LETTER OF TRANSMITTAL.

U. S. DEPARTMENT OF AGRICULTURE,
BUREAU OF PLANT INDUSTRY,
OFFICE OF THE CHIEF,
Washington, D. C., November 7, 1901.

SIR: I have the honor to transmit herewith a paper entitled A Collection of Economic and other Fungi, prepared by Mrs. Flora W. Patterson, of Vegetable Pathological and Physiological Investigations, and submitted by the Pathologist and Physiologist. It is respectfully recommended that the paper be published as Bulletin No. 8 of this Bureau.

Respectfully,

B. T. GALLOWAY,
Chief of Bureau.

Hon. JAMES WILSON,
Secretary of Agriculture.

PREFACE.

This Office has for some time had in contemplation a distribution of its duplicate material to the various State agricultural experiment stations, and now offers to them and other interested workers such specimens as they may select from the list which follows. It is greatly to be regretted that all species represented in this list are not in sufficient quantity to permit the distribution to be made to the experiment stations at least in uniform sets.

Each State agricultural experiment station is invited to compile its own set and to select from this list fifty specimens, which we will forward on request, but if preferred the selection will be made here. All specimens desired over fifty may be considered as in exchange. Accounts will be opened with any station so that it may avail itself at once of this material, even if it is not yet in position to send the exchanges for specimens selected in excess of the fifty furnished free. Experiment station workers will be enabled by this means to add to their reference collections with but slight expense and trouble. There are, of course, many things common in certain parts of the country which are either rare or do not occur in other parts. We would like to get all kinds of material, whether common or not. Aid is solicited toward making this exchange a success.

In establishing this exchange it is desired to extend its benefits not only to experiment station workers, but to specialists and all who are interested in the study of fungi from the economic standpoint.

The arrangement proposed is to exchange specimen for specimen when those offered are well preserved, of good quality, in abundant quantity, and authentically determined, labeled, and already placed in mycological envelopes.

In regard to exchanges for undetermined specimens and material in bulk requiring preparation for herbarium use, arrangements will be made by correspondence.

The attention of specialists is called to the desirability of having *type* specimens of at least all American species deposited in the herbarium of this Office, where they will always be accessible to those interested.

Address all correspondence to Mycological Exchange, Bureau of Plant Industry, Department of Agriculture, Washington, D. C.

ALBERT F. WOODS,
Pathologist and Physiologist.

A COLLECTION OF ECONOMIC AND OTHER FUNGI PREPARED FOR DISTRIBUTION.

By FLORA W. PATTERSON, *Mycologist*.

INTRODUCTION.

An examination of this list will show the collection to be geographically very limited. It is hoped by the method now proposed to interest a large number of botanists whose collections may help ours to become more general in its nature and enable others to materially enhance the value of their herbaria at small expense. Advanced students in agricultural colleges may, under the directions of their instructors, be able to collect and contribute valuable material that will thus be made available to other workers and at the same time acquire a choice nucleus for their own herbaria. This plan will also accomplish the purpose of an exchange bureau for fungi which will be free from the awkward limitations of the usual exchange bureau. It will be easily adapted to the individual needs and circumstances of all classes interested.

Much unidentified material is at hand to be worked up which, together with what is expected to be received in response to this issue, will warrant the publication of an additional catalogue as soon as the work can be accomplished. The attempt will be made in the future, as has been with this distribution, to verify all determinations, and no effort will be spared to make the collections as authentic as published sets of exsiccati. Species have been carefully compared with their types when such were available. Duplicates of all these specimens may be examined in our herbarium.

The general arrangement and the nomenclature of the fungi are in the main that of Saccardo's *Sylloge Fungorum*, and the nomenclature of the hosts is from Farlow and Seymour's *Host Index* and Hooker and Jackson's *Index Kewensis*. Names marked with an asterisk (*) are from the *Index Kewensis*. The above works are the ones used for general reference and the arrangement of our herbarium. No attempt has been made to keep strictly up to date with the rearrangement of groups by recent monographers, as an exchange like the present may much more appropriately adhere to standard works which are probably accessible to all.

BULLETINS OF THE BUREAU OF PLANT INDUSTRY.

The Bureau of Plant Industry, which was organized July 1, 1901, includes Vegetable Pathological and Physiological Investigations, Botanical Investigations and Experiments, Grass and Forage Plant Investigations, Pomological Investigations, and Gardens and Grounds, all of which were formerly independent Divisions, and also Seed and Plant Introduction, The Arlington Experimental Farm, Tea Investigations and Experiments, and the Congressional Seed Distribution. Beginning with the date of the organization of the Bureau, the independent series of bulletins of the Division of Vegetable Pathology and Physiology, the last number of which was 29, and also of each of the other divisions, were discontinued and all are now published as one series of the Bureau.

The bulletins published in this series are:

1. The Relation of Lime and Magnesia to Plant Growth, 1901.
2. Spermatogenesis and Fecundation of *Zamia*, 1901.
3. Macaroni Wheats, 1901.
4. Range Improvement in Arizona, 1901.
5. Inventory No. 9, Seeds and Plants Imported, 4351-5500, 1901.
6. A List of American Varieties of Peppers, 1901.
7. The Algerian Durum Wheats: A Classified List, with Descriptions, 1901.
