NOTICE.

HE numbers and prices will generally explain each article, and are sufficient description when ordering.

Goods ordered to be sent by mail should be registered, and are mailed at buyer's risk.

Postage is added to the cost of goods.

5. 4 N. 6/W

The Post-Office accepts no liquids of any kind.

Cash on delivery orders will be sent by express, with privilege of examining before paying if desired; a moderate sum, about equal to cost of expressage back and forth is requested with the order. The express charges for return of money to be added to bill.

Every care is observed in the packing of goods and no responsibility is assumed by the shipper for breakages or loss in transit.

Rolls of drawing paper should be ordered to be boxed; the damage done by twine marks and other injuries frequently amounts to more than the cost of a box.

Packing boxes and cartages are charged at cost.

Owing to the miscellaneous nature of goods, in this line of business, many of which are of foreign make, variations in values of materials, etc., may cause alterations in prices, which are subject to change without notice.

Terms are Cash, payable by Bank Draft, Post-Office or Express Money Order or otherwise, in New York City. Bank Notes are less liable to go astray if sent by registered mail.

To satisfy the purchaser has been, and always shall be, the aim.

TRACING PAPERS

III KOIIS.									
340. "PREMIUM" Oiled, thin.									
Roll 20 yards long, 40 inches wide									
341. "MAMMOTH" Oiled, Extra Heavy.									
"Mammoth" Tracing Paper is used for Pen and Ink Sketches, which are to be mounted									
on Card or Mounting board. India Ink or Water Color are easily applied, and pencil marks can be erased without									
tearing the paper.									
Roll 20 yards long, 40 inches wide\$4.00									
344. "VICTORIA" Hor PRESSED, Satinized, Unprepared.									
"Victoria" Tracing Paper contains no oil or paraffine, and will not become brittle or yellow with age.									
It can be folded without breaking; India Ink or Water Color do not spread or soak through, and on account of the low price it is preferable to many other Tracing Papers.									
Roll 44 yards long, 54 inches wide									
" 22 " " 54 " "									
·· 44 ·· ·· 27 ·· ··									
345. "MONARCH " (Registered Trade Mark,) Cold Pressed, unglazed, unprepared.									
"Monarch" Cold Pressed Unprepared Tracing Paper has a slightly rough surface ; it									
contains no oil, will not turn yellow or brittle with age, and is not injured in folding.									
Water Color and India Ink do not spread or soak through, and the low price has made it a very popular tracing paper.									
Roll 44 yards long, 54 inches wide(List Price, \$5.50) \$5.00									
··· 22 ··· ··· 54 ··· ···									
··· 44 ··· ··· 27 ··· ···

Roll, 20 yards long, 57 inches wide\$5.50									
" 20 " " 43 " "									
·· 20 ·· ·· 28 ·· ·· 2.85									
347. "LEATHERINE" Strong, very clear.									
This paper is less liable to wrinkle when Water Color is applied than many other Tracing									
Papers. India Ink flows freely and pencil marks can be erased without tearing the paper.									
Roll, 20 yards long, 54 inches wide \$6.85 " 20 " " 40 " "									
" 20 " " 27 " "									
350. "LION" Parchment, very tough and transparent.									
Is an excellent substitute for tracing cloth; it can be folded, takes India Ink and Color									
freely, and may be stretched like Drawing Paper, by gumming down the edges first, and when it adheres thoroughly, moistening the surface with a sponge or brush.									
Roll, 20 yards long, 37 inches wide									
352. "ELEPHANT VELLUM" Extra Heavy, Extra Strong.									
"Elephant Vellum" is strong enough to be used like a drawing paper. Drawings, con-									
structed in pencil, on it, can be easily erased without tearing. A fine "Blue Print" is produced from an ink drawing made on this paper, which saves the expense of tracing the									
original. To stretch it, gum down the edges, and when it adheres, moisten the surface with									
a sponge or brush.

SAMPLE BOOK of Blue Process Papers mailed on application

THE "BLUE PROCESS."

ALSO KNOWN AS

FERRO-PRUSSIATE AND HELIOGRAPHIC PROCESS. For producing Copies of Tracings in White Lines on a Blue Ground.

This design is printed from a wood cut and represents the general appearance of a "Blue Print."

All Lines Drawn with Black India Ink on Tracing Cloth will show distinctly in whit. c. a blu ground.

Within the past few years the use of "Blue Prints" (copies of tracings by the Blue Process) has steadily increased. The Low Price, the Rapidity with which they can be Produced, and the positive knowledge of having a fac-simile of the original are but a few of the many advantages gained by using these copies. Iron Workers, Bridge Builders, Machinists, etc., use them extensively. At a comparatively small outlay copies of every part of the work can be freely distributed among the men, thus overcoming the disadvantage of compelling a number of persons to work and measure from one drawing. Architects acknowledge it to be economical and convenient to furnish sets of "Blue Print" copies to the Builder, Mason, Carpenter, Stone Cutter and others who desire estimating on structures. The necessity of calling at the Architect's office to examine the drawings or to await their turn in taking away the tracings is hereby obviated, and the contractors are enabled to estimate at their leisure.

The tracings are not injured or defaced, and can at any time be used for producing additional copies.

PRICE LIST

FOR PRODUCING

COPIES FROM TRACINGS BY THE "BLUE PROCESS."

TRACINGS IN BOLD BLACK LINES WILL PRODUCE PERFECT COPIES.

If possible, the tracings should be rolled, not folded. Water color causes tracing cloth to wrinkle. If tracings are not colored, the copies are more distinct.

"BLUE PROCESS" PAPERS.

Prepared ready for use.

DIRECTIONS FOR USING.

All Tracings should be drawn with Black India Ink, and the lines to be as heavy as possible.

A flat drawing or other board is covered with a blanket or any yielding material answering the purpose of a cushion. Place the prepared paper (prepared aide up) on the blanket; then lay the tracing (face up) over the prepared paper, and, in order to press paper and tracing closely together, a piece of heavy plate glass is placed over the tracing, thus producing a perfect contact. Expose from five to ten minutes in a bright sun, and longer in cloudy weather or diffused light. No exact time for exposure can be stated. It is advisable to practice with small pieces of the prepared paper, by exposing them various lengths of time, say every consecutive minute from five to ten minutes, and note the relative results. After the paper has been exposed the proper length of time, the sheet is submerged in a shallow dish of clean water; where the light has acted upon the prepared paper, it will change to a rich blue, and where a line on the tracing prevented the action of the light, the chemical with which the paper is covered will wash off and the original white paper re-appears, thus producing a copy in *White Lines on a Blue Ground.* This copy is permanent.

Better results can be obtained with a Blue Printing Frame. See Nos. 650, etc.

"BLUE PRINT PAPERS."

All prepared papers are called "BLUE PROCESS" Papers.

500, "LINOLA" Extra Hard Surface, Extra Tough. Not Prepared Blue

Print Papers.

"Linola" is in many respects superior to other Blue Print Papers. It is strong and pliable, and adapted for severe usage in machine shops, buildings, etc. The surface is very hard; it absorbs but little of the chemicals, and consequently will keep in the prepared state for some time.

The above cut represents Frames No. 650, with hollow wheels attached to sides, mounted on a track.

BLUE PRINTING

FRAMES OR CASES AND APPARATUS

FOR COPYING TRACINGS BY THE

"BLUE PROCESS."

Blue Printing Frames consist of a shallow frame made of hardwood with a rabbet holding a piece of plate glass ; two or more (hinged) wooden panels (according to size) arranged so as to permit examination of the print without any possibility of changing its position in the case. The springs which press the panels and glass together are attached to cross-bars, held in position by self-acting clamps ; the cushion is of the best quality of felt about 1/4 inch thick, which material is very soft and pliable, and assists in producing a perfect, even contact between tracing and the prepared paper.

The following prices are for complete Frames, WITHOUT hollow wheels or tracks, as shown in cut.

Extra Fine Quality; made of hard wood, well finished, with extra powerful springs, numerous panels and crossbars, and in every respect of first-class workmanship.

Large frames can be furnished with hollow wheels attached to the centre of each side. In this way the frame, if placed on a track, is easily turned and rolled into the light. Orders filled for large frames with side wheels and the complete track (SEE CUT). A frame so arranged can be handled by a small boy without danger of breaking the glass.

COMPARING SCALES.

Nos. 4030-4036.

Nos. 4030 to 4036 have only one scale on each edge; all graduations begin on the same line, which extends across the scale from one edge to the other, and are figured from left to right. At a glance a distance can be measured in any of the four scales. Inches and $\frac{1}{12}$ ths are easily reduced to inches and $\frac{1}{16}$ ths, Metric measure to inches, etc.

A glance at the illustration above will explain the good qualities of this style of board. The wood used is carefully selected pine, with hardwood cross-bars at back. To prevent the warping of the pine, the board is sawed half way through at about every two inches, and for the purpose of allowing the board to contract and expand, the cross-bars are not glued on, but fastened with screws, which run in oblong metal slots. At the ends, pieces of hardwood are inlaid, to give the **T** square a smooth working edge. They are also cut at every few inches, to allow for contraction and expansion of the board.

DRAWING BOARDS, WITH WALNUT CROSS BARS.

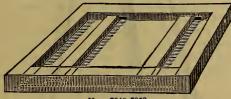

Nos. 7830-7896.

Nos. 7830 to 7896 are well made of narrow boards. The cross-bars are fastened with screws, running in brass slots to allow for contraction and expansion of the pine board.

FRAMED DRAWING BOARDS.

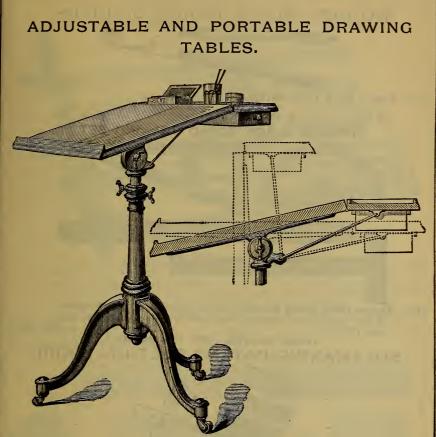

Nos. 7940-7952.

Framed Boards are used for stretching drawing paper. The inside cross pieces can easily be removed and the board taken out. A sheet of paper is wet and placed on the pine board; press the frame down; secure the cross pieces; allow the paper to dry and it is ready for use.

This table can be fixed at any *required height*, so one can use it either sitting or standing; and by turning back the screw at the right, it is allowed to rotate, bringing *either side in front*. The shelf or ledge for instruments is attached to the r verse side of the table, so that it is *always level*, whatever inclination is given to the dcsk. This is very convenient for the water-cups, inkstands, etc. The second figure shows the table fixed at a slight inclination, the dotted lines showing it horizontal or vertical. When the table is nearly vertical the whole occupies but little space, and forms a perfect easel.

Under the instrument shelf are provided two drawers, one on each side, for working materials. The table and drawers are made of black walnut or other appropriate wood, nicely finished.

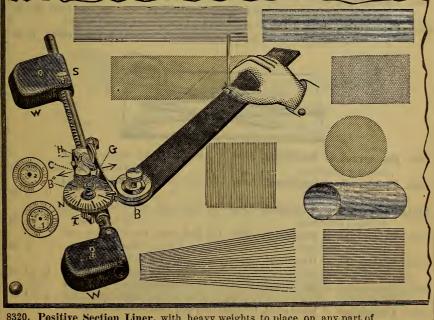

Cast iron is used for the tripod, hollow standard and sliding spindle, which are neatly painted and bronzed. The working parts are well finished, and very easily operated. The stand is sufficiently firm to hold a large drawing board. It can be raised to a level of 44 inches and lowered to 30 inches.

MEASURING INSTRUMENT

AND WATCH CHARM

No. 8750. 8752.

> To measure, it is only necessary to move the instrument over the surface. The small dial registers the feet and the large one, the inches. When 25 feet have been traversed, the small hand has made a complete revolution, and begins the second one, etc. It is about the size of a small locket, and convenient to carry.

ADJUSTABLE CURVE RULERS.

No. 8760 (large).

This Rule consists of a band of thin, flexible steel, $\frac{3}{4}$ of an inch wide; this is attached to a bar of soft lead, which is covered by a long, spiral spring.

The Rule is bent to the required position, and the soft leaden bar prevents any springing back.

This size is nickel plated, and is adapted for railroad and ship building, and for long curves in general.

8760. ADJUSTABLE CURVE RULER, Large.

Entire length and ruling edge, 30 inches.....(List Price, \$3.25) each, \$2.87

No. 8762 (small).

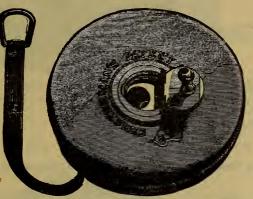

The basis of this Ruler is a bar of soft lead, which can easily be bent, and remains so. To improve the working of it, the lead is lined with two thin bands of steel, and the drawing edge covered with rubber, which is held in place by the small ribs.

8762. ADJUSTABLE CURVE RULER, Small. Entire length, 141/2 inches; ruling edge, 10 inches .. (List Price, \$1 67) each, \$1.50

PAINE'S PATENT STANDARD STEEL TAPES.

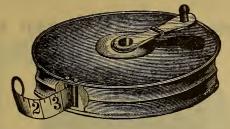

Nos. 8960-8980.

These tapes have been in the market for a number of years. The increased demand is the best evidence of their good qualities. The handles of all tapes (50 feet and over) are detachable; compensating, and other handles can be put on. The entire tape, if taken out of the case, by fastening an extra handle to the other end, can be used as a chain.

ROE'S IMPROVED STEEL TAPE CHAIN, With Folding Reel.

127

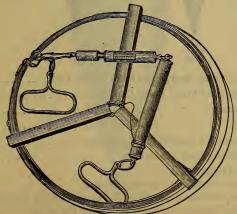

1105. 5450-5455.

These tapes are made of spring steel about $\frac{1}{2}$ -inch wide. Each consecutive foot has a brass rivet, and every five and ten feet have large plates with figures stamped thereon. For country and field work the tapes have given excellent satisfaction. They can be dragged through woodland, brush, etc., without catching or kinking, and as they are nickel-plated (mat finish) they do not rust, and require no oiling or cleaning after being used.

MINER'S DIPPING NEEDLE AND COMPASS.

For tracing iron ore. Consists of a needle mounted in a metal ring, graduated to degrees, and having glass on top and bottom. When used for tracing ore, the prospector should hold the ring, and keep the needle pointing north and south.

10,100. Miner's Dipping Needle. Complete, with Stop In Case, each, \$12.00

On account of its extreme sensitiveness, the slightest variations in gradients, levels, etc., are easily ascertained, and therefore this instrument is adapted for general mining and surveying. By a new arrangement, the scale of altitude can be subdivided by a vernier. The barometrical scale of inches has been made progressive so as to give the correct relative readings with the scale of altitudes.

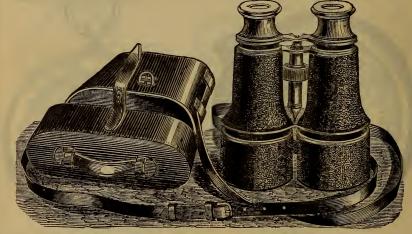

For mining purposes the entire circle of the dial is graduated to represent 6 inches of the mercurial column, *i. e.*, from 27 inches to 33. This scale will register about 2,000 feet below sea-level to 4,000 feet above; the finest divisions, $\frac{1}{100}$ ths of the altitude scale, represent 10 feet measurements, which can be again subdivided by the vernier scale to single feet. The vernier scale is moved by a rack-work adjustment, and a magnifying lens which rotates on the outer circumference of the instrument facilitates the reading of minute quantities.

For surface surveying purposes only, not to be used below sea-level, the instrument is made with the scale divided from 25 to 31 inches, thus giving an altitude scale of 6,000 feet above sea-level only, and with this open scale and the assistance of the vernier, the same minute readings can be easily taken.

The instruments are also constructed for measuring greater altitudes, *i. e.*, 10,000, 15,000, or 20,000 feet, but with these scales the measurements cannot be made quite so minute as in the more open scales.

EXTRA HEAVY COLORED PENCILS,

FOR

Coloring Details, Marking Lumber, etc.

These Pencils are of fine quality. The heavy lead does not break easily, and large surfaces can be colored in a short space of time.

POCKET LEAD PENCIL POINTER.

No. 17,250.

Consists of a number of sheets of fine sand-paper pressed into a block; when the upper sheet is used, insert a knife at the uncovered part of the side, and cut all around. To prevent the loose lead which adheres to the sand-paper from soiling the pocket, the block is enclosed in a small, neat, folding case, with rubber band, to keep it closed when not in use.

The original is carefully drawn or written with the prepared ink; moisten the preparation with a sponge or brush, and remove the superfluous water by blotting with ordinary newspapers (not blotting paper); the original is then placed on the adhesive surface (face down), and removed after a few minutes. The greater portion of the highly concentrated ink remains on the pad, from which numerous copies can be produced by successively placing sheets of white paper on the adhesive surface. The pad is cleaned with a sponge saturated with warm or cold water; warm water

EIDLITZ' Leopold Nature and Function of Art, more especially of Architecture. 520 pp. This work is an attempt to discover and expound the rational basis of architecture as a fine
art. It begins by confirming the conceded fact that the art of architecture is now dead; that is to say, that the monuments of our time do not express the ideas of our time, as the ideas of Greece were expressed in the Grecian Temples, or as the ideas of mediæval Christianity
were expressed in the Cathedrals of the thirteenth century. It finds the causes of the admit- ted decline in the assumption that because art appeals to the emotions, it may not only be
judged, but produced by the emotions, and in the consequent practice of architects since the period of the Renaissance, who have contented themselves with copying forms which pleased them, instead of developing forms out of the ideas which are the basis, the materials and the
methods of construction which are the conditions of progress in architecture. The work thus comprehends an inquiry into the nature of art in general, in the course of which its cur-
rent themes are critically examined. This inquiry comprises the second part of the work. The first is devoted to an examination of the present condition of architecture, and the third to the means by which architecture may be made again a living art. This third part
third to the means by which architecture may be made again a living art. This third part comprehends an analysis of antique and mediæval architecture, and although it deals to some extent with technical questions, is so written as to be intelligible to unprofessional readers.

Lienard's Specimens of Decoration and Ornamentation. An American edition of this important work. Most of the plates are fac-similes of the originals, and of the same size. A few are slightly reduced or slightly enlarged in size, but in all cases the essential features of the Designs are retained. It is well printed and on good paper, and is in every way as valuable to the designer as the more costly French edition. These plates cover a wide range of Indus- trial Art, almost every branch being represented, from Ceramic to Architecture, including subjects, carving, painting, chasing, inlay, modeling, fabrics, etc., exemplifying the various phases of the Renaissance, of which M. Liénard is one of the most able modern exponents. Furniture is also largely represented. 127 10x16 plates. Portfolio

Correct Answers to all Questions relative to practical Mensuration, without the aid of either drawings, pencil, paper or effort of mind. This marvel of ingenuity and beautifully formed instrument is in one section, its edge beveled and divided into twelfths. The slide is German Silver, and it has astonishing powers of making accurate calculations as to cost of materials, work, time or quantity. This valuable information is easily acquired by the mechanic whose opportunities may have been neglected if ambitious to learn, and willing to pay out for it about what he may earn in one day. How to use the instrument is clearly explained in one volume, illustrated by 32 engraved plates, 9×6 , and 44 pages of letterpress. Price of Book and Instrument

NNNNNN

J. L. SMITH, MAP PUBLISHER, PHILADELPHIA.

We call your attention to the New Walnut Map Case, containing a great amount of map room condensed within a small space, and combining utility with adornment as a prominent office fixture.

The above cut represents the Map Case and one of the maps partially drawn down. The whole of any one of the maps can be instantly brought to view, and again rolled up out of the way, without the loss of a moment's time, and so simply that any one who can raise and lower a window curtain, can handle the maps in the case satisfactorily.

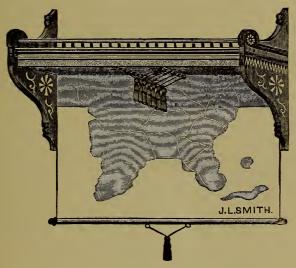

This Case holds twelve large maps, 7x6 feet, or a proportionate number of smaller ones.

PRICE OF CASE, \$50.00. Spring Bollers for the Case, 60c. per foot extra.

J. L. SMITH. MAP PUBLISHER, PHILADELPHIA.
