantageous to herself rather than to India. To-day, having read many books on Indian topics by men of all sorts, and having considered them against a background of general reading, I know well that India's fortunate hour was that which saw the rise of the British *raj*. Reflecting on this personal experience I am urging the authorities to give the young Indian a similar opportunity for broad reading of the best books, feeling sure that he will reach a similar conclusion, for he is an eager student and no fool."

#### SPECIAL LIBRARIES IN CHICAGO

AT the meeting of the Chicago Library Club, March 9, the subject for the evening was "Some special libraries in Chicago," and some valuable information was brought out.

Miss Louise B. Krause of H. M. Byllesby & Company spoke on "Technical libraries." In this respect, she said, Chicago was fortunate in having the John Crerar Library, one of the best technical libraries in the country. She described the smaller libraries, stating where they were, their reasons for existence, and what material they contained. Of these, the Universal Portland Cement Company Library is the most complete collection of its kind in the country. It contains only authoritative material, is open to the public, answers inquiries and loans lantern slides. The National Safety Council has a very interesting library, gathered to fulfil the motto "Safety First," supported by business men, and really the center of the Council's work. H. M. Byllesby & Company's library has a collection dealing with public utilities, and also a large photographic file. These three libraries are in the Continental and Commercial Bank building. The Commonwealth Edison Company Library is the senior in organization of technical business libraries in Chicago; this and The People's Gas, Light and Power Company deal with the special subjects of their companies' interests. The Insurance Library in the Insurance Exchange is kept up by the

Fire Underwriters of the Northwest. The Western Society of Engineers has an excellent library, and the Western Railway Club Library, kept up by the Master Mechanics and Master Car Builders' Association, has a clientele all over the world. All these libraries have their justification in the convenience of material; in the possibility of using the material in any way desired; in the fact that specialization can be made much more minute; and in the greater quickness with which material can be secured. These libraries try to avoid duplication and acquisition of material not much used. Miss Krause also exhibited charts from the National Safety Council.

Miss Metta B. Loomis of the University of Illinois School of Medicine Library discussed medical libraries. Interest in such collections began in the '80's, and was crystallized by the formation of the Medical Library Association in 1889. In December of the same year this association gave the books it had collected to the Newberry Library for its medical department. In 1906 by mutual agreement the books were transferred to the John Crerar Library. It has grown to be the fourth largest medical library in America, mainly through the generosity of Dr. Nicholas Senn, whose gifts include collections in physiology, pathology, and medical history, and a valuable collection of medical incunabula. Next in size and importance to the Crerar are the libraries connected with medical schools. The Northwestern Medical Library in 1865 started with 1000 volumes. Rush Medical College Library began in 1899 with 250 volumes and 75 periodicals, and grew fast; when the college affiliated with the University of Chicago, there was made necessary another library at the University for the lower medical classes. This is the Biological Library of the University of Chicago with 18,000 volumes. The Library of the College of Physicians and Surgeons started in 1897 and grew unevenly, but latterly, as the University of Illinois School of Medicine, it has been rounding out its collections. Hahneman, Bennett Medical, and the Chicago College of Medicine and Surgery all have some library facilities. Many hospitals have gathered together book

collections, of which the best are Augustana and Michael Reese. The Department of Health has a library which is a cross between medical and commercial. Very unusual is the Library of the American Medical Association, which not only has its regular collection, but a remarkable index library. It lends periodicals to, and does reference work for, its 41,000 members throughout the country. All the medical libraries in Chicago are crowded for room, and many prospective donors are awaiting fireproof buildings before giving valuable collections. Chicago is the only large city where the medical profession has no home of its own, with libraries and assembly halls. Besides the John Crerar Library, Chicago needs another great medical library on the West Side near the hospitals with their 3000 patients, and the medical schools with their thousand students and several hundred professors.

Rev. J. F. Lyons, librarian of McCormick Theological Seminary Library, followed Miss Loomis. He surprised the audience, as he said he had found himself surprised, with the fact that Chicago with its suburbs has 14 theological institutions, more than any other city in the country, Philadelphia being second with eight. Mr. Lyons named the institutions, and said that all had libraries, for the study of theology from the Middle Ages has been absolutely dependent on collections of books. The largest collections in the Chicago institutions range from 10,000 to 42,000 volumes. At Evanston the Garrett Biblical Institute has 35,000 volumes, of which nearly one-half have come in the last three years at an expenditure of about \$1000 a year. This has been due to the new librarian, Rev. S. G. Ayers, for whom great admiration was expressed not only as an acquirer of books, but as a writer, an organizer, and administrator. With small appropriations and student help he has built up the library, reclassified, recataloged, and indexed sermon material and conference reports. McCormick Seminary has 42,000 volumes, housed in a hundred-thousand dollar building devoted exclusively to library purposes. Chicago Theological Seminary has the Hammond Library, from which 1400 volumes

have been moved since the graduate work was affiliated with the University of Chicago. There is some doubt as to the future of the library, but at present most of the books are at the old location. The Western Seminary (Protestant Episcopal) has 20,000 volumes. It has a special endowment for works on Egyptology, and has one of the best collections on that subject in the country. The Evangelical Lutheran Seminary Library at Maywood is the youngest of the seminary libraries of the city, but has 10,000 volumes. The University of Chicago has proved a magnet for theological institutions. In 1891 the Baptist Seminary from Morgan Park became a part; then Ryder Divinity School from Lombard College; then the Disciples Divinity School; and finally Chicago Theological Seminary (Congregational). The library for these is in Haskell Oriental Building, where there are 30,000 volumes under the care of W. L. Runyan, D.B. It is broader in outlook because of the several denominations connected with it, and may become the great theological library of the city. The Newberry Library has a collection of about 25,000 volumes on religion and church history. Mr. Lyons said that despite these libraries he would like to see another one, largely endowed, for the religious interests of Chicago and the whole West, which would send out books to ministers on their fields, who are unable to purchase them. The model for this is the General Theological Library in Boston.

Mr. F. W. Schenk of the University of Chicago spoke on the law libraries, indicating some of the interesting subjects one could find in them. He compared the needs of a lawyer of Coke's day, when Lord Coke complained of having to go through 100 volumes of reports and abridgments, to the needs of a lawyer of to-day, when the number of volumes needed for a workable library is at least 30,000. As the law librarian must know the contents, expert knowledge of the use of digests and indexes is indispensable. In Chicago the law libraries are very much of the same nature. These are the Ashland Block Law Library, consisting of about 5600 volumes of reports of Illinois and nearby states, primarily

for tenants in the building; the Chicago Bar Association, composed of younger lawyers, having in the Fort Dearborn building a library of 15,460 volumes and with dues of \$10.00; the Chicago Law Institute, on the 10th floor of the County Building, with 62,000 volumes and membership costing \$110.00, annual dues \$10; the Northwestern University Law Library, with over 42,000 volumes, including large and valuable collections on Continental and South American law; and the University of Chicago Law School Library, established in 1902, and now having 41,290 volumes. These libraries all contain reports of decisions of courts of last resort, laws and revisions, legal periodicals, treatises, and reports of individual trials. Their users are instructors, students, writers, lawyers, lay readers (*i. e.* sociological, economic, political science and historical investigators). In the Law Institute Library and Chicago Bar Association Library, lawyers are the chief users; students, instructors, writers, and lay investigators are permitted to use the libraries for a limited period. There is no public law collection in Chicago, although there is an excellent collection on Constitutional Law in the John Crerar Library, and about 210 titles on Constitutional Conventions in the Newberry Library. Chicago needs a public law library, for the use of the lawyer who is not a member of one of the private law libraries, and the lay investigator. Such a library could be obtained if a law were passed in Illinois, as has been passed recently in Georgia, providing for county law libraries.

---

"THE comparative financial statistics of cities under council and commission government, 1913 and 1915," just published by the U. S. Census Bureau shows that the per capita expenditures for libraries in cities governed by a mayor and council have decreased from 20c. to 19c., while in cities which have had the commission form of government they have increased from 12c. to 15c., and in cities which have changed from the mayor and council form in 1913 to the commission form in 1915 they have increased from 10 to 15c.

#### LESSONS FROM THE METHODS OF THE CURTIS PUBLISHING CO.\*

Ask ten different laymen what a Public Library is and see if you don't get ten different answers. If you think of a library in the same way that one man did when he called it "an institution which keeps books," then there is no parallel between the problems of the library and those of the Curtis Publishing Company, probably the most successful single distributor of literature in the world.

Upon looking over the reports turned in, the first thing I sought was the librarian's idea of what the library should be. So I read from one report touching upon this matter:

"The work of a librarian might be roughly classified under three heads. 1, Selecting books; 2, Classifying and cataloging books; 3, Circulating books. For the first two functions a librarian is supposed to be fully equipped under the general system of preparedness. But the last—"Aye, there's the rub." The problem still remains unsolved of bringing the people and the books together. Prof. Neystrom, in a paper read at a meeting of the Wisconsin Library Association, made the following very just criticism. Public libraries are not a dividend paying proposition from a business standpoint. The machinery is there. The need for work is there, but somehow or other the two fail to connect. The place where they fail is in letting the people know about it and in creating interest where none now exists."

Now, if you can, imagine the library as a commercial proposition; something may be gained by considering the methods of the Curtis Publishing Company and the reasons for their use.

On the face of it the commercial proposition is a very simple one. You observe a market and you find something that the market wants. You let the market know what you have and then you supply what is demanded. Though a market based wholly upon public desire is not a very stable one, it is possible to stimulate public

---

\*Condensed from a paper read at the Atlantic City meeting, March 4, 1916, and based on reports sent in by five librarians in different parts of New Jersey.

desire and lead it along right lines (commercially speaking, along profitable lines) and thus add stability to it. If your market is based upon public need and you can stimulate desire, you have an ideal commercial situation.

The Curtis Publishing Company has tried, in its three publications, to create a product which fits the requirements of public desire and public need. Let us look briefly at the publications and see how the company has analyzed its market. First, there is the *Saturday Evening Post*, a paper which recognizes the American spirit of to-day—the commercial spirit, if you will, and the working of the success-germ. It contains articles on current topics written by the successful man whom everybody knows, and articles about men of the hour, but never about failures. Its fiction is stimulating from the standpoint of the success-lover, with a touch of sentiment occasionally. The editorials are not afraid to say what the editor thinks, but seldom “view with alarm.” And please note this: The circulation is well over 2,000,000.

The *Ladies' Home Journal*, full of every conceivable kind of literature that the woman is supposed to want and need, became very progressive a short time ago, when it discovered that woman, too, was becoming progressive. Its circulation is now a million and three-quarters.

The *Country Gentleman* is a little ahead of its time, but is designed to satisfy a market which is just beginning to crystallize, and will undoubtedly be one of the instruments in creating a new class of citizen in this country. Let us call him the *commercial farmer*, a combination of the ordinary garden variety of farmer and the American business man. The circulation of this magazine at present is over a quarter million.

Do you see the first parallel? Has the library discovered its market? Has it the products to satisfy the public desire and meet the public need at the same time? I think we agree that it has. Then the “*x*” to our library problem is to determine how the public shall be led to find and use in the library the material waiting there.

The policy of the Curtis Company is

to have an organization that is personal and human, and above all things helpful to the community. Their problem is not only one of distribution but also one of promotion or growth; and in the expansion, their distinguishing method has been the combination of these two elements. One of their axioms is that they must take their printed matter to the reader, rather than expect the reader to find the periodical. In proof of this witness the army of boys covering every section of the city, and the free use of display space in drug stores and on news stands. Another axiom is that persistent and intelligent advertising is necessary to attract the attention of the reader and to acquaint him with the varied lines of thought presented in the publications; and finally, the articles in the publications themselves must be expressive of the thoughts and events of the moment.

There is no opportunity for the librarian who adopts the first principle of this policy, to relax satisfied with a slight increase in circulation, expecting the perfection of the service to advertise itself and bring the population in crowds to the library. One of the Curtis maxims is: “Merely to enjoy the patronage of present customers contributes nothing to increase your profits.” Further study of their method of promotion shows that the library, to give service in proportion to the population, must create in every reachable person, not now a reader, a favorable attitude toward the library, and offer to each the appropriate literature found in the library. And here let us emphasize the Curtis insistence on the value of personal contact. The Curtis Company uses long range work only when it is not possible to do otherwise.

As one of the reports says: “When we have our book collection and staff well in hand to receive borrowers, then we may profitably consider the Curtis methods for intensive circulation cultivation, since they tell us that haphazard, hit-or-miss methods are out of date, and an attempt to cover the entire territory by a general plan without an analysis of the actual conditions by wards, is like shooting in the dark.

“They advise their agents, as a basis of

calculation, to take as a unit of production the city ward, or voting precinct, and ascertain the number of inhabitants in each unit, from which to estimate its maximum number of readers. They figure that one *Post* copy is sold to every 35 inhabitants, and from this they figure out what should be the net total circulation in each ward. We of the library profession may arrive at our average circulation per inhabitant and apply a similar policy. After we have ascertained the circulation possibilities of each ward or precinct, we should concentrate on those wards that promise the greatest circulation increase with the least effort.

"If the library sees any merit in the Curtis plan and purposes to follow it, it must have a complete list of the names and addresses of all the clubs, whether social or business, the lodges, societies and associations of different kinds in the city. If possible invite the clubs to use the committee room at the library for a meeting, after which introduce the members to the staff and to the various departments of the library; or seek a place on their program, if only for a few minutes, to show how the resources of the library may be applied to their interests. Through the school and its different avenues much interest may be created in the library and this contact is of especial value in placing the library before the public as one of the educational factors of the city."

Another angle on the same subject may be quoted from another report:

"We know that if we give a person the wrong book, one unsuited to the mentality or to the taste of that reader, he will not trust us again. Like the Curtis Company's graded school of salesmanship, we need a course of instruction for desk assistants in observation of people, in responsiveness and tact. Like them we want it to take no time from the day's work (in their case school, in ours, library routine). Might not an occasional talk along this line to the younger members of the staff be feasible and inspiring, and a few suggestions carefully thought out and typewritten, supplemented often enough not to become stereotyped? I take it for granted that the trained librarian makes few mistakes in

grading her borrowers, and can distinguish the reader of the *Cosmopolitan* from the devotees of the *Atlantic*, but most librarians must put apprentices and untrained assistants at the desk part of the time, and we all realize that to the borrower the person at the desk is the library, in manners, in policy and in intelligence."

In planning to make use of the boy as a distributing agent, the Curtis Company has spared no pains or expense necessary to study the child, his thought development, his play, work, schooling, environment and ambitions. They have found that 50 per cent. of our boys leave school under 14 years, and they have tried to find out what becomes of these boys. They have watched the degrading effect both on the employer and the boy, of continually hiring and firing untrained boys.

With the broader end in view of developing the boy, the Curtis League of Salesmen has been formed. This treats the boy as an individual. One of its aims is to teach thrift—to stop the American tendency to extravagance. It has a mailing list of one million boys which it now circularizes at the rate of fifty thousand per week. To each of these boys it advances the proposition that when the boy has sold three copies of each publication during a month, the company will deposit in any bank designated by the mother, one dollar. *Enclosed there is a circular to the mother.* Further still, there is a letter going out to bankers on this proposition, and circulars containing suggestions to banks on how to advertise for accounts of this sort.

Librarians complain that they haven't the support of the solid man in the community, and they haven't—not because the solid men haven't time or inclination to support them, but because these men do not see a definite picture of where the library belongs.

To whom would you imagine such people as Dr. P. P. Claxton of the Bureau of Education at Washington, Mrs. Frederick Schoff, president of the Mothers' Congress, F. K. Mathews, chief librarian of the Boy Scouts of America—would go in order to further their campaign to get the proper literature written for boys? They went, as a matter of course, to the Curtis Company.

In Germany you can find an expert vocational counsellor in every town. In this country not one man in ten thousand knows what the term means, though a little course of reading in the following books would give the fundamentals. The books should be in every library and their contents should be in the heads of librarians. "Vocational guidance," by J. Adams Puffer; "Education for efficiency," by Eugene Davenport; "Learning by doing," Edgar James Swift; "School credit for home work," L. R. Alderman; "All the children of all the people," Wm. Hawley Smith.

As to advertising for the library, let us read from one report:

"Too long librarians have lived on the traditions of the past, refusing to advertise lest the scholarly dignity wrapped about the libraries of former days vanish before the garish light of modern methods, and lest the profession of librarian require as much aggressive ability as is called forth in mercantile pursuits. The library must ever stand before the community for all the culture and refinement of learning, but we believe that this need not be impaired by persistent and intelligent advertising.

"In this connection one sentence from the Curtis system gives a good policy to follow. Rarely should you hesitate to include working men in any special advertising plan intended to reach readers.

"By frequently changed notices posted in work shops and factories with specially prepared lists placed near for distribution or inserted in the pay envelopes, the working men or women learn what the library has for them. It is astonishing how quickly the intelligent foreigner, ambitious for an education, whether Jew or Gentile, Swede or German, reads himself out of the sensational newspaper, out of cheap fiction in the less desirable periodicals, into better and more useful forms of literature. The library should take its part in all civic celebrations and in all conventions and campaigns looking towards the educational or social betterment of the community. We must have our plans arranged beforehand so that those interested in the campaign may be informed of the library's resources along the line, or of any timely articles of

peculiar interest to them in the current issues of the periodicals. At the time of the campaign have carefully prepared lists, briefly annotated, for distribution at the place of holding the meetings; and in the library have the books related to this subject placed out in view under a suggestive bulletin. The use of posters, book displays, etc., within the library has strong publicity value.

"With the resources of the Library at our command we should be able to place before readers the very latest information along all the lines of current interest, and to supplement this newly awakened interest in a given event or movement with its historic background. We must have our information up to date. This is especially necessary if we hope to gain the confidence of business men and serve them efficiently."

EDWARD M. STERLING.

#### SUNDAY AND HOLIDAY HOURS

An investigation of the practice in some of the leading libraries of the country as regards closing on Sundays and holidays, was made this past winter by George T. Settle of the Public Library of Louisville, Ky., and the resulting report was printed in the *Louisville Times*.

"The Louisville library is more liberal at present in Sunday and holiday hours than the majority of the libraries in the country," writes Mr. Settle. "The main building is open from 2 to 9:30 p. m. on Sundays and legal holidays during the year except Fourth of July and Christmas. The branches are open from 2 to 9 p. m. on Sundays and legal holidays during the year, except the Highland branch, which closes at 6 p. m. Sundays. All branches are closed on Fourth of July and Christmas.

"Two of the largest libraries in the country, including the main building and all branches, Philadelphia and Queens Borough, are closed all day on Sundays.

"The main buildings of three libraries, New York, Indianapolis and Cincinnati, are open all day on Sundays. The branches of each, however, are closed all day on Sundays. Five libraries are open on Sundays from 2 to 6, Brooklyn, Pittsburgh,

Syracuse, Atlanta and New Haven, but New Haven for eight months of the year only.

"Eight libraries are open on Sundays from 2 to 9, St. Louis, Detroit, Newark, Washington, Kansas City, Jersey City, Denver and Toledo.

"The Boston Library is open on Sundays from 12 noon to 10 p. m.; Cleveland, 1 to 9:30; Baltimore, for eight months of the year only, 2 to 7; Los Angeles, 1 to 9; Buffalo, 11 to 9; San Francisco, 1:30 to 5; Milwaukee, 1:30 to 5; Minneapolis, 2 to 10; Seattle, 2 to 10; Portland, 2 to 9:30; Worcester (Mass.), 1 to 9; Oakland, 2 to 5; Springfield (Mass.), 2 to 10.

"The branches of sixteen of the principal libraries in the country are closed all day on Sundays: New York, Philadelphia, Baltimore, Pittsburgh, Buffalo, Milwaukee, Newark, Washington, Queens Borough, Seattle, Jersey City, Denver, New Haven, Toledo, Atlanta and Springfield.

"Cleveland has fifteen branches, some of which are closed and some of which are open, and at different hours according to the local needs. Detroit has thirteen branches; only one, the East Side Jewish branch, is open on Sundays.

"The branch libraries in the following five cities are open on Sundays from 2 to 6: Brooklyn, St. Louis, Los Angeles, Portland and Syracuse.

"The branch libraries in the following four cities are open on Sundays from 2 to 9: Boston, Minneapolis, Kansas City, and Rochester.

"The branch libraries in San Francisco are open on Sundays from 1:30 to 5; Cincinnati, 1:30 to 6; Indianapolis, 3 to 6; Worcester, 2:30 to 6, and Oakland, 2 to 5.

"The main buildings of the following seven large libraries are closed on all legal holidays during the year: Philadelphia, Boston, San Francisco, Milwaukee, Cincinnati, Queens Borough and Oakland.

"The branches of the following fourteen large libraries are closed on all legal holidays during the year: Philadelphia, Boston, Baltimore, Buffalo, San Francisco, Milwaukee, Newark, Cincinnati, Seattle, Jersey City, Portland, Worcester, Oakland and Springfield.

"The main building and branches of the

New York Public Library in Carnegie buildings are open on all legal holidays from 9 a. m. to 10 p. m.; Brooklyn, 2 to 6 p. m.; St. Louis, 9 a. m. to 9 p. m. except Christmas, 2 to 6 p. m., and Fourth of July, 9 to 6 p. m. Cleveland main library is open on legal holidays 1 to 9:30 p. m. Some branches are open and some are closed, according to local needs. Detroit main library and branches are open from 2 to 9 p. m. except Fourth of July and Christmas, when all buildings are closed all day. The Baltimore main library is open from 2 to 7 except Fourth of July and Christmas, when it is closed all day. The Baltimore branches are closed all day on all holidays. The Pittsburgh main library and branches are open from 2 to 6 p. m. except Christmas, Fourth of July and Memorial day. Los Angeles main library is open from 1 to 9. The branches are open from 2 to 6 except on January 1, February 22, May 30, July 4, Thanksgiving and December 25, when all buildings are closed all day. The Buffalo main library is open from 11 a. m. to 9 p. m., but all branches are closed all day. The Newark main library building is open from 2 to 9 p. m. on legal holidays, but all branches are closed all day. The Washington main library is open from 9 a. m. to 9 p. m. and the branches special hours, but all libraries are closed all day Christmas and Fourth of July.

"The Minneapolis main library is open on holidays from 2 to 10, and branches 2 to 9. Kansas City main library and branches are open the regular hours, except Christmas and July 4, when all buildings are closed all day. Queens Borough main library is closed on all legal holidays; some branches are open from 9 to 12, noon, and some 9 to 9. Seattle main library is open from 2 to 10, and branches closed all day on legal holidays. Jersey City main library is open from 2 to 9 p. m. except on Christmas and Fourth of July, when it is closed all day. All branches are closed all day on all holidays. Portland main library is open from 2 to 9:30 except Christmas, when it is open from 2 to 6, and July 4, when it is closed all day. All branches are closed all day on legal holidays. Indianapolis main library is open from 9 a. m. to 10 p. m. on

all holidays, and branches 3 to 6 p. m., except New Year's day, Fourth of July, Thanksgiving and Christmas, when all buildings are closed all day. The Denver main building is open from 2 to 9 p. m., and the branch libraries are closed all day. Worcester main building is open from 9 a. m. to 9:30, branch libraries closed all day. New Haven main library and branches are open from 2 to 6 p. m.; Syracuse main library and branches, 2 to 6, except Thanksgiving, Christmas, Fourth of July and Easter, when all buildings are closed all day. Rochester branches are open from 2 to 9 p. m.; Toledo main library is open from 2 to 9, except Fourth of July, Christmas and Thanksgiving, when it is closed all day; Atlanta main library is open from 2 to 6 except Christmas, New Year's day, April 26, July 4 and Thanksgiving. Branches are closed all day on holidays. Springfield main library is open from 9 to 10 p. m., but branches are closed all day."

As a result of this report, the library board has decided that henceforth the main building shall be open from 9 a. m. to 9:30 p. m., on all holidays except Christmas and the Fourth of July; and on Sundays, for reference use, from 2 to 9:30 p. m., the children's room closing at 6. Branches, daily, including all legal holidays but Christmas and the Fourth of July, 2 p. m. to 9 p. m., except Western Colored branch, which will be open from 10 a. m. to 9 p. m. On Sundays this branch will be open from 2 p. m. to 9 p. m., while the other branches will close at 6.

#### FURTHER REGULATION OF BOOK IMPORTATIONS

SINCE Dr. Putnam, of the Library of Congress, issued his circular letter, dated Feb 12, 1916, with reference to the importation of books from certain belligerent countries, the following requirements have been added by the British Foreign Office:

(1) In each application the precise number of volumes applied for, the value of each, and the total value is to be furnished.

(2) In all applications the name is to be given of the shipping agent at Rotterdam, by whom the shipment is to be forwarded.

(3) All applications are to be in *quadruplicate* instead of in triplicate.

From applications returned for correction, it would appear that only publications in the German language are intended to be covered.

#### THE PUBLIC LIBRARY OF HILVERSUM, HOLLAND

THE summarized statement of Dutch library resources printed in the January number of the LIBRARY JOURNAL, useful in itself, has served also to stimulate one librarian, at least, to send us a more detailed description of one of the libraries there mentioned. Miss Olena Mühlenfeld, the librarian of the Public Library of Hilversum, near Amsterdam, has written an interesting description of her library and has accompanied it with a photograph of its newspaper and magazine reading room, which latter we are reproducing as a frontispiece for this issue. While Amsterdam itself still lacks a public library, there are four in its vicinity in the towns of Zaandam, Weesp, Bussum and Hilversum, and it is in the latter town that Miss Mühlenfeld has been doing splendid work.

"Hilversum has 34,326 inhabitants, of whom about 11,000 are Roman Catholics, who, as a rule, do not make use of a public library. The library has 1745 members belonging to every class and station. There is no other large library in the community. The collection of books consists of 21,773 volumes, comprising standard works in the different branches of human learning, many fine works on art, and the best books of fiction. In 1915, 4815 volumes were lent out, 65 per cent. of which were works of fiction.

"Besides its books, a large place is given to reproductions of works of art—pictures, drawings, etchings, etc.—from the Flemish Dutch, Belgian, English, French, Italian, Spanish and Swiss schools, Japanese woodcuts, Greek works of sculpture, and works of architecture in various countries and periods. These reproductions are mounted on cardboard and arranged after schools and periods in so-called 'sheaves'; 129 of these sheaves being at present in our possession, with about 80 reproductions in each of them. The pictures are exhibited, under

glass, on low book-cases in the lending department and in frames in the reading room, being changed once a fortnight. Portraits are also collected, and for lovers of coins there is an interesting collection of reproductions of coins, arranged after countries and times.

"With all these collections it is not to be wondered at that exhibitions are a feature among the library activities, the more so, as there is a room at hand for exhibition purposes, and from the date of opening, Dec 10, 1910, several exhibitions have been held each year, including reproductions of the works of Rembrandt; an exhibition of technical works; a holiday exhibition, showing guides to different places in Holland and abroad, maps, views, etc.; a Goethe exhibition, including works on and by Goethe, portraits, bibliographies, etc.; reproductions of the work of Flemish painters; Japanese wood-cuts, works of art, china, etc.; a library exhibit in honor of the fifth anniversary of the library was shown Dec 10, 1915, and on exhibition were statistics, photographs of the Hilversum and other public libraries in Holland, best books, pictures, etc. These exhibitions, which are free to everybody, are appreciated by a great many persons.

"Our library is a free access one. The manuscript catalog in use is the sheaf catalog. The kinds are: The alphabetical catalog of authors; the systematical catalog (with subject index); a biographical one and a title catalog for the novels.

"The color of the paper has special significance, white paper being the ordinary color, gray is used for articles in periodicals, blue for biographies, and green for standard works. On brown paper are cataloged those books which are not to be found in the library, but which are in the possession of inhabitants of Hilversum, who are so kind as to lend them to any member of the Public Library who may be in want of them. In this way we have access to some fine private collections, as one on Goethe, Michael Angelo, on works of architecture, French literature, etc. The classification is a modification of the Dewey decimal system."

## THE LUXURY OF TELLING THE TRUTH

"THERE was a hustling western city which planned to hold a great international exposition," writes "The Librarian" in the *Boston Transcript*. "(This was years ago.) The managers of the show wrote letters to many of the great ones of the earth, asking them to express their opinions, 'to utter a few appropriate sentiments,' about expositions in general and the coming exposition in Grandopolis in particular.

"Mr. Gladstone was appealed to, and he wrote a letter to say that he was delighted to hear the news; expositions, he declared, had a wonderful educational and civilizing effect. Lord Salisbury wrote to say that he was pleased to know of the exposition—such things, he said, made for universal peace and the comity of nations. Mr. W. S. Gilbert, the author of the 'Bab ballads' and the operas, was also asked to 'write a few lines.' He wrote as follows:

"Gentlemen—I have received the news that there is to be an exposition in Grandopolis with a calmness bordering upon complete indifference."

"Lucky man, he was in a position where he did not have to bluff, where he could enjoy the luxury of telling the truth. It is a luxury in which many librarians wish they could more often indulge. Dependent, as their libraries are frequently, upon the favor of politicians, and municipal councils, it is essential for them to offend nobody. So they must become polite liars, when they would prefer to be brutal truth-tellers.

"Take a case. Practically every public librarian in the land receives a good many letters like this:

"Dear Sir—I have to prepare a paper for a club reading of about an hour's length, on 'The influence of oriental poetry upon the modern Russian realists.' I am not very familiar with oriental poetry (tho' I have read the Rubaiyat of Omar Khayyam) and I know practically nothing about Russian literature.

"I have no doubt, that you can tell me of some good article, or a bright and interesting essay, on this subject, which will be just what I want.

"Hoping you will oblige, and thanking you in advance, I am

"Yours very truly,

"(MRS.) WOODBY Highbrow.

"P. S. I hope to hear from you with the least possible delay, as I have to have the paper ready for day after to-morrow at 2 P. M.

"What does the wretched librarian do? Of course, he does the dishonest and polite thing. He sends her a few books, if he has them, on oriental poetry, and on Russian realism, and abandons Mrs. Highbrow and her hearers to their fate.

"There was a librarian once who rebelled at this kind of thing, and though he had to hold his rebellions in secret, he enjoyed them nevertheless. After he had despatched his note of polite humbug, he used to compose the one which he knew he really ought to send if he had the courage. It was something like this:

"Dear Madam—I have received your letter in which you ask me to aid and abet you in a fraudulent act. You admit that you know next to nothing about either oriental or Russian literature. There is nothing shameful about this. But you unblushingly announce your intention to talk to a roomful of people, and only two days hence, on this subject, and you ask me to furnish you with some books out of which you can crib (in plain English: steal) whole paragraphs of information, which you will retail as your own, or at any rate, as the result of your research. Do you realize the full extent of your dishonesty? Are you further aware that this is a bluff upon your part, since you are pretending to be interested in a subject which has never attracted your attention up to this moment? Do you also see that you are making similar bluffers out of your audience?

"Will I oblige you with a 'bright and interesting essay' on your subject? Not by a long shot. No, ma'am. But I have done better. I have told you the truth. I hope it will have its effect.

"Yours very truly,  
"A. TURNING WORM, *Librarian.*"

### CIVIL SERVICE EXAMINATION

THE United States Civil Service Commission has announced a competitive examination, open to men only, to be held at Pittsburgh, Pa., May 17, 1916, for the position of assistant librarian in the Bureau of Mines at Pittsburgh, at a salary ranging from \$1200 to \$1440 per annum. At least one year's training in a library school, or one year's experience in actual library work in a library where modern methods are employed is a prerequisite for consideration for this position. It is desired to secure a person who has had the equivalent of a four years' scientific or technical course in a college or university of good standing, who is familiar with the standard and current scientific and technical literature, and who has a knowledge of

the general principles of library cataloging and classification.

Competitors will be examined in the following subjects, which will have the relative weights indicated: Library economy, 20 points; Bibliography, including cataloging and indexing, 20 points; French, German, or Spanish (translations from one of these languages into English) 20 points; Technical education, training and experience, 40 points.

Applicants must be 20 years or over in age. Applications should be made at once on form 1312, which may be obtained from the U. S. Civil Service Commission, Washington, D. C., or from the secretary of the U. S. Civil Service Board, Room 406, Berger Building, Pittsburgh, Pa.

#### "THE GREAT AMERICAN NOVEL"

PEOPLE often talk of "the great American novel,"—an imaginary book which they fancy will be written some day. The idea, apparently, is that a genius will create a novel so typical of this country and its people that it will stand as a final expression of American life. Between the covers of one book he will place characters which all of us will recognize as our fellow-countrymen; he will set them in surroundings which will seem as familiar as home.

Of course, this can never be done. The one great English novel, or the one great French novel has never been written; and if countries smaller and more homogeneous than ours cannot be summed up in a single work, how can we expect one book to typify American life with all its extraordinary variety? A book which might describe a New England village with absolute fidelity would have little relation to the cosmopolitan aspects of New York and Chicago. What might be surprisingly faithful to South Carolina would be foreign to the Northwest. New Orleans and St. Paul are both American, but a novel dealing exclusively with one of them would not be accepted by the other as typical of the national spirit. If the man from New York or Boston is sometimes indifferent or contemptuous about "the West" (wherever that may be) so the Westerner is convinced

that his is "God's country," and that there is no virtue east of the Alleghanies.

The great American novel, then, seems to expand into a small library of books. To find America in fictitious literature one must read different writers for each section. A list could be made out,—though instantly the writers of short stories have to be called upon. There are not novelists enough to go around. Many readers would declare that Miss Mary Wilkins's stories of New England are the best representatives for that section, as are O. Henry's for New York. It would be hard to name anyone who has adequately described the South of today. But the South before and during the Civil War is seen—through a golden haze of romance—in Thomas Nelson Page's books. No one name is quickly suggested in connection with any part of the great Western country, until California recalls Bret Harte. But the California which he wrote about vanished many years ago—some people say it never existed at all. And he, like the other three, is primarily a writer of short stories, not a novelist.

There are, perhaps, two pre-eminent American novels. But one of them owes its distinction to its artistic excellence, the other to its historical importance. They are Hawthorne's "Scarlet letter" and Harriet Beecher Stowe's "Uncle Tom's cabin." As the supreme work of a remarkable imaginative genius there are very likely some critics who would say that Hawthorne's book is the one American novel. But inasmuch as it is a study of the Puritan conscience, true only of an early period of our history and in a small community, it is certainly not national in the sense of our discussion. The truth of "Uncle Tom's cabin" is often vehemently denied; its artistic merit also is doubtful. It is important, however, as one of the most effective "purpose novels" not only of America, but of the world.

If there is a type of character typically American it seems to be the "self-made man," the man who with few advantages has risen by his own efforts to prosperity and eminence. Such a character has been described by one distinguished novelist,— "The rise of Silas Lapham," by W. D.

Howells. In a lesser degree, and dealing with its unpleasant aspects, the same theme has been ably treated in Robert Herrick's "Memoirs of an American." Still more recently, Booth Tarkington, in "The turmoil," has used a similar character to illustrate America's sad awakening to the fact that commercial success and "bigness" are often only Dead Sea fruit. The self-made man, from a cheerful point of view, is portrayed in the humorous and popular story called "David Harum," by E. N. Westcott.

American political life has been described in two admirable novels,—"The Honorable Peter Stirling" by P. L. Ford, and "Coniston" by Winston Churchill. Defects in our national character have been arraigned in two excellent works of social satire,—one, a painful transcript of fashionable life in the great cities, "The house of mirth" by Edith Wharton; and the other, "Unleavened bread," by Robert Grant, a biting commentary upon politics, upon commercial affairs, but especially upon the half-educated woman of vague ambitions and faulty character.

A vivid picture of the old Southwest, with a combination of romance, realism, and humor, and a power in the delineation of character only attainable by a great genius, is in Mark Twain's Mississippi River story—"Huckleberry Finn." The Western cattle-puncher lives in "The Virginian" by Owen Wister. Finally, "Nathan Burke" by Mary S. Watts, is a story of Ohio at the period of the Mexican War, which contains many of the elements of a representative American novel.

It is a mistake to deplore the condition of American fiction. There have been greater writers, but never at one time in this country a more worthy group of novelists than Winston Churchill, Booth Tarkington, Owen Wister, Jack London, Robert Herrick, Mrs. Wharton and last but certainly not least, Mrs. Watts.—From *Branch Library News*, of the New York Public Library.

"No matter what his rank or position may be, the lover of books is the richest and happiest of the children of men."—Langford.

## A PRIMER OF LITERATURE

What is the Literature of to-day?  
Fiction.

How is Fiction divided?

Into Historical Novels and Nature Books.

What is a Historical Novel?

One that shows no trace of History or of Novelty.

What is a Nature Book?

A volume of misinformation about animals.

What are the best-selling books?

Those which sell the best people.

What is a Magazine?

A small body of Literature entirely surrounded by advertisements.

Why is a comic paper so called?

Because it's so funny that anybody buys it.

What is a Critic?

A Critic is a man who writes about the books he doesn't like.

What is a Minor Poet?

A poet not yet twenty-one years of age.

What is a Major Poet?

There isn't any.

What is a Publisher?

A man who is blamed if a book doesn't sell, and ignored if it does.

What makes a book a phenomenal success?

Much bad, much pad, and much ad.

—CAROLYN WELLS, in *Metropolitan Magazine*.

## American Library Association

---

### PUBLICITY COMMITTEE

The publicity committee of the A. L. A. has been sending out the following circular letter:

Charles A. Dana once said: "It is not news if a dog bites a man, but it is news if a man bites a dog." If a man goes into a library, usually it is not news. But if a library goes into a man—

The A. L. A. publicity committee wants to hear about it. It plans to begin the publication of a quarterly "American Library Press Bulletin" for the use of newspapers in all parts of the country. This will be an attempt to interpret in news form all the good things being done by American and Canadian libraries. Your co-operation is absolutely necessary.

Please send regularly to the chairman of the committee, Mr. W. H. Kerr, Emporia, Kansas, your

Bulletin,  
Book lists,  
Advertising leaflets,  
Posters,  
Reports,  
Clippings of library items, etc.

Send two copies of each in addition to any that you may have been sending to Mr. Kerr's library. The material will be divided among the members of the committee according to the special duties agreed upon.

The committee in full is: W. H. Kerr, State Normal School Library, Emporia, Kansas; C. H. Compton, Public Library, Seattle, Wash.; Mrs. E. C. Earl, Connersville, Ind.; F. C. Hicks, Columbia University Library, New York; S. H. Ranck, Public Library, Grand Rapids, Mich.; C. E. Rush, Public Library, Des Moines, Iowa; J. L. Wheeler, Free Library, Youngstown, Ohio; W. F. Yust, Public Library, Rochester, N. Y. The committee will welcome suggestions.

#### ASBURY PARK CONFERENCE

##### THE PROGRAM

The Asbury Park program is not yet quite out of its tentative stage and, therefore, information about it cannot be considered as definite and final, but certain features seem sufficiently assured for the program committee to speak of with some degree of confidence. It will be seen, however, that President Plummer has arranged a timely and practical series of sessions that are sure to be productive of permanent results.

There will be five general sessions and the central theme, or keynote, will be "Democracy and education." Miss Plummer will deliver the "Presidential address" at the first session on Monday evening, June 26. Mr. M. Taylor Pyne, chairman of the New Jersey Public Library Commission, will greet the association on behalf of the local committee and New Jersey librarians, and a reception given by the New Jersey Public Library Commission and New Jersey Library Association will follow in the ballrooms of the New Monterey.

Among the speakers at subsequent sessions from outside our own ranks are: Robert Gilbert Welsh, formerly head of Scribner's library department and now dramatic critic of the *New York Telegram*, who will discuss "Democracy in the modern drama"; Jessie B. Rittenhouse, author and critic, on "The new poetry as an expression of democracy"; John Jay Chapman, well known author, on "Children's reading"; Mary Ogden White, on "Democracy in modern fiction"; and John Foster Carr, director of the Immigrant Publication Society, who will speak on some aspect of work with foreigners.

From our own membership the following papers will be presented: "How democracy educates itself," by Arthur E. Bostwick, of St. Louis Public Library; "Leadership through learning," by William W. Bishop, librarian of the University of Michigan; "Municipal retrenchment and the public library," by Frederick C. Hicks, of Columbia University Library; "How Canada supports her free libraries," by E. A. Hardy, of Toronto, secretary of the Ontario Library Association; "Analysis of library legislation," by W. H. Brett, of Cleveland; and a paper on publicity outside the library, by J. L.

Wheeler, librarian of the Youngstown (Ohio) Public Library.

Miss Mabel Wilkinson, of Greeley, Colo., will speak on "Establishing libraries under difficulties," being her personal experiences in organizing county libraries in Colorado and Wyoming. At one of the evening sessions Mr. Faxon will show slides of past conferences and prominent association figures.

There will be a symposium on the work of the circulation department in its relations with the public. Miss Edith Tobitt, of Omaha; Miss Catherine Van Dyne, of Newark; Paul M. Paine, of Syracuse, and others will participate.

There will be two meetings of the Council. Among the subjects to be considered are: "The Americanization of the foreign born," with Albert Shiels, of the New York Department of Education; H. H. Wheaton, of the U. S. Bureau of Education; J. Maud Campbell, of the Massachusetts Library Commission, and John Foster Carr as participants; the plans of the French Social and Civic Alliance for the establishment of free public libraries in France after the war and how American librarians can aid in this worthy enterprise; the relation of the librarian and the library buyer to the publisher and bookseller, discussed by W. H. Brett, of the Cleveland Public Library, and a question box on ventilation and heating of library buildings, conducted by Samuel H. Ranck, of the Grand Rapids Public Library.

Each of the sections and affiliated societies will hold one or more sessions. Their programs are not yet in the hands of the A. L. A. program committee.

##### ENTERTAINMENT AND AMUSEMENT

On Monday evening after the program a reception will be given to the association by the New Jersey Public Library Commission and the New Jersey Library Association.

Thursday afternoon will be devoted to a trip by special train to Princeton, where we will be the guests of the university and of Mr. M. Taylor Pyne, chairman of the New Jersey Public Library Commission.

Friday afternoon after the program a two hours' automobile drive up the coast will be given by the Asbury Park Chamber of Commerce.

As a result of special efforts on the part of Mayor Hetrick and the Chamber of Commerce and other prominent citizens, Pryor's Band will begin its engagement a week earlier than originally contracted for, expressly that it may be at Asbury Park the week of our conference. All music-loving members of the

association will keenly appreciate this very signal courtesy.

The hotel orchestra will play every evening for informal dancing.

There are excellent tennis courts close by the New Monterey, canoeing and boating in Deal Lake, three or four minutes' walk distant; golf at a neighboring country club, and bath houses close to the hotels.

The local committee will compile a booklet on "What to Do at Asbury Park," which will be distributed at headquarters.

#### HOTELS—RATES AND RESERVATIONS

Headquarters will be at the New Monterey Hotel and Columbia Hotel, across the street from each other. Auxiliary hotels providing for probable overflow, three of which offer lower rates than headquarters, and all of which are in close proximity, are the following: The Thedford, the Fenimore, The Seabreeze and The Brunswick. There are a multitude of hotels in Asbury Park. Those selected for our use are known personally to the local committee and every effort has been made to choose those which will provide satisfactory service and give "value received." The committee have also, of course, selected those which are located in fairly close proximity to the two headquarters' hotels. The rates per day offered by these hotels, all on the American plan, for week of conference, are as follows:

*New Monterey* (capacity 609; exclusive use):

Two persons in double room fitted with double bed, hot and cold running water, \$3.50 each.

Same, but with twin beds, \$4.00 each.

Two persons in double room with twin beds and private bath, \$4.50 each.

Two rooms with private bath between and occupied by four persons, \$4.00 each.

For a party of six, eight or ten, occupying a suite of rooms all communicating and having access to one private bath, \$4.00 each.

There are forty rooms in this hotel large enough to accommodate three or four single beds. Congenial parties of intimate friends can be made up if desired to occupy these.

*Columbia* (capacity 300; exclusive use):

Two in double room, hot and cold running water, \$3.50 and \$4.00 each, according to location of room.

One in single room, hot and cold water, \$4.00.

Two in double room with private bath, \$4.50 each.

Four in two communicating double rooms, with private bath between, \$4.50 each.

*Thedford* (capacity 120; exclusive use if needed; nearly opposite Columbia):

Two in room, \$2.00, \$2.50, \$3.00 and \$3.50 each, according to size and location of room.

One in room, \$2.50 to \$3.00 each.

*Fenimore* (capacity 250, can accommodate 150 A. L. A. members; five and one-half blocks from New Monterey):

Two in double room without private bath \$2.50 and \$3.00 each.

One in room \$2.50 and upwards, according to location and size of room.

Two in double room, twin beds, private bath, \$3.50 each.

*Seabreeze* (can accommodate 75 A. L. A. members; diagonally opposite New Monterey and across street

from Columbia; unobstructed view of ocean):

One in room \$2.50, or \$15.00 per week.

Two in room \$2.25 each, or \$14.00 per week.

No rooms with private bath.

*Brunswick* (can accommodate 150 A. L. A. members; three blocks from New Monterey; near the ocean):

Two in room without private bath, \$3.50 and \$4.00 each.

One in room without private bath \$4.00.

Two in room with private bath \$4.50 each.

One in room with private bath \$5.00.

Reservations for rooms at all the above-named hotels will be in charge of Mr. Sherman O. Dennis, manager New Monterey Hotel, Asbury Park, N. J., and applications should be addressed directly to him. *Bookings for rooms will be made on and after May 15*, and in order that all may have an absolutely equal opportunity the ruling has been made, as on previous similar occasions, that applications made for rooms in advance of May 15 will be considered as having been received on that date.

Members of the local committee will be in Asbury Park the greater part of the time bookings are being made, and will advise and co-operate with Mr. Dennis in this work. The New Monterey has a New York office at 8 West 40th street, where the manager or his representative will be pleased to meet any wishing to confer personally with him.

Those wishing to room together, or having preference as to room-mate, should so state when applying for reservation. State clearly and definitely name of hotel desired, and price you wish to pay. If full name is not signed, letter should state whether the writer is a man or a woman.

The New Monterey has a small number of single rooms regarding which information can be had from the manager, but in order that as many as possible may be quartered at this hotel it will be necessary in most cases to assign two persons to a room. Twin beds can be provided in nearly all cases when requested.

There are in addition to the hotels scores of very comfortable boarding houses. Information regarding some of these may be had from Miss Josephine Porter, or Miss Adeline Pratt, members of local committee and librarian and assistant librarian, respectively, of the Asbury Park Public Library.

#### MEETINGS

General sessions will be held in the Auditorium in the open square, just across the street from the New Monterey. Meetings of sections and affiliated societies will be held in parlors of New Monterey and Columbia, and some of the larger section meetings in the Auditorium. The librarian and trustees of the Asbury Park Library have very kindly placed

at our disposal the auditorium in the library, and the offer will be gratefully accepted if it is necessary to hold meetings outside the zone of the headquarters' hotels.

#### MISCELLANEOUS

There will be plenty of space in New Monterey Hotel for exhibition by publishers, book-sellers and others who handle commodities of interest to librarians. For space and rates application should be made direct to Mr. Dennis, manager of the New Monterey.

Banks at Asbury Park have signified their willingness to cash personal checks for members of the association who identify themselves by their membership badge.

The travel committee will make a separate statement regarding transportation matters. It may be well, however, to give added emphasis here to one point. *North Asbury Park* station is nearer to all the aforementioned hotels than *Asbury Park* station. Tickets reading to *Asbury Park* are good also to *North Asbury*, about six-tenths of a mile further north. All baggage should be checked to *Asbury Park* (as conditions are not adequate for handling it at *North Asbury Park*), but members should alight at *North Asbury*. Baggage checks will be surrendered to porters on arrival at hotels so it will be unnecessary to look after one's own baggage at the station.

GEORGE B. UTLEY.

#### TRAVEL COMMITTEE

To the preliminary travel notices printed in the *LIBRARY JOURNAL* for April (p. 279) may be added some details concerning the special travel parties.

A personally conducted party from Chicago and the Middle West will be arranged by Mr. John F. Phelan, of the Chicago Public Library. A Pullman train will be run from Chicago to *North Asbury Park* without change, leaving Chicago over the Pennsylvania R. R., Sunday, June 25, at 3 p. m., due at *North Asbury Park* about 5 p. m., Monday, June 26, allowing a 2½-hour visit to Harrisburg, Pa., en route. Deposits to cover cost of Pullman berths should be sent to Mr. Phelan.

From New England Mr. F. W. Faxon will conduct a party, via the Providence Line boat from Providence to New York, and thence by Sandy Hook boat to Atlantic Highlands, only 40 minutes from *Asbury Park* by rail. Leave Boston, South Station, probably at 6.06 p. m., Sunday, June 25, Mansfield, 6.46, Attleborough, 6.57, arriving at Providence Line dock in Providence at 7.20. Steamer (probably the *Providence*) will sail at 7.30 p. m., due in New York City at 7 a. m., Pier no. 14, foot of

Fulton St. Sandy Hook steamer leaves from Pier no. 10, foot of Cedar St. (two blocks from Providence Line dock) at 9.15 a. m., due at Atlantic Highlands at 10.28, where the short train trip will commence, reaching *North Asbury Park* at about 11.05 a. m., Monday, June 26.\* These times are subject to change, as the summer schedules are not yet available. Verify before buying tickets.

The Providence Line to New York is the same class of service as the Fall River Line, and has been chosen as more convenient to the greater number of persons. Staterooms (containing upper berth and double lower berth in each) cost \$2.00 outside, and \$1.00 inside, accommodating one or two persons. Members of the party will buy their own excursion tickets, but will send money for stateroom, or half stateroom if roommate is desired, on the Providence boat, to Mr. F. W. Faxon, 83 Francis St., Fenway, Boston, Mass., before June 1.

Tickets reading via boat lines to *North Asbury Park* may be used for return all-rail as far as New York without extra cost, and by rail, New York to Boston, on payment of \$1.25 extra, either at time of purchase or at Grand Central station, New York City, returning.

Each piece of checked baggage will cost 50c. for New York transfer. These transfer cards may be purchased at time of purchase of ticket, and used in checking baggage to destination. Those leaving from Boston and vicinity may purchase tickets at 248 Washington St., or at South Station.

The round-trip rates tabulated on page 280 of the *LIBRARY JOURNAL* are correct with one change. The 16-day coach excursion round-trip rate of \$12.00 on the Pennsylvania road is only good leaving Thursday, June 22. If Pullman is used the rate is \$14 plus the Pullman fare.

There will be no post-conference trip this year, and no personally conducted parties will be planned returning, but the travel committee will make reservations for any wishing to return together, and will be glad to give all information required.

F. W. FAXON, *Chairman*,  
83 Francis St., Fenway, Boston, Mass.  
C. H. BROWN,  
26 Brevoort Place, Brooklyn, N. Y.  
J. F. PHELAN,  
78 E. Washington St., Chicago, Ill.

\*As no special party will be arranged from New York City, owing to the shortness of the trip, any members desiring to join with the New England party on the 9.15 boat, will be more than welcome. No registration needed.

### SCHOOL LIBRARY SECTION

The following is the tentative program, subject to changes of the School Library Section of the American Library Association at the Asbury Park convention:

*First Session. Thursday evening, June 29:*

*Topic:* The national campaign for better school libraries.

The importance of the school library in modern education. James Fleming Hoscic, Chicago College, Chicago, Ill., Normal.

The school library situation in the south. Lucy E. Fay, University of Tennessee, Knoxville, Tenn.

*Symposium:* How can we further the school library movement?

What the college and university can do. Azariah S. Root, Oberlin College, Oberlin, Ohio.

How the public library can help in developing effective high school libraries. Henry E. Legler, Chicago Public Library.

What the public library can do for grade and rural school libraries. Effie L. Power, Carnegie Library of Pittsburgh; Orpha Maud Peters, Public Library, Gary, Ind.

What a department of education can do for school libraries of a city. Claude G. Leland, superintendent of school libraries, New York City.

*Second Session. Saturday afternoon, 2-5 p. m.:*

2-3 Business meeting. Election of officers. Reports of committees.

3-5 Round table conference on normal and elementary school libraries. Conducted by Nancy I. Thompson, State Normal School, Newark, N. J.

3-5 Round table conference of high school librarians. Conducted by Mary E. Hall, Girls' High School, Brooklyn, N. Y.

There will be an exhibit of normal and high school library work, photographs of rooms, plans, outlines of instruction, reading lists, illustrative material, etc.

## Library Organizations

### NEW YORK SPECIAL LIBRARIES ASSOCIATION

A meeting of the New York Special Libraries Association was held on Thursday evening, Apr 6. On the invitation of Mrs. A. L. Robinson, the meeting was held in the committee room of the Texas Company, Whitehall Building. The meeting was called to order by Dr. Williamson, and in the absence of the secretary the minutes were read by Miss Glenn and approved, with the exception of a point raised by Miss Frick, who pointed out that the New York Special Libraries Association is an independent organization, and not a Manhattan branch of the Special Libraries Association.

As Miss Morgan, chairman of the committee on duplicates, was absent, Miss Douglass, librarian of the Farmers' Loan and Trust Company, reported that a plan was under consideration and details would be given at a subsequent meeting.

Miss Glenn reported that the union list of periodicals in financial libraries, which had been proposed at the previous meeting, had

been started by the Library of the American Bankers Association, and was then in the hands of the librarian of the Federal Reserve Library. Card entries for periodicals, year-books and other serials were made for the A. B. A. collection and will be added to by each library in turn, the cards eventually to be returned to the American Bankers Library Association for editing and filing, with the matter of publishing the list to be decided later. It was generally agreed that the question of inter-library loan of material would be optional with each library, although as much co-operation as possible would be desired.

Dr. Williamson then announced that at the next meeting of the association, to be held on Wednesday, May 17, the annual election of officers would be held, and appointed, as a nominating committee, Miss Wallace, chairman, Miss Smiley and Miss Dawson.

Mrs. Robinson, of the Texas Company, was called on for her paper on the "Indexing and handling of commercial files," but only briefly outlined her filing problem and asked for discussion as to how much indexing and cross-referencing was necessary with a commercial file. The discussion covered methods of arranging correspondence when first received in the morning; files outside the main filing room; definition of the term "files"; the form in which mail should be received by the filing department from other departments; the time limit which should be established for having mail sent in to be filed; and ways and means of checking missing letters.

Miss Dobbins opened a discussion of the relative value of vertical files and pamphlet boxes for pamphlets, by outlining the problem of the Library of the American Telephone and Telegraph Company which is shortly to move into new quarters, where space is at a premium and the expediency of putting certain pamphlet material on shelves, is under consideration. Miss Frick, Dr. Williamson and Miss Ball contributed the experience of their respective libraries in assigning special sets of class numbers for pamphlets and putting them on the shelves in pamphlet boxes; in putting pamphlets on the shelves without protecting them with boxes, and in putting them on the shelves classified by means of the colored band system used by the Newark Library.

Miss Marjorie Strong then described the educational work of the Alexander Hamilton Institute and the relation of the library to its educational correspondence courses in business and finance.

Miss Pugsley talked on the work of an

export library, and told of the special collections of maps, directories and customs tariffs in the library of the National Manufacturers Association, the methods of classification and cataloging which had been used, and the pamphlet digest of trade-mark laws which the association has recently published.

Miss Ball told of the experience of the Newark Business Library with a collection of about 5000 trade catalogs which had been given up because of the difficulty in keeping it down to date and the slight use which was made of it. In response to questions as to the arrangement of such material, Miss Ball spoke on trade literature in general, the difficulties of collecting it, the value of the list of copyright entries as a clue to new publications, and told of the list of directories and other business material in the business branch of the Newark Public Library, which is being printed by the H. W. Wilson Company.

Prior to the meeting, the filing room of the Texas Company was open to visitors and blanks and forms used by business libraries were on exhibition. There was an attendance of 73.

MARIAN GLENN, *Secretary pro tem.*

#### NORTH CAROLINA LIBRARY ASSOCIATION

The North Carolina Library Association held its tenth annual meeting at Gastonia, April 12 and 13.

The first meeting was held on the evening of April 12. The address of welcome was made by the mayor of the town and responded to by Miss Mary B. Palmer, president of the association. Miss Minnie W. Leatherman, secretary of the State Library Commission, addressed the association in her usual forceful and impressive manner, urging the association and citizens of the state to aid in the campaign for a public library in every town in North Carolina by 1920. She was followed by Miss Sarah Askew, of the New Jersey Library Commission. Miss Askew is not only an expert in her line of work, but a very fascinating speaker. Aside from her delightful storytelling, she won the hearts of the people by her charming personality. An interesting musical program was rendered by local talent.

On Thursday morning the association held two round-table discussions of the problems of public and college libraries. The college librarians considered "Teaching the use of books and libraries in our schools and colleges"; and the public librarians took up "Scientific management and efficiency in the library," "How the public library can pro-

ject itself into the life of a community," "The pamphlet problem," etc. These papers were followed by general discussion and exchange of ideas.

After the session the visitors were taken for an automobile ride and served a delightful luncheon at the home of Mr. G. W. Clifford, given by the Woman's Betterment Association of Gastonia.

Thursday afternoon Mrs. A. F. Griggs, of the Durham Public Library, gave a very helpful demonstration of the use of books to the high school pupils, the librarians and the public. This was followed by a business session. Reports of officers and committees were made and the following officers elected: President, Miss Mary B. Palmer; first vice-president, Mrs. D. A. Garrison, second vice-president, Mrs. L. D. Coltrane; third vice-president, Mrs. Linton; secretary, Carrie L. Broughton; treasurer, Mrs. A. F. Griggs.

Thursday night Dr. Maurice G. Fulton, of Davidson College, gave an illustrated lecture on Shakespeare and Stratford. The Gastonia Music Club rendered several musical numbers.

On Friday the librarians were the guests of Miss Palmer and the directors of the Carnegie Library of Charlotte. Two features characterized the day. First of these was an automobile ride throughout the city and to points of historic interest in the county. The second was a delightful luncheon given at the Chamber of Commerce rooms in honor of the visitors, the board of trustees of the Charlotte Carnegie Library being hosts.

CARRIE L. BROUGHTON, *Secretary.*

#### THE CHICAGO LIBRARY CLUB

The Chicago Library Club met on April 13, at the Commonwealth Edison Company, 72 W. Adams street.

President J. C. M. Hanson stated that, at the following meeting, the election of officers for the ensuing year would be held and named as a nominating committee: Miss Louise Krause, Edward D. Tweedell, Miss Anna C. Reque, Miss Ruth Abbott and G. M. W. Teyen.

After inspecting the library under the guidance of Miss Helen Norris, the librarian, the club assembled in the lecture room, on the eighteenth floor, overlooking—literally—the dome of the United States Post Office, and listened to an illustrated talk on "The prairie," delivered by Mr. J. Christian Bay, of the John Crerar Library. The topic brought to light an unsuspected fund of information, sentiment, humor, and illustration upon the

prairies of the Western United States. After touching upon their physical and political history, Mr. Bay, in choice and entertaining phrase, depicted the drama of human life that had been enacted on the prairies by successive streams of Indians, Spaniards, French, and lastly, emigrants coming from the East to seek homes in the Far West. A series of lantern slides was then shown, most of them quite new to the audience and of much historical interest. An unexpected picture was reserved to the last, showing Abraham Lincoln sitting upon a simple bench, with his stove-pipe hat beside him. "I like to think," remarked Mr. Bay, "that the sympathy and helpful kindness, the repose, the simplicity and unaffectedness of this beloved man are in essence the ideal of the life colored by prairie land adventure and experience." Mr. Bay then took up the bibliographical aspect of his topic and, with brief descriptive comment, characterized the varied historical, descriptive and literary material dealing with the prairies. He has collected for his personal library many of the rare narratives of early travelers who visited the West. About eighty persons were present.

W. S. MERRILL, *Acting Secretary.*

#### DES MOINES LIBRARY CLUB

The Des Moines Library Club is now nearing the close of a most successful and enjoyable year. The club is primarily a social organization where the librarians from the city, state and college libraries and their friends meet once in two months to get better acquainted. A literary program is usually given followed by the serving of light refreshments and an informal social hour.

The October meeting of the year 1915-16 was converted into a musical evening and the club attended in a body a recital given by Mme. Johanna Gadski at the Coliseum.

In December the annual banquet was held in the beautiful new home of *Successful Farming*, one of agricultural Iowa's best known farm journals. Dr. Benjamin F. Shambaugh, Superintendent of the State Historical Society, was present and addressed the club on the subject, "The making of historical books," explaining in an interesting manner the detailed work of the historical research and publishing department of that society. The company then became the guests of the *Successful Farming* staff and were guided through the various departments of this modernly equipped publishing house.

A valentine party, where the famous lovers of all times and climes met for the entertainment of assembled guests, was given by the staff of the City Library in February. Beauty

and the Beast were there and Beatrice and Dante met and shook hands with our own president and Mrs. Wilson.

The most pretentious program of the year was the Shakespearean tercentenary celebration given in the auditorium of the West Side High School, April 4. A procession of fifty living characters from the plays of the famous bard took possession of the auditorium, passed solemnly down the aisles and across the stage, recalling in realistic manner the golden days of the Elizabethan drama. The procession was led by ten trumpeters, Bottom and the fairies from *Midsummer Night's Dream*, followed by Katherine the shrew and a group from *As You Like It*—Rosalind, Celia and Audrey. Curator E. R. Harlan of the Historical Department of Iowa, as a Shakespearean clown, gayly ushered in the beautiful Desdemona, accompanied by Perdita, Miranda, Calpurnia, Cleopatra, Falstaff (represented by Charles E. Rush, the new city librarian), and the stately Julius Cæsar in the person of A. J. Small, state law librarian. The dramatic personæ of the Merchant of Venice came next, Portia, Nerissa, Jessica and Shylock. Romeo and Juliet also strolled with the immortals. The witches shadowed Lady Macbeth, in whose wake followed Viola and her nurse, Hermione and Helena. Johnson Brigham, state librarian of Iowa, wore the regal robes of King Lear and with his daughters preceded the Hamlet group represented by the 'melancholy Dane,' Queen Gertrude, Ophelia, and the Ghost which brought up the rear.

Members of the Highland Park College of Music recalled the Shakespearean songs with selections from *Twelfth Night*, *The Tempest*, and *Midsummer Night's Dream*. Two folk dances, "Sweet Kate" from the *Taming of the Shrew* and a hunting gigue were given by girls from the public schools and added much to the evening's pleasure. A reading from the Merchant of Venice portrayed vividly the bargain of the pound of flesh, and the company then dispersed to the wedding music from *Midsummer Night's Dream*.

The last meeting of the year will be held in June in the picnic grounds of one of the city's parks. Much credit for these programs is due to Miss Gentiliška Winterrowd, president, and her program and social committee chairmen, Miss Grace Shellenberger and Miss Pearl Hamilton.

ETHEL B. VINTON, *Secretary.*

#### TWIN CITY LIBRARY CLUB

The members of the Twin City Library Club were entertained at Shevlin Hall by the staff of the University of Minnesota Library

on the evening of March 14. The affair was strictly social in character, and each "stunt" given by members of the five institutions represented in the club aimed to be frivolous in tone.

The following was the "program of stunts":

1. Historical exhibit, by the Minnesota Historical Society.

2. Readings from Tennyson, by the University of Minnesota Library.

3. A model book meeting, by the Minneapolis Public Library.

4. Song and dance, by the Minnesota Public Library Commission.

5. St. Paul's eight little maids, by the St. Paul Public Library.

Music during the evening was furnished by Mr. Heyl, of the University Library.

After a short business session, the club adjourned to the parlors for refreshments.

ETHEL I. BERRY, *Secretary*.

#### MAINE LIBRARY ASSOCIATION

The annual meeting of the Maine Library Association will be held at the State Library, Augusta, on the afternoon and evening of Monday, May 15. The program will include a business session with reports and election of officers; a report from the library commission; report on school libraries and the new school traveling libraries; a paper by State Librarian Dunnack on the present library situation and outlook in Maine; a report on the library survey of the state by Miss Brainerd, the new state organizer; a consideration of rural library problems, with special reference to Maryland, by Miss Farr, director of institutes this year; discussion of a dozen recent books by prominent Maine librarians. There will also be interesting addresses by others who are not librarians.

A series of library institutes under the auspices of the Maine Library Commission will be held in May at four points in the state, as follows:

Tuesday and Wednesday, May 16 and 17, Lithgow Library, Augusta.

Thursday and Friday, May 18 and 19, Public Library, Rockland.

Monday and Tuesday, May 22 and 23, State Normal School, Machias.

Thursday and Friday, May 25 and 26, Bethel Library, Bethel.

These institutes, given this year for the second time in Maine, take the place of the summer school formerly conducted by the state commission.

#### MISSOURI VALLEY LIBRARY CLUB

The last meeting of the Missouri Valley Library Club for the year will be held in the assembly room of the Kansas City Public Library, May 12. Mr. Willis H. Kerr, librarian of the State Normal School Library at Emporia, Kans., will endeavor to answer the question, "What next in school libraries?"

GRACE BERGER, *Secretary*.

#### NATIONAL EDUCATION ASSOCIATION—LIBRARY SECTION

No definite program for the part the library workers of the N. E. A. will take in the conference to be held in New York City the first week in July has yet been received. It is hoped and expected now, that the section's meetings will be chiefly scheduled for the first half of the week, that as many librarians as possible may attend this conference as well as that of the A. L. A. in Asbury Park the week preceding. Those responsible for the library portion of the N. E. A. program hope to have one library paper at every meeting, in addition to the regular library section, that the importance of the library in education, to-day, may be forcibly brought home to every person in attendance.

---

### Library Schools

---

#### PRATT INSTITUTE SCHOOL OF LIBRARY SCIENCE

New England was invaded this spring by no less than three library schools, so we feel more than usually indebted to that long-suffering section for the patience, cordiality and hospitality with which we were received. We ourselves varied our usual itinerary by going up to Northampton for two days after all too-brief visits to New Haven, Hartford and Springfield. There is much of interest in that neighborhood, and Sunday was spent in trolleying to Deerfield, Mt. Holyoke and other nearby places, and also in visiting the Art Gallery of Smith College, which was especially opened for us.

New England had much that was new and interesting to reward the library tourist this year. Two new college library buildings—Smith and the Widener at Harvard—the new State Library building and the Morgan Memorial at Hartford, the building of the Somerville Public Library, the wonderful Annmary Brown Library of incunabula at Providence, the work with aliens recently undertaken by the Massachusetts State Commission, of which we had a full account by Miss Campbell, had all come into being since our trip three years ago. To the librarians

and staffs of the libraries visited—Yale, the New Haven Public Library, the Public and State Libraries in Hartford, the Springfield Public Library, the Forbes, Clarke, and Smith College Libraries at Northampton, Amherst College, Worcester Public Library, the Athenæum, State Library and Public Library of Boston, the Public Libraries of Brookline, Somerville, Medford, the McLean Hospital Library at Waverley, the Public Library, Athenæum and Brown University Library at Providence—to each and all our thanks are due for attentions and kindnesses to which the success of this ever-to-be-remembered trip was due.

The students had the privilege of attending the meeting of the New York Special Libraries Association at the Whitehall Building on Thursday evening, April 6, where a number of business librarians discussed their methods of arrangement of files, indexing of material, classification of special collections, etc.

On April 7 the first of the Friday afternoon visits to neighboring libraries was paid to the administration department of the Brooklyn Public Library (where tea was hospitably served by the catalog department), and to the Montague branch.

#### APPOINTMENTS, CLASS OF 1916

Evelyn J. Badger, formerly of the staff of the San Antonio (Tex.) Public Library, has been made first assistant in the Public Library at Cedar Rapids, Ia.

Beulah G. Murray, formerly children's librarian at the Oshkosh (Wis.) Public Library, has been appointed to the staff of the Carnegie Library at Pittsburgh.

Genevieve O. Reilly, formerly assistant on the staff of the Oil City (Pa.) Public Library, has been appointed assistant librarian of the Madison (N. J.) Public Library.

JOSEPHINE ADAMS RATHBONE,  
*Vice-Director.*

#### LIBRARY SCHOOL OF THE NEW YORK PUBLIC LIBRARY

The junior lectures by visiting lecturers for the last month of the winter term were as follows:

Library business methods. J. A. Lowe, of the Massachusetts Library Commission.  
Municipal reference work. Dr. C. C. Williamson.  
Book-buying (two lectures). F. F. Hopper.  
Italian literature (two lectures). T. E. Comba.  
Administration of the children's room. Jessie Sibley, of the New York Public Library staff.  
Aims and scope of the American Library Association. G. B. Utley, secretary.

The month was spent by the seniors in the school and college library course and the advanced reference and cataloging course in their

work in Italian, with T. E. Comba, and in the closing lectures of Miss Mudge's course on college library reference work.

Students of the administration and the children's librarians' course joined forces in attendance on Mr. Hopper's remaining lectures on library administration and Miss Bacon's lectures on book-selection. The former class were given as a problem a written comparison of two sets of library schedules, following Miss Charlotte Wallace's lecture on the subject. The latter class also attended two lectures by Miss Anna C. Tyler, on boys' and girls' clubs in libraries, visited children's rooms in Brooklyn and Queens, reporting in writing on the same, and listened to a symposium on dealing with children, by Miss Mildred Davis, Marcia Dalphin, and Marion Greene, of the library staff.

Junior students had the pleasure of meeting Mr. Lowe and Mr. Comba at an informal reception after their lectures.

The Principal and Miss Van Valkenburgh, with four juniors and three seniors, attended the Atlantic City meeting. Several alumni were present and a joint school and library dinner was arranged for.

The term came to a close on March 24, and the next morning Misses Van Valkenburgh and Handerson set out with twenty-two juniors for the spring visits to New England libraries. Albany, Springfield, Worcester, Boston, Cambridge, Somerville, Brookline, Hartford, and New Haven were the towns and cities visited. The class were given a choice between the trip and attendance on the Conference of the American Library Association, one or the other being required as work for the certificate. The division was almost half and half. Besides the libraries visited, namely: The New York State Library, Springfield City Library, Worcester Public Library and Clark University Library, Boston, Cambridge, Somerville and Brookline Public Libraries, Harvard University Library, Boston, Athenæum, Massachusetts State Library, Simmons College and the Museum of Fine Arts Library, Hartford and New Haven Public Libraries, the Watkinson Reference and Yale University Libraries,—the party were personally conducted by J. G. Moulton of Haverhill to Salem and Marblehead, and those who wished a guide to historic Boston had the welcome assistance of Mr. Lowe of the Massachusetts Commission. A reception by the State Library School at Albany, a social evening at Somerville after the library had been inspected, a delightful supper-party at the home of Mr. and Mrs. H. B. Mosher at

Marblehead, an entertainment of readings and music given jointly by the two Hartford libraries visited, and a luncheon tendered by the New Haven Public Library, are among the extra-library features of the trip that will make it not easily forgotten.

The school has become a member of the *Cercle Léopold de Lisle* of the *Fédération de l'Alliance française*. This entitles it to a number of free admissions to the French lectures and entertainments given under the auspices of the *Alliance*.

#### ALUMNI

Rachel Stone, 1915, has been appointed librarian at West Springfield, Mass.

Helen H. Greene, junior, 1915, recently appointed to the staff of the Ferguson Library, Stamford, Ct., has been given charge of the High School Library of the city which has recently been put under the Ferguson Library board for management.

Dorothy Rogers, 1915, has been engaged as first assistant at the East Liberty branch, Pittsburgh, beginning work there April 1.

Fanny T. Taber, junior 1914, has recently been appointed librarian of the West End branch of the Public Library of Birmingham, Ala.

Enid M. Stafford, junior 1913, has joined the staff of the Public Library of Hibbing, Minn.

Mary B. Snyder, 1915, has accepted a position in the library of the University of Pittsburgh.

Madeline Scheuch, junior, 1915, has been engaged for the filing department of N. W. Halsey & Co., New York.

Elizabeth N. Prall, senior, has been appointed librarian of the new Lord & Taylor bookshop, conducted by Doubleday, Page & Co.

MARY W. PLUMMER, *Principal*.

#### CARNEGIE LIBRARY SCHOOL

The Training School for Children's Librarians has been made a department of the Carnegie Institute, an institution endowed by Mr. Carnegie for educational purposes. Hereafter it is to be known as the Carnegie Library School. It continues to be conducted by the Carnegie Library of Pittsburgh, with the librarian, Harrison W. Craver, as director.

Dr. Arthur E. Bostwick, librarian of the St. Louis Public Library, gave two illustrated lectures to the school March 20 on the "Co-operation of the public library with other social agencies," and "The St. Louis Public Library."

A course of six lectures on "Story-telling"

was given by Miss Marie Shedlock, of London, England, in the Carnegie Institute Lecture Hall, March 27-April 7, under the auspices of the Pittsburgh and Allegheny Free Kindergarten Association, the Bureau of Recreation of the City of Pittsburgh, and the Carnegie Library School. Students of the Library School were required to attend three lectures of the course.

March 28-30, Miss Lutie E. Stearns, of Milwaukee, Wis., gave the following lectures: "The library spirit," "The library beautiful," "Possibilities in library extension," and "The library's relationship to the nine big problems of the day."

Miss Carrie E. Scott, assistant state organizer, Indiana Library Commission, Indianapolis, commenced her course on the "Administration of small libraries," April 10. The course includes six lectures, in connection with which the students are required to work out problems.

The school had the pleasure of having Miss Caroline M. Hewins, librarian of the Hartford (Ct.) Public Library, give two talks on "Picture books" and "A child and her books," April 11.

"School work of the Free Library Association of Portland, Oregon," was the subject of an interesting talk, given April 11, by Miss Harriet A. Wood, school librarian of the Free Library Association of Portland, Ore.

The Library School was closed for vacation April 3-8.

#### FACULTY

Miss Marie Hamilton Law, registrar, spoke at Wellesley College April 5 on the work of the Library School.

#### ALUMNAE

Mary Caroline Pillow, 1915, resigned her position as assistant in the children's department of Carnegie Library of Pittsburgh in April.

Clara E. Purdum, 1915, has resigned her position of children's librarian in the Free Public Library, New Castle, Pa., to accept a position in the children's department of the Los Angeles Public Library.

SARAH C. N. BOGLE, *Principal*.

#### LIBRARY SCHOOL OF THE UNIVERSITY OF WISCONSIN

The field practice period ended March 29 and a brief recess followed. The spring quarter opened April 4 with the usual schedule in effect. Courses in book selection, reference and children's work are continued, and the work in documents, subject bibliography,

administration, periodicals, binding, and other minor courses begun.

Since this year marks the decennial of the founding of the school it has been planned to make the annual May day celebration, held this year on Saturday, April 29, the occasion of its observance. The speakers are Hannah M. Lawrence, class of 1910, supervisor of branches, Buffalo (N. Y.) Public Library, and Charles D. Stewart, author of "Some textual difficulties in Shakespeare," "Fugitive blacksmith," etc., who will speak on Shakespeare. The alumni association plans to hold its annual meeting and reunion upon this occasion.

#### SUMMER SESSION

A course of six weeks in library training is announced, but will be open only to properly qualified workers in the state. The dates are June 24 to August 4.

#### ALUMNI NOTES

Mrs. Earl G. Taylor (Lucile Cully, 1908) has been appointed a director of the Kewanee (Ill.) Public Library.

Esther Johnston, 1908, who for the past five years has been librarian of the Lake Forest (Ill.) Public Library, resigned to accept a position in one of the New York City branch libraries.

Althea H. Warren, 1911, has been appointed acting librarian of the San Diego (Cal.) Public Library. She was previously engaged in recataloging the library.

Rumana McManis, 1915, who held a substitute position in the Council Bluffs (Ia.) Public Library, has been elected librarian of the Tyler (Tex.) Public Library.

MARY EMOGENE HAZELTINE, *Preceptor.*

#### UNIVERSITY OF ILLINOIS LIBRARY SCHOOL

The senior class spent the four weeks, beginning March 20, in their regular assignment for field work in various libraries away from the university. As heretofore, they were expected to work under conditions as nearly as possible like those of regular members of the staff of the assigned library. The following libraries agreed to take a student each this year: Evanston Public, Gary (Ind.) Public, Rockford Public, Chicago Art Institute, Illinois Library Extension Commission, Galesburg Public, the John Crerar, Decatur Public, and Kansas City (Mo.) Public. Two of the students were compelled to return to Urbana by reason of serious illness, and will complete their month of field work in the University Library and in the Champaign Public Library.

Miss Frances Cullen, of Brooklyn, talked to the junior students, March 20, on artistic

bookbinding, and displayed as illustrative material a number of books finely bound in her own studio.

Mrs. Edna Lyman Scott met the seniors one hour each day and the juniors twice a week for the five weeks beginning Feb. 14, this being the regular instruction in children's literature and in library work with children.

The Library Club held its regular meeting March 13 in the Woman's Building. Mrs. Scott gave a program of stories from Hans Christian Andersen, and Miss Ruth Hammond, a junior, sang several children's songs. About 100 were present.

Dr. A. S. Pease, professor of the classics, at the beginning of the semester gave three lectures on paleography in connection with the regular Library School course in the history of printing.

Dr. A. H. Lybyer, professor of history, gave to the senior three lectures on the literature of the European War, which were most timely and greatly appreciated.

During the last two weeks in March an exhibit on reading for the blind was shown in the upper corridor of the library building; the exhibit was largely prepared by Miss Weston, a student.

#### ALUMNI NOTES

Marie Hammond, 1909-10, head cataloger at Miami University, has been given a year's leave of absence and will study for her Master's degree. Miss Effie Abraham will be acting head cataloger during her absence.

P. L. WINDSOR, *Director.*

#### SIMMONS COLLEGE LIBRARY SCHOOL

The most noteworthy occurrences of the past month have been the visits made to other libraries, and the lectures given at the college by visiting librarians.

Mr. John A. Lowe spoke of the work of the Massachusetts Free Public Library Commission, and Mr. J. I. Wyer, Jr., of the library work of the Education Department of the State of New York through the New York State Library, the two lectures showing most vividly two different methods of extension under the auspices of the state.

The visit of the New York State Library School for an hour on April 7 was a very welcome one, and the Simmons seniors acted as their guides in an effort to show them the College and the School in that brief time.

On April 8 the classes spent the day in Worcester, visiting the Public Library, Clark University, the Worcester County Law Library and the Library of the American Anti-quarian Society.

The visit of April 17 to Waverley, to the McLean Hospital showed a very special and unusual type of library, rendered more particularly interesting because its librarian, Miss Kathleen Jones, had recently spoken at the College of the "Institution Library."

Miss Sawyer, librarian of the Perkins Institute for the Blind, is to speak on "Work for the blind" and a visit to that institution is planned for a later date.

On April 24 the first visit of the school to the new Widener Library at Harvard is to be made, though many members of the classes have had an opportunity to go through the building during the year.

#### GRADUATE NOTES

Ethel Mitchell, 1909, who has been an assistant for some years in the Carnegie Library of Boise City, Idaho, has recently been appointed librarian.

Margaret Kneil, 1914, has resigned from the High School Library, Olean, N. Y., to take charge of the High School branch of the Somerville Public Library.

Frances Bickford, 1913, has resigned from the New Haven Public Library to accept the librarianship of the High School Library at Bridgeport, Ct.

Theresa Stuart, 1908, is substituting for three months for the librarian at Walpole, Mass.

J. R. DONNELLY, *Director*.

#### WESTERN RESERVE LIBRARY SCHOOL

Professor Allen D. Severance of Adelbert College has been giving his lectures in general bibliography during the month. The outside lecturers in the course on the public library and community welfare have been Allen T. Burns, director of the Cleveland Survey of the Cleveland Foundation, who gave a résumé of the aims and ideals of the work of the Cleveland Survey; and Miss Mary B. Gilson, service superintendent of the Joseph & Feiss Company, who spoke on "The book and the factory." Inasmuch as Miss Gilson was a librarian before taking up her present work she brings to the students a very practical message, as well as presenting the large problems of social service work. In the course in library administration, Miss Annie Cutter, supervisor of grade school libraries of the Cleveland Public Library, gave her lecture on "Grade school libraries," which was followed by a visit to one of the school libraries.

#### ALUMNI NOTES

Announcement has been made to the School office of the marriage of Mildred Van Schoick, 1913, to Robert L. Watson of Columbus, Ohio.

Mrs. Adaline C. Merrill, 1908, formerly librarian for Morris Knowles, consulting engineer of Pittsburgh, is now on the staff of the printing and binding department of the Carnegie Library of Pittsburgh.

ALICE S. TYLER, *Director*.

#### SYRACUSE UNIVERSITY LIBRARY SCHOOL

Arthur S. Patterson, professor of French, and Charles J. Kullmer, professor of German in the College of Liberal Arts, are giving the Library School courses in technical French and German during the semester.

The members of the senior class had charge of an exhibit of books held during the second week of March, at the Syracuse Public Library. The purpose of the exhibit was to acquaint the public with the best books issued by American publishers during the past year.

Miss Welch and Miss Snarlin of the senior class have been organizing and cataloging the High School Library at Kenwood, N. Y.

Miss Church, 1916, and Miss Van Dorn 1917, are assisting in the Library of the State College of Forestry.

E. E. SPERRY, *Director*.

#### LIBRARY SCHOOL, CARNEGIE LIBRARY OF ATLANTA

The new South branch of the library was opened on March 3, and the class had the benefit of experiencing something of the actual work of preparation connected with such an event. This branch is one of the busiest spots in the library system and offers excellent opportunity for the students for observation and practice.

Mrs. Edna Lyman Scott gave her regular course on children's work extending over two weeks beginning March 20. The course was somewhat extended this year to include the administration of a children's room, book evaluation and selection including the examination of representative children's books in all classes, and the place of the story hour.

Miss Ella May Thornton, head of the legislative reference work of the Georgia State Library, gave a talk to the class on April 5, on the legislative reference library.

Miss Laura Hammond, librarian of the Georgia School of Technology, gave two lectures to the school on April 11 and 12 on the "Administration of a college library" and "Book selection and buying in the college library." These lectures were followed by a visit of inspection to the Library of the Georgia School of Technology.

TOMMIE DORA BARKER, *Director*.

*DREXEL INSTITUTE LIBRARY SCHOOL  
ASSOCIATION*

The Drexel Institute Library School Association dinner was held at the Hotel Chelsea on March 3. Twenty-six members were present. The guests were: Miss MacDonald, Miss Graffen, Miss Middleton, Miss Coplin and Mrs. N. T. Simer. The class of 1911 were given the place of honor in the middle of the table. Six of the class were present at their fifth anniversary. After dinner a special meeting was held and letters read from all the absent members. Miss Helen Subers made the arrangements for the dinner.

The luncheon at the College Club has been permanently changed from the first to the third Thursday of the month, since that date suited the members better. The next meeting will be held May 18. After the luncheon of June 15, the next one will be held September 21, owing to the fact that the College Club dining room is closed from June 16 to September 15.

Cards have been received announcing the engagement of Miss Fanny M. Libby, 1914, to Mr. William R. Spinney.

The class of 1913 has a class baby. She is the daughter of Mrs. Elizabeth Kessler Striker.

Miss Mary P. Farr, Drexel, 1895, has begun the reorganization of the Georgetown College Library.

Mary B. Latta, Drexel, 1914, was appointed librarian-in-charge of the Falls of Schuylkill branch of the Free Library of Philadelphia in December, 1915.

*IOWA STATE UNIVERSITY—SUMMER  
LIBRARY COURSES*

The State University of Iowa announces the fifteenth session of the Summer School for Library Training, which the university will hold in Iowa City, June 19 to July 28, with the active co-operation of the Iowa Library Commission. Malcolm G. Wyer, librarian of the University of Nebraska, will be director, and the staff will include Miss Julia Robinson, secretary Iowa Library Commission, for subject of library administration; Miss Alma Penrose, Minneapolis High School Library, for cataloging and classification; Miss Grace Shellenberger, children's librarian in Des Moines Public Library, for library work with children; Miss Blanche Watts, secretary and reviser.

A feature will once more be made of library week for the fourth week of the session, bringing at this time a number of outside librarians for lectures on the inspira-

tional side of library work. Inquiries for further information and applications should be addressed to Miss Jane E. Roberts, resident director, State University of Iowa, Iowa City.

*UNIVERSITY OF MICHIGAN—SUMMER  
COURSE IN LIBRARY METHODS*

During the summer session of 1916 (July 3 to Aug. 25), courses will be given as usual in library methods, intended both to give an elementary knowledge of library science to university students and to assist librarians and assistants in smaller libraries who have had no special school training. The courses are not offered as a substitute for a regular full year library course.

A series of general lectures on books and bibliography, the history of libraries, library buildings and furnishings, library administration, book selection and book buying will be given by the Librarian of the University. Technical instruction will be given by B. A. Finney, F. L. D. Goodrich, W. C. Hollands, Miss F. B. Gillette, Miss E. A. Smith, and others. Three hours' practice work will ordinarily be needed for each lecture in the technical subjects. University credit will be given for satisfactory completion of the full course.

All inquiries for further information and applications for admission to the course should be addressed to Wm. W. Bishop, Librarian, General Library, University of Michigan, Ann Arbor, Michigan.

*UNIVERSITY OF MISSOURI—SUMMER LI-  
BRARY COURSES*

The University of Missouri, with the co-operation of the Missouri Library Commission and the St. Louis Public Library, offers courses in library methods for six weeks beginning June 12 and ending July 22. The courses are offered for the benefit of librarians of small libraries and assistants and to those under appointment to positions, who have had no library training. Others will not be admitted to the courses. A special non-technical course for teachers who wish some insight into library methods is offered as a part of the regular Summer School work.

Three courses for librarians will be given, covering library economy, cataloging and classification, and book selection and reference work, and credit in the School of Education will be given for their satisfactory completion.

Instruction will be given by: Mary E. Baker, head cataloger, University of Missouri Library; Alice I. Hazeltine, supervisor of children's work, St. Louis Public Library; Mar-

gery Quigley, librarian, Divoll branch, St. Louis; Emma K. Parsons, reference librarian, University of Missouri, and Elizabeth B. Wales, secretary, Missouri Library Commission. There will also be special lectures by: Henry O. Severance, librarian, University of Missouri; Lutie E. Stearns, formerly with the Wisconsin Library Commission; and Purd B. Wright, librarian of the Kansas City Public Library.

For further information write J. D. Eliff, director of the Summer Session, or to H. O. Severance, librarian, Columbia, Mo.

#### INDIANA PUBLIC LIBRARY COMMISSION— SUMMER SCHOOL FOR LIBRARIANS

For the fifteenth season the Indiana Library Commission will maintain its summer library school for library workers. This will be conducted at Butler College, Indianapolis, from June 19 to July 29. The work covered will be the same as usual and the instructors will be the members of the staff of the Library Commission, with the addition of lectures from the outside.

Miss Flora B. Roberts, the librarian of the Pottsville (Pa.) Public Library, will conduct a two weeks' advanced seminar for librarians who have already taken the summer school course. This experiment was tried last year with great success and is to be repeated this year. In addition to these two weeks, Miss Roberts will spend another week lecturing to the students in the regular school.

From the applications already received, it is expected that there will be forty students enrolled from this state. All inquiries should be addressed to Henry N. Sanborn, secretary of the commission, 104 State House, Indianapolis.

#### CHAUTAUQUA LIBRARY SCHOOL

The sixteenth annual session of the Chautauqua Library School will be held from July 8 to August 18. Mary E. Downey will be director in charge, assisted by Genevieve Conant of the Brookline (Mass.) Public Library, Ruth Wallace of the Evansville (Ind.) Public Library, and others.

The purpose of the school is to help raise the standard of librarianship and to extend library knowledge by instruction in modern methods, essentials, and ideals.

The course of study is a general one, planned to accomplish the most possible in six weeks and includes the fundamental principles in the following branches of library work: organization and administration, cat-

aloging, classification, reference and children's work, bibliography, order, accession, shelf-list, loan systems, bookbinding and mending. Lectures are followed by practice work which is carefully revised. The work of the staff is supplemented by special lectures and by the regular Chautauqua program.

Librarians, assistants, trustees and teacher-librarians, having completed a four year high school course or its equivalent are eligible to the class which is limited to the number that can be given satisfactory instruction and supervision. No one is admitted who has not previously filled out a registration blank and received the official matriculation card.

Early application should be made to Mary E. Downey, 1184 First Ave., Salt Lake City, Utah.

#### RIVERSIDE LIBRARY SCHOOL

The dates for the summer school have been fixed for June 26 to August 12. In addition to the instructors announced last month two new names may be given. Miss Lucy Lay, librarian of the Los Angeles High School, will give six lectures on "The high school library and the junior college," and Miss Martha Wilson, state supervisor of school libraries in Minnesota, will give twenty periods with laboratory, on "The library and the school."

---

## Librarians

---

BALDWIN, Amy S., Drexel 1908, formerly librarian of the West End branch of the Carnegie Library of Pittsburgh, was married in Philadelphia Dec. 24 to Ernest G. Beinhart of the Department of Agriculture, Washington, D. C.

BULLOCK, Edna D., librarian of the Nebraska Legislative Reference Bureau, has been organizing the North Carolina Legislative Reference Library.

CARSON, W. O., formerly chief librarian of the London (Ont.) Public Library, has been appointed inspector of public libraries for the province. He succeeds Walter R. Nursey, who has ably carried on the work of the office for seven years, and who is now compelled by ill health to withdraw from the work.

CRANDELL, Lillian, who has been a substitute in the Grand Rapids Public Library since last summer, has received appointment as a regular assistant. Miss Crandell is a graduate of Alma College, has taught in several high schools in Michigan for nine years, and last

year took the summer course in library training at the University of Michigan.

CRANE, Amy, has been appointed department librarian in Ohio State University at Columbus, to care for the collection belonging to the College of Medicine.

DUNNELLS, Cora K., Pratt 1905, who has been a cataloger in the Office of the Superintendent of Documents for some years, has gone into the work of rural organization in the Department of Agriculture.

GILL, Henry M., is the editor and compiler of a book called "The South in prose and poetry," in which have been gathered together selections intended to interest the boys and girls of the South in the literature and history of their own section of the country. A short biographical sketch of each author precedes the selection from his works. The passages have been chosen with an eye to simplicity and interest rather than finish of style, and so far as possible the more familiar selections have not been chosen.

HAYS, Florence C., who has been in charge of the cataloging work of the Wisconsin Legislative Reference Library for the past four years and who formerly was in charge of similar work at Oshkosh and librarian at Ripon College, is on leave of absence for four months. Miss Hays will be at Columbia University, New York City, during that time, having been called upon to assist in the special cataloging work involved in the reorganization of the University Law Library.

HOUGH, Clara, of Morgantown, has been appointed librarian in charge of the Public Library at Fairmont, W. Va.

KNEIL, Margaret M., high school librarian at Olean, New York, has been appointed to the reference staff of the Somerville (Mass.) Public Library, and accepted by the school committee to be high school librarian. The school library, which is under the administration of the Public Library, serves some 2200 teachers and pupils.

LARNED, Josephus Nelson, librarian in Buffalo from 1877 to 1897, is the subject of a considerable portion of volume XIX of the Publications of the Buffalo Historical Society. There is a biographical sketch by John B. Olmsted and a number of Mr. Larned's essays and addresses, with a chronological list of his writings exclusive of those published

in library periodicals and in the *Buffalo Express*, of which he was for a number of years the editor.

MENDENHALL, Ida M., Pratt 1904, who some years ago was librarian of the Geneseo State Normal School, has returned there and has taken up her old position.

MOTH, Axel, head of the reference catalog division of the New York Public Library, on April 1 completed twenty years of service with the library, having been connected with the old Astor Library before its coalition with the Lenox Library and the Tilden trust. In recognition of the anniversary the staff of the catalog room presented Mr. Moth with a very handsome fitted travelling bag.

NEWMAN, Lorraine, has been put in charge of the East Leonard School branch of the Grand Rapids Public Library. Miss Newman took the apprentice class work in July, 1914, and since October of that year has been working as a substitute.

SOMERVILLE, Evelyn, Drexel Institute Library School 1914, has been appointed librarian of the West End branch of the Birmingham Public Library succeeding Miss Louise Roberts who has accepted a position in Portland.

STRONG, Florence, has been appointed librarian of the Alexander School branch of the Public Library in Grand Rapids, succeeding Miss Carmody, resigned. Miss Strong is a graduate of the State Normal College, at Ypsilanti, receiving her library training in the Normal College Library, and was appointed to a position as substitute in February, 1915.

TABER, Fanny T., New York Public Library School 1914, has been appointed librarian at Avondale branch, Birmingham Public Library.

TAYLOR, Lucien Edward, of the catalog and Library, has recently collected and had reference departments of the Boston Public Library privately printed a small volume of verses originally written by his uncle, Lucien Lord, of Athol.

WALKER, Mrs. Mae, is now in charge of the Brown Hall Library at Ohio State University in Columbus. This collection includes the books on architecture, engineering, drawing and civil engineering.

# THE LIBRARY WORLD

## New England

### MAINE

*Bangor.* The Public Library has put collections of about 50 books each, in the schools of Bagley and North Bangor. While primarily intended for school use, they are also available for neighborhood use. These two schools were selected because their teachers were the first to volunteer their services, which means the giving of no small amount of time and clerical labor. The school department and the library are both watching the experiment with interest, and like service may be extended to other rural districts in the near future, in so far as seems advisable. At present the establishment of more libraries is dependent on the teachers of suburban schools, and their willingness to co-operate in the work without additional remuneration.

*Waterville P. L.* Jennie M. Smith, lbn. (Rpt.—yr. ending Jan. 31, 1916.) Accessions 1209, total circulation 42,764. New registrations 604; total number of readers 18,531. Receipts \$3714.41; disbursements \$3795.09, including salaries \$1100, books \$1017.28, periodicals \$156.08, and binding \$90.70.

### MASSACHUSETTS

*Boston.* The Boston Co-operative Information Bureau has changed its name to the Information Clearing House of Boston, so that it can be more readily found in the telephone book and directory. The officers for 1916 are Lewis A. Armistead, president; E. H. Kittredge, vice president; John Ritchie, Jr., chief of service; Waldo A. Rich, Jr., treasurer; and A. D. Smith, 491 Boylston St., secretary. The directors are Henry B. Alvord, Frank Irving Cooper and George W. Lee.

*Boston.* John Singer Sargent has come to this city from London to arrange for placing in position in the third-story hall, the final paintings in the great series of mural decorations which depict "The triumph of religion." Among the paintings is one for the strip of ceiling at the crucifix end of the hall and also those for two panels on each side of that end of the hall. These two panels will each contain a Madonna, and on the strip of vaulting above there will be various subjects connected with the life of Christ. There are also six large lunettes which go in the penetrations of the ceiling, the subjects of which are connected with the Old and New Testament.

*Boston.* The annual report of the Insurance Library Association for 1915 (D. H. Handy, librarian), shows that 730 books and pamphlets, exclusive of periodicals, bulletins from various sources and newspaper clippings, have been added to the library during the year. Of these 212 were bound. It is estimated that information or assistance in consulting references has been given to about 1000 members and others. The number of book loan cards now outstanding is 77. During the year 35 cards were issued, and 22 were withdrawn. The number of books drawn during the year was 389, taken from a special collection consisting of about 90 books and pamphlets which cover particularly the subjects being given in the evening courses. During the year 32 small maps were added; and 27 bound maps were corrected, with corrections aggregating 15,841. The index cabinets now contain approximately 35,000 cards. About 2000 main cards are added each year. Prof. Z. Takidani, of the Higher Commercial College in Kobe, Japan, who has been studying insurance methods in Germany, England and the United States, spent several weeks in the library in the summer of 1915, and said that nowhere else had he found so complete a collection of literature on fire insurance or one whose material was made so quickly available. Professor Takidani took with him a list of questions intended to cover fire insurance in Japan which he proposes to answer with care and file with this association for reference.

*Cambridge.* Charles Follen Atkinson has presented a collection of 1000 books from the William Parsons Atkinson Library to the Radcliffe Library. Works of history, travel and literature chiefly are included. The books are all contained in mahogany book cases, and will be placed in the newly built conference room in the basement of the library. A collection of books on architecture, also the gift of Dr. Atkinson, will soon be placed in the Whitman room.

*Dalton.* The report of Mrs. Carolina Flickinger, acting librarian of the Free Public Library for 1915 (for the first time printed as a separate report) records many changes. During the year the reading and reference rooms were combined by transferring the reference books from the museum to the periodical room. The museum

material was moved to the entrance hall and the juvenile books transferred from the stacks to the former museum. Low wall bookcases were installed in all rooms, additional furniture purchased, and the whole interior redecorated. Free access to the stacks was given, the classed catalog changed to a dictionary card catalog, a new registration begun, and less stringent lending rules inaugurated. The cost of the improvements to the building was borne by three public-spirited citizens. The total number of books in the library is 11,203, and the total circulation was 30,407.

*Gardner.* The West branch of the library, whose quarters in the Riordan block were burned out a few weeks ago, will be moved about May 1 to the second floor of the Brazell block at the corner of Parker and Vernon streets. When the branch is opened a much larger number of books will be carried on the shelves than was the case in the old rooms, and it is expected that the patronage will be largely increased.

*Grafton.* The annual report of Miss Lucy W. Briscoe, librarian, shows that 19,622 books were drawn from the Public Library in 1915. The library has a total registration of 977, 24 names having been added during the year. The total number of volumes in the library and stations is 14,401, of which 354 were added during the year.

*Lexington. Cary Mem. L.* Marian P. Kirkland, lbn. (Rpt.—1915.) Accessions 925, withdrawals and public documents returned to Washington, 732; total in library 28,577. Circulation 48,690. Total registration 3283, an increase of 248.

*Northampton.* The city council, on April 6, voted for the consolidation of the Forbes Library and the Clarke Library, to take effect by Dec. 1. Library development in Northampton began in 1830 with the "Social Library." In 1869, the town voted to appropriate \$25,000 for the purchase of a lot and the erection of a Public Library and Memorial Hall Building, on condition that not less than \$25,000 should be raised from other sources: \$29,000 were collected, of which John Clarke gave \$5,000. When he died, July 5, 1869, he bequeathed \$40,000 for the benefit of the Public Library, which, however, was not distinctively called the Clarke Library until after the opening of the Forbes Library in 1895. Judge Forbes who died Feb. 3, 1881, gave the bulk of his estate to found a Public Library for the use of the inhabitants of Northampton, to be called the

"Forbes Library." Further legacies to this institution include, \$5000 from the Hon. W. Gaylord in 1881; \$50,000 from Dr. Pliny Earle in 1892; and \$5000 from Mrs. Charles A. Cutter in 1903. With no good reason why the city should maintain two separate libraries, the city council point out among the many advantages of consolidation, greater efficiency in library work, less expense in maintenance, better facilities and better appreciation by the public of the library opportunities offered.

*Taunton.* By the death of Miss Emma F. Beattie, the life tenancies provided for in the will of Samuel C. Cobb, former mayor of Boston, are ended and a one-fifth share in his estate is bequeathed to the Taunton Public Library. Other beneficiaries in like amount are Harvard College, Massachusetts Institute of Technology, Young Men's Christian Union and the Massachusetts Society for the Prevention of Cruelty to Animals. The present value of the property is approximately \$200,000.

*Watertown.* Perkins Institute for Blind now contains in its library, according to the 1915 report, 1878 different titles in raised print, the actual number of books, however, being 13,999. The pupils of the school drew out for voluntary reading within the year 3091 books, and the adult blind living outside the institution 5318. In June 1506 books were sent out for summer reading, the largest number ever lent from this library.

*West Springfield P. L.* The report for 1915 shows 562 volumes were added during the year. Circulation to juveniles was 6292, to adults 14,871. Receipts amounted to \$4297.73, and expenditures \$1600.81, leaving a balance of \$2696.92 on hand. The librarian, Rev. George W. Love, resigned Jan. 1, and Miss Rachael N. T. Stone of Hartford was appointed his successor. A Carnegie building is now under construction at the corner of Park and Elm streets.

#### RHODE ISLAND

In the report of the State Board of Education for 1914, the latest received, it appears that the Audubon Library was the only one added during the year, making the number of free public libraries sixty. During the year over \$9000 was apportioned among these libraries from the state appropriation, used for the purchase of books. In many libraries this is the only book income, the lack of adequate local financial support for several libraries being considered the greatest weakness of the present system. The com-

mittee on libraries of the state board, though there has been no appropriation for the work, has continued to give help for the general improvement of library service in the state, and the library visitor, in addition to her work as director of the traveling libraries, has given it much time. An assistant who can do additional work on traveling libraries and give instruction in library methods to inexperienced librarians, is recommended. An inquiry to determine children's use of libraries and the extent of co-operation between libraries and schools showed that of nearly 600,000 books in public libraries of the state children's books numbered 49,953, of which 6812 were purchased in 1913. Of a total circulation of nearly 900,000, there were 290,363 loans of children's books. In 51 libraries it is reported that children ask for books to help in school work; in 5 they do not. In 33 libraries teachers co-operate with the librarian in directing the children's readings; in 22 they do not. In 22 libraries definite plans for co-operation with schools have been carried into successful practice.

#### CONNECTICUT

*Norwalk P. L.* Dotha Stone Pinneo, lbn. (Rpt.—yr. ending May 31, 1915). Accessions 1012; total 14,144. Circulation 64,278. New registrations 462; total 7882. The library had a booth at the Civic and Industrial Exposition in March, and found it the most successful method of advertising yet tried.

### Middle Atlantic

#### NEW YORK

*Buffalo P. L.* Walter L. Brown, lbn. (Rpt.—1915.) Accessions 42,578 books, 887 pamphlets; withdrawn, 30,621 volumes; total resources 342,144 volumes, 40,035 pamphlets, 26,418 maps, charts, music, etc. Circulation 1,669,690. New registration 26,580; total, library and branches, 87,843; schools, 43,044. Receipts \$134,295.10; expenditures \$29,550.92, including \$27,586.80 for books, \$1802.80 for periodicals, \$8421.09 for binding, and \$63,329.58 for library salaries. Besides the Central Library, there are 7 branches, 5 stations, 2 depositories, 43 schools (having 920 libraries in 920 rooms), and 447 traveling libraries in clubs, fire houses, etc.

*La Salle.* La Salle's new Public Library was opened to the public, April 6, in rooms in the postoffice building. One thousand well selected books are on the shelves—the larger share have been donated—and a reading table with the latest magazines is a feature. The

Library Association has 102 charter members, and has been granted a charter by the State Board of Regents. It will be open three afternoons each week, Miss Marian V. Tompkins acting as librarian.

*New York City.* The valuation of the estate of the late J. Pierpont Morgan for transfer tax is practically completed and reports put the valuation of the books in the private library on East 36th street at \$5,000,000, while original manuscripts, medals, and other items are put at \$2,500,000. The books number about 20,000.

*New York City.* An active campaign by alumni and undergraduates of the College of the City of New York to raise \$150,000 for a library building, was inaugurated April 17. The city, several years ago, offered to provide a site for the library near the present group of buildings, and to appropriate \$100,000 toward clearing the site, provided the alumni of the college raised the \$150,000 required for the erection of a suitable building. The time for taking up the offer of the city expires in July. One subscriber has agreed to furnish the last \$25,000, and another the last \$5000, and three have agreed to double whatever is subscribed by their respective classes. The 70,000 books of the institution are now in crowded quarters in the basement of the Great Hall, and students who go there to consult them have generally to stand. It is no place for the leisurely pursuit of literature.

*Oneonta.* The Public Library was reopened in its new quarters, April 1, after a month and a half had been spent in transferring the books. The latter have been rearranged and classified under the supervision of Miss Anne M. Mulheron of the State Library School in Albany. The building, which was formerly a dwelling, has been remodelled and thoroughly renovated.

*Rochester.* The Ad Club of this city publishes a weekly sheet called the *Bumblebee*, of which William F. Yust, the librarian of the Public Library, is managing editor. In the issue of Mar. 29 an appeal is made to club members to contribute from their private book collections, either as gifts or as loans, such books on advertising as can be spared to build up a club library on advertising. A deposit collection from the Public Library would supplement the volumes contributed by club members.

#### NEW JERSEY

*Manasquan.* A check for \$300 has been given toward a building fund for the Public

Library. The library, which was opened January 29, 1916, has nearly 1500 books on its shelves. Every book has been donated by residents of the town and their friends. There are over 400 borrowers registered.

#### PENNSYLVANIA

The report of the Free Library Commission, published in *Pennsylvania Library Notes* for January, 1916, records building operations in seven towns. Field work on the part of the staff required 44 trips covering 237 days. Some of these were to organize new libraries, some to consult with those planning to establish libraries, some to attend the 14 library meetings held in different parts of the state, and some to see how work already started was progressing. In all 167 visits were made to 136 librarians. Gifts for library uses totalled \$351,200. Eight new libraries were organized and opened during the year, making 172 free libraries in the state. There are still 28 counties without free libraries at the county seat. The fifth session of the summer school for library workers was held, and was accounted successful in spite of the small attendance. The commission lent 20,766 books to people in the state, and there has seldom been a time when there are not from 20 to 30 applications on file. The commission has books in German, Italian, Hungarian, Lithuanian, and Polish, for lending to libraries needing them, and also has for distribution to libraries with foreign book collections circulation rules printed in ten languages.

#### DELAWARE

*Wilmington.* A site for a library building has been donated by a public-spirited citizen whose name is withheld for the present. The new building will be located in Tenth street, between Market and King, facing Court House Square. At a banquet held April 12, initial contributions amounting to \$57,500 were announced at the opening of a campaign to raise a fund of \$325,000 for the new Wilmington Institute Free Library Building. William P. Bancroft gave a tenth of the whole amount or \$32,500 and the E. I. du Pont de Nemours & Co. contributed \$25,000.

#### MARYLAND

*Baltimore.* The plans for Branch No. 18, Enoch Pratt Free Library, to be erected at the northeast corner of Wolfe and Twentieth streets, have been accepted and the contract has been given out. Otto G. Simonson is the architect. The building will be built of English bond brickwork and terra cotta trimmings. The main entrance, on Wolfe street,

will lead directly into the delivery room, to the left of which will be the juvenile reading-room and to the right the adult reading-room. At the left of the entrance will be the stairway and at the right the staff room. The basement will contain a large lecture hall, with entrance on Twentieth street. There will also be a reading clubroom in basement.

*Baltimore.* In the annual report of the Maryland penitentiary Chaplain William D. Beall writes of the library: "Last year we reported the library to have been classified and cataloged. This work was intrusted to an inmate, and was found upon investigation to have been performed in a very imperfect and unsatisfactory manner, necessitating its being done entirely over. This time it has been done under my personal supervision, after consultation with those in charge of the cataloging department at the Pratt Library, who were very courteous in giving me all needed information. The work is nearing completion, and when finished the library will be properly classified and cataloged and its contents will be readily available. Many of our books are old and much worn, and the constant use made of them by men of the type of the most of those here, limits the time of their serviceableness and calls for a liberal policy toward this department, if it is to be maintained at even its present standard. In our process of classification and cataloging we have had to discard 629 imperfect volumes. Seventy-five volumes have been added during the year by purchase or donation. We have at present 4917 books on our shelves."

## The South

#### VIRGINIA

*Winchester.* Handley L. C. Vernon Eddy, lbn. (Rpt.—1915.) Accessions (net) 1789; total 5669. New registration 509; total (net) 1700, in a population of 5864. Circulation 29,851 (21,510 fiction). Expenditures for books were \$1661.65, for binding \$380.78, lectures \$938.68, and salaries \$2803.69.

#### NORTH CAROLINA

"A public library in every town in North Carolina by 1920" is the goal toward which the State Library Commission is working. At present North Carolina has 19 towns with a population of 2500 or more which have no true public libraries, though a few of them have small school libraries or collections belonging to study clubs or civic leagues. The commission plans to print in succeeding issues of its quarterly *Bulletin*, articles about some of the best libraries in the state writ-

ten by library patrons who appreciate the value of a library to the community. It will also contain articles on the practical questions involved in the organization and administration of a public library, and it is hoped these articles will help to crystallize into successful action the interest that the commission will seek to arouse in its campaign among the literary, social, and educational agencies throughout the state.

#### SOUTH CAROLINA

*Winnsboro.* Plans for starting a public library are being laid by the members of the Thomas Woodward chapter, D. A. R. A series of lectures by notable men of the state will be one means of raising funds.

#### GEORGIA

*Atlanta.* The Carnegie Library opened its fourth branch, March 3. The building was erected in 1915 at a cost of \$17,000, and is a gift from the Carnegie Corporation. This branch, which will be known as the South branch, is located in one of the most thickly populated sections of the city and in a section remote from the Main Library.

*Augusta.* Members of the Augusta Bar Association met Mar. 27 to discuss plans for a central library, practically every library in the city having been destroyed in the fire Mar. 22.

#### KENTUCKY

*Louisville.* At the last meeting of the library trustees it was decided to make additional use of the newspaper and civics room as a writing room by furnishing pen, ink and stationery.

#### ALABAMA

*Tuscaloosa.* Prof. George G. Brownell, chairman of the library committee of the University of Alabama, has proposed that the alumni erect a library building for the university, the money to be raised by popular subscriptions. The plan has been endorsed by the faculty and alumni. The present library building is entirely inadequate. The new building will be called the Amelia Gorgas Memorial Library, in memory of Mrs. Amelia Gorgas, who for many years was university librarian and who was connected with the University of Alabama for the greater portion of her life. Mrs. Gorgas was the widow of General Gorgas, who served as president of the university, and was the mother of Surgeon General Gorgas, of the U. S. Army.

### The Middle West

#### MICHIGAN

*Ypsilanti.* Under an opinion handed down by Attorney-General Fellows, the Michigan

State Normal College cannot build the proposed new library as a separate building on the site of former President Jones' residence, as had been hoped by the college authorities. The library must be built as part of the main building when that structure is repaired. The library will probably not be built this summer, however, as the high cost of building supplies is likely to force the authorities to postpone repairing of the main building.

#### OHIO

*Cleveland.* Trustees of the Public Library have purchased from R. L. Holmes a parcel 80 by 126 feet at W. 25th street and Mapledale avenue S. W. for approximately \$10,000 to be used as a site for erection of a new public library branch. The new building probably will cost \$25,000 and will be erected to house what is known as the Brooklyn branch on W. 25th street near Denison avenue S. W. It is scheduled to be erected some time this summer.

*Columbus.* The Public School Library under the direction of the Board of Education, of which Martin Hensel is librarian, now has reference libraries in each of the 55 school buildings under the control of the board. These libraries are housed permanently in these buildings and are operated by the principals and teachers. The central library makes such additions to these libraries as conditions require and funds permit. On August 31, 1915, these reference libraries contained 6443 volumes. In addition to the above the central library had 355 class room libraries in operation in the various school buildings, containing nearly 10,000 volumes. These are returned at the close of the school year. The total book resources of the library on Aug. 31, 1915, was 105,581 volumes.

*Toledo.* Architectural plans for two of the five new branch libraries will be started at once, so that actual construction will not be delayed. The East Toledo branch, corner Greenwood avenue and South Main street, will be designed by Manfred M. Stophlet, and the South End branch, Broadway and Langdon street, will be under the supervision of Architect D. L. Stine. Edward L. Tilton of New York has been retained as supervising architect. An effort will be made to begin operation on the other three branches, and a meeting of the trustees will be held in a short time to engage architects for each.

*Youngstown.* In an extended investigation published in the *Youngstown Vindicator*, Apr. 6, Joseph L. Wheeler, the new librarian in charge of the Reuben McMillan Public Li-

brary, compares the library's needs and its results with the same items in other cities, and furnishes some interesting figures. Other cities of the size of Youngstown and less spend twice as much on books. Twenty cities are listed and the average per capita expenditure is shown to be 42 cents, with Youngstown the lowest at 15 cents. The library, he maintains, does not get its fair and proper share of support, because the city officials have never realized the importance of the library's work, and have not granted its share of public money. The policy of a mere existence has been followed and when in the past it has been necessary to reduce civic expenses, while less important departments have been cut down 25%, the library has been cut 60%.

#### INDIANA

*Indianapolis.* The corner-stone of the Indianapolis Public Library was laid amid impressive ceremonies on Friday, Mar. 24, on a beautiful site, at Meridian and St. Clair streets, a part of which was generously donated to the city by James Whitcomb Riley. Edmund Eitel, nephew and representative of the latter, placed in the stone a steel box which contained an original MS. and copies of Riley's poems, copies of the library laws, papers relating to the history of the library, and several other documents. Construction work on the new library, which is to cost \$1,000,000, will go forward rapidly this summer, and it is expected to be ready for occupancy next winter. The present library is now crowded badly, holding 205,000 books, while being designed for only 80,000. The new building will be built throughout with Bedford stone and the interior furniture and library devices will be the most modern. Provision for a separate room in the new library to be filled with books on travel, science, history and literature, and to be known as the "Reference Library: Memorial to H. H. Lee, presented by his wife, Elizabeth Wood Lee," is made in the will of Mrs. Lee, probated recently.

#### ILLINOIS

*Augusta.* The people of Augusta township, Hancock county, voted a one mill tax for a township library April 4. Hancock county has now six free public libraries with permanent tax support. Carthage, La Harpe, Warsaw, Nauvoo and Hamilton are city libraries. The city councils of Nauvoo and Hamilton took over the association libraries early in the year. The library at Augusta will be the only township library in the county.

*Lexington.* The Smith Library has received a bequest of \$500 from Mrs. C. S. Arnold. The money is to be spent for books only.

*Lockport.* Healy Alexander, a well-known resident, has notified the Woman's Club, which has been working to secure a public library for the township, that he will donate the lot at the corner of Ninth and Hamilton streets for a library site. With the lot now secured, a building and maintenance of the same is all that is necessary and it is probable that some means will be presented whereby Lockport can have a library in the near future.

*Pana.* Five hundred of the most valuable volumes from the library of William Eugene Hayward have been presented to the public library of Pana by his daughters. Mr. Hayward for many years has been one of the most prominent citizens of Pana, serving as mayor for one term. The collection of books contains many valuable and rare books in literature, science and art, valued at \$7000.

## The Northwest

#### WISCONSIN

*Brodhead.* The librarian reports in the *Wisconsin Library Bulletin* that by actual count there is a registration of 1430 borrowers in this town of 1667 population—a truly remarkable showing.

*Milwaukee.* Plans have been completed by the Harley-Davidson Motor Company, manufacturers of motor-cycles, for the installation of a library and research department under the management of Hugh Sharp, formerly assistant publicity manager. The increasing amount of advertising and publicity material being issued made the need of the research section and library imperative.

*Platteville.* A collection of about 125 German books, belonging to the late Fritz Schroeder, has been placed in the Public Library.

#### MINNESOTA

*Hibbing.* The library board at the next meeting of the village council will ask the village to appropriate \$56,000 for an addition to the present Public Library, which is considered too small for its present needs. According to the plans and specifications the addition will be built out up to the street on Third avenue and will take in additional acreage in the rear of the present library and on Mahoning street. The addition planned for the rear of the present building is 20 x 75 feet. An auditorium will be included and this will be 65 x 47 feet.

*St. Paul.* The Improvement Association of Merriam Park has voted to deed two lots valued at \$4000 to the city of St. Paul. The

property, on Marshall avenue near Fairview avenue, is to be used only for community house or library purposes. It will be leveled and improved before the transfer is made.

## IOWA

*Cedar Rapids F. P. L.* E. Joanna Hagey, lbn. (Rpt.—1915.) Accession 4418; withdrawn 1477; total in library 35,252. Circulation 208,712. New registration 2914; total 11,855; estimated population 43,000. Receipts \$19,170.53; expenditures \$16,781.19, including \$4,270.12 for books, \$393.79 for periodicals, \$881.54 for binding, and \$6,573.39 for library salaries.

## NEBRASKA

*Omaha.* Miss Edith Tobitt, public librarian, has announced that the library board next fall will ask for a bond issue of \$200,000 or \$250,000, with which to erect a new building, to be used as an art gallery, auditorium and store rooms. The board wants another building, practically the duplicate of the present structure, three stories high and 120 feet long and 60 feet wide. The library owns the ground back of the present building at 19th and Harney streets.

## The Southwest

## MISSOURI

*Kansas City.* Plans for the addition to the Public Library at 11th and Locust streets, are complete. Work probably will begin soon. The board of education is awaiting the decision of the supreme court regarding the title of the land. The board was sued by the original owner of the land, who declared he was insane at the time he signed the deed. At a meeting of the board of education of the Kansas side, April 3, a contract was let for about \$18,300 for a branch library to be located on 18th street, between Metropolitan and Strong avenues, in Argentine.

## COLORADO

*Fort Morgan.* The newest Carnegie library in the state was opened here Feb. 25. As county-seat library in one of the dry-farming sections of eastern Colorado, with its new \$10,000 building and the services for six weeks of an organizer to start the new growth in accepted lines, it is hoped it will become a leader in its part of the state. The building has two large reading rooms and an auditorium seating 200 people. Free use by people outside the town will be permitted, and this privilege is expected to be especially enjoyed by the rural school teachers. The county agricultural agent and county superintendent of schools are co-operating with the library board.

## TEXAS

*Dallas.* The board of trustees of the Dallas Public Library has voted to authorize the president to ask for bids for constructing a small addition to the building. The crowded condition of the reference room has made some change necessary, and as Carnegie Hall, on the second floor, has not been used for an auditorium in some time, it has been decided to use that space for a reference room. The old reference room will be filled with double stacks. Only a small addition will be made to provide a stairway to the new reference room. The roof of the building will also be repaired. The cost of the changes will be about \$5,000.

*Vernon.* At a meeting of the library committee, appointed by the Young Men's Business League of this city, the contract for the building of a \$12,500 library building has been awarded to a local contractor. The erection of this building will begin at once and will be pushed to completion at the earliest possible date.

## The Pacific Coast

## WASHINGTON

*Harrington.* Members of the Mothers' Club report that in their efforts to establish a reading room and library in Harrington the council has granted them the use of the south room of the lower floor in the city hall. A number of local business men have donated paper, paints, lumber and labor and the room is being renovated.

## CALIFORNIA

*Gridley.* The new \$15,000 Public Library was dedicated Mar 17 with appropriate ceremonies.

*San Francisco.* A resolution to set aside \$10,000 to be called the James Lick fund for the purchase of volumes for the library of the Mechanics' Institute was passed at the annual meeting of the Mechanics' Institute. The fund was voted from the general treasury of the institute for the purpose of replacing volumes destroyed by the fire of 1906, originally purchased with a fund of \$10,000 donated by James Lick.

## NEVADA

*Ely.* The Woman's Club has presented to the board of county commissioners a petition for assistance in the matter of establishing a public library. The petition sets forth that the board of education has signified a willingness to allow the use of a room in the high school building and to co-operate in the movement, that Mayor A. B. Witcher has assumed the responsibility for the collection of \$300

by private subscription for the purpose of buying books; that the teachers of the county high school have offered their services in organizing and caring for the library until the close of the present school term. The request is then made that the sum of \$300 be appropriated from the county funds for immediate use in the purchase of books; that the further sum of \$300 be guaranteed by the county in monthly installments of \$25 for the purpose of maintaining the public library, and that all books belonging to abandoned school districts be transferred to the county public library.

#### UTAH

*Mount Pleasant.* At the election in March it was voted to establish a public library in a \$12,000 building. The building is to be constructed from the Sanpete County library fund. The city will meet the cost of running the library.

*Salt Lake City.* Revised plans of Fred A. Hale, architect, for the addition to the Packard Free Public Library have been tentatively accepted by the library board. The plans call for an addition in the rear of the present building, 31 by 64 feet, two stories in height and following in general appearance the style of the present building. The building will contain a board meeting room, a magazine room and children's reading room on the ground floor, the remainder of the space being devoted to stack space for books.

### Canada

*Montreal. Fraser Inst.* P. B. de Crève-cœur, lbn. (Rpt.—yr. ending Je. 30, 1915.) Accessions 3211; total number of volumes in library, 74,085. Attendance in the reference and circulating room was 88,319, and in the newspaper and periodical room 72,073. Salaries amounted to \$5500; English periodicals and newspapers \$317.80, French 124.43; English books purchased \$841.79, French \$366.41.

#### QUEBEC

*Quebec. Legislative L.* Ernest Myrand, lbn. (Rpt.—1915.) Accessions 2287 volumes, 1200 pamphlets; total 107,218 volumes, 26,450 pamphlets. During the year the library was moved into its spacious new quarters, where provision is made for storing 200,000 volumes, besides the space available in the basement for from 30,000 to 40,000 more. The making of a suitable catalog and the final classification of the books, probably on a combination of the Dewey and Cutter systems, will be begun as soon as possible.

### Foreign

#### HOLLAND

*The Hague.* The munificence of Mr. Carnegie made it possible for the work at the library of the Peace Palace to be carried on without interruption. Its rules and regulations have just been issued and published in two languages. The nature of this library is that of a public library, with this restriction, that besides the members of certain colleges and institutions the general public can obtain admission only when this has been granted by the directors.

#### CHINA

In her report of the work of the Boone Library in Wuchang for the year ending June, 1915, Miss Mary Elizabeth Wood, the librarian, shows a steady increase in the number of readers in the library and a more intelligent use of the books. Reference reading in the building has increased, while the number of books drawn out is slightly less than in the year preceding. The accessions were 482 new volumes in English and 624 in Chinese, a large proportion of the latter being translations of Western literature. The most interesting feature of the library work during the year was the development of the traveling libraries. Three of these small libraries were started in 1914 and taken to three of the government schools in the city. In 1915 ten such small libraries were in service at different times in the government schools and other educational institutions in Wuchang and Hankow, thus putting in circulation 1100 of the best translations from Western learning and English books adapted to the needs of the students in these schools. In two of the government schools, reading rooms have been started as the result of the librarian's taking these books in person to these schools. A small branch reading room with books and periodicals from the Boone Library has been started at St. Michael's, the other side of the city, and during certain hours is opened to the public. This reading room has been of special service to students of the Military School. The average number of students to be found using the University Library each week has been about 325, and 1123 books were issued during the year to teachers and students of the university and to members of the missions. Increased support of the library, in the shape both of funds and of books and subscriptions to periodicals, is coming from the churches and schools in this country as the work of the library is becoming better known.

Notes of developments in all branches of library activity, particularly as shown in current library literature

ADVERTISING. See Publicity

## BIBLIOGRAPHY

Bibliography in relation to literature. A. Cecil Piper. *Lib. World*, S., 1915, p. 79-83.

"The relationship that exists between bibliography and literature is sufficiently obvious to all, and probably it is this obviousness which accounts for the comparative neglect of this side of bibliographical study. What is wanted is a good bibliographical history of literature. The only literary histories I know that approximate to this demand are the *Cambridge History of English Literature*, now in course of publication, which is, unfortunately, not illustrated, and Garnett and Gosse's *English Literature*, 1903. The most common relationship between bibliography and literature is the simple one usually adopted by authors before writing about a particular subject, *viz.*, to search out what has been already done and compare results. Librarians know only too well that the specialist is a specialist only; that he rarely knows anything of the general trend of knowledge in subjects other than his own; and are aware, also, that while he knows exactly what he wants, he is frequently helpless in conducting the actual search; yet a little training would make the path easy. Many of the concordances and indexes that have been published would have been greatly increased in value had the compilers had but an elementary idea of the science of cataloging and indexing.

"Again, how often do we lament the lack of general indexes to important books, and how often, when indexes are provided, do we find that they are badly compiled and practically useless? Bibliography chronicles and describes the works necessary for the study of literature, but it should go further: it should concern itself with the methods of literary research, by applying its laws and methods to the examination of literary texts. The greater part of the work of an editor of literary texts, is of a purely bibliographical nature, and he should have had some bibliographical training for the task. It is by means of bibliographical method that literary documents can show the best results and the most satisfactory and reliable knowledge.

Likewise it is of the utmost importance that librarians should study bibliographical methods and gain some knowledge of the general principles of bibliography, both his-

torical and practical. Bibliography is necessary in practically every phase of library work, whether in the collation of books, in aiding readers, in the selection of books, or in cataloging and classification. It is the progress of librarianship that has been the chief means of proving the value of bibliographical knowledge to students, and nearly all the eminent bibliographers are, or have been, librarians.

## BINDING—LETTERING THIN BOOKS

An article in the *British & Colonial Printer & Stationer* for Feb. 17 summarized a discussion carried on in several issues of the *Publishers' Circular* by the editor and various correspondents (including librarians, a bookbinder, and others) who have been agitated by a revival of the question whether the title on the back of a book or magazine should read from the top downwards or vice versa.

"The *Publishers Circular* states that its view is that a title should be printed to read along the back of a book or magazine from the top down, because when placed face up, singly or in a pile, on a table or counter or shelf, the title is in the correct position for reading it, and as many cloth-bound books have no titles on the front covers, it is doubly important to have the books so lettered. On the other hand, if the title is printed to read from the bottom upwards, then the title is always upside down when the book or magazine is lying on a table or counter or shelf, either singly or in a pile.

"The arguments of the various correspondents against the view of the *Publishers' Circular* may be summarized as follow:—1. The method of placing books on their sides in piles on shelves is the wrong way to place books on shelves, and therefore the *Publishers' Circular's* argument is a weak one. 2. A book lettered from the bottom upwards can be read quite easily whether it is on a floor shelf or on one twelve feet high, by taking a side view from the right—the natural and habitual method. 3. The great majority of thin books are lettered the opposite manner to that which the *Publishers' Circular* advocates and therefore for the sake of uniformity they should continue to be so lettered. 4. It is a standing rule among book-finishers to letter books from bottom to top, and book-finishers from time immemorial have always adopted this method."

The writer discusses the various arguments and in general agrees with the opponents of the *Publishers' Circular's* view, regretting that the latter "should support the American and German method, which is the reverse of ours, and thus strive to alter our very general practice."

#### BIRD CLUBS

The East Portland (Ore.) Branch Library Boys' Club, which has been studying the lives of inventors and their inventions during the winter, is now turning its attention to birds. Dr. Emma Welty of the Audubon Society gave the club a talk recently on "How to study the birds." One of the points emphasized in her talk was how to describe accurately the birds seen, starting with a well known bird and comparing with it the strange bird as to size, shape of bill, etc., giving especial attention to the color of the plumage and the markings. The interest of the boys was more and more aroused as the lecture proceeded until toward the end of the hour they were all asking questions about the birds they had seen and wished to identify. Some of the questions asked showed that the boys had been keen observers of the birds and were enthusiastic bird-lovers.

This lecture on birds was followed by an evening arranged by the pupils of the Buckman school, who had secured a splendid set of pictures from the Board of Education rooms. Twelve boys and girls were chosen from a seventh grade and a bird picture assigned to each one. Each learned all he could about his bird and if the school could not furnish the information he wanted he turned to the books of the library. After this preparation they came with their slides and lanterns and gave to the two hundred and sixty boys and girls of the nearby schools, who had gathered in the library auditorium to hear them, a most interesting and instructive talk on these birds. Such an eager audience of young listeners would be hard to find. The attention of the boys and girls was then drawn to the library posters showing designs of bird houses which they could copy and they were urged to help make of Portland a real bird city.

An exhibit of the best types of bird houses made by the public school children may now be seen in the children's room of the library.

BOOK SELECTION. . . See Fiction

#### CATALOGING

The classified or the dictionary catalogue;

a summary. Wilfrid S. Robertshaw. *The Librarian*, S.-O., 1915. p. 29-32; p. 49-53.

"What better can be desired than the logical arrangement of a classified catalog? Surely it is more educative, and an improvement upon one which hitherto has followed the order of the alphabet. The subjects in a dictionary catalog may show, by references, all their cognate subjects, but it is to numerous parts of the catalog that we are referred. As an example of this logical order, take the subject, Medicine. In the consultation of the A. L. A. Catalog, a reader sees at class no. 610 the heading Medicine, followed by its subdivisions as Anatomy, Physiology, Hygiene and Public Health—all the works on medicine being contained in four pages. But the same reader turns to the Chelsea or similar dictionary catalog and finds that he has to look under several headings, this being due to the fact that the specific entry principle is followed throughout. This means that the reader has to look for books on Anatomy under Anatomy, and for works on Veterinary Hygiene under Veterinary Hygiene. If the scheme of classification is followed, all works on Medicine will be collected in systematic order, while by the aid of the alphabetical index of subjects at the end of the catalog the reader is directed immediately to any specific subject if such is desired. That the wants of such a reader as the above are far better met by the classified catalog is quite obvious.

"Judging by the statements set forth on the subject of classified and dictionary catalogs, it would appear from the general tone that the classified catalog is the better form for a reference library. On the other hand, the dictionary catalog seems to me to be quite as adaptable to the reference library as the classified form. Proof of this is forthcoming, an attempt being made to show how it can claim the dual merit—that of adequately catering for both departments. Take, for example, the two common subjects, Philology and Psychology, which are the technical terms for Language and Mind, respectively. Granting that the popular terms are employed for subject headings, the student need not fear that the cataloger has altogether forgotten him. When he looks in the catalog under the technical names he finds he is directed to Language and Mind. Under these two headings he will find all that he otherwise would under the catalog. It is only when the dictionary catalog fails to provide the necessary references that its claim to serve for a reference library is resented. Within the two covers of a dictionary catalog we find all

classes of people catered for; which is the exact reverse to providing, primarily, for specialists in some particular literature as a classified catalog does."

CLASSIFICATION. See also Cataloging

—PERIODICAL LITERATURE

The superstition of the bound volume. By L. Stanley Jast. *Lib. Assn. Rec.*, 1915. p. 540-547.

"When I contemplate a large collection of pamphlets before and after the classifier has worked his will upon them I am tempted, remembering Nietzsche's definition of the highest art as 'The reduction of order out of chaos,' to claim for the classifier a place beside the painter, the sculptor, and the musician. It is curious, however, to notice how the superstition, the fetish of the binding still governs us in regard to another mass of what is to all intents and purposes pamphlet material, namely, periodicals, transactions, and such like matter. I have here a few examples of the manner in which I propose that periodical literature should be dealt with. The articles composing the serial are separated from one another, bound in manilla covers, and bear on the outer cover the decimal class number, author, and title of the contribution, together with the title of the magazine, and full reference to series, volume, date, and page numbers. What is left of the magazine, when the articles have been thus extracted, which in this case consists of the title page, the list of contents, notes, and miscellaneous short articles, and the index to the volume, is then treated similarly as a pamphlet, and placed where the bound volume of the magazine would otherwise have been put. Against the entries of the articles in the table of contents are entered the class numbers under which they will be found, and the following label is pasted inside the cover:

The articles in this work have been extracted and classed separately under their appropriate topics. They will be found in the pamphlet collection under their authors (or if anonymous, under their titles) in the class numbers entered in the margin of the list of contents

The "pernicious practice of publishers of magazines and transactions of commencing articles on the same page or on the back of the page which concludes another contribution" is condemned, and is recommended for consideration to the book production committee of the Library Association. Until the present practice is altered it is necessary either to buy two copies of every serial, or supply the missing portions with the typewriter.

Mr. Jast thinks his plan would eliminate in some cases two-thirds of the material as having no permanent value, with a corresponding saving in space and in binding costs.

CLUBS. See Bird clubs

DISCIPLINE—IN HIGH SCHOOL LIBRARIES

"Few libraries exist which do not have to meet the discipline problem, and in many cases it is a very serious one," says a writer in the March issue of the *Wisconsin Library Bulletin*. "The following scheme to get the co-operation and interest of high school pupils in the matter of proper behavior has been tried out by Miss Miller, of Menominee, Mich., and will be suggestive to other libraries.

"In the library work of the junior English classes of the high school, each pupil was requested to write three rules from which the following eight have been chosen by a committee composed of three members of the junior class:

BE COURTEOUS.  
AVOID TOO MUCH WALKING AROUND.  
AVOID UNNECESSARY TALKING.  
DO NOT VISIT WITH THE LIBRARIANS.  
DO NOT VISIT WITH YOUR NEIGHBORS.  
DO NOT LINGER BETWEEN THE BOOK STACKS.  
REPLACE BOOKS AND MAGAZINES AFTER USING.  
DO NOT BEND OR BREAK THE BINDING OF BOOKS.

"These rules, which were printed in the newspaper, are posted in the library for the guidance not only of high school students, but as a gentle reminder to the general public."

ENGINEERING LIBRARIES

The technical library's field of service. W. P. Cutter. *Spec. Libs.*, N., 1915. p. 150-152.

Mr. Cutter, the librarian of the Engineering Societies Library in New York, maintains a library service bureau for his clients, and receives inquiries from engineers in Chile, Penang, Alaska, Buenos Aires, Queensland, etc. The services rendered range from a complete list of references on magnesite to specifications for the 7 mm. Mauser cartridge, 1893 model.

Many questions are answered from reference lists made for other persons, and the library prepares bibliographies on subjects in demand. War conditions are responsible for many requests for information. Many orders for photostat reprints are received by telephone.

The library has recently published a "Catalogue of technical periodicals in New York and vicinity," in which 2600 publications are

listed. A current index to leading articles in 1000 periodicals received is also extremely useful. A committee has been appointed to devise a standard system of classification for technical literature, which may be used by the Engineering Societies and as a basis for an index to technical literature.

A schedule of charges covers the cost of the work of the bureau, and it is hoped to make it self-supporting, with branch research offices in other places.

#### EUROPEAN WAR—EFFECT ON LIBRARIES

The press and public libraries. *Lib. World*, Jan., 1916. p. 303-304.

The closing of newsrooms in some of London's libraries for the sake of economizing during war time has aroused a storm of disapproval from the English press.

The *Saturday Review* says: "More especially let English literature be the last thing to be cut out of the list of necessary things. Those who think of literature as a mere luxury, to be cut down with as little compunction as petrol or asparagus, are exceedingly ill advised. They can have very little idea as to what precisely it is we are fighting to preserve. The nation which is starved in mind and fancy is as little likely to survive the searching test of war as the nation which is starved for bread and cheese."

The *New Statesman* condenses an article from the *Librarian* on the saving of money normally spent on new books for libraries:

"The sum total of the economy thus effected throughout the whole country is perfectly trifling, and probably it is not an economy at all, even financially. For the smaller public expenditure must mean a larger private expenditure on books, and while every book added to a public library is read on the average by at least a hundred persons, privately owned books are read at most by five or six. The explanation of this foolish policy is no doubt the inability of most people . . . to understand that a reduction of public expenditure is of no national value whatever if it leads to private expenditure as great or greater. . . . If the nation cannot afford the trivial sum needed to keep public libraries more or less up to date, then it is time all places of entertainment were closed, and publishers forbidden to publish new books."

#### FICTION

What about fiction in our public libraries? Caroline B. Clement: *Bull. of N. H. Pub. Libs.*, D., 1915. p. 138-139.

The librarian must decide to what extent

the demand for current popular fiction must be met in each library, and the problem varies with different communities. The criticisms in the *Book Review Digest* and the *A. L. A. Booklist* are invaluable aids to judicious selection, and the latter at least is within the reach of every librarian. A library is not a newsstand for the free distribution of the latest publications, regardless of their contents, and it is just as important to select the best and most reliable fiction as it is in choosing non-fiction, if the public is to get a good return for its money invested.

The five tests given by Mrs. Belle Holcombe Johnson, of the Connecticut Library Committee, may be safely applied: (1) Test of good English; (2) simplicity and charm; (3) good taste; (4) truth; and (5) effect on the reader.

#### FILING

Filing. Mrs. A. L. Robinson. *Spec. Libs.*, N., 1915. p. 147-149.

Mrs. Robinson has charge of the filing department of the Texas Company, of New York, a firm which produces and markets petroleum and its products.

She emphasizes the qualities of memory, imagination, intuition, tact, patience and love of order as requisite for the efficient filer.

The business man expects results quickly from his file, and cares little for niceties of indexing if letters are not forthcoming in a reasonable time.

Boys are useless as filers, according to Mrs. Robinson, because they see no chance for advancement in the file, and seek merely to get papers and documents out of sight. Girls who have had library experience are, of course, especially valuable.

Her own file combines subject filing with subdivisions of alphabetical, geographical and numerical filing, and is capable of great expansion. Her general file takes care of about 2000 sheets of paper, from 10 departments, in about 500 classifications, and gives out some 150 files a day. An index and a series of letter books, containing duplicates, help to check the file.

#### FORMS AND BLANKS

The new form of daily branch statistics in use in the Queens Borough Public Library, and reproduced herewith, was inaugurated in June, 1915, and revised in January, 1916. In the revised form, certain entries have been omitted, the work being reported on from the departments for the whole system. Other entries have been differently grouped, but

the main idea and most of the headings remain as at first planned. It is mailed daily.

Miss J. F. Hume, the chief librarian, writes as follows concerning the new form: "This form relieves the branches from keeping nine daily branch accounts, recorded in separate

branches have separate boxes for each account with slot in the top, and moneys as taken in are dropped into the proper box, not opened until counted for the day's receipts. A separate box is kept for change.

"A monthly summary of statistics, consist-

"Some of the librarians clung to their petty cash accounts, very reasonably, as they are responsible for the moneys, so on the revised form changes have been introduced which produce a daily cumulation which checks itself automatically on each daily report and is simplicity itself in the working. The

ing of the totals line for each branch, is made up for the chief librarian, having the same column headings as are on the daily report, with the different branches in alphabetical order in the first column. This gives the work of the whole system in surprising detail at a glance. A copy of this report is cut into strips horizontally, and its particular line is sent to each branch, where it is pasted on a sheet having the same column headings. Twelve lines thus show detailed statistics for the branch on two pages, and by leaving a blank line between the pasted strips, both monthly and cumulated statistics are revealed

at once instead of in a dozen separate records, some on cards, others in books, etc. This we are beginning now, as the end of the year found the branches with only brief cumulated statistics for their yearly reports. This method was immediately devised to supply them, and like the original daily form, makes one rather breathless in realizing its comprehensiveness and ease."

—In high school libraries

#### INDEXING—COST OF

The 1915 report of the librarian for the Insurance Library Association of Boston contains some figures on the cost of making the index cards in the association's file:

"The whole number of cards in the card index cabinets is now approximately 35,000. In June a complete duplicate set of the cards in the library at that time was sent to the National Board of Fire Underwriters, in New York. Since then about 3000 cards have been added to the National Board's set.

"It seems probable that we will add to our collection at the rate of about 2000 main cards a year. Assuming that each card will be distributed in four places in the index, this will mean each year the addition of about 8000 reference cards.

"A carefully kept record of the work done by the card indexer devoting her whole time to the work when we were preparing the original set for the National Board of Underwriters, shows that one girl was able to type at that time about 530 finished cards a week. The cards consisted of Library Bureau 3 x 5-inch punched stock, costing \$2.70 per thousand, net. We were paying the indexer twelve dollars a week. These items indicate that our cards cost us for making approximately twenty-five dollars per thousand. Ordinarily, the work of making cards seldom goes on uninterruptedly for more than a few hours together, while the time spent in supervising is not easily measured, which makes it difficult to say just what is the entire cost. So far as I have been able to learn from others who have undertaken special library cataloging, this cost is not excessive for the mechanical part of work done in this way."

#### INFORMATION CLEARING HOUSES — PROPOSED HANDBOOK ON

A handbook for the operation of clearing houses of information. Kenneth C. Walker. *Spec. Libs.*, N., 1915. p. 152-154.

Mr. Walker, of the department of technology of the Free Public Library, New Haven, Ct., has suggested to the Special Libraries Association a handbook for special librarians. Mr. Marion has offered his services as joint author. Mr. Walker defines his purpose as follows:

"The aim of the proposed publication is threefold: First, to act as a suitable guide and instructor to those inexperienced in library technique as applied to a modern business collection. Second, to serve as a consulting collection of recognized methods used in the operation of special libraries. And, third, to benefit the business man by cumulating the flood of material illustrative of library methods as adapted to business methods. Furthermore, to effect a saving in establishing and maintaining a special collection. The saving hinted at in the above is that gained by adopting a tried system instead of ignorantly experimenting, as is so often the case."

The modern business man spends hours planning floor space so as to conserve the time and energy of his employes. It is only reasonable to expect that equal care is required in arranging a special library's space to best advantage. Hence considerable attention is given to "arrangement" in the chapter analytics which follow:

#### OPERATION OF AN INFORMATION CLEARING HOUSE

##### CHAPTER ANALYTICS

- Introduction
  - Definition
  - Relation to business house in which it is established
  - Aims and scope
- Operation
  - Equipment
    - Rooms: Their location, size, etc.
    - Furniture: Desks, shelves or book cases, card catalogs, cabinets, filing cases, tables, chairs, etc.
    - Selection
    - Arrangement
    - Heating, lighting and ventilating
    - Outside communication
    - Telephone
    - Other mechanical means of communication
    - Messenger service
  - Supplies: cards, typewriters, duplicators, other labor-saving devices
  - Purchase of supplies
    - Requisitions or special purchasing forms
    - Accounting in relation to the library
    - Aids and methods other than included in above
- Administration
  - Head of department
    - Qualifications
    - Salaries
  - Assistants
    - Qualifications
    - Salaries
  - Staff management
  - Relation of staff to supporting organization

- Material
  - Sources and forms
    - Books and pamphlets
    - Periodicals, society proceedings, continuations, trade catalogs, clippings, maps, plans, photographs, manuscripts
    - Government publications: federal, state, municipal
  - Ordering material
    - Publishers
    - Prices, trade bibliography, trade terms
    - Special order forms
  - Accessioning material
    - Systems
  - Shelf listing
  - Classifying
    - Purpose of classification
    - Systems available
    - Individual and special vs. general or standard systems
  - Aids and suggestions
    - Cataloging
      - Purpose
      - Rules or codes
    - Alphabetizing (or filing of cards and other similar material)
    - Arrangement of material and mechanical preparation
    - Bookbinding and repair
    - Loan systems and records
      - Purpose
    - Aids and suggestions
  - Co-operation
    - Interdepartmental
    - Public and similar library systems
    - Other special libraries
    - Information bureaus and research bureaus
    - Other sources, e. g., knowledge of experts and individuals
    - Methods of handling co-operation, e. g., special card forms, systems, etc.
  - Extension or publicity work
    - Purpose
      - Methods of
      - Examples or samples
    - Aids and suggestions
  - Library terms and definitions
    - Comparison with A. L. A. definitions and special library application of the same or similar terms
  - Bibliography
  - Index

PERIODICALS. See Classification—Periodical literature

**PUBLICITY**

On Wednesday, Mar. 1, was inaugurated the carefully planned campaign of the Public Library Committee of the Toledo, O., Commerce Club for a Library Publicity Week, to direct the attention of every citizen to the opportunities offered them by the Public Library, and to stimulate among them the use of the library's resources. The *Commerce Club News*, the official publication of the club, issued a special library number covering the movement. After several months' preparation, a combination advertising campaign had been agreed upon, in which no avenue of publicity was overlooked.

Articles written by the committeemen—each having some news feature mentioning the

Public Library, appeared daily in the different city papers. A characteristic advertisement alternated in the two afternoon papers, each carrying two advertisements, and two were also carried in the morning paper. The moving picture theaters showed slides, bearing such appropriate slogans as, "Learn more—Earn more,"—"A book for every reader—A reader for every book," and many others. The street cars carried posters in the front during the week with this announcement, printed in red and black:

THE FOOL NEVER LEARNS  
 THE AVERAGE MAN learns from his own experience  
 THE WISE MAN from the experience of others  
 BE WISE  
 USE YOUR PUBLIC LIBRARY  
 FOR TRAINING                      FOR INSPIRATION                      FOR PLEASURE  
 NO COST                                      NO RED TAPE  
     LEARN MORE                                      EARN MORE

THE PUBLIC LIBRARY "AT YOUR SERVICE"  
*Public Library Committee, Toledo Commerce Club*

Twenty thousand laundry packages upon being opened disclosed the following polite request,

LEARN MORE, EARN MORE

Use your Public Library  
 Begin now—Do it often—Tell your friends

THE PUBLIC LIBRARY  
 At your service

Windows in one of the prominent savings and trust companies in the business district where thousands of people pass daily were decorated with attractive signs, "Are You Going to Build this Spring? The Library Has Books Which Will Tell You How." Nine by twelve cards were printed for use in show windows and given large distribution. A six-page folder printed in dark brown on india tint stock told a story of human interest, "Why Smith kept his job." This little story emphasized how easy it was to use the Public Library, telling that it had books for all tastes and needs, and giving some of the questions that were asked and satisfactorily answered by Public Library books. The folder also told of surprising changes in the old library and all about the five Carnegie branch libraries building in various parts of the city. The folders were placed in banks; an automobile party, also distributed them to various factories with an attractive hanger. Superintendents of schools distributed one thousand to teachers who in turn told the story to the pupils. This was followed by personal trips with the children of the classes instructing them how the Public Library may be used easily. Churches of all denominations helped.

Announcements by leaflets and from the pulpits called attention to the Public Library. In the Sunday paper a half-page feature story told about the children's hour, and other interesting branches of the work. Nothing was overlooked. Every channel of daily custom was covered and the results have already been most gratifying in a large accession of card holders.

REFERENCE DEPARTMENT. See Bibliography

---

### Bibliographical Notes

---

The March number of the *Bulletin* of the Indiana State Library is devoted to condensed biographical sketches of the governors of Indiana, both under territorial and state form of government.

The quarterly *Bulletin* of the Insurance Library Association of Boston contains in each issue a list of references to current articles and publications on fire insurance and related subjects.

The "Apprentice course," a series of articles originally published in the *Wisconsin Library Bulletin*, is obtainable in a set of reprints for 75 cents, and is especially useful in small libraries where such a course must be organized.

A "Supplement 1916" to the Norwegian catalog of books suitable for public libraries, first published in 1913 (with supplements in 1914 and 1915) is now available. It is arranged according to the main classes of the Dewey decimal classification.

In *Special Libraries* for February, 1916, (p. 40) is given a list of the people from whom may be obtained reports on wood-using industries, including box manufacture, in a number of states. A list of recent book reviews on "Business" is given in the same issue.

Two libraries at least gave special attention to the Lenten season this year. The Seymour Library of Auburn, N. Y., got out a short "List for Lenten reading," and the Public Library of Trenton, N. J., issued its "Suggestions for devotional reading," with brief annotations for each title included.

The *Medical Record* of April 8, volume 89, pages 651-652, contains an editorial on the importance of medical libraries for hospitals, both with reference to the use of these libraries by patients in hospitals, especially hos-

pitals for the insane, and with reference to their use by members of the staff. According to the editorial hospital libraries "have been degenerated into a sort of lounging room for internes by day, and a trysting place for nurses by night."

In the last three years the LIBRARY JOURNAL has printed lists of books by representative American poets of the present century, as compiled by a committee of the Poetry Society of America. From these three lists has been compiled a single list "intended to cover the story of our published books on poetry from 1900 to December, 1915," selecting the most notable among the works of individual poets, and this cumulative list is published in Bulletin 44 of the Syracuse Public Library, and may be had for 5 cents a copy, postpaid.

The Chicago Public Library is planning to issue a cumulation of the fifty monthly lists of additions printed in its *Book Bulletin* from 1911 to 1915. This cumulation will comprise 11,000 titles and will be issued in three parts. Part I, Fiction, embraces 2500 titles, with names of authors and titles arranged alphabetically. Part II, Juvenile, comprises 1500 titles, and also has authors and titles in one alphabet. Part III, Non-fiction, 7000 titles, is grouped in classes as follows: Philosophy, Religion, Social sciences, Language, Literature, History, Biography, Travel, Useful arts and Fine arts. This part is supplied with an author, title and subject index in one alphabet. An indexed finding list of all the titles in the library on Philosophy, Religion, and Medicine, is also under way, and a number of select topical lists are planned for issuance during the year. There has been a material reduction in the prices of all the lists.

*Biblioteksbladet* is the name of a Swedish library journal, the first number of which has just been received here. Like the catalog of books for the public libraries mentioned in the LIBRARY JOURNAL for March, 1916, it is a sign of the increased activity in the library field which is noticeable in Sweden at the present time. A library association to which belong librarians of all kinds of public as well as college libraries, was founded in February, 1915. This association, whose only organ at first was a magazine for higher public education in general, has now felt the need of a medium of its own for the successful accomplishment of its purpose. This new library journal is to appear five times a year, and the annual subscription will be 3 kr. (80c.). the first number contains, among other things,

an account of the first annual meeting of the association, an article on co-operation between different kinds of public libraries, and one about travelling libraries. A large section is devoted to short reviews of new books. These book-notes will serve as the chief basis for the annual supplements to the printed catalog of books suitable for library use.

To facilitate an intelligent appreciation of the exhibition of New Jersey textiles held in the Newark Public Library during February and March, a handbook called "The story of textiles" was published by the Newark Museum Association. The exhibition contained "exhibits of clothmaking, hatmaking, knitting, embroidery and lace, rugmaking; modern arts and crafts and the handwork of the schools; an historic exhibit of old New Jersey-made textiles and the Homelands exhibit, articles contributed by school children of foreign parentage." Also 66 firms contributed commercial exhibits and 32 schools and 10 clubs were represented. The handbook, which is copiously illustrated, describes the methods of preparing the thread for weaving, both early and modern; shows the processes of weaving on various looms, and in various weaves; gives quotations from the literature of all times and peoples containing allusions to this industry; presents some statistics on the subject of textiles in the United States and in New Jersey; and ends with reproductions of twelve Japanese pictures illustrating silk manufacture in the Flowery Kingdom.

the use made of the book are two elements in the consideration of this question. Books in our circulation department that go out frequently, and ready reference books in our reference department which are consulted daily by hundreds of people, naturally wear out much sooner than books that repose quietly on the shelves and are subject to infrequent handling.

"Not so many years ago librarians were distressed because books in frequent circulation were 'read to pieces' after they had been out fifteen or twenty times; the binders have now solved this problem by treating circulation books in a special way, sewing them with care, putting them into first-class leather or buckram, and thus lengthening their life materially. Indeed, the so-called 'library binding' of to-day will, in most cases, outlast the paper.

"You ask 'Has any definite effort been made to have the contents of modern books put in form or material that will last against the destructive agencies of passing years?' The answer is both 'Yes' and 'No.' We have succeeded in no general concentrated action on the part of librarians to force publishers to print their books on paper that will last. Even if such action had been made, I fail to see how we could require publishers, who are free and independent agents, to use paper that we specified unless librarians were willing to pay the cost. It is, of course, a matter of dollars and cents. If we to-day were willing to take the time that old papermakers took, we could make paper as stout and lasting as they made. But we are in too much of a hurry and are too unwilling to pay the price. What we want is a cheap product made quickly. We get it, and, of course, books printed on paper made after this fashion suffer the consequences. No books printed on the ordinary wood-pulp paper of commerce are assured of permanency. That is a fact we are all agreed on. Whether they will last five years or fifty years is a thing none of us can say.

"In our own library we have long recognized the importance of making an effort to preserve the books entrusted to our care. If you are interested in this subject, you may care to look at an article in the LIBRARY JOURNAL for April, 1915, giving an account of some experiments made in the New York Public Library for preservation of newspaper files. There are numerous preparations that have been used experimentally in an effort to preserve print paper stock; their names are legion—Zapon and various others of similar familiarity. None of them, however, has had any commercial success, so far as I know.

---

## Open Round Table

---

### PAPER AND BOOK PRESERVATION

In reply to an inquiry as to "the supposed life or term of existence of books printed on paper, such as form the bulk of" every library, one of the largest public libraries sent the following interesting discussion of the question raised:

"We have in our library books printed on paper in the fifteenth century and they are in better condition than books printed on paper of the twentieth century. We have books issued recently printed on good paper that are in better condition than texts printed fifty years ago. The quality of the paper and

"The Modern Historic Records Association has for some years been interested in the subject of making permanent preservation of texts of to-day, and they have deposited with the New York Public Library some of the results of their experiments. For instance, they printed on hand-made vellum a list of the incorporators and directors of the association, put this in a box and sealed it in concrete inside a cylindrical terra-cotta tile. A scheme like this, one must admit, bids fair to preserve the message, but would scarcely be practical for anything requiring frequent consultation. Doctor George F. Kunz, of Tiffany's, one of the active members of the association, devised a method of setting metal type in reverse fashion, taking a stereotype impression therefrom, and from the stereotype getting an impression in soft vitrified clay, which when hardened, as quickly happens, makes an imperishable record. This has the advantage of being easily consulted, but would be bulky if applied to large books, and would, of course, be costly in operation.

"The question is one of which librarians feel the importance, but, as I said above, we seem at present to have made no successful steps towards its solution notwithstanding the great amount of thought we have put on it."

#### SOME OBSCURE REFERENCES LOCATED

*Editor Library Journal:*

Having recently had an opportunity to examine three volumes of Street & Smith's *New York Weekly*, which contain little but long and properly forgotten romantic stories with terrorizing illustrations, I wish to put on record a few notes which perhaps deserve preservation.

Vol. 25, was issued in 1869, no. 8 contains a poem called Pecos by E. A. Brown which perhaps deserves to be noticed in the Texas bibliography, number 12 contains a poem by Ella Wheeler. No. 19 contains a parody of Yankee Doodle and a California story On A Bank by E. Minturn, number 26 has a legend of early Kansas by J. E. Nadger, 28 a poem by Ella Wheeler, number 48 has a prophetic dream by Abraham Lincoln, volume 26, number 8, poems by Wheeler, volume 26 number 25 publishes the Heathen Chinees on the date of May 4th, 1871, number 42 has an unusual portrait of Nice, number 47 has a portrait of one of the valued contributors, Roger Starbeck, volume 27, number 4, has a portrait and biography of Howard Macy, another contributor.

Yours truly,

WILLIAM BEER.

STATEMENT OF THE OWNERSHIP, MANAGEMENT, CIRCULATION, ETC., REQUIRED BY THE ACT OF CONGRESS OF AUGUST 24, 1912, OF THE LIBRARY JOURNAL, published monthly at New York, N. Y., for April 1, 1916.

STATE OF NEW YORK, } ss.  
 COUNTY OF NEW YORK, }

Before me, a Notary Public in and for the State and county aforesaid, personally appeared Fremont Rider, who, having been duly sworn according to law, deposes and says that he is the Managing Editor of the LIBRARY JOURNAL and that the following is, to the best of his knowledge and belief, a true statement of the ownership, management, etc., of the aforesaid publication for the date shown in the above caption, required by the Act of August 24, 1912, embodied in section 443, Postal Laws and Regulations, printed on the reverse of this form, to wit:

1. That the names and addresses of the publisher, editor, managing editor, and business managers are:

<i>Publisher</i>	R. R. BOWKER Co.	241 West 37th St., New York.
<i>Editor</i>	R. R. BOWKER.	241 West 37th St., New York.
<i>Managing Editor</i>	FREMONT RIDER.	241 West 37th St., New York.
<i>Business Manager</i>	J. A. HOLDEN.	241 West 37th St., New York.

2. That the owners are:

R. R. BOWKER Co., 241 West 37th St., New York.  
 R. R. BOWKER, 241 West 37th St., New York.  
 A. H. LEYPOLDT, 241 West 37th St., New York.  
 J. A. HOLDEN, 241 West 37th St., New York.  
 FREMONT RIDER, 241 West 37th St., New York.  
 W. A. STEWART, 241 West 37th St., New York.

3. That the known bondholders, mortgagees, and other security holders owning or holding 1 per cent or more of total amount of bonds, mortgages, or other securities are:

NONE.

4. That the two paragraphs next above, giving the names of the owners, stockholders, and security holders, if any, contain not only the list of stockholders and security holders as they appear upon the books of the company but also, in cases where the stockholder or security holder appears upon the books of the company as trustee or in any other fiduciary relation, the name of the person or corporation for whom such trustee is acting, is given; also that the said two paragraphs contain statements embracing affiant's full knowledge and belief as to the circumstances and conditions under which stockholders and security holders who do not appear upon the books of the company as trustees, hold stock and securities in a capacity other than that of a bona fide owner; and this affiant has no reason to believe that any other person, association, or corporation has any interest direct or indirect in the said stock, bonds, or other securities than as so stated by him.

R. R. BOWKER Co.,

FREMONT RIDER, *Managing Editor.*

# THE LIBRARY JOURNAL

VOL. 41

JUNE, 1916

No. 6

THE general theme of the Asbury Park program, as previously indicated, emphasizes library work as a feature of education in a democracy like our own. It is to be treated from several points of view by librarians and other speakers. In this relation library development is a kind of peaceful "preparedness" which fulfills itself in training the democratic state and citizenry to the highest point of intellectual and industrial efficiency. The "open meeting" of the Council, at which the Americanization of the immigrant is to be treated by outside speakers as a phase of library work, is really another part of the general program. We may note indeed that it is a Council meeting only in name, for the function of the Council under the present constitution is of decisions rather than of dissertations. The real work of the Council will thus be confined to one session at which several questions of very practical importance will be taken up and, it is to be hoped, treated to some definite purpose.

AN important discussion before the College and Reference Section at Asbury Park should be that of intercommunication between reference libraries with respect to their special fields of collection and research, and a proposed systematic endeavor to complete amongst them the collection of early engineering literature, especially from foreign countries. It is oftentimes of first importance to the working engineer to know what plans or working operations have been tried and found wanting or what methods have been adopted in foreign countries which are not familiar in our own. The records of the patent offices of the several countries cover inventions, but methods and processes not patented are often to be found only with great difficulty. It is hoped to present as a basis for discussion, some concrete examples of the value of the systema-

tization of this kind of knowledge, which would render our libraries of more direct importance to the working professional men, and thus make this important class the better supporters of our library system.

THERE is no more important field in which to develop the library system of this country than among business men. The number of special business libraries developed by leading concerns is noteworthy evidence that the value of libraries is appreciated in high quarters, but it is difficult to awaken the average business man to the fact that his local library may be and should be of money value to him. Mr. Dana has made himself a pioneer and is proving what a library may mean to the business community, as shown through the Newark Public Library, and he has gone farther than this in an endeavor to awaken libraries throughout the country to the desirability of their awakening in turn the interest of the business man. With this in view he has been in close touch with the Associated Advertising Clubs of the World, and has become chairman of the library committee of that organization. He has found, however, that out of a thousand libraries addressed, with a view to increasing their means of publicity, less than a hundred have shown enough interest to respond to his suggestion, and of this a considerable portion have simply been polite enough to reply. This field of business is one not to be left by the small libraries to the large library systems. In fact, in the small communities there is proportionally more need to put the service of the library in shape to invite the business man and, in this as in other fields, the library should show grateful appreciation to those who, like Mr. Dana, are endeavoring to work out plans for the common good.

THERE is frequent demand for the development of printed bibliographies, which everybody wants, but for which few are willing to pay. Some discussion was given to this topic at the recent session in Cambridge of the Association of New England College Librarians. Mr. Faxon alluded to the general demand for a cumulation of the material in dramatic bibliography, which had been published in the *Bulletin of Bibliography*. The demand was met by such a cumulation in convenient form, yet of this disappointingly few were ordered. This is a melancholy example of the relation of responsive supply to what proves to be sadly limited demand. More than one publisher in the library field would be glad to do much more in furnishing bibliographical material were it not that this experience has been so often repeated. In fact, bibliographical publications are almost sure to be not only labors of love, but love at considerable loss. The H. W. Wilson Company endeavors to safeguard itself in its cumulative work by asking what seem very high prices for cumulated material, as the proposed price of \$32.00 for a nine years' cumulation of the material of the *Reader's Guide*. But bibliography is not profitable, even at high prices, because of the limited demand to which we have referred. We have tentatively planned within our office for a card issue of a bibliography of bibliographies, but loud as the demand seems to be, we shall not be surprised if the realized demand should prove small indeed.

THE classification of books on Christian Science has been called to the attention of many libraries by a request that they should not class books against Christian Science with Christian Science books and that only such should be listed in the latter category as are authoritatively accepted by the Mother Church. The problem, however, is not so simple as at first sight it seems, and for this reason most libraries relegate such distinction to bulletins and descriptive lists and to the annotation on catalog cards in-

stead of direct classification pro and con. One or more libraries have adopted the suggestion of the Christian Science authorities and follow the subject card Christian Science in the card catalog, with sub-cards designating books approved by the Christian Science Literary Committee, and those not approved by them. This, however, seems to throw books which claim to be orthodox or which favor Christian Science into the same category with those in opposition. A special difficulty in catalog classification, which can be better met by annotation, is that books which claim to treat a subject impartially and to give both views cannot be classified on either side, and are often if not usually classified by the orthodox as unorthodox because the writer finds grounds for exception as well as for acceptance. Libraries will therefore naturally make their own choice between attempting to make the classification of pro and con in this and other fields of polemic in the catalog and on the shelves, or reserving the distinction for annotation of cards and in descriptive lists.

But regarding both Christian Science and Theosophy there is a special difficulty. In the first mentioned, Mrs. Stetson puts herself forward as the true successor to the founder of that faith, while in the latter Mrs. Annie Besant makes a similar claim, although both are heretics or *personae non gratae* to the Mother Church at Boston, in the one case, and to Madame Tingley and the Point Loma society in the other. A library can scarcely follow this distinction in its catalog, and must class books by these authors as among the pros rather than the contras. In respect to Roman Catholic literature the same rule should hold, and not only the books specially authorized or approved by the Holy See but those generally in favor of Roman Catholicism should be included on the one side, while books against the Roman Church should be rightly distinguished in descriptive or critical bibliography.

## FICTION AS REFERENCE MATERIAL\*

BY CORINNE BACON, *The H. W. Wilson Company*

It has been evident for some time that the theory formerly held by many with regard to the proper function of the novel was in need of revision. We must rid ourselves of the notion that all fiction is "light reading," serving for amusement only. Which of the two requires the greater degree of mental concentration, the memoirs of a lady of rank who reveals the gossip and scandal of some European court, or Meredith's "Egoist?" Muller's "Invasion of America," or Tolstoi's "War and peace?" Arnold Bennett's "Your United States," or Nexo's "Pelle the Conqueror?" Irvin Cobb's "Speaking of operations," or Dostoyevsky's "Crime and punishment?" Is it not true that many books classed as literature, travel, and even as philosophy, do not measure up, either as sources of information, as stimulants to thought, or as works of art, to the level of many novels?

It does not, however, follow from this either that most novels are valuable as reference material, or that the novel's value as reference material is in direct ratio to its value as a work of art. Suppose, for the purpose of this discussion, that we classify novels roughly, not by their literary form, romantic, realistic, etc., but by what they do for the reader. These classes will not be mutually exclusive, as some novels will fall within two or three of them. We shall have:

(a) Novels purely recreative, such as detective stories, tales of mystery, and delightful fooling like Birmingham's "Spanish gold."

(b) Novels of skilful literary workmanship, such as Oscar Wilde's "Dorian Grey," which most of us who read it at all read rather for its subtle artistry than for any other reason. Of course the nov-

els in all our other groups may be equally well written. I would class here only those whose chief appeal lies in their style and construction.

(c) Novels that are just slices of human life. Many novelists present life as they see it, but the vision of the majority is warped. The greatest are they who see the most clearly, with the least color of personal passion or prejudice, who do not write "from above down," and who neither consciously teach nor preach.

Novels of this high order that spring to our minds at once are "Anna Karenina," "Adam Bede," "The egoist," Gorky's "Mother" and, to mention one of more recent vintage, St. John Ervine's "Mrs. Martin's man," which towers above all other novels of 1915.

I would include in this group the best of the so-called "psychological" novels.

(d) Novels of inspiration, or those whose chief appeal is ethical, such as Cable's "Bonaventure," George Eliot's "Romola" and Hawthorne's "Scarlet letter."

(e) Novels of information, either historical novels proper, such as Reade's "Cloister and the hearth" and Scott's romances, or those describing the life of a particular period or of a special section of country.

Hardy, Howells, Jewett, Phillpotts and Trollope have given us living pictures of this latter sort.

(f) Novels of social propoganda. The importance of the novel today as a vehicle of new ideas in art, economics, ethics, politics and religion can hardly be overestimated. Writers like W. L. George cannot get the wide hearing they wish for their sociological treatises and therefore embody their ideas in fiction. Mr. H. G. Wells has said:

"I consider the novel an important and necessary thing indeed in that complicated system of uneasy adjustments and readjustments

\*This contribution to the discussion at the meeting of the New Jersey Library Association at Atlantic City, March 3, 1916, was given from brief notes, and has been written out since the meeting.

which is modern civilization. I make very high and wide claims for it. In many directions I do think we can get along without it. . . . The novel has inseparable moral consequences. . . . It is unavoidable that this should be so, even if the novelist attempts or affects to be impartial, he still cannot prevent his characters setting examples; he still cannot avoid, as people say, putting ideas into his readers' heads. The greater his skill, the more convincing his treatment, the more vivid his power of suggestion. . . . The novel is to be the social mediator, the vehicle of understanding, the instrument of self-examination, the parade of morals and the exchange of manners, the factory of customs, the criticism of laws and institutions and of social dogmas and ideas. The novelist is going to be the most potent of artists, because he is going to present conduct, devise beautiful conduct, discuss conduct, analyze conduct, suggest conduct, illuminate it through and through."—H. G. Wells. *Social forces in England and America*, 1914. p. 173-98, The contemporary novel.

An excellent illustration of the importance of the novel in modern life is the leaflet entitled "Modern topics as illustrated by modern literature," published in 1914 by the General Federation of Women's Clubs.

A few examples of novels in the social propaganda class are:

- (1) *Business*. Dreiser's "Financier," Chester's "Get-rich-quick Wallingford," Norris' "The pit," White's "A certain rich man."
- (2) *Subsidized press*. Adams' "The Clarion."
- (3) *Child labor*. McCall's "Red Horse Hill."
- (4) *Strikes*. Edward's "Comrade Yetta," Poole's "The harbor."
- (5) *Socialism*. Tressall's "Ragged-trousered philanthropists."
- (6) *U. S. politics*. Blythe's "Fakers," Churchill's "Mr. Crewe's career."
- (7) *Religion*. Churchill's "Inside of the cup."
- (8) *Feminism*. George's "Second blooming," Harrison's "Angela's business."
- (9) *Marriage and divorce*. Canfield's "Squirrel cage," Wells' "Marriage," Wharton's "Custom of the country," Webster's "Real adventure."
- (10) *Woman suffrage*. Anti: Allen's "Her wings," Curtis' "Congresswoman," Nichols' "Wild mustard"; Pro: Forman's "Opening door," Johnson's "Hagar," Robins' "The convert."
- (11) *White slavery*. Kauffman's "House of bondage," Francis' "Story of Mary Dunne," Robins' "My little sister."
- (12) *Race question* (the negro). Du Bois' "Quest of the silver fleece," Howells' "Imperative duty," Gibbon's "Flower o' the peach."

(13) *War and peace*. Newton's "War," Palmer's "Last shot," Von Suttner's "Lay down your arms," Tolstoi's "War and peace."

Modern drama ably seconds the modern novel in the discussion of social problems. Ibsen's "Ghosts" and Hauptmann's "The weavers," among other plays, set a pace which such authors as Middleton, Sheldon, Kennedy, Brioux, Shaw, Zangwill, and Galsworthy have not been slow to follow. But it does not seem to me likely that the drama will, as some predict, supersede the novel. The novel as a disseminator of social ideas seems to have come to stay.

Obviously, I think, only the last two groups of novels of which we have spoken, those of *information* and of *social propaganda* are suited to any extensive reference use. The helps that may make these available, such as Baker's "Guide to the best fiction" and "Guide to historical fiction," Nield's "Guide to the best historical novels and tales," the Free Library of Philadelphia's "Contribution to the classification of works of prose fiction," Dixson's "Subject index to prose fiction," etc., have already been dwelt upon. I wish to refer to them only to caution those who may try to supplement them by lists of later fiction, against the useless arrangement of novels under broad classes, indulged in by the compilers of some of these lists, and also against the notion, apparently entertained by some, that because it is helpful to classify and bring out under subject *some* fiction, it is useful to so treat *all* fiction. Of what use is a list of novels under the broadly inclusive heading "*Sin*" or "*Sociology*?"

Of what help is it to a reader to find grouped under the heading "*Psychological*," "The redemption of David Corson," "House of the seven gables," "Golden age," "Magic skin," "The egoist" and "Lady Rose's daughter?" Why is Meredith's "Ordeal of Richard Feverel," "*psychological*," "Lord Ormont and his Aminta," "*ethical*," "Diana of the Crossways," "*general*," "Beauchamp's career," "*sociological*?" Of what possible use, to take one illustration from drama, so closely allied to the novel, is it to anyone to find Masefield's "Tragedy of Nan" listed un-

der "Rural communities?" Specific, closely defined headings for a few novels are valuable in our card and printed catalogs, and in the Book Review Digest, which has begun to index fiction under subject headings, but all such helps should avoid generalities, even though they glitter.

An interesting experiment in fiction analysis is being tried by Miss Louise Con-

nolly in the Free Public Library of Newark, N. J., with the help of the Contemporary Club of Newark. This differs, as I understand it, from the usual library treatment of fiction, in that Miss Connolly expects to index subsidiary topics in novels, instead of simply assigning one subject heading to each novel. A sample of this book analysis is appended:

### Sample of Book Analysis

Name of Book: *Girl of the Limberlost*  
 Author: *Gene Stratton Porter*  
 Date of Book:  
 Date Read: *July, 1915*  
 Local Color: *Forest lands of Michigan*  
 Historical Color: *(Bugs and plants)*  
 Social Problems: *Self-dependent women*  
 Psychology of Sex: *Comradeship vs. the old type of love*  
 Sentiment Embodied:  
 Character Developed: *Sudden conversion of bitter woman*  
 Analysis of Personality:  
 Mechanism of Plot:  
 Style: *Crude yet bombastic*  
 Chief Values: *Nature study*  
 Class Appealed To: *The immature*  
 Notes:

Name of Reader: *Louise Connolly*  
 Address: *Summit, N. J.*

*Forests*  
*Comradeship in love*  
*Sudden conversions*  
*Self-educated girl*  
*Moths*

# POSSIBLE RESULTS OF THE EUROPEAN WAR IN THE BOOK MARKET

BY DR. WALTER LICHTENSTEIN, *Librarian, Northwestern University*

HE is a bold man who will undertake to prophesy as to the outcome of the war and its effect upon the commercial and social organizations of the world. I need only point out how many fallacies have already been exploded. The greatest experts of the financial world were certain that the war could not last beyond a few months on account of the fact that all the countries involved would be bankrupt if it lasted any length of time. Likewise, many military experts were of the opinion that the loss of life would be so great as to preclude the possibility of a war lasting several years. And so, probably the experts will be found wrong as regards what will happen after the war. I need only mention a question which deeply affects our own country, the question of immigration after the war. I have heard statements to the effect that on account of the poverty-stricken condition of Europe, we should be swamped with immigrants, coming from all the belligerent countries. And, on the other hand, I have heard maintained with equally good reason the thesis that our immigration would be almost nil after the war, because there would be room for everyone in Europe when the present holocaust was over. So, in regard to the book market, I hardly venture to give any definite expression of opinion. All I should like to do is to point out a few possibilities, based upon what I know of the European book market.

In the first place, something will depend upon who wins. If Germany were to be hopelessly defeated, it would probably mean the end of that strong central organization situated at Leipzig which directly and indirectly has been able to control prices of books, not only in Germany, but also in many other parts of Europe by acting as a kind of clearing house. Should Germany win an overwhelming victory, the power of Leipzig would probably be extended. You understand, of course, that I am dealing with the class of books that chiefly interests American libraries in their purchases

abroad, namely, the large number of scientific publications long out of print. I am not speaking about current publications.

In France, England, Spain, Italy, and other smaller countries the book trade is not nearly as centralized as it is in Germany, and the greater part of that book-trade of which I am speaking in these countries was more or less in German hands before the war. If, therefore, the present war is practically a drawn battle, or if Germany wins, probably the German book-dealers will flock back into the countries out of which they have been temporarily driven, and, as far as the organized book-trade is concerned, there may not be much change. If the Germans are unable to maintain this lead in the European book market, disorganization may result for a time, and, until matters are adjusted, prices may fall. If such disorganization does not result, it does not seem to me that we are likely to see a very sharp fall in the price of books. I know that this is not in accordance with the opinion of most of my friends, but the fact is that the more important dealers who own large stocks of books are most of them people of considerable means who, while at the present moment they would be glad to sell cheaply rather than have much of their capital lying dormant, at the end of the war will probably feel that, having been able to withstand business depression for so long a time, there is no need for them to make sacrifices when immediate improvement may reasonably be expected. These large dealers have not been suffering as much from the war as you may suppose. The ones that have been suffering most have been those whose chief business has been to supply us and other countries beyond the seas with our current needs, but these library agents are not the people who possess the large stock of books and are not the ones who influence prices. The dealers with the large stocks have been somewhat protected by the fact that in spite of the war the German government and

some of the other governments also have not cut down their budget for the support of libraries and art museums materially. At least, in Germany it was felt that the amount that could be saved by any sudden cessation of the purchase of works of art and books would be more than offset by the losses occurring thereby to the business enterprises involved. My German friends have informed me that they have been doing a fair business in Germany, Austria-Hungary and in neutral countries such as Holland and the Scandinavian kingdoms in spite of the war. All of these dealers have had vastly more than the biblical seven prosperous years and are quite able to withstand the pressure of seven lean years. Thus, I do not anticipate a sudden fall in the price of the books that we ordinarily order.

You ask: Will there be then no result? Yes, I do anticipate some results, but not in the case of books bought through the usual channels. In England, in France, in Germany, in Austria-Hungary large collections of art and libraries have been handed down for generations in certain families. Especially in England, but also in the other countries, these families are paying very heavily the price of blood in this war. They are losing the bread earner. Oh, I do not mean the man who keeps them from starvation, but the man who can enable them to afford the luxury of maintaining a large library and a large collection of art. In many cases the whole male relationship of such families may be wiped out of existence, and the widows will be left perhaps not poverty-stricken but severely hampered. What is perhaps more important, the people who were the ones to be interested in these family collections will have disappeared. The ones left, women and small children, will regard the possession of the books and treasures of art, which prevent them from moving into smaller quarters and thus husbanding their resources, as simply a burden, and they will be glad to sell for cash to almost the first comer. Formerly, the large book dealers would have been the ones to buy, and they would have driven up the price rather than allow an outsider to obtain possession.

But while, as I have pointed out in the first part of my paper, I do not believe these dealers will be so hard pressed financially as to be compelled to unload what they already own, they will probably not desire to load up with a large number of collections until they are pretty well aware how things are going to go. Before they are able to readjust themselves and to take action, we here in America will have the opportunity to acquire some of the choicest treasures of books and of objects of art that are now in private hands. We shall, moreover, be doing a service to the widows and orphans by being able to offer them cash for their treasures, cash which many of them will need badly, and which they will regard as a godsend. From my personal experience, I can tell of a somewhat analogous case. This was the purchase of the Ehrenburg collection for the John Creerar Library. This collection had been the prized possession of Dr. Ehrenburg of the University of Würzburg. When he died rather suddenly he left a widow and a small child in very comfortable circumstances. I heard of this collection accidentally, visited Mrs. Ehrenburg and found that on account of the library she had to have much larger apartments than she wanted, and that she much preferred to let an American library have her collection, thus keeping it more or less together, than to turn it over to a European dealer. I bought the collection, as Dr. Andrews can testify, for about \$500. I could have turned around and sold it to any dealer for about double that sum. It is of situations like this that I am thinking when I say that perhaps as a result of the war research facilities in American libraries may be increased. For example, the Hohenzollern collection of German history at Harvard has nearly everything obtainable in the ordinary way and through ordinary trade channels. What it lacks are those older publications that are entirely in the possession of public institutions and in the hands of a few families who have held the material for generations. It is only as a result of a cataclysm such as has been taking place in Europe that America can hope to obtain any of this material and thus strengthen collections for scholastic re-

search in this country and make us less and less dependent upon European libraries. I think that measures ought to be taken by the library world analogous to those taken by the commercial world in order to be prepared for action as soon as the war is over. We ought not to wait to plan until the war is over, because recuperation may be quicker than we expect—let us hope that it may be.

If we are wise, we may be able to make our libraries along many lines as great as the greatest collections of Europe. What research facilities our libraries now offer and wherein they are lacking, others after me are to discuss. Only, this much is certain, that for practically all fields of history

and literature except those immediately pertaining to this country, we are still far behind even many of the minor libraries of Europe. It has not been our fault. Much has been done in recent years, but we have been handicapped by the fact that most of these European libraries have had centuries in which to develop and have often acquired material for an infinitesimal proportion of the expense which we should have to undergo now. This war may give us the opportunity to make up the loss of these centuries, and perhaps the old adage will be found to be correct:

"Yet true it is as cow chews cud,  
And trees at spring do yield forth bud,  
Except wind stands as never it stood  
It is an ill wind turns none to good."

## CAN THE AMERICAN LIBRARY SYSTEM BE ADAPTED TO CHINA?

BY S. TSU-YUNG SENG, *Assistant Librarian, Boone University Library,  
Wuchang, China*

To the ear of the West speaks the voice of the East! What future hand is to turn the pages of knowledge that China may read and send forth the modernized relics of her arrested science and art? What she speaks for is the crumb from the loaf of educational benefactors; a penny from the world that she may return millions!

The library in China is the subject of my paper, for what factor could mean more to the advancement and civilization of a country, than these store-houses of stimulating volumes?

### OLD CHINESE LIBRARIES

Libraries, in the old Chinese conception, are not a novelty, but they are considered such from the Western point of view. In China they meant a store-house where books were kept and hidden away, the main idea being to preserve the "literary treasure" of the country. The existence of libraries can be traced back in the official records of early Chinese history. In the Chow Dynasty, for instance, Lao Tan, the founder of Taoism and the respected teacher of Confucius, served as a librarian and custodian of the archives in 553 B. C.

Again, after the downfall of the first Chinese Empire, Liu Pan, the founder of the Han dynasty, upon his victorious entry into the capital in 206 B. C. directed his minister, Hsiao Ho, to collect the books and state papers from the library and keep them in a safer place.

### LIBRARIES OF THE PRESENT TIME

Sze Ku, the present national library, was modelled after that of the Han dynasty. The contents were collected for the sole use of the state officials and the princes of the royal family, and were more or less looked up to by the public as a precious possession. It is a most regrettable thing to record that, during the Boxer outbreak of 1900, many of the treasures in the national library were taken away by the Japanese, British, French, and German troops to their respective countries, and more were burnt by them.

In addition to the national library there are provincial libraries as well as club and subscription libraries. The latter were established by the various craftsmen in their guilds. The customs officers also have small libraries for the members of their

staff. Occasionally, in some of the Buddhist temples, are to be found libraries made up largely of Buddhist books and Sanscrit scriptures. Naturally there are private libraries for individual use. I recall my great surprise, on visiting a very extensive private collection of manuscripts of the Sung dynasty, to find that it contained early medical and Buddhist books, old Japanese folios and rare editions.

In connection with the establishment of schools and colleges, there has been a considerable effort to make collections of books for their libraries. These collections have been purely academic, and selected for the sole purpose of meeting the immediate needs of the schools.

Though I could mention a number of libraries in my country, there has never been a free circulating library of any sort. The collections in the provincial libraries are too one-sided and also too small to be considered as state libraries; even their existence is very seldom known. The books are not to be drawn by readers, their use having been traditionally regarded as a privilege, not as a right of the people. They have, however, gone so far as to install the one-penny admission plan. Apparently the founders of these institutions have never realized the function of a public library. To my mind the real modern library is not for the literati alone, not for the scientific man entirely, nor yet for the fortunate few who could well afford to have a private collection, but should stand with open doors as an institution for self-education to train future Lincolns, Grants, Carnegies and Edisons. It should be a center of light to the whole community, from the smallest child who comes in to look at the pictures to the mature man solving the problems of business life.

#### CLASSIFICATION OF BOOKS IN CHINESE LIBRARIES

As to technique in the Chinese library, there is much to be said. All the books in the state libraries are classified in the same way as those in the national library, under the following headings: Classics, History, Philosophy, and Belles lettres. Under the head of classics are found the

books written by or about the great sages, Confucius and Mencius, either in prose or poetry. Under the history heading are the histories of China. Histories of foreign countries are entirely excluded. The third group includes philosophical works, natural and social sciences, and useful and fine arts. Literature, poetry and miscellanies are entered together, and whatever is difficult to classify is put under the last heading, *belles lettres*. The inadequacy of the system of classification can be appreciated from this fact that the grouping is too general. Book selection, however, is careful, and in general well made. Books containing radical ideas or critical views of the Imperial government are rejected, not to mention the "trashy" books and most fiction. Should an author once be condemned by the government, his books would not be accepted again under any circumstances, regardless of their value and usefulness. For this reason the works of many talented writers have never been admitted to the library.

The well-known classified catalog of the Chinese national library, printed with critical notes, is in 500 volumes. The abridged edition intended for the use of the state libraries, as a guide to their collections, is printed in 120 volumes.

The arrangement of historical books is very difficult. The average Chinese historian treats of important events arranged according to the year of the emperor who ruled. Each new emperor has his own name and his own date. Sometimes a ruler changed his name several times during his reign. I recall an instance where the emperor's name was changed on one occasion because of an earthquake, and then again because of a famine or plague. Whenever the royal name was changed, a new date was adopted. If the historian recorded events in the fifth year of the emperor, it might be recorded as having occurred in the first year of the title "so and so," though the emperor known by the two different names was one and the same person. This frequent changing of dates and names complicates matters seriously for the student. It is difficult, if not impossible, for a Westerner

to get an answer to a question like this: What happened in China in 1815?

The assignment of subject headings is a serious problem to Chinese librarians. Though we have a few tools like Bun Tsao Gong Mu, "Chinese herbal book of nature," Dze Woo Min Sze Tu Cow, "Names and pictures of vegetables," San Tsai Tu Huei, "Pictorial book of nature," Er Yah, "Ready guide," etc., we greatly need aids in religious, medical, legal, and scientific subjects. There is no standardization of terms in Chinese. Many simple words, as *industry*, *liberty*, *girl*, etc., have four or five terms to interpret them, and one term is as much used as another. Which one to adopt is something the librarian must decide. Again many new words have not been translated into Chinese, and the language is so constructed as to make it impossible to attempt to use foreign words without serious confusion.

#### VARIOUS AIDS FOR CATALOGING AND FILING

Though there is no alphabet in our language, our system of pictorial symbolism is not without advantage. Let me illustrate by a few instances. We have a symbol standing for the word *field*, and by adding another symbol, representing strength, it becomes a man ready for field-work; by adding field to it, *i.e.*, double field, it means comparison of fields; by putting the word *grass* above it, we have the symbol representing grain, and so on. One who sees any of these words, or symbols, providing one knows the sign for field, will have no difficulty in understanding that each has something to do with field. No doubt it was the realization of the difficulty due to the lack of an alphabet that caused our forefathers to devise the following three valuable methods by which Chinese words are grouped together. They might be used for filing in the library.

1. *Natural Method.* Words having similar meanings are placed together under distinct heads as: heaven, earth, moulds, hills, waters, plants, trees, insects, animals. The key to this system is the "Ready guide," which was credited to Chow Kung of the Chow dynasty about 1100 B. C. The present form was revised about 280 A. D.

This method may roughly be compared with the classified catalogs of some of the American technical libraries. Anyone unfamiliar with the word belonging to a certain class, would be unable to use it, and its inconvenience and difficulty for the average man prevents its adoption in libraries.

2. *Rhythmic Method.* A grouping of words is made according to their similar tones. The number of tones in the Tong dynasty was 206, and was reduced to 160 in the present form. Pa Wen Yung Fu, "The treasury of good sentences," in 120 volumes, and Ping Tze La Pen, "The classification of dissyllables" in 100 volumes, are the two best aids. They have not been adopted in libraries, because of the lack of a standard phonetic system. Only those who have written poetry or understand the technique of poetry may find them of any help. The people from Canton or Sze-Chuan would not be able to use either of these books, for though the written characters are the same in all parts of China, their pronunciation varies so in different provinces that the natives find it impossible to understand each other.

3. *Analytic Method.* In this, the arrangement is made according to the radicals or keys. The number of radicals in Lu Soo Bun Yi, "Origin of the six modes of writing," was decreased from 566 to 360, and was again reduced to 214 in the Emperor Kang Hsi dictionary. Any word can be formed from 214 groups. While the lack of an alphabet causes very great inconvenience, still we are fortunate in possessing these radicals, for in them we find the solution of the problem of cataloging and filing of Chinese books. For example, the symbols for the words *brightness*, *yesterday*, *time*, *warmth*, and *summer*, have the same root or key as the word *sun*, under which they are to be filed, one after the other according to the number of strokes.

Occasionally a difficulty arises in selecting the right radical of a word. For example, we have a symbol which means *unite*. Add the symbol for *mouth* to it, and it means *bite*. If the symbol for *woman* is added to it, we have the word *handsome*. By adding the symbol for *dog* to it, we have formed the symbol for *crafty*, and so

on, through an innumerable list, in which we find that all the words have the beginning symbol for *unite*, but in each case it is not the key. No word can be found in the Emperor Kang Hsi dictionary under the symbol for *unite*, but only under its component parts. No cross references whatever occur. This is one of the defects of the dictionary plan. In forming a modern catalog in a Chinese library, there must be cross references. They are not only necessary, but essential.

In cataloging the names of Chinese authors we might use the "One hundred surnames" as a guide. It is commonly used in China. Every boy at ten begins with this book and learns it so thoroughly that he can recite it from memory. The names could be filed according to the order in which they came, but there would arise the objection that the adult searcher would be compelled to drill his memory so as to remember every name on record, something that very few people are capable of doing. Further confusion would be bound to arise, should the subjects and title cards be filed together with the main author cards. The third objection to its adoption in the library is that it is inadequate because there are many new names that have not been entered into the "One hundred surnames."

Moreover, the average Chinese writer does not stick to real names. The more he writes, the more numerous are his pseudonyms. The difficulty could be overcome, of course, provided there were aids to assist in finding these names. To be sure we have biographical dictionaries, but they are so inadequate and crude that they could serve no purpose. To make the Chinese library efficient, there is need for some such help as the "Dictionary of pseudonyms," "Lippincott's universal biography," or "Century dictionary of proper names," in Chinese.

I have shown that the Chinese library system is unable to meet present-day needs, but that does not assume that we should give up our old system entirely and adopt a new one. If we proceed thus, we shall create an immense amount of opposition. The failure of our reformers, who, while introducing new ideas, new theories, new

systems, overlooked the fact that much of our system should be preserved, may serve as a warning to every Chinese librarian. The good points of our system should be utilized, harmonizing with the American ideas. There is no one perfect plan for a whole universe. One system, though ideal in one place, may be found of no use in another. The nearest to an ideal system is that which suits the conditions best and serves the people most efficiently.

#### ADOPTION OF THE AMERICAN LIBRARY SYSTEM

Can the American library system be introduced in my country? The answer is yes, but with many modifications. Even in this country there is no absolutely uniform system in the libraries. Each locality has its own special needs. The library of the old plan cannot be the people's university. The card catalog must be introduced. An inadequate arrangement by class should give place to a simple and up-to-date decimal classification. After studying various systems, I consider the Dewey Decimal Classification the best for our use because of its simplicity and comprehensiveness, and especially since the Chinese students have learned Arabic figures in solving mathematical problems. The "A. L. A. subject headings" will be of immeasurable assistance to our libraries, as an aid in unifying terms. It has been my cherished desire to translate both Dewey's classification and the "A. L. A. subject headings" into my native tongue. The cataloging system should be simple and usable, so that the ordinary person may find the same help as the intelligent student. To solve this great problem we need a Chinese Dewey, and to remedy the inconvenience of the indexing and the cataloging we need a Dr. Poole and a Cutter.

Should Chinese books be used in the library for circulation, better bindings would have to be used and the paper necessarily would have to be of a better quality. Soft paper covers would then give place to strong cloth ones. Fortunately some of the publishing firms have their books published and bound in semi-foreign style, but even these would not be of much service to the

library. The Chinese and Japanese books are very thin, so thin that they cannot stand on the shelves, as do the European books, but must be laid flat, one on top of the other. It will be a duty of the Chinese librarians to demand that library bindings be used, and that different parts of the book be bound in one volume instead of in the usual pamphlet form. This question of binding and serviceability has been a strong objection to the circulation of books in China. After one or two circulations, the books would return as waste paper.

#### TRAVELING LIBRARIES

A magnificent marble library building with a large collection of books is indeed a pride to a community and an honor to a nation, but it is not a necessity in China at present. Aside from the question of cost, it would hinder the movement, because of the people's ignorant awe of grandeur and imposing appearances. Of most importance is an efficient staff to carry the great cause forward. Instead of waiting for the readers to come to the library, traveling libraries should be established in the different localities. They can be worked out on an extensive scale, but at a relatively small cost.

#### BOONE UNIVERSITY LIBRARY

In order to give my readers an example of this plan, I call to their attention Boone University Library in Wuchang, China. This library was established through Miss M. E. Wood by the gifts of American friends. It has two departments, with a collection of about 6000 volumes in the English department and 9000 in the Chinese department. The former is largely made up of theological and literary books; the latter, of classics and histories. Though the collection is too small to meet all the needs of that city, the books have been well selected. At first the people did not come with the purpose to read, but from sheer curiosity. Even the students of the university were reluctant to believe in its usefulness. Many a time the librarians were greatly discouraged, and the heads of the university doubted whether the library could continue. Gradually but steadily the students began to appreciate it and to draw

out books. The work with the people in the outlying districts has also been encouraging. In 1914 only three traveling libraries had been placed in government schools, where books could be taken out for home use, but the number has grown into ten such stations, as the last year's report shows. This is a bait. More people will be drawn into the library when the privilege is understood and the reading habit is formed.

The university extension lectures on various topics such as "How disease is carried," "Prevention of blindness," "International law and neutrality," etc., held in the library auditorium, have done much in advancing the library movement. The average attendance of these meetings is between four and five hundred. Both before and after the lecture the students serve as ushers to conduct the audience in separate groups through the library to view the arrangement and classification of books on the shelves, and to explain the purpose of the library. Most important is the influence that is exerted—the seed sown in the minds of these students, who will be the leaders of Chinese thought in the reconstruction period that is before us. Possibly no other agency is so capable of carrying to remote parts of the country the idea of the library as a factor of public education and progress. An institution such as Boone University Library, with a collection of well selected books and an up-to-date American system would, with the willingness of its officials to serve, prove my people's university.

At the traveling library branches, with workable collections, Boone Library will have an important rôle to play in introducing the American library system. Considering the progress and development already made, I am full of hope that traveling libraries, in charge of trained assistants, may be established in the treaty-ports along the Yang Tze valley, an extent of one thousand miles. Another step will be to work with the so-called club and subscription libraries, which will gradually develop into larger ones. Then will follow the organization of provincial libraries.

The exhibits of American library meth-

ods at the Panama Exposition turned over to the Chinese Y. M. C. A. at Shanghai, will be of immeasurable help in the future of our libraries. I learned recently that Prof. Robertson of the lecture department will use them to conduct a campaign in the library movement throughout the country.

Some time ago Andrew Carnegie formed a committee with Dr. Eliot at its head, to investigate the advisability of establishing a library on the American plan in the capital of China, but unfortunately this noble idea was laid aside, if not indefinitely postponed. Had the investigation of the liberal educator proved satisfactory, the nation would have applauded him with a lifelong fidelity.

The present government is beginning to recognize the importance of the library as an educational factor and has conferred upon the writer this present scholarship as a student in the Library School of the New York Public Library. One more student will be sent next year to continue the study of such administration.

I have tried to show that the Chinese library is still in the mediæval period; how the American system can be advantageously adopted and how Boone can be a model of the American library in China. It is in this cause I appeal to you, the citizens of the land of libraries; to you, librarians and lovers of humanity. The eternal gratitude of a nation stands awaiting to be won!

To my people I give forth a vision I have had; the vision of a new China where education shall be free to all; where the best books shall be available to all; where the history, art and science of our civilization and the civilization of the West shall be gathered into libraries and museums, and form a background for the new civilization toward which we have set our faces and our hearts.

---

The choice of books, like that of friends, is a serious duty. We are as responsible for what we read as for what we do. The best books elevate us into a religion of disinterested thought where personal objects fade into insignificance, and the troubles and the anxieties of the world are almost forgotten.—LUBBOCK.

## BELGIAN LIBRARIES

UNDER the title "Das Kriegsschicksal der Belgischen Bibliotheken" (Belgian libraries in the war) Dr. Fr. Milkau has a leading article in the January-February, 1916, number of the *Zentralblatt für Bibliothekswesen*, which contains a wealth of valuable and interesting information. Dr. Milkau was sent to Belgium in March, 1915, by order of the Prussian Minister of Education, to inspect the libraries of that country, to learn how much they had been damaged or were endangered by military operations, and to call the attention of the military authorities to the importance and value of the various collections. His mission had the fullest sympathy of the German governor of Belgium, Gen. von Bissing, who gave Dr. Milkau every possible assistance. On his return to Berlin in June, Dr. Milkau turned in a formal report to the Ministry. The article in the *Zentralblatt* was written in response to a request from library circles generally to hear more about the subject.

As Dr. Milkau does not confine himself to the limits prescribed by his title he has given much that will be of value as permanent record of Belgian library work, particularly as there has been so little published, even in Belgium itself, concerning its many libraries and the rich store of books. The *Annuaire des Bibliothèques de Belgique*, published 1912 by Deraedt-Verhoye in Roulers, the one and only volume of this enterprise which has yet appeared, was the only guide Dr. Milkau could find to give him an idea of the number and importance of the Belgian libraries. The list he gives in his article is made from first-hand investigations, hampered naturally by war time conditions, which rendered authentic statistics regarding the number of books and items of note regarding more valuable manuscripts very difficult to obtain.

Brussels alone has a list of 37 libraries, which does not include public libraries ("People's libraries" as they are called in Germany and on the Continent generally) or public reading rooms. The list comprises the scientific libraries of general and special knowledge, the libraries of scientific societies, and the libraries of the various governmental departments. This latter

group is of a high order of importance in Belgium, their collections being of unusual size and range of subject. One important private library is mentioned—that of the Duke of Arenberg.

Chief among the Brussels libraries are the Royal Library with 700,000 volumes, the Bollandist Society's Library of 250,000 books, the library of the Foreign Ministry with 100,000, and the War Department and Chamber of Deputies collections of 100,000 and 125,000 volumes each. The Royal Academy of Medicine has a library of 100,000 volumes, and the Ministry of Arts and Sciences as well as the Royal Conservatory of Music have notable libraries but slightly smaller than these others. It was not possible to get the figures for the Arenberg library as the building was closed and most of the books, as well as other treasures, had been taken away to a place of safety. Altogether, these scientific and technical libraries of Brussels represent a total of over two million volumes, not including many rare parchments and manuscripts.

For the provinces Dr. Milkau lists 73 libraries, among them 4 university libraries; 15 libraries attached to theological colleges and seminaries; 22 important municipal libraries; 3 museum libraries; 19 convent or sacred order libraries, and 9 large private collections. Of these the following are the most important numerically as well as in quality: the University and City Library in Ghent with its 450,000 volumes; the University Library in Lüttich (405,000); the City Library in Antwerp (130,000); the Central Public Library in Lüttich, and the Municipal Libraries in Tournai and Mons. Chief among the libraries collected by the sacred orders are the Benedictine Library in Maredsous, and the collection of the Jesuit Convent in Enghien. Of the three most noted private collections in Belgium, those of the Prince of Ligne in Beloeil, the Vicomte Ghellinck in Elsegem, and of M. Raoul Warocqué in Mariemont, Dr. Milkau was able to visit and inspect the first and last named. Elsegem was closed, its chief treasures hidden somewhere and its possessor away.

Dr. Milkau's list does not attempt to include a perfect network of small public li-

braries scattered thickly throughout Belgium, nor many collections belonging to churches and communities in the rural districts.

Chief among the provincial libraries in importance as well as numbers are the Louvain collections of the University and the Theological and Philosophical College, with a total of 320,000 volumes. The complete destruction by fire of the valuable collection of the University Library is counted among the great tragedies of the war.

Belgium possesses great stores of books, the older literature, although not the most ancient, predominating. Dr. Milkau was struck by the lack of rare older works side by side with so many valuable volumes from the seventeenth and eighteenth centuries, but a little study convinced him that Belgium's chief treasures of antiquity wandered off to Paris during the French Occupation following the Revolution, and have not yet been restored.

Dr. Milkau found the libraries noteworthy for the excellent physical condition of the books, the evident care and attention given the binding, and the prevailing neatness of the cataloging work. The American decimal and card catalog systems, generally newly installed, were found almost everywhere. Every opportunity was given the student for serious work, but Dr. Milkau found that the Belgian libraries had made little provision to interest the great mass of the people in reading and study. Newer methods of interesting the general public, such as can be found anywhere else in Europe or America to-day, did not seem to be practised or known in the Belgian libraries. The librarians acknowledged this and confessed that the weak point of their library system lay in the very small salaries paid even the highest officials, making it almost impossible for a man to devote his whole time and energy to library work. The books are there if anyone wants them, but little effort is made to get people into the libraries, to awaken a demand for better class reading. Another defect in the Belgian system is the meagre appropriation, when the general wealth of the country is considered, made for accessions of modern books. The only libraries that Dr. Milkau

found well provided for in this direction (he is dealing here, naturally, with conditions before the war) were the ministerial or governmental libraries. There is also a great lack of modern buildings, fireproof structures built for library purposes. The writer believes that possibly the deplorable catastrophe at Louvain might have been averted had the valuable books there been housed in a library building such as can be found in many other European cities.

Excellent care is given the collecting of local literature in the various chief provincial cities, something quite unique in the thorough way it is done in Belgium.

Always with the exception of Louvain, the Belgian libraries have suffered little from the war. There have been losses of collections in Dinant, Dendermonde, Mecheln, and Ypres, but in other places which were under fire for many days, the library loss has been scarcely noticeable. A curiosity of the bombardment of Mecheln is the incident of a piece of a shell, about the size of a nut, which bored its way through two thick tomes and came to a halt in the center of a third. And this was the only damage done in that particular library.

Belgian librarians who stayed at their posts throughout the stormy early months of the war—some did, although many fled the country—are now working hard to open the libraries on full time again and continue the routine and catalog work. In many cases they are aided by trained German librarians, to whom the military authorities have given leave of absence from their regiments for the purpose. Dr. Richard Oehler of the Bonn University Library (now Lieutenant Oehler of a Landsturm regiment) has been put in charge of the Departmental Libraries in Brussels and is rapidly restoring order in those collections.

Dr. Milkau speaks feelingly of the kindness and cordiality which, with few exceptions, was accorded him by the men in charge of the libraries which he inspected, and says that the value to the libraries of his mission, and the good will in which it was undertaken, was understood everywhere.

## REORGANIZATION PLANS OF THE CHICAGO PUBLIC LIBRARY

IN the Chicago Public Library *Book Bulletin* for April the first article, under the caption "Wanted—one million dollars," is an appeal for gifts to provide the branch buildings needed to carry out properly the work of the Chicago Public Library in all parts of the city. In the *Christian Science Monitor* for May 3, Mr. Legler's plan of decentralization is more fully described.

"Reorganization of all the branches of the Chicago Public Library, on lines original with this city and adapted to its peculiar needs, is under way," says the writer in the *Monitor*. "The needs in this particular instance are comprised in the necessity of covering a territory of 200 square miles within the city limits. To care for this broad field a decentralization of distribution is planned. It is proposed to erect half a dozen big branches at strategic points, give each the same thorough equipment, and make it the center of its own system of smaller branches. The main library downtown will continue the hub of the city's library work, the dominating center in fact of half a dozen library systems.

"The better to appreciate the possibilities of this plan it will be well to look into the present means the Chicago Public Library is using to cover its wide expanse. Its equipment is not like that of most great cities. Besides Chicago, only Boston and Milwaukee of the big cities have not filled out their branches by Carnegie funds. Labor union sentiment here is against the Carnegie libraries and so the city has preferred to take care of itself. The branch libraries number 37. Of these only three are housed in buildings belonging to the Public Library. Of the rest 19 are in park field houses, six in school buildings, two in institutional establishments, the Hebrew Institute and Lincoln Center, and seven in rented quarters. Librarian H. E. Legler says of these conditions: "The last named, having been placed with special regard to need and convenience, enjoy the largest circulation of books for home use, but involve an annual outlay of \$10,000 for rentals. Another disadvantage is the insecurity as to permanence which attaches to leased

premises. Moreover, it is difficult to provide adequate library service in quarters not planned for the purpose.

"What is wanted is a set of five more big branch buildings, making two on the south side, three on the west side and one on the north side; and scattered around them 40 small branch libraries, dependent on the big branches. One of the big branches, the sixth, or perhaps better, the first, is already up. This is the Hiram Kelly branch at 62d street and Normal avenue, which can be used as a central branch.

"Each of these nucleus branches, in Librarian Legler's plan, will contain a complete library within itself, so that except for calls for rarely used volumes it will be independent of the main building. Its collection will comprise a complete reference library, as compiled from demands at the main building, and total some 50,000 volumes. A motor delivery car will be attached to it, to facilitate the delivery of books to the smaller branch libraries tributary to it. The cost of such a central branch library is estimated at between \$200,000 and \$250,000, probably the latter.

"The smaller branches are likewise to be housed in their own buildings, according to Mr. Legler's plan. Their collections will number 10,000 volumes each, and as previously indicated, they will draw on the nearest large branch for their further needs, or if necessary, in rare instances, by telephone on the main library. Each is to cost not to exceed \$25,000, including purchase of well located site and erection of suitable building, providing approximately 5000 square feet of floor space and containing separate reading rooms for adults and juvenile readers, story hour nook, reference facilities and circulation department—practically all the accommodation except auditoriums included in branch library buildings, Mr. Legler notes, which cost two to six times this expenditure.

"This plan will require a good deal of money. Wealthy Chicagoans have been liberal in their giving, and to them the library is turning for funds. Mr. Legler estimates that a million dollars will build the 40 small branches.

"The big branches can be taken care of in a bond issue. On several occasions the city council has gone on record as favoring library bond issues, one for \$500,000 and again for \$300,000, and it is believed that it would accede to the \$500,000 issue needed to supply the big branches if they were needed to complete the municipal library system.

"Already a start has been made on the smaller branch idea. Plans have been adopted for the initial library of this type, and they will be of interest to librarians in general. This branch is going to be on Kimbark avenue near 63d street, in Woodlawn. The plan for an auditorium has been dropped. The schools now provide auditoriums enough. By its situation between other structures and lack of lawns, the new branch will find administration costs reduced. Special efforts have been made to obtain an artistic treatment. Young architects have been invited to submit plans in the hope that the opportunity will develop originality of treatment.

"The long room, 44½ by 125, has been divided in half, down the middle, for adults on one side and intermediates on the other. At the entrance are the administration quarters. At the rear the children's room, specially designed for them. This room will run across the end of the building. Across the rear wall a series of panelled windows will bring light far into the reading rooms, for the children's rooms will be open generally, except when screened in for story hour or other occasions. By a mezzanine floor in front, rest and work rooms for the library staff will be provided.

"Advantages to the public are seen by Librarian Legler in such a reorganized branch system as is here outlined. The accessibility of skilled librarians all over the city, acquainted with the facilities of the public library, is an important consideration."

---

There are people who at times have to make a choice between books and bread. There are times when the bread needed is—books.—KATE LANGLEY BOSHER.

CARNEGIE UNITED KINGDOM  
TRUST—SECOND ANNUAL RE-  
PORT

THE second annual report of the Carnegie United Kingdom Trust, for the year ending Dec. 31, 1915, discusses at considerable length the formation of a more definite future policy for the Trust, and records the various experimental schemes through which the policy is now being tested. The total financial obligations assumed by the Trust from the Carnegie Corporation of New York, in respect to actual promises made by Mr. Carnegie or the Corporation, amounted to £212,443. During the two years of the Trust's existence, this sum has been reduced to £131,046, and disbursements for new buildings would have been much greater during 1915 if the scarcity of labor and the high price of materials had not stopped practically all building operations.

In an effort to determine how best to carry on Mr. Carnegie's benefactions in aid of the library movement, Professor Adams of Oxford was authorized to survey the library field and to prepare a report on library provision and policy. This report has been published and has been widely discussed in library periodicals. After careful consideration of its content, the executive committee of the Trust has decided to carry on its work under four main heads: (a) Rural library grants; (b) grants for special libraries of a national character; (c) loan charge grants to public libraries; and (d) grants for public library buildings.

A number of experimental schemes for the establishment of a system of circulating libraries in rural areas in Scotland have been started, varying somewhat in detail, but with the same underlying principle of circulating, from one or more centers, collections of books to the villages in a fairly large area, in general using the village schools as the final distributing units. Great care has been taken in the selection of the books, and the headquarters library is kept at Dunfermline. While this increases the cost of carriage and in some cases causes delay in the interchange of books, the committee has decided to center

control there for the present that it may obtain first-hand knowledge of the administrative problems involved. Moreover the districts in question being exceedingly poor, the expense must be borne largely by the Trust, and better facilities for administration can be provided at Dunfermline. Boxes of books are sent out every six months from headquarters, where they are in charge of a "superintendent librarian."

"In England, schemes have been inaugurated in the counties of Staffordshire, Nottinghamshire, Dorsetshire, Westmorland, and Yorkshire. The first named is under the control of a statutory committee, the County Education Committee; the second named is also under a statutory committee, and is to be worked under the existing Library Acts. The last three mentioned are controlled by non-statutory committees, and are to be financed eventually by means of local subscriptions.

"In Scotland a scheme under the direct control and supervision of the Trust has been started for the Orkneys, Shetland, and the Island of Lewis, and a scheme for a county area is under immediate contemplation, which will have as its basis the existing Library Acts."

In Ireland a peculiarly difficult situation existed, for a number of cases were found where buildings beyond the needs of the district and its ability to maintain, had been either built or promised. After careful study of the situation in the Newcastle West and Rathkeale areas, an "organizing librarian" was appointed to take charge of the work in that district. Under his guidance, library sub-committees now meet regularly, libraries have been put in order, books have been properly cataloged, and the Central Library in Newcastle West is likely to become an efficient center for distribution to the branch libraries in the entire area. The tendency in rural Ireland has been to look upon the library as a village hall rather than a place for the distribution and reading of books, and the opinion is held by many that "so long as the real function of the library building is preserved, its use for carefully chosen recreation purposes, with a due admixture of lectures upon literary subjects,

may greatly enhance the influence of the reading facilities provided."

In connection with the repository library at Dunfermline, steps have been taken to make a small museum of the different types of boxes and other machinery used in the various experimental schemes for conducting rural libraries, so that others contemplating projects in rural library provision may profit by the experience of the Trustees.

Following out its policy announced last year, of assisting certain libraries of a special character intended for the use of sections of the community at large, the Trust has given further financial assistance to the Co-operative Reference Library of Dublin. It has also had printed a large number of books for the blind which have been made over to the National Lending Library for the Blind, and has assisted in obtaining larger and more commodious quarters for the library in Tufton street, Westminster. Another important step taken has been to assist in establishing a Central Lending Library for Students for the use of all educational organizations of working men and women. The Trust has agreed to meet the cost of the necessary initial outlay on books, premises, etc., and to assist in maintaining the library for five years, while it is in the experimental stage. Cheap textbooks will not be included, but the more expensive reference works which are beyond the resources of the students, will be bought. Assistance has also been given or promised to certain other established libraries, and another plan now under consideration is the institution of a system of traveling libraries for the British mercantile marine.

It has been found that a number of libraries, established before the Carnegie grants for buildings were inaugurated, have been so crippled by the annual charges for interest and repayments that their real purpose, to furnish books to the public, has been very much curtailed. To a number of these the Trust has made capital grants, with an offer of further capital grants if equal sums can be raised locally. These grants are made on condition that the library tax levy shall not be reduced, and

that the increased income thus set free shall be used for purely library expenditures.

Grants of money for the erection of public library buildings will be continued, though probably not to the extent that has prevailed in the past. The Library Association has promised its co-operation in investigating local conditions, and the Trustees hope in the future to avoid the "overbuilding" mentioned by Professor Adams in his report. In giving grants the executive committee has also decided to make it a rule that 10 per cent. of the grant shall be withheld until a certificate is furnished showing that, on its payment, no debt will remain on the building.

The remainder of the report describes certain miscellaneous applications for aid already received, and discusses the formation of a policy in regard to such applications in the future.

Appended to the report is the text of the trust deed; statistics compiled from Professor Adams' report; a detailed description of the rural library scheme for the North of Scotland, of one applicable to England and Wales, and of those in operation in Dorsetshire, Westmorland, and Yorkshire; and the financial accounts for the calendar and fiscal year 1915.

#### NOTES ON SOME SHAKESPEARE EXHIBITS

No library this year has been too small to have its Shakespeare tercentenary exhibit, and in some of the larger libraries noteworthy collections have been brought together. In the main building of the New York Public Library an unusual collection of Shakespeareana, including many rare editions not possessed by even the British Museum, which owns the best single collection of this kind, was open during April and May. The exhibition was made possible by the generosity of collectors throughout the United States, according to acknowledgments made by the library in a pamphlet descriptive of the collection. The Lenox collection of Shakespeare's works formed the basis of this exhibition, which was divided into four sections. The first included the works of

Shakespeare, both plays and poems, issued before 1709. In the second division were put all the spurious works attributed to Shakespeare at various times, and all adaptations of his plays from Sir William Davenant's version of "Macbeth" (1674) to the "Coriolanus" of J. P. Kemble (1814). The third section was made up of the books which Shakespeare was supposed to have read or to which he referred in his plays and poems, and the fourth section included books containing allusions to Shakespeare or his works, from Greene's "Groatsworth of Wit," 1592, to the "First Folio," 1623. Later allusions to Shakespeare also have been put into this section.

"The Shakespearean festival" compiled by Jacqueline M. Overton, an interesting 22-page pamphlet with illustrated cover, was also issued by the library in connection with the exhibit. The list was intended to help those preparing to celebrate the tercentenary, especially those arranging celebrations with children in the schools and playgrounds.

In the exhibit at Princeton University, Shakespeare's biography was illustrated by pictures of places connected with his life so far as we know it, facsimiles of his birth-record and will, a volume of life portraits, and in the Hutton collection, a cast from the head of the bust in the church at Stratford. Of the sixteen plays by Shakespeare published before his death facsimile copies were shown, together with original copies of most of the important editions up to the year 1800, from the library's shelves. The characters of the plays were shown in several original sketches and paintings by George Cruikshank. The sources upon which Shakespeare's imagination worked to produce plays were shown in several editions from the W. A. Paton collection, contemporary with those with which the poet himself must have worked.

The Chicago Public Library arranged an exhibit of prints and pictures illustrative of the works and times of Shakespeare. In addition to the pictures shown on twelve double screens, interesting books associated with Shakespeare were placed in display cases. The headings on the bul-

letin boards of the Shakespeare exhibit will serve to indicate its character: Shakespeare himself, Stratford town, Famous Hamlets, Famous Shakespearean actors, Shakespearean theatres, Shakespeare's heroines, Scenes from plays, Book lists, and early editions. A list in one of the display cases which was found particularly interesting, included sixty-nine names of plants and flowers indicative of the plant lore and garden craft of Shakespeare.

The Boston Public Library, in addition to its book exhibit, printed in its quarterly *Bulletin* for March a 13-page list of the Shakespearean music contained in the library. The Jersey City Free Public Library prepared one of its excellent brief monographs, giving a brief outline of Shakespeare's life, and scarcely a library bulletin has come to this office in months that did not have its list of Shakespeare books.

In the Bodleian Library at Oxford was opened on Easter Monday the most noteworthy Shakespearean exhibition in England. Next to the British Museum, which found itself unable to organize a display of Shakespeareana, the Bodleian Library has the largest and most valuable Shakespearean collection in the world, and the exhibit was opened with a public meeting in which distinguished speakers took part. The exhibition was arranged in fifteen classes: Early works of Shakespeare; Quarto plays; Folio collections of plays; Eighteenth-century editions; Selected nineteenth-century editions; Specimens of translations; Adaptations of plays; Music; Some sources of Shakespeare's plays; Works ascribed to Shakespeare; Specimens of early references to Shakespeare; Autographs, genuine and forged; Lives of Shakespeare; Portraits and bust of Shakespeare; and Miscellanea. Two catalogs were prepared. The smaller one (6*d.*) contained Sir Sidney Lee's preface, an account of each exhibit, and one illustration. The quarto edition (5*s.*) added nine more illustrations, historical notes on the Bodleian, an essay on Shakespeare and Oxford by Archdeacon Hutton, and appendixes containing a transcript of Aubrey's Life of Shakespeare and other notes of interest.

The John Rylands Library of Manchester also prepared an extensive exhibition of the works of Shakespeare, his sources, and the writings of his principal contemporaries. An extended catalog of the exhibit, illustrated with numerous facsimiles and introduced with a sketch of the life and times of Shakespeare and a chronological list of the principal events in his life, was prepared to facilitate appreciation of the books displayed.

#### ADVERTISING CLUBS SEEK LIBRARY CO-OPERATION

EARLY in January John Cotton Dana, as chairman of the committee on libraries of the Associated Advertising Clubs of the World, started an active campaign for closer relations between the advertising men and the libraries of the country. The first move was to send a letter to the other members of the committee, announcing his purpose and calling on each member for frequent suggestions and also for criticism, whether adverse or favorable, of each step as taken. This was followed in a few days by a second letter enclosing the suggestive pamphlet "A nucleus for an Ad Club library" which had been prepared by his predecessor in office, John Renfrew of Los Angeles. There was also enclosed a statement on Ad Club libraries and books, by Miss Ball, of the Newark Library's Business branch. While recognizing the desirability of owning business books individually, and also collectively, as a club, she urged their ownership collectively through a public library as the most economical and in many ways the most efficient arrangement. That scant attention has been paid to this class of literature by many libraries she ascribed to the lack of interest shown in it by the business men themselves, and the slight demand they make on libraries for its collection. Summing up, she urged advertising men to do four things: "First, investigate what your public library contains along business lines; second, build up a business department in it, if not already there; third, make it widely known; fourth, use it."

The third letter, sent to the committee the middle of February, accompanied some

printed material on special libraries, the business branch, books for business men, the proper field of the public library, etc., and urged the Ad Clubs to use their local libraries and to work for the establishment of business collections or of business branches. This letter also urged the publication in some widely read periodical of an article on the work the Ad Clubs do in promoting better advertising.

The fourth letter was sent to public libraries in towns where there are advertising clubs, enclosing a roster of the Associated Advertising Clubs of the World and giving the name of the chairman of the local club's educational committee. This letter was intended to put the librarians in touch with the Ad Club officials in their own towns for the purpose of securing their assistance in calling attention to the books on advertising and business which each library might contain.

The association has a traveling representative whose business is to talk on better advertising methods to the business men in various cities, under the patronage of the Ad Clubs, and the next letter was sent to librarians in the towns where he was to speak, giving the date of his appearance and urging the co-operation of each library in making his talk a success.

Letter number seven was sent out Mar. 23 to one thousand libraries. It described briefly the organization and work of the Associated Advertising Clubs of the World; urged the librarian to get the help of the club in his town in promoting the wider use of books by business men; explained the work of the club's traveling representative; called attention to the books published by the A. A. C. of W.; offered copies of the list of books on advertising described above; and closed with a cordial offer of any assistance which the committee might render the librarians addressed.

The next step in the campaign was the sending out, by the general secretary of the club, of a circular letter and questionnaire to a selected list of libraries prominent in work for business men. This questionnaire was designed to gather information on the special provision for

business men made in these libraries, the methods of advertising business material and the extent of the collections of special interest to business men.

In response to the various letters sent to librarians, eighty-odd replies had been received by the first of May. Many requested copies of the "Nucleus of an Ad Club library" and expressed interest in the Ad Club campaign, and forty reported on specific work done for business men. Some of these libraries have been in close touch with the local advertising men for some time and have been working systematically to strengthen their collections of books on advertising and on merchandising generally. Others have followed the suggestions made by Mr. Dana in his letters and report an immediate response on the part of the merchants of the town. It is to be hoped that the other nine hundred libraries already circularized, and the seven thousand libraries in the country that still represent an unworked field, may recognize the opportunity for co-operation in which the Ad Clubs are now taking the initiative and may respond with their hearty support to the movement so energetically begun.

#### THE CELTIC COUNTRIES: THEIR LITERARY AND LIBRARY ACTIVITIES

UNDER the above title D. Rhys Phillips, who is secretary of the Welsh Bibliographical Society and librarian of the Celtic department of the Public Library of Swansea, Wales, has gathered together in compact form much information on the present status of the various branches of the Gaelic tongue. The monograph was first printed in the *Library Association Record* for March, 1915, has been reprinted in separate pamphlet form, and is now published by the author both in paper covers and in boards.

Some five or six years ago, according to Mr. Phillips' preface, "a note was sent to the Education Committee of the Library Association suggesting that, in bilingual areas, option should be given to substitute the local native language for either French or Latin in the syllabus for the professional diploma. . . . The suggestion

was discussed and accepted by the Education Committee and was sent as a recommendation to the Council of the Association." No action was taken upon the recommendation, but in the light of the present survey a better result is expected when the matter again comes up for discussion.

Mr. Phillips prefaces his booklet with a quotation from a speech of Lloyd George's:

. . . "God has chosen little nations as the vessels by which He carries the choicest wines to the lips of humanity, to rejoice their hearts, to exalt their vision, to stimulate and to strengthen their faith."

"There is not a more romantic tale," the author adds, "than that of the struggles of subject peoples to preserve their power of individual expression." He instances Bulgaria, which after five centuries of prostration under the heel of the Turk, began her emancipation by founding a Bulgarian private school in 1835. Alsace after 1870 determined to preserve her own language, and in 1911 French was placed on the same plane as the tongue of the conqueror.

Poland has an extensive national literature, in spite of her years under German and Russian oppression. Belgium raised the cry "Flemish for Flanders," and replaced French with Flemish and Walloon. The Celtic peoples have also experienced persecution, literary decadence and language revivals.

Wales is becoming more and more bilingual every year. In 1901, 929,000 persons spoke Welsh, and in 1911, 977,000, an increase of 48,000, in ten years. Even in the three Anglicized university colleges, the Welsh literary movement is strong. In poetry and prose Welsh literature has never stood so high as it does to-day.

"Some half a dozen of Wales' greatest native writers are university professors or lecturers—Professor Sir Edward Anwyl, one of the most capacious minds in Europe, has joined the great majority since the war began—and each in his own sphere is increasing the sum of knowledge and training new Richmonds for the Celtic field. Welsh literary activity is,

however, by no means confined to the seminaries of learning or even governed by them. The backbone of the movement is, and always will be, the country people. Professors and even librarians may change their allegiance. The guardians and inspiritors of the best literature of the principality have been colliers and quarrymen, blacksmiths and weavers, and its destiny lies in their continued steadfastness. The most typical Welsh poet we know is a humble collier, and the most cultured classical scholar is still without a degree.

"The novel is gradually taking root in the soil watered by Daniel Owen, and the drama now has its votaries in hundreds of towns and villages. The impetus and inspiration recently given by Lord Howard de Walden's company of Welsh players to a movement which began among the villages and received encouragement in the University Colleges—whence a new type of play-writer has emerged—mark a linguistic development, the effect of which we can hardly yet appraise.

"The golden age of the recognition of Welsh and Celtic literature in public libraries did not begin till 1876, when the Welsh portion of the library of Dr. Rowland Williams, vicar of Broadchalke, Wilts, and formerly vice-principal of St. David's College, Lampeter, arrived in Swansea. To this generous gift was added, early in 1880 and at a cost of £650, the rich Celtic collection of the Rev. Robert Jones, B. A., vicar of Rotherhithe. This included works in Welsh, English, Breton, Erse, Scots Gaelic, Cornish, Manx, French and German, and it was probably the first fairly complete Celtic library ever collected."

A special librarian has recently been appointed for this collection.

In 1891 the neighboring city of Cardiff purchased the library of the Rees family of Llandovery, the well-known printers. In 1896 the Welsh MSS. of Sir Thomas Phillipps of Middle Hill were bought for £3681 8s. 9d., raised mainly by subscription. The Welsh reference catalog, published in 1898, was an opportune contribution to the bibliography of Wales.

Other collections rich in native literature are the Salisbury collection at the University College of South Wales, the growing library of St. David's College, Lampeter, and the Royal Institution, Swansea.

"To the National Library of Wales, now being organized with great energy by Mr. John Ballinger, M.A., we can only devote a few words. Architecturally the glorious building that rears its head on the hill above Aberystwyth will be a dream of beauty, and we have no doubt that when its departments are complete it will reflect in a special manner all the activities and aspirations of the Celtic races. The institution is now the final resting place of a number of celebrated private libraries and of the great bulk of Welsh mediæval and other MSS. The debt of Wales to Sir John Williams, the munificent donor of these priceless collections, is indeed enormous.

"The movement for the collection of native literature has also been spreading gradually to the smaller towns and villages, though in many places there is still a lack of the vision and the faculty which true patriotism and common sense should always inspire. The county of Glamorgan has a number of workmen's libraries, and fairly extensive mixed collections are in some districts found attached to places of worship. Sight must not be lost of the fact that a large proportion of the peasants and workmen of Wales, especially the miners, have in their homes small private libraries of choice literature in both languages."

In Scotland little Anglicizing influence was at work in the Highlands until the end of the eighteenth century. When the children began to learn English, Gaelic was discouraged by parents, as interfering with English. In 1893 was held the first annual meeting of the Highland Association, whose objects were four-fold:

- 1—The teaching and use of Gaelic.
- 2—The study of Gaelic literature, history, music and art.
- 3—Revival of the native industries of the Highlands.
- 4—Encouragement of the wearing of Highland dress.

The report of 1913-14 showed the association had some 90 branches. In 1901 the total number of Gaelic speakers in Scotland was 230,806. By 1911 these had declined to 202,398. The patriots must bestir themselves to save the Highlands from literary decay.

There are valuable collections of Gaelic literature at Aberdeen, Edinburgh, Glasgow and Inverness. Books in Gaelic for home reading are available at the Glasgow district libraries. The largest library of Gaelic books ever collected is at Mountstuart, in the Isle of Bute, and was purchased by the Marquis of Bute from the Rev. D. Maclean of Duirinish, Skye. The country people take calmly the ignoring of their language, but a few enthusiasts in the towns try to keep it alive. There is no Gaelic newspaper published even in the Gaelic-speaking localities.

In Ireland there were in 1801, out of a total population of 5,200,000, some 4,000,000 who were Irish speakers. By 1911 the continued emigration had reduced the total of Irish speakers to 582,446.

In 1877 the Society for the Preservation of the Irish Language was formed, and in 1893 the Gaelic League was founded in Dublin. In 1911 there were 1631 National schools in which Irish was taught as an extra subject, and in 190 of them the teaching was bilingual. Lack of trained teachers caused the establishment of 18 Gaelic colleges, in Munster, Connaught, Ulster and Leinster.

Outside Dublin and Belfast, Ireland has few public libraries. The Irish collection at the Linen Hall Library contains 3000 volumes, though no original MSS. are included. Belfast has a fine Town Library, with five branches.

Mr. R. I. Best, the distinguished Irish bibliographer, says the Dewey decimal classification is employed at the National Library of Ireland, thus keeping together all works in the Celtic languages. This library issued in 1913 an excellent "Bibliography of Irish philology and of printed Irish literature," compiled by Mr. Best under the general editorship of Mr. Lyster, the principal librarian.

In Cornwall there were three persons

still living in 1904 who remembered certain words and sentences handed down by their parents. The purity of the Welsh language was saved by a vernacular translation of the Scriptures; the lack of a similar version sealed the fate of Cornish.

"Why should Cornishmen learn Cornish?" asks Mr. Jenner in the preface to his valuable "Handbook of the Cornish language." "There is no money in it, it serves no practical purpose, and the literature is scanty and of no great originality or value. The question is a fair one, the answer is simple. Because they are Cornishmen." Mr. de Montmorency urges the Education Committee of the County Council of Cornwall to restore the old language of the Duchy to its ancient prestige by teaching it in the schools. He adds: "A nation that has lost its language has lost much more than its language. Individuality and local patriotism are also lost. In the Isle of Man the old language has been gradually receding into obscurity for a century. Unlike Cornwall, it has an excellent monument of the language in the Manx Book of Common Prayer, 1765, and an edition of the Scriptures dated 1771-5.

"The best collection in the island itself is at the Douglas Public Library. The former librarian, Mr. J. Taylor, with praiseworthy zeal, set about collecting together the literature of Manxland, conscious of the fact that the native literature was diminishing and getting scarce in the market. Mr. W. Cubbon, the present librarian, says in a letter: 'We have here a very fine collection of Manx literature, that is to say, books concerning the Isle of Man in both Manx and English. Of these we have probably 1000, excluding tracts and MSS. . . . The only Welsh, Irish, and Scottish literature we purchase are those having some reference to Manx history, archæology, philology, etc.'

"The present number of Manx speakers living on the island is something under 2400, half as many as there were in 1901. It must not be inferred that no efforts are made now, at the eleventh hour, to lengthen the lease of the old tongue. The first Manx Language Society had its origin in the old

chapel of the Primitives at Peel during the winter of 1897-8, when a number of enthusiastic Manx folk decided to start classes in Peel for teaching the mother language. Others of antiquarian bent devoted themselves to the collection of literary remains, such as Manx riddles, rhymes, etc., remembered by the older people, and a column was set apart for them in the *Isle of Man Examiner*."

The Antiquarian Society now issues twice a year an excellent journal entitled *Mannin*, which forms a close link with members of Manx societies in other parts of the British Empire.

Most of the Breton authors are now at the front, with the exception of those debarred by age or ill health. The chief libraries of Brittany are at Rennes, Quimper, Nantes, Brest, Lorient, Vannes, Morlaix and Saint-Brieuc.

"The methods of internal administration, hours of opening, etc., vary in different towns according to the views of the municipal councils. At Quimper the library is open from eleven o'clock in the morning till three o'clock in the afternoon. The people are allowed to borrow books without fee, provided they are armed with a certificate of consent from the mayor, which is never denied to respectable people. The librarian enjoys a salary of 200 francs a month. The institution is closed during September. The Lorient Library is open from October to March, during the hours of ten to twelve o'clock in the morning, and from three to seven o'clock in the afternoon; from March to October the library opens an hour later in the afternoon, but it remains closed during August and on Mondays.

"The Municipal Library of Saint-Brieuc contains about 50,000 volumes, and is open on three afternoons per week—Wednesdays, Thursdays, and Sundays. The librarian, M. Selbert, is also a professor of history at the local Lycée. Books on the history of Brittany are popular, but the stock of books in Breton is not large. This is due, in part, to the fact that the subvention granted by the Conseil Municipal is but £40 a year, but partly also to the action of the publishers."

So remarkable is the vitality of the ancient tongue that its speakers still number a million and a half. M. Vallée, author of "Le Breton en 40 leçons," says the people are fond of their ancient literature, and have composed many war songs in Breton for publication in local magazines.

M. Mocaër points out that the attitude of the Church is favorable to the old language. Only Breton-speaking priests are appointed in Breton-speaking Brittany, and Breton is used to the exclusion of French in all churches. Breton literature was almost entirely religious in character until quite recently, and books on religious questions enjoy the largest circulation still. He says, further:

"We have a room in the French house, and we are loyal citizens of the Republic; but we claim to be French in the Breton way, and to arrange our things as we see fit in our own room."

In 1865 a Welsh colony was founded at Chubut in Argentina, under the leadership of Lewis Jones, a Carnarvon printer. Most of the early colonists were literary men, and small family libraries were early in evidence on the banks of the Camwy. The people have acquired the Spanish language, but care little for its literature. English and Welsh are taught in the intermediate school. The schools founded by the first settlers were conducted in Welsh, and many native Indians learned the language. It is now feared that intermarriage with the Argentinos will cause the younger colonists to lose their Welsh characteristics, but a colony which has preserved its language and religion intact, in spite of Argentine opposition, is hardly likely to become a thing of the past.

Welsh settlements exist also in the United States, in Canada, and in Australia, and there are colonies of Glamorgan men at iron works in Russia. Two Welsh newspapers are published in the United States.

Prince Louis-Lucien Bonaparte, who formed a library including "every known language which possessed even the most rudimentary literature," had 1429 volumes in all the Celtic languages.

A remarkable development of the nineteenth century was the study of Welsh and

Gaelic in continental universities, notably in Germany. Welsh grammars in German exist, one published at Leipzig in 1886.

"Up till the outbreak of the present conflagration, Celtic studies were being carried on at Paris and Rennes in France, at Liège in the Walloon territory of Belgium, at Copenhagen in Denmark, at Berlin, Jena, and other places in Germany, and at Vienna in Austro-Hungary. There is some irony in the fact that a well-known professor at a great English university learned his Welsh in Berlin!"

## GOVERNMENT DOCUMENTS AND OUR FOREIGN RELATIONS

DURING April and May, Miss Adelaide R. Hasse, chief of the public documents division of the New York Public Library, gave a supplementary course in United States documents to the students in the senior class of the Library School of the New York Public Library. The general subject for the six lectures was: "United States foreign relations," and each hour's talk was followed by an hour of recitation, during which no student was allowed to speak more than ten minutes. The outline for the course was as follows:

### LECTURES

- April 24. Our first ambassadors (1): To Mexico (Poinsett), China (Cushing), and Japan (Harris).  
 May 1. Our first ambassadors (2): To France (Jefferson), Great Britain (Pinckney), German Empire (Bancroft).  
 May 8. History of the idea of international peace.  
 May 15. American culture in the diplomatic service (1): New Yorkers and New Englanders.  
 May 22. American culture in the diplomatic service (2): Southerners and Westerners.  
 May 29. The navy in diplomatic history.

### RECITATIONS

#### May 1. *U. S. foreign relations: Executive administration*

1. History of the Department of State. The department in the Continental Congress (name, powers, duties, functions). The department under the Constitution (how created, how organized, how housed, powers, duties, functions). Sources used.

2. Events in which the State Department participated under the Continental Congress. Sources used.

3. Events in which the State Department

participated under the Constitution before 1870. Sources used.

4. Events in which the State Department participated under the Constitution after 1870. Sources used.

5. Publications of the Department of State under the Continental Congress—original or reprint.

6. Publications of the Department of State under the Constitution.

#### May 8. *U. S. foreign relations: Legislative regulation*

1. Treaty-making power. Procedure. Define proclamation, ratification, abrogation. Where are proceedings of treaty-making power published? Where are treaties published?

2. Language of treaties. Define preamble, protocol, convention. Popular names of treaties, what determines. Give six popular names determined by various circumstances.

3. Lower House foreign relations committee. Origin, how constituted then and now, what are its proceedings—where is record? Sources used.

4. Upper House committee same.

5. Define commission, conference, congress as bearing on foreign relations. Name resp. two international commissions, conferences and congresses in which U. S. has taken a part and give distinctive circumstances concerning each.

6. Define arbitration. Name resp. six arbitrations in which the U. S. has been a party, and two in which the U. S. has been the arbitrator. Give prominent circumstances concerning each.

#### May 15. *U. S. foreign relations: Administrators*

1. Who were the U. S. executive officers administering foreign affairs under the Continental Congress? Characterization, achievements. Sources used.

2. Choose two members of the Cabinet holding the State Department portfolio before 1840. Characterization, achievements. Sources used.

3. Same from 1840-1880.

4. Same after 1880.

5. Define ambassador, plenipotentiary envoy, consul, umpire, counsel, chargé d'affaires, secretary, embassy.

6. Each country has adopted a color for its printed diplomatic correspondence. What is this color for, the various countries.

#### May 22. *U. S. foreign relations: Cataloging work*

Each student to make an author card for the following: Jay Treaty. Alabama claims arbitration. Pious Fund cases. Treaties and conventions of the U. S., 1776-1889. Hearings before committee on foreign affairs on [any hearing]. International Peace Conference.

May 29. *U. S. foreign relations: Reference work*

1. Describe the U. S. official literature essential for a working reference service.
2. Describe the periodical literature desirable for a working reference service.
3. Describe some text books for a working reference service.
4. Describe some historical, bibliographical, biographical, etc., literature desirable for a working reference service.
5. Describe the principal classifications of international affairs.
6. Name some labor or time saving reference devices which have occurred to you during this course.

### LIBRARIES IN INSTITUTIONS

As a part of the National Conference of Corrections and Charities, in Indianapolis, a meeting devoted to the interests of libraries in institutions was held May 13. The meeting was called to order by H. H. Shirer, chairman of the public and private charities committee, under whose auspices the section on libraries in institutions was conducted. After stating that the program had been arranged and the topics chosen and assigned by Miss Miriam Carey, supervisor for the state institutions of Minnesota, Mr. Shirer turned the conduct of the session over to Miss Carey.

The chairman called attention to the fact that ten years had passed since the standardizing of libraries in state institutions had been definitely undertaken. The history of such libraries, however, covers a much longer period. Miss Florence R. Curtis, of the University of Illinois Library School, who has recently made a survey of the condition of libraries in state institutions, was the first speaker on the program. She presented a report on this survey, which was prepared from the replies to a questionnaire sent to six hundred institutions supported by the national and state governments.

The returns from this study do not show that many of the state institutions have taken advantage of the help which is offered by the state library commissions and similar agencies, in selecting and buying books, and in cataloging the collections. In three states a special institu-

tional librarian is employed by the Board of Control, or by the State Library Commission, to give this definite aid. In several other states the institutional libraries, like the public libraries, are under the care of the state library workers, and receive from them the aid which they desire.

A comparison of the statistics received by Miss Curtis showed that the libraries in many penal institutions make a better circulation showing than public libraries of similar size, and this in spite of the fact that most of the institutions lack both adequate book collections and trained librarians.

The second speaker of the session was Miss Edith Kathleen Jones, for twelve years the librarian at McLean Hospital, Waverley, Mass., who spoke on the "Importance of organized libraries in institutions." She said that the importance of books and magazines for hospitals and reformatory institutions is well recognized now, and just as no hospital would think of putting in charge of a laboratory a person who knew nothing of chemicals, so there is no reason why a library, which is a laboratory for diversional treatment and education, should be placed in the hands of persons who do not know books and have not the requisite technical knowledge for its administration. An institution library to be efficient should have three things: (1) An annual appropriation for new books. (2) Some competent person in charge, preferably a trained librarian. (3) Simple but efficient cataloging, classification, and charging system.

Private hospitals and the larger prisons and reform schools should have their own librarians and develop individual libraries. State institutions not able to afford this can follow the example of Iowa, Minnesota and Nebraska by employing supervising librarians for the management of the entire group of institutions. This state control does not mean that the institutions have nothing to do. Each institution should have some special person, patient or prisoner, perhaps, who is in charge and works under the direction of the supervisor. Competent persons are necessary to get the books to the inmates and get the

whole population interested in the right kind of books.

This being Indiana's centennial year, the chairman felt that it was fitting to mention the brilliant work of the state institutions of Indiana during that period, and Henry N. Sanborn, secretary of the Indiana Public Library Commission, was introduced to speak on the "Outlook in Indiana." The state has six penal or reformatory institutions, five hospitals for the insane, a tuberculosis hospital, schools for the deaf, blind, and feeble-minded youth, a soldiers and sailors' orphans' home, a soldiers and sailors' home, and a village for epileptics. Every one of these, except the recently established penal farm, has what may legitimately be called a library. The penal institutions have about 225,000 volumes with an annual circulation of something like 350,000, and the other eleven institutions have probably not over 25,000 volumes combined, with a circulation unknown. Four of the five libraries in penal institutions have been organized by or under the supervision of the Public Library Commission and the library at the State Prison is about to be reorganized in the same way. The reformatory library has a most efficient librarian and an adequate corps of assistants from the prisoners. The technical methods are excellent and kept in first-class condition. The Indiana Boys' School has a librarian with training. The library at the State Prison is under the direct charge of the chaplain, but several of the long-term or life prisoners act as assistants and give their full time to the library, and there has been worked out a very adequate system of lending and exchanging books. The library at the Woman's Prison has recently been reorganized by the Public Library Commission and there is a definite officer in charge. Of the other eleven libraries, five have been organized according to library methods and two have librarians with special training. The hospitals for the insane have done least and are least in sympathy with the library movement. The officers have not seemed to realize the therapeutic value of books which some specialists have advocated and

which several well-known hospitals have made much of, notably the McLean Hospital at Waverley, Mass.

The relations between the Public Library Commission and the institutions of the state have always been pleasant, and half of the institutions of the state have called upon the commission to help organize their libraries. In other cases, the commission has been of material assistance in the selection of books. The greatest need is financial. Most of the institutions have to maintain their libraries as best they can out of the general fund appropriated for maintenance, with the result that there is little money left for the books or the library. A bill to provide \$500 annually to each state institution for the purchase of books, introduced in the last legislature, was killed in committee, but it was a good sign and prophesies well for the future.

The last speaker on the program was Superintendent W. L. Kuser of the Iowa Industrial School for Boys, which has a fine library in a completely equipped reading-room. His theme was "The book and the boy." "It is a lack of knowledge of what to do which has hindered parents, school teachers, Sunday school teachers, social workers and institution workers, in their efforts to strike a responsive chord in the mind and soul of the boy," said Mr. Kuser. "We are very careful as to the company our boy keeps, and we pass various laws for his physical well-being, but we allow a seemingly inexhaustible supply of pernicious reading matter of the Nick Carter type to exist in every town. The men of to-morrow are the victims of the yellow-backs. The bad book or even the passive book which 'does no harm' has no place on the library shelves. If we will carefully guide the boy in his reading during the first twelve years of his life little fear need be felt as to his book selections afterward. Reading must never be assigned as a punishment nor made a task. It should rather be regarded as a privilege and a pleasure, and it is not well to have set times to read and require a boy to do his reading then, willy nilly. Every boy should have his own library case or

at least a shelf in the general home library which he can call his own. He should in a measure be permitted to select his own books, *e.g.*, of a number of good books let him take the one he wants. It may not be the best of the lot but it will be the one he will enjoy reading."

In accordance with the fixed plan for the conduct of all meetings of the National Conference of Charities and Correction, a portion of the time allotted to the session was devoted to discussions from the floor. Libraries in jails, the value of the budget system in securing funds for library purposes, and the selection of books for institution libraries, were some of the subjects brought up in this manner.

Mrs. D. B. Frazier, Columbia, South Carolina, asked to be put in touch with agencies which would assist her in getting books for the use of the small negro children in her section, and Rabbi Volmer of New Orleans, in view of his knowledge of the lack of library facilities in the South, offered a resolution that this session of the library workers petition the National Conference of Charities and Correction for the establishing of a circulating library for the use of social workers in the South. The motion was carried and the chairman was instructed to bring the resolution to the attention of the secretary of the National Conference.

The attention of the meeting was called to the fine exhibit prepared by the Public Library Commission of Indiana which was on view in the corridors of the State House. The library work in the Indiana institutions, as illustrated in this exhibit, was full of suggestions to workers.

Miss Scott, organizer of the Indiana Library Commission, made a report on the manual now in preparation under her direction for the guidance of the untrained workers who must take charge of many institution libraries. In this manual, which will be ready for distribution in the fall, an attempt has been made to present the standard methods of library science as they have been adapted to conditions in institutions. The explanations will be as simple as possible so that an inexperienced librarian by a study of this manual can

gain sufficient knowledge of library organization to direct the work of her assistants in an intelligent manner and introduce methods which will give a library organization simple in detail yet efficient.

The meeting adjourned at eleven o'clock and those who had been specially interested in bringing it to pass felt that it had been a good meeting. The necessity of conforming to the rules of a great conference proved somewhat perplexing and led to the calling of "time" on some of the speakers. This, however, was the only drawback as the time and place of meeting were favorable and the audience which assembled was much larger than had been expected.

ANNA MAY PRICE, *Secretary.*

---

### MY BOOKS

[As the centenary of the birth of John G. Saxe, once widely known in this country as an editor and a poet, falls early in June, it may not be out of place to reprint here these pleasant verses from his pen.—Editor, LIBRARY JOURNAL.

Ah! well I love these books of mine,  
That stand so trimly on their shelves,  
With here and there a broken line  
(Fat "quartos" jostling modest "twelves").  
A curious company I own;  
The poorest ranking with their betters;  
In brief—a thing almost unknown,—  
A Pure Democracy of Letters.

A motley gathering are they,—  
Some fairly worth their weight in gold;  
Some just too good to throw away;  
Some scarcely worth the place they hold.  
Yet well I love them one and all,—  
These friends so meek and unobtrusive,  
Who never fail to come at call;  
Nor (if I scold them) turn abusive!

And they have still another merit,  
Which otherwise one vainly seeks,  
Whate'er may be an author's spirit,  
He never *uninvited* speaks;  
And should he prove a fool or clown,  
Unworth the precious time you're spending,  
How quickly you can "put him down,"  
Or "shut him up," without offending!

Here—pleasing sight!—the touchy brood  
 Of critics from dissension cease;  
 And—stranger still!—no more at feud,  
 Polemics smile, and keep the peace.  
 See! side by side, all free from strife  
 (Save what the heavy page may smother),  
 The gentle "Christians" who in life,  
 For conscience' sake, had burned each other!

I call them friends, these quiet books;  
 And well the title they may claim,  
 Who always give me cheerful looks;  
 (What living friend has done the same?)  
 And, for companionship, how few,  
 As these, my cronies ever present,  
 Of all the friends I ever knew  
 Have been so useful and so pleasant?

JOHN GODFREY SAXE.

June 2, 1816—March 31, 1887.

#### A LIBRARY SURVEY OF UTAH

In *The Utah Survey* for April, 1916, Miss Mary E. Downey, who has been working throughout the state as library secretary and organizer since March, 1914, sums up the results of her two years of labor, and points out the lines along which the work should be carried to bring the library movement in Utah to its highest development.

"In these two years," writes Miss Downey, "the whole state has been visited several times. The general plan adopted has been to visit by counties, going to towns having libraries and also to those where interest may be aroused to start them. These visits have had the following definite purposes: to arouse interest in starting libraries; install standard charging systems; classify libraries needing such help; assist in the work of cataloging; arrange the library into departments; build up periodical reference collections; increase the use of many libraries; go over problems with the librarian and board; stimulate the reading habit, by addresses before church, school, and club organizations; bring about co-operation between libraries and schools; develop library extension through the teachers' institutes; encourage training through summer library schools; urge non-tax-supported libraries

to secure the levy which assures their permanence and efficiency; and suggest applying for a Carnegie building when the library is ready for it. Visits have been made to tax-supported, non-tax-supported, university, college, academy, public school, and state institution libraries and to towns where there is interest in starting a library.

"Certain geographic centers have been noted to which surrounding towns will look for their model. . . . There is a healthful rivalry among towns in the same county and between county seats of nearby counties. However, there are some isolated places where this is wholly lacking, leaving the towns dead. The county seat of every county should have a thriving, tax-supported library. Eleven counties are still without one. . . .

"Home libraries do not supply the need in any community. The day of the large private library is passing and should pass. No one of modest means can afford sufficient books for any line of research he may care to make, but he should have within easy access a public collection of books, so selected as to have a reasonable amount of reference material on any subject. What is said of adults is just as true for children. Very few homes provide adequate reading for the developing years of childhood, nor is this expected. While some books should be provided by the home, the child should be taught to read and to have the reading habit created in school. This demand created, the school and public library should supply the books.

"The schools until recently have followed the method of haphazard purchase of books with little idea of the real purpose of a school library. A few books, called a library, could be found in most schools. The books were usually for adults, seldom selected to suit the grades or the individual child. One could rarely find enough books suited to any one grade so that each child could be supplied. Wherever there is a public library the books and any school funds for books should be turned over to it. School census should be taken by grades and sufficient books provided to distribute to each teacher as many as she has pupils and suited to the grade. The

library thus increases its service to children many-fold, for no librarian or group of children's librarians can possibly do for the children of a whole community what the teacher can do for her group of thirty to forty children of the same grade with whom she works every day. The county school boards and the superintendents over the state are co-operating in this movement, which, when fully accomplished, will mean that the children now in the public schools will be readers.

"A number of helpful agencies are co-operating to make libraries in Utah a success. Among them may be mentioned the pulpit of the Mormon Church, which is open for the discussion of subjects of social and civic welfare. The Mutual Improvement Association of the Mormon Church has developed their collections of books into free public libraries in a few places. The Parents' Organizations, both of the church and public schools, have given stimulus to the movement. The state library work being connected with the Department of Education places all the teachers behind it. It is wonderful what can be done for a library when all the school people are back of it. The Utah Féderation of Women's Clubs has had a limited influence in promoting interest through their few traveling libraries scattered over the state and two or three libraries have been found to have their inception in the local Women's Club. The Home Economics Clubs are now starting libraries which are developing into public libraries in a number of towns. The state awakened to the need of organized effort through the Utah Library Association which held its fourth annual meeting in December.

"Three summer library school sessions have been held at the University of Utah. Most of the libraries have been represented and some of the librarians have attended more than one session.

"A series of addresses relating directly to library work and reading has been given before a number of county teachers' institutes. The results of this work should be: a stimulus to the use of the local library by the teachers of the county as well as

the town where the meeting is held; encouragement to the teachers to create the reading habit in children through the grades; interest toward developing a library in towns and counties having none; such co-operation between the libraries and the schools as will bring about an intelligent use of the technical and reference helps of libraries throughout the state. This work to be most effective should be continued from year to year by a sequence of subjects. In addition to the reading courses of the various church organizations, a general teachers' reading course, such as is in operation in many states, would be of great advantage to the teachers of Utah. Lectures have been given each year before the normal school students of the University of Utah. Addresses also have been given before school Parent-Teachers' Associations in Salt Lake, Ogden, Provo and in a number of the smaller towns of the state.

"Mr. Carnegie's generosity, perhaps, has done more to stimulate the establishment of libraries than any other one thing. In addition to the building in Salt Lake, given by Mr. Packard, seventeen other towns have completed buildings given by Mr. Carnegie, have them under construction or promised. . . . All the towns of any size will soon have library buildings. . . .

"In a few instances the boards and councils have taken pride in furnishing a library commensurate with the building. Others are not so equipped, which greatly detracts. While a few libraries are well kept, others are found to be greatly lacking in the care which makes for health and beauty. Books and more books, especially for reference and for children, are needed in every library in the state. The lack of periodical reference files in the libraries over the state offered a problem, as old magazines in the homes are sent to the miners, sheepherders, and ranchmen. Collections have been made through the school children of Salt Lake, Ogden and Provo, filed and shipped to the various libraries. These collections, together with what could be gathered from the local towns, have given a generous start to periodical

files, which, with the Readers' Guide, Poole indexes, atlas, dictionary and encyclopedia, give to the small library an opportunity to do fair work in the way of reference.

"With a few notable exceptions, the number of people using the library, in comparison with the population, is seldom what it should be. Extension work brings wonderful results and Utah is going to offer more and more opportunity for local library extension from the school, branch and deposit sides. The beginnings are most encouraging and it is expected that more and more of it will be done."

After describing in some detail the library progress made in Salt Lake, Ogden, Provo, and some of the smaller towns, Miss Downey states that throughout the state "twenty-three towns have now levied tax for libraries and as many others have made collections of books and started libraries and reading rooms, but are not yet tax supported. Many other towns are awakening to the need of libraries and will start them in the near future.

"The University of Utah library now has one of the finest reading and study rooms in the United States. The library is well administered and doing excellent service considering the small number of the staff. Brigham Young University Library has a good collection of well organized books. Agricultural College has a well administered library, especially relating to its work. The library at the Branch Agricultural College is not adequate either as a collection or an organization. With the exception of the Brigham Young University Library at Provo and the Latter-day Saints High School Library in Salt Lake most of the church-school libraries of every denomination are hardly worthy the name of library. Aside from the cities, an effort should usually be made to get the various collections in a town together, thus making one respectable library which can better serve the whole community.

"The state institutions all have libraries suited to the particular class of persons using them. While the amount of literature in the institutions is no greater than it should be, an interesting comparison might be given of the proportion per

capita of those using it to what the public libraries have per capita in the cities where the institutions are located.

"The laws providing for the annual expenditure of 15 cents for each child of school age for books, and for the tax support of municipal libraries, are good so far as they go, but the territory for tax levy should be extended to cover the school districts and county, so that in many cases the building may be more adequate, the tax income larger and the service extended to the rural districts. We hope to get a county law through the next legislature.

. . . A school district law would apply especially to counties divided into two or more districts. State traveling libraries are not practicable on account of long distances from the railroad and great cost of transportation. County traveling libraries, however, would be the ideal thing, with a library at the county seat and traveling libraries going to every school and community center. The condition here is different from the East and Middle West in that there is little isolated farm life. People live in community centers, so the problem resolves itself into every town wanting its own individual library.

"With the co-operation of the various agencies interested in the movement, it is not too much to hope that the three great objects, increased efficiency, a free public library in every town, and a book to a child in every school room, will soon be realized. When this time comes Utah will have reached her library and school millennium."

---

#### NATIONAL MUNICIPAL LEAGUE LIBRARY COMMITTEE

THE National Municipal League has appointed a special committee to draft the library section for the proposed model city charter which the league is working on to recommend to American cities. The following librarians have been appointed members of this committee: Samuel H. Ranck, chairman; John Cotton Dana, Drew B. Hall, Harrison W. Craver, and A. E. Bostwick. The committee is planning to have a meeting at Asbury Park in connection with the meeting of the A. L. A.

## INSTITUT INTERNATIONAL DE BIBLIOGRAPHIE

A MEETING of officers of the Institut International de Bibliographie was held in Paris in February to consider the possible and probable effects of the war on the Institut and on the other international bibliographical enterprises with which it is affiliated.

Up to the present time no material damage has been done to the collections belonging to the Institut in Brussels, but progress in the work has practically stopped. The question of financing the work after the war, and the general fate of all international bibliographical enterprises when the present struggle is ended, were discussed. The question was raised whether America, in this crisis, might not find means to give special aid in support of this scientific work, and the practicability of establishing a second headquarters for the Institut in this country, where a duplicate of the "Repertoire bibliographique universel" might be maintained, was also brought up for consideration.

### THE STEPHENS BILL

HEARINGS on the Stephens Bill commencing Tuesday, May 30, were expected to continue for several days, the library interests being represented by Mr. Bowerman of the A. L. A. committee on federal relations, acting for the committee on book buying. The Stephens Bill has also been introduced into the Senate by Senator Ashurst, where it is known as the Ashurst Bill, but there has also been introduced by Senator Borah, so that it is known as the Borah Bill, a substitute which is generally regarded as a "back-fire" from the interests opposing the Stephens Bill. This omits the exception in favor of libraries adopted as a feature of the Stephens Bill, and is otherwise drastic, so that it will be opposed by the A. L. A. committee on book buying should it be reported to the Senate, which, however, is thought to be unlikely.

As you grow ready for it, somewhere or other you will find what is needful for you in a book.—MACDONALD.

## American Library Association

### COMMITTEE ON LIBRARY ADMINISTRATION

The A. L. A. committee on library administration announces that after June 15 all communications relating to its investigation of labor-saving devices should be addressed to C. Seymour Thompson, librarian, Public Library, Savannah, Ga.

It now seems inevitable that there will be a delay of perhaps several months in the preparation of the manual which the committee had hoped would be ready in the fall of this year. Work on it will proceed with as little delay as possible, and in the meantime librarians are urged to make full use of the "clearing house" by writing to Mr. Thompson for the available information on any subject of equipment in which they are interested. They are also requested to remember that this is a co-operative undertaking, and that any information they can at any time contribute will be very valuable.

### SCHOOL LIBRARIES SECTION

The tentative program for school library meetings at Asbury Park, printed in our May issue, is correct with one exception. Mr. Certain, of the Polytechnic Institute in Auburn, Ala., will discuss "The school library situation in the South" in place of Miss Lucy Fay of the University of Tennessee.

The topics of discussion at the round table conference for normal school librarians on Saturday afternoon will include:

Courses of instruction in library methods for normal school pupils.

What subjects should be included

Textbooks for a course

Systems of marking and grading

Ways of reaching and co-operating with elementary school libraries.

Preparation and use of supplementary material in the normal school library.

Picture collection.

Classification for pamphlets and clippings.

General question box.

At the high school librarians' round table the same afternoon the following questions will be talked over:

Possibilities of a library hour in the high school library.

Reading aloud in the library.

Use by entire class and teacher as an introduction to interesting books on a subject.

Classes in library instruction. (Illustrated by charts outlines etc., found especially helpful.)

Special problems of high school branches of public libraries.

Discussion led by Miss Bessie Sargeant Smith, Cleveland, and Miss Elizabeth White, Passaic.

General question box. Practical questions such as the following:

Should we keep uniform statistics? If so, what should they be? Library passes and their problems. Student assistants, etc.

School library exhibits will include the New Jersey exhibit, Geneseo State Normal school exhibit, high school library exhibit, and scrap books illustrating the work of progressive high school libraries in twelve cities.

Alice A. Blanchard,  
*Secretary School Libraries Section.*

*JOINT MEETING FOR STATE AND LAW  
LIBRARIANS*

A most interesting number on the program of the A. L. A. conference, to be held at Asbury Park, June 26 to July 1, will be an address by Dr. Clinton Rogers Woodruff, of Philadelphia, on "The economic conditions of the twentieth century," before the first joint session of the National Association of State Libraries and the American Association of Law Libraries. Johnson Brigham, state librarian of Iowa, will lead the discussion that is to follow.

*NEW YORK LIBRARY CLUB PLANS*

Through the courtesy of the directors of the Metropolitan Museum the New York Library Club is enabled to extend to the members of the American Library Association who visit New York City after the Asbury Park meeting an invitation to attend a reception at the museum on Monday, July 3, at three o'clock. Officers of the museum will be present to give brief sketches of the work of the Museum and guides will be provided to escort the visitors about the buildings. As Monday is pay-day, tickets of admission will be provided only to those (including members of the New York Library Club) who make application, in person or by letter, to Miss Eleanor H. Frick, care of Secretary, A. L. A., Hotel Monterey, Asbury Park.

*INFORMATION BUREAU*

An Information Bureau will be maintained by the club in the central building of the New York Public Library at Fifth Avenue and Forty-second Street during the week of July 2-8, to help visiting librarians who may feel the need of advice or suggestions about any question connected with the city or its neighborhood, whether library matters or information concerning the worlds of churches, theatres, restaurants, bohemian or otherwise, boarding houses, time-tables, trains, trolley or boat trips, amusement or edification. The Information Bureau will be open from 9 a. m. to 10 p. m. daily, except Sunday, July 2, when the hours will be from 1 to 10 p. m. Inquiries may also be made by telephone (call Bryant 7800).

The Merchants Association also will main-

tain an information bureau downtown at their convention headquarters, Woolworth Building, 233 Broadway, New York City. The services of this Bureau are also kindly offered by the Merchants Association to visiting librarians. Open from nine to six daily.

Members of the conference who have no other convenient mail address in New York City may have their letters forwarded in care of the New York Public Library, 476 Fifth Avenue. They may also register their New York addresses here for the benefit of other librarians.

*NEWARK HOSPITALITY*

Mr. Dana wishes it to be distinctly understood that visitors are welcome at the Newark Free Public Library and that the members of the A. L. A. are especially welcome. The library is open daily from 9 a. m. to 9:30 p. m. On Sundays from 2 to 9:30 except during July and August, when it is closed on Saturday at 12 noon and is not open at all on Sunday. The library will be pleased to entertain at luncheon librarians going to or from the conference if it receives notice a few hours beforehand. Notice may come by letter, telegram or telephone. Luncheon is at 1 o'clock in the building.

---

## Library Organizations

---

*THE NEW YORK LIBRARY CLUB*

The annual meeting of the New York Library Club was held Thursday, May 18, at 2:30 p. m., at Holliswood Hall, Hollis, Long Island, with President Jenkins in the chair. In spite of the rather unpropitious weather 340 members were present.

After the election of 36 new members, reports of committees and officers were made. Dr. Hill, chairman of the committee on reception of A. L. A. members visiting New York, July 3 to 8, reported that through the courtesy of the Metropolitan Museum, the offer of a reception at the museum had been tendered to the New York Library Club. Officers of the museum will be present to give brief addresses, and guides will be provided to escort the visitors about the building. In view of this generous offer, the committee recommended that a reception be tendered to the visiting A. L. A. members, to be given at the museum at three o'clock, Monday, July 3; that invitations be printed and distributed at the Asbury Park meeting with request that replies be sent to the secretary of the New York Library Club at Asbury Park; and that cards of admission be dis-

tributed to guests and to such members of the New York Library Club as may make application to the secretary. The motion was carried that this report be accepted.

Miss Hitchler, chairman of the committee on a library guide to New York City for use of visiting A. L. A. members, reported that through the co-operation of the National Education Association, arrangements had been made for the Merchants' Association to incorporate a section on libraries in their Guide-book to New York City. This section will be inserted without charge, thereby obviating the expense to the club of printing a list of its own. The section will contain, together with other information, directions as to how best to reach each library listed. As many copies as desired will be furnished for the use of the A. L. A.

Dr. Hill reported for Mr. Lydenberg that an Information Bureau would be established at the Central Building of the New York Public Library, July 3-8, for the use of the visiting members of the A. L. A.

The report of the secretary showed that there had been a net increase of membership in the club during the past year of 149, the total membership now being 808.

The treasurer reported that the receipts had been more than \$1100, the greatest in the history of the club, and that there was now a balance in the treasury of \$472.

Formal proceedings then halted for the production of a clever little play by Miss Helen Rex Keller, entitled "Co-operation," which satirized modern methods of library administration, holding up to particular ridicule the modern library system of inter-loans. It was exceedingly well acted by Miss Hitchler, Mr. Dunbar, Miss Leavitt, Miss Prescott and Mr. Hicks.

Ballots for officers were then canvassed by the tellers, Messrs. Ruotolo, Rice and Smith, and the following elected for the ensuing year: President, Dr. Frank P. Hill; vice-president, Miss Susan A. Hutchinson; secretary, Miss Eleanor H. Frick; treasurer, Mr. Robert L. Smith. Members of the council to serve four years: Mr. Benjamin Adams, Miss Miriam S. Draper, Miss Maria V. Leavitt, Mr. Edward F. Stevens. While the ballots were being counted, music was furnished by Miss Shedd, Miss Coombs, Miss Leipziger, and Mr. and Mrs. Hicks.

The meeting then adjourned to the piazza of Holliswood Hall where afternoon tea was served. Mr. Jenkins and Dr. Hill were guests of the Council at dinner.

ELEANOR H. FRICK, *Secretary.*

#### NEW YORK SPECIAL LIBRARIES ASSOCIATION

A meeting of the New York Special Libraries Association was held on May 17 at five o'clock in the Municipal Reference Library. The meeting was called to order by Dr. C. C. Williamson, president, and the minutes of the previous meeting of April 6 were read and approved.

Dr. Williamson then asked for opinions on the subject of using the term Manhattan or some other description for our association. The name Metropolitan had been suggested and had been informally approved by the Executive Committee.

Miss Wallace, as chairman of the nominating committee, then gave her report. Miss Frick having withdrawn her name for the office of secretary-treasurer, Miss Ball was proposed for that office by Miss Spencer. Miss Frick moved that Miss Wallace be nominated for the office of vice-president, but Miss Wallace withdrew her name immediately. The nominations being closed, the following officers were unanimously elected: President, Dr. C. C. Williamson, Municipal Reference Library; vice-president, Miss Marjorie Strong, Alexander Hamilton Institute; secretary-treasurer, Miss Sarah B. Ball, Business branch of the Newark Public Library; executive committee, Miss Rathbone, Pratt Institute Library, and Miss Beatrice Carr, Robinson & Co.

Dr. Williamson then asked the opinion of the meeting on the subject of giving out the lists of members of the association to any one who asked for a copy. Miss Frick suggested that the commercial bureaus pay for these lists, if they wanted one. It was then moved and seconded that the whole question of handling lists should be decided by the executive board.

The question of an index of applicants for "special library" positions was then discussed. It was agreed that this was of great interest to us all. Miss Spencer suggested a card system of applicants to be kept in the office of the president of the association which all members could consult when necessary. Miss Ball then moved that a committee be appointed by the chair to consider the question and decide on the kind of employment blanks to be used. Seconded and carried.

Dr. Williamson then suggested that the members consider before the next meeting what the association might do in the way of publicity methods if it was desirable to do anything at all in this line. Miss Ball suggested that descriptive leaflets on the

association be enclosed in letters by the different members.

After the announcement that the next meeting would be held on the third Wednesday in October the meeting adjourned.

FLORENCE SPENCER, *Secretary*.

#### TENNESSEE LIBRARY ASSOCIATION

The Tennessee Library Association held its annual meeting April 17, 1916, at the Chattanooga Public Library. After the routine business of the meeting, Miss Margaret Dunlap, the president, welcomed the association to Chattanooga. She announced as the theme of the meeting, "Opportunities for library growth in Tennessee, with reference to the library activities of schools, cities, counties and the state."

The development of school libraries was treated by Miss Lucy E. Fay, University of Tennessee, Knoxville. She based her talk on the answers to a questionnaire sent out by the U. S. Bureau of Education to the county superintendents of education. She stated that while present conditions are far from ideal, the awakening interest in school libraries is encouraging. Miss Harriet L. Johnson, librarian of the Knoxville High School Library, spoke with enthusiasm of the possibilities of school libraries, and gave some practical suggestions for securing the interest and cooperation of parents, pupils and faculty.

Miss Margaret Kercheval, Nashville Carnegie Library, told of new activities into which some city libraries are entering and some means they are using for more efficient service to the public. Miss Mary Rothrock, Cossitt Library, Memphis, mentioned newspaper articles, booklists and exhibits as some ways in which city libraries may secure effective publicity.

Tennessee's experience in county library work was interestingly told by Miss Louise McMillin, Chattanooga Public Library. She claimed for Hamilton county the first working system of county libraries and related some of her experiences in placing library books in little mountain settlements. Her talk was interestingly supplemented by that of Prof. W. P. Lockwood, principal of the Daisy High School, who spoke on "What the county library means to the community." He talked especially of the Daisy branch of the Chattanooga Library, and related definite instances in which it had been a source of encouragement and inspiration.

Tennessee's progress in library organization and buildings was reported by Mrs. Pearl W. Kelley, Department of Library Extension,

Nashville. She told of the Library Day which was held in 1915 under the auspices of the Library Extension Division of the State Board of Education, and of the traveling libraries which are sent out by the State Library.

After a discussion, led by Miss Marilla W. Freeman, Goodwyn Institute Library, Memphis, the following officers were elected for the ensuing year: President, Charles D. Johnston, Cossitt Library, Memphis; first vice-president, Dora Sanders, Vanderbilt University, Nashville; second vice-president, Louise McMillin, Chattanooga Public Library; secretary and treasurer, Mary U. Rothrock, Cossitt Library, Memphis.

Members of the association and visitors were the guests of the Chattanooga Library at a luncheon at Signal Mountain Inn. From Signal Mountain, the guests were taken to Lookout Mountain, Chattanooga's other landmark, famous for its Civil War history and for the splendid view it affords of the Tennessee river and its fertile valley.

MARY U. ROTHROCK, *Secretary*.

#### INLAND EMPIRE TEACHERS ASSOCIATION —LIBRARY DEPARTMENT

The first session of the library department was held Wednesday afternoon, April 20, in the library of the Lewis and Clark High School, the president, Miss Frances Yeomans, Chewala, Washington, presiding.

The president appointed the following nominating committee: Lucile Fargo, Librarian, North Central High School Spokane; J. F. Davies, Librarian, Public Library, Butte; Miss Crawford, Librarian, State Normal School, Lewiston, Idaho.

Miss Fargo spoke of the exhibit on display in the library, borrowed from the U. S. Bureau of Education. It contains most important documents on the subject of school library work and the work of the public library with schools, as well as pictures from many schools and public libraries doing this work.

The program consisted of the two following papers: "The high school library in the small town," by Mr. Hargraves, principal of the High School in Colfax, Wash., and "Consolidation of school and town libraries," by W. G. Wagley, superintendent of schools in Kettle Falls, Wash.

The second session was held Thursday afternoon, April 20, when Mr. Davies gave the following report for the nominating committee: President, Gertrude Buckhous, librarian, University of Montana, Missoula; secre-

tary, Mary C. Richardson, librarian, Lewis and Clark High School, Spokane, Wash.

It was also decided to appoint a permanent secretary whose duty it should be to keep the records from year to year and whose office should be a clearing house for all kinds of library information in the Inland Empire. Miss Mabel Reynolds, librarian, State Normal School, Cheney, Wash., was appointed to this position.

The resolution was passed that this section put itself on record as being in favor of the idea of a state supervisor of school libraries.

The most important paper of the afternoon was read by G. W. Fuller, the librarian of the Spokane Public Library. His subject was "County libraries," and he reported that a committee had been appointed to make a survey of library work in the State of Washington. Mrs. Preston, superintendent of schools for the State of Washington, acting as chairman. Mr. Fuller's paper was discussed by Mr. Dewey, former state superintendent of schools of Washington, and also by Mr. Watson of Spokane. The way in which the county library law works in California was quite fully discussed.

MARGARET ROBERTS, *Secretary*.

#### CALIFORNIA SCHOOL LIBRARY ASSOCIATION

The Northern Section of the California School Library Association met in San Francisco, April 19. The meeting was held as the Library Section of the California Teachers' Association, and most of those present were teachers in the bay cities. The theme of the meeting was instruction in the use of books and libraries. Miss Helen Evans, assistant librarian of the San José Normal School, spoke on "Books and the child," showing what the normal school library is doing to give an appreciation of the best children's books and a knowledge of their use to the girls who are to teach in the elementary schools. Will C. Wood, state commissioner of secondary education, in discussing "Books and high schools," emphasized the opportunity of the high school librarian, who may become the most efficient member of the faculty. A certificate from the State Board of Education is now required of high school librarians, and requires a university degree, training in a library school of recognized standing, and at least one year of teaching and one year of library experience, or satisfactory equivalents. Dr. William A. Morris, professor of history in the University of California, took as his topic "Books and the student," showing the

need of school libraries to prevent dependence on a single second-rate text-book and to make students more intelligent users of the public library.

In the discussion which followed Mrs. Gertrude Mathewson described the course she gives in the Berkeley High School for which college entrance credit is given; Mrs. Elizabeth Madison of the Oakland High School Library described her course which is outlined in the March *English Journal*; Miss Horton described the course given as a part of the English course in Fremont High School, Oakland.

The association recommended that high school and university authorities require that at least two lectures be given each half year, accompanied by practice work, in the use of library reference aids, and that one-quarter of the credit given either in English or history each half year be contingent upon satisfactory completion of such work.

MARION L. HORTON, *President*.

#### SASKATCHEWAN LIBRARY ASSOCIATION

The annual meeting of the Saskatchewan Library Association was held in the Collegiate Institute, Prince Albert, Sask., on April 25. Owing to the distance of the place of meeting from the principal educational centers and the fact that a civic reception was being held at the same time, many of those who have hitherto been prominent in connection with this gathering were unable to be present.

The usual financial statement was submitted by the secretary-treasurer and adopted. This showed a balance on hand of \$16.62.

The secretary-treasurer submitted a report outlining the work carried on by the association during the year.

Following the reports of the secretary and treasurer, A. H. Gibbard, librarian of the Public Library at Moose Jaw, was elected president of the association for the ensuing year and Dr. Norman Black, Regina, was elected a member of the council in place of Mr. J. H. Gallaway, resigned. The other members of last year's executive board were re-elected.

An informal discussion took place on section 33 of the Hotel Act, which provides for the establishment of public reading rooms and care of traveling libraries in hotels. John Hawkes, provincial librarian, pointed out that that matter was one which was entirely in the hands of the municipalities and he had no information as to what had been done in this direction. The general opinion seemed to be that no great development need be expected in this direction.

It was decided to memorialize the Provincial Government once more with respect to a small grant for the purpose of helping country librarians and employes of libraries to attend the annual convention of the association or library institutes which might be organized under its direction.

Dr. Black was of the opinion that special efforts should be put forth to have subordinate officials of public libraries become members and attend the annual gatherings, and that the attention of library boards generally should be drawn to this matter.

The following resolution was unanimously adopted:

*Resolved*, that the Saskatchewan Library Association gives its unqualified support to the movement for the establishment of a Canadian National Library, recognizing as it does the urgent need of such an institution as an integral part of the intellectual and educational life of the Canadian people, its manifold advantages to students and investigators in every branch of human knowledge, and its importance as the natural center for library development and activities throughout the Dominion.

*Resolved*, further, that a copy of this resolution be transmitted to the Prime Minister of Canada and to the members of the government, and that they be respectfully urged to take the necessary steps for the establishment at the earliest possible moment of a Canadian National Library.

Mr. Honeyman, in moving this resolution, stated that the matter was before the executive last year, but owing to the condition of public affairs brought about by the war, it had been thought wise to postpone further action. Since that time, however, the disastrous fire at the Parliament Buildings at Ottawa, had come within a small margin of totally destroying the only national collection we had and he considered it absolutely necessary that steps should be taken at a very early date in the direction indicated in the resolution.

A telegram was received from the Ontario Library Association in session at Toronto, conveying fraternal greetings.

Papers had been prepared to be read at this meeting by Mr. John Hawkes, provincial librarian, on the "Provincial Government Library," and by Miss B. Cleveland, Dominion Park School, Regina, on "Story telling to children." Owing to the small attendance it was decided to read these papers by title only, as they would be printed in the Proceedings of the Saskatchewan Educational Association.

On Wednesday, Mr. Honeyman addressed the general meeting of the Saskatchewan Educational Association on "The public library in public education."

The next annual gathering of the association has been fixed to take place in Regina.

J. R. C. HONEYMAN, *Secretary*.

#### ONTARIO LIBRARY ASSOCIATION

According to custom, the sixteenth annual meeting of the Ontario Library Association was held in Toronto on Easter Monday and Tuesday, April 24 and 25, the meeting place being the Reference Library. The steadily widening scope of the work of the association was demonstrated by the large attendance from all parts of the province, and a very encouraging feature was the enrolment of new members.

The morning session was given up to the routine business of receiving annual reports of the standing committees and the officers. These committees had charge of the "Quarterly selected list of books," the distribution of public documents, the library institutes, technical education and the public library.

The treasurer's report showed a satisfactory balance, and the secretary's report covered the work of the year throughout the province, and gave some indication of what was going on in the library world elsewhere. One especially interesting item was that of the arrangement between the Straffordshire, England, County Education Authority and the Trustees of the Carnegie Fund for the undertaking of the establishment of a county system of school libraries, the Carnegie Fund furnishing £5000 for its support.

The afternoon meeting was addressed by two newspaper men of high standing, Mr. David Williams of Collingwood, whose presidential address dealt with "The press and the library," and Mr. W. E. Smallfield of Renfrew, who discussed "How we carried the Public Library By-law in Renfrew." Mr. Williams is an ex-president, and Mr. Smallfield is the present president of the Canadian Press Association, and their papers were, therefore, the work of experts.

The other feature of the afternoon program was a trilogy of papers by the chief librarian of the Toronto Public Library and two of his assistants. Dr. Locke discussed "The value of lists of books" and gave a short list of books on the great war. Miss Lillian Smith, the head of the children's department, discussed "Considerations which enter into the making of a list of books for Canadian girls"; and Miss Gladys Stauffer, children's librarian of the western branch, enumerated some of the "Considerations which enter into the making of a list of books for Canadian boys." These papers were particularly informing and suggestive and were greatly enjoyed by the meeting.

The evening session was given up to a discussion of "Agriculture and the war" and

the especial relation libraries bear to our communities as affected by the war. The speaker, Dr. C. C. James, is the commissioner of agriculture for Canada, and one of the outstanding authorities on agriculture in the world. His statement was a most illuminating and comprehensive treatment of the subject.

Following the custom established in previous years, the balance of the evening was devoted to an inspection of the Public Library building in all its departments, and an examination of the John Ross Robertson collection of some 3000 pictures of persons, places and events in Canadian history, and the annual exhibition of the Ontario Society of Artists, the chief librarian and his staff being the hosts of the occasion.

"The use of a public library by the general reader," and "The use of a public library by a public man" were the two items for the Tuesday morning program. The first was given a most thoughtful and thorough treatment by Miss Ethel G. Flavelle, secretary of the Lindsay Public Library Board, Miss Flavelle especially emphasizing the value of the reading room and of open access. The Hon. Mr. Justice Riddell's paper on the other topic was a masterpiece of brilliant wit and sympathetic appreciation of the value of the library.

The association expressed the warmest congratulations to the new inspector of public libraries for Ontario, Mr. W. O. Carson, formerly chief librarian of London Public Library, and also its deep appreciation of the valued services of the retiring inspector, Mr. Walter R. Nursey, for his seven years of earnest work.

The interest and attendance at the sixteenth meeting was very gratifying to those responsible for the program, and an especially interesting feature was the presence of six ex-presidents of the association.

The officers for the coming year are: President, George H. Locke, Public Library, Toronto; first vice-president, Mary J. L. Black, Public Library, Fort William; second vice-president, F. P. Gavin, B.A., the Public Library, Windsor; secretary-treasurer, E. A. Hardy, 81 Collier St., Toronto. Councillors: D. M. Grant, Public Library, Sarnia; W. J. Sykes, Carnegie Library, Ottawa; W. H. Murch, Public Library, St. Thomas; B. Mabel Dunham, Public Library, Berlin; R. H. Belamy, Public Library, Mount Brydges; and the ex-president, David Williams, Public Library, Collingwood.

E. A. HARDY, *Secretary.*

#### UPPER PENINSULA LIBRARY ASSOCIATION

The annual meeting of the Upper Peninsula Library Association was held at Escanaba, Mich., May 9 and 10. Thirteen Michigan libraries were represented.

The session devoted to the "Library and the school" was held in the assembly room of the high school at the invitation of the school board, and eighty teachers were present. A very suggestive exhibit of library aids for schools was shown by Miss Ruth D. McCollough of the Hancock High School Library. Miss Brubaker read an excellent paper on "Budgets and appropriations" which was well worth serious attention, and which made a decided impression upon Mayor Mac-Killican of Escanaba who was present at this session and who afterward told the association that the Escanaba Library would receive more adequate support in the future if he had anything to say on the subject. The incident proved that too often the smaller libraries do not appeal in a business-like manner to the powers that make appropriations.

Four librarians spoke on "A book I can recommend," and other speakers and subjects were Mary F. Carpenter, "Rules we have and rules we need"; Mrs. Marie F. Grierson, "Fines and overdue books"; Zana K. Miller, "What the library can do for the high school"; P. A. Lint, "The librarian and the high school student"; Ethel Kellow, "Reading for 'intermediates'"; Gladys M. Andrews, "County traveling libraries"; and Nina K. Preston, state library visitor, on "Publicity."

ZANA K. MILLER, *Secretary.*

#### COLUMBIA LIBRARY CLUB

The Columbia Library Club, of Columbia, Mo., is a live organization of 41 members. These members are not only librarians and student assistants in the various branches of the University of Missouri Library, but include also the librarians of Stephens and Christian Junior Colleges, the State Historical Society Library and the Public Library of the city.

Regular monthly meetings are held from October to May. The evening is divided between literary and social interests. A successful feature of the work this year has been that of delegating the business of the club to standing committees such as program, entertainment and refreshment committees. One night, an enjoyable John Muir program was rendered consisting of an excellent paper on the life and works of this great naturalist and of selections read from his "Stickeen."

The April meeting consisted in discussing the various items of interest in the Shakespeare exhibit held in the faculty room of the new library. The most amusing feature of the social hour has been that of the White Elephant party held soon after Christmas. Undesirable gifts were brought and auctioned off to the highest bidder. This money was raised to pay for refreshments. The precedent has been to make the last meeting a picnic in the woods.

The club looks forward to entertaining the State Library Association at its annual meeting next fall. **BESSIE M. ROBERTS, Secretary.**

#### MISSOURI VALLEY LIBRARY CLUB

The Missouri Valley Library Club held the last meeting of the fiscal year, the evening of Friday, May 12, in the Assembly Room of the Kansas City Public Library. Willis H. Kerr, librarian of the Kansas State Normal School, Emporia, Kansas, addressed the club on "What next in school libraries?"

Mr. Kerr said that school libraries must keep pace with modern educational developments. "In building school libraries let us surely build for service based on intelligent and frequently revised comprehension of the best educational aim and method." The subject was discussed from three standpoints; first, a much greater and more careful use of the illustrated editions of the classics. The children are apt to be carried away by the beauty of the illustrations and do not get the immortal message of the text. Second, use of the library will be taught more skillfully than now because the pupil will never be conscious of being instructed. It will become an integral part of the class room work. Third, regarding the use of school libraries by the public: "In this matter of joint use I am only anxious that school librarians shall be open-minded and ready to join forces with whatever plan local conditions demand. The library idea is big enough to take any next step approved by educational and social common sense."

Mr. Kerr's paper occasioned a lively discussion, particularly that part relating to the instruction of pupils in the use of the library.

The following officers were elected for the ensuing year: President, Ward H. Edwards, librarian of Wm. Jewell College, Liberty, Missouri; vice president, Mrs. Cassandra Warner, Kansas City Public Library; treasurer, Mrs. Sara Judd Greenman, librarian of Kansas City, Kansas, Public Library; secretary, Grace Berger, Kansas City Public Library.

**GRACE BERGER, Secretary.**

#### NATIONAL EDUCATION ASSOCIATION— LIBRARY DEPARTMENT

One session of the Library Department meetings in New York the first week in July will be given over to a discussion on the general topic: "The control of the high school libraries—shall the public library board or the public school board supply the high school library equipment and control the educational policy of the high school library department?" Bessie S. Smith, of the Cleveland Public Library, will discuss the question from the viewpoint of a field worker. Arthur E. Bostwick, of the St. Louis Public Library, will discuss: "The educational and administrative principles involved." William B. Owen, principal of the Chicago Normal College, will present "A constructive plan for standardizing high school libraries." The second session will have for its general topic: "Source material and its use." At this session there will be given a lecture recital on "The drama of life in the lyrics of the folk," by Caroline Crawford and Elizabeth Rose Fogg. A round-table session will be held devoted to reports from school librarians representing the various types of libraries—university, college, normal school, high school, elementary school and rural school.

A joint session of the Library Department and the Department of Secondary Education will be held in the auditorium of Washington Irving High School. The program will be as follows:

- The importance of the library in the modern high school. Dr. William M. Davidson, Superintendent of Schools, Pittsburgh. (15 minutes.)
- The need of an aggressive campaign for better high school libraries. Charles Hughes Johnston, professor of secondary education, University of Illinois, Urbana. (10 minutes.)
- The value of the library in vocational and trade high schools. Walter D. Hood, principal of the Gilbert High School, Winsted, Ct. (10 minutes.)
- The administration and maintenance of the high school library. Miss Mary Sullivan, head of the department of English, Fifth Avenue High School, Pittsburgh. (10 minutes.)
- Report of Library Committee. C. C. Certain, chairman, Polytechnic Institute, Auburn, Ala. (10 minutes.)

There will be a symposium on the uses of the library in the teaching of subjects in the high school curriculum, when the following five-minute talks will be given by teachers and librarians:

- How teachers use the library in different departments and its value in their work:
  - English: James F. Hosis, secretary of the National Council of Teachers of English, Normal College, Chicago.
  - History: Charles W. Gayman, principal of the Waite High School, Toledo, Ohio.
  - German: Miss Lydia M. Schmidt, German Department, University High School, University of Chicago.

French: William L. Milwetzky, French Department, Barringer High School, Newark, N. J.  
 Commercial subjects: Arthur M. Wolfson, principal of Julia Richman High School, New York City.  
 Physical training: Miss Caroline D. Wallaston, Physical training department, Girls' Central High School, Brooklyn.  
 Sciences: J. A. Peabody, head of biology department, Morris High School, New York City.

Under the chairmanship of Miss Mary E. Hall, an exhibit of materials used in the best high school libraries of the country is being prepared, showing how the school library of to-day helps in the work of each department of the modern high school and in each kind of high school—vocational, cosmopolitan, academic, trade, and technical.

A printed and carefully prepared bibliography on the modern high school library and a list of helpful lists and other printed aids available, will be distributed, together with special material assembled by members of the library committee.

#### MASSACHUSETTS FREE PUBLIC LIBRARY COMMISSION—SUMMER CONFERENCE

The program for the library conference to be conducted at Simmons College by the Massachusetts Free Public Library Commission, July 25-27, is printed below. The speakers will be Charles F. D. Belden, of the State Library; Miss J. Maud Campbell, Miss E. L. Jones, and John Adams Lowe, of the State Commission; Miss June Richardson Donnelly, director of the Simmons College Library School, and Miss Crampton, also of Simmons; Miss Florence L. Wheeler of Leominster; Miss Wiggan of Belmont; Charles R. Green, of the Massachusetts Agricultural College at Amherst; and Hiller C. Wellman of Springfield.

##### Tuesday, July 25

- 9:30-10:20 a.m. Miss Crampton, Reference work in the small library.  
 10:30-11:20 " Miss Donnelly, Simmons' library schools and the small libraries.  
 11:30-12:20 p.m. Mr. Lowe, Ways in which the Library Commission can help to make the small library more efficient.  
 2:00-2:50 " Miss Wiggan, Practical methods of co-operation between the library and the school. A program.  
 3:00-3:50 " Miss Jones, Efficiency through simple methods of administration.

##### Wednesday, July 26

- 9:00-9:50 a.m. Miss Crampton, Reference work in the small library. (Continued.)  
 10:00-10:50 " Miss Wheeler, Publicity methods for the small library.  
 11:00-11:50 " Miss Campbell, How to interest the alien in the library and the result.  
 2:00-4:00 p.m. Mr. Wellman, The best recent books for the small library; followed by a Round Table. Discussion of the problems of the small library and their solution (Questions to be handed in or asked by members of the class.)

##### Thursday, July 27

- 9:00-9:50 a.m. Miss Crampton, Reference work in the small library. (Continued.)  
 10:00-10:50 " Mr. Green, Massachusetts Agricultural College documents and their practical use in the small library.  
 11:00-11:50 " Mr. Belden, State Library aid and Massachusetts documents in the small library.  
 2:00-5:00 p.m. Demonstration visits: Brookline Public Library, Work with children; North End Branch Library, Work with aliens.

#### NEW YORK LIBRARY ASSOCIATION

The New York Library Association will meet at Bloomfield's (formerly Hotel Earlington), Richfield Springs, Sept. 11-16. The program is not yet completed but a variety of subjects are under discussion and a number of speakers of reputation are expected.

Richfield Springs is a short distance east of Utica and readily accessible from every part of New York State. Although perhaps best known as a health resort, the village offers a variety of opportunities for recreation during the week. Among these are golf, tennis, boating, fishing, walking and a region famous for its automobile routes. The hotel is very favorably known. During "library week" it will be reserved entirely for those in attendance at the meetings of the association. The hotel rates will be from \$2 to \$3 per day—a very substantial reduction from the usual rates.

Further particulars will be given in a later number of the LIBRARY JOURNAL.

F. K. WALTER.

## Library Schools

### NEW YORK STATE LIBRARY SCHOOL

In some ways, it was unfortunate that this year's library trip covered the same general route taken by three other library schools at nearly the same time. In other ways, the visit, which lasted from April 3 to 11 inclusive, was merely another demonstration of the hospitable treatment which we have through long experience come to expect from New England libraries. Springfield, Worcester, Boston, Harvard University, Medford, Salem, Somerville and Providence were visited. The new Widener Library and the new building of the Boston Athenæum were among the libraries first visited by the school this year.

Despite the large size of the party, fifty-three, the schedule was carried out with but one noticeable complication and that one not the fault of the students. In addition to the

uniformly courteous treatment received everywhere, especially pleasant features of the trip were the informal reception given by Mr. and Mrs. Shaw and the staff of the Worcester Public Library, a luncheon given by Dr. Wilson of Clark University at which the school had the pleasure of meeting President G. Stanley Hall, and teas given at the Somerville Public Library, the Essex Institute, Simmons College, Medford Public Library, and John Carter Brown Library. Mr. Gardner M. Jones again kindly took the entire party in a special car to his branch library and guided them to the Essex and Peabody Institutes, and Dr. H. L. Koopman placed the party under similar obligations at Providence. The informal tea given in the pleasant rooms of the John Carter Brown Library made a delightful end to the trip.

The Regents of the University of the State of New York have included in their revised rules a recent recommendation of the faculty. Hereafter, the school year will begin the third Wednesday in September and end the third Friday in June. Supervised practice work and the library visit are also officially recognized as part of the work of the school year.

The school will close June 23 to permit those students who desire to do so to attend the A. L. A. meeting at Asbury Park. The first part of the summer session will begin Wednesday, May 31; the second part, June 21.

Lectures from visiting lecturers have been as follows:

Apr. 14. Branch library administration, by Miss Mary Casamajor of the Prospect Branch of the Brooklyn Public Library.

Apr. 24. Some experiences in commission work, by Miss Sabra W. Vought, formerly of the Ohio Library Commission.

Apr. 27-28. Commission work in New Jersey. Two lectures by Miss Sarah B. Askew of the New Jersey Library Commission.

May 3-4. Library buildings. Two lectures by Mr. W. R. Eastman.

May 8. The college library building; and Literature of mountaineering, by N. L. Goodrich, librarian of Dartmouth College. The latter was given before the "Library Round Table."

F. K. WALTER, *Vice Director*.

#### PRATT INSTITUTE SCHOOL OF LIBRARY SCIENCE

The libraries visited during the past months have been the main building and two branches of the New York Public Library, the libraries of Columbia University, the Union Theological Seminary, the Grolier Club, and the Russell Sage Foundation. Each class is impressed anew with the pains and care taken by the librarians and staff to make these visits of

value, and with the cordial and often refreshing hospitality with which they are received.

On Saturday, May 13, the students went by invitation to visit the establishment of the H. W. Wilson Company at White Plains. After visiting the editorial rooms and the workshops, the heads of the different departments in turn explained to the class the details of their work. Mr. Wilson then entertained us all at luncheon at the White Plains Club.

In addition to the practice work in this library, which makes up so large a part of the course during the third term, students have had the opportunity of working in the Girls' High School Library and in the technology division and several branches of the New York Public Library. Two of the students who are interested in business library work have spent one afternoon a week visiting a number of such libraries, including those of the Federal Reserve Bank, the National Association of American Manufacturers, the J. P. Morgan Company, and the American Bankers' Association.

#### ALUMNI NOTES

Elsie Hay, 1912, formerly of this staff, has been appointed assistant in the library of the law firm of White & Case, New York.

Mildred Maynard, 1915, assistant in the children's department of this library, has been made supervisor of children's work in the Public Library of Waterloo, Iowa. Miss Dorothy Bemis of 1916 has been appointed as Miss Maynard's successor here.

JOSEPHINE ADAMS RATHBONE,  
*Vice-Director*.

#### LIBRARY SCHOOL OF THE NEW YORK PUBLIC LIBRARY

The juniors have visited the libraries of the following local institutions during the spring term: Columbia University, Teachers' College, Avery Library, School of Journalism, City College, Hunter (Normal) College, Children's Museum and Brooklyn Institute, Russell Sage Foundation, American Society of Civil Engineers, Municipal Reference Library, Mercantile Library, New York Society Library, Montague Branch of the Brooklyn Library, Pratt Institute.

Lectures from visiting librarians have been as follows:

#### Junior Lectures

Library buildings and Library legislation (seven lectures). W. R. Eastman.

Work with schools. Miss Harriet Wood.

Civics, woman, and common sense. Miss Maud Van Buren.

*Senior Lectures*

The small library (two lectures). Mrs. Alma D. Custead, Patchogue, L. I.  
 The special library. Miss Marian Glenn.  
 Commission work. Miss Sarah B. Askew, and Mrs. Belle Johnson.  
 Cataloging for children's rooms. Miss Emma F. Cragin.

The seniors of the reference course have completed a comparison of almanacs and year books, which may be consulted by anyone. This is the subject for which the school agreed to be responsible in the new A. L. A. "sponsors for knowledge" scheme.

Dr. H. L. Koopman, librarian of Brown University, has accepted an invitation to deliver the commencement address on Friday, June 9.

Miss Sutliff has delivered a course of four readings on "Modern poetry" at the Patchogue Public Library this winter.

Ellen M. Foster, junior, 1912, was married to Harold I. Bell, April 27, at Ottumwa, Ia. They will reside in Portland, Maine.

The bibliography subjects selected by the present senior class are as follows:

Clarke, M. Ethel. Literature of the dance.  
 Condell, Lucy. School lunches.  
 Davis, Caroline H. Pageants.  
 Jones, E. Louise. Co-operative schemes for purchase of food.  
 McCurdy, Jessie. Education of women before the 19th century.  
 Olchewsky, Johanna. Year books of learned societies, containing biographical material.  
 Paine, Olivia H. Chinese art.  
 Prall, Elizabeth. Opportunities for women in business and the professions.  
 Robb, Ena. Poetry of democracy.  
 Thomson, Grace. Novels of life in the Southern States.  
 Vail, R. W. Glenroie. List of books published in Albany up to the Civil War.  
 Wagar, Ella E. Translations of Greek dramas.

Subjects for the senior theses are:

Clark, Elizabeth V. History of Philadelphia libraries.  
 Crain, Gladys L. The furnishing of the children's room.  
 Dickey, Philena A. Care of clippings and ephemeral material.  
 Engell, Jennie C. Relation of the library to the community.  
 Goodrich, Dorothy A. Yorkville district: Study of the community for library purposes.  
 Hopkins, Jessica. Library publicity.  
 Overton, Clara L. Music collections in public libraries.  
 Salzmann, Helen. History of the high school library movement of the U. S.  
 Seng, Samuel T. Difficult problems of librarianship in China.  
 Sherwood, Elizabeth J. History of co-operative cataloging.  
 Simpson, Ray. Aguilar district: study of the community for library purposes.  
 Stull, Maud I. Importance and use of the normal school library.  
 Wilder, Edna H. Libraries in Vermont.

MARY W. PLUMMER, *Principal*.

LIBRARY SCHOOL OF THE UNIVERSITY OF WISCONSIN

The observance of the tenth anniversary of the school proved enjoyable and stimulating alike to the present class and the alumni, who returned for the occasion, April 29. The formal program consisted of two lectures. The first, appropriate in connection with the university celebration of Shakespeare's tercentenary, was given by Charles D. Stewart, entitled "Unacademic adventures in Shakespeare." For the other May Day speaker, an alumna of the School was chosen for the first time, and Hannah M. Lawrence, 1910, supervisor of branches for the Buffalo (N. Y.) Public Library, read a delightfully sympathetic paper, "The added cubit." An informal reception was held from 10.30 to 12 and attended by more than 200 friends of the school. In addition to the annual exhibition of poster bulletins on the gallery walls, the display cases in the foyer contained specimen sheets from the students' notes and syllabi, and their tools.

The business meeting of the Alumni Association took place at 2 o'clock and the reunion dinner, with 78 present, at the Woman's building in the evening. Announcement was made at the banquet by Ada J. McCarthy, 1907, that the alumni intend to present a Victrola to the school to commemorate the decennial. A collection of fifteen Victrola records was presented by Helen Farr, class president, for the class of 1916. The evening was spent in dancing.

In addition to the scheduled lectures of the spring term, the class visited in sections the private bindery and heard a lecture by Miss Katherine Hall on her work. Miss Mary A. Wiggin of the Massachusetts Consumers' League spoke on "The characteristics of a good trained worker," drawing her illustrations from a keen observation of libraries. The school was fortunate in being able to secure convocation tickets for the concert given by the Russian Cathedral Choir, when it appeared in Madison. In the discussions on sociological material, talks have been given by J. A. Hazelwood of the Civil Service Commission, Sidney J. Williams of the State Industrial commission, and L. W. Hutchcroft of the State Board of Health. The students had opportunity to hear several distinguished Shakespearean critics, among others, Charles Mills Gayley and William Allen Neilson, who lectured at the university in April. Prof. Bleyer of the School for Journalism delivered a special lecture to the class on "News-papers for libraries."

Subjects for bibliographies have been assigned as follows:

Proper names. Miss Andrews.  
 Dramatics for children. Miss Baskerville.  
 Red Cross. Miss Batchelor.  
 History and criticism of English newspapers, 1800 to date. Miss Helen R. Cochran.  
 Prison reform. Miss Ava L. Cochrane.  
 References on pictures in Madison (Wis.) schools. Miss Davenport, Miss Estes and Miss Roeseler.  
 Relative shares of the sexes in the shaping of our inherited culture (thesis for master's degree). Mrs. Davis.  
 Inexpensive books for private purchases. Miss Day.  
 Labrador and Dr. Grenfell. Miss Dewees.  
 The Great Lakes. Miss Ellison.  
 Puritanism in English and American fiction (bachelor's thesis). Miss Farr.  
 Children's clubs. Miss Fifield.  
 Selma Lagerlöf. Miss Flagg.  
 Contribution to a bibliography on pessimism in fiction (bachelor's thesis). Miss Hall.  
 Care of special material in libraries. Miss Harvie.  
*Punch*, its editors and contributors. Miss Hogg.  
 New community spirit. Miss Jaggard.  
 Women in industry since 1914. Miss Ketcham.  
 Good roads. Miss Lawrence.  
 Music in the public schools. Miss Little.  
 Preventable diseases. Miss Long.  
 The abnormal child. Miss McAfee.  
 American composers. Miss Meyer.  
 Alsace-Lorraine in English, French, and German literature since 1870. Miss Montgomery.  
 Training children for citizenship. Miss Ohr.  
 Addison and Steele as journalists. Miss Petterson.  
 Juvenile courts. Miss Rolfs.  
 Corrupt practice in elections. Miss Ross.  
 Play as a factor in education. Miss Schwab.  
 Junior high schools. Miss Sias.  
 Henry James as a literary critic (bachelor's thesis). Miss Smith.

#### CLASS OF 1916—APPOINTMENTS TO DATE

Stella E. Baskerville, member, Training class for children's librarians, Cleveland Public Library.  
 Winifred G. Batchelor, organizer, Waukesha (Wis.) Public Library.  
 Helen R. Cochran, reviser, Wisconsin Library School.  
 Margaret E. Davenport, assistant, Freeport (Ill.) Public Library.  
 Florence C. Day, librarian, Edgerton (Wis.) Public Library.  
 Gertrude L. Ellison, assistant reference librarian, Duluth (Minn.) Public Library.  
 Grace W. Estes, librarian, Stanley (Wis.) Public Library.  
 Alta D. Fifield, assistant, Branch dept., Cincinnati (O.) Public Library.  
 Juliet Lawrence, librarian, West Duluth (Minn.) Branch Library.  
 Georgie G. McAfee, assistant, Evansville (Ind.) Public Library.  
 Jessie F. Montgomery, librarian, Dept of extension, University of Alberta, Edmonton, Canada.

#### ALUMNI

Lucius H. Cannon, legislative reference course, 1914, who has been doing special indexing, has accepted a position with the American Appraisal Co., Milwaukee, Wis.

MARY EMOGENE HAZELTINE, *Preceptor*.

#### CARNEGIE LIBRARY SCHOOL

Miss Anna Holding, librarian of the Brumback Library, Van Wert, Ohio, on April 17 gave a talk on "County work as developed by the Brumback Library."

A course in public speaking conducted by Mrs. Ella B. Kirk was begun April 20.

Lectures on parliamentary law are being given once a week to the junior class by Mr. William A. Jordan.

April 28-May 2, Miss Elizabeth Knapp, chief of the children's department of the Detroit Public Library, gave four lectures on "Biography."

Miss Adah Hopkins, instructor in the Margaret Morrison Carnegie School, is giving a course of lectures on "Social conditions" to the senior class.

Mrs. Gudrun Thorne-Thomsen of Riverside, Illinois, gave ten lectures May 8-16 on "Story telling." The school invited those interested to an open lecture given the evening of May 12 in the Lecture Hall of Carnegie Institute, when Mrs. Thomsen spoke on "Story telling as a folk art."

Junior students are receiving instruction in sewing and mending books in the library bindery, where each student is scheduled for three periods.

On April 29 the school attended the Founders' Day exercises of the Carnegie Institute.

#### ALUMNAE

Esther Friedel, special student 1914-15, has resigned her position of children's librarian of the Carnegie Free Library of Allegheny, Pittsburgh, Pa., to become assistant children's librarian of the Brownsville children's branch of the Brooklyn Public Library.

Alice R. D. Gillitt, 1915, is organizing the Public Library at Munroe, Louisiana.

Mabel Harlow, 1914, has resigned from the children's department of the Carnegie Library of Pittsburgh to accept the position of children's librarian in the Public Library, Oberlin, Ohio.

Mary Hughes, 1915, has resigned her position of children's librarian of the Public Library, Victoria, B. C., Canada, and has been appointed children's librarian of the Ballard branch, Seattle, Wash.

Helen R. Langfitt, 1916, has been made librarian of the Woods Run branch of the Carnegie Free Library of Allegheny, Pittsburgh, Pa.

Martha J. Sands, 1915, was married May 4 in Pittsburgh, Pa., to Louis Kirtland of Poland, Ohio.

Carolyn D. Stevens, 1916, has resigned her

position of children's librarian of the Public Library, Burlington, Iowa, to become children's librarian of the Carnegie Library of Homestead, Pa.

SARAH C. N. BOGLE, *Principal*.

#### WESTERN RESERVE LIBRARY SCHOOL

The schedule for the past month has included the course in government documents given by Carl P. P. Vitz, second vice librarian of the Cleveland Public Library and a graduate of the Library School. In connection with this course, the students have had the opportunity to attend one of the city council meetings.

The outside lecturers for the month have been as follows: Dr. E. A. Peterson, of the Cleveland Public Schools, who spoke on "Recreation a community necessity"; F. W. Jenkins, librarian of the Russell Sage Foundation Library, on "The Russell Sage Foundation," "The library as a civic factor," and "The library and the delinquent." These were the concluding lectures in the course on "The public library and community welfare," and the inspiring message which Mr. Jenkins brought to the school aroused genuine enthusiasm in all who heard him speak. Miss Kathleen Jones, librarian of the McLean Hospital Library, Waverley, Mass., spoke on "Institutional libraries," especially those in hospitals, and gave the students a glimpse of this comparatively new field of library service in helping those who are mentally and physically sick. Miss Harriet Wood, school librarian of the Portland (Ore.) Public Library, gave an account of the splendid work with the schools of Multnomah county and spoke on "The administration of school libraries." Miss Bessie Sargeant Smith, supervisor of smaller branches and high school libraries of the Cleveland Public Library, spoke on "High school libraries." Mrs. Emily Gibson of the new Cleveland Art Museum gave an interesting account of the "Educational work of art museums." Miss Clara L. Myers, associate professor of English, spoke on "The essay," and Professor Benjamin P. Bourland on "Poetry," both being members of the faculty of the university.

Miss Evelyn Hess, 1913, who has returned to Cleveland as the children's librarian of the new East Cleveland Public Library, was a guest of the school for an afternoon, and gave a very interesting talk on her work with the boys' and girls' clubs in the New York Public Library.

On April 15 the Alumni Association presented on its Lectureship Foundation Marie

L. Shedlock, the English story teller, who lectured on "Humor in education," illustrated by scenes from "Alice in Wonderland" and other stories. This lecture was given in Amasa Stone Memorial Chapel located on the Adelbert College campus, and immediately following it there was a reception for Miss Shedlock in the rooms of the Library School. Members of the university faculty, the Cleveland Library staff, and interested friends of the school were guests.

The school was closed April 19-27, the Easter vacation of the university.

ALICE S. TYLER, *Director*.

#### SIMMONS COLLEGE LIBRARY SCHOOL

The Simmons College Library School does not make an annual "tour of libraries," as most of the other schools do, but throughout the year, usually on Monday afternoons, it visits neighboring institutions, and occasionally spends a Saturday visiting groups of libraries in more distant cities. During the month, April 17-May 17, such visits were made to the Massachusetts State Library, the Boston Athenæum, the Widener Library of Harvard University, the Perkins Institution for the Blind, and to an auction sale at Libbie's. In Providence the Public Library and the Athenæum, the Rhode Island State Library, and the John Hay, John Carter Brown and the Annmary Brown Libraries were visited.

In May the outside lectures were:

- May 22. Miss Ethel Johnson. Special libraries.
- " 23. Mr. Langdon Ward. Branch libraries.
- " 24. Miss J. Maud Campbell. Work with foreigners.

The only new topics taken up in this period of the course are "Library buildings," and "Classed cataloging."

Final examinations occur May 29-June 9, and Commencement Day this year falls on June 14.

During the summer practice work will be done in various libraries, much of it under the supervision of the Massachusetts Free Public Library Commission.

#### SUMMER SESSION

The conference called by the commission to meet at Simmons, July 25-27, will be open also to all those registered in the summer class and its sessions will be considered, for them, a part of the course in reference and library economy SI. The speakers at the conference will be Mr. Belden, Miss Campbell, Mr. Lowe and Miss Jones, of the commission, Miss Donnelly and Miss Crampton, of the college, Miss Wheeler, of Leominster,

Miss Wiggin, of Belmont, Mr. Green, of Amherst, and Mr. Wellman, of Springfield.

While this year is but just drawing to its close, the program for 1916-17 is determined upon. The present staff of instructors will be unchanged, except that the college is compelled, with the greatest regret, to accept Mr. Bolton's decision that pressure of work will make it impossible for him to carry the course of lectures in the history of libraries next year. A few minor changes have been made in the curriculum, the only new departure being that a new elective called "High school libraries," is offered to those who have had the course in "Library work with children." This will be given during the second term, once a week.

#### GRADUATES AND POSITIONS

Rebecca Gross, 1912, was married May 17 to Mr. Frederick Stephen Marsh.

Ella M. Coats, 1916, has been appointed to a position whose duties will be divided between the Social Service Library and the Simmons College Library Department.

Barbara Keith, 1915-16, has been appointed on the cataloging staff of the Boston Athenæum.

Marjorie Yates, 1916, has received an appointment in the Swarthmore College Library.

Chie Hirano, a special student, will catalog in the Japanese department of the Boston Museum of Fine Arts this summer.

Alice Rowe, 1915-16, has received an appointment as general assistant in the Wellesley College Library.

JUNE RICHARDSON DONNELLY,  
*Director.*

#### LOS ANGELES PUBLIC LIBRARY TRAINING SCHOOL

Forty librarians and library attendants from ten libraries near Los Angeles, and forty-five members of the Los Angeles Public Library staff attended one or more of the "open courses" of the Los Angeles Public Library Training School, April 3 to May 11. The courses given during this period were:

Binding and repair of books. J. Elmo Reavis.  
Library movement. Miss Helen Haines.  
Survey of literature (special lectures selected from the regular course of 30 weeks). Miss Gertrude Darlow.  
Library work with children (special lectures selected from the regular course of 20 weeks). Miss Jasmine Britton.  
Reference work (special topics). Mrs. Brewitt.  
Library administration. Miss Zaidee Brown.

In as far as it can be measured by attendance, this first attempt at extension work on the part of the Training School has met with

unexpected success and "open courses" will probably become an annual feature.

Of the members of the 1915-16 class, whose school work is now coming to an end, two have already received outside appointments. These are Miss Marie Deutschbein (from Bloemendaal, Holland), who will go as assistant to the Portland (Ore.) Public Library on August 1st, and Miss Elizabeth Walker (of Long Beach, Cal.) who has accepted a position on the staff of the Long Beach Public Library.

The last six weeks of the instructional work of the school, in addition to the successful experiment of the "open courses," were marked by several notable lectures by visiting lecturers. Among them was M. Henri LaFontaine, of the Institut International of Brussels, who told of the inception and development of that great endeavor toward a universal bibliography. Dr. Allison Gaw, of the University of Southern California, spoke on bibliographical apparatus in the critical study of literature; Dr. James M. Dixon, of the same university, gave an interesting talk on Scottish literature; and Miss Ella Morgan, of the Lincoln High School Library, and Miss Lucy Lay, of the Los Angeles High School Library, both gave lectures covering different aspects of high school library work.

Beginning June 1st the students entered upon a month of practice work, mainly in the Los Angeles Public Library system.

THEODORA BREWITT, *Principal.*

---

### Librarians

---

ABBOTT, Elizabeth, formerly in charge of the reference department library for the Studebaker Corporation in South Bend, Ind., assumed the position of librarian of the Public Library at Billings, Mont., May 1.

ARNOLD, Lillian, formerly librarian of the Carnegie-Stout Library at Dubuque, Iowa, has resigned and was married in Denver, Mar. 30 to Howard Chester Means.

BANGS, Mrs. Martha H., who for sixteen years was the librarian of the Cairo (Ia.) Public Library, died recently.

BIRDSALL, Edith, has resigned from the staff of the Public Library at Foud du Lac, Wis., to become librarian at Laona.

BROOMELL, Eilyn C., New York State Library School, 1913-14, has left the University of Chicago Library to become assistant librarian at the Armour Institute of Technology.

CRUIKSHANK, Alice D., New York State Library School, 1903-04, has been appointed assistant cataloger at the Ohio State University Library.

DAVIS, Helen, of the traveling library department of the Indiana Library Commission, was married in March to Cornelius M. Smith of New York.

HAWES, Clara S., New York State Library School, 1894, is cataloging at the Wayne County Medical Society Library, Detroit, Mich.

HEMSON, Nellie E., one of the senior assistants of the cataloging department of the Brooklyn Public Library, will give a course of instruction in lip-reading for the deaf and "hard of hearing" adult at the Summer School at Chautauqua, New York, July 10-Aug. 19. Miss Hemson's interest in lip-reading has grown out of her own necessity, and as she realized the increasing facility with which its mastery enabled her to comprehend the speech of others, she began to teach it to others in like predicament. Out of her success with these has come the opportunity to work with a larger group at Chautauqua, where both individual and class instruction will be given.

HILL, Grace, B.L.S., New York State Library School, 1912, has gone to the Kansas City Public Library to take charge of the catalog department.

LOCKE, George H., the chief librarian of the Public Library of Toronto, was on Easter Monday elected to the presidency of the Library Association of the province of Ontario and on the same day to the presidency of the Canadian Club of Toronto, the largest and most important of the national clubs of Canada.

MCGIRR, Alice T., New York State Library School, 1906-07, has resigned her position as first assistant in the reference department of the Carnegie Library of Pittsburgh, to accept the librarianship of the University of Pittsburgh Library.

SCRIPTURE, Bessie B., New York State Library School, 1912-13, librarian of the East High School, Minneapolis, will assist in the University of Minnesota Summer Library School.

STANLEY, Harriet H., New York State Library School, 1895, has been substituting temporarily in the Public Library at Utica, N. Y.

THOMPSON, C. Seymour, will become librarian of the Public Library of Savannah, Ga., about June 15. Mr. Thompson was gradu-

ated at Yale University in 1902 and took post-graduate work there. He was with the Brooklyn Public Library for eight years, the latter part of the time in charge of its traveling libraries. For the last five years he has been assistant librarian of the Public Library of the District of Columbia. He has become best known to the library profession from his work in connection with the exhibit of library labor-saving devices at the Washington conference of the A. L. A. in 1914 and his comparative study of such devices as a member of the committee on library administration.

VOGLESON, Helen E., New York State Library School, 1903-04, has resigned her position as Supervisor of the County Extension Department of the Santa Barbara Public Library to become acting librarian of the Inyo County Library at Independence, Cal.

VOUGHT, Sabra W., B.L.S., New York State Library School, 1901, served as temporary assistant in the Educational Extension Division of the University of the State of New York from January to May 1. Miss Vought will return to Albany in June to give the instruction in cataloging in the New York State Library Summer School.

WALLACE, Ruth, New York State Library School, 1913-14, head of catalog department, Evansville (Ind.) Public Library, will have charge of the reference course at the Chautauqua Summer Library School, Aug. 4-18.

WATTS, Blanche V., New York State Library School, 1910-11, will assist in the Iowa Summer Library School as secretary and reviser.

WHEELER, Harold L., B.L.S., New York State Library School, 1913, who has been in charge of one of the larger branches of the New York Public Library, has succeeded Jesse Cunningham as librarian of the University of Missouri School of Mines and Metallurgy at Rolla.

WILCOX, Almira, Pratt 1910, formerly head of the circulation department of the Troy Public Library, has been appointed librarian of the Public Library at Dubuque, Iowa.

WILLARD, Ruth M., New York State Library School, 1911-12, has resigned her position with the Iowa Library Commission and has gone to the Minneapolis Public Library as first assistant in the 36th Street branch.

WYER, Malcolm G., B.L.S., New York State Library School, 1903, will be the director of the Iowa Summer Library School.

# THE LIBRARY WORLD

## New England

### MAINE

*Brunswick.* The Curtis Memorial Library is making a collection of material pertaining to the sea-captains of Brunswick, their pictures, pictures of ships, log-books, letters, anything pertaining to sea-faring life. The library building was given to the town in memory of a sea-captain, John Curtis of Brunswick. The collection is small as yet, but interesting and valuable.

*Waldoboro.* The Public Library, whose inception was planned at a banquet held last November, was dedicated and thrown open to the public on May 1. The library opened with over 1100 volumes on the shelves, the combined gifts of 66 individuals. Mrs. Lucy W. Bliss is the librarian.

*Winthrop.* Charles M. Bailey, a manufacturer of this town, has offered to give a public library building to the community. The building, if the offer is accepted, will be built of brick.

### MASSACHUSETTS

*Amherst.* The plans for the new library building at Amherst College, which were prepared by McKim, Mead & White, have been accepted, and the new building will be located on the site of Hitchcock Hall. The disposition of Hitchcock Hall has been left to the library committee. Work will soon commence on the library and it will be substantially completed for commencement in 1917.

*Attleborough P. L.* Helen M. Chaffin, lbn. (Rpt.—1915.) Accessions 1234; withdrawn 130; total 18,484. New registration 770; total 7955. Circulation 71,425. Some changes in the library's interior were made during the year, and the equipment of a children's room in the basement is recommended. A picture collection has been started, and now contains 2700 mounted and twice as many unmounted pictures.

*Boston.* Contracts have been awarded for the new addition to the Public Library. The extension on Blagden street was awarded to the George B. Long Co. of Worcester for \$125,000. The book stack was awarded to the Library Bureau for \$27,188.

*Boston. Mus. of Fine Arts L.* Foster Stearns, lbn. (Rpt.—1915.) Accessions 686 volumes, 633 pamphlets, 1311 photographs; total, 16,155 volumes, 9087 pamphlets, 41,638

photographs. In the reading room the attendance was 4550, and in the photograph room 3239. Photographs to the number of 13,075 have been used outside the room—by 374 individuals or classes in the building and 402 times outside the museum. The collection of pictures from magazines is growing at a remarkable rate, and one person is fully occupied in preparing and filing the material and attending to the increasing demands of users. During the year 3594 mounts with 4891 pictures have been added, making a total of 10,165 mounts and about 14,000 pictures. Students have borrowed 1260 of these, besides constant use in the room.

*Cambridge.* The North Cambridge Business Men's Association has appointed a committee to take steps toward securing a Carnegie branch of the Public Library to replace the small branch now located in a room over the police station.

*Fitchburg P. L.* George E. Nutting, lbn. (Rpt.—yr. ending Nov. 30, 1915.) Accessions 1729; lost or withdrawn 355; total in library 58,565. Circulation 98,274. Total registration 5780. Receipts \$9076.53; expenditures \$9056.12, including \$5486.59 for salaries, \$1682.59 for books, \$315.15 for periodicals, and \$235.10 for binding. The report includes interesting comment on the use of the "request" book by readers, the success of the story-hour conducted by women of the city, the increased use of books in foreign languages, and of the open book-shelf. Through the co-operation of the local papers, the library this year will publish semi-monthly reviews of new books.

*Malden P. L.* Herbert W. Fison, lbn. (Rpt.—1915.) Accessions 3921; lost or withdrawn 1818; total 68,232 volumes and 9109 pamphlets. Circulation 211,234. New registration 3981; total 12,650. Receipts \$25,649.08; expenditures \$22,899.53, including \$3954.55 for books, \$448.85 for periodicals, \$1202.32 for binding, and \$9768.60 for salaries for library service.

*Needham.* The new library building was dedicated May 4. In the total cost of about \$32,000, ten thousand represents the expense to the town. William Carter, one of the town's most public-spirited citizens, was the principal donor, giving \$12,000 for the old building, \$9000 in cash, and a suitable site for the new structure. Another to help the town was Myra C. Greenwood, widow of the

late Charles C. Greenwood, who in her will left \$10,000 for library purposes. Miss Esther Johnson is the librarian.

*North Adams P. L.* Mabel Temple, lbn. (32d ann. rpt.—yr. ending Nov. 30, 1915.) Accessions 1604; lost or withdrawn 637; total 37,382. Circulation 98,734, over 35% of the population being registered borrowers. Receipts \$7596.74; expenditures \$7354.10, including \$1661.04 for books, \$197.71 for binding, \$284.44 for periodicals, and \$2933.93 for salaries.

*Northampton.* W. B. Clarke of Boston, a nephew of the late Christopher Clarke, has intimated the possibility that the plan to unite the Clarke and Forbes Libraries at the Forbes Library, which has been adopted by the city council, may be contested in the courts. Mr. Clarke says that he has received letters from contributors to the fund with which the library building was erected, expressing opposition to consolidation. Mr. Clarke says further that, in proportion to number of books, the circulation of the Clarke Library is the greater of the two and he holds that the Clarke Library should be maintained for its value as a circulating medium.

*Reading.* The Grouard estate, bounded by Main, Woburn, and Lowell streets, has been chosen by the town as the site for its new library building. The town bought the estate a few years ago for a location for a municipal building. For the library, the Lowell street side will be used and an option has just been secured from the Emma M. Brown estate adjoining, should more land be needed in years to come. A grant of \$15,000 was received from the Carnegie Corporation for the library building and the town has appropriated \$5000. It is planned to have the building ready for occupancy by 1917.

*Somerville.* An offer of \$18,000 has been received from the Carnegie Corporation for a branch library at East Somerville.

*South Hadley Falls.* A memorial to Jessie Goodwin Spaulding of the class of 1903 has just been placed by her parents and sister in the library at Mt. Holyoke College. It is an exhibition case of plate glass with oak table and frame for the display of rare books. The case stands a little more than five feet high with sloping sides, and is constructed with an inside frame which provides for two rows of books on each side of the case at a convenient angle to be read.

*Wakefield. Beebe Town L.* H. Gertrude Lee, lbn. (Rpt.—1915.) Accessions 917; dis-

carded 1202; total 18,132. Circulation 78,266. Total registration 4040. Receipts \$3056.45; expenditures \$3056.44.

*Waltham.* The Francis Buttrick Memorial Library, the new home of the Public Library, is described in the *Architectural Record* for April (p. 321-337). A number of illustrations, including floor plans, accompany the article.

#### RHODE ISLAND

A bill has been introduced in the House by Representative Bodwell (H. 193) to promote the efficiency of library service, providing state aid for payment of school librarians whose qualifications are approved by the State Board of Education.

*Auburn.* Officials of the Auburn Library Association are making plans to secure a Carnegie appropriation for a new library building. The site selected is in the district destined to become the civic center of Cranston, and those in authority suggest that the Auburn Library may be changed in title to the Cranston City Library, with the other libraries as branches.

*Carolina.* On Mar. 17, the Public Library, which had been closed since November for renovation and repairs, was reopened on an enlarged and reorganized basis, offering a conspicuous illustration of the value of cooperation between the women's clubs of Rhode Island, the State Board of Education, and local interests in providing library facilities in the smaller towns. The library started in 1881 with 800 volumes, by 1900 had reached 3059 volumes, and now has over 5000. The state has granted an annual appropriation of \$150 for the purchase of books since 1900.

*Newport.* During March and April the delivery and reading rooms in the Redwood Library were rearranged. The old fiction room, which was hopelessly overcrowded, was given up and all fiction in English, including translations from foreign languages, is now arranged in one alphabet, occupying practically all the shelves in the reading room. The juvenile collection has been placed in the northeast alcove of the delivery room, and most of the books previously on these shelves have been removed to the two alcoves on the south side of the room. A valuable addition to the library's books on medicine has just been received from Mrs. Rufus E. Darrah, who has presented the medical library of her late husband, comprising 366 volumes.

*Pawtucket. Deborah Cook Sayles P. L.* Harold T. Dougherty, ex-lbn. (Rpt.—1915.)

Total volumes 38,543. Circulation 179,879. Registration total 9822 (estimated population 55,355). Receipts \$17,647.45; expenditures \$17,647.45, including \$10,028.40 for salaries, \$2536.05 for books, \$1058.40 for binding, and \$497.57 for newspapers and periodicals.

## Middle Atlantic

### NEW YORK

*Akron.* Mrs. Eunice Denio, who died recently, left \$10,000 which is to be used in the building of a new library here, as a memorial to herself and her husband. It will be at John and Franklin streets, opposite Russell park.

*Carthage.* The Free Public Library building, to be erected this summer, will be 40 x 60, and one story in height, with basement. In the basement will be located the assembly hall, with a seating capacity of about 200. The main floor will contain the library, reading room and the librarian's room. The material used will be dark brown brick.

*New York City.* *Amer. Soc. of Civil Engrs.* L. Eleanor H. Frick, lbn. (Rpt.—1915.) Accessions: 1240 bound and 2197 unbound volumes, 181 specifications, and 347 maps, photographs, and drawings; total: 25,872 bound volumes, 48,452 unbound volumes, 7869 specifications, and 5236 maps, etc. The card index now contains about 100,000 cards. During the year 100 new bibliographies (3610 separate references) were made, and copies have been made of 33 made in previous years. The total cost of this work, \$944.36, was charged to those for whom it was undertaken. The index to technical literature started this year, and the result of an investigation of the cost of the library work, are both to be described in the department of "Library Work" in a later issue.

*Schoharie.* The Free Public Library which the local chapter of the D. A. R. has had in charge, was opened May 10 with 800 volumes on the shelves.

*Seneca Falls.* Plans for the new Mynderse Library, to be built on the site of the former library, have been accepted. The new library, plans for which were drawn by Architect I. Edgar Hill of Geneva, will be 64 x 42 feet. The building will be of brick, with stone finish and a Spanish tile roof. The main floor will have a reading room, a delivery room, a reference room, and a stack room with a capacity of 20,000 volumes. Work on the building will be pushed during the summer.

### NEW JERSEY

*Camden.* The contract for the new Cooper branch of the Public Library has been let for \$130,000. The building is the gift of President Eldredge R. Johnson of the Victor Talking Machine Company. Karcher & Smith of Philadelphia are the architects. The building is to be 63 x 108 feet, and built entirely of stone. Colonnades with tall fluted columns will enrich the elevations on Cooper and Penn streets. Over the doors will stretch a mosaic frieze seven feet high and running the full 58-foot width of the portico. This frieze of mosaic glass in rich colors will be the only color contrast with the simple buff color of the building and is unique in its use as an exterior motive.

*Collingswood.* The city authorities favor the purchase of the Presbyterian Church property, on the corner of Haddon and Frazer avenues, as a site for the library building to be erected with the \$15,000 grant made by the Carnegie Corporation. This is considered the best location in the town for a library building. The present library has a registration of 2000, exclusive of the West Collingswood branch.

*Madison P. L.* Norma B. Bennett, lbn. (Rpt.—1915.) Accessions 517; lost and withdrawn 276; total 11,201. Circulation 28,027. New registration 442; total 1886. Receipts and expenditures not given.

*Morristown.* At a meeting of the directors of the Morristown Library and Lyceum, held April 12, it was announced that Mr. Grinnell Willis has agreed to give to the Morristown Library the \$50,000 building recently designed by Mr. Edward L. Tilton as a library for Morristown. Mr. Willis stated that he gave the building to the Morristown Library in memory of his wife. This building will replace the Morristown Lyceum building destroyed by fire two years ago.

*Paterson.* Another branch of the Public Library, in the People's Park section of the city, is proposed. The annual cost of maintaining such a branch is estimated at \$3000.

### PENNSYLVANIA

*Grove City.* *Carnegie F. L.* Mary E. Dunbar, lbn. (Rpt.—1915.) Accessions 1031; total 11,680. Circulation 5136; students of Grove City College make large reference use of the library, but of this no record is kept. Registration of townspeople 916; no statistics are kept of the number of students taking books. The library is open 12 hours a week

to children of the town. As all reference and circulation work, both for adults and children, must be carried on in one room, much confusion results and the seating capacity is taxed to the utmost many hours a day.

*Mechanicsburg.* An effort is being made to transform the Mechanicsburg Library and Literary Association into a free library.

*Oil City P. L.* Emily S. Glezen, lbn. (Rpt.—yr. ending Mar. 31, 1916.) Accessions 821. New registration 916; total 8432. Circulation 72,266. The reading room attendance was 24,661; reference workers and questioners were 2424 and the story-hour attendance was 2847. The gain in circulation during the year was 5487. Following the publication in one of the local papers of a summary of the report and a statement of the need of increased funds to keep up the book collection, the library received an anonymous gift of \$600 for the purchase of new books.

*West Chester.* The children of the town collected \$197.70 to be applied as part payment for the new annex to the library building, which is being fitted up especially for the children. On April 7 the pupils of the lower grades assembled in the High School auditorium. Several members of the library board were present to thank the children, and there was music and speeches. Judge Hause, the principal speaker, suggested to the children that each one resolve to spend 20 minutes a day reading some wholesome interesting book, recommended by the librarians, and see how much they would learn in a very little while.

#### DELAWARE

*Wilmington.* In the campaign for subscriptions to provide a new library building carried on here in April over \$325,000 was raised, in amounts ranging from a nickel to \$34,000. The building is expected to cost about \$300,000, and when completed will house the Howard Pyle pictures now held in trust for the city by the Wilmington Fine Arts Association. There has also been some talk of placing the Historical Society in the same building, but no decision has yet been reached on this point. The building will belong exclusively to the library, any other organization housed under its roof coming in as a tenant.

#### DISTRICT OF COLUMBIA

*Washington.* On or about July 1 the Southern Railway Company expects to move its library into new offices here, where it will have approximately 2600 square feet of floor space.

The books are all to be placed in Globe-Wernicke cases, six sections high, requiring about 850 sections.

*Washington.* Clarence L. Hay and Miss Helen Nicolay have presented to the government four Lincoln manuscripts of extraordinary interest. The manuscripts are the two drafts of Lincoln's Gettysburg address, one of which he held in his hand when he delivered it; and the draft of the second inaugural address. These were the property of the late Secretary John Hay. Miss Nicolay's gift is the memorandum which Mr. Lincoln prepared, August 23, 1864, which stated that it seemed to be probable that he would lose the coming election, in which event it would be his duty to co-operate with the president-elect to save the Union. This memorandum he sealed, and requested each of the members of his Cabinet to endorse. After the election, the sealed packet was opened, and he read it to his Cabinet. This document was preserved by John G. Nicolay.

## The South

### VIRGINIA

*Richmond.* The Rosemary Library was reopened April 1 in the John Marshall High School, and is open to the public as well as to students of the school. The hours will be from 8.45 a. m. to 9.30 p. m., except Sundays and legal holidays.

*Richmond.* In spite of past disappointments, there are still a large number of people in the city who are determined not to rest until Richmond has a Public Library adequate to its needs and commensurate with its importance. Evidence of this attitude of mind is seen in the announcement made at the annual meeting of the Richmond Education Association, held in May, that the principal object of the association during the coming year would be to secure the erection of a Public Library in Richmond. Likewise the Young Men's Progressive Association, at a recent meeting, went on record as being in favor of an adequate public library for Richmond and an appropriation of \$25,000 per year for the purpose of securing quarters temporarily and for the purchase of books and equipment to be used when the permanent public library is built.

*South Boston.* Plans are well under way to establish a library in South Boston, principally through the efforts of one or two women of the city. Already 50 volumes have been donated, and a campaign to raise cash for furniture, etc., will be started at once. It

is planned to get all the donations possible here, and then appeal to the Carnegie Corporation for help.

#### NORTH CAROLINA

*Durham.* Directors of the Durham Public Library are preparing to seek \$30,000 from the Carnegie Corporation with which to erect a new building in this city. City aldermen have consented to give a site for the library and are now negotiating with county officials relative to paying a share of the \$3000 annually for the maintenance of the building, following its erection.

#### SOUTH CAROLINA

*Greenville.* In order to provide for the establishment of a library for Greenville county, the recent session of the general assembly passed two acts. One provided for an election in the city of Greenville to determine whether or not the city council will appropriate the amount of \$4000 a year for 50 years for the support of the library. The second act provides for the creation of a library commission, and gives this board full authority to use the old "Record building" on South Main street, or the lot on which it is situated, in any manner they deem best. The only limitation upon their power to establish the library, is the question of funds. The act does not carry any provision for funds for the erection of a library building, or remodeling of a present building. A request will probably be made to the Carnegie Corporation for a building appropriation.

*Kingstree.* Mayor W. R. Scott has received information from the secretary of the Carnegie Corporation that the \$6000 promised by the corporation for the erection of a Public Library at Kingstree is now available and that the local authorities can start work on the building as soon as the architects are in position to take charge of the same. The library building will be located on the corner of Mill street and Hampton avenue, the site of the old public school building.

#### GEORGIA

*Savannah.* The new building of the Savannah Public Library, a Carnegie building costing \$75,000 exclusive of equipment, will be ready for occupancy about August 1. The library was established in 1903 in connection with the Georgia Historical Society, and has since been maintained jointly by the city and the Historical Society. With the opening of the new building the connection with the Historical Society will be severed, the city taking complete control of the Public Library.

The recently appointed board of managers has elected as librarian C. Seymour Thompson, now assistant librarian of the District of Columbia Public Library.

#### FLORIDA

*West Tampa.* Nearly 200 volumes, a number of good pictures, together with a large collection of standard magazines, were donated to the West Tampa Carnegie Library as a result of Library Day. The day was set aside by the Library Board, and Mayor Macfarlane gave it official recognition through the issuance of a proclamation. During the day the donations were gathered, and in the evening an informal reception was held in the reading room of the Library Building, under the direction of the West Tampa Woman's Club.

#### KENTUCKY

*Corbin.* Ground was broken for the Carnegie Library early in April and much enthusiasm for the work is evident here. The cornerstone was laid Easter week.

*Tell City.* Tell City expects to have a Carnegie Library. The school board has had the subject up for some time with the Carnegie Corporation, and the site for the structure has already been selected. The City Council passed a resolution indorsing the action of the school board and a levy for its maintenance annually has been placed on the taxes. The cost of the Carnegie Library will be \$10,000, and the new building will be erected this summer.

#### TENNESSEE

*Chattanooga.* The cornerstone of the new library building for the University of Chattanooga, was laid on the afternoon of April 20. Dr. Fred W. Hixson, president of the university, delivered the address. Dean W. W. Hooper, Dr. David R. Lee, secretary of the faculty, and other members of the faculty and student body, took part in the ceremonies.

*Nashville.* A favorable communication has been received from the Carnegie Corporation regarding the erection of a branch building in East Nashville.

*Vicksburg.* The Carnegie Library was dedicated March 7. Mayor J. J. Hayes presided over the exercises arranged for the evening, and made the formal address of dedication. Music and several other short addresses followed, after which those present were shown through the library by Mrs. Bernard Forster, the librarian, and members of the board of trustees.

## ALABAMA

*Anniston.* A \$20,000 Carnegie library for Anniston may be considered almost assured. The city council has accepted the offer of R. E. Garner for a lot on Tenth and Wilmer streets and his further proposition to give the city \$1200 a year for a period of five years to defray the expenses of the library. It is now only necessary to raise an additional \$800 a year, making \$2000 in all, for upkeep. The city is willing to give \$500 of this amount if the county commissioners will contribute the balance.

*Birmingham.* The Birmingham *Age-Herald* for April 30 showed the front and side elevation of Architect Eugene H. Knight's proposed design for city hall, jail, library, and auditorium, which would utilize the steel frame of the Roden building at Eighteenth street and Fifth avenue. The plan has been endorsed by the Chamber of Commerce and other civic bodies.

## LOUISIANA

*Lafayette.* At a meeting of the Federation of City Clubs March 30, a constitution and by-laws were adopted and steps taken to secure a city library through the Carnegie Corporation.

## The Central West

## MICHIGAN

*Ann Arbor.* Work is shortly to be begun on the new library building for the University of Michigan. The new bookstacks will be erected first, and will be placed at right angles to the present stacks. It is expected that it will take about a year to finish these and have them ready for occupancy. Upon their completion, books and furniture will be removed from the present front of the library building to these two stack wings, one of which will be used for a temporary reading room until the completion of the main building.

## OHIO

*Akron.* A new library building erected at a cost of \$30,000, was opened to the students of Akron University the latter part of April. The building was a gift from F. H. Mahon of the B. F. Goodrich Co. and F. A. Seiberling of the Goodyear Tire Rubber Co., and is the first building added to the campus since Buchtel College was converted into a municipal institution.

*Cleveland.* Progress on the proposed new main building has been long delayed, but it seems now as if an end might soon be made to waiting. The situation is this: The location

to which the library is assigned in the group plan is owned by the city. More than two years ago the council decided to deed this land to the library on condition of the erection of a library building and its occupancy by the library board. The library board decided to accept. A citizen asked for an injunction to prevent the city from deeding valuable property without consideration and also to prevent the library board from building on land which they did not own in fee simple. The questions are purely technical, since the same people constitute the library, organized for educational purposes, as constitute the city school district. The injunction has been denied by the Common Pleas Court and the Court of Appeals. The case was argued by the Supreme Court on the 25th of April and if its decision is favorable, the library will probably proceed at once with the selection of an architect and the erection of the building.

*Cleveland.* The Carnegie building in Lakewood, for which the Carnegie Corporation granted \$45,000, has been completed. Its exterior is of Indiana limestone, and with the exception of a mezzanine story across the front, the interior is one story about 20 feet high.

*Columbus.* The library at the Godman Guild House is being enlarged. Miss Elinor Ryan, assisted by other workers on the regular staff and volunteers, has charge. A recent book campaign resulted in the donation of 600 books, mostly for children. An arrangement has been made with the Public Library board so that 500 popular books are being placed on the shelves of the guild library, known as the James Kilbourne library, because it was founded by and has benefited considerably from gifts by Colonel James Kilbourne. There are about 2500 volumes. From 10,000 to 15,000 magazines are gathered up yearly and distributed to families not able to subscribe. Magazines also are utilized in the kindergarten and the small children's classes for scrapbooks, puzzles, coloring, etc.

*Columbus.* A dispatch to the Youngstown *Vindicator* announces, on the authority of Lieutenant Governor John H. Arnold, that a bill will be introduced soon after the legislature meets next January to move the State Library from the quarters it has always occupied in the State House to the Ohio State University. Lieutenant Governor Arnold favors the proposed change, being of the opinion that the State University Library force, with some of the present State Library force, could manage the State Library and thus cut down the cost of its maintenance.

*Maumee.* Plans are being prepared for the Carnegie Library building to be erected on the site of the old courthouse. The Carnegie Corporation has made an appropriation of \$10,000 for the building.

#### INDIANA

*Franklin.* The new Public Library, for which the Carnegie Corporation made an appropriation of \$14,000 in 1914 and which has been finally completed at a cost of \$21,000, was dedicated April 28. The building is at Madison street and Home avenue, and is of English style architecture. Graham & Hall of Indianapolis were the architects. The Public Library in Franklin is the result of an agitation started by the women's clubs five years ago, when they set apart a day as library day, and obtained sufficient money to warrant the starting of a library. Just before the library was opened another library day was held, known as "book" day, when all persons were asked to contribute a book. In this way, 1000 volumes were received. The library now contains 5000 volumes. There are 11 branch stations in Franklin and Needham townships, with a circulation of 7000 books.

*Laporte.* The Carnegie Corporation has granted \$27,500 to this city for a public library building. The city has had a library for a number of years and has outgrown its present quarters. The library board has purchased the Frank T. Roberts corner, Maple and Indiana avenues, for \$10,000 and will erect the new building thereon. This site is half a block west of the present building, and is 120 x 121 feet in dimensions.

*Mishawaka.* The Public Library was reopened May 6 in the new structure on Mill and First streets. A reception was held the preceding evening, when the rooms were open for inspection. The library was first opened in the fall of 1907, and has grown steadily since. Branches throughout the township and stations in the local factories may be opened in the near future.

*Williamsport.* The library board has selected the southwest corner of the P. W. Fleming property on Falls street, a half block south of the twin bridges, on the east side of the street, as the site for the Carnegie library that is to be erected as soon as the preliminary arrangements can be completed. The Carnegie Corporation has made a grant of \$8000 for a building, and it is believed that the matter can be pushed through so rapidly that the building will be ready to dedicate by November.

#### ILLINOIS

*Chicago.* The directors of the Fire Underwriters' Association of the Northwest voted April 18 to appropriate \$250 annually for indexing the library, with the understanding that a like amount is to be appropriated by the Fire Insurance Club of Chicago and \$500 by the Chicago Board of Underwriters. The library is the largest collection of fire insurance literature in the West, but much of its value is lost by the absence of an adequate index. The co-operation of the various organizations was obtained by Miss Abbie Gantz, the librarian of the association, who will be in charge of the work.

*Chicago.* A branch reading-room of the Chicago Public Library to be established on the new municipal pier has been recommended in a report of Librarian Henry E. Legler to the directors of the Chicago Public Library, and was referred to the committee on branch reading-rooms. This proposed room would be provided with current literature, books, magazines and other reading matter of interest to the general public, and it is believed would prove to be a source of interest and benefit to those waiting for boats or trains.

*Chicago.* A "library smoker" was held at the Red Star Inn Mar. 27, called by C. B. Roden to commemorate the four-hundredth anniversary of the birth of Conrad Gesner, the "father of bibliography" and the author of the *Bibliotheca Universalis*, "the first and only successful attempt to record all the world's literature to date." J. Christian Bay addressed the assembly, both about Conrad Gesner and about smoking, calling attention to the little book on "Tobacco leaves" recently issued by W. A. Brennan. Another subject was called to the attention of the assembly by Professor Clapp, who, as acting chairman of the committee on American speech, asked the co-operation of librarians in the production of a bibliography of voice culture and voice hygiene.

*Chicago.* The most extensive salary increases in the history of the Chicago Public Library were authorized by the Board of directors at their last meeting on recommendation of the librarian. These include forty-five grade promotions and two hundred and fifty-nine other salary increases for the members of the staff, together with raise of pay for the scrubwomen, janitors and the minor grades of service in the engineers' and other mechanical departments, a total of three hundred and sixty-eight salary increases.

*Chicago.* In the civics room in the Chicago Public Library is a considerable part of the collection of pictorial and printed material gathered by the Civic Education Extension Committee for use in connection with the "Chicago course" in the public schools. Included in the collection are many maps of European cities, comprising the principal industrial centers, showing the residence zones, the sections designated by municipal law for manufacturing sites, and similar apportionment of corporate areas in well-planned cities. There is also a large collection of stereopticon slides, illustrative of city activities in Europe and the United States. The slides have been fully indexed on a novel plan, showing pictorially in scrap books what is included in the various groups. They will be loaned to teachers, lecturers and organizations which can use them advantageously.

*Chicago.* The 1915 report of the Art Institute of Chicago shows the following totals in the collections in the Ryerson Library at the end of the year: Books, 11,307; photographs, 31,503; lantern slides, 13,840; pamphlets, 9563; post cards, 5274; and maps, 320. Circulation of books was 12,672; photographs, 5044; lantern slides, 18,994; and post cards, 705. Visitors for reading and reference numbered 94,959, and 447 special tickets were issued. During the summer exhibition cases were installed, and there were shown exhibits of old manuscripts, examples of modern illumination, and the illustrated catalogs of the J. Pierpont Morgan Library.

*Decatur.* The first branch of the Public Library was opened in the Durfee school May 3. The library furnishes the tables and other equipment, and there is shelf room for about 1500 books. The branch is not distinctively a school library but is open to the adults of the neighborhood as well.

*Urbana.* President Edmund J. James of the University of Illinois has started a campaign to make the university library one of the leading libraries of the world. It is proposed that one section of the library shall contain American history and the subsections of this shall be devoted to source material on the races that make up American nationalism.

## The Northwest

### WISCONSIN

*Oshkosh.* The West Side branch of the Oshkosh Public Library was formally opened Mar. 11.

*Tomah.* Tomah is to have a new library this spring, to be called the Carnegie-Buckley library building, after the donors. The old building which has served as a public library since 1903, will be moved from the site. It was purchased for \$2,500, and is now worth some \$8000. The growth of the library since its foundation by a group of public spirited women in 1902 has been rapid. The fund for the new building is partly the gift of the Dr. Ernest R. Buckley estate. Dr. Buckley, a geologist, and a resident of Tomah as a boy, provided for a fund in his will, but his early death resulted in its being inadequate for the building, and a Carnegie grant was obtained to complete it.

### MINNESOTA

*St. Paul.* The city council has approved the award of a contract for \$68,215 to Cameron & Co. to build three Carnegie branch libraries. This contract does not include heating, plumbing, and electric work. The Carnegie Corporation offered the city \$75,000 to construct the three buildings. Sites have been given to the city by residents in St. Anthony Park, the West side and the First ward.

*St. Paul.* In the *Minnesota History Bulletin* for February, 1916, is given the following record of growth of the library of the State Historical Society: "The total number of accessions recorded during the year 1915 was 2232, of which 1870 were bound volumes, and 362 were pamphlets placed in pamphlet binders. Of these accessions, 956 items were purchased, 123 were received as exchanges, 366 are gifts, not including 156 United States government documents received on deposit, and 371 are volumes of newspapers donated by the publishers, but bound by the society. The remaining 260 items represent material, mostly pamphlets, which has been in the possession of the society for some time, but was not accessioned until the past year. The total number of accessions on January 1, 1916, was 78,854, of which 78,492 are bound volumes and 362 are pamphlets in binders. The unaccessioned material in the library is estimated at 41,000, making a total estimated strength of almost 120,000 books and pamphlets."

### IOWA

*Greenfield.* The contract for the new Carnegie library building has been let and work will be started promptly.

*Sutherland.* By provisions of the will of the late Mrs. Roma Wheeler Woods, Sutherland is given a site and a fireproof brick li-

brary building as a memorial to Mrs. Woods and her husband. They were among the first settlers of this community.

*Waterloo P. L.* Maria C. Brace, lbn. (12th ann. rpt.—1915.) Accessions 1500; lost or withdrawn 536; total in library 23,912. Circulation 130,262. New registration 5665; total 7089 (registration period 3 years). Receipts \$14,186.77; expenditures \$14,043.62, including \$1055.23 for books, \$425.70 for periodicals, \$328.65 for binding, and \$7346.55 for salaries for library service. The library has two main buildings, East and West. In addition four stations were opened during the year, and school collections are maintained in 53 school rooms. As the result of work on the part of the committee on rural extension, East Waterloo township has made a levy for library purposes, thereby securing free use of the library for its citizens.

#### NEBRASKA

*Blair.* A grant of \$10,000 for a library building has been made by the Carnegie Corporation, and \$1200 was collected by popular subscription in April for the purchase of a site.

*Broken Bow.* The new Carnegie Library was opened to the public Mar. 25. There was no formal program but there was music and refreshments. The building was erected and equipped at a cost of \$10,000. The cornerstone was laid last June. The structure is 40 x 60 feet and is built of brick with a tiled roof. It has a full story with basement. It consists of reading and lecture rooms, offices, kitchen, furnace room and lavatory. The library has over 3000 volumes and about one hundred people take out books daily.

#### NORTH DAKOTA

*Bismarck.* Organization of the Bismarck City Library Commission, newly created, was perfected late in April and plans made for the establishment of the library provided by a gift from the Carnegie Corporation.

#### SOUTH DAKOTA

*Wagner.* The contract was awarded in April for the erection of the new Carnegie Public Library building in this city. The contract requires that the structure be completed in 90 days. The building will be constructed of shaded fire-proof brick.

#### MONTANA

*Roundup.* The erection of a free public library is assured by permission obtained from

the city council to erect a building to cost not more than \$1200 on lots owned by the city. The work will be done by subscription, sufficient funds having already been pledged to carry it to completion. No outside help will be asked, at least for the present. The movement was initiated by local lodges and has been given the support of the Woman's Club and all other organizations in the city.

## The Southwest

### MISSOURI

*Kansas City.* Bids have been asked for the \$200,000 addition to the present library building. The enlarged building will occupy the entire west half of the block bounded by Locust, Cherry, and Ninth streets.

*St. Louis.* At the end of the first three months of the year donations to the St. Louis Public Library of perforated rolls for use in mechanical piano-players had reached 1335. The circulation of these in January was 544, in February, 979, and in March, 1352.

### KANSAS

*Topeka.* The Masonic Grand Lodge of Kansas has advertised for bids on the erection of its \$100,000 building at Eighth avenue and Harrison street. The plans were prepared by Edward L. Tilton of New York, and call for a stone building of Roman Ionic architecture, 75 x 120 feet in dimension, with two floors and a high basement. Steel fixtures will be installed throughout the building. On the first floor will be found office rooms of the grand secretary, assistant grand secretary, two work rooms, offices for the grand master, a library and museum. On the second floor will be found office rooms, and rooms for the grand chapter, grand council and grand commandery. Book rooms will fill the basement.

### OKLAHOMA

*Frederick.* The new Carnegie Public Library, built at a cost of \$10,000, was opened early in March. The library now has 1200 books.

*Tulsa.* The new Carnegie Library was opened May 1. The building stands at the corner of Third street and South Cheyenne avenue. It is built of white stone and cost \$55,000. Plans for the building include an art gallery as well as library, and it is intended to maintain it as a place for municipal gatherings as well as an institution for the distribution of books. The stacks will accommodate 50,000 volumes.

## TEXAS

*Austin.* At the annual meeting of the State Library and Historical Commission in March, a letter was read from the Carnegie Corporation. This letter stated that unless the Carnegie libraries in Texas fulfill more promptly the terms of their contracts with the Carnegie Corporation, the Carnegie library movement in this state will suffer. The commission was asked to devise ways and means for compelling certain Carnegie libraries in Texas to keep their pledges with the corporation. As there is no state law governing the matter, the commission can go no further than to request the libraries to fulfill their contracts. Of the 26 Carnegie libraries in the state, it is said that only 10 of them have fully complied with their contracts.

*Vernon.* At a meeting of the library committee, appointed by the Young Men's Business League of this city, the contract for the building of a \$12,500 library building was awarded to a local contractor, says a *Dallas News* special. The erection of this building will begin at once.

## The Pacific Coast

## WASHINGTON

*Harrington.* A new Public Library was opened here in April by the Mothers' Club.

## CALIFORNIA

*Calistoga.* Through a series of entertainments given by the women members of the Calistoga Civic Club enough money has been raised to purchase a lot on Main street, as a library site. The club also intends to build a modern club room on the same lot.

*Grass Valley.* The contract for building the new Carnegie library building has been awarded and work is well under way. The building will be of brick with a concrete foundation. In the basement there will be an assembly room capable of seating 150 people, a smaller room to seat 60 people and a game room. Upstairs will be the library proper, 50 by 70 feet.

*Los Angeles.* The general report of the board of education for the city school district for the year ending June 30, 1914, is the first one printed in five years, and is a volume of 300 pages. The report of Miss Charlotte Casey, librarian in charge of the Elementary School Library, shows the library's growth from September, 1910, to May, 1915, when it contained 132,458 volumes. During the five-year period 87,589 volumes

were added. The circulation for the school year of 1914-15 was 46,971. The library also contains 332 phonograph records, 808 lantern slides, and 243 bird pictures. Supplementary readers have been sent out in sets of 25 copies each, to the first five grades, about 600 readers being kept for this purpose, and in 1913 a plan of sending group sets to the higher grades was put in operation. The plan was so successful that during 1914-15 6585 volumes were added to these collections, and each group set now in each school contains an average of 80 volumes, or five copies each of 16 titles. In addition each teacher may draw a collection of miscellaneous books for use in her classroom, and in some schools the library books have been concentrated in one center under the supervision of one teacher.

*San Diego.* It is proposed to have plans drawn, preparatory to submitting a request to the Carnegie Corporation asking an appropriation for remodeling the present library building. Many believe that a new building is necessary and that it could be erected for a sum little greater than that required for remodeling the old one. The Carnegie Corporation also will be asked to finance the building of at least two branch libraries.

*San Francisco.* The corner stone of the Civic Center Library building was laid April 15 by Mayor James Rolph, Jr., and the board of library trustees. The stone was set at the southwest corner of the edifice, where Larkin and Fulton streets intersect. Edward Robeson Taylor, president of the board of library trustees, made the opening address. Architect George W. Kelham, who designed the building, and Joseph O'Connor, chairman of the trustees' building committee, also spoke. John D. McGilvray, Jr., whose company is supplying the granite for the big structure, presented a silver trowel, with which the corner stone was laid. The building is to be ready for occupancy before the end of this year. Its cost, completely furnished, is placed at \$1,153,000. It occupies the block bounded by Larkin, McAllister, Hyde and Fulton streets.

*Sanger.* The new \$10,000 Carnegie Library was formally opened to the public with a reception Mar. 28.

*Santa Rosa.* At a meeting of the Sonoma County Development Association, in April, the county library plan, as presented by a member of the State Library Board, was given the unanimous endorsement of the association. It

was pointed out that 32 counties of the state have already taken up the plan. The cost is about three cents on each \$100 assessment. More than 50 residents from various cities and towns in the county were present and urged the proposition, and a resolution of intention was passed to establish a free county library. May 11 was the date set for the final resolution to be passed.

#### UTAH

*Provo.* The Brigham Young University has secured a library of 1200 volumes, and valued by the collector at more than \$45,000, by the payment to Judge J. W. N. Whitecotton of \$1500. The money was raised by subscription. The presentation of the library was made by Miss Mattie Woodbury of the senior class.

*Salt Lake.* A branch library to cost \$15,000 is desired for the west side of the city, and a request for that sum has been sent to the Carnegie Corporation.

### Canada

#### SASKATCHEWAN

*Regina.* At the request of the city authorities, the publication of the monthly paper which has been published under the title of *The Regina Library* has been discontinued, and the paper is now incorporated with the new *Regina Municipal News*. While some sacrifice of identity and of space is called for, it is felt that the arrangements made by the city for the distribution of the new paper will be greatly to the library's advantage. As far as possible the features of the *Regina Library* will be maintained in the library section of the *Regina Municipal News*.

### Foreign

#### GREAT BRITAIN

*Leeds.* The sum of £18,000 for four new branch libraries has been accepted from the Carnegie United Kingdom Trust.

*London.* A building at 18 Tufton street, Westminster, has been presented to the National Library for the Blind by the Carnegie Trust. The committee are hoping to raise an endowment fund of £20,000. The library is the only one of its kind in the United Kingdom, and even sends volumes in Braille and Moon type to the colonies. Last year the Carnegie Trust gave 4200 volumes. The library now has 23,000 volumes, and the new building will have a free reading room.

*York.* An appropriation of £12,000 from the Carnegie trustees has been offered and accepted for a new library.

#### FRANCE

*Lille.* A wireless dispatch from Berlin to Sayville, N. Y., announces that the Town Hall at Lille has been burned. The librarian, a Frenchwoman, selected the most valuable books of the famous library there and handed them to German soldiers, who formed a chain to remove them from the building. The Lille fire department was unable to save the hall, but saved the neighboring buildings. The Town Hall, or Hôtel de Ville, was erected in 1847-59 in the Renaissance style. It occupied the site of a palace of the dukes of Burgundy. The library contained nearly 100,000 volumes and included many valuable manuscripts.

#### HOLLAND

*Amsterdam.* The *Boersenblatt für den deutschen Buchhandel* quotes the following from a history of the University Library in Amsterdam written by J. C. van Dokkum: "The University Library is very old. Its first catalog, written by the first official librarian, Petrus Sladen, in 1612, gives a list of 762 books, of which 380 were works on theology. The latest library report places the figures at 950,000 titles, of which 6780 are periodicals, and 3000 are manuscripts. There are also listed 1200 works by or concerning the Dutch poet Vondel, 20,000 books in Hebrew or dealing with the Hebrew or Judaic religion, 30,000 original letters, 70,000 political pamphlets, 100,000 essays or theses in foreign languages, and 5000 engravings and portraits. The library owns a very fine collection of bindings and some choice samples of the work are of Amsterdam bookmakers of the sixteenth century. The librarian in chief, Dr. C. P. Bürger, has just completed his twenty-fifth year in that position. The occasion was celebrated by a meeting attended by many city and university officials, followed by a banquet in the evening.

*Delft.* The inauguration of the new library of the Polytechnic Institute has attracted many interested visitors to the old city of Prince William the Silent. The new building marks a new era in the library history of the Netherlands. All large libraries throughout the country are established in buildings that in former days had other uses—cloisters, churches, mansions, palaces, or armories and were altered or partly rebuilt to suit their new purpose. Invariably these buildings became too small for such purposes and this resulted in the erection of a series of annexes. The libraries at Amsterdam and at The Hague are striking examples of this kind of library "economy." At the present time

however several new structures are in course of erection, which when completed will contain the book collections of the Peace Palace, the Colonial Institute, and the Academy of Commerce; but the Polytechnic Library at Delft is the first in the country to occupy a building specially built for the book collection of the University. The librarian, H. H. R. Roelofs Heyrmans, sketched in his speech at the opening exercises the history of this library, going back in his reminiscences to 1858, when the first paid librarian was appointed with a salary of \$40 per annum. In those days the library already included 10,000 volumes. Conditions gradually improved and towards the end of 1874 Prof. J. F. L. Schneider was nominated librarian in charge. Under his guidance the library grew to an important institution and the present edifice is a structure worthy to contain the book collection of the university.

#### DENMARK

A summary of the work carried on by Danish libraries, made by H. H. Lassen in *Bogsamlingsbladet* for January, 1916, shows that there are 19 libraries in Denmark with collections of more than 30,000 books each, although the circulation figures of the smaller libraries not included in this list are sometimes much larger than those of the big libraries in the chief cities. The writer attributes this to the fact that the larger libraries, with a greater number of scientific works, put special emphasis on the reading room and reference use, and do not lend books for home reading as freely as is done in the smaller establishments. The statistics as compiled in this article are interesting. The Royal Library in Copenhagen with its 750,000 volumes has a circulation of 27,192 yearly. But 154,850 books were handed out for use in the reading room, and 100,000 books from the reference shelves were used. The University Library with its 550,000 volumes had a circulation last year of 23,553, whereas the Public Library in Frederiksberg Commune, with 20,000 volumes, had a yearly circulation of 79,878. The smallest library on the list, that in Struer, with only 2,056 books, had a circulation of 15,325 during the year.

#### GERMANY

*Berlin.* The Royal Library in Berlin has fallen heir to a unique collection of 3000 books on cooking and diet, said to be the most complete collection of the kind to be found anywhere in the world. This cook-book collection contains some rare pieces. Among its curiosities are several huge albums

containing menus of special banquets held at the court, covering two or three centuries of royal festivities. It was the property of the late Dr. Georg Freund, who left the rest of his library, about 10,000 books, to the Municipal Library in Berlin. His fortune of several millions went to the city.

*Munich.* The Royal University in Munich sent Christmas gifts of books, through its own library, to each one of the 4500 students of the university who are in the field.

#### NORWAY

The 1916-17 budget of the Department of Church and Education in Norway includes items of 63,000 crowns for public libraries, 8000 crowns for school libraries, and 48,000 crowns for extension lecture courses.

#### POLAND

*Warsaw.* In the *Zentralblatt für Bibliothekswesen* for January-February, 1916, A. M. Wagner gives a report on the libraries in Warsaw. The report of the Warsaw University Library for 1913 shows 576,387 entries in the catalog. Of these 292,000 were printed books, 1384 were manuscripts, and 9000 engravings. Of the yearly budget of 32,000 rubles, 17,000 were set aside for the purchase of accessions. Use of the library was not what might have been expected from the really fine collection, though 57,000 visitors took out 74,000 books. The library is open to the public from 9 to 3 only. The University Library is the only state library in Warsaw. The Municipal Library was founded and endowed by a private society, the "Public Library Association." A handsome new building was given to the library shortly before the outbreak of the war. The reading room has seats for over one hundred visitors, and the stack room accommodations for 350,000 books. The building stands in the center of a large plot of ground, so that there is room for additions as needed later. The library is rich in works of science, but has a good collection of fiction as well. The Krasinsky Library has 130,000 volumes, 7000 manuscripts and 3000 engravings. This library makes a specialty of Polish history. Its yearly budget is 12,500 rubles, of which 3000 is set aside for accessions. It is housed in a new building with every modern convenience. Owing to the war the building is not quite completed, but the stack room is in order, and is equipped with every modern device. Warsaw has a number of public libraries and reading rooms founded and supported by private initiative. There are altogether 30 of these establishments.

# LIBRARY WORK

Notes of developments in all branches of library activity, particularly as shown in current library literature

## ADVERTISING

In a special "Made in Sheboygan" edition of the Sheboygan (Wis.) *Press*, Miss Bertha Marx, the librarian in charge of the Public Library, describes "Sheboygan's Public Library and the place it fills in this city." The article gives a historical sketch of the establishment of the library in 1897, enumerates the methods used to stimulate interest in the institution, and quotes statistics showing its growth. It is followed by Walter M. Smith's long description of the "Development of libraries in Wisconsin," reprinted from the *Wisconsin Library Bulletin*. The two articles and a picture of the Public Library occupy practically a whole page.

The Forbes Library of Northampton, Mass., has had a page all winter in the program of the Academy of Music, the city's leading theater, and the only one in the United States owned by a city. A resident company of players presents a new play each week, and the plays presented are well attended.

At first the library's page was given over to a summarized statement of hours and resources, in the following form:

### FORBES' LIBRARY

From 9 a. m. to 8 p. m. daily, except Sunday there are at your service

130,000 volumes

in every language and on all subjects

108,000 pictures

of paintings, sculpture and places

10,000 pieces of sheet music

vocal and instrumental

500 current periodicals

in English, French, German, Italian, Spanish, Polish and Yiddish

A well equipped reference room

Special room and service for children

In February it was decided to make a change, and a list of new books of varied interest now fills the page and is carefully read by many of the theater's patrons.

## BOOK SIZES

For those who accession their books and have to use the old fashioned measuring ruler, with the marks of Q O D S, Walter C. Green, of the Meadville (Pa.) Theological School Library, has found it a good plan to cut on the edge of the accession book a notch for each letter and then to paste on the black book a little white gummed letter

Q O D S at the right place. One can then lay a book at the edge of the accession book and get its size without troubling with the size card or size ruler.

BUDGET, LIBRARY. See Finance

CARNEGIE UNITED KINGDOM TRUST—REPORT BY PROF. ADAMS

Papers on the "Report on library provision and policy, by Prof. W. G. S. Adams, to the Carnegie United Kingdom trustees, 1915." Read at the annual meeting, Sept., 1915, of the Library association, at Caxton Hall, Westminster. *Lib. Assn. Record*, D., 1915. p. 510-539.

Some general considerations arising out of the report. John Ballinger. p. 510-516.

The speaker, who is librarian of the National Library, Wales, expressed first his appreciation of Mr. Carnegie's "large-hearted generosity in continuing the assistance he had given on so large a scale for some years, and of the ample powers given trustees, who had at their disposal, roughly, £100,000 a year. He added:

"The first observation I wish to make is that this great endowment offers the opportunity, long desired by most of us, to bring the library movement into line with the other great educational movements of our time: to organize the library service of the country so that it may become a definite (not an incidental) factor, in the training of men and women as good and useful citizens. It would be a source of strength if the local libraries could draw upon a specialized central library in certain cases, but this does not apply to the books required by the average student, except perhaps where duplication is necessary to meet the demand." For such students he felt there was a two-fold danger if they obtained their books from other libraries than the one in their own area—first, the lack of contact with the wider range of the public library, and second, the probable ultimate failure of the libraries with limited funds to keep well-rounded collections.

Two matters not mentioned in the report which Mr. Ballinger would like the Trustees to take up, are the fixing of a standard quality for paper for library books, and the better provision for extension of book storage space in planning library buildings.

The need for more books and for an improved status and remuneration for librarians and assistants is a significant feature of the report, and of this Mr. Ballinger says:

"To me there is one outstanding fact revealed by the report—unless the present limit on the rate which can be levied for library purposes is removed, even the large funds at the disposal of the Carnegie Trustees will not secure permanently such an extension of efficient library service as will meet the needs of the United Kingdom. The absurdity of a limited rate based on the assessment for calculating the income necessary to support a library is shown in one of the replies quoted by Prof. Adams. In one town of 55,000 inhabitants the penny rate produces £1850, while in another place with 115,000 inhabitants only £1830 is produced by a similar rate. These are not isolated cases, they could be multiplied almost indefinitely. Further efforts must be made to demonstrate to members of Parliament the desirability of entrusting local authorities with fuller powers under this head."

A short review of the statistical tables and summaries embodied in the report. G. E. Roebuck. p. 516-522.

"We learn that there are 522 establishments—366 in England, 57 in Wales, 73 in Scotland, and 26 in Ireland. One table compares the populations resident in library areas in 1884 and in 1914—a very fair period to take. From this we gather that in the thirty years intervening the number of people to whom library facilities were extended increased nearly four times; the most marked increases being in Scotland where the number was eight times increased, and in Ireland where it increased over five times. There is food for reflection, however, in the footnote reminding us that 43 per cent of our total population were still outside the reach of public library effort in 1914. This statement must be taken carefully, seeing that it is arrived at by the inclusion of Ireland's 72 per cent of outsiders."

There follows a detailed discussion of the tables of benefactions and expenditures, leading to the same conclusion as the preceding paper, that the library income must be increased before the libraries can be really successful.

"I have said that a classification of library workers into grades would have been interesting, but one need is common to all—they must *live!* Let us see now how we are paid, whether we polish brass or brains. The 3093

library workers in England are paid on an average £67 12s. per annum; the 596 in Scotland get an average of £50 13s., while in Wales the average wage is £46 15s., and in Ireland it stands at £45 6s. Comment is almost superfluous. Yet, I claim, here we have the proper starting-point for our many airy discussions on lack of qualifications, need for certification, questions of opportunity, etc. I wish it to be understood that it takes the vast sums annually earned by chief librarians to bring these averages up to the dazzling standards I have cited."

The criticisms and suggestions relating to Carnegie library benefactions in the past and in the future. Henry Bond. p. 522-529.

"Mr. Carnegie, as well as Heaven, helps those who help themselves, but amongst those who have written to Prof. Adams are some who would have the Carnegie Trustees depart considerably from this policy. I think, however, that to change this policy as a working principle would be a mistake. Public libraries are democratic institutions. I call attention to what is perhaps the most important suggestion in the extracts from the letters which appear in the Report, and which is made by several correspondents, as follows:—

"A special aim of the Trust should be the removal of the limit to the rate. Scarcely any greater service could be rendered to the movement. Owing to the hostility referred to, a bill to effect this reform cannot be passed without influential backing and financial support. I believe the Trust, if it worked in combination with the Library Association, would be able to succeed where the Association, working alone, has hitherto failed. And if the bill were passed, the calls upon Dr. Carnegie's generosity would be fewer, and the Trust would probably find it necessary to give assistance only in those districts where the inhabitants are poor and the rates high."

The question of over-building. L. Stanley Jast. p. 529-532.

"We need not go away from London and its neighbourhood to find cases of districts attempting to support three or four buildings on an income utterly insufficient for the purpose. A true library may be said to consist of the three B.'s, *viz.* Building, Books, and Brains; all three are necessary, but although Books and Brains cannot perhaps be said to be more important than some sort of building, seeing that you cannot collect books or administer them without space, yet it is true

that Books and Brains may make a very efficient library service in a very simple and unpretentious building. It is not enough to put books on the shelves and wait for people to ask for them. We must use all legitimate means to bring people and books in contact, and to insure that the material on the shelves is productive material. A fine building, with a starved book fund, and no money for extension activities, is not a library; it is a melancholy example of arrested development, and the worst kind of advertisement of the movement of which it is an ineffective outcome. The remedy for over-building is obvious but not very easy to apply. It consists in the education and re-education of the public as to what a library really is."

The report and rural libraries. Butler Wood. p. 533-539.

To Prof. Adams' suggestions, there is practical agreement on the following points: That the time is ripe for action, that the County Council should replace the Parish Council as library authority; that co-operation between authorities should be effected where desirable; that a system of travelling libraries is most suited to the needs of rural districts. "It is clear that the court is with him in urging the transfer of the library authority to the County Councils, and I have no doubt that his desire to see the removal of the penny-rate limit will be shared by all who have the library movement at heart. I think we shall agree with him in desiring that the rural library system should be a public State organization, supported by rates, and universal in application. But there will be a divided opinion on his remark that it should be associated with, if not under the control of, the educational authority. I feel it would be a huge mistake to place a scheme of this magnitude in the hands of a department already overburdened with work. Let there be the most hearty co-operation possible, but the work must be in the hands of an executive entirely independent of the county education committee.

"Assuming that we eliminate the school children from our calculations, the question arises as to the number of volumes it will be necessary to provide per head for the adults in each village district. It is difficult to arrive at a satisfactory solution, but my own experience may be taken for what it is worth. Out of a population of 290,000, we have 20,000 active borrowers from the lending libraries in our city; say one in fifteen. That fifteen includes, of course, infants, school children,

old people, and those who don't read books. Now the 20,000 borrowers have a stock of books at their command numbering 100,000 volumes, or five per head. It is likely, however, that a village population would yield a much larger number of active borrowers than one in fifteen. Let us, for the sake of argument, put it at one in five. A village of 300 inhabitants would thus yield sixty borrowers, and at five per head we should need 300 volumes, or really one per head of the population. In actual practice this may need revision, but in any case it furnishes a basis on which to calculate the number of books necessary to start the scheme."

#### CHILDREN'S READING

What children read in the library. Emma R. Engle. *Pa. Lib. Notes*, O., 1915. p. 175-182.

Miss Engle, who is chief of the children's department of the Philadelphia Free Public Library, opens her paper (read at the state meeting at Butler in October, 1915) with an enumeration of the five points to be borne in mind in considering this question:

1st. The class from which the readers are drawn, their racial traits and preferences.

2d. The age at which children have been admitted to the library, to show period of influence.

3d. The amount and quality of school co-operation.

4th. The inspirational influence of the librarian.

5th. And most important of all—*What children can actually get to read in the library.*

"A great majority of the books actually taken out for home reading represent voluntary, independent and conscious choice on the part of the readers. The second largest percentage in the circulation is found in the books in which their interest has been aroused, and their reading encouraged by the library practice of the story hour, poetry readings, organized clubs, posted lists, etc. The third and smallest class is the reading imposed by classroom work and the required reading in the schools. The cheering and really enlightening point is—the best still holds its own. If you will name twenty-five books of recognized worth that have come to be known as children's classics, we will point to them as the most read books on the fiction shelves, the books that are most duplicated year by year, and best known to the mass of children. While books by Alcott, Kipling, George MacDonald, Defoe, Stevenson, Richards, Dodge and Clemens are still being read by the thou-

sands, why morbidly turn the spotlight on Barbour and Nina Rhoades, when some of us will live long enough to see them tenderly pushed into Styxlike oblivion with the obsolete Oliver Optic and the tearful Elsie.

"As soon as the child reads understandingly, he finds his natural heritage in the fairy tale, wonder story and myth. . . . The boy's persistent demand for information relating to his amateur mechanics and ingenious devices is responsible for another wide and popular class of books which are read freely. . . . It is my belief that at present it is the exceptional and not the average child who is conscious of any love of nature. Books about birds, plants, trees, flowers, insects and minerals, being chiefly informational, are consulted only as the occasion demands. So the optimistic children's librarian sees her most artistic posters failing. . . . It is noticed that the children in the library like to handle freely the complete editions of most of the well-known poets, as well as the best collections, and I think it is the common experience to find that the favorite volumes are those made up of patriotic songs and poems of action. . . . The natural inclinations of the reading child take him more frequently to the history shelf than to any other section where he finds books relating to classroom topics. Even the classroom histories of the United States are read again and again, and if the library has invested liberally in those well-known historic readers and selected biographical tales, where the human quality is emphasized and the dramatic element is well handled, the number of volumes circulated here should at least evenly balance the fairy tales and folklore circulation. Especially among the children of foreign parentage, there is a constant leaning towards lives of great Americans; lives of Washington, Franklin, Boone and Lincoln are read and re-read."

CO-OPERATION. *See* High Schools—Co-operation from public libraries

#### FINANCE

Insane economy. *Librarian and Book World*, N., 1915. p. 69-71.

"We do not inveigh against economy, but we do protest most emphatically and with all sincerity against the ruthless and insane curtailment of expenditure in certain quarters, and still more do we protest against reducing the incomes of public libraries. If all public libraries were to be abolished the saving would be less than three-quarters of a million sterling annually. If the whole of the incomes of all the public libraries were

to be divided amongst those employed in them, each would get about £120 a year. When, however, the cost of maintenance is deducted, the remaining sum is about the same as it would cost to keep these five thousand people in the workhouse. Let us look at it from the point of view of the Chancellor of the Exchequer. Each book purchased by a public library is read by at least a hundred people. Each book purchased by a private individual is read, at the outside, by an average of six. In this time of national economy, therefore, the sum stands thus:

"Public purchase. . . . . 100% use.

"Private purchase. . . . . 6% use, 94% waste. And yet insane 'economists' talk about saving national funds and conserving the nation's purchasing power by substituting for 100% of efficiency 94% of waste."

FINES. *See* Overdue Book Day

#### FOREIGNERS, WORK WITH

In Detroit the Public Library and the county clerk are co-operating in a movement to assist foreigners to become American citizens. The county clerk has a special "card of introduction" to the library which he gives to the aliens with whom he comes in contact:

#### CARD OF INTRODUCTION

To the Public Library, Detroit, Mich.,  
Please assist the bearer of this card with your advice in the selection of books which will help him in preparing for American citizenship. . . .

THOS. F. FARRELL,  
County Clerk.

To supplement this, the library has prepared for distribution among foreigners in the city, who presumably know some English, the following circular:

#### DETROIT PUBLIC LIBRARY

Detroit Public Library

DO YOU WANT TO BECOME AN AMERICAN CITIZEN?

If so, you will want to know something about the United States, something about the city of Detroit, its GOVERNMENT and INSTITUTIONS.

The city has various agencies where such information may be had. The public schools, especially the evening schools, can teach you a great deal. The city also maintains a PUBLIC LIBRARY where books are at your service without charge.

The privilege of borrowing books from the library for home use is given to any reputable resident of the city of Detroit. Call at the Main Library downtown or try the Branch Library nearest you.

You will find librarians, trained and willing to serve your needs. Don't hesitate to ask questions or state your desires! Library attendants who can speak foreign languages are often at hand. They will be glad to show you books on "Naturalization," "How to learn English," "Citizenship," "Civil service," "American history"; books on "Manufacturing"

and "Industries." All these books are at your service FREE.

Present your "card of introduction" at any library building and the service we can give will be explained to you.

DETROIT LIBRARY COMMISSION.

#### FOUNTAIN PENS

As there appeared to be a dearth of positive information as to the possibility of using fountain pens on the catalogers' desks, with the multiplicity of inks generally used, it was thought worth while to collect some data on the subject, and William R. Sprague, assistant librarian in the Coast Artillery School Library, Fort Monroe, Va., has recorded the results of a recent investigation there conducted. "In this library," he writes, "we use four inks: Higgins' waterproof black for lettering book labels; Higgins' waterproof blue for lettering cards; Carters' blue-black writing fluid; and Carters' red writing fluid. This necessitates two ink-stands—for the red and black writing fluids—and bottles for the waterproof inks. We have, at different times, tried several patterns of ink-stands for the waterproof inks, but in every case they soon became gummy or hardened.

"It was thought that possibly fountain pens for all four inks would result in a saving of time and ink, and be more convenient. With this in view, the writer corresponded with fourteen fountain pen manufacturers, stating the case, and asking them for copies of their catalogs, and also if they would care to submit two pens for test, the pens to be returned at its completion. Eight responded, four of whom stated their willingness to submit pens for test, one asking for a deposit in advance, and three praising their pens, but dodging the issue. A letter was then written to each of the eight, stating that enough interest was being shown by the manufacturers, and that the test would be made, and asking for the specimen pens. Six of the eight sent two pens each.

"It was intended to have each manufacturer send two pens of exactly the same type, one to be tested with black and one with blue ink. All did so, with the exception of the Waterman and the American Pen Mfg. Co., both of whom submitted two different types, as will be seen from the tabulated test.

"As the Higgins' black waterproof ink soon proved to be more difficult to handle than any other, the final result has been tabulated for it only; it being thought that any pen feeding and keeping it will be equally successful with any other.

"The pens were filled as per directions with each; three types being self-fillers, and the

others requiring the use of a dropper. Immediately after filling the test *a* was made. Each test was simply a trial of writing qualities, lettering and writing for approximately one minute with each pen. All testing was done on L. B. No. 33035 cards and on Gaylord's gummed cloth labels, so that all pens were tried on the same two surfaces. The test *a* showed that the self-fillers start a shade quicker than pens filled with a dropper, as the ink being drawn in through the feed channels starts the feed at once.

"The pens were then laid aside, remaining open, for fifteen minutes, and again used (test *b*.) Even in this short time some trouble developed. Some pens would require two or three shakes before writing properly, and then occasionally would miss part of a stroke, or 'hesitate.' Then the pens were closed, replaced in their boxes, and left undisturbed for twenty-four hours. When this time had elapsed, they were given test *c*, closed, replaced in boxes for forty-eight hours, and tested *d*. They were not closed after *d*, but laid open on desk, and used in turn for a few characters, each pen being used about twelve times, at intervals varying from ten to thirty minutes. It was endeavored to simulate as closely as possible the conditions that would obtain in cataloging use, when handling books, looking up data, lettering cards, book-plates, labels, etc.

"After being closed for twenty-four hours some of the pens needed hard shakes to start (Note: bad for floors and floor coverings), and poor feeding was evident even after a drop of ink had been jarred to the pen point.

"After the forty-eight hour rest only three pens would feed freely, and when continued in use all the others would, at odd moments, refuse to make a mark.

It will be noticed that of the three pens having perfect scores, two are of the type in which the pen draws down into the ink chamber when closed, while the third, the 'Parker' has a peculiar 'lucky curve' at the inner end of the feed tube, which is claimed to draw all the ink back into the reservoir when pen is not in writing position. So it would seem that a pen, to answer our purpose and feed heavy inks without clogging, must either keep the pen submerged in the ink when not in use, or in some manner drain the ink from the feed channels, as well as be very tightly capped. It should also be noted that, while all the other pens were 'stock pattern' so far as is known, the manufacturer of the Parker pen wrote as follows:

"If . . . they were to be used exclu-

sively for this purpose, we would want to cut the feed channel so that it would be particularly adapted to this heavy ink.'

"It is probable that this was done with the sample pens submitted, although the manufacturer did not so state.

"The test as a whole developed the following points:

1. Fountain pens can be used with heavy inks.

2. They are entirely suitable for use on cataloging desks.

3. They would probably result in a saving of time, and would assuredly dispense with inkwells and their accompanying annoyances of drying out, filling, and washing.

4. A point can probably be obtained to suit any hand and purpose, and to write about the same as the steel pen now used. (Each manufacturer was requested to duplicate, with his trial pens, a 'Leonard Ball point, No. 516 F' of which a sample was sent him, and in the majority of cases the pens submitted were very close duplications, so far as 'feel' and results are concerned.

"The personal preferences of the writer would incline toward a pen which withdraws into the ink reservoir when not in use, as it is probable that such a pen would dry out slower than when the pen is just covered with a cap, even if hermetically sealed. Again, the fact of the pen being surrounded by fluid

ink tends to make it quicker starting after a prolonged rest. If a self-filler, of the withdrawing type, is made, doing away with the inconvenience of the 'dropper' and having the cleaning action of fresh ink being drawn up through the feed channels when refilling, it would probably prove the best all-around pen for our purpose."

#### HIGH SCHOOLS—CO-OPERATION FROM PUBLIC LIBRARIES

Co-operation between the public libraries and the high schools. Alice M. Jordan. *Mass. Lib. Club Bull.*, D., 1915. p. 140-147.

"To accustom children to good reading, so that at high-school age they will choose wisely, is the aim of the children's librarian. We do not always accomplish this aim. There are outside influences which counteract, like the presence of many magazines and much modern fiction on the home table, the moving-picture show and the athletic field outside the home. There are children who come to us too late, there are failures of our own to meet the need of individual children. Greater diplomacy is needed in presenting a literary masterpiece acceptably to children of high-school age. Bearing with them the list of outside reading prepared by the school, these boys and girls say to you: 'I want one book

Style of pen	How filed	A Writes when filled	B Unused and uncovered for 15 minutes	C Closed for 24 hours	D Closed for 48 hours	Ordinary desk use
Conklin <sup>1</sup> No. 30, NL, \$3.00.	Self (crescent)	At once	Shake to start	Several shakes	Hesitates	Hesitates

to read for school and one good book for myself.' Propose to them to look at the reading list, and they reply: 'If it's good, it isn't on the list.' We are still in the place where literature and interesting books are far asunder in the minds of many young people. One principal tells us that his experience proves that lists do not encourage reading. In his school, a large technical school, they have ceased to use reading lists for this reason. More effective than reading lists are shelves of books set aside for the use of the older boys and girls, with attractive illustrated editions of standard works to tempt to further reading.

"High school courses of study demand fuller use of library resources than the studies of the elementary school. For book reports, history topics, debates, current events classes and community civics, it is imperative that pupils have something beyond text-books. Commercial and industrial courses, the study of the life of the community, the introduction of vocational training all mean that there must be constant reference to periodical literature, to pamphlets, to files of clippings and pictures, and, consequently, reorganization and readjustment of high school libraries is now going on everywhere to meet the changing conditions."

In Massachusetts, a committee on high school libraries sent out last year a questionnaire to 270 high schools in the state to find out the status of the high school libraries and the measure of co-operation they were receiving from public libraries. Out of 155 schools replying, 58 reported libraries varying in size from 5 volumes to 5500, rooms with seating capacity ranging from 4 to 60, and annual book expenditures from \$18 to \$200. Only five reported having a librarian, who is neither teacher nor clerk.

There are two theories among librarians regarding high school libraries—one that a high school library is not needed where there is a good public library, and the other that the library equipment of city high schools cannot be handled by public libraries except in rare instances.

"A good high school library by no means takes the place of a public library, nor does it, if properly administered, lead children to depend upon a few books when they should use the greater resources of a public library. The school library needs continually to draw from the larger collection to supplement its own supply. The school librarian will train pupils to use the public library and will send them there. There will always be ways in

which the two may be mutually helpful. At Somerville the High School Library is jointly administered by the Public Library and the school department. At Framingham the Public Library has a branch in the high school building.

"There are advantages in each of these arrangements. The library in the school building makes it possible for pupils to utilize the time between classes, the free study hour, or the few minutes before school in the most profitable way. It enables the teacher to get necessary material without waste of time, to give special lessons in the library, to get particular references at short notice. It enables the librarian to come more closely in touch with the students, to follow the work of different classes, to employ bulletin boards in conspicuous places, to seize the right moment for introducing a good book. Affiliation with the public library not only lessens the burden of expense for each partner, but assures an administrator informed regarding library usages and library resources. More than all else in the high school library the right administrator is needed. A small collection of books, and behind it an enthusiastic book lover, who is also a sympathetic friend to young people, will do far more than a large and excellent library left to the care of an inexperienced assistant or one of the older pupils.

"The committee inquired further of the high school as to their relation with the public libraries in their respective towns. Out of 155 libraries, 117 report that they have co-operation with the public libraries. Usually this takes the form of classroom libraries, or deposits of books, and instruction in the use of reference books, training the student to use the library with the least waste of time. Twenty schools report that their pupils receive such instruction from public library assistants. A very large number of the schools answering the questionnaire evidently do not know whether the public library offers any systematic instruction or not. This is the case in one instance where such instruction has been offered repeatedly, by circular letters and by word of mouth.

"In 41 schools instruction in the use of books is given by teachers, usually by the teachers of English and history. Such instruction generally takes the form of occasional lessons when the teacher feels that they are needed, rather than any systematic study or exercise assigned to pupils. Credit for such lessons is seldom given. Are we not agreed that such instruction has little practical

value unless some actual practice in handling catalog and reference books is given the student?"

#### INTERMEDIATE SCHOOL LIBRARIES

California is recognizing the importance of having trained library workers in its intermediate schools, as well as in its schools of higher rank. In Glendale the Third St. Intermediate School, now a little over a year old, has about 800 volumes. In another year its librarian, Miss Gertrude Mallory, who is also head of the English department, hopes to have it completely classified and cataloged, and a course of instruction in its use will be given.

In Los Angeles, likewise, the intermediate schools are putting in trained librarians. In the Boyle Heights School is a library of 2000 volumes and 500 pamphlets (Miss Emma Lee Lott, librarian), to which the public as well as the pupils of the school have access. In the Fourteenth Street School a little library of 450 volumes has been started and the librarian, Miss Viola Stevens, spends three days of each week here, going the other two days to a similar library in the Custer Avenue School, where very live work is being done with a very small equipment.

#### JAPANESE ART EXHIBIT

Some 25 examples of the work of Japanese students in the Tokio School of Fine Arts have been on exhibition in the arts and crafts room of the Chicago Public Library, and from there they will probably be lent to public and college libraries in other parts of the United States. They belong to the American Library Association, to whom they were given by the Japanese government following their display at the San Francisco exposition.

Most of the examples are art panels, three to five feet high and one to three feet wide. They show water colors on silk in native wood frames, the designs including animals, children, peasant women, etc. They were made by pupils from 16 to 25 years of age.

LANTERN SLIDES. *See* Lectures

LECTURES. *See also* Libraries—Developing and maintaining interest

A note upon a special use of lantern slides. L. Stanley Jast. *Lib. Assn. Rec.*, F., 1916. p. 68-71.

Lectures dealing with the scope and comparative value of books have never been

illustrated with lantern slides. Some years ago Mr. Jast thought out a popular treatment by means of slides of the unlikely subjects, "Encyclopædia" and "Dictionary."

Among the slides was one giving a facsimile of the title page of the first edition of the "Britannica" (1771). Another showed differences of plan in the "Britannica" and in "Chambers" in dealing with astronomy, the former treating of subjects in large units with subdivisions, the latter dividing into small independent units.

Some definitions from Bailey's "Dictionary," the authority prior to and for some time after Dr. Johnson, were next given. Treatment of synonyms in the "Century Dictionary" was also illustrated by slides.

Such lectures on books might form a good introduction to the important and never-taught art of reading.

#### LEGISLATIVE REFERENCE WORK

The new legislative reference bureaus which date from the state legislatures of 1914 and 1915, are those of Arizona (1915), New Jersey (1914), North Carolina (1915), and Virginia (1914). In Arizona and New Jersey the new bureaus are departments of the State Library, while in North Carolina and Virginia the work is to be carried on by separate bureaus created for the purpose. New York state (1915) has a new legislative library under the control of the legislature, which is rather for the custody of documents, papers and records that for the legislative reference work which is still a function of the State Library. Radical changes were made in 1915 in the Vermont law, changing the two revisers of statutes to legislative draftsmen who assist in bill drafting and bill revision only on request. In California (1915) and Ohio (1914) provision was made for the submission of initiative measures to the legislative counsel bureau in the one and the legislative reference department in the other.

LIBRARIANS AND ASSISTANTS. *See also* Carnegie United Kingdom Trust—Report by Prof. Adams

#### —WOMEN AS

The position of women in public libraries. Mizpah Gilbert. *Lib. World*, O., 1915. p. 100-105.

Women were first employed as public library assistants in England at Manchester in 1871. They received from £26 to £80 a year. At present junior assistants receive from £25 to £52 a year in London, and from £17 10s.

to £41 10s. in the provinces. Senior assistants receive from £58 to £95 in London, and from £52 to £78 in the provinces. No woman is chief librarian of a municipal library system in London, though one or two are in charge of branches, the salaries ranging from £80 to £130. There are a few women chiefs in the provinces, the average salary being £110.

There are about 3500 library assistants in Great Britain and Ireland, of whom 1500 are women. Few women become chiefs, because the average age of the women is much lower than that of the men. "The women marry and leave; the men marry and stay."

The Library Association holds classes in library routine and history, classification, cataloging, bibliography and literature. Each course costs twelve shillings and sixpence. The six certificates must be obtained to gain the diploma of the Library Association. A thesis must be written, and a knowledge of Latin and one European language is expected. Three years is required, and an entrance fee of two guineas demanded.

Out of 566 certificated assistants, 448 are men, 118 women. Out of 2000 men, nearly one-quarter are sensible of the necessity for qualification, while in the case of the women only eight per cent. are qualified.

In the United States about 14,000 people engage in library work, 10,000 being women. In some of the largest cities, the libraries are administered by women, their salaries ranging from \$2000 to \$4000. Large numbers of secondary cities have women librarians. Small libraries of 10,000 volumes and under are usually in charge of women. Women librarians of high and normal school libraries receive from \$1200 to \$2000. There are twelve library schools in various states.

American women are inclined to regard the profession as their lifework, and are therefore more successful. Women are employed in German public libraries. A library school near Berlin offers a one or two-year course costing 1000 marks (about £50). Most librarians are in favor of employing women, and those who are qualified are in demand. Women assistants are also employed in Sweden, Belgium and Austria. Holland has several women librarians, and the future of municipal libraries in Holland is in the hands of women.

In 1913 the Council of the Library Assistants' Association formed a committee, consisting of some of the foremost women in the profession, to show women assistants the necessity of qualification. Three reasons are given for lack of enthusiasm among women

for qualification: lack of time for study, need of money for classes, and the probability of marriage. "No study is ever lost. The woman who has endeavored to grasp the possibilities of a position in all its fullness cannot by marriage lose the mental grasp and power obtained by such study. . . . The wise woman will endeavor to qualify herself for a high place. She will work hard. She will protest against the undercutting of man."

#### LIBRARIES—DEVELOPING AND MAINTAINING INTEREST

A note on privilege issues in connection with lectures. W. C. Berwick Sayers. *Lib. Assn. Rec.*, Ja., 1916. p. 63-67.

A novel plan has been tried out at Croydon in connection with lectures given at the library. A list of books is drawn up on a lecturer's subject, and is sent to him for his approval. This list is then printed in the program of the lectures. It is also written out on lantern-slides, and thrown on the screen after the slides illustrating the lecture. A slide bearing the following legend is shown at the last:

##### PRIVILEGE ISSUE

Any one of these books may be borrowed WITHOUT A TICKET by any resident in the borough whose name appears in "Ward's Croydon Directory."

The books are on exhibition in the lecture-room, but are also offered to anyone present who is a resident in the borough, whether he is enrolled as a member of the library or not. The following notice is displayed on the table in front of the books:

##### PRIVILEGE ISSUE

To obtain a book all that is necessary is that the borrower should sign his (or her) name and address on the slip provided. Such signing will be taken as indicating that the book shall be returned to one of the Public Lending Libraries within 15 days; and that payment shall be made for undue detention, damage, or loss, as provided for in the library rules.

The slip mentioned is an ordinary paper slip of a size suitable to be used in regular card charging, and plays the same part in the charge as the borrower's permanent ticket. The book is stamped and issued in the usual way, and a printed slip inserted, bearing the following text:

##### PRIVILEGE USE

This book is issued on the distinct understanding that it is returned to one of the Lending Libraries within 14 days, excluding the day of issue, of the date last marked on the date label inside the front cover of the book.

Or that if kept beyond the 14 days, the library fine of 1d. per week (or portion of a week) for such detention will be paid, together with any cost of notification; also that any damage or loss will be made good.

This being a "privilege" issue, it does not entitle to another book in exchange. If, however, the reader is not a member of the Lending Libraries, he should return the accompanying Application Form, properly

filled up, along with this book, when he will be allowed to take another book at the time of return, and thenceforward exercise the privileges of membership for one year.

A voucher of application for membership is also inserted, and the borrower often becomes a regular reader. The charge is inserted in the day's issues. The libraries also consider applications for a privilege service of books from any accredited society or institution in the town. No books have ever been lost by this method, which Mr. Sayers terms "adventurous."

#### —GOVERNMENTAL CONTROL OF

Nationalized public libraries. Marjorie Peacock. *Lib. World*, Jan., 1916. p. 196-199.

If commercial enterprises have flourished when acquired by the nation, an intellectual institution like the Public Library might also enhance its usefulness.

The rate-product which constitutes many libraries' incomes leaves little for books after expenses are paid. A nationalized Public Library would enable small libraries to borrow books needed by their readers from larger and more complete collections.

The country could be divided into workable sections. Taxes in the form of government grants, instead of rates, would support the libraries. The administration of individual libraries would not need to be changed, but all libraries would officially fraternize with one another. A central board of control, among other things, would supervise the allotment of government grants. The salaries of librarians would probably be higher if they were government officials. Library intercourse with the Board of Education would possibly be fostered by such a scheme of nationalization.

#### —SCOPE AND PURPOSE OF

The public library—theoretical and applied. Lillian E. Parshley. *Bull. of N. H. Pub. Libs.*, D., 1915. p. 143-147.

To-day, with the increased complexity of life, the public library is recognized as a necessity in every community. "From the things which the fathers had, and the things which they missed, has grown our love of reading, our books, and our library. . . . The first duty of a public library is to grow in popularity, in value, in usefulness, and in books. . . . It must open the way for investigation of all truths, yet stand for the good and the true. . . . It must attract, encourage, and interest the indifferent; it must extend willingly and impartially, the great key to the wisdom of the ages. It must not only supply the demand, but it must create a demand and a love of good reading.

"How shall the individual make the most of this heritage? He should learn to use it as 'a first aid' in time of need, whether it be the looking up of a bit of data, a half-remembered poem, a magazine article, or material for the theme or learned discourse. Although he should not waste this substance in continuous light reading, it is better to read fiction than nothing, for unconsciously the reader is imbibing many things which he would learn in no other way. Our taste in dress, in household decoration and economy, our appreciation of art or music is better than ten or twenty years ago. Why should our taste in reading not improve?"

Speaking of the help the live club woman may be to a library, Miss Parshley says: "First, strike the personal note in your thought of it. It is not the trustees' library or the librarian's library; it is your library. If this is so, you should take a greater interest in it, help to raise its standard, to increase its usefulness. Visit the library often. If things are not quite to your liking, ask the why and the wherefore, offer suggestions rather than criticisms. Upon investigation you will usually find that there are exactly six uses for every dollar of income. Perhaps you can think of some way to increase this income. Add it to your personal list of interests and benevolences, and be on the watch for the person with the gift.
