In the field of economy there are so many thinkers who are far better judges of Bagehot's invaluable work than myself, that I will say a very few words indeed upon it. It is curious, but I believe it to be almost universally true, that what may be called the primitive impulse of all economic *action*, is generally also strong in great economic *thinkers* and financiers, — I mean the saving, or at least the anti-spending, instinct. It is very difficult to see why it should be so, but I think it *is* so. No one was more large-minded in his view of finance than Bagehot. He preached that in the case of a rich country like England, efficiency was vastly more important than the mere reduction of expenditure, and held that Mr. Gladstone and other great chancellors of the exchequer made a great deal too much of saving for saving's sake. None the less he himself had the anti-spending instinct in some strength, and he was evidently pleased to note its existence in his favorite economic thinker, Ricardo. Generous as Bagehot was, — and no one ever hesitated less about giving largely for an adequate end, — he always told me, even in boyhood, that spending was disagreeable to him, and that it took something of an effort to pay away money. In a letter before me he tells his correspondent of the marriage of an acquaintance, and adds that the lady is a Dissenter, "and therefore probably rich. Dissenters don't spend, *and quite right too*." I suppose it takes some feeling of this kind to give the intellect of a man of high capacity that impulse towards the study of the laws of the increase of wealth, without which men of any imagination would be more likely to turn in other directions. Nevertheless, even as an economist, Bagehot's most original writing was due less to his deductions from the fundamental axioms of the modern science, than to that deep insight into men which he had gained in many different fields. The essay not long ago published in this review,* in which he showed so powerfully how few of the conditions of the science known to us as "political economy" have ever been really applicable to any large portion of the globe during the longest periods of human history, was itself quite a series of studies in social history and in human nature. His striking book, "Lombard Street," is quite as much a study of bankers and bill-brokers as of the principles of banking. Take again Bagehot's view of the intellectual position and value of the capitalist classes. Every one who knows his writings in the *Economist* knows how he ridiculed the common impression that the chief service of the capitalist class — that by which they *earn* their profits — is merely what the late Mr. Senior used to call "abstinence," that is, the practice of deferring their enjoyment of their savings in order that those savings may multiply themselves; and how wholly inadequate he thought it, merely to add that when capitalists are themselves managers, they discharge the task of "superintending labor" as well. Bagehot held that the capitalists of a commercial country do — not merely the saving, and the work of foremen in superintending labor, but all the difficult intellectual work of commerce besides, and are so little appreciated as they are chiefly because they are a dumb class who are seldom equal to explaining to others the

complex processes by which they estimate the wants of the community, and conceive how best to supply them. He maintained that capitalists are the great generals of commerce, that they plan its whole strategy, determine its tactics, direct its commissariat, and incur the danger of great defeats, as well as earn, if they do not always gain, the credit of great victories. Now, here again is a new illustration of the light which Bagehot's keen insight into men, taken in connection with his own intimate understanding of the commercial field, brought into his economic studies. He brought life into these dry subjects from almost every side; for instance, in writing to the *Spectator*, many years ago, about the cliff scenery of Cornwall, and especially about the petty harbor of Boscastle, with its fierce sea and its two breakwaters, — which leave a mere Temple Bar for the ships to get in at, — a harbor of which he says that "the principal harbor of Liliput probably had just this look," he goes back in imagination at once to the condition of the country at the time when a great number of such petty harbors as these were essential to such trade as there was, and shows that at that time the Liverpool and London docks not only could not have been built for want of money, but would have been of no use if they had been built, since the auxiliary facilities which alone make such emporia useful did not exist. "Our old gentry built on their own estates as they could, and if their estates were near some wretched little haven they were much pleased. The sea was the railway of those days. It brought, as it did to Ellangowan in Dirk Hatteraick's time, brandy for the men and pinners for the women, to the lonest of coast castles." It was by such vivid illustrations as this of the conditions of a very different commercial life from our own, that Bagehot lit up the dismal science, till in his hands it became both picturesque and amusing.

Bagehot made two or three efforts to get into Parliament, but after an illness which he had in 1868, he deliberately abandoned the attempt and held, I believe rightly, that his political judgment was all the sounder, as well as his health the better, for a quieter life. In 1866 he was very nearly elected for Bridgewater, but was by no means pleased that he was so near success, for he stood to lose, not to win, in the hope that if he and his party were really quite pure, he might gain the seat on petition. He did his very best, indeed, to secure purity, though he failed. As a speaker he did not often succeed. His voice had no great compass, and his manner was somewhat odd to ordinary hearers, but at Bridgewater he was completely at his ease, and his canvass and public speeches were decided successes. His examination, too, before the commissioners sent down a year or two later to inquire into the corruption of Bridgewater was itself a great success. He not only entirely defeated the somewhat eagerly pressed efforts of one of the commissioners, Mr. Anstey, to connect him with the bribery, but he drew a most amusing picture of the bribable electors whom he had seen only to shun. I will quote a little bit from the evidence he gave in reply to what Mr. Anstey probably regarded as home-thrusts: —

42,018. (*Mr. Anstey.*) Speaking from your experience of those streets, when you went down them canvassing did any of the people say anything to you, or in your hearing, about money? — Yes, one I recollect standing at the door, who said, "I won't vote for gentlefolks unless they do something for I. Gentlefolks do not come to I unless they want something of I, and I won't do nothing for gentlefolks, unless they do something for me." Of course I immediately retired out of that house.

42,019. That man did not give you his promise? — I retired immediately; he stood in the doorway sideways, as these rustics do.

42,020. Were there many such instances? — One or two I remember. One suggested that I might have a place. I immediately retired from him.

42,021. Did anybody of a better class than those voters, privately of course, expostulate with you against your resolution to be pure? — No, nobody ever came to me at all.

42,022. But those about you, did any of them say anything of this kind, "Mr. Bagehot, you are quite wrong in putting purity of principles forward. It will not do if the other side bribes"? — I might have been told that I should be unsuccessful in the stream of conversation; many people may have told me that; that is how I gathered if the other side was impure and we were pure, I should be beaten.

42,023. Can you remember the names of any who told you that? — No, I cannot, but I dare say I was told by as many as twenty people, and we went upon that entire consideration.

But my space is well-nigh exhausted, and to leave my subject without giving some idea of Bagehot's racy conversation would be a sin. He inherited this gift, I believe, in great measure from his mother, to whose stimulating teaching in early life he probably owed also a great deal of his rapidity of thought. A lady who knew

him well, says that one seldom asked him a question without his answer making you either think or laugh, or both think and laugh together. And this is the exact truth. His habitual phraseology was always vivid. He used to speak, for instance, of the minor people, the youths or admirers who collect round a considerable man, as his "fringe." It was he who invented the phrase "padding" to denote the secondary kind of article, not quite of the first merit, but with interest and value of its own, with which a judicious editor will fill up perhaps three-quarters of his review. If you asked him what he thought on a subject on which he did not happen to have read or thought at all, he would open his large eyes and say, "My mind is 'to let' on that subject, pray tell me what to think;" though you soon found that this might be easier attempted than done. He told me once, at a time when the *Spectator* had perhaps been somewhat more eager or sanguine on political matters than he approved, that he always got his wife to "break" it to him on the Saturday morning, as he found it too much for his nerves to encounter its views without preparation. Then his familiar antitheses not unfrequently reminded me of Dickens's best touches in that line. He writes to a friend, "Tell —— that his policies went down in the 'Colombo' but were fished up again. *They are dirty but valid.*" I remember asking him if he had enjoyed a particular dinner which he had rather expected to enjoy, but he replied, "No — the sherry was bad; tasted as if L—— had dropped his h's into it." His practical illustrations, too, were full of wit. In his address to the Bridgewater constituency, on the occasion when he was defeated by eight votes, he criticised most happily the sort of bribery which ultimately resulted in the disfranchisement of the place. "I can make allowance," he said, "for the poor voter; he is most likely ill-educated, certainly ill-off, and a little money is a nice treat to him. What he does is wrong, but it is intelligible. What I do not understand is the position of the rich, respectable, virtuous members of a party which countenances these things. They are like the man who stole stinking fish; they commit a crime, and they get no benefit." But perhaps the best illustration I can give of his more sardonic humor was his remark to a friend who had a church in the grounds near his house: "Ah, you've got the church in the grounds! I like that. It's well the tenants shouldn't be *quite* sure that the lord's power stops with this world." And his more humorous exaggerations were very happy. I remember his saying of a man who was excessively fastidious in rejecting underdone meat, that he once sent away a red-hot cinder "because it was red;" and he confided gravely to an early friend that when he was in low spirits it cheered him to go down to the bank and dabble his hand in a heap of sovereigns. But his talk had finer qualities than any of these. One of his most intimate friends — both in early life and later in Lincoln's Inn — Mr. T. Smith Osler, writes to me of it thus: "As an instrument for arriving at truth, I never knew anything like a talk with Bagehot. It had just the quality which the farmers desiderated in the claret, of which they complained that though it was very nice, it brought them 'no forrader;' for Bagehot's conversation did get you forward and at a most amazing pace. Several ingredients went to this, the foremost was his power of getting to the heart of the subject, taking you miles beyond your starting-point in a sentence, generally by dint of sinking to a deeper stratum. The next was his instantaneous appreciation of the bearing of everything you yourself said, making talk with him, as Roscoe once remarked, 'like riding a horse with a perfect mouth.' But most unique of all was his power of keeping up animation without combat. I never knew a power of discussion, of co-operative investigation of truth, to approach to it. It was all stimulus and yet no contest."

But I must have done, and, indeed, it is next to impossible to convey, even faintly, the impression of Bagehot's vivid and pungent conversation to any one who did not know him. It was full of youth, and yet had all the wisdom of a mature judgment in it. The last time we met, only five days before his death, I remarked on the vigor and youthfulness of his look, and told him he looked less like my contemporary than one of a younger generation. In a pencil note, the last I received from him, written from bed on the next day but one, he said, "I think you must have had the evil eye when you complimented me on my appearance. Ever since I have been sickening, and am now in bed with a severe attack on the lungs." But the expression of health and youth was really on his face, though it may have been but the last rally of overflowing life in one whom it will always be difficult to associate with age or death. Nor need any one now make the attempt. Possibly, indeed, what I saw may have

been that light of youth which Matthew Arnold speaks of as

> A breath of promise and repose
> From the far grave to which it goes.

So at least I like to conceive it. And though we shall none of us see again that buoyant expression of keen and vivid life, — at least with these eyes which year after year learn to weary more in seeking for that which is no longer to be found, — it is something at least, when we close them, to see it, as I trust I may always continue to do, in the vision both of memory and of hope. R. H. HUTTON.

This story ("GREEN PASTURES AND PICCADILLY"), *being written partly in collaboration with an American author, is copyrighted both in this country and in England, and is printed in* THE LIVING AGE *from Harper's Bazar, by arrangement with Harper & Brothers.*

GREEN PASTURES AND PICCADILLY.

BY WILLIAM BLACK,

AUTHOR OF "THE PRINCESS OF THULE," "THE ADVENTURES OF A PHAETON," ETC.,

In conjunction with an American writer.

[Entered according to Act of Congress, in the Year 1877, by HARPER & BROTHERS, in the Office of the Librarian of Congress, at Washington.]

CHAPTER XLV.

FIRE CHIEF.

NEXT morning, as we drove away from Decatur, a cold white fog lay all along the broad valley of the Missouri; but by-and-by the sun drank it up, and the warm light seemed to wake into activity all the abounding animal life of that broken and wooded country that skirts the prairie. There were clouds of reed-birds rising from the swamps as we approached; now and again a mourning-dove quietly flew across; large hawks hovered high in air; and so abundant were the young quail that it seemed as if our horses were continually about to trample down a brood coolly crossing the road. We saw the gopher running into his hole, and the merry little chipmunk eying us as we passed; and at one point we gave a badger a bit of a chase, the animal quietly trotting down the road in front of us. The air was cool and pleasant. Dragon-flies flashed, and butterflies fluttered across in the sunlight; it was a beautiful morning.

And at last we were told that we were on the reservation lands, though nothing was visible but the broken bluffs and the open prairie beyond, and on our right the immense valley of the Missouri. But in time we came to a farm, and drove up to a very well-built house, and here we made the acquaintance of H—— F——, who most courteously offered to act as our guide for the day. He took a seat in our vehicle; and though he was rather shy and silent at first, this constraint soon wore off. And Lady Sylvia regarded our new acquaintance with a great friendliness and interest, for had she not heard the heroic story of his brother, the last chief of the Omahas, "Logan of the Fires"? — how, when his tribe was being pursued by the savage Sioux, and when there seemed to be no escape from extermination, he himself, as night fell, went off and kindled fire after fire, so as to lead the enemy after him; and how he had the proud satisfaction of knowing, when he was taken and killed, that he had saved the life of every man, woman, and child of his followers. We do not wonder that the brother of the hero was regarded with much respect by the Omahas — in fact, there was a talk, at the time of our visit, of the smaller chiefs, or heads of families, electing him chief of the tribe. Indeed, the story reflected some romantic lustre on the peaceful Omahas themselves, and we began to cherish a proper contempt for their neighbors, the Winnebagoes — the broken remnant of the tribe which committed the horrible massacres in Minnesota some years ago, and which, after having been terribly punished and disarmed, was transferred by the government to the prairie land adjoining the Missouri.

But for the time being we kept driving on and on, without seeing Winnebago, or Omaha, or any sign of human life or occupation. Nothing but the vast and endless billows of the prairie — a beautiful yellow-green in the sun — receding into the faint blue-white of the horizon; while all around us was a mass of flowers, the Michaelmas daisy being especially abundant; while the air was everywhere scented with the aromatic fragrance of the may-weed. We had now quite lost sight of the Missouri valley, and were pursuing a path over this open prairie which seemed to lead to no place in particular. But while this endless plain seemed quite unbroken, bare, and destitute of trees, it was not really so. It was intersected by deep and sharp gullies — the beds of small tributaries of the Missouri, and the sides of these gullies were lined with dense brushwood and trees. It was certainly a country likely to charm the heart of a tribe of

Indians, if only they were allowed to have weapons and to return to their former habits, for it offered every facility for concealment and ambuscade. But all that is a thing of the past, so far as the Missouri Indians are concerned; their young men have not even the chance — taken by the young men of apparently peaceable tribes living on other reservations — of stealing quietly away to the Sioux; for the Sioux and the Omahas have ever been deadly enemies.

The danger we encountered in descending into these gullies was not that of being surprised and having our hair removed, but of the vehicle to which we clung toppling over and going headlong to the bottom. These break-neck approaches to the rude wooden bridges, where there were bridges at all, were the occasion of much excitement; and our friendly guide, who seemed to treat the fact of the vehicle hovering in air, as if uncertain which way to fall, with much indifference, must have arrived at the opinion that Englishwomen were much given to screaming when their heads were bumped together. In fact, at one point they refused to descend in the carriage. They got out and scrambled down on foot; and the driver, with that rare smile one sees on the face of a man who has been hardened into gravity by the life of an early settler, admitted that, if the vehicle had been full, it would most assuredly have pitched over.

At length we descried, on the green slope of one of the far undulations, three teepees — tall, narrow, conical tents, with the tips of the poles on which the canvas is stretched appearing at the top, and forming a funnel for the smoke — and near them a herd of ponies. But there were no human beings visible, and our path did not approach these distant tents. The first of the Indians we encountered gave us rather a favorable impression of the physique of the Omahas. He was a stalwart young fellow; his long black hair plaited; a blue blanket thrown round his square shoulders. He stood aside to let the vehicle pass, and eyed us somewhat askance. The few words that F. addressed to him, and which he answered, were of course unintelligible to us. Then we overtook three or four more, men and women, in various attire; but, altogether, they were better in appearance and more independent in manner than the gipsy-looking Indians we had seen skulking around the confines of the towns, in more or less "civilized" dress, and not without a side-glance for unconsidered trifles. These, we were told, were mostly Pawnees, though the Winnebagoes have in some measure taken to the neighborhood of the towns on the chance of getting a stray dollar by digging. After we passed these few stragglers we were apparently once more on the tenantless prairies; but doubtless the Indians who prefer to live in their teepees out on the plain, rather than accept the semi-civilization of the agency, had taken to the hollows, so that the country around us was not quite the desert that it seemed to be.

But a great honor was in store for us. When it was proposed that we should turn aside from our path and visit the wigwam of Fire Chief, one of the heads of the small communities into which the tribe is divided, some scruples were expressed, for we held that no human being, whether he was a poet laureate or a poor Indian, liked to have his privacy invaded from motives of mere curiosity. Then we had no presents to offer him as an excuse.

"No tobacco?" said our good-natured guide, with a smile. "An Indian never refuses tobacco."

The news of our approach to the wigwam was doubtless conveyed ahead, for we saw some dusky children scurry away and disappear like rabbits. The building was a large one; the base of it being a circular and substantial wall of mud and turf apparently about ten feet high; the conical roof sloping up from the wall being chiefly composed of the trunks of trees, leaving a hole at the summit for the escape of smoke. We descended from our vehicles, and, crouching down, pushed aside the buffalo-skin that served for door, and entered the single and spacious apartment which contained Fire Chief, his wives, children, and relatives. For a second or two we could scarcely see anything, so blinding was the smoke; but presently we made out that all round the circular wigwam, which was probably between thirty and forty feet in diameter, was a series of beds, toward which the squaws and children had retreated, while in the middle of the place, seated on a buffalo-skin in front of the fire, was the chief himself. He took no notice of our entrance. He stared into the fire as we seated ourselves on a bench; but one or two of the younger women, from out the dusky recesses, gazed with obvious wonder on these strange people from a distant land. Fire Chief is a large and powerful-looking man, with a sad and worn face; obviously a person of importance, for he

wore an armlet of silver, and ear-rings of the same material, and his moccasins of buffalo hide were very elaborately embroidered with beads and porcupine quills, while the dignity of his demeanor was quite appalling.

"Will you take a cigar, sir?" said the lieutenant, who had vainly endeavored to get one of the children to come near him.

Fire Chief did not answer. He only stared into the smouldering wood before him. But when the cigar was presented to him, he took it, and lit it with a bit of burning stick, resuming his air of absolute indifference.

"Does he not speak English?" said Lady Sylvia, in an undertone, to our guide, who had been conversing with him in his own tongue.

"They don't know much English," said F., with a smile, "and what they do know, they don't care to speak. But he asks me to tell you that one of the young men is sick. That is he in the bed over there. And he says he has not been very well himself lately."

"Will you tell him," said Lady Sylvia, gently, "that we have come about five thousand miles from our homes, and that we are greatly pleased to see him, and that we hope he and the young man will very soon be well again?"

When this message was conveyed to the chief, we rose and took our departure, and he took no more notice of our leaving than our coming. Shall we say that we felt, on getting outside, rather "mean;" that the fact of our being a pack of inquisitive tourists was rather painful to us; that we mentally swore we should not "interview" another human being, Indian or poet laureate, during the whole course of our miserable lives? Our self-consciousness in this respect was not at all shared by our good friend from Omaha, who was driving one of the two vehicles, and who seemed to regard the Indian as a very peculiar sort of animal, decidedly less than human, but with his good points all the same. Was it not he who told us that story about his wife having been one day alone in her house — many years ago, when the early settlers found the Indians more dangerous neighbors than they are now — and engaged in baking, when two or three Indians came to the door and asked for bread? She offered them an old loaf; they would not have it; they insisted on having some of the newly-baked bread, and they entered the house to seize it; whereupon this courageous house-mistress took up her rolling-pin and laid about her, driving her enemy forthwith out of the door. But the sequel of the story has to be told. Those very Indians, whenever they came that way, never passed the house without bringing her a present — a bit of venison, some quail, or what not — and the message they presented with the game was always this: "Brave squaw! Brave squaw!" which shows that there is virtue in a rolling-pin, and that heroism, and the recognition of it, did not die out with the abandonment of chain armor.

We also heard a story which suggests that the Indian, if an inferior sort of animal, is distinctly a reasoning one. Some years ago a missionary arrived in these parts, and was greatly shocked to find on the first Sunday of his stay that these Indians who had taken to agriculture were busily planting maize. He went out and conjured them to cease, assuring them that the God whom he worshipped had commanded people to do no work on the Sabbath, and that nothing would come of their toil if they committed this sin. The Indians listened gravely, and having staked off the piece of ground they had already planted, desisted from work. After that they never worked on Sunday except within this inclosure; but then this inclosure got the extra day's hoeing and tending. When harvest came, behold! the space that had been planted and tended on Sunday produced a far finer crop than any adjacent part, and no doubt the Indians came to their own conclusions about the predictions of the missionary. Anyhow, whether the legend be true or not, the Omahas retain their original faith.

At length we reached the agency — a small collection of houses scattered about among trees — and here there were some greater signs of life. Small groups of Indians, picturesque enough with their colored blankets and their leggings of buffalo hide, stood lounging about, pretending not to see the strangers, but taking furtive glances all the same, while now and again a still more picturesque figure in scarlet pants and with swinging arms would ride by on his pony, no doubt bound for his teepee out on the plain. Alas! the only welcome we received from any of the Indians was accorded us by a tall and bony idiot, who greeted us with a friendly "How?" and a grin. We had our horses taken out, we were hospitably entertained by the agent, a sober and sedate Quaker, and then we went out for a stroll round the place, which included an inspection of the store, the blacksmith's shop, and other

means for assisting the Indians to settle down to a peaceful agricultural life.

Our party unanimously came to the opinion — having conversed to the extent of "How?" with one Indian, and that Indian an idiot — that the preference of the Indians for remaining paupers on the hands of the government rather than take to tilling the ground is natural. The Indian, by tradition and instinct, is a gentleman. Of all the races of the world, he is the nearest approach one can get to the good old English squire. He loves horses; he gives up his life to hunting and shooting and fishing; he hasn't a notion in his head about "boetry and bainting;" and he considers himself the most important person on the face of the earth. But the Indian is the more astute of the two. Long ago he evolved the ingenious theory that as his success in the chase depended on his nerves being in perfect order, it would never do for him to attack the ordinary rough work of existence; and hence he turned over to his wife or wives the tending of the horses, the building of the teepees, the procuring of fuel — in fact, all the work that needed any exertion. This is one point on which the English country gentleman is at a disadvantage, although we have heard of one sensible man who invariably let his wife fill and screw up his cartridges for him.

And you expect this native gentleman to throw aside the sport that has been the occupation and passion of his life, and take to digging with a shovel for a dollar a day? How would your Yorkshire squire like that? He would not do it at all. He would expect the government that deprived him of his land to give him a pension, however inadequate, and the wherewithal to keep body and soul together. He would go lounging about in an apathetic fashion, trying to get as much for his money as possible at the government stores, smoking a good deal, and being the reverse of communicative with the impertinent persons who came a few thousand miles to stare at him. And if the government stopped his drink, and would not let him have even a glass of beer — but this is carrying the parallel to an impossibility: no existing government could so far reduce Yorkshire; there would have been such an outburst of revolution as the world has never yet seen.

We set out on our return journey, taking another route over the high-lying prairie land. And at about the highest point we came to the burial-mound, or rather burial-house, of White Cow. When the old chief was dying, he said, "Bury me on a high place, where I can see the boats of the white men pass up and down the river." Was his friendly ghost sitting there, then, in the warm light of the afternoon, amid the fragrant scent of the may-weed? Anyhow, if White Cow could see any boats on the Missouri, his spectral eyes must have been keener than ours, for we could not see a sign of any craft whatsoever on that distant line of silver.

Strangely enough, we had just driven away from this spot when an object suddenly presented itself to our startled gaze which might have been White Cow himself "out for a dauner." A more ghastly spectacle was never seen than this old and withered Indian — a tall man, almost naked, and so shrunken and shrivelled that every bone in his body was visible, while the skin of the mnmmy-like face had been pulled back from his mouth, so that he grinned like a spectre. He was standing apart from the road, quite motionless, and he carried nothing in his hand; but all the same, both our horses at the same moment plunged aside so as nearly to leave the path, and were not quieted for some minutes afterward. We forgot to ask F. if he knew this spectre, or whether it was really White Cow. Certainly horses don't often shy because of the ghastly appearance of a human being.

That night we reached Decatur again, and had some more pelican of the wilderness and prunes. Then the women went up stairs, doubtless to have a talk about the promised addition to our party, and we went outside to listen to the conversation of the tall, uncouth, unkempt fellows who were seated on a bench smoking. We heard a good deal about the Indians, and about the attempts to "civilize" him. From some other things we had heard out there we had begun to wonder whether civilization was to be defined as the art of acquiring greenbacks without being too particular about the means. However, it appears that on one point the Indians have outstripped civilization. The Indian women, who had in bygone years sometimes to go on long marches with their tribe in time of war, are said to have discovered a secret which the fashionable women of Paris would give their ears to know. But they keep it a profound secret; so perhaps it is only a superstition.

From The Nineteenth Century.

THE MURDER OF THOMAS BECKET.

By the terms of the peace of Frêteval, the archbishop was to be restored to his estates and dignity. He on his part had given assurances of his intentions with which Henry had professed himself satisfied. Private communications had passed between him and the king, the nature of which is known only to us through the archbishop's representations to his friends. That the reconciliation, however, was left incomplete, is evident both from Becket's conduct and from Henry's. The king had made the return of his favor conditional on Becket's conduct. Either he did not trust Becket's promises, or the promises were less ample than he desired.

Immediately after the interview the king became dangerously ill, and for a month he believed that he was dying. Becket returned to Sens, and sent messengers to England to young Henry announcing his approaching return, and requesting that his estates should be made over at once to his own people. The messengers were instructed privately to communicate with his English friends, and ascertain the state of public feeling. The young king named a day on which the trust should be made over to the archbishop's officials, and advised that the archbishop should remain for a while on the Continent, and endeavor to recover his father's confidence. The messengers reported that he had many staunch supporters, the Earl of Cornwall among them; but they were unanimously of opinion that it would be unwise for the archbishop to reappear at Canterbury so long as the old king's distrust continued. The peace of Frêteval, therefore, was obviously understood to have been inconclusive by all parties. The inconclusiveness was made still more apparent immediately after.

At the beginning of September, Henry had partially recovered. The archbishop sent John of Salisbury and Herbert of Bosham to him to complain of the delay with the estates. He had been watched, perhaps, more closely than he was aware. The king knew nothing as yet of the intended excommunication of the bishops. But he knew Becket's character. He felt it more than probable that mischief was meditated. He said that he must wait to see how the archbishop conducted himself.

Passionate as usual, the archbishop complained to the pope; he intimated that only his Holiness's orders prevented him from revenging his ill-treatment. Prudence, however, told him that if he was to make an effective use of the excommunications which the pope had trusted to him, he must for the present restrain himself. Twice again he saw the king at Tours, and afterwards at Amboise. Henry was reserved, but not unkind. The archbishop had professed a wish for peace. If his behavior after his return to England proved that he was in earnest in these professions — if he remained quietly in his province, and made no further disturbances — the king said that he was prepared to show him every possible kindness.

The king needed no more complete justification of his suspicions than an expression which Becket used in relating this conversation to his friend Herbert. "As the king was speaking," he said, "I thought of the words: 'All these things will I give thee if thou wilt fall down and worship me.'" It is evident on the face of the narrative that the king never gave the conscious sanction to violent measures against the bishops, which Becket pretended afterwards that he had received. In answer to his complaints at Amboise, Henry may have told him that the rights of the see of Canterbury should be assured, and that, if those rights had been impaired, satisfaction should be made to him. To this last conference, and to some such words as these, the Count of Blois may have referred in his letter to the pope. But Becket and his friends put a construction upon the promises which none knew better than they that Henry did not intend. It is as certain that Becket's own professions were no less equivocal — that when he spoke of peace he was thinking only of a peace of which he was to dictate the terms, and that he had already determined to reopen the war on a new stage on the instant of his return to his cathedral.

But the return was now determined on, be the consequences what they might. The English bishops had their friends among the cardinals. In the course of the autumn it became known in England that the archbishop had applied for censures against the bishops, and that the pope had granted them. They advised the king to insist that Becket should bind himself by some more explicit engagements before he should be allowed to land, that he should be examined especially as to whether he had received any letters of excommunication from Rome, and that if he were in possession of such letters he should sur-

render them. Henry preferred to trust to the archbishop's honor, or to the watchfulness of the wardens of the ports. He was weary of the struggle. Doubtless he had his misgivings, as the bishops had; but he had made up his mind that the experiment should be tried, with, on his part at least, a faithful discharge of his own engagements.

The archbishop had gone to Rouen in November to settle accounts with creditors who had advanced him money. He had meant to see Henry once more, but Henry wrote to say that the delay of his return had led to disquieting rumors which ought not to continue. He desired the archbishop to go back to Canterbury at once; and that he might be subjected to no inconvenience on landing, he sent John of Oxford, whose person was well known, to accompany and protect him. John of Oxford's instructions were, after seeing Becket safe at Canterbury, to go on to the young king and give orders for the immediate restoration of the property of the see.

The die was cast. The archbishop resolved to go. There was abundant dissatisfaction in England. In the spring of this very year, the king had been obliged to suspend the sheriffs in every county, and ultimately to remove many of them, for extortion and oppression.* The clergy were lukewarm in his interests; but there were better reasons for relying upon the nobles. The king had thrust a bridle in their mouths, restraining what they called their liberties, and many of them, as was afterwards proved, were ready to make common cause with the Church against the crown. The archbishop was perfectly right in expecting to find among the laity a party who would stand by him. He went once more to Sens to take leave of his entertainers. After an affectionate parting with Lewis and the queen of France, retaining still his old taste for magnificence, he rode down to the coast with an escort of a hundred cavaliers, and there once more, separated from him but by a few hours' sail, lay the white cliffs of England.

It was thought likely, if it was not known for certain, that Becket would bring with him letters from the pope, and the introduction of such letters, if to the hurt of any English subject, was against the law, without a written license from the king. The duty of the wardens of the ports was to search the persons and the baggage of any one whom there was ground for suspecting, and on reaching the coast Becket learned that the three prelates who were to be excommunicated, the sheriff of Kent, Sir Ranulf de Broc, and Sir Reginald de Warenne, one of the council of the young king, were waiting for him at Dover to ascertain whether he was the bearer of any such explosive missile. The future martyr was not select in his language. "Archdevils," "priests of Baal," "standard-bearers of the Balaamites," "children of perdition," were the common phrases with which he described the unfortunate bishops who were thus trying to escape their sentences. To outwit their vigilance, a day or two before he meant to sail, he sent over a boy in a small vessel whose insignificant appearance would attract no attention. The boy or nun (for there is reason to suppose that the bearer was a woman disguised) presented himself suddenly before the Archbishop of York in St. Peter's Oratory at Dover, placed the letter of suspension in his hands, and disappeared before he had time to learn its contents. In the same hour, and by the same instrument, the still more terrible letters of excommunication were served on the bishops of London and Salisbury. Their precautions had been baffled. The shots had been fired which opened the new campaign, and the mark had been successfully hit. Sir Ranulf de Broc searched the town with a drawn sword for the audacious messenger, but the messenger had vanished.

It would have gone ill with Becket had he landed in the midst of the storm which the delivery of the letters instantly kindled. The ground of the censures was the coronation of the young king. To excommunicate the bishops who had officiated was to deny the young king's title to the crown. The archbishop had come back then, it seemed, to defy the government and light a civil war. The next morning, when he and his friends were examining the vessel in which they were about to embark, an English boat ran into the harbor. Some one leaped on shore, and, coming straight to Herbert, told him that if the archbishop went to Dover he was a dead man; the excommunications had set the country on fire. A rapid council was held. Several of the priests were frightened. The certain displeasure of the king was admitted with a frankness which showed how little Becket really supposed that Henry would approve what he had done. Becket asked Herbert for advice. Herbert, always the worst ad-

viser that he could have consulted, said that they must advance or fall into disgrace. Let the archbishop go boldly forward, and he would tread the dragon under his feet. The worst that could befall him was a glorious martyrdom.

Much of this fine language may have been an afterthought. The archbishop, when a choice of conduct lay before him, was certain to choose the most rash. He decided, however, to avoid Dover, and on the morning of the 1st of December he sailed up the river to Sandwich, with his cross raised conspicuously above the figure-head of his ship. Sandwich was his own town. The inhabitants were lieges of the see, and a vast and delighted crowd was gathered on the quay to receive him. The change of destination was known at Dover Castle. Sir Reginald de Warenne, the sheriff of Kent, and Ranulf de Broc, had ridden across, and had arrived at Sandwich before the archbishop landed. John of Oxford hurried to them with the king's orders that the archbishop was to be received in peace. They advanced in consequence without their arms, and inquired the meaning of the excommunication of the bishops. To their extreme surprise, they were told that the letters had been issued with the king's knowledge and permission. To so bold an assertion no immediate answer was possible. They pointed to his train, among whom were some French clergy. Strangers coming into England without a passport were required to swear allegiance for the time of their stay. The sheriff said that the priests must take the usual oath. Becket scornfully answered that no clerk in his company should take any oath at all. He declined further conversation, and bade them come to him after two days to the palace of Canterbury if they had more to say.

Becket passed the remainder of the day at Sandwich. The next morning he set out for his cathedral. Seven years he had been absent, and for all those years his name had been a household word in castle and parsonage, grange and cabin. In England people sympathize instinctively with every one who opposes the crown, and between Sandwich and Canterbury Becket was among his own tenants, to whom he had been a gentler master than Ranulf de Broc. The short winter day's ride was one long triumphal procession. Old men, women, and children lined the roads on their knees to beg his blessing. Clergy came at the head of their parishioners with garlands and banners. Boys chanted hymns. Slowly at a foot's pace the archbishop made his way among the delighted multitudes. It was evening before he reached Canterbury. He went direct to the cathedral. His face shone as he entered, "like the face of Moses when he descended from the mount." He seated himself on his throne, and the monks came one by one and kissed him. Tears were in all eyes. "My lord," Herbert whispered to him, "it matters not now when you depart hence. Christ has conquered. Christ is now king." "He looked at me," says Herbert, "but he did not speak."

Strangely in that distant century, where the general history is but outline, and the colors are dim, and the lights and shadows fall where modern imagination chooses to throw them, and the great men and women who figured on the world's stage are, for the most part, only names, the story of Becket, in these last days of it especially, stands out as in some indelible photograph, every minutest feature of it as distinct as if it were present to our eyes. We have the terrible drama before us in all its details. We see the actors, we hear their very words, we catch the tones of their voices, we perceive their motives; we observe them from day to day, and hour to hour; we comprehend and sympathize with the passions through the fierce collision of which the action was worked out to its catastrophe. The importance of the questions which were at issue, the characters of the chief performers, and the intense interest with which they were watched by the spectators, raise the biographies and letters in which the story is preserved to a level of literary excellence far beyond what is to be found in all contemporary writings.

The archbishop slept in his desolate palace. No preparations had been made for him. The stores had not been laid in. The barns and byres were empty. Ranulf de Broc had swept up the last harvest, and had left the lands bare. In the morning (December 3) De Warenne and the sheriff reappeared with the chaplains of the three bishops. They had been led to hope, they said, that the archbishop would come home in peace. Instead of peace he had brought a sword. By scattering excommunications without notice, he was introducing confusion into every department of the realm. The very crown was made dependent on the archbishop's will. The law of England was reduced to the archbishop's edicts. Such an assumption could not and would not be allowed. The

excommunication of the bishops was a direct blow at the authority of the young king. For the archbishop's own sake they advised him, and in the king's name they commanded him, to take the censures off, or a time might come when he would regret his violence too late to repair it.

Until the issue of the sentences against the three bishops, Alexander had not committed himself to any positive act in Becket's favor, and it had been to compromise the papacy distinctly in the quarrel that the pope's letters had been thus immediately discharged. Becket answered that the excommunications had been issued by the supreme pontiff, and that he could not undo the work of his superior. He admitted, with exasperating satire, that he was not displeased to see his Holiness defend the Church with his own hands. To punish men who had broken the law was not to show contempt of the king. He had himself complained to the king of the bishops' conduct, and the king had promised that he should have satisfaction. For the rest he acknowledged no right in the king or any man to challenge his conduct. He bore the spiritual sword, and did not mean to shrink from drawing it against sinners, whatever might be the inconvenience. If the bishops would take an oath to submit to any sentence which the pope might pass upon them, he would strain a point and absolve them; without such an oath, never.

The answer was carried to Dover. Foliot and the bishop of Salisbury were willing, it was said, to have sworn as Becket prescribed. The archbishop declared that he would spend the last farthing that he possessed rather than yield to such insolence. The young king was at Winchester.* De Warenne hastened to him to report Becket's behavior, and probably to ask instructions as to what the bishops should do. They crossed eventually to the old king's court in Normandy, but not till after a delay of more than a fortnight at Dover. Obviously the conduct which they were to pursue was carefully canvassed and deliberately resolved upon. Becket himself, too, found it prudent to offer explanations, and sent the prior of Dover after De Warenne to Winchester to report the archbishop's arrival, and to ask permission for him to present himself. From the rapidity with which events now passed, the prior must have ridden night and day. Young Henry being still under age, the archbishop's messenger was received by his guardians, whom he found in towering indignation. The excommunication was regarded as an invitation to rebellion, and had Henry died in August there undoubtedly would have been rebellion. "Does the archbishop mean to make pagans of us, with his suspensions and curses?" they said; "does he intend to upset the throne?" The prior asked to be allowed to see the young king himself. He assured them that the archbishop had meant no injury to him. No one in the realm besides his father loved the prince more dearly. The displeasure was only that other hands than those of the primate had placed the crown upon his head. He repeated the story that the old king knew what was to be done to the bishops. He trusted that the young king would not refuse to receive a person who only desired to do him loyal service.

The court was evidently perplexed by the confident assertions with respect to Henry. The Earl of Cornwall advised that Becket should be allowed to come; they could hear from himself an explanation of the mystery. Geoffrey Ridel, the archdeacon of Salisbury, happened, however, to be present. Ridel was one of Henry the Second's most confidential advisers, whom Becket had cursed at Vezelay and habitually spoke of as an archdevil. He had been intimately acquainted with the whole details of the quarrel from its commencement, and was able to affirm positively that things were not as Becket represented. He recommended the guardians to consult the king before the archbishop was admitted; and the prior of Dover was, in consequence, dismissed without an answer.

The archbishop had committed himself so deeply that he could not afford to wait. His hope was to carry the country with him before the king could interfere, or at least to have formed a party too strong to be roughly dealt with. The prior of Dover not having brought back a positive prohibition, he left Canterbury professedly to go himself to Winchester: but he chose to take London in his way; it was easy to say that he had been long absent; that his flock required his presence; that there were children to be confirmed, candidates for the priesthood to be ordained — holy rites of all kinds, too long neglected, to be attended to. There was no difficulty in finding an excuse for a circuit through the province; and the archiepiscopal visitation assumed the form of a military parade.

* Not Woodstock, as is generally said. William of Canterbury, with special reference to localities, says Wintonia.

Few as the days had been since he had set his foot on the English shore, he had contrived to gather about him a knot of laymen of high birth and station. *Quidam illustres*, certain persons of distinction, attended him with their armed retainers, and, surrounded by a steel-clad retinue with glancing morions and bristling lances, the archbishop set out for London a week after his return from the Continent. Rochester lay in his way. Rochester Castle was one of the strongholds which he had challenged for his own. The gates of the castle remained closed against him, but the townsmen received him as their liege lord. As he approached Southwark the citizens poured out to greet the illustrious churchman who had dared to defy his sovereign. A vast procession of three thousand clergy and scholars formed on the road, and went before him chanting a *Te Deum;* and this passionate display had a deliberate and dangerous meaning which every one who took part in it understood. To the anxious eyes of the court it was a first step in treason, and in the midst of the shouts of the crowd a voice was distinguished, saying, "Archbishop, 'ware the knife!"

It was on December 13 that Becket reached London Bridge. He slept that night close by, at the palace of the old Bishop of Winchester. His movements had been watched. The next morning Sir Jocelyn of Arundel and another knight waited on him with an order from the court at Winchester to return instantly to Canterbury, and to move no more about the realm with armed men. The archbishop had not ventured so far to be frightened at the first hard word. He received Sir Jocelyn as a king might receive a rebel feudatory. With lofty fierceness he said he would go back at no man's bidding, if Christmas had not been so near when he desired to be in his cathedral.* "May I not visit my diocese?" he demanded. "Will the king drive off the shepherd that the wolf may tear the flock? Let God see to it!" Arundel said that he had come to deliver the king's commands, not to dispute about them. "Carry back, then, my commands to your king," said the archbishop.† "Your commands!" Arundel retorted; "address your commands to those of your own order." Turning sternly to the young lords in the archbishop's suite, he bade them remember their duties, and rode off with his companions.

To obey was to lose the game. Instead of obeying, the archbishop went on to Harrow, a benefice of his own into which an incumbent had been intruded by the crown. From Harrow he sent for the old abbot of St. Albans, and despatched him to Winchester with a list of complaints. At the same time, and to learn the strength of the party at court which he supposed to be ready to stand by him, he sent a monk — apparently William of Canterbury, who tells the story — on a secret and dangerous mission to the Earl of Cornwall. The monk went disguised as a physician, Becket bidding him write word how things were going. The words in which he gave the order show his intention beyond possibility of question. The pretended physician was to go *velut alter Cushy*, and Cushy was the messenger who brought word to David that the Lord had avenged him of his enemies, and that the young king Absalom was dead.*

The Earl of Cornwall was well-disposed to Becket, but was true to his king and his country. When the rebellion actually broke out three years after, the Earl of Cornwall's loyalty saved Henry's crown. He was willing to befriend the archbishop within the limits of law, but not to the extent upon which Becket counted. He received the disguised monk into his household; he examined him closely as to the archbishop's intentions. He would perhaps have allowed him to remain, but a servant of the young king recognized the man through his assumed character as one of Becket's immediate followers two days after his arrival. The earl bade him begone on the instant, and tell his master to look to himself; his life was in peril.

The abbot of St. Albans had travelled more slowly. The discovery was a bad preparation for his reception. Sir Jocelyn of Arundel had brought back Becket's insolent answer, and the open disobedience of the order to return to Canterbury could be construed only as defiance. To the alarmed guardians it seemed as if an insurrection might break out at any moment. The abbot found the court at Breamore, near Fordingbridge, in Hampshire. He was admitted, and he presented his schedule of wrongs, which, after all, was trifling. The archbishop's clergy were forbidden to leave the realm. He had

* "Spiritu fervens respondit se nullatenus propter inhibitionem hanc regressurum, nisi quia tunc jam festus tam solemnis urgebat dies quo ecclesiæ suæ abesse noluit."

† "Si et mandata mea regi vestro renunciaturi estis." — William of Canterbury.

* 2 Samuel xviii. 31.

been promised restitution of his property, but it had been given back to him in ruins. His game had been destroyed; his woods had been cut down; his benefices were detained from him. As a last outrage, since his return Sir Ranulf de Broc had seized a cargo of wine which he had brought over with the old king's permission. The vessel in which it had arrived had been scuttled, and the crew had been incarcerated. God was injured when his clergy were injured, the abbot said, and in Becket's name he demanded redress.

The abbot had spoken firmly, but in language and manner he had at least recognized that he was a subject addressing his sovereign. A priest in his train, with Becket's own temper in him, thundered out as the abbot had ended: "Thus saith the lord primate, 'Let man so think of us as ministers of Christ and stewards of the mysteries of God. If justice be not done as right demands, ye need not doubt that we will do our part and use the powers which God has committed to us.'" The fierce message was delivered amidst scowling groups of knights and nobles. Hot youths clenched their fists and clutched their dagger-hilts. A courtier told the bold priest that, but for the honor of the king's presence, he should suffer for his insolence. Sir Reginald de Warenne, who was present, said, "The bows are bent on both sides." The Earl of Cornwall, fresh from his conference with Becket's secret messenger, muttered, "Ere Lent there will be wild work in England."

The archbishop was still at Harrow when the abbot came back with an account of his reception. Many things the abbot must have been able to tell him which have been left unrecorded. Thus much, at any rate, must have been made plain — that the archbishop could not count on any immediate armed intervention. For the moment, at least, he would be left to face alone the storm which he had raised. The best that he could now hope to effect would be to bury himself and his enemies in common ruin. He foretold his fate to the abbot, and, resisting entreaties to spend Christmas at St. Albans, went back to Canterbury, where he had still work before him which could be accomplished only in his own cathedral.

The story now turns to Henry's court in Normandy. Between Southampton and the Norman coast communications were easy and rapid; and the account of the arrival of the censured bishops, with the indignant words which burst from the king at the unwelcome news which he heard from them for the first time, is an imperfect legend in which the transactions of many days must have been epitomized.

The bishops did not leave England till the 20th or 21st of December,* and before their appearance the king must have heard already not only of the excommunications and of the daring misuse of his own name, but of the armed progress to London, of the remarkable demonstration there, of the archbishop's defiance of the government, of the mission of the abbot of St. Albans, of the threats of the priest, and of the imminent danger of a general rebellion. During the first three weeks of this December many an anxious council must have been held in the Norman court, and many a scheme talked over and rejected for dealing with this impracticable firebrand. What could be done with him? No remedy was now available but a violent one. The law could not restrain a man who claimed to be superior to law, and whose claims the nation was not prepared directly to deny. Three centuries later the solution would have been a formal trial, with the block and axe as the sequel of a judicial sentence. Ecclesiastical pretensions were still formidable under Tudors, but the State had acquired strength to control them. In our own day the phantom has been exorcised altogether, and an archbishop who used Becket's language would be consigned to an asylum. In Becket's own time neither of these methods was possible. Becket himself could neither be borne with, consistently with the existence of the civil government, nor resisted save at the risk of censures which even the king scarcely dared to encounter. A bishop might have committed the seven deadly sins, but his word was still a spell which could close the gates of heaven. The allegiance of the people could not be depended upon for a day if Becket chose to declare the king excommunicated, unless the pope should interfere; and the pope was an inadequate resource in a struggle for the supremacy of the Church over the State. It was not until secular governments could look popes and bishops in the face, and bid them curse till they were tired, that the relations of Church and State admitted of legal definition. Till that time should arrive the ecclesiastical theory was only made tolerable by submitting to the

* Herbert says that they arrived at Bayeux *paucis diebus ante natalem Domini.*

checks of tacit compromise and practical good sense.

Necessities for compromises of this kind exist at all times. In the most finished constitutions powers are assigned to the different branches of the State which it wonld be inconvenient or impossible to remove, yet which would cause an immediate catastrophe if the theory were made the measure of practice. The crown retains a prerogative at present which would be fatal to it if strained. Parliament would make itself intolerable if it asserted the entire privileges which it legally possesses. The clergy in the twelfth century were allowed and believed to be ministers of God in a sense in which neither crown nor baron dared appropriate the name to themselves. None the less the clergy could not be allowed to reduce crown and barons into entire submission to themselves. If either churchman or king broke the tacit bargain of mutual moderation which enabled them to work together harmoniously, the relations between the two orders might not admit of more satisfactory theoretic adjustment; but there remained the resource to put out of the way the disturber of the peace.

Fuel ready to kindle was lying dry throughout Henry's dominions. If Becket was to be allowed to scatter excommunications at his own pleasure, to travel through the country attended by knights in arms, and surrounded by adoring fools who regarded him as a supernatural being, it was easy to foresee the immediate future of England and of half France. To persons, too, who knew the archbishop as well as Henry's court knew him, the character of the man himself who was causing so much anxiety must have been peculiarly irritating. Had Becket been an Anselm, he might have been credited with a desire to promote the interests of the Church, not for power's sake, but for the sake of those spiritual and moral influences which the Catholic Church was still able to exert, at least in some happy instances. But no such high ambition was to be traced either in Becket's agitation or in Becket's own disposition. He was still the self-willed, violent, unscrupulous chancellor, with the dress of the saint upon him, but not the nature. His cause was not the mission of the Church to purify and elevate mankind, but the privilege of the Church to control the civil government, and to dictate the law in virtue of magical powers which we now know to have been a dream and a delusion. His personal religion was not the religion of a regenerated heart, but a religion of self-torturing asceticism, a religion of the scourge and the hair shirt, a religion in which the evidences of grace were to be traced not in humbleness and truth, but in the worms and maggots which crawled about his body. He was the impersonation not of what was highest and best in the Catholic Church, but of what was falsest and worst. The fear which he inspired was not the reverence willingly offered to a superior nature, but a superstitious terror like that felt for witches and enchanters, which brave men at the call of a higher duty could dare to defy.

No one knows what passed at Bayeux during the first weeks of that December. King and council, knights and nobles, squires and valets, must have talked of little else but Becket and his doings. The pages at Winchester laid their hands on their dagger-hilts when the priest delivered his haughty message. The peers and gentlemen who surrounded Henry at Bayeux are not likely to have felt more gently as each day brought news from England of some fresh audacity. At length, a few days before Christmas, the three bishops arrived. Two were under the curse, and could not be admitted into the king's presence. The Archbishop of York, being only suspended, carried less contamination with him. At a council the archbishop was introduced, and produced Alexander's letters. From these it appeared not only that he and the other bishops were denounced by name, but that every person who had taken any part in the young king's coronation was by implication excommunicated also. It is to be remembered that the king had received a positive sanction for the coronation from Alexander; that neither he nor the bishops had received the prohibition till the ceremony was over; and that the prohibitory letter, which it is at least possible that the king would have respected, had been kept back by Becket himself.

The Archbishop of York still advised forbearance, and an appeal once more to Rome. The pope would see at last what Becket really was, and would relieve the country of him. But an appeal to Rome would take time, and England meanwhile might be in flames. "By God's eyes," said the king, "if all are excommunicated who were concerned in the coronation, I am excommunicated also." Some one (the name of the speaker is not mentioned) said that there would be no peace while Becket lived. With the fierce impatience of a man baffled by a problem which he

has done his best to solve, and has failed through no fault of his own, Henry is reported to have exclaimed: "Is this varlet that I loaded with kindness, that came first to court to me on a lame mule, to insult me and my children, and take my crown from me? What cowards have I about me, that no one will deliver me from this low-born priest!" It is very likely that Henry used such words. The greatest prince that ever sat on throne, if tried as Henry had been, would have said the same; and Henry had used almost the same language to the bishops at Chinon in 1166. But it is evident that much is still untold. These passionate denunciations can be no more than the outcome of long and ineffectual deliberation. Projects must have been talked over and rejected; orders were certainly conceived which were to be sent to the archbishop, and measures were devised for dealing with him short of his death. He was to be required to absolve the censured bishops. If he refused, he might be sent in custody to the young king, he might be brought to Normandy, he might be exiled from the English dominions, or he might be imprisoned in some English castle. Indications can be traced of all these plans; and something of the kind would probably have been resolved upon, although it must have been painfully clear also that, without the pope's help, none of them would really meet the difficulty. But the result was that the knights about the court, seeing the king's perplexity, determined to take the risk on themselves, and deliver both him and their country. If the king acted, the king might be excommunicated, and the empire might be laid under interdict, with the consequences which every one foresaw. For their own acts the penalty would but fall upon themselves. They did not know, perhaps, distinctly what they meant to do, but something might have to be done which the king must condemn if they proposed it to him.

But being done unknown,
He would have found it afterwards well done.

Impetuous loyalty to the sovereign was in the spirit of the age.

Among the gentlemen about his person whom Henry had intended to employ, could he have resolved upon the instructions which were to be given to them, were four knights of high birth and large estate — Sir Reginald Fitzurse, of Somersetshire, a tenant in chief of the crown, whom Becket himself had originally introduced into the court; Sir Hugh de Morville, custodian of Knaresborough Castle, and justiciary of Northumberland; Sir William de Tracy, half a Saxon, with royal blood in him; and Sir Richard le Breton, who had been moved to volunteer in the service by another instance of Becket's dangerous meddling. Le Breton was a friend of the king's brother William, whom the archbishop had separated from the lady to whom he was about to be married on some plea of consanguinity. Sir William de Mandeville and others were to have been joined in the commission. But these four chose to anticipate both their companions and their final orders, and started alone.* Their disappearance was observed. An express was sent to recall them, and the king supposed that they had returned. But they had gone by separate routes to separate ports. The weather was fair for the season of the year, with an east wind perhaps; and each had found a vessel without difficulty to carry him across the Channel. The rendezvous was Sir Ranulf de Broc's castle of Saltwood, near Hythe, thirteen miles from Canterbury.

The archbishop meanwhile had returned from his adventurous expedition. The young king and his advisers had determined to leave him no fair cause of complaint, and had sent orders for the restoration of his wine and the release of the captured seamen; but the archbishop would not wait for the State to do him justice. On Christmas eve he was further exasperated by the appearance at the gate of his palace of one of his sumpter mules, which had been brutally mutilated by Sir Ranulf de Broc's kinsman Robert. "The viper's brood," as Herbert de Bosham said, "were lifting up their heads. The hornets were out. Bulls of Bashan compassed the archbishop round about." The Earl of Cornwall's warning had reached him, but "fight, not flight," was alone in his thoughts. He, too, was probably weary of the strife, and may have felt that he would serve his cause more effectually by death than by life. On Christmas day he preached in the cathedral on the text "Peace to men of good will." There was no peace, he said, except to men of good will. He spoke passionately of the trials

* Mandeville came afterwards to Canterbury, and being asked what he had been prepared to do if he had found the archbishop alive, he said "that he would have taken the archbishop sharply to task for his attacks upon his sovereign: if the archbishop had been reasonable, there would have been peace; if he had persisted in his obstinacy and presumption, beyond doubt he would have been compelled to yield." Mandeville, indisputably, had direct instructions from the king. ("Materials," vol. i., p. 126.)

of the Church. As he drew towards an end he alluded to the possibility of his own martyrdom. He could scarcely articulate for tears. The congregation were sobbing round him. Suddenly his face altered, his tone changed. Glowing with anger, with the fatal candles in front of him, and in a voice of thunder, the solemn and the absurd strangely blended in the overwhelming sense of his own wrongs, he cursed the intruders into his churches; he cursed Sir Ranulf de Broc; he cursed Robert de Broc for cutting off his mule's tail; he cursed by name several of the old king's most intimate councillors who were at the court in Normandy. At each fierce imprecation he quenched a light and dashed down a candle. "As he spoke," says the enthusiastic Herbert, "you saw the very beast of the prophet's vision, with the face of a lion and the face of a man." He had drawn the spiritual sword, as he had sworn that he would. So experienced a man of the world could not have failed to foresee that he was provoking passions which would no longer respect his office, and that no rising in England would now be in time to save him. He was in better spirits, it was observed, after he had discharged his anathema. The Christmas festival was held in the hall. Asceticism was a virtue which was never easy to him. He indulged his natural inclinations at all permitted times, and on this occasion he ate and drank more copiously than usual.

The next day Becket received another warning that he was in personal danger. He needed no friends to tell him that. The only attention which he paid to these messages was to send his secretary Herbert and his crossbearer Alexander Llewellyn to France, to report his situation to Lewis and to the Archbishop of Sens.* He told Herbert at parting that he would see his face no more.

So passed at Canterbury Saturday, Sunday, and Monday, the 26th, 27th, and 28th of December. On that same Monday afternoon the four knights arrived at Saltwood. They were expected, for Sir Ranulf with a party of men-at-arms had gone to meet them. There on their arrival they learned the fresh excommunications which had been pronounced against their host and against their friends at the court. The news could only have confirmed whatever resolutions they had formed.

* One of his complaints, presented by the abbot of St. Albans, had been that his clergy were not allowed to leave the realm. There seems to have been no practical difficulty.

On the morning of the 29th they rode with an escort of horse along the old Roman road to Canterbury. They halted at St. Augustine's Monastery, where they were entertained by the abbot elect, Becket's old enemy, the scandalous Clarembald. They perhaps dined there. At any rate they issued a proclamation bidding the inhabitants remain quiet in their houses in the king's name, and then, with some of Clarembald's armed servants in addition to their own party, they went on to the great gate of the archbishop's palace. Leaving their men outside, the four knights alighted and entered the court. They unbuckled their swords, leaving them at the lodge, and, throwing gowns over their armor, they strode across to the door of the hall. Their appearance could hardly have been unexpected. It was now between three and four o'clock in the afternoon. They had been some time in the town, and their arrival could not fail to have been reported. The archbishop's midday meal was over. The servants were dining on the remains, and the usual company of mendicants were waiting for their turn. The archbishop had been again disturbed at daybreak by intimation of danger. He had advised any of his clergy who were afraid to escape to Sandwich; but none of them had left him. He had heard mass as usual. He had received his customary floggings. At dinner he had drunk freely, observing, when some one remarked upon it, that he that had blood to lose needed wine to support him. Afterwards he had retired into an inner room with John of Salisbury, his chaplain Fitzstephen, Edward Grim of Cambridge, who was on a visit to him, and several others, and was now sitting in conversation with them in the declining light of the winter afternoon till the bell should ring for vespers.

The knights were recognized, when they entered the hall, as belonging to the old king's court. The steward invited them to eat. They declined, and desired him to inform the archbishop that they had arrived with a message from the court. This was the first communication which the archbishop had received from Henry since he had used his name so freely to cover acts which, could Henry have anticipated them, would have barred his return to Canterbury forever. The insincere professions of peace had covered an intention of provoking a rebellion. The truth was now plain. There was no room any more for excuse or palliation. What course had the king determined on?

The knights were introduced. They advanced. The archbishop neither spoke nor looked at them, but continued talking to a monk who was next him. He himself was sitting on a bed. The rest of the party present were on the floor. The knights seated themselves in the same manner, and for a few moments there was silence. Then Becket's black restless eye glanced from one to the other. He slightly noticed Tracy; and Fitzurse said a few unrecorded sentences to him, which ended with "God help you!" To Becket's friends the words sounded like insolence. They may have meant no more than pity for the deliberate fool who was forcing destruction upon himself.

Becket's face flushed. Fitzurse went on: "We bring you the commands of the king beyond the sea; will you hear us in public or in private?" Becket said he cared not. "In private, then," said Fitzurse. The monks thought afterwards that Fitzurse had meant to kill the archbishop where he sat. If the knights had entered the place, thronged as it was with men, with any such intention, they would scarcely have left their swords behind them. The room was cleared, and a short altercation followed, of which nothing is known save that it ended speedily in high words on both sides. Becket called in his clergy again, his lay servants being excluded,* and bade Fitzurse go on. "Be it so," Sir Reginald said. "Listen then to what the king says. When the peace was made, he put aside all his complaints against you. He allowed you to return, as you desired, free to your see. You have now added contempt to your other offences. You have broken the treaty. You have allowed your pride to tempt you to defy your lord and master to your own sorrow. You have censured the bishops by whose ministration the prince was crowned. You have pronounced an anathema against the king's ministers, by whose advice he is guided in the management of the empire. You have made it plain that if you could you would take the prince's crown from him. Your plots and contrivances to attain your ends are notorious to all men. Say, then, will you attend us to the king's presence, and there answer for yourself? For this we are sent."

The archbishop declared that he had never wished any hurt to the prince. The king had no occasion to be displeased if crowds came about him in the towns and cities after having been so long deprived of his presence. If he had done any wrong he would make satisfaction, but he protested against being suspected of intentions which had never entered his mind.

Fitzurse did not enter into an altercation with him, but continued: "The king commands further that you and your clerks repair without delay to the young king's presence, and swear allegiance, and promise to amend your faults."

The archbishop's temper was fast rising. "I will do whatever may be reasonable," he said, "but I tell you plainly the king shall have no oaths from me, nor from any one of my clergy. There has been too much perjury already. I have absolved many, with God's help, who had perjured themselves.* I will absolve the rest when He permits."

"I understand you to say that you will not obey," said Fitzurse; and went on in the same tone: "The king commands you to absolve the bishops whom you have excommunicated without his permission (*absque licentiâ suâ*)."

"The pope sentenced the bishops," the archbishop said. "If you are not pleased, you must go to him. The affair is none of mine."

Fitzurse said it had been done at his instigation, which he did not deny; but he proceeded to reassert that the king had given him permission. He had complained at the time of the peace of the injury which he had suffered in the coronation, and the king had told him that he might obtain from the pope any satisfaction for which he liked to ask.

If this was all the consent which the king had given, the pretence of his authority was inexcusable. Fitzurse could scarce hear the archbishop out with patience. "Ay, ay!" said he; "will you make the king out to be a traitor, then? The king gave you leave to excommunicate the bishops when they were acting by his own order! It is more than we can bear to listen to such monstrous accusations."

John of Salisbury tried to check the archbishop's imprudent tongue, and whispered to him to speak to the knights in private; but when the passion was on him, no mule was more ungovernable than Becket. Drawing to a conclusion, Fitzurse said to him: "Since you refuse to do any one of those things which the king requires of you, his final commands are that you and your clergy shall forthwith depart out of this realm and out of his

* Laicis omnibus exclusis.

* He was alluding to the bishops who had sworn to the Constitutions of Clarendon.

dominions, never more to return.* You have broken the peace, and the king cannot trust you again."

Becket answered wildly that he would not go — never again would he leave England. Nothing but death should now part him from his church. Stung by the reproach of ill-faith, he poured out the catalogue of his own injuries. He had been promised restoration, and instead of restoration he had been robbed and insulted. Ranulf de Broc had laid an embargo on his wine. Robert de Broc had cut off his mule's tail, and now the knights had come to menace him.

De Morville said that if he had suffered any wrong he had only to appeal to the council, and justice would be done.

Becket did not wish for the council's justice. "I have complained enough," he said; "so many wrongs are daily heaped upon me that I could not find messengers to carry the tale of them. I am refused access to the court. Neither one king nor the other will do me right. I will endure it no more. I will use my own powers as archbishop, and no child of man shall prevent me."

"You will lay the realm under interdict, then, and excommunicate the whole of us?" said Fitzurse.

"So God help me," said one of the others, "he shall not do that. He has excommunicated over-many already. We have borne too long with him."

The knights sprang to their feet, twisting their gloves and swinging their arms. The archbishop rose. In the general noise words could no longer be accurately heard. At length the knights moved to leave the room, and, addressing the archbishop's attendants, said, "In the king's name we command you to see that this man does not escape."

"Do you think I shall fly then?" cried the archbishop. "Neither for the king nor for any living man will I fly. You cannot be more ready to kill me than I am to die. . . . Here you will find me," he shouted, following them to the door as they went out, and calling after them. Some of his friends thought that he had asked De Morville to come back and speak quietly with him, but it was not so. He returned to his seat still excited and complaining.

"My lord," said John of Salisbury to him, "it is strange that you will never be advised. What occasion was there for you to go after these men and exasperate them with your bitter speeches? You would have done better surely by being quiet and giving them a milder answer. They mean no good, and you only commit yourself."

The archbishop sighed, and said, "I have done with advice. I know what I have before me."

It was four o'clock when the knights entered. It was now nearly five; and unless there were lights the room must have been almost dark. Beyond the archbishop's chamber was an ante-room, beyond the ante-room the hall. The knights, passing through the hall into the quadrangle, and thence to the lodge, called their men to arms. The great gate was closed. A mounted guard was stationed outside with orders to allow no one to go out or in. The knights threw off their cloaks and buckled on their swords. This was the work of a few minutes. From the cathedral tower the vesper bell was beginning to sound. The archbishop had seated himself to recover from the agitation of the preceding scene, when a breathless monk rushed in to say that the knights were arming. "Who cares? Let them arm," was all that the archbishop said. His clergy were less indifferent. If the archbishop was ready for death they were not. The door from the hall into the court was closed and barred, and a short respite was thus secured. The intention of the knights, it may be presumed, was to seize the archbishop and carry him off to Saltwood, or to De Morville's castle at Knaresborough, or perhaps to Normandy. Coming back to execute their purpose, they found themselves stopped by the hall door. To burst it open would require time; the ante-room between the hall and the archbishop's apartments opened by an oriel window and an outside stair into a garden. Robert de Broc, who knew the house well, led the way to it in the dark. The steps were broken, but a ladder was standing against the window, by which the knights mounted, and the crash of the falling casement told the fluttered group about the archbishop that their enemies were upon them. There was still a moment. The party who entered by the window, instead of turning into the archbishop's room, first went into the hall to

* "Hoc est præceptum regis, ut de regno et terrâ quæ ipsius subjacet imperio cum tuis omnibus egrediaris; neque enim pax erit tibi vel tuorum cuiquam ab hâc die, quia pacem violâsti." These remarkable words are given by Grim, who heard them spoken. After the deliberate fraud of which Becket had been guilty towards the pope in suppressing the inhibitory letter addressed to the Archbishop of York, Alexander might perhaps have been induced at last to approve of such a measure.

open the door and admit their comrades. From the archbishop's room a second passage, little used, opened into the south-west corner of the cloister, and from the cloister there was a way into the south transept of the cathedral. The cry was, "To the church. To the church." There at least there would be immediate safety.

The archbishop had told the knights that they would find him where they left him. He did not choose to show fear, or he was afraid, as some thought, of losing his martyrdom. He would not move. The bell had ceased. They reminded him that vespers had begun, and that he ought to be in the cathedral. Half yielding, half resisting, his friends swept him down the passage into the cloister. His cross had been forgotten in the haste. He refused to stir till it was fetched and carried before him as usual. Then only, himself incapable of fear, and rebuking the terror of the rest, he advanced deliberately to the door into the south transept.* His train was scattered behind him, all along the cloister from the passage leading out of the palace. As he entered the church cries were heard from which it became plain that the knights had broken into the archbishop's room, had found the passage, and were following him. Almost immediately Fitzurse, Tracy, De Morville, and Le Breton were discerned, in the dim light, coming through the cloister in their armor, with drawn swords, and axes in their left hands. A company of men-at-arms was behind them. In front they were driving before them a frightened flock of monks.

From the middle of the transept in which the archbishop was standing a single pillar rose into the roof. On the eastern side of it opened a chapel of St. Benedict, in which were the tombs of several of the old primates. On the west, running, of course, parallel to the nave, was a lady chapel. Behind the pillar steps led up into the choir, where voices were already singing vespers. A faint light may have been reflected into the transept from the choir tapers, and candles may perhaps have been burning before the altars in the two chapels — of light from without through the windows at that hour there could have been none. Seeing the knights coming on, the clergy who had entered with the archbishop closed the door and barred it. "What do you fear?" he cried in a clear, loud voice. "Out of the way, you cowards! The church of God must not be made a fortress." He stepped back and reopened the door with his own hands, to let in the trembling wretches who had been shut out among the wolves. They rushed past him, and scattered in the hiding-places of the vast sanctuary, in the crypt, in the galleries, or behind the tombs. All, or, almost all, even of his closest friends, William of Canterbury, Benedict, John of Salisbury himself, forsook him to shift for themselves, admitting frankly that they were unworthy of martyrdom. The archbishop was left alone with his chaplain Fitzstephen, Robert of Merton his old master, and Edward Grim, the stranger from Cambridge — or perhaps with Grim only, who says that he was the only one who stayed, and was the only one certainly who showed any sign of courage. A cry had been raised in the choir that armed men were breaking into the cathedral. The vespers ceased; the few monks assembled left their seats and rushed to the edge of the transept, looking wildly into the darkness.

The archbishop was on the fourth step beyond the central pillar ascending into the choir when the knights came in. The outline of his figure may have been just visible to them, if light fell upon it from candles in the lady chapel. Fitzurse passed to the right of the pillar, De Morville, Tracy, and Le Breton to the left. Robert de Broc and Hugh Mauclerc, another apostate priest, remained at the door by which they entered. A voice cried "Where is the traitor? Where is Thomas Becket?" There was silence; such a name could not be acknowledged. "Where is the archbishop?" Fitzurse shouted. "I am here," the archbishop replied, descending the steps, and meeting the knights full in the face. "What do you want with me? I am not afraid of your swords. I will not do what is unjust." The knights closed round him. "Absolve the persons whom you have excommunicated," they said, "and take off the suspensions." "They have made no satisfaction," he answered; "I will not." "Then you shall die as you have deserved," they said.

They had not meant to kill him — certainly not at that time and in that place. One of them touched him on the shoulder with the flat of his sword, and hissed in his ears, "Fly, or you are a dead man." There was still time; with a few steps he

* Those who desire a more particular account of the scene about to be described should refer to Dean Stanley's essay on the murder of Becket, which is printed in his "Antiquities of Canterbury." Along with an exact knowledge of the localities and a minute acquaintance with the contemporary narratives, Dr. Stanley combines the far more rare power of historical imagination, which enables him to replace out of his materials an exact picture of what took place.

would have been lost in the gloom of the cathedral, and could have concealed himself in any one of a hundred hiding-places. But he was careless of life, and he felt that his time was come. "I am ready to die," he said. "May the Church through my blood obtain peace and liberty! I charge you in the name of God that you hurt no one here but me." The people from the town were now pouring into the cathedral; De Morville was keeping them back with difficulty at the head of the steps from the choir, and there was danger of a rescue. Fitzurse seized him, meaning to drag him off as a prisoner. He had been calm so far; his pride rose at the indignity of an arrest. "Touch me not, thou abominable wretch!" he said, wrenching his cloak out of Fitzurse's grasp. "Off, thou pander, thou!"* Le Breton and Fitzurse grasped him again, and tried to force him upon Tracy's back. He grappled with Tracy and flung him to the ground, and then stood with his back against the pillar, Edward Grim supporting him. Fitzurse, stung by the foul epithet which Becket had thrown at him, swept his sword over him and dashed off his cap. Tracy, rising from the pavement, struck direct at his head. Grim raised his arm and caught the blow. The arm fell broken, and the one friend found faithful sank back disabled against the wall. The sword, with its remaining force, wounded the archbishop above the forehead, and the blood trickled down his face. Standing firmly, with his hands clasped, he bent his neck for the death-stroke, saying in a low voice, "I am prepared to die for Christ and for his Church." These were his last words. Tracy again struck him. He fell forward upon his knees and hands. In that position Le Breton dealt him a blow which severed the scalp from the head and broke the sword against the stone, saying, "Take that for my Lord William." De Broc or Mauclerc — the needless ferocity was attributed to both of them — strode forward from the cloister door, set his foot on the neck of the dead lion, and spread the brains upon the pavement with his sword's point. "We may go," he said; "the traitor is dead, and will trouble us no more."

Such was the murder of Becket, the echoes of which are still heard across seven centuries of time, and which, be the final judgment upon it what it may, has its place among the most enduring incidents of English history. Was Becket a martyr, or was he justly executed as a traitor to his sovereign? Even in that supreme moment of terror and wonder, opinions were divided among his own monks. That very night Grim heard one of them say, "He is no martyr, he is justly served." Another said, scarcely feeling, perhaps, the meaning of the words, "He wished to be king and more than king. Let him be king, let him be king." Whether the cause for which he died was to prevail, or whether the sacrifice had been in vain, hung on the answer which would be given to this momentous question. In a few days or weeks an answer came in a form to which in that age no rejoinder was possible, and the only uncertainty which remained at Canterbury was whether it was lawful to use the ordinary prayers for the repose of the dead man's soul, or whether, in consequence of the astounding miracles which were instantly worked by his remains, the pope's judgment ought not to be anticipated, and the archbishop ought not to be at once adored as a saint in heaven. J. A. FROUDE.

* "Lenonem appellans." In extreme moments Becket was never able to maintain his dignity.

DA CAPO.

BY MISS THACKERAY.

CHAPTER I.

COLONEL BAXTER'S RETROSPECTIONS.

IT is a curious experience to come back in after-years to an old mood, and to find it all changed and swept and garnished; emotionless, orderly now: are the devils of indifference and selfish preoccupation those against which we are warned in the parable? Perhaps it is some old once read and re-read letter which has brought it all back to you; perhaps it is some person quietly walking in, followed by a whole train of associations. Who has not answered to the call of an old tune breaking the dream of to-day? Is the past past if such trifles can recall it all vividly again, or only not present?

One day Colonel Baxter, an officer lately returned from abroad, came up to the door of an old house in Sussex, and stopped for an instant before he rang the bell. The not-present suddenly swept away all the fabric of the last few years. He stopped, looking for a little phantom of five years

Digitized by CORNELL UNIVERSITY Original from CORNELL UNIVERSITY

before, that he could still conjure up, coming flitting along the terrace, gentle, capricious, lovely Felicia Marlow, as he remembered her at eighteen, and not so happy as eighteen should be. The little phantom had once appealed to him for help, and it had needed all Colonel Baxter's years of service, all his standing in the army, all the courage of a self-reliant man, and all the energies of his Victoria Cross and many clasps to help him to withstand the innocent entreaty of those two wild gray eyes which had said, "Help me! Help me!" The story was simple enough, and one which has been told before, of a foolish little creature who had scarcely been beyond the iron scrolls of the gates of Harpington Court, who had been promised to her cousin, the only man she had ever seen, and who, suddenly finding a world beyond her own, had realized the possibility of a love that was not her cousin James's old familiar, every-day, ever-since-she-could-remember mood.

Colonel Baxter had seen the world and travelled far beyond Harpington, but, nevertheless, he too had been carried away by the touching vehemence of this poor little victim to circumstances, and felt that he could give his whole life to make her more happy. Only, somehow, it was not for him to make her happy. That right then belonged to James Marlow, who was Baxter's friend, and one of the best and most loyal of men.

Baxter walked up to the gates one day, and stopped to remember how Felicia had looked when she found them closed at the time of the old squire's death. But the place was changed. A new spirit seemed to have come over the periwinkle avenue. There were bright flowers in tubs at intervals along the road; a couple of gardeners were at work in the sunshine, chipping, chopping, binding up all the drifts and wreaths, carefully nipping away all the desolate sweetness, and carrying it off in wheelbarrows. Gay striped blinds were sprouting from the old diamond windows; Minton china twinkled on the terrace; the stone steps had been repaired and smartened up somehow; a green trellis had been nailed against the walls. It was scarcely possible to see in which of these trifling signs the difference lay, but it was unmistakable. Once more an old feeling seemed to come over the man as he tramped along the gravel walks with long even strides — a feeling of hopeless separation, of utter, and insurmountable distance: all this orderly comfort seemed to come only to divide them. In the old days of her forlorn negligence and trouble Felicia had seemed nearer, far nearer, than now. When he had come back after James's death, he had thought it wrong to obtrude his personal feelings. He was then under orders to rejoin his regiment. When he went to India, he had written an ambiguous little message to Felicia Marlow, to which no answer had come; he had been too proud to write again; and now that he was home once more, an impulse had brought him back to her door. And he had listened to the advice of a woman whom he had always trusted, and who told him that he had been wrong and proud, and that he had almost deserved to lose the woman he loved.

A very pert housemaid with a mob-cap opened the door, and to Colonel Baxter's inquiry replied that Miss Marlow was abroad, travelling with friends, Mr. and Mrs. Bracy and Mr. Jasper Bracy, from Brayfield. She was not expected? Oh dear, no; all letters were to be sent on to the hotel at Berne. "Here is the foreign address," says the housemaid, going to a table and coming back with a piece of paper.

A minute ago it had been on Baxter's lips to ask her to give him back a letter which he had posted himself only the day before, addressed to Miss Marlow, at Harpington, not to the Falcon Hotel, at Berne. But the sight of her writing, of a little flourish to the F, touched him oddly. When the lively housemaid went on to say that a packet was just a-going, and Baxter saw his own letter lying on the hall table, he gave the maid a card, and asked her to put it in as well, and thoughtfully turned on his heel and walked away. Then he stopped, walked back a few steps once more along the terrace to a side window that he remembered, and he stood for an instant trying to recall a vision of that starry, dim evening when the iron gates were first closed, and he had waited while Felicia flitted in through that shuttered window. He still heard her childish, sweet voice; he could remember the pain with which he left her then; and now — what was there between them? Nothing. Baxter thought as he walked away that Felicia had been more really present this time in remembrance than the last time when he had really seen her, touched her hand, and found her at home indeed, but preoccupied, surrounded by adulating sympathizers, dressed in crape, excited, unlike herself, and passionately sobbing for James's death. Yes, she had once loved him better than that. It was not Felicia

whom he had really seen that last time. He *must* see her again, her herself. She would get his letter; but what good was a letter? It had a voice, perhaps, but no eyes, no ears. The Hôtel du Faucon at Berne was not a very long way off. Before he left the terrace Baxter had made up his mind to go there.

I wrote this little story down many years ago now. The people interested me at the time, for they were all well-meaning folks, moving in a somewhat morbid atmosphere, but doing the best they could under difficult circumstances. There was the young couple, who had been engaged from childhood, without, as I have said, much knowledge of anything outside the dreary old home in which fate had inclosed their lives. There was an old couple, whose experience might have taught them better than to try and twine hymeneal garlands out of dead men's shoes, strips of parchment, twigs and dried leaves off their genealogical tree, with a little gold tinsel for sunshine. The saving clause in it all was that James Marlow truly loved his cousin Felicia; but this the old folks scarcely took into account, and it was for quite different reasons that they decreed the two should be one. And then came human nature in the shape of a very inoffending and unconscious soldier, a widower with one child, a soldier of fortune without a fortune, as he called himself; whereas James Marlow, the hero of this little tragedy (for it *was* a tragedy of some sort), was the heir to the estate, and a good man, and tenderly attached to his cousin. But, nevertheless, the little heroine's heart went away from mousy old Harpington, and flashed something for itself which neither grandmother nor grandfather had intended, and which Felicia herself did not quite understand. James Marlow, perhaps, of them all, was the person who most clearly realized the facts which concerned these complicated experiences.

Felicia found out her own secret in time, in shame and remorse; and James, who had found it out, kept silence, for he too had a secret, and knew that for him a very short time must break the solemnest engagements. He did full justice to Felicia's impulsive, vivid-hearted nature — to the honesty of the man she preferred to himself.

The three had parted under peculiar circumstances. James had been sent abroad by the doctors as his last chance for life, and before he went he had said something to Felicia, and Baxter not one word. The captain, as he was then, was faithfully attached to James. He went abroad with his friend, and remained with him while he lived, and tended him in those journeys, and administered those delusive prescriptions which were to have cured him. The air was so life-giving, the doctors spoke so confidently, James himself was almost deceived at one time.

His was a wise heart, and a just one consequently. If he had lived, he would have done his part to make those he loved happy, even though their own dream of happiness should not include his own. But he had no chance from the first, except, indeed, that of being a good man, and knowing the meaning of a few commonplace words, such as duty, love, friendship. From a child he was always ailing and sensitive. When he found that his happiness (it had been christened Felicia some eighteen years before) was gone from him, it made him languid, indifferent; his pulse ebbed away; not even African sun could warm him. He would have lived if he could, but he was not sorry to die; and when he found he was dying, he sent a message home to his "sweet happiness" — so he spoke of her.

Baxter had come back to England with his heart sore for his friend's loss, and neither he nor Felicia, who had been wearying and pining to see him again, could find one word except words of grief. In those days it had seemed to them both that it would be wronging James's memory to speak of their own preoccupations at such a time — so little do people with the best hearts and intentions trust each other or those who have loved them most. Baxter had not come to Harpington, but to London, where Felicia was staying with her aunt in Queen's Square. The old butler showed him up the old staircase, looked round, and then went to the window and said, "Miss Felicia, you are wanted. Here is Colonel Baxter."

She had come into the room to speak to him, stepping across the window-sill from the balcony, where she had been sitting. How well he remembered it, and the last time they had been there together! That was in the evening, and Jem had been alive. Now it was morning, and Felicia wore her black dress — a burning autumn morning, striking across the withered parks in broad lines of dusky light. They flooded through the awnings, making the very crape and blackness twinkle. But Felicia's face somehow put out the light; it was pale and set and wan. There was no appeal in it now. She frightened Baxter for a moment; then, when he saw her

hands tremble, a great longing came to him to hold them fast, to be her help and comforter once more, and to befriend this forlorn though much-loved woman. He talked on quickly to hide his emotion. He gave her the few details she wanted.

"Jem told me to come and see you," he concluded. "He thought I might perhaps be your friend, Felicia," said Baxter, "and he sent you his love."

Baxter turned pale, and his voice faltered; he hardly knew how to give the remainder of James's message, which was to tell Felicia that James sent them both his blessing: perhaps he might have gone on, but the door opened, and another Miss Marlow came bustling in — Aunt Mary Anne, a stout, beaming, good-natured, and fussy lady, with many bugles and ornaments and ear-rings, and a jet-bespangled bonnet, rather awry, and two fat black kid hands put out.

"Here he is! Here is our captain. How is he? They told me you were here. How glad I am to see you! You two poor dears have been having a sad talk, I dare say. Well, it is a good thing got over. You don't look well, Baxter; you must come and let us nurse you up." And then, as she grasped Colonel Baxter's hands, "I am not your only friend here, as I dare say you suspect. Jem, dear fellow, he knew all about it: we must make the best of what is left us. Eh, Felicia?" said the fat lady, who hated anything in the shape of grief, and only tolerated its bugles and lighter ornaments. "No, we won't speak of the past — better not; but tell us how long you can stay." And the old aunt, who took things so easy, began to wink and nod at the poor little passionate-hearted girl, to whom all this seemed like some horrible mockery — like ribald talk in a sacred place. Felicia and Baxter both began to shrink before the old lady's incantations. Felicia had wiped her tears, and stood silent and dull. Baxter was cold, vexed, and ajar. He saw Felicia's averted looks; his own face grew dark. He could not remain in London, he said; he had not yet been to his own home. His little girl was at Brighton, with his cousin Emily. And while Miss Marlow the elder, disappointed in her well-meant efforts to cheer up the young people, was remonstrating and scolding, and threatening to appeal to Flora Bracy, whoever she might be, Baxter stood looking abstractedly at Felicia, and Felicia drew herself away farther and farther.

"Perhaps you will let me hear from you, when you can see me again," said Baxter, taking leave, with some sudden change of manner.

"Yes, yes; you shall hear from us," cried Miss Marlow the elder, giving him a friendly tap on the shoulder; young Miss Marlow dropped her eyes with a sigh, and did not speak. And so he had walked away, and out into the street, disappointed. It had not been the meeting he had hoped; it had not been the meeting Felicia hoped. They had neither of them made a sign to the other. Baxter thought of Felicia day after day; Felicia thought of Baxter. "You sly thing! I know you will write to him as soon as you get back, though you won't let me write now," her aunt used to say; and Felicia would shake her head.

"It seems to me that, for dear James's sake, you ought to show him some attention," says the old lady.

Was it indeed for James's sake only, or for her own, that Felicia wished to see Baxter? This was a question she could never answer. She went back to Harpington, and day after day Felicia put off writing; and Baxter was too proud to go unsummoned. And then a thousand chances and less generous feelings intervened, and time went on, and on, and on; and James might have never lived for all the good his self-sacrifice had brought about to the two people he held most dear.

CHAPTER II.

FELICIA'S RETROSPECTIONS.

In the first part of my story I have described how Felicia lived at Harpington with her grandmother, old Mrs. Marlow, the original match-maker — a strange and somewhat stony-faced old lady, who did not seem always quite in her right mind. Her presence frightened people away. She seemed to have been, years before, frozen by some sudden catastrophe, and to be utterly indifferent to everything that happened now. She had no love for Felicia. It was almost as if she resented the poor child's very existence. Felicia's betters were gone; her grandfather, her father, her mother, her young aunts and uncles — a whole blooming company, had passed away. What business had Felicia to live on, to gather in her one little hand all the possessions which for years past had been amassed for others?

Sorrow for the dead seemed to take the shape of some dull resentment against the living in this bitter woman's mind. All Felicia's grace and loving readiness failed to touch her. Fay did her best, and kept

to her duty as well as she knew how. It was a silent duty, monotonous, ungrateful; it seemed like gathering figs of thorns or grapes of thistles to try and brighten up this gloomy woman. Felicia knew there was one person who would gladly, at a sign from her, respond to the faintest call; but, as I have said, some not unnatural scruple withheld her from sending for him. She hoped he would come to her, but *she* would move no finger, say no word, to bring him. She kept the thought of him, as she had done all these years, shyly in the secret recesses of her heart. She was so young that the future was still everything — the present mattered little. Young people seem to have some curious trust in their future consciences, as older ones look back with sympathy to their past selves.

After all, it was not very long before Felicia saw Aurelius again; but not in the way she had hoped to see him. She had ridden into L—— on some commission for her grandmother — I think it was a sleeping draught that the old lady fancied. It was a lovely autumn afternoon; old Caspar snuffed the fresh air; young Felicia sprang into her saddle with more life and spirit than she had felt since their trouble had fallen upon them. Old George was there to follow in his battered blue livery. He opened the gates when Felicia had not jumped down before him. The two jogged along the country lanes together, old George's blear eyes faithfully fixed on Caspar's ragged tail. The road was delightful; white drifting wreaths of briony seemed to lie like foam upon the branches; ivies crept green along the ditches, where the very weeds were turning into gold and silver, while the branches of the trees overhead were also aglow in the autumnal lights. It was a sweet, triumphant way. The girl's spirit rose as she cantered along between the garlands that spread on either side of it. There is one place where the road from Harpington crosses the road to L——, just where an old mill stands by a stream, with its garden and farm buildings. The fence was low, and as Felicia peeped over she could see a garden full of sweet clustering things mingling with vegetables, white feathery bushes, and bowers of purple clematis, and here and there crimson fiery tongues darting from their stems along the box-lined paths, and yellow roses against the walls. The place was well cared for and seemed full of life, and rest too. She could hear a sound of horses and of voices calling and dogs barking in the mill yard beyond the garden. The flowers seemed all the sweeter for the busy people at work. Felicia began to build up one of her old fancy pieces as she lingered for a moment by the hedge; perhaps some day they might walk there together, and he would look down into her face and say, "The time has come, the time has come." Then she started, blushed up, tightened old Caspar's rein again, and set off once more, riding quickly past the old sign-post that pointed to Harpington with one weather-beaten finger, and to L——, whither she was going. There was a third road leading to the downs — it was only a continuation of the Harpington lane.

The mill was nearly an hour's ride from L——, that pretty old country town, with its bustle of new things cheerfully mixing up with the old, its many children at play, and its many busy people stirring among the old gables and archways, and its flocks making confusion in the market.

Felicia left old Caspar to be cared for at the inn, while she went off upon her shopping, being, girl-like, delighted with the life and bustle of the place. She herself was perhaps not the least pleasant sight there, as she darted in and out of the old doorways and corners, holding up her long skirt, and looking out beneath the broad brim of her dark beaver hat. It was late before she had done. The town clocks were striking six as they turned their horses' heads towards Harpington. There is a long level stretch of road at the foot of the hill, with poplars growing on either side, and tranquil horizons between the poplar stems. Felicia trotted on ahead; old George jogged after her, pondering upon his crops and the price of wheat, which he had been discussing in the bar of the Red Lion.

Evening was falling: the oxen looked purple in the light, as they stood staring across the fences at the road and the horses, and slowly tossing their white horns. The shadows under the trees were turning blue, the evening birds were flying across the sky — a tranquil, dappled sky, with clouds passing in fleecy banks, while the west spread its crimson wings. All the people were crossing and recrossing the paths to the villages beyond the fields; in one place Felicia could see the boats gliding along the narrow river. Then they came to the old mill at the cross-roads. The garden was resplendent with clear evening light: the great cabbages seemed dilating and showing every vein; each tendril of the vines, wreathed along the wooden palings, stood out vivid

and defined. As Felicia advanced, urging old Caspar along, she saw a figure also on horseback coming along the road from Harpington. It was but for a moment, but in that moment Felicia seemed to recognize the rider — his square shoulders, the slouch of his broad hat. He crossed the highway, and took the lane leading to the downs: he did not look to the right or to the left. Felicia's heart gave a throb. She suddenly slashed old Caspar into a canter, and reached the corner where she thought she had just seen Baxter pass. She looked up and down. "Did not somebody go by, George?" Felicia said, turning round to the old gardener. "I can see no one in the lane. It must 'a been a ghost," said old George, starting, "or maybe it wer' a man that leapt the fence onto yon field: ther'll be a short cut along by that thar way," says George, who had followed his master, the late squire, along many a short cut and long road. Felicia said no more; she turned Caspar's head toward home, and the old horse stepped out, knowing his way back to Harpington. The way seemed very long. The road was dusty and bare; the garlands seemed to have lost their fragrant bloom. Her grandmother was up when she got back. Tea was laid in the parlor, and the windows were open on to the terrace.

"There has been some one to see us," said Mrs. Marlow. "That Baxter was here. He is going away again to India. Have you got me my sleeping-draught?"

"Did he leave *no* message for me — nothing?" said Felicia.

"He left his card," said the old lady. "Take care, don't shake the bottle; what are you about! I want a good night's rest. That man talked about James; he upset me. I had to send him away. He would have kept me awake at night if I had let him talk on any longer." And then Mrs. Marlow hobbled off to her old four-post bed, crumpling up Baxter's card in her fingers. "I *must* see you once more," he had written upon it; "send me one line." Mrs. Marlow threw the card into her fireplace. Felicia never saw the pencilled words. She was left alone — quite alone, she said to herself, bitterly. He had left her no word, he was gone without a thought of her, and everything seemed forlorn once more.

Old Mrs. Marlow survived her grandson for a year, half imbecile, never quite relenting to the poor little granddaughter, and then she too passed away, and Felicia inherited the old house and the broad stubble-fields and the farmyards and haycocks, among which she and her cousin James had both grown up together. And now Felicia belonged to that sad company of heiresses with friends and a banker's account, and consideration and liberty, in place of home and loving interest and life multiplied by others.

She came; she went; she travelled abroad. She was abroad when Baxter came to Harpington for the second time in vain. He had been in India hard at work, and little Felicia had been leading her own life for the last three years. Everything seemed to be hers except the things which might have made everything dear to her. She had scarcely been conscious of any want; she was never alone, never neglected. Events came by every post, twopenny pleasures, sixpenny friendships, and favors asked and cheap thanks returned. All this had not improved her, and yet she was the same Felicia, after all, that Baxter remembered so fondly as he walked away from the door.

From Fraser's Magazine.

ON THE COMPARATIVE STUPIDITY OF POLITICIANS.

We owe an apology to a very respectable class of persons for the apparent, but we trust only apparent, and certainly involuntary, discourtesy of the thesis to which we invite attention. The late Mr. Mill, in a well-known passage, called the Conservatives the stupid party. We do not call them so, nor their opponents. All we venture to assert of both is, that in a universe of graduated intelligence they are not highest in the scale. The great majority of even prominent politicians have just the gifts which make a man conspicuous in a town council or a board of guardians; physical energy, moral persistency, and ideas on a level with those of their fellows. Miss Martineau in her very candid autobiography has recorded her sense of the mental and moral inferiority of the political men with whom, during her period of lionizing in London, she was brought into contact, as compared with the men of letters, and still more with the men of science, whose acquaintance she made. She observed in the politicians a much lower type of mind and character, expressing itself even in a certain vulgarity of manners, the lowest point being reached in all these particulars by the Whig aristocracy of the day.

The Whig aristocracy, in virtue, perhaps, of the phenomena which Miss Martineau noted, has almost ceased to play any active part in public affairs. In the struggle for political existence it has been pretty nearly crushed out. Such titular chieftainship as used, let us say, up to the time of Lord Althorp to be accorded to its members is Macmahonian. Not ability and eloquence, but the conspicuous lack of them, dictated a choice rather of a figure-head than of a leader. But no doubt there is such a thing as a force of stupidity which is often more powerful in human affairs for the moment than any other. When intellectual dulness is united with moral rectitude, as it frequently is, the combination is pretty nearly irresistible. Either without the other is a power of the first magnitude. Both together are fate.

We do not suppose that there has been any great change for the worse in the talent of the great families, from the time when the English government first became their special business and almost their property. It would be ungenerous and even unjust to think so. Their imaginary superiority in earlier generations was probably due to the fact that they themselves supplied their own standard of comparison. They were measured against each other. In a company of dwarfs a diminutive man seems a giant. If from the political history of the last century and a half we withdraw the names of Walpole, of the Pitts, of Fox, Burke, Canning, Brougham, Peel, Cobden, Bright, Gladstone, and Disraeli, and two or three more, we take away almost all that gives it distinction. In spite of the earldoms of Orford and Chatham, and the barony of Holland, the Walpoles, the Pitts, and the Foxes no more belonged to the aristocracy than Lord Beaconsfield does, or than Richard Burke would have done if the fates adverse to Marcellus had permitted him to be Lord Beaconsfield. The Marquis of Rockingham and the Duke of Portland are fair specimens of the aristocratic statesmanship of England. Lord Shelburne, Lord Grey, Lord Russell, Lord Palmerston, and the late Lord Derby rose as much above that level as the old Duke of Newcastle fell below it. The abilities of Addington, which were ludicrously below par in a middle-class politician, would have given him a very decent place among the old families if he had belonged to them.

We refer to these things now, because the rule of the great families has done something to lower the standard of political eminence and ability in England. They flourished under a system of very restricted competition, a competition so restricted as to amount to little more than an arranged participation in the great affairs of state. Of course, they themselves were prevented from developing such capacities as they had by the absence of the proper stimulus to exertion. It would be as reasonable to expect commercial enterprise and skill under trade monopolies as the highest political capacity under a system of political privilege. When the buyer is obliged to take such articles as the seller chooses to give him, they are not likely to be of the first quality, or the most reasonable price. If the rulers of a people nominate themselves, they are just as little likely to be very exacting in the articles of virtue and capacity. When these qualities were wanted, some plebeian person, some Burke or Barré, was looked for to supply such of them as he possessed; and, unfortunately for human nature, the self-respect which declined to wait upon my Lord Rockingham or my Lord Shelburne was seldom found. If oratory was wanted, the plebeians had it in readiness; but oratory as a rule was seldom wanted. A nominated House of Commons, whose opinions were dictated by their patrons, did not need to be persuaded. Hence probably, to some extent, the low standard of speaking which prevails in the House of Commons, and in which (whatever the exceptional divergencies) it falls below every other great Parliamentary assembly. It is a bequest from the time when good speaking was a superfluity for the purposes of government, and when it was regarded mainly as the accomplishment of political adventurers — needful in a Burke, unnecessary in a Rockingham. Hence there is a tradition of bad speaking in the House of Commons. The defects of elocution and delivery, and the absence of taste and style, which are noticeable in the speeches delivered from the benches of ministers and ex-ministers in the two Houses of Parliament, amaze foreigners acquainted with the legislative assemblies of other countries. They are a tradition of the age when a great lord did not need to acquire either grace of speech or force of thought. It was sufficient for him to indicate the line which he took, and his party troubled themselves as little as he did about the reasons; or if from any cause they wanted them, some dependant was at hand to supply the arguments which his patron, from indolence or incapacity, was unable to afford. A cynical

politician, more remarkable himself for the keenness of his thought than the graces of his oratory, is said to have declared that a certain speech listened to with attention from the son of a duke would not have been tolerated from the son of a marquis. The distinction, perhaps, is too finely cut, but this rule of judgment comes down from our political history, and unfortunately is not yet obsolete. What has been said of oratory applies to administration. In the absence of anything like competition among the ablest men, and of a career open to talent, the proper stimulus to skill and industry was wanting. Great peers and wealthy country gentlemen untrained to business, aided by adventurers bent upon serving themselves rather than the country, and using the ill-rewarded drudgery of hopeless clerks, were poor instruments for the conduct of affairs. As their tenure of office was to a great extent independent of capacity, it developed capacity to a correspondingly slight extent. A lofty ambition, an ardent nature, a consciousness of powers seeking and delighting in their full discharge, have no doubt at all times furnished orators and statesmen of the highest rank to England. But the great names and stirring conflicts of Walpole and Pulteney, of Chatham, of Wyndham, of Burke, of Fox and Pitt, disguise from us the gulf of intellectual poverty beneath this glittering and splendid surface.

In the long prevalence of an aristocratic monopoly, diminished now, but not altogether done away with, and subsisting still in its effects even more powerfully than in itself, one of the special causes, as we have said, of the comparative stupidity of politicians in England may be discerned. But the evil is inherent in the very conditions of what are called practical politics. The real development of mind is to be sought in what Mr. Arnold calls its disinterested play in science and art. Discipline in the methods of research after truth, familiarity with the highest conceptions of the universe, delight in the most perfect forms of expression, whether they take the shape of literature or of the plastic and imitative arts, these are the feeders and purifiers of the mind. The artist, including the author as well as the sculptor, the painter, and the actor, and the man of science, live, so far as they are true to their work, in the society of nature and of its great interpreters. They are constantly in the presence of their betters. The statesman lives habitually in the society of county and borough members; or, if we restrict our view to the intimate associations of the Cabinet, of men little if at all above these intellectually. In other words, the finest mind is habitually in the presence of its inferiors, whose ideas and impulses are to it what his daily beer was to Mr. Justice Maule, the instrumentality with which he brought himself down to the level of his work. He must think their thoughts and speak their language. To be over their heads, to be, as a dexterous politician said of a great philosopher, too clever for the House of Commons, to have nobler and farther-reaching conceptions than they, is to commit the sin for which there is no Parliamentary forgiveness. It is sometimes said that the House of Commons is wiser than any single member; a saying which, according as it is interpreted, is either an absurdity or a truism. It may mean, what is indisputable, that the whole is greater than the part, or, what is impossible, that the average is higher than the elements which raise it. The House of Commons can only be wiser than some particular member by following the guidance of some other member who on that particular occasion is wiser than he; that is to say, it is wiser than one of its less wise members. The saying, however, is intended to affirm the position that intellectual superiority is not the truest guide in politics, or in other words that politicians, in so far as they are successful, are comparatively stupid, a position which we are far from disputing. On the contrary, we affirm it as a truth of observation and experience, and are at the present moment doing our best to account for it. As regards the proposition itself, it means simply that the House of Commons knows its own mind, such as it is, and, whatever the worth of that knowledge, better than any single member of it; and as a rule the average member who is in sympathy with it will interpret it better than the member of much higher powers who is above its level. But it is only wiser than its wisest members in the sense in which the field may be said to be wiser than the farmer, or the ocean than the navigator; that is to say, in no intelligible sense at all. Like nature, if it is to be commanded it must be obeyed; and the necessity of understanding it is by confusion of thought taken for its understanding of itself.

The inferior society in which politicians live, inferior in intelligence and cultivation, and the necessity of adapting their own thoughts and aims to those of the ordinary minds and characters they have to in-

fluence, brings about the decline and deterioration of men of originally fine endowments. It either prevents these qualities from developing, or stunts them where they have a certain degree of growth. Their "nature is subdued to what it works in, like the dyer's hand." This evil is in part qualified by another. It is chiefly the second-rate order of minds and characters that betake themselves now to politics in England — minds already on the level to which superiority needs to be reduced before it can be effective. For this reason, probably, whenever an occasion demands a hero in politics, he has been seldom found in the walks of professional statesmanship. The national crisis which asks for a deliverer, finds him not among those who have been deteriorated and dwarfed by the ordinary work and associations of politics, but in a man who has lived among nobler ideas and associations, and cultivated a larger and more liberal nature. The practice of affairs is, no doubt, a discipline of some value; but nearly everything depends on what the affairs are. To manage the House of Commons, to get bills through committee, to administer a public office, does not seem usually to be good training for very difficult business. When a considerable emergency occurs there is almost invariably a break-down of the departments. The true discipline of public business is to teach men readiness in action and fertility in resources. Its ordinary effect is to harden them in routine, which suits poorly enough even the common round and the daily task of business, and which is a hindrance and which may be ruin when necessities, transcending precedents and rules of office, have to be encountered. The fact is that the training of affairs, invaluable as it is, seldom bears its proper fruit, unless the affairs are a man's own, or when the consequences of failure are sure to come upon him in a rapid and crushing manner. The merchant or capitalist, whose ventures depend upon his personal vigilance; the engineer who has to deal with overwhelming physical forces, the military commander who has to contend at once with the not always benevolent neutrality of nature and the watchfulness of human enemies, cannot afford to take things easily. Action is forced upon them; they must either succeed or conspicuously fail. In politics, usually, the state of things is entirely different. The demand is rarely made for heroic measures; the prudence which is taught is that rather which shuns difficulty and dreads failure, than that blending of caution and audacity which finds in the way of seeming danger the true path of safety. The education of practice in Parliamentary politics is therefore for the most part an education in the arts of inaction, evasion, and delay. The blame of doing nothing is usually less than the blame of doing amiss. A great writer, whose instinctive sagacity was often wiser than the elaborated reflections of more painful thinkers, embodied the characteristic weakness of political training in England, when he made "How not to do it" the aim of our statesmen. Lord Melbourne's "Can't you leave it alone?" gave expression to the same paralysis of action in excessive caution and prudence. Politics of this sort will attract feeble minds and characters, or will enfeeble those naturally stronger. The oratory which they foster will be that of mystification, amusement, and excitement. Acquaintance with political philosophy or economic science will be felt to be wholly superfluous. Even that empirical knowledge of his age and country, and of the assembly in and through which he rules, which are essential to every practical statesman, will be little more than the charlatan's or demagogue's acquaintance with the foibles and passions of popular sentiment and opinion. The admiral who boasted that he brought his ships home uninjured from seas in which he had not encountered the enemy, and the Frenchman whose achievement it was to have kept himself alive during the French Revolution, represent the prevalent aims of modern statesmanship. A ministry exists to keep itself in existence; if the ship, without going anywhere or doing anything, can be kept afloat, that is held to be all that can be required. This *fainéant* policy does not require any high range of intellect. Men of the first order will seek careers which afford ampler scope to capacity. If they betake themselves to public life, which affords them no opportunity of great public work, there is danger of their devoting their energies to their own private and personal ends. Or merely to establish a character for "honesty" will often prove enough to repose on. A picture, a statue, or a poem, does not receive additional value from the fact that its author is a very pleasant and straightforward sort of fellow; but "honest Jack Althorp's" statesmanship rested entirely on this basis of character; and a late Parliamentary leader has been commended on the ground that "there is not the making of a lie in him." A career in which char-

acter may be a substitute for capacity must, from the nature of the case, be pursued on a lower intellectual level than those in which intelligence and cultivation and general or special knowledge are absolutely essential.

The natural and almost necessary inferiority of politicians as a class, is compatible with the unsurpassed intellectual and moral greatness of statesmanship of the highest class. Men are not wanting in the history of any country, least of all in that of ours, and they have representatives among us now, who have found or made work for themselves to do which taxes the very highest gifts, and in the doing of which the very humblest and most commonplace allies and instruments acquire a sort of transfiguration. Their appearance and exertions mark the high-water point in the national life, an epoch of brief but fruitful work, an epoch of civil heroism. But the languor comes after the exertion; and in such a period of languor we seem now to be plunged. Even the men who counted for much when they followed a great leader, become mere cyphers when the figure which stood at their head is removed.

Apart from these singular cases of moral and intellectual ascendency, the gifts which make a Parliamentary leader are just those which make a man popular in society. The cheerful animal spirits and vigorous gaiety of temperament which characterized Lord Palmerston, or the amusing qualities of a public entertainer which marked Charles Townshend (not to seek for living illustrations), are what it most relishes — the quailties which make a first-rate host in a country house, or an amusing diner-out in town. H.

From Good Words.

DORIS BARUGH.

A YORKSHIRE STORY.

BY THE AUTHOR OF "PATTY."

BOOK IV. — MOTHERHOOD.

CHAPTER XXIV.

RALPH BURNESTON'S BROTHER.

TOWARDS the end of the autumn holidays, Ralph Burneston, having chosen to travel all night, electrified first the village and then the Hall by arriving in a flood of morning sunshine. His first inquiry was for the housekeeper; and by her he was admitted to Mrs. Burneston's sitting-room, and introduced to his baby brother. "Turn its face this way, Faith. Well, it's not so very ugly for a baby, and, thank God, it's not like the Barughs. I was afraid it would have red hair, like that terrible old farmer. There; take your rubbish away."

Ralph walked to the window, quite unheeding the "Hush! hush!" "Whisht! whisht!" which had accompanied his survey of his little brother; for Faith had gone into the dressing-room and taken the baby from the cradle in the absence of the nurse.

Faith looked down at the child and then at Ralph; and then she said, in a low tone, "It's as like yersel', Master Ralph, as it can be; it's a Burneston, ivvery spit on't." She turned to carry the infant away.

"Let's have another look," Ralph said. "Poor little devil! What a funny thing to think I was such another little chap! By Jove! it's laughing at me. I think I like having a brother, Faith, after all. You see he won't interfere with me at all."

Faith glanced at the half-open door of communication, but Mrs. Burneston was still lying asleep on a sofa in the bedroom within.

"I'll close the inner door, sir," she said. "I ought to have done it sooner. The missis is asleep yonder." But Ralph was examining the baby's hand.

"How pretty its hand is! And look! don't move, Faith; its jolly little fingers have caught hold of me! Poor little chap! I suppose there was more fuss made when I was born, wasn't there? It must be horrid to be a second son, and to feel you've no land. A second son's a nobody, Faith, I can tell you; and it's worse for this poor little thing because his mother had no fortune of her own. Poor little chap! he'll have to earn his living and marry a rich wife. But I'll take care of him. There, that'll do; take it away."

Spite of her adoration for Ralph, Faith had a woman's natural feeling of worship for babies, and she resented the pitying manner in which the heir of Burneston seemed to regard his unconscious brother.

"It's a reeal shame that 'tis, honey," she said, as she laid the infant again in his cradle, "when ye's sike a beauty 'at waaz nivvers seen. Whisht! whisht! ye mun be a gude bairn, as gude as ye's bonny." And she stood patting the little soft roll till it sank into sleep again.

"Faith!"

The housekeeper started. Mrs. Burneston was calling her from the bedroom. Faith went in and found her young mistress sitting up and quite awake.

"I shall leave my room to-day," Doris said, "and I believe nurse is going away in a few days. I have called you in here, Mrs. Emmett, to ask you if you will take the superintendence of the nursery into your own hands. There are the two nursemaids, but I cannot trust baby to strangers. I can trust him fully to you, if you are willing to accept this charge. It need not interfere with your other duties."

Faith stood stupefied. Her intercourse with her young mistress had been simply official. Doris never spoke to her except about her duties, and Mrs. Emmett cherished the belief that if she gave the shadow of an excuse the new mistress would gladly get her dismissed. It took her several minutes to reconcile this flattering mark of confidence with Mrs. Burneston's previous cold reserve. She seemed to see some plan in it to make her lose her place, but Doris gave her no time for hes itation.

"I want you, please, to make up your mind at once," she said. "If you refuse, of course it will not affect your position here, but I prefer that baby should be under your charge; while he is young he will, of course, require more of your personal superintendence, but I will take care that there shall be few visitors, so that you may not be overtaxed; and it seems to me you are quite competent to train baby's nurses in your own ways."

Faith's vanity was appeased. It was such a revelation to find that her young mistress, who had never praised anything but her jams, had really been studying her and appreciating her all this while. For these few moments she almost forgave Doris for having married the master of the Hall. She made a ceremonious curtsy.

"Ah'll be fain to do t' best ah can to please yey, ma'am," she said; "an' fer t' babe, onybody wad be fain to take tent o' sike a bonny bairn."

"Very well; I am glad you think so; then you can take possession of the nurseries as soon as you like. Now send Burnell to me, please."

Doris smiled, and then, as soon as Faith had departed, she crossed her large room to the smaller one where the infant lay sleeping. Bending over it she kissed it passionately. She startled herself by her vehemence. "How I love it!" she smiled; "but I suppose every woman loves her child more than she can love in any other way. I feel that Philip and every one else — father even — are nothing now, compared to this precious little one. Oh, my darling! — my own, own sweet baby!" Again she kissed it fondly.

She had planned long ago, and settled it with her husband, that Faith should, if possible, rear her child. Her notion was that an old servant was far more likely to train it as she wished it to be trained than a new-comer who felt no interest in the Burneston's. She knew that her own and her mother's nursery traditions could not be trusted; and "early habits are so important," Doris had said to herself in the long solitary hours she had lately passed. The difficulty had been how to speak to Faith on such a subject; but Doris's quick ears had heard not only Ralph's loud speeches, but also the soft crooning over her babe when the housekeeper thought herself quite alone with it.

And now her difficulties were ended, and the future safety of her baby seemed secured; for though she disliked Faith and shrank from her, she respected her qualities and felt full trust in them; yet instead of feeling soothed and relieved, it seemed to Doris as if all aim had gone out of her life.

Her husband had taken her to London, and she had soon become aware of her own deficiencies, but these did not crush her into shyness and *mauvaise honte.* She was greatly admired, and at first her husband watched her anxiously, wondering what the effect of so much worship would produce; but it did not turn his young wife's head. She was pleased to find that spite of her shortcomings her power was so absolute, and her feeling of gratitude to her husband gained strength as she reflected that but for him she might have been like some hidden gem in an unexplored mine.

"I can never thank you enough, dear," she said to him one day while they were in London. "Suppose you had not married me, I must have pined for want of a congenial atmosphere."

He was deeply touched; for Doris rarely gave him a glimpse of her inner feelings.

"I had my reward when you married me; and if you will always love me, my darling, I can wish for nothing more."

Doris smiled, but she thought that she could give him far greater happiness by studying and perfecting herself in all the

duties of her position, and making herself really fit to be mistress of Burneston.

Sometimes Philip Burneston had marvelled at his wife's persevering pursuit of pleasure. She would never refuse an invitation if there were any possible means of accepting it, and was most dutiful in returning calls, and in attending concerts, fancy bazaars, and flower-shows; and yet she seemed to take no real interest in these amusements, but to fulfil engagements as a matter of daily routine.

At a lecture at the Royal Institution they met Gilbert Raine. The meeting between the two old friends was at first stiff on both sides; but Doris received Mr. Raine most graciously, and before the end of the evening Gilbert was conquered.

"Good-night, old fellow," he said, as he and Burneston stood together a moment, after putting Doris into her carriage. "I congratulate you heartily; you have won a prize. She is quite charming."

Next day he dined with the Burnestons; and he was greatly struck with the intelligence and interest shown by Doris about some plans for the improvement of the property.

"Philip was right after all," he said, as he went home to his rooms. "That girl has some sense, and right feeling too. She don't care a fraction for all the fashion and rubbish, compared with her home duties. And yet, from the way people talk about the beautiful Mrs. Burneston, I expected to find her head completely turned. It's a wonderful piece of luck for Phil as it has turned out."

But Doris had learned one fact in London, which had been unknown to her secluded existence, and that was, the position of a younger son in such a family as the Burnestons. She had consoled herself by remembering that at the time of her marriage her father had told her that she, and any children she might have, were provided for. But she had shrunk from the contemplation of any pecuniary advantage, and had not asked any questions.

Ralph's pity for her baby had not only revived the feeling of dislike which he had created on her wedding-day, but had filled her with misgivings. Was it then quite impossible that out of all these large estates some part could be settled on her boy? But this was not all. During these days of enforced solitude her thoughtful mind had gone back to its old habit of planning the future — a habit which first her foreign journey, and then her busy London life, had greatly checked, and now Ralph's words called up vividly a picture, which as yet had only foreshadowed itself dimly. She saw herself left a young widow, turned out of the Hall by her husband's son, before she had attained the position which she had resolved to make for herself. What chance would she have, she asked herself, of rearing her child as Ralph's equal? — for Doris had an almost slavish belief in the value of surrounding influences, as a means of culture.

She stood, looking down at the sleeping baby, with a troubled face.

"It will be worse for him," she thought, "to be reared here at first accustomed to luxury, and all this charming outer life, and then to have to give most of it up; and yet" — the far-off, questioning gaze in those deep liquid eyes grew intense — "what else can happen? Whenever his father dies, he and I must leave the Hall — we can never live here dependent on Ralph — unless," — a bright gleam of hope spread from lip to brow, irradiating the lovely face, and bringing the color on the delicate skin, — "unless" — but the vision she was contemplating disturbed her serenity, the light faded out of her face, and she frowned, as if in rebuke of herself.

Then she leant over her babe and kissed it. "I must know soon," she said, "how my boy is provided for; but I will be very kind to Ralph, he is baby's brother, and it must be my fault if we don't get on well together."

CHAPTER XXV.

AN EMPTY HEAD IS THE DEVIL'S WORKSHOP.

Doris was not impulsive or imaginative, she was specially realistic and practical; and yet that night, when she was alone, she felt that she had deceived herself.

She had said it must be her own fault if she did not get on well with Ralph; and a careless observer would have pronounced her manner towards her stepson kind and pleasant. But Ralph was not at ease with her; he had not forgiven her for marrying his father. His stiff, indifferent greeting roused Doris's pride.

He had addressed all his conversation to the squire, and when she joined in the talk he became cold and polite, and seemed to lose all interest in what was going forward. Doris had grown colder and colder, and when at dinner-time the lad made some disparaging remarks on farmers, she flushed scarlet. Then by a great effort she checked her anger.

"After all, perhaps I misjudge him," she thought, "he possibly considers that I now belong to his own class, and speaks without reflecting or wishing to pain me. I will not dislike him."

She turned to Ralph, and forcing one of her sweet, rare smiles, she began to question him about his school life. He answered her courteously, but this was evidently not a successful topic, and she changed to their own journey, and told him some of the wonders she had seen in Rome and Florence. It seemed to her that if George had so enjoyed this kind of talk, this better-taught youth must surely feel still more interest in it.

His father had always refused to take Ralph abroad with him, and the lad listened, but with ill-concealed indifference, to her descriptions; and then he asked her how she had liked Ascot, and whether she did not think riding in the Park the chief enjoyment of London life.

"I liked it at first," she said, "but I soon wearied of it — it grew so monotonous. We used to prefer long rides a little way out of London."

Ralph's eyes opened widely.

"Awfully slow I should think," he said, "one can do that in the country; in fact, it's the only thing a lady can do. I can't fancy how people can go on living in a place like this for weeks together without hunting and shooting to look forward to," he ended with an impatient groan.

Mr. Burneston had kept silence in the hope that Doris and Ralph were making acquaintance, but he looked up at the sudden change in his son's voice.

"You used to be happy enough here," he said, smiling.

"Yes, when I was a little chap I did not know any better. Ridley says there have been no birds this year worth speaking about, and this is not a hunting country. I really don't see what a fellow's to do," he added discontentedly.

"You may ride my horse, if you like, for a change," said Doris. "She is such a pretty creature. I have named her Thekla."

Ralph brightened a little. "I will go and look at her this evening;" and then he added, "But how about wet days? my father is no hand at billiards, and I suppose you can't play at all?"

Doris laughed.

"No, I have never learned to play; you shall teach me. But don't you ever read?"

Ralph shook his head and looked contemptuous.

"Hate it. I am bored quite enough with books at Eton, thank you. I like a sporting paper well enough, but I can't bear the sight of a book. But don't you trouble about me, Mrs. Burneston," he said politely. "I will find some way of amusing myself. Now I am going to see the mare."

Doris felt a glow of self-respect. How inferior in every quality but personal beauty was this lad to her own brother; and as she thought of George and the interest he had shown in all she told him, it seemed to her that she had not thoroughly appreciated her brother.

"You will soon get on with Ralph, I see," said Mr. Burneston, far too happy in having his wife down-stairs again to suspect discord. Since his marriage, life had been gilded, little worries and vexations had no power over his facile temper.

"I hope so," and then she added slowly, "though I'm afraid there is not much sympathy between us."

Her husband smiled admiringly. "You are too good about everything, child," he said, "and so you expect too much of others. Ralph is quite a lad, and has to learn like every one else; but don't you trouble about it, my pet, the world will teach him all that is necessary. A boy cannot be reared like a girl, remember."

Doris sighed, but she did not attempt to dispute her husband's wisdom. As yet her faith in his judgment was implicit. It was a powerful proof of her belief in her surroundings that she failed to see the strong mental likeness between Ralph Burneston and her husband.

Her new life had been hitherto so varied that there had been no want of subjects of talk. Once only in that first visit of Mr. and Mrs. Boothroyd she had been pained by some words spoken by Mr. Burneston in regard to a woman's education, but she had soon forgotten these. She found in her husband the refinement of speech and manner which she so highly valued, and he seemed to her so superior to any one else that she was quite satisfied. Mr. Raine's talk had fascinated her and roused her curiosity, but his abrupt, eccentric manner weakened the wish she had felt for a longer talk with him.

"Come and say good-night to baby," she said to her husband, and they left the room together.

Meantime Ralph sauntered to the stables, but not finding any of the men about, he changed his mind and went out beside the river.

The evening promised rain, there was a red glow in the east, and the clouds seemed to be in a hurry to change their quarters, careering from one part of the sky to the other as if they were playing "puss in the corner."

As Ralph walked on looking at the water, he saw a fish dart to the surface.

"By Jove," he said, "that's an idea! I'll have some fishing, and I'll get that fellow Ephraim Crewe to come with me; he's the only chap in the village who knows anything, unless it's old Sunley, and he's such a pragmatical old fool."

He turned up the steep street and soon reached Crewe's farm.

Mrs. Crewe came out, red as a peony with delight, and full of apologies and curtsies.

"It's maist unfortnit," she said, "bud Ephraim hes ghen to Redcar fer twae ur mebbe three deays, an' ah donnut look fer 'im then, Maister Ralph — bud appen it's fer t' fishin', awd Sunley's sprack at 't."

Ralph was tired with his journey, and it seemed to him that everything was going cross. It was all the fault of this foolish marriage. His father had not been much of a companion formerly, but he had been better than no one.

"Now," he murmured, "I suppose we shall have to go into the drawing-room after dinner instead of getting a smoke in the evening. It's a most awful bore; if she were a lady it would be different, but I can never be at my ease with a person of that kind, there's no counting on what she may say or do."

It was lighter at the top of the hill than it had been beside the river, and before he reached Church Farm, Ralph saw that old Sunley was not in his usual place outside the cottage door. His chair even was not there, and a fresh burst of impatience rose to the lad's lips.

"By Jove!" he said angrily, "it's beyond bearing, everything is against me; so seldom as I come to Burneston, they might all be ready to do what they can."

Sunley's door was fast shut, it was evident he was absent. The next door stood wide open, but Ralph had always avoided Mrs. Duncombe; he had a horror of deafness, and he turned away hastily from the cottage door.

Something, he could hardly tell what, caught his ear; he stood still listening; was it the wind among the fir branches? No, the air was calm and still spite of the restlessness among the clouds overhead. Then he thought the sound might be made by the rustle of the pigs among the straw of Church Farm yard, and he turned at once to the white gate.

There was not a pig to be seen; the only living creatures were the black and white ducks dipping their broad yellow beaks into the horse-pond as they swam merrily round it. Ralph looked on to the gate leading into the garden of the farmhouse. He remembered that George Barugh had formerly been a sort of amusement to him in his holidays. "But I was only a boy then," said this man of seventeen. "I should find the poor fellow dull enough now. What could have possessed my father to make that poor homely lad his brother-in-law? By-the-bye, I must have it clearly understood that I am not to be thrown in the way of those Barughs."

As his eyes rested on the farmhouse he saw figures in the garden, and next minute a woman came forward to the gate.

Ralph remembered her at once.

"Good evening, Mrs. Swaddles," he said. "Where's Shadrach? He can fish, can't he?"

Mrs. Swaddles curtsied, and came out into the yard.

"Gude een, sir." Mrs. Swaddles curtsied again, and then she shook her untidy golden locks. "Bud Shadrach's nae t' yam, he 'es gehn wiv Farmer Crewe an' Maister Sunley tu Redcar, sir, tu seea t' booat reeace."

"Confound Redcar!" Ralph said angrily; then his eye wandered back to the garden, where another slight figure stood in the shadow of the porch. "Who's that standing there?" he said carelessly.

Mrs. Swaddles grinned. She was still a young woman, but the action showed how fat her double chin was.

"Wheea, sir," she said, "yey kens Rase; sheea 's bahded i' t' village thruf t' tahme ut her faything and mudher deed, an' left her tu Missis Duncombe; an' that war u matter o' sexteen year sin."

"Rose Duncombe?" A small, freckled, fat face, seen years ago, rose up in Ralph's memory, and recalled an early disgust. "Oh, yes," he said, turning his eyes away, "I remember her."

But the figure had come through the gate. Rose saw that the young squire was going away without speaking to her, and she was determined to get the chance of speaking to him.

"Good evenin', sir," she curtsied; but there was a pout on her lips at his indifference. As he turned round the pout vanished into a blush and dimpling smiles, that made Rose look her prettiest. The

young man gave a slight start, and held out his hand to her.

"Why, I ought to have known you," he said, as recognition flashed on him. "How could I be so stupid? I saw you in church, Rose, on the wedding-day, but I couldn't make you out afterwards. How's Mrs. Duncombe? I'll go in and see her."

Full of sudden interest in the deaf woman, he was ready to lead the way to her cottage.

"Gran'mother's a-bed, sir," said Rose; "but I'll tell her you was so good as to ask for her. She'd be proud to see you, sir." And her blue eyes gazed at him full of admiration.

Ralph felt flattered. Rose was prettier than he had thought her.

"Has Shadrach still got that terrier, Mrs. Swaddles?" he said, catching at an excuse for lingering. "Fury he used to call her, I think?"

"Yey meeans Pickles, sir; yey called t' awd lass yursel'. Sheeas gitten fower poops, an' thur as likely as can be." Then, as Ralph turned back towards the farmhouse, she added, "Coom in an' sit ye doon, sir, an' ah'll sheea yu t' poops."

She bustled in first, conscious that the room was in disorder, for Rose had just been lecturing her on untidy ways. Rose was a sort of queen to Sukey Swaddles. At first the girl had turned up her nose at these successors of the Barughs, for Shadrach was only the vicar's head man; but by degrees Sukey's flattery and respectful ways had grown pleasant to Rose, and she had taken to visiting Mrs. Swaddles, to the infinite disgust of Joseph Sunley.

Ralph slackened his pace. Rose held back to let him pass through the gate, which she kept open.

"You have grown so pretty, Rose," — Ralph blushed like a girl — "that it is no wonder I did not know you." He looked at her, and Rose blushed too.

"I knew you, sir," she said, in a low voice. "I sud ha' known you anywhere."

"Should you?" Ralph's dignity as a man felt reproved. "Well, I've altered a good deal though. I'll come and see your grandmother to-morrow," he said. "Is she as deaf as ever?"

"She's a good deal deafer," said Rose, sighing. And she raised her eyes piteously, and looked into Ralph's.

There was nothing in the words, and yet they both felt that a bond was established between them. That exchange of complaint and sympathy had given them a new interest to their lives; days perhaps is a truer rendering; for Ralph's notion of life was how to make each day as "jolly" as possible; while Rose's creed arrived at the same result by an inverse process. She wanted to be free from each day's work, and each day's trouble in making her grandmother hear.

The gaze lasted an instant, and then the youth said, "Let me hold the gate," and took it from her plump fingers.

A glow of pleasure spread over Rose's face as she went into the house. She was proud Mrs. Swaddles should see the young squire's politeness to her.

"Theer's Pickles, sir." Mrs. Swaddles pointed to a basket in a corner of the dim room, from which came a murmur of sobbing and yelping; but at the sound of footsteps Pickles jumped out, and ran, first sniffing, and waggling her tail and body, and then with a prolonged whine of welcome, to introduce herself to Ralph. Sukey immediately sprawled beside the basket and produced four creatures something like large white maggots, with pink toes and noses, snuffling in the uninteresting fashion of very young puppies.

"Wad ye hev twae on 'em, sir, ur mair? An ye will Shadrach 'll be reet doon fain."

"No, thank you." Ralph looked disgusted. "Put them back, Mrs. Swaddles. They're regular mongrels; not one of them a scrap like the mother. I should drown them if they were mine."

"Massy! droon 'em! Tu think o' that noo." Mrs. Swaddles put back the puppies, and stood upright. Her hair had come unfastened with her exertions, and streamed over her shoulders in roughened abundance. But she stood still, unconscious of this accident, one dirty finger in her mouth, pondering Ralph's words.

"Well, good-night." He had been looking at Rose, regardless of Mrs. Swaddles's dismay at the doom he had pronounced on the puppies; and now he nodded to the dishevelled creature and turned to the door. "You're coming my way, arn't you?" he said to Rose. He spoke very low, without looking round. Sukey Swaddles roused up, pushed the hair out of her eyes, and spoke out suddenly, —

"Waaz ah tu say tu Shadrach 'at 'e mun droond yal t' poops?"

Ralph laughed. "He can do just as he likes. If they were mine they'd be drowned to-night."

He looked for Rose, but she had slipped out and away. He could not see her anywhere, though he loitered through the farmyard. When he reached the gate,

he saw that the door of Mrs. Duncombe's cottage was now closed.

"She's a nice, well-behaved little girl," he thought. "She doesn't choose to be seen walking about the village with me."

"Good-night, Mrs. Swaddles. Don't forget the fishing."

"What an extraordinary difference there is in men's minds," said this man of seventeen, as he walked down the hill again. "I might just as well fall in love with this girl, and want to marry her; for she's prettier than Mrs. Burneston, and it seems to me my father married his wife entirely for her looks. I don't believe in her manners. I expect they're put on."

CHAPTER XXVI.

AN UNEXPECTED VISITOR AT THE CAIRN.

THE sun has set, and a broad grey mist is rising fast from the valley, blotting out the villages and farmsteads that lie cradled beside the river and the tall trees that mark its course; blotting out, too, the form of the hills across the valley till their tops grow confused with clouds in a grey expanse bordered by luminous red, and this as it mounts changes to pale green, across which steal narrow leaden-hued cloud lines.

The day has been very hot, so hot that George — who has been rather ailing of late — has feared to expose himself to the glare of sunshine on the unsheltered moor, and this evening he has strolled out to the highest point near the farm, a weird, desolate spot, where a heap of black grit stones, piled one on another, seem to record some crime enacted there: this is really the Cairn. All around stretches the wild moor, strewn here and there with long layers of greystone which rise up in abrupt crags at the edge of the weird platform, where valleys yawn between the Cairn and the still loftier hills miles away. These hills rise sharply from the purple line of moor and the mist which rises also from the valleys on this side of it; but the mist here does not shroud human life and dwellings as it does on the other side; even in broad noonday glare all is desolate, one stretch of purple heather or bare brown moor and faint blue hills beyond.

George loved this vast solitude; he was often glad to get away from his mother's weak, purposeless talk, and although he was now able in many ways to share his father's work, still he had to husband his strength and often to take complete rest.

As the long leaden clouds spread westwards he turned to go home; he was two miles from the farm, and it would be almost dark before he reached it, but still he lingered.

"'Twad do Doris a sight o' good to come up here, body and mind too," he said, "'twad blow away t' mists o' self-conceit an' worldliness she's gettin'. I's feared she's sorely changed. She did ought to ha' cum an' seen father long since. Well, maybe t' babe 'll work a blessed change."

He longed sorely to see his little nephew, but Doris had not sent a second invitation to the Cairn. She had written from time to time putting off her promised visit — but only a few days ago, she had written to her mother saying she hoped, when baby was old enough to travel, to take him to see his grandparents, and this promise had healed the soreness which taxed even John Barugh's faith in his beautiful child.

George wondered what would happen about the child's bringing up; his simple mind went directly to truths without being turned aside by the zigzags circumstances seem to create for some others.

"Doris sud be like Hannah," he said, "all mothers sud; she sud give her little one to the Lord from t' first, an' make it t' child's first thought to love our dear Lord an' seek him in ivery person an' ivery place. I'd like to hev a little chap to train fer God; an' yet it's an awesome thought, fer one 'ood hev to live fair up to one's teachin', young uns is so sharp."

He sighed as he began to descend the rocky, rugged path that led him beside the edge of a narrow gorge, dark and deep, with frowning crags bristling on either side. George was pondering the often pondered puzzle, why resolves are so strong in theory, so weak in practice; why he failed so signally in practising what he preached. "There's a way out of it," he said at last. "We shall find Him if we watch for his light to guide us. Ah's ower apt to trust to my own light."

He looked back at the lofty expanse of moor. In the distance, a large bird, a speck in the fast deepening gloom, rose from the Cairn and swooped slowly away, as if it rested on its wings. "That's how ah should rest," he said. "He's awllys by me, with me, in me, — if ah'll only rest on him, an' let him guide my will and my tongue. Good Lord, deliver me."

He raised his hat and stood still.

But it behoved him to give up reverie and walk with real care, for the blocks of grit just here were so overgrown with brakes and gorse that more than once he had nearly fallen over them. A little stream came down from the hills at this point and leapt to a lower level in a double thread of glistening water.

At last he reached the bottom of the descent. Here was a sort of glen on the moor itself, formed by a spur of rock that overhung the great valley below; through this wild nook the little stream from the hills rushed noisily, half hidden by the rich tufts of heather and cloudberry, which nestled on huge grey boulders in the stream itself; breaks of tawny yellow on the banks, where the outer garbing had been rent away, were varied with tufts of bent whitening round the edge.

As George drew near this noisy chattering brook he saw some one seated on the huge block of stone which served as a bridge across it; it was not his father, the figure was smaller, and seemed to crouch. A stranger was such a new sight at the Cairn that the lad quickened his steps with a feeling of expectation.

"Hollau, lad! yey've come doon fra t' cloods, hev yey? Yer mudher sehs, sehs sheea, mah lad's oop at t' Cairn, yey mun needs gan yer weays an finnd un'. And ah sehs, 'Neea. Ah'll bahde tiv e' comes; patience iz a deeal better than brokken beeans' — sae theer noo."

George was breathless, partly from his rapid descent, and also from the surprise of seeing Joseph Sunley seated as quietly on the heather-crowned boulder as if he were sitting in his own armchair opposite Church Farm at Burneston, with one of the farm dogs beside him.

"Why, Mr. Sunley," he gasped, "who'd ha' thought o' seein' ye hereabouts?"

"Woonkers!" — Sunley waved his hand in his usual fashion, as if he wished to put aside all other thoughts and opinions than his own — "there's a mint mair thowt on an' kenned than sike as yey can think uv 'at gans meeasin' aboot at yal inds t' deea thruf."

"What is it?" — George's sympathies roused at once. "Has aught happened at t' Hall to my sister or t' babe?"

"Neea, neea." Sunley looked discontented. "T' missis an' t' bairn's lahkely eneeaf; bud ah's ha' thowt, George, at thèer waaz yan nearer tiv' yu i' t' village than at t' Hall."

There was a sly inquiry in his small, half-shut eyes which set George's ears tingling and made his heart beat. He looked away across the moor.

"Ye mun tell me going along, Mister Sunley," he said, crossing the brook as he spoke, "fer darkness is gaining on us o' t' moor, an' we find it none so easy to win back to t' Cairn without a light."

Sunley got up stiffly, and then he gave as arcastic look at George.

"It mun be telled, lad; nobbut ye ken' yal, ye'd be fain to lisen tiv't at yance; bud t' yoong yallus thenks they'r reet, an' 'at t' awd fooalks gans toitlin' an' toiterin' aboot at yaal inds wivoot onny wut. Yis, yis, ah knaws t' ways on 'em," he added pettishly, and then walked on in silence.

George waited, but Mr. Sunley was really huffed. He had heard of George's visits to the rector of Steersley, and it seemed to him that he, the acknowledged mentor and guide of the youth of Burneston, was completely superseded by "an awd craw 'at can't sae mich as fire a gun off."

"How d'ye find my father and mother?" George said at last.

"Ah seeas neea chaange," Joseph said sullenly; but as they went along the straight path across the moor, which he knew must soon bring them to the farmhouse, he made a dead stop and laid his hand on George's arm. "Ah's nane comed sae far to see aither yan at' ither. Ah's comed tu seea yersel', an' tu talk wi' yey aboot what's yur ain business," he said reproachfully, but with a keen look in his small eyes. He knew that an appeal to the lad's feelings was irresistible.

"It's reet kind on ye then, Mister Sunley, an' I'm sorry I was not indoors when ye cam; nut but what mother wad see to ye better than I could ha' done."

Sunley waved his hand.

"Yur mudher's yallays menseful," he said; "theer's neea takking her unawares. Eh, lad, yey sud seea t' mummacks at t' farmhoose noo; t' lass theer's nowt bud a trail-tangs. Ah has tell'd Rase sae mair an yance an' yance ageean. Ah misses ye sairly, mah lad."

George's interest quickened.

"I don't think Rose would find much to say to Mrs. Swaddles," he said. "She seemed to me a slovenly, stupid woman."

Sunley stopped and slapped George's shoulder. "Yey's sed it, lad. Them's t' wods 'at fits her. Sheea's a fondy, an' ah tell'd Rase she'd best keep aloof; bud neea, neea, sheea'd ha' sedd ah war a meddlin' awd fogrum. Waes me, lad; she's gangin' tu rewin her ain gate." He drew in his breath and shook his head.

George grew suddenly pale, but it was now too dusk for the sexton to note the change.

"Ah dizn't ken hoo mich store ye set by Rase," he said, "bud sheea'll gang to rewin, lad, if it's 'at sheea's nut guided."

"What do you mean?" George had recovered the first shock, and he remembered the old man's prejudices. "Ye're apt to be hard, Mr. Sunley; a lass with such a face as Rose has will always have

admirers;" then the uneasiness he really felt got beyond control. "What's the matter? Speak out, I'd liefer ye'd say it oot, an' ha' done wi' 't. Has aught happened?"

"Tell 't oot! gently, lad, that's jist what ah can't deea; there's nowt deean yit, nobbut theer's mich harm owerkestin, bud theer's t' yoong lad, Ralph, littin' an' lattin' efter Rase, an' sheea thenks a deal o' 'im, ah knaws. Sheea's a fond feeal an' maks leeght o' mah warnin's, bud mebbe, lad, sheea'd hearken to ye."

George felt struck as if some one had dealt him a heavy blow; he knew that this was far more serious than any village flirtation. It seemed to him that he had himself put this idea into Rose's head. He walked on, bewildered, in silence, and Sunley did not disturb him. The old man was tired out with his journey and anxious to get to bed.

At last George spoke.

"I'll not meddle with Rose, Mister Sunley; after all it's not her fault if that foolish lad misbehaves himself, for he seeks her. Rose is not one to run after any man; don't you take notice about it to father nor mother neither, an' I'll get t' young fellow sent away from Burneston."

Sunley was surprised at his calmness, though George's caution pleased him.

"Yis," he said, "ye're reet, lad, t' leeast sed seeanest mended; oot o' seeght is maist times out of mahnd wi' t' lasses. Hallau," as the dog ran forward with a joyful bark, "theer's t' fayther."

They had reached the farm without seeing how near they were, and in the gloom there suddenly appeared the tall farmer, standing in front of the low stone wall which ran round the farmhouse and buildings.

"Hey, Maister Sunley," John called out; "ah thowt ye war a streayed sheep, an' ah war comin' efter yu wiv t' collie."

At supper his mother rallied George about his silence. He had made no attempt to revisit Burneston, and she had begun to hope he had given up Rose. Now she feared that Joseph Sunley had brought some message which had rekindled his love.

"Lit t' lad be, missis." Sunley never let slip the chance of snubbing a woman. "Nae doobt he's weary wi' sae mich clahmin', bud ah's fain tu seea he can clahm reet weel, he's fahne an' hearty noo."

George laughed.

"Well," he got up and nodded to the three, "I'm real tired now, an' so I guess is Mr. Sunley. Good night t' ye all."

Dorothy sat silent, her lips pressed together; her motherly instinct told her that fatigue was not George's motive for withdrawing so early. She waited a short time and then went up the old oak staircase and tapped at his bedroom door. This was made, like the floor and walls of the long dark gallery, of oak planks, and through the chinks came the glimmer of George's light.

No answer; she waited and then lifted the heavy latch.

"Stop — I'm comin'," George said; "don't come in, mother."

He came to the door without his candle — he did not want her to know that he was writing — and she could not see his face.

"George, lad," she said tenderly, "you're in trouble; tell your mother what 't is."

He waited; then he said, —

"I cannut tell it, an' ye cannut help me, mother, in the way you means. I must keep my trouble to myself, thank you." He stopped.

Dorothy gave a smothered sob.

"Eh, George," she said sadly, "once was a time when your mother was more to ye than she's come to be lately."

In the dark she felt his arm round her neck and his hearty loving kisses.

"You war nivvers dearer than ye are, mother mine. Why, I cud nivver love you enough for all your goodness to me, bud this trouble's not all my own." Then more cheerfully he added, "But you can help me in a way, an' it's a powerful way, too, mother; pray for me that I may be guided to do right and not seek after my own will."

Dorothy sighed heavily.

"Eh, lad," she said, "ye don't know what ye're askin'. What good can the prayer of such as me do you?"

He kissed her yet more fondly.

"Shall I tell ye what Mr. Hawnby told me?" he said reverently; "he said, 'There's nothing like a mother's prayers, lad, remember that, and it may help to keep you in mind how much you owe your mother.'"

CHAPTER XXVII.

A WARNING.

Doris had earnestly battled with her dislike to Ralph, but day by day, in spite of her efforts, it grew stronger; when her husband praised Ralph she had to make an effort to repress the harsh judgment that rose to her lips. And yet all the time she knew that she was unjust, unreasonable, that in Ralph's position she should not have behaved as well as he did. She had not once complained, but she won-

dered her husband did not notice the complete indifference with which his son treated her. Ralph was never rude, but he made Doris feel that he did not want her, and that she came between him and his father.

But these thoughts only came to her in Ralph's presence, and these two rarely met except at meals. Her baby so engrossed the young mother that Mr. Burneston already complained that she thought of no one else.

She gave up its management implicitly to Faith Emmett, but she would sit gazing at it lying in its cradle, dreaming out its brilliant future, dreaming out, too, the part she would play of perfect motherhood. No child had ever been loved as she would love her little Philip. It was a great joy to Doris that her child could bear his father's name.

Faith was secretly aggrieved by Mrs. Burneston's long visits to the nursery, although if Doris had been less devoted the housekeeper would have railed at her want of motherly love. She was taken by surprise one morning when Doris came up sooner than usual after breakfast, and instead of sitting there with the child in her arms, only paid a short visit and then went on to her room.

She had scarcely spoken, and there was a frown on her delicate face and a slight flush. Faith noticed, too, that she was more than ever erect and stately.

"She ha' bin hevin' wods wi' Ralph. I kenned it wad be seeaner or later, an' noo we sal seea which side t' squire'll tak atween 'em. My wod, if it comes aboot 'at he turns ageean his first-born!"

It was a long time since such a dire gleam had shot from the yellow eyes; it seemed to reach little Phil, for he turned uneasily in his cradle, but Faith did not heed him. Her keen wits were divining how to discover what had chanced at breakfast-time to upset the methodical ways of her mistress.

But when, at the appointed time, she went down to give her orders to Mrs. Hazelgrave, Faith could only gather that Mrs. Burneston had received a letter that morning which she had read to herself, and that, instead of lingering to chat over the morning's news with the squire, she had put the letter in her pocket and left the room.

As Mrs. Emmett went up-stairs again by the back way, she caught a glimpse of the tall, slender figure of her mistress crossing the courtyard dressed for walking.

"Theer's somm'at oop oot o' t' common," the housekeeper thought.

A letter from George had greatly troubled Doris. He had hesitated what to do; first he thought he would go and speak to Rose, fearing to be a means of stirring family strife at the Hall, but he could not bring himself to seek her again, and yet it seemed to him that he ought to consider her happiness before that of any one else.

"She cannot love sike a lad as that yet," he said, "but she'll be dazed an' flattered with his nonsense, an' maybe she'll go on to earnest while he's only sporting an' trifling just because he's nothing to do. I'll be bound 'tisn't Rose's fault, but for all that I must take some note on't, as Mr. Sunley says she heeds ne'er a one but me; an' settin' all else apart, I'm bound to hev a care of her."

So after long and painful thought he decided to write to Doris. He felt that the squire would have considered his interference presumptuous.

In his letter he asked Doris not to speak of him in the matter. Rose would, doubtless, get over this folly, but she would not forget or forgive the person who took Ralph Burneston's company and flattery away from her; and George had still a too painful remembrance of her sudden anger with him when they last met, to run the risk of again provoking it.

Perhaps the vexation Doris felt as she read the letter was more caused by her brother's evident love for Rose than by Ralph's misconduct; it was secretly pleasant to feel that she had not misjudged her husband's son, and that he really did not deserve her esteem. Yet, spite of the bias which her jealousy gave to her judgment, she shrank from this pleasure as from something evil. No, if she could manage any other way she would be generous to Ralph, and she would keep this matter from her husband.

"He would be so very much annoyed," she thought, "and George is very good to say he wishes to try to prevent family discord; and yet his goodness amounts to silliness. Why does he ask me to deal tenderly with Ralph? He says it is because the boy has had no mother. I wonder why sons set so much more store by the good they learn from mothers than daughters seem to do. Is it because they see so much less of the mother's daily life? And yet in my case and George's this has been reversed, and, according to this reasoning, it is I who ought to think I owe much to my mother." There was an incredulous smile on her lip as she ended.

She had taken the longer way round by the vicarage instead of going up the steep

Digitized by CORNELL UNIVERSITY Original from CORNELL UNIVERSITY

village street. As yet she had not lived long enough at the Hall to feel at her ease with the people of Burneston. But, instead of shortening this long walk by crossing the glebe field and coming out opposite Rose's cottage, either through Church Farm or by the churchyard, she went on along the avenue, as the road was called at this point from the grand old trees on either side of it, and then followed the dusty cross-road on the right which brought her past the church on to the Steersley highroad, opposite Rose's cottage.

She hated Church Farm, and above all she hated the vision which that glebe-field gate always recalled; the sunny, golden-starred meadow, and the girl swinging, with lilac pinafore and sun-bonnet and long sun-burnt arms, and then blushing under Mr. Burneston's gaze. There was an entire contradiction in her mind when she looked back at her life, as at something gone forever, though the contradiction was as unconscious as the look over her shoulder which had then created her brilliant future life.

She was not ashamed of having been that girl, but she hated to think that her refined husband could have conceived a sudden passion for her as she then was. She always turned from this thought resolutely; it seemed to her that if she dwelt on it Philip Burneston must sink in her esteem, for mere personal beauty was in Doris's eyes contemptible, a quality that might belong to the most uncultivated; and yet she rejoiced in the remarkable loveliness of her child, "For he is lovely," she thought, "even the doctor said, 'What a wonderfully pretty baby!'"

"Yes," she said pensively, as at last she paused before the stone cottages, "My boy will be quite as handsome as Ralph, but oh, how superior he shall be in everything else!"

On the doorsill she stopped a few seconds to recollect herself.

"I hope Philip will not be vexed with me for this interference; but no, — he will see that I wished to spare him vexation, and more than once he has asked me to go and see Rose and her grandmother, and — and — I have always shrunk from it and have felt vexed that he asked me to go."

This was all that troubled Doris, only the fear of vexing her husband, not the dislike to having thoughts unshared by him, to speaking words unknown to him, to acting without being sure that he would approve the action; but from a child she had depended on herself for judgment and had drawn others to depend on her; doubt of her own wisdom was the last doubt likely to trouble her.

The inner door was not close shut; she went into the little entrance and tapped.

"Come in, please." And then Rose pulled the door open, keeping herself hidden behind it with a glad, expectant look on her bright face.

"Good morning." Mrs. Burneston spoke gently, but she did not smile.

When she saw who her visitor was, Rose grew red and shy. She curtsied, and then set a chair for Mrs. Burneston, but without any of the pretty deftness usually as much a part of her as her pink and white face was. The quiet dignity and stately grace of her visitor completely took away her wits.

"How is your grandmother? Is she at home?" Doris spoke graciously, but she too felt a strange shyness creeping over her. Now that she was face to face with the offender she scarcely knew how to speak of the offence.

"She's at home." Rose had nearly said "ma'am" in her fluttered surprise. "But for two weeks or so she's been ill in bed, and t' doctor says she'd best keep there, she's stiff all one side."

Doris knew little of illness and had a shrinking from nursing, but it seemed to her that this was a case which called for her aid.

"Does Mr. Spencer know?" she said; "he always tells me about sickness in the village, and he has said nothing about your grandmother. I will send up some jelly and beef tea; but you ought to let Mr. Spencer know, he would call and see her, or Mrs. Riccall would."

Doris's voice had been more natural in these last words, and the tone seemed to Rose to bridge the chasm which separated her from her old acquaintance. Her courage came back.

"Thank you, Mrs. Burneston, but —" she tossed her fair head — "there's time enough, an' maybe gran'mother's in no hurry to see t' vicar. She couldn't heer a word he said — nor no one else, as to that."

Doris looked severe; her merciful intentions towards Rose were checked by this pertness.

"Rose," she said gravely, "I will not go up and see your grandmother to-day, but I want to speak to you about something: I want to caution you. I am told that young Mr. Burneston comes to see you, you must not encourage his visits. You" — she hesitated, "you will get talked about."

There was a pause. Rose sat quite still, but stripes of bright color flew across her throat and face; she quivered and throbbed with passion, and yet clenched her plump fists to keep in any expression of it; her sharp wits even then told her to mind what she said. Doris waited anxiously for her answer.

"Thank you, ah'm sure," said Rose at last with contemptuous emphasis, and getting up from her chair, "for being so very thoughtful over me, Mrs. Burneston; ah thought you'd forgotten there was such a person as me living; but ah fancy ah'm equal to take care of myself, come what may; ah've had to do it all along."

Doris flushed under the girl's insolent glance.

"You are wrong," she said haughtily; "I give you this warning as a friend; I hoped that it might have been managed quietly, but perhaps I had better speak to your grandmother." She looked on to the door which shut out the ladder staircase leading to the room above.

Rose moved quickly to the door, and set her back against it.

"You'll not see gran'mother wi' my leave, Mrs. Burneston, an' ye'll find it none so easy to see her without. You may be missis at t' Hall, but ye're not missis here. Why, ah'm ashamed on ye, Missis Burneston; if" — she grew deeply red — "a lass do chat with a lad odd times, what harm's done, ah'd like to know?"

"Yes" — Doris spoke with unusual eagerness, and her frown relaxed — "if it were a lad of your own class, Rose, I agree with you, though even then a girl should not flirt and get herself talked about. You have been always fond of admiration, but this is quite different; setting all other objections aside, you are injuring your own happiness in encouraging this acquaintance, and you know very well that you can end it at once if you choose."

Going up to the cottage Doris had resolved not to be over earnest, and not to provoke the girl's anger. She fancied that the shock of discovery would shame Rose, and that she would be ready to promise anything, and now she felt that she had made a false step in treating the matter so seriously.

Rose looked at her with a curling lip, and eyed her from head to foot with slow, concentrated scorn.

"You'd best let me be," she said; "ah've been trying to keep my tongue quiet, but it'll have its will, in spite of gran'mother, if you tice me on to 't. You're a lady now, and ah suppose have all you want, Mrs. Burneston, an amusement belike for every hour o' the day; but if you'd stayed just plain Doris Barugh, ah'd like to ask, if you'd found a sudden pleasure come to your life without any seekin' of your own, if you'd hev cast it from you just because it didn't please some one who had no heart in her body to feel for your feelin's?"

"Rose, hush! you forget yourself." Doris raised one hand reprovingly, as to an angry child.

This was the spark the pent-in smouldering anger had wanted. Rose's arms fell suddenly straight, her pink fists doubled tighter than ever, this time in fury, not self-restraint, and her eyes lightened in a sudden blaze.

"You may think what you please, and do what you please, but ye'll not come here doin' missis ovver me, Doris Burneston. What sud you, who have given up father, mother, an' brother, fer money an' a grand hoose and fine claise, know about what makes me happy or sad? Ah misdoubted yu awllays, an' when ah looked on yur face on yur marriage morn, ah knew what ye were doin'. Ah knew there was no love in you; your heart was still an' clot-caud all thro'. Ah had serrowed fer yur father before, but then ah serrowed fer yur husband. Whya, fra' t' time ah was that high" — she held her outspread hand level with her waist — "ah worshipped the ground he walked on, an' so wad any lass who could love; there's few like him. An' now there's Ralph, his livin' image, an' he comes an' cheers up my dull, sad life with a kind word an' a kind look, till ah begins to coont t' hoors till he comes again, an' lo! walks in you, madam, an' says, ''Tisn't proper, Rose, you'll be talked of.' Talked of, posh! — wha's been mair talked of than you yourself? an' *you* don't feel soiled with it; an' yet ah'd hev mair pity an' less shame fer a lass 'at lost her name fer givin' her heart than ah'd hev for one with nae heart in her body, unless it's a heart full o' self. No — ah'll say all ah've gitten to say; you needn't hush at me. Whya, if you knew hoo to love, ye'd not begin by telling me to take care o' myself; ye'd say harm might come to him. Not you" — she shook her head vehemently — "you never did think o' any one's feelings but your own. Just t' same," she laughed angrily, "when George an' ah wanted to play, you wur awllays thinkin' o' something else."

Disgust and surprise had kept Mrs. Burneston silent and still, but at this allusion to the days she hated a bright color flew into her face, and she looked sternly at Rose.

"You seem to have lost your senses, Rose Duncombe," she said. "I cannot talk to you at all, but I shall find some other way of stopping this acquaintance."

She walked slowly to the door, opened it, and passed out into the road.

Rose gasped once or twice, and then, clasping her hands over her face, she burst into passionate crying — such crying as Doris had never known. Shuddering sobs that made her whole body quiver as they came, and then hot streaming tears, that fell through her fingers and wetted the front of her gown.

Suddenly she looked up, and pushed her hair off her swollen, disfigured face.

"Ah hate her, ah deea, that's sear; but ah've been a rare fool. How could ah own up 'at ah cared for Ralph? and then ah promised gran'mother ah'd never be unmenseful to Doris; but it's served her right, that it has. But still there's no good in it, it's like cutting off my nose to get revenge on my face; an' it's givin' the proud, stuck-up thing such a peg ovver me. What fur dew ah let my tongue run away so? Well," she began to dry up her tears, "no ane 'll be the wiser, that's one comfort; nothing ah said 'll see daylight, it'll stick too much in my lady's throat, except it's that bit about the lad." She hid her hot face again. "Oh," she moaned, "to say what ah'm not sure o', just to flout her to own ah care fur a lad who has not said he loves me! An' ah deean't love him — ah only likes to see him. Whatever would George say? Ah hevn't thought o' him."

She burst into fresh tears. These lasted longer and fell more silently. Rose was conscious of a new feeling, or, to speak more truly, Doris's words had torn away the veil which the girl's careless vanity and love of admiration had wrapped round her inner feelings. Perhaps Rose had never felt so humble, so little absorbed in self, as in the hour after her visitor's departure.

"George said how 'twould be," she sighed very sadly; "he has said it over and over. 'Rose,' he said, 'if ye go on flirtin' about wiv t' lads t' day 'll come when ye'll be caught.' Why sud ah care so much to see Master Ralph? He only cares for me because there's no one else he cares to talk to — or who's so pretty as me. And if he did love me, where'd be the use? he couldn't wed me, and ah wouldn't wed with him if he'd ask me. Ah'd be too proud to do what Doris did; an', besides, ah sud die of it like a bird in a cage. She was always fit for a cage; she never was wild an' free. Ah had enough o' that cage work when ah was teachin'. No, it can do Ralph no harm, and me none either. Ah won't turn my back on him and let him think ah don't care for him, just to please her — so there noo!"

From The Spectator.

MR. BRYCE'S ASCENT OF MOUNT ARARAT.

FROM the plain of the Araxes, where the Armenians place the lost Paradise of man, rises an extinct volcano, of immeasurable antiquity, its peak seventeen thousand feet high, soaring suddenly from the platform, which is but two or three thousand feet above the sea; its snow-line at the elevation of fourteen thousand feet, treeless, waterless, solemn, and solitary, one of the sublimest objects on the face of the earth. It is Ararat, the mountain of the Ark, the ancient sanctuary of the Armenian faith, the centre of the once famous kingdom, now the cornerstone of three great empires. "On the top of its lower peak, Little Ararat, the dominions of the czar, the sultan, and the shah, the territories of the three chief forms of faith that possess western and northern Asia, converge to a point. When in 1828 the Czar Nicholas defeated the Prussians and annexed the territory round Erivan, his advisers insisted on bringing Ararat within the Russian territory, on account of the veneration wherewith it is regarded by all the surrounding races, and which is reflected on the sovereign who possesses it." No mountain save Sinai has such sacred associations, and Sinai itself has less of legendary lore attached to it. Persians, Tartars, Turks, and Kurds regard the mountain with reverence as genuine as that of the Christian races, for its majesty, its solitariness, and because they all believe in the deluge and in the patriarch, "faithful found." They are all equally persuaded that "Massis" is "inaccessible;" they are not to to be convinced by any testimony, not that of Parrot, of Aftonomof, or of Abich — who respectively ascended Ararat in 1829, 1834, and 1845 — of General Choazk and his party, and the Englishmen who ascended in 1856; and it now appears that they reject that of Mr. Bryce, who performed, in September of last year, the extraordinary feat of ascending the mountain of the Ark, alone.

The narrative of Mr. Bryce's ascent fills one with wonder and delight, fires one's imagination like an astronomic discovery,

and communicates to one something of the thrill and awe of the loneliness and immutability of the scene on which the solitary man gazed, when he stood on the little plain of snow which forms the summit of Ararat, "with a vividly bright green sky above it, and a wild west wind whistling across it, clouds girdling it in, and ever and anon through the clouds glimpses of far-stretching valleys and mountains away to the world's end." It was only from dawn till dark, but an immeasurable experience, one of those which seem to free the spirit from bonds of time and space, lay between those boundaries, for him who left on the plain and on the lower slopes of the mountain scenes such as they had witnessed from immemorial time, — the nomad Kurds "watering their flocks at the spring, pitching their goat's-hair tents in the recesses of the lonely rocks, chanting their wildly pathetic airs, with neither a past to remember nor a future to plan for," — and who climbed, with body and mind strained to the utmost pitch of exertion and excitement, to that platform of eternal snow, to stand, a feeble solitary, exulting, cowering atom in the vastness, between the cloud-veil of Ararat and the light-flooded sky.

Mr. Bryce had set out on the ascent from Aralykh, with a companion and an escort of six armed Cossacks, accompanied by an interpreter; but the Cossacks failed them early in the undertaking, having no notion of the importance of time, no notion of carrying baggage, and a propensity, perfectly good-humored, but ruinous to the purpose of the expedition, to sit still, smoke, and chatter. The interpreter was obliged to abandon the party at Sardarbulah, or "the Governor's Well," the only high permanent camping-ground on the mountain, and the one spot in all the landscape where there are trees. With their companions the travellers had thenceforth no means of communication, and they were at their mercy completely, yet they felt no fear of them, and incurred no danger from either Kurds or Cossacks, only after a certain point both became equally useless as guides, for the former never go higher on the mountain than the limits of pasture, and the latter have no motive to go nearly so high. When they had reached a height of twelve thousand feet, and everything lay below them, except Little Ararat opposite, and the stupendous cone that rose from where the friends were sitting, its glittering snows and stern black crags of lava standing up perfectly clear in a sea of cloudless blue; when they had noted the landmarks carefully, and agreed to meet about nightfall at that spot, having a notion that the Cossacks, who were now widely scattered about the slope, would at least bring them safely down into the plain, the travellers parted, and Mr. Bryce commenced his solitary ascent of the awful peak, held by the Armenians to be guarded by angels from the profaning foot of man, and by the Kurds to be the haunt of jinn who take vengeance on mere human disturbers of their devil's revelry. At eight o'clock he started, carrying with him his ice-axe, some crusts of bread, a lemon, a small flask of cold tea, four hard-boiled eggs, and a few meat lozenges, on the perilous journey, whose dangers were of that most formidable kind, the unknown, and climbing away to the left along the top of a ridge, came to a snow-bed, lying over loose, broken stones and sand, so fatiguing to cross that he almost gave in on the far side of it. There he found solid rock, however, and the summit of the Little Ararat began to sink, and that meant real progress. At ten o'clock he was looking down upon its small flat top, studded with lumps of rock, but bearing no trace of a crater. Up to this point one Cossack and one Kurd had accompanied him — they were mightily amused by the ice-axe, and curious as to its use — but the Kurd stopped now, shivering on the verge of a long, treacherous snow-slope, in which steps had to be cut; and afterwards the Cossack, who had crossed the snow-slope, looked up at the broken cliff above them which had then to be scaled, and shook his head. Mr. Bryce made him understand by pantomime that he was to return to the bivouac below, bade him farewell, and set his face to the great peak, Little Ararat now lying one thousand feet below the eye. He climbed the crags which had appalled the Cossack, and emerged on a straight slope of volcanic stones, which rolled about so that he slipped down nearly as much as he went up; and here the breathlessness and fatigue became extreme, owing to the thinness of the air; and "the practical question was whether, with knees of lead, and gasping like a fish in a boat, he would be able to get any farther." There was no rashness in Mr. Bryce's great courage. He sat down, ate an egg, and resolved that when three o'clock should come, or he should come to a "bad place," he would turn back, let the summit be ever so near. And as there is no more brag about his story than there was rashness in his courage, he says simply that, such was the exhaustion of his legs and his lungs, the bad place

or three o'clock would have been almost welcome.

Going on again, he turned and got on another rock-rib, working his laborious way over toppling crags of lava, until perhaps the grandest sight of the whole mountain presented itself. At his foot was a deep, narrow, impassable gully, in whose bottom snow lay, where the inclination was not too steep. Beyond it a line of rocky towers, red, grim, and terrible, ran right up towards the summit, its upper end lost in the clouds, through which, as at intervals they broke or shifted, one could descry, far, far above, a wilderness of snow. Had a Kurd ever travelled so far, he might have taken this for the palace of the jinn. Then came the struggle between the imagination, longing to feast itself upon the majesty and the wonder of the scene, and the exigencies of the tremendous task of the ascent; Mr. Bryce found that the strain on the observing senses seemed too great for fancy or emotion to have any scope. This was a race against time, in which he could only scan the cliffs for a route, refer constantly to his watch, husband his strength by morsels of food taken at frequent intervals, and endeavor to conceive how a particular block or bit of slope would look when seen the other way in descending. Climbing on and on, sometimes erecting little piles of stones to mark the way, like Poucet without his brothers; so absorbed that the solemn grandeur of the scenery impressed him less than on many less striking mountains, the solitary traveller consumed the precious hours until he found himself at the top of the rock-rib, and on the edge of a precipice, which stopped farther progress in that direction, but showed him, through the clouds which floated around him — real clouds, not generally diffused mist — the summit barely one thousand feet above him. To accomplish that distance, he had to choose between two courses, both almost impracticable; the first was to return to the long slopes of rolling stones which he had deserted, get up the cliffs at the top, and so on to the upper slopes of rock or inclined snow which lead to the summit. This involved a renewal of the terrible labor he had already found almost unendurable. The second was to turn back and descend into a vast snow-basin, lying south-east of the summit, and whose northwest acclivity formed, in fact, its side; which was so steep as to require step-cutting, and a "likely place for crevasses." The hours were wearing on; a night upon the mountains would probably mean death to the brave man (whose clothing was insufficient even for the day-time, for his overcoat had been stolen on a Russian railway); the decision had to be quickly taken. He decided for the snow-basin, retraced his steps from the precipice, climbed into the basin along the border of a treacherous ice-slope, and attacked the friable rocks, so rotten that neither feet nor hands could get firm hold, floundering pitiably, because too tired for a rush. All the way up this rock-slope, where the strong sulphureous smell led Mr. Bryce to hope he should find some trace of an eruptive vent, it was so "delightfully volcanic," but where he only found lumps of minerals and a piece of gypsum with fine crystals, he was constantly gazing at the upper end of the toilsome road for signs of crags or snow-fields above. But a soft mist-curtain hung there, where the snow seemed to begin, and who could tell what lay beyond? The solitude must indeed have been awful then, for everything like certainty and calculation had ceased. From the tremendous height, Little Ararat, lying he did not know how many thousands of feet beneath him, looked to the climber like a broken obelisk. And he could only imagine the plain, a misty, dream-like expanse below. Did he dare to think of the human life, of the peaceful tents, the cheerful fires, the voices away there in the depths of distance, as he stood alone amid the eternal snow, with mists to the left and above him, and a range of black precipices which shut in the view upon the right, and just below him clouds seething like waves about the savage pinnacles, the towers of the palace of the jinn, past which his upward path had lain? Only one hour was before him now; at its end he must turn back,— if, indeed, his strength could hold out for that other hour. He struggled on up the crumbling rocks, now to the right, now to the left, as the foothold looked a little firmer on either side, until suddenly the rock-slope came to an end, and he stepped out upon the almost level snow at the top of it into the clouds, into the teeth of the strong west wind, into cold so great that an icicle enveloped the lower half of his face at once, and did not melt until four hours afterwards. He tightened in his loose light coat with a Spanish neck-scarf, and walked straight on over the snow, following the rise, seeing only about thirty yards ahead of him in the thick mist. Time was flying; if the invisible summit of the mountain of the Ark were indeed far off now, if this gentle rise stretched on and on, that summit must

remain unseen by him who had dared and done so great a feat that he might look from its sacred eminence. He trailed the point of the ice-axe in the soft snow, to mark the backward track, for there was no longer any landmark, all was cloud on every side. Suddenly he felt with amazement that the ground was falling away to the north, and he stood still. A puff of the west wind drove away the mists on the opposite side to that by which he had come, and his eyes rested on the Paradise plain, at an abysmal depth below. The solitary traveller stood on the top of Mount Ararat, with the history of the world spread beneath his gaze, and all around him a scene which reduced that history to pigmy proportions, and man himself to infinite littleness.

Mr. Bryce has given to the world a wonderful word-picture of that amazing and awful spectacle, of that "landscape which is now what it was before man crept forth on the earth, the mountains which stand about the valleys as they stood when the volcanic fires that piled them up were long ago extinguished;" but he could not tell us what were his thoughts, his feelings there, what the awe and yearning that came over him in that tremendous solitude, where "Nature sits enthroned, serenely calm, and speaks to her children only in the storm and earthquake that level their dwellings in the dust." His vision ranged over the vast expanse, within whose bounds are the chain of the Caucasus, dimly made out, but Kazbek, Elbruz, and the mountains of Daghestan visible, with the line of the Caspian Sea upon the horizon; to the north, the huge extinct volcano of Ala Göz, whose three peaks enclose a snow-patched crater, the dim plain of Erivan, with the silver river winding through it; westward, the Taurus ranges; and north-west the upper valley of the Araxes, to be traced as far as Ani, the ancient capital of the Armenian kingdom, the great Russian fortress of Alexandropol, and the hill where Kars stands, — peaceful enough when the brave climber looked out upon this wonderful spectacle. While it was growing upon him, not indeed in magnificence, but in comprehensibility, "while the eye was still unsatisfied with gazing," the mist-curtain dropped, enfolded him, and shut him up alone with the awful mountain-top. "The awe that fell upon me," he says, "with the sense of utter loneliness, made the time pass unnoticed, and I might have lingered long in a sort of dream, had not the piercing cold that thrilled through every limb recalled me to a sense of the risks delay might envolve." Only four hours of daylight remained, the thick mist was an added danger, the ice-axe marks were his only guide, for the compass is useless on a volcanic mountain like Ararat, with iron in the rocks. The descent was made in safety, but by the time Mr. Bryce came in sight of the spot, yet far off, where his friend had halted, "the sun had got behind the south-western ridge of the mountain, and his gigantic shadow had fallen across the great Araxes plain below; while the red mountains of Media, far to the south-east, still glowed redder than ever, then turned swiftly to a splendid purple in the dying light." At six o'clock he reached the bivouac, and rejoined his friend, who must have looked with strange feelings into the eyes which had looked upon such wondrous sights since sunrise. Three days later, Mr. Bryce was at the Armenian monastery of Etchmiadzin, near the northern foot of Ararat, and was presented to the archimandrite who rules the house. "This Englishman," said the Armenian gentleman who was acting as interpreter, "says he has ascended to the top of Massis" (Ararat). The venerable man smiled sweetly, and replied with gentle decisiveness, "That cannot be. No one has ever been there. It is impossible."

From The Saturday Review.

CONVALESCENCE.

During a severe illness, when the patient is not harassed by pain or fever, he occasionally experiences sensations not far removed from pleasure. His very prostration may have a certain charm about it. Rest and repose being at such times the highest objects of his ambition, when he obtains them, he feels a contentment nearly allied to actual enjoyment. Some people are of opinion that even death itself, apart from the diseases which cause it, is probably an agreeable process. On the other hand, the first dawn of recovery has its pleasures. It is like waking on a summer's morning after a long night's sleep. But, however delightful the transition from death to life, it heralds a period of weariness and distress almost exceeding the sufferings of the illness itself. A parallel may be found in the case of minor ailments. For instance, when the blood has been accidentally prevented from circulating freely in one of our limbs, no inconvenience is experienced; but when the vital fluid reflows, great discomfort and

pricking sensations succeed. Again, the act of fainting is said to be far from unpleasant, while the resuscitation is disagreeable or even distressing. So in severe illness there may be periods of pseudo-pleasure, while the restoration to health may be irksome in the extreme. Returning strength seems almost too rough and rude a friend for the poor weak body; and, if its first tenders of assistance are welcome, we are tempted to wish that it would not be quite so energetic in its later advances. Our bodies during convalescence become bones of contention between strength and weakness, each of which struggles hard for the mastery. It is disheartening, after a rapid advance, to find that we had overrated our powers, and to be thrown back for a week or two. As we begin to walk about a little, we become more keenly sensible of our great weakness than we were when still lying in bed; and when we throw ourselves down for rest upon an easy-chair or a couch, we draw unfavorable comparisons between their comfort and that of our bed. It would be like striking our flag to return to the latter place of repose; and we therefore remain wearily on the sofa or armchair until the happy moment arrives when we can respectably ensconce ourselves between the comfortable sheets. During convalescence reading must of necessity form our chief amusement; but our brains and eyes soon weary of it. And then, in our books and newspapers, we read of those who are, or have been, up and doing; and this makes our own enforced idleness the more painfully apparent. Everybody seems to be at work except ourselves. Perhaps it strikes us that our confinement to the house is a capital opportunity for working up some foreign language, or cultivating some art or science. We set to work valiantly, but the grammar proves quite beyond our strength, the pencil will not bring the lines into drawing, and the scientific problem makes our heads ache. The idea occurs to us that at any rate we can write a light satire, and that such an occupation will cheer and amuse us. This attempt, however, is an utter failure; all our efforts to summon sparkling wit and effervescence result in miserable unsuccess, and in place of a brilliant squib we produce a few vapid pages, while a deep gloom settles upon us instead of a spirit of fun and banter. We pipe unto our wit, but it will not dance. The black demon of disgust with the world and with ourselves hovers round us. In this stage, to what depths may we not sink? Perhaps even to attempts at poetry or musical composition. There are no limits to human folly. The patient who is sane enough in mind to be aware that he has no special genius will probably long for society. Yet, when his friends come to visit him, he soon becomes intensely wearied. The callers' very anxiety to amuse without fatiguing him makes them stilted and awkward, while he has not sufficient vital energy to keep the ball of conversation rolling about conventional nothings. The convalescent host is an object richly deserving of pity. Trifles which, at ordinary times, would scarcely occur to his mind, now press upon him almost more heavily than the question of his eternal salvation. The society of his guests causes him weariness and vexation of spirit rather than pleasure and gratification. When, utterly tired out, he has asked permission to go to bed, as he leaves the smoking-room he perceives a peculiar expression on his friends' faces, and a significant interchange of glances, which plainly means, "Poor fellow, he is not long for this world." The minor arrangements for sending to meet or despatching his visitors, the disposition of a shooting-party, or the management of an entertainment of any sort or description, are enough to bring his grey hairs with sorrow to the grave.

The appetite of the convalescent is fitful and capricious; yet his friends insist upon stuffing him at all sorts of odd hours, as if he were destined to fill a tureen *de foie gras*. Between breakfast and luncheon he must swallow some raw meat juice and a glass of wine; at three P.M. he must take some strong jelly; between dinner and bedtime he has to face beef-tea, and during the night-watches he is dosed with Liebig's Extractum Carnis. An attack of biliousness soon follows, which has to be relieved by cooling but unpleasant medicines. The doctor tells him that he never intended him to be overfed in such a manner, and reads him a long lecture on the incapability of the stomach to respond to too frequent calls upon its energies. In place of being overgorged, he is now overtonicked, until a buzzing in the head and sudden deafness demand rest for the system from medical pick-me-ups. There is yet one more torture in store for him. He is sent abroad. According to the time of year, a German watering-place or an Anglicized town in the south of France is selected as the scene of his banishment. The necessary arrangements before leaving home harass him beyond measure. Even were he in good health, they would

prove a considerable burden. Wearied out by these preliminary worries, he starts upon a long and tiring journey, reaching his destination more dead than alive. To be treated like a child by his courier humiliates and annoys him; yet he is perfectly helpless in his hands. Likely enough, wet weather or the mistral hails his arrival. Sad, indeed, is then his lot. Confined to the house, as he lies all day in his one sitting-room, he wishes himself back in his comfortable English home, with its choice of rooms and domestic interests. Such meditations upon his personal comforts and discomforts, and the increase or decrease of his health, are apt to engender in his disposition that spirit of selfishness and egotism which too frequently becomes a parasite of the invalid.

But unfortunately the convalescent himself is not the only sufferer. His relatives and attendants who may be taking care of him have also a bad time of it. When he was very ill, there was a certain excitement in nursing him; and watching every symptom that presented itself caused an intense and perpetual interest. The very dependence of the patient upon his nurses afforded the latter some gratification. It won the heart of the female attendant to see the great stalwart man owing every comfort and necessary to her tender watchfulness and delicate hands. The fact of having a strong man under despotic discipline, and reduced to the feebleness of a baby a month old, has charms for certain feminine minds. It is sweet to the weaker sex to have the power, by raising a finger, to silence in an instant the voice of one who in health can move the hearts of thousands by his oratory; and it is delightful to the fair governante to have full authority to scold, or even punish by a curtailment of reading or conversation, the wayward patient whose utterances as a judge, examiner, or critic, are usually received with awe and fear. But, besides these pleasures of despotism during serious illness, there is an excitement in the constant and marked changes, and the rapid succession of hopes and fears. In convalescence, however, there is none of this stimulative interest; the process of restoration to health is gradual and gently progressive, and the only excitement is an occasional relapse, which is caused, as a rule, by some imprudence on the part of the invalid. The gentle patient who, in the extremity of his illness, was so passive and so grateful for the least service, is converted into a testy and irritable hypochondriac, who resents the least interference and yet is discontented unless constantly attended to. His constant employment is to do nothing, and compel as many people as possible to assist him in this nugatory occupation. His occasional relapses are very disheartening to his poor attendants, and yet he generally seems to attribute them in some degree to their neglect. They dare not explain and argue out the whole state of the case to him, lest he should become wearied and feverish, and the ill-deserved odium has to be patiently endured. He becomes wilfully wayward. His nurse flatters herself that he is safe in his own room, when suddenly he appears on the terrace, although a keen easterly wind is blowing, and he adds insult to injury by appearing immensely pleased with himself, and indulging in a little chaff at his duenna's expense. During the relapse which follows this piece of imprudence, he suffers from a fit of overwhelming depression, when his attendant has to devise means of amusing and enlivening him, instead of indulging in richly merited "I told you so's." He will be fidgety and restless, and take the most capricious and unaccountable likes and dislikes to people, places, and things; evincing a sudden antipathy towards a doctor who is managing his case with great ability, loathing a watering-place, just as every arrangement has been satisfactorily made there for his comfort, and taking an invincible aversion to a wine or rare article of food, a stock of which has just been laid in at his especial request. If he is fanciful about his food, he is absolutely obstinate about his medicines, and when he has left the neighborhood of his doctor, he refuses to take the tonic which he used to swallow so obediently. If he has been suffering from gout, he will insist upon drinking port and champagne, and tasting all sorts of "curious" and unwholesome wines. If he has been ailing from poverty of blood, he will take a sudden whim about total abstinence, and drink nothing but water. After an attack of gastric fever, richly-made dishes will form his favorite food; while after an illness which necessitates the most nourishing of diets, he will be seized with a mania for fasting or vegetarianism.

Altogether convalescence is a trying period both for nurses and patients, especially after severe illnesses. It is an uninteresting, unsympathetic, and uncomfortable probation, and severely tests the temper, patience, and endurance both of the victims of disease and the victims of invalids.

LITTELL'S LIVING AGE.

Fifth Series, Volume XX. | No. 1745.—November 24, 1877. | From Beginning, Vol. CXXXV.

CONTENTS.

I.	PRE-CHRISTIAN DISPENSARIES AND HOSPITALS,	*Westminster Review,*	451
II.	DA CAPO. By Miss Thackeray. Part II.,	*Advance Sheets,*	462
III.	LORD CHANCELLORS AND CHIEF JUSTICES SINCE LORD CAMPBELL. By Rev. F. Arnold,	*New Quarterly Review,*	469
IV.	GREEN PASTURES AND PICCADILLY. By William Black. Part XXXVIII.,	*Harper's Bazar,*	486
V.	THE RESTORATION OF THE ANCIENT SYSTEM OF TANK IRRIGATION IN CEYLON,	*Nature,*	489
VI.	ERICA. Translated for *The Living Age* from the German of	*Frau von Ingersleben,*	495
VII.	THE BLACK MUSEUM,	*Spectator,*	501
VIII.	WILLIAM AND MARY HOWITT,	*Leisure Hour,*	504
IX.	A FEMALE DETECTIVE,	*European Mail,*	510
X.	THE MENNONITE COMMUNISTS,	*Pall Mall Gazette,*	512

POETRY.

THE ANGELS' GREETING,	450
DEAD, YET SPEAKING. By the author of "John Halifax, Gentleman,"	450
BIDE A WEE, AND DINNA FRET,	450
GATHERED ROSES. By F. W. Bourdillon,	450

PUBLISHED EVERY SATURDAY BY

LITTELL & GAY, BOSTON.

TERMS OF SUBSCRIPTION.

For EIGHT DOLLARS, *remitted directly to the Publishers*, the LIVING AGE will be punctually forwarded for a year, *free of postage*.

An extra copy of THE LIVING AGE is sent gratis to any one getting up a club of Five New Subscribers.

Remittances should be made by bank draft or check, or by post-office money-order, if possible. If neither of these can be procured, the money should be sent in a registered letter. All postmasters are obliged to register letters when requested to do so. Drafts, checks and money-orders should be made payable to the order of LITTELL & GAY.

Single Numbers of THE LIVING AGE, 18 cents.

THE ANGELS' GREETING.

Come to the land of peace!
Come where the tempest hath no longer sway,
The shadow passes from the soul away,
The sounds of weeping cease.

Fear hath no dwelling there!
Come to the mingling of repose and love,
Breathed by the silent spirit of the dove
Through the celestial air.

Come to the bright and blest,
And crown'd forever! Midst that shining band,
Gather'd to heaven's own wreath from every land,
Thy spirit shall find rest.

Thou hast been long alone:
Come to thy mother! On the Sabbath shore,
The heart that rock'd thy childhood, back once more
Shall take its wearied one.

In silence wert thou left:
Come to thy sisters! Joyously again,
All the home voices, blent in one sweet strain,
Shall greet their long bereft.

Over thine orphan head
The storm hath swept, as o'er a willow's bough:
Come to thy father! It is finish'd now;
Thy tears have all been shed.

In thy divine abode,
Change finds no pathway, memory no dark trace,
And, oh! bright victory, death by love no place.
Come, spirit! to thy God.

School and Home.

DEAD, YET SPEAKING.

BY THE AUTHOR OF "JOHN HALIFAX, GENTLEMAN."

"I have been dying for years; now I shall begin to live." These were almost the last words of the Rev. James Drummond Burns, minister of the Presbyterian Church at Hampstead, who died of consumption abroad, in 1865, deeply beloved and lamented.

Dead, and alive again. Alive to us,
Who through the long, long lapse of years still mark
The after-glow thy sunset luminous
Threw back upon our dark.

Alive to God, and to his work divine,
Though in what sphere we know not, nor need know:
Content to follow those dear steps of thine,
And where thou goest to go.

The blessings of the happy and at rest,
The sorrowful, and those whose sorrows cease,
Blossom, like April daisies, on thy breast,
Sleeping the sleep of peace!

But far beyond all sound of earthly strife,
Or silent slumber 'neath this long-green sod,
Thou art passed, triumphant, into perfect life,
The soul's true life in God.

Sunday Magazine.

BIDE A WEE, AND DINNA FRET.

Is the road very dreary?
Patience yet!
Rest will be sweeter if thou art aweary,
And after night cometh the morning cheery,
Then bide a wee, and dinna fret.

The clouds have silver lining,
Don't forget;
And though he's hidden, still the sun is shining;
Courage! instead of tears and vain repining,
Just bide a wee, and dinna fret.

With toil and cares unending
Art beset?
Bethink thee, how the storms from heaven descending
Snap the stiff oak, but spare the willow bending,
And bide a wee, and dinna fret.

Grief sharper sting doth borrow
From regret;
But yesterday is gone, and shall its sorrow
Unfit us for the present and the morrow?
Nay; bide a wee, and dinna fret.

An over-anxious brooding
Doth beget
A host of fears and fantasies deluding;
Then, brother, lest these torments be intruding,
Just bide a wee, and dinna fret.

Leisure Hour. S. E. G.

GATHERED ROSES.

Only a bee made prisoner,
Caught in a gathered rose!
Was he not 'ware, a flower so fair
For the first gatherer grows?

Only a heart made prisoner,
Going out free no more!
Was he not 'ware, a face so fair
Must have been gathered before?

Spectator. F. W. B.

From The Westminster Review.

PRE-CHRISTIAN DISPENSARIES AND HOSPITALS.*

FEW movements of recent times have acquired more popularity than the "Saturday" and "Sunday" Hospital Fund. The terrible fact of pain and suffering appeals to our common humanity, and awakens the deepest feelings of sympathy in the hearts of rich and poor alike: "*Non ignara mali miseris succurrere disco.*"

The movement has also called forth some inquiry as to the origin of hospitals, and Jews and Christians both contend for the honor of having given the first hospital to mankind. The impression that hospitals are a Christian innovation is much more widely spread than persons competent to judge of its legitimacy might suppose. Canon Farrar, in a "Life of Christ" which has acquired some popularity, says, "Amidst all the boasted civilization of antiquity there existed no hospitals, no penitentiaries, no asylums." Professor Lightfoot stated, at the opening of a hospital last year, that hospitals were "a creation of Christianity." It may, therefore, be of some interest to trace the history of the rise of hospitals in the nations of antiquity; and to show that they have not been confined to any one age or nation, and that they are the natural outcome of that tender compassion for suffering humanity which is characteristic of all civilizations and of every cultured religion.

The hospital is simply the development of the dispensary, which is a necessary requirement of the medical officer appointed and paid by the State for the relief of the sick poor. Some room is required by the medical officer in which to see his patients and dispense the drugs, and this room naturally developed into the hospital ward, where the patients could be continuously under his eye, and be more carefully attended than in their own homes. It is therefore in the medical officer appointed and paid by the State that we are to find the earliest germ and first idea of the vast network of hospitals which has spread over the civilized countries of the world.

These medical officers were an institution in Egypt from a remote antiquity, for in the eleventh century B.C. there was a college of physicians in the receipt of public pay, and regulated by law as to the nature and extent of their practice. At Athens, in the fifth century B.C., there were physicians elected and paid by the citizens; there were also dispensaries in which they received their patients, and we find mention made of one hospital. In the fourth century B.C. an edict was promulgated in India by King Asoka commanding the establishment of hospitals throughout his dominions; and we have direct proof that these hospitals were flourishing in the fifth and in the seventh centuries A.D. There was probably a leper-house outside the walls of Jerusalem; and medical officers were attached in early times to the temple, and in later times to the synagogues. Among the Romans under the empire, physicians were elected in every city in proportion to the number of inhabitants, and they received a salary from the public treasury. And the ancient Mexicans had hospitals in the principal cities "for the cure of the sick, and the permanent refuge of disabled soldiers." Army surgeons are of very remote antiquity, for we read of them in Homer; and they won the admiration of Plato, because "they were heroes as well as physicians;" but there is no notice of the military hospital before the reign of Hadrian. Hospitals exclusively for the treatment of the insane are of comparatively modern growth, and are first found among the Mohammedans; they afterwards spread among Christian countries, *the earliest being found in Spain, the country most influenced by Mohammedan thought.**

It was around the temples that the early medical schools centred, for it was natural to regard the "divine art of healing" as a gift of the gods.* It is Brahma who writes the Ayur-Veda, the science of life; it is Æsculapius who appears in human form at Epidaurus and extends his saving right hand over all the earth to heal the souls that are in error and the bodies that are diseased; † and Prometheus in the midst of his sufferings declares that he has gifted mankind with the true science of medicine.‡ The priests were the first physicians; and on the walls of the temples of Egypt and of Greece were suspended the observations and the votive tablets of the cures they effected. These tablets are very curious, because they are a strange medley of rational medical treatment with the superstition of charms and incantations; and they are most important, because they not unfrequently enable us to trace the rise of scepticism in the charm and incantation, and the struggle between the waning power of the priest and the increasing skill of the physician.

The Babylonians and Assyrians alone, among the great nations of antiquity, had no physicians. The sick man was laid on a couch in the public square, and the passers-by were required to ask him the nature of his disease, so that if they or any of their acquaintance had been similarly afflicted, they might advise him as to the remedies he should adopt.§ This custom commended itself to Herodotus, who thought it almost as wise as their other custom of selling the girls of the village in marriage, so that the "fairer maidens portioned off the plainer." As a consequence, incantations to drive out the evil spirit of disease were in much request, and the nature of their operation may be gathered from the following tablet:—

"God shall stand by his bedside; those seven evil spirits he shall root out and expel from his body; those seven shall never return to the sick man."*

(1.) Egypt claimed the invention of medicine.† This claim is partially recognized in Homer, when Polydamna gives medicinal herbs to Helen in Egypt, "a country producing an infinite number of drugs, and where the physician possesses knowledge above all other men;" ‡ and is fully endorsed by M. Chabas after a careful comparison of the medical papyrus at Berlin with the best medical works of Greece and Rome.§

The extreme antiquity of medical science in Egypt may be inferred from the fact that the medical papyrus at Berlin, fourteenth century B.C., contains the copy of a treatise on inflammation (*ouchet*) which was found "written in *ancient* writing, rolled up in a coffer under the feet of an Anubis in the town of Sokhem (Letopolis), in the time of his sacred Majesty Thot the Righteous. After his death it was handed on to King Snat on account of its importance. It was then restored to its place under the feet of the statue, and sealed up by the sacred scribe and wise chief of the physicians." ‖

Medical science attained so high a degree of perfection in Egypt, that there were specialists in the different branches of the art, and the physician was only allowed to practise in his own branch. There were oculists and dentists, those who treated mental disorders, and those who investigated obscure diseases—*οἱ δε τῶν ἀφανεῶν νούσων*.¶ There are medical papyri which treat of these several diseases. In the Hermaic books a whole chapter is devoted to diseases of the eye, and mummies have been found in Thebes with their teeth stopped in gold.** Athothos, son and successor to Menes, the first king of Egypt, wrote a book on anatomy.†† The

medical papyrus at Berlin contains a treatise on midwifery, and not less than one hundred and seventy prescriptions for the cure of diseases, of which the diagnosis is carefully recorded.* In these treatises diseases are regarded as enemies, not simply to be cured, but to be attacked, destroyed, driven forth; † a vestige, apparently, of the ancient superstition that diseases were devils which possessed the patient.

To guard the people against quacks and the rash experiments of young doctors, the Egyptian physicians were required to follow the rules laid down in the medical treatises preserved in the principal temple of each city; the idea being that the old must be better than the new.‡ Aristotle, however, says that they were allowed to alter the orthodox treatment; yet if they did so, it was at their peril, as their own lives were forfeit for the life of the patient.§ This rule, when followed, secured the physicians of Egypt from the accusation which Pliny brings against the profession in his day: "It is at the expense of our perils that they learn, and they experimentalize by putting us to death. The physician is the only person allowed to kill with impunity, the blame being thrown on the sick man who is dead and gone." ‖

In Egypt, about the eleventh century B.C., there was a college of physicians,¶ who seem to have belonged to the sacerdotal caste, as did also the embalmers who are styled "physicians" in Genesis. They were not confined to one sex; the sculptures confirm Exodus i. 15 that women practised medicine.

The physicians were the paid officers of the State, and we may therefore conclude that they were required to treat the poor gratuitously; ** and as they were not likely to attend the sick in their own houses, except in extreme cases, we may further assume that, as in the case of Athens, there were official houses to which the sick poor repaired at fixed times, which correspond to our medical dispensaries. Although paid by the State, they were allowed to receive fees.* This care for the sick poor is a trait of character we might naturally expect from a people on whose sarcophagi we meet with inscriptions which tell how the deceased "succored the afflicted, gave bread to the hungry, drink to the thirsty, clothes to the naked, shelter to the outcast; that he opened his doors to the stranger, and was a father to the afflicted."

In the time of Herodotus "every place in Egypt was full of doctors," whence Pliny concluded that no country was so unhealthy; yet Herodotus says that few countries were so salubrious, which he attributes to the uniformity of the climate.†

Although the older papyri show that the medical treatment of disease was rational, *post-mortems* even being made to discover the source of disease,‡ yet charms and incantations were by no means excluded; and dreams were granted to devout souls who had consulted physicians in vain, and the votive offerings of arms, ears, eyes, etc., which still adorn the ancient temples,§ show how readily the superstitious element found its place in Egypt, as it afterwards did in Greece and Rome,‖ and as it does to this day in many European Christian countries.

There is a curious inscription in the temple of the god Chonson at Thebes, which points to a struggle between reason and faith, between the skill of the physician and the prayer of the priest. Ramses XII. summons before him the "scribe of the houses of life," and orders him to select one who shall be "a man of an intelligent heart and skilful fingers," that he may be sent to cure the young princess of Bouchten. She is the "little sister" of the royal wife, and bears the Semitic name Bentrash. The physician fails to cure the damsel, for she is possessed with

an evil spirit. Then the god Chonson is sent from Thebes to Bouchten in a great barge, escorted by five smaller barges on the river, and by nobles, with the god's chariot and horses, along the banks. When the god arrives, he communicates to the princess "his virtue of life," and the evil spirit comes forth.* We, unfortunately, only possess the priests' version of the story; but it points to a rivalry between the rational science of the physicians and the superstitious faith of the priests.

The fame of the medicine of Egypt spread to all lands. Cyrus the Persian hears of it, and sends to King Amasis of Egypt for an oculist.† Darius the Great had at his court "certain Egyptian physicians, whom he reckoned the best-skilled physicians in the world." ‡ The Hebrew prophet Jeremiah says, "O virgin daughter of Egypt, in vain shalt thou use many medicines; thou shalt not be cured." § It lasted until the time of the Antonines, so that Galen, the "wonder-worker," thought it no small gain to have studied in the schools of Alexandria; ‖ and it is preserved to our own day, wrapped up like one of its own mummies, in the words *chemistry*, *alchemy*, which tell us that the cradle of medical science was in the land of the great god Chemmis, who had given to Egypt its ancient name, Chemi.¶

(2.) A story told by Herodotus of the Egyptian physicians at the court of Darius will serve to carry us from the school of Egypt to the schools of Greece. One day,** when mounting his horse, Darius sprained his foot. The Egyptian physicians thought it was a dislocation, and put the king to such pain by the violence of their treatment, that for seven days and seven nights his sleep went from him. On the eighth day some of the courtiers told him of a Greek prisoner among the slaves of Oroetes, named Democedes, who came from the famous medical school of Crotona. In such haste was Democedes summoned into the king's presence, that he appeared "just as he was, clanking his fetters and wearing his rags." He reversed the treatment of the Egyptians, and cured the king. From that day no one stood so high in the favor of Darius as Democedes. He also cured of a sore in the breast Atossa, daughter of Cyrus and wife to Darius, and she rewarded him by aiding him to make his escape to Greece; whence he returned to Crotona, and married the daughter of his fellow-townsman, Milo the Wrestler, who had carried off the prize six times at the Olympic and seven times at the Pythian games (sixth century B.C.). Crotona was celebrated quite as much for her athletes as for her physicians; indeed, it was a proverb that the last among the wrestlers of Crotona were the first among the other Greeks.* This is a point of extreme interest; the same place that produced the best trainer of athletes would naturally produce the best physician,† because the healthy condition of the man's body was the aim of both; and as the trainer would soon learn not to trust in charms and incantations as preparations for the games, so would the physician learn to distrust charms, and to strive after a rational system of medicine. The physicians of Crotona would have agreed with Plato that the art of the physician was to cure the sickness and the wounds of men of good constitutions only, and to leave the weak and sickly to their fate; and applaud him when he quoted the tradition that Asclepius had been struck by lightning because he so far forgot the sacred obligations of his art as to allow himself to be bribed to heal a rich man who was at the point of death. Indeed Plato complained of what he call "our present system of medicine" as being calculated to "educate diseases," and as opposed to the old practice of the guild of Asclepius. He lays the blame at the door of Herodicus, a trainer who had a sickly constitution: "He, by a happy combination of training and doctoring, found out the way of torturing, first and principally himself, and secondly the rest of the world, by the invention of a lingering death." ‡ Plato might laugh at Herodicus, nevertheless he was the master of Hippocrates, the "Father of Medicine" — fifth century B.C.

All medical science before the time of Hippocrates was, says Pliny, "lost in the densest night; he was the first to compile a code of medical precepts," § derived

partly from the traditions of the family of the Asclepiadæ to which he belonged,* and partly from the study of the votive tablets in the great temple at Cos.† Dion Cassius says that Democedes of Crotona and Hippocrates of Cos were the two most distinguished physicians of antiquity.‡ Galen tells us that the Asclepiadæ founded the three great medical schools of Rhodes, Cnidos, and Cos. These were Doric settlements,§ and we find that their influence survived as late as the fifth century B.C. by the use of the Doric dialect both in medical conversation and prescriptions,‖ and also in the prose oracles given at Delphi, which were so largely consulted by the sick.¶

At Athens, in the time of Plato, we find that some of the physicians were elected by the people and paid from the public treasury. Socrates, for instance, speaks of one "desiring to obtain a medical appointment from the government" (*ἰατρικὸν ἔργον*),** and there was a technical term applied especially to physicians who practised with a public salary, *δημοσιεύειν*.†† These State physicians, after they had been elected in the *Ecclesia* or other assembly,‡‡ appear to have appointed slave doctors under them to attend on the poor, while they attended on the rich, and either by their own or the eloquence of some friendly rhetorician §§ persuaded the patient to drink the medicine or to submit to the knife and the hot iron. Indeed this system of *persuasion* as a part of the medical art became at last ridiculous: "Foolish fellow! you are not healing the sick man, you are educating him; and he does not want to be made a doctor, but to get well;" ‖‖ and in the next generation it was completely exploded; for as Aristotle says, the duty of a physician is simply to prescribe.¶¶

Very different is the offhand manner in which the slave doctors treated their patients; they waste no words with them, but run about from one patient to another, and dose them as they think proper; or they "wait for them *in their dispensaries*," *ἐν τ. ἰατρείοις*.* This passage clearly shows that there were at Athens, in the fifth century B.C., dispensaries to which the sick poor repaired to be treated for their diseases; not indeed by the most skilful physicians, but by physicians paid by the State to look after their ailments. These dispensaries varied in number according to the prevalence of disease: "Where diseases increase in a State, then *ἰατρεῖα* are always being opened." †

The temples of Asclepius were, however, the schools in which the students who had taken the noble Hippocratic oath studied, partly from the votive tablets, and partly from the treatment of the patients who resorted thither. That patients did resort to the temples is evident from an amusing scene described by the slave who attended Plutus when he went to the temple to be cured of his blindness. When night came on, all were commanded to keep silence, and not to move should they hear the god passing before the altars. The slave peeps through a hole in his threadbare cloak, and sees the priest "consecrate into a sack" the offerings of cakes and dried figs made by the sick.‡ Afterwards there followed the mixing of the drugs with the pestle and mortar, and the anointing the eyes with the ointment. The patients were of both sexes, for it was an old woman whose savory posset excited the cupidity of the slave Cario.§

There is one, though we regret to say only one, hospital (*παιώνιον*) mentioned in Greek literature, and that only by one author, the comic poet Crates, middle of fifth century B.C. It was situated probably in the Piræus — *ἐπὶ τῆς θαλάσσης*.‖

The State physicians did not receive private fees, but their State emoluments may be guessed by the pay of Democedes before he was carried prisoner to the kingdom of Darius. He fled from his father, who was a celebrated physician of his day at Crotona, and came to Ægina, where his skill caused the State to hire him at £243, 15*s*. a year; in the next year the Athenians engaged him at £406, 15*s*; in the next, Polycrates obtained him for £487, 10*s*.¶ The first payment made to him by Darius was a pair of golden fetters, to remind him, perhaps, that although

he would now be laden with honors and wealth, yet he was to remain a prisoner, exiled from his native land.

(3.) Hitherto we have met only with State physicians and dispensaries, and but one hospital; it is to India we must turn to see a system of hospitals spreading over the country.

When Brahma took compassion on the weakness and suffering of mankind, and wrote for them the commentary on the Vedas, he devoted one treatise to the science of medicine. Hence it was that the ancient Hindus ascribed to the medical art a divine origin, and that the Brahmans were the first physicians. Fragments only of this Ayur-Veda remain, but they are sufficient to show an advanced knowledge of the art, in that they treat both of surgery and the practice of medicine.*

Soon after the conquests of Alexander the Great, Megasthenes the Greek was sent on an embassage to the court of Sandrocothes, where he resided for some years. Among his notes, preserved by Strabo, we find that "next in honor to the Sramans were the physicians, for they apply philosophy to the study of the nature of man; . . . they cure diseases by diet rather than by medicinal remedies." † The grandson of Sandrocothes was the celebrated King Asoka, 325–282 B.C., one of the greatest monarchs who ever graced a throne. He embraced the religion of Buddha, and almost immediately afterwards promulgated a series of edicts, some score of which still exist inscribed on pillars and graven in the living rock. Among these there occurs the following, as translated by Mr. Prinsep: "Everywhere within the province of Piyadasi (Asoka), the beloved of heaven, as well as in the parts occupied by the faithful, . . . and moreover within the dominion of Antiochus the Greek [the Bactrian kingdom], . . . everywhere the heaven-beloved Piyadasi's double system of medical aid is established — both medical aid for men and medical aid for animals — together with medicaments of all sorts which are suitable; . . . and where they are not, they are to be prepared, and to be planted, both root-drugs and herbs." ‡ There is also a legend that Asoka, seeing how people often died from diseases and sores which were at first simple and easily cured, established public dispensaries at the four gates of Patna.§ In the year 400 A.D., seven hundred years after Asoka's edict, the Chinese pilgrim, Fa-Hian, visited India, and casually mentions in his "Travels" that he found hospitals in complete working order at Asoka's own city of Patna: "The nobles and landowners of this country have founded hospitals in the city, to which the poor of all countries, the destitute, the cripples, the diseased, may repair for shelter. They receive every kind of requisite help gratuitously. Physicians inspect their diseases, and according to their cases order them food and drink, decoctions and medicines, everything, in fact, which may contribute to their ease. When cured, they depart at their own convenience." *

Two hundred and fifty years later (648 A.D.), another Chinese pilgrim, Hiouen-Thsang, visited India, and mentions hospitals at several places. At the Port of the Ganges "les rois qui aiment à faire le bien, y ont établi une *maison de bienfaisance*, qui est pourvue de mets recherchés et de médicaments de tout genre, pour donner l'aumône aux veufs et aux veuves, et secourir les orphelins." Elsewhere he says: "Les grands personnages des cinq Indes . . . ont établi des maisons de bienfaisance, où l'on distribue des boissons, des vivres, et des médicaments pour secourir les pauvres et les malades." "Il y avait jadis dans ce royaume une multitude de maisons de bienfaisance, où l'on secourait les malheureux." † These houses were *hospices* as well as hospitals at the time of Hiouen-Thsang's visit.

At the commencement of the present century there still flourished at Surat a hospital set apart for the treatment of animals. It covered twenty-five acres, and was divided into courts and wards for the accommodation of the dumb patients. When an animal broke a limb, or was otherwise disabled, the owner brought it to the hospital, where it was received without regard to the caste or the nation of its master, and was treated with the greatest care; and, if need be, found a peaceful asylum for the infirmities of old age.‡ "If proper inquiry were directed to this building," says Mr. Prinsep, "I dare say it would be discovered to be a living example — the only one that has braved twenty centuries — of the humane acts of Asoka,

recorded at no great distance on a rock in Guzrat."

Further investigation will doubtless bring to light many other instances of this wise and compassionate edict of Asoka having been put in force over the whole country; for, quite recently, Major Kittoe (1852) found, in the course of his excavations at Sarnath, "a large quadrangle or hospital, with pestles and mortars, etc."*

The great interest of these hospitals lies not only in the large-hearted toleration which opened them "to the poor of all countries," and in the liberality which supplied "help to all gratuitously," first fruits of that noble-minded charity which knows no distinction of race or creed in the presence of suffering humanity, and which found so tender an illustration in Christ's story of the good Samaritan, but also in the fact that these hospitals are an evolution such as we might naturally expect from the teaching of the religion of Buddha, which Asoka had adopted. The central point round which all the ethics of Buddhism revolve — the doctrine which imparts to it so great a vitality and strength — is the law of self-sacrifice carried to the point of complete devotion, so that a man should lay down his life for his fellow-men, and in certain extreme cases for the lower animals. Moreover, the problem of existence which Buddha endeavored to solve is the way by which mankind may be saved from disease, decay, and death. The life of the founder was in itself the highest ideal of his religion, for Buddha was manifested in the form of man because his exceeding love moved him with compassion for the sons of men; † and he left the home of his reputed father to live among the poor and wretched, in order that he might bring back those who have wandered from the right way, that he might enlighten those who are living in darkness and gloomy error, and that he might remove from the world all sources of pain and suffering and sorrow.‡

(4.) On passing from the East to the extreme West, we find that the ancient Mexicans had hospitals in the principal cities, "for the cure of the sick, and for the permanent refuge of disabled soldiers." Surgeons were placed over them, who were "so far better than those in Europe," says the old chronicler Torquemada, "that they did not protract the cure in order to increase the pay."*

This care for the sick and disabled might naturally be expected from a people who were accustomed to hear the form of absolution which followed on the confession of their sins close with the words: "Clothe the naked, feed the hungry, whatever privations it may cost thee; for remember their flesh is like thine, and they are men like thee;" † and who worshipped God as "the merciful and long-suffering, the enjoiner of charity." ‡

(5.) The history of medicine may be traced with tolerable clearness in the Hebrew nation.

So long as diseases were regarded as put upon and taken off men by Jehovah — as, for instance, in the passage, "I will put none of these diseases upon thee that I put upon the Egyptians, for I am Jehovah that healeth thee," § — the priests, as his representatives, were the physicians to afflict and to cure. The fame of King Solomon as a physician still holds its place in the traditions of the East, and the Talmud assigns to him a "volume of cures." After his time, when the priestly power declined before the majesty of the prophetic, the influence which medical skill gives among a rude people was eagerly grasped by the prophets, and medicine was taught in their "schools." Their sacred scriptures record that the prophets struck men with two of the most terrible diseases of the nation, leprosy and blindness, and that they cured the sick, and even raised the dead to life. At a prophet's word a king's hand is withered as he stands before the altar surrounded by his court; at the same word the hand is restored to its former strength. The decline of the healing power among the priests is probably marked by the chronicler's lament that King Asa, in his disease, "sought not to Jehovah, but to the physicians."

On the return of the exiles from Babylon, the medical art passed into the hands of the new power in the State — the scribes. They raised the dignity of the physician to a high pinnacle, and the knowledge of medicine became an essential qualification for membership in the Great Sanhedrim: "Honor a physician with the honor due unto him for the use

which ye may have of him; for the Lord hath created him. . . . He shall receive honor of the king." * The art reached its fullest development among the Essenes, a Jewish sect who lived an ascetic life, ruled by love to God and man. They studied the sacred books for the service of God, and medicine for the service of man.

The surgeon and the physician are treated as distinct functionaries in the Mishna.† We read of surgery in the Book of the Prophet Ezekiel, and curiously enough in connection with Egypt: "I have broken the arm of Pharaoh king of Egypt; it shall not be bound up to be healed, to put a roller to bind it." ‡ Rollers to bind are used to this day. The apothecary's trade is frequently mentioned; for instance, "The Lord hath created medicines out of the earth; . . . with such doth he heal men and taketh away their pains; of such doth the apothecary make a confection." § Josephus mentions female physicians.‖

Physicians had from early times been a necessity to the nation. Manetho's account of the Hebrew slaves in Egypt is that they were driven away by the king because they defiled the land with their leprosy. This disease became so identified with the nation, not only in their neighbors' eyes but in their own, that to the question asked in the Talmud, "What is the name of the Messias?" the answer is, "The Leper." ¶ This singular identification of the Messiah with the characteristic disease of the people obtained a place among the Christian legends of the Middle Ages. When, for instance, St. Francis d'Asissi dismounts from his horse to succor a leper, he finds in the leper the Christ.** This strange idea was probably founded on the Vulgate rendering of Isaiah liii. 4, "*Nos putavimus eum quasi leprosum.*" The ceremonial observances which required the lepers to "show themselves to the priest," assume a knowledge of medicine in some officials connected with the priestly order. Accordingly we find that physicians were in later times attached not only to the temple but also to the synagogues. They were elected, as were the Greek State physicians, by the voice of the people, to whom they were responsible.* The physicians in all times, whether priests, prophets, or scribes, received fees † — in early times, "bread and cakes and honey" from the poor, camel-loads of stuffs, with gold and silver from the rich; in later times, "such things as were commanded."

The contagious nature of leprosy required that the wretched patients should dwell apart from the abodes of men; so we read of them herded together in miserable groups prowling about the outer gates of cities, or wandering over the country, always raising their weird cry, "Unclean, unclean!" and standing afar off when they saw their fellow-men approaching. It is possible that houses may have been erected for their accommodation outside the city walls of some of the larger towns. Of one such house we read, but as in the case of ancient Greece, of one only, the "several house" into which King Uzziah retired when the "leprosy mounted into his forehead," and the priests with indecent haste thrust out from the sacred precincts of the temple the sorrow-stricken leper who himself "hasted to go out." Ewald, Gesenius, and other great scholars, see in this "several house," or "house of separation," or "free house," a hospital corresponding to the leper hospitals of later times. It may have been in this house of separation that some leper wrote the touching "prayer of grievous complaint," in which he cries aloud to Jehovah: "I am counted with them that go down into the pit, free among the dead. Lover and friend hast thou put from me, thou hast made me an abomination unto them. I am shut up, I cannot come forth." ‡

Care for the sick, a characteristic of the Jews to this day, is what we might look for in the nation whose sacred writings inculcate as the highest religion love to God and love to man; and whose greatest rabbis taught, "Be not slow to visit the sick, for that shall make thee to be beloved," § and raised the kindly act towards the sick man to the dignity of a deed done to God, for "the glory of God hovers over the couch of the sick." ‖

(6.) The elder Pliny tells us that for six hundred years the Romans had shown a repugnance to the art of medicine, and he boasts that medicine is the only one of the arts of Greece which Romans refuse to cultivate. It was on this account, he says, that the temple of Æsculapius was built, in the first instance, outside the city walls, and was afterwards removed to an island in the Tiber. Plutarch revenges himself by saying that the temple was built in imitation of the famous temple at Epidaurus, which was situated at a distance of five miles from the city for the sake of the fresh air and change of scene.

Pliny is probably correct in stating that in the earlier days of the republic physicians were unknown, and that for some time afterwards they were confined to foreigners, chiefly Greeks and Egyptians,* and to slaves. The first physician who came from Greece to Rome, in 219 B.C., had a surgery (*taberna*) provided for him at the public cost, at the Acilian crossway; the Romans called him *vulnerarius*, the wound-curer; but he hacked and cauterized his patients so mercilessly, that his name was changed to *carnifex*, the executioner.† Cato hated the Greek physicians because they spoke of the Romans as "barbarians" and "clodhoppers;" and he became possessed with the idea that they meant to poison the Romans wholesale with their drugs. The use of Latin by physicians in our day in their prescriptions may be a survival of the idea which is by no means confined to Pliny's time, that "people lose confidence in that which is intelligible to them;" for, as he says, even the few Romans who studied medicine thought it necessary to write their prescriptions in Greek, for "if they should attempt to treat of the disease in any other language, they will certainly lose all credit, even with the ignorant who do not know a word of Greek." Slaves skilled in medicine were attached to all the great houses, and Justinian allows the maximum price of sixty gold pieces to be paid for both male and female.‡

Pliny accuses the physicians of extreme avarice. Indeed, their gains were so large that skilled artisans — bootmakers, carpenters, tanners, and even gravediggers — became doctors, and unsuccessful doctors sank back into the humbler trades.

‡ Code, vii. 7, 1, 5.

Nuper erat medicus, nunc est vespillo Diaulus.
Quod vespillo facit, fecerat et medicus.*

Their charlatanism, bad manners, and ignorance were so great, that Galen says the greater part of them could read only with difficulty, and he counsels his colleagues to be on their guard lest they should make grammatical blunders when conversing with their patients; and he moreover complains that at the bedside of the patient the rival doctors so far forget themselves that they abuse each other, put out their tongues, and even come to blows.† Pliny laments that there is no law to punish their ignorance, and he chuckles over the well-known epitaph, "*Turbâ medicorum perii.*" Under those circumstances, one is not surprised to find *ex votos* of arms and legs, ears and eyes, and tablets commemorative of successful dreams, adorning the temples both at Rome and in the provinces. One tablet reminds us of the story of the cure of the young Egyptian princess by the god after the failure of the physicians; it is the tablet of a blind slave at Rome to Minerva Medica, the "good goddess," for the restoration of sight: "After he had been given up by the physicians, he was cured by the grace of our lady and the use of her medicines." ‡ It was this superstitious element which caused the miraculous cures of the Emperor Vespasian at Alexandria to be attested by many among the great multitude who beheld them, even after the Flavian line had become extinct, and nothing was to be gained by falsehood.§

Physicians and surgeons followed each their own functions; and we read of specialists, oculists, dentists, aurists (*auricularii*), etc.; there were court physicians, among whom we read of one who was above the others (*supra medicos*); and women (*medicæ*) were employed for diseases of women and children.

In the time of the Antonines we read of a "chief of the physicians," ἀρχίατρος.‖ *Archiatri populares* were provided for every city according to its size; they formed a college of physicians, and seem to have held a sort of examination of persons qualified to practise. They were elected by a vote of the citizens, and received a salary from the public treasury. They were required to treat all the sick

who came to them free of charge, but they were appointed primarily for the sake of the poor.*

It is, however, at Epidaurus that we find a house which was one of the noblest expressions of the tender feeling and gentle sympathy with suffering humanity which in the second and third centuries of our era were becoming such marked characteristics of the cultivated Roman gentleman. Many cultured Romans took the same tour as that described by Livy: Æmilius Paulis went to Athens, "filled with the decayed relics of ancient grandeur;" thence to Corinth, with its beautiful views and busy modern life; and thence to Epidaurus, famous for its temple of Æsculapius, "then rich in offerings, which the wealthy had dedicated to the deity in acknowledgment of the remedies which had restored them to health, but *now*," he adds sorrowfully, "filled only with their traces, showing whence they have been torn away." † As the tourist of the time of the Antonines approached the walls which surrounded the temple, the sacred grove, and the massive buildings (whose ruined mounds to this day attest their former magnificence ‡), he would see a house built before the entrance to the gate to shelter the aged, and the delicate women, who were forbidden to tarry within, lest the sacred precincts should be defiled by those who were entering and by those who were leaving life. That house had been erected by the emperor Antoninus, who won from the Roman senate and people that most touching of all the titles of antiquity, the Pius.§

(7.) We read of military surgeons as early as the time of Homer. "In those days," says Plato, "the sons of Asclepius were heroes as well as physicians; for when the arrow of Pandarus wounded Menelaus, they sucked the blood out of his wound, and sprinkled soothing remedies (Il. iv. 218): these remedies they thought to be enough to heal any man whose constitution was healthy and sound." ‖ The State physicians of Egypt were forbidden to take fees when attached to the army in time of war.¶ Cyrus employed surgeons to march with his army; so did the Spartans. Among the Romans, soldiers dressed each other's wounds until the time of Augustus, when we first hear of military surgeons. The German wives and mothers "did not fear to search for and to count the gashes" of the wounded heroes whom they had accompanied to the battle.*

It is not, however, until the reign of Hadrian that we find the military hospital, which is called *valetudinarium*. It was under the control of the prefect of the camp, whose duty it was to see that the surgeons visited their patients.† These *valetudinaria* were always attached to the winter quarters, and those generals who visit the sick and wounded are applauded.‡

We have already seen that the ancient Mexicans had hospitals for the care of the sick, and as a refuge for disabled soldiers, institutions which may have foreshadowed our Chelsea Hospital and Les Invalides at Paris.

The most remarkable instance of a military hospital was one in Ireland. The palace of Emania was founded about 300 B.C. by the princess Macha of the Golden Hair, and continued to be the chief royal residence of Ulster until 332 A.D., when it was destroyed. To this palace were attached two houses,— one the house in which the Red Branch Knights hung up their arms and trophies; the other, in which the sick were cared for and the wounded healed; this latter was called by the expressive name, *Broin Bearg*, the House of Sorrow.§ The institution of the house of sorrow spread through Ireland under the influence of Christianity, and the ancient laws sanction the right of distress to provide for the sick "a physician, food, proper bed-furniture, and a *proper house*." ‖

(8.) Such was the progress made by some of the great nations in the noble effort to ameliorate the condition of the sick and suffering, when, towards the close of the fourth century after Christ, Christianity inspired the world with the enthusiasm of humanity. A noble Roman lady, Fabiola, devoted her princely patrimony to build, in a salubrious quarter near the city, a house for the reception of the sick and the infirm who were found homeless and without shelter in the streets. This,

says St. Jerome, was the first νοσοκομεῖον.* The fame of this institution spread throughout the Roman Empire, "from the Egyptians and the Parthians to the isles of Britain." The work was carried on by St. Basil, who built outside the walls of Cæsarea in Cappadocia, probably on the site of an earlier hospital,† the massive pile of buildings which, says St. Gregory Nazianzen, "rose to view like a second city, the abode of charity, the treasury into which the rich poured of their wealth and the poor of their poverty. Here disease is investigated (φιλοσοφεῖται) and sympathy proved." No building of antiquity seemed to him to equal this hospital, not even "Thebes with its hundred gates, nor the walls of Babylon, nor the pyramids of Egypt, nor the Colossus of Rhodes, nor the tomb of Mausoleus." "My brother's hospital," he says, "is a tabernacle of witness to the world, like unto that of Moses." ‡

St. John Chrysostom found at least one hospital already existing when he went to Constantinople, and he built many more on the plan of the *Basileas*. We may form some idea of the number of hospitals at Alexandria from a law of Honorius which mentions no less than six hundred nurses, *parabolani*,§ who were placed at the disposal of the bishop for the nursing of the sick — "*ad curanda debilium ægra corpora*."

Noble ladies like Fabiola gave themselves up to the work of nursing the sick. The empress Placilla visited the sick in their own homes and in the public hospitals, she stood at the bedside, she tasted the broth, handed the food, washed the cups, and performed other offices with her own hands, such as the meanest servants ordinarily did.‖ The aged bishop of Carthage, Deogratias, having sold the church plate to ransom the captive Christians, lodged them in two large churches, and every hour by night and day he visited them, with the physicians, and went from bed to bed to know of what each stood most in need.¶ In the great plague at Alexandria (A.D. 260–268) many of the brethren nursed the sick in the height of the disease; they saved many by their care, who rose from their beds to life, while they themselves fell struck by the plague unto the death: "They saved others, themselves they could not save." * This work of the Christians excited the emulation of the emperor Julian: "These impious Galileans give themselves to this kind of humanity;" and although he thought their motive base, yet † he orders Arsacius to "establish abundance of hospitals in every city, that our kindness may be enjoyed by strangers, not only of our own people but of those who are in need." ‡

To the great hospital at Cæsarea there was attached a "house of separation" for the lepers, of whose wretched condition St. Gregory of Nyssa gives such an appalling account. They wandered in troops over Cappadocia in search of food, and exposed to the inclemency of the seasons. They resembled corpses before death. Clothed in rags, supported by a staff fastened with a string, not to the hands, which had been eaten away by disease, but to the stumps of the arms which were left, driven from the towns and the assemblies of men, tracked as hunters track wild beasts, they did not dare even to approach the wells and fountains on the roadside to quench their burning thirst. "Basil it was who persuaded men not to scorn men, nor to dishonor Christ the Head of all by their inhumanity towards human beings." §

Most if not all of these early Christian institutions were *hospices* as well as hospitals — the home of the stranger no less than the home of the sick. It is interesting to note the difficulty of finding a word to express these new buildings. St. Jerome uses a Greek word, νοσοκομεῖον, for the house built by the gentle lady who herself *cared for the sick* whom she received. St. Basil evidently felt a difficulty in finding a name for his institution. In one letter he speaks of it as the support of the poor, πτωχοτροφεῖον,‖ in another as a place of lodging, καταγώγιον,¶ open to strangers passing through the country, and to those who need (θεραπείας) peculiar treatment by reason of the state of their health; while Sozomen falls back upon its popular name, *Basileas*, "that most famous lodging for the poor founded by Basil, from whom it received the appellation which it still retains." ** It was reserved

for later times to take one of the most sacred ideas of ancient days, hospitality, and inspiring it with the spirit of Christianity to enshrine it for future ages in the home which is open to all who are suffering from sickness and from pain: "Go out into the streets and lanes of the city, and bring in hither the poor, and the maimed, and the halt, and the blind, . . . that my house may be filled."

Thus we see that the glory of Christianity does not lie in having originated the idea of hospitals, but in having seized it, like the runners the torch in the ancient games, and carried it forward with brighter flame and more intense enthusiasm. The fame of Fabiola and St. Basil has been immortalized by St. Jerome and the Gregorys; the edict of Asoka is graven with a pen of iron in the rock, a living witness to the noble thoughts of his kingly mind; the house of sorrow, which was built within the ancient *rath* that exists to this day, speaks of the tenderness of the princess Macha; but no trace remains of the names and titles of the men and women who built the solitary hospital on the seashore in the Piræus, who founded the house of separation for the lepers in Judæa, and the home for the disabled soldiers in Mexico; or of those, even more illustrious, who in ancient Egypt conceived the idea of the physician paid by the State to tend the poor — an idea which contains the germ that has borne fruit in the vast network of hospitals which are rapidly spreading over the continents of Europe and America. Their names may be forgotten, but their deeds are immortal; they have joined

that choir invisible,
Whose music is the gladness of the world.

A Jewish legend, preserved in the Haggadah, tells us that Abraham wore upon his breast a jewel "whose light raised those who were bowed down and healed the sick;" and that when he died it was placed in heaven, where it shone among the stars. Countless as the stars of heaven and as the sand on the sea-shore are the men and women of all countries and of all creeds who have worn next their heart the patriarch's jewel of light.

[*Published by arrangement with* HARPER & BROTHERS.]

DA CAPO.

BY MISS THACKERAY.

CHAPTER III.

ON THE TERRACE AT BERNE.

THERE is a stone basin full of water in an old city in Switzerland, over which a shady stream of foliage waves against the sun. The city arms are emblazoned upon the stone, and the flood of green overflows its margin. In the autumn the leaves glow, gleam, change into flame or ashes, tendrils hang illumined over the brimming fountain, which reflects the saffron and the crimson overhead. The townswomen come and fill their brazen pans and walk away leisurely, swinging their load and splashing the footway. The sloping street leads to a cathedral, of which the bells come at stated hours, suddenly breaking the habitual silence, and echoing from gable to gable.

A young English lady passing by one autumn day went and stood for an instant by the fountain, leaning over its side. The naiads, in their Sunday bodices and well-starched linen, who were already there filling their brazen cans, watched her with some interest, and looked curiously at the stranger's bright, startled eyes, her soft grey felts and feathers, and her quick, all-pervading looks. They themselves were of the placid, broad-faced, broad-shouldered race of naiads who people Switzerland, who haunt the fountains, who emerge from châlets and caves with sparkling cups in their hands, who invite you to admire their fresh watercourses through kaleidoscopes of various tints.

There is a certain sameness, but an undeniable charm, about Swiss maidens, especially on Sundays, when they put on their pretty silver ornaments, plait their shining tails of hair, while their fresh and blooming faces certainly do credit to their waters. Felicia had been standing interested and absorbed for some minutes. She was watching the stream flow on; wondering whether life hard won in the Bernese valleys would not be more satisfying on the whole than it seemed to her day by day, flowing, unheeded, in her own lonely and luxurious home. Presently she caught a whispered comment from one nymph to another, "She is not alone; here is the company coming from the Falcon to find her." Then Miss Marlow started, looked up, hastily turned away,

Original from CORNELL UNIVERSITY

and began walking determinedly away along the street. She had come out to avoid her company — that was the truth. For a week she had been travelling with them and glad to be in their society; but that morning a letter had reached her from home which had strung her to some other key, and which made her want to be alone for a little to realize her own mind, to hear her own voice, and listen to that of an old friend speaking across five years. Was Baxter right when he thought that a letter was nothing? His letter certainly had a voice for Felicia. They had never had one word of explanation before or since they parted. There had been no promise given on either side; and yet she had considered herself in some implied way bound to this absent person whom she had not seen twenty times before James Marlow died, and who had not come back to her, except once with a shy, cruel, stiff message.

Felicia flitted away, as preoccupied as Baxter himself had been with certain events of former years. The houses on either side of the street stood upon their arches, the broad roofs cast their shadows, the quaint turrets turned to daily domestic use protruded from the corners, pigeons flew whirring across her footsteps. The street was called the *Street of the Preachers*. Felicia spelled it out, written high against a gable, and as she read the words, all the cathedral chimes began preaching overhead, sounding, vibrating, swinging through the air; the sunlight broke out more brightly, doors opened, and figures passed out on their way to the cathedral, from whence a little procession came slowly to meet her. It was headed by a sleeping baby lying peacefully frilled and pinned on to a huge lace pillow, with a wreath of silver flowers round its little head. On its placid little breast a paper was laid with a newly-bestowed name carefully written out, with many simple-minded flourishes.

A little farther on a closed house opened, and a tall and solemn-looking personage issued forth, some quaint ghost of a past century, with a short Geneva gown, and a huge starched ruffle round his chin, walking with a deliberate step. The apparition crossed the piazza, passed under the statue (it seemed to be brandishing a bronze sword in its country's defense, against the scattered and mutilated wreaths that lay on the steps at the horse's feet); then the cathedral doors opened wide to receive this quaint ghost of another time and faith. It passed on with one or two people who had been standing round about. The bells gave a last leap of welcome, and then were silent, and the doors closed with a solemn bang.

Felicia noted it all, interested in spite of herself and her own abstractions. Sometimes in our perplexities the lives of other people seem to come to reassure us. Have they not, too, been anxious, happy, died, lived, walked from house to house, stood outside and inside cathedral porches, as little Felicia stood now, staring at the saints over the doorway? It was a whole generation of ornamental sanctities, all in beatitude no doubt, and independent of circumstances: some were placidly holding their heads in their hands, some contemplating their racks, others kneeling on perilous ledges. Felicia was no saintly character, but she had gone through a certain gentle martyrdom in her life, short as it was. Now she took a letter out of her pocket, and looked at it throughtfully, and read it once again. It had been sent on to her from her own house, and had been waiting for her at the hotel when she arrived that morning, with a pile of bills, invitations, demisemiquavers of notes, in the midst of all of which this chord suddenly sounded:

"My dear Miss Marlow, — I have thought it possible that you have understood the reason which has prevented me from troubling you all this long time, and which made me wish for some sign from you, before I again asked to see you. Before I left England it seemed to me more and more difficult to see you, or to come unasked to Harpington without probable misconstruction. In India one report reached me after another, and some not unnatural feeling prevented a proud man from wishing to appear to put himself into competition with a crowd of others, whose personal advantages seemed undeniable; and I remained, sorry and disappointed, and knowing that it was my own fault that I had not seen you once more. I now think that for many reasons, my own peace of mind being one of them, this indefinite estrangement between two old friends should not continue. I am at home again for six months, and staying at the Cottage with Lucy and my cousin Emily Flower. I shall come to-morrow to see you, and to hear from your own lips upon what terms you would wish henceforward that we should meet.

"Believe me always

"Faithfully yours,

"A. H. Baxter.

"The Cottage, Harpington."

It was a difficult letter to read: was it very difficult to answer? Felicia was both hurt and touched — hurt by the long mistrust and doubt which were implied by this delay, touched by this long-delayed confidence. If the writer had only come to her, as James had no doubt intended him to do, helped her in her hours of loneliness and sorrow, proved himself the stay and comfort for which she had longed, how happy they might have been all this time! If instead of speculating anxiously, comparing his advantages with those of others who were nothing to her, he had but forgotten himself for her, how different these last few years would have seemed to her, how much less sad, less drearily gay, less noisy, less confused! She had had a right to be hurt, to give no sign. Did he deserve forgiveness now? If he had really loved her, would he have treated her so cruelly? or did he only think that she loved him? Her eyes filled with tears — tender, angry drops that she impatiently dashed away.

Felicia walked on beyond the cathedral gates to the terrace close by — a delightful autumn garden for children and old people, with a wide valley and a line of distant hills beyond the walls. All the leaves were falling from the trees, and the brown chestnuts were dropping with the sudden swift gusts of wind; the country flushed with a bright tumult of sunshine and clouds; the river rolled with a full silver rush; the streets below were piled up against the very foot of the dizzy terrace walls; as seen from the high cliff, the Bernese men and women seemed like toys for children to play with — tiny figures that passed and re-passed, intent upon their Lilliput affairs, upon rolling a barrel or turning a wheel, or upon piling a stack of wood; in windows and garrets, upon terraces and outstanding balconies, everywhere, people were occupied, passing and re-passing. The whole business of their microscopic life seemed scarcely so important as the children's game on the cathedral terrace: they were shouting as they ran, and picking up dry leaves and brown shining chestnuts that fell from the trees.

Felicia was standing against the terrace wall, still reading her letter, still thinking over the meaning of its somewhat abrupt sentences. They were not unlike Baxter's own way of speaking, stiff, abrupt, melting now and then for an instant, and then repelling again. The girl covered her eyes with her hand, trying to recall the vivid past more vividly. She was changed, this she knew, since those childish days when her whole heart's emotion had overpowered her so easily, and she had appealed in vain against her cruel condemning fate; she wanted something more now than she had wanted then; she had learned to mistrust her own impulses as well as those of the people she lived with. She wanted to trust as well as to feel; she wanted proof as well as the expression of good-will. Poor little Felicia, it was not for nothing that she had been an heiress all this while, warned, flattered, surrounded, educated by cruel experience. All that was past now in her short life seemed suddenly in existence again, came as a wave in between her and the man she had loved; it seemed to float them asunder as she conjured up his image; and so it happened, by some curious chance, that they met. As she wiped her eyes, her heart seemed to cease beating for an instant. What extraordinary realization was this? Who was this coming across the shadow of the chestnut-tree? Felicia, looking up with a start, found herself face to face with a tall man who had slowly followed her all this time; the hand that had written the letter was held out to her, and the letter seemed to take voice and life, and to say, "It is I; don't look frightened." The strangest things cease to be strange after a moment. Miss Marlow was accustomed to face possibilities, and as for Colonel Baxter, had he not followed her all the way from the fountain?

"Is it really you?" she said, looking more lovely than he had ever seen her look before.

Colonel Baxter smiled admiringly, and held out his hand. Miss Marlow flushed crimson, and looked up into his face an instant before she took it. He was altogether unaltered; he did not look older, he did not look gladder. He was moved, but less so than she was; his dark face seemed pale, somehow, and thin. She could not see very clearly, she was too much troubled and excited.

First meetings are curious things: all the long habit of separation seems still to be there; all the long days that have come to divide, the very anxieties and preoccupations that have made the time so heavy, now seem to thrust themselves in between those who have yearned for each other's presence, and the absent are come home at last; but as people are not all gone when they first depart, so they are not always quite come when they meet after long separation.

"I have just been reading your letter,

Colonel Baxter," said Felicia, quietly, and regaining her composure.

"I heard you were abroad from your housekeeper," said Colonel Baxter, "and I thought that — that I might as well follow my letter," he said, with an odd expression. All this time he had been so afraid of what Felicia might think; and now she was there before him, more charming, more beautiful even than he had remembered her. His scruples were all forgotten; they seemed unkind, almost cruel. Her eyes fell beneath his look; her face changed; a dazzle of sunlight came before his eyes. It may have been the falling leaves, the wind stirring among the branches; it may have been his own long-pent emotion; but it seemed to him suddenly as if he could read what was passing in her mind, as if some vibration had swept away all outward conventional signs. He was a silent man usually, not given to much expression, but at this moment the feeling that had long been in his heart overmastered everything else. What was her money to him at that instant, or his own disadvantages? He even tried to remember them, but he could not recall one single impediment between them.

"You do not know what a struggle it has been to me to keep away! Can you forgive me?" he said, going straight to the point — ignoring all he had meant to say, to explain, to withhold.

"I do not quite forgive you," said Felicia, smiling with tears, and once more responding to this new never-forgotten affection, by some instinct against which she could not struggle. As they stood there a swift western gale began to blow; the leaves showered from the trees; the chestnuts dropped over the terrace and beyond the wall; the children scampered through the changing lights. What had not happened in this moment's meeting? "No, I can't quite forgive you," repeated Miss Marlow. "Where have you been all this time? What have you been doing? What were you thinking of?"

He could scarcely answer for a minute, though he looked so calm. He was more really overcome, perhaps, than she was. He was blaming himself unsparingly, wondering at his pride, the infatuation which had kept them apart; wondering at her outcoming pardoning sweetness and welcome. Baxter, who had been imbittered by various mischances; Felicia Marlow, whose pretty little head had been somewhat turned of late by the dazzling compliments and adulations which she had met with, had both forgotten everything in the present, and met each other with their best and truest selves, surprised by the chance which seemed at last to have favored them. Details did not exist for either of them. At that minute Felicia felt that the future was there facing her with the serious and tender looks. Baxter also thought that at last, leaving all others, she had come straight to him, confiding with perfect trust. With a silent triumph, almost painful in its intensity, he held her hand close in his.

"Nothing shall ever come between us again," he said. "Nothing — no one." Was fate displeased by his presumption? As he spoke, a cheerful chorus reached them from behind, a barking of dogs, a chatter of voices. Felicia, blushing, drew her hand away from Baxter. A scraping of feet, and in one instant the couple seem surrounded — ladies, gentlemen, parasols, a pug-dog. "Here you are; we saw you from the place. Why did you run away?" cries a voice. Felicia, with gentle confusion, began to name everybody: "Mrs. Bracy, Mr. Jasper, Mr. Bracy, Miss Harrow. Dear Mrs. Bracy, you remember our James's friend, Colonel Baxter?"

"We have met in Queen's Square," said Mrs. Bracy, with her most graciously concealed vexation. Had she not brought Felicia abroad expressly to avoid colonels of any sort?

CHAPTER IV.

BEARS IN THEIR DENS.

BAXTER found it almost impossible to adjust himself suddenly to these unexpected circumstances, to these utter strangers, complacently dispersing his very heart's desire — so it seemed to him.

The results seemed so very small, compared to the intolerable annoyance inflicted upon himself. His was not the best nor the most patient of tempers, and he would gladly have dropped Mr. and Mrs. Bracy, Mr. Jasper, and Miss Harrow too, over the terrace at a sign from Felicia. But she gave no sign; she seemed — could it be? — almost relieved by their coming. In one instant all his brief dream, his shelter of hope, seemed shaken, dispersed: not one of these people but came in between him and her; they did it on purpose. Couldn't they see that they were in the way? I am not sure that Mrs. Bracy did not do it on purpose. She took the colonel in at a comprehensive glance. Cold, clear, that look seemed to him to be a wall of well-polished plate-glass let down between him and Felicia, who had in some

confusion accepted Mr. Bracy's arm, and was already walking away and leaving Baxter to his fate. "We are going to the bears," cried Mr. Bracy, over his shoulder. "Flora, are you equal to the walk, my love? Jasper, take care of your aunt. What are you looking at?"

Jasper started at this address. He had been standing motionless, gazing up at the sky, and he now turned round. He was a young man about five or six and twenty, peculiar in appearance, and curiously dressed; his hair was frizzed out something in the same fashion as his aunt's own locks. He wore an orange cravat; a blue linen shirt; rings upon his fore-fingers; buckles to his shoes; a silver pin was fastened to his wide felt hat. He was handsome, with one of those silly expressions which come from too much intelligent detail.

"I beg pardon," said he. "That amber cloud floating in ultramarine called me irresistibly;" and he pointed and stood quite still for an instant, as actors do at the play, who have, of course, to emphasize their movements as well as their words. Felicia had no great sense of humor, and to her Jasper Bracy's performance was most serious and important. Baxter could hardly help laughing; at least he might have laughed if he had been less disturbed.

Mrs. Bracy was a lady of about fifty; she must have been handsome once. Her dark hair was nearly black; her features still retained a somewhat regal dignity of hook and arch; her brow was shiny, and of the same classic proportions as her conversation.

"Do you wish to see the bears? Do you not agree with me, Colonel Baxter, that it is a cruelty to keep such noble animals in durance vile?" said Flora, turning to Aurelius, who looked very black and brown, and likely to growl himself.

"What do you say to a study from the life, my dear aunt?" said Jasper, joining in. "Some friends of mine are going to Poland bear-shooting next month. I should be glad to join them, and to make a few sketches from the dead carcass."

"Jasper, do not talk of such horrible necessities," said his aunt. "My husband must show you some lines I wrote upon 'Living Force restrained by the Inert,'" continued she, with a roll of her glossy eyes, "which bear upon the stern necessities of fate. Colonel Baxter, you do not seem to catch my meaning."

Felicia, who was a few steps ahead, turned at this moment, hearing Mrs. Bracy's remonstrances; and the kind gray eyes beamed some little friendly signal to the poor disconcerted colonel, who tried to overmaster his ill-humor and to attend to the authoress's quotations, and abruptly asked what was meant by "the inert."

"Bars, bars," said Flora; "those bars of circumstances that weigh upon us all; upon you, I dare say — upon myself, what is *this* but a bar, through which no woman can pass?" and she held up her fat finger, with the wedding ring which Mr. Bracy had doubtless placed there.

While Mrs. Bracy, now well launched in metaphor, revelled on from sentence to sentence, Baxter's attention wandered; he was watching the slight, graceful figure ahead, flitting over the stones by Mr. Bracy's dumpy little form, only he listened when Felicia's friend began to speak of Felicia. They had left the terrace by this time, and were walking down a shady side street. "Dear child," Mrs. Bracy was saying, and she pointed to Felicia with her parasol; "those who have her welfare at heart must often wonder what fate has in store for one so strangely gifted. You may think what an anxious charge it is for *me*, who am aware of all Felicia's exquisite refinement and sensitiveness of disposition. I have known her from childhood, although circumstances at one time divided us" (the circumstances being that, until three years before, Mrs. Bracy had never taken the slightest notice of little Felicia). "There are many persons who, from a subtle admixture of feelings, are attracted by our sweet heiress," continued the lady. "I will not call them interested, and yet in my heart I can but doubt their motives. You, Colonel Baxter, will, I am sure, agree with me in despising the mercenary advances of these — shall I call them — soldiers of fortune." Aurelius could hardly force himself to listen to the end of Mrs. Bracy's tirade, and gave her one black angry look, then suddenly strode on two or three steps, joined Felicia, and resolutely kept by her side. She looked up, hearing his step; but though she smiled, she continued silent. She would not — indeed she could not — talk to Baxter about indifferent subjects. Just at that moment she wanted to breathe, to collect her nerves and her mind. One vivid impression after another seemed to overcome her. Aurelius attracted and frightened her too; he seemed to have seized upon her, and half willingly, half reluctantly, she had let herself be carried away. It was a new Aurelius, a new Felicia, since that moment upon the terrace. Mr. Bracy rattled on with his usual good

humored inconsequence. Mrs. Bracy caught them up at every opportunity. Jasper, who prided himself upon his good-breeding, showed no sign of the annoyance he may perhaps have felt at the unexpected advent of this formidable arrival, for it was to charm Felicia that these strange attitudes and ornaments were assumed, and that Jasper sang his song. By degrees Felicia's composure returned. She was able to talk and be interested as the others were, to look at the dresses of the peasant people, at the little children in their go-carts, at the streams above the bridge and below it, at the green river rushing between the terraces and the balconies; she was able to throw buns to the bears, and to laugh when they rolled over on their brown woolly backs, with crimson jaws wide stretched; she was still a child in some things, and when she caught sight of the colonel's face she almost resented his vexed look. Why didn't he laugh at the bears' antics? Poor fellow! Mrs. Bracy's conversation might well account for any depression on his part. She seemed to scintillate with allusions.

Fortune-hunters? Felicia's rare delicacies of feeling, and her own deep sympathies, which enabled her and her only to know what would be suited to that young creature's requirements: she seemed to have taken such complete stock of the poor little thing that Aurelius wondered what would be left for any other human being. He knew it was absurd to be so sensitive. He might have trusted the woman who had loved him for years and years; but at this moment Mrs. Bracy's monotonous voice was ringing in his brain.

It seemed to him, notwithstanding all his experience and long habit of life and trust in Felicia, that he had been a fool. Was he to subject himself to this suspicion for any woman's sake? Had he placed his hopes upon some one utterly and entirely beyond his reach? Was not that the refrain of it all? Did Felicia mean him to bear alone? She did not seem to interfere; she avoided him; and yet surely they had understood each other when they had met only a few minutes ago. He could endure it no longer. He came up to Miss Marlow and said abruptly, "I am going back to the hotel now; will you come with me?"

"We are all coming," said Felicia, looking eagerly around; "don't leave us."

"I cannot stand your friend's conversation any longer," said Aurelius, not caring who heard him. "She is the most intolerable woman."

Felicia seemed to be gazing attentively at the bears, as she bent far over the railing. "You should not speak like that," she said, very much annoyed. "They are all so kind to me. What do you want?"

"I want to see you," he said, standing beside her. "I want to talk to you; and I wonder you don't see how cruelly you are behaving, keeping me in this horrible suspense."

"One more sugarplum, my Felicia, to give your four-footed friends," here says a voice just behind them, and a fat hand is thrust between them with a peppermint between the finger and thumb.

Baxter turned angrily away. "This is unbearable," he muttered.

Felicia looked after him reproachfully. He walked straight off; he crossed the place; he never looked back; he left her feeding the bears with sugarplums — left her to Mrs. Bracy, pointing out the advantages of national liberty, and the tints of the mountains, to Felicia, to Miss Harrow, to any one who would listen. Jasper, his aunt knew by experience, was not a good listener; he would compose himself into an attitude of profound attention, but his eye always wandered before long.

I suppose Felicia wanted a little time to think it all over, and to understand what had happened, and that was why she took no decisive step concerning her new lover. A curious feeling — surprise and confidence and quiet expectancy — seemed to have come over her. Baxter's impatient words had startled her. It was something she was unprepared for. Was this love, this sudden unaccustomed rule? — was she in future to be at another person's call? She had not taken the colonel's character into account; she had never thought about his character, to tell the truth, only that he had come, that the story of her youth had begun again. He had come, as she knew he would, and she had all but promised to be his wife. She did not want to go back from her word; but she wanted to wait a little bit, to put off facing this terrible definite fact a little longer, now that it had come so near. She had got into a habit of waiting. He ought to be happy: what more could he want her to say? And she wanted to be happy also, to rest and enjoy her happiness, and not to be carried breathless away by his impatient strength of will.

CHAPTER V.

THE FALCON HOTEL.

THE Falcon, at Berne, is a quiet, old-fashioned place, very silent and restful, and reached by flights of white stone steps. There are echoes, panels, galleries, round an old court, and a kitchen which is raised high above the ground. You can see the cook's white cap through a gable window, and taste the cook's good cheer in a panelled dining-room, at the end of a long empty table.

Now and then you hear a piano's distant flourishes, and if you go to the windows, you see a sleepy old piazza, and the serious people sauntering by, and your bedroom windows across the street.

Aurelius, who was moodily passing the deserted dining-room, was seized upon by Mr. Bracy, who had come in to order some refreshments. "Do you dine with us at the *table d'hôte?*" said the little gentleman. "There is no one else. My wife finds that absolute quiet is necessary to her. The afflatus is easily startled — easily startled away. I have known Flora lose some of her finest ideas through the inopportune entrance of a waiter or the creaking of a door. I myself one night thoughtlessly attempted to whistle that chorus out of 'Faust' (after all, who is there like Gounod in these days?), but the result was distressing in the extreme. I shall never forget watching the subsequent wandering about the room in a vain attempt to recall the interrupted thoughts."

"Do you live in this part of the house?" interrupted Aurelius.

"Come and see our rooms; we are opposite: the ladies are gone up to the top of the house to watch the sunset," said the friendly little man. "Charming girl, your friend Miss Marlow; so is Georgiana Harrow — a person of rare amiability of disposition. Ah! here is the waiter. At *quel heur table d'hôte* to-day?"

Aurelius left Mr. Bracy absorbed in the various merits of private and public refections, and crossed the street, and went in at the arched door opposite, and walked up the stone flights of the opposite house, now darkening with all the shadows of evening; he climbed straight up with steady footsteps to the upper story, and there, through an open door, he saw, as he had hoped, some heads crowding together and looking through an open window at a faint azure sky and all its dying daylights. Mrs. Bracy was busily pointing out each tint in turn. Jasper was criticising the colors, and comparing them with various bits of blue and red rag which he produced from his pockets. Miss Harrow was listening in admiration.

One person had heard Baxter's footsteps, and Felicia, guessing by some instinct that it was Aurelius, slipped unnoticed out of her corner and turned quietly to meet him, with all the evening's soft radiance shining in her eyes. Her sweet truthful look of welcome touched him and reassured him not a little. He forgot his irritation; for the moment he did not speak, neither did she; he could not waste this happy minute in reproach, and indeed he knew, as she did, that the whole company would surround them at the first spoken word. As they stood side by side, silent, leaning against the wall, the shadows came deeper, the little room was full of peace, and a sort of tranquillizing evening benediction seemed to fall upon their hearts; he could hear her quick, gentle breath, though her head was turned away. It was no idle fancy, no vague hope, taking shape in his imagination. Felicia was there, and she did not repulse him, and met him with a welcome of her own.

"Why, Colonel Baxter, have you been here all this time?" cries Mrs. Bracy, suddenly wheeling round and facing the two as they stood in the dusky corner.

Felicia came to dinner that day looking prettier than ever, and happier than they had seen her yet, although the young heiress was, on the whole, a cheerful traveller. At home she might be silent and oppressed; but abroad the change, the different daily colors and words, the new and altered ways and things, all amused her and distracted the somewhat hypochondriacal phantoms which had haunted her lonely house — home it could scarcely be called. Baxter might have been happy too had he so chosen, if he had accepted the good things as they came to him, with patience and moderation, and not wished to hurry and to frighten his happiness away. But although that five minutes' unexpressed understanding in the garret had soothed his impatient soul, the constant society of Mr. and Mrs. Bracy, the artistic powers of Mr. Jasper, the cultivated observation of Miss Harrow — all seemed to exasperate his not very easy temper. He was very much in earnest, he felt that his whole happiness was at stake. And to be treated to a few sugarplums, when he was asking for daily bread, was not a system calculated to soothe a man of Aurelius's temper. Felicia was kind, gay, in her most childish

mood, that evening. Jasper, who seemed to be on the most excellent terms with her, kept up an artistic conversation about the poignant painters of the present age, as opposed to the subtle school of philosophic submission, while Mrs. Bracy, on the other side, asked the colonel many questions about the Vedas, and the dreamy Orient, and the moral cultivation of the Zenanas.

The only other people at the table were some Germans, one of whom was recounting to the others a colossal walk he contemplated across his plate of cutlets and brown potatoes, — the little Scheidegg, the waterfall of Lauterbrunnen, the dizzy height of Mürren, to be reached that same evening. "It is a colossal expedition," says the athlete, with a glance at the company. "Pfui! Pfui!" cry the others, with a sort of admiring whistle.

Mrs. Bracy was preparing to take a parting leave of the colonel that evening; but as Felicia said good-night, Baxter held her hand, and said, quite simply, before them all, "Is this good-by, Felicia? may I not come to Interlachen with you?"

"Why not," said Felicia, demurely, "if you have time to spare? We are going by the early train. They say the lake of Thun is lovely."

"I am sure Colonel Baxter will prove a delightful and most unexpected addition to our party," cried Mrs. Bracy, not without asperity. "Interlachen is a charming place; it is more suited for invalids like myself, who cannot attempt real mountain expeditions, than for *preux chevaliers;* but if your friend will be content, dearest Felicia, to potter with my old husband — forgive me, Egbert — we will escort him to the various pavilions round about the hotel."

"I have no doubt I shall be well looked after," said Colonel Baxter, with a somewhat ambiguous gratitude, as he bowed good-night, and walked off with a candle. Felicia's consent had made his heart leap with silent gladness; he no longer minded Mrs. Bracy's gibes. His bedroom was in the same house as the Bracys' apartments. It was on the ground-floor, and the windows opened on a rustling and beshadowed garden, where lilac-trees waved upon the starry sky, and striving poplars started ghost-like and dim; close shrouds of ivy veiled the walls. Felicia's window was lighted up, and as Baxter paced the walks, smoking his cigar, and watching the smoke mounting straight into the air, he caught her voice from time to time, and the mellifluous accompaniment of Mrs. Bracy's contralto notes; he could not hear their conversation, but a word or two reached him now and then as he walked along. Presently something made him wince, alone though he was, dark and solitary as the garden might be; he ceased to puff at the cigar; for an instant he listened. "My money, my money," Felicia was repeating; "I know that people think I am rich;" and then the steps Felicia also had been listening to, and which somehow she had identified with Baxter — the steps went away and came no more, and the garden was left quite solitary and dark, with its thick shrubs, and silent lilac-trees, and strange night dreams.

"Good-night, dear Mrs. Bracy," says the girl, starting from her seat. "How shall I thank you for all your kindness to me? Don't be anxious; I am *sure* no one here ever thinks about my fortune, or about anything but being good to me." But alas! Baxter was not there to hear her.

From The New Quarterly Review.

LORD CHANCELLORS AND CHIEF JUSTICES SINCE LORD CAMPBELL.

BY REV. F. ARNOLD.

THERE are no works of legal biography that have enjoyed a greater degree of popularity, both with the profession and the public, than Lord Campbell's volumes on the "Lives of the Lord Chancellors and the Lord Chief Justices." There is in existence a large body of destructive criticism on the work, and some measure of personal hostility was mingled with the sifting processes of criticism. Lord Campbell has been described as a "gentleman of the press," but he was as little of a man of letters as any such gentleman could be. For the finer and more delicate shades of criticism, for the highest work of imaginative minds, he had a kind of color-blindness. His book on Shakespeare's sonnets was so absurd, that it may be doubted how far it was seriously written. But when criticism has done its best and its worst on "Lord Chancellors and Chief Justices," volumes which our libraries could ill spare, it is easy to form a conception of a much better work on the subject, but it is extremely unlikely that such a book will ever be produced. By no one, moreover, could such a work be more appropriately written, than by one who had himself been both lord chief justice of England and lord high chancellor.

It cannot but be of the highest interest and utility that there should be some record of the lives of our greatest magistrates, and it may be hoped that at some future time some ex-chancellor may find employment for his leisure in continuing Lord Campbell's labors to a later date. Lord Campbell closed the chief justices with Lord Tenderden, and the chancellors with Lord Lyndhurst. Since the death of Lord Tenderden, we have only had three chiefs of the queen's bench, including the present illustrious holder of the office. But there has been a rapid succession of chancellors, holding office not for life, but only for the brief term of party supremacy. A great lawyer takes the seals only very late in life, and so many and rapid have been the changes of ministry and their re-combinations, that the average duration of a chancellor's office, so different to the days of Thurston and Eldon, is only for a very few years. Since Lyndhurst we recall the titles of Cottenham, Truro, St. Leonards, Cranworth, Chelmsford, Campbell, Westbury, Hatherley, Selborne, Cairns. We propose, somewhat on the method of Mr. Fox's well-known work, to sketch out briefly the outlines of judicial biography since Lord Campbell's time. It will be more convenient if we first speak of the chief justices, beginning with Lord Denman.

A recent biography of Lord Denman has been published by a great Indian magistrate, Sir Joseph Arnould, who enjoyed his intimacy from the very earliest days. It fully confirms the deep-seated impression of the intrepidity, honesty, and natural nobility of Denman's character. The story of his early love and gradual progress is one of the most touching narratives of legal biography. One of the most unique portions of the work is the account, mainly furnished by the present Mr. Justice Denman, of his early efforts at the bar, and the pleasantries of the circuit mess. There have been great judges who have said that they were never so happy as in these merrymakings of the bar, when one man would be fined because the court paid him a compliment, and another because he declared that the lot of an auctioneer was preferable to that of a barrister. The greatest chancellor has in his time been a junior counsel, just as the humblest curate may have risen to be archbishop. The circuit stories are pleasant, and form a natural though perhaps incongruous prelude to the graver cares of public life. We take a few instances of the mock circuit court proceedings which one learned judge has procured for another: —

1807. July 14, Lincoln. Mr. Denman was presented for wearing nankeen trousers at a circuit court.

1808. April 4, Warwick. Mr. Denman presented Mr. Dayrell for saying in open court that no wise man would ever dream of going to law.

Also Mr. Justice Vaughn, for puffing the attorneys of Notts in open court by saying, "There are in this county in particular several most respectable attorneys." For this heinous offence a fine of one guinea was imposed and paid.

1810. August 20, Leicester. Mr. Perkins presents Mr. Denman for accommodating an attorney, named Hobbs, with a seat at the green table (appropriated to the use of the bar), to the inconvenience of the said Perkins.

Mr. Denman presents Mr. Reynolds for dancing with seven attorneys' daughters at Derby ball. One guinea.

Also Mr. Copley (Lord Lyndhurst) for an arrogant puff of himself in placing himself in competition with Lord Kenyon, saying in open court, "Which is right, Lord Kenyon or I." One guinea.

Also Mr. Holt, for travelling the circuit in stage-coaches, and without a servant. One guinea.*

We should observe that there is a very interesting lecture extant on going the vacation circuit, by Sir John Taylor Coleridge, which might be compared with these reminiscences.

Lord Denman was not eminent for legal power and attainments as other chiefs have been, or even as the two Parkes — "Green Park" and "St. James's Park." But he was steadfastly supported by a bench of judges, which made his court a strong court, and to which he was linked on terms of the utmost confidence and affection. In one or two points he touches closely the general history of the country. He was one of the remarkable group of counsel engaged on behalf of Queen Caroline, every one of whom arrived at high distinction. It was his lot to be brought into personal collision with George the Fourth himself, who, on account of the famous allusion to Tigellinus, conceived the bitterest hostility against him. It was only the good offices of the Duke of Wellington which, even in a limited degree, could set the matter right. In the famous Stockdale case the conflict was substantially between himself and Sir Robert Peel. It was a remarkable case that the chief justice should be opposed to the premier, the Queen's Bench to the House of Commons,

* Sir Joseph Arnould's "Life of Lord Denman."

the law of the land to the voice of Parliament. Such a collision was fraught with most dangerous consequences.

Very curious instances of the ways of putting things may be found in the different versions of Denman's promotion by his fond biographer, Sir Joseph Arnould, and the now familiar "Gruncher," Mr. Greville. According to the biographer, everybody was intensely delighted; it was only the old "mumpsimus" party who murmured, and "time was soon to show that since the days of Lord Holt no better appointment of a chief magistrate had ever been made in England." Mr. Greville, in the "Memoirs," puts the matter somewhat ill-naturedly, but still with substantial truth. Three other men were named; it might be argued that each was a better man, but in each case there was an insuperable difficulty. Lord Lyndhurst was by far the ablest man, but he had broken with Lord Grey on the Reform Bill, and had put himself out of competition. Scarlett was a Whig of forty years, but he had now broken off with the Whigs. James Parke — the future Lord Wensleydale — was one of the best of judges, but there was no political motive for his elevation. "So that, every rival being set aside, Denman, by one of the most extraordinary pieces of good fortune that ever happened to man, finds himself elevated to this great office, the highest object of a lawyer's ambition. His legal qualifications are admitted to be very inferior to those of his predecessors. He made a very bad judge, but was personally popular for his high and honorable moral character."

We next come to Lord Campbell. His friends, especially Lord Brougham, made every effort to procure the chiefship for him, and he was a man who would never be slow to urge his own claims to any appointment he coveted.

"I was born," said Lord Campbell, when once addressing an Edinburgh audience, "within the sound of the Castle guns." He was born at the Manse of Cupar, another instance in which manse and parsonage have contributed something of the best bone and sinew of the country. He came to London, an adventurer, on the top of the mail-coach, at the time when the fast mail-coach was considered a wonderful achievement. Like Mr. Disraeli, he was "a gentleman of the press." In these days, the bar and the press often look askance upon one another, and a scribbling barrister is supposed to tread the path of professional perdition. It was quite otherwise with Campbell. He reported the proceedings of the court for the papers, and in the same published a series of masterly reports which were accepted as of the greatest value by the profession at large. His literature, therefore, was exactly in the way of his profession, giving precision to his eloquence and increasing his stores of information. In addition to these, he collected a large number of cases, which he labelled "bad law," and threw into a separate drawer. It would be interesting to many to examine these cases, but they perished in the great Temple fire. The time came when he thought that for professional purposes he might aspire to Parliamentary honors. He stood for Stafford. There is a tradition that the ladies of Stafford are lovely specimens of the human race, and Campbell, with elephantine playfulness, attempted to flatter them, but his flattery was too clumsy for the taste of Stafford. He afterwards stood for Edinburgh. "Gentlemen, electors of Edinburgh, and fellow-countrymen, here is *plain John Campbell* before you as a candidate for the high honor of your suffrages. . . . I must say that I think it rather hard on me to say that if I had been merely *plain John Campbell* I might have been elected, and that all hopes of my ambition being crowned with success must be forever extinguished by *the eminence to which I have had the good fortune to attain.*" He obtained the seat, and was afterwards succeeded by Macaulay. His profound good opinion of himself was a matter of scoff to the bar. But Campbell had some sort of right to entertain such an opinion, for there was hardly a man at the bar who came up to him. He led the Oxford circuit, but could say, like Follett, that there was hardly an assize town in England where retainers had not led him. He had a wonderful faculty in conciliating the flow of fees. Some one shrewdly said that if plain John undertook to dance, he would not dance so well as Vestris, but he would certainly get a higher salary. There was a wonderful adroitness about the man. When he prosecuted the Chartists, it was objected by the defence, not without reason, that there was a time when he was little better than a Chartist himself, and that he was responsible for much of the Chartist movement. But the only notice was a somewhat grim smile from the shrewd lawyer. If he had transgressed against the law he might be prosecuted as well as any other man, but the question immediately before the jury was that of the guilt or innocence of the prisoners at the bar.

It was as a law lord that Lord Campbell now found his place and work, and did useful service, though he confesses that he had very factiously helped to throw out some good bills. Lord Palmerston used to say, "What is one man's faction is another man's action;" but if there is such a thing as party faction, it is hard to see how any man could be more liable to the imputation than Lord Campbell. He found a worthier mode of beguiling and solacing his days in the legal historical biographies which he compiled. We have to go back many generations, and it is not till we come to the time of Lord Clarendon, that great "chancellor of human nature," that we find any legal lord who has contributed so largely to literature, who has both written history and lived history, as Campbell. It is, perhaps, from some kind of sympathy that Lord Campbell lingered so long over his life of Clarendon, and delineated it with loving pains. It is almost ludicrous, at the first sight, to compare the grand, simple, pathetic figure of Clarendon, in his grandeur under his reverses and exile, with the smug, prosperous, well-contented chancellor. To use a phrase of Carlyle's, the one had a heart to be satisfied even as the other had a stomach to be filled. Though Clarendon is so far removed from us, we have from his memoirs and scattered papers an insight into his character and motives, such as we do not possess in the case of the distinguished Scotchman. To a great degree, in his later volumes, Campbell, like Clarendon, was writing a history of his own times. It is not so much in any regular narrative, as in incidental touches and stories, that both bring out their own story and the story of their age. Both their works are marred with inaccuracies, though Clarendon's inaccuracy has been greatly exaggerated by semi-political writers, which critics of the Dryasdust species, who prefer the shell of history to its spirit, have denounced with absolute ferocity. Both of them rendered a little more than justice to themselves, and a little less than justice to their opponents. Lord Campbell had none of Clarendon's Dantesque power of portraiture, none of his cheerful piety or severe wit; his gallery has not that living aspect, warm with light and color, which belongs to the incomparable Clarendon portraits. Only once or twice, when he dealt with a Thurlow or Ellenborough, is he able to bring the real man before us. But, like Clarendon, he has a thorough genuine love of writing, and concentrates history on the events of his own day. It is a true saying, that every man is a debtor to his profession; and in tracing the biographical annals of the law, Lord Campbell has adequately discharged this debt, and has helped to make the public at large interested and familiar with our legal institutions. It is in his latest volumes, where he has drawn oftenmost on his own memory and experience, that he gives us the personal details which are most useful in the construction of history.

The final volume of the "Lives of the Chancellors," the volume containing the lives of Lord Lyndhurst and Lord Brougham, was, in some respects, a shameful production. It did some injury to these chiefs, but most of all it did injury to his own memory.

Perhaps of all the lawyers who have held those highest judicial offices of which we are speaking, there was no man so utterly destitute of any approximation to genius as Lord Campbell. But at the same time there is none who so decidedly left his mark on the judgment seat and on the legislation of the country. He was a man capable of stern continuance to very severe labor. He studied hard. His intellect was alike massive and acute. His tenacity of purpose was invincible. Allowing for natural prejudice and favoritism for himself, his relations, and his party, he was a fairly honest man, as times went. He presided, and took a manifest pleasure in presiding, at some of the most important trials of our time. He presided at Palmer's trial, and during his summing up, that remarkable poisoner is stated to have expressed a wish to put some strychnine down his throat. Palmer's brother published a pamphlet bitterly attacking him, and he was actually weak-minded enough to be chagrined by this attack. A man whose brother was hanged might be allowed to say anything. Since, Lord Chief Justice Cockburn has shown himself keenly sensitive, even to an amusing extent, to the attacks make by the supporters of the Kenealy and Orton delusions. Lord Campbell presided on the great conspiracy case, the trial of Dr. Bernard, and is said to have been visibly chagrined by the abrupt verdict of the jury. But he had read our history but poorly if, in the case of a political trial, in which foreign influence was supposed to have been at work, he had reckoned upon any other verdict. Some laws which Lord Campbell placed on the statute-book are among the best known and most popular pieces of legislation. Such is the law which has made the railroad companies pecun-

iarily responsible for death or accident through the negligence of their servants. This law, though it sometimes bears hard on the companies, has worked so large an amount of good, that, in spite of the immense Parliamentary interest of the railways, it will probably never be repealed or materially modified. By making accidents costly, it has given the travelling public a large additional safeguard against accident, and by it compensations have saved many families from ruin or distress. His act for the suppression of immoral literature has worked very usefully, although the debates on it were pronounced to be hardly fit for publication. He also earnestly promoted all schemes for the improvement of the law, though he probably invited Lord St. Leonards' criticism, that lawyers were tampering with a wonderful system of jurisprudence which they only imperfectly understood.

As a common law judge he gave very great satisfaction. He had a great tendency to long evening sittings, which, at the present time, have very properly gone entirely into disuse. His own iron constitution was susceptible of any amount of work. He was at the assizes at Warwick on a certain Sunday, when Parliament had been prorogued the previous day. The officiating clergyman, not knowing the fact, began the prayer for the high court of Parliament. Lord Campbell stood up in his pew and cried out, "There is no Parliament sitting." The clergyman was confused, and not catching what was said, began the prayer again. "I tell you, sir," called out the chief justice, "there is no Parliament sitting." The chief justice was not thought to have acted in good taste. He might have been charged with brawling in church. His enemies used to say that there was a kind of restlessness about him, a wish to be sensational, a desire to be popular, which was not very healthy. As a judge he would calmly overrule the verdict of a jury. In a heavy commercial case he practically overruled the verdict of the jury, for he told one of the prisoners that his conscience only permitted him to impose a fine of a shilling. The mental idiosyncrasies of judges greatly vary. Some judges form very clear definite opinions on each case that comes before them, and are hardly to be distinguished from advocates. A certain judge once said that he had only lost two cases since he had been raised to the bench. Other judges simply present each side of a case, and unless a conviction is forced upon their mind, do not think it necessary to arrive at one. Some judges consider themselves bound to give full effect to the verdict of a jury, but others will seek to overrule it. Lord Campbell was not a man who, if he could help it, would allow the verdict of a jury to stand in the way of his own opinion.

He was essentially a pleasant man, and enjoyed rank and wealth without laying too much stress upon them. He might be seen, when lord chancellor, on the knife-board of an omnibus, ready to enter into cheerful conversation with any one who offered. The great substantial rewards which he secured were precisely the kind, perhaps the only kind, of recompense for which he would care. He seemed at last, like a very aged but still effective chief justice, to have very much passed out of the sphere of practical politics. But having worn the S.S. collar, he was eventually destined to ascend the marble chair. When Lord Palmerston formed his ministry, it was generally supposed that Sir Richard Bethell would at length obtain the supreme object of a lawyer's ambition. There were other claims, but Bethell's claim seemed first. To the astonishment of politicians, Lord Campbell came forward and boldly claimed the woolsack as his due. The claim was allowed. It was felt that the ultimate goal of legal ambition was very fairly his. It was also felt that it was hardly probable that he would long delay the claims of younger men. He retained the seals for two years, and though there was not time for him to place the same impress on the Court of Chancery as he had on the Queen's Bench, yet he holds his own with any common-law lawyer who has ruled as chief in equity.

His death was awfully sudden, and in accordance with a predilection which he had expressed for a sudden death. A certain number of the *Times* has a threefold mention of him. There is a mention of his attending a Cabinet council; in another column he hears a case in Chancery, but reserves judgment; in a further column we have an account of his death. He had entertained a party of gentlemen at dinner, and at night had retired to his room, where he was found dead in his chair. As Lord Bacon says, "A healthy old man is a tower undermined." So sudden a death caused a little consternation for the moment, but the gap was at once filled. In England, no public man is absolutely necessary. There was a certain vice-chancellor who had a pet phrase which he was constantly producing, for the delight of the bar who elected his

court. The phrase was, "What does it signify?" When he died, one of his bar suggested that his tombstone might bear the inscription, "Here lies Vice-Chancellor ———. What does it signify?" In the case of each of us it signifies very little. In the particular case of Lord Campbell, he was succeeded as chancellor by one of the greatest equity lawyers this country has ever known, and as chief justice of the queen's bench, he has been succeeded by Sir Alexander Cockburn, who has made a still greater name, and who, in a still greater degree, has made his impress on the mind of the country.

Cockburn was one of a small cluster of great luminaries of this age whom that little legal college on the Cam, Trinity Hall, has given to the country. He went the Western Circuit, and so, in a sense, belongs to that roll of great lawyers, extending back to the days of Fortescue and Glanville, of whom Devonshire makes boast. He is one of those barristers who made the beginning of their fortunes at quarter sessions. Unfortunately for barristers, quarter sessions are not now what they once were. Even Sir William Follett once attended the Exeter sessions, and it was Sir William Follett who loudly prophesied the future eminence of Alexander Cockburn. He soon rose from cases which collected knots of rustics and country town idlers, to cases where the magnitude of the interests arrested the attention of the country. It became known that in complicated cases he could speak with a sweetness and lucidity which charmed judge and jury for hours together. He became engaged in the heaviest common-law cases of the time — such a case as when he rolled back the vindictive tide of popular prejudice against McNaughton, the murderer of Drummond, and, as it seemed, the intended murderer of Peel; such a case as when he rolled back the profoundest prejudice against his own uncle, then dean of York, whose semi-simoniacal dealings with preferments had so nearly cost him his own preferment. Those, too, were days when counsel took their fees without demurring, and faithfully did their work for which they were paid — when barristers did not undertake to be in several places at the same time, and it became necessary to fee them, if only that they should not appear on the other side.

There have been few young barristers about whom report has had more to say than him who was once young Cockburn. He will long be a tradition of the Western Circuit. His Exeter doings will not pass out of the recollection of Devonshire. He was looked upon as a careless genius who could do, by the mastery of genius, what cost humbler men an infinity of labor. There has always been an affectation at the bar, which even now has not quite died out, of consummate talent being able to dispense with labor. Of course it is only an affectation and impossibility. It lingers at the university. But the apparently idle men, who lounge about all day, have a habit of sitting deep into the night, and so overcoming arrears. From the first, Mr. Cockburn was a brilliant and dashing barrister, who seemed to have a prescience of coming greatness about him. There is no doubt that he was compelled, not by an indolence of his own, but through the force of circumstances, to master very difficult cases in a very short time. Even in very heavy criminal cases, the attorneys would not deliver briefs until the grand jury had found a true bill. The object, of course, was to save the fee, in the case of an ignoring of the bill. That would be so much gain for the defence, or so much lost for the attorney. A grand jury may have returned, and we believe did return, a true bill the last thing one night, and a great trial for murder come on the first thing next morning. For a barrister of Mr. Cockburn's *calibre*, the time for preparation would be quite sufficient. Indeed, cases of much swifter preparation are not uncommon, and we are afraid that cases of no preparation at all are not unknown. The other day a well-known barrister had to go into court with a heavy case. "I have not had time to look at my brief," he calmly said to the solicitor. "Give me just ten minutes, and I will explain everything," said the solicitor. And in that time the case was perfectly understood. A well-known Oxford man one day saw a favorite pupil, as he was, within an hour, about to take his place in the school for his final examination. "I'm in for 'Butler's Analogy,'" said the man, "and have not had time to read it through." "All Butler's governing ideas," mildly remarked the tutor, "are reducible to four. You can learn them in a quarter of an hour, and you must manipulate them as well as you can." The man passed a capital examination in Butler. It is possible enough to get up a case with great promptitude; but the chief justice, with his deep thoughtfulness and immense stores of learning, never trusted to promptitude what he could secure by care and study.

The distinctive political character he assumed was somewhat remarkable at that time. Devonshire, in his time, was a thoroughly Tory county. Mr. Cockburn was a thorough Liberal. He was a thorough despiser of everything that was merely conventional. In the now vanished piazza of the Exeter assize court amid the throng of country people, he would stop in wig and gown at an old woman's stall, and take his cup of tea or coffee, to the admiration of the groundlings. He has been known, as a young barrister to whom fees were of consequence, to return his fees when his sympathies were strongly enlisted in a case. He was remarkable for the perfect fearlessness and intrepidity which he exhibited; he was thoroughly straightforward, uniformly friendly and sincere. He soon showed that a brilliant and amusing man can be learned and deep. Occasions arose when he showed great powers of argumentation, great powers of eloquence; whenever an occasion arose worthy of his powers he made astonishing efforts which soon raised him to the highest rank both in the crown and *nisi prius* courts.

He naturally belonged to the order of men who seek for political distinction and the highest offices in their profession. Sir Alexander's Parliamentary *début* was made on the occasion of the great Don Pacifico debate. On this occasion the whole Parliamentary and official career of Lord Palmerston was impeached, and Mr. Anstey's philippics were seconded by the vehement eloquence of Lord Stanley. Lord Palmerston made the greatest speech of the debate, the greatest speech of his life — a speech which lasted nine hours; lasted from the dusk of evening to the dawn of morning on a midsummer day; filled the most part of two pages of the *Times*; and, Sir Robert Peel said, "made the House proud of the man who delivered it." But the next great speech of the debate was made by Mr. Cockburn; it was on the fourth night that he made his memorable speech. It can be said, we believe, of this speech, what cannot be said of more than one or two in our recollection, that it not only changed opinions but that it also changed votes. Lord Palmerston, it will be remembered, had demanded full indemnity from the Greek government for wrongs done to Don Pacifico, a British subject, though a Portuguese by birth. He joined issue not unequally with Gladstone himself, and boldly maintained Lord Palmerston's *Civis Romanus* doctrine. The speech was remarkable for the gorgeous rhetoric, the incisiveness, epigram, boldness, and astonishing eloquence. It was weakest when he went into the subject of the political combinations supposed to be involved by the coming vote on the fate of the ministry.

This speech was, in every point of view, a very great success. Sir Alexander's Parliamentary fame was now established. In a few months' time he was solicitor-general. He gained the first rung of State promotion, and we believe that he has refused the highest — the chancellorship — just as he has refused barony and earldom. It does not seem, however, that he made any great Parliamentary speech at all approaching this great speech. In time he became attorney-general in succession to Bethell. Then he was made chief justice of the common pleas. It was the case of a man being pitchforked upstairs. He did not want to become a judge. "As attorney-general and your member," he told his constituents at Southampton, "I have nothing more to wish for." "The senate," said Lord Russell, "has lost one who would have been its chief luminary, and the bench has gained a man who will be its enduring pride and ornament."

Just a few words on that remarkable legal career, which was closed by this well-merited elevation. The case of Palmer, which we have used before, again recurs. The opening speech was worthy of the great *procureur du roi*, a great minister of justice. The cross-examination of a certain wretched attorney was of a terrific character, but the reply on the whole case was as marvellous a speech as that great speech in the House of Commons. The place swarmed with barristers who came to hear their chief, and witness one of the finest examples of oratory. Palmer's great reliance had been on the fervid eloquence of his advocate, Serjeant Shee — poor Wilkins, who was to have undertaken the case, was in hiding at Boulogne — but even Shee's eloquence was overshadowed by Mr. Attorney's. Palmer's case had some very remarkable features beyond the sensational element. The intellectual problem, considered apart from the moral conviction, is more difficult than might be thought for. Mr. Fitzjames Stephens, in his "General View of the Criminal Law," gives a careful summary of the evidence. On the trial, Serjeant Shee took the unusual course of declaring his personal conviction of the innocence of the prisoner. Charles Phillips had incurred great obloquy for doing the same

in Courvoisier's case. But Mr. Phillips actually knew at the trial that Courvoisier was guilty; while the late Mr. Justice Shee believed, to the last day of his life, that Palmer was innocent. While Lord Campbell was summing up, Palmer handed Serjeant Shee a note, still extant: "I am satisfied with your exertions on my behalf, as I am satisfied that you have done all that mortal could do." In his reply, Cockburn expressed that he was satisfied both of the genuineness and the mistakenness of such a conviction. It is interesting to recollect that it was Serjeant Shee who subsequently, on behalf of the bar, made a famous panegyric on the chief justice. Sir Alexander, however, has been heard to say that the greatest compliment ever paid to him was by Palmer. Like Arthur Orton, Palmer had a habit of writing on little bits of paper, and flinging them over to his solicitor. One of these fell into Sir Alexander's hands at a final period of the trial, when there could be no doubt about a conviction. Palmer had written, "It is the riding that's done it," in reference to the irresistible torrent of eloquence with which the great counsel for the crown had swept away every hope from him.

Comparing him as chief justice with his predecessors — with Mansfield, with Tenterden, even with Lord Campbell — we perceive that he has taken a broader range. On several great public occasions he has stood forward in a national, we might say a cosmopolitan, character. The charge and summing-up of the lord chief justice to the grand jury in the case of Governor Eyre, he thought worthy of being reproduced in a separate form. Another remarkable step which he took was to publish a letter to the lord chancellor in 1868, protesting against the judges being called upon to try election petitions. It cannot be said that the evils which the chief justice anticipated have been verified by the result. He did Christendom an international service by acting as an arbitrator in the Alabama dispute, and his publication on the matter showed that this country was morally guiltless, and had been mulcted in an unjust penalty. But his greatest effort was on the trial of Arthur Orton, "the claimant" of the Tichborne property, the most remarkable *cause célèbre* of the kind in this or any other country. In this case, Sir Alexander, at the final stage of the trial, undoubtedly imported something of the advocate into the character of the judge. Perhaps, all things considered, his charge in that case is one of the finest exhibitions of judicial eloquence and power that our age has witnessed. The chief justice has been exposed to an immense amount of insolence and obloquy by Kenealy and his followers. To say the truth, we are astonished that he showed himself so sensitive to these attacks. He made an amount of rejoinder, he exhibited an amount of wounded feeling, which were hardly in keeping with his great name and his high place.

We are surprised that Lord Campbell never undertook the life of Earl Cottenham. It is a sort of biography, with its remarkable forensic luck, which, we should have thought, would have had great charms for him. Cottenham was twice chancellor; he was altogether chancellor for nine or ten years — the only chancellor, since Eldon, who has been made an earl. The other law lords disliked him; it was truly said, "His offence was rank." He was a man of great ability, but luck is the predominant element in his career. The English bench has been famous for its wranglers and classics, but Christopher Pepys took no honors among his contemporaries at Cambridge. The son of a master in chancery, to whose baronetcy he eventually succeeded, he had a natural affinity for the equity bar. He had the advantage of the best of tutors in Mr. Tidd and the great Romilly. His practice in Chancery, for many years, was not at all remarkable. But then came the great rise. He had been returned member in 1831, and again after the Reform Bill, for boroughs which, despite reform, were substantially in the gift of Lord Fitzwilliam. He was late in taking a seat in Parliament, but once in Parliament, nothing could exceed his assiduity in voting with his party. He was never a politician till he took office, and then he became a politician with a vengeance.

His rise was gradual and prosperous. He was solicitor-general when the mastership of the rolls became vacant. As we have seen, Campbell was attorney-general, and greatly desirous of the mastership. But an equity man was absolutely necessary. The Whigs have few great lawyers; great lawyers naturally seem to take to the Conservative side. Thus, Sir Christopher Pepys became master. When Sir Robert Peel's short-lived ministry of 1834 came to an end, instead of the great seal being handed back to Brougham, it was put in commission, and the first commissioner was Sir Christopher Pepys. The appointment was an awkward one. It was asked in the House of Commons

whether it was a safe precedent to allow Sir Christopher Pepys, the chief commissioner — in point of fact, lord chancellor — to sit in the House of Commons as master of the rolls. Sir Edmund Sugden actually went so far as to write a pamphlet on the subject, pointing out that a whole century had elapsed since there had been any such precedent. Pamphlets, letters, remonstrances, and even threats of Parliamentary inquiry abounded, and Lord Melbourne found it necessary to appoint a chancellor, and that chancellor became Lord Cottenham. Thus Pepys, a man, comparatively speaking, of very inferior abilities, succeeded in cutting out Campbell, a far abler man, from the rolls, and Brougham, a man of true genius, from the woolsack.

A better chancellor might have been found in Harry Bickersteth, afterwards Lord Langdale; but Bickersteth, with rare moderation and disinterestedness, had refused to be solicitor-general, and later refused to be chancellor. Bickersteth tried hard at the rolls, where he succeeded Pepys, to make a useful reform by refusing to refer matters to a master which he could settle for himself. He found himself checked and hampered, however, by Lord Cottenham's principles and procedure. Bickersteth once said on the subject of Chancery reforms, "I am determined not to put myself forward as the attacking party, but I am willing to march side by side with the lord chancellor; I will not take upon myself the odium of the assault, and leave the chancellor the grace." Lord Cottenham, however, was always falling into the rear. He was sure that if Chancery reform required any money, not a farthing would be granted. Indeed, a Whig lawyer, when he gets into office, is as conservative as the most Conservative lawyer could be. Pepys seems to have had a real love of technicalities, and it may be said of Lord Melbourne's second chancellor under the Reform Act that he was thoroughly opposed to the most useful and necessary direction which reform might take.

As lord chancellor he proved even an abler judge than he could ever have been expected to prove. He always stood in great dread of Lord Brougham, who, deprived of the woolsack, to which he always had the strongest claim, was a lion robbed of its whelp. Lord Campbell says that Cottenham stood in much awe of Brougham's sarcasm, and would rather have submitted to any insult than enter into a personal encounter with him. Old officials of the Court of Chancery look back upon his reign as very good times, when things were done in a sound, orderly fashion, and the Radical chancellor was a man who possessed very considerable obstinacy of character; and once or twice he laid down false principles of law which nearly threw the commercial world into convulsion, and which he would only retract with the greatest difficulty and after the lapse of years. When once he had taken a false view of a case, it was with the utmost difficulty that he could be persuaded to look upon it in any other light. In the case of other judges, it was said that he rather upset judgments than overruled them. One most estimable judge had to complain bitterly of the insulting terms in which a decision of his had been overruled. It is reported of a very eminent practitioner in Chancery, now a still more eminent judge, that when a client was urging him with the utmost anxiety to apply for a re-hearing of a cause in which the lord chancellor had just delivered a very decided judgment under a palpable misconception of the facts of the case, he refused to make any such application, adding, "And I tell you more, sir — that if an angel were to come down from heaven to ask the lord chancellor to reconsider his opinion after such a judgment as he has just given, he would most probably commit him for a contempt." No judge would ever less submit to the slightest suspicion of being "bamboozled;" and as soon as any argument was advanced which he thought ranked under that category, he would embody it pithily in a short sentence or two, and place it before its astonished author, whether in silk or in stuff, to his utter discomfiture. "It is very awkward," observed one of the counsel most frequently employed in his court, "he just puts it to you shortly, and asks, 'Is that your argument?' adding quietly, 'I only want to know, that's all,' and then when he sees he is right, he sinks back in his chair, and it is all over."

Harry Bickersteth was not far wrong when he spoke of others doing the work, and Lord Cottenham getting the grace of it. On one occasion Lord Cottenham moved an amendment in his Drainage Bill, and made no allusion to Lord Langdale, who had sat up three or four hours the previous night, framing that very amendment. "You see," said Lord Langdale, on that occasion, "how public history differs from private truth." When Cottenham gave up the great seal at Buckingham Palace, it was delivered to Lord

Langdale as the first of three commissioners.

It is curious that so little public attention was drawn to the chancellor, who for two prolonged terms filled the office, filled it for a longer time than Brougham, Campbell, Truro, St. Leonards, Chelmsford, all put together. One reason of the silence about Lord Cottenham, perhaps, was that it was found that there was very little human interest about the man. It was all hard steady business. He was never seen to show the slightest pleasantry, and if he smiled, it was a haughty smile; a little like a certain judge who fixed his countenance in a certain pose of contemptuous indifference. He was too fond of reversing judgment whenever he could see his way to do so, and lawyers hold that he is to be taxed with some terrible blunders. He was a great stickler to forms and precedents, thoroughly attached to the old system of the court, and with little heart for any legal reforms. He knew little or nothing of public law or the law of other countries, but with one department of our own law he was thoroughly familiar. It was for this reason, perhaps, that Lord Kingsdown used to declare that he never knew the House of Lords better managed than when Lord Cottenham sat alone on the woolsack, hearing appeals during his first chancellorship. Once only his court became a scene of general attraction. The late prince consort came into court to ask for protection against a publisher who had pirated some of his etchings. Lord Cottenham very properly took the matter in the direct legal way, and saw nothing remarkable in the husband of the queen becoming a humble suitor in one of her own courts.

A curious question relating to the office of lord chancellor arose as to the close of his second chancellorship. He became very ill, but was apparently unwilling to relinquish the seals. Lord Langdale suggested that the great seal might be handed over temporarily to somebody else, who might attend to legal business, without disturbing the political status and duties of the chancellor. Lord Cottenham wrote to say that he was almost well, and altogether disagreed with such a doctrine. Lord Langdale called on him. He found him pale and thin, but otherwise much better and in good spirits. He got better through the long vacation — that blessed long which has brought rest and healing to so many a wearied lawyer. But the amendment did not last. To all, except himself, he was evidently breaking up. But he did not like to admit it, did not like even to receive any assistance in discharging the functions of his office. He was a man who had always been very jealous of his authority, and who could never forgive any interference with it.

He resigned at last, in June, 1850, and went abroad. But he went abroad too late, and died at the baths of Lucca in the following April.

The career of Thomas Wilde, Lord Truro, has always been pointed out as a very remarkable one. He was of a legal family, and another member of it became Lord Penzance. He began life as an attorney, and attained to middle age before he felt that his position was too cramped for his energies, and he became a barrister. His career is a striking instance of what can be done by perseverance and a rooted purpose. Like Demosthenes he had an impediment in his speech, but he overcame it in a peculiar way. He formed a list of synonyms, and substituted them for the words which he could not pronounce. He was one of the great group of lawyers whose names and fortunes were made by the memorable trial of Queen Caroline, in 1820. The poor lady was so pleased with him that she made him one of her executors. He obtained the lead in the Common Pleas, being found in every case, and being noted for the thoroughness of his work. Clients thought themselves lucky who secured him; judges were pleased to listen to him; and Lord Tenterden happily said that he had "industry enough to succeed without talent, and talent enough to succeed without industry."

Copley, afterwards Lord Lyndhurst, one day came down to Exeter, specially retained. He watched Rele, the leader of the circuit — how quickly once famous leaders of circuits pass out of memory! — but observing Wilde, he quoted, —

Proximos illi tamen occupavit,
Pallas honores.

He took up the famous Serjeant Wilkins, whose brilliant career is quite a tradition with the English bar. Wilkins almost began his career by singing his songs and telling his stories at public houses in the evenings, and far on into the nights, and then sending the hat round. He helped Serjeant Wilde in a Parliamentary contest, and from that time the serjeant was his firm friend. But no amount of genius, or ability, or friendship, could save Wilkins from utter ruin. "I was, on one occasion," writes a gentlemen, "dining with

Charles Kemble, the actor, who was very deaf. He inquired of me how Wilkins and Jones were getting on at the bar (they had both been actors), and he threw a long speaking-trumpet across the table. I told him they were both in the hands of Jews and attorneys. He replied, in a loud voice, that it was all up with them."

Sir Thomas Wilde once had an illustrious client, and he fell in love with her. This was Augusta Emma d'Este, the daughter of the Duke of Sussex and Lady Augusta Murray. He had strenuously tried to legitimate the marriage, but it was ineffectual. Various stories have been constructed on the theory of the barrister marrying his client, and a certain learned counsel's attempt to do so led to a memorable law-suit. Before this second marriage, Sir Thomas had become attorney-general. He only held the office for a few months, and five years later, when he was again appointed, he only held it for a few days. In 1850, he became chancellor, and was only chancellor for nine months. He will best be remembered for his work in the Common Pleas, where his great forensic triumphs were won, and where he presided as chief justice for four years.

Campbell says that there was a combination between Lord Lyndhurst and Lord Brougham, to drive Lord Truro from the woolsack. Truro did not care for law reforms, and showed plainly that he did not care, which, of course, made a possibility of his becoming unpopular. After he was appointed, Brougham insisted on hearing the Scotch appeals. He declared that they involved the deepest intricacies of Scotch law, and he advised Lord Truro to get up as much Scotch law as he could during the long vacation. Lord Truro, according to Lord Campbell, knew as little of Scotch law, as he did of the law of Japan. He says of Truro — Towran, as he used to be familiarly styled in the courts — that during his short chancellorship he displayed much honesty and discrimination in his judicial appointments." Lord Brougham, on the contrary, declared "that Jonathan Wilde had become a courtier; and, having married the queen's cousin, laid all his patronage at the queen's feet." To the last, Brougham used to talk of "Jonathan Wilde," and "Tom, the queen's cousin." The fact is that, considering his brief tenure of office, he effected some remarkable reforms, both in the Court of Chancery and in the common-law courts. The solicitors were delighted with his success, and placed his portrait in the hall of the Incorporated Law Society, while his widow, the royal cousin, gave his library to the House of Lords.

His successor, Edmund Burtinshaw Sugden, was only chancellor in England for ten months. But he had been previously chancellor in Ireland for four years. At the present time Ireland has given England a chancellor of matchless power — one of the many contributions which Ireland makes to England's greatness. The recent death of Lord St. Leonards at the advanced age of ninety-five reminded the public of his marvellous faculties and wonderful career. Like Lord Tenterden, he was the son of a hairdresser, though on a larger scale than the poor Canterbury barber; but by indomitable energy and legal gifts of a peculiar kind, he gained the topmost niche in the legal temple of fame. He was the greatest conveyancer of his age. In the knowledge of all the intricacies of the law of real property he almost stood alone. It was his endeavor, at the outset, also to establish his reputation by legal works, and fifty years after he endeavored to popularize this knowledge for the public good. His "Letters to a Man of Property on Buying, Selling, etc., Estates," half a century later were re-issued as a "Handy Book of Property Law." Hardly any man of property felt safe until he had submitted his titles to Sugden's inspection. His practice was something enormous. For ten years he was simply a conveyancing counsel. He was overloaded with abstracts to inspect and deeds to settle. His business was so crushing that he resolved to abandon it, and confine himself to the courts. Then he came into the Court of Chancery, but in all-important litigation he was as much sought for as a pleader as formerly as a conveyancer. It was once said in the House of Commons by a member who became a judge that there were not more than six persons who were acquainted with the law of real property. It was at one time declared that there was no one practising at the Chancery bar who knew it except Sir Edmund Sugden. O'Connell, with whom he had once some sharp brushes in the House of Commons, said that if there was a man in England who knew all law, Sugden was that man. A curious case once occurred to the great lawyer, which is one of the stock stories of the court. He mistook the side on which he was to act. It was the case of King *v.* Turner, vice-chancellor's court, Jan. 26, 1829. Messrs. Horne and Pemberton were heard on one side. Mr. Sugden followed, con-

curred in the argument of his learned friend, and said the law was quite clear.

Vice-Chancellor. — "Then Mr. Sugden is with you, Mr. Horne."

Mr. Horne said the argument of his learned friend was, to his great surprise, on his side; but his learned friend happened to be on the other. (Great laughter.) Mr. Sugden consulted his junior and seemed not a little disconcerted. He owned he was mistaken. What he had said, however, was said in all sincerity; and he never would for any client, be he whom he may, argue against what he thought a settled rule of law. As his learned friends had differed on the present point, he hoped his honor would decide it without reference to what had fallen from him. The vice-chancellor promised he would do so. It is rather curious, too, that Sugden should have made the admission. A less honest lawyer would have said that he was simply stating his opponent's case with a view to answer it.

Between Sugden and Brougham there were repeated "rows in court." Sometimes Sugden distinctly got the better; sometimes it was otherwise. Lord Brougham would write his letters while listening to the address of counsel. We have seen judges deliberately reading newspapers while counsel have been making their speeches. But on this occasion Sugden was addressing judge and jury, not a jury alone. Sugden stopped short in the middle of a sentence. "Go on, Sir Edmund, I am listening to you," said Brougham. "I observe that your lordship is engaged in writing, and not favoring me with your attention." The chancellor neatly stopped him. "I am signing papers of mere form. You may as well say that I am not to blow my nose or to take snuff while you speak." On this occasion the laugh was against Sir Edmund. But on other occasions the laugh was all on his side. Sugden hated Brougham. Towards a chancellor whom he liked he could be as sweet as summer. We think it was Lord Cottenham who actually fell asleep. Sir Edmund immediately paused. The cessation of sound had the customary effect of awakening the chancellor. "Why don't you go on, Sir Edmund?" "I thought your lordship might be looking over your notes," was the bland response. This would please Lord Cottenham, who was very liable to doze, and hated anybody noticing it. Sugden took his revenge on Brougham in the famous *bon-mot*, that it was a pity he did not know a little law, and then he would have a smattering of everything. To a man of his great knowledge, a discursive mind like Lord Brougham's would be very distasteful, and they were also separated by many political and personal differences.

Sugden was solicitor-general in 1820, and twice lord chancellor of Ireland. At the age of seventy he became lord chancellor of England. He was then created Baron St. Leonards of Slaugham, in Sussex. During his lifetime, whenever the Conservatives had their brief and sudden accession to power, we believe it was customary to offer the seals to Lord St. Leonards. But the old man preferred Boyle Farm. But now Boyle Farm is brought into Chancery litigation. He composed a will, which is supposed to have been the model of a will which a man of real property should make — a model exemplar will, which should put into concrete shape the true doctrine of wills — and for want of some ordinary precautions which a clerk or housekeeper might have taken, alack! the will of wills is gone!

In following the career of Lord Cranworth, there is one special point of view which is thereby suggested. When he was chancellor, there were more than a dozen men who, from a legal point of view, would have made better chancellors. "Consider what we have endured from dear Cranny," wrote a Cabinet minister when the fitness of Lord Chelmsford's subsequent appointment was in question. Robert Monsey Rolfe's prosperous career was due rather to manners and morals than to ability and attainments. He was a cousin of Lord Nelson, and, like Nelson, born in a country vicarage. He did fairly at the bar, got some acquaintance, though an equity man, with criminal law as a recorder, and though a rare, was thought a gentlemanlike and pleasing speaker in the House. There was some surprise, however, that a man so little known should be appointed solicitor-general. He did his duty quietly but effectively, and, like other solicitors-general hardly indicated by fame for the heights of the law — the Liberals had once quite a rapid succession of such men — he was glad to take a *puisne* judgeship. His qualifications, however, had been underrated by the world, and probably, in his modesty, by himself. He was much more distinguished on the bench than he had ever been at the bar. We have sometimes heard of a barrister making his fortune in a single trial. But it was so with Robert Rolfe. The trial was that of Rush for the murder of the Jermyns, and he drew the attention of the whole country

by his patience, temper, firmness, impartiality, and knowledge of the law. When he was raised to the peerage, it was said that his title ought not to be Cranworth, but Kilrush. The year following the trial the great seal was put in commission, and he was third commissioner. He now reverted from common law to equity. He became vice-chancellor, not without a public suspicion that he might have forgotten his equity practice. Even Lord Truro plucked up heart of grace, and reversed one of his earliest decisions. Rush's trial was in 1849; in 1850 Lord Cranworth became vice-chancellor; in 1851 lord justice; in 1852 lord chancellor. His opinions in time came to be held in the highest respects by Chancery lawyers; he was beloved by the bar, and was a most popular speaker of the House of Lords. He was a most conscientious, careful, painstaking judge, and a most amiable man, but a man more destitute of high intellectual calibre than perhaps any who had held his high office. He came after Sugden, and in his second term of office after Lord Westbury — an isthmus uniting two continents.

Another instance of the remarkable rise of a common lawyer to the marble chair was that of Frederick Thesiger, who, as a midshipman, was present at the second bombardment of Copenhagen in 1801. His father lived at St. Vincent's, and as he became heir to some property there, he went out to the island, as he used to say, "to make his father's acquaintance." It was thought that he had better qualify himself for the bar of the little island, and so returned to London. But the eruption of a volcano blew his estate into the air, and as the counsel in whose chambers he studied said it would be a shame that he should go back to the West Indies without trying his fortune in England, he started fair for the woolsack. All his lifetime he has been a singularly prosperous and popular man. The sessions paved his way for the assizes, and the assizes brought him business in the Westminster Courts. It was noticed of the young barrister that whenever his leader was absent he was always found ready and equal to taking his place. He had the leading business in an immense number of *causes célèbres*. He was counsel for Hunt, an accessory of Thurtell's for the murder of Weare. When in stuff, after these trials, he won in an ejectment case at Chelmsford, relating to the right to some unenclosed strips of land by the highway — a success to which he always attributed his subsequent advance, and which caused him to choose his title of Chelmsford. He defended Lord Ferrars in the ridiculous action brought for breach of promise against the earl by Miss Smith. He was also successful in unmasking the impostor who claimed to be the son of Sir Hugh Smith, and entitled to the very large family estates. This was the most remarkable "claimant" of our days until he was overshadowed by a still more notorious one. He compromised, as counsel, the famous action of Swynfen *v.* Swynfen, and when Mrs. Swynfen brought an action in consequence, the principle was sustained that no action could lie, and that counsel were irresponsible. Sir Thomas Wilde was a competitor of his. Wilde defeated him at Woodstock, and defeated him in becoming chief justice, Sir Nicholas Tindal having died just two days before Sir Robert Peel went out of office. He has been twice chancellor, but only for brief tenures on each occasion, but he is one of the most estimable and popular of law lords.

Another common-law chancellor succeeded, in the person of Lord Campbell, and then Bethell came to his rights. The career of Lord Westbury is very remarkable, and one which would have given full employment to all Lord Campbell's story-telling propensities. Like Bishop Philpotts, and, we believe, Dr. Jowett, the present master of Balliol, he was only a boy in jackets when he gained an open scholarship at Oxford. It was through his Oxford connection that he obtained his first great triumph at the bar. A suit in Chancery had been instituted against Brasenose College by a nobleman in the east of England. If his suit should be successful, the interests of the college would be overcast to a most serious extent. An eminent authority, however, advised the principal and fellows to give way, or at least consent to a compromise. The master of the college, Dr. Gilbert, the late Bishop of Chichester, then bethought himself of the gifted student, who had indeed been the most distinguished *alumnus* of the college, and whom he himself had examined for his degree, and made Mr. Bethell counsel, or one of the counsel, for the college. He was then a young and untried lawyer, but he earnestly represented to the college that they ought not to give way, and the event abundantly justified his advice. Practice rapidly flowed in upon him. Through the promotion of Wigram and Knight-Bruce, he made his way rapidly to the front, and became the leader of the Court of Chancery. For twenty years there was hardly a case in

Chancery of any importance in which he was not interested. For five-and-thirty years he was a prominent figure in all the equitable *causes célèbres* of the country.

He was late in entering the House of Commons, but the very year after he entered he became solicitor-general, Sir Alexander Cockburn being attorney. A few years later he became attorney, when Sir Alexander became chief of the common pleas. It must certainly be said for him that he put his mark upon the statute book. He gave Mr. Gladstone the greatest help in his Succession Duty Bill — an act which was accepted with resignation by the peers, but which excited the liveliest disgust in the bosom of eldest sons — for not even Mr. Gladstone could make the intricate technical points clear to the House of Commons. He had a very large part in the legislation which followed the Oxford University Report. But he differed altogether from his former friend and leader, Mr. Gladstone, in his Divorce Act, a bill which excited the strongest opposition in the minds of the High Church party, and of which the good effects have been extremely problematical. It may be questioned also whether the law of limited liability, which he had so great a part in settling, has not been more mischievous than salutary for the commercial interests of the country. Finally, his statement of the law of conspiracy, and the Conspiracy Bill which he introduced, had the effect of ejecting both himself and his party from office. It may be doubted, after all, whether his services to his party were in point of fact very great or essential. He was intensely self-conscious, and the self-consciousness would creep out in a small and ludicrous way. One vacation it is said he visited like an ordinary traveller the romantic little town of Porlach, and the next astonished landlady and tourist by inscribing his name "Westbury, Lord High Chancellor of England."

Certainly Lord Westbury was not an amiable man. His words were sweeter than honey yet were they sharp as swords. Men writhed beneath the irony of his tone, and contemptuous expression of lip and eye. One barrister was so far irritated that he struck him in court, and we need hardly say that that barrister's professional career was henceforth closed. He it was who told Bishop Wilberforce that a man "might smile and smile again and be a villain." He it was who contemptuously alluded to "what a noble lord had called his mind." It was an interesting study to look at Lord Westbury hearing appeals in the House of Lords, and listening to the other law lords giving judgment. The head was posed backward inimitably, and the countenance wore a fine expression of disgust and contempt. On one occasion when a case in which he was concerned came on before two learned judges, he happened not to be present, and a junior was called on to speak. Bethell came in and wanted to be heard. The opportunity of "taking a rise" out of the terrific unpopular barrister was not to be lost. "Oh, no, Mr. Bethell," said one of the judges, "it is quite unnecessary to call upon you, your junior has put the whole case before us very properly and at great length." "Then your lordships decline to hear me?" "We merely think that it is quite unnecessary, Mr. Bethell." The discomfited counsel gathered up his papers and left the court in a huff. "Look at him, look at him," quoth one of the judges in the greatest glee to the other, as both enjoyed great happiness from seeing him annoyed.

We do not enter into the miserable stories of the Westbury scandals. Not since the days of Macclesfield, to go no farther back, had the conduct of a great magistrate been similarly impugned. The House of Commons voted a resolution, practically of "no confidence," and his resignation followed. His farewell speech presented two good points — a promise, which was not left unredeemed, of doing good work as a private member, and a much-needed expression of regret, if by inadvertency or want of courtesy he had given pain to any member of their lordships' house. He was succeeded by Lord Cranworth once more. Here, again, we see the remarkable special characteristic of Rolfe, the moral gifts which in his case have been as fruitful and striking as any merely intellectual gifts. Lord Westbury never returned to office, and the fiasco of his will, like that of Lord St. Leonards, made the merriment of the law courts.

One great charm in studying the lives of illustrious chancellors and chief justices, is to watch the gradual steps by which great lawyers have achieved their position, and the lowly origin from which they sprung. Take the instance of the parentage of Lord Hatherley, who said once in the House of Lords that he had no ancestral honor. His father, Matthew Wood, worked as a child in a serge-manufactory, was bound chemist and druggist at Exeter, and was afterwards chemist and hop-merchant in London. He became alderman, sheriff, lord mayor, and the first of

the city members. The conspicuous part which he took in the defence of Queen Caroline is matter of history. He performed another public service, not equally well known, when, being dissatisfied with a sentence of execution passed upon three criminals, he inquired into the case, discovered the perjury of the witnesses, and saved the lives of the men. A curious history connects Sir Matthew Wood with the famous Jemmy Wood, the miser of Westgate Arms, Gloucester. Lord Hatherley has obligingly informed us that there was no connection between the families, that his father never sought the acquaintance of Jemmy Wood, but Jemmy Wood sought the acquaintance of Sir Matthew because he sympathized with his defence of Queen Caroline. In the event, after an immense amount of extensive litigation, Sir Matthew took a quarter of million under the will of the old miser. In the property was included the old ivy-mantled dwelling-house of Hatherley Court, with the surrounding estates, which has given a title in the peerage to the ex-chancellor.

Sir William Page Wood contributed to Mr. Fox's "Judges of England" many autobiographical details which make the final chapter one of the most interesting of his work. He took part in a school rebellion at Winchester, which was not repressed without the aid of the military. The penalty was expulsion, and he refused the escape which was offered him on account of his high standing in the school. He tells us how he had formed an order of Milton and Shakespeare knighthood at the school, and how close was his intimacy with his illustrious schoolfellow, Dean Hook. He enumerates the remarkable advantages he enjoyed in the way of society. During the two years of his father's mayoralty he associated with men of all parties at the Mansion House; for two years he lived at Geneva, then a great intellectual centre; he made a sojourn at Paris, a sojourn in Italy, where he knew Mezzofanti, and in London he was familiar with the highest literary society. He relates how he nearly lost his fellowship through the supposed radical character of a prize essay, and how he was offered by the editor of the *Times* full employment if he chose to write for the press. His mind, however, was fixed upon the bar, and he lived to attain the summit of his profession. He tells us that when practising at the equity bar, Lord Lyndhurst with natural courtesy gave him encouragement, and Sir John Leach, we presume with natural rudeness, administered a rebuff. For a long time he practised both at the equity bar and the Parliamentary bar, before committees of both houses of Parliament. He found himself forced, however, to make his election, and elected in favor of Chancery business. Both before and after his elevation to the bench, he worked hard on numerous commissions connected both with the law and with the Church. Much of our most beneficial legislation connected with both is due to his exertions. Like other ex-chancellors he has had a great deal to do with arbitration business. Long ago he was selected by Lord Cranworth to act, with Lord Wensleydale and Sir Lawrence Peel, as arbitrators between her Majesty and the king of Hanover in reference to certain crown jewels left by that king. He came to the bar the inheritor of an immense fortune, the inheritor of a great political name. He had the additional distinction of being a fellow of Trinity. Nevertheless, for twenty-eight years he labored assiduously at the bar without obtaining any special distinction. Then the blushing honors came thick upon him. In rapid succession he became Q.C., M.P., and solicitor-general. Most barristers regard the last honor, so immensely lucrative, as the first great prize of the profession, and the stepping-stone to the loftiest distinctions; but he resigned the much-coveted post with a careless magnificence. It was a wealthy and lofty position, but it was not a comfortable one. He resigned because he found that to be solicitor-general "entailed upon him so large an amount of late work, and so interfered with his duties of domestic life and comforts of home, that he felt bound to relinquish his honorable position." It is not often that a barrister in the full flush of success can permit himself to be actuated by such considerations.

For fifteen years he was vice-chancellor. Then the Conservatives, from whom he was always thoroughly alienated in politics, made him lord justice. Lord Justice Selwyn, a short time earlier, had obtained a similar post, and by right of prior appointment would be the senior judge. Sir Jasper Selwyn insisted, however, that Sir William should take his seat first, and so obtain precedence. He was not an attractive judge, so far as oratory went, or indeed the arrangement of sentences and thoughts. But the judicial mind has never been more finely manifested. He was of a serene, passionless temperament, im-

mense learning, keen judgment, and the most absolute impartiality. In the same year in which he was made lord justice, he was appointed, towards its close, lord chancellor. "I never had the least hope that I should ever occupy the high and distinguished position which I now hold," he has said, in one of those civic speeches, in which, at times, he became autobiographical. He held the position on account of the noble self-abnegation of Roundell Palmer. With the great prize of the profession at his feet, he allowed a scruple to stand in the way of his promotion, on the subject of the Irish Church disestablishment and disendowment. It was a noble example, which did much to raise the moral dignity of the bar, and even to elevate the public taste of the country. Sir William Wood was a lawyer whose moral and religious sense was as tender and delicate as Sir Roundell's. They had both, for instance, been for many years Sunday-school teachers. They had both written religious or devotional works. But Sir William Wood had not the slightest objection to legislation, which has proved the severest shock of our day to many religious minds, and which, to a mind like Sir Roundell Palmer's, was contrary to the rights of property and the principles of justice. It was scarcely expected that the new chancellor would prove any material addition to the debating power of the House of Lords. But in his great speech on the Irish Church Bill, Lord Hatherley more than enhanced his reputation. The *Times*, in a leader, thus characterized the speech: "It may appear strange to many, that casting about for the phrase which should most naturally and justly express the especial characteristic of Lord Hatherley's speech, we should say that it was pre-eminently the speech of a gentleman. Yet this is the simple truth. With no conscious art affecting to lend it grace, it was a rare mixture of delicacy and power. Its severity was proportionate to its dignity." It was this essentially "gentlemanly" character which Lord Hatherley peculiarly sustained during his somewhat long tenure of office. Every one was sorry for the physical misfortune which incapacitated him for office; but at the same time every one rejoiced that Roundell Palmer was chancellor at last.

We regret that our closing limits permit us to deal only very slightly with the great name of Lord Selborne. His is one of the great historical names of the equity courts, and except Lord Westbury, even if that exception is to be allowed, no practise has been so continuously large. But Lord Selborne is not a mere lawyer, as was Bethell. More than Bethell himself he was a law reformer, one who, in a special way, has made the question of law reform his own; although his brief tenure of office hardly brought the full development of his plans within the scope of practical politicians. Roundell Palmer has established a great ethical, as well as a great legal and great political reputation. He is one of the few great English lawyers who is also a great publicist. He is scholar, poet, critic. In early life, at Oxford, there were two distinguished young men, one of whom was intended for the Church, and the other for the bar. But the intended clergyman felt the keenest intellectual interest in the arena of this world's struggles, and became a barrister; whilst the intended barrister was absorbed in the other world's interests, and became a clergyman. As we heard the story, the names were those of Roundell Palmer and John Henry Newman. Before he became chancellor he had the opportunity of performing a great public service. He went out to Geneva as counsel for England, in the international arbitration case of the "Alabama." It was calculated that his fees would amount to about thirty thousand pounds; but we are informed that he refused to receive this, or any, remuneration for his services. He derived his title from the village of Selborne, associated with Gilbert White's most pleasant chapters of "Natural History," where he purchased an estate. It was characteristic of him that he built a church and schools, before he would build a house for himself; and the genial speech in which he addressed his friends and neighbors, when he really did get into his house, was "a very pretty bit" of legal biography. Lord Selborne seems now in that state of professional inaction which is the normal condition of an ex-chancellor; but he is sure to profitably employ his well-earned leisure, and if health be spared, may be safely regarded as the great chancellor of the future.

The late Lord Justice Rolt, following the example of Pemberton Leigh, drew up an autobiography of himself. It has some interesting references to Lord Cairns, his great competitor. "Cairns came, on taking silk, into Vice-Chancellor Wood's court, and of course soon got abreast of me there. For a very little time, if at all, did Cairns, towards the close of his brilliant career at the bar, get ahead of me in the business of the court." Rolt was de-

lighted to become lord justice. "Cairns had not long before succeeded Knight-Bruce as lord justice, and the new Court of Appeal was universally spoken of as one that would do justice to the judicial power and dignity of the Court of Chancery, and was not unworthy of its best times." This was his first judicial dignity. It had been deservedly won by a career of great splendor and honor at the bar. But great as that legal career has been, it will probably be looked upon at a future day as inferior to his political career. Hugh Cairns, like Mitford and Grant of a preceding generation, was a real statesman and a great member of Parliament. He might, even with a greater show of reason than Mr. Walpole, have forsaken the legal for the political career. Amid the prevailing feebleness that now has so long characterized the great law officers of the crown, the recollection of what Hugh Cairns was in the House of Commons comes back with a sense of startling contrast and surprise. Those were days in which Cairns would speak for hours late into the night, and the House was awaked by his commanding eloquence.

There is no case in which more rapid success has been obtained at the bar, or in which a lawyer has won a peerage at an earlier age. We regret to hear that in the case of the chancellor a great drawback has been a somewhat weak state of health. We hear of him at Torquay and other localities affected by pulmonary patients. It was this which induced him years ago to surrender the office of attorney-general, and become one of the lord justices, a loss which a stronger government than that which then existed must have contemplated with dismay. When Mr. Disraeli first became premier, he displaced Lord Chelmsford from the woolsack, and made Lord Cairns his chancellor. Henceforth Lord Chelmsford retires into comparative obscurity, and Cairns is more than ever to the front. The term of his chancellorship was not long. He went out with his party on the question of the Irish Church, and those who heard his speeches are not likely ever to erase them from their memory. A longer term of office now seems open to him than has fallen to the lot of many of his predecessors.

It is remarkable that the last three chancellors have all been deeply religious men, just as there had been a succession of chancellors of very opposite characteristics. Lord Hatherley and Lord Selborne have been distinctly High Church, but Lord Cairns is accredited with Evangelical or Low Church views. He gave, for instance, a very hearty support — which must have been valuable in its way — to the Moody and Sankey movement, and has made appointments which would emphatically commend themselves to Lord Shaftesbury. His administration of patronage is unique, and such as can hardly be paralleled by any examples of preceding chancellors, unless in the case of his predecessor, Lord Selborne. Only too often, the livings in the gift of the chancellor have been loot for private friends or political supporters. Lord Cairns appears to regard his patronage in the light of a trust. He seems deaf to the usual social and political considerations. He has developed a feeling for curates which must be astonishing and unexpected to that long-suffering order. We know several cases in which men have been unexpectedly appointed to livings simply on account of the worth of their character and the length of their services. Other chancellors, in a spasmodic way, might now and then have done this before, but Lord Cairns seems to do it very much on a system.

He is considered to have been, perhaps, the ablest lawyer that this country has ever possessed. He would not shrink from a comparison even with Lord Selborne, to whom, during his term, many would have applied a like expression. If we might venture to indicate the difference, we would say, that while Roundell Palmer has the greater subtlety, Lord Cairns has the wider grasp. The mind of the former is not free from a certain crotchetiness which is not found in the latter. The width of mind, the logical acumen, and the comprehensiveness of view are commonly thought to be somewhat rare in an Irishman, and perhaps have not been equally united in the same Irishman since the days of Edmund Burke. We may here recall Lord Lytton's lines, who thus commemorates the present lord chancellor and the present chief justice of England, and joins with them one who is the light and ornament of the Irish bar.

Hush'd were the benches when, with careless ease,
With accents matchless for melodious keys,
With words the choicest, that seem strung by chance,
Cockburn's frank mind reveal'd its large expanse.
Still Whiteside's genius charms both foes and friends,
So headlong force with sparkling fancy blends;
As torrents flash the more their rush descends.
Still, when Cairns rises, though at dawn of day,
The sleepers wake, and feel rejoiced to stay,

As his clear reasonings in light strength arise,
Like Doric shafts admitting lucent skies.

Certainly English law never showed brighter, nor was the English judgment-seat in greater glory, than when we see Lord Cairns as the high chancellor, and Sir Alexander Cockburn as the chief justice of England.

GREEN PASTURES AND PICCADILLY.

BY WILLIAM BLACK,

AUTHOR OF "THE PRINCESS OF THULE," "THE ADVENTURES OF A PHAETON," ETC.,

In conjunction with an American writer.

[Entered according to Act of Congress, in the Year 1877, by HARPER & BROTHERS, in the Office of the Librarian of Congress, at Washington.]

CHAPTER XLVI.

SCHEMES.

SHALL we ever forget that sunrise over the vast plain through which the Missouri runs — the silence, and loneliness, and majesty of it? Far away — immeasurable leagues away it seemed — a bar of purple cloud appeared to rest on the earth, all along the flat horizon, while above that the broad expanse of sky began to glow with a pale lemon yellow, the grassy plain below being of a deep, intense olive green. No object in the distance was to be descried, except one narrow strip of forest; and the trees, just getting above the belt of purple, showed a serrated line of jet black on the pale yellow sky. Then a flush of rose-pink began to fill the east, and quite suddenly the wooden spire of the small church beside us — the first object to catch the new light of the dawn — shone a pale red above the cold green of the cotton-trees. There was no one abroad at this hour in the wide streets of Decatur, though we had seen two Indians pass some little time before, with shovels over their shoulders. Our object in getting up so early was to try to get over the swampiest part of our journey before the heat of the day called up a plague of flies from the mud.

One thing or another, however, delayed our departure, and when at last we got into the swamps, we were simply enveloped in clouds of mosquitoes. If we could only have regarded these from behind a glass mask, we should have said that they formed a very beautiful sight, and so have discovered the spirit of good that lurks in that most evil thing. For we were in shadow — our vehicles having a top supported by slender iron poles arising from the sides — and, looking out from this shadow, the still air seemed filled with millions upon millions of luminous and transparent golden particles. Occasionally we got up on a higher bit of ground, and could send the horses forward, the current thus produced relieving us from these clouds; but ordinarily our slow plunging through the mire left us an easy prey to these insatiable myriads. Indeed, there were more mosquitoes within our vehicle — if that were possible — than in the same space without; for these creatures prefer to get into the shade when the blaze of the sun is fierce, though they do not show themselves grateful to those who afford it. The roof of our palankeen-phaeton was of blue cloth when we started. Before we had been gone an hour, it was grey; there was not anywhere the size of a pea visible of the blue cloth. But this temporary retirement of a few millions in no wise seemed to diminish the numbers of those who were around us in the air. At last even the patience of the lieutenant broke down.

"Lady Sylvia," said he, "I have now discovered why there is so much bad language in America. If ever we go up the Missouri again, you ladies must go in one carriage by yourselves, and we in another carriage; for the frightful thing is that we cannot say what we think" — and here he slapped his cheek again, and slew another half-dozen of his enemies.

"But why not speak?" his wife said.

"It was an ancient privilege, my lords,
To fling whate'er we felt, not fearing, into words."

Lady Sylvia was supposed to say something; but as she had tied a handkerchief tightly around her face, we could not quite make out what it was.

He continued to complain. We had delayed our return to Decatur on the previous day so that we should avoid driving on to Tekamah in the evening, when the plague is worse: he declared it could not be worse. He even complained that we had not suffered in this fashion a couple of days before, in driving over the same ground, forgetting that then we had a fresh and pleasant breeze. And we were soon

to discover what a breeze could do. Our friendly guide and driver suddenly plunged his horses off the path into a thicket of tall reeds. We thought we should have been eaten up alive at this point. But presently we got through this wilderness, and began to ascend a slope leading up to the bluffs. Was there not a scent of cooler air? We clambered higher and higher; we got among our old friends the sunflowers and Michaelmas daisies; and at last, when we emerged on to the sunlit and golden plain, the cool breeze, fragrant with May-weed, came sweeping along and through our vehicle, and behold! we were delivered from our enemies. We waxed valiant. We attacked their last stronghold on the roof; we flicked off these gray millions, and they, too, flew away and disappeared. We sent a victorious halloa to the vehicle behind us, which was joyfully answered. We fell in love with the "rolling" prairies, and their beautiful flowers and fresh breezes.

But the cup of human happiness is always dashed with some bitterness or another. We began to think about that vast and grassy swamp from which we had emerged. Was not that, in effect, part of the very Mississippi valley about which such splendid prophecies have been made? Our good friends out here, though they made light of their river by calling it the Big Muddy, nevertheless declared that it was the parent of the Mississippi, and that the Mississippi should be called the Missouri from St. Louis right down to New Orleans. Had we, then, just struggled upward from one branch of the great basin which is to contain the future civilization of the world? We had been assured by an eminent (American) authority that nothing could "prevent the Mississippi valley from becoming, in less than three generations, the centre of human power." It was with pain and anguish that we now recalled these prophetic words. Our hearts grew heavy when we thought of our children's children. O ye future denizens of Alligator City, do not think that your forefathers have not also suffered in getting through these mud flats on an August day!

At length we got back to Tekamah and its conspicuous tree, which latter, it is said, has done the State some good service in former days. We were much too early for the train, and so we had luncheon in the block-house inn (the lieutenant in vain offering a dollar for a single bottle of beer), and then went out to sit on a bench and watch the winged beetles that hovered in the sunshine and then darted about in a spasmodic fashion. That was all the amusement we could find in Tekamah. But they say that a newspaper exists there; and if only the government would open up a road to the Black Hills by way of the Elkhorn valley, Tekamah might suddenly arise and flourish. In the end, we left the darting beetles and drove to the station. Here we saw two or three gangs of "civilized" Indians, digging for the railway company. Whether Pawnees, Omahas, or Winnebagoes, they were, in their tattered shirt and trousers, not an attractive-looking lot of people, whereas the gentlemen-paupers of the reservations have at least the advantage of being picturesque in appearance. There were a few teepees on the slopes above, with some women and children. The whole very closely resembled a gipsy encampment.

And then, in due course of time we made our way back to Omaha, the capital of the Plains, the future Chicago of the West, and we were once more jolted over the unmade roads and streets, which had now got dry and hard. And what was this?—another telegram?

Lady Sylvia took it calmly, and opened it with an air of pride.

"I thought so," she said, with assumed indifference: and there was a certain superiority in her manner, almost bordering on triumph, as she handed the telegram to her friend. She seemed to say, "Of course it is quite an ordinary occurrence for my husband to send me a telegram. There, you may all see on what terms we are. I am not a bit rejoiced that he has actually sailed and on his way to join us."

The word was passed round. Balfour's telegram was from Queenstown, giving the name of the vessel by which he had sailed. There was nothing for her to be proud of in that; she did well to assume indifference.

But when, that evening, we were talking about our further plans, she suddenly begged to be left out of the discussion.

"I mean to remain here until my husband arrives," said she.

"In Omaha!" we all cried. But there was really no disparagement implied in this ejaculation, for it must be acknowledged that Omaha, after its first reception of us, had treated us with the greatest kindness.

"He cannot be here for a fortnight at least," it is pointed out to her. "We could in that time go on to Idaho and be

back here to meet him, if he does not wish, like the rest of us, to have a look at the Rocky Mountains."

"I can not tell what his wishes may be," said the young wife, thoughtfully, "and there is no means of explaining to him where to find us if we move from here."

"There is every means," it is again pointed out. "All you have to do is to address a letter to the New York office of the line, and it will be given to him even before he lands."

This notion of sending a letter seemed to give her great delight. She spent the whole of the rest of the evening in her own room. No human being but him to whom they were addressed ever knew what were the outpourings of her soul on that occasion. Later on, she came in to bid us good-night. She looked very happy, but her eyes were red.

Then two members of our small party went out into the cool night air to smoke a cigar. The broad streets of Omaha were dark and deserted; there were no roisterers going home, no lights showing that the gambling-houses were still open. The place was as quiet as a Surrey village on a Sunday morning when everybody is at church.

"I have been thinking," says one of them; and this is a startling statement, for he is not much given that way. "And what these ladies talk about Balfour doing when he comes out here — oh, that is all stuff, that is all folly and nonsense. It is romantic — oh yes, it is very fine to think of; and for an ordinary poor man it is a great thing to have one hundred and sixty acres of freehold land — and very good land — from the government; and if he knows anything about farming, and if he and his family will work, that is very well. But it is only romantic folly to talk about that and Balfour together. His wife — it is very well for her to be brave, and say this thing and that thing; but it is folly: they cannot do that. That is the nonsense a great many people in England think — that, when they have failed at everything, they can farm. Oh yes; I would like to see Lady Sylvia help to build a house, or to milk a cow even. But the other thing, that is a little more sensible. They say the railway has beautiful grazing land — beautiful grazing land — that you can buy for a pound or thirty shillings an acre; and a man might have a large freehold estate for little. But the little is something; and there is the cost of the stock, and the taxes; and if Balfour had enough money for all that, how do you know that he will be able to make his fortune by stock-raising?"

"I don't know anything about it."

"No," said the lieutenant, with decision; "these things are only romantic folly. It is good for a laboring-man who has a little money to have a homestead from the government, and work away; and it is good for a farmer who knows about cattle to buy acres from the railway, and invest his money in cattle, and look after them. As for Balfour and his wife ——"

A semicircular streak of fire in the darkness, a wave of the hand indicated by the glowing end of the cigar, showed how the lieutenant disposed of that suggestion.

"Do you think," said he, after a time — "you have known him longer than I have — do you think he is a proud man?"

"As regards his taking to some occupation or other?"

"Yes."

"He will have to put his pride in his pocket. He is a reasonable man."

"There was one thing that my wife and I talked of last night," said the lieutenant, with a little hesitation; "but I am afraid to speak it, for it might be — impertinent. Still, to you I will speak it; you will say no more if you do not approve. You know, at the end of one year, my wife and I we find ourselves with all this large property on our hands. Then we have to decide what to do with it."

"Sell every stick and stone of it, and take the proceeds back with you to England. You cannot manage such a property five thousand miles away. Bell's uncle, mind you, trusted to nobody; he was his own overseer and manager, and a precious strict one, if all accounts be true. You carry that money back to England, buy a castle in the Highlands, and an immense shooting, and ask me each August to look in on you about the 12th. That is what a sensible man would do."

"But wait a bit, my friend. This is what my wife says — yes, it is her notion; but she is very fearful not to offend. She says if this property is going on paying so well, and increasing every year, would it not be better for us to give some one a good salary to remain here and manage it for us? Do you see now? Do you see?"

"And that was your wife's notion? Well, it is a confoundedly clever one; but it was her abounding good nature that led her to it. Unfortunately there is a serious drawback. You propose to offer this post to Balfour."

"*Gott bewahre!*" exclaimed the lieu-

tenant, almost angrily, for he was indeed "fearful not to offend;" "I only say to you what is a notion — what my wife and I were speaking about. I would not have it mentioned for worlds, until, at least, I knew something about — about —— "

"About the light in which Balfour would regard the offer. Unless he is an ass, which I don't believe, he would jump at it. But there is the one objection, as I say: Balfour probably knows as much about the raising of cattle as he knows about mining — which is nothing at all. And you propose to put all these things into his hands?"

"My good friend," said the lieutenant, "he is a man; he has eyes; he is a good horseman; he can learn. When he comes out here, let him stay with us. He has a year to learn. And do you suppose that Bell's uncle he himself looked after the cattle, and drove them this way and that, and sold them? No, no; no more than he went down into the mines and watched them at the work. If Balfour will do this — and it is only a notion yet — he will have to keep the accounts, and he will judge by the results what is going on right. And so we too. If it does not answer, we can sell. I think he is a patient, steady man, who has resolution. And if he is too proud, if he is offended, we could make it an interest rather than a salary — a percentage on the year's profits —— "

"Well, if you ask me what I think of it, I consider that he is very lucky to have such a chance offered. He will live in the healthiest and most delightful climate in the world; he and his wife, who are both excessively fond of riding, will pass their lives on horseback; he may make some money; and then he will be able to come up here and go in for a little speculation in real estate, just by way of amusement. But, my dear young friend, allow me to point out that when you talk of the women's schemes as romantic, and of your wife's and yours as a matter of business, you try to throw dust into the eyes of innocent folks. You are contemplating at present what is simply a magnificent act of charity."

"Then," said he, with real vexation, "it is all over. No, we will make him no such offer unless it is a matter of business; he will only resent it if it is a kindness."

"And are there many people, then, who are in such a wild rage to resent kindness? Where should we all be but for forbearance, and forgiveness, and charity? Is he a god, that he is superior to such things?"

"You know him better than I do," is the gloomy response.

But the lieutenant, as we walked back to the hotel, was rather displeased that his proposal was not looked upon as a bit of smart commercial calculation.

From Nature.

THE RESTORATION OF THE ANCIENT SYSTEM OF TANK IRRIGATION IN CEYLON.

A WORK apparently pregnant with the largest and most beneficent results to the native population of Ceylon is in process of being carried out by the colonial government of that island. More than a thousand years ago a system of irrigation, the most complete and remarkable that the world has ever seen, was in successful operation in the low country, and the object which the government has in view is to restore to something like its pristine fertility a large proportion of the immense tracts of land — many hundreds of thousands of acres in extent — that for want of water have fallen into a condition of the most utter sterility. Sir Emerson Tennant, writing twenty years ago on this subject, says, "The difficulties attendant on any attempt to bring back cultivation by the repair of the tanks are too apparent to escape notice. The system to be restored was the growth of a thousand years of freedom, which a brief interval of anarchy sufficed to destroy, and it would require the lapse of long periods to reproduce the population and recreate the wealth in cattle and manual labor essential to realize again the agricultural prosperity which prevailed under the Singhalese dynasties. But the experiment is worthy of the beneficent rule of the British crown, under whose auspices the ancient organization may be restored amongst the native Singhalese."

The origin of the system of irrigation spoken of dates as far back as the year 504 B.C., when, according to the Singhalese chronicle, Mahawanso, the first tank was built in the neighborhood of his new capital, Anuradhapoora, by Panduwasa, the second of the Hindu kings. This was succeeded about seventy years later by two others formed in the same neighborhood. In the year 459 A.D. the Kalawewe tank, the largest of all, was completed. The retaining bund of this immense sheet of water is twelve miles long, and the circumference of the lake which it formed was no less than forty miles, the water being

Digitized by CORNELL UNIVERSITY

Original from CORNELL UNIVERSITY

backed up for a distance of fifteen miles and conducted from the tank by means of a conduit sixty miles in length to the capital. Sir Emerson Tennant, in describing these remarkable reservoirs, says, "Excepting the exaggerated dimensions of Lake Mœris in central Egypt, which is not an artificial lake, and the mysterious basin of Al Aram in Arabia, no similar constructions formed by any race whether ancient or modern exceed in colossal magnitude the stupendous tanks of Ceylon." The same author estimates that at the time of its greatest prosperity the island contained a population of from fifteen to twenty millions, nearly all of whom must have derived their means of sustenance from irrigated lands. At the present moment, after all the care bestowed through three quarters of a century by a paternal government, the population only amounts to twenty-four hundred thousand, whilst even for this a large proportion of the food — six million bushels of rice annually among other things — has to be imported from India, and the population itself must be considered to have been somewhat unnaturally increased during the last fifty years by the stimulus of European enterprise. The mass of the people too have changed their place of residence from the interior to the neighborhood of the seacoast, where trading and fishing instead of rice-cultivation furnish them a livelihood. The vast areas which formerly, under the magic influence of a sufficient supply of water and a hot sun, produced their two or three crops of rice in a year are now absolutely deserted, frequently not a single inhabitant surviving where once a thousand found ample means of subsistence. The city of Anaradhapoora, if its ruins afford us any means of estimating its magnitude, must have covered an immense area — no less than from thirty to forty square miles, and the population living on the spot and drawing its supplies of food from the immediate neighborhood must have been correspondingly immense. Now it is a mere village in the midst of vast heaps of ruins.

One of the most gigantic of these early irrigation works is supposed to have been originated by Maha Sen about the year 275 A.D., and, having been enlarged by Prakrama, Bahu I., who reigned in 1153, to have received from him the name of "the Sea of Prakrama." It consisted of a series of lakes formed by an embankment twenty-four miles in length and from forty to ninety feet high, by which the water of a large river and many considerable streams was hemmed in along the base of a range of hills and so forced into the valleys that a series of lagoons or lakes was formed extending for the above-mentioned distance and frequently several miles in width. A canal five miles in length conducted the waters of "the sea" to the Minery Lake, another of the works of Maha Sen, to be mentioned presently, and a further canal from Minery led the waters to the neighborhood of Trincomalie, in all a distance of fifty-seven miles. When it is remembered how sudden and torrential the rains are in a country like Ceylon — the writer has known eighteen inches of rainfall in forty-eight hours over a very large extent of country, and at one spot as much as 18·9 inches in twenty-four hours, — we cannot too much admire the vastness of such a work and the skill which enabled the native engineers to use the natural features of the country in such a manner that for a distance of twenty-four miles a single embankment sufficed not only to hem in the water for purposes of irrigation but also to provide a water-way for the transport of produce and merchandise. Along the whole course of this embankment and canal and wherever its tributaries carried the life-giving water there would be without doubt a teeming population; for irrigable land in Ceylon is capable of supporting, according to official calculation, one thousand persons to the square mile. In 1855 there was not a single inhabited village, although a few patches of land were occasionally cultivated by people from a distance. The contrast between the remote past and the present condition of this half of the island is a painful one to contemplate, but it is to be hoped that the colonial government will never stay its hand until all the useful works of ancient times have been restored and improved — but this will be a work of centuries.

Long before the Christian era the main ambition of the kings of Ceylon appears to have manifested itself in the formation of tanks, and many kings are mentioned in the Mahawanso who, "for the benefit of the country," and "out of compassion of living creatures," built a dozen or more of these splendid, but absolutely necessary, irrigation works. The Minery tank, some twenty miles in circumference, and irrigating an enormous area of fertile land now entirely barren, owed its origin, along with sixteen others, to Maha Sen, who reigned about the year 250 A.D. It is now merely a swamp, resorted to by enormous numbers of wild fowl. Up to the twelfth

and thirteenth centuries Ceylon produced her own supplies of food, but in the fourteenth it appears that the island was obliged to import a portion of it from India. In 1301, it is related that there were 1,470,000 villages in Ceylon. In 1410, as many as 1,540,000, the term village implying hamlet, or even a single house where there are people resident. Of the vast majority of these, if they ever really existed, not a vestige is left except the ruined tanks, which show unmistakably where the foci of population formerly were. This was shortly after the conquest of the island by the Malabars, who are believed not to have actually destroyed the fabric of the embankments, but by their system of government to have disorganized the village communities to such an extent that the works connected with the tanks fell into disrepair through neglect, the land became imperfectly irrigated, and the population gradually died out. That this process was a perfectly natural one seems evident from the fact that the tanks do not show any traces of wilful damage, and also from the consideration of the almost innumerable evils resulting in death, of which a scarcity of water in a tropical country like Ceylon is productive. Indeed one of the most frightful diseases that have ever scourged the human race is believed to have been developed in these very localities chiefly through the want of proper food, caused by the absence of a system of irrigation. It is believed, too, and there is strong evidence, based on experience, for the belief that the disease entirely disappears wherever irrigation is restored. It will naturally be asked, "If the advantages of a plentiful supply of water are so enormous, why have not the tanks been restored before this, and what hinders their immediate restoration at the present time?" The reply is, that the creation of this magnificent system of irrigation was not the work of a decade, or even of a century, but of a thousand years of successful national development, and that therefore the restoration of it must be also a work of time.

The object of this paper is to draw attention to the fact that the experiment of restoration is at the present moment in process of being tried, and bids fair, after the lapse of half a century or so, to alter entirely the character of the island. The most remarkable success has already attended the efforts to afford irrigation facilities to the Singhalese on the east coast. Where but a few years ago the natives were half starved and the land apparently in a hopeless condition, the reintroduction of irrigation through the assistance of the government has transformed not only the people, but the country, as if by magic. Rice-fields, palms, and other fruit-trees abound, and the population is increasing at a rapid rate. Of this particular district the present governor of Ceylon (Sir William Gregory), reported some four years ago to the legislative council of the island in the following terms: "In the month of April I visited the rice-growing regions of the eastern province, which are the creation of the irrigation works carried out by the government. I never before saw such an unbroken sheet of grain. Save where some isolated trees, part of a recent forest, broke the view, the eye wandered over some twenty thousand acres of green paddy. I saw, wherever I went, a sleek, vigorous, well-fed, and thoroughly healthy population. Up to 1864 the lands under cultivation in this province were fifty-four thousand acres, the chief impetus to the irrigation scheme having been given in 1857. In 1871 the lands in cultivation were seventy-seven thousand acres. The crown lands to be additionally reclaimed under works already completed or in course of completion, amount to fifteen thousand nine hundred acres, equal to the support of twenty-three thousand eight hundred and fifty persons." Again, speaking in the same report on the subject of the great tank already mentioned, he says: "I am most anxious to put the full strength of the department at work in restoring irrigation to Nuwara Kalawia. This magnificent district has the strongest claims upon us. It was once the granary of the island. It is now utterly neglected. It has a population of sixty thousand persons and over sixteen hundred villages, which have each of them their tank. There are at least seventeen hundred of these tanks, and I am credibly informed not one of them has a sluice in order. I trust that a few years hence the population may present the same vigorous and thriving appearance as the population of the eastern province, and from the same causes — namely, good and plentiful food." Of this same district a gentleman of very great experience told the writer that in travelling through it many years ago he came to a village where, of the thirty inhabitants, only one of them was able to carry water, all the others having been stricken down by hunger or disease. This destitution was caused by the failure of three successive rice-crops, and was not specially exceptional, but fairly repre-

sentative of what takes place frequently in the district. If we compare the scenes of plenty and contentment as they exist in the eastern province at the present moment with what meets us in the Wanni, or in any of the northern districts, where tanks have not been extensively repaired, the contrast is most striking. We find an almost depopulated country, with here and there a wretched village peopled by a few miserable and more than half-starved inhabitants, who, in times of scarcity, which are not infrequent, are obliged to live on roots and wild herbs, who are periodically decimated by a frightful disease, yet who seem bound to the spot where they were born, and prefer to die there rather than move away to a more fertile and healthy district. It is, indeed, this disinclination which possesses the agricultural Singhalese to move more than a day's journey from his home that presents the greatest of all difficulties to the scheme for the restoration of the tanks. It is on this account that the process of restoration is always in advance of the supply of natives to take up the new land, unless the works happen to be in the immediate neighborhood of population. The only plan, therefore, that has proved really successful under present conditions is to restore the tanks in the vicinity of villages, and induce the population to creep slowly onwards step by step, cultivating the more fertile pieces of ground as it advances, until the depopulated districts shall have been partially reclaimed, when the completion of the work will be a matter of comparative ease. Two typical instances of this mode of procedure have been mentioned to me by an official high in the government service, as showing the effect of a well-regulated expenditure of labor and money in restoring irrigation works. In the year 1854, Mr. Bailey, whose name will ever be associated with this scheme for benefiting the natives, spent less than 100*l.* on a canal some miles to the north of Matalé, a country town a few miles north of Kandy. The village thus supplied with water had previously dwindled away until only three houses were left, the rice-fields were deserted, and the famine-stricken inhabitants declared that they would die where their fathers had lived and died rather than migrate to a part of the country that was unknown to them. Ten years after the improvement was made the spot had become a little oasis in the desert; nearly two hundred acres of rice were under cultivation, yielding about thirty bushels per acre, and supporting a population of several hundreds.* Almost in the same neighborhood a sum of between 200*l.* and 300*l.* was spent on an old canal fifteen miles in length by the same zealous government official already mentioned. Many hundreds of acres were brought under cultivation, and in ten years' time, instead of a starved and fever-stricken population of one hundred and fifty inhabitants, no less than five hundred able-bodied men were on the list as liable to the road-tax. The changes in these, as in other instances, took place as if by magic, yet the means employed in effecting them were of the most limited and simple nature. The secret of the success lay in the fact that a famishing and disease-smitten population was within a few miles of the spot, and the remnants of ancient engineering skill were ready at hand to guide the laborers on to certain success. Since the above tentative experiments were made, very great changes for the better have taken place in the condition of the agricultural part of the native population. The carrying out of the scheme for the restoration of irrigation works is recognized as one of the chief duties of the colonial government, and there is little danger that, after the real success which has attended it so far, any future government will allow it to be interrupted. The policy of the colonial authorities may be summed up in the pregnant words of Sir Wm. Gregory's address to the legislative council in 1876: "I consider that at least one hundred tanks should be supplied with sluices, and properly repaired each year; and I have asked the secretary of state to furnish me with an additional number of well-trained officers, by whom these works will be carried on with vigor. There is no boon which the government can confer on the villagers more legitimately than this. It is a reward for their own exertions, and I am confident that each year, as it becomes better understood, it will be more appreciated, and that it will be recognized everywhere that the government have no other object in it than to increase the comfort and resources of the people." It will appear, from what has been quoted, that the tanks are not repaired free of cost and then handed over gratuitously to the villagers, but the natives are required to give a certain amount of labor in restoring the tanks, and also to pay a small rent or tax on the land cultivated, so that, whilst the native cultivator is the chief gainer by the

* Irrigated rice-lands in the low country will support population at about the rate of a thousand persons to the square mile.

undertaking, the government is no loser. If there could have been a doubt as to the wisdom of the tank-restoration scheme, the experience of the last three years must have dispelled it and proved how absolutely necessary a system of irrigation is to the welfare of the natives. In the address above quoted, whilst speaking of the cholera and other diseases which had visited several of the provinces, the governor says: "It is remarkable that the inhabitants of the eastern province enjoyed perfect immunity from epidemics of all kinds. It is an interesting question, on which I do not give an opinion, whether this general immunity from disease in the eastern province is due to the abundant supply of food throughout the populous part of it, the result of irrigation works." At the same time he speaks of the restoration of two of the large tanks as complete. One of these will irrigate twenty-three thousand acres, equal to supporting a population of thirty-five thousand persons; the other will bring large tracts of magnificent land into cultivation, and dissipate the unhealthiness of the district which has hitherto prevented settlement.

To look back over the early history of the attempts under Sir Henry Ward to restore the above system of irrigation, is like reading the accounts of the commencement of a successful campaign. The difficulties encountered were sufficient to discourage even enthusiastic philanthropists, chief amongst them being the utter disorganization of the village communities through the abolition of compulsory labor and the rooted dislike of the natives to migrate from one spot to another. For the recent part of the evil caused by this disorganization the British government was alone to blame, for in abolishing *rajekaria* they abolished the right of compelling villagers to keep their tanks and watercourses in repair. By doing this they practically placed the distribution of the most valuable property of which the natives were possessed in the hands of the strongest, and consequently the most unscrupulous, inhabitants of each district. In a dry season, when there was barely sufficient water to irrigate the fields along the course of a canal, those who were nearest to the source of supply would probably get more than their share, whilst those who were furthest from it and had an equal claim on it might get none; but, generally, the strongest party would get the advantage, to the ruin of the weaker. Dams would be built at various points along the course of the stream by one party, and as quickly destroyed by another. Interminable feuds were the results, and appeals to the courts of law, which, not being guided by native customs, only made matters worse. The canal, too, which ought to have been kept in proper repair by the united efforts of all who benefited by it, was allowed to fall year by year into a more ruinous condition, after compulsory assistance had been abolished, the residents on the upper portion of it refusing to aid those on the lower to repair the breaches made by the annual floods. Consequently the work that was done was ill done, and only of a temporary character. Soon it became beyond the power of isolated communities to effect the necessary repairs; the lands fell out of cultivation, and the population, after a long struggle with their neighbors, either died out or sought a living elsewhere. The early legislation in 1856 was based on a revival of the native customs and a compulsory distribution of the necessary work among the different villages, a majority of two-thirds of the inhabitants being enabled to place the lands under the irrigation ordinance, and to compel the assistance of all who benefited by the supply of water. The scheme resulted in complete success. It met the great want of the natives, and the interminable disputes about boundaries and rights of water, which was as much property to the natives as the land itself, soon ceased. The government claimed its own and sold large portions of it by auction at a very reasonable rate, the upset price being generally 1*l.* per acre, the land continuing to be chargeable with a yearly tithe to the government of from 3*s.* to 4*s.* per acre. In special cases the government granted even easier terms in order to induce the natives to settle in particular localities. Newly-purchased land was allowed to be free from tithes for four years, and the purchase-money was spread over an equal period from the time of sale. The pecuniary result was most gratifying to the government, and the benefit conferred on the natives inestimable.

A few words will be sufficient to describe the character of the cultivation which this system of irrigation is intended to promote. A crop of rice, or paddy, as the undressed grain is called, requires about ninety days to come to perfection, and during this time it must be supplied with about thirty inches in depth of water, or a little over four thousand cubic yards to the acre. The first and second watering of the paddy takes place within a fortnight of the sowing of the seed, and the

water is only allowed to remain on the land for a short time. The three subsequent waterings take place about the twentieth, the fortieth, and the sixtieth days after sowing, from eight to ten inches of water being used each time, and the water is allowed to remain on the land until it has evaporated. This system, though more or less modified according to the climate and the supply of water, is fairly representative of rice-cultivation in the lowlands of Ceylon. The official estimate of the produce is about thirty bushels per acre. It is probable that exactly the same system existed in the very earliest times, and that the Singhalese engineers were able to regulate the flow of water through the tank sluices just as they wished. It certainly seems unreasonable to suppose that the men who could design such a vast irrigation system with no better means of levelling than that of leading water by actual experiment from one point to another, should fail in minor matters such as sluice-gates. Yet the writer believes that nothing is known as to the manner in which the flow of water was regulated. It is true that in some of the sluices a square masonry well is found leading upwards from the sluice soon after it has entered the embankment from the tank, but there is nothing left to show how it was used. Captain Sim., R.E., some years ago suggested that it was intended to break the force of the water rushing in flood-time towards the sluice, and reduce the velocity of the water in the sluice to that due to the pressure in the well only. I am, however, inclined to think that a frame of wood somewhat in the shape of a box strongly braced together was fitted into the well so that it could rise and fall readily under the influence of the water in the tank, and that by placing weights on the top the frame might be forced down so as to cut off either partially or wholly the water issuing through the sluice. Wherever rocky foundations could be found for a dam or a ledge of rocks for a spill-water, the native engineers, as if distrusting artificial constructions, would be sure to utilize them. In some cases, where it was possible to include masses of rock in the embankment, the sluices themselves would be cut out of the solid gneiss and the work thereby rendered as indestructible as the rock itself.

It will no doubt be somewhat surprising to persons who are only acquainted with the system of rotation of crops in vogue in Europe, that these rice-lands can be made to produce year by year, for hundreds of years consecutively, one or two crops of grain annually without the land becoming exhausted or requiring to be continually renovated by manure. The explanation, however, seems to be that sufficient vegetable matter is carried down from the hills partly in solution and partly in suspension in water to supply all the waste produced by the continuous cropping. Those who have visited the richest alluvial valleys of California and Australia will no doubt have been struck by the fact that the most fertile soil is always found where the alluvium has been deposited in extremely fine particles and in water practically at rest, conditions which obtain in the paddy-fields of Ceylon, and must have obtained formerly on the Hunter River in New South Wales, and in the valleys opening on the Bay of San Francisco.

I cannot better conclude this paper than with an extract from a minute by Sir Henry Ward, after a tour of inspection in 1859:—

"The village of Samantorre is a very fine one, and stands on the borders of the richest plain in Ceylon, containing, as it does, nearly fifteen thousand acres of paddy. Mr. Birch and Mr. Cumming informed me that the scene of joy and excitement exhibited by the whole population when the water first came down from the Ericammam, in July, 1858, and saved a magnificent crop from destruction by drought, was one of the most striking things ever witnessed. Hundreds of people had collected at Samantorre as soon as they knew that the sluices were to be opened; and when the water was actually seen advancing down the bed of the dried-up river, the shouts, the firing of guns, the screams of the women, the darting off of messengers bearing the news in every direction, made a deep impression on all who saw it. They felt that a great work had been done, a great benefit conferred. But I feel also that under British rule this benefit ought to have been conferred thirty years ago upon a people so capable of appreciating it. Indeed, knowing what I now know of the history of the eastern province, I hold that what the government is doing in 1859 is simply the payment of a debt incurred by our rash interference with a people of whose habits and wants we knew nothing. This error is now in part repaired. Forty-four thousand acres of land are already under paddy cultivation, and I see reason to believe that the amount will be not less than sixty thousand acres in 1861, when the irrigation works have obtained their full development. But this will require constant attention on the part

of the government and of its local repsesentative. The maintenance of the *system* must never be lost sight of, and should unforeseen demands for assistance arise they must be met liberally and promptly." The words of so successful a governor have not been forgotten. The present governor, Sir William Gregory, has devoted all his energies to the carrying out of what was so well begun. The survey and engineering staff of the colony has been considerably increased, and the restoration of nearly the whole of the ancient irrigation works, besides the creation of new ones, may now be considered to be only a question of time. R. ABBAY.

ERICA.*

TRANSLATED FOR THE LIVING AGE FROM THE GERMAN OF

FRAU VON INGERSLEBEN.

I.

THE ISLAND OF WOLLIN.

NATURE has endowed the north of Germany with few rural charms. Here she rarely appears in the full splendor of her festival robes, with whose magnificence she well understands how to dazzle and intoxicate the eyes of men. On the contrary she usually displays a grave, almost stern countenance which does not allure the inhabitants to pleasure or dreamy idleness, but harshly casts them on themselves and their own strength.

The soil, although for the most part fertile, requires industrious tilling to yield its abundant harvest, for the sun is niggardly in bestowing its rays, and does not afford heat enough to make everything grow and flourish. The soft breeze of the south, which fans our cheeks and fills us with a sense of delicious comfort, here quickly changes into a keen wind, from whose chilling breath we strive to protect ourselves, and the radiant violet and crimson hues into which southern horizons melt are here transformed into a lustreless blue, or dull cold grey.

It might almost seem as if north Germany had reason to consider itself a stepchild of nature, and complain that she had withheld the blessings with which she so richly endows more favored climes. But if she has been parsimonious in her gifts and proved herself a harsh mistress, she has done the country no injury. A sturdy, powerful, manly race has grown up in the rude school, a race which in the exuberance of its strength easily conquers the toils of life, and only views the scanty charms of the country with a clearer eye, receives them with a more susceptible mind. A race whose heart clings to its northern home, though its imagination yields to the magic of the south, and whose energy exults in the conflicts forced upon it by the opposition of the soil and climate. A race which, even beneath this unsightly husk, can discover the imperishable spiritual beauty of nature, and perceive her eternal poetry even in the roar of the chilling winds, as they sweep over the monotonous plains, or bow the treetops in the vast forests.

Among the few spots richly endowed with external beauty are the islands scattered along the coast of the Baltic sea. First comes Rügen with its chalk cliffs and leafy forests, then nearer to the shore Usedom, and the smaller but no less lovely Wollin. The latter, which is separated from the continent on one side by a large bay, and on the other only by the Dievenon, may almost be considered as an outpost of the main land. Yet even in her greater generosity nature remains faithful to the character she has stamped upon the whole country. There is none of that laughing, radiant beauty which dazzles the eye and makes the heart leap with delight, but on the contrary a grave, almost solemn charm, which elevates the soul and involuntarily leads it to devotion. Wide tracts of woodland, in which the pine is not wholly unrepresented, receive the wanderer in their cool shades, and his eye roves admiringly over the huge lofty trunks of the oaks and beeches, whose branches interlace beneath. Here and there in the distance appears the blue, furrowed surface of the sea, or the smoother mirror of the great bay. The shores of both are rugged and precipitous, but the hills soon recede again, and the waves dash freely on the level shore. The watery element is well represented, for even in the forest there are numerous large and small lakes, in whose dark water the sky and trees are dreamily mirrored, and over which the lower branches of the beeches, or the slender boughs of the birches and willows bend caressingly.

If from some rising ground one obtains a view of the whole island, its forest-covered hills resemble a waving sea of leaves, everywhere interrupted by the flash of water, and surrounded by the waves of the sea. The eye rarely falls upon a village or any large tracts of tilled fields, the

clearings usually seem to be filled with luxuriant meadows, and this peculiarity increases the character of loneliness, the majestic monotony, stamped upon the whole landscape.

Even the vegetation assists in enhancing the solemnity of the impression produced. It consists of tall, slender ferns which nestle at the foot of the tree-trunks, soft moss, and luxuriant heather, with its countless lilac blossoms. The color of the latter, however, is not sufficiently bright to produce any variety, and the yellow cowslips, brownish dandelions, red field-pinks, or scarlet wild poppies bloom too far apart to assert themselves. Even the turf, reddened by strawberries or cranberries, seems monotonous in its long streaks of red and green.

The woodcutter's axe is rarely heard among the trees; for the eager greed of gain, which has recklessly sacrificed our forests, has not yet forced its way here. Undisturbed by the echoing axe, the roe bounds through the glades, and then with timid glances hies towards its accustomed pasture. The antlered stag proudly tosses his head as if he scorned danger, and walks quietly to the water to quench his thirst. The crafty fox hungrily watches the wild ducks fluttering among the reeds that border the ponds, or slinks like a cat after the partridges innocently amusing themselves in the tall grass. Slender lizards cling to the branches of the trees, and timid hares luxuriate in the abundant pasturage.

In the summer season, when hunting is forbidden by law, these animals are rarely disturbed. The inhabitants of the island usually dwell on the seacoast or along the shore of the bay, where fishing and seafaring afford them a comfortable support, as the capital Wollin possesses a by no means inconsiderable commerce.

Some of these fishing villages have gradually risen to the rank of watering-places, where the throng of visitors seeking health and comfort yearly increases. When the lovers of woodland solitude think the crowd too large, they emigrate to another village, and there found a new watering-place. But even here the feeling of quiet comfort does not remain long, for the inhabitants of the little hamlet do everything in their power to attract new guests, and a long list of names seems indispensable to their ambition.

In one of the numerous inlets formed by the Baltic, is one of the most important of these watering-places, which we will call Waldbad. Here the steep wooded hills which overhang the sea suddenly recede, as if to make room for the settlement of the inhabitants, and thus surround the houses in the village with a dark, lofty girdle of trees. There is plenty of space to build, as is shown by the wide intervals between the cottages. Tempting as the sea looks in the glittering sunlight, when ruffled by a light breeze, almost all the inhabitants have resisted the charm and left the protecting down between themselves and the water; nay, there is even a large meadow and several ploughed fields between the centre of the village and the shore.

The whole hamlet gives the impression of a place which has been erected gradually, and where each person has built his house without any special reference to his neighbor. Alhough there are distinct streets, the buildings are sometimes set far back, sometimes very near them, part turn the front and part the end to the street. Sometimes one house is entirely away from it, and a side path leads to the door of the independent dwelling. Some of the dwellings are very near the front, others close to the down; nay, here and there some bold wight has even disdained its protection, and set his small or large house directly on the summit.

An equal diversity exists in the architecture of the dwellings. There are the villas of the rich merchants from the neighboring city, which, with their ivy-grown verandahs, pillars, and balconies, present the stately exterior of a small castle; the tasteless mansions built on speculation, and which — spite of their verandahs and external adornments — make by no means a pleasant impression, as they are entirely unsuited to their surroundings. Then come the fishermen's tiny houses, adorned with glass-roofed balconies and climbing vines for the summer guests, while the real owners retire to the narrowest quarters. Last of all appear the wretched huts, which can venture to make no claim to accommodate visitors, scarcely afford room for the families they shelter, and are pervaded by an indescribable atmosphere, produced by freshly smoked fish, nets spread out to dry, and similar things.

The houses adjoining the forest resemble a real street least of all. They are farther away from each other, and in still more peculiar positions than the rest. Most of them are built on a small hill, and one is obliged to turn aside from the highway and mount the steep ascent. Although the sea is not so near at this point,

the contrast afforded between the blue, boundless expanse of water, the cattle grazing in the meadows, the waving fields of grain, intersected by the highway filled with gay groups of pedestrians, produces a far more charming impression.

There is a certain degree of jealousy between the inhabitants of the different streets; each one thinks himself entitled to claim special attractions. One expatiates upon the view, another holds forth the advantage of being sheltered from the wind; if the vicinity of the sea is found delightful, the neighborhood of the forest is certainly also very charming. The guests eagerly take sides with the rivals, and each is firmly persuaded that he lives in the best street.

Various as are the opinions, there is one singular point of agreement, that all think the Bergstrasse, the forest path previously mentioned, particularly destitute of attraction; of course with the exception of its inhabitants, who are all enthusiastic in praising their street. And yet if the impartial spectator did not fear the hatred of almost the entire population of Waldbad, he would undoubtedly give the prize to this very Bergstrasse. Spite of the beautiful oaks and beeches which the island possesses, the girdle of trees that immediately surrounds the village consists principally of pines, which, clothing the hills with their monotonous green, somewhat impair the beauty of the landscape, and one has reason to regret the predominance of the stiff firs. This regret is undoubtedly most keenly felt by the inhabitants of Waldbad, indifferent as they usually are whether their eyes rest on the needles of the pine or the graceful foliage of other trees. But their summer guests often lament the existence of this belt of pines, nay, even seem to consider its existence a lack of consideration on the part of the inhabitants, and constantly praise the beautiful foliage of the woods around Heringsdorf.

The charming situation of this fishing-village on a neighboring island soon made it a well-known and favorite watering-place, and it even disputes the supremacy with the neighboring city of Swienemunde, whose size enables it to offer greater attractions to summer visitors, and thereby not only excites the jealousy of the latter place, but of all the larger and smaller hamlets around, which are just as good fishing-villages, and therefore entitled to equal favor. Waldbad, which is very proud of the advantages afforded by the villas of the numerous rich merchants, of course keenly feels the rivalry. The illustrious names which yearly appear on the list of visitors at Heringsdorf are a thorn in the side of every resident of Waldbad, which has hitherto been visited by no one of princely lineage, and any commendation of the beautiful oak woods of Heringsdorf seems like a personal insult.

But as the unlucky pine wood cannot even be transformed into timber, all Waldbad makes it a point of honor to think its stiff firs bewitchingly beautiful, and every one extols the healthy freshness of the forest, the strong odor of rosin that exhales from the trees, and calls the attention of visitors to the advantages of a place which combines sea-air with the much-desired strengthening breath of the pines.

Nor are the inhabitants wrong in this respect. A walk in the woods, when the soft breeze brings the freshness of the sea, and at the same time impregnates the air with the spicy odor of rosin, is wonderfully invigorating, and every guest may well be satisfied with his choice of a summer resort.

II.

THE TREASURE.

At the time our story begins Waldbad seems utterly lifeless. The season has not yet commenced, and most of the houses have shutters over the windows and seem asleep. Even the inhabitants of the village remain in their dwellings, for a tempest, such as autumn or spring often brings the residents of the shore, is raging over the island. The sea seems to boil, the trees fall crashing to the ground, and there is a hissing and roaring in the air as if the wild huntsman were abroad.

In one of the houses on the Bergstrasse a young girl is standing at the window, watching the raging storm. It is one of the smallest and least elegant dwellings on the street, nay, it even seems somewhat ruinous, and the little veranda creaks heavily in the gale.

The young girl, however, seems to feel no fear, for an expression of satisfaction, almost delight, rests upon her features.

Her figure, of middle height, has not yet gained the graceful roundness of womanhood, and her movements are also the abrupt, hasty gestures of a child. Her features, too, have the same undeveloped appearance, and only her brown eyes and soft brown hair, whose heavy braids are worn twisted like a diadem around her head, can be called beautiful. She turns and looks into the room, where an older lady is seated on the sofa.

"Isn't it beautiful, mamma?" she asks with a radiant smile.

Her mother does not seem to be of this opinion, for the old lady, who is evidently an invalid, has drawn a coverlet over her knees as a protection against the cold air, and seems the image of peace. The young girl, familiar as is the sight, evidently feels the want of consideration in her words. She leaves her place, throws herself on her knees beside her mother, and clasps her in her arms.

"Forgive me, mamma. I did not think that the storm made you uncomfortable."

The mother passes her hand lightly over the brown hair, and gazes lovingly into her daughter's beaming eyes. "Does the storm really please you, child?" she asks, half laughing; "I should think it would be uncomfortable enough."

"Not to me, mamma, and I do not fear its fury. When it comes howling and roaring in this way, hisses through the forest, makes the pines groan, tears the limbs from the trees, and uproots the stout trunks, it gives me a sort of wild delight. I feel its terrible beauty just as keenly as I admire it in its gentler mood, when it creeps through the boughs like a wailing sigh. The melancholy it arouses does not cause pain, any more than its fury excites fear, but produces a certain happiness; it only awakens a pleasant sense of excitement."

"When you are safe in the house, Erica?"

"Perhaps so, perhaps that is what gives me the feeling of quiet independence, nay, defiance, which is aroused within me. When I used to run away from you out into the storm, it was only to throw myself down in some hollow, and thus let the tempest tear over me without harm."

"You were safe, it is true; but did not the thought of the many persons who lacked that security disturb you? We dwellers by the sea certainly have good reason to remember such things."

"Yes, mamma, that was the shadow on the bright picture, and even now the thought of Michel and Peter Störensen, who were out in their boat when the storm burst, is torturing me. I should certainly have gone to see whether they had returned, if I had not been afraid you would forbid it. But now the storm has ceased, it will soon clear up entirely, and there is surely no reason for not going out."

A violent gust of wind, which made the panes rattle, seemed to contradict this assertion, but the mother felt no hesitation in giving the desired permission. Erica was no delicate city child, who, rendered effeminate by education, feared the discomfort of the storm, and in spite of her slender frame she had often, without injury, bid defiance to the worst weather. But when, wrapped in her cloak, with her head covered by a thick hood, she gave the old lady a farewell embrace and glided ont of the door, her mother's glance betrayed a shade of anxiety.

"Have I done right to make her so hardy?" she murmured. "Shall I not perhaps draw down some evil upon her head? And yet, when I think of my own youth, the tender anxiety with which I was guarded, and which was unable to protect me either from the sorrows of life or bodily illness, I hope I have chosen the right way. I hope I have at least saved Erica from some portion of her mother's fate."

Her head drooped on her breast as she murmured these words, and her features, which were still beautiful, though marred by sickness, assumed an expression of unspeakable sorrow. "Oh God!" she suddenly exclaimed, "I cannot make her destiny brighter. I can only try to steel her, that she may feel its bitterness less, offer it a stouter resistance than her mother."

She covered her eyes with her hands, as if to forcibly shut out the sorrowful pictures that rose before them. But she could not protect herself against them. Her life steadily unrolled before her mental vision. She saw herself a young, beautiful, petted girl, surrounded by love and wealth, upon whom happiness seemed to pour out its horn of plenty. She saw the radiant joy in the face of the man whom she selected from her throng of suitors to be her husband. She loved him warmly and loyally, and therefore felt the separation less keenly, when he took her from the circle of her friends, from the banks of the beautiful Rhine, to his own more northern home. If she missed the sunny hills, the vineyards, the castles on the mountain peaks reflected in the green waves of the beautiful river, she still felt inexpressibly happy. Her husband's love, and the bright smiles of her children afforded her an abundant compensation, and the magnificent home in which she was installed almost effaced the habits of her girlhood. True, her delicate constitution suffered a little from the rough climate, but the excessive care by which she was surrounded, the constant attendance of the most skilful physicians, and the springs she visited every summer did not suffer ill health to conquer, and it thus merely

formed the dark background to the bright picture of her life.

But even here was proved the truth of the terrible proverb, that there can be no compromise with fate. Misfortunes, such as the death of cattle or a bad harvest, which at first were scarcely noticed by the rich man, increased, and soon made themselves unpleasantly felt. The expenses of housekeeping, fixed upon the basis of the large receipts of the previous lucky years, now considerably exceeded them. Out of consideration for his spoiled and beloved wife, the husband would not commence any retrenchments; he did not wish to cloud the horizon of her life, and supposed that the present disasters would only be passing clouds.

But it was beyond his power to shield her from sorrow entirely, for death now approached and robbed them of several blooming children.

Grief for this terrible loss completely shattered the wife's feeble health, and only a long sojourn in the south could preserve her life. Her husband, to whom a separation under such circumstances seemed doubly impossible, accompanied his wife, and unfortunately made a bad selection in his choice of a steward. On his return he found his affairs in a state of confusion that it seemed impossible to unravel, and as misfortune did not cease to pursue him, he was soon unable to call himself a wealthy man.

Retrenchment now became absolutely necessary, and although the wife submitted without a murmur, he fancied he perceived in the constant expression of sorrow that rested on her face, perhaps only caused by the loss of her children, grief for the deprivations to which she was subjected. This suspicion made the battle of life so unspeakably bitter that death was almost welcome when, a short time after, it approached his couch, and only the thought of his wife made the parting difficult.

This death caused the total loss of all the property. The wife, bowed down by grief, and rendered incapable by physical weakness of managing the confused business affairs, resembled a rudderless boat carried by the tempest over the heaving surges. Treacherous men took advantage of her position to gain profit for themselves, and the once rich and petted woman, with her youngest and now only child, was almost reduced to actual want.

The last piece of property remaining, except a very small income, was a little house in which she had formerly been in the habit of spending a few weeks at the seashore. Whenever her husband had wished to build a handsome villa on the site of the little dwelling, she had always opposed the plan, thinking a simple rural cottage more in harmony with the surroundings of forest and sea, meadows and fields, and to her entreaties the tiny house owed its prolonged existence.

Now it had become her last refuge, for the air was beneficial, nay, absolutely necessary, to her feeble frame, and as the place was cheap, and she could live there in the utmost seclusion, she had retired to it. True, the rude storms of winter again shook her health, but iron necessity compelled her to remain.

Her whole life here had been devoted to the sole object of giving Erica an education that would enable her to secure an independent future. The child's instruction — which in the out-of-the-way little fishing-village seemed almost impossible to obtain — had been eagerly undertaken by the pastor; she herself possessed the ability to teach her daughter music and the modern languages, and thus the latter had acquired a degree of culture which might satisfy the most comprehensive claims.

Erica was only a few years old when death robbed her of her father; her childish eyes had no longer beheld the evidences of wealth, and therefore no contrast made her poverty seem bitter. Her bright, cheerful temper was unshadowed, and her presence acted on her feeble mother like a ray of vivifying sunlight. The delicate frame Erica had inherited from the latter — a resemblance which, remembering her own sufferings, rendered the invalid inexpressibly anxious — seemed to have been steeled by the rude school in which life had placed her. Although she had not developed early, and at the age of seventeen still appeared a mere child, this very circumstance had perhaps assisted in protecting and strengthening the originally tender mood. Rendered flexible and pliant by the free life she led, she could vie with the fishermen's children in running, climbing, or rowing, and the mother's heart was constantly divided between dread of the dangers to which her darling was exposed, and the thought of the strong constitution which would result from this mode of education.

As all these considerations now passed before the mind of the invalid, who had sunk down upon her couch, the terrible question which had so often haunted her once more arose. "Am I to blame for the misfortunes that have befallen me? Was I too weak, too pleasure-seeking;

did I abuse my husband's love instead of aiding him in his struggles with fate like a faithful wife?" Guilt and destiny are often strangely interwoven, and the groaning victim might feel the crushing burden, without being able to distinguish which sting wounded most painfully.

"Oh God! protect my Erica, do not let her become as wretched as her mother!" was the agonized prayer that burst from the oppressed heart, and at last seemed to give her peace, for the drawn features grew smooth, the clasped hands relaxed, and the compressed lips gradually parted. When the old maidservant, who now entered the room, cast a searching glance at the invalid, she perceived no traces of the storm which, like the tempest without, had just swept over her.

When Erica emerged into the open air, the fury of the wind was still so great that she could scarcely walk against it. She therefore altered the direction of her steps, which had been turned directly towards the sea, and tried to gain the shelter of the woods in order to reach the hut where she wished to make her inquiries. At the moment Erica entered the forest, however, it offered no peaceful refuge, but, on the contrary, a scene of terror.

The wind still swept howling and hissing through the trees, the branches were torn off, and the pines creaked as they swayed to and fro. The young girl hesitated a moment, as if she were inclined to turn back, but instantly shook her head with a smile — as if ridiculing her own fear — and hastily entered the forest. Although the protection it afforded against the tempest was instantly perceptible, she could only advance very slowly. Sometimes her way was barred by broken boughs, nay, even uprooted trunks, sometimes one of these branches splintered from the tree directly before her, but she continued her progress undismayed. With nimble dexterity she sprang over or glided through every obstacle, and the roar of the surf, which constantly grew louder and louder, showed that she was approaching the sea.

The trees now parted; and there lay the boiling, foaming surges, apparently close at her feet. The high cliffs here descended abruptly to the water's edge, beyond the eye wandered over wooded hills, which rose from the shore and were washed by the waves. Here the needles of the pines and the graceful foliage of other trees had united in a picturesque group. Graceful beeches, fragrant lindens, broad-leaved maples, lofty oaks, and here and there the waving boughs of white birches alternated with rows of densely crowded pines, whose dark-green hue made a wide ravine seem even more gloomy. Sometimes a bare, steep rock appeared, whose perpendicular sides had prevented the growth of any trees, and anon a glade — like a spot of light in a dark picture — carpeted with vivid green, in which the scattered trees, developing in perfect freedom, had grown to a wonderful size.

Now all the boughs were tossing stormily, like the foaming waves. The sea had swept over the wide sandy beach that usually intervened between it and the woods, and the white spray dashed almost to the treetops and was whirled far into the forest. Sea and woods sang together in the wildest harmony, and it required a strong mind to feel and rejoice in this bacchanalian beauty.

When Erica entered the glade, she was instantly besprinkled with the foaming spray — a damp greeting. She evidently did not find it unpleasant, for she made no effort to protect herself, but gazed earnestly at the magnificent spectacle, and then turned towards a footpath, which, in numerous curves, wound from the hills down into the valley, and at this moment did not seem wholly free from danger. But the light, pliant figure soon traversed it, and as the plain where Waldbad was built now lay before Erica's keen eyes, she soon perceived a crowd of people in the distance.

Fearing that some accident had happened, she hurried forward as fast as the storm permitted, but soon discovered that avarice, not sympathy, had allured the throng. The beach was covered with planks, casks, and other objects, which probably belonged to some standed ship, and every one was endeavoring to get possession of the article he thought most valuable; they considered it unclaimed property, a gift presented to them by the sea, and troubled themselves very little about the unfortunate owners, who had perhaps perished by a terrible death.

Erica recognized among the throng the old and young fishermen about whose fate she had been anxious, and as the object of her walk was thus gained, she was just turning away, when her eyes fell upon a small box that one of the men had just angrily pushed aside, and in which she perceived a dark object. Urged on by curiosity, she stooped and seized a dripping portfolio, most of whose contents seemed to have been lost.

The portfolio itself was made of gilded

leather, now tarnished and spoiled. The few leaves it still contained had been somewhat protected from the wet, but the papers scattered around were so completely drenched that Erica, though against her will, was obliged to leave them to their fate. She carefully concealed her treasure under her cloak, and walked hastily back towards home.

From The Spectator.

THE BLACK MUSEUM.

"TAKE care how you step," says a courteous official, who has preceded the visitor up a staircase in one of the houses in Scotland Yard, and opened a door on an upper floor; "we are obliged to throw a great deal of this about." The substance in question is a disinfecting powder, inimical to "the moth;" the room is a large, bare-floored apartment, with barred windows, fitted up with wide shelves, which are divided into square compartments; the centre is occupied by a shelved stand, also divided into compartments, and their contents are liberally sprinkled with the all-pervading powder. The room is that in which the articles of property taken from convicts about to undergo their sentences are stowed away, until they are reclaimed by their owners; the stand in the centre is a receptacle for objects of the "unlawful possession" class, to which a large room upstairs is also devoted. Overhead is the "Black Museum," in which, during the last three years, *pièces de conviction*, which until then had been kept indiscriminately with the other property of criminals, have been arranged and labelled, forming a ghastly, squalid, and suggestive show. On entering the lower room, the visitor is struck by its odd resemblance to a seed-shop. Hundreds of hooks stud the rims of the shelves and the sides of the compartments, and from them are suspended hundreds of little packets, neatly made up in brown paper, tied with white twine, and severally distinguished by large parchment labels, each bearing a neat inscription. The packets contain small articles taken from the prisoners, who in due course, after they are discharged from prison, will be brought to Scotland Yard, will have their portraits taken (by force, should they object to that process); the larger things are deposited in the compartments of the shelves, and every item, no matter how insignificant, is entered in the proper registers. A motley collection are the larger articles, with a preponderance among them of grimy pocket-books and greasy purses, — one trim and pretty hand-basket strikes the visitor's eye, — but there are valuable things in some of those parcels; and down-stairs, in the officials' room, is a massive iron safe, fitted with sliding shelves, in which is kept a large collection of watches, rings, chains, pins, scent-bottles, pencil-cases and other jewellery, which are either the lawful property of prisoners, or have been found in their unlawful possession and confiscated, but for whom no owners have been discovered. Among the watches are some beautiful specimens, one in particular, taken from a costermonger, and of exquisite workmanship and ornamentation, is valued at fifty pounds.

The prisoners' property room is scrupulously clean and tidy, but the look of it is forlorn and squalid, the powder lies thick on everything, and the scent of moth and rot is in the air. Great bales of cloth and woollen stuff occupy the shelves of the central stand; they are shaken, and beaten, and turned, but all to no avail; the moth and the rot have got them, while the prison has got the former unlawful possessors of them, and the unwholesome weirdness peculiar to once worn, but long-unused garments is upon the articles of wearing-apparel which are hung or folded up in the room. This impression comes more strongly upon the visitor when he goes up higher still, into the topmost apartment, where heaps of clothing hang against the walls, some new, some worn. A girl's white fur jacket behind the door is a mere nursery for moths, a bunch of new boots of several sizes dangling from a peg at the end of a long string is all speckled with a measly mildew; the heaps of shawls have a draggled and furtive look, and some children's clothing has a touch of its inseparable prettiness, even here. Old books, a picture or two, some worthless table ornaments, innumerable articles, which could not be described or classed except as odds and ends, form a portion of this collection, which goes on accumulating, and which has no ultimate destination. "What is to become of all this?" asks the visitor, and is answered, to his surprise, that nobody knows; that the things are nobody's property, and nobody has the power to do anything with them, — a piece of information which makes them more ghastly and nightmarelike to the imagination than before. An ever-growing dust-heap, formed of thieves'

clothing and unlawful possessions, with nobody to cart it away, to distribute it, or bury it out of sight forevermore; an accumulating banquet always spread for the moth, the rust, and the rot, — the contents of those rooms are far from pleasant to think of. It seems supremely ridiculous, but it is a fact, that nothing short of a legislative measure could rid the premises of these rotting garments out of whose every fold one might shake, with the dust, an image of squalor, crime, and punishment.

Outside the door of the Black Museum is a shelf, in the wall of the landing-place. The visitor passing it is aware of a huddled heap of dirty coats, a serge gown, and a coarse kind of rug, the skin of an animal, with the red and white hair on. Under the shelf, on the floor, lies some rough packing-cloth. He passes the heap carelessly — there's a little can full of a disinfecting fluid on the same shelf — and enters the museum. What are his first impressions of it? They are various, — that it is like a bit out of a gamekeeper's room, with a bigger bit out of a smith's forge, a touch of a carpenter's workshop, a broad suggestion of a harness-room, something of the marine-store complexion (and a good deal of its odor), a hint of the open-air stall in front of a pawn-shop in a very small way of business indeed, a little of the barrack-room gun-rack, with no "bright barrels" enforced; a general air of lumber-room, with just a dash of anatomical museum, but above all, and increasing with every moment's prolonged observation, a likeness to the cutlery booth in a foreign fair, with all the knives symmetrically displayed, but unaccountably rusty and dim-bladed, as if the booth had been shut up for half a century, and the salesman and his customers were all ghosts.

Opposite the door, and on the face of the wall to the right, are the objects, displayed on a wooden shelf with iron legs, which convey to the visitor a hint of the open-air stall in front of a pawn-shop in a very small way of business indeed. A common little looking-glass in a wooden frame, with a foot to it, four black glass buttons, two wisps of rope, a pair of trumpery earrings in a cardboard box, two bullets, a pipe, a cluster of soft, now dull, light-brown hair, wound round a pad, a comb, a pocket knife, and a little wooden stand covered with glass, are among the most noticeable articles. On the shelf to the right are a dirty prayer-book, a pocket dictionary, a pair of boots, a gaudy bag worked in beads, and the crushed remains of a woman's bonnet, made of the commonest black lace, and flattened into shapelessness. In both these instances the other impressions of the place come in too, for over the shelf fronting the door hang workmen's tools, hammer, and cleaver, and spade, and beside that on the right, is just such a bundle as adorns the walls of the marine store; it consists of a gown and petticoat, of cheap, poor stuff, bearing dreadful, dim stains, and a battered crinoline. The visitor is in presence of the mean objects which perpetuate here the memory of two peculiarly horrible crimes. The soft brown hair is that of Harriet Lane, the buttons and the earrings are those which were found in the earth where her body had been buried, the bullets were taken out of her skull, the object under the glass case is the sacred piece of her skin, which completed the identification of the body; the wisps of rope dragged her out of the earth under the warehouse, the cleaver, the hammer, and the spade are the implements with which the horrible deed which led to the murderer's detection were done. The knife was Thomas Wainwright's, the pipe was Henry's, and when the visitor is leaving the museum he will be shown, in the pack-cloth on the floor under the shelf outside the door, the wrapper in which the dismembered body was packed; and in one of the dirty coats, — a horrid thing, with its hideous rents and smears, — Wainwright's vesture on the occasion. The coat of the captain of the "Lennie," with the gash in the cloth torn by the knife of his murderer, and eaten through and through with moth and rot, is not nearly so disgusting an object; and as for the serge robe of that poor rogue, "Professor Zendavesta," and the hide cloak of the confiscated "anatomical" wax African, who grins awfully in one corner of the museum, a real skeleton hand and arm considerately hidden behind him, they are quite cheerful to look at in comparison. The prayer-book and the other pitiful objects upon the shelf to the right were found on the body of Maria Clousen, the blood-and-mud-stained clothes were hers, and they contrast with grim irony, as evidences of an unpunished crime, with the adjoining objects, which tell of one brother hanged and the other in penal servitude.

Along the wall on the right side of the room is ranged a choice collection of guns, crowbars, and "jemmies" — the latter are implements of the housebreaking industry, which admit of great variety, and are susceptible of highly artistic hand-

ling — and among them is a pair of tongs, unevenly rusted, and with a dirty paper-book, written all over with incoherent sentences, attached to it. The tongs are those with which a man named Macdonald killed his wife about two years ago; the book is, it seems to the visitor, a record of the various phases of the man's insanity. They hanged him, though, and also the greater number of the proprietors of the horrid, labelled assortment of hammers, knives — including the bread, carving, and pocket varieties — razors, and pistols, which suggest a cutler's booth in a fair. There is dried blood on all the knives and razors, and on some of the hammers, and every one of them stands for a murder or a suicide; in a terrible nnmber of cases, for the murder of a wife by her husband. Several of the pistols, mostly beautiful weapons, are the instruments of suicide, and each is labelled with the name, date, and place. The simple suicides are almost all among the higher classes of society, and when the visitor asks how the pistol with which a gentleman of wealth and station shot himself has come into the keeping of the museum, he is told: "The family mostly do not like to have it, and so they ask the police to take it away." In a corner hang the clothes of the Rev. J. Watson, who murdered his wife at Stockwell; the horse-pistol with which he shot her, and the heavy hammer which he bought to knock the nails into the chest in which he proposed to hide her body. So carefully had the murderer washed his trousers and his coat-sleeves, that the blood-stains could only be discerned with difficulty at the time of the investigation. But since the coat and trousers have been hanging on the Black Museum's walls, the stains have come out close and thick. "We many times notice that here," the visitor is told. The frightful weapons used by the "Lennie" mutineers are here, neatly ranged under the photograph of the ring-leader, "French Peter," and a "group" of the whole gang of ruffians, with a red-ink mark on four heads among the number, to indicate those who were hanged. Hard by is a bundle of letters, forming the correspondence which furnished much of the evidence against Margaret Waters, the baby-farmer. How much sin, shame, sorrow, and cruelty that small dusty bundle represents! A small billycock hat, with a mask fastened inside the front rim, into which is packed a purse, a comforter, a small lantern, and a life-preserver, with a terrific knob of lead on it, is quite a cheerful object to turn to from all these grim relics of worse crimes, though the burglar who formerly owned the life-preserver informed the police who seized, but also rescued him, having come up on hearing his cries when he was caught between the iron bars of a window through which he was escaping, on a false alarm, that he had thoroughly intended to "do for" any one who should interrupt him, with that convenient weapon. A bundle of flash notes, Bank of Elegance issue, for which there is a fixed price, and a brisk sale on racecourses among bettors who can only read imperfectly or not at all; the conjuring-book of Professor Zendavesta, which always opened at the same page, the only one on which there is a worked horoscope; the wretched cheat's ill-spelled accounts, which reveal the stupendous credulity of the people, for they record an average of five hundred visitors a week; and the letters addressed to him, chiefly by women, at least sufficiently educated to know better, — these are almost amusing, after all that has been seen before. A forged betting ticket, which got the forger into trouble at the Nottingham races, is a curious and ingenious example of perverted cleverness. The forged ticket is identical with the real one, to all appearance. On very close inspection, one sees that it is better printed than the genuine article. A large assortment of burglars' tools is not the least suggestive object here. The weapons of the thieves' war upon society are models of good workmanship, and of the adaptation of means to ends. When the neatest "centre-bit" of the carpenter's shop is compared with the deft, swift, noiselessly-working implement which goes into an iron shutter as a cheesemonger's scoop goes into a "fresh Dutch;" when one looks at the wedges of finely-tempered steel, working between zinc side-bites; at the two home-made dark lanterns, contrived with extraordinary cleverness out of a mustard-tin and a metal match-box respectively; at the rope-ladder; the "beautiful little jemmy," in a carefully buttoned red-flannel case (this small, powerful tool is made of a piece of a driving-wheel belonging to the finest machinery, and the metal was, of course, stolen to make it); at the bright, slender skeleton keys; at the foot-pads, which are enough to make one start at every creak of one's boards and stairs, however slight; at the safe-breaking tools, which make one think there's nothing like the old stocking in the thatch, after all,— one is amazed at and sorry for the mis-

used cleverness and perverted inventiveness to which these things testify. Among the skeleton keys is one delicate little contrivance, which at first glance one might take for an ornament for a lady's châtelaine. It is in reality a double instrument for picking latch-keyholes,— one part forming the key, and the other lifting the spring. This pretty trifle was made from the brass clasp of a purse, and used with such success by the inventor that in a short time he found himself in prison. While one is actually inside the Black Museum, one cannot feel amused at anything; but by the time one has turned into the Strand, the impression of the dreary reliquary of crime has so far passed away that one can smile at the story told of the impudent simplicity of this poor, clever thief. "When he was discharged from prison," said the curator of the Black Museum, as he restored the delicate, dangling little bit of villany to its place, "the man came here, and asked us to let him have it back!"

From The Leisure Hour for September, 1877.

WILLIAM AND MARY HOWITT.

William and Mary Howitt passed their "golden wedding day" in Rome, April 16th, 1871, this happy domestic festival being celebrated for them by a circle of cordial friends — English, American, German, and Italian — drawn around them during their residence in that city. It was a day of sunshine and congratulation. Conspicuous among the beautiful flowers heaped upon them was a monster bouquet, composed of snow-white flowers, crowned with a golden bay-wreath: this was presented by a German friend in the name of their absent children. It has been granted to few literary workers to enjoy such an "Indian summer" of repose towards the close of their career. Looking back on their long and useful lives, there are few who have any acquaintance with English literature but must sympathize in the satisfaction of such an event, and rejoice that they have been accorded not alone length of days, but the even greater and rarer blessing of continued health and of mental vivacity, toned and deepened though it be by the weight of years and the chequered experiences of many varied times and seasons.

William Howitt was born of Quaker parentage, in the village of Heanor, in Derbyshire, in the year 1792. Both on the paternal and maternal side his ancestors had resided for many generations in the same neighborhood. The pastoral and old-world character of the district in which he was born and passed his childhood and youth made a deep impression upon his imagination, and have stamped themselves upon numerous pages of his writings with a quaint individuality. He was the third of six sons, another of whom, the late Richard Howitt, was favorably known to the public as the author of several volumes of original and tasteful poetry, and of a prose work upon Australia. Educated at Ackworth School, in Yorkshire, the public seminary of the Society of Friends, he devoted himself with unwearying enthusiasm, when school-days were past, to the study of languages, ancient and modern, as well as to chemistry, botany, and natural and moral philosophy.

In his twenty-eighth year William Howitt married Mary Botham, a young lady of the Society of Friends, who, like himself, came of "the stock of the martyrs." Mary Botham was born amongst the iron forges of the Forest of Dean, in Gloucestershire, although her childhood and youth, until her marriage, were spent at the pleasantly-situated little town of Uttoxeter, in Staffordshire, where her father's family had possessed property for some generations. It has been remarked that amidst the Society of Friends, where the cultivation of music is forbidden, the cultivation of poetry appears to have especially flourished. Both William and Mary Howitt began to write poetry almost as soon as they could write at all, and many were the ballads and dramas which Mary Botham and her sister Anna composed in their early youth. Verses by Mary were in manuscript lent to a friend, and fell into the hands of a young Quaker poet — no other person, in fact, than her future husband. They were admired by him, and brought about a friendship between the young people, which terminated in their union, full of domestic happiness and of unceasing literary labor. The marriage took place in 1821. Their first appearance in print was a joint volume of poems, entitled "The Forest Minstrel." This was quickly followed by a second, "The Desolation of Eyam, and other Poems." At this time also they became widely known through contributions to the "annuals," as they were called, and which at that time were just commencing their popular career.

The first year of their married life was spent in Staffordshire. They then took

up their residence in Nottingham. Between 1831 and 1837, during their residence there, William Howitt published "The Book of the Seasons," "Pantika; or, Traditions of the most Ancient Times," and "A Popular History of Priestcraft," the first and last named of these works having passed through many editions. Mary Howitt at the same time published her first three-volume work of fiction, entitled "Wood Leighton," published by Mr. Richard Bentley, and which soon afterwards formed one of the earliest volumes of the cheap one-shilling library, being brought out by Mackintyre of Belfast, and her most important poetical work — now for many years out of print — namely, a volume of dramas, entitled, "The Seven Temptations," and her earlier volumes for the young, entitled "Sketches of Natural History," and "Tales in Prose and Verse." These juvenile works were originally written for her own children.

In 1837 the Howitts quitted Nottingham, and settled in the neighborhood of London, in the village of Esher, in Surrey, where they devoted themselves exclusively to literary pursuits, their relaxation being found in the society of their children and a few intimate friends, and in enjoyment of their garden and the beautiful surrounding country. During their three years' residence at Esher, William Howitt produced, in rapid succession, some of his most popular works, "The Rural Life of England," "Colonization and Christianity," the first series of "Visits to Remarkable Places," and his first work for the young, "The Boy's Book of the Country." Mary Howitt, during the same period, published two of her most popular volumes of poetry for young people, "Hymns and Fireside Verses," and "Birds and Flowers;" also a series of short prose tales, entitled "Tales for the People and their Children." Amongst them is one called "My Own Story," which is the authoress's autobiography when a child.

The pervading sentiment of these earlier volumes, as well as of others that followed them, is well expressed in the concluding stanza of "Birds and Flowers:" —

Go, little book, and to the young and kind
Speak thou of pleasant hours and lovely things:
Of fields and woods; of sunshine, dew, and wind;
Of mountains, valleys, and of river-springs.
Speak thou of every little bird that sings;
Of every bright, sweet-scented flower that blows,
But chiefest speak of Him whose mercy flings
Beauty and love abroad, and who bestows
Light to the sun alike, with odor to the rose.

Thus the commonest things of nature are brightly and gracefully described, but with an undercurrent of feeling which realizes their moral significance. How simple, yet how sweet, for example, the familiar verses on the "Use of Flowers." We quote, as more characteristic than the completest list of writings, the poem on

LITTLE STREAMS.

Little streams, in light and shadow,
Flowing through the pasture meadow;
Flowing by the green wayside;
Through the forest dim and wide;
Through the hamlet dim and small;
By the cottage; by the hall;
By the ruined abbey still;
Turning here and there a mill;
Bearing tribute to the river, —
Little streams, I love you ever!

Summer music is their flowing;
Flowering plants in them are growing;
Happy life is in them all,
Creatures innocent and small;
Little birds come down to drink
Fearless on their leafy brink;
Noble trees beside them grow,
Glooming them with branches low;
And between, the sunshine, glancing,
In their little waves is dancing.

Little streams have flowers a many,
Beautiful and fair as any;
Typha strong, and green bur-reed;
Willow-herb with cotton-seed;
Arrowhead with eye of jet;
And the water-violet;
There the flowering rush you meet;
And the plumy meadow-sweet;
And in places deep and stilly,
Marble-like, the water-lily.

Little streams — their voices cheery,
Sound forth welcomes to the weary;
Flowing on from day to day
Without stint and without stay.
Here, upon their flowery bank,
In the old times, pilgrims drank;
Here have seen, as now, pass by,
Kingfisher and dragon-fly, —
Those bright things that have their dwelling
Where the little streams are welling.

Down in valleys green and lowly,
Murmuring not, and gliding slowly;
Up in mountain hollows wild,
Fretting like a peevish child;
Through the hamlet, where all day
In their waves the children play;
Running west, or running east,
Doing good to man and beast;
Always giving, weary never, —
Little streams, I love you ever!

From Esher the Howitts removed to Germany, chiefly in order to educate their elder children amongst a people towards

whom they had always felt a strong intellectual attraction, and also with the intention of perfecting themselves in the knowledge of the German language and literature. During his residence in that country, William Howitt wrote "The Rural and Domestic Life of Germany," "German Experiences," and translated a curious manuscript which had been written at his request by a German acquaintance, "The History of the Student Life of Germany."

Whilst residing at Heidelberg, William and Mary Howitt had their attention drawn to the literature of Scandinavia, and commenced the study of the Swedish and Danish languages, studies which at once made them acquainted with the earlier works of Frederika Bremer, "The Neighbors," "The Home," etc., then achieving their deserved popularity. These were translated by Mary Howitt. Somewhat later she also translated the earlier works of Hans Christian Andersen, "The Improvisatore," "Only a Fiddler," etc., and had thus the pleasure of introducing these remarkable authors to the British and American public, by whom they were received with enthusiasm.

The same class of study, and admiration of the vigorous genius of the north, led William Howitt, in 1852, to produce "A History of Scandinavian Literature," an important work, of great research, and the only complete history of the kind extant, copiously illustrated with specimens from the poets, translated by Mary Howitt. In 1864 Mary Howitt received a silver medal from the Literary Academy of Stockholm, in recognition of the esteem in which her labors as a translator were held by that body.

But to return. In 1842 Mr. and Mrs. Howitt, having left the Continent, settled down with their family at Clapton, in the immediate vicinity of London. Here chiefly Mary Howitt translated the works of the Scandinavian authors to which we have already referred, and also one or two works from the German. William Howitt wrote a second volume of "Visits to Remarkable Places," and, somewhat later, "The Homes and Haunts of the Poets," one of his most genial and delightful books; whilst Mary Howitt wrote two of her most popular juvenile books, "The Children's Year," which was a diary, kept for twelve months, of the lives of her two youngest children, in order to supply to youthful readers that *desideratum*, "a story, every word of which should be true;" and afterwards "Our Cousins in Ohio," a little book formed on the same plan, relating to a young family in America, the children of her younger sister, Mrs. Alderson, of Cincinnati. Both volumes became at once very popular. "The Children's Year" has been translated into several languages. At this period, too, a collected edition of Mary Howitt's ballad poetry was published, the poetry by which probably she will have gained her most permanent hold upon the mind of the public. Allan Cunningham, in his "Biographical and Critical History of the Literature of the Last Fifty Years," wrote: "Mary Howitt has shown herself mistress of every string of the minstrel's lyre, save that which sounds of broil and bloodshed. There is more of the old ballad simplicity in her compositions than can be found in the strains of any living poet besides." And yet this particular volume, which traverses a wide range of life, and throbs throughout with a strong humanity, is full of imagination and fancy.

In 1846 the Howitts availed themselves of an opportunity which appeared to promise a useful sphere of congenial labor in the establishment of a journal devoted to literature and social progress, entitled *The People's Journal*. A series of unfortunate events, however, soon brought their connection with this journal to an end, and a periodical (*Howitt's Journal*) of a similar character, started by themselves, failing to repair the losses which the first enterprise had entailed upon them, they returned, after a couple of years, to the less anxious pursuits of general literature. Among the more popular books produced at this time may be mentioned "The Year-Book of the Country," by William Howitt, and by Mary Howitt a pleasant country story in one volume called "The Heir of Wast Wayland," published in a one-shilling series.

In 1852, upon the discovery of the gold-fields, Mr. Howitt paid a visit to Australia. Various causes led to this expedition. The following two years formed a chapter of considerable adventure in his life, and were productive of much useful result. Through a younger brother, long settled as a physician in Melbourne, he possessed many facilities for acquiring information which are not accessible to the ordinary traveller. Accompanied by his two sons, a nephew, and friends, provided with good horses and well-armed, he visited the various "diggings" in succession, and encountered many perils both by night and day. No signal misfortune, however, befell the party, with the exception of the serious illness of William Howitt, occa-

sioned by camping out in an unhealthy locality. This illness, humanly speaking, must have proved fatal but for the providential kindness of a wealthy "squatter," who removed the sick and apparently dying traveller to the comforts of his healthy station, where he speedily recovered.

In December, 1854, Mr. Howitt, accompanied by his youngest son, again set foot in England. The eldest son, Alfred, remained in the colony, where he has since distinguished himself as an explorer, having been sent out by the Royal Society of Victoria, in 1861, as leader of the party despatched in quest of the missing expedition of Messrs. Burke and Wills. Alfred W. Howitt was fortunate enough to discover and save the last survivor of that ill-starred company, and he interred the remains of the brave but unfortunate explorers in the wilderness on the spot where they were found. Upon a second expedition, he brought their remains back to Melbourne to be there honored by a public interment. Alfred Howitt has been successfully employed in other undertakings by the government in the colony of Victoria, and has also distinguished himself by his scientific attainments.

William Howitt embodied the knowledge gained by him during his two years' life in Australia in several valuable works. "Land, Labor, and Gold" treated of subjects of great practical moment. "A Boy's Adventures in the Wilds of Australia" gave vivid coloring to the scenes and incidents of colonial life, which were still more fully portrayed in "Tallengetta, the Squatter's Home;" while somewhat later appeared "A History of the Discovery and Exploration of Australia, Tasmania, and New Zealand." This last-named work, written *con amore* through its author's personal sympathy with exploration, contains in its concluding pages a touching, yet manly, memorial of the death of his youngest son, Herbert Charlton Howitt, also a dauntless explorer, and who, with two of his party, whilst engaged upon an arduous undertaking, was drowned in Lake Brunner, New Zealand, in June, 1863.

During the absence of her husband and sons in Australia, Mary Howitt took up her residence with her two daughters in a picturesque cottage near Highgate, known for many years as "the Hermitage." Assisted by her eldest daughter — at that time beoming favorably known to the public in the combined character of author and artist — Mary Howitt saw through the press various works committed to her charge by her husband during his absence. During this time also she compiled "A History of the United States of America," and translated Frederika Bremer's "Homes of the New World," which was shortly afterwards followed by the travels of this lady in other countries.

After the return of Mr. Howitt from Australia, he and his family continued to reside at Highgate for some years. He was at this period engaged on a "Popular History of England," a work which extended to five large volumes, and is now in its seventh edition. It was sold originally in weekly numbers, and reached a circulation of one hundred thousand copies. In 1863 appeared a work of a different class, illustrative of the social and political state of England half a century ago, entitled "The Man of the People." In 1864 he produced his "History of the Supernatural," a work of varied research, which, however, while expressing conscientious conclusions, brings us upon controverted ground, where we cannot follow him with approval.

From Highgate Mr. and Mrs. Howitt removed to the neighborhood of Esher, in Surrey, some fifteen miles from London, a neighborhood charming in itself, and endeared to them by the memory of their former residence there, some five-and-twenty years earlier. The love of the country, so conspicuous in their writings, has always more or less influenced them in the choice of a residence, and though for many years residing in the immediate vicinity of the metropolis, they always gave a certain picturesqueness to their various homes, and surrounded themselves with greenery, flowers, trees, and a garden of more or less extent, and commanding some near outlet into the fields. Their cottage at Esher, called "the Orchard," amply gratified their taste both within and without. Here William Howitt completed a work which, requiring much research, more or less occupied him for two or three years, "The Northern Heights of London," and which may be regarded as a third volume of his "Visits to Remarkable Places." Long a resident at Highgate, and daily taking his walks amidst the sites of historical and antiquarian interest, which are thickly scattered within the range of Hampstead and Highgate, he had worked *con amore* on his task, and produced a volume which was warmly welcomed as a very storehouse of anecdote and fact. At "the Orchard" Mary Howitt composed a series of simple, popular ballads, full of pathos and religious tenderness, adapted to touch the hearts of

the laboring poor. They appeared in a periodical of wide circulation, and have not yet been collected into a volume. It is impossible within the limits of our space to chronicle all the work that has come from these industrious pens; but we must not omit to mention what is, perhaps, the most carefully elaborated of all Mrs. Howitt's prose works of imagination, "The Cost of Caergwyn," the scene of which is laid in Wales. This volume, published in 1864, the result of several summers spent in north Wales, where she carefully noted down her observations on the scenery and people, and where she had studied with exceeding interest the legends, manners, and customs of the principality, contains probably the most highly finished pictures of human character and natural scenery which have proceeded from her pen.

In 1865 her Majesty granted William Howitt a pension from the civil list in acknowledgment of his and his wife's long and valuable literary services.

We have a pleasant autobiographic glimpse of the manner in which the energy requisite for these labors has been sustained in a little paper written by him fourteen years ago, and called "The Four Famous Doctors." It is addressed to the working classes, and advocates temperance, not of necessity in the form of total abstinence, but as an essential of life. Repudiating the idea that a literary man, "sitting in comfort and merely driving his quill," is incompetent to judge, "for my part," he says, "seeing the victims [of "society" and late hours] daily falling around me, I have preferred the enjoyment of a sound mind in a sound body, the blessings of a quiet, domestic life, and a more restricted but not less enjoyable circle. I am now fast approaching my seventieth year. [Mr. Howitt is now more than eighty.] I cannot, indeed, say that I have reached this period, active and vigorous as I am, without the assistance of doctors. I have had the constant attendance of these four famous ones — TEMPERANCE, EXERCISE, GOOD AIR, and GOOD HOURS. And now a word on work. Often, in earlier years, I labored with my pen sixteen hours a day. I never omit walking three or four miles, or more, in all weathers. I work hard in my garden, and could tire down a tolerable man at that kind of thing. During my two years' travel in Australia, when about sixty, I walked, often under a burning sun of from one hundred and twenty to one hundred and thirty degrees at noon, my twenty miles a day for days and weeks together; worked at digging gold in great heat and against young, active men my twelve hours a day, sometimes standing in a track. I waded through rivers — for neither man nor nature had made many bridges — and let my clothes dry upon my back; washed my own linen, made and baked my own bread, slept constantly under the forest tree; and, through it all, was hearty as a roach. And how did I manage all this, not only with ease, but with enjoyment? Simply because I avoided spirituous liquors as I would avoid the poison of an asp."

The Howitts did not, however, long remain stationary at Esher. During the last fifteen years of their industrious lives, frequently experiencing a necessity for change of scene and objects of thought, they had been accustomed to pass the summer or autumn months in some beautiful country place, taking their literary work with them. Sometimes their place of sojourn would be Wales, or the Isle of Wight, the Cotswold Hills, in Gloucestershire, or the Peak of Derbyshire; sometimes, even, their summer rambles would extend into France, Germany, or Switzerland. Much interesting material for literary work was frequently discovered by them in these pleasant places. The spring of 1870 saw William and Mary Howitt once more set forth for a summer's sojourn in Switzerland, and this time also for a winter's sojourn in Italy. To visit Italy had been a daydream of their lives. They were at Zurich when the first tidings of the outbreak of the Franco-Prussian war reached them. The horrors of this struggle called forth from William Howitt an indignant protest against the inhuman cruelties and madness of war, which shaped itself into a blank-verse poem, entitled, "The Mad War-Planet." This poem, giving its title to the volume, was printed with several shorter poems, also composed amidst the Alps, and published in the spring of 1871. Even those who cannot accept all its views will do justice to its fervid eloquence, and its pathetic sympathy both with suffering in man and with beauty in nature. We cannot better indicate its general scope than by the following extract, which depicts too truly the state of "Christian" Europe for years past: —

MODERN WARFARE.

If kings and ministers of state would labor
A thousandth part as much to foster peace
As they do to make war. If they would spend
A hundred millionth part of the vast wealth

That they have spent on war, in checking war.
If they had been as zealous to avoid
Subject of discord and the guilt of blood,
As they have been to challenge, rob, and slay.
If people styling themselves pious and wise,
Had forced their governments, as was their duty,
To pick no quarrels, wound no neighbor state;
In spleen 'gainst kings, lay waste with murderous troops
No lands of innocent peasants; if the priests,
Naming themselves as Christ's, had dared to preach
The very words of Christ. If learned scribes
Had not, in fine and milk-and-water phrase,
Said war was bad, and peace was very good,
But, in the tone of bold and genuine wisdom,
Had branded war as treason unto God,
And devil-work by gospel law condemned.
Had gentle woman, oracle of home,
The priestess of the heart, the fashioner
Of all men in soft childhood's plastic years,
And youth's unfolding; had she, unseduced
By fictions of the hells, by talk of glory,
Which is the glory only of the realms
Of nethermost strife and malice:
Unseduced by pleas of patriotism
And lust of social honor, had she taught
That the true bravery is to curb our wills;
That truest honor lies in love of neighbors;
That truest wisdom lies in force of reason,
And eloquence of purpose to smooth out
Causes of difference; and religious work
To reconcile, and pacify, and bless;
That mutual slaughter is the act of fools,
And they who practise it are mad, or worse,
And should be stamped with the world's infamy.

In one brief word, had there been Christian nations,
Not names alone; and man, indeed, been bent
To do Christ's will, and bear the cross he bore,
Love unto death, and death unto ourselves
Rather than murder, — war had long ago
Become a ghastly legend like the tale
Of cannibal orgies in dark lands abhorred.

But we are not so blest in all our pride
Of knowledge and virtue. The old madness still
Is terrible in our blood; and hence we stand
Nation in face of nation, highly Christian,
Yet most intent on murder. Hosts immense
Are held in every land termed civilized
Ready for instant slaughter, ready armed
With instruments of death and desolation
Such as the pagan nations never knew.
Tools and machines of a capacity for crime
And massacre stupendous and infernal,
A million-devilled power. A power that art,
And chemic science, and the giant strengths
Of fire and steam, intended for the good
And ornament of life, but seized by death,
And wielded by the maniac rage of man,
Is driven forth to lay whole kingdoms waste;
To knock down cities, and destroy all works
Of beauty and of pleasance; to sweep files
Of human creatures at one blast from life,
As so much worthless carrion. So we stand.

But this is little. These vast hosts of carnage
Are but a fragment of our monstrous life.
Now every man is disciplined to war;
And at the call of some fanatic king,
Starts up at once and grimly stands enmassed,
Shoulder to shoulder, one vast merciless horde,
A body mechanized to organic power,
Moving with the same prompt and accurate skill,
The same remorseless stress as hammer and wheel,
As crank and cylinder, beneath one will.

In October of that year the Howitts crossed the Alps, and soon found themselves at home amidst Italian sights and sounds, at Bellagio, on the banks of the beautiful Lake of Como. Their enjoymet of Italy, so rich in historical and poetical associations, in beauty, both of nature and art, more than realized their expectations. In Rome they passed the memorable winter of 1870, watching with deep interest the startling changes which marked the dawn of the new era in which "the Eternal City" became the capital of united Italy. The author of the "History of Priestcraft," it may be supposed, would warmly sympathize with the Italian Liberals, and watch with peculiar interest the totterings of the papal power, the downfall of which, in his book, written in early manhood, he anticipated, little imagining that he himself should, in Rome, be an eye-witness of the "beginning of the end." The great events in Italian history of which he and his wife were witness have many of them been described in the pages of this magazine by Mrs. Howitt.

In 1873 William Howitt published a translation from the Italian of a work entitled "The Religion of Rome, described by a Roman." During the quiet of his summer sojourn in the Tyrol, at the request of his children, he has also written the recollections of his life, which naturally contain many facts and memories of interest. We believe that he has this year, as his summer's occupation, resumed the completion of a work which he has long had in progress, "George Fox and his Friends," and which he believes will constitute a history of the rise of Quakerism on a new plan. We also understand that he has been revising his "Popular History of Priestcraft," in contemplation of a reissue of this work in a more perfected form at some future day. The Howitts up to the present period have continued to reside during the winter in Rome, and have passed their summers in the Austrian Tyrol.

During his residence in Rome, Mr.

Howitt has strenuously exerted himself to forward the cultivation in Italy — and especially on the Roman Campagna — of the *Eucalyptus globulus*, the gum-tree of Australia, celebrated for its valuable power of destroying the malarious element in any atmosphere where it grows. Nor has he been less zealous in his endeavors to promote the establishment in that city of a society for the protection of animals, which laudable object he has happily seen accomplished.

It has frequently been supposed by those who were personally unacquainted with the subjects of this memoir that, having been born members of the Society of Friends, they wore the dress and adhered to the formalities of that admirable, but peculiar, religious body. This is not however, the case. Early in the course of their married life, William and Mary Howitt ceased to wear the distinguishing garb of the Friends, and to conform to their other external peculiarities, and later in life they "withdrew from membership" with the society. But to the spirit of the writings and lives of the "early Friends," they have always remained warmly attached. One of the Society of Friends, for many years intimately acquainted with them, thus writes: "The pure, genial atmosphere of their household; their kindly welcome to their ever-hospitable home; their literary work uniformly laid aside for family intercourse as evening drew in; William Howitt's personal attention to their attractive garden; their active, yet temperate manner of life; their kind consideration towards animals; Mary Howitt's eminent practicality as a tenderly loving and devoted wife and mother — her gentle influence shed ever around her, felt even by the little children as she passes them in the street — these, and many other most lovable traits, live in the memories of the friends of William and Mary Howitt, as ever fresh and refreshing realities."

We present our readers, in conclusion, with a little poem recently written by Mrs. Howitt, the simple pathos of which may serve to illustrate her sympathy with the poorer classes: —

IN SEVEN DIALS.

Up an alley of Seven Dials,
Mid the dirt, and the noise, and the crowd,
Went a poor crippled child upon crutches,
Alone, yet crying aloud.

"And why are you crying," I asked her,
"Alone mid the crowd of the place?"
In a moment was silenced her weeping;
She paused and looked into my face.

"All the scholars are gone up to Hampstead,
They set off this morning at seven;
The vans were so lovely with ribbons,
And I know that Hampstead is heaven!"

"Nay, Hampstead is nothing but London
Just pushed out into the green;
How can it be heaven, where God is,
And never came sorrow nor sin?"

Her pale face grew radiant in beauty
As steadfastly thus she replied,
"I know it is heaven, for my mother
Went to Hampstead the day that she died.

"She went with a neighbor; they wrapped her
In blankets because she was ill,
And so weak and so dazed with the noises,
And pining for where it was still.

"She came back at evening, towards sunset;
And Hampstead was heaven, she said,
Where the blackbirds were singing like angels,
And the blue sky all overhead.

"She died before midnight, and whispered
Just when she was passing away,
'I bless thee, my Lord, for the foretaste
Thou hast given me of heaven to-day!'

"So I know that Hampstead is heaven,
And I'm pining like her to be there,
Where the women are kind to the children,
And the men do not get drunk and swear.

"But my breath is so short, and I tremble —
My legs are so weak — when I run;
Now I'm going to the end of the alley,
Where it's quiet, to stand in the sun!"

From The European Mail.

A FEMALE DETECTIVE.

A STRANGE, not to say sinister, character has recently passed away from among the dark dens of crime, which she haunted with unflinching persistence. This extraordinary woman was as peculiar in her appearance as in the nature of her avocations. Short, thick-set, with the arms of a prize-fighter, and features which might perhaps be compared with those of a bull-dog, but certainly bore no resemblance to the ordinary countenance of "gentle women," this creature could not fail to inspire a sense of repugnance to those even who were disposed to admire her courage and acknowledge the utility of the services she rendered. There are but few persons, however, who were ever acquainted with the secret of her life. In Blackfriars there lives an artisan, much respected by his neighbors, whose voice is not without influence at election times, but who is also notorious for his republican, not to

Original from CORNELL UNIVERSITY

say revolutionary, views. Some years ago his children and wife were seized with scarlet fever. Helpless and alone, with all his family dangerously ill, the father rushed wildly about for assistance, and when the woman, whose appearance has been but faintly described, came forward and offered her services as a sick-nurse, he at once accepted her help. She was known in the neighborhood as an experienced nurse, and had often been recommended to poor patients by the parish doctor. The nurse subsequently confessed her real character. In a word she was a police detective. Nursing was but a pretext; it was an excellent excuse for gaining admittance into suspected households, and doubtless the police had their eye on this republican. The female detective in question was not, as a rule, employed on political missions. Her chief duty was to discover criminals, and those of the lowest and most dangerous type. For this purpose her appearance was more an advantage than otherwise. No oath was too loud, blasphemous, or coarse for her to utter; there was no vulgar turn of speech that she ignored, and she was ever ready to greet the most revolting jokes with the heartiest laughter. Placing herself in relation with the parish doctor, she volunteered to nurse those families whose honesty was suspected by the authorities. As a nurse she disarmed all suspicion, and did not fail to take careful note of all she heard. Her manners were also apparently so loose and low that but little restraint was observed in her presence, and her reports forwarded to Scotland Yard were thus rendered all the more valuable. As a monthly nurse she welcomed into the world the children of notorious criminals who were ultimately destined to become her prey, while as a sick-nurse she extracted from her half-unconscious and debilitated fever patients the confession of some dark deed, and hints as to the whereabouts of confederates in crime. Such was the general plan of action observed by this extraordinary woman: but this was rather a slow process, and at times it was necessary to fall at once on the wrongdoer. On one occasion, for instance, the police received information that there was a gang of false-money makers in a certain street; but notwithstanding every effort they were unable to ascertain in which house the coiners worked. The services of the female detective were thereupon requisitioned, and she was despatched to the street in question to see what could be done. After walking up and down a little while she noticed a child come out of one of the houses, whose face indicated a kind disposition. Seizing hastily this opportunity the detective feigned illness, and begged to be taken indoors for a moment. Forgetful of her parent's warning, the child, in her excitement, seeing nothing but a woman apparently in great agony, at once, and without giving alarm, admitted the detective into the house. The sudden entrance thus obtained enabled the detective to hear the metallic sounds proceeding from the coiners' workshop before the latter were aware that any stranger was in the house. They were not long in discovering their danger. Before the detective had time to leave the premises the chief of the gang rushed up from the cellar, where he was at work, and, in his fury, hurled a ladle full of molten lead at her head. Fortunately the poke bonnet that she wore saved her life; the burns she received were not fatal, though they destroyed her hair and its roots. The police arrived in time, on hearing the alarm, to arrest eighteen coiners. The chief, who was first aware of the surprise, was able to escape, but he was subsequently captured in France, and there sentenced to eighteen years' servitude in the galleys. It might have been imagined that if anything could make a woman abandon her particular calling it would be the loss of her hair; but with the detective it only increased her love of what she called the sport. She considered that it would now be more easy for her to dress as a boy, and in this, her favorite guise, she penetrated many a thieves' den. On one occasion, however, she was discovered. A brawny thief asked her to speak — that is to say, to give the pass-words and to use certain slang expressions known only to the particular gang whom she was spying. This she was unable to do. The thief then inquired whether any one had seen her enter the house, and, on her answering in the negative, coolly informed her that she would never be seen to go out again. This was the signal for execution, and after brandishing an iron bar, he struck a terrible blow at the detective's head. She had just time, however, to dash her hand through a window-pane and spring a rattle, and the police stationed outside rushed in to the rescue. They found the detective lying insensible on the floor, with her skull fractured, and it has been her boast that this adventure cost her fourteen small pieces of bone extracted from the wound. Still undaunted, and so long as health lasted, the detective con-

tinued on the scent, encountering adventures on every step, always in danger, often indulging in hand-to-hand fights, and selecting indiscriminately for her foes both men and women, proving on either her skill in the "art of self-defence." She constantly received subsidies from Scotland Yard, and was armed with the magic whistle, rattle, and number, given her by the authorities, and which insured the assistance of every policeman, stranger or not, whose services she might find it necessary to call for. Sickness at last subdued this turbulent spirit, and the thieves on the Surrey side need no longer fear the visits of the female detective.

From The Pall Mall Gazette.

THE MENNONITE COMMUNISTS.

An interesting account of the Mennonites in Manitoba is given by the *Winnipeg Standard*. The Mennonite reservation, east of the Red River and about twenty-five miles south-east of Winnipeg, is now as well populated as any district of the province of Manitoba, and the most recent immigration has been directed to a reservation of seventeen townships adjoining the frontier and extending west of Red River to Pembina Mountain. The settlement on the reservation first mentioned, called Rat River, consists of six hundred and fifty families, and on the second reservation, called Dufferin, four hundred and fifty families have been planted. In addition thirty-three families have been settled near Scratching River, and a late arrival of thirty-five families will go to Dufferin. Estimating five to a family, the Mennonite settlements of Manitoba contain a population of 5,865, which will doubless increase steadily, but by no means with the volume of the past three years. There are Mennonite settlements in the Western States, but the land system there enforced does not admit of special reservations; and Manitoba has thus been enabled to present greater inducements for this class of settlers, the community being able to organize itself according to its traditions, including the rural village life of the "dorf," under which groups of families take their homesteads separately, but throw them together and form a village or dorf. Through these villages a street two chains wide is laid, and the plot divided into half-acre lots, with assignments for church, school, or other public use. A tract most suitable for tillage is then selected in a block, which is enclosed, and within which each head of a family cultivates his allotment. A hay meadow, held also in severalty, is chosen, and the remainder of the consolidated homesteads is used as a range for cattle and other animals, which are attended by a herdsman, who is paid by the dorf. The village lots and other subdivisions are distributed by lot. The houses are comfortably heated by central brick ovens. Each family has a yoke of oxen, two cows, and poultry. The pig is not wanting, and there are five hundred sheep and one hundred and fifty horses on the Rat River reservation. The municipal government is a simple democracy. The heads of families annually select a mayor or reeve, who is the chief executive officer. Over the whole community is a president or elder, elected for five years, and who with the mayor of the dorfs forms a court for the final adjustment of all disputes and the enactment of all necessary ordinances. The president may act in all matters relating to a separate village in concurrence with the mayor of such village. The church organization is quite distinct from the civil administration. The people elect a clergyman in each dorf and a bishop to preside over the community for periods of five years. They receive no stipends. The teachers of the schools — one held in each village — are chosen by the people, but are paid a modest salary. Marriages are free and usually contracted early, the young couples often remaining with the more prosperous of the parents for a year or two. An admirable system of mutual insurance against fire prevails under a board of directors elected by the whole community. The insured are not restricted in amount, but contribute *pro ratâ* in case of any loss. The mayor of a dorf, with two assistants, constitutes an orphan court for the distribution of estates and the custody of the funds of orphans, for which the property of every village is liable, deducting from the orphan fund whatever contributions for the relief of the few destitute orphans may be found necessary.

BETWEEN THE LINES.

SING the song of the singer, merrily ring the rhymes,
Light is the lay they tell us, light as its echoed chimes;
Sing the song of the singer, mocking at doubt and fear,
Catch the joy of its melody, let its daring beauty cheer;
Well that the mellow music may bear no hidden signs
Of the broken heart of the poet, written between the lines.

Watch the part of the player, bravely and deftly done,
See the difficult height attained, the loud applauses won;
Weep with his passionate sorrow, thrill to his passionate bliss,
Blending your joyous laughter with that happy laugh of his;
Well that his marvellous acting dazzles, wins, refines,
Who thinks of the desperate effort, written between the lines?

See the work of the painter, in coloring rare and rich,
Give it its well-won homage, choose it the choicest niche;
Hang it where it may render, as an artist's best can do,
Companionship in its beauty, delicate, pure, and true!
Well that its silent loveliness softness and thought combines;
None read the bitter baffling strife, written between the lines.

Watch the path of the prosperous, sunny, and smooth, and bright,
Health and wealth to give it its full of sweetness and of light;
See how the easy future is planned for the careless feet,
Given each slight desire, flattered each vague conceit.
Well that the outward surface gladness and peace enshrines;
Who knows the tale of the skeleton, written between the lines?

If the singer dies in solitude, his songs sigh on as sweetly;
If the statesman has a hearth disgraced, does he face the world less metely?
So the artist's touch is fine and sure, who heeds the hand that guides it?
Does the player feel a fading life? his miming, masking, hide it.
Cypress, and rose, and laurel, Fate's reckless hand entwines;
Life reads the printed story — Death writes between the lines.

All The Year Round.

THE FALL OF THE YEAR.

COLDLY and bright draws in the day;
Gloomy and drear it steals away;
For slowly now comes up the sun,
His summer's ardent labors done;
And low his golden wheel declines
Where winter shews his starry signs.

No more to earth the fervid beams
Give beauty such as poet dreams;
No more descends the glorious ray,
The rapture of the summer day.
The sky's deep blue is waxing pale,
The sun's inspiring fervors fail;
The slanting beam he gives is chill
Within the vale and on the hill;
And now, with many a jealous fold,
The clouds would all his cheer withhold,
Nor would on plain or height bestow
The soothing of his waning glow.

The flowers are gone, save those that still,
Like friends who cleave to us through ill,
Outbrave the bitter wind that blows,
And deck their season to its close.
The leaves that late were only stirred
By gentlest breath, that only heard
The song-bird's note, round these the blast
Blows keen and fierce, and rude and fast
The rising gale flings far and wide
Their withered bloom and idle pride.
The birds have fled; the wind alone
Makes song in many a sullen tone.

But sudden through the bursting sky
The sun again comes out on high;
The clouds fall back to yield him way,
And fly before his eager ray;
And gladness fills the breast amain —
The glimpse of summer come again!
Ah! sweet the beam, but like the smile
With which the dying would beguile
The mourning heart — the last sad ray
Love gives to cheer our tears away.
The light is gone, the moment's bloom
Is sunk again in cold and gloom.
So pass away all things of earth,
Whate'er we prize of love and worth —
The form once dear; the voice that cheered;
The friends by many a tie endeared;
The dreams the aching heart forgets;
The hopes that fade to cold regrets.

Sweet scenes, dear haunts, that once I knew,
My heart yet fondly turns to you.
Let seasons change, and be ye bright
With all the summer-tide's delight,
Or let the winter's gloom be yours,
Your beauty still for me endures;
For memory keeps unfaded yet
What love would have me not forget.

From The Westminster Review.

SIR JOHN BOWRING.*

It would be a slight to the memory of a distinguished man — even if he had not been connected with the *Westminster Review* — if we were to allow this book to pass unnoticed; but as Sir John Bowring stood to us in the relation of one of our first editors, and was long one of our contributors, it would be ungrateful and unjust not to avail ourselves of the opportunity offered by the publication of this volume to pay a tribute to the memory and the services of our lost friend and fellow-laborer.

Were Paris on earth again, and compelled to decide, not the conflicting claims of rival beauties, but whether this memoir or that of Lord Abinger, reviewed in our last number, is the worst executed, he would be as much puzzled as on the memorable occasion on which he was before called on to exercise the functions of the judicial office.

Mr. Scarlett candidly pleaded ignorance as the cause of his inability to write a proper memoir of his father as an advocate and a judge; Mr. Bowring has even worse disqualifications for the work of a biographer, for, with candor equal to that of Mr. Scarlett, he avows that he has no sympathy with many of his father's religious and political opinions.

Now as Sir John Bowring was nothing if not a politician, and his firm adherence to the last to the small and despised church to which he belonged from his youth was one of his leading characteristics, a biographer out of sympathy with both his political and religious faith cannot fail to produce an unsatisfactory biography. This book is composed on the same plan as Mr. Scarlett's memoir of his father. There is first a skeleton memoir of Sir John Bowring, from which the reader learns little or nothing, followed by a series of autobiographical recollections of his early and of his later life, written by Sir John at sundry times and in divers manners, and notes of travel, and sketches or anecdotes of public men. These papers are throughout superficial, and in many places redundant. In some cases the dates given in the "Recollections" cannot be reconciled with those given for the same events in the memoir. Their extreme desultoriness shows they never had the benefit of their author's revision, nor were they arranged by him for publication — *e.g.*, in the sketches of various celebrities, under the head "Lamartine," we find the history of the negotiations for a treaty of commerce with France of 1830–31, which had been told before,* and some statistics as to the wine trade. While Lamartine is dismissed in something less than a page, the testimony borne to his merits is, however, remarkably strong. "Examples," writes Bowring, "are not rare in France where men of letters are leading actors in the field of political strife; among the most illustrious will Lamartine be ranked" (pp. 374, 375).

By clothing Mr. Bowring's skeleton memoir with integuments taken from his father's "Recollections," we will endeavor to give a connected though brief sketch of Sir John Bowring's busy and useful life.

John Bowring, the descendant of a Devonshire yeoman's family, was born on the 17th October 1792, at Exeter, which is well called the "Mecca of Unitarianism." The family might have taken for their motto Burke's well-known description of the New Englanders: "The dissidence of Dissent and the protestantism of the Protestant religion;" for in the reign of James I. the then Bishop of Exeter denounced to the Archbishop of Canterbury a "turbulent and unmanageable Nonconformist," named John Bowring, from whom Sir John was directly descended. Bishop Philpotts, who presided over the diocese of Exeter for the greater part of Sir John Bowring's public life, would have described the descendant in the terms applied to the forefather by the bishop's predecessor.

Again, Sir John treasured amongst his family records a license granted in the reign of William and Mary to another John Bowring, also one of his forefathers, authorizing him to use his house at Chulm-

leigh for the purpose of religious worship. From 1670 to the time of Sir John's father, the successive generations of the family of Bowring were engaged in the staple woollen trade of Exeter; but Sir John notes the fact: "The coal mines and the steam machinery of central and northern England have crushed the ancient industry of the west" (p. 37). Like most of the principal merchants and manufacturers of Exeter, and many of the nobility and gentry of the west, the Bowrings were of Puritan descent, and had remained members of the English Presbyterian Church — a wholly distinct body from the Presbyterian kirk established on the northern side of the Tweed, and from the branches of it afterwards extended to the southern shore of the boundary river. This body was distinguished from the Baptists and Independents by the practice of free and open communion. The trust-deeds of their places of worship, moreover, rarely specified the doctrines to be taught in them, and were usually conceived in such terms as left room for a progressive modification of opinion.* The congregations worshipping in these chapels, therefore, mostly went through the stage of Arianism on to the humanitarianism of Belsham and Priestley. George's Meeting-house, in which the Bowring family had been for generations worshippers, was one of these foundations. In this chapel, James Pierce, its minister, at the commencement of the eighteenth century, publicly attacked the doctrine of the Trinity, and began what is known in Nonconformist annals as the Exeter controversy — *Vixerunt fortes ante Agamemnon.* It may be gratifying to the vicar of Owston Ferry and his diocesan to read that the vicar of St. Leonard's, Exeter, denied Pierce, who was a parishioner, "a just memorial on his tomb," and he lies buried in the churchyard of St. Leonard's beneath a massive stone monument bearing the words "Mr. James Pierce's Tomb." A tablet in the old meeting-house commemorates the labors of its former pastor and the jealous bigotry of the minister of the Establishment.

* *Vide* J. J. Taylor's Retrospect of the Religious Life of England, p. 171, Edinb. 1876, notes.

In Sir John Bowring's youth the ministry serving George's Meeting still showed signs of the progressive modification of the opinions of the church.

There were no less than three ministers who served the congregation — Mr. James Maning, an Arian (a forefather we believe of Cardinal Manning!), who was the most popular with the poor, whom he often visited, and always addressed in sweet words and gentle manner.

There was Mr. Timothy Kenrick, a courageous Unitarian, who was the chosen one of the more intellectual and inquiring; and there was Mr. Joseph Butland, from whom I do not remember ever to have heard a doctrinal sermon; [an amiable and excellent man, whose simple mode of life Sir John illustrates by describing his supper,] which consisted of a farthing's worth of periwinkles (wrinkles is the Devonshire name), on which he fed himself with a pin. [Somewhat of the stiffness and narrowness of Puritanism remained in this good man.] The latter end of his life, [writes Sir John, was] disturbed by the introduction of an organ into the meeting-house. It led to a rupture with the congregation, and, even as a hearer, I believe he never attended when the pipes were brought into play. I have seen him glide in to unite with the rest in partaking of the Lord's Supper, and I think when it was known he was to attend the pealing organ was locked into silence (pp. 39, 40).

Mr. Kenrick was the father of the eminent Nonconformist scholar and divine, the Rev. John Kenrick, of Manchester New College, who lately died full of years and honors, and of whose career one of his most distinguished pupils relates a noteworthy incident. When the rapid growth of Matthiæ's "Greek Grammar," in successive German editions, rendered it necessary to reconstruct Valentine Blomfield's English translation of it on a larger scale, the Bishop of London (Blomfield), who had not leisure for the task, had recourse to Mr. Kenrick as best qualified to undertake it. A new edition accordingly, in which the new matter was incorporated, came out under Mr. Kenrick's editorial care. "The printer had set up the editor's name as 'The Rev. John Kenrick, M.A.,' and sent the proof in that form both to Fulham and York. From the former it was returned with the *Rev.* erased, and from the *Right Reverend* a letter was ad-

dressed to the editor explaining the impossibility of conceding the sacred prefix to a person not in holy orders. Dr. Blomfield, the Grecian, could look up to the scholar; but Dr. Blomfield, the bishop, must look down on the Nonconformist." *

On the death of Mr. Kenrick, he was succeeded in the co-pastorate of George's Meeting by Dr. Lant Carpenter, himself a distinguished minister among the Unitarians, and the father of another, the Rev. Russell Lant Carpenter, and of the excellent woman who has been lately removed from amongst us, Mary Carpenter. For many a year Sir J. Bowring deemed Dr. Carpenter "the wisest and greatest of men, as he assuredly was one of the best." Mrs. Barbauld used to say, that in opulent families the carriages of the third generation always carried their possessors away to the Established Church; and Sir John Bowring records that when he was young the principal merchants and manufacturers of the staple woollen trade at Exeter were members of George's Meeting; but after his return from China and his final settlement at Exeter he says: —

> At the moment when I write (1861), not one of their descendants, myself excepted, occupies a place in that once distinguished seat and school of heterodox Christianity. [The cause of this falling away Sir John finds in] an indifference to religious questions in general, a yielding to the tide of tendency, and a wish to maintain a social status in a country where a certain amount of opprobrium and degradation has been generally associated with dissent; these are among the causes and apologies for much real dishonesty (p. 388).

A judgment in which we thoroughly concur. In addition to the early and permanent influence of George's Meeting on young Bowring, the home influences by which he was surrounded were of kindred spirit. His grandfather was a man of strong political feeling, being deemed by the Exeter politicians of the day a Jacobin, and by Churchmen a heretic. The influence of his Puritan descent showed itself in the fine print of Oliver Cromwell which hung in his parlor, and still more in his warm sympathy with the descendants of the Pilgrim Fathers in their war of independence. During that war many prisoners from America were confined at Exeter, and old Mr. Bowring did not fail to do all in his power to alleviate their sufferings. Party spirit has always run high in the "Ever Faithful City," and the sympathizer with America was hustled in the streets by Exeter Tories; and at the time of the Birmingham riots, when Dr. Priestley was compelled to flee his native land, the Exeter church and King Mob showed how they would have liked to have treated his brother Unitarian at Exeter by burning his effigy in the cathedral yard. From earliest childhood, kneeling at the feet of this stout old Nonconformist, the young John Bowring daily said his morning prayers, and afterwards breakfasted, "sitting on a trivette (tripod) kept in a state of beautiful brightness, with a gamecock in the centre, a great object of childish admiration" (p. 32). During these visits, "many a sweet and kind counsel fell" from the old man's lips; and, "well do I remember," continues Sir John Bowring, "the emphasis with which he repeated to me hymns and passages of poetry which left an indelible impression upon a somewhat susceptible mind."

Of his father, our reminiscent tells us, that of all the men he ever knew he "possessed the sweetest temper, and only on two occasions have I ever seen it ruffled. My father, though a sound and thoughtful Liberal, took little share in party politics, and when the Municipal Reform Bill passed, refused an offer of the citizens of Exeter to be the first Liberal mayor" (pp. 34, 35). Sir John's mother, how we believe was Cornish by birth if not by race, was a daughter of the Rev. Thomas Lane, vicar of St. Ives, Cornwall. She was, with many brothers and sisters, left an orphan, her father and mother having been carried off by a pestilential disease which attacked that ancient and pilchard-producing borough, which, as his first constituency, sent to Parliament Francis Horner, and later on the brilliant writer who, after many changes of name, will be known to future generations as the first Lord Lytton. Of his mother her son writes in terms of grateful and affectionate remembrance.

* Dr. Martineau in the *Theological Review*, No. LVII., July 1877, Art. "In Memoriam, John Kenrick," p. 306.

My mother was one of the most excellent of women. . . . Education and affection made her devout, and the Bible was a source of habitual enjoyment to her; but her religion was unostentatious and silent, though on all becoming occasions lessons of virtue and wisdom were conveyed to her children. She used no other discipline than that of kind reproof, and in her presence I knew not the emotion of fear or awe. All her influences were gentle and patient (pp. 34, 35).

An acquaintance which, though of the slightest, extended over the long period of thirty-two years, enables us to bear our testimony that in Sir John Bowring's disposition and manner were shown the same sweetness of temper which he attributes to both his parents, and the effect of the gentle and patient influences under which he was brought up. He, in fact, furnished a good example of Mr. Cobden's theory, so well verified in his own person, "that political economists are amongst the most amiable of men." * If these same influences of home were not brought to bear on young Bowring's school-life, the Nonconformist influence still predominated there. The only school which he ever attended was a small one at Moreton-Hampstead, in the Dartmoor district, the master of which was also the minister of the ancient Presbyterian meeting-house of the place. It is a common saying in Devon that Moreton-Hampstead was made out of the rubbish that was left when the rest of the world was created. The roads were in Bowring's school-days in much the same condition as Lord Macaulay describes them to have been in the seventeenth century.† "They were not passable by wheel-carriages of any sort, and everything was conveyed by horses to and from Exeter *on crooks*, bent branches of trees fastened to pack-saddles." On one of these young Bowring left home for school. Moreton-Hampstead was not a place of high education. The master, the son of an instrument-maker at Ipswich, had been educated in an academy of divinity at Exeter; while the scholarship of the master therefore was defective, his moral qualifications for his office were no greater. His pupil describes him as "not a very wise nor a very honest man, but he had in him some dry humor, some knowledge of old books, some amusing stories, and of what was called an affectionate nature" (pp. 44, 45). With this person, who ended by committing forgery and dying in obscurity, was associated a drunken tyrant, whose sole merit was in adorning the pages of the boys' copy-books with those swans' and eagles' and angels' heads and wings with which we of the older generations were familiar. It was not to Moreton-Hampstead that Bowring owed the education which fitted him for his long career of usefulness. Like his friend and fellow-laborer, Richard Cobden, the training for the public life which they both afterwards entered was in the case of each of these eminent men given by himself after he had begun mercantile life. It was not to the minister of Moreton-Hampstead, but, next to himself, to the refugee priest and the French prisoners at Exeter from whom young Bowring learned French, the itinerant vendors of barometers and mathematical instruments from whom he learned Italian, and the mercantile friends by whose aid he acquired Spanish and Portuguese, that he was most indebted for his education. The Nonconformist influences by which he was surrounded produced their natural effect on young Bowring's mind. Although the English Presbyterians or Unitarians did not separate themselves from "the world," its pleasures, and the duties of citizenship, as, at the close of the last and the beginning of the present century, was the case with the Methodists and most of the other Evangelical Nonconformists, yet there prevailed amongst the heterodox Dissenters a tone of "seriousness," a vestige of their Puritan descent. This affected young Bowring's views of life.

In his earlier letters [writes his son] written when he was twelve or thirteen years old, there prevails a strong religious feeling, tinged with a somewhat didactic and moralizing tone, which seems strangely at variance with the buoyancy of youth. Reflections on death, and juvenile verses on the shortness of life and its sorrows, are interspersed freely in these productions, while even in his latter years such thoughts constantly sprang up and acted as a counterpoise to his zest for new impressions.*

Sir John Bowring himself says: —

It was a longing desire of my boyhood to be trained to what is called the ministry, but I never gave open expression to my wish, and never even hinted it to my father or to any of my friends. It seemed too lofty an ambition, and I felt as if it would be impertinent and presumptuous to indulge in such aspirations. . . . I had hardly perhaps defined to myself

what a Dissenting minister was or ought to be, but in the circle in which I moved he was an object of boundless reverence, his visits were anticipated with awe, and sometimes with apprehension, and always recollected among the memorabilia worthiest of note. Then he was the principal actor in the most impressive family scenes — he gave their names to the children when life began, he spoke the eulogiums of the dead when life was ended, he counselled, encouraged, reproved all from the pulpit, and was entitled to speak as no one else spoke in the household. He knew most of hidden things, most of heaven, hell, and God, and had little to do with the working, everyday world. It was indeed a great thing to be a minister of the gospel, too great a thing for me, and so I glided into other studies and pursuits, still looking back upon that to which I felt I was not worthy to be called (pp. 52, 53).

Writing towards the close of his life, he seems to congratulate himself on his escape from what he felt would have been an "existence of silent monotony." This leaning towards the ministry led him to engage for years in a fierce theological controversy with a cousin, afterwards a successful Chancery barrister, with the usual result. Neither made any advances towards the conversion of the other, the disputants became angry, each despising his adversary for being blind and deaf to the counter-arguments which each deemed irresistible. "The itch of writing," writes Sir John, "was upon me from my boyhood." "Another result of the Nonconformist training which he underwent was an intense love of liberty and independence of opinion." This, as his son remarks, fitted him later on in life to become the willing disciple of Jeremy Bentham, and the ardent apostle of the principles taught by the philosopher of Queen Square Place.

The first four years after his leaving school young Bowring spent in his native city as clerk in a house the principal of which bore a name then and now much respected in Exeter — that of Kennaway, which was engaged at the same time in the wine and spirit and the Manchester trade. It is not said, but from Bowring's subsequent devotion to the interests of the cotton trade we should judge, that it was in the Manchester branch of the business in which he was engaged. It was during this period that he learned the rudiments of the six languages which we have specified, which he afterwards spoke with ease and fluency.

Having [writes his son] the quick ear and ready apprehension which constitute the linguist, he soon found himself able to converse with facility in the native tongue of any country which he visited. He had a fair acquaintance with Danish and Swedish, and acquired a book-knowledge of Russian, Servian, Polish, and Bohemian, which enabled him to translate the productions of writers in those languages. He studied Magyar also with some success at a later period, learnt a little Arabic during his journeys in the East, and when an old man mastered a good deal of that difficult language Chinese, to which he devoted much attention. Although he was rather a linguist than a philologist, he wrote many articles on some of the less-known tongues of Europe.*

From the breadth of his attainments in foreign languages, Sir John's experience as to the best method of acquiring them is worth transcribing, though it is not novel, but corroborative of that of others.

In the study of languages for practical purposes, I have found that courage in speaking is the very best means of advancing. Far more is learnt by the exercise of the tongue, which is necessarily active, than by that of the ear, which is necessarily passive. It is a common vanity for people to say that they understand better than they can talk. Such cases are, I believe, rare. Generally speaking, it is more easy to convey one's thoughts by signs and language to others than to receive their thoughts. The art of language-learning is one that requires no superior capacity. There is not much difference in the ages at which different children are able to express their emotions, and if languages were learnt as children learn them, they would be found easy of acquirement. It is scarcely more difficult to acquire five languages than one, and I have known many instances of five or more languages spoken with equal purity and perfection. The proof of the thorough possession of a language is that you are able to think in it, and that no work of translation goes on in the mind. *For myself, I often dream in other languages* than English, and find that associations with particular countries and particular studies do not take the form of English phraseology; but this, of course, depends upon the extent to which foreign languages have been employed in the daily business of life.†

The ancient woollen trade of Exeter, in which the Bowring family had for many generations been engaged, was decaying, and about to vanish away. It no longer afforded the prospect of a livelihood to men like Bowring whose career lay before them; his father, in fact, lived to see its final decay and departure to the north. Bowring therefore followed the path taken by most young men in the country who have to make their way in the world — he

came to London. The year 1811 found him engaged in the offices of Messrs. Milford & Co., a firm engaged in the Spanish trade. The clannish feeling, still so strong amongst the people of the two most western counties, is illustrated by the fact that John Milford, the head of the firm, was an Exeter man. He seems to have been a man of overbearing disposition, with a strong attachment to the pleasures of the table, and to have been much addicted to magnums of port.* Young Bowring was an inmate in the house of a Mr. and Mrs. Parkes. Mr. Parkes he describes as "an author and a popular one," though we fear his fame has not lasted to this day. His ruling passion was for literary distinction. He evidently had great influence over the mind of Bowring, and so far forth as his commercial success is concerned, it was not an influence for good. Within two years he had risen so high in the opinion of the firm, that in 1813 he was sent on important business to Spain. Not only his business habits, but his mastery of Spanish, gained during his four years' clerkship at Exeter, especially fitted him for the task. This mastery was shown by the fact that though before his landing in Spain he had scarcely ever spoken Castilian with a native, he not only was able to hold converse with the people, but his earliest publication was written *currente calamo* in Spanish. It was a book against negro slavery, and was published at Madrid in 1821.† Three years later he published his "Ancient Poetry and Romances of Spain."‡ He was known in Spain as *el Español Ingles*. His principal occupation was receiving consignments of wheat and stores for the British army, the headquarters of which were at Leraca, a Pyrenean village. These cargoes were consigned to him at the ports of Bilbao, St. Sebastian, and Passages, and the River Adour, between which places he passed constantly to and fro.

He saw much of the horrors of the war, and of the financial economy of the British army, which he thus describes:—

> Never was a war conducted with more improvidence and disregard to economy than that of the peninsula. Everything was bought at extravagant prices; and the want of ready money had thrown British pecuniary reputation into such distrust, that large fortunes were made by the purchase, at an enormous discount, of the promissory notes of our commissariat officers; sixty to eighty per cent. less was not an uncommon depreciation. The exchange upon London was immensely disadvantageous to the British government; and instead of providing money by drafts on the treasury, supplies of hard cash had been sent out. Probably more than half the expenses of the war might have been saved to the public. Our army was at the mercy of contractors, jobbers, and speculators in exchange, and a thousand classes of adventurers, native and foreign, almost everything being bought at most extravagant rates. This added to the enormous increase of prices which increased demand always produces. There was the additional augmentation, justified by supposed risk as to ultimate payment, and certainty of delay in the examination and settlement of accounts (p. 56).

The Spanish democratic constitution of 1812, based upon universal male suffrage, had been in force about two years, and seemed to be a great success. "There was much to gratify the friends of progress. Schools were everywhere started, multitudes of newspapers were published, and a free press gave the desirable influence to all the master minds of Spain."

Bowring became intimate with the leading members of the "patriotic" or popular party. The error into which the popular leaders had fallen appeared to him to be the attempt at centralization. "We ourselves," he admits, "owe much to the pertinacity with which we hold to ancestral traditions and ancestral usages." This is true, but it is not at all in the spirit of Bentham; and we should like to know whether this passage was written before Bowring came under Bentham's influence, or whether it was written after a wider experience of men and public affairs had emancipated him from the somewhat *doctrinaire* views of the great legist. But if this be true of England, it is *à fortiori* true of Spain, where there is more of provinciality than nationality. "There is no abstract Spain, as every Spaniard is prouder of his province than of his country. The provincialities were the true elements of freedom, and should have been carefully and cautiously watched" (p. 102). Lord Holland applied to Bowring to furnish the *Edinburgh Review* with an article on the Spanish position and prospects. He did so, but its tone was too Radical for the Whig organ. It was never inserted, and the writer had his labor for his pains. These "Recollections" supply a corroboration to Lord Beaconsfield's historical sketch of the Jews in Spain, which was

* See the sketch of him, Recollections, pp. 398, 399.

† Its title was, "*Contestacion a las observationes de Don Juan. B. Ogavan sobre la esclavitud de los Negros.*" See Appendix, List of Principal Writings, 1821.

much ridiculed at the time of its first publication.*

Of the great hidalgos of Spain — the sons of something, as the word implies — the dignitaries of the *sangre azul*, there is scarcely one whose ancestry is not mingled with the Hebrew races. Those races have been equally the object of persecution with the Moors, but they have not been extirpated. I have often met with Jews in Spain whose religion was concealed from their Catholic neighbors, but who did not hesitate to avow their faith to those they deemed worthy of their confidence. They absented themselves on some plea or other during the time when the *viejos cristianos* are required to attend the confessional (p. 103).

The peace of 1814 brought Bowring back to England, but in 1815 he returned to the peninsula; not, however, to Spain, but to Portugal, to claim for Milford & Co. from the British government some accounts in arrear, payment of which he enforced. He found the administration of justice in Portugal was tardy and arbitrary. "It was the custom for the Society of Mercy to supply the instruments of punishment, by bribing whom, the most atrocious criminals escaped from death. They were always present at executions, and, when sufficiently paid, provided rotten ropes, which broke with the guilty person, and when he fell they covered him with the flag of mercy, and he was out of the reach of the civil power" (p. 114). Bowring was dissatisfied with the estimate put by his principals on the services he had rendered them abroad, and he accordingly separated from them, and commenced business on his own account. In 1816, in his twenty-fourth year, he married Maria, daughter of Samuel Lewin, and their son records that "during the vicissitudes of forty-two years, in which were blended, as in most human lives, much of happiness and much of sorrow, his wife, by her noble character and equanimity under heavy trials, proved herself a worthy partner, rejoicing in his successes and strengthening him in his reverses." †

As a commercial man Bowring was not successful. He sums up his business career with equal brevity and frankness. "At one time I had realized about £40,000, a sum that ought to have satisfied my ambition. Not once, but twice in my life, I have been possessed of this more than competency, and twice I have lost more than I possessed. I abandoned commerce, for which, in some respects at all events, I was not unfitted" (p. 57).

This modest estimate of his business qualifications he based on two undoubted facts—his thorough knowledge of accounts, and a knowledge of languages superior to that of most (we should have said any) of the merchants on the Royal Exchange. He congratulates himself that he utilized his knowledge of accounts by a successful effort to reform our national system of bookeeping.

"I can now calmly estimate and thoroughly understand I had too much confidence in unworthy men, and was altogether of too adventurous and speculative a nature. Had I been associated with persons of a less sanguine character, and possessing qualities in which I was deficient, I should probably have ended my commercial career in much prosperity and opulence" (p. 291).

To these causes his son adds another, which no doubt had a share in producing the catastrophe which marred Bowring's commercial career, viz., the tendency which he early showed to deviate from a purely business life to literary pursuits, which had for him an attraction that proved irresistible. With regard to the gain to the public from Bowring's commercial experience, it is proper here to state that his (Bowring's) reputation as a man versed in business as early as 1828 attracted the notice of official men, and Mr. Herries, the then chancellor of the exchequer, nominated him one of the commissioners then appointed to inquire into the state of the public bookkeeping, with a view to its reform. The Duke of Wellington inexorably refused to agree to his appointment, saying "he would never consent to the appointment of such a d——d Radical" (p. 291).

This first commission proved a failure, but on the access to power of the Grey ministry, it was reconstituted, and Bowring was made its secretary. Its report, laid before Parliament in 1852, became, he says, with a pride entirely justifiable, "the foundation of all the improvements which have been introduced into our financial records, whose last triumph has been in the act which requires the payment of the *gross revenues* of the State — the revenues without any deduction — into the exchequer, thus giving Parliament an absolute control over the whole national expenditure" (p. 291). We may here quote Bowring's estimate of the Duke of Wellington as a statesman: —

He understood very little, if anything, of the questions of state policy beyond the immediate field of his own personal responsibilities and duties. Of political economy he was

supremely ignorant, yet his strong common sense enabled him at last to recognize some of its fundamental truths. His speeches on economical subjects teem with puerilities and absurdities, without ingenuity in conception or in expression. Of the ends and objects of government he had formed no philosophical estimate, nor dreamed that authority had any other duty or function than to cause itself to be respected and obeyed.

The people were altogether a cypher in his eyes, except as grouped round the sovereignty. All his sympathies were with rulers, whatever was the character of their rule, and he cared nothing for subjects, whatever might be the nature of their subjection. But when dangers menaced the ruling few "from the action of the serving many," he had the sagacity to discern that those dangers justified and demanded concessions (p. 293).

To return for a moment to Bowring's "commercial experiences." He remarks that the men who have amassed the largest sums of money have generally succeeded by the persevering application of some very simple principle as their general rule of proceedings, and gives the following instances of his theory: —

Ricardo said that he made his money by observing that people in general exaggerated the importance of events. If, therefore, dealing as he dealt in stocks, there was reason for a small advance, he bought because he was certain the unreasonable advance would enable him to realize; so when stocks were falling, he sold in the conviction that alarm and panic would produce a decline not warranted by circumstances. Morrison told me that he owed all his prosperity to the discovery that the great art of mercantile traffic was to find out sellers rather than buyers; that if you bought cheap and satisfied yourself with only a fair profit, buyers — the best sort of buyers, those who have money to buy — would come of themselves. He said he found houses engaged with a most expensive machinery sending travellers about in all directions to seek orders and to effect sales, while he employed travellers to buy instead of to sell; and if they bought well, there was no fear of his effecting advantageous sales. So uniting this theory with another, that small profits and quick returns are more profitable in the long run than long credits with great gains, he established one of the largest and most lucrative concerns that has ever existed in London, and was entitled to a name which I have often heard applied to him, "the Napoleon of shopkeepers." Hudson had his theory too, and a very simple and sensible one. He saw how unnecessarily expensive was the machinery of railway management; that the same staff and plant, generally very costly, while directing only one railway concern, might with a small additional charge be applied to many. Hence fusions and absorptions, and junctions and unions — the *personnel* improved in quality by the selection of the most efficient, and the *materiel* economized by a great extension of its employment (p. 58).

The years 1819–20 were spent by Bowring in visiting on business for the second time Spain, and for the first time France, Belgium, Holland, and Russia. In France he formed the acquaintance of many of the leaders of the political and literary world.

Through General Dumouriez he became intimate with Louis Philippe, at that time Duke of Orleans, and the object of the suspicions and fears of the restored Bourbons. He was surrounded by spies, and told Bowring that he had not a servant whom he could trust, and that he believed they were all in the pay of the police.

Bowring thought there was no ground for the accusations of plotting brought by the court and its followers against Louis Philippe, whom he describes as "talkative and somewhat swaggering, but really a very timid man." Elsewhere he speaks of him as "the most insincere of men," and adds that Thiers once called him "*le plus grande fourbe de l'Europe*" (p. 137). He had, continues Bowring

a notion certainly that the absurd policy of the elder Bourbons, and especially of Charles X., would in the natural course of events waft the crown of France towards him, and that it would fall on his head. In fact, his work was better done by his foolish relations than he could have done it for himself, and he preferred a safe to an adventurous policy. He was wholly without enlarged ideas, but saw clearly enough in a narrow circle (p. 132).

Throughout Louis Philippe's reign he kept up an acquaintance with Bowring, and not unfrequently sent for him to consult him on political and commercial questions. Further acquaintance with this monarch did not increase Bowring's respect or esteem for him. Amongst his sketches of various celebrities, there is one of Louis Philippe (p. 258, *et seq.*). It is interesting and impartial, but the writer's estimate of the king is on the whole unfavorable. "As a country squire, he would have held an honored position; as a monarch, he was beneath mediocrity. He would have quarrelled with England, and under Thiers' impetuosity would willingly have gone to war, but he *dared* not. I doubt if he trusted anybody, though he believed he could control anybody" (p. 365).

Some of the personal traits of the king are amusing.

He was accustomed to interlard his conver-

sation with bits of foreign languages, several of which he spoke well. He called the Duke of Wellington "comme vous autres Anglais disent a puss in boots;" and when speaking of his own possession of the crown he added, "Possession, vous savez, is nine points of the law." He (writes Bowring) so little understood the position of a constitutional monarch, that he often boasted of carrying matters against the opinion of his ministers by his personal will. He said to me, "Am I to sit in council and be a nullity like the queen of England?" to which my reply was, "Sire, vous faites des questions ministerielles des questions monarchiques. You involve yourself in responsibilities which had better be avoided." In another of his outpourings he said, "Il n'y a que moi qui puisse mener cette voiture-là," meaning the state carriage; and when Bowring replied, "Mais, sire, si vous la versez," he was much displeased, and remarked to Casimir Périer, "Bowring avait me dit des choses vertes."

During the negotiations for the Spanish marriages he carried on a private correspondence with Bresson, his minister at Madrid, and in a conversation Bowring had with him at that time he pulled out from his side pockets a quantity of papers, and said, "*Croyez-vous que mes ministres aient vu cela?*" He had a great idea, says Bowring, that he was a master of the art of kingcraft, but he certainly had not the *ars celare artem*.

Bowring's first visit to France had an unpleasant ending; he had all along been an object of suspicion to the police (p. 134), and they supposed, not without reason, that he was implicated in a plot for promoting the escape of the "*quatre sergens de la Rochelle*" young men of good family, who had been condemned to death for singing republican songs. He was arrested as he was embarking at Calais for England. Canning was then prime minister of England,* and as soon as he was informed of Bowring's arrest, he insisted on his release, or on such an *acte d'accusation* as would justify his detention. The French government dreaded discussion and exposure, and after six weeks' detention, during which he had several interviews with the *procureur du roi*, who sought to exhort from him materials out of which to frame an indictment, and was informed by Bowring that, if brought to trial, he should call attention to facts exceedingly discreditable as to the manner in which judicial proceedings were conducted in France, he was suddenly released, and informed that he would not be allowed again to enter France. He did, however, return, and that ere long. A congratulatory address to the French people on the Revolution of 1830 had been agreed to by a Common Hall of the city of London. The address was Bowring's own composition. He was sent over by the meeting to present it. He was entertained by M. Odillon Barrot, then prefect of the Seine, at a public dinner given at the Hôtel de Ville, and was the first foreigner received by Louis Philippe after the English ambassador had announced to him that England recognized the monarchy of July.

This recognition delighted and so excited the newly-made king, that on Bowring and his companion, M. Odillon Barrot, entering the room, he drew with his own hands three chairs to the centre of the room, and saying, "*Asseyez vous, asseyez vous,*" he sat down so violently in the middle chair that it broke down, and the king fell on his back on the floor. He was raised up by the two others, M. Odillon Barrot saying, "*Voyez vous êtes entourés des amis;*" but the incident, notes Bowring, "was not a very pleasurable one to the incipient monarch."

It was on Bowring's first visit to Paris, and on his introduction to Abbé Grégoire (Bishop of Blois), Laroche, Thierry, Cuvier, Humboldt,* and other men of letters that he formed the determination which in one of his letters he thus expressed: "It will be the height of my ambition to do something which may connect my name with the literature of the age."

It was during Bowring's visit to Paris in 1830 that he came under the influence of the St. Simonians.

Among the leaders of this once famous sect were Michel Chevalier, afterwards the ally of Richard Cobden, and Arles Dufour of Lyons, in which city he was not only an earnest promoter of every philanthropic project, but one of the most efficient advocates in the chamber of commerce and through the press of the great principles of free trade.

Some of the most instructive documents which have been published on the free-trade question emanated, says Bowring, from Arles's pen. The free-trade tendencies of the St. Simonians attracted Bowring, already a free-trader, to them; he speaks of them in terms of the highest praise.

* In this statement we follow the "Recollections," which are confused as to dates. The arrest is said to have taken place in 1822. Canning did not become premier until 1827.

* See the sketches of Humboldt, Recollections, p. 367; of Grégoire, ibid., p. 391.

Whatever tares and weeds [he says] may be found in the harvesting of this strange community, there was in all their teachings abundance of the good and prolific seed of a genuine and generous philanthropy, which has produced excellent fruits in many of the leading minds of France. International hatreds have disappeared wherever the St. Simonian creed has prevailed, and with it the conviction has spread that love, not hatred, peace, not war, unchecked commercial intercourse, not repulsion, are the motives by which nations should be influenced and the objects for which they should strive; that if God in his all-wise providence has given to each people its advantages of climate, soil, and production, it was not for selfish but for cosmopolitan ends; it was that the superfluities of each may be interchanged with those of all others; it was, in a word, that benefits and blessings might be maximized over the widest space and for the whole human family.*

This passage, both in thought and expression, closely resembles one in Hume's essay on the balance of trade, which is remarkable as containing one of the few religious allusions to be found in his writings. Writing of protective and prohibited duties, he says, "Could anything scatter our riches, it would be such impolitic contrivances; but this general ill effect, however, results from them, that they deprive neighboring nations of that free communication and exchange which the author of the world has intended by giving them soil, climates, and geniuses so different from each other."

In 1831 Dr. Bowring, as he came to be called after the University of Groningen, in Holland, bestowed on him the diploma of LL.D., availed himself of his intimacy with Louis Philippe to endeavor to negotiate a commercial treaty on free-trade principles between France and England. Of this negotiation Mr. Greville writes in his journal: —

Poulett Thomson, who has been at Paris some time, has originated it, and Althorp, the chancellor of the exchequer, selected George Villiers (afterwards Earl Clarendon) for the purpose, but has added to him as a colleague Dr. Bowring, who has in fact been selected by Thomson, a theorist and a jobber, deeply implicated in the Greek fire, and a Benthamite. He was the subject of a cutting satire of Moore's, beginning, —

> The ghost of Miltiades came by night,
> And stood by the bed of the Benthamite.

But he has been at Paris for some time understanding the subject, and has wound himself into some intimacy with the French king and his ministers. It is, however, Poulett Thomson who has persuaded Althorp to appoint him, in order to have a creature of his own there.*

The animus of this passage is plain. It is the dislike the aristocratic writer felt at two City men presuming to interfere in the sacred mysteries of diplomacy, hitherto free from plebeian intrusion. Bowring was no creature of Poulett Thomson's. On the contrary, Bowring brought Thomson into public life; he introduced him to Joseph Hume, who introduced him to the Radical party at Dover, which constituency first sent him to Parliament; he brought much commercial knowledge and business habits to Parliamentary life, and became a useful ally to Lord Althorp. His appointment as vice-president of the board of trade in the Grey government was the only one insisted on by Lord Althorp.† He afterwards was one of the two first members for Manchester, and president of the board of trade. Subsequently he was governor-general of Canada and Lord Sydenham. Of his merits and defects as a public man there is not much difference between Greville and Bowring.‡ With regard to the once celebrated lines by Moore, quoted by Greville, which were originally published in the *Times*, Bowring notes an instance of great generosity on the part of Moore, that when a common friend assured him that he had done Bowring great injustice, he immediately consented to suppress the publication of the poem.

As the attack on Bowring's integrity insinuated by this poem is withdrawn, there can be no harm in reprinting it. As a specimen of versified satire it is inimitable.

AH QUOTIES DUBIUS SCRIPTIS EXORSIT AMATOR.§

The ghost of Miltiades came by night,
And he stood by the bed of the Benthamite,
And he said in a voice that thrilled the frame,
"If ever the sound of Marathon's name
Hath fired thy blood or flushed thy brow
Lover of liberty, rouse thee now."

The Benthamite, yawning, left his bed,
Away to the stock exchange he sped,
And he found the scrip of Greece so high,
That it fired his blood, it flushed his eye;

And oh! 'twas a sight for the ghost to see,
For there never was Greek more Greek than he;
And still as the premium higher went,
His ecstasy rose so much per cent.,
(As we see in a glass that tells the weather
The heat and the silver rise together,)
And liberty sung from the patriot's lip,
While a voice from his pocket whispered, "Scrip!"

The ghost of Miltiades came again,
He smiled as the pale moon smiles through rain,
For his soul was glad at the patriot strain,
And, poor dear ghost, how little he knew
The jobs and tricks of the Philhellene crew,
Blessings and thanks were all he said,
Then, melting away, like a night dream fled.

The Benthamite hears, amazed that ghosts
Could be such fools, and away he posts.
A patriot still? — ah no! ah no!
Goddess of Freedom, thy scrip is low,
And warm and fond as thy lovers are,
Thou triest their passions when under par.
The Benthamite's ardor fast decays,
By turns he weeps and swears and prays,
And wishes the devil had crescent and cross,
Ere he had been found to sell at a loss.
They quote him the scrip of various nations,
But spite of his classic associations,
Lord, how he loathes the Greek quotations!
"Who'll buy my scrip? who'll buy my scrip?"
Is now the theme of the patriot's lip,
As he goes to tell how hard his lot is
To Messrs. Orlanda and Luriottes,
And says, "O Greece! for liberty's sake,
Do buy my scrip, and I vow to break
These dark, unholy bonds of thine
If you'll only consent to buy up mine."

The ghost of Miltiades came once more,
His brow like the night was lowering o'er,
And he said with a look that flashed dismay,
"Of liberty's foes, the worst are they
Who turn to a trade her cause divine,
And gamble for gold on freedom's shrine."
So saying, the ghost, as he took his flight,
Gave a Parthian kick to the Benthamite,
Which sent him whimpering off to Jerry,
And vanished away to the Stygian ferry.

In Bowring's (p. 350) well-intended efforts to promote greater freedom of commercial intercourse between England and France, he was met by many hindrances. The minister of finance, Baron Louis, was a most earnest and conscientious supporter of free trade, but the French commissioners who met Mr. Villiers and Dr. Bowring were not so. One, the Baron Freville, was "a man of little strength of character;" the other, M. Duchatel, the friend and colleague of Guizot, was more desirous of making himself agreeable to the king than of promoting the general good. The king himself was a deceiver throughout. He was a large forest proprietor, and could not reconcile himself to the losses he anticipated should the importation of English iron lessen the value of the timber employed in the manufactures of the French. His sister, Madame Adelaide, was a partner with Marshal Soult, Duke of Dalmatia, in ironworks, and they furnished supplies to the State. The English commissioners were all along thwarted by M. Thiers, by a great majority of the peers and deputies interested in the articles protected by the existing tariff, and by M. David, the head of the *douane*, the most determined enemy of free trade, all whose subordinates were equally the bitter enemies of commercial liberty, and who held the doctrine, then equally popular in England, and the lingering prevalence of which is abundantly to be traced in Parliament and elsewhere in discussions on cattle importation and other kindred subjects, viz., that the markets of a country belong by right to the natives, and that foreigners are but intruders there. In the course of the negotiation the English commissioner arranged with M. Thiers for the removal of the prohibition on the importation of the finest qualities of cotton twist. It was promised that the ordinance for that purpose should appear in the *Moniteur* of a given day. It did not, whereupon Bowring went to M. Thiers, and taking him by the coat, said, "*Mon ami, il faut que l'ordonnance paraisse sans rétard.*" Thiers made some lame excuse about difficulties, but in the end said, "*Bien! ca se fera,*" and the promised ordinance appeared the next day. An exaggerated report of this interview got abroad, which caused Lord Melbourne on one occasion, when Bowring's name was mentioned to him, to exclaim, *more suo,* "Dr. Bowring! d—— him, why he collared a prime minister!" On the whole, the negotiations were unsuccessful, and it was reserved for another Englishman, Richard Cobden, and for a less selfish and more enlightened sovereign, Napoleon III., to lay the foundation of unrestricted commercial intercourse between England and France.* Of Napoleon III. Dr. Bowring had a high opinion. His acquaintance with him commenced when he was

* The writer wishes to state, on the authority of Mr. Cobden, what he believes is not generally known, that the settlement of the celebrated treaty of commerce was much facilitated by Prince Napoleon Louis. Mr. Cobden told the writer that whenever, as often happened, a difficulty arose in the course of the negotiation, he at once applied to the prince, through whose influence with the emperor the difficulty, whatever it might be, was generally got over.

residing with his mother at Arenenberg and engaged in military studies. In reference to the emperor's book on the artillery service, the merits of which are allowed by the highest authorities, but the merits of which have been attributed not to him, but to his instructor, General Dufour, Dr. Bowring tells us that he met the general at Berne, and "took the liberty to inquire how far he had been a party to the composition, but he disclaimed all participation in the work, and said that the prince, as he then was, was a superior military genius" (p. 140). It was at or about the time of his negotiation at Paris that Dr. Bowring visited most of the wine districts of France, and there learned some facts which are not only amusing but instructive.

The average production [he writes] of the four clarets of the first quality does not exceed about four hundred tons per annum. These are called *premiers crus*, and are represented by the Médoc vineyards of Lafitte, Latour, Château Margaux, and Château Haut Brion. It is a curious fact, that while the English were possessors of Gascony, the wines now universally recognized as of the best order were so inferior, that it was made a condition, in order to dispose of them, that a certain quantity should be taken by those who desired to purchase the then superior wines of Blaye. It is believed that more than thirty thousand tons are sold in the different markets of the world under the favored names. In champagne, the two most distinguished vineyards, that of Ai for the sparkling, and that of Sillery for the still champagne, produce very small quantities, though there is no wine merchant who will not agree to provide a supply to any extent. I was informed that there are five countries, England, Russia, France, Turkey, and the United States of America, any one of which consumes more than the whole of the genuine produce of champagne, so that at least four-fifths of the wine drunk under that name is either made in other districts or artificially manufactured. While on a visit to M. Ouvrard, the proprietor of the most celebrated of the Burgundy vineyards, that of Romanee Conti, he informed me that though the wine was nominally sold at every restaurant in Paris, and is to be found in the list of all the principal dealers in wine, he never sold a bottle, the vineyard producing only a few tons, which he kept for his own private use, and for presents to a small number of privileged personages.*

This was written in 1861, seemingly from recollections of what he had learned in 1830–32.

Looking at the great increase in the import of French wines of all names and descriptions since the Cobden treaty,* and the absence of any evidence that the manufacture of the wines of highest quality has or can be proportionately increased, the English drinkers of the so-called *premiers crus* have great and melancholy reason for doubting the identity of the liquors they consume with the wines whose names they bear, and for which names the consumers pay a heavy price.

Very different results followed Dr. Bowring's labors as a free-trade missionary in Belgium. King Leopold once told him that by his writings and discourses he had made all the Belgians free-traders. Dr. Bowring had at different times two official missions to Belgium, both connected with commercial subjects. One of these coincided in time with the Belgian revolution of 1830. He had much intercourse with the provisional government. He pointed out to them that the future of Belgium must be settled in London, and not in Brussels. To him belongs the merit of introducing the late M. Van de Weyer into the diplomatic world which he so long adorned. It was at Dr. Bowring's instance that M. Van de Weyer was selected by the provisional government as their envoy to the British Cabinet. Dr. Bowring accompanied him, and introduced him to the political circles of London. M. Van de Weyer was the son of an obscure *juge de la paix*, his mother kept a small library in Louvain. Prior to the Belgian revolution he had attained some eminence as an *avocat*, and attached himself to the republican party. On the success of the revolution he became a member of the provisional government. As a diplomatist he was successful from the first. Talleyrand spoke of him in terms of high praise, and the Duke of Wellington was struck with the *undiplomatic* frankness and ability with which he treated the interests committed to his charge.

Van de Weyer [says Bowring] formed a very correct estimate of the tendencies of public opinion at home and abroad. He soon detached himself from the republican party, and attached himself to the cause of monarchy as represented by Leopold, to whose service he

* Recollections, p. 374, under the head "Lamartine."

* This may be inferred from the following figures. The total average number of gallons of wine imported to England in the years 1840, 1841, and 1842, the last three years of our protectionist policy, was 8,078,621. The average total number of gallons imported in the years 1872, 1873, and 1874, under the *régime* of free trade and the Cobden treaty, was 19,859,152 — increase, 11,790,531. Of this increase in our imports, France supplies a very large, if not the largest share. — *Vide* Ashworth's "Recollections of Richard Cobden, M.P., and the Anti-Corn-Law League," Appendix, p. 15.

devoted himself with unswerving faithfulness. It was happy for him that Great Britain was the field in which his talents found their exercise, for in Belgium the *morgue aristocratique* would have rebelled against his elevation, as it did when for a short season he was invested with ministerial authority at home (pp. 273, 274).

With Leopold I. Dr. Bowring had frequent and unrestrained intercourse during the fifty years of that monarch's public life. A common desire to promote sound principles of political economy was the bond of union between them. A very interesting and appreciative sketch of the king will be found in the "Recollections" (pp. 265, 281). We can afford only to notice a few of his more marked characteristics.

The mind of Leopold, modified as it was by English and French associations, the result of the study of books and men, was markedly of the German type, and though he spoke fluently, but somewhat slowly, the languages of what have been called the two great rival nations, and was well instructed in the history of both, there was a paramount Teutonic influence traceable in his phraseology, which showed that he thought in German, even while his utterances were the idioms of France or England. Even at his table, German was the accepted and preferred tongue, unless when courtesy to guests or diplomatic usages made the employment of French or English more becoming.

There was always in the mind of King Leopold a longing, a feeling (for which the Germans have in *Sehnsucht* a more emphatic word than we possess), there was a longing which led his thoughts towards Claremont. The gardens and conservatories there were called upon to furnish fruits and flowers for his table, and I have had not unfrequently a dinner invitation from the court with the appendix, *le panier de Claremont est arrivé.*

A striking evidence of the genuine simplicity of Leopold's nature was seen in his attachment to his country abode at Laeken, which he much preferred to the palatial residence in the capital. In the grounds and gardens, and in the less adorned but very comfortable apartments of his country home, he found much more that was domestic and social than was compatible with the greater glare and splendor of the metropolitan city. Though he visited it for state receptions, for diplomatic intercourse, and for those public displays which are associated with the functions of monarchy, he always returned with renewed enjoyment to the comparative retreat and seclusion of his beloved rural domicile. Not that he was in any way reserved or inaccessible — quite the contrary; for not only did he willingly and cordially receive all those with whom he had to do in private or public life, but there was a courtesy and kindness in his habitual bearing which were singularly winning, and which in his presence left everybody at his ease.

Among the less important characteristics of King Leopold was this: he seemed to have an affection for old garments, not from any niggardliness — of which I never heard him accused — but from the mere force of habit, which becomes, as it were, a portion of every day's continuity. Many men confess to a certain weakness in favor of old shoes and old hats, and it is a subject of reasonable complaint that when they become most comfortable, when every toe has found its own particular niche, or when the hat has become plastic enough to accommodate itself to every undulation of the brow, the faithful servant is dismissed on account of some hostile criticism, and a new hat is introduced which pinches the forehead, or a new pair of shoes which inflict agony upon the feet. Now up to the time in which absolute raggedness demands the expulsion of a favorite bit of ancient costume, one may be allowed to hesitate about its rejection, and certainly the gold lace upon King Leopold's *froc* had lost its lustre long before it was dismissed (pp. 269, 277, 279, 280).

The occasion of Dr. Bowring's last visit to Leopold was characteristic of the peace-seeking and peace-loving disposition which influenced the career of both, though, as will be seen, there were in Bowring's Chinese career aberrations from his usual peaceful tendencies. He had negotiated or been instrumental in bringing about a treaty of friendship and commerce between Belgium and the Hawaiian Islands. The draft treaty contained a clause providing that if there were any difference of opinion between the two governments which could not be satisfactorily solved by diplomatic correspondence, there should be no appeal to arms, but such differences should be referred to the friendly arbitration and decision of some neutral power. No such clause had up to that time been inserted in any European treaty, and the authorities of the Belgian Foreign Office were aghast at a proposal so unprecedented and foreign to all the traditions of diplomacy. The ministers specially referred the question to the decision of the king. "*C'est une question humanitaire, ainsi soit il,*" was his award, and the arbitration clause remains in the Belgo-Hawaiian treaty. A precedent was thus made which we trust will in the future be universally followed, and so lead to that great desideratum — a code of international law.

We have deviated from chronological order in our narrative of Bowring's career in order to deal connectedly with his French and Belgian labors. We return to it.

In 1819 Bowring visited Russia. We find nothing noteworthy in his Russian experiences except that at St. Petersburg he found

some interesting documents among the manuscripts, namely, the original letters of Mary Stuart written while in prison, and an immense mass of papers purchased by the Russian ambassador at Paris during the Revolution. I saw the missal of the unfortunate queen, in which she wrote up to the time of her death. She made it an album, and appears to have requested the celebrated personages who visited her to write their names in it. Bacon's name is among the rest. Some of her own verses bewailing her fate are beautiful. From the letters of Mary to the French court and others she seems to have been treated by Elizabeth with monstrous brutality. In one of them she complained that the guards insisted on her sleeping with their wives and daughters. Elizabeth's answers to several potentates who interceded for Mary bespoke a cold-hearted cruelty and pride which do her little honor. At the time of the Revolution, these letters were scattered among the mob to be trampled on as the works of "kings and queens," and were most of them purchased for a trifle. Some hundred of letters of Henry IV. cost forty francs (p. 123).

During Bowring's visit to Russia he acquired sufficient knowledge of its language to enable him to give to the world the first specimens of it ever translated into English. These were his two well-known volumes of "Russian Anthology," published 1820–23. He returned home through Finland. The language, the poetry, and the traditions of the Finnish people were to him "full of charms." "Most of the poetry of the Finns is written in that peculiar metre to which Longfellow has given a certain popularity in his 'Hiawatha;' but I believe," adds Bowring, "I may take credit to myself for having been the first to introduce it into our language in an article which appeared in the *Westminster Review* of April 1827" (p. 126). From Finland he crossed *via* the Gulf of Bothnia to Sweden. His passage was not unattended with difficulties and even dangers. He spent a few days with Frauzen, Bishop of Oretro, one "of the most popular of the modern poets of Sweden." Here a somewhat odd coincidence occurred. A Hindoo escaped from a wreck in the Baltic, and sought refuge in the bishop's house. He had saved from the wreck a copy of Bowring's "Matins and Vespers," * which he said had been a great comfort to him, and which on parting he gave to the bishop as a token of gratitude for his kindness; and the bishop had kept it in his pulpit, little expecting ever to have its author as his guest.

In or about 1821 Bowring made the acquaintance of Bentham, the guide, instructor, and admiration of his riper years, as Dr. Lant Carpenter was of his youth. In that year Bowring published from Bentham's MSS. his first economical work, viz., "Observations on the Restrictive and Prohibitory Commercial System."

The disciple speedily gained the esteem and affection of the master; for as early as 1821 we find him writing to the Portuguese minister of justice, "Avez vous besoin, vous autres portugais, d'un homme que est propre a tout, pourvu que cela ait rapport au genre humain? Il est actif, infatigable au plus haut degré; meilleur cœur n'a jamais existé et n'existera jamais; vous m'avez appellé citoyen du monde, et je le suis, mais je ne le suis pas plus que lui. On ne risque pas en donnant des éloges à cet homme-là; il a autant d'amis qu'il a de connaissances." *

The same affectionate relations between them continued until Bentham's death in 1822. Bowring was the sole companion of his last moments. The dying philosopher ordered the exclusion of every other person from his room, and made the characteristic remark, "Now we have minimized pain."

Of Bentham these "Recollections" tell us little not previously known through the life by Bowring prefixed to his edition of Bentham's works published after his death, in which, according to the *Edinburgh Review*, he is "typographically interred." † We learn, however, that so much was he

in advance of his age, that Romilly recommended him not to publish several of his works, as he felt assured that printing them would lead to prosecution and imprisoment. Many of his writings [continues Bowring] I have not deemed it safe to give to the world even after his death, so bold and adventurous were some of his speculations, but they remain in the archives of the British Museum, and at some future time may be dragged into the light of day (p. 339).

Of Bentham's conversation Bowring says that it was often desultory, but that he threw into every remark such originality and power that his observations might serve as texts which require volumes for their development.

* Published 1823. There is some confusion of dates here, as the journey from Russia through Sweden is elsewhere fixed for 1819.

* Memoir, p. 8.

Nothing very new or striking appears in the examples given in this volume in the "Notes of Conversations with Bentham" (pp. 339, 344). The following anecdote is curious, as, for the first time, if we are rightly informed, it reveals to us George III. in the character of a newspaper correspondent: —

George III. hated me (Bentham) cordially. With Pitt I was on terms, but the malevolence of the former frustrated the intentions of the latter towards me, and prevented the fulfilment even of the most solemn contracts. The origin of the king's hatred was this. He had written in the *Leyden Courant* (the then European journal) a dull and prosing but most mischievous letter to induce the king of Denmark to make war upon Russia without any motive whatever. The only ground — the fallacy — was the repetition of the idea, "Check, check, check." I answered the letter in the indignant strain which Junius had made so popular. I poured upon it *a storm* * of contempt. I signed "Anti-Machiavel." The king discovered that I was the writer, and ever after put his veto upon everything I proposed; so that, in spite of acts of Parliament, in spite of the protection and the warm encouragement of several ministers, I was always sacrificed (p. 342).

Benthamite poetry is new to us, and we doubt not to our readers. It seems, however, that Bentham, though he always spoke slightingly, and even insultingly, of poetry, occasionally made verses. The following "memoriter verses, expressive of the elements or dimensions of value in pleasures and pains," are a specimen of the great utilitarian's poetic powers: —

Intense, long, certain, speedy, fruitful, pure,
Such points in pleasures and in pains endure.
Such pleasures seek, if private be they end;
If it be public, wide let them extend.
Such pains avoid, whichever be thy view;
If pains must come, let them extend to few.

We confess this specimen does not make us wish for more of the outpourings of the muse of Queen Square Place.

The following *dicta* are characteristic of the man: —

It would be a good service to publish an edition of the speeches delivered in Parliament, with a statement at the foot of each of the particular fallacy employed for the purposes of deception. People would soon learn to apply this mode of judgment. Bingham † is heartily tired of the law and of its cheatery. More credit is obtained for defending a bad cause than a good one. Rhetoric and delusion are the only currency. The great value of our English law records consists in their proposing almost every possible case which can be the object of legal decision. The cases have wonderful variety. The decisions are often unjust, absurd, and deceptive.

This also is characteristic, and we must add characteristically narrow and absurd: "The worst of pickpockets is better than the least bad of the judges. They never open their mouths but to lie, to tell money getting lies" (pp. 342, 343). Bentham, it is well known, paid no visits, and usually received but one guest at dinner, for more than one, he said, distracted conversation. To this rule he once made a noteworthy exception. Talleyrand and Bentham had been acquaintances in the earlier period of the French Revolution. So great was the impression made by the philosopher on the diplomatist, that after forty years' separation Talleyrand said "he had known many men, but as a *man of genius* Bentham overtopped them all." Bowring related this to Bentham, who asked whether the prince would accept a dinner invitation to Queen Square Place. "Talleyrand said he would give up any and every engagement for the pleasure of meeting his ancient acquaintance. They met, and an amusing and instructive colloquy took place between one of the busiest actors in the great scenes of the world, and the almost inaccessible recluse whose life was given up to meditation and study" (p. 305).

Not the least interesting of these "Recollections" is the description of the relations between Bentham and Brougham.

O Henry, what a mystery you are!
Nil fuit unquam tibi tam impar,

was the language in which the great thinker once addressed the great speaker. With equal plainness of speech he said to him on another occasion, "Harry, when you want to study insincerity, stand opposite a looking-glass." After Bentham's death Bowring found the following lines in his writing, —

Frailty! thy name is woman.
Insincerity! thy name is Brougham.

Spite of this unfavorable estimate of Brougham's sincerity, Bentham felt for him both admiration and affection. Brougham on his part sought advice and inspiration from Bentham in reference to his speeches and proposals for law reform. "Grandpapa," he wrote to him on one occasion, "I want some pap; I will come for it at your dinner hour." Nevertheless

* Correctly quoted, but we should think *stream* in the original.

† *Sic* in original, but we conceive Brougham is intended.

in no one of Brougham's speeches or writings on the improvement of the law did he ever refer to Bentham either in his lifetime or after his death. Nor in Brougham's autobiography is there any mention of his intimacy with Bentham. Sir Robert Peel also was more than once seen by Bowring in the garden at Queen Square Place discussing with Bentham questions of law reform, but Sir Robert was as reticent as Brougham as to any obligation or inspiration he owed to Bentham. Bowring agrees in the general verdict that Brougham was both vain and insincere. Of his insincerity he discovered a proof in a letter of Brougham to Bentham, found among Bentham's papers after his death, in which he cautioned Bentham against Bowring as a man by no means to be trusted, and no better than a tool of the Tories; and this letter was written at a time when Brougham assured Bowring he was exerting himself to secure for him a professorship in the University of London. Bentham's whims as to the disposal of his remains after death seem to have been various. At one time he was full of the notion of having his head preserved in the style of the New Zealanders, and sent to a physician to consult him about it. Ultimately, as is well known, he left his body to Dr. Southwood Smith to be dissected. His skeleton in his usual clothes, and with the face restored in wax, remained in the custody of Dr. Southwood Smith until his death, when Brougham, who had not the slightest title to dispose of it, presented it to London University College, where it now remains.

Soon after Bowring's intimacy with Bentham commenced the *Westminster Review* appeared. The funds were furnished by Bentham, the editors being Henry Southern, who had charge of the literary department, while the political was committed to Bowring's care.

The first article in the first number, entitled "Men and Things in 1824," was written by William Johnson Fox, "the Norwich Weaver Boy, afterwards one of the orators of the Anti-Corn-Law League," the "Publicola" of the *Weekly Despatch*, and M.P. for Oldham.*

About the time of Bentham's death, the proprietorship of the review passed to General Perronet Thompson, the author of the "Anti-Corn-Law Catechism." We have on a former occasion briefly expressed our opinion of the character and public services of this excellent man,* and we have read with pleasure Bowring's sketch of him (p. 70). Its tone is admirable, and is characteristic of the writer's amiable nature, for it was not written until after Thompson had renounced all acquaintance with him on account of his conduct in the affair of the *lorcha* "Arrow." "Thompson," says Bowring, "became one of the most efficient auxiliaries of the Anti-Corn Law League, which, I think, somewhat under-estimated the value of his services and sacrifices."

In this opinion, which we know was held by General Thompson himself, we cordially agree, and we must add that the same may with equal truth be said of Bowring himself.†

The year 1828 first saw Bowring employed in the public service. Notwithstanding the Duke of Wellington's refusal to employ him in England, he was sent to Holland to examine the method in which the public accounts of that country were kept. He prepared a report, "the first," says his biographer, "of a long series on the public accounts of various European States. These papers are models of perspicuity, showing considerable power in grasping facts and in arranging them lucidly and intelligibly." ‡ Bowring's name was not unknown in Holland, for he had published a volume of translations from the Dutch poets,§ and received for it a gold medal from the king. He made the acquaintance of most of the Dutch literary men, and it was from a Dutch university that he received, *honoris causa*, the diploma of LL.D. "In addition to this diploma, he received during his life more than thirty certificates of honorary distinction from various learned societies and institutions in different parts of Europe." ‖ Nor were these literary honors confined to Europe alone, as the list of these distinctions in the appendix to this volume includes the American Antiquarian Society and the New York Historical Society. Last in the list appears a body to the admission of which into the class of learned societies we demur. It is the "Ancient Order of Foresters." We suspect Sir John Bowring sought admission into that respectable friendly society with a view to the vote of its members at the Exeter election, in which, at the date

* The *Theological Review*, No. 14, July 1866, contains a full and interesting sketch by Sir John Bowring of Fox, his life and writings.

of his admission (1867), he had special reason for feeling an interest. Prior even to the passing of the first Reform Act, Dr. Bowring, as after 1829 he was generally called, determined to seek a seat in Parliament. Under the head of "Election Experiences" (p. 79) he writes:—

I was inquiring into my chances of return for Penryn.* My maternal grandfather was a minister of the Church of England in that part of Cornwall, and I learned that his name was very popular among the people. Both he and his wife died victims of their attention to the poor during a desolating epidemic. An old man came to me on behalf of the Wesleyan Methodists, and told me it was reported that I did not believe in the Trinity, and therefore I must pay double for their votes. They fancied, no doubt, that they ran some additional risk to their souls' salvation, and were therefore entitled to get some premium for the perils they incurred.

Another instance of religious fanaticism, mixed up with electioneering contests, is given by Dr. Bowring in the shape of a letter from a voter in a Scotch constituency, in which the writer, without regard to the consistency of his words, said, "We will have a religious man to represent us, even if we go to hell to find him." There is some doubt as to the constituency where the corrupt Trinitarian lived. General Thompson, who often related the anecdote, which he had heard from Dr. Bowring at the time of the occurrence, used to lay the scene at Blackburn. These "Election Experiences" were not written until 1861, and it is not unlikely that, writing at the distance of thirty most chequered years from the event, Bowring confused one constituency with the other. "In Cornwall," writes Dr. Bowring, "the deadening influence of the rotten borough system was such that it was impossible to secure a moment's attention from any auditory." We may add, that one who accompanied Dr. Bowring on his visit to Penryn, told us that during the doctor's address the people present kept shaking and slapping their pockets, thereby signifying to the aspirant for the honor of representing them it was to that region, and not to their reason or conscience, that his arguments should be addressed.

Blackburn, whether or not it was the home of orthodox corruption, was the constituency first contested by Dr. Bowring. He was received by the people with acclamation, but at the poll was defeated by twelve votes. His defeat led him to resume the negotiations in France and Belgium of which we have spoken. About this time he published "Bentham's Deontology," and a smaller work entitled "Minor Morals," in which Bentham's principles were set forth in conversational tales suitable for young persons.

At the general election of 1835 he was again defeated at Blackburn, but within a few days he was returned for Kilmarnock by an immense majority. His return was entirely owing to his political reputation, as he had no personal acquaintance in the constituency, and had never been but in one of its districts, and that not as a public man. His heterodox faith and liberal votes on Catholic and Sabbatarian questions were not suited to a Scottish constituency, and at the general election of 1837 he failed to secure his re-election. He was returned for Bolton at the general elections of 1841 and 1847, and finally retired from Parliament in 1849.

Although not an infrequent speaker, he cannot be said to have gained the ear of the House, and his Parliamentary career was not so brilliant, or even successful, as with his undoubted ability and multifarious acquirements might have been expected. Although a fluent speaker — never, indeed, pausing for a word — his voice was monotonous, his manner too didactic or professorial. He had a habit, while speaking, of raising himself on the tips of his feet and letting himself down with some violence. This was done so often during a speech as to become ludicrous. Moreover, his arguments — and the remark holds good of all the Bentham school — were always appeals to abstract *a priori* principles, and therefore not suited to popular assemblies. For the same reason, although a frequent he was not a popular speaker at the meetings of the Anti-Corn-Law League. The arrangers of these remarkable gatherings generally contrived that his address should come between those of two more attractive speakers, fearing that if he spoke first or last, he would fail to keep the meeting together.* In a sketch of Sir Robert Peel as a speaker, reference is made to the enjoyment which he experienced in replying to speakers who laid themselves open to fair retort, *e.g.*, "some philosopher who wanders out of the ordinary track, and draws

* It is Penzance in the original, but Mr. Bowring, a west-countryman, should have known that the most western borough in England has never sent a member to Parliament.

* Ashworth's "Cobden and the League" does not contain a single extract from Dr. Bowring's League speeches.

Original from CORNELL UNIVERSITY

arguments for annual Parliaments from the annual revolution of the earth." Dr. Bowring was the philosopher here referred to, having on one occasion used this argument in debate. Both while in Parliament and during his exclusion from it, he continued his labors in promoting the freedom of commercial intercourse between European nations. For this purpose he visited the manufacturing districts of Switzerland, regarding which he writes: "By a system of free trade Switzerland has overcome every natural difficulty, and created for herself a real superiority over the protected manufactures of all the surrounding nations." *

In 1836, and again in 1837, he visited Italy on a free-trade mission from the British government. In Tuscany he had repeated interviews with the grand duke, with whom he visited the southern provinces of the then duchy. The duke he describes as disposed to listen to suggestions for improvements, but on economical subjects he was utterly in the dark.

"Railways," writes Bowring, "were then beginning to supersede less convenient and rapid modes of communication, but the grand duke expressed his apprehension that their introduction might interfere with the interests of his '*poveri vetturini*'" (p. 161.) The pope (Gregory XVI.) was quite as much in the dark on such subjects. When told by Bowring the object of his mission, his Holiness remarked that England must not raise her commercial prosperity on the ruin of other nations, and that she should not absorb the trade of the whole world. "I answered," writes Bowring, "that she could only trade as much with others as others would trade with her, and that trade was but the interchange of common interests, all nations having the same interest when rightly understood. He said that trade was a circle in which there was a great centre" (p. 174).

We fear Bowring's mission to Italy was barren of immediate results.

In 1837 he visited Egypt and Syria. The account of his visit to these countries, and his sketch of Mehemet Ali, are amongst the most interesting of his "Recollections," and will well repay perusal. We regret we cannot afford space for extracts from them.

In 1839 Bowring was sent by the British government on another free-trade mission. This was to the meeting of the Zollverein at Berlin. The experience gained by these various missions led him to the conclusion "that Great Britain was ill fitted to be a teacher when a restrictive and prohibitory system formed the foundation of her commercial code." Bowring could easily refute the theoretical arguments of German protectionists, but he could not "gainsay the fact that our own tariffs, and especially those which most interested northern Germany, by which the import of corn was placed under severe and repelling restrictions, were altogether hostile to free-trade principles." He therefore returned to London, and told the premier, Lord Melbourne, that if he would have more trade with Germany, he must first abolish the corn-laws. The minister, with one of his usual oaths, exclaimed that Bowring was "only fit for Bedlam" (p. 207). Events were at hand that proved which was the saner of the two statesmen.

In the September of 1839 Dr. Bowring was entertained at a public dinner at Blackburn. The late Archbishop Prentice, whose paper, the *Manchester Examiner and Times*, was one of the earliest journals to advocate free trade, and in which Richard Cobden, under the signature "Libra," first gave to the world his views on political economy, seized the occasion of Dr. Bowring's passage through Manchester to issue circulars to a number of the more decided local free-traders to meet him. About sixty gentlemen met together, and the meeting was very enthusiastic. Dr. Bowring denounced the corn-laws in unmeasured terms. "It is impossible," said he, "to estimate the amount of human misery created by the corn-laws, or the amount of human pleasure overthrown by them. In every part of the world I have found the plague spot." In the course of the evening, when the enthusiasm of the meeting had been thoroughly evoked, a Mr. Howie proposed "that the present company at once form themselves into an anti-corn-law association." The proposal was unanimously and heartily adopted. Such was the origin of the National Anti-Corn-Law League, the most remarkable political organization this country has seen. Of the very considerable part which Dr. Bowring took in the counsels and labors of this body, his "Recollections" contain no account, but he has left on record his testimony to the character and services of its great leader, which we gladly transcribe. It is another proof of Dr. Bowring's amiable disposition, for it was written after Mr. Cobden had proposed and carried the resolution of the House of Commons which censured Bow-

ring's proceedings in the case of the "Arrow."

Cobden's name has obtained far too much celebrity, and his history is too well known, to sanction any observations of mine upon either. I deem him to be one of the most privileged, as he deserves to be one of the most honored, of his race. No man has ever been called on to exercise more important functions, and no man's exertions have been more successful in their issue, or more unpretending in their display. No doubt he has been rewarded by proofs of the most general sympathy. Those were indeed for him proud moments when the *Times* announced the existence of the Anti-Corn-Law League as a great fact, and when Peel avowed that Cobden was the apostle who had converted him from the error of his ways in the field of political economy. Cobden has been tried by heavy domestic sorrow in the loss of his only son, an affliction far more hard to endure than the endless vituperations of which he has been the object. His strength has always been found in his advocacy of sound principles to be carried out in their full extension. No surrender of a truth, no compromise with an error; yet he has always been willing to take reasonable instalments towards the payment of a just debt; he has never sacrificed an obtainable good in the pursuit of an unapproachable better; but has felt that every step forward is progress, leaving less to be done than if that step had not been taken. This is practical philosophy and sound wisdom; it is a disarming of the enemy to employ against him the weapons he has surrendered. Then, again, there has been on Cobden's part no jealousy or distrust of fellow-laborers — on the contrary, they have been most cordially welcomed to co-operate (p. 300).

We can supply a very apt illustration of this absence of jealousy on Cobden's part towards his fellow-laborers, namely, his testimony to the anti-corn-law services and sacrifices of General Perronet Thompson, which shows that Cobden, at least, among the leaguers, did not under-estimate them.* At the final meeting of the league in 1856, Mr. Cobden, after mentioning that on entering on his career he found mighty impediments removed by the labors of others, proceeded: "There is one man especially whom I wish not to forget — it is Colonel Thompson. (Hear, hear.) Colonel Thompson has made larger pecuniary sacrifices for free trade than any man living, and we all know that his contributions in an intellectual point of view have been invaluable to us. We will not, therefore, forget the worthy colonel amidst our congratulations amongst each other." †

* Comp. Recollections, p. 72.
† Ashworth's "Recollections of Cobden and the League," p. 320.

In Bowring's childhood he dreamed that he was sent by the king of England as ambassador to China. Strangely enough in after life this dream, as Macaulay says of Laud's dream that he had turned Papist, proved to have come "through the gate of horn." He had invested all his means in a Welsh iron company. The commercial panic of 1847 so seriously affected the position and prospects of this adventure, that he determined to seek permanent employment under government. At the close of 1848 he was appointed by Lord Palmerston British consul at Canton. The next nine years of his life were spent in the East. "I was accredited," he writes, "not to Pekin alone, but to Japan, Siam, Cochin China, and Corea; I believe to a greater number of human beings — indeed not less than a third of the race of man — than any individual had been accredited to before" (p. 217). Bowring thought — why it does not appear — that his dignity and position in the estimation of the Chinese would be enhanced if he had a personal interview with the queen before his departure, but was told by Lord Palmerston "that there was a general rule, through which he could not break, that no persons under the rank of ministers plenipotentiary should have special audiences, and that the queen was unwilling to have her privacy at Osborne disturbed" (p. 280).

The first five years of his Eastern life seem not to have been pleasant.

> Cooped up [writes his biographer] in the prison-house of the Canton factories, far removed from the political and literary world, and restricted to the dull routine of purely consular duties, he realized in all its sadness the truth of the poet's saying, "Better fifty years of Europe than a cycle of Cathay," and found his position almost unendurable. He mixed much with the people, however, and gave in his letters curious and interesting details of their religious and social life, their occupations and amusements, their usages and their superstitions.*

It is to be regretted that none of these letters are given in this volume. In fact, one of the noteworthy omissions in the book is the total absence of letters to or from Bowring, which, as he must have had a large correspondence, is remarkable.

From his age and experience, says his biographer, and we should add from mental constitution and habit, the new consul was not well fitted to serve in a subordinate capacity, and the consul and the pleni-

potentiary (Sir George Bonham) did not always agree as to the line of policy to be taken with the Chinese. In 1853, however, Sir George Bonham retired, and Dr. Bowring, who was in England on a year's leave of absence, was appointed to succeed him as plenipotentiary and governor-general of Hong-Kong; he was knighted by the queen before his departure for the seat of his government.

"My career in China," writes Sir John, "belongs so much to history that I do not feel it needful to record its vicissitudes. I have been severely blamed for the policy I pursued, yet that policy has been most beneficial to my country and to mankind at large" (p. 217).

We have not space or inclination to go into the details of the controversy as to his Chinese policy, but we will state the resolution of the House of Commons in the case of the *lorcha* "Arrow," that our readers may judge whether Sir John Bowring's remarks, which we shall presently quote, are an answer to it. His former associates thought that his proceedings in that case showed a decided preference for the "arm of flesh," little to be expected in one who had been taught to regard "the greatest happiness of the greatest number" as the one principle of government, who had felt strong sympathy for St. Simonianism on account of its peaceful tendencies, and who had been secretary of the Peace Society. Mr. Cobden determined to bring the matter before Parliament. He accordingly moved the following resolution, which had been drawn up by Mr. Milner Gibson,* who is a perfect master of the art of framing Parliamentary resolutions: —

That this House has heard with concern of the conflicts which have occurred between the British and Chinese authorities in the Canton river, and without expressing an opinion as to the extent to which the government of China may have afforded this country cause of complaint respecting the non-fulfilment of the treaty of 1842, this House considers that the papers which have been laid upon the table fail to establish satisfactory grounds for the violent measures resorted to at Canton in the late affair of the "Arrow," and that a select committee be appointed to inquire into the state of our commercial relations with China.

In his speech Mr. Cobden said that, without going too definitely into what we had actually done, he contented himself with inquiring, would we have done what we had done if we had been dealing with a strong power, and not a weak one? He contrasted the conduct of the British authorities at Hong-Kong with that which we would have pursued had the government we dealt with been at Washington, and the transaction had taken place at Charleston. He was supported in debate by Lord J. Russell, Sir E. B. Lytton, Mr. Warren, Mr. Whiteside, Sir James Graham, Dr. Phillimore, Sir Frederick Thesiger, Sidney Herbert, Sir Roundell Palmer, Mr. Henley, Mr. Gladstone, and Mr. Disraeli. In fact "the whole character and oratorical power of the House, save what was possessed by ministerialist office-holders and office-seekers, ranged themselves under Cobden's leadership. He carried his motion by a majority of sixteen."*

Sir John Bowring defends himself by saying: —

It is not fair or just to suppose that a course of action which may be practicable or prudent at home will always succeed abroad. You can no more apply exactly the same discipline or the same character of reward and punishment to masses of men than you can apply them to individuals. The powers of reason fail when coming in contact with the unreasoning and unconvincible. No man was a more ardent lover of peace than I; in fact, I had been the secretary of the Peace Society, and had always taken an active part in promoting the peace movement; but with barbarous, ay, and sometimes with civilized nations, the words of peace are uttered in vain, as with children too often the voice of reproof (p. 217).

To us it appears that this is no answer to the reasoning by which Mr. Cobden guided the House of Commons to adopt his resolution, and it reads like an admission by Sir John that the theories of the humanitarians, of whom he was a leader, fail when sought to be put in action in the affairs of life. The object he had in view, to secure the admission of foreigners into Canton, was no doubt important, and the quarrel he considered as a means to that end; but we concur with his biographer "that it is a subject of regret that a better cause of quarrel was not found than the 'Arrow' affair."

It would be absurd and unjust to condemn the whole Chinese career of Sir John Bowring for this one error. We gladly turn to its brighter side.

I look back with complacency [he writes] on my government of Hong-Kong, which I held for five years, and on surrendering the

post received the thanks of the Conservative ministers of the colonies. I had during my tenure of office the pleasure of seeing the population nearly trebled, and the shipping trade increased nearly cent. per cent. I not only made the revenue, in which there had been a great deficit, equal the expenditure, but I left a large balance in the treasury chest. I carried out the principles of free trade to their fullest possible extent, and did not impose even a harbor due to pay the expenses of the service. Vessels came from every quarter and from every nation. They entered, they departed, and no official interfered, except to record whence they came or whither they went. The tonnage increased from three hundred thousand to seven hundred thousand tons of square-rigged vesssels, to say nothing of the large native junk trade. The harbor (one of the finest in the world, having an extent of safe anchorage exceeding five miles) is always crewded with shipping, more than a hundred vessels being ordinarily in port, in addition to the steamers, frequently as many as twenty, and the ships of war of all the great maritime powers. An enterprising individual made docks equal, if not superior, to any east of the Cape, and there is no element of prosperity and progress which has not been wonderfully developed.

The revenues are furnished by the ground-rent of houses, the opium monopoly, the judicial fees, etc., but there is no direct taxation. The value of land has increased rapidly, and indeed land is the main source of income. On my recommendation the legislative council had an infusion of many non-official persons, but I am not sure that the colony was ripe for this sort of representation, and I think that more might have been done by the executive without the popular element (pp. 218, 219).

This disparagement of popular representation shows how far at the close of his life he had departed from the Benthamism of his earlier years.

His Chinese administration was likewise distinguished by successfully negotiating in 1855 an "Anglo-Siamese Treaty of Commerce" which has brought most beneficial fruits. "The number of vessels engaged in foreign trade has been centupled, the sides of the Meinam are crowded with docks, the productive powers of the land have increased, and with them the natural augmentation of property and the rise of wages" (p. 250).

In 1857 an attempt was made to poison the English residents in Hong-Kong through the bread eaten by them. Every member of the governor's family was more or less affected by the poison, and Lady Bowring's health failed in consequence of it. She was compelled to return to England, where she died soon after her arrival. War broke out again between China and England, and the mandarins set a price on Sir John Bowring's head. Domestic and diplomatic troubles increased, local squabbles disturbed the peace of Hong-Kong; and at length, "nearly worn out by incessant care and anxiety," in May 1859 he resigned his office and finally quitted China. On his homeward voyage he was shipwrecked in the Red Sea, but in the end reached England safely. Shortly after his return he married Deborah, daughter of the late Thomas Castle of Clifton, the lady like himself being a devoted Unitarian. "His second union," writes his son, "contributed much to the comfort and serenity which attended his latter days."

The last twelve years of his life were spent in varied occupation. He was precluded by the terms on which he held his pension from re-entering Parliament, but had the satisfaction of seeing one of his sons elected for his native city by the enlarged constituency of 1868. The same pleasure was enjoyed at the same time by another ex-editor of a review, Sir John Taylor Coleridge; the ex-editor of the Tory *Quarterly* and the ex-editor of the Radical *Westminster* co-operating to promote the return of Sir John Duke Coleridge and Mr. Bowring as Liberal members for the capital of the west.

"A political Rip van Winkle" was the term bestowed on Sir John Bowring by the *Times*, because, after re-settling in Exeter, he made his first public appearance before his fellow-citizens at the Exeter Discussion Society, and delivered a lecture on the ballot, of which, in common with Bentham, James Mill, Perronet Thompson, W. J. Fox, George Grote, J. A. Roebuck, and most of the old "philosophical reformers," as well as the more modern leaders of the Manchester school, he was an unflinching supporter, and which he lived to see carried spite of the sneers and opposition of the *Times*. He repeatedly gave lectures on Oriental subjects and social questions, he wrote many articles in peridicals, and much fugitive poetry. The Devonshire Association, the British Association and the Social Association had much of his assistance and labor. But the association to which he gave most time and aid was the British and Foreign Unitarian Association. He remained to the last, as has been said, a decided Unitarian; but his contact with the ancient religions of the East led him to the conviction "that it were well if Christians would recollect that there never was a religion exercising any influence among thoughtful and philosophical men which had not in it some element

Original from CORNELL UNIVERSITY

of truth and consequently of stability" (p. 386).

The last year of his life (1872) saw him with mental and bodily powers alike unweakened. At the meeting of the British Association at Brighton that year he delivered an eloquent and effective speech at the sudden call of the president of the Geographical Section, welcoming to this country the ambassadors from Japan. At the Social Science Congress held at Plymouth within two months of his death he was particularly active, speaking at length two or three times a day, and addressing a temperance meeting of three thousand persons "with all the energy of a young man." Shortly after celebrating his eightieth birthday he was seized with illness which speedily proved fatal, and, after all the changes of fortune and of country he had experienced, he died within a stone's throw of the home where he was born.

With such great ability and such varied acquirements, he hardly obtained so high a position as might have been expected. He was a voluminous writer; "ever too rash to rush into literature" is his description of himself. He published, he says, between forty and fifty volumes, in every case, we are glad to learn, with some pecuniary profit; but we do not think he has written anything which will permanently take a high place in English literature. His "Life and Works of Bentham" will always be consulted by legal and political students, but probably he will be longest and most generally remembered by his hymns, many of which are to be found in the various collections used by Unitarian churches. Of his Parliamentary career we have already spoken. He was a free-trader before Cobden was known, but it is Cobden who always is and will be considered the hero and apostle of free trade. Bowring's labors were too discursive, and his powers as a popular orator too feeble, to compete with a man whose principle was, "This one thing I do," and whose eloquence was only the more effective because it was simple and unadorned. Still Bowring did much and well for his country and the world, and we think that such a public servant as he was should not be left without some public memorial of his many labors and his useful life. His bust might well be placed side by side with Cobden's in the great Abbey which holds the memorials of so many of our statesmen; or, if he be thought unworthy of that high honor, the men of Devon are restoring the noble cathedral which looks over the valley of the Exe, beneath the shadow of whose massive towers Bowring was born and died; in that great historic fane some fitting memorial might well be placed to preserve to future generations the name, the character, and the services of one who may fairly claim to rank among the "worthies of Devon."

From Good Words.

DORIS BARUGH.

A YORKSHIRE STORY.

BY THE AUTHOR OF "PATTY."

CHAPTER XXVIII.

A DISPUTE.

DORIS walked quickly back to the Hall. Certainly she had never been so angry since the days of her childhood.

In some ways her nature was too large to wince under Rose's personal taunts, as a more sensitive, more delicately-strung temperament might have winced. She had made up her mind that Rose would be vexed, and probably would vent her vexation by pertness and rudeness, though she had not known how stinging this rudeness would prove. The point that so angered her was Rose's flat disobedience to her will. One of her own villagers! A mere dependant on her husband's goodness! — for she knew that Mr. Burneston took no rent for the stone cottages. It seemed to Doris in her indignation that her slightest wish should have been law to the vain, rebellious girl.

But, with the evidence of anger, grew a consciousness that she was angry, and Doris yielded herself up, and tried not to think, not to make any resolves till the mental storm had passed over.

"What a temper mine is!" she said to herself, as she drew near the Hall. "I did not think it was so strong."

A regret, a rare feeling with Doris, rose and troubled the lull which was slowly falling on her anger. If she had put in practice towards Rose some of the lessons of worldly wisdom, learned in her close study of others during her stay in London, and in intercourse with country neighbors, she would not have failed so entirely to-day.

"That girl is so wretchedly vain," she thought, "that if I had forced myself to notice and call on her sometimes she would have yielded to my influence, and I might have done what I pleased with her now." She remembered again, with some

bitterness, that her husband had said, in the early days of their marriage, "If you choose, you may be of the greatest possible service to Rose Duncombe."

But besides all this, there was something quite different; there was a weight, and beneath that weight a soreness at Doris's heart. It was galling to feel in herself a want, and to feel, too, that one so completely her inferior as Rose Duncombe possessed the quality she lacked. What was it that glowed in Rose's eyes, and trembled in her voice, when she spoke of giving up all for the happiness of another?

If Doris had been older, she might have consoled herself with the conviction that her passions were more under control than Rose's were, and that she would never so betray her feelings. But, as has been said, Doris had read few novels, and at school had never talked intimately with any girl besides Rica Masham. And, moreover, forty years ago novels painted life more from the outside than from the inside, and were, in consequence, healthier, though less instructive, than they are now, when, in some of the books we read, human hearts are put under a microscope, and treated like plants and insects.

Besides the look on Rose's face, her words had conveyed the knowledge of a feeling — a knowledge that some months ago might not have aroused attention, but love had begun in Doris's heart beside her baby's cradle, that only true love which is content to give itself without counting on return.

She walked along, her eyes fixed on the ground, her trouble and puzzle getting more tangled and increasing the soreness she felt. Could she then be more happy than she was? She knew that her life had its troubles; but these had been caused partly by the fact of Ralph's existence — a trouble which she never let herself dwell on — and by the avoidance and petty slights offered her by certain country neighbors; and this was a trouble which only curled her lip with scorn, so confident was she in the ultimate triumph of her influence, when what she considered her worldly education should be complete.

All at once she looked up, and saw her husband coming with his dogs along the avenue.

Even at a distance she knew that he had perceived her, and was hurrying eagerly to meet her.

"Yes," she said sorrowfully, "I suppose his love for me is more like Rose's. Why cannot I return it equally? But, then, I am not sure that women need, or ought, to love in that way. I am sure I could never like any one better than I like Philip, and I have baby."

And yet, instead of the feeling of exquisite relief — the feeling akin to that which a draught of cold water gives to parching thirst — when a perplexing doubt is solved, or a light thrown on some difficult undertaking, this answer did not satisfy Doris; the soreness at her heart increased as she approached her husband. Would it have been different, she thought, if she had been Mr. Burneston's equal, and they had met and loved when he was younger, and if his wooing had been done in less set fashion? Next moment she rebuked her own idle folly.

"It is against common sense to dream of what could never have happened. The only thing that could have happened differently would have been that I might have grown up at Church Farm and married — well, say Ephraim Crewe" — she gave a shudder of disgust — "no." A proud and more contented expression rose on her face. "For all the joy that the feeling could give, I would not give up my position for any power of loving; and Philip is quite satisfied, I think. I am not sure that he would wish for any change in me."

Her husband had come up to her; she stopped and smiled at him.

"Where have you been, darling?" He took her hand, drew it tenderly within his arm, and then turned back again towards the Hall. "I have been studying your face as you came along, and you really looked oppressed with care and woe. I don't think I ever saw you look so troubled before, my darling. What is it? tell me, Doris."

The strong loving tenderness in his voice troubled her; and in this moment of awakened self-consciousness, she knew that she shrank from it as she had never shrank before; not because she disliked it — she felt it to be due to her as a wife; but her natural pride made her shrink from receiving that which she could not return, and Doris could not feign.

It was a relief that she had a real reason to give for her troubled face. The idea of a state of perfect union and thorough interchange of thought and feeling had not been conceived by Doris. She would have shrunk indignantly from deceit; but thorough confidence with her husband was quite beyond her grasp.

She grew very serious while she answered.

"I was coming to tell you, Philip. I had hoped" — she looked up at him with the direct, truthful look that had so mastered him when he met her in Steersdale — "that I might have saved you the worry of knowing; but as I have failed, it seems to me best to tell you and leave you to judge."

Mr. Burneston smiled at her earnestness, and Doris flushed. She felt that if he did not consider Ralph very wrong indeed she should be angry.

"I have been in the village," she spoke more quickly than usual, "I have been up to see and to warn Rose Duncombe, who has been very foolish. I have been told that something very wrong has been happening, Ralph goes and talks to her of an evening, and I did not want you to be worried about it."

Mr. Burneston looked puzzled, and then he smiled.

"You are a wonderful creature," he said. But Doris reddened; she was not quite sure how much of his praise was real or how much a playful mockery of her earnestness, for this gentle banter was the only reproof her husband ever administered. "You are playing mother in earnest; it is very good of you, and very tiresome of Ralph, my darling," he said more seriously, as he read the trouble in her eyes. "Well, how was your lecture received, and what does naughty, pretty Rose say for herself?"

"She is very headstrong, and she behaved as badly as possible, and ——" She felt that her tongue was going at a most unusual pace, and checked herself.

"She is a silly little girl," Mr. Burneston said cheerfully. "However, there can be no great harm done, I fancy. A girl at Rose's age is far too old to care for Ralph, and I suppose boys will be boys, eh, Doris? and talk to a pretty girl sometimes."

"I can't bear to see you so cool about it, Philip," she said bluntly, for he had begun to whistle softly to himself. "I call such a thing disgraceful. I'm sure Rose thinks a great deal too much about him."

"Indeed! Poor little girl; that's a pity." The squire looked serious, and left off whistling. Doris had never spoken to him in such a decided tone; he felt roused from his easy life of happiness to consider this subject more gravely.

"Ralph is dull, poor fellow!" he said; "and I dare say Rose is amusing to talk to. Your brother George found her so, I know." Then another pleasant smile crossed his face. "Perhaps it vexes you, dear, that Ralph should talk to George's sweetheart?"

Doris's anger was getting beyond her mastery.

"I have never spoken to you about this," she said proudly, "because it pains me so much. I cannot — I will not — believe that George really cares for such a person as Rose Duncombe. No! if I did not think of the harm to Ralph I should let this acquaintance go on; it might cure George of such a silly infatuation, and then he would have eyes for Rica."

The sudden change in her husband's face startled Doris. He looked utterly bewildered.

"My dear child," he said, "you talk as if love went for nothing, or as if it could be made to grow like a cabbage. If your brother loves Rose, and I think he does, he won't give her up lightly. And I don't mean to vex you, darling, but Rose will suit George much better than Miss Masham would."

Doris crimsoned till she felt almost suffocated. They were close to the Hall now, and she stood still before she answered.

"I understand you; you mean that I forget the difference of their positions; perhaps that is not my fault," she said in a pained, humbled voice. "There is far less difference between George and Rica than there was between you and me."

It was the first time she had so spoken, and Mr. Burneston grew as rosy as a girl would have done.

"My dear child, you must not compare yourself with any one, you are beyond all rules." Doris thought she had never heard him speak with so much dignity. "If Rose Duncombe were like you, I should hold Ralph completely justified; as it is, you are right, and I will put a stop to this business."

Then they walked on in silence. Doris wished that as she had said so much she had said a few other things which often rose to her lips, while her husband wished the whole talk unspoken, and tried to forget that his wife had lost her temper with him.

They did not meet again till just before dinner. Then Mr. Burneston, instead of meeting Doris, as he usually did, at the door of her dressing-room, knocked and went in.

"I'll talk to Ralph, and settle this business," he said smiling, "so do not expect to see me for some time after dinner." His easy, cheerful manner vexed Doris.

"But you will speak seriously to him,

will you not?"—her voice getting stiff and hard with the struggle of her feelings—"I do not know much about boys, perhaps, but this conduct seems to me, at Ralph's age, simply disgraceful."

Mr. Burneston laughed.

"My darling, you are making too much of it. You are only a woman after all—you see things in exaggeration; there's really nothing to worry about."

"Worry!" Doris had flushed scarlet. "To me disgrace would cause a great deal more than worry. You know, you must know, that Ralph's visits to Rose Duncombe will do her harm. Why, if a child of mine acted so, I should punish him severely. I should threaten to disinherit him——"

She stopped abruptly; the words had come without her will.

He looked at her a moment; then he put his arm round her and kissed her forehead.

"You are tired, dear," he said, "and you want your dinner. Don't you know that I couldn't disinherit Ralph, even if I wished to do it? I am only a life tenant here; he must be master of Burneston. Now, come along, we are keeping dinner."

This was Mr. Burneston's way of "settling the business" after dinner, when he and Ralph were left alone.

"Do you still wish to go to Paris as much as you did last year, old fellow?" he said kindly.

Ralph's eyes brightened at once.

"I should just think I did. Why do you ask?" he said eagerly.

"I fancy Gilbert Raine is going abroad for a short time, and if you like you can go with him; that is to say, if you are willing to start for Austin's End to-morrow."

Ralph had flushed with eagerness. His two special school chums had seen Paris and many other foreign towns, and he felt himself an ignoramus beside them. One of his great home grievances was that his father had taken Doris abroad, and that he had never been asked to go with him in his previous journeys.

"All right, father; thank you," he said. "I'll go and find Faith, and tell her to have my things put up. The coach leaves Steersley at ten, doesn't it?"

He ran off in an excited bustle, while Mr. Burneston lay back in his chair and thought, "That will settle the matter; how very true is the old proverb, 'Least said soonest mended.'"

CHAPTER XXIX.

RICA MASHAM.

It had rained heavily all night, so heavily that from the windows of Burneston Hall that looked across the river, the landscape had a forlorn, soaked aspect; the leaves drooped, the roses near the house had been scattered in pink fragments on the brown moist earth by the violent pelting of so many hours. But the sun was now asserting himself, and driving the lingering clouds out of sight; and along the lane seen in the foreground of the landscape the little flowers, white and blue and yellow, were opening their bosoms widely to the warmth, though drops still glittered on the fragile speedwell blossoms and on white starry stitchwort nestling under the hedges.

Everything wore a brightened, renovated aspect, except the battered roses and a plot of balsams beneath Doris's window. The violence of the rain had strewn the rich dark mould with pink and white and scarlet blossoms.

Doris looked radiant, too, with happy expectation.

"You have not looked so young since you married," her husband said. "I believe you are far more excited at the idea of seeing Miss Masham than you were on your wedding-day."

Doris smiled at him.

"I suppose it does make me feel young to think of Rica—it takes me back to school-life," she said, with brightening eyes; "but then what a child I was in those days!"

She gave a little sigh, and a pensive look stealing over her face made her in her watching husband's eyes lovelier than ever. He had a way of quietly studying her face—learning by heart its marvellous delicacy both of skin and feature. Usually it betrayed little emotion; but to-day, in this high-strung mood of expectation, a faint pink color came and went on her clear skin, and her deep gray-blue eyes looked moist with happiness, almost like the Speedwell beneath the hedge across the river.

Doris felt strangely fluttered as Rica's arrival drew near—nervously anxious that all should be thoroughly well ordered. She had never forgotten the suffering she had gone through when Rica arrived at the cottage at Steersley. She wanted her friend to realize how completely that bit of her existence had been an episode.

And besides the pleasure of seeing Rica and renewing the old intimacy which had

begun to lessen in their letters, Doris hailed her visit on another account — she meant to take her to the Cairn. She knew that her father was deeply hurt by her long delay, and that her mother pined to see the baby; but neither of these reasons could have induced Doris to take a maid with her to the Cairn, and she knew that her husband would not allow her to go alone. She did not wish him to go with her; he would be a restraint on the others, and it would be a trial to her to let him see their homely ways; but now that the Cairn was not her own home she thought that she could take Rica there without mortification.

"I do not fancy," she thought, with a slight curl of her delicate lip, "that in a poor parsonage where there are five boys and an invalid mother, the ways can be so very refined. When I knew Rica I knew no one else; she may seem different now."

It was afternoon when Mr. Burneston said, "There she is," as loud barking announced an arrival.

Doris followed him down the broad darkening stairs, and she thought of the difference between Rica driven by George in the dog-cart, and Rica as she saw her now through the open hall-door being helped out of the luxuriously cushioned carriage by Mr. Burneston.

But Rica seemed shy and quiet, and was not laughing and chattering as she had laughed and chattered with George at Steersley. When she saw Doris the change was magical. She flew at her and gave her a long intense kiss, that made Mrs. Burneston's heart thrill with strange pleasure; but having done this Rica reddened, and looking half ashamed let go of Doris and said, "How's baby? may I see him?"

Doris was delighted.

"We will go and see him at once," she said; "you shall have some tea in the nursery."

"I see you also will be offered up to the idol," said Mr. Burneston laughing. "I warn you that Doris sacrifices us all without the slightest compunction to this new deity."

Rica stopped when she reached the staircase. "Oh, I forgot," she said eagerly. "There's something for you in that basket, Doris. I've left it in the carriage, but it's a King Charles — father said it was thrown away upon us, and so I brought it to you." Mr. Burneston went back for the basket — when it was opened a black silken head, with large, liquid, luminous dark eyes and a turn-up nose, appeared, wistful and trembling.

"What a dear quaint little face!" said Doris. "How very kind of you!"

Rica felt rather awed by the size and grandeur of the house. It seemed to her, too, that Doris had grown years older since their last parting; but when she saw her with her baby in her arms she thought she had grown more lovable — there was such a deep tenderness in the eyes bent on little Phil.

"Isn't he a darling?" Doris said.

As she looked up her eyes met Rica's earnest gaze.

"Well!" and the young mother laughed. Rica leaned over and kissed her.

"He is like his mother. I am so glad to come, dear; it seems years since that wedding-day. I have pictured you many ways, but you never came to me as a mother, Doris, and just now I could have fancied you my own mother looking at Algy."

Doris flushed a little; the old dislike to showing her feelings was as strong as ever.

"Will you come to your room?" she said after a little; "I think you must want to rest before dinner after such a long journey. Jane, one of baby's maids, will take out your things if you will give her your keys."

Rica laughed.

"Thank you; you remember my habits, I see; but indeed I have almost left off dreaming, and am really growing punctual and methodical. I was going to say I have so much to do, but," raising her large bright eyes to her friend's face with admiring reverence, "I suppose you are so much busier that you would simply laugh."

They had reached a pretty room at the end of the gallery, and found Jane waiting and the boxes already placed in the adjoining dressing-room.

Doris held out her hand for her friend's keys, and then closing the door on Jane and her labors she seated herself in an armchair and pointed to the other.

"Sit down, dear," she said; for Rica had gone to the window and was hanging out of it, exclaiming at the extent of the view. "Let us have a little talk now, and then I will leave you to rest."

Rica came and seated herself beside her friend. "You think my life is so busy," said Doris. "No! I expect your life is much busier than mine is; till baby came I had really nothing to do — I mean besides music and reading and so on."

Rica's eyes and mouth opened in wide wonder.

"Why, I thought you said your rector had no wife! Who looks after your schoolmistress and schoolchildren, and old people, and sick, and all the rest?"

Doris flushed.

"Yes," she said gravely; "I know what you mean. At Pelican House I meant to do so many things when I never dreamed of having so much power; and yet perhaps it is the very circumstance of having the power that makes my way so difficult. You know what I mean," she said abruptly. She had thought to be quite frank with her old schoolfellow, but somehow she could not go back to the mention of that early life at the Church Farm as easily as she had thought. Rica was altered. She seemed so much older, and there was a thoughtful tenderness in her eyes which was strange to Doris. She could not yet summon up the old power which she used to possess over her impulsive friend.

"You mean" — Rica smiled so sweetly that Doris's heart went out to her — "that one cannot do all one likes at once; that is the very lesson my father has been preaching to me ever since that day we left Pelican House. Oh, what have I said! a thing I don't mean at all. My father never preaches to me, but his practice has been showing me how very little I can really do of all my grand imaginings, and how much better it is to do one thing thoroughly than to try at three or four and only half finish them all; but you would never have wanted teaching that, you old darling — you were always so calm and so thorough."

She took Doris's hand and pressed it warmly — these two friends had never indulged in many kisses.

"I am not sure" — Doris still looked grave — "whether after all you have not been doing while I have only been thinking. I must get you to tell me about some of your work, though I suppose I shall have plenty to do now."

Rica laughed.

"But I have come here for a holiday, you dear old thing! — I am not going to teach you — oh, I am so happy, I must give you a kiss," she said, kissing her warmly. "I feel actually wild with happiness at having you again to talk to. I suppose the husband will not allow me much of you all to myself; but he does not look tyrannical; and yet I never trust looks in men. I don't believe in any of them, except my father and your brother George, and he is a myth at present. You see that visit last year was such a lightning-flash kind of event there was no realizing anything. I seemed to eat, drink, and sleep wedding preparations and wedding from the day I arrived till the day I departed."

"Yes, it was all very hurried." Doris smiled as her friend's natural way of speaking broke through the shyness and reserve she had felt at first. "But you would believe in my father too if you knew him, he is so true. You will learn to know him at the Cairn."

"Yes," —Rica looked delighted, — "I am so looking forward to the happiness of that visit. Why ever should you have doubted my willingness to go there with you?"

Their eyes met in a long earnest gaze. Eyes are really the most useful of our features. It is all very well to talk of frankness and heart-to-heart communion, and doubtless there are hearts made one in marriage, or, in the case of sisters, every thought is sometimes shared — nay, even the embryo thought or doubt may grow into existence simultaneously in two souls only divided by the separate bodies in which each dwells; but these are rare privileges, and most of us have to carry with us alone through our life's journey thoughts and feelings which are either too high or too low to be shared by our dearest companions. We must bear our burden, so far as human sympathy goes, alone; and perhaps we may find hereafter that those whose cup of human love and sympathy seems fullest on earth — whose lives form the most of oneness with some fellow-being, will be farthest removed in the endless life from the great Sympathizer, the never-absent bosom friend of all who have loved him here.

It had seemed to Doris that the crowd of stifled, pent-up thoughts and doubts which she had borne unshared since she left Pelican House, would find release when Rica came to Burneston, and now face to face with her friend she could not force her tongue to say why she shrank from the Cairn, and why she feared that Rica, too, might shrink from it. She did not know how this trouble which so burdened her proud spirit looked out now at "the windows of her soul," and was comprehended and pitied by the warm sympathy of her friend.

Rica's color deepened, but she only said, "When are we to go to the Cairn, Doris? Dear me! that sounds rude, as if I wanted to leave this place; but you understand, don't you? I think it will be delightful;

and it is so very kind of Mrs. Barugh to make room for me."

A look of decided relief spread over Mrs. Burneston's fair, troubled face.

"If you had come yesterday," she said, "I should have told you our plans were not decided, as I did not want to leave my husband all alone, but now we can go any day, as he expects a friend at the end of the week. It is that Mr. Raine, Rica. Do you remember?"

"I should think I do — disagreeable person he must be. I hope we shall go before he comes. I must always hate that man for refusing to come to the wedding, and if I saw him I might have to like him against my principles."

"We shall certainly start before he arrives," said Doris thoughtfully. "We may expect cold weather any day at this season, and it would not do for baby to travel in cold weather. But I am not sure that you would like Mr. Raine. I like him now very much, but you and he are too much alike to be friends. Now I really am going to let you rest."

But instead of resting, Rica, as soon as she was alone, went to the window. She was so full of the tumult of enjoyment which new and pleasant surroundings are apt to create in imaginative and impressionable beings, that she seemed scarcely able to contain the gladness of her ecstasy as she gazed at the broad landscape beyond the river, with its hedge-bordered fields and distant lines of moorland overtopped by lofty blue hills, which made those in front of them quite puny and dwarfed, though they glowed with yellow and vivid green here and there, as if they hoped by color to compensate for lack of size.

Rica sighed — not from envy, though at home she could never escape the sight of chimneys, as her father's parsonage lay on the outskirts of a manufacturing town — but from the delight which the very sense of space gave her. It seemed as if she grew full of rest as she gazed at the large calm English scene — a scene that might be found in many other places, so still and yet so full of hints of life. The green meadows were dotted with brown cows, and in the meadow across the river fat geese were eating grass.

"After all," the girl thought, "a view like this teaches the use of commonplace beauty. There is nothing special here, unless it is the great extent of view and that brown line, which makes me dream of a wild, seldom-trodden moor, with perhaps a highroad across it," she said, with a smile at herself; "and yet the very sight of it all has made me feel ever so quietly happy. Doris must lead a happy life here."

Her eyes fell on the river that ran below her window, for her room was in one of the projecting wings of the building, and only a small strip of lawn bordered the terrace wall. The rain had swollen the stream, and it ran by in a swift, dark current to the bridge arches, dashing noisily against the piers. It had grown dark quickly, and Rica shivered as she watched the strong, dark water.

"And yet," she said, "I like the river better than that view beyond. There is life and motion in it, and mystery besides; it seems as if it might be full of weird secrets; there is nothing tame about it. I am not sure that I could live on always looking at those immovable fields and hills, with only the varying crops by way of change, but then Doris has her husband to live for; she does not care what sort of view this is." She stopped here to think. Rica was not sure that a husband would be as satisfactory to work for as a father, and mother, and four brothers were. It seemed to her that there could be nothing to do for the master of Burneston. She laughed again at herself.

"I am so absurd," she said, "so full of wild, dreamy notions, and yet in practice so very humdrum and ignoble. What a good thing it is for me that I must mend stockings and teach Algy Latin! I should perhaps carry my absurdities into action if I could get time even to think of myself at home."

CHAPTER XXX.

MATCH-MAKING.

DORIS liked the Cairn. There was a breadth about the wild, lonely place that could not be frittered away in Mrs. Barugh's small attempt at "genteel" decoration.

The floor of the large, low, heavy-beamed sitting-room was not nearly covered by her smart Brussels carpet; this was placed in front of the wide hearth, and as the broad latticed window with its seat below was on the same side as the fireplace, though at the other end of the room, very little daylight reached the carpet, already hidden by a heavy square table.

The last tenant of the Cairn, an old bachelor, had left all his old cumbrous furniture to be taken with the house, and John Barugh had peremptorily decided to

keep these chairs and tables in their places. He said his wife's "gimcracks" — so he called poor Dorothy's attempt at modern upholstery — were more suited to bedchambers.

The old, faded chintz window-curtains, too, were far more in harmony with the wild moor outside than were Mrs. Barugh's white muslin draperies up-stairs; and on the square table Dorothy kept an old china bowl filled with dahlias, the last bits of color that lingered in the narrow garden outside on the evening of Doris's arrival.

As they drove up to the house she thought her mother must sorely miss her garden. The former tenants of the Cairn had seemingly so loved its desolate, weird aspect that they had been unwilling to divide the house from the moor by more than a narrow strip of mould surrounded by a holly-hedge. There was not even a climbing shrub against the dark stone walls. But there was her mother at the door, her face full of eager delight, and when she had set eyes on her grandson, she pushed forward, and took him out of the carriage, and then kissed him till George called out that the baby would be stifled.

John came forward, proud and pleased to see his grandchild, but his face was troubled as he kissed Doris.

"Bless thee, lass," he said, "an' bless t' bairn; nobbut ah thowt ye wad nut hev com."

Doris looked at him with a sweet, shy seriousness.

"Indeed I have wanted to come, father, but there has been so much to prevent it."

As soon as they reached the parlor Doris took the baby from Mrs. Barugh's unwilling arms and held it up to her father.

The big, red-whiskered man bent down and scanned tenderly, yet with a kind of awe, the little sleeping creature that lay in its white wrappings quite undisturbed by its changed surroundings.

"You'll kiss him, won't you, father?" There was a pleading in her voice; never before had she seen clearly how her neglect must have pained her father. Softly, so that no one could hear but John, she said, "He shall learn to love you dearly; you may be sure of it."

John kissed the child heartily, and then turned away suddenly; he put his broad hand on his child's shoulder, but he could not find anything to say.

"Come, come, father. Doris is not used to holding the child, she'll be faint." Dorothy took the little bundle, and carrying it up-stairs she seated herself before the blazing logs in Doris's bedroom, and with the baby in her lap warmed its feet and legs at the fire. "It's the very image of the squire, that 'tis; yes, you are, you bonny boy, and as like your own mother as two peas, bless it!" Here she buried her face in the infant, and the rest of a long sentence of endearing words became inaudible.

Rica made George laugh heartily with the account of their journey. They had travelled post as far as the town in the valley below, and there they had parted from Jane the nursemaid, who was to return to Burneston in the carriage, while they drove to the Cairn in a hired fly; and Rica declared that Doris had been more solicitous about her baby's comfort than her own mother had been about her six children put together.

"He's the first," said George; "you don't know but what Mrs. Masham made a fine fuss about you."

On that evening and through the days that followed, for Doris kept her promise and stayed a week at the Cairn, it seemed by some natural order that she was always her father's companion, and Rica went with George. Mrs. Barugh was too much absorbed in the baby, and in directing the little extra maid she had hired to attend it, to need any other companion, so that except at meal-times they saw little of her.

Very little talk passed between the father and daughter in their walks; they seemed to have gone back six or seven years, sauntering round the farm and over the moor in the silent companionship that had once made them so happy; though now instead of the serene, idle-minded content John had been used to feel, he found himself wondering now and then whether such plain talk as his suited Doris or whether he did not weary her; while she, after the first novelty was over, used to let her mind wander as it had wandered years ago, with this difference, that formerly she dreamed a future out of chaos, and now she was often lost in retrospect, or in planning realities likely to happen. She could not bring herself to ask the question she longed to put about the future of her child, and yet she felt that her father was the only person to whom she could talk on this subject.

One great part of her reveries related to George and Rica. Every day there seemed more talk between these two; they seemed always glad to be together.

The only point that disturbed Doris was their mirth; she remembered that when George was in love with Rose he had been so dreamy and serious.

"But then I never saw him alone with Rose in this way. Rica and he must care for one another after a time, they'll learn to. Why, I did not care for Philip at first. Liking grows in these cases, I fancy."

Doris had to struggle with herself at this, to stamp down a conviction that there was a higher and more mystical feeling between lovers of which she knew nothing; but her belief in this idea was so vague that she would have considered it morbid to allow thought to dwell on it consciously, especially as the only time that she had allowed herself to consider it she had felt disturbed and unhappy.

"Father," she said one day, near the end of her visit, "how do you like Miss Masham?"

John had been walking beside her as they toiled up to the Cairn from the farm below; he had been busy showing Doris some new fields which he had lately purchased, and which were to be sown with clover, and she had been listening so attentively to his agricultural projects that he had been led into far more talk than usual. This seemingly irrelevant question startled him. He looked at his daughter curiously; his own mind, slow to move from one subject to another, could not yet grasp the connection which had helped her so quickly from clover to her friend.

"Eh well, sheea's a bonny lass, an' sheea's fair set on yu, Doris. Sheea's yalays efter yu an' wantin' yu. Ah notes that mitch."

"Don't you think she and George seem to like one another?"

John's eyebrows met in the puzzle created by her question, and his mouth grew screwed and round as he stared at her for explanation.

"Well?" he said at last, seeing that she waited for his answer.

Doris grew confused under that broad, unconscious gaze. Why should not this idea have come to her father?

"I mean," she said, "that they suit one another very well. I should like Rica for a sister if you would like her for a daughter."

John stopped abruptly in his walk. The thick red eyebrows rose suddenly, producing a series of crimson wrinkles something like a curved reed-moulding, while John's mouth opened as wide as the dominie's did for "Prodigious," only instead of the adjective came an explosion of hearty laughter, which sorely discomfited Mrs. Burneston.

"Zookerins, lass! bud mebbe ye're reckonin' ower fast. George is nut t' lad tu tak a wahfe becos yey an mey bid him wed, he's a steadfast lad is George."

Doris reddened. "I did'nt mean that, father, but I think they are taking to one another. And I want to know whether you would approve such a marriage."

John sighed. A memory came back with Doris's words of his talk with her about her own engagement. He thought she was more dutifully inclined about George's marriage than she had been about her own.

"Ye're iv ower mitch uv a hurry, lass; George is nut yan to change yeeasily, an' he's cared for Rose Duncombe ivver sin' he war a bit uv a lad."

"But, father," Doris spoke eagerly, at that moment she hated Rose, all her dislike for her came back, "you would not like Rose for a daughter. She is — she is not a fit girl for George to marry, indeed she is not."

Again John was puzzled, but he smiled down at her in the superior wisdom of simplicity.

"Ah deean't reetly gaum yu, bud seeams tu mey, lass, weddin's cannut be made as ye wad mak 'em. Gin a lad an' a lass is made yan theer mun be summat to draw 'em thegither, an' ah cann't think theer's onny mair then likin' atweens yon lass an' George, an' likin's nut eneeaf tu wed on, mahnd ye that, Doris lass.— Hollau!" This was addressed to a strayed sheep which had found its way through some gap in the fence of a turnip-field, and without a word more John strode off to remove the intruder, quite unconscious of the blow he had dealt his daughter.

But she soon recovered herself. She dearly loved her father; but this visit had shown her that he and she must of necessity judge from different points, and she tried to heal the pain he had just given her by this anodyne.

"I fancy love must wear different aspects in different classes. Apart from other things, in a worldly point of view, it would be a good thing for Rica to marry George. Charming as she is she has little chance of marrying. Her father is evidently very poor, and has four boys to place in life, and my father has saved a good deal, I know, and of course George can have it all. With Rica's notions about rank and society she would not con-

Digitized by CORNELL UNIVERSITY Original from CORNELL UNIVERSITY

sider the marriage unequal, and it will make me so very happy to have such a sister. Oh yes, it must be."

John came back redder in the face, but showing no other sign of his run after the delinquent sheep.

"Ye mun send t' lahtle lad oop tu t' Cairn when he's big eneeaf," he said, "an ah'll larn him hoo tu ten t' stock an sike like; t' squire wad be fain tu ken mair nur he diz, bud he wasn't reetly skeealed; an' t' parson's wrang yal togither, thof he thinks he kens mair an' ah diz."

Doris looked thoughtful.

"Thank you, father, it's very kind of you, and in any case it would be useful knowledge; but I suppose my boy will not have any land or stock of his own to manage, unless — unless anything happens to Ralph Burneston." She spoke calmly, and looked hard at her father.

"God forbid!" the farmer said hastily. "Whya, mah lass, ah teld ye afore ye married aboot t' dowment 'at's made on ye an' on onny bairns 'at ye may hev. Theer's a conny pleeace wi' a farm belangin', at Loughton, 'at 'll come round tu ye; t' squire sayd 'at he bowt it oot o' some shares 'at turned oot better than he leeaked fer, sae that's nowt to do wi' Ralph Burneston; but that's a poor lahtle scuffling pleeace, nae chance o' keepin' stock or growing owt i' siken a stany corner. Theer's twenty yaccres mebbe, bud 'twad deea fer yes, Doris, nobbut ye war left tu fend fer yersel'."

He sighed. Once he had thought that if she were left a widow, Doris might perhaps come home again. Now he saw this was impossible.

"Yes, I remember," she said slowly, "but I am not thinking about myself. Does it not seem rather hard, father, that one son, just because he happens to be born first, should have all, and the other should have nothing and have to earn his own living in a profession?"

John's shaggy eyebrows lifted in wonder.

"Woonkers! Wah, Doris lass, ye mun be dreeamin', it's t' law o' t' land, an' hes been t' law tahme oot o' mahnd, ye kenned it yal afore ye wa' married, sae there's nae help fer it; an' tu mah thinkin' t' lad 'at warks fer his livin' 's t' happiest, t' tahme dizn't drag wiv him, he's yalays wantin' mair on't then he's gitten."

"Yes" — but Doris sighed — it seemed to her that a high-minded man, such a man as she meant to create in her little Philip, would always find plenty to do without being obliged to work for his living. Her husband had said he did not wish either of his sons to enter the army or the navy, and it seemed to Doris that those were the only two professions suited to a gentleman.

CHAPTER XXXI.

ON THE HILLTOP.

The last day of the visit had come, and Doris still felt puzzled about George and Rica.

She did not know how to act. She dared not take her mother into confidence, she would immediately tell either Rica or George, perhaps both. But Doris feared to leave the matter undecided; she must at least get some insight into George's feelings, and yet private talks with George had been her great objection to visiting the Cairn.

Doris was not morbid, but like some other practical people she was apt to realize too strongly and to create bugbears for herself. She studied George attentively, asked his opinion on some points, and was so struck by the change in his temper that she began to smile at her own fear of a dispute.

"You and I have not had a walk together yet," she said on the last day of her visit. "I want to see your wonderful hill that Rica is so enraptured with. She says it is a poem. It is a real pleasure to show her things; don't you think so?"

"Ah!" George gave a sigh of pleasure, and Doris rejoiced. "Yes," he added slowly, "she has a feeling for all that is really beautiful." He stopped as if he had checked some further words.

"She is quite made for a quiet country life," Doris said. "Well then, suppose father and I go with you two this evening? or shall you and I go alone?"

George smiled. It was new to him that his sister should care for his company, but he thought there must be an improvement in many ways in Doris or she would not have come to the Cairn. He had not noticed any shrinking from the plain, homely ways of the farmhouse, or even any impatience with his mother's flow of talk; for Mrs. Barugh's triumph of self-glorification in her daughter's visit exhibited itself in a never-ending babble — now on the make of Doris's gown, now on the perfections of the baby, and a constant analogy between him, and Doris and George, at the same age. She sometimes carried these recollections so far that George was forced to call her to order.

"Spare Miss Masham, mother," he had

more than once said, when he saw Rica striving vainly to check her laughter at these baby stories.

Rica was thoroughly happy.

"You are all simply delightful," she said. "I never felt so much at home away from my own people. I never have to think what I shall say or what I shall do; you are so easy to please. And then these moors; I seem to breathe more freely on them than I've ever done. I had not dreamed of anything half so wild and grand."

Mrs. Barugh bridled with pleasure. She had just laid the baby in his cradle, and so had a few moments to bestow on inferior beings.

"I'm sure we're all much obliged to you, Miss. Masham, for your good opinion of us, and the place, and everything, and we'll be proud to see you any time you like, whether Doris can come or not — sha'n't we, George? sha'n't us, father?"

Doris's eyes were fixed on George with tell-tale eagerness, and as he looked up from the collie nestling its pointed ears against his knee he met her gaze, and wondered at its intensity. So wondering he let the question slip on to his father.

But John did not answer at once with the heartiness usual to him when a welcome was required. He remembered his daughter's proposal, and he felt troubled. It seemed almost as if he should be lending himself to thwart George if he encouraged Miss Masham at the Cairn — but his hospitality conquered.

"Ay, marry," he said with a smile that beautified his face by its genial breadth, "ah's prood tu think 'at t' leeady lahkes t' Cairn. Ye sud bide here i' t' cawd weather, when there's bonny wutherment — t' winds com' swoopin' an' sworlin' fra t' hills as if they'd lift t' thatch; nut 'at they dee 'at, bud ther's a tussle atween 'em for it."

"I've asked George to take me to the Cairn this evening," said Doris; "will you come, Rica, or will you get father to show you some of his haunts beside the river? I don't believe you have seen the stepping-stones."

Rica's face brightened with delight.

"May I? do you really mean it? It is too good to take a walk with me, and have you all to myself, Mr. Barugh. At least" — she stammered and reddened, conscious of the surprise on Doris's face — "I don't mean any disrespect to you, Mr. George, but I so want to see all over the farm."

"After all," Doris thought, when she went up-stairs to get a warm wrap, for George had warned her of the cold on the summit of the hill, "I don't think that counts for anything; the more she likes him the less she would own her liking, and she got very red just now."

The four started together for their walk. For some time they followed the yellow, deeply-ridged cart-road, skirting the moor that rose loftily on the left, bare except for knots of furze and tufts of heather on its rugged side; and, on the right, divided from the road by a dry grassed ditch, half-filled with clumps of peat, was a hazel hedge, barred with stumps of pollard elms. This was the boundary of John Barugh's fields, which sloped down steeply to the road beside the river.

As they walked on, above the shoulder of the moor loomed two huge blocks of gritstone, that seemed ready to fall on the heads of those who walked below.

"We must separate here." George pointed out to Doris how the road mounted and took a sweeping curve to the left, cutting sharply against the still, blue sky. On the right, filling the gap made by the road in this leftward curve, came a lovely peep of the valley, some rich green trees near at hand standing out in bald relief from the vista of hills beyond — hills rising one behind another, the emerald tints of the meadows sinking into dimness as the mist rose from the valley.

John Barugh led the way to a gate on the right, and he and Rica were soon out of sight as they went down towards the river.

Then George and Doris slowly climbed the steep hill, and crossed the wide moor to the glen, where Joseph Sunley had waited.

"Will ye sit an' rest here?" George said, "afore ye climbs again. I's feared o' wearyin' ye, lass," he added kindly.

"I tire sooner than I did," Doris smiled; "perhaps it is because I walk less."

A year ago George would have said, "This is one of the evils of increased culture; women learn to depend on carriages and horses, and neglect bodily exercise," but one of the most valuable lessons he had learned from the rector of Steersley had been to economize his opinions.

He had been waiting patiently for a quiet time, as he called it, with Doris. She had written him a few lines saying that Ralph had left Burneston, but he longed for, and yet shrank from, an ac-

count of the interview he felt sure she must have had with Rose.

He looked at Doris; she seemed to be thinking deeply, and to have forgotten his presence. He pulled a tuft of heather, and flung it among the stones.

"Did ye see Rose?" he said nervously, as his movement roused Doris.

"Yes, I saw her." She sate upright on the stones, and looked straight on to the hills beyond.

"Well, lass?" then, after a minute, he said sadly, "maybe ye had words. Rose has a quick tongue, but her bark's iver sae mitch worse then her bite, an' hard words break no bones, as t' old sayin' is, — do they, Doris?"

Doris felt full of pity just now for George's infatuation, and yet she thought, "He may only seek to excuse her for friendship's sake; he cannot put her and Rica in comparison, and still love Rose."

George watched her face anxiously, but Doris had learned to control its expression.

"Rose was very rude" — she tried to speak without bitterness — "but that is not the worst. I am sorry to say, she gloried in Ralph's attention to her, and refused to give up seeing him."

George grew paler, but he did not answer hastily.

"She's not easy to manage, Rose isn't; an' in hot blood she'll say whatever comes in her head if she thinks onnybody's wishin' to thwart her — mebbe she had no meanin' in what she said; it was nobbut to fret you, lass. You an' her nivver drawed ovver well together."

Doris raised her head proudly. An allusion to her early knowledge of Rose seemed always to set the blood rushing hotly through her body; it flamed angrily now on her cheeks, and George saw it. He rose up from his stony seat.

"Dunnut vex yoursel'," he said gently. "Ah doesn't think of Rose as you does, but then it's different. Whiles you was at school learning to love your friend there, Rose was all ah had, an' she was a heart's weight ov good to me."

Doris checked her vexation. She had also risen from the stone and they went on again slowly towards the hill.

She was surprised at her brother's reticence and gentleness. She had expected a very stormy reply to her account of Rose's conduct. She began to think that Rica's influence had prevailed. Although George took the part of his old friend, he was no longer what Doris called "silly about Rose."

"You and Miss Masham seem to be great friends," she saidafter a while.

"Yes, surely, she's real good she is;" he spoke heartily, he was so truly glad to be able to sympathize with Doris.

"Her goodness is only one of her qualities. She made me so happy when we were at school together by her brightness, and she is so sympathetic, she has a way of feeling personally for others that is almost comic."

"She's real kind to mother," George sighed. He wished Doris would treat her mother with more deference. It seemed to him that his sister received all her mother's care and tenderness as if they were her due.

But Mrs. Burneston was too intent on carrying out the plan she had proposed to herself to be turned aside by any other thought, and she only noticed George's words to contain praise of Rica.

"She is a great reader too," she went on; "it must be pleasant to you to have a companion with whom you can talk about your books. I should think you often feel the want of this, don't you?"

"Ah cannot really say;" he looked thoughtful. "Ah's getten so used to pondering on 'em whiles ah's by myself 'at ah thinks ah likes it better than hearin' opinions which donnut jump wi' mine. Ye see ah hevn't many books, an' ah reads 'em ovver an ovver till ah luovs 'em. Ay, my lass, ah luovs 'em mitch as ye luovs your bairn."

Doris smiled at George's gauge of the intensity of her love for her little one, though she avoided discussing this question.

"Your mind is so much stronger and your will is so much firmer than Rica's, that I fancy when you had been together a short while she would be easily moulded to your views."

George laughed.

"Mebbe so, lass, nobbut we'll not have t' chance o' findin' out. Mebbe we'll nivver meet again. This place isn't likely to suit Miss Masham."

"You quite mistake." Doris spoke eagerly, here was her chance, she thought. "My mother has asked her to come to the Cairn whenever she likes, and Rica says she means to come."

"Surely?" George felt contradictory; it seemed to him hard that his mother, who had never offered an invitation to Rose, should be so friendly to a comparative stranger.

Doris knew that she had better let the matter rest and trust its issue to time and

opportunity, but she had no intention of revisiting the Cairn for some time, and she could not leave her work unfinished.

"George" — she spoke very gently — "you can make me very happy."

His honest brown eyes brightened, and a warm glow of pleasure spread over his pale face, while a smile of exquisite sweetness parted his thoughtful lips.

"D'ye say so, lass? Ah'll be reet fain to ken what it is."

His earnest glance was searching her, and she blushed under it and winced. Her conscience was asking Doris whether her wish was solely for the happiness of this brother so anxious to prove his love to her.

"I should like to have Rica for a sister," she said, and then she stopped.

George smiled. His first impression was that Doris must be strangely blind if she imagined that Miss Masham would take up with a mere farmer's son like himself.

"You mistake, lass," he said. "Like takes to like, an' Miss Masham an' me's not likely to suit."

"I know what you mean," — Doris roused the whole strength of her will against this obstacle, — "but you do not understand Rica. I am sure you are just suited to one another and would make a very happy couple."

George's smile faded as she went on.

"You have forgotten, lass," he said, "a man cannot love two at yance, an' ah loves Rose."

"George, you must not, you cannot love Rose. I tell you she's not worth your love. I am sure she would not make you happy, she is far more likely to disgrace you. I don't know which is worst, her conduct or her temper."

Doris spoke vehemently and her brother grew red, he was trying hard for self-control.

"Stop there, lass, or I may say something foolish; you and me must not talk about Rose, it isn't safe."

Doris was calm again when she answered.

"I am sorry I spoke so openly. I did not know you still cared for her; but, George, I am older than you are, and marriage and society have made me still older, and love is not the only thing to be thought of in marriage."

George looked at her more quickly than was usual to him, for his lameness had increased his slowness of movement, then seeing that she looked in earnest he smiled.

"Do ye mind how ye said to me oop at t' Hall 'at you an' me looked at things different ways, an' it struck me there was reason in it. Well, it's the same now, you look at marriage from one end an' ah looks at it fra t'ither."

"Ah, but I said that about matters on which there might be differences according to the differences in relative duties. This is quite another question, only a question of the change which a few years of experience and knowledge of the world must bring to you, George. You say you like Rica; well then, there is no risk, for you are sure to love her well enough when you come to know her better. She has no money certainly, but she has every other requisite. She is pretty and clever, and very, very bright and loving, and so kind in illness; then she is well-born, and all her friends and relations are people of position and culture; and with all this she is so wonderfully simple and unconventional that I believe she actually prefers the Cairn to Burneston Hall. Oh, George, think how much better it would be for you to have a wife who would help to raise the tone of the family, whom I should be able to receive as a sister and introduce to my friends; think how proud mother would be of such a daughter."

She paused. His listening, unmoved face puzzled her. He could hardly listen so patiently, she thought, if he entirely disagreed with her appeal.

"Ye make very sure o' Miss Masham," he said gravely. "Seeams to me she may look for a rise in life as well as anybody."

Doris felt rebuked. She knew well that she had no right to take Rica's consent for granted.

"I only make sure for two reasons; first, that I believe she is entirely free to love any man who seeks her love in earnest, and next, because she has told me more than once that in marrying she would only think about her husband, not about his money or his position. It is just a special chance, indeed it is. Surely you will not be so utterly selfish as to sacrifice us all to your infatuation for Rose Duncombe?"

No answer. He walked on faster, and stopped, at last, when they reached the top of the Cairn. He waited for Doris to speak, but she was too intent on his answer and the success of her project to see the wild grandeur of the scene. She had forgotten all her interest in Rica's account of the weird, far-stretching moors.

"Well, lass," he said at last, "mebbe we look yon with different eyes too. Seeams to me 'at if ye were to come oop now an

agean ye'd mebbe get cleared o' theease mists which dull your sight. Eh, lass, John Bunyan would be a safer guide t' you, ah'm thinkin', than what ye're pleased t' call knowledge o' t' world."

"No, indeed, George." Doris could smile now. It was absurd that a home-bred recluse like her brother should combat her wisdom. I never argue with you about religion, because I know you are much better than I am; you always were; but this is quite different. There would be no harm in your marrying Rica; that is, I mean, of course, if she will marry you; but there would be a great deal of harm done by marrying Rose; and, besides, Rose does not care for you, or she would not do as she has done."

She stopped. George stood facing her, looking far taller than usual on the bare hilltop, with the far-off background of distant hills. His eyes glowed; his whole body seemed to vibrate with intense earnestness as he spoke far more broadly than usual.

"Listen, lass. D'ye mahnd when we waz lahtle bairns ah telled ye a tale, an' ye did not lahke it cos ah telled it frev a book. It telled uv hoo a huckster man found a pot o' grease, an' when his eyes was rubbed wi' it he saw t' warld was nut t' seame 'at he thowt he'd been livin' in. It's sae noo wi' you, Doris. Ye're blinded wi pomps an' vanities an' t' lahke, or ye'd ken t' pooer an' t' trewth o' luov. Eh, lass, ye war a rare yan fer trewth lang syne; an' noo ye bids me aks Rica Masham to wed me when ah cannut gie her my love as a husband shood deea. What if Rose cannut luov me; that changes nowt in me. In God's sight ah'm her man as mitch as if ah'd wedded her. Ah've gien her all t' luov ah can give, an' it's oot o' my pooer to take it back. My heart and my life are hers, whether she taks 'em ur leeaves them, sae noo then!"

CHAPTER XXXII.

THE CLYTIE.

RICA wandered round the large airy nursery at Burneston, looking at a series of prints on the walls which Faith assured her were Master Ralph's special treasures in his childhood, but from time to time she glanced with an amused look at Faith herself.

The housekeeper sat with little Phil in her lap, carefully examining him to make sure that no harm had chanced during his absence, and giving vent now and then to peevish ejaculations, aimed at the ignorance displayed by "folks," clearly meaning Mrs. Barugh, on certain points of baby management.

Faith had tried all she could to prevent the visit, and had prognosticated all kinds of harm to little Phil, and it was almost a disappointment that her charge was returned to her looking far stronger and healthier than when he was taken away.

At last she looked round, "Ah does wonder, that ah does, Miss Masham, 'at nut one o' you could hev thought an' put a veil on him; whya if he were a bit uv a farmer's brat he couldn't be mair sunburnt, he's as brown as August corn — yis ye are, mah beauty."

Rica's eyes twinkled with amusement.

"Why, that's just what we're proud of, Mrs. Emmett. I thought you'd be as pleased as possible to get such a sturdy young gipsy home again; and he did have a veil at first, but he didn't like it; and we thought he was to do exactly as he liked — I'm sure I heard you say so."

Faith did not answer. She disliked jokes from any one but Ralph, and it annoyed her that this friend of Mrs. Burneston's, a girl who did her own hair and required no help in dressing, should be invited to stay at the Hall.

Rica was rather ill at ease this morning. After a week's separation she felt that Mr. and Mrs. Burneston must have much to talk over, so she kept out of her friend's sitting-room; and Mr. Raine had contradicted her so decidedly at breakfast that she preferred to avoid the library lest she should find him there, and get into some fresh dispute with him.

"He is clever, no doubt, and very amusing, but he is downright rude," the girl said with flushing cheeks, "and I dislike rude people."

As she reached the top of the old staircase it seemed to her that the portraits which covered the four lofty walls frowned at her; already in her bedroom one fair, blue-eyed Burneston in a well-curled flowing wig and brown coat, had seemed to her to shake his head and glance at the book he held as if to rebuke her idleness.

Rica stood looking down the wide old staircase.

"What stories these massive old balusters and standards could tell!" she said; "how many sad and tender partings that old lantern hanging from the roof has lighted!"

The staircase occupied three sides of a large square well; here were shelves filled with china which nowadays would be deemed priceless, but beyond its color

china had no attraction for Rica. She lingered on the stairs studying the pictures: tightly bodiced ladies with flowing hair, round-eyed and round-mouthed; grave gentlemen with sad faces, looking all too old and prosaic for the fair dames languishing out of landscape backgrounds, not quite in harmony with their bare arms and abundant unkerchiefed charms.

Two of these pictures had a special fascination for her: one a delicate, lovely lady, in a more modern costume than the rest, whose cheek rested on her hand; there was an almost plaintive sweetness in this face which roused Rica's imagination. Opposite to it was a full-length portrait of Mr. Burneston in his boyish days, dressed as a sailor, with a background of sea.

Faith asserted that this portrait was the living image of Ralph, and Rica felt a certain curiosity to see again this heir of Burneston who seemed such a general favorite.

"Not with Doris, I think," the girl said; "she rarely speaks of him."

At the second landing of the staircase were two arched recesses at right angles; one contained a doorway leading to another gallery of bedrooms, in the other was a marble pedestal supporting a bust of the Clytie. The staircase was lighted solely from the lofty oaken roof, and light and shade fell sweetly on the exquisite face and shoulders. As Rica turned from the picture of the sailor squire her eyes fell on this bust.

"Why don't I make a study of her? It would be good practice," she said. "That cross-looking man in red will leave off frowning when he sees I am at work. It is a rare chance for me to get an antique head placed in such a light."

She hurried back along the gallery for her drawing-materials. It was delightful to have found something to do; for to Rica's hard-working habits it was difficult to take holiday alone, though it was easy for her to share the holiday-making of others.

She was soon seated on the topmost stair, beneath the arched opening to the ante-room, a charming nook, furnished with well-filled book-shelves and Indian cabinets, leading to a gallery of bedrooms.

She soon grew intent on her work; she rapidly marked out the head, and began to draw it in chalk. She did not hear the door into the ante-room open. All at once a footstep close behind her gave her a start, and sent her crayon across Clytie's nose.

"Oh!" she said, without turning round, for she thought only of the mischief done.

"I beg your pardon." But Gilbert Raine did not look sorry; he was too much amused by the originality of the whole proceeding to have much care for the false stroke. He began to think his first impression last night had been correct, and that there was some character in Mrs. Burneston's friend, an idea which her silent coldness during breakfast had quenched.

"It's too late to beg pardon now." She did not look at him. She was trying to rub out the unlucky stroke with a bit of bread.

No answer came. Raine was looking down admiringly at the bright, sensitive face, full of expression, though the eyes were hidden by a deep fringe of dark lashes.

"I beg your pardon, do you want to pass?" She rose and gathered up her materials. "I quite forgot I was filling up the passage."

"Thank you." But Raine stood still as soon as he had descended a couple of steps, and looked down at her drawing. "Upon my word, you've got it uncommonly like," he said; "it's really very good for a woman."

Rica looked up now, her eyes brimful of mischief.

"Which do you mean, the face or my attempt to copy it? You may say, if you like, that it is good for me; but you must not say it is really very good for a woman."

"But there never have been any women great painters."

"The world is not ended yet, and I believe in progress," said Rica triumphantly. "Women will do something good in art, as well as other things, before all's ended. Hitherto the weak have made themselves weaker by yielding all, and the strong women have never been taught properly as men are taught; so they never start fair."

"Then you ought not to resent my words; but I'll not shelter myself under that cover. I utterly deny that a woman can equal a man in any one thing — yes," with a merry twinkle in his eyes, "I yield on two points — talking and caprice."

Rica looked aghast.

"There is no use in arguing with you; you are a misanthrope — you never had any sisters, I am sure. People are always positive of what they know little about."

Raine laughed.

"But I have history and many great writers on my side."

"Not all; there are plenty of constant women in Shakespeare who are not chatterboxes, and every-day life will show you more. Look at that lovely, pensive face shrouded in black lace," she pointed her crayon at the lady resting on her hand; "if we knew her story we should find she loved all too constantly, and as for talking, why," Rica's face glowed with sudden animation, "I believe her talk must have been like Mrs. Burneston's, full of diamonds and pearls," — she stopped suddenly, conscious that she had been talking excitedly to this stranger, and that he was probably laughing at her. "I forgot you were here," she said abruptly; "I bore you, I know."

"If you were any one else," Raine said with a laugh in his voice that provoked her, "I should say you were complimentary, but as I am sure you have no intention of paying a compliment, bad or good, I suppose I must apologize for interrupting you and take myself off."

"Please tell me, first, who the lovely lady is with the pensive face and the lace mantilla."

"She is Ralph's grandmother. I can only just remember her, for she died young, but I fancy she was very lovable, and not nearly so sad as the artist has painted her: but as she died so early she is no contradiction to my theory; shy women, and she was shy, don't get full use of their tongues till middle age, and she might have turned out very fickle if time had been given her."

Rica had seated herself again, and gone back to her drawing. She wished Mr. Raine would go on talking instead of looking at her so satirically.

"I am sure of one thing," she said; "women may have faults, but they are larger-minded than men are, they are not always twitting men with being violent and overbearing, and tyrannical, and contemptuous, and teasing," she said the last word with emphasis.

"Ah, but you are incautious — you let me see that you consider men guilty of these faults and yet you never speak of them; now see how much better we behave to women, we are always trying to create in you the most impossible virtue to a feminine mind."

"What is that?" said Rica, looking up at him.

"Humility."

He said this quite seriously. Rica's lips quivered and her face glowed with vexation. "According to you," she said, pushing the loosened brown hair from her forehead, "we are a sort of chameleon — we just reflect the color you are pleased to throw on us, and women who don't do this exactly are capricious. Well then, if we are not humble it is because men are so self-satisfied."

"Ah, my dear Miss Masham, now you come to the great safety-valve for the soul of a man — the tongue of his better half. Tell me honestly, did you ever see a self-satisfied married man? He may and he does put on a good deal of conceit, but this is mere war paint, a try-on to deceive the outsiders. See the unhappy biped on his own hearth-rug, *tête-à-tête* with his tyrant, and you'll see him literally skinned out of all self-respect."

"Have you ever been married?" said she indignantly.

"No, I thank God," and he laughed as he looked at her.

She had got far too angry to go on with her drawing. Quite heedless that she had passed her hand across her forehead and left a crayon smudge on its centre, she rose up.

"You are extremely irreverent; but, of course, you do not know what you are talking of. Some day you will have to eat your own words; but, indeed, I pity from my heart the woman who is sacrificed to you."

With this parting shot she ran back into the ante-room.

"A malediction," said Raine. "But I wish she had stayed a little longer. It was too bad of me to tease her. I will make my peace at luncheon, she is too pretty to quarrel with."

From The Edinburgh Review.

THE STORY OF AN INDIAN LIFE.*

THE opportunity which our Indian empire presents for a career to the able and adventurous is a trite subject on which to moralize. But if trite the inference is no less true; and a very noteworthy example of what may be achieved by an Indian public servant, through simple merits, without adventitious aid from interest or connection, is afforded by the life of the officer placed at the head of this article. In one sense, indeed, the late Colonel Meadows Taylor cannot be deemed to

* *The Story of my Life.* By the late Colonel MEADOWS TAYLOR, C.S.I. Edited by his Daughter. Edinburgh: 1877. 2 vols.

Original from CORNELL UNIVERSITY

have achieved distinguished success; not being a member of either of the recognized Indian services, he was debarred from rising to any of the high offices of the Indian government, and at the time of his retirement held merely the charge of a district, to which comparatively humble preferment every "covenanted civilian" is entitled to succeed in ordinary course, without displaying any merit whatever, and usually passes on from such a post to some higher and more lucrative appointment. But for his writings, the name of Meadows Taylor would probably have been unknown beyond the province in which his official life was passed. Nevertheless his career was so remarkable as illustrating both the force of character in overcoming difficulty, and for the exhibition of those virtues and qualities which are most especially to be desired in Indian administrators, that it well deserves to be brought under the notice of his countrymen. Landing in India an almost friendless and uneducated boy, and passing an unusually busy and harassing life, Taylor succeeded in making himself an accomplished and cultured man, and, still better, gained in an extraordinary degree the attachment and gratitude of the native communities over which he was placed. In this respect his example cannot be brought too prominently before the notice of a class, almost every family of which has, or looks to have, one at least of its members engaged in some form or other in the administration of our Indian empire. The materials for telling the tale are fortunately available in the "Story" of his life, which Meadows Taylor prepared in his later years, and which has just been issued from the press. The story, however, is not merely an old man's uncertain recollections of his younger days; the autobiographer, during the forty years of his Indian service, had carried on a voluminous correspondence with his father and other members of his family, and his share of it has been carefully preserved. It is on these records of incidents written at the time of their occurrence that the story is based, which has thus all the freshness of contemporary narrative.

Meadows Taylor was born at Liverpool in 1808, the eldest son of a then prosperous merchant of that city, but whose affairs suffered a loss when the boy was about seven years old, which brought him to comparative poverty and involved the need of stringent retrenchment in his easy way of living. As one apparent result of this change of fortune, little Meadows was sent to a big and cheap boarding-school near Prescot, where there were a hundred boys; "a rough place," says the autobiographer, where the domestic arrangements rivalled those of Winchester in their primitive discomfort, and where, although the food was plentiful, one institution at least resembled the customs of Dotheboys Hall.

> Good Mrs. Barron attended to our personal cleanliness and to our health; and at stated seasons, especially in spring, we were all gathered together in the dining-hall, where the old lady stood at the end of the room at a small table, on which was a large bowl of that most horrible compound brimstone and treacle. The scene rises vividly before me, as we all stood with our hands behind our backs, opened our mouths and received each our spoonful, swallowed it down as best we could — and had to lick the spoon clean too! Surely this was a refinement of cruelty.

The discipline of the school was as savage as the life was rough, and, under pressure of the brutal canings he received, the boy ran away; his parents had the good sense not to send him back again. Soon after this, his father, whose affairs did not improve, removed to Dublin, where he had accepted the management of a large brewery, and here too the school his boys were put to seems to have been of a low standard. "Was everything I learned," asks Meadows, "always to be beaten into me?" However, his spirits were high, and he signalized his last half-year by defeating the bully of the school, to whom he had succumbed on a previous occasion, in single combat. Every man of Taylor's time, and many a good deal younger, can look back to the school fights of those days, so frequently, often so stubbornly contested, always so full of excitement and interest to the lookers-on. Fighting at school, we understand, has gone out like duelling. The disuse of the practice is probably due to the great development lately given to athletic games. The worship of muscle may not be without its disadvantages, but the mode of life of the rising generation is at least more healthy and kindly than that of their forefathers.

To return to the subject of our notice. The school life of Meadows Taylor came to an abrupt end in his fourteenth year, just, as he says, when he was beginning to take a pleasure in school work, and he was articled for a seven years' apprenticeship to Messrs. Yates Brothers and Co., West India merchants at Liverpool, there to undergo the drudgery which falls to the boy clerks in such an establishment.

Original from CORNELL UNIVERSITY

From copying circulars, his first employment, he was soon promoted to be post-office clerk — "not an easy task in those days, as the postage on letters sent and received was of considerable amount and variety" — and then he became one of the clerks for attending the discharge of cargoes: "a hard life," writes the old man looking back on his boyhood; "day after day, in snow, frost, or rain, I have sat for hours together, shivering and benumbed with cold, being allowed an hour for my dinner, in which time I had to run two miles to eat it, and run back again. Sometimes a friendly captain would ask me to partake of his meal; and I have frequently shared a landing-waiter's lunch when offered." But that the lad had very soon made his mark is shown from his being now appointed collector of moneys due — "assistant dunner," as it was called.

And late in the dark evenings have I, mere boy as I was, been walking the streets of Liverpool with thousands of pounds in bills, notes, and gold in my pocket. I was getting on; but I had enemies — why, I know not — who played me many a scurvy trick. My petty cash was often pilfered, my desk being opened by other keys. I was ordered on private errands for other clerks, and when I refused to execute them I was "paid off" by malicious accusations. These were, however, entirely disproved. I had a steady friend in Mr. Yates, and persevered in my work.

It is easy to understand why the boy's preferment for such duty should have excited jealousy among the other clerks; but this was the last occasion, during Meadows Taylor's long and varied life, of his making an enemy of any sort.

The wretchedness he endured from this continued persecution broke down his health and spirits, and his employer agreed to let him go home for a time for rest and change, and offered to cancel his indentures if he could find any preferable opening. This soon presented itself, and, as it appeared at the time, of a very favorable kind. A Mr. Baxter, styling himself a Bombay merchant, offered him a situation in his house in Bombay, with a small share in the business when he should come of age. It had been previously decided that he should be sent to Madeira for his health; so the proposal fitted admirably, and he sailed for India in his sixteenth year, in the hope of returning home, after a few years, a rich and prosperous member of Baxter's "house." The voyage was so far eventful that the "Upton Castle" was threatened by a pirate felucca off the Azores, on which occasion Meadows Taylor served as captain of the mizen-top, his favorite resort for reading, "and which was now garrisoned by six stout boys besides myself;" but as the felucca sheered off on a closer inspection of the "Upton Castle's" broadside — for the Indiamen of those days were all armed — the expected fight did not come off. On reaching Bombay a terrible disappointment awaited our young adventurer. Baxter's "house," in which he looked to become a partner, turned out to be simply a large shop, the profits of which had been for some time more than absorbed by the expenses of its owner's London establishment. The business, he found, was notoriously in a critical state, and most unlikely to last. Mr. Baxter's business habits, moreover, did not carry him to the point of sending notice of his future partner's having embarked for Bombay. The local agent received him civilly, but knew nothing about his engagement, while his quondam fellow-passengers gave the cold shoulder to the young shopboy. But deliverance soon came from this embarrassing position. His mother was a Mitford "of that ilk," one of the best families in the north of England, and Meadows Taylor had brought out a letter of introduction from that lady to her cousin, Mr. Newnham, a member of the civil service, then holding the high office of chief secretary to the Bombay government. After a few weeks passed in making out bills for wine and groceries at Baxter's, and selling goods over the counter, he received one morning a summons from this gentleman, who "showed me a letter from Sir Charles Metcalfe, then "Resident at Hyderabad, stating that he had procured me a commission in his Highness the nizam's army, and the sooner I went up to Aurungabad the better." It needs not to say that he accepted the offer, Baxter's local agent kindly cancelling his indentures. Mr. Newnham on this writes to his kinswoman in England that her son

will now quit the shop and move in his proper sphere. The nizam's service [he continues] holds out the most flattering prospects; and if he qualifies himself in points of duty and in acquaintance with the native languages, the road to high and lucrative employment will be open to him. He will remove to my house, where he will remain till he is ready to proceed to Aurungabad, where his military service will commence. . . . He is a fine, intelligent lad, and I saw him, with regret, articled to a house which is not in as flourishing a state as you were led to believe.

I removed [continues the autobiography] to a small bungalow within Mr. Newnham's "compound," and a Parsee servant was appointed to attend me, who spoke good English; but I had not been idle, and could make myself understood pretty well, my ear guiding me to a good pronunciation. Arrangements for my military outfit proceeded. I needed of course uniform, tents, clothes, etc., and my generous friend, Mr. Newnham, gave me a splendid chestnut Arab, which had belonged to his late wife. How pleased he was that I was out of "that shop" — that I was no longer "Baxter's boy!" indeed I am sure he felt his own dignity insulted as long as I was there. "Now," he said, "you are Lieutenant Meadows Taylor of his Highness the nizam's service, and we all drink your health and wish you success."

Just at this time another tempting offer was made him. The head of a leading mercantile firm invited him to join his house, and Mr. Newnham was puzzled at first how to advise his young *protégé*. But it was ultimately determined that he should follow a military career; and the decision was a fortunate one, for the great house, then apparently so prosperous, not long afterwards failed. In the latter end of 1824, young Meadows Taylor, being then only sixteen, started to join his appointment, with a liberal outfit, the cost of which had been advanced by his generous patron. Thus he owed his first real start to the kindness of a friend and kinsman; and almost every successful man, if he is honest, will admit that his success can be traced in the first instance to the same cause. Wellington, in all probability, would not have been selected for the command in Portugal if he had not already distinguished himself on Indian battlefields, the opportunity for doing which he owed entirely to his eminent brother. Of course a man must have the needful qualities for turning such opportunities to good account. Some men pass their lives in getting and losing chances, but Taylor was of the sort to make befriending him a pleasing office; winning, active, eager, and industrious, every one took kindly to the lad, and his high-placed relation had the discernment to see that influence and generosity exerted in his case would be well repaid by the result.

We are tempted here to quote an extract from the lad's first letter to his mother on his arrival in India.

Nothing goes down here but the "Company," and it is indeed an excellent service. There are the writers, for instance; as soon as they arrive in India, they have their three hundred rupees a month, and nothing to do but to learn the Hindostanee and Persian languages, and ride about in palankeens, with a score of black fellows at their heels. In this country there are lots of servants, and they are the laziest lot of rascals under the sun. One fellow will not do two things. If you have a fellow to brush your shoes, he will not go on an errand. One of our passengers hired eighteen servants the moment he landed! But their wages are very cheap. You get these fellows for two, three, four, and six rupees a month, and have not to clothe them or anything. . . . A shirt here lasts only a day — sometimes not even that. Fortunately washing is very cheap, only three rupees a month, and you may dirty as many things as you like. I think the climate will agree with me; I do not find the heat oppressive. . . . I have not seen any of the passengers since I came ashore. I suppose they will all be too proud to speak to me now; but, fortunately, there was not one I cared twopence for, except young Shepheard; that's a comfort. . . . The language is not difficult to get a knowledge of; but to be a good grammatical scholar is difficult, as it is not a written language. But Gilchrist, of London, has invented a way of writing it in English letters. The natives transact their business in Persian, which is a written language. This is a festival day, and the natives walk in a sort of procession, with a kind of drum, making a terrible noise. They dress up in the most ridiculous manner, carry torches in their hands, and go on with all sorts of antics.

When you see the boys, kiss them for me, and tell them the black fellows are such queer "Jummies," with large bracelets on their arms and thighs made of silver, and rings through their noses, and strings of beads round their necks, and almost naked.

In the first sentence of this extract the writer notes the fact which was to have such an important influence on his fortunes. Nothing, he truly observes, goes down but "the service," and it was his misfortune to be outside that service. Another reflection is suggested by the ingenuous commonplaces the lad sets down about the Indians. These are just what hundreds of young men have written to their friends on first landing in India; unfortunately too many of our countrymen in the East are satisfied to go through life taking this superficial view of what they are pleased to call the "black men" or "niggers" around them, regarding them as if the social conditions of India were as simple and easily understood as that of the negroes of the West Indies; ignorant to the last of the extraordinary complexity, variety, and interest of India which a nearer acquaintance would afford; and ignoring, because themselves incapable of exciting, the manifold good qualities

of the people among whom their lot is cast. With Taylor, however, this ignorance was soon replaced by a more intimate and juster knowledge; and we may observe that with almost all the Anglo-Indian statesmen who have achieved a reputation in the East, as Munro, Elphinstone, Metcalfe, Henry Lawrence, and Outram, a close acquaintance with the people of India has been followed by a strong feeling of kindliness towards them, invariably repaid on their part by gratitude and affection. People nowadays lament the decay of feudal sentiment, the coldness and want of attachment manifested by retainers and dependents. Let those who need such ties seek them in India. The sentiments of confidence and devotion with which so many of our best Indian statesman have succeeded in inspiring the people under their rule — people who, although in daily contact, are yet removed to an immeasurable distance from them by the difference of race and religion and the restrictions of caste — is one of the most striking, as it is also one of the most gratifying, circumstances in our connection with that country. To a man of this sort, coming home worn out and in broken health, to die perhaps on the way, the sympathy, the unfeigned and disinterested grief shown by the people over whom he has ruled at losing him, must be at once a source of pain and of the highest kind of pleasure. Such a man was Meadows Taylor, and we would go so far as to say that the success of an Anglo-Indian official may be judged in most cases by his manner of looking on the natives of India. If he likes them, and, while not blind to their many faults, can yet find room to appreciate their many admirable qualities, he has been a good public servant. If, on the other hand, he has not got rid of the contempt and aversion for the people with which in his ignorant complacency he set out, he has probably made a mistake in going to India at all.

The nizam's army, as it was then called, now the Hyderabad Contingent, was that part of the nizam's armed forces which had been supplied with a staff of British officers, and brought under regular military training and discipline. It comprised about a dozen regiments of infantry and cavalry with some batteries of artillery, to which were attached about one hundred European officers, most of whom belonged to the regular establishment of the Indian army, and were detached to the nizam's service by way of staff employ, but some of whom, like Meadows Taylor, were appointed on the nomination of the resident, and whose commissions carried no authority beyond the nizam's army itself. The force was created with a twofold object — of securing the nizam in possession of his throne, and as a set-off against the turbulent rabble which did duty for his own army, and also as a means of controlling the affairs of the state; for, although styled the nizam's army, and paid from his treasury, it was virtually commanded by the resident, or representative of the Indian government at Hyderabad, and received its orders only through him. Service in this force was always much sought after by the younger officers of the Indian army for the increased pay and promotion it conferred, captains and even lieutenants on the lists of the regular army having the command of regiments, and field-officers the command of brigades, while the cavalry of the contingent has been reputed to be amongst the best in India. Perhaps not the least of the attractions were the gorgeous uniforms with which the different commandants, untrammelled by dress-regulations and remote from view of army headquarters, delighted to adorn themselves and their officers; and did an officer appear at a levee at St. James's with an exceptional amount of gold lace and embroidery on his coat, he would usually be found to belong to the Hyderabad Contingent. For an outsider like young Meadows Taylor to gain admission to this coveted service was therefore exceptional good fortune; but the lad made a good impression on all with whom he came in contact, and soon qualified himself for his position, becoming a bold rider and sportsman, and devoting himself from the first with such assiduity to the acquisition of the vernacular language, that in a few months he was appointed to act as interpreter to a court-martial on a native officer. His satisfactory performance of this duty was the occasion of his first preferment, which happened when the resident came to the station where he was quartered, and the account of the incident is worth inserting in his own words.

At last the resident arrived with a brilliant staff; the station was very gay, and I was presented with all the other officers. Hampton had been promoted, and therefore the command of the escort was vacant. The resident's camp was to move on next morning. After dinner Colonel Sayer took me up to Mr. Martin, saying, "Allow me, sir, specially to introduce my young friend here, of whom I have had already occasion to report favorably, officially; I beg you to keep him in mind."

"Will you take the command of my escort by way of a beginning?" said the resident. "I shall be happy to have you on my personal staff if you are sufficiently acquainted with the native language." This the good colonel answered for, and I was told to prepare without further delay. I don't know how I got away: I only remember trying to keep down a big lump that rose in my throat, and the colonel saying to me, "Now you've got a start — you will never disappoint me, I know."

All the ladies and gentlemen of the station were present, and crowded round me with congratulations; one of my friends came back with me to my house; my things were packed; we sent to the city for camels for my tents and baggage, which were despatched as quickly as possible. The night passed — I do not think I slept — and by dawn I was in my saddle, and joined the officers of the resident's staff as they were starting on their morning stage. It was a sudden change in my life: what might be the next?

The resident expressed himself much pleased when I presented myself at breakfast when the camp halted at a short stage from Aurungabad. We had killed two foxes by the way, my dogs having been posted beforehand. "So you can ride," said one of my new companions. I was then nine stone eight pounds, and well mounted, as I had my chestnut, and a splendid bay hunter which Stirling had given to me. Yes; I could ride.

After breakfast Mr. Martin sent for me, and asked me about my family and what I could do. He then set me to converse with his moonshee, which I found very easy. I had learned to speak Hindostanee like a gentleman; and here let me impress upon all beginners the great advantage it is to learn to speak in a gentlemanly fashion. It may be a little more difficult to acquire the idioms; but it is well worth while. There are modes of address suitable to all ranks and classes, and often our people unintentionally insult a native gentleman by speaking to him as they would to their servants, through ignorance of the proper form of address. I was also examined in Persian, and Mr. Martin complimented me on my diligence.

The quality of the young commander of his escort had evidently made an impression on the resident, for in a very few days he gave him still further advancement. An officer of the contingent, a friend of Taylor, had lately been selected for the civil office of superintendent of one of the nizam's districts — a last resource not uncommonly adopted when one of them had fallen into a state of anarchy under its native officials — but had almost immediately been killed in trying to get possession of a fort held by a gang of turbulent Arabs. Mr. Martin, who was still in camp, on getting the news at once offered the post to Meadows Taylor, who could hardly at first believe in his good fortune, for the post was worth fifteen hundred rupees a month, or about 1,800*l.* a year, but rode off straightway across the country to join the cavalry regiment which had been despatched to try and bring the rebels to reason; or, failing that, to storm the fort. Happily the garrison evacuated it just as the troops had been told off for the storm, and Taylor awaited only the confirmation of the appointment by the supreme government to enter on his new duties. The commandant of the nizam's cavalry, however, telling him that this confirmation would not in his opinion be given, offered him the adjutancy of one of his regiments. "Mr. Martin's patronage in the civil department," said Major Sutherland, "will be curtailed considerably; and what I propose to you is this — do not go to Hyderabad. I want an adjutant here for one of the regiments. I will appoint you, pending your final transfer to the cavalry. You ride well, our men like you, and the pay is very good." A tempting offer, especially if we bear in mind the gorgeous jackets affected by that branch of the service; but Taylor stuck to the first acceptance of civil employ. The commandant, however, was right; the nomination was not approved, as was only natural, for Taylor was still a boy of seventeen, and meanwhile the adjutancy had been filled up. So he was glad to accept the office of superintendent of bazaars at the camp of the contingent near Hyderabad — an office which, though comparatively humble, involved plenty of work. "I had to regulate the markets and the prices of grain in conjunction with the principal merchants and grain-dealers. I was to decide all civil cases, try and punish all breaches of the peace, besides having to inspect all meat killed, and settle disputes between masters and servants." While thus occupied, Taylor worked away steadily at Persian, looking for the time when an opportunity should come for gaining an entrance into civil employ.

The day came at length. An officer, who was assistant superintendent of police in the S. W. district of the country, got tired of his solitary life, and proposed to exchange with me. Mr. Martin at once consented to the step, and wrote to me very kindly on the subject, expressing his desire to serve me to the utmost of his power, and recommending me to accept the exchange.

My arrangements were soon complete. I was to become proprietor of Captain L.'s bungalow at Sudasheopett, with one or two

tents; he, of my "buggy" and horse, which I no longer needed. Furniture on both sides was valued; and when we were respectively in "orders," I betook myself to my new duties, of which the resident and his secretary gave me an outline; but nothing very precise could be laid down respecting them, and I was left very much to exercise my own judgment. . . .

Now at last I was free! — literally my own master. I had an immense tract of country to overlook, of which I knew nothing, except that in going to Dundooty I had crossed part of it. I took leave of the resident and of the nizam's minister, Chundoo Lall, who were both very kind to me; . . . and I started on my journey, accompanied by my escort of police, and reached Sudasheopett on the fourth day. I had not completed my eighteenth year.

The district over which his police jurisdiction extended was about two hundred and fifty miles long by from fifty to sixty broad, for the duties of which he was provided with a force of fifty mounted and one hundred and fifty foot policemen. Under these circumstances the supervision was obviously not of the same kind as we expect to see performed by the police in England. The force was mainly occupied in patrolling the road to Bombay, to keep it clear of the gangs of robbers with which it had been infested, the superintendent occupying a little bungalow at a central point on the line containing only one room, but with stabling for five horses. Here he occupied himself in following up information about the thieves, collecting birds and insects for his uncle, Mr. Selby, the well-known naturalist, and learning the Mahratta language.

I had plenty to do. Every morning brought in reports from my officers and men, which had to be answered and investigated. Then my early bag of birds had to be skinned and prepared; English correspondence and my Mahratta lesson followed; and I had a box of books from the Secunderabad or Bolarum library to occupy my evenings. I kept Mr. Newnham well informed of my doings, and his delight when I obtained this appointment was very sincere.

To pass one's days in a little hut, with not another European within scores of miles, and no opportunity of hearing your own tongue for months together, may be thought a dull life to those who are accustomed to spend a large part of each day in family communion, or who look on their club or their mess as a necessary part of existence. But to those who have experienced this sort of solitary life in the midst of an Indian jungle — and many hundreds of our countrymen in the East, engineers, civilians, and planters, have gone through it — the life will have been found not without charms, if only health be granted; although to lie tossing on a sick bed when away from help, the bones racked with fever, still worse to die in such a case, with only your servants to bury you, as has happened to so many an Indian official, is a hard fate. Among the pleasures of the life must be set the appreciation which it permits of any society that comes in the solitary man's way, when even the portentous monotony of an Indian cantonment in the hot season seems to the visitor from his solitary bungalow a life of unbridled gaiety. Such occasional relaxations Taylor had, and evidently enjoyed, as when he foregathers with his nearest neighbor the collector of Sholapoor, the conterminous district of the Bombay presidency, to get some pigsticking, bearing himself in a way to earn the commendation of that experienced sportsman, or when he meets at the hospitable collector's table some of his old shipmates, surprised to see "Baxter's shop-boy" a grave political agent for the whole of the nizam's frontier.

Taylor's first feat in the thief-taking line was the capture of a certain turbulent baron, Narrayan Rao by name, who eked out a slender revenue by highway robbery and burglary. A young man is brought to the superintendent's tent one day, covered with sabre-cuts, whose uncle, father, and grandmother had been murdered the night before and their house plundered by the robber. This worthy lived in a fortified village or castle, thirty miles off, which Taylor reaches after a night's ride accompanied by ten of his police and a couple of mounted grooms.

It looked very strong as we approached in the early morning; the fort stood out in the centre with its large bastions and loopholed walls, all in excellent repair. We halted under a little grove of mango trees, and when the gate was opened to allow the cattle to come out, we rode in boldly, and though the guard seized their matchlocks, no one attempted to fire. In reply to their questions I answered, "I have been travelling all night, and am tired, and intend to rest here a while."

"We will send word to the rajah," said several.

"No," I answered, "I will speak to him myself;" and we rode up the main street. I thought for a moment that it was rather a rash proceeding, for on the bastions of the fort many men appeared, showing themselves on the parapet and calling to us to go back. The rajah lived in the fort, and some men came out and stood on the steps leading up to it, and asked me what I wanted.

"The sahib bahadur wishes to see your rajah sahib," said my jemadar, "and he is tired, — he has ridden all night."

"My master is asleep," rejoined the man, "and I dare not disturb him."

"I must see him, and at once," I said; "if he does not come, I shall go in myself;" and the spokesman went in, returning directly with a young fair man, who was tying a handkerchief round his head.

He saluted me, and inquired haughtily "why I had come into his town, into which no Feringhee had ever before entered without his leave."

I stooped down and said in his ear, "You are my prisoner, and must come quietly with me; if you or your people resist, I will drive my spear through your body. Now, we will go, if you please."

The street was narrow, and as my horsemen spread themselves behind us, no one could get near us. I do not remember ever feeling so excited as I did when the rajah and I went down to the gate by which we had entered. He said nothing; but his men were crowding on the walls and housetops, all armed and calling to each other. Perhaps they noticed that my long hog-spear was within six inches of their rajah's back!

When we reached the gate, he merely said to the guard, "Don't follow, I shall return soon;" and we all passed out safely.

"Now," said I to one of my men, "let the sahib ride, Bhudrinath;" and as he dismounted from his mare, I bade Narrayan Rao get up.

"If you don't, you're a dead man," I said; and Bulram Sing advised him to obey; "for," said he, "if you do not do as my master orders you, he will put his spear through you."

So the rajah mounted; and as this was seen from the gate towers not a hundred and fifty yards from us, one of my men, happening to look round, called out, "They are going to fire!" and we had scarcely time to put our weary horses into a canter, when a regular volley was discharged, knocking up the dust behind us.

Bhudrinath had scrambled up behind the rajah with a merry laugh, and kept consoling his companion by telling him the shot would hit him first. Narrayan Rao, however, maintained perfect silence, and told me afterwards he expected to have been hung upon the first tree, and supposed this to be my reason for ordering him to mount.

A rescue was attempted; and, that failing, Narrayan Rao offered Taylor a large bribe to let him off, in the form of a draft on his bankers at Hyderabad. Eventually Taylor carried off his capture safely to that place, and paid the draft into the nizam's treasury.

As an illustration of the varied work falling to the lot of a political officer in such a position we may quote the following. Readers of Miss Edgeworth's novels will remember a similar case described in "Patronage."

Some very curious and difficult cases of disputed inheritance came before me. One I very well remember, in which two families claimed the same land under a grant from King Yoosuf Adil Shah, who began to reign A.D. 1480. The papers were exactly similar. No forgery could be detected either in the registries or seals; both seemed genuine, and we were fairly puzzled, till, after dinner, holding up the paper to the light, I saw an unmistakable water-mark — a figure of an angel, with "Goa" underneath. Now, Goa had only been taken by the Portuguese in A.D. 1510; therefore, there could have been no Goa paper in existence in 1488, and Indian paper has never any water-mark. The falsification, therefore, of the deed written on Portuguese paper was conclusive.

More important, however, than such cases was the enquiry which he was now led to make.

Returning after an absence of a month through my district, I was met by some very startling revelations. The police, and chiefly my faithful Bulram Sing, had reported some very unusual occurrences. Dead bodies, evidently strangled, and in no instance recognized, were found by the roadside, and no clue could be discovered as to the perpetrators of their death. In two places, jackals or hyenas had rooted up newly-made graves, in one of which were found four bodies and in another two, much eaten and disfigured.

The whole country was in alarm, and the villagers had constantly patrolled their roads, but as yet in vain. All we could learn was, that, some time before, two bodies of men had passed through the district, purporting to be merchants from the north going southwards, but that they appeared quiet and respectable, above suspicion. During these enquiries it transpired that numbers of persons of that part of my district were absent every year from their homes at stated periods. These were for the most part Mussulmans, who carried on a trade with Belgaum, Darwar, and Mysore, bringing back wearing-apparel, copper and brass vessels, and the like. Who could these be? Day after day I tried to sift the mystery, but could not. I registered their names, and enjoined Bulram Sing to have the parties watched on their return home. But as the monsoon opened that year with much violence, I was obliged, most reluctantly, to go back to my bungalow at Sudasheopett.

Had Taylor been allowed more time to follow up his clue, he would probably have unravelled the celebrated Thuggee mystery; but on the accession of another nizam to the throne, which happened at this time, the new monarch demanded that all the British officers who were "interfering in his country" should be withdrawn,

and he accordingly had to return to regimental duty. Before he was again employed in a civil capacity, Thuggee had been unearthed by Captain (afterwards Sir) William Sleeman.

While adjutant of his regiment it fell to Meadows Taylor's duty to take a prominent part in drawing the teeth of the nizam's brother, who had retired with an army of ragamuffins to the Fort of Golconda, and there bade defiance to the nizam's government. As the treasury of Golconda contained a million sterling in coin, its irregular occupation threatened to be financially inconvenient, and a force was despatched to take the fort. But the turbulent brother, after some days' palaver, was got to surrender without fighting. The case is interesting for the following incident: —

I was not sorry when, on the fifth morning, one of the staff rode up and told me I might withdraw my men, for the prince had agreed to send away his levies and keep only his immediate retainers.

A scene followed which affected me very deeply. I had drawn up my four companies, and released the guns from their position, when the men burst into loud shouts of —

"*Bolo, Mahadeo baba ke jey!*" ("Victory to the son of Mahadeo!")

I hardly understood it at first; but my friend S., who came to look after his guns, clapped me on the back and said, "I do congratulate you, Taylor, with all my heart: no truer proof could have been given you of the men's affection; you will never lose your title — it will follow you all your life." "*Bolo, Mahadeo baba ke jey!*" he shouted to the men, and heartily did they respond; while, as I proceeded to dismiss them from parade, the cry was taken up by hundreds of both the regiments present.

Even our chief came out to say a few kind words. Captain S. was right; my *sobriquet* never left me, not even in the mutiny; and it may still linger among the descendants of those who conferred it.

In 1832 Meadows Taylor, being then twenty-four years of age, married a daughter of Mr. William Palmer, the once famous banker of Hyderabad, whose failure some ten years before had been a terrible catastrophe to many an Indian household. After a few years of quiet married life, the happy monotony of which was broken only by the suppression of an occasional rebellion, or the capture of some robber chieftain, Taylor and his family all fell sick and he was ordered home. Unfortunately he was ineligible for a furlough, a special ruling of the government having laid down that the "local" officers of the nizam's service — *i.e.* those who did not belong also to the Company's army — were not entitled to the benefit of the furlough rules. An officer so circumstanced must therefore either surrender his appointment or die. The case illustrates very strongly the force of that feeling which animated the officials about the government towards all who had not the good fortune, like themselves, to enter the public service under special covenant and conditions, and, it may be added, the feeling of the ruling authority at home. It illustrates, too, that tendency of the regulations to linger behind the wants and conditions of the times with regard to leave and pensions, which has been for many years a chronic source of discontent among all classes of officials in India. Until the end of the last century all the Company's services were on the same condition as that which Meadows Taylor describes himself to have felt so hard; they were not entitled to leave India at all except by leaving the service at the same time, and the rules which for the first time made it possible to do this were only obtained by the persistent efforts of Lord Cornwallis when governor-general, followed up on his return home. Long after the overland route was established, and England had been brought much nearer to India than was the Cape, a heavy pecuniary penalty continued to attach to a return home, which did not apply to a voyage to the latter country, and which practically prevented all staff-officers and most civil servants from ever coming to England before their final retirement. This disability has only been removed within the last few years through Lord Lawrence's exertions, and the conditions of Indian service placed on a rational footing with respect to the increased facilities for travel. Now at last these rules have been made so liberal and reasonable as immensely to enhance the comfort and happiness of the covenanted civil and military officers serving in India. But they have so far been made applicable to these classes only; the authorities still ignoring the claims to similar consideration of the very large body of European civil servants outside these two branches of the public service — engineers, forest and telegraph officers, education inspectors, and so forth — a body which has grown up of late years with the great extension of Indian administration in all lines, to which almost every family in England has furnished a member, and which, on every ground of education, training, and ability, deserves the same amount of consideration as the

older branches of the services, but which is not yet recognized as having any claims to be dealt with differently on this head from the humblest native officials, to be numbered by tens of thousands, who naturally do not want to come to England or to send their families there, but whom the framers of the existing rules, with a strange ignorance and obstinacy, persist in clubbing up with all the European officials not in the army or covenanted service under the absurdly inappropriate title of the "uncovenanted" service. This title is about as sensible as if, for example, one were to style all English clerks who are employed outside the Treasury "non-treasury officers." The state of things is so incongruous and absurd, and many of the clauses of the pension and leave rules of the so-called "uncovenanted" service are so degrading as well as ludicrous in their application to educated English officials, that the thing must surely need only to be brought prominently under the notice of proper authority to be set right, as happened in the particular case of Meadows Taylor. Going to the Neilgherry mountains to recover from his severe illness, he there had the good fortune to be introduced to the governor-general, Lord William Bentinck, and to have the opportunity of telling his tale of the furlough grievance. The governor-general, astonished to find that such an order had been passed by the government of which he was the head, at once undertook to have it annulled, and henceforward it became possible for officers of the nizam's army to revisit their native land on the same terms as those obtained for officers of the Company's army. With Taylor's adventurous journey home with his wife and family in native craft up the Red Sea we have not space to deal, but may just remark that it would in all likelihood have come to an untoward end but for his good knowledge of Oriental languages, his courteous bearing, and the reputation he had taken with him from Hyderabad of being on friendly terms with some of the leading Arab chiefs there. Arrived in England, his ever active mind at once occupied itself in utilizing his experiences of native life, and in a few months he brought out his famous "Confessions of a Thug;" those who have reached middle life will remember the extraordinary interest the book created. As a literary lion for the time, Taylor naturally found himself often at Gore House, and the opportunity of meeting with the literary celebrities of the day must have had unusual charms for one who had spent so many years in total solitude, or the banishment of an Indian cantonment; and one anecdote of his London experiences is worth repeating here.

It was most interesting and fascinating to me to meet so many men of note under such charming auspices as those of Lady Blessington. Most of these now, perhaps, are gone to their rest, and there is no need to mention names. Does any one remember the strange, almost "eerie" speech that Prince Louis Napoleon made one evening there, when, leaning his elbow on the mantelpiece, he began an oration declaring the policy he should adopt when he became emperor of the French? And I remember, too, when this really happened, how his actions actually accorded with that strange speech. When Lady Blessington rallied him good-naturedly on what he had said, he put his hand on his heart, bowed gravely, and told her that he was never more in earnest in his life, and that she would understand it all by-and-by. Maclise and I walked home together, and could speak of nothing else.

As I came to know Prince Louis Napoleon better, he proposed to me to join him in a tour through India, which he contemplated, taking with him Count D'Orsay. He was to apply for my services as long as he required them, and the plan appeared delightful.

I heard from him direct, after I had returned to India, asking for information on various points of equipment, etc.; but the Boulogne affair and what followed put an end to the whole scheme, to my infinite regret.

Returning to India in 1840, Taylor reverted for a few months to regimental duty, combined with the office he at this time undertook, and held for many years, of Indian correspondent of the *Times;* but in the following year he obtained his first definite political appointment, the line in which he was to achieve such great success. The rajah of the little principality of Shorapoor (not Sholapoor be it remarked, which is a district of the Bombay presidency) having died, the nizam's government, to which the state of Shorapoor owed allegiance, exacted a succession fee of 150,000*l*. This was to be paid by instalments; but the borrowing of the money by an already impoverished government led to disputes between the banker who advanced it, the Shorapoor state, and the nizam's government, which were still under discussion when the next rajah also suddenly died. The British government thereupon appointed the rajah's brother, one Pid Naik, regent for the infant son, a child of seven; but the child's mother, a woman who had already outraged decency by her dissolute behavior, and was com-

pletely under the influence of her paramour for the time being, seized the regency in defiance of authority, summoned the armed men of the principality to her standard, and began to recruit actively from the Arab mercenaries who infested the Hyderabad territories. The British officer who had been charged with the supervision of affairs in Shorapoor asked for military aid; but our northern army was still entangled in Affghanistan, the Madras army was in a state bordering on mutiny, and no troops could be spared for the purpose. In this emergency the resident at Hyderabad bethought him of turning to account the extraordinary influence which Meadows Taylor had already exhibited over all classes of the people with whom he had to do, and sent him down to Shorapoor to see if he could accomplish what was needful without the use of force. Off started Taylor on his mission, as to which the commandant of the Hyderabad Contingent observed, "If Taylor settles this matter without troops, he will be a cleverer fellow than I take him for." "Not a flattering prediction," as the latter observes, "but quite enough to put me on my mettle." The story of the pacification of this little state is one of the most interesting parts of a most interesting book, but only an outline of it can be given here. By a mixture of firmness, kindness, and expostulation, Taylor succeeded in inducing the truculent lady to give up her scheme of independence, and to recognize the little rajah's uncle, Pid Naik, as the rightful regent; and, what was a still more difficult task, he secured the acquiescence in this state of things of the turbulent yeomen of the state, who had been looking forward to the promised anarchy with all the zest born of an innate love of excitement. Not only did he put down the lady's incipient rebellion, he managed to extract from her no less than ten thousand pounds of arrears of revenue which she had misappropriated, and still more to lock up her favorite paramour. All this was not done without much risk. For some time Taylor carried his life in his hand, but the combined courage and kindness which he exhibited in due course worked their effect on a race peculiarly susceptible of personal influence and disposed to hero-worship; and the feelings of suspicion which the primitive people of the country first evinced towards him gradually changed from suspicion to unbounded confidence and attachment.

At one time, indeed, it appeared as if Taylor's administration would come to a speedy end. The state of Shorapoor was, as we have said, tributary to the state of Hyderabad, although the relations between the two were to a certain extent supervised by the British government, and Meadows Taylor was therefore acting as representative of the nizam; and notwithstanding the credit given to him for his success in putting down the ranee's incipient rebellion, and establishing the regent's authority, he received shortly afterwards a curt intimation from the supreme government, through the resident, that it was in contemplation to make other arrangements for the management of the state, in which his services would be no longer required. The change thus referred to would have been the direct assumption of authority in Shorapoor by the government of India during the young rajah's minority, and the supercession of Taylor by a member of the civil service, to be sent there for the purpose, on the plea that the former was only a servant of the nizam, and that, on a transfer of the administration to the Indian government, a servant of the latter should be placed at the head of it. What were the secret influences at work on this occasion was never distinctly ascertained, and some interesting correspondence on the subject from Mr. John Stuart Mill, who highly approved of Taylor's conduct (in letters which are inserted in the preface to these volumes), shows that they were not fully understood even at the India House; but apparently the governor-general, Sir Henry Hardinge, was acting under the influence of the secretariat at Calcutta, jealous of the claims of the covenanted civil service to all preferment of the kind, and wishing to secure the appointment for a member of that body. Happily this act of injustice was not perpetrated; and eventually Taylor received instructions to set the nominal regent, Pid Naik, who turned out to be an incapable drunkard, on one side, and to assume himself direct control of the administration, which he retained until the young rajah came of age. The little state during this time made a wonderful change towards prosperity; the revenue increased largely, the people abandoned their lawless habits, schools were established, roads made, trees planted, tanks built and enlarged. The most troublesome person to deal with was the dowager ranee. At times penitent and tractable, at others she relapsed into intrigue and plots for regaining independence. On one occasion Taylor detected a correspondence with the court of Hyderabad for bringing about his removal and the reversion of the govern-

ment to herself, a part of the conditions being the payment of a handsome bribe to the prime minister, and a still larger one to the nizam himself. Later on she attempted to effect a rising of the people, and at last Taylor was obliged to deport the fiery lady for a time from the principality. Of one stormy scene he gives a vivid description, when the old ranee (old at least in appearance if not in years — she was only forty, but looked to be seventy), after declaring that her son was not the late rajah's child — a most probable statement which might be implicitly believed — produced the young man's horoscope, which had been prepared by a learned *shastree* at his birth, declaring that he was fated to die in his twenty-fourth year.

"Yes," cried the ranee, after the horoscope had been read, seizing my arm as I was sitting on the ground by her bedside — "it is bad! All that concerns that base-born boy is bad! Why did his father die? Why did I not strangle him with my own hands rather than let a wretch like that live to be the ruin of the State? Yes! he is fated to die *in his twenty-fourth year*, and I shall not see it! I am dying myself, and you English have made him secure to glory in my death! Ah, yes! he will die before he is twenty-four complete; we, my husband and I, sent that paper to Nassik, to Benares, and everywhere that there are wise Brahmins; but they all returned the same answer. He must die in the twenty-fourth year after birth. Is it not so, shastree? Did we not spend a lakh of rupees over this, and it availed nothing?" and she stopped for want of breath, her eyes flashing with excitement. "Is it not so? Tell the truth!"

"You speak truth, lady," said the shastree, who was sobbing. "It is only the truth, Taylor Sahib; I have tested all the calculations, and find them exactly conforming to the truth according to the planets. The rajah is safe till then; but when that time comes, how I know not, but he will surely die. He will never complete his twenty-fourth year! never! never!"

"No!" cried the ranee, interrupting him — "he will not live; he is the last of his race. He will lose his country, and all the lands, and all the honor that the Sumusthan has gained for five hundred years. Would that he were dead now, the base-born dog and slave!" and then she uttered language that I dare not write.

To the manager of a native state in Taylor's position the supervision of the revenue and the administration of justice are not the only demands on his time. He must also be a road-maker and general engineer. Among Taylor's feats in that line must be mentioned not only the construction of an artificial lake for irrigation purposes hard by the city, but the building of a little yacht to sail upon it.

My boat turned out a pretty thing after all — twenty feet keel, and twenty-four feet over all, a good beam, and three masts — old Liverpool ferry-boat fashion — a bowsprit and jib, topmast and sails. She was very stiff in the water, and very safe; in fact, she worked well, and was beautifully finished in every respect, built of teak, copper fastened throughout; yet she had been entirely the work of two common carpenters of the country. I felt rather proud of my first experiment in ship-building; and my boat was a constant source of amusement and recreation, as, although the lake was not very large, it was sufficiently so for an hour or two's sail in the evenings when work was done. First, out came the ranee and all the *élite* of Shorapoor, to have a look at the boat, and their admiration was unbounded and most amusing. As to the little rajah, he was wild with delight, and hugged me with all his might for having made the boat for him. The ranee was for being out half the day; and once, when there was "a bit of a sea," and the little vessel was dashing through the water, throwing up the spray about her bows, she was in absolute glee.

As to the miscellaneous duties which fell to his lot as guardian of the young rajah, the following extract gives an illustration.

In March, another great ceremony took place — the first removal of the young rajah's hair! It is usual in some Mussulman, and most Hindoo, families, not to cut the hair of a male child until he has attained a certain age. In the rajah's case, his father and mother had fixed the period at nine, eleven, or fourteen years of age. It had not been done in the ninth year, and the present was the eleventh, which could not be passed over, and I was glad of it, for the boy suffered greatly from the weight and heat of the tangled and matted hair falling about his shoulders. . . .

There was a great gathering of all classes of people to partake of the ranee's hospitality. I don't know how many Brahmins and others were invited; all were fed and received gifts of clothes and alms; the crowds were enormous. All the members of the family were feasted for two days, and received turbans, scarves, and other presents, and every one seemed pleased and happy. The ceremony itself took place in a tamarind grove near a suburb in the plain on the south side of Shorapoor, and the ranee had had comfortable tents arranged for me, and I arrived from camp in time for the beginning of it. I did not see what was taking place, as no one entered the enclosure but the Brahmins; but the beating of kettle-drums, blowing of horns, and firing of guns announced it was completed. I was sitting with the ranee the whole time, and she

was very thankful to me for my presence there, and the assistance I had been allowed to give.

As the camp could not move into the city that night, I remained, and there was a grand *nautch* under the trees, and fireworks, which had a very pretty effect, the whole grove being lighted by torches, with occasional Bengal and blue lights. Next evening all went up to the city in grand procession. The rajah on his superb elephant with his little wife beside him, who had arrived from the Mysore country just in time. She is rather dark, but a pretty child about eight, with glorious eyes. I rode and drove another elephant, and we were surrounded by all the horsemen and foot soldiers, and the Beydur clans. Such a scramble! When we got into the city, we were joined by others, and there were literally thousands, and all the housetops were covered with well-dressed women and children. By this time it was dark, but there were hundreds of torches and blue lights, and the effect of the crowds in the streets, the horsemen, and the women on the flat roofs was very fine. It was the best procession I have seen.

Ten years were passed in this way, a time of unremitting hard work, chequered by domestic sorrow; for Captain Taylor had barely finished the comfortable house he had built on a pleasant hill outside the town when he lost his wife, and had to send his children to England, and henceforth he lived at Shorapoor a solitary Englishman, finding solace only in official labor.

I had [he writes of this time] in some measure succeeded beyond my hopes — I had won the hearty approbation of the highest in the land. I had gained, and was hourly gaining further, the confidence of the people — they were more peaceful and content, improvements were progressing, trade and crops were promising; I had good health and constitution, and, though often weary and sadly sick at heart, the thought that my efforts had so far succeeded gave me strength to fight on; and somehow I had a liking for my work, and a certain pride in it, which carried me through many a difficult task. If I had not felt at times so unutterably lonely, I should have been quite happy; but the thought of what I had lost in her who would have cheered and supported me was at times almost too much to bear.

When the rajah came of age, Taylor would have found himself without occupation, for the young man, although passionately attached to him, wanted to taste the sweets of independence; but just at this time a new field was presented for the exercise of his remarkable administrative abilities. The nizam's affairs had fallen into hopeless confusion, and it became absolutely necessary to make some arrangement to provide funds for the regular payment of his army. Contrary to the advice of the resident, who urged the Indian government to assume the direct administration of all the nizam's misgoverned dominions, Lord Dalhousie decided finally to claim merely that the administration of certain districts should be placed under British government, until the surplus revenues should provide for the liquidation of the debt due to it. The control of that part of the nizam's army which was officered by Europeans was transferred at the same time, and in its reduced form is now known as the Hyderabad Contingent. The result has justified Lord Dalhousie's policy, but only because there has been found for the native rule of Hyderabad what had never existed before — a thoroughly honest and able minister. At the time when these negotiations were on foot there was no reason to expect that such a man as Sir Salar Jung would appear to alleviate the condition of that unhappy country, while it may be safely asserted that, but for the extraordinary qualities exhibited by that distinguished man, the nizam's government must ere this have utterly collapsed. The change in question occurred opportunely for Taylor to give him fresh scope for his abilities. It was determined to place him in charge of one of the districts now to be assigned, and at the express desire of the Bombay government he was appointed to the one adjacent to that presidency. Before setting off to take charge of it, Taylor returned to say good-bye to the people of Shorapoor.

It was a painful process; there were crowds of people all about me, clinging to my palankeen, as I went from house to house. The rajah had gone out to one of his hunting retreats, leaving word that he could not bear to see me go. As I proceeded, the people and the Beydurs, men and women, gathered in the streets, and accompanied me, and it was as much as I could do to get away at all. The rajah's wives, whom I had known as children, clung about me. Poor old Kesámá, now nearly ninety years old, blessed me: "I cannot weep," she said, "my old eyes are dry; but I bless you, you and all belonging to you."

It was a most exciting scene, and very painful. Mine has been a long sojourn among a strange people, and, whatever may have been their faults, there was no doubt of their warm attachment to myself.

The crowds followed me to the gates; but as my bearers quickened their pace the numbers soon fell off. At every village I was met by the people, and at the last one on the frontier a great concourse had assembled of all the

head men, *patells* and *putwarries*, and principal farmers. I do not think there was even one man who had a hope of the rajah's maintaining his position, and as to themselves they said, "We must escape oppression as best we can. It will be a hard struggle."

So ended my connection with Shorapoor for the present. It was hereafter renewed for a time under far different circumstances.

First overcoming with his wonted tact a little difficulty which arose when taking possession of his new district, from a party of Arabs holding out in the almost impregnable fort of Nuldroog, where his headquarters were to be, Taylor set to work with one European assistant to introduce a settled government where hardly the semblance of such a thing was to be found. The district covered about fifteen thousand square miles, or about half the area of Scotland; and it is worth mentioning by the way that those who are accustomed to speak of India as one might speak of Essex, will find their popular notions disabused in this as in many other respects by reading Meadows Taylor's autobiography. Enormous tracts of India are on a dead level, and as monotonous as such plains must be in all parts of the world; but the table-land of the Deccan, in which this assigned district is situated, abounds in a variety of scenery, the beauty of which Taylor is never tired of dwelling on, while, at a time of year when the residents of provinces far to the north are sweltering in heat, he writes of the delightful freshness of the climate on the tableland where his camp is pitched. As for work, the two things which pressed most to be taken in hand were the establishment of a code of laws and the settlement of the land revenue. With respect to the first, his instructions were "to make use of the existing local courts of the nizam's government for the trial of all cases, civil and criminal; but as no local tribunals or any judicial office of any kind were found by me, and none had existed for years, I determined to introduce a code of laws of my own, civil as well as criminal; and I took the regulations of the Bombay government as my guide, drawing up a short definition of crimes and their punishments — and, in civil cases, of general procedure — simple and intelligible to all classes. This code lasted until replaced by Macaulay's Penal Code." As to revenue matters, he writes to his father: —

I found the district in shocking order: no proper accounts, and no confidence among the people; a ruined, impoverished set of pauper cultivators, who have been so long oppressed and neglected under the Arab management that they are, I imagine, blunted to all good perceptions. Murder, robbery, attacks on villages, plunder of cattle, and destruction of crops had got to such a height last year, that civil war could not have had a worse effect upon the people or on the revenue; and all agreed that if British rule had not come in this year, the whole district would have been utterly ruined and wasted. I never saw anything like it. I thought Shorapoor bad; but this is infinitely worse, and the labor it is to get anything put right has been excessive. I can only say that I have been obliged to work frequently from four A.M. to eight P.M., with only respite for dressing and breakfast; but there is no help for it. I have been giving five years' settlements to such villages as are ready to take it, but there are many which are so disorganized that they require to be specially nursed.

The state of things here described did not occur among a tribe of simple savages; the country in question has been the seat of great kingdoms, and bears scattered over its surface the vestiges of a high civilization existing at a time when we in the West were comparative barbarians; it had been reduced to this condition by centuries of anarchy and misrule. To gain a mere record of occupancy rights of the landowners was an immense labor; and, as an accurate survey of the village holdings was a necessary condition of the operation, Taylor, having first taught himself the art of surveying, established a school of surveyors, whom he himself instructed on an extremely ingenious method, and in time was able to carry out a field survey, which, if rude, was sufficiently accurate for the purpose, over the whole district. Irrigation works also occupied a large share of his attention; and here again, if self taught, he proved a very successful engineer. Upon this point, however, it should be observed, as well with reference to what Taylor accomplished, as to the works executed in various parts of India under native dynasties which are still in use, that in India the first beginning of irrigation, like the rude farming of the first settlers in a colony, is of a perfectly simple and obvious kind, when great results can be produced by very simple means. The difficulty lies in the extension of irrigation, after the most easy situations for such works have been occupied. It would be about as fair an inference to say that the man who gets a crop of wheat by scratching the virgin soil of some new settlement is a better agriculturist than the Norfolk farmer, who employs expensive manures and machinery to obtain the same result,

as to assert that the Indians who took up the best sites for irrigation works of a most simple and obvious kind showed special engineering skill in doing so.

The labor of such a post, if filled with zeal, was of course enormous. Taylor records that in one year nearly thirty-five thousand letters passed through his office, most of them of course being in the vernacular languages, and written to dictation — native secretaries are almost as quick as shorthand writers — and that he had himself nearly three hundred criminal cases to dispose of, "thirteen of which were indictments for murder." In the same year the land revenue of the district increased from about 70,000*l*. to nearly 90,000*l*., and the land under cultivation by more than thirty thousand acres. In one sense it was a joyless life, passed in utter loneliness save for occasional meetings with his one European friend and assistant, and void of all the ordinary pleasures which men in other parts of the world have come to regard as necessary to make life endurable; yet a life in many respects happy because it was cheered by the consciousness of good work done on a large scale, resulting in the vastly bettered condition of large numbers of helpless people; a sort of life that is led patiently by a great many of our fellow-countrymen in the East, although it is given to few to illustrate the good side of the patriarchal government on so large a scale as was possible for Meadows Taylor. Such good work and such remarkable success, as attested by the rapid increase of the revenue and the corresponding decrease in crime, the occupation of lands heretofore left waste, and the extraordinary attachment manifested for him by the people, would have assured him rapid promotion to higher and still more responsible positions had he belonged to either the civil or military service of the Company; but, being only an "uncovenanted" officer, the only advancement he obtained was the transfer to another of the assigned districts at the critical period of the mutiny.

"Go to Berar directly," was the order he received from the resident at Hyderabad one day in August 1857, "and hold on by your eyelids. I have no troops to give you, and you must do the best you can. I know I can depend on you, and I am sure you will not fail me." And Taylor, of course, responded at once to the appeal, receiving on his sudden departure a most gratifying and spontaneous address from the leading persons of the district, expressive of their gratitude for his efforts on their behalf, and sorrow at losing him.

I can never forget the scene in the public *cucherry* when this was read to me. My old friend, Shunkur Rao Baba Sahib, read it with the tears running down his cheeks, and there were few dry eyes among the vast crowd that had collected. The old cry, "*Mahadeo baba ke jey!*" was raised outside and taken up by thousands. It was the first time I had heard it at Nuldroog. I was much moved. Nothing, I thought, could exceed this simple but earnest expression of the feelings of the people towards me, and their manifestation of regard and affection was very grateful to my heart; and if I had stood between the people and wrong in the matter of land, if I had governed them justly to the best of my ability, if I had insured for them peace, and laid the foundation of prosperity, this was indeed a grateful reward — all I could have hoped or wished for on earth.

That night as I left the fort and town, I found all the road and street lined with the people, cheering me with the old shout, "*Mahadeo baba ke jey!*" and many weeping, and pressing round to bid farewell; and I was followed for more than two miles out of the town with the same cheer, by a crowd from which it seemed difficult to get away.

At every village I passed through that night, and till my frontier was reached, the village authorities, elders, and people came with their farewells and best wishes, in crowds, from all points within their reach, praying for my speedy and safe return. My departure from Shorapoor had been affecting and painful to me, but the demeanor of the people here was, if possible, more touching and affectionate.

Taylor was wanted to keep Berar quiet; for the road from Hyderabad to the north of India lying through this district, which was being constantly traversed by disaffected bands, to maintain order there was as important as difficult, whereas Taylor's own district, lying out of the main road, was more likely to be left undisturbed. Troops there were none; for the resident at Hyderabad, Colonel Davidson, putting a bold front on things, and holding on to the isolated residency at a distance from all aid, when his advisers all counselled his taking refuge in the neighboring cantonment of Secunderabad, had also denuded his command of troops, sending a large part of the contingent forward with aid in support of Sir Hugh Rose's force. Davidson, as Meadows Taylor points out, had a much higher aim than merely to keep the troops employed in the field. His object was to dissociate the nizam from all suspicion of having sympathy with the rebel party at Delhi, and also to show his own confidence in the ability of the

Original from CORNELL UNIVERSITY

nizam's government to secure the British minister at his court from attack. His detached officers had to second this endeavor to hold the country by moral influence only, and Taylor's extraordinary personal influence came into play with the best effect in Berar. An attempt to oppose his crossing the Godavery by some of the people who were up in arms was at once put down by the well-affected part of the peasantry, and an old native friend, a landed proprietor of the district, escorted him to his headquarters with a body of his mounted retainers. The life led in Berar by Taylor at this season resembled that of a large number of British officials left unsupported in their districts with orders to maintain the authority of the government to the last; he was one of those fortunate enough to come unscathed out of the ordeal in which so many perished. The country of which he held charge was about two hundred and fifty miles long by sixty broad, with a population of two millions; so it may be supposed the "deputy commissioner," as he was styled, had enough to do.

On the suppression of the mutiny and general re-establishment of peace in India, Taylor, after receiving the thanks of government for his good services in maintaining order in Berar, received instructions to return to his proper appointment; but while on his way to join it he was suddenly ordered to his old station at Shorapoor, where he had passed so many years of his service. The young rajah, whose investiture to the government of the state we have already mentioned, and who with manhood and independence had lost all the winning simplicity which had made him so attractive when a boy, had taken to drinking and general dissipation, and allowed the flourishing affairs of his little kingdom to fall again into confusion; and on the outbreak of the mutiny, instigated by bad advisers who held out hopes of creating a kingdom on the nucleus of Shorapoor, he had broken out into open rebellion, and was now a prisoner in the main guard of a British regiment at Hyderabad. The case created more interest than was due to its relative importance in that time of rebellions and anarchy subdued, because the young man had been brought up under the direct tutorship of an English officer, had been taught the English language, and was indebted largely to the English government for their support against the exactions of the state of Hyderabad; and it was felt that such treachery merited the severest penalty. We quote Taylor's account of the affecting scene with the unhappy young man in prison.

Hours had passed while he poured out this tale; hours of intense suffering to him, and bitter self-reproach. Sometimes he would stop, and throw his arms round me passionately; sometimes kneel beside me, moaning piteously; again he would burst into loud hysterical sobs which shook his frame. I did my best to soothe him, and gradually he gave me the details narrated above. I have given only the heads, which I took down for the resident's information. It would be impossible to remember his wild, incoherent exclamations, his sudden recurrence to old scenes when he had played as a child about me with his sisters; of the enjoyment they had had in the magic lantern I showed; of the little vessel on Bohnal Lake, and the happy expeditions there; and all those recollections of his innocent early life made the scenes through which he had lately passed the more grievous and full of reproach.

I asked him if he would like to see the resident, who had promised to accompany me on my last visit to him if the rajah wished it. To my surprise, he drew himself up very proudly, and replied, haughtily, —

"No, *appa;* he would expect me to ask my life of him, and I won't do that. Tell him, if you like, that if the great English people grant me my life, I and mine will be ever true to them; but I deserve to die for what I did, and I will not ask to live like a coward, nor will I betray my people."

I think this speech, which I reported word for word, pleased the resident better than anything he had heard of the rajah before.

"The poor lad has spirit in him," he said; "and I will not forget all you have told me of him."

Leaving him there to await trial and sentence, Taylor passed on to assume the government of Shorapoor, when the old Brahmin to whom reference has already been made, on hearing that the rajah had been sentenced to death, reminded Taylor of the horoscope which predicted that he must die at twenty-four, the age he had just reached. In due time the news arrived that the resident had commuted the sentence to transportation for life, and the governor-general had commuted it still further to four years' imprisonment in a fortress in the south. Taylor at once sent off for the shastree. "What now becomes of the prophecy?" he asked him. But the old man refused to be comforted; the danger was not yet over, he said; the rajah's life must come to an end at the appointed time. The rajah's family, however, who knew nothing of the horoscope, were in raptures of joy at the

news, and the ladies began making their preparations for joining the young prince.

I took leave of them both in the morning, and settled down to my work after breakfast was over. It chanced to be a morning set apart for the arrangement of yearly allowances and gifts to the Brahmins, and all the chief Brahmins were present, and the old shastree among them. Several were seated at the table with me assisting me, when suddenly I heard the clash of the express runner's bells coming up the street. I thought it might be some message from Linsoogoor, or some new arrangement for the ranee's departure. The runner entered the palace court, and his packet was soon in my hands. It contained a few lines only, from the resident.

"The rajah of Shorapoor shot himself this morning dead, as he arrived at his first encampment. I will write particulars when I know them."

My countenance naturally changed; and the old shastree, who was beside me, and had been reading over Sanscrit deeds and grants to me, caught hold of my arm, and, peering into my face, cried, almost with a shriek, —

"He's dead! he's dead! I know it by your face — it tells me, sahib, he's dead!"

"Yes," I said, sorrowfully. "Yes, he is dead; he shot himself at the first stage out of Secunderabad, and died instantly."

. . . .

"Ah!" said the old priest, as soon as he could speak; "he could not escape his fate, and the prophecy is fulfilled."

It was indeed a strange accomplishment of the prediction. In a few days more the rajah would have completed his twenty-fourth year; and now he had died by his own hand! I sent for the ranee's father, and bade him break the news gently to his daughter. I could not bear to see the poor girl's misery, and I should have to visit her; so he and an old friend of his departed to perform their sad task.

The day after, I heard by another express the particulars. The rajah had been told of the governor-general's commutation of his sentence, and was very deeply grateful for the mercy shown to him. He had promised earnestly to try and deserve the consideration which had been extended to him, and particularly pleased that he was to be allowed the society of his two ranees, speaking joyously of the prospect of meeting them at Kurnool.

He had travelled in a palankeen, with the officer commanding his escort near him, all the way to their camp.

When they arrived the officer took off his belt, in which was a loaded revolver, hung it over a chair, and went outside the tent. While washing his face a moment afterwards he heard a shot, and running back found the rajah lying on the ground, quite dead. The ball had entered his stomach and passed through the spine.

Was the act intentional? I think not. . . . Whether accidental or intentional, the result was the same. The rajah was dead, and his kingdom was lost, ere he completed his twenty-fourth year; and the grim old prophecy deduced from the horoscope was literally fulfilled!

We may add to this strange story that Taylor's own horoscope, cast for him by another shastree at an early stage of his career, was fulfilled in all essential particulars.

The Raichore Doab, another of the ceded districts, was now put under Taylor's charge in addition to Shorapoor, making altogether about twenty thousand square miles of country, although it does not appear that the salary of the superintendent was sensibly augmented. The commissionership of all the ceded districts fell vacant about this time, and, if fitness constituted any claim, the post would have been given to Taylor, but it was too good a thing for an uncovenanted servant. "I had hoped," he said, "that the gracious proclamation issued on her Majesty's assumption of the government of India, which I had the pleasure of reading to the people of Shorapoor in Mahratta and Oordoo, would have done away with the invidious distinctions of covenanted and uncovenanted, but it was not so to be." An act of Parliament passed a short time afterwards would have rendered Taylor's appointment to any office of the kind legal, and indeed the appointment in question would apparently have been legal at any time, since previous acts of Parliament did not apply to the nizam's dominions; but class prejudices cannot be allayed even by acts of Parliament. The rule under which the first avenues to the public service in India can only be entered through certain doors is an eminently wise one. If the dispensers of Indian patronage could confer it on whom they pleased, enormous jobbery would infallibly result. But when a man like Taylor does happen under any circumstances to obtain admission to the public service, and amply justifies by conduct his existence in it, no possible objection can arise to his subsequent preferment according to his merits. In such a case the interests of the public service are more strongly concerned in utilizing a man of exceptional capacity and merit, than in maintaining a strict rule, from breaking which under such circumstances none of the evils it is designed to guard against can follow. That, if he had belonged to the regular Indian service, Taylor would have risen to the highest posts, is certain, for he exhibited almost every quality needed to deserve promotion; that being

what he was, he should never have been allowed to rise higher than a district officer, or to receive even the salary of a humdrum collector, is hardly creditable to those concerned. In the sequel the state of Shorapoor was made over to the nizam's government in recognition of its loyalty, and Taylor, whose health had broken down under nearly forty years' hard work, was obliged at the same time to surrender charge of the Raichore Doab and take sick-leave home. His departure from Shorapoor was mourned by the people as a public calamity.

I cannot describe the scene; but its passionate character can be estimated from the purport of what is there recorded in the quaint, simple words of the people. Some of them had been strangers to me; many had grown up from children, and had now children of their own about their knees; others were old and greyheaded; and many whom I had known had gone to their rest. It was not an easy task to leave them all; but I had to go, and I do not think I am forgotten there even now. I intended to depart quietly in the night; but I found the chiefs of the Beydur clans assembled in the streets, and it was as difficult now to reach the north gate of the city as it had been to enter it two years before — only, instead of a clamor of joyous welcome, there was now sad wailing of women, while the men walked by me in utter silence. Now and then some one would exclaim, "We have no one now to care for us; but our women will sing of you as they grind corn in the morning, and will light their lamps in your name at night. Come back to us; oh, come back!"

It was very sad and very solemn, and can never be forgotten. At every village the people came about me, the mothers held their children for me to put my hands upon their heads and bless them; and it was all so simple, so earnest, and so heartfelt, one could not but feel its sincerity. People ask me what I found in the natives to like so much. Could I help loving them when they loved me so? Why should I not love them? I had never courted popularity. I had but tried to be just to all, and to secure to the meanest applicant consideration of his complaint, by allowing unrestricted communication with myself.

. . . .

In all I had ruled over thirty-six thousand square miles of area, and a population of upwards of five millions of a most industrious and intelligent people, not only without a single complaint against my rule, but, as I think and hope, with a place in their affections and respect, gained by no other means than by exercising simple courtesy and justice to all.

His health not being restored in time to admit of returning to his appointment within the prescribed period — and here again it may be remarked that the leave-rules for "uncovenanted" servants are far more stringent on this head than those for the civil and military services, assuming a much robuster state of health, a more rapid recovery from sickness, and a less strong desire to revisit their native land — Taylor was obliged to resign his position under the Indian government, and henceforward devoted himself to literary work. At all times he had been a most industrious writer. For some years, as we have mentioned, he held the post of Indian correspondent to the *Times*, and he was a frequent contributor to the Indian newspapers, usually employing his pen to advocate some useful measure in education or administration. The success of his "Confessions of a Thug" some years before, we have already related; he now reverted to the same line, and brought out "Tara, a Mahratta Tale," an historical romance of the days of Sivaji, the celebrated founder of the Mahratta empire. This, which was very favorably received, was followed by "Ralph Darnell," to illustrate the rise of British power in Bengal, and "Seeta," the plot of which is laid in the time of the mutiny. His last work of fiction, "A Noble Queen," has been published in a complete form since his death. That these books were not even more successful must be attributed in part to the subject, which does not lend itself readily to the spirit of romance. With all their good qualities, the sentiment of chivalry does not among Indians govern the relations between the sexes; but that the novels are not more largely read must also be set down in great measure to that want of interest in all Indian matters, born of mental indolence, which is such a discreditable feature in the mental condition of the English middle classes, who, from the neglect of Indian history so conspicuous in their system of education and habits of thought, would seem to care no more about the country with which England is so intimately bound up than if they were French or Germans. It must, however, be acknowledged that the liberal spirit in which every parish and almost every household in this kingdom has subscribed to the relief of the natives of India during the present famine is a touching proof of the brotherhood and sympathy existing between the British and Asiatic subjects of the queen; and we trust this great calamity may have the effect of strengthening the ties which inseparably unite the different parts of the empire. A work which, to our thinking, is even more valuable than his romances — although these

afford a more accurate and vivid idea of Indian life and society than any other available sources of information — is Taylor's "Student's Manual of the History of India," the modest appearance of which hardly does justice to the great research and accuracy which it displays. Written by a man who is thoroughly conversant with the people of the country about which he is treating, it is throughout permeated by that kindly feeling towards them and appreciation of their good qualities which are too often wanting in the writings of Englishmen on India. If ever the study of Indian history should become a recognized part of English school and college work, Taylor's "Manual," as he modestly calls it, will be brought into the notice it deserves. And, as he truly observes, there can scarcely be a subject of greater importance to Englishmen than the history of the noble dependencies won by their ancestors.

In 1875 Meadows Taylor, being recommended to try the effect of a warmer climate again, returned to India on a visit, and spent some weeks at Hyderabad as the guest of Salar Jung, by whom his qualities were thoroughly appreciated. Health and sight both failing, he set out in the beginning of the next Indian hot season for England, but, gradually getting worse, died at Mentone in May 1876, at the age of sixty-eight.

Taylor's career, of which we have given a brief outline, as far as possible in his own words, was not, it will be seen, in one sense a highly imporant one. His position as an outsider debarred him from rising to a place in which to achieve great distinction, and the Companionship of the Star of India conferred on him in his old age, as we are told by the express wish of the queen, may probably be taken as a fair estimate of the actual place he occupied in the estimation of the Anglo-Indian community. Yet few men have done more to elevate the character of his countrymen in the eyes of the people of India, while we know no work which deserves to be more strongly recommended to the attention of those who are destined to take a future share in the administration of India than this simple narrative of the extraordinary influence a disinterested and kind-hearted man was able to exert over the people who came under his rule. It is true the opportunity for exerting such an influence is seldom afforded in these days. Taylor's administration of Shorapoor, and again of the Nuldroog district, represented the most complete type of patriarchal government, which, whether for good or evil, is surely passing away, giving place to the codes and regulations which there is a constantly increasing tendency to substitute for individual action. But the need for the exercise of sympathy, kindliness, and consideration for the people of India, is still as great as ever; and the advice with which Meadows Taylor concludes his most interesting autobiography may usefully be taken to heart by all Englishmen, of whatever class, whose business takes them to our possessions in the East.

One word, one last reflection in regard to India may not be out of place. It is to advise all who go there, in whatever capacity, or whatever position they may hold, — use true courtesy to natives of all degrees. My experience has taught me that large masses of men are more easily led than driven, and that courtesy and kindness and firmness will gain many a point which, under a hard and haughty bearing, would prove unattainable. By courtesy, I do not mean undue familiarity — far from it — self-respect must always be preserved; but there is a middle course, which, if rightly pursued in a gentlemanly fashion, not only exacts respect from natives of all classes, but gratitude and affection likewise.

ERICA.*

TRANSLATED FOR THE LIVING AGE FROM THE GERMAN OF

FRAU VON INGERSLEBEN.

III.

THE CONTENTS OF THE PORTFOLIO.

When Erica, almost running — for the wind blowing behind her swept her irresistibly along — reached the little house, she found old Christine waiting for her at the door. The young girl answered her reproaches with a smile, hastily threw aside her damp cloak and hood, and entered her mother's room. The invalid was still sitting in the same spot where her daughter had left her, and the joy that beamed in her eyes when she saw Erica revealed the anxiety she had felt far more than any words. After reporting the safe arrival of the fishermen who had been supposed to be in danger, and speaking of the shipwreck, which must have occurred close by, the young girl produced the portfolio she had found.

"So you have made use of the strand-right, Erica?" said her mother, smiling, as

she opened the portfolio and looked at the wet papers.

"The fishermen would have left them to be spoiled, but now we can see whether it is possible to discover the owner of these papers, and restore his property, if he is still alive."

"*If* he is still alive, poor man! At any rate we may be able to restore papers which are perhaps of importance to the relatives; you did perfectly right to take charge of the portfolio."

"Here is a letter in some language I don't understand," exclaimed Erica, who, kneeling beside her mother, was busily engaged in examining the papers.

"It seems like Danish or Swedish. Unfortunately I do not understand either language; but we can probably easily find an interpreter among the sailors in Wollin."

"It would be of very little use, mamma; for see, there is no address of any kind, and it is just the same with this, and this one too. How hateful if we should not be able to ascertain to whom the papers belong; I expected to give somebody so much pleasure by returning them."

"Let us look farther," said her mother thoughtfully, unfolding another sheet.

"A German letter, mamma!" cried Erica joyously, holding up a worn paper. "Now we shall get some information at last. Come, let us read it."

"Your letter of the 25th has been duly received, and we beg leave to inform you that the buttons and yarn ordered have been punctually forwarded according to agreement. The goods are unusually desirable, and you will therefore surely consent to pay the slight increase in price mentioned in the accompanying account. Hoping to receive farther orders, I am

"Very respectfully yours,

"JULIUS MEYER."

A gay laugh from Erica followed the conclusion of the letter. "That was certainly a great satisfaction, mamma, and moreover the name of the place where this Julius Meyer lives is also torn off, so we are just as wise as we were before."

"We know a little more, my child, the portfolio undoubtedly belonged to a merchant."

"It seems so, and yet it was so handsome that I thought it belonged to a prince. I imagined it would be so delightful if he should come to our house to get it."

"And thank you for having saved his interesting correspondence with a young princess, eh, Erica?"

"Why yes, mamma! Why not?" replied Erica, pouting; "at any rate it would be pleasanter than this button and yarn correspondence."

"Yet the latter would probably be just as interesting to the owner. But let us look farther."

Again came papers written in a foreign language, but at last they found a small packet fastened with a red string. The papers were so glued together by the moisture that it seemed difficult to separate them. The first wrapper was removed with considerable trouble, and a sealed envelope appeared. An address in the German language, in a firm, legible hand, contained the following somewhat singular words: —

"These are the papers I found in a secret drawer of my dead sister's desk. It is the only legacy my *Hoch und Wohlgeboren* nephew, who has never troubled himself about his uncle, will ever receive from me."

An involuntary pause followed the reading of this superscription; both were probably reflecting upon the mystery before which they stood. At last Erica broke the spell, and said, drawing a long breath, —

"That is very strange. The old gentleman doesn't seem to like his nephew. But what does *Hoch und Wohlgeboren* mean? I never heard it."

"It is the old-fashioned way in which barons were formerly addressed. The title here is ironically used."

"Then am I *Hoch und Wohlgeboren*, as well as this nephew, mamma?" laughed Erica, whose volatile temper had already conquered the grave impression the words had made upon her.

"Yes, Erica, but you must not set any value upon it, for the time for such courteous appellations has passed away. The advantage of birth is perhaps undervalued now, simply because in earlier days it was so greatly over-estimated."

"But ought we to break the seal and look at these papers?" asked Erica thoughtfully, as she turned the little packet over and over.

"We certainly ought *not*, if the papers would not be utterly destroyed if they were left pressed together in this way. Besides, it is possible, nay, probable, that we shall learn from them the owner of the portfolio. So open the package, but very carefully, or we shall do harm instead of good."

Erica, heeding her mother's warning, slowly broke the seal, and then laid the papers one after another on the table to

dry; nay she even restrained her impatience until the sheets had become firmer, then drew a little footstool to the invalid's side and began to read.

"You will not see me, you are angry with me, Agatha! How have I deserved this indignation, what have I done to offend you? If I was too eager, too impetuous in my homage, is not the unspeakable charm of your nature alone responsible? Can one enjoy the happiness of seeing you, and yet have power not to fall in adoration at your feet? And will you inflict such a terrible punishment upon me because I did not possess this strength? Do you not know that the measureless harshness of this punishment is harder than death?

"Oh Agatha! remove the ban, I implore you, let me appear before you again. I cannot live without the sunlight of your presence, and you will not have the cruelty to expose me to the torture of a lingering death. One word from you, just one kind word, and I shall feel new life, and hasten, radiant with joy, to your feet, repeating what I have often said.

"Ever, ever your own

"RODERICH."

During the reading of these words, the invalid's face had become somewhat clouded. When Erica paused, she looked at her, and said with gentle raillery, —

"Well, how do you like this letter, my child? Does it appear more interesting than the yarn and button correspondence?"

"Of course, mamma," replied Erica frankly, "only I think it is written in rather a singular style. It consists almost entirely of questions, which is somewhat against the rule. Who can the lady have been to whom a letter was written in this way?"

"A ballet dancer, or perhaps an actress."

"Why so, mamma? Surely any other woman can inspire just as ardent an affection."

"Undoubtedly, but to any other lady this affection is not declared in such a manner. Read on, perhaps we shall solve the mystery."

Erica took the next sheet, and began again.

"You are cruel, Agatha! You refuse me all access to you, and yet you cannot prevent me from seeing you. Yesterday, when, radiant in beauty, you enchanted all Stockholm by your matchless acting ——"

"Why yes, she is an actress!" Erica exclaimed in surprise. "How clever you are, mamma!"

"You were forced to allow me also to admire you, revel in your loveliness. With all your anger against me, you could not even prevent me from considering the tender words your sweet voice uttered to another, as addressed to me, and thus for a moment feeling unutterably happy. Unfortunately this happiness lasted only an instant, and I became so much the more miserable, when I found a letter from home, which required my immediate return there.

"Will you still have the cruelty to withdraw from me? Will you not permit me to press one farewell kiss upon your hand? Hundreds of miles will soon stretch between us, will you increase my misery by your anger? Can you, dare you be so cruel?

"I shall await with a trembling heart the return of the servant who is to bring me your answer. Will it be my sentence of death, or unspeakable happiness? Agatha, you will, you cannot utterly reject

"Your own

"RODERICH."

"Herr Roderich seems to be very fond of asking questions," said Erica. "But I wonder whether Agatha allowed him to visit her again."

"Is there no date, no signature except Roderich?" asked her mother.

"None. If you will allow me, I'll go on with the reading at once. I am curious to see the end of the affair."

"Greatly as I know how to prize the joy of your presence, Agatha, gratitude alone must not procure it for me. I am ignorant what officious person, who must be totally wanting in delicacy of feeling, has told you of the slight efforts I have made in your behalf. I assure you that, becoming by accident intimately acquainted with the manager of the theatre in this place, I merely called his attention to your remarkable talent. On taking a journey to Malmö he saw you there, and of course made every exertion to secure such a pearl for the Stockholm stage. So this slight effort deserves no thanks, and if it alone is to again open to me the door of your drawing-room, I prefer not to enter it.

"Meantime I have also been told tales of you, Agatha, and in addition to the glittering nimbus which talent and beauty weave around your brow, I now behold the halo of heroic virtue resting on your

head. You are the sole support of your numerous family. Father, mother, and children are all dependent upon you, receive their sustenance and education from you alone. You have changed your name because a dark shadow rests upon your father's, a shadow, however, cast by misfortune, not guilt. The victim of a shameful intrigue, he was dismissed from the government service without a pension, and helpless and poverty-stricken sought his wife's native country to found a new home. But a severe illness — undoubtedly caused by the undeserved humiliation — made him incapable of doing so, and thus his oldest daughter, still almost a child, took up the battle of life for her father, and by her unwearied industry, kept poverty from her parents' threshold.

"Now for the first time I understand the sadness that is sometimes mirrored in your eyes. It was connected with your parents' fate, your own sorrowful past, and I, silly fool, attributed it to a former affection, and felt jealous and bitter. Now, for the first time, I understand the cause of the plainness of your drawing-room, a simplicity which you have often made the subject of your charming jests without permitting it to be altered. Yes, I now understand your whole heavenly nature, Agatha, am ashamed of the rudeness with which I often wounded your soul, and perceive that my banishment was just.

"Do not suppose I have indiscreetly inquired into your circumstances, and in this way obtained possession of your secret. A strange accident, I might almost call it a dispensation of Providence, placed the clue in my hand; and it has made me both happy and miserable. Happy on account of the heartfelt reverence I must offer you, miserable because of the idiotic folly of my previous conduct, most unpardonable in me, a widower, who am no longer a very young man. Let me atone for my offences; open the door of your drawing-room; no word, no look, shall wound you. Let me, before my departure, implore your forgiveness; I could not go away in peace while oppressed by the thought of your indignation.

"Roderich."

Erica silently laid the sheet on the table, and her mother did not interrupt the pause that followed.

"That was quite a different letter, mamma!" the young girl began at last. "I like it much better, and I believe Herr Roderich did not ask a single question. Agatha seems to be an excellent girl, don't you think so too, mamma?"

"I am ready to suppose so, Erica. And after this letter, I like the young man very well. Any one else would not have concealed his efforts — which were undoubtedly much greater than he represents — but made the utmost possible use of them."

"We will read on again to see how the affair ends," and Erica took the next sheet from the table.

"A farewell, Agatha, perhaps an eternal one! And yet I could not do otherwise, could not leave unpunished the insolent man who sought to sully your pure name. Because you belong to a profession in whose thorny path many a poor creature is stranded, people imagine they have the right to insult you; suppose the innocent purity of your features a mere mask of virtue, which they can mock as a false halo of sanctity. I would not endure it, Agatha, for surely it is the duty of every man to protect innocence and virtue.

"If I fall in this duel, do not grudge my memory a place in your heart, and believe that I am not wholly unworthy, though I have not always done what I ought. Farewell, Agatha! May God ever bless and protect you.

"Roderich."

"I suppose Roderich did not fall in this duel?" asked Erica somewhat hastily, gazing anxiously into her mother's face.

"I think not, my child," replied the latter smiling, "for all the letters appear to be written in the same hand."

"Let us read on, mamma," said the young girl with a sigh of relief, seizing the next sheet.

"You love me, Agatha, you love me! I am in a tumult of happiness. I bless my wounds, I bless the suffering which has given me the blissful certainty of your affection. Hitherto, when I sought to intoxicate myself with the hope that I was not indifferent to you, when it seemed as if your eye sought me, and my presence brought a deeper color to your cheek, doubt soon entered my heart and destroyed all my bliss with its icy breath. But now I have the happiest certainty, have it without your confession. The eyes that grew dim with tears when you bent over me, the loving hand that bandaged my wounds, held the cup to my longing lips, and softly smoothed my pillows that my feverish head might rest more quietly, give me

this assurance. In my unconsciousness, I could only instinctively feel the pain-destroying magic of this presence, but now I have the joyful certainty that you were the merciful angel who stood beside my couch and assuaged my sufferings.

"True, since I have been able to recognize those who surrounded me, the angel again has vanished, but I will entreat her to return, implore her to bless my life as she has alleviated the tortures of my sick bed. I will take no denial, Agatha! I am sure of your love, and what reason could there be to prevent you from becoming my wife? I am rich, and we will together provide for your family. You need not even entirely resign your art, although you will no longer delight the general public.

"We will choose for our residence the castle of whose beautiful surroundings I have often told you, and there have a large, well-arranged stage at our disposal. The whole neighborhood will flock to admire the beautiful mistress of the castle in the exercise of her skill as an accomplished actress, and no insolent fellow will venture to sully your stainless name. Thus you will be able to enjoy your art, without suffering from the dark side of the profession.

"Oh, Agatha, how wondrously beautiful is the existence of which I dream! You, the high priestess of art, as my guardian angel, my beloved, my wife; I elevated and supported by you, and in return protecting you from the thorns of life, smoothing your path. Dream of this heavenly future with me, Agatha, and by a speedy answer make happy

"Your own
"RODERICH."

"There is joy even in your refusal, Agatha, for the lines express naught but anxiety for the man you love, a total disregard of your own happiness. Sweet, dearest girl, do you suppose I am a young, immature man, who is still dependent upon his parents' will? Unfortunately I lost my father at a very early age, and even when a boy was the head of the family. My mother and aunts, who educated me, as well as my sisters, thought everything I did exactly right, and my first wife unhappily allowed herself to be infected by this idolatry. I was on the point of being worn out by this constant adoration, when my wife died, and the void thus made in my life cured me by the pain it inflicted.

"Even if my relatives should at first be a little dissatisfied with my marriage, for the hand of a princess would scarcely be considered good enough for that paragon of perfection called Roderich, they will soon become reconciled to it. Even my brothers-in-law, though they do not perceive in me quite the ideal I seem to their wives, cordially like me, and know that the woman to whom Roderich gives his hand will be worthy of the position, whatever station in life she may previously have occupied. So have no anxiety, dearest, they will receive you with open arms, and soon behold in you the ornament of their circle.

"I shall wait for no answer to these lines, but come for it myself, and my presence will scatter all doubts, dispel the last clouds from your brow. Expect me immediately.

"Your own
"RODERICH."

"Have no anxiety, my sweet girl, I will not leave Sweden without you. My business in Germany must take care of itself a while longer, for I have sworn not to see the green waves of the Rhine again until I have my dear wife by my side. But we must hasten the preparations for our wedding, and as you wish to be married in Malmö, I have already written to the pastor there.

"Our thoughts are entirely in sympathy, for I too wished to celebrate our nuptials when I saw you for the first time. That moment is as visibly present as if it had been only yesterday. The sound of music had attracted me to the little church, and when I entered it, the peace that pervaded the sanctuary impressed me so strongly, that I mingled with the crowd and attended the service. The simple sermon in its plain, direct language, went to my heart. The pastor had just uttered his amen, when my eyes chanced to wander towards the window, before which the leaves of the trees were casting their changeful shadows, and there saw a figure which instantly claimed all my thoughts. It was you, Agatha, and your pure, angelic beauty so completely bewitched me, that I had neither reverence nor attention for the conclusion of the service. When the congregation dispersed, I followed you, saw you enter a house, and asked an old man who had just left it to tell me your name.

"I was strangely surprised when I heard that this angelic face belonged to an actress, for I had discovered both devoutness and sorrow in the expression of the

Digitized by CORNELL UNIVERSITY Original from CORNELL UNIVERSITY

features, and, fool that I was, believed those of an actress could only wear the guise of thoughtless happiness and gayety. Perhaps this very contrast doubly attracted me, and yet I was base enough to forget the angelic face in the church, and remember only the actress. You, my sweet Agatha, have long since pardoned the crime, although I cannot yet entirely forgive myself, but am ever longing to make some new atonement.

"Perhaps it is a part of this atonement that the triumphs won every evening by the petted actress, now about to take a farewell of the stage, fill me with the keenest jealousy. I most ardently long for the time when this farewell will have been uttered, and my adoration alone can be offered you. If my darling were not so excessively conscientious, I would have taken her from Stockholm and her contract, and thus spared myself these tortures.

"Hoping to see you very soon, I am
"Your own
"RODERICH."

"Only a few days more, my darling, and we shall be united forever. I have just received a letter from Herr Dahlström, the pastor, who has consented to join our hands at the altar of that little church, and then nothing will be wanting to our happiness.

"I shall see you in a few hours, it is true, but I would not delay informing you of the good news. Farewell till then, my beloved, and during these long hours think a little of

"Your
"RODERICH."

"What a pity, mamma! I am taking the last sheet, we shall not learn what we wish," said Erica regretfully, as she raised a somewhat larger letter.

"I too fear that we shall not discover the name of the person who wrote these lines, but go on, my child."

"To-day, for the first time, I can give you news of myself, dear heart, and tell you I shall soon be with you again. I have been here since yesterday, to make the necessary preparations; order everything to be arranged for the reception of the guests, for I shall bring the whole crowd with me. There will probably be plenty of rooms and beds, and if not, the steward must come to our assistance, and we will break his wife's heart by claiming her best rooms. I hope it will be a brilliant entertainment, for I have succeeded in getting a quantity of things we had made up our minds to do without. I have even found an excellent manufacturer of fireworks, and we will have a brilliant display in the evening. But of course Iphigenie still remains the principal attraction, though fat old Count Steinbach ——"

"What did you say, what was the name?" the invalid hastily interrupted.

"'Fat old Count Steinbach,' mamma!" replied Erica laughing.

"Go on, my child, there may be several Count Steinbachs," murmured the old lady, leaning back in her chair again.

"Who knows, mamma! Perhaps this is an acquaintance of yours, perhaps the fat old count will give us the clue," eagerly exclaimed the daughter.

"Well, read on, Erica, perhaps the mystery will be unravelled."

"Iphigenie will remain the principal attraction, although fat old Count Steinbach plays Theas. The excellent old gentleman would have taken Orestes, if we had asked him to do so. However, I hope Iphigenie will not cherish too warm a sisterly affection for her Orestes, even sisterly affection rouses my jealousy, if it seems too strong.

"Besides, Eichfeld ——"

"'Eichfeld?'" interrupted the old lady again. "I really believe I shall find myself among acquaintances, for I have often heard that name also."

"How fortunate, mamma, if we should really find out to whom the letters belong. Let us read on as fast as possible."

"Besides Eichfeld has already sacrificed his beard to Orestes, or rather Iphigenie, and looks ten years younger. Under the seal of the most profound secrecy, he confided to me that Arabella Kroneck —"

"Isn't that your maiden name, mamma?" the reader hastily interrupted herself, looking inquiringly into her mother's face.

"Yes, my child, but there may be many others of that name," replied the invalid with visible embarrassment.

"That Arabella Kroneck is the object of his love. Perhaps I owe the confidence of this usually reserved man only to my jealousy. Arabella is said to be a great beauty and very bewitching, but I have never seen her. I wish Eichfeld success with all my heart, for it would be pleasant to have such an agreeable couple near us. The old baron, however, is said to set a very high value upon his jewel, and I

scarcely think Eichfeld's property will suit him.

"You see, my darling, I show great interest in the love affairs of your Orestes, but in so doing will not forget practical things, and beg you, if Mumm has not yet sent the Johannisberg and Rudesheim, to write to him at once. Also remind Daniel of the colored lanterns for the park, the illumination must extend to the last terrace, and Swan Island be particularly brilliant. The reflection of the light on the water will have a magical effect on the wonderful little lake, and I shall probably have the fireworks there. But Daniel must see that new lanterns can always be supplied, for the park must be illuminated every evening while the guests remain in the castle — which will undoubtedly be four or five days.

"I must close, for I have my hands full of business. Kiss the little bawler for me, and remember

"Your own

"RODERICH."

"Unfortunately that is the end of the letter, mamma," said Erica, "and we have really discovered nothing."

The old lady, who since the reading of the last letter had seemed to be struggling with some violent emotion, passed her hand over her brow, as if she wished to dispel unwelcome thoughts, and then said slowly:

"I should think we knew enough, my child. Agatha and Roderich are happily married, and she must have been received as an equal, for they seem to exercise the most magnificent hospitality at their castle. Probably afterwards they were never so situated as to find it necessary to exchange letters."

"And Eichfeld, mamma? You are certainly the lady who was a 'great beauty and very bewitching,'" said Erica mischievously, laying her head caressingly on her mother's shoulder.

"Is not the name of the place from which he writes given in any of the letters?" asked the old lady, without entering into her daughter's jest. "Look carefully, Erica."

Erica took the sheets in her hand again, and examined them as she was requested. "Here is 'Stockholm, April 6th,' but the year is not mentioned. And here again, 'Stockholm, May 20th.' Here there is nothing at all; here again no date. Herr Roderich was decidedly negligent, mamma. Ah! this last letter has the name — 'Coblenz, June 27th.'"

"I thought he must live on the banks of the Rhine, or at least in the immediate vicinity," said her mother, thoughtfully. "How often I have attended such entertainments at the castles of the gay, pleasure-loving nobility! This last letter really made me think of home. But in spite of this, I know of no clue which could guide us in discovering the writer of these letters. Even if this Eichfeld were the one I once knew, he could give us no information, for he died young, and has been resting in his grave many years."

"And fat Count Steinbach, mamma?"

"He died long, long ago, died when I was a betrothed bride, and, as he was unmarried, left his property to my cousin Vally."

"Suppose we should write to her, mamma?"

A deep shadow flitted over the countenance of the elder lady. "I am now somewhat unaccustomed to communicate with my family," she said, after a long pause; "besides, Vally was educated in our house, and knew no more about her uncle Steinbach than I, so any inquiry would be useless. Moreover, the contents of the letters scarcely require such an exertion on our part. We know that their owner is dead, and her children could hardly have considered these papers of any special importance, or they would not have parted with them so carelessly."

The old lady spoke hastily, and with a certain sharpness of tone which was very unusual to her. Erica cast a hurried, questioning glance at her mother's agitated features, and a suspicion dawned upon her that these letters had aroused feelings which she wished to conceal, even from her daughter. With delicate tact, she therefore refrained from any farther questions, carefully folded up the papers, which had now become perfectly dry, and gave them to her mother, who silently placed them in one of the drawers of her writing-table.

From The Pall Mall Gazette.

A GLIMPSE OF ADRIANOPLE.

FROM a very interesting letter from Adrianople we take the following passages: —

"Adrinople (it is the local fashion to leave out the *a*) is in a very different condition to what it was a year or two years ago. Trade, indeed, is slack and commerce at a standstill; but the whole place, even to the back streets, is alive and thronged, and the crowds everywhere testify to activity. The road to the railway

station is always busy; but it is as often the passage of files of bullock-wagons for the wounded as aught else, diversified now and then by the stopping of troops going up to the front. Visits to the station are always full of interest. Frequently special trains arrive in the middle of the night full of wounded; these are taken out, laid in wooden sheds erected for the purpose, where English surgeons dress wounds as quickly as possible all through, sometimes eight or ten hours' work; then, clean and fed, the injured men remount the train and go on to Constantinople. The thing to see is when, as has several times occurred, a train of wounded going down meets a train of soldiers going up. No one could say, after that, that the Turks do not know how to cheer. Up jumps every man that can rise on his legs, every arm that can move is waved, and every throat that can utter a sound joins in the cheer with a yell of welcome, and perhaps of envy of those who are going to fight. With less noise, but with eager eyes and cheerful faces, the new-comers return the salute — not a laggard among them. They are not neatly dressed; they would not do for Aldershot; they are often somewhat dirty; they are of all sizes, and they do not look exquisitely disciplined; but their eagerness and their gladness make up for a great deal, and their patient endurance is beyond all praise.

"Next to the war movements, the relief is naturally the first interest here. All that has been done by Mr. Blunt is admirably done; he has followed the plan of collecting the women and children (there was scarcely a man among the fugitives) into decent but poor houses, insisting upon cleanliness, and giving to each woman one or two or three piastres, according to the number of the children; thus occupying the mothers in buying and contriving, instead of leaving them to croon idly over their sorrows. These women will contrive to feed and fatten out of the pittance given, and even, perhaps, to put by an odd piastre or two for better times. The two Catholic convents of the Missionnaires Apostoliques are all giving wise and simple relief in much the same way. Each has a house full of Moslem women and children, and another of Bulgarians. Mme. Camara's little hospital of Moslem women and children actually wounded in the war is quite a touching sight; and one cannot admire enough the unselfish devotion of the one lady who did not leave the city in panic, but remained to help with her own hands the poor things who were worse off than any one else at the moment. As wounds heal the hospital will gradually turn into a refuge. Near the railway station there is another small hospital for wounded Bulgarian women and children, attended partly by one of the English surgeons; but of them nearly all now are dead."

From Nature.

ON THE COMING WINTER.

HAVING recently computed the remaining observations of our earth-thermometers here, and prepared a new projection of all the observations from their beginning in 1837 to their calamitous close last year, results generally confirmatory of those arrived at in 1870 have been obtained, but with more pointed and immediate bearing on the weather now before us.

The chief features undoubtedly deducible for the past thirty-nine years, after eliminating the more seasonal effects of ordinary summer and winter, are: —

1. Between 1837 and 1876 three great heat-waves, from without, struck this part of the earth; viz., the first in 1846·5, the second in 1858·0, and the third in 1868·7. And unless some very complete alteration in the weather is to take place, the next such visitation may be looked for in 1879·5, within limits of half a year each way.

2. The next feature in magnitude and certainty is, that the periods of minimum temperature, or cold, are not either in, or anywhere near, the middle time between the crests of those three chronologically identified heat-waves, but are comparatively close up to them *on either side*, at a distance of about a year and a half, so that the next such cold wave is due at the end of the present year.

This is, perhaps, not an agreeable prospect, especially if political agitators are at this time moving amongst the colliers, striving to persuade them to decrease the out-put of coal at every pit's-mouth. Being, therefore, quite willing, for the general good, to suppose myself mistaken, I beg to send you a first impression of plate 17 of the forthcoming volume of observations of this Royal Observatory, and shall be very happy if you can bring out, from the measures recorded there, any more comfortable view for the public at large.

PIAZZI SMYTH,
Astronomer-Royal for Scotland.

PURGATORY.

FROM THE FRENCH OF MARIE JEUNA.

If far from thee he pines in twilight dim,
Mercy, just God! I pray thee on my knees;
His hope in thee, thy tender love for him,
Dear Lord, remember these!

Our souls abide in tenements of clay,
At every step we stumble as we go,
Thou knowest, Lord, how difficult the way
We travel here below.

How hard, amidst the loves, and hopes, and fears
Of this wide world, calmly to do our part,
Nor give its thrilling joys and songs and tears
Too much of our weak heart!

But, oh, my God, I offer unto thee
The blood of Jesus: *that* all bonds can break,
And lift all burdens. Now, depart from me
Awhile, to that dark lake,

My angel guardian! stir with thy cool breath
His fiery mantle; whisper, soft and low,
Comfort to soothe that anguish worse than death
Souls without God must know.

Let thy fair aureole shine upon his night,
Thy loving arms protect him from his fears;
There all are weeping! let thy voice unite
With those sad sighs and tears.

Point from his prison to the heaven above,
Tell him that thou, when all this pain is done,
Will greet him there — that there the God of love
Is longing for his son.

Tell him no saint, in his ecstatic prayer,
Musing upon the eternal loveliness,
Has ever caught one glimpse of what is there,
That unimagined bliss!

Put thy arms round him, give him sweet relief,
And then, if he should ask who bade thee fly
To soothe his anguish and assuage his grief,
O tell him it was I!

Keep in thy breast, a sacred trust and dear,
His loving pain, his longings and his cries;
Then soar to heaven, and whisper in God's ear
The echo of his sighs;

And then, from heaven to earth and earthly things,
Come back, for, ah! God knows if I should be
Faithful for long, without thy two white wings
Between the world and me!

Month.

AT THE LAST.

There must be something after all this woe,
A sweet fruition from the harrowed past;
Rest some day for this pacing to and fro;
A tender sunbeam and dear flowers at last.

There will be something when these days are done,
Something more fair by far than starry nights —
A prospect limitless, as one by one
Embodied castles crown the airy heights.

So cheer up, heart, and for that morrow wait!
Dream what you will, but press toward the dream;
Let fancy guide dull effort through the gate,
And face the current, would she cross the stream.

Then when that something lies athwart the way —
Coming unsought as good things seem to do —
'Twill prove beneath the flush of setting day
A nobler meed than now would beckon you.

For lifted up by constant, forward strife,
Hope will attain so marvellous a height,
There can be nothing found within this life
After the day to form a fitting night.

So heaven alone shall ever satisfy,
And God's own light be ever light enough
To guide the purified, ennobled eye
Toward the smooth which lies beyond the rough.

There will be something when these clouds skim by —
A bounteous yielding from the fruitful past;
Sweet peace and rest upon the pathway lie,
E'en though but death and flowers at the last.

Transcript. JAMES BERRY BENSEE.

VILLANELLE.

O Summer-time, so passing sweet,
But heavy with the breath of flowers,
But languid with the fervent heat,

They chide amiss who call thee fleet, —
Thee, with thy weight of daylight hours,
O Summer-time, so passing sweet!

Young Summer, thou art too replete,
Too rich in choice of joys and powers,
But languid with the fervent heat.

Adieu! my face is set to meet
Bleak Winter, with his pallid showers, —
O Summer-time so passing sweet!

Old Winter steps with swifter feet,
He lingers not in wayside bowers,
He is not languid with the heat;

His rounded day, a pearl complete,
Gleams on the unknown night that lowers;
O Summer-time, so passing sweet,
But languid with the fervent heat!

Spectator. EMILY PFEIFFER.

From Temple Bar.

THE COURT OF THE GRAND MONARQUE.

BY THE AUTHOR OF "MIRABEAU," ETC.

No court, thanks to the great number of contemporary memoirs, has ever been so minutely and elaborately sketched as that of Louis the Fourteenth. The letters of Madame de Sévigné, the memoirs of Mesdames de Motteville, de Lafayette, de Montpensier, of Dangeau, and, above all, of St. Simon, have rendered its manners as familiar as those of to-day, and its personages better known to us than our most intimate friends. Scarcely a vice, a folly, a secret, of the times, escaped those prying eyes, and all that came beneath their observation has been recorded with a facile pen for the delectation of posterity. Nothing can be more interesting than these records. St. Simon alone contains more genuine romance than a whole library of fiction. And yet to the ordinary English reader they are all absolutely unknown. These are the sources from which the materials of the present article have been drawn, and my authorities for the many extraordinary anecdotes, which may otherwise read apocryphal, herein contained.

Let us begin with Madame de Sévigné's picture of this court at the height of its splendor (1676): —

I was at Versailles on Saturday with the Villarses: this is how they pass their time there. You know the ceremony of attending on the queen at her toilette, at mass, and at dinner; but there is no longer any need to be stifled while their Majesties are at dinner, for at three the king, the queen, Monsieur, Madame, Mademoiselle, all the princes and princesses, Madame de Montespan, all her train, all her courtiers, all the ladies — in a word, the whole court of France, retire to that fine apartment of the king's which you know. All is furnished divinely; all is magnificent; we do not know there what it is to be hot, we pass from one place to another without any press. A game of *reversis* gives the form, and fixes everything. The king is near Madame de Montespan, who keeps the bank. Monsieur, the queen, and Madame de Soubise; Dangeau and his company; Langée and his company, are at different tables. The carpets are covered with thousands of Louis d'ors; they use no other counters. I bowed to the king in the manner you taught me; he returned my salute as though I had been young and beautiful. The queen talked to me a long time of my sickness as if it had been a confinement. She also spoke some words about you. Monsieur the Duke bestowed upon me a thousand of those caresses of which he gives no thought. M. de Lorges attacked me in the name of the Chevalier de Grignan, and, in short, all the company. You know what it is to have a word from every one who passes. Madame de Montespan spoke to me of Bourbon. Her beauty and her shape are really surprising; she is not half so stout as she was, and yet neither her complexion, her eyes, nor her lips are less fine. She was dressed in French point, her hair was arranged in a thousand curls, the two at the temples falling very low upon the cheeks; black ribbons upon her head, some pearls of the Maréchal de l'Hôpital and diamond pendants of the first water, together with three or four bodkins, but no other covering — in a word, she looked a triumphant beauty, to excite the admiration of all the ambassadors. This agreeable confusion without confusion of everything that is choicest lasts from three to six. If any couriers arrive the King retires to read his letters and then returns. There is always music, to which he listens, and which has a very good effect. He chats with the ladies who are accustomed to have that honor. They leave play at the time I have mentioned without the trouble of settling up accounts, because they use neither marks nor counters. At six we take the air in chariots, the king, Madame de Montespan, Monsieur, Madame de Thianges, and the good Heudicourt upon a little seat before, which seems to her a place in paradise. You know how these chariots are made; we do not sit face to face in them, but all look one way. The queen is in another with the princesses, the court follows in different equipages according to fancy. We go afterwards in gondolas upon the canal, where we have music; at ten we go to the theatre; midnight strikes, we perform the *media noche*.* This is how we passed the Saturday.

No description could be more sprightly and charming than this. But it is a *couleur de rose* one; Madame de Sévigné frequented the court but little, and did not see far beneath the surface. Her picture is a brilliant *coup d'œil* of its outward aspect; for its inner life we must turn to more outspoken and better informed

* A Spanish game.

chroniclers, from whom we glean coarse pictures of Dutch-like fidelity.

These fine ladies and gentlemen delighted in practical jokes and horse-play of a very rough description, of which I will cull a few examples. Madame la Duchesse de Luxembourg was famous for conjugal infidelity. M. le Prince (the son of Condé) thought it a capital joke to persuade M. le Duc to wear a stag's head decorated with an enormous pair of antlers, at a fancy ball. They were so large that they became entangled with a chandelier that hung from the ceiling. The victim was quite delighted at the honor M. le Prince had done him, in arranging his head-dress, and strutted about as proud as a peacock, to the intense amusement of everybody, including the king himself.

The principal butt of such amusements was the Princesse d'Harcourt, a protégé of Madame de Maintenon. St. Simon says the lady's father had been one of Madame Scarron's lovers. His description of Madame la Princesse is in his best style of portrait-painting. Here it is: —

> The Princesse d'Harcourt was a person whom it is good to describe, in order to better lay bare a court which did not scruple to receive such as she. She had once been beautiful and gay; but although not old all her beauty and grace had vanished. At the time I speak of she was a tall, fat creature, mightily brisk in her movements, with a complexion like milk porridge; great, ugly, thick lips, and hair like tow, always sticking out and hanging down in disorder, like all the rest of her fittings-out. Dirty, slatternly, always intriguing, pretending, enterprising, quarrelling, always low as the grass or as high as the rainbow, according to the person with whom she had to deal: she was a blonde fury, nay, more, a harpy; she had all the effrontery and the deceit and violence of one, all the avarice and audacity; moreover, all the gluttony and all the promptitude to relieve herself from the effects thereof, so that she drove out of their wits those at whose houses she dined; was often a victim of her confidence, and was many a time sent to the devil by the servants of M. du Maine and M. le Grand. She, however, was never in the least embarrassed, tucked up her petticoats and went her way; then returned saying she had been unwell.

This repulsive personage was very much hated by everybody, especially her servants, whom she treated very badly, and who occasionally revenged themselves upon her in a very pronounced manner. One day her coachman and footman, after soundly abusing her, deserted her in her carriage in the middle of the Pont Neuf; at another time a maid, whose ears she was in the habit of boxing, fell upon her, thumped her, kicked her, knocked her down, trampled upon her, and after double-locking the door quitted the house. Her domestics frequently left her in a body. Every day there was some disturbance in the house, and the neighbors could not sleep at night for the noise and riot. Much of this was occasioned by these aforesaid practical jokers. One night, twenty Swiss guards were introduced into the lady's chamber; each was armed with a drum, and at a given signal the whole twenty commenced a terrific rub-a-dub at her bedside. On another night, the Duchesse de Burgogne and her suite collected a quantity of snow and snowballed her in bed.

> The filthy creature, waking up with a start, bruised and stifled with snow, with which even her ears were filled, with dishevelled hair, yelling at the top of her voice, wriggling like an eel, without knowing where to hide, formed a spectacle that diverted people more than half an hour, so that at last the nymph swam in her bed, from which the water flowed everywhere, slushing all the chamber. It was enough to make one die of laughter.
>
> Such [he says in conclusion] was the favorite of Madame de Maintenon, so insolent and so insupportable to every one, but who had favors and preferences for those who bought her over, and who made herself feared even by princes and ministers.

Another victim of this horse-play was one Madame Panache, "a little and very old creature, with lips and eyes so disfigured that they were painful to look upon; a species of beggar who had attained a footing at court from being half-witted, who was now at the supper of the king, now at the dinner of Monseigneur, or at other places, where everybody amused themselves by tormenting her. She in turn abused the company at these parties, in order to cause diversion, but sometimes rated them very seriously and in strong

language, which delighted still more those princes and princesses, who emptied into her pockets meat and ragouts; the sauces of which ran all down her petticoats. At these parties some gave her a pistole or a crown, and others a fillip or a smack in the face, which put her in a fury, because with her bleared eyes, not being able to see to the end of her nose, she could not tell who had struck her; she was, in a word, the pastime of the court."

Practical jokes were not, however, the worst failings of some of these fine ladies. Of their morals it would be ridiculous to discourse, since they were non-existent; but they sometimes gave way to vices which are now confined to the most degraded of their sex.

> Madame la Duchesse de Burgogne supped at St. Cloud one evening, with Madame la Duchesse de Berri and others. Madame de Berri and M. d'Orléans, but she more than he, got so drunk that Madame la Duchesse d'Orléans, Madame la Duchesse de Burgogne, and the rest of the company there assembled knew not what to do. M. le Duc de Berri was there, and him they talked over as well as they could; and the numerous company was amused by the grande duchesse as well as she was able. The effects of the wine in more ways than one were such that the people were troubled. In spite of all the Duchesse de Berri could not be sobered, so that it became necessary to carry her, drunk as she was, to Versailles. Still the servants saw her state, and did not keep it to themselves!

This was the daughter of the king's nephew!

One of the most extraordinary personages of the court was Mademoiselle de Montpensier, the *great Mademoiselle*, as Madame de Sévigné calls her, the daughter of Gaston Duc d'Orléans. It has been said that one half her life was occupied in matrimonial projects that were never realized. Her list of proposals is, perhaps, the most remarkable on record. While a child, and until she was twenty years of age, she was encouraged by Anne of Austria and Mazarin in the idea that she would be queen of France. Then she was betrothed to the Cardinal of Bourbon, who died. Afterwards negotiations for her hand were opened by Philip of Spain; these were broken off by the machinations of Mazarin and the queen-mother. Her next suitors were the Prince of Wales, afterwards Charles II., the emperor and his brother the archduke Leopold, and the Duke of Savoy. All these, except the emperor, were refused by her as unequal to her haughty and towering ambition. She owed a grudge to the court for disappointed hopes, and paid it off in the Fronde time. During that war her father sent her to hold Orleans, which was beginning to waver. The citizens hesitated to admit her. Going round the walls she found an old disused gate unguarded, and by this she entered the city, which she held bravely against the royal forces for six weeks. Some time afterwards, being then in Paris, she prevailed upon the citizens to open the gates to Condé, who had sustained a severe defeat at the hands of Turenne in the Faubourg St. Antoine; and this done she proceeded to the Bastille, armed with an order from her father, and commanded the guns to be fired upon the royal forces. The cause of the Fronde being lost, fearing arrest, she retired to her estate of St. Fargeau; there she assembled around her a little court, applied herself to study, and began to write her "Memoirs." She returned to court in 1657. Then commenced fresh negotiations for the marriage of this erratic princess; first it was Monsieur, the king's brother, who was twelve years her junior, then the son of Condé, then the king of Portugal, besides a number of smaller personages; but all came to nothing. At forty years of age she fell in love, for the first time, after disdainfully rejecting kings and princes, with an obscure gentleman, the Comte de Lauzun, who was distinguished neither for talent, manners, nor personal beauty, but who by a mixture of insolence and adulation had won his way to royal favor. It was a *grande passion* she conceived for him, and after a time she gained the king's consent to the marriage. Instead of at once availing himself of his fortune, the comte frittered away the precious days in magnificent preparations, thereby giving those who were envious of his success opportunity to work upon the king for the destruction

of his hopes. They succeeded, and at the moment that all was ready for the nuptials, the consent was withdrawn. In vain did Mademoiselle cast herself at the royal feet, and weep and implore, Louis was inexorable. Madame de Montespan was at the head of the conspiracy which had broken off the marriage, but Lauzun, not knowing this, appealed to her to intercede for him with the king. She promised to do so; to be assured that she kept her word he contrived to conceal himself in her chamber and overhear all that passed between her and her royal lover; here he discovered that far from being his advocate she was his enemy. The next time they met he inquired if she had pleaded for him; she answered in the affirmative; upon which he grasped her by the wrist and overwhelmed her with such foul abuse in the presence of the whole court that she fainted away. All hope of obtaining the king's consent being at an end he and Mademoiselle contracted a private marriage. This being discovered he was arrested and imprisoned at Pignerol, in the chamber with Fouquet. There he remained ten years, and it was only by sacrificing a considerable part of her immense fortune to the children of Montespan, that Mademoiselle obtained his release. All her love and devotion, however, he repaid with the basest ingratitude, treating her with such contumely that at length, something of her old pride conquering her ignoble passion, she forever banished him her presence. Her remaining years — it is the usual sequel of such stories — were passed in devotion. When we have exhausted all the charms of the world we turn to heaven, and give ourselves to God only when man has rejected us.

Another beauty of this court, the hapless daughter of Charles the First, presents us with a yet more melancholy story. Henriette d'Angleterre, as she was called, was scarcely more than an infant when her mother first took refuge in France; Mazarin and the queen-mother at one time thought of her as a bride for the young Louis, but she had not then won any favor in his eyes, and by-and-by, just after the king's nuptials, a marriage was arranged between her and Monsieur, then Duc d'Orléans. He brought her to the court, at Fontainebleau, where, Madame Lafayette says, "there was nothing to compare with her."

That which the Princess of England possessed in the highest degree [says the same chronicler] was the gift to please, and what we call grace; these charms were diffused over all her person, over all her actions and her mind, and never princess was so equally capable of making herself loved by the men and adored by the women.

In a little time the king, attracted by her wit and beauty, found a charm in her society that aroused the jealousy of the queen and the displeasure of his mother. "She arranged all the diversions (at Fontainebleau); all were undertaken on her account; and it appeared that the king had no pleasure save in bestowing it upon her. It was in the midst of summer; Madame went to bathe every day; she went in a carriage, on account of the heat, and returned on horseback, followed by all the ladies, splendidly dressed, with a thousand feathers on their heads, accompanied by the king and all the youth of the court. After supper they got into calèches, and to the music of violins, went away to wander a part of the night around the canal." There were, besides, balls and plays and hunting parties, and all life was a dream of pleasure.

Louis was at this time in all the perfection of that manly beauty to which even the cynical St. Simon was compelled to pay homage, and Henriette, any more than any other woman, was not proof against his attentions. The remonstrances of the queen-mother revealed to them the dangers of their position, but did not break the infatuation. To hoodwink watchful eyes it was arranged that the king, in order to visit her, should pretend an affection for one of her maids of honor; the one selected was Louise de la Vallière. The pretence soon became earnest, and then — Henriette was forgotten. We next find her engaged in a *liaison* with the Comte de Guiche, and afterwards in one with the Marquis de Vardes. It is astonishing the naïveté with which Madame de Lafayette writes of these peccadilloes, and those of other ladies of the court. Volumes of dissertation upon the *morale* of the age could not bear so much significance as her tone. But there were many excuses for poor Henriette; she had been reared from infancy in a corrupt atmosphere, she was married to a man she did not love, who did not love her, and who, if the terrible stories of the age be true, she could only loathe. Here is his portrait, sketched by the great limner St. Simon: —

Monsieur was a little round-bellied man, who wore such high-heeled shoes that he seemed always mounted upon stilts; was always decked out like a woman, covered everywhere

with rings, bracelets, jewels; with a long black wig, powdered, and curled in front; with ribbons wherever he could put them; steeped in perfumes, and a fine model of cleanliness. He was accused of putting on an imperceptible touch of rouge. He had a long nose, good eyes and mouth, a full but very long face.

Speaking of his character he describes him as possessing much knowledge of the world, but neither wit nor reading; weak, timid, at once led by the nose and despised by his favorites; quarrelsome, suspicious, fond of making mischief, incapable of keeping a secret, etc. In 1670 the king entrusted the duchess with a secret mission to her brother Charles, the result of which was England's abandonment of Holland, and that treacherous league with France which brought such discredit upon this country.

Soon after her return to France she expiated her sins by a terrible death. One day after drinking a glass of chicory water, a beverage of which she was in the habit of partaking, she was seized with violent pains, and died nine hours afterwards in great agony. It was not until the publication of St. Simon's "Memoirs" that the mystery of her death was cleared up. The following is an abstract of his account: —

Her gallantries caused some jealousies in Monsieur, while the opposite taste of Monsieur roused Madame's indignation. The favorites whom she hated did all in their power to make division between them, to dispose of Monsieur at their ease. The Chevalier de Lorraine possessed a complete empire over Monsieur, and made Madame feel it as well as the rest of the house; she was not able to endure this domination, and being then in the height of favor and consideration with the king, she obtained the exile of the chevalier. At these tidings Monsieur fainted, then burst into a flood of tears, and cast himself at the king's feet to make him revoke the order. He was not able to succeed. The chevalier had two minions, the Marquis d'Effiat, Monsieur's master of the horse, and the Comte de Beuvron, his captain of the guards, and to these he sent from Italy a poison "sure and speedy." Madame was then at St. Cloud. Her chicory water was kept for her use in a cupboard of one of the ante-chambers; beside it was placed a vessel of water to dilute the beverage if her taste required it. This ante-chamber was a public passage. On the twenty-ninth of June, 1670, D'Effiat watched his opportunity, and dropped the poison into the chicory water. Just as he had done so a valet, passing by, observed him at the cupboard and asked him what he was doing. He replied that he was only taking a draught of water, and apologized for the liberty. After the duchess's death the valet seems to have talked about this incident, and it came to the king's ears. In ths middle of the night Louis sent an officer and six guards to secretly arrest Madame's *maître d'hôtel*, and bring him privately into his cabinet; from him he extracted the particulars just narrated. "And my brother, does he know of it?" he demanded. "No, sire," replied the *maître*, "none of us three was foolish enough to tell him; he cannot keep a secret, he would have destroyed us." Upon which the king uttered a sigh of relief and said, "That is all I wish to know." The man was set at liberty, and his Majesty preserved the secret, taking no steps to punish the assassins! Was there ever a more terrible piece of secret history brought to light? *

The next member of the royal family to be described is Monseigneur, the dauphin. It is still to St. Simon's wonderful portrait-gallery we must turn for our pictures, for what pencil could draw so accurately as his who painted from life?

He describes Monseigneur as rather tall, very fat, with a lofty and noble aspect, but a countenance wholly destitute of expression, feet singularly small and delicate.

He wavered always in walking, and felt his way with his feet; he was always afraid of falling, and if the path was not perfectly even and straight, he called for assistance. As for his character, he had none; he was without enlightenment or knowledge of any kind, radically incapable of acquiring any; very idle, without imagination or productiveness; without taste, without choice, without discernment, born for ennui, which he communicated to others, a ball moving at haphazard by the impulsion of others; obstinate and little to excess in everything; amazingly credulous and accessible to prejudice, keeping himself always in the most pernicious hands, yet incapable of seeing his position or changing it; absorbed in his fat and his ignorance, so that without any desire to do ill he would have made a very bad king. Ignorant to the last degree, he had a thorough aversion for learning; so that, according to his own admission, since he had left the hands of his teachers he had never read anything except the deaths and marriages in the *Gazette de France*.

* By a strange fatality the daughter of Madame, married to Charles the Second of Spain, died of poison at about the same age as her mother, administered, it was said, by the Comtesse de Soissons in a cup of milk. A doom as terrible as that of the Atridæ seemed to rest upon the Stuart race.

The king, he adds, treated him not as a son, but as a subject; he was totally destitute of all influence, and any person to whom he showed preference was sure to be kept back. "The king was so anxious to show that Monseigneur could do nothing, that Monseigneur after a time did not try." He was supposed to be secretly married to Mlle. de Choin, one of the maids of honor to the Princesse de Conti; she was always treated with great respect by the king and royal family, and well provided for after his death.

The next in succession to the throne was Louis' grandson, the Duc de Burgogne. The Duc de Burgogne in his youth is described by St. Simon as impetuous to frenzy, voluptuous beyond bounds, looking down upon all men as from the sky, as atoms with whom he had nothing in common, but at the same time gifted with a clear and penetrating intellect. Before his eighteenth year, however, a sudden change fell upon him, and he became devout to asceticism and so charitable he would refuse himself a new desk, to give the money it would cost to the poor.

A volume would not describe sufficiently my private interviews with this prince. What love of good, what forgetfulness of self, what researches, what fruit, what purity of purpose — may I say it? — what reflection of the divinity in that mind! candid, simple, strong, which, as much as it is possible here below, had preserved the image of his Maker. It was he who was not afraid to say publicly, in the *salon* of Marly, "that a king is made for his subjects, and not the subjects for him." Great God! what a spectacle you gave to us in him! What tender but tranquil views he had! What submission and love of God! What a consciousness of his own nothingness and his sins! What a magnificent idea of the infinite mercy! What religious and humble fear! What tempered confidence! What patience! What constant goodness for all who approached him. France fell in fine under this last chastisement: God showed to her a prince she merited not. The earth was not worthy of him; he was ripe already for the blessed eternity.

The life and soul of the court was his wife, the Duchesse de Burgogne. Although not beautiful she is described as being one of the most charming and fascinating women in the world.

Her gayety [says St. Simon] animated all; and her nymph-like lightness carried her everywhere like a whirlwind. She was the ornament of all diversions, the life and soul of all pleasure, and at balls ravished everybody by the justness and perfection of her dancing. She acquired a familiarity with the king and Madame de Maintenon that not any, even of the royal children, approached. "Never since he came into the world had he become really familiar with any one but her." In private she prattled and skipped about them, now perched upon the arms of their chairs, now playing upon their knees, clasping them round the neck, kissing them, rumpling them, tickling them under the chin, rummaging their tables, opening their letters. The king could not do without her. Everything went wrong with him when she was not by; even at his public supper, if she were away, an additional cloud of seriousness and silence settled upon him. She saw him every day, and if a ball or pleasure-party made her lose half the night, she always contrived to go and embrace him as soon as he was up, and amuse him with a description of the fête.

Monseigneur died of small-pox in 1711. In the following year, the Duchesse de Burgogne was seized with a mysterious illness, of which she expired in great agony. A few hours afterwards her husband was attacked by similar symptoms, of which he also died. Their son, a child of five years of age, followed his parents to the tomb, within a few weeks after their decease. A day or two previous to the attack the duchesse had been warned by her chief physician of a plot to poison her, and about the same time the duke received a similar warning from the king of Spain. On the day she was seized, the Duc de Noailles presented her with a very handsome snuff-box filled with Spanish snuff, of which she took a little and then left it upon a table in her dressing-room. That night she was seized with a feverish headache. As she grew worse, her attendants bethought them of the snuff; they went to look for the box; it had disappeared, and although the most rigorous inquiries were instituted, and every place searched, it was never again seen.

The Duc d'Orléans, afterwards the regent, was suspected of this deed, and all the popular fury was directed towards him. It does not come within the scope of this article to weigh the evidence for and against him, as the whole question as to whether or not the dauphin and dauphine died of poison, and if so who was the poisoner, still remains an impenetrable mystery.

The prevalence of secret poisoning was one of the most terrible phenomena of the age. To such a height did this crime rise in France that Madame de Sévigné ex-

pressed a fear lest the name of Frenchman and poisoner might become synonymous. Two Italians, one of whom was named Exili, were discovered to carry on a regular traffic in poisons. They were cast into the Bastille; one died, Exili survived, and by means of his agents La Voisin and La Vigoureuse, two women, pretended fortune-tellers, and a priest named Le Sage, he continued to exercise his horrible calling, even during his imprisonment. One of the most celebrated *causes* arising out of this discovery was that of the Marquise de Brinvilliers, who, by means of potions supplied by these miscreants, had destroyed her father, her two brothers, and her sister, besides many other people, even the poor and sick, among whom she had distributed poisoned food, probably for the purpose of testing the powers of her drugs. Her accomplice in these crimes was a lover, named St. Croix, who perished of the fumes of a poison he was concocting. She was beheaded, and her body afterwards burned. About the same time a great number of persons of rank and wealth died suddenly under the most suspicious circumstances. The police were now set to work to investigate these events, and brought to light a system of wholesale poisoning, carried on by every grade of society, from the nobility down even to the peasantry, by means of the agents before named. Among the "great" people implicated in these crimes were the Comtesse de Soissons and the Duchesse de Bouillon, two nieces of Mazarin, the Duc de Vendôme, the Duc de Luxembourg, etc., etc. Nearly all were brought to trial before the *Chambre Ardente.* Many were dupes rather than criminals; but the facts elicited by the tribunal afford an extraordinary picture of the superstition of the age, and of a general belief in spells, witchcraft, and other occult influences, even amongst the highest. The Comtesse de Soissons fled to Spain, where she attached herself to the young queen, having been a great friend of her mother's, and whom, as it has been before stated, she was afterwards accused of poisoning. Whether the accusation was true or false has never been proved; but from that hour she became a wanderer, hated and shunned, even by her own son (the celebrated Prince Eugène), and died in absolute want. Her sister, the Duchesse de Bouillon, proved her connection with La Voisin and La Vigoureuse to have begun and ended in a consultation of those occult powers they were supposed to command. The Duc de Luxembourg, a great general who had rendered vast services to his country, pleaded to nothing beyond similar weaknesses, having employed Le Sage to draw up the horoscope of several persons, concerning whom he was curious. His trial, however, lasted fourteen months, during which he was debarred the use of pen and paper, and every means were used to convict him of the crime with which he was charged. But not even the malice of his powerful enemy Louvois could accomplish this, and he was ultimately acquitted. Indeed, the *Chambre Ardente* had been instituted by that despotic minister, and many of its prosecutions were undertaken to gratify his personal hatred.

A terrible man, even to his august master at times, was this Louvois. He was the son of Michael le Tellier, the chancellor, and in 1666 was appointed, through his father's interest, secretary at war. Overbearing and ambitious, hating all who possessed any portion of the royal favor, he became Colbert's most bitter rival and enemy. During many years these two men were Louis' evil and good angels; unfortunately the latter went first, and from the death of Colbert and the ascendency of Louvois date the darkness and misery which clouds the latter portion of this reign. Colbert was all for peace, Louvois was ever inciting the king's vainglorious temper to war. That of 1688, which lasted nine years, cost hundreds of thousands of lives, converted vast tracts of fertile country into arid deserts, ruined arts and commerce, plunged France into defeat and desolation, was, according to the authority of Dangeau, brought about by Louvois to gratify a fit of spleen. The Trianon was built under his superintendence. One day, while surveying the progress of the work, the king observed that one of the windows was smaller than the others. Louvois denied it was so with some insolence. The king reproved him sharply, and went away in great dudgeon. The minister was alarmed. "I am lost," he said, "if I do not find some occupation for a man who loses his temper about such trash: nothing but a war can wean him from building, and a war he shall have." And from that hour he never rested until he had plunged the country into hostilities. He died suddenly in 1691; and again we hear rumors of foul play. A scullion was arrested on suspicion of having put poison into his water-jug, from which he was in the habit of drinking copiously, but nothing could be proved. A strange circumstance, how-

ever, occurred five or six months afterwards: one day Séron, his physician, shut himself up in his private apartment in Versailles, uttering the most dreadful cries; he refused to open the door, and all that inquiries could gain from him was — that he had got what he deserved for what he had done to his master. Eight or ten hours afterwards he was dead, and no further light was ever thrown upon the mystery. The king, to whom Louvois' insolence had become intolerable, seems to have hailed his death as a relief; it was equally acceptable to Madame de Maintenon, the acknowledgment of whose marriage with Louis he had always violently opposed. It is said that his death only prevented his arrest and imprisonment in the Bastille for an insult he had offered to the king. He was in the habit of systematically disobeying his royal master's express commands; it was by his orders the terrible ravages in the Palatinate were executed; he counselled the burning of Trèves, an act of superfluous horror that was too much for even the bigotry of Louis, and he sternly forbade it. A day or two afterwards he boldly announced, in a private council at Marly, that he had given the order. Louis was so exasperated that he snatched up a pair of tongs, and was only prevented from using them upon the minister's head by the interposition of Maintenon. "If a single house is burned your head shall answer for it!" he exclaimed. Fortunately the whole thing was a piece of bravado; the order had not been given. In spite of the tragic horror that lurks behind it, there is something ludicrous in this peep into royal privacy. Louvois was nevertheless a man of genius, and managed his department with rare ability: he was the creator of the commissariat, and wherever the army moved, vast stores were established that served them both in advance and retreat.

Among the great figures of the court, we must not forget the king's confessor, not Père la Chaise, of his younger days, but the terrible Père le Tellier of his age; the destroyer of the Jansenists, and, with Maintenon, the prime mover of the repeal of the Edict of Nantes. St. Simon's picture of this bigot is perhaps the most powerful of all his portraits: —

Harsh, exact, laborious, enemy of all dissipation, of all amusement, of all society, incapable of even associating with his colleagues, he demanded no leniency for himself and accorded none to others. His brain and his health were of iron; his conduct was so also; his nature was savage and cruel. He was profoundly false, deceitful, hidden under a thousand folds; and when he could show himself and make himself feared, he yielded nothing, laughed at the most express promises when he no longer cared to keep them, and pursued with fury those who had trusted to them. He was the terror of the Jesuits, and was so violent to them that they scarcely dared approach him. His exterior kept faith with his interior. His physiognomy was cloudy, false, terrible; his eyes were burning, evil, squinting, his aspect struck all with dismay; one would not have cared to encounter him in a dark wood. The whole aim of his life was to advance the interests of his society; that was his God; his life had been absorbed in that study. Surprisingly ignorant, insolent, impetuous without measure and without discretion, all means were good that furthered his designs. The first time Père le Tellier entered the king's cabinet, after having been presented to him, there was nobody there but Bloin and Fagon (the king's chief physicians) in a corner. Fagon bent two-double, and, leaning on his stick, watched the interview, and studied the physiognomy of this new personage — his duckings and scrapings and words. The king asked him if he was a relation of MM. le Tellier. The good father humbled himself in the dust. "I, sire," answered he, "a relative of MM. le Tellier! I am very different from that. I am a poor peasant of Lower Normandy, where my father was a farmer." Fagon, who watched him in every movement, twisted himself up to look at Bloin, and said, pointing to the Jesuit: "Monsieur, what a cursed" — then shrugging his shoulders he leaned upon his stick again. It turned out he was not mistaken in his strange judgment of a confessor. This Tellier made all the grimaces, not to say the hypocritical monkey tricks, of a man who was doubtful of his place and only took it out of deference to his company.

There are other personages of this wonderful court I would love to describe: M. le Prince, the son of the great Condé, the horrible Duc de Vendôme, although decency would preclude a full description of this monster, etc., etc., but my limited space compels me to stay my pen. Of the royal mistresses, La Vallière, Montespan, Maintenon, of the Duc d'Orléans (the regent), and his daughter, the Duchesse de Berri, I have written in previous numbers of *Temple Bar*, and must not repeat myself.

Turn we now to the central figure of this court, the king himself. Madame de Sévigné has supplied us with a picture of his earlier and brilliant days, St. Simon must be again put under contribution for one of his later life. Here is a description of his daily routine, condensed from the voluminous pages of the duke: —

At eight o'clock the chief valet-de-chambre on duty, who alone had slept in the royal chamber, and who had dressed himself, awoke the king. The chief physician, the chief surgeon, and the nurse (as long as she lived) entered at the same time. The latter kissed the king; the others rubbed and often changed his shirt, because he was in the habit of sweating a great deal. At the quarter the grand chamberlain was called, and those who had what is called the *grandes entrées*. The chamberlain drew back the curtains which had been closed again, and presented the holy water from the vase at the head of the bed. These gentlemen stayed but a moment, and that was the time to speak to the king if any one had anything to ask of him, in which case the rest stood aside. He who had opened the curtains and presented the holy water presented also a prayer-book. Then all passed into the cabinet of the council. A very short religious service being over, the king called; they re-entered. The same officer gave him his dressing-gown; immediately afterwards other privileged courtiers entered, and then everybody, in time to find the king putting on his shoes and stockings, for he did almost everything for himself. Every other day he shaved; he had no toilette-table, but simply a mirror held before him. As soon as he was dressed he prayed beside his bed, the clergy kneeling with him, the laity standing. Then he passed into his cabinet. Thither he was followed by every person who held any office. Having given each his orders for the day all departed, and he was left alone with his sons, a few favorites, and the valets. This was the time that plans for new buildings, etc., were discussed and arranged.* After this came the audiences, mass, then the council, and at one o'clock, usually, the dinner. He always ate alone in his own chamber, that is to say, no one ate with him, not even his sons; sometimes, but rarely, Monsieur was made an exception. He was noted for being a very large eater. The meal finished he re-entered his cabinet, amused himself with feeding his dogs, gave audience to distinguished people, changing his dress at the same time. Then he went abroad, sometimes in his coach, sometimes on horseback, to hunt the stag, sometimes to promenade, or to picnics in the forest of Marly or Fontainebleau. Upon returning anybody might speak to him from the time he left his coach until he reached the foot of the staircase. After resting an hour in his cabinet he went to Madame de Maintenon's. At ten o'clock supper was served; this was usually a grand affair, all the royal family and the principal ladies and gentlemen of the court being present. After supper he stood for some moments with his back leaning against the balustrade at the foot of his bed, encircled by the court; then, bowing to the ladies, he passed into his cabinet. There he spent an hour in company with his children and grandchildren and their husbands and wives, seated in an armchair, his brother in another, the princesses on stools, all the princes standing. Then he went and fed his dogs and passed into his chamber; after this began the *petit coucher*, at which only the most privileged were present; these did not leave until he was in bed.

Louis XIV. [says St. Simon] was created for a brilliant court. In the midst of other men his figure, courage, grace, beauty, mien, even tone of voice, and the majestic and natural charm of his person distinguished him till death as King Bee, and showed if he had only been born a private gentleman he would equally have excelled in pleasures, fêtes, gallantry.

Such testimony from a man who has, above all other chroniclers, shown the seamy and ignoble side of the *Grand Monarque's* character is incontrovertible. Never was man so polite; he never passed a woman, however lowly her position, even though she were one of the menials of his palace, without raising his hat, and the whole time he conversed with a lady he remained uncovered.* And yet never was

* Louis, as it is well known, had a great passion for building (although his only addition to Paris was the Pont Royal). Every one has heard of the vast sums the heterogeneous pile of Versailles cost; but few would imagine that — according to the authority of St. Simon — he expended more upon the construction and embellishment of that gloomy retreat of his latter days, Marly, than even upon the gorgeous palace with which his name is ever associated. For this abode he fixed upon a deep, narrow valley behind Lucienne, shut in by hills and inaccessible swamps. On the slope of one of the hills was a miserable village. This uninviting spot he ordered to be drained, and this done builders were set to work to erect the palace. Not upon these labors, however, so much as upon his caprices in the arrangement of the grounds, was the money lavished. Great trees were brought thither from distant parts, vast tracts were covered with thick woods; but these plantations were scarcely completed before all was again changed, the woods were uprooted, and artificial lakes, upon which floated numbers of magnificent gondolas, took their place. Six weeks afterwards another whim seized the royal fancy, the lakes were filled up and the forest replanted. Then were constructed carp-ponds adorned with the most exquisite paintings, which were scarcely dry ere they were all destroyed to make room for basins and cascades. And all this time France was groaning and famishing beneath the burdens of war.

* The etiquette of his court was the exact reverse of our own. In the presence all remained covered except

man more selfish and indifferent to the convenience of both man and woman; no matter what might be the state of the weather, no matter how delicate might be their health, he insisted upon all the ladies of the court attending him in his long drives or promenades, sometimes continued through several hours, beneath a burning sun or in frost and snow. Sometimes they fell fainting from their horses with illness or fatigue, but such incidents never moved him. His robust constitution felt neither heat nor cold. To no one, not even to Maintenon, did he show any indulgence. When she went abroad he rode or walked beside her carriage bareheaded, and treated her with the most reverential respect; but on the coldest night he would have every door and window of her chamber open when she lay sick in bed, and knowing all the time she was painfully susceptible to draughts. For a noble not to attend court was the greatest offence he could commit against the royal person, and the absolute centralization thus induced was one of the great causes of the miseries of the provinces and — of the Revolution.

He instituted a system of espionage from which no person was safe. He employed a number of Swiss to hang about the corridors and grounds of the palace day and night, watch all ingoings and outgoings, listen to all conversations, and report to him all they saw and heard. All letters were opened at the post-office, and those containing the slightest reference to himself or the government were forwarded to him; a single hostile or satirical expression was sufficient to ruin a person. Of education, thanks to Mazarin, he had little or none, and he was suspicious of talent in others. He could not endure any superiority. He was fond of teaching, even to his cooks; he believed that all his generals and ministers owed their success to his inspiration. To cringe and flatter were the only means of gaining his favor, and this naturally conduced to the employment of incompetents both in military and domestic offices. He could not breathe unless the air was impregnated with the incense of flattery; he would himself sing verses containing the most fulsome adulation of himself. At least half his wars and military displays were the offspring of vanity; he was ever posing himself to dazzle Europe, to strike it with awe, terror, or admiration. Yet a Breton peasant was scarcely more credulous. One day there came to him a farrier from Provence, who told the following extraordinary story. One night when he was returning home, he saw a great light shining against a tree that stood upon the roadside; in this light he saw the figure of a woman, who addressed him, and after informing him she was the late queen, made a certain communication, which she desired him to carry to the king. Thinking he had fallen asleep and dreamed this vision he took no notice of it; shortly afterwards it appeared a second time and delivered the same injunctions. Still he neglected to obey, until he received a third visitation and a command to go to the intendant of the province, tell him the story, and ask for money to carry him to Versailles. He did so; and whether the intendant was credulous enough to swallow the story, or had secret orders, it is impossible to say, but he obeyed the ghost's behests and supplied him with the necessary funds for the journey. The king received him, at first in the presence of his ministers, and afterwards alone; twice they were closeted together for an hour. "I have conversed with him," said his Majesty; "he has much good sense, and is far from mad." He also averred that he had told him a circumstance he was certain was known only to himself. The man was dismissed with a handsome gratuity, and a recommendation to the intendant never to let him want for anything. What the nature of the pretended supernatural communication was never transpired, but it was supposed to relate to the public declaration of his marriage with Maintenon, and the vision was believed to be the work of one of her creatures, a Madame Arnoul, who dabbled in the occult arts.

Although so sanguinary a bigot in his later years, Louis had little or no sense of religion, as the following anecdote will prove. When the Duc d'Orleans was about to start for Spain, he named among the officers of his suite a gentleman named Fontpertius. "What!" exclaimed Louis, when the list was submitted to him, "Fontpertius, the son of that Jansenist woman who ran everywhere after M. Arnould" (the great head of the Jansenists), "I do not wish that man to go with you." "By my faith, sire," replied the duke, "I know not what his mother might have been, but as for the son he is far enough from being a Jansenist, I'll answer for it; for he does not even believe in God." "Is it possible?" exclaimed the king, but in a very softened tone; "well, since it is so, there is no harm. You can take him with you."

the king, and removed their hats only when addressing him or any of the royal family.

It was a heinous crime not to be orthodox, but to be an atheist was a mere bagatelle in the eyes of this religious persecutor.*

Louis the Fourteenth would have been a far better man and a greater king, had not his youth been passed amidst rebellion, and had he received an education befitting his station. For both these misfortunes he was indebted to his weak mother and her infamous minister.† The first, by rendering him morbidly fearful of mob and noble turbulence, urged him to despotism; his lack of knowledge — they scarcely taught him to read and write — warped and narrowed his mind; vanity and self-conceit filled the vacuum of his brain — for a man's self-opinion is usually in the reverse ratio of his abilities and information. In this last lay the causes of his ruin and that of his country.

The spectacle of the earlier part of his reign is grand and imposing; great generals, great writers, an enormous impetus given to arts and manufactures, scientific discoveries, ever-increasing wealth and the most brilliant court of modern Europe, all tended to elevate the central figure and cast a halo of glory around it not its own. Louvois and Maintenon were the evil geniuses who clouded this dazzling picture with a Cimmerian gloom, bringing with them war and bigotry and bloody persecutions. Art, science, literature, withered beneath their foul breaths; one by one the great writers and statesmen and generals died off, and none rose to take their places, for genius could not exist in a world over which such demons presided. With each succeeding year the gloom deepened; a death, strange and mysterious, swept away his children and grandchildren, and all he loved best, and those who survived added to his troubles by their plots and cabals; his treasury was empty, his people famishing, his villages depopulated by Catholic fury, his armies defeated. And he, once the cynosure of Europe, a querulous old man broken down by disease, worn by remorse, cowering over the fire in a cell-like chamber at Marly, groaning, weeping, ever complaining, and opposite to him the withered Gorgon who had done so much to work this mischief. Each was the Nemesis of the other.

How terrible is this woman's wail in one of her letters! —

"Do you not see I am dying of weariness amidst a fortune that can scarcely be imagined? I have been young and pretty; I have tasted pleasure. I have been everywhere loved. In an age more advanced I have passed some years in the commerce of the mind, and I protest to you that all conditions leave a frightful void." And, again, her exclamation to her brother: "I can endure no more, I wish only to die."

Amidst such storm and gloom the *Grand Monarque* at last closed his eyes in death, and the people who had once worshipped him as an idol, now offered up thanks to God for lifting off them the burden of a hideous nightmare of war, famine, and priestcraft.

* Such was the religion of the age. The next generation only cast off the mask and cloak which had hitherto concealed dry bones and dust. What the church was may be gathered from the career of a celebrated ecclesiastic, the Abbé de Vatteville. He began life as a Carthusian; growing weary of his monastery he made his escape, having first shot the prior, who attempted to stay him. Stopping at an inn that night he committed a second murder, shooting a traveller who desired to share his supper. Quitting France he made his way to the East, and entered the Turkish service. Renouncing his religion he embraced Mohammedanism; he was intrusted with a post of considerable consequence in the army. Growing tired of his new country, he offered to betray several important places to the Venetians, with whom it was then at war, on certain conditions. These were, that the pope should grant him absolution for all the crimes he had committed, protect him against the animosity of the Carthusians, and all other religious orders, and preserve to him all the rights of the priesthood, so that he might have the power to accept benefices. So important was the price he offered for these concessions, and so little scrupulous was the papacy, that all were granted him. Having betrayed the Turks, he returned to France, where the queen-mother wished to bestow upon him the archbishopric of Besançon, but this was too much even for his Holiness, and so my ex-Mussulman had to content himself with the abbey of Baume and a second in Picardy. There he lived like a grand seigneur, kept hounds, mistresses, and the most jovial company, was always received with great distinction whenever he visited court, and so lived jovially until the age of ninety.

party. It was a terrible temptation to hear of all those beautiful grazing lands close by in the Platte valley, the freehold of which was to be purchased for a song. The fact is, things were rather bad at Omaha while we were there; and although everybody tried to hang on to his real estate in hopes of better times, still the assessments pressed hard, and one could have very eligible "lots" at very small prices. No doubt there were ominous rumors about. We heard something, as we went further west, about county commissioners, elected by the homesteaders and pre-emptors who are free from taxation, going rather wild in the way of building roads, schools, and bridges at the cost of the mere speculators. It was said that these very non-resident speculators, whose ranks we had been tempted to join, were the curse of the country, and that all laws passed to tax them, and to relieve the real residents, were just. Very well; but what was that other statement about the arrears of taxes owing by these unhappy wretches? Was it fair of the government of any state or any country in the world to sell such debts by auction, and give the buyer the right of extorting forty per cent. per annum until the taxes were paid? We regarded our friends. We hinted that this statement was a capital credulometer. The faith that can accept it is capable of anything.

These profound researches into the condition of public affairs in Omaha, during the further day or two we lingered there, were partly owing to vague dreams of the pleasure of proprietorship, but no doubt they were partly due to the notion that had got into the heads of one or two of our party that the idyllic life of a shepherd in the Platte valley must be a very fine thing. The lieutenant combated this notion fiercely, and begged Lady Sylvia to wait until she had seen the harshness of life even amid the comparative luxury of a well-appointed ranch. Lady Sylvia retorted gently that we had no further knowledge of life at a ranch than herself; that she had attentively listened to all that had been said about the subject by our friends in Omaha; that harshness of living was a relative thing; and that she had no doubt Bell and her husband would soon get used to it, and would not complain.

"Oh no, she will not complain," said he, lightly. "She is very reasonable — she is very sensible. She will never be reconciled to the place while her children are away, and she will have a great deal of crying by herself; but she will not complain."

"Nor would any woman," said Lady Sylvia, boldly. "She is acting rightly; she is doing her duty. I think that women are far more capable of giving up luxuries they have been accustomed to than men are."

This set the lieutenant thinking. On the morning on which we left Omaha, he came aside, and said, —

"I, too, have written a letter to Mr. Balfour. Shall I post it?"

"What is in it?"

"The proposal I told you of the other night, but very — very — what do you call it? — roundabout. I have said perhaps he is only coming out to take his wife home sooner than you go: that is well. I have said perhaps he is waiting until the firm starts again; if that is any use, when they must have been losing for years. Again, that is well. But I have said perhaps he is coming to look how to start a business — an occupation; if that is so, will he stay with us a year? — see if he understands — then he will take the management, and have a yearly percentage. I have said it is only a passing thought; but we will ask Lady Sylvia to stay with us at Idaho until we hear from him. He can telegraph from New York. He will tell her to remain until he comes, or to meet him somewhere; I will get some one to accompany her. What do you say?"

"Post the letter."

"It will be very pleasant for us," said he, in a second or so, as he rubbed his hands in an excited fashion, "to have them out for our neighbors for a year at the least — it will be pleasant for Bell — how can she get any one in Denver or Idaho to know all about her children and Surrey? My dear friend, if you have any sense, you will stay with us too. I will show you bears."

He spoke as if he were already owner of the Rocky Mountains.

"And we will go down to Kansas — a great party, with covered wagons, and picnics, and much amusement — for a buffalo-hunt. And then we will go up to the Parks in the middle of the mountains — what it is, is this, I tell you: if our stay here is compulsive, we will make it as amusing as possible, you will see, if only you will stay the year too."

A sigh was the answer.

And now, as we again set out on our journey westward, the beautiful prairie country seemed more beautiful than ever; and we caught glimpses of the fertile valley of the Platte, in which our imagi-

nary freehold estates lay awaiting us. On and on we went with the never-ending undulations of grass and flowers glowing all around us in the sunlight; the world below a plain of gold, the world above a vault of the palest blue. The space and light and color were altogether most cheerful; and as the train went at a very gentle trot along the single line, we sat outside, for the most part, in the cool breeze. Occasionally we passed a small hamlet, and that had invariably an oddly extemporized look. The wooden houses were stuck down anyhow on the grassy plain; without any trace of the old-fashioned orchards and walled gardens and hedges that bind, as it were, an English village together. Here there was but the satisfaction of the most immediate needs. One wooden building labelled "Drug Store," another wooden building labelled "Grocery Store," and a blacksmith's shop, were ordinarily the chief features of the community. All day we passed in this quiet gliding onward; and when the sun began to sink toward the horizon we found ourselves in the midst of a grassy plain, apparently quite uninhabited and of boundless extent. As the western sky deepened in its gold and green, and as the sun actually touched the horizon, the level light hit across this vast plain in long shafts of dull fire, just catching the tops of the taller rushes near us, and touching some distant sandy slopes into a pale crimson. Lower and lower the sun sank, until it seemed to eat a bit out of the horizon, so blinding was the light; while far above, in a sea of luminous green, lay one long narrow cloud, an island of blood-red.

In a second, when the sun sank, the world seemed to grow quite dark. All around us the prairie land had become of a cold, heavy, opaque green, and the only objects which our bewildered eyes could distinguish were some pale white flowers — like the tufts of canna on a Scotch moor. But presently, and to our intense surprise, the world seemed to leap up again into light and color. This afterglow was most extraordinary. The immeasurable plains of grass became suffused with a rich olive green; the western sky was all a radiance of lemon yellow and silvery gray; while along the eastern horizon — the most inexplicable thing of all — there stretched a great band of smoke-like purple and pink. We soon became familiar with this phenomenon out in the West — this appearance of a vast range of roseate Alps along the eastern horizon, where there was neither mountain nor cloud. It was merely the shadow of the earth, projected by the sunken sun into the earth's atmosphere. But it was an unforgettable thing, this mystic belt of color far away in the east, over the dark earth, and under the pale and neutral hues of the sky.

The interior of a Pullman sleeping-car, after the stalwart colored gentleman has lowered the shelves and made the beds and drawn the curtains, presents a strange sight. The great folds of the dusky curtains, in the dim light of a lamp, move in a mysterious manner, showing the contortions of the human beings within who are trying to dispossess themselves of their garments; while occasionally a foot is shot into the outer air so that the owner can rid himself of his boot. But within these gloomy recesses there is sufficient comfort; and he who is wakeful can lie and look out on the gathering stars as they begin to come out over the dark prairie land. All through the night this huge snake, with its eyes of yellow fire, creeps across the endless plain. If you wake up before the dawn and look out, behold! the old familiar conditions of the world are gone, and the Plough is standing on its head. But still more wonderful is the later awakening; when the yellow sunlight of the morning is shining over the prairies, and when within this long caravan there is a confused shuffling and dressing, everybody wanting to get outside to get a breath of the fresh air. And what is this we find around us now? The vast plain of grass is beautiful in the early light, no doubt; but our attention is quickened by the sight of a drove of antelope which trot lightly and carelessly away toward some low and sandy bluffs in the distance. That solitary object out there seems at first to be a huge vulture; but by-and-by it turns out to be a prairie wolf — a coyote — sitting on its hind-legs and chewing at a bone. The chicken-hawk lifts its heavy wings as we go by, and flies across the plain. And here are the merry and familiar little prairie-dogs — half rabbit and half squirrel — that look at us each from his little hillock of sand, and then pop into their hole only to reappear again when we have passed. Now the long swathes of green and yellow-brown are broken by a few ridges of gray rock; and these, in some places, have patches of orange-red lichen that tell against the pale blue sky. It is a clear, beautiful morning. Even those who have not slept well through the slow rumbling of the night

soon get refreshed up on these high, cool plains.

At Sydney we suddenly came upon an oasis of brisk and busy life in this immeasurable desert of grass; and of course it was with an eager curiosity that we looked at these first indications of the probable life of our friend the ranch-woman. For here were immense herds of cattle brought in from the plains, and large pens and inclosures, and the picturesque herders, with their big boots and broad-rimmed hats, spurring about on their small and wiry horses.

"Shall you dress in buckskin?" asked Lady Sylvia of our lieutenant; "and will you flourish about one of those long whips?"

"Oh no," said he; "I understand my business will be a very tame one — all at a desk."

"Until we can get some trustworthy person to take the whole management," said Bell, gently, and looking down.

"What handsome fellows they are!" the lieutenant cried. "It is a healthy life. Look at the keen brown faces, the flat back, the square shoulders; and not a bit of fat on them. I should like to command a regiment of those fellows. Fancy what cavalry they would make — light, wiry, splendid riders — you could do something with a regiment of those fellows, I think! Lady Sylvia, did I ever tell you what two of my company — the dare-devils! — did at ——?"

Lady Sylvia had never heard that legend of 1870; but she listened to it now with a proud and eager interest; for she had never forsaken, even at the solicitation of her husband, her championship of the Germans.

"I will write a ballad about it some day," said the lieutenant, with a laugh. "'*Es ritt' zwei Uhlanen wohl über den Rhein* ——'"

"Yes!" said Lady Sylvia, with a flash of color leaping to her face, "it *was* well over the Rhine — it was indeed well over the Rhine that they and their companions got before they thought of going home again!"

"Ah, yes," said he humbly, "but it is only the old seesaw. To-day it is Paris, to-morrow it is Berlin that is taken. The only thing is that this time I think we have secured a longer interval than usual; the great fortresses we have taken will keep us secure for many a day to come; our garrisons are armies; they cannot be surprised by treachery; and so long as we have the fortresses, we need not fear any invasion ——"

"But you took them by force: why should not the French take them back by force?" his wife said.

"I think we should not be likely to have that chance again," said he; "the French will take care not to fall into that condition again. But we are now safe and for a long time, because we have their great fortresses, and then our own line of the Rhine fortresses as well. It is the double gate to our house; and we have locked all the locks, and bolted all the bars. And yet we are not going to sleep."

We were again out on the wide and tenantless plains, and Bell was looking with great curiosity at the sort of land in which she was to find her home; for over there on the left the long undulations disappeared away into Colorado. And though these yellow and gray-green plains were cheerful enough in the sunshine, still they were very lonely. No trace of any living thing was visible — not even an antelope, or the familiar little prairie-dog. Far as the eye could reach on this high-lying plateau, there was nothing but the tufts of withered-looking buffalo-grass, with here and there a bleached skull, or the ribs of a skeleton breaking the monotony of the expanse. The lieutenant, who was watching the rueful expression of his wife's face, burst out laughing.

"You will have elbow-room out here, eh?" said he. "You will not crowd your neighbors off the pavement."

"I suppose we shall have no neighbors at all," said she.

"But at Idaho you will have plenty," said he; "it is a great place of fashion, I am told. It is even more fashionable than Denver. Ah, Lady Sylvia, we will show you something now. You have lived too much out of the world, in that quiet place in Surrey. Now we will show you fashion, life, gayety!"

"Is it bowie-knives or pistols that the gentlemen mostly use in Denver?" asked Lady Sylvia, who did not like to hear her native Surrey despised.

"Bowie-knives! pistols!" exclaimed the lieutenant, with some indignation. "When they fight a duel now, it is with tubes of rose-water. When they use dice, it is to say which of them will go away as missionaries to Africa — oh, it is quite true — I have heard many things of the reformation of Denver. The singing-saloons, they are all chapels now. All the people meet once in the forenoon and once in the afternoon to hear an exposition of one of Shakespeare's plays; and the rich people, they have all sent their money away to be

spent on blue china. All the boys are studying to become bishops —— "

He suddenly ceased his nonsense, and grasped his wife's arm. Some object outside had caught his attention. She instantly turned to the window, as we all did; and there, at the distant horizon, we perceived a pale transparent line of blue. You may be sure we were not long inside the carriage after that. The delight of finding something to break the monotony of the plains was boundless. We clung to the iron barrier outside, and craned our necks this way and that, so that we could see from farthest north to farthest south the shadowy, serrated range of the Rocky Mountains. The blue of them appeared to be about as translucent as the silvery light in which they stood; we could but vaguely make out the snow peaks in that long serrated line; they were as a bar of cloud along the horizon. And yet we could not help resting our eyes on them with a great relief and interest, as we pressed on to Cheyenne, at which point we were to break our journey and turn to the south. It was about midday when we reached that city, which was a famous place during the construction of the Union Pacific Railway, and which has even now some claim to distinction. It is with a pardonable pride that its inhabitants repeat the name it then acquired, and all right to which it has by no means abandoned. The style and title in question is "Hell on Wheels."

CHAPTER XLVIII.

"HELL ON WHEELS."

WE step out from the excellent little railway hotel, in which we have taken up our quarters, on to the broad platform, and into the warm light of the afternoon.

"Bell," says our gentle Queen T., looking rather wistfully along the pale rampart of the Rocky Mountains, "these are the walls of your future home. Will you go up to the top of an evening and wave a handkerchief to us? And we will try to answer you from Mickleham Downs."

"On Christmas-night we will send you many a message," said Bell, looking down.

"And my husband and myself," said Lady Sylvia, quite simply, "you will let us join in that too."

"But do you expect to be out here till Christmas?" said Bell, with well-affected surprise.

"I don't think my husband would come to America," said Lady Sylvia, in the most matter-of-fact way, "after what has happened, unless he meant to stay."

"Oh, if you could only be near us!" cried Bell; but she dared not say more.

"That would be very pleasant," Lady Sylvia answered, with a smile; "but of course I don't know what my husband's plans are. We shall know our way more clearly when he comes to Idaho. It will seem so strange to sit down and shape one's life anew; but I suppose a good many people have got to do that."

By this time the lieutenant had secured a carriage which was standing at the end of the platform, along with a pony for himself.

"Now, Mrs. Von Rosen," said he, "air you ready? Guess you've come up from the ranch to have a frolic? Got your dollars ready for the gambling-saloons?"

"And if I have," said she, boldly, "they are licensed by the government. Why should I not amuse myself in these places?"

"Madame," replied her husband, sternly, "the Puritan nation into which you have married permits of no such vices. Cheyenne must follow Homburg, Wiesbaden, Baden-Baden —— "

"No doubt," said the sharper-tongued of our women-folk, who invariably comes to the assistance of her friend — "no doubt that will follow when your pious emperor has annexed the State."

"I beg your pardon, madame," says the lieutenant, politely, "but Wyoming is not a State; it is only a Territory."

"I don't suppose it would matter," she retorts, carelessly, "if the Hohenzollerns could get their hands on it anyhow. But never mind. Come along, Bell, and let us see what sort of neighbors you are likely to have."

They were no doubt rather rough-looking fellows, those gentlemen who lounged about the doors of the drinking-saloons; but there were more picturesque figures visible in the open thoroughfares riding along on stalwart little ponies, the horsemen bronzed of face, clad mostly in buckskin, and with a good deal of ornament about their saddle and stirrups. As for Cheyenne itself, there was certainly nothing about its outward appearance to entitle any one to call it "Hell on Wheels." Its flat, rectangular streets were rather dismal in appearance; there seemed to be little doing even in the drinking-saloons. But brisker times, we were assured, were at hand. The rumors about the gold to be had in the Black Hills would draw to this point the adventurers of many lands, as

free with their money as with their language. Here they would fit themselves out with the wagons and weapons necessary for the journey up to the Black Hills; here they would return — the Sioux permitting — to revel in the delights of keno, and poker, and Bourbon whiskey. Cheyenne would return to its pristine glory, when life — so long as you could cling on to it — was a brisk and exciting business. Certainly the Cheyenne we saw was far from being an exciting place. It was in vain that we implored our Bell to step down and bowie-knife somebody, or do something to let us understand what Cheyenne was in happier times. There was not a single corpse lying at any of the saloon doors, nor any duel being fought in any street. The glory had departed.

But when we got away from these few chief thoroughfares, and got to the outskirts of Cheyenne, we were once more forcibly reminded of our native land; for a better representation of Epsom Downs on the morning after the Derby day could not be found anywhere, always with the difference that here the land is flat and arid. The odd fashion in which these wooden shanties and sheds, with some private houses here and there, are dotted down anyhow on the plain — their temporary look, the big advertisements, the desolate and homeless appearance of the whole place — all served to recall that dismal scene that is spread around the grand stand when the revellers have all returned to town. By-and-by, however, the last of these habitations disappeared, and we found ourselves out on a flat and sandy plain, that was taking a warm tinge from the gathering color in the west. The Rocky Mountains were growing a bit darker in hue now; and that gave them a certain grandeur of aspect, distant as they were. But what was this strange thing ahead of us, far out on the plain? A cloud of dust rises into the golden air; we can hear the faint footfalls of distant horses. The cloud comes nearer; the noise deepens. Now it is the thunder of a troop of men on horseback galloping down upon us as if to sweep us from the road.

"Forward, scout!" cried Bell, who had been getting up her Indian lore, to her husband on the pony; "hold up your right hand and motion them back; if they are friendly, they will retire. Tell them the Great Father of the white men is well disposed toward his red children —— "

"And wouldn't cheat them out of a dollar even if he could get a third term of office by it."

But by this time the enemy had borne down upon us with such swiftness that he had gone right by before we could quite make out who he was. Indeed, amid such dust the smartest cavalry uniforms in the United States army must soon resemble a digger's suit.

We pushed on across the plain, and soon reached the point which these impetuous riders had just left — Fort Russell. The lieutenant was rather anxious to see what style of fortification the United States government adopted to guard against any possible raid on the part of the Indians, exasperated by the encroachments of the miners among the Black Hills; and so we all got down and entered Fort Russell, and had a pleasant walk round in the cool evening air. We greatly admired the pretty little houses built for the quarters of the married officers, and we appreciated the efforts made to get a few cottonwood-trees to grow on this arid soil; but as for fortifications, there was not so much as a bit of red tape surrounding the inclosure. Our good friend who had conducted us hither only laughed when the lieutenant expressed his surprise.

"The Indians would as soon think of invading Washington as coming down here," said he.

"But they have come before," observed the lieutenant, "and that not very long ago. How many massacres did they make when the railway was being built —— "

"Then there were fewer people — Cheyenne was only a few shanties —— "

"Cheyenne!" cried the lieutenant, "Cheyenne a defence? — a handful of Indians they would drive every shopkeeper out of the place in an hour —— "

"I don't know about that," responded our companion for the time being. "The most of the men about here, sir, I can assure you, have had their tussles with the Indians, and could make as good a stand as any soldiers could. But the Sioux won't come down here; they will keep to the hills, where we can't get at them."

"My good friend, this is what I cannot understand, and you will tell me," said the lieutenant, who was arguing only to obtain information. "You are driving the Indians to desperation. You make treaties; you allow the miners to break them; you send out your soldiers to massacre the Indians because they have killed the white men, who had no right to come on their land. Very well: in time you will no doubt get them all killed. But suppose that the chiefs begin to see what is the

end of it. And if they say that they must perish, but that they will perish in a great act of revenge, and if they sweep down here to cut your railway line to pieces — which has brought all these people out — and to ravage Cheyenne, then what is the use of such forts as this Fort Russell and its handful of soldiers? What did I see in a book the other day? that the fighting-men of these Indians alone were not less than eight or ten thousand, because the young men of the Red Cloud and Spotted Tail people could easily be got to join the Sioux; and if they are to die, why should they not do some splendid thing?"

"Well, sir," said our friend, patting the neck of one of his horses, as the ladies were getting into the carriage, "that would be fine — that would be striking in a book or a play. But you don't know the Indians. The Indians are cowards, sir, take my word for it; and they don't fight except for plunder. They are revengeful — oh yes — and malicious as snakes; but they wouldn't kill a man unless they could get his rifle, or his oxen, or something. The young men are different sometimes; they want scalps to make themselves big in the eyes of the gals; but you wouldn't find a whole tribe of Indians flinging their lives away just to make a fuss in the New York papers."

At this point we started off again across the plains; and the discussion was adjourned, as the Irish magistrate said, *sine die* until the evening. Only Bell was anxious to be assured that if Sitting Bull and his merry men should meditate one grand and final act of revenge, they would not make their way down to the plains of Colorado and take up their abode there; and she was greatly comforted when she heard that the chief trouble of the government was that it could not get the Indians to forsake their native hills in the north and go down to the Indian Territory in the south.

"I think, Mrs. Von Rosen," said Lady Sylvia, "that you will have some romantic stories to tell your children when you return to England. You would feel very proud if you compelled the Indians to address you as 'Brave squaw! brave squaw!'"

"I can assure you I am not at all anxious to become a heroine," our Bell said, seriously; no doubt remembering that romantic incidents have sometimes a knack of leaving children motherless.

And now "the Rockies" had grown quite dramatic in their intensity of plum-color, and there were flashing shoots of crimson fire high over the dusky peaks. But as we were driving eastward, we saw even more beautiful colors on the other horizon; for there were huge soft masses of color that had their high ridges of snow touched with a pale saffron as the light went down. And then, when the sun had really sunk, we found that strange phenomenon again appear along the eastern horizon — a band of dull dead blue lying close to the land, where no clouds were, and fading into a warm crimson above. Had this belt of colored shadow been a belt of mountains, we should have estimated them to be about five thousand feet above the level of these plains, which are themselves five thousand or six thousand feet above the level of the sea; and a strange thing was that this dusky blue and the crimson above remained well into the twilight, when all the world around us was growing dark. It was in this wan twilight that we drove out to a lake which will, no doubt, form an ornamental feature in a big park when the Black Hills miners, gorged with wealth, come back to make Cheyenne a great city. The chief attraction of the lake, as we saw it, was the presence of a considerable number of wild-duck on the surface; but we did not stay long to look at them, for the reason that there were several boats out after them; and the tiny jets of pink fire that were from time to time visible in the silvery twilight showed that the occupants of the boats were firing pretty much at random. As we did not wish to have a charge of No. 5 shot for supper, we drove off, and eventually were landed at the railway inn at Cheyenne.

We were quite conscious of having done an injustice to "Hell on Wheels" in taking only this cursory glance at so famous a place; but then we knew that all our letters — and perhaps telegrams — were now at Idaho, and we wished to get on as soon as possible. But as the present writer was unanimously requested by the party to pay a tribute of gratitude to the clean and comfortable little inn at the station, he must now do so; only he must also confess that he was bribed, for the good-natured landlord was pleased, as we sat at supper, to send in to us, with his compliments, a bottle of real French champagne. Good actions should never go unrewarded; and so the gentle reader is most earnestly entreated, the first time he goes to Cheyenne — in fact, he is entreated to go to Cheyenne anyhow — to stay at this inn and give large orders. Moreover, the present writer, not wishing to have his conduct in this particular regarded as being too mercenary, would wish to ex-

plain that the bottle of champagne in question was, as we subsequently discovered, charged for in the bill, and honestly paid for too; but he cannot allow the landlord to be deprived of all credit for his hospitable intentions merely on account of an error on the part of the clerk. We drank to his health then, and we will do so now. Here is to your health, Mr. ——; and to yours, you kind friend, who showed us the non-fortified Fort Russell; and to yours, you young Canadian gentleman, who told us those sad stories about Denver; and we hereby invoke a malison on the Grand Central Hotel of that city, on account of its cockroaches, and its vinous decoctions, and its incivility; but all this is highly improper, and premature, and a breach of confidence.

We did indeed spend a pleasant evening that night at Cheyenne; for we had ordered for our banquet all the strangest dishes on the bill of fare, just to give our friends a notion of the sort of food they would have to encounter during their stay in the West. And then these steaks of antelope and mountain sheep and black-tailed deer derived a certain romance from the presence, on the walls of the room, of splendid heads and antlers, until it appeared to us that we must be mighty hunters just sitting down to supper, with the trophies won by our own sword and spear hung up around us. And then our Prussian strategist — who had acquired such a vast and intimate acquaintance with the Indians from his conversation with the Omaha idiot — proceeded to explain to us his plan of an Indian campaign; which showed that he was quite fitted to take the command of all the red men in Dakota. We were treated to a dose of history, too; to show that, in desperation, the Indians have often risen to commit a general massacre, apparently with no ulterior motive whatever. And of course, when Sitting Bull had swept down on Cheyenne and drunk its taverns dry, and when he had swept down on Denver and filled his pockets — if any — with sham French jewelry, surely he would come up to Idaho to pay a certain young lady a friendly call?

"Bell," said her husband, "you shall have a laurel wreath ready, and you will have all the neighbors trained and ready, and when the great chief approaches, you will all burst out with '*Heil dir im Siegerkranz!*'"

"In the mean time," said Bell sedately, "if we are to catch the train for Denver at five in the morning, we had better get to bed."

CHAPTER XLIX.

IN SOCIETY.

FIVE in the morning — pitch darkness all around the station — a clear star-lit sky — the flashing belt and sword of Orion almost right overhead. We had our breakfast of bread and apples in the great empty saloon; then we went out on to the platform, wondering when the Cyclops eye of the train would come flaring through the dark. For now we were within a few hours' journey of the point to which those messages were to be directed which would finally set at rest one or two grave problems; and there was a good deal of nervousness visible among our women-folk when we touched on these probabilities. But Lady Sylvia showed no nervousness at all. She was eager, buoyant, confident. She was clearly not afraid of any telegram or letter that might be awaiting her at Denver. Nay, when her friends, shivering in the cold and darkness of the early morning, were complaining of the railway arrangements that compelled us to get up at such an hour, she made light of the matter, and showed how, as we went south, we should have the beautiful spectacle of the sunrise breaking on the Rocky Mountains.

At length the train came along, and we got into the warm carriage, in which the conductor was engaged in cramming a blazing stove with still further blocks of wood. Very soon we were away from the scattered shanties of Cheyenne, out on the lone prairie-land that was to be our Bell's future home. And as we sat and silently looked out of the windows, watching a pale glow arise in the east, and trying to make out something on the dark plains below, suddenly we caught sight of some flashing lights of red and yellow. These were the breakfast-fires of some travellers camping out — probably miners or traders making for the Black Hills with a train of wagons and oxen. The light in the east increased; and then we saw all along the western horizon the great wall of the Rocky Mountains become visible in a stream of color — the peaks the faintest rose, the shadowy bulk below a light, transparent, beautiful blue. The morning came on apace; the silvery greys of the east yielding to a glowing saffron. There seemed to be no mists lying on these high plains, for, as the sun rose, we could see an immense distance over the yellow prairie-land. And the first objects we perceived in this lonely desert of grass were a number of antelope quietly grazing within rifle-range of the railway line, tak-

ing no heed whatever, though occasionally one of the more timid would trot off on its spider-like legs to a safer distance. Bell began to laugh. She saw the misery of her husband's face.

"Ah, well," said he, with a sigh, "I suppose if the train were to stop, and you went down with a gun, they would be away like lightning. *But a time will come;* and your husband, Lady Sylvia, will be with me to help me, I hope."

There was certainly no misery on Lady Sylvia's face, now that the brilliant light of the new day filled the carriage. Was this the pale, sad soul who had come away from England with us, out of sorts with the world, and almost aweary of her life? There was a color in her cheeks that nearly rivalled Bell's apple-blossom tints. There was an unusual gladness in her eyes this morning that we could not at first account for; but she let the secret out: she had been making elaborate calculations. The telegram she received at Omaha from Queenstown had been waiting for her two days before she got it. Then, taking into account the number of days we staid at Omaha and the leisurely fashion in which we had come across the plains, there was at least a chance — so she proved to herself — that her husband might at that very moment be landing at one of the New York wharves. It all depended on the steamer. Who knew anything about that steamer? Notoriously it belonged to the fastest of all the lines. Was it possible, then, that as we were chatting and laughing in this railway carriage on the Colorado prairies, Balfour might be on the same continent with us? You could almost have imagined that his stepping ashore had communicated some strange magnetic thrill to his wife's heart.

"We are getting near to Greeley now," said Queen T. to her friend Bell, looking rather eagerly out of the window.

"Yes," said the practical lieutenant, "and we shall have twenty minutes there for a real breakfast. An apple and a bit of bread is not enough, if you are travelling in Colorado air."

But I do not think it was altogether the breakfast — though that, as it turned out, was excellent — that led us to look out with unusual interest for this little township set far among the western plains; there were other reasons, which need not be mentioned here. And, indeed, we have the most pleasant memories of Greeley, as it shone there in the early sunlight. We walked up the broad main thoroughfare, with its twin rows of cotton-wood trees; and no doubt the empty street gained something from the fact that the end of it seemed closed in by the pale blue line of the Rocky Mountains, the peaks here and there glittering with snow. A bright, clean, thriving-looking place, with its handsome red-brick schoolhouse and its capacious white church; while many of the shanties about had pleasant little gardens attached, watered by small irrigation canals from the Cache-la-poudre River. As we were passing one of those tiny streams, a great heron rose slowly into the air, his heavy wings flapping, his legs hanging down; but a large hawk, crossing a field beyond, took no notice of him; and we were disappointed of a bit of extempore falconry. We had only a look at the public park, which is as yet mostly a wilderness of underwood, and a glimpse at the pretty villas beyond; in fact, our explorations nearly lost us our train. As we think of Greeley now — here, in England, in the depth of winter — it shines for us still in the light of the summer morning, and the trees and fields are green around it, and the mountains are blue under the blue of the sky. May it shine and flourish forever!

It is most unfair of the Americans to speak slightingly of Denver. It is a highly respectable city. We were quite astounded, on our first entrance, by the number of people who appeared in black coats and tall hats; and the longer we staid in the place, the more we were impressed by the fashion in which the Denverites had removed the old stains from their reputation by building churches. They have advanced much farther in the paths of civilization than the slow-moving cities of the East. In New York or Boston hotels the servants merely claim a free-and-easy equality with the guests; in Denver they have got far beyond that. The wines are such triumphs of skilful invention as no city in the world can produce. And then, when one goes into the streets (to escape from the beetles in one's bedroom), the eye is charmed by the variety of nationalities everywhere visible. A smart Mexican rides by, with gayly decorated saddle, on his long-tailed pony. Chinese women hobble on their small shoes into an iron-mongery shop. The adjoining saloon is called "*Zur goldenen Trauben;*" and at the door of it a red-haired Irishwoman is stormily quarrelling with an angry but silent and sulky negress. Over this seething admixture of population dwell the twelve patrician families of Denver, shining apart like stars in a silent

heaven of their own. We are not permitted to gaze upon any one of these — unless — unless? Those two people who stood on the steps of the hotel after dinner? They were distinguished-looking persons, and much bediamonded. The lady wore beautiful colors, and the red-faced gentleman had a splendid gold chain round his neck; and thus — so far as we could make out — they spake: —

"Jim," said the lady, "don't you remember that hop of Steve Bellerjean's that he giv after he run away wi' Dan Niggles's gal, to make up all around, when he found pay gravel, and married the gal?"

"No," said the other, reflectively, "I disremember."

"Well, that woman in yaller fixins that stared at me all dinner, I could swear was Steve's woman."

"But Steve run away from her," said the gentleman, who seemed to remember some things, if not the hop. "She didn't pan out well. Tried to put a head on him with a revolver — jealousy and rum. Steve went to Sonora; tried to bust the government; and the Greasers ketched him with a lariat, and his chips were passed in."

The gentleman in the gold chain had suddenly grown melancholy.

"Yes; Steve's chips were called," chimed in his spouse."

"That's what's the matter with all of us," continued her companion in a sad tone. "That's what no Fifteenth Amendment can stop; the chips must be paid. That's what I told the boys down at Gridiron Bend, when I giv my experiences and jined the church, and Euchre-deck Billy heaved that rock into the christenin'-place; sez I, boys, sez I, life gen'rally begins with a square deal, leastways outside the idiot asylum. 'Cordin' as you play your hand, will the promises be kep'. Sure enough, some has aces, and some not, and that's luck; and four aces any day is as good a hand as the Ten Commandments. With four aces, I'd buck agin the devil. But we don't have four aces in the first deal, unless mebbe the czar of Russia, or the Prince of Wales, or some of them chaps; and so life and religion is pretty much as we play the hand we've got."

The lady seemed to put another aspect on these moral truths.

"Hosea Kemp," said she, practically, "that pig-skinned Mormon fraud diskivered that when you raised him ten thousand, and raked in his pile; and he had a full, and you were only king high."

"That was before I knowed better, and I hadn't seen the vanities," said the repentant sinner. "But when I played, I played my hand for all that it was worth; and that's what's the matter with me. You kent fool away your hand and keep the chips; and that's what you find in the commandments. That's the idee." What the idea was we were rather at a loss to discover; but we were not exactly in search of conundrums at this moment.

Indeed, our arrival at Denver had put an end for the time being to our idling and day-dreaming. First of all, there were the letters (there were no telegrams for any one, so we imagined that Balfour had not yet reached New York); and in the general selfishness of each seizing his or her own packet, no one noticed the expression with which Lady Sylvia broke open the only envelope addressed to her. There was a turmoil of news from home, mostly of a domestic and trivial nature, but none the less of tremendous importance to the two mothers. And when they turned to Lady Sylvia, she was sitting there quite calm and undisturbed, without any trace of disappointment on her face.

"So Mr. Balfour has not reached New York yet," said Queen T., in her gentle way.

"I suppose not," was the answer. "I was calculating on the very shortest time possible. This letter was written some time before he left England. It is only about business affairs."

It was not until that evening that Lady Sylvia communicated the contents of this letter to her friend, and she did so without complaint as to the cold and formal manner in which her husband had written. Doubtless, she said, he was perfectly right. She had left him of her own accord; she deserved to be treated as a stranger. But the prompt answer to her message to him convinced her — this she said with a happy confidence in her eyes — of the spirit in which he was now coming out to her; and if, when he came out here, she had only five minutes given to her to tell him —— But the present writer refuses to reveal further the secrets that passed between these two women.

In fact, he would probably never have known, but that at this juncture he was privately appealed to for advice. And if, in the course of this faithful narrative, he has endeavored as far as possible to keep himself in the background, and to be the mere mouthpiece and reporter of the party, that *rôle* must be abandoned for a moment. He must explain that he now found himself in a position of some difficulty. Balfour had written out to Lady

Original from CORNELL UNIVERSITY

Sylvia, informing her of the collapse of his father's firm. It was hopeless, he said, to think of the firm resuming business; the trade that had made his father's fortune was played out. In these circumstances, he considered himself bound to give up everything he possessed to his creditors, and he wished to know whether she, Lady Sylvia, would feel disposed to surrender in like manner the £50,000 settled on her before her marriage. He pointed out to her that she was not legally bound to do so, and that it was a very doubtful question whether she was morally bound; it was a matter for her private feeling. If she felt inclined to give up the money, he would endeavor to gain her father's consent. But he thought that would be difficult, unless she also would join in persuading him; and she might point out that, if he refused, she could in any case pay over the annual interest of the sum. He hoped she was well; and there an end.

Now, if Lady Sylvia had had a bank-note for £50,000 in her pocket, she would have handed it over with a glad heart. She never doubted for a moment that she ought to pay over the money, especially as she now knew that it was her husband's wish; but this reference to her father rather bewildered her, and so she indirectly appealed for counsel.

Now, how was it possible to explain to this gentle creature that the principle on which an ante-nuptial settlement is based is that the wife is literally purchased for a sum of money, and that it is the bounden duty of the trustees to see that this purchase-money shall not be inveigled away from her in any manner whatever? How was it possible to point out to her that she might have children, and that her husband and father were alike bound by their duties as trustees not to let her defraud these helpless things of the future? Nay, more; it would be necessary to tell her that these hypothetical young people might marry; and that, however they might love their mamma, papa, and grandpapa, some cantankerous son-in-law could suddenly come down on the papa and grandpapa and compel them to make good that money which they had allowed, in defiance of their trust, to be dissipated in an act of quixotic sacrifice.

"I always thought the law was idiotic," says Queen T.

"The law in this case is especially devoted to the protection of women, who are not supposed to be able to take care of themselves."

"Do you mean to say that if Lady Sylvia, to whom the money belongs, wishes to give it up, she cannot give it up?"

"It does not belong to her; it belongs to Balfour and Lord Willowby, in trust for her; and they dare not give it up, except at their own risk. What Balfour meant by making himself a trustee can only be imagined; but he is a shrewd fellow."

"And so she cannot give up the money! Surely that is a strange thing — that one is not allowed to defraud one's self!"

"You can defraud yourself as much as you like. If she chooses, she can pay over the £2,000 a year, or whatever it is, to Balfour's creditors; but if she surrendered the original sum, she would be defrauding her children; do you see that? Or does your frantic anxiety to let a woman fling away a fortune that is legally hers blind you to everything?"

"I don't see that her children, if she has any," says this tiny but heroic champion of strict morality, "would benefit much by inheriting money that ought never to have belonged to them. That money, you know very well, belongs to Mr. Balfour's creditors."

"This I know very well: that you would be exceedingly glad to see these two absolute beggars, so that they should be thrown on each other's helpfulness. I have a suspicion that that is the foundation for this pretty anxiety in the cause of morality and justice. Now there is no use in being angry. Without doubt, you have a sensitive conscience, and you are anxious that Lady Sylvia's conscience should be consulted too; but all the same —— "

By this time the proud blood has mounted to her face.

"I came to you for advice, not for a discourse on the conscience," she says, with a splendid look of injured dignity. "I know I am right; and I know that she is right, children or no children. You say that Lord Willowby will probably refuse —— "

"Balfour says so, according to your account."

"Very well; and you explain that he might be called on to make good the money. Could not he be induced to consent by some guarantee — some indemnity —— "

"Certainly, if you can get a big enough fool to become responsible for £50,000 to the end of time. Such people are not common. But there, sit down, and put aside all these fantastic speculations. The immediate thing you want is Lord Willowby's consent to this act of legal van-

Original from CORNELL UNIVERSITY

dalism. If he refuses, his refusal will be based on the personal interests of his daughter. He will not consider children or grandchildren. Long before her eldest born can be twenty-one, Lord Willowby will be gathered to his fathers; and as for the risk he runs, he has not a brass farthing that any one can seize. Very well: you must explain to Lady Silvia, in as delicate a way as you can, that there might be youthful Balfours in the days to come, and that she must consider whether she is acting rightly in throwing away this provision ——"

"But, gracious goodness! her husband wants her to do so, and she wants to do so ——"

"Then let that be settled. Of course, all husbands' wishes are law. Then you must explain to her what it is she is asking her father to do, and point out that it will take a good deal of appealing before he consents. He has a strictly legal right to refuse; further, he can plead his natural concern for his daughter's interests ——"

"He ought to have more regard for his daughter's honor!" says she, warmly.

"Nonsense! You are talking as if Balfour had gone into a conspiracy to get up a fraudulent settlement. It is no business of hers that the firm failed ——"

"I say it is a matter of strict honor and integrity that she should give up this money; and she *shall* give it up!" says Queen T., with an indignant look.

"Very well, then; if you are all quite content, there only remains that you should appeal to Lord Willowby."

"Why do you laugh?"

"Lord Willowby thought he would get some money through Balfour marrying his daughter. Now you are asking him to throw away his last chance of ever getting a penny. And you think he will consent."

"His daughter shall make him," said she, confident in the sublime and invincible powers of virtue. Her confidence, in this instance, at least, was not misplaced — so much must be admitted.

From The Nineteenth Century.

THE MARSHALATE:
A CHAPTER OF FRENCH HISTORY.

MAY 1873 — OCTOBER 1877.

THE elections of the 14th of October have opened a new chapter in the history of France. Whether Marshal MacMahon elects to submit to the national verdict, or to resign his office, or whether he has the evil courage to impose his will by force upon the French people, in any case the peculiar power he has wielded since the fall of M. Thiers must be replaced by something belonging to a different political order. The "marshalate," as it has been aptly named, was neither a pure republican government nor a frank despotism. It was an attempt to evade the oppugnancy between parliamentary institutions and personal rule; it was a compromise which no party in the State cordially accepted, and which was interpreted in different ways according to the diverse opinions of Frenchmen. It has come to an end in the clash of a struggle as momentous as any that France has witnessed since the overthrow of the Bourbon monarchy. Europe has watched its progress with the most painful anxiety. Nevertheless, though the issues are so grave, and the immediate consequences so obvious, it is not surprising that the political forces which have come into collision are imperfectly appreciated. A period of transition and of compromise is always a period of reserves, ambiguities, and confusions, and the history of France during the past four years has been so obscure and shifting, that it would be a reasonable matter for wonder if its undercurrents had been comprehended and remembered even by the most intelligent foreign observers. Yet if we would understand what has happened in France since the 16th of May, and what is likely to happen next month, it is necessary to trace back the tendencies of French parties and the ambitions of French statesmen through the maze of intrigue, passion, and illusion, the analysis of which is, it may be acknowledged, unattractive, but not by any means uninstructive.

It may be useful, therefore, to disentangle from the complicated annals of the marshalate the main threads of political interest. The progress of liberal opinion in France since the resignation of M. Thiers has been not less steady and rapid than it was during the *provisoire* established after the capitulation of Paris. But it has been so often and so ingeniously obstructed, that it is only by taking a broad view of the whole field of advance that we can measure either the pace or the ground that has been gained.

I. M. THIERS AND THE MONARCHISTS.

THE armistice of the 28th of January, 1871, brought to one section of Frenchmen a gleam of hope for long-unsatisfied ambitions. The monarchical parties in France had for more than twenty years

been excluded from power. The Legitimists were too proud to serve a mushroom empire; the Orleanists waged an unceasing war against the outrage on the principles of constitutional government which Louis Napoleon's rule was from the beginning and remained till the end. But they both knew well that when Imperialism broke down, it was neither the Comte de Chambord nor the Comte de Paris that would ascend the vacant throne. The empire, it was evident, could be overthrown only by a popular movement, and no popular movement in the France of the present generation was likely to result in the recall of either the elder or the younger Bourbons. Patient Legitimists — of whom there were a few — and sagacious Orleanists — of whom there were many — recognized the fact that the republic must succeed the empire, and they restricted their ambitions to a later opportunity. They argued that the republic must break down, and that in sheer weariness and disgust the country would then return to the old monarchy, reconciled with the claims of modern progress. Their chief anxiety was lest this chance should escape them through their family feuds. Ever since 1848, therefore, there have been Legitimists and Orleanists who dreamed of "the fusion" of the two branches of the Bourbons. In 1852 M. Thiers told Mr. Senior that the solution of the dynastic difficulty was to be found in the adoption of the Comte de Paris by Henri Cinq. But the exile of Frohsdorf is a true Bourbon, and he has consistently refused to accept any of those compromises which would have permitted the family of Louis Philippe to accept his headship. So when the empire fell, and the republic was dragged through the terrible ordeal of the war, the Monarchists were taken by surprise. Their opportunity, however, came sooner than they had expected. The Imperialists did not yet dare to lift their heads; the Republicans were unable to come forward as the advocates of peace. The Convention signed by M. Jules Favre at Versailles on the 28th of January, stipulated (Article 2) that an Assembly should be at once convoked to decide the question of peace or war. From this Assembly the Bonapartists were almost completely excluded, and the Republicans were hampered in their appeal to the electors by the vehemence with which M. Gambetta and some others advocated the war *à outrance*, a policy at the time denounced by M. Thiers as *politique des fous furieux*. The result was, that about two-thirds of the members of the Bordeaux Assembly were Legitimists and Orleanists, wealthy men, known to be lovers of peace and order, and regarded as peculiarly fitted to negotiate an arrangement with a great monarchy like Germany.

The Monarchists lost no time in fastening their grasp upon the power which had so unexpectedly passed into their hands. The age, the experience, the eminent services of M. Thiers had given him an undisputed claim to the highest place in the State, and the Monarchists had no reason to believe that he would not join hands with them. However, the conclusion of peace was the first task before the Assembly, and the slow performance of the terms agreed upon gave the majority an excuse for remaining invested with power after their original "mandate" had been exhausted. In the scheme for the provisional constitution of the executive power, the Assembly was ingeniously styled *dépositaire de l'autorité souveraine*, and M. Thiers was formally confirmed as president *en attendant qu'il soit statué sur les institutions de France.* Starting from these admissions, they advanced to the preamble of the Rivet-Vitet Constitution (passed the 30th of August, 1871, by 434 against 225 votes), which asserted for the Assembly "the right to use the constituent power, an essential attribute of the sovereignty with which it is invested." The Monarchists thus out-numbering the Republicans by nearly two to one, and having no Bonapartist rivals in the Assembly, might hope to arrange a restoration as soon as they had disposed of their disputes among themselves. The *Pacte de Bordeaux*, to which M. Thiers had given his approval in March, protected the majority from any sudden attack. It was stipulated that, while the work of reorganizing the administration was being carried out, it was the duty of all parties, to quote the words of M. Thiers, "*de n'en tromper aucun, de ne pas vous conduire de manière à préparer à votre insu une solution exclusive qui désolerait les autres partis.*" This understanding gave the Monarchists a chance of patching up "the fusion" at last, and of then using their majority to restore Henri Cinq, with or without a charter.

While M. Thiers was occupied with the task of paying off the German indemnity, and reconstructing the fabric of government which had been shattered by war and revolution, the majority in the Assembly were vainly endeavoring to bring the Comte de Chambord to some declaration which would enable them to present him to France as a constitutional sovereign.

But Henry Cinq opposed to these efforts an unyielding resolution. He would never, he said, become "the legitimate king of the Revolution;" he would never consent to substitute the tricolor for the white flag. He even rebuked "the hours lost in seeking barren combinations." In fact at the close of the first year of the Assembly's authority, the prospects of a restoration seemed as distant as ever. The Bonapartists began to pluck up courage and to creep out of their obscurity. The partial elections showed that the tide of public feeling had turned in favor of the Republicans. The Monarchists had gained nothing, except the expulsion of most of the Republican officials from their places, and the reinstatement of great numbers who had served the empire and were still attached to imperialism.

In the mean time M. Thiers had shown a disposition to separate himself from the majority. M. Casimir Périer, son of the minister of Louis Philippe, and one of the chiefs of the Left Centre, was brought into the cabinet (October 11, 1871), and he lost no time in declaring that he regarded the republic as "the only possible government." In January 1872 M. Thiers pronounced himself in favor of the transfer of the legislature to Paris, a change most distasteful to the Right. He was beaten, and his defeat was probably due to the emphasis with which a month earlier he had insisted on the necessity of giving the republic a fair trial. The Monarchists shrank from the *essai loyal*, and their smothered anger against M. Thiers soon began to produce important consequences. A controversy between the president and the Assembly upon the question of protective duties led (January 19, 1872) to M. Thiers's first resignation, which however he withdrew in deference to the almost unanimous appeal of all parties. But the majority now saw that by choosing their own time and driving M. Thiers into a corner, they could again compel him to quit his place. Indeed, M. Thiers showed a fatal inclination to press the majority with threats of resignation, and in this way he carried his point when the period of military service was being debated in June 1872. It may be doubted whether M. Thiers ever sincerely accepted the attitude of deference towards a parliamentary majority which a constitutional ruler ought to assume, but it must be remembered that he did not possess the power of dissolution with which a constitutional king or minister can at any time secure an appeal to the country.

By the middle of 1872 it had become evident to the Monarchists that M. Thiers must either be subjugated or driven from power. The progress of Bonapartism alarmed Legitimists and Orleanists alike, and convinced them that further delays would be dangerous. Nearly all the by-elections went in favor of the Republicans; but some Bonapartists were elected, among them M. Rouher, and a brisk Imperialist propaganda was begun by secret committees established throughout France. The majority sent a deputation of nine members to the president to demand that thenceforward he should choose all his ministers from the ranks of the Right, but M. Thiers refused to give any such engagement. There was no formal rupture; but it was felt on both sides that if the monarchy was to be restored, it would be in despite of, and not with the aid of, the president. The immediate attack, however, was postponed, because precisely at this time the government achieved its most brilliant financial success in raising the loan of three milliards (one hundred and twenty millions sterling), the subscriptions offered amounting to forty-one milliards, or more than twice the national debt of the United Kingdom. The moment was not opportune for assailing M. Thiers. Yet some malcontents ventured to assert, that if there were a monarchy in France there would be no need of a heavy expenditure upon the army.

In November 1872, M. Thiers took another step away from the Right. He said, in his message to the Assembly: "The republic is the legal government of the country; to desire anything else would be a new revolution and the most formidable of all;" and he urged the necessity of proceeding without delay to the work of giving the republic "that conservative force with which it cannot dispense." This was M. Thiers's gage of battle. He declared that the restoration of national vigor, order, and confidence was complete, as the success of the loan had proved, and that therefore the time had come to set aside the Pact of Bordeaux, and to give France a definite form of government. The majority accepted the challenge. A commission was appointed to draw up an answer to the message, and M. Thiers was invited to give "explanations." He was very frank; he said: "My conviction is that monarchy is impossible, for there are three dynasties competing for a single throne. The Pact of Bordeaux has been torn in pieces by all parties. . . . Every one feels the necessity of getting rid of

the *provisoire*." But he added that he did not presume to dictate the form of constitutional changes which were indispensable. The Right, after secret consultations, determined to strike at M. Thiers by a law defining the responsibility of ministers. By this they hoped not only to compel M. Thiers to take his ministers from the majority, but to exclude him from the tribune. These aims were apparent in a report read by M. Batbie. M. Thiers, through M. Dufaure, resisted, and again urged the importance of "defining" the government. On M. Dufaure's motion a vote of confidence was taken, which gave M. Thiers only a majority of thirty-seven. The subject of ministerial responsibility and of the distribution of power in the State was referred to a Commission of Thirty, of whom nearly two-thirds belonged to the Right.

The Republicans had begun a movement for a dissolution, which quickened the apprehensions of the Monarchists. The latter, while they endeavored to gain time by prolonging the deliberations of the Commission of Thirty, approached the Comte de Chambord with new fusionist schemes. But Henri Cinq was immovable; he wrote (Febuary 5, 1873), "I have neither sacrifices to make nor conditions to accept. I expect little from the cleverness of men and much from the justice of God." The majority returned, therefore, to their schemes for diminishing the influence of the president. M. Thiers did not oppose them on personal points, content to find them moving, however slowly, towards the organization of the government and the dissolution. But the passions of all parties were now unchained. The session of 1873 was discredited by some riotous scenes, one of which ended in M. Grévy's resignation of his presidency of the Assembly, and some scandalous combinations, as when the Legitimists, on March 29, voted for the readmission of the Bonaparte family to the rights of citizenship.

2. THE 24TH OF MAY AND THE MARSHAL.

AFTER two years of half-concealed strife, the conservative majority in the Assembly had at length determined to measure its strength with M. Thiers. The declarations of the latter in favor of the republic, the electoral victories of the Republicans, the pledges which the Assembly itself had given by the law of the 13th of March to proceed at once with the constitutional debates, admonished the Monarchist leaders that they had no time to lose. Unprepared as they were with any definite scheme which would satisfy at once the Legitimists and Orleanists, they hoped so to retard the progress of events, when M. Thiers was once driven from power, that a restoration could be safely and quietly arranged. It is true that there was a section of the majority — the Imperialists, who had steadily grown in numbers and influence — to whom the plans entertained by "the party of the dukes" — the Orleanists and constitutional Legitimists led by the Ducs de Broglie, d'Audiffret-Pasquier, and Decazes — could not be satisfactory. Yet it was necessary to secure the adhesion of the Imperialists not only to strengthen the majority in the Chamber, but to make sure of the army and the civil administration. For many military commanders and civil officials had Imperialist connections, and M. Thiers, in his anxiety to separate himself from Radicalism, had given little substantial power to the Republicans. The alliance with the Bonapartists was concluded early in the spring of 1873, when M. Raoul Duval become secretary to the Commission of Thirty, of which the Duc d'Audiffret-Pasquier was the president, and M. Batbie, famous for his invention of the phrase *gouvernement de combat*, the "reporter."

The coalition only awaited a pretext, which was not long wanting. The extreme Left had been for some time discontented with M. Thiers's concessions to the majority, and had especially revolted against the severe treatment of the municipality of Lyons, which, proposed by the Right, had been accepted by the government. A vacancy in the representation of Paris was to be filled on the 27th of April. The ministerial candidate was M. de Rémusat, minister of foreign affairs, the personal friend of M. Thiers, a distinguished man of letters, and an old Orleanist converted to the republic by the logic of events. As "*un avertissement à M. Thiers*" the Radicals put forward M. Barodet, mayor of Lyons, a politician of extreme opinions. The Right, enchanted at the split among the Republicans, brought forward Colonel Stoffel, an avowed Bonapartist, not with any hope of gaining a majority, but with the intent to proclaim the conservative coalition. M. Barodet was successful, obtaining one hundred and eighty-five thousand votes, while M. de Rémusat had one hundred and thirty-five thousand, and Colonel Stoffel twenty-seven thousand. A fortnight later M. Ranc, for some time a member of the Commune, was elected in the Rhône.

These "Radical" victories afforded a *casus belli.* M. Thiers at once made ready for the conflict. On the 17th of May, he "modified" his cabinet, getting rid of M. de Goulard, representing the Right, and of M. Jules Simon, representing the Left. The new ministers were MM. Casimir Périer, Waddington, and Béranger, all Left Centre politicians, hostile to Radicalism, but also pledged to the republic. Upon this ground the Right were ready to deliver battle. They closed up the ranks of the coalition; they ascertained that if M. Thiers were forced to resign Marshal MacMahon would be willing to accept the vacant place, and then their newspapers opened fire unsparingly upon the government. M. Thiers had been beaten in the Paris election, yet the whole blame of the Radical victory was cast upon him. Those who used to name him "*l'illustre homme d'état,*" now spurned him as "*le sinistre vieillard.*"

The Assembly met on the 19th of May, and M. Buffet, who had succeeded M. Grévy as President, read out a motion, signed by more than three hundred deputies, affirming that "the gravity of the situation demanded a cabinet at the head of affairs which by its firmness should reassure the country," and insisting upon the necessity of "a resolutely conservative policy." The debate was remitted to the 23rd, when the Duc de Broglie led the attack upon M. Thiers. M. Dufaure, the most conservative probably of the ministers, offered a feeble defence. But M. Thiers demanded a hearing in his own cause, which the Right could not refuse to accord. The decision, however, was predetermined. M. Target, at the head of fifteen members of the Left Centre, announced that his *groupe* would vote for the motion of M. Ernoul, a conspicuous "clerical," affirming that "the ministerial modifications had not given conservative interests the satisfaction that might have been expected." With the aid of the *groupe Target*, the Monarchists — Legitimists, Orleanists, and Bonapartists — rejected the order of the day proposed by the ministry, by 362 against 348 votes. It was not a glorious victory, but it was sufficient. The same evening M. Thiers sent in his resignation, which was accepted by 362 votes against 331. Without an adjournment, the majority elected Marshal MacMahon by three hundred and ninety votes, the Republicans abstaining *en masse.* At eleven o'clock at night M. Buffet, in the name of the Assembly, waited on the marshal and secured his formal acceptance. The fact was announced to the Chamber a few minutes after midnight. The *Journal Officiel* of the next day (May 25) published an address from the marshal in which he promised "the re-establishment of moral order," and pledged "the word of an honest man and a soldier" that, "with the aid of the Assembly, he would maintain internal peace and the principles on which society rests." The same day the list of the new ministry, prepared beforehand, like the marshal's nomination, was made public. The Orleanists — MM. de Broglie, Beulé, Batbie — had the greater number of places, but M. Ernoul (Legitimist) became keeper of the seals, and M. Magne (Bonapartist) minister of finances. This was M. Batbie's *gouvernement de combat.*

It is certain that if M. Thiers had been driven from power some months before, the choice of his successor would have dismayed and disgusted France. Down to the end of 1872, Marshal MacMahon was known to Frenchmen as a brave but unlucky soldier. In the Crimea he had displayed more valor than skill, and his strategy in the Italian campaign had been severely criticised. His earlier defeats in the war of 1870 would have cast upon him a serious responsibility, if they had not been forgotten in the more ruinous collapse of Sedan. And at Sedan, it was believed, MacMahon's will had been overruled by the emperor's political fears. Wounded and a captive, he came to represent in the eyes of Frenchmen the gallantry and the misfortunes of France. On his return from Germany he was entrusted with the highest command and with the task of reorganizing the army. But no glory, no popular enthusiasm gathered around his name. In civil affairs he was simply unknown. He had held a seat in the Senate under the empire, and on one occasion he had courageously opposed, as a few remembered, an oppressive law. There was no one, however, ready to affirm that the marshal knew anything more of political conduct and constitutional principles than one of his own orderlies. But when the majority found M. Thiers determined to keep the question of organizing the republic before the country, they turned to Marshal MacMahon, and set their journals to extol the marshal's merits, while they vilified the "*sinistre vieillard.*" After six months of assiduous trumpet-blowing, there was something approaching to an admission on the part of France that Marshal Mac-

Mahon was a great man. At any rate he had the army, it was believed, "well in hand," and his assurances that he would keep the peace were received by France, in her alarm and fatigue, with a sort of acquiescence.

3. THE DUC DE BROGLIE AND THE FUSION.

MARSHAL MACMAHON being unfit himself to exercise political power, the greatest influence in the State fell into the hands of the Duc de Broglie. This son of Louis Philippe's liberal minister, trained in the school of M. Guizot and posing at an early age as the defender of constitutions and parliaments in the *Revue des Deux Mondes*, had been regarded under the empire as a deadly enemy of despotism in all its forms. But when his mastery of the arts of intrigue had organized the coalition which gave him power, and when he found that the country was unwilling to follow the path he had chosen, he quickly cast behind him his constitutional doctrines. So carefully had he studied the practices of the empire in attacking them, that he was well fitted to use them when the time came. The Duc de Broglie had persuaded himself that the Orleanists, though having less support in the country than either the Legitimists or the Bonapartists, could step upon the heads of the others to a supremacy preserved by skilful management of men. The larger operations of politics did not attract him, but supposing it were possible to restore the *pays légal*, the restricted suffrage, of Louis Philippe's reign, he was justified in believing in the results his cleverness might achieve.

The Monarchist coalition had thus gained their first point; they had the command of the army, the civil bureaucracy, the magistracy, and the Assembly. With such means, a restoration might be accomplished. No opposition was to be feared from the marshal who had long served an empire, who was an ardent Catholic, and who probably would accept with grateful joy the office of constable or lieutenant-general of the kingdom from its legitimate king. The officers of the army, the judges, the civil servants, were "made sure" by a rapid process of purgation. Scarcely a single person holding Republican opinions was retained in the service of the State three months after the eventful 24th of May. But the Assembly remained and "the king"—two immense obstacles to any solution. The majority in the Assembly was the work of the coalition, and among its members many Legitimists and the whole of the Bonapartists were jealous of the Orleanist success. The Bonapartists might perhaps be neglected, for the party in power always attracts fresh support, and the government spared no pains to draw over to itself some members of the Left Centre. But the Legitimists could not be dealt with so cavalierly. For them the approval—the advent even of the Comte de Chambord—was an indispensable requirement. On the other hand, the Orleanists could not accept the Comte de Chambord except as a constitutional king. To keep together a parliamentary majority, and to "bring out" the Comte de Chambord as a constitutional king, were tasks worthy even of the Duc de Broglie's unmatched skill as a "lobbyist."

During the parliamentary recess the Monarchical chiefs set to work with extraordinary zeal to patch up "the fusion." In August they triumphed over the scruples of the Comte de Paris, and sent that intelligent and amiable prince to Frohsdorf, to recognize, in so many words, his cousin of the elder branch as "the sole representative of the monarchical principle in France." This submission went far beyond the views of the Orleanist party, and it could only have been condoned by an understanding with Henri Cinq which would content the constitutionalists and make an alliance with the *centre gauche* possible. But neither the Comte de Paris nor those who prompted him had made any terms, and the liberal Monarchists found it necessary at once to protest. They insisted on knowing whether the Comte de Chambord would give constitutional guarantees or not. The Right could not refuse an answer, and delegates were sent to Frohsdorf to obtain "explanations" on the subject of a charter and "the flag." They brought back ambiguous utterances, which failed to produce calm. The Monarchists had appointed a committee of nine, one of whom, the Duc d'Audiffret-Pasquier, told his friends that Marshal MacMahon had given him this warning: "If," said the marshal, "the white flag were raised against the tricolor, the chassepots would go off of themselves, and I could not answer either for order in the streets or for discipline in the army." The committee of nine, in alarm, despatched another envoy, M. Chesnelong, to Frohsdorf, who obtained an assurance that the Comte de Chambord would leave the question of the flag to be determined in concert with the Assembly after his return to France. The Monarchists confidently proclaimed

Public Domain / http://www.hathitrust.org/access_use#pd

that "the restoration was made." But it soon appeared that the comte was appalled by the liberal interpretation placed upon his conversation with M. Chesnelong. He would not, in spite of all entreaties, remain silent. On the 27th of October, 1873, he published a letter from Salzburg, in which he protested against the pressure and the misunderstandings of which he was the victim. Never would he become a revolutionary (*i.e.* constitutional) king; never would he sacrifice his honor to the exigencies of parties; never would he disclaim "the standard of Arques and Ivry." "My person is nothing," he said, "my principle is everything: I am the indispensable pilot, the only one capable of guiding the vessel into port, because for this I have mission and authority." This letter demolished the work of the king-makers. The Orleanist princes refused to accept any compromise to which the "head of the family" was not a party.

There still remained, however, an expedient at which the Duc de Broglie grasped eagerly — the prolongation of Marshal MacMahon's power, not as a Republican president, but as a chief of the executive personally trusted. When the Chamber reassembled (November 5), the marshal himself was put forward by his ministers to suggest that while, on the one hand, the establishment of a definitive form of government "presented grave difficulties," on the other hand, the central power needed at once stability and extended authority. The Duc de Broglie's ministry, which lasted nearly twelve months, was occupied during the first half with the abortive scheme of restoration, and during the second with securing a prolonged dictatorship for Marshal MacMahon.

4. CONSTITUTION-MAKING.

THE Legitimists were naturally angered by the dispersion of the hopes they had cherished for months; but, on the other hand, the Bonapartists saw in the consolidation of the marshal's personal power a new encouragement. The latter were no more ready than the Duc de Broglie and his Orleanist friends to appeal to the country on behalf of their own candidate; the Prince Imperial was too young; the history of 1870 had not yet been forgotten. Nothing could be more satisfactory to the Bonapartists than the Duc de Broglie's efforts to establish Marshal MacMahon in authority as a watchful enemy of "Radicalism." They knew that a reactionary administration would be compelled, whatever its own leanings, to use the instruments which the empire had provided.

The prolongation of the marshal's authority was instantly submitted to the Assembly on its meeting in November. The Right proposed a term of ten years, the Left a term of five years; finally a seven years' term was accepted as a compromise. The title of president of the republic was confirmed. The "Septennate" thus established was supported by a majority of three hundred and eighty-three members, including several of the Left Centre, but excluding a band of malcontent Legitimists. The greater number of its supporters hoped to make it the cover for schemes of an Orleanist or Bonapartist restoration; others were attracted to it by the mere promise of stability; a few were, or professed to be, satisfied with the mention of the republic by name. A new majority, therefore, was substituted for the majority of the 24th of May, and the cabinet was modified to suit the change. MM. Ernoul and Labouillerie, Legitimists, resigned, and the Duc Decazes took office as foreign minister on the express stipulation that all "manifestations," whether Legitimist or Orleanist, Bonapartist or Radical, should be kept down. The Duc de Broglie still remained premier, and took to himself the portfolio of the interior. The ministry had thus become pure Right Centre with a slight leaning to the Left Centre, and with a careful repression of Orleanist hopes. The anger of the Legitimists was unrestrained, but for the time they were powerless.

Another Commission of Thirty, however, was immediately nominated to draw up the constitutional laws, and in this body the Legitimists were strong. Their proceedings showed a disposition to delay the organization of the "public powers," and to jeopardise the stability of which the authors of the Septennate had boasted. The Duc de Broglie devoted his attention more especially to the extirpation of those local liberties of which he had been the champion under the empire. The nomination of mayors and deputy mayors was transferred to the government by the law of January 15, 1874. The changes which followed were all unfavorable to the republic. Nevertheless the Republicans began to show a disposition to accept the Septennate as bound up with the republic, and the Duc de Broglie, by his ambiguities and vacillations, holding fast to nothing except the necessity of keeping the marshal in power, became the

mark for criticism from all sides. The first attack was opened by the Bonapartists. M. Rouher published a manifesto declaring that the Septennate was a truce of parties, but adding that when the day came for an "appeal to the people" (*i.e.* a plébiscite) there would only be two rivals — the republic and the empire. The ministry retorted with two strong circulars, prohibiting the civil functionaries and officers of the army from taking a part in the celebration of the Prince Imperial's birthday. The most striking effect of the Bonapartist movement was to induce the government to make overtures to the Left Centre, which, however, bore no fruit. The Legitimists, on the other hand, lost no time in declaring that they considered the Septennate no bar to a restoration. The marshal, they said, will never oppose his historic words, spoken in the Malakoff, "*J'y suis, j'y reste*," to the summons of Henri Cinq. It was clear that, though the Broglie ministry could on a critical occasion still command the votes of the coalition, the Legitimists and the Bonapartists had become insecure allies. The discontent grew to a head rapidly, and the 16th of May, not quite a year after the overthrow of M. Thiers, the Duc de Broglie was defeated upon the question whether the Electoral Bill should take precedence of the Municipal Bill. He was defeated, as he had triumphed in the previous year, by a coalition. The three groups of the Left were joined by fifty-two Legitimists and eighteen Bonapartists in hurling him from power.

The duke had, it was admitted, become the most unpopular minister that France had known since the days of Prince Polignac. His craft had overreached itself in every direction, and he found no party that would thoroughly trust him. The result of his painful labors, first to restore the house of Orleans, and then to establish the marshalate as a non-republican government, was what M. Rouher had predicted: the republic and the empire were left practically alone in the political field. During the ministry of the Duc de Broglie, and down to December 1874, twenty-one Republicans gained seats and six Bonapartists; not one royalist. A restoration of the Bourbons in either line was never more hopeless than in 1874.

No parliamentary party could be found to undertake the responsibilities under which the Duc de Broglie had fallen, and no coalition was for the moment possible. Marshal MacMahon accordingly formed what was called a business cabinet under the war minister, General de Cissey; but the influence of the Duc de Broglie was known to be still powerful both with the ministers and the marshal.

The Commission of Thirty continued to waste time in barren controversies, until in 1875 the marshal, losing patience, held several conferences of "Moderates" at the Elysée. In these it became evident that the "impersonal Septennate" would never be accepted by the Left Centre, and the hostility of the Legitimists being already known, the subject was apparently forced into an *impasse*. Under the influence of the Duc de Broglie, the marshal, in his message to the Assembly, made a final attempt to carry the Right Centre policy, but the jealousy of Orleanist designs was too strong, and the Chamber refused to adopt the course recommended in the message. The Republicans on this vote again were aided by the Legitimists and Bonapartists, but they could not count on a working majority, and when the ministers resigned, no one could be found to take their places. The marshal resolved to maintain them in power until the close of the debates on the constitutional laws, which at last the Chamber was prepared to carry through. It is unnecessary to follow the complicated discussions upon the "Public Powers Bill" and on the "Senate Bill," in which the months of January and February, 1875, were spent. It is enough to say that the ideas of the Left Centre most powerfully influenced the result, and that a considerable contingent of the Right Centre, led by MM. Wallon and Lavergne, co-operated with them. The Constitution, if not expressly establishing the republic, did so by a clear implication. The Right Centre, including the Duc de Broglie himself and the princes of the Orleans family, reluctantly yielded, though without resigning the hope of renewing the battle another day. The triumph of the Left Centre was for the time complete, and it was evident that the marshal could not decline to choose some at least of his ministers among its members.

To this point, then, had the Duc de Broglie's policy conducted the cause, or causes, he had championed. The anti-Republican majority was broken up; the Left Centre had become the most powerful and compact force in the State; the Republicans of all shades had been forced into union; the Right Centre had been driven to give an unwilling support to arrangements which established the repub-

lic; Marshal MacMahon had unexpectedly taken the Septennate *au sérieux*, and was fast coming to believe that he, too, was a "providential man." Whatever interpretation the marshal might place upon the Republican Constitution — and it was certain that he would not construe it in a liberal sense — the continuance of his power familiarized France and her neighbors with the conception of the republic as an orderly and established government. But the control of the "political machine" had given the largest share of permanent power to men whose ambitions were bound up with the hopes of the empire.

Still the Duc de Broglie had some ground for hoping that he might retrieve his failing fortunes. His personal influence over the marshal-president was great, and though his unpopularity prevented him from taking office, he might hope that his voice would always be powerful in choosing the new ministers and directing their policy. He trusted in the skill of the government agents to hold the Republicans in check at the general election. Finally, he regarded the Senate, one-fourth of the members of which were to be chosen by the moribund Assembly, and the rest by electoral colleagues drawn from the councils of departments, *arrondissements*, and municipalities, as a stronghold of the peculiar conservatism which he professed. M. Gambetta, in a famous speech at Belleville, pointed out that this view was unsound, and that the Senate might be considered as a democratic institution — "a grand council of the communes of France."

M. BUFFET AND THE DISSOLUTION.

In March, 1875, the marshal reorganized his cabinet to fit in with the new Constitution and the increasing strength of the Left. After prolonged negotiations M. Buffet, the president of the Assembly, accepted the premiership with the portfolio of the interior. M. Buffet had certainly shown no favor towards the Left during the two years' hot debating over which he had severely ruled; he had been a minister of the empire, he had shared in the dreams of the fusionists. But it was believed that he had rallied sincerely to the Constitution, and he was known to be a strong man, who could, if he pleased, keep down the intrigues of the Bonapartists, and who could steadily guide the vacillating temper of Marshal MacMahon. The Left were on the whole satisfied with the choice of M. Buffet, especially as he brought into the cabinet with him three conservative Republicans, MM. Dufaure, Léon Say, and Wallon. It was with great reluctance that the marshal, who had repeatedly declared that he was a conservative, and would act only with and through conservatives, consented to this "capitulation." It was, however, inevitable, unless the restraints of the parliamentary system were to be wholly thrown off. The majority of the 24th of May no longer existed. The Legitimists and the Bonapartists were openly hostile to the Constitution, and neither one section nor the other commanded strength enough in the Assembly to maintain a cabinet in power for a single week. The Right Centre, which had formed the flower of the Duc de Broglie's scattered army, had partly drifted into the Legitimist and Bonapartist ranks, and partly had crystallized into a new party, the Constitutionalists, ready to support with the Left a Buffet ministry, but incapable, like the others, of undertaking any exclusive responsibility. The ministers, therefore, could not dispense with the good-will of the Left, and this, at the time, was to be obtained by very moderate concessions. For though the number of the Republicans had been steadily augmented by the results of the by-elections, they were still unable to hold their ground against a "fortuitous concourse" of the fractions of the Right except with the aid of the Constitutionalists. By putting the Left Centre forward as the representatives of Republican opinions, the moderate and extreme Left avoided the risk of alarming the Constitutionalists. Unfortunately there was a small group of irreconcilables — M. Madier de Montjau, M. Naquet, M. Ordinaire — who were mischievously ingenious in giving the government, the Constitutionalists, and the Left Centre reasons or pretexts for alarm.

The new ministry had to clear the way for the dissolution by the enactment of a great number of indispensable supplementary laws. The electoral question, the definition of the powers of the Senate and lower house, the control of the press, had all to be settled before the appeal to the country. But their progress was delayed by the line of policy which M. Buffet adopted. He seemed pained and ashamed at having allied himself with the Left, and he lost no opportunity of telling the Assembly his real opinions. He was jealous, it was said, of the vast though quiet influence which M. Thiers wielded over and through the Left Centre, and which was increasing every day. He was dismayed at the disappearance of the

Right Centre as a party, and was resolved to reconstitute it. He announced his intention of governing with a vigorous conservative policy; he refused to join in the sharp condemnation which the Left wished to pass upon the conduct of the Bonapartists; finally, he used all his efforts to diminish the advantages which the Republicans seemed likely to obtain at the general election. He procured the partial disfranchisement of the French colonies, always Republican; he insisted on obtaining a stringent press law in consideration of his surrendering the powers of the "state of siege." But the most remarkable aggression was upon the *scrutin de liste*, the system of voting for all the members of a department together, for which M. Buffet, aided by M. Dufaure, wished to substitute the *scrutin d'arrondissement*, or "unicorn" constituencies. The Left feared the latter system, because it gave excessive power to local and official influences; and the contest was a sharp one, though the Republicans had forced themselves to endure much from M. Buffet, and the liberal ministers had kept their seats in the cabinet. But the struggle was chiefly important as showing M. Buffet's unexpected success in rallying a Conservative majority. The Left Centre, in defending the *scrutin de liste*, found itself deserted by the Lavergne-Wallon "Constitutionalists," and by some of its own members, including the liberal ministers. To overwhelm them, the whole of the conservative sections combined. It was rumored that if, notwithstanding, the Left should triumph, the marshal would abandon his efforts at conciliation, and would take a Broglie-Fourtou cabinet, as he did a year and a half later. M. Buffet triumphed by 357 against 326 votes.

The blow was a severe one for the Left, especially as it had been provoked by the imprudent violence with which M. Gambetta had attacked the ministry and the moderate Right. But it proved the ruin of M. Buffet and the Right Centre. The latter believed that the opportunity they had missed in 1873 had returned, and became impatient to use their power. The election of the seventy-five life senators by the Assembly gave them an apparent chance of gathering in the fruits of victory. The Left proposed that a list should be selected, taken in fair proportions from the various parties which had voted for the Constitution. The Right refused, and the Left was thus driven to fight *à outrance*. Eleven Legitimists, headed by M. de la Rochette, the personal friend of the Comte de Chambord, offered their votes to the Left, provided they were themselves placed upon the liberal list. This was agreed to, and the result of the ballots showed that several Bonapartists, though without any similar agreement, must have voted with the Republicans. The fact was that the success of the Right Centre had alarmed both Frohsdorf and Chiselhurst, and at any cost the recrudescence of Orleanism was to be forced back.

The seventy-five life senators were thus distributed; fifty belonged to the three constitutional divisions of the Left, seven were Lavergne liberals, and ten ultra-Legitimists who had voted with the Left. The Legitimists adhering to M. Buffet, the Bonapartists and the Right Centre had only eight seats, three of which the Left Centre had conceded to the Duc d'Audiffret-Pasquier, General de Cissey, and M. Wallon. M. Buffet and the Duc de Broglie were among the vanquished. But the former at least was not disheartened; before the final adjournment of the Assembly, which was fixed for the end of the year, he took care to obtain his powers over the press. He then launched a manifesto in which he declared that "the victor of Magenta and the Malakoff would never resign himself to become the plaything of factions and of Radical passions, and the instrument of their demands." This done, he was ready for the dissolution.

The Assembly adjourned on the last day of the year 1875. The senatorial elections were fixed for the 30th of January, and the elections of deputies for the 20th of February. In the mean time the marshal, under M. Buffet's inspiration, again warned the country against Radicalism, and extolled the "conservative and truly liberal policy" of his first minister. More than once there was danger of a rupture with MM. Dufaure and Léon Say, but harmony was outwardly preserved. M. Gambetta counselled the Left to preserve a cautious moderation, and his word of command was obeyed.

5. FROM M. DUFAURE TO M. JULES SIMON.

THE National Assembly which met for the last time on the 31st of December, 1875, had during its five years' tenure of power conferred one priceless benefit on France. It accustomed the French people to think soberly about politics, and to discuss political questions on a basis of practical compromises. If a Radical Assembly had been elected in 1871, it would

probably have attempted legislation for which the mass of the nation was not prepared, and would have given an opportunity for some new savior of society to sweep away parliamentary government, or at any rate to restore the *pays légal* of the July monarchy. But the weakness of the extreme Left in the country taught its leaders the necessity of prudence and *transactions*. Nothing in modern history is more remarkable than the gradual development of M. Gambetta's good sense, except the docile sagacity with which the so-called revolutionary party learned the lesson their leader was at so much pains to teach them. Having to co-operate at the same time with the Left Centre and M. Thiers, with the "Republican Left" and M. Jules Simon, M. Gambetta's organization — the *union républicaine* — was compelled to choose between isolation and "opportunism." It wisely chose the latter, and firmly held to it in spite of the angry protests of a few irreconcilables. And at the elections of 1876 this wisdom bore fruit.

The senatorial elections did not confirm the hopes of M. Buffet and the Duc de Broglie. The former was rejected in the Vosges; the latter only succeeded in the Oise by a coalition with the Bonapartist Admiral La Roncière le Noury, who had been dismissed from his command for an open attack on the constitution. The issue everywhere raised turned upon the interpretation of the clause which permitted the revision of the Constitution in 1880. The Republicans contended that this was not meant to justify a monarchical restoration at the end of the Septennate. The Bonapartists upheld the contrary, but insisted on a *plébiscite* in 1880. M. Buffet and the Duc de Broglie, with the Right Centre, threw into prominence the personal power of Marshal MacMahon, and while parading the revision clause, were careful to abstain from forecasting its operation. At the same time M. Buffet did not disdain the Bonapartist alliance, and the candidates of M. Rouher everywhere received the patronage of the ministry of the interior, except in one or two places where the liberal ministers, MM. Dufaure and Léon Say, were attacked by the champions of the empire. The result was that reckoning the life senators, the senate was thus divided: the extreme Left, 15; the Republican Left, 50; the Left Centre, 80; the Right Centre, 81; the Legitimists, 13; the Bonapartists, 40, while between the two sides of the house wavered a small body of 24 or 25 Constitutionalists, among whom were reckoned the Duc d'Audiffret-Pasquier and M. Bocher. If the last section remained true to the Constitution, M. Buffet's policy might be regarded as defeated.

The elections to the Chamber of Deputies gave much more decisive results. While the Senate reproduced almost precisely "the unstable equilibrium" of the National Assembly, the Lower Chamber was frankly Republican. The extreme Left had 98 seats, the Republican Left 194, the Left Centre 48, and the Constitutionalists 22. The minority was composed of 75 Bonapartists, 25 Legitimists, and 55 Right-Centrists. M. Buffet was beaten in four departments. M. Gambetta was elected by four of the great cities of France — Paris, Marseilles, Lille, and Bordeaux. Before the struggle M. Buffet's journals had announced that "the public security would be inevitably compromised," and the marshal's mission made impossible, unless a conservative Senate, and at least a "Moderate" chamber of deputies, were returned. It was thought for a moment that the marshal would defy the country, but he yielded. He accepted the resignation which M. Buffet promptly tendered, and formed a Left Centre ministry under M. Dufaure. Among the new ministers were several trusted conservative Republicans: M. Ricard, who took the portfolio of the interior, M. Waddington, and Christophle. M. Léon Say and the Duc Decazes remained in their former places. At one time it seemed probable that Marshal MacMahon would go still further, and a cabinet under M. Casimir Périer representing not the Left Centre only, but the Left Centre and the pure Left, was proposed. The marshal, however, refused to have anything to do with a pure Left cabinet, or to sanction the large changes in the bureaucracy which M. Périer deemed necessary for the security of the republic.

It was, however, a great step in advance to bring the marshal to the acceptance of a ministry that might be fairly called liberal. He insisted indeed on keeping the army, the navy, and the foreign office in the hands of ministers, two of whom at least would have been at once rejected if their nominations had been submitted to a parliamentary vote. But there was much to be said in excuse for the marshal. A dull man, ignorant of civil affairs, and accustomed to use the peremptory methods of military command, his head had been turned by the perpetual incense of contending parties, each of whom was eager to influence the executive chief, and to

exhibit him as a partisan or a sympathizer. He had come to believe himself indispensable, adored, the protector of order against revolutionary passions; and, believing this, it was scarcely reasonable to expect him to defer to the simple formulas which govern the conduct of constitutional sovereigns. Moreover, behind the marshal was the Duc de Broglie, now counselling compromise, now resistance, but always meditating a sudden blow at the Republicans.

The session of 1876 was uneventful. The Republican majority in the Chamber did nothing to justify the panic with which the news of their victory had been received by the conservatives. Yet exciting topics were not wanting. The amnesty claimed for the Communist prisoners by the majority, the authority of the Church over higher education, the honors to be paid at the funerals of officers of the *Légion d'Honneur* who were buried without religious rites, did undoubtedly show that the government was not in accord with the Chamber, and that the Senate was in accord neither with the executive nor with the lower house. While the Republican majority of the deputies had been increased by the invalidation of some conservative elections, and the choice of liberals in place of Bonapartists and Legitimists, a conservative majority on the Senate was formed by the filling up of certain seats lost to the liberals by deaths, and by the defection of the Constitutionalists. The main cause, however, of the weakness of the Dufaure ministry was its disinclination to grapple with the administrative question. Its liberal intentions were everywhere crossed and confounded by Bonapartist and Legitimist judges, prefects, and mayors. It was not astonishing that the Republican Chamber showed some dissatisfaction. But as M. Thiers in his posthumous address to the election of the ninth arrondissement of Paris has pointed out, in spite of this irritation, no Radical measures were carried; a conservative policy was maintained in the reorganization of the army, in the conduct of foreign affairs, in ecclesiastical relations, in finance, and, finally, with respect to the balance of power in the State.

M. Dufaure, finding himself checked both in the Senate and in the Chamber, resigned petulantly in December 1876. The attempts of the marshal to form ministries which would not force him further towards the Left failed. Neither the Duc d'Audiffret-Pasquier nor M. Grévy (presidents respectively, of the two houses) would undertake the task. It was, indeed, indispensable that the new government should rest upon a parliamentary majority. As M. Gambetta said, "*Il faut suivre la Chambre ou la dissoudre!*" For a moment again the marshal thought of an "extra parliamentary ministry," but the Left seemed ready to meet any expedient of this kind with a war *à outrance* upon the supplies. The Duc de Broglie himself was of opinion that "the pear was not ripe," and he advised Marshal MacMahon to send for M. Jules Simon, the leader of the moderate Left. It was only after a painful struggle that the marshal consented, but he did consent, and M. Simon came into office, taking with the presidency of the Council the portfolio of the interior. M. Martel, a respected member of the Left Centre and vice-president of the Senate, became keeper of the seals.

6. THE 16TH OF MAY.

M. JULES SIMON'S cabinet began with more than one success which ought to have reassured the marshal and the conservatives. M. Gambetta imprudently provoked a conflict between the Chambers on the question whether the Senate should be allowed to alter money bills or should be restricted, according to the English precedent and the right interpretation of the letter of the Constitution, to the rejection or acceptance of the budget as a whole. But on this point M. Jules Simon triumphed over M. Gambetta, and the danger of a collision like that between the Victorian chambers on the Darling grant a few years ago was averted. In other parts of his policy M. Jules Simon appeared for a time to triumph at once over the suspicions of the thoroughgoing Republicans and the prejudices of the marshal. He proceeded slowly but steadily to carry out the administrative changes from which the Dufaure cabinet had shrunk, and to place Republican magistrates, prefects, and other officers in posts previously occupied by avowed enemies of the republic. He did not resist, though he did not follow to its full extent, the energetic feeling of hostility to Ultramontanism which the majority in the Chamber began to show. He expressed sympathy with the movement for freeing the press from the trammels that M. Buffet and his predecessors had in the interests of "order" thrown around it. At length it grew apparent that M. Jules Simon, in spite of his dexterity in evading unpleasant issues, was, and was determined to remain, a parliamentary minister, not a

personal agent of Marshal MacMahon. The cabal which has ever since the 24th of May, 1873, been hidden behind the presidential chair came to the conclusion that it was time to strike a blow. On the 16th of May, a memorable date, the marshal sent a letter to his president of the council insisting that the latter did not possess influence enough in the Chamber to carry on the government, and reproaching him with his complaisance towards the Radicals. M. Jules Simon and his colleagues immediately resigned, and the "government of combat" was reconstituted, with the Duc de Broglie as premier and keeper of the seals and M. de Fourtou as minister of the interior.

The 16th of May was exactly the counterpart of the 24th of May. The Duc de Broglie had in both instances prepared everything beforehand, and sprung his mines with rare skill. But when he overthrew M. Thiers he had been able to organize a majority, and against M. Jules Simon no such success was possible. The imminent presence of disaster cooled the most heated spirits among the Republicans. In the Chamber, when the marshal's *coup* was announced, there was neither confusion nor excitement in the ranks of the Left. A resolution was proposed asserting the rights of parliamentary majorities, and carried by the whole of the Republican party. The action of the Senate, whose assent was needed for the dissolution, was awaited calmly, and only a few riotous Bonapartists such as MM. Paul de Cassagnac and Robert Mitchell disturbed the tranquillity of debate. M. de Fourtou, by a clumsy compliment thrown at the majority in the defunct National Assembly, gave the Republicans an opportunity of acclaiming M. Thiers as "the liberator of the territory," and of putting him forward as an avowed competitor for the presidency. Marshal MacMahon, by declaring his incompatibility of temper with the Radical majority in the Chamber, had appealed to the country against them, and it seemed clear that unless he cast off all pretences of respect for constitutional principles, he was bound to abide by the issue of the appeal. He had not, however, taken into account the important fact that so long as M. Thiers was ready to take his place, the country would not be frightened by his threatened retirement.

The Senate supported the marshal's dissolution decree by a majority of twenty. Exactly one-half of the senators (one hundred and fifty) voted in the affirmative. It is only fair to say that the conduct of the majority may be defended on constitutional principles. If Marshal MacMahon had been somewhat brusque in dismissing M. Jules Simon and installing the Duc de Broglie in his place, he was still guilty of no legal breach of the Constitution, and he was bound, like any other constitutional sovereign, to accede to the demand of his new ministers when, checked in the Chamber, they wished to appeal to the nation. The Senate cannot be blamed for sanctioning this appeal, nor could they have been blamed for refusing it. But it was apparent that many of the Constitutionalists and a few of the Left Centre politicians had drifted away from their allies in the popular branch of the legislature.

The dissolution once resolved upon, both parties braced themselves for a conflict more decisive than any that France had witnessed since the downfall of the Bourbon throne. The Left hoped to conquer by moderation, the Right by "vigor." M. Thiers, M. Gambetta, M. Jules Simon, M. Louis Blanc, M. Victor Hugo, were for once agreed upon immediate ends and means. The majority which had opposed the marshal's dismissal of his liberal ministers was to be returned unbroken, or if possible augmented. The "three hundred and sixty-three," whether Left Centre, Left, or extreme Left, were in the first place to be re-elected, and every anti-Republican seat was to be attacked. The Republicans, sinking all differences of ultimate objects, were to hold together on the constitutional ground which Marshal MacMahon had conveniently defined for them. He had declared that he could not govern with a Radical Chamber, and that the country had been entrapped into voting for Radical candidates in 1876 by the unauthorized use of his name. If the three hundred and sixty-three, or the greater number of them, were returned in spite of his denunciation, he would be compelled, it was hoped, to acknowledge that the country wished to be governed through the Republicans.

It is clear that the marshal, advised by the Duc de Broglie, had persuaded himself that France, in sheer despair of losing his guidance, would submit her own wishes to his. The Duc de Broglie himself had probably no such confidence, but he trusted much in the strenuous "management" of the political machine by M. de Fourtou and the official forces of the empire. These were means which, when the empire used them, the Duc de Broglie had repudiated in the loftiest disdainful mo-

ralities, but if they could only be employed to bring back a docile conservative Chamber, which would establish the *pays légal* and leave the Right Centre to govern it, all might be well. The duc's reckonings omitted the ambitions of the Bonapartists, who for their own part had no notion of being left out of the game, but were willing to postpone their claims to a later day.

So the campaign opened. Its incidents are too fresh in the recollections of all of us to need repetition here. M. de Fourtou did all that the marshal and the Duc de Broglie could have expected of him. Never, even under the empire itself, were the prefects, mayors, and all the rest of the bureaucracy so active. The voice of Republican opinion was everywhere strangled. The press was coerced; public meetings were bullied into silence; the most moderate statements of the political issue before the country were made the mark for vindictive prosecutions. The Duc de Broglie as keeper of the seals rivalled the "energy" of his colleague of the interior, and the indictment of M. Gambetta for a speech in which he laid down the constitutional principle that the chief of the executive, when he appeals to the country against a hostile legislature and is beaten, must "either submit or resign," appeared the high-water mark of "conservative" pretensions. But this was followed up by two proclamations in which Marshal MacMahon personally addressed the French people and told them that adverse elections would not force him upon M. Gambetta's dilemma. If defeated — for he made the defeat of his ministers his own — he would neither accept a ministry from the parliamentary majority nor surrender his place to any rival. "With the Senate," he would continue to govern and to maintain order.

What Marshal MacMahon meant by this oracular utterance is now the great problem before France; for the electors have not been terrified by his threats into voting against their convictions. As M. de Fourtou and the Duc de Broglie redoubled their "administrative pressure," the Republicans closed up their ranks and displayed a calm, moderate, and firm resolution, that won the admiration of even those who have little sympathy with the Revolution and its developments. The death of M. Thiers seemed a heavy blow, but it was sustained in a worthy spirit. M. Grévy was put forward as the representative of the same moderate but steadfast championship of parliamentary liberties of which M. Thiers, in the admirable State paper he left behind him, had justly claimed the credit. The government multiplied its restless and splenetic interference down to the very day of the election, and it received its reward.

On Sunday, the 14th of October, the votes of the French electors were taken in the midst of profound and imposing calm. The Republicans returned were three hundred and twenty-five, the anti-Republicans less than two hundred. A few seats remained to be disposed of on the second ballot (Oct. 28). The Republican majority is at least one hundred and twenty: as great as any English minister has commanded since the rout of the Whigs by Pitt. Such is the answer of France to Marshal MacMahon's challenge. How will "the simple soldier" of the Elysée receive the plain and disagreeable intimation that his pretensions are held incompatible with the rights of his countrymen?

E. D. J. WILSON.

From Good Words.

DORIS BARUGH.

A YORKSHIRE STORY.

BY THE AUTHOR OF "PATTY."

CHAPTER XXXIII.

THE SORCERY OF LOVE.

BUT Gilbert Raine was more skilled in the art of raising the storm than in quelling it. At luncheon his allusions to the dispute vexed Rica, because they attracted Mr. Burneston's attention and made him, too, begin to tease.

Doris was preoccupied and so did not attempt to help her friend, and Rica, though she had tried to keep a smiling face, got up from table with eyes smarting from repressed tears, and a feeling of sore vexation with herself, for being so easily irritated.

She hurried away to her bedroom. "How stupid I am to let him vex me! I must go home to work," she said; "this holiday life evidently does not suit me, it has made me conceited, or I should not be so touchy."

"Doris," — Mr. Burneston had followed his wife into the garden after luncheon, — "do you know that Raine is really smitten with Miss Masham? I never saw him take so much notice of any woman. You know he was jilted some years ago. Poor old fellow, I don't think your friend cares a bit for him."

"Was he jilted?" but Doris spoke coldly; she had not at all relinquished her plan of marrying Rica to George, and she went on towards the houses where she knew she should find the gardener.

"Stay here a little," her husband said, and he sat down on the seat beneath the cedar. "Slater may wait. You seem to forget we have scarcely had a moment's talk since you came back."

Doris glanced at him from under the shade of her garden bonnet. She wondered he looked so grave.

"I am not going away again for a year, Philip, so you will have plenty of time to get tired of me."

"You were very good to come back so punctually," he said, and then he prodded with his stick the dry fir needles that formed a brown carpet at their feet. Presently, in a more earnest tone, "Are you really glad to come home to me, my darling?"

Doris's thoughts had gone back to George and Rica, at this she looked up. "Yes," she said simply, "of course I am glad."

But though she smiled sweetly Mr. Burneston was not satisfied. Till now his wife had been perfect in his eyes, and she was perfect still; but he had felt her absence very keenly, he had looked forward to her home-coming so ardently, that her equanimity almost ruffled him. Perhaps the contrast afforded by Rica Masham's impulsive nature had impressed him, for as he sat musing under the cedar, while he told himself that his wife's graceful self-possession was one of her rarest gifts, he felt a hungry longing that she would show a more impulsive fondness towards him.

He sighed. "You have not told me anything about your father or George; were they satisfied with your looks? I fancy from what you say that your mother was completely absorbed by her grandson."

"My father looks older, I think; and George — well, on the whole, I think George is greatly improved;" then with her wonted directness, "I was not hearty just now when you spoke of Mr. Raine and Rica, because I so dearly want her for a sister; please do not encourage him to like her."

Mr. Burneston smiled at her earnestness, and for an instant he thought reproachfully, "She can be warm enough about anything she has at heart."

"But are you sure George is free to care for your friend?" he said; "his is not a nature to change, and he did care for pretty Rose Duncombe, I'm sure. I used to see them together when you were away, remember."

"He does not deny it." Mrs. Burneston's cheeks flushed, as all that talk on the hilltop came back to her memory. "But, Philip, surely it is only a fancy; what can a clever, thoughtful man like him have in common with such a girl as that? He and Rica, who is really well educated, are much better suited to each other, and they seemed to find so much sympathy at the Cairn."

"Sympathy is not love, my darling, it belongs more to friendship. Some of the most ardent love-affairs I have seen have been between opposite natures, natures which actually clashed till love made them one."

Doris sat thinking.

"Philip! do you think," she said timidly, and the tone made his pulses beat quicker, it was so unlike the even, trustful voice he was used to — "do you think," she repeated, "that I have deteriorated, grown worldly, I mean? George says I have."

He put his arm round her and kissed her.

"George is a simpleton," he said.

"No, indeed he is not! he never speaks at random; it was about this subject: he said he loved Rose, and I said love was not the only requisite for a happy marriage, and that if he tried he would soon love Rica dearly, and he said I was worldly to set so little store by love."

"My dear child, you are simply perfect, but when you are as old as I am, you will know that this feeling, or sorcery, or whatever love may be, is the most obstinate and unchangeable of maladies. You," he glanced at her unresponsive face and sighed, "my darling, when you know more about love yourself, you will be more merciful to George."

"What do you mean?" she said. "It seems to me that you are as unreasonable as George is. He says I am too worldly to understand love, and you say I am too young. It seems to me that each person must love acording to his or her temperament. Rose is violent and uncontrolled, and she loves, I suppose, in the same manner, and" — she stopped self-convicted. George was neither violent nor uncontrolled, and then her own passionate love for her child thrilled through her reproachfully; and yet, though she knew he was waiting to be assured of her love, she could not deceive her husband.

"You are too good for me every way,"

she said, and her voice was so full of pain that he longed to take her in his arms and comfort her. "Have I not told you so?"

She got up hastily and went into the house. She met Mr. Raine and passed him, but neither of them spoke.

Raine hurried on to Mr. Burneston, he held an open letter.

"I say, Phil, here's no end of a mischief. It seems this letter — it's from Ralph to me, poor fellow! — was left in the bag by mistake this morning. Benjamin has just brought it in." Then seeing how pale and anxious the father looked — "He's not ill, old fellow, but he has got into a confounded scrape, and I'm afraid he will have to leave Eton."

BOOK V. — JEALOUSY.

CHAPTER XXXIV.

"LITTLE PHIL."

JUNE, "the sweetest and gentlest of months," was at its loveliest. The garden at Burneston Hall glowed with the purple and white and yellow of rhododendrons and azaleas — the last of every hue — orange, scarlet, purple, and primrose. Showing above these were groups of scarlet hawthorn and snow-balls of guelder rose, shaded with golden showers of pendent laburnum, the luxuriant wealth of autumn, but with the tender tints and coy delicacy of spring on the leaves and on the grass.

In the dark river nook made by the turn in the terrace wall was a plot of water-lilies. The white blossoms had opened widely, hiding their delicate green cups as they warmed their golden bosoms in their sunshine. They seemed to float like the starred queens of the river on green silken barges, here and there spangled with gold, as yellow nymphœas showed between the close-clinging raft of leaves. In the terrace wall, beside one pier of the steps, a wild rose had niched itself, and flung down long sprays to the water's edge — sprays which, in the early morning, had been green, but on which the warm sunshine had opened the hidden white buds into exquisite golden-centred roses.

Towards these flowers, which grew so high in air, before their long arms flung themselves down to the river, that they were plainly to be seen from the garden, little Phil Burneston was dragging his nurse. He was a fine little fellow, nearly three years old now, with a lovely face, not much like that of either father or mother, most like Doris in delicacy and regularity of features, but with fair silken hair and dark, sweet, brown eyes.

"I'se goin' to get Faith a nosegay, an' I will," he said in a sweet, decided voice. "I yikes to, an' gran'ma says I'se to do what I yikes, acos I'se a gentleman."

Phil's nurses had no great reverence for "gran'ma." He was allowed, while his father and mother were in London, to pay a yearly visit to the Cairn under the conduct of his grandfather, who came over to Steersley to fetch him and bring him home, and for about a month after his return he was so spoiled and tiresome that only his mother could control him.

"No, indeed, Master Phil, an' Missis Emmett wouldn't approve of such goin's on, an' your ma," added the London nurse with emphasis, "would be shocked."

"No, she wouldn't; oo are silly." Then he suddenly spied his mother at the glass door. "Mamma!" — he ran away to her, and clasped his arms round her knees — "oo doesn't mind me picking roses, does oo?"

"Don't pick those near the water, my boy. Come with mamma to the flower-garden, and Phil shall gather himself a nosegay. Come." She held out her hand.

But the little face still looked determined.

"Me wants roses. Faith yikes roses best; Ralph says so. Where is Ralph, mamma? Me wants him."

"You shall have some roses, darling. Come."

She did not stoop to give the child one of the passionate kisses which she gave him when there was no one by to see; the child's words had stirred into movement the serpent that poisoned her life — her jealousy of Ralph Burneston.

He had been home only a few days, and little Phil had clung to him with a love which hitherto the child had only shown to his mother. Phil was not much with Faith now. When he was about two years old the housekeeper had spoken her mind about his visits to the Cairn, and but for Mr. Burneston's intercession she would have been dismissed.

"She may remain, as you wish it," Doris had said; "but she can only be housekeeper for the future. She has done her duty by our darling; I do her that justice; but I can see that her influence would be prejudicial now."

"As you like, though it is hard on Faith." Mr. Burneston sometimes wished his wife would be less stern and unbending towards her servants. To the poor she was very kind and indulgent; but it seemed

impossible to her now to forget, even for a moment, that she was Mrs. Burneston of Burneston; and her husband thought she was very hard in her judgment of Ralph.

Mr. Burneston had gone off to Eton with Gilbert Raine, and although Ralph's fault had been grave and disgraceful, still Raine's influence and the squire's judgment had drawn him to be lenient towards the boy, who really seemed earnest in his promise of amendment. Mr. Burneston's idea was to keep Ralph at Burneston for a year with a tutor, and then send him to Oxford; but when this was proposed Ralph begged to be placed abroad with a foreign tutor.

"He is right," Doris said; "he knows he cannot resist temptation, and he will have far less temptation to drink in France than he would have in England; besides, Philip, I really shrink from living under the same roof with a son who could so disgrace his father's name; and — and I cannot bear to think of his influence on little Phil."

Mr. Burneston was silent.

"I have vexed you," Doris said; "forgive me. I did not mean to do it. If it ever becomes possible for our little one to be as much in fault as Ralph is, be sure that I shall wish you to punish him severely."

She put her hand on her husband's shoulder; but there was no caress in the action: it was rather as if she strove to prove that she had no bias against Ralph.

Mr. Burneston looked up at her earnestly as she stood before him, then he shook his head and smiled.

"We'll not discuss that, my love. God grant that you may never be put to such a trial! I have told you before that you are apt to judge hardly of yourself as well as of others, and I don't believe you would be as unloving as all that."

"Unloving!" Doris withdrew her hand as it fell by her side. "Surely justice and truth must come first; indeed, Philip, I shall always wish you to be much firmer with our boy than you seem to have been with Ralph."

"Poor Ralph!" Then as he rose from his chair — for this talk had taken place in his wife's room — "Ah, my darling, if you loved me better — and you will some day, I know — you would not be so very hard on Ralph."

Her husband left the room as he spoke. "So very hard on Ralph!"

Doris felt as she thought over the subject that it could not be again discussed between them; it touched them both too nearly on points which they could not see with the same eyes. "If you loved me better!" Her heart ached sorely at her husband's words. She could not accuse herself of any failure in wifely duty.

"He is exacting," she said proudly. "I do love him; I cannot always be telling him so. I like to be with him better than any one except baby."

She was deeply wounded. When they next met, her husband tried by more than usual tenderness to efface the memory of his words, and Doris was too high-minded to show any rancor or coldness; but her reserve increased, and certainly her husband's appeal did not produce the effect he had hoped.

After a few months Ralph announced himself so pleased with his French life — he was placed with a French *savant* close to Tours — that he entreated to be allowed to remain, choosing to spend his summer holidays in excursions to Switzerland, the Tyrol, etc., rather than at Burneston. He refused to return to England, even for Christmas, to the infinite relief of Doris.

But when the first summer holidays came she persuaded her husband to spend a fortnight with his son, while she went to the Cairn to fetch home little Phil, who had been staying with his devoted grandmother.

Last year Gilbert Raine had volunteered to accompany Ralph to the Tyrol, and now in this bright fine weather the young man had returned without invitation to Burneston.

He had shown so much affection for little Phil that Doris had softened towards him, and had even taken his part against his father. Mr. Burneston found his son greatly altered. On Sunday he had yawned all church-time, and had made jokes about the sermons; then he smoked from morning till night; and besides these "foreign habits," as his father called them, Ralph had evidently coarsened both in manner and language.

Even Faith had said, "Eh, Maister Ralph, whist, will ye noo?" more than once; but Phil could talk of nothing but his "big brother," and he worried to be with him all day long.

"Where's Ralph, mamma?" he said plaintively. "Me wants Ralph dreffully."

Doris stopped, and clasped the baby hand in hers.

"We'll go and find him, darling," she said. Her jealousy even was conquered for the moment by that compelling power — a child's entreaty.

But when they reached the rose-garden,

a round plot surrounded by wire arches on which snowy clusters of blossoms with tassels of rosy buds contrasted with glorious creamy and with dark velvet-like crimson flowers, the child clapped his hands with delight.

"Me wants two — fee — four — five, all for Faith," he said. "Ralph says Faith yikes roses. Mamma, dho find Ralph; will 'oo tell Ralph me wants him arectly?"

It was the first time the child had ever sent her away from him, and she felt pained that it should be for Ralph.

On her last visit to the Cairn, George had been absent, but John Barugh had urged her strongly to cherish affection between Ralph Burneston and his little brother; this thought came back now and helped Phil's entreaty.

"Do you love brother Ralph so much?" She looked down sadly into the baby face, feeling as if it were no longer her special property.

"Welly, welly much! Me would yike to go to cool wiv Ralph," and the sweet dark eyes were lifted wistfully to the mother's face.

"Oh, Phil!" — there was such pain in her voice — "like to go to school away from mamma?"

"Dess — me would tum home adain;" then, with his little decided manner, which so perfectly imitated his mother's, he said, "Dho an' find Ralph arectly, will oo, mamma?"

Doris called the nurse, and turned towards the house. Her dark, finely-marked eyebrows were closely knit; the deep-set liquid eyes looked full of trouble, and the firm rosy lips were pressed together. All at once her troubled look turned into a smile.

"After all, it is natural; the child has never seen his brother before. The novelty of a brother is delightful to him, and I suppose there is a natural feeling towards him. Phil is so good and sweet that he may be of use to Ralph; only I must see how Ralph behaves. I can't have my precious boy injured by bad example, and I suppose Ralph will be often here now."

For the first time a chill doubt of the power of her own influence troubled Doris. She remembered that, yielding as her husband was, he always contradicted her about Ralph, and seemed to doubt her judgment in regard to him. Gilbert Raine too in his rare visits had shown the same distrust.

"But surely," she said, "if Ralph does not treat me better than he used to, his father will not care to have him at Burneston. I will be as kind as possible; and, come what may, I will not speak against Ralph to his father. Surely then Philip will believe in my justice towards his son."

As she went into the house she met Benjamin Hazelgrave.

"Where is Mr. Ralph?" she asked.

"Maister Ralph? He's gaen oop t' village, ma'am. Ah thinks he's mebbe gaen'd te Maister Sunley's aboot t' fishin'."

Since that memorable day Doris had not gone into either of the stone cottages opposite Church Farm. She had learned at the Cairn that Rose had twice left home to fill the situation of nursery governess. She believed that she was still away.

"I hope so," she said as she mounted the hill; "though I suppose Ralph is too much of a fine gentleman now that he has been abroad and in society to care to flirt with a village girl like Rose."

She had reached the top of the hill; and, turning her head resolutely away from Church Farm, she looked on to Sunley's cottage. He was not sitting at the door; the door itself was closed, so was the window-shutter. Evidently Joseph was away from home.

While Doris stood she wondered at herself. Was it likely that Ralph would come, just to please his little brother, if he had set his mind on sport?

"But still he would be pleased I took the trouble to seek him," she said.

All at once the door beside her opened, and Ralph came out of Mrs. Drummond's cottage. Doris saw the door shut by some unseen hand, and she knew that it could not be that of Mrs. Drummond, who for more than a year had been bedridden, and was tended in Rose's absence by Sukey Swaddles.

"It may be Sukey Swaddles now," Doris thought; but the next moment Ralph, who had not yet turned towards her, tapped at the door; he put in his head and said something, and then the door closed again. But Doris had seen Rose's flushed face, and had seen too that the girl perceived her.

Ralph was unconscious of Doris's presence, and he turned to go down-hill, muttering to himself.

For a moment Doris stood undecided, then she hurried after her stepson.

"Ralph!" He turned; his bronzed, bearded face looked quite unmoved by the sight of her. "You have been talking to Rose Duncombe," she said. "Ralph, indeed you must not go to see her; it is wrong."

Ralph looked first surprised, then insolent, then he laughed.

"Really," he said, "I think you had better not interfere with me, Mrs. Burneston. I can manage my own affairs."

Doris knew that she had spoken hastily and imperiously, but still she felt that she was right. She said, "I cannot see wrong done without trying to prevent it. It is not good for Rose."

"Rose! — nonsense! You had better mind your own business," he said, interrupting her roughly. "You will do more harm than good." He turned and went up-hill again, past the church along the highroad.

A bright flush rose on her delicate face, but she checked her anger.

"I said I would not speak against him to his father," said Doris; "I will not. I will show Philip the danger of keeping Rose here, and leave it all to him. She must be sent away this time."

CHAPTER XXXV.

THE SQUIRE'S PERPLEXITY.

THE only chance Doris had had of speaking to her husband was as they went down to dinner.

They used the drawing-room when they had visitors. At other times Mrs. Burneston's sitting-room was the usual rendezvous before dinner, but sometimes she and her husband met in the gallery into which their dressing-rooms opened.

They met there to-day, and as the gong had sounded they went down-stairs arm-in-arm.

As they reached the bottom of the staircase, Ralph appeared above at the arched recess beside the bust of Clytie.

"Rose Duncombe is at home again just now," Doris said in a low voice; "it is not safe for Ralph, is it?"

The squire shrugged his shoulders; but the troubled look, which he had worn since Ralph's return, deepened.

"Perhaps not," he said; then Ralph joined them and they went in to dinner.

Mr. Burneston was very silent, but he was too much occupied with his own perplexity to notice the evident estrangement between his wife and his son — the forced politeness of their frigid reserve.

Doris left the table as soon as dinner was over to seek the peace and soothing which her child had such power to give to her — though now a slight dread hovered over these meetings with her darling, the dread that he should speak of Ralph. She shrank from the strong, overmastering dislike, but it pursued her. Hitherto she had found a refuge from it with little Phil, but now that the baby voice made Ralph its constant theme, Doris almost writhed under the added torture.

"I fear I hate him," she said, as she went up-stairs, "he is so weak, so vain and shallow; and now there is a new manner, that of a confident coxcomb; all the freshness of boyhood has left him, and he is only twenty. I cannot go on living with him in this way. Either I must conquer this hatred, or he must go."

Ralph left the dining-room almost directly after Mrs. Burneston did; his father's silence bored him, and besides he had to keep an appointment he had made with Rose. His father's face cleared when his son went away, but his eyes were still full of sadness. Although at different periods he had lived out of the world he had always been full of pursuits; his time and his thoughts too had been fully occupied; he had never indulged in self-communing, nor had he, except on rare occasions, troubled himself to think out his son's future. He was an optimist; all had hitherto gone right with him and his, and therefore all would go right to the end. This would have been his theory had he been questioned on it, till Ralph came back from his self-imposed exile.

The disgrace Ralph had incurred at Eton had pained and shocked his father; but Mr. Burneston shook trouble off easily, and disliked to be reminded of it. The evident change in his son's expression and manner had disturbed him on the youth's return from France, but even then at first Mr. Burneston had laughed at his own anxiety, and told himself he was growing a fidget. Away from Ralph, he shook off the uneasiness he felt; but each time this became more difficult. His attention was constantly roused by some look or word which showed how great the change was; Ralph's utter irreverence and his frequent oaths shocked his father, and the coarseness of some of his remarks.

To-day the squire sat thinking far more seriously than usual.

"Yes," he said, "Doris is right. Ralph is just in a mood to make a fool of himself with Rose Duncombe; and though I really believe the girl is good and steady enough, still his foolish notice of her may unsettle her; it is not fair to risk even the chance of it for the poor little girl."

He sighed, he disliked trouble, and yet he was strongly moved to go out at once and speak to Rose. He knew that it was useless to ask his wife to interfere, for he

had silently comprehended the dislike she felt towards the pretty village girl. He had a good deal of fatherly liking for Rose; she had grown up under his eye, and he liked to look at her in the way he liked to look at anything that pleased him; but he had spoken to her very seldom since his marriage, lest it should vex Doris. Indeed the Burneston people generally said that marriage with the farmer's daughter had made the squire "much less free" than he had been when single.

"Yes," he said at last, "I'll see Rose at once. It would be easy for her to go to the Cairn for a bit," he thought, as he went into the hall to get his hat. "If I wrote to Mrs. Barugh I am sure she would ask her at once; I know George would thank me for giving him the chance of seeing her. Poor little girl, I should be sorry if she was made unhappy."

He looked uneasy and then laughed.

"I am foolish about Doris," he said; "she would not be human if she was not wrong sometimes, and she is quite wrong about George and Rose. This marriage would do very well. The worthy fellow would make a good woman of her."

So he sauntered quietly up to the stone cottage — not through the steep village, but round by the vicarage and then across the glebe-field — the secret pain and pleasure of his life. He loved to picture his beautiful wife as the child to whom he had at once given his love, and yet he felt that Doris always shrank from any reference to that first meeting.

He shrugged his shoulders.

"Dear girl! Why should she not have whims as well as other people?" he said, looking at the gate. "I want her to be perfect, I suppose."

CHAPTER XXXVI.

ROSE AND THE SQUIRE.

It is a certain truth that true love has an elevating influence, and often rouses character in a being who without it would never have emerged from the mere monotony of commonplace. The shade of disappointment which tinged Mr. Burneston's overmastering love for his wife served to keep it unselfish and purified. He was far more sympathetic and less careless in his feelings for others than he had been before his second marriage, and he now felt roused up to protect Rose from his son's folly.

As he drew near the hazel copse he heard a rustling; he turned his head inquiringly and stood still, just within sight of the little gate that led from the nut-wood into the glebe-field, with a corresponding entrance set at right angles into the churchyard. Though it had grown quite dusk within the wood, there was a clear space round the gates, and as he stood looking Rose Duncombe came hurrying out of the wood; she pushed open the gate into the churchyard, and then closed it behind her. Having done this she stood still, leaning back on the gate, and clasped her hands over her eyes. It seemed to Mr. Burneston that she was either in pain or in grief.

He hesitated; then, finding that the girl stood still, quite heedless of any observation, he went close up to the gate leading into the field. It was so near the one against which she leaned that he could have touched Rose's shoulder.

She stood like a statue, utterly absorbed in her great grief. She saw her love for Ralph in all its strength, and she knew, with the sure insight which a true love sometimes gives, that she was wasting it on a worthless object. A pit seemed to open at her feet, dividing her forever from Ralph. If she stretched across it after him, there was no firm hand to steady her steps and guide her safely over the yawning rent.

"It's just play to him," she said passionately; "an' it's my very life; he cares nowt for me! Oh, what shall I do, what shall I do?"

But the passion was soon wept away, and her sadness deepened.

"Rose!"

She gave a little cry, and looked up and saw the face she had loved so dearly all her life, and which she had grown to idolize in Ralph, but now with a pitying, kindly look on it which seemed to Rose older and far kindlier than the squire's. Her heart went out to him in an agony of love and remorse.

"Don't speak kind to me, sir; ah cannut bear it. If you kenned what ah'd been deeain, you'd be ower put aboot to speak a word to me."

She spoke in a wild, shrill voice that startled Mr. Burneston, and made him look round at the rick-yard to see if Shadrach or his wife were within hearing.

"Hush! hush, my poor child! Come home now," he said quietly, "I want to speak to you."

He stepped over the low wall of the churchyard and stood beside her. "Come!" He touched her arm and went on. Rose followed mechanically, past the grey headstones gleaming in the dark,

past the screen of weird fir-trees, along two sides of the low granite wall, till he reached the entrance facing the church porch.

He held this gate open for his companion to pass through, and then followed her closely. She had spoken so desperately that he felt afraid she would run away from him.

But Rose went on to the cottage doggedly and heavily. The burst of passion had left her stupid and dazed with sorrow, for the sight of Mr. Burneston did not bring any comfort, it only strengthened the renunciation of Ralph, which she had plainly seen before her as she leaned against the gate.

"Rose, can I see your grandmother, or is it too late?"

The girl looked at him dreamily. "It's ower late," she said, "but gran'mother's sure to be waking. Ah'll tell her you want to speak wi' her, but ah doobts if she'll hear you."

She went up-stairs slowly, as if she had suddenly grown old, but came down again in a minute.

"Gran'mother's sleepin', sir. Shall I waken her?"

"Oh no, I'll see her to-morrow; and I'll see you too, you are tired now."

"No!" She roused herself and stood in his way to the door. She was very pale, and her lips trembled. "You'd best speak now; you'd best not trust me, as ah doesn't trust myself. Oh, sir, ah'll tell you all. Ah've been talkin' and listenin' to Master Ralph, an' mebbe if you don't forbid me ah sal gan on listenin'. Ah loves to hear him talk, an' ah's nane so much pleasure i' my life 'at ah can give him up all at yance — sae noo, that's it!"

The desperation in her voice shocked him.

"No, Rose," he said gently, "I am sure you won't try to see Ralph again, and I'll tell you why. If you care for him you will not try to get him into further disgrace, and I am already very angry with him. These meetings are harmful to you both."

"Ah told him you would be angry, but he didn't seem to think so. But it's all my fault, sir, indeed it is — he's not to blame!"

Mr. Burneston looked stern. He wanted to counsel Rose, and did not know how to begin. The acquaintance could not have gone far, he thought, or she would be less suddenly frank. He stood looking at her. "Sit down, my poor child, and listen to me quietly," he said presently. "It isn't right, you know, Rose, to meet young men like Master Ralph in the evening."

She looked wounded.

"Didn't ah say ah'd been deeain wrang? What mair can I say? Ah've teld him 'at ah wadn't see him again."

"Rose, you must go away for a time." He spoke very kindly. "I don't blame you so much, my poor lass. You will wish to go away, Rose, to please me — won't you?"

She looked up passionately; then, as the yearning pity in his kind, gentle face stole into her heart, she clasped her hands over her eyes and sobbed.

"Dunnut — ah teld you nut — dunnut speak kind nur look kind. Ah's nut worth it; but oh, Mr. Burneston, ah'd try all ways to please you, but dunnut ask me t' go schoolin' again; it makes me feel 'at ah'd like to drown myself."

He looked surprised and shocked.

"I never meant that, lass; but you shall go and stay with Mrs. Barugh at the Cairn. Listen!" — he raised his hand to check the fiery answer he read in her face as her hands left her eyes — "they will all make you very welcome there, and you will be a great comfort to Mrs. Barugh. She has been ailing lately, and your kind nursing will cheer her up."

Rose looked eager.

"Did Mrs. Barugh sae 'at she would be fain t' see me?" she asked. Then she shook her head; "If she'd written to me, ah'd ha' credited it — but ah cannot otherways."

"You cannot expect her to write when she is ill, Rose." Mr. Burneston hesitated, for in his heart he guessed Rose would be unwelcome to Mrs. Barugh. "But surely you will take my word. I will write to-morrow, and tell them to expect you the day after. I will see that you reach Steersley in time for the coach. Now it is settled, is it not?"

Rose looked unwilling.

"Ah cannot say ah want to go when ah'd liefer stay," she said sullenly, keeping her eyes on the ground.

She looked so like her old childish self, with her flushed, tear-stained cheeks and pouting lips, that Mr. Burneston felt inclined to manage her as he used to manage her ten years ago.

"Come, Rose," he said, "your grandmother always said you would do anything to please me, and yet the first time I ask you really to do the thing I wish, you refuse. This is not kind, Rose."

Rose grew very red, and her head drooped on her bosom.

"Will it really and truly please you, sir, or is it only to fret him?"

"He deserves punishment" — Mr. Burneston frowned — "but it is for my sake and yours, Rose, that I wish you to go away quite as much as — as for any other reason. Come, you used to be a tractable girl, don't let me find you changed. You have no father to advise you, and you ought to listen to me as if I were your father."

He held out his hand, and smiled so kindly at her that the girl's pride melted, and she took his hand in both of hers and kissed it reverently, but with all her heart going out to him. "Ah'd lay down my life to please you, sir, you're so kind an' good," she sobbed. "Ah said ah always would. Ah'll go whenever you please."

"That's right, that's a good little girl. Well, then. I'll send some one the morning after to-morrow, at five o'clock, to drive you to Steersley. You will breakfast at the inn and wait there for the coach, and some one from the Cairn will meet you at the village and drive you up to the moor. You will have no trouble, everything will be settled for you. Now, good-bye," — then looking suddenly grave, "Stay indoors to-morrow, Rose, and if my son should call, which is not likely, do not talk to him."

"Ah winnut, indeed ah winnut."

"Go in," he said, as she opened the door for him, "and don't stand looking after me. Good-bye, God bless you, my poor dear child!"

Rose obeyed, then she went back into the little bare parlor and sat down.

"Oh, he is kind an' good. Ah could kiss the ground he stands on. Ah do love him. Ah believe if he teld me to walk to Lunnon ah'd try to deea it. Is it because he's Ralph's father, or is it 'at ah loves Ralph becos he's like t' squire? Ah loved t' squire first. Well, he's gitten his will o' mey. Ah've gien my word to deea just t' very thing 'at ah doesn't like, an' to put up with Mrs. Barugh's mincing an' snubbing ways, an' wi' George's sermons — poor lad, ah mun not be hard on George, for ah's in his debt. Ah cannot give him what he's given me." She turned as if from some hateful thought, and the look of sullen despair overspread her face again.

"Oh, my heart will breeak. Ah cannot gan away. Ah teld Ralph 'at ah'd nut meet him again, but even noo ah langs to be with him. Na yan ivver spake so sweet to me as he does; an' whiles he looks an' whiles ah listens it's like heaven," she murmured. "What fur should ah give it up? it's ower hard, ower cruel."

CHAPTER XXXVII.

MRS. BARUGH'S UNWELCOME GUEST.

The letter which Mr. Burneston wrote was to Mr. Barugh instead of to Dorothy. Without throwing any blame on Rose, or even hinting that she had any special liking for his son, he said that for certain reasons he had decided it was better Rose should be kept away from Burneston for a couple of months or so, and that if it did not suit Mr. Barugh to receive her he should be grateful if he would find a temporary home for her in the village. "Poor little Rose looks ill and worried," he added, "and the change will, I think, be of real service to her. I have not said anything about it to Doris, so perhaps it may be better not to allude to my interference in the matter. I think George's advice and influence would be very valuable to poor Rose just now."

On that morning John Barugh met the postman on his way, so no one at the Cairn knew that Mr. Burneston had written to him.

At first the farmer had been sorely puzzled — his mind was always slow in struggling to grasp facts — but as he walked with long striding steps across the moor he began to understand. He had not heard of Ralph's return, but it seemed to him that there was some one in or near Burneston, perhaps staying at the Hall, who was paying more attention to Rose than the squire thought good for her.

"He's rare an' thoughtful an' kind, an' ah's reet fain tu help him."

A sly smile spread over the serious, weather-beaten face. "T' missis is touchous aboot Rose; ah's dootful hoo shea'll tak' it."

He considered for some time, but there was little time to spare; finally he turned back and went indoors, startling Dorothy by his unexpected return — startling her still more when he abruptly told her she might expect Rose as a visitor in the afternoon.

He made the announcement as briefly as possible, and then retreated, leaving his wife too much surprised to ask questions.

Dorothy stood looking at the door he had closed after him, then she said three times in rapid succession, varying the

accent with each explosion, "Well, I never!"

Her first thought was to get George out of the way, but there was no time for this, and as she stood thinking it seemed to her that the danger was less great than she had fancied it far off.

That curious mounting in ideas which comes to some people from the promotion of their friends and relations, had told strongly on Mrs. Barugh. She was still a farmer's wife, but since her daughter's marriage she had thought it necessary to keep two maids instead of one, to use her silver forks every day instead of keeping them locked up, with various other small innovations, tending, as she considered, to establish her position as the mother of a real lady. Her horizon had so mounted that, although she could not drag John up with her, she tried to persuade herself that his rusticity was merely a way he had, and that he would "pass muster," as she expressed it, whenever the day should come — that day which shone like some bright particular star on the limits of Dorothy's horizon — when she should find herself installed as a visitor at Burneston Hall.

It seemed to her too that George had benefited greatly by his visits to Mr. Hawnby, and she had hoped much from Rica's society. It had been a general disappointment that Miss Masham had not repeated her visit to the Cairn. Her mother's lingering illness and death had chained her at home, but Mrs. Barugh knew that she had at last promised to spend a short time at Burneston, and she hoped would also come to the farm.

"If he cares for Miss Masham, it isn't in nature that he can care for Rose too," said the anxious mother; "there's often more in fancy than in reality; not that he's breathed her name, but seeing her here with her common ways, and thinking of the difference between her and that sweet young lady, must surely open his eyes to the foolishness of his fancy, even supposing he still does care for Rose."

She settled her cap, and threw both its long lavender strings irritably over her shoulders.

"Anyway, it is a folly to have her here," she said pettishly; "but when John has that strong manner on him, you might as well try to reason with a rushlight for spluttering."

George had gone away very early on one of his long expeditions across the moors; he took his dinner with him on these occasions, and came in late. To-night, though Dorothy had been eagerly expecting his arrival, she was too busy talking to Rose to notice it. George stopped at the parlor door, the strange but well-known voice thrilled through him, and set his heart beating and his pulse throbbing with mad excitement. Yes, there was Rose! This moment, which he had so longed for, to see his one only love seated at his own hearthstone between father and mother, had come at last.

The door was open, no one heard his approach, and he stood in the shadow of the doorway gazing his fill at Rose.

She looked pale and sad. He noticed that she scarcely answered his mother's flow of talk. A feeling that was half enjoyment, half shyness, held him back; he watched the light glistening on her golden hair, the pretty turn of her head with its small pink ears, and the exquisite crisped waves in which the shining hair rolled back from the creamy temples. Her pensive, subdued look added a fresh charm — it gave the refinement to her he had sometimes missed. He could restrain himself no longer, his eyes were dancing with delight as he came forward.

Rose heard his step, but she would not look round. Mrs. Barugh felt suddenly tongue-tied, the farmer only was easy and natural.

"See thee, mah lad, here's a stranger fra Burneston. Noo, mah lad, thoo's reet doon fain tu see Rose?"

"That ah is; ye're reet eneeaf, fayther. How are yu, Rose, an' how's t' gran'-mother?"

Rose flushed at George's warm welcome.

"She's no better nor no worse," she said fretfully; "there's no use me trying to make her hear, it hurts my throat to speak to her, she's deafer than deaf, she only hears Maister Sunley, no one else."

"It's a sore affliction," John said seriously, while Dorothy glanced at George to see how he took Rose's grumbling.

Poor woman, her heart sank within her at what she saw. There he stood, his large tender brown eyes fixed strainingly on Rose, as if striving to get her face by heart, while she never once turned to glance at him.

"Rose," he said presently, "there's light enough still to see t' garden; that's not much, yu'll say, but beyond's t' glorious, far-stretching moor. Eh, my lass, yu've niver seen such a sight; there's nowt in Burneston can marrow 't."

Rose tossed her head. At that moment she felt sore and angry. How broad and rough George's talk sounded after Ralph's soft voice and pleasant flattery! here was George taking the upper hand already.

"Burneston's not t' only place in t' world, lad," she said scornfully. "I've lived in a sight of places besides Burneston;" then recollecting her position as a visitor she turned smiling to Mr. Barugh.

"Do t' cows an' pigs thrive as well up here as they did at t' Church Farm?" she asked.

"Weel, lass, t' feedin's maistly doon riverwards. Ah'll show ye t' Cairn t' morn 'at's a'most fower tahmes as big as t' Church Farm, bud gan yer ways wi' George an' see t' sun set ower t' valley, it's a grand seeght, an t' e'en's clear."

Rose went unwillingly to get her bonnet; no one seemed ever able to disobey John Barugh's express wish.

Mrs. Barugh shrugged her shoulders, but George's eyes thanked his father heartily.

"Now look you here, John" — Dorothy had scarcely patience to wait till the pair had left the house — "if George takes up with that pert girl and disgraces us all, you've only yourself to thank for it, that you have."

The farmer went up to the mantelpiece and filled his pipe, then when he had puffed out a few whiffs he smiled kindly at her puckered face.

"Coom, mah lass, yu munnut be fractious. Yu've left that off, and ah lahkes yu best wivoot a froon. Lahke will tak tu lahke, honey. Hevn't yu said monny a tahme 'at a man sud be heead, an' 'at a lass sud better hersel' when sheea weds? Rose'll suit George better nobbut Miss Masham ud suit him, thof tu mah thinkin' Rose has nae great lahking fer t' lad. Mebbe she's bespokken."

Mrs. Barugh's pale face grew almost as red as her husband's broad hands.

"You're certainly not proud o' your own flesh and blood, John. To think of a girl like Rose refusing our George, and not feelin' she's honored by him! No; my hope lies t' other way. I think George may prefer Miss Masham."

"Posh!" John snapped his broad fingers. "Change is not in t' stuff 'at George is made on; that's where t' lad favvours his sister. Mebbe it's t' oa'nly bit o' lahkeness atween 'em."

Dorothy could only shake her head. He rarely spoke of Doris, but the mention of her at this disturbing crisis was overpowering. Yes, Doris — what would she say? What could she think of this folly of George's?

"Ah, she's got a will of her own," said the poor mother to herself. "If she'd been in my place, her man wouldn't have durst bring a visitor home without asking her leave."

CHAPTER XXXVIII.

ON THE MOOR.

Next morning the breakfast was a very quiet meal. George ate his porridge in silence, while Rose was so completely wrapped up in her own thoughts that when Mr. Barugh spoke suddenly to her she nearly let the milk-jug, which she was passing back to Mrs. Barugh, fall on the floor.

"Hollaw," said John, "a penny fer yur thowghts, lass; it's new fer ye tu be musin', Rose."

Rose grew pink to the roots of her yellow hair, then she glanced timidly at Mrs. Barugh.

Dorothy was signalling and frowning severely at her husband; it seemed to Rose that Mr. Burneston must have told her secret, and the pink flush deepened to a burning red. Her hands trembled, so that she could hardly hold the knife and fork with which she was cutting some bacon.

George was angry and sheepish; he felt that something ought to be said, but did not know how to say it; he could only try to get Rose away from his mother's vexatious glances. He was too angry to reflect, or he might have been surprised at his own indignation.

"It's all mother's fault, every bit of it," he said to himself; "we s'ud all be happy and comfortable but for her; she's a firebrand."

"Would yu like to see t' farmyard, Rose?" he said as the silence continued.

"Oh yes, I should." She jumped up and ran away for her hat. John Barugh burst into a hearty laugh.

"Well, mah lad, it's plain you're a chip o' t' a'wd block; noo if ah'd send that tu yur mudher when we war courtin' sheead ha' her neb at mey."

Dorothy's vexation overcame her prudence.

"You make mistakes, John; George and Rose are old friends, that's all, they're not thinkin' of courtin'."

This was the opportunity her son was waiting for.

"I'll not answer for Rose," he said. "I can only hope father's right. I dunnut

know why yu should think me changeable," he added stubbornly. "I've loved Rose all my life, an' shall love her let coom what will."

"Oh, George!" but Mrs. Barugh was stopped, the rustle of Rose's gown gave warning that she was coming down the creaking, uneven staircase close to the half-open kitchen door, for except during Doris's visit meals were not allowed to be served in the parlor at the Cairn.

George hurried to the door and met Rose in the passage; he was thankful to be spared for ever so brief a space the strife which he saw must come.

His father was on his side, and therefore he was in the right. I do not think that George, in the excitement of his joy and his love, remembered his sternness to his sister, who had her mother's good-will, though not her father's, in her choice, and yet George loved his mother much more truly than Doris had loved John Barugh; but then love blindfolds its victim completely, the soft witchery flings its veil over reason, natural affections, duty, even honor, dulling the eye to see, the ear to hear, and the heart to feel all save its own teachings.

George walked on silently beside Rose, watching the color come and go on her bright face, and the eager interest with which she looked around her.

Yesterday George had put a great strain on his longing for open speech with Rose. He had felt as we all feel when a bird lights on the hand, or within a short distance — a word, a movement even, may fright the shy, wished-for creature away forever.

It was such joy to be with Rose, to feel the rustle of her garments as she walked beside him, to see her loved face and watch the changes of expression thereon, that, though his ardent love, kindled to intensity by her sudden presence, longed for a nearer, fuller communion, he still refrained from seeking this lest he should lose the bliss he had.

Meanwhile his silence, the slight unconversational answers he made to her idle surface talk, drove Rose almost to frenzy. She could not choose but think; the overpowering events of these last days, days unmatched by any previous experience, filled her mind and claimed to be dwelt on.

But the bliss of those moments spent with Ralph was so alloyed with the certainty that he was no longer the "Master Ralph," the boy whose image she had so fondly cherished, that there was as much misery as bliss in going back to them. Then there was the squire. How good, how kind, how forbearing he had been! How thoughtfully he had provided for her comfort on the journey!

She looked furtively at George as they walked. How good and amiable he was, but oh how dull and tiresome he seemed after Ralph! Almost unconsciously her resentment rose against her companion, as recollection showed her how much he had taught her. But for his teaching she would perhaps not have noticed the change in Ralph.

She gave a groan which made George start. His eyes met hers, and the agony in them set all his self-restraint loose.

"What ails yu, lass?" he said very tenderly. "Is it aught 'at ah can set straight for yu?"

The very contrast of his tone with the slighting insolence she felt in Ralph's manner to her stung her. How could she answer his question, and tell him she groaned for the change that had come over Ralph Burneston! George would utterly despise her if she confessed that she cared for a man from whom she shrank with a kind of fear. Her good angel was striving hard with Rose, and at that moment she felt a distaste for goodness, because she felt dimly that a protecting influence came between her and Ralph.

"D'yu mean preaching?" she spoke scoffingly. "No, thank yu, George — yu mean kindly, but I've got beyond that."

Again their eyes met, and she shrank under the intense sympathy in his.

"Tell me, lass, what's amiss," he said softly, and sadly too, for something warned him not to speak of his love; "nothing eases a trouble like the sharing o' it. When we were bairns, d'yu mind, I used to help yu to carry t' milk across t' road because yu said it war heavy, eh, Rose?"

He bent down and looked into her troubled face.

"I dare say," she said more quietly, "you're right; no doubt you're always right, George, but just now I hate right." She stamped her foot, her anger getting vent with her words. "I wish I couldn't see wrong, and I hate you because you've taught me the difference."

He grew very pale.

"Will yu bide wiv yoursel' awhile?" he said at last; "ye'll master yoursel' best alone. Pray, Rose, honey, pray hard; if yu cannot say aught else, say 'Good Lord, deliver me!' It's the evil one's self 'at's got his hold on yu, an' only God and your own will can set yu free."

She put up both hands and turned her back on him.

"Yes, go, an' I'll thank yu," she said; then mockingly, "I say, deliver me from cant."

She looked round after a minute — George was gone. There was a gate in the hedge leading to the fields below, and she thought he must have passed through it.

The moor rose steeply on her left, and she turned hurriedly to climb its heather-covered side; she longed to be free from the chance of observation, to be off the yellow highroad which, though rarely traversed, led from the village in the valley to a larger town far beyond the moor.

She tried to be angry with George, but instead she felt that his presence had soothed and quieted her, spite of herself.

"Did he say pray? — ah! but prayer's not for such as me. How can I pray to be delivered from loving Ralph when I so love to think of him?"

Above her rose a crag — a mass of black gritstone, looking like the tower of some old castle. It was too steep to climb; but presently she saw a little path, a kind of winding stone staircase cut in the rock, overgrown here and there with tufts of grass, and bent, and heather. Up this she made her way to the top, a broad smooth platform of rock some eight hundred feet above the river, marked by the line of trees in the valley below. Facing her was a whole range of lofty hills, and all around the far-reaching brown and crimson moor. Below, at some distance, was a small tarn, a cold, sluggish-looking pool. Rose shivered, and turned her back on it. More than once during her journey she had wished vehemently for death as an escape from her misery, but the sight of this dark, silent pool set her pulses beating in strong revulsion.

"I'm like a child," she said, "I don't know what I want. He's taken the taste out of my life for everything but talkin' to him; why was I so weak-minded as to come here? why don't I go back and take my chance o' seein' him?"

She sat down on the broad stones. She would not go back to the Cairn; if they missed her they might come and seek her on the moor.

"They're kind — too kind for the likes o' me," she said sadly, "for I brought it all about myself. Oh, why couldn't Ralph an' me keep as friends! Why, when I used to seek after seein' him I only thought of amusin' myself, an' of listenin' to his voice, an' lookin' at his sweet face, so like his father's, an' what harm could ever come to any one from talkin' and lookin' at t' squire? Ah!"

The deep sigh was like a groan — it seemed the breathing of despair.

"'Twas Doris did the mischief first. Mebbe I'd never ha' known I loved Ralph if she hadn't come and taunted me; mebbe then I'd not have lived on the thought of him as I've done day and night these years he's been away. I didn't know how I'd got to love him till my heart shrank at the change in him. Why, before it seemed to me that I was old beside him — he hadn't a word or a thought that was amiss — an' now he's quite altered." Then, with a burst of self-reproach, "I don't care what he is — I love him more than life!"

Then she sat silent, crouched on the stone.

"Yes, love him," she said wildly, "love him! And yet ah know ah mustn't love him."

She looked round in terror, as if she feared her own thoughts would take bodily shape; then she fell forward on the stone. "Good Lord, deliver me!" she gasped, "deliver me from temptation!"

Dinner was half over at the farmhouse when George came in.

He looked anxious and tired, but he turned white when he saw Rose's place empty.

"Where is she? — where's Rose? Hasn't she come in?"

"I thought she was with you; and really, George, I think you might both try not to keep dinner waiting." Mrs. Barugh spoke peevishly; but the farmer was studying George's face.

"Eat yer dinner, mah lad; yu need it," he said kindly. "Ah'll gang an' leeak fer t' lass." He thought that George had asked Rose to marry him, and that she had refused him.

"No, no," George said abruptly; "ah mun go myself. We parted an hour ago. Mebbe she's lost the path."

He hurried along the yellow road to the spot where he left Rose. She was nowhere to be seen; but the moor rose so steeply that it was impossible from below to see any distance across it.

George was tired and exhausted, but he climbed the steep bank as Rose had climbed it, and paused for breath when he reached the top.

On the top of the crag above him was a

woman; he felt sure it was Rose, and he began to climb up the broken stone steps far more slowly than she had climbed them; but half way up he paused and flushed a deep red, then he put his hand to screen his eyes and gazed intently at a man hurrying away across the moor.

With a sudden exclamation George turned to look for Rose; it seemed to him that she was kneeling on the rock.

"Rose!" he said.

She started and cried out as she rose up.

"It's you," she said, and he thought she looked glad.

"Had yu lost yer way?" he began; then fear and anger found a vent. "Wasn't that Ralph Burneston goin' ovver t' moor? What's he doin' here? What can you have to do wiv him? Answer me, Rose. What has he been saying to yu?"

He held her arm roughly; his voice was harsh; his eyes, no longer tender and beseeching, flashed out the passion that was choking him. Rose looked at him coldly.

"He has nowt to do with me; I sent him away."

"Bless yu, lass, for that word!" He clasped her hand in both his. "Don't be angered wiv me fer speakin' roughly, an' for thinkin' yey wad love a man who meant no good to yu. Though he's t' squire's son, he's a false-hearted blackguard."

"Stop there — how dare yu! I may send him away for my own reasons; but I'll not hear him blamed by yu, an' I'll not tell yu a word he said, so there!"

"Listen here" — George was carried away by the excitement of his feelings and his joy at her quarrel with Ralph. "Yu need tell me nothing, lass; I know it every word; your face tells me. Oh, Rose, my darling! t' Lord is with yu, sure and certain, or you'd not have sent him away. How can yu say 'at yu loves one 'at hates the Lord, who bought yu for his own at the price of his own life?"

She listened, but she shuddered and turned away.

"I don't want to hate yu, George," she said, "but I shall if I listen any more. It's your teachin' that's made me quarrel with him. Some day, I may see it different; now I hate t' very sight of yu."

She darted off northwards in a different direction from that by which George had approached or Ralph Burneston had left her. George ran after her as fast as he could, but his lame foot tripped against a block of grit hidden by the grass, and he fell heavily. When he got up, bruised and shaken, Rose was out of sight.

From Tinsley's Magazine.

PRINCE BISMARCK'S MOTHER.

> Vom Vater hab' ich die Statur,
> Des Lebens ernstes Führen,
> Vom Mütterchen die Frohnatur
> Und Lust zu fabuliren.
>
> GOETHE.

IT requires an effort of the imagination to picture the chancellor of the German empire — the "man of blood and iron," as he has often, and not quite unjustly, been called — standing at his mother's knee, listening to the fairy tales and ghost stories with which Teutonic infancy in particular is so frequently amused. Had the biographers sketched the boy Otto as surreptitiously taking down from the shelves of his father's library the "Prince" of Machiavelli, or some such kindred book, no reader would have doubted the fact for a moment. It would have so delightfully tallied with that trite and nearly always untrue aphorism, "The child is father to the man." But no, they represent him as snowballing in the streets with lads of his own age, disporting himself in field and woods, climbing the highest trees on the ancestral domain, and being delighted with the entertainment provided for him by his mother. So true is it, what Helvetius and his set maintain, "that an infant of genius is quite the same as any other infant, only that certain surprisingly favorable influences accompany him through life, especially through childhood, and expand him." And the process of expansion, to bear fruit, must, as history has nearly always shown, be accomplished by the mother. "The father was the heart, the mother the wisdom, of the family," once said a lady, a near relation of the Bismarcks. These few words give us not only a picture of both parents, but also of the influence they had upon their offspring. This lady's opinion is further confirmed by several other connections and friends. In Frau Louisa Wilhelmina von Bismarck's character the predominating trait was ambition, and this she allowed to become the principal guide in the education of her youngest son especially. Unlike the fisherman in the Arabian tale, who could not foresee what shape and form the genii from his casket would take, she hesitated not in foretelling the remarkable *rôle* he was to play in the history of the nineteenth century. But she did not live to see her prophecy fulfilled. She was sleeping in the grave long before her son became a great and world-renowned man. Frau von Bismarck descended from a family of *savants*, the Menkens from Leipzig. Already once

Original from CORNELL UNIVERSITY

they had intermarried with the *noblesse*, one of her great-aunts having become the wife of the Reichsfreiherr von Hohenthal, the founder of the elder branch of the Counts von Hohenthal. But the Menkens themselves had for years been famous in the scientific world, nearly every generation contributing its representatives, who by sheer worth and unaided exertions rose to exalted positions. Frau Bismarck's father proved not an exception, but a modification. He took to diplomacy. He entered his country's service under Frederick the Great, and obtained, through the recommendation of the minister Von Hertzberg, whose schoolfellow he had been, a position in the secret intelligence department. Having been sent to Stockholm on an important mission, he proved himself so useful to Queen Louisa Ulrica, Frederick II.'s sister, that, on his return, he was appointed private secretary to the cabinet. Under Frederick William II. he was made a state councillor, but Bischofswerder aiming at almost irresponsible power, Herr Menken resigned, to the great regret of the crown prince, who thought very highly of him, and who immediately after his accession offered him a similar proud position in his own cabinet. It was he who drew up the address from the throne for that monarch, a speech which, at the time, made an extraordinarily good impression.

Menken was a liberal in the soundest acceptation of the word. An ardent and staunch advocate of progress, he wished for nothing better than to see his country enjoy that religious freedom which it owed to the great Frederick, but which under his successors somewhat declined. To regain for it its former vigor was one of his constant aims. In order to accomplish this he even went so far as to become a warm partisan of the French Revolution, though he cordially condemned the excesses of the Jacobins, which sentiment, however, did not prevent his attempting to sow the tenets and aspirations of the first French National Assembly in his native land, hoping that they would bear fruit there. During his protector's reign he took an active and prominent part in state affairs, having more than once held the portfolio of the interior with such *éclat* that his royal master offered him a title, which he declined, proud of exercising his functions as a mere commoner, and of being an exception to the nobility, who, in those times, arrogated to themselves such exalted posts as their prerogatives.

The Menkens kept a sumptuous establishment, as was the habit at that period, not only with the aristocracy, but also with the higher government officials, and even with the wealthy merchants. In Berlin luxury and display had reached their zenith. The almost Spartan simplicity and absence of show repugnant to the inhabitants of the capital, but practised solely under Frederick William I. from fear of the king, who despised all refinement and elegance, had been replaced under Frederick the Great, still more under his successors, by an excess in the opposite direction.

A similar phenomenon to that witnessed at the restoration of the Stuarts in England became observable in Prussia, when Frederick the Great took his father's place. The reaction was less violent and profligate than under the "merry monarch," seeing that the restriction had not been quite as severe as that under Cromwell. A starving wretch, on being set before a table loaded with food, is very likely to clutch at the most substantial fare, be it never so coarse. If he be less hungry he is apt to be more discriminating, and soon to want his share of the delicacies on the board.

Thus it was with the Berliners. The magnificent court festivities which took place at the beginning of Frederick's reign, and which were resumed on a somewhat smaller scale after the Seven Years' War, were eagerly imitated in miniature by private families. A large house, furnished in the height of the then prevailing French fashion, its walls covered with valuable pictures and expensive statuary, was the *sine qua non* of *bon ton*. In these *salons* the most charming and brilliant entertainments were given, the company vying with each other as to who should display the greatest extravagance. It was the same with dress, in which the court of Frederick's successor set an example of spendthrift lavishness that soon permeated all ranks of society. Many families, in endeavoring to keep pace with their rivals, brought themselves to ruin. In vain did Frederick William III. try to introduce a more sensible and modest way of doing things. Neither his own nor his young wife's unassuming habits could prevail against an evil which was too deep-rooted to be eradicated, save by slow stages.

Cabinet-councillor Menken, though a decided opponent of systematic extravagance and luxury *per se*, swam nevertheless to some extent with the current. He led a social, agreeable life, moving with his family in the most æsthetic Berlin cir-

cles, where political and religious liberalism had effected a secure hold. During the summer he occupied a country house in the environs of Potsdam, which he had built for himself, and surrounded by a magnificent garden and tastefully laid-out grounds, being very fond of horticulture, and spending most of his leisure time in tending his flowers. His *parterres* were a never-failing source of joy to his numerous guests. Among these might often be seen the little crown prince, afterwards Frederick William IV., and his brother, Prince William, the present emperor. Their tutor, Delbrück, was on terms of the most affectionate friendship with Herr Menken, and remained after the latter's death on the same loving footing with his family. In after years the late king of Prussia often remarked that his love for flowers received its birth in Menken's garden. The councillor's children, a son and two daughters, received, as may well be imagined, a most careful and enlightened education, inasmuch as the father imbued them early with his own views and principles. But they had the misfortune to lose him when still very young, the second daughter, the subject of this memoir, being scarcely twelve years old. She was born on the 24th of February, 1790. Richly endowed by nature, both physically and mentally, her amiable disposition and social acomplishments obtained for her many stanch friends and zealous admirers. When the child ripened into the maiden she presented a noble, beautiful appearance; a strong mind and a knowledge of her own worth and self-reliance spoke in every feature; but the well-formed mouth, with its loving expression and dimpling smiles tempered all these *hauteurs*, and made her a prize, to win which was the dearest wish of many a youthful suitor in her most immediate circle. She had scarcely reached her seventeenth year before Herr von Bismarck-Schönhausen offered himself as her husband. His must have been a tender affection to cause him to brave the caste prejudices of his time, and to marry a plebeian girl, who, let it be said in justice, was in every way worthy of enchaining the heart of the noblest *Junker*. He himself was rather distinguished for his handsomeness and good-nature than for intellectual qualities. Intended for a soldier's life, his education had been most superficial; he was a bold rider and a keen sportsman, that was all. But his want of learning was amply compensated by his ready humor, his easy temper, and stalwart appearance, which, combined with his noble-heartedness, made him a very lovable person indeed. Fair Louisa Menken was, however, not deeply smitten with him, but the persuasion of her relations made her accept him. After the nuptials, which took place on the 7th of July 1806, Herr von Bismarck took his bride home to his country seat Schönhausen. Through a magnificent park, under the spreading branches of patriarchal oaks clothed in their verdant summer garb, they drove to the Schlosz. The vassals and *valetaille*, in holiday attire, received the newly-wedded pair with loud acclamations of joy. The Schlosz looked more like a plain private dwelling than an ancestral demesne, and its outward and inward simplicity made but a sorry impression on the young wife, accustomed from her birth to a certain splendor and elegance. The fashions of the period had left their traces on the mind of Frau von Bismarck — as we henceforth must call her. She was fond of dazzling and showy surroundings. But no attempt was made by her to alter her husband's paternal home: she soon came to the conclusion that a country establishment did not require the same attempt at display as the dwelling which vanity rears for itself in town.

Built on a quadrangle consisting of two stories, crowned with a high roof, the Schlosz presented a very sombre and heavy appearance. The apartments were correspondingly dull, with their low ceilings, wainscotings, and mantelpieces loaded with carving. The so-called garden-room on the ground-floor, large and spacious, had a beautiful look-out upon a far-spreading park, ornamented with picturesque flower-beds, fountains, and statues. Up the first flight of stairs was the dining-room, with two drawing-rooms on its left. To the right was the sitting-room of the young matron, leading to the bedroom, behind which was an alcove or recess, in which her eminent son Otto first saw the light. On the other side was the library, of modest dimensions, two of its walls occupied by enormous book-shelves, filled with venerable calf-bound tomes. Fiction, inspired by fancy, would fain linger and create a picture of boy Bismarck ransacking the contents of the intellectual department of his birthplace, were we not so positively assured, by those who know best, that of all rooms in the house that one beheld his presence least. Biographers proper are very useful and indispensable adjuncts to literature; but their existence would perhaps be better

appreciated by readers of the lighter fare, if they were not invariably accompanied by a couple or so of incontrovertible facts, which, like hounds, they let slip from the leash at the slightest scent of the fox's frisky brush in the way of unauthenticated comment.

To resume. The Schlosz stood on a terrace planted with venerable lindens and chestnuts, whose intertwining foliage spread into a natural roof, beneath the cool shadow of which the inmates of the house loved to pass their days in summer. The favorite spot in the park, however, was a small artificial island, half hidden among the willows bordering the piece of water, across which a rustic bridge led to a pavilion. This solitude seemed to breathe a poetic feeling on the atmosphere, and it was here that Frau Bismarck in after times passed the many tranquil hours when she was free from pain.

The honeymoon was spent in all manner of festivities, partly given at Schönhausen, partly at adjacent country-seats. The whole neighborhood vied in giving a hearty welcome to the young wife, whose plebeian origin was overlooked in virtue of her beauty, amiability, and social gifts. There were dinner and hunting parties, balls, and entertainments. The political commotions of the year 1806 soon made an end of this pleasant existence. The crushing defeat at Jena left the Germans practically powerless to stop the invading tide of the French, who spread all over the land, finding their way also to Schönhausen. Frau Bismarck was in her sitting-room when she heard her country's enemies storming up the stairs. In another moment they were at the door. At the sight of the handsome woman they made a rush towards her. With one bound she was in the library, barring the means of ingress behind her. The soldiers followed her, and prepared to remove the obstacle with their bayonets, the marks of which are visible in the door to the present day. But she was too quick for them. While busy with their onslaught she fled by another exit, and left the house. Just then her husband luckily came to her aid, and conducted her to a wood close by, in the densest part of which he hid his wife, to shield her from the outrages of the horde of plunderers. As their stay was of short duration, Frau Bismarck was enabled to leave her place of concealment and return home. Truth to tell, Herr Bismarck had not altogether been unprepared for these unbidden guests. One of his precautions had been to bury his ready money and valuables beneath the pavilion on the little island spoken of before. When the danger was over, his first steps were directed to the spot in question. Great was his concern to find the earth disturbed, and much gold lying scattered about. But not a coin was missing; the sum was correct, so was the plate; and it was soon proved that not the French, but his dogs, had been trying to convert the place into a Tom Tiddler's ground.

And here let me for a moment pause in my task of chronicling the facts of Frau von Bismarck's life, to reflect upon the episode just related. The biographer who tells of a man or woman long after that man or woman has ceased to live, has an evident advantage over him who sets about the task while his hero or heroine is still among his contemporaries. He has, as it were, in his own power the arrangement by which Theseus found his way backward out of the labyrinth; and if he would avail himself with still greater effect of this clue, he should retrograde even a good way into the parent's existence. Is it not very certain that Otto von Bismarck, while a child, had often heard this scene of the French invasion described? Were not the bayonets' points imbedded in the door? And does it need a great stretch of imagination to detect in that determination of thoroughly humiliating the old enemy of his country a little mixture of private revenge? We simply ask the question. We leave it to be answered by the reader himself.

The anxiety and alarm consequent upon the French did not last long; and as Herr von Bismarck was fortunate enough not to have had his pecuniary interests seriously damaged by it, he continued his former way of living. With the young wife a more serene sociability had taken up its abode in the Schlosz. Receiving company became a frequent occurrence, both husband and wife loving to exercise their hospitality. Spring and summer were very pleasant to Frau von Bismarck in the country; but as soon as autumn appeared and nature had no longer any smiling pictures to bestow, she returned to the capital. The fond husband took a town house, thither to pass the winter months, though he himself, as a keen sportsman, often regretted the absence of his vast and beautiful woods.

A pleasant life was the one in Berlin. Frau von Bismarck delighted in society, in going to and giving parties. She remembered the charming, interesting circle that used to frequent the paternal home,

and her own was furnished in an expensive and tasteful manner. She aimed at living on the same scale as the highest *noblesse*, without dispensing, however, with the artistic, scientific, and literary element from which she had derived so much pleasure while a girl. Through the disastrous war with France and consequent scarcity of money, luxury had materially decreased in Berlin. Many families were seriously impoverished, while the financial resources of all were more or less impaired. Lavishness and magnificence had to be replaced by simplicity and retrenchment. But not to every one is it given to discard at one stroke the habits and predilections of a lifetime — to do without the show and parade of a sumptuous existence. The Epicurean school says, "Give us the luxuries, and we will dispense with the necessaries." Frau von Bismarck was in this respect one of its disciples.

Her society was much courted; and as she was not altogether free from vanity, she derived a great deal of pleasure from these social *réunions*. Her ambition was to shine not only in her own immediate circle, but to surround herself with the wittiest, cleverest, and most scientific men, and, by preference, with those who professed the liberal opinions of her late father, which were hers also. Among such she aspired to take a high standing. Her preference for the plebeian element, from which she sprang, was always noticeable, and has descended to her famous son. It is a sufficiently known fact that Prince Bismarck honors talent and knowledge — nay, even seeks for it, irrespective of the birth or position of their possessors.

Among the most favorite pastimes of his mother was the game of chess, in which, for proficiency, she rivalled the best players of her time. Music, in which she also excelled, was another of her accomplishments. In town, as well as in the country, she kept a diary, in which she noted down her every incident and thought, and experience derived from them. Unfortunately it was destroyed after her death. Had it been preserved, it would no doubt have given us many an interesting page from the infancy and youth of the imperial chancellor.

During her summer residence at Schönhausen she displayed a lively interest in what nowadays would be called "high farming." She was fond of introducing new experiments, which did not always turn out to the best advantage. But she leaned more to the grandiose and brilliant than towards the practical and useful. The autumn found the family generally at Ems; for this lively, sprightly, and life-enjoying woman began ailing at a very early age. The temporary establishment at this fashionable resort was in no way inferior to that in Berlin. Whether Frau von Bismarck in the beginning of her wedded life reciprocated the all-absorbing love her husband felt for her, is a doubtful question; but certain it is that the union was a happy one. The noble nature and lovable qualities of Herr von Bismarck could not fail to arouse in one endowed with similar qualities a feeling of self-congratulation at being the chosen object, and at the same time the arbitress, of such a man's destinies. Hear what Saint-Prosper, a no mean authority on such subjects, says: "Dans l'amour il y a le plus souvent une personne qui aime et l'autre qui est aimée. L'amour-propre chez cette dernière supplée au sentiment qu'elle n'a pas." The author of this profound aphorism has not gone far enough. He should have said that this *amour-propre* nearly always merges into *propre et vrai amour*. This was so in this instance. Their union was blessed with six children, three of whom died at an early age. The youngest boy is the present imperial chancellor, Prince Otto von Bismarck, born the 1st of April 1815.* Besides him there are still his elder brother, the Kammerherr and Landrath von Bismarck of Külz and Jarchelin in Pomerania, and the sister who married the Kammerherr von Arnim of Krochlendorf.

A more indulgent, fond, and doting father than was Herr von Bismarck it were difficult to find. He had neither eyes for his children's misbehavior nor sufficient strength of mind to punish them for it. The youngest son soon showed himself a lively, boisterous lad, full of mischief, delighting to tumble about the floor, or run about the garden and park in search of birds'-nests and kindred means of enjoyment. Every object in nature inspired him with a deep-felt interest, and drove him to study its phenomena with a more than precocious understanding and application. The scene of his infantine and youthful exploits was, however, not the park of Schönhausen. A twelvemonth after the birth of Otto, Herr and Frau von Bismarck had removed to the estate of Kneipholz, which came into the former's possession at the death of one of his relatives. This

* We recommend this fact to hair-splitting antiquaries, who would prove that all children born on tha day have invariably turned out fools.

dwelling was still more simple and devoid of ornament than the one left; the garden was, however, more beautiful; the domain was situated in a smiling and fertile region. Here, also, Frau von Bismarck took to agricultural experiments, which brought more loss than profit. She kept to her old system, which was not unlike the nigger uprooting his potatoes an hour after their planting to examine their progress.

Though the mother loved the children no less than the father, she was soon forced to recognize that the latter's reprehensible indulgence was likely to have a damaging influence on their offsprings' career. She deemed it therefore best to send them, even at their tender age, from home, to a more severe and disciplined establishment. Otto, when but six years old, was packed off to a boarding-school in Berlin, where his elder brother had already resided for some time. The chancellor gave it as his opinion in after days that this early leaving of home had not been good for him. To the parents also the continual absence of their children proved too trying; and it was resolved that the lads, during the winter months at least, when their elders were in Berlin, should share their quarters. The town house was in the Behrenstrasse, close by the Operaplatz. It is related that little Otto was often seen in these days, disporting himself with his schoolfellows and others, in the then somewhat uncultivated sandy open square. Wind and weather seemed to have been of little consequence to him; on the contrary, slush, and especially snowy slush, appears to have possessed a great attraction, and many a scrape is recorded which his too free indulgence in that agreeable pastime of snowballing led him into.

During the summer vacations the lads came to Kniepholz, where it was their greatest delight to roam the livelong day in the open air through the woods and the meadows. It was here that the chancellor laid the foundation of his knowledge of agricultural economy and science. But the mother did not altogether allow her sons to spend their time in idleness: she insisted upon part of it being devoted to study. She was notably strict in this arrangement with her youngest son. She seems never to have wearied of inciting him to acquire learning; nor did she hide the hopes she had built upon, and the almost prophetic certainty she had, of his future greatness. Hannah's reliance on Samuel's prospective eminence, inspired by the divine voice, was as doubt when compared with Frau von Bismarck's inviolable belief in her Otto's celebrity, derived from maternal observation and perspicuity. Sad it is to think that she did not live to see the realization of her confident presentiments and foresight. The elder son she had destined for the profession of *Landrath* (provincial councillor); the youngest for the diplomatic career, because she, if no one else, foresaw his fitness for it.

When in the country, the mother devoted much of her leisure to reading, and indulged in it often till the early hours of morning, especially in later years, when she passed sleepless nights, tortured by the disease which in the end caused her death. Her favorite literature was ghost stories, in curious contradiction to her own enlightened tendencies, and entirely at variance with the education and impressions she had imbibed in the paternal home. How often had Herr Menken railed against and ridiculed the foolish supernatural beliefs and spiritualistic manifestations which then, as now, were greatly in fashion! If he could not openly declare his contempt for the "mystic rubbish" by which King Frederick William II. appeared to set such a store — and which his two celebrated ministers, Bischofswerder and Wöllner, as much imbued with the thing as their master, even introduced on the stage for this master's pleasure — he made up for this enforced silence by an incessant condemnation of the folly at home and in the company of his friends.

During the reign of the monarch just spoken of, the tenets of the Rosicrucians spread far and wide. Truth to tell, their aspirations and prophecies were enticing enough. They not only professed to be in possession of the philosopher's stone, but to have the command over unlimited treasures, and to be able to summon at will the spirits of the departed. They more than once performed ghost scenes for their royal gull. In one of these incantations they had shown him in succession the emperor Marc-Aurelius, Leibnitz, and the Great Elector; nay, they had done more: the *revenants* had spoken to his Majesty in hollow, deep-sounding voices, as coming from the grave, thanks to the coöperation of a skilful ventriloquist. On another occasion the ghost of the king's son, the Count von der Marck, whom his father had dearly loved, was evoked and appeared. The Rosicrucians were adepts in these dexterous tricks, which were nothing more than carefully-planned optical delusions. The *séances* were, as far as

possible, kept a secret from the general public; but notwithstanding this, the belief in them spread pretty quickly, and many among the faithful asked for nothing better than the presence of such a phenomenon, which would unveil to them either the past or the future. Literature found a godsend in the mania: there was a perfect deluge of ghost stories and fairy tales. Even Schiller could not resist the pervading temptation, and produced his "*Geisterseher.*"

The mystic and wonderful have a great attraction for sentimental temperaments, and Frau von Bismarck was in no wise free from sentimentality. Add to this that Schönhausen, in common with all old castles, had its quota of traditional and hereditary legends, which are such near kin to *ghost-seeing*. An uncle of the present chancellor maintained that on one particular night he had beheld a ghostly form, which beckoned and conducted him to the vaults, where it showed him a door with a lock in the shape of a heart. The apparition uttered no sound, but by its gestures seems to have wanted to express the presence of a treasure hidden in that particular spot. The visitee awaited with strong anxiety the break of day, when he immediately repaired to the subterranean regions, which he subjected to a prying search, in the full conviction of lighting upon a treasure trove. The result of his exploration was the discovery, in one of the deepest recesses, of a small door with a lock in the shape of a heart, hitherto known to no one. But there was not the slightest trace of a treasure — nothing more than a passage that led to the chapel. But henceforth there was a firm conviction that a ghost had appeared to the gentleman. No one seemed to have had an idea that it might have been a dream.

A dream is not a dream,
  Until we wake and find
That what reality did seem
  Was but the fancy of the o'erstrung mind.

And the waking was delayed a long while. Others, again, gave it as their opinion that the library at Schönhausen was not altogether safe from such nocturnal intrusions. An old servant, who slept in the apartment during the master's absence from home, declared that he felt more than once a chill puff of air, as of some one breathing over him. Further was it said that at night a muffled sound was heard going carefully up the stairs. The dogs, however, always on the watch, did not bark, nor was there any one found when the door was opened.

Even in the last forty years, since Frau von Bismarck's death, Schönhausen has maintained its reputation for these legendary adjuncts to a noble and ancient castle. Her now famous son avers that, while passing the night in the alcove where he was born, he had distinctly heard the opening of a door and light steps in the adjacent room, while immediately after the cry of "Who's there?" uttered by one of the guests sleeping there, resounded in the next apartment. At the same moment, as he fearlessly jumped out of bed, the clock struck twelve. After he had searched carefully everywhere, without discovering aught unusual, he returned to his couch, and slept soundly till morning.

The interest of Frau von Bismarck in ghost stories need cause us no surprise when we reflect that probably there was not the slightest belief mixed up with their reading, and that it was a mere pastime. When young, she heard these things a great deal spoken of; and we all know what charms the mysterious and supernatural possess for youth, when fancy has as yet received no check, and is still in full play. When she came to Schönhausen, the traditions of her future home were detailed for her edification. What more natural than the wish to be the heroine in one of these interesting scenes? But she meets with no such good fortune: the wish remains unfulfilled. She has still one course open to her whereby to excite her fancy, stimulate her imagination; and heroically — mock heroically I was about to say — she avails herself of it. If she cannot have the real thing, she will at least have the best imitation. She will take to the literature that shall enable her to soar into the ghostly spheres, and to cast a glance into the supernatural regions. In her latter years, when pain often debarred her from sleep for whole nights, reading was her only relief. When she was too weak to do so herself, she had some one to perform the office until daybreak; and even then she beguiled the time in discussing the stories just related. There is still among the heirlooms of the family a much-bethumbed volume of a work, in vogue some forty years ago, yclept "*Die Seherin von Prevorst,*" by Justinus Kerner.

The two young Bismarcks not being very comfortable at the college whither they were at first sent — notably the younger, who had many causes of just complaint — it was decided, as in the interest of their education they could not yet leave Berlin, to furnish them with a

little household of their own in the town mansion. A faithful and trustworthy female servant — Trine Neumann from Schönhausen — was despatched to look to the domestic concerns, and a tutor engaged to aid them in their labors. But the arrangement did not turn out so well as was expected. The tutors were frequently changed; one decamped with all the Lares and Penates, and cash-box to boot. Meanwhile the elder son was sufficiently prepared to begin his military career. His junior returned to another gymnasium, where he was somewhat more at ease than in the former. The last of which he was an inmate must have been like a second home to him, as he conceived a sincere affection for its director, Bonnell, an affection which lasted until the latter's death.

The children's religious welfare was looked after by the celebrated Schleiermacher, who also baptized them. As it is pretty certain that their education depended more upon the mother than the father, there is scarcely a doubt that she had the casting vote in the choice of the spiritual guide. We may see the clear proof of her enlightened ideas in these matters by this selection. "And notwithstanding this, how can we reconcile them with this love of spiritualism and ghost stories?" asks the latest biographer of her son.

When Otto took his place in the higher forms of his school, his extraordinary intelligence and application, hitherto unnoticed by others, sprang suddenly to the fore. He learned easily and quickly. History was his favorite study. He displayed an unwearied zeal; every hour was taken up in the reading of the world's chronicles, but especially of those that dealt with the vicissitudes of his own country and those of the neighboring states. We may picture the mother's pride as the most glowing reports of her darling's progress reached her ear; we may imagine the proud and brilliant future she mapped out for him. But dearly as she loved him, she never allowed him to be content with the mirage of eminence only: she cheered and supported him with a firm hand on the road to reality. Such mothers are the roots whence spring great men. They know that the planting and pruning is not sufficient. They know that the balmy breezes that produce dreamy music from the poplar will elicit no sound from the oak, that it requires the hurricane to make these sing.

Before Otto had reached his seventeenth year he was at the university. He wanted to go to Heidelberg; but the mother preferred Göttingen. She was afraid that the art of imbibing enormous tankards of beer — an art so assiduously cultivated in the former town that it may almost be said to form part of the curriculum — would become a habit with her son. "A beer-vat cannot scale a mountain, and you have one before you, on the top of which is fame," said she. Otto conformed to the wishes of his mother, and to Göttingen he went. He was by no means a straitlaced young man; he joined in every amusement of the *Burschen* life, dressed like them, adopted their tone and manners. He was foremost in freaks of all kinds; but displayed that strong will and determination for which he afterwards became so famous.

Having been invited to a ball, at which the prettiest girls in the town were to be present, our young student orders a pair of varnished boots for the occasion.

As the eventful day drew near, and the *chaussure* was not sent home, he grew somewhat uneasy, the more as his friends kept repeating to him, "You'll not have your boots; the shoemaker disappoints every one."

"I'll have them in spite of that," replied the future chancellor.

The day before the entertainment Bismarck enters the shop. "And my boots?" asks he.

"I am very sorry sir," is the reply; "but I have so many orders on hand for to-morrow's ball ——"

"Ah, is that it?" cries the furious youngster; and, banging the door behind him, he leaves the house.

A quarter of an hour afterwards he comes back, accompanied by two of those enormous dogs which the German students are in the habit of feeding at the expense of their association.

"You see these dogs?" This to Crispin.

"Yes."

"Well, I swear that they'll tear you to pieces if you do not send my boots by to-morrow afternoon, five o'clock."

With this he went out again. But a *commissionaire*, paid *ad hoc*, was kept stationed in front of the dwelling, reminding the poor fellow at every minute, "Do not forget Mr. Bismarck's boots."

He had but the night to finish them. At ten o'clock he closes his shop, resigning himself to pass the hours on his stool instead of in his bed.

Suddenly the stillness is broken by the barking of the dogs, and the voice of their master singing out, "Snob of my soul, your life is in danger! Remember your family!"

The following day the boots were sent home in time.

As thus metamorphosed into the reckless student he came home for his holidays, his mother was far from pleased with his manner and appearance. They contrasted much with her *beau idéal* of the refined, elegant bearing a *diplomate* should make his own; and as she never dreamt of any other career for him, she began to have her misgivings about the continuance of a student's life. She was afraid that it would make him swerve from the path she had marked out for him.

From Göttingen young Bismarck went to Berlin, to complete his studies at the university there. He did not trouble the professors much, and was as little seen at their lectures as he had been at those of their Göttingen colleagues. Nevertheless he passed a brilliant examination, having, as the time for it approached, spent night and day in its preparation. The son's extravagances were not altogether unknown to the mother; but when she saw him stalwart and confident as Hercules after his twelve labors, her maternal fears were set at rest. Curious to relate, neither his *débuts* nor his labors in the forensic career, which he at first embraced, were of a kind to inspire much hope in her who cherished such great expectations.

Meanwhile the financial circumstances of the Bismarcks had become much impaired, partly owing to the sumptuous life when in Berlin during the winter; also to the expensive yearly excursions to Ems and elsewhere; but most of all to the agricultural experiments introduced on their estates. In 1838, therefore, the sons proposed that the parents should leave them not only the reversions, but grant to them the present possessions of the demesne in Pomerania, and that they (the elders) should return to Schönhausen. They intended, by a more careful supervision and management of the land, to make it more remunerative, and by this means to ward off the total ruin which threatened the family; seeing that Schönhausen, thanks to the care bestowed upon it for several years already by a conscientious and business-like relative, was yielding a substantial revenue. The plan was carried out. The illness of Frau von Bismarck, increased of late, obliged her to repair to Berlin to consult the most eminent physicians. But her disease, hopeless and incurable, terminated fatally in the capital on the 1st of November, 1839, when she had not quite reached fifty.

The old friends of the family, to whom the mother's ambition for and estimate of her younger son were no secret, have often said to the chancellor, while he was as yet but an ambassador in St. Petersburg and Paris, "Bismarck, if your mother could have but witnessed this!"

For once a mother's legacy to posterity has not been lost in transmission. Whether the recipients are quite pleased is another question. As for Frau von Bismarck, we may sing with Anacreon: —

Thus after death, if shades can feel,
Thou may'st, from odors round thee streaming,
A pulse of past enjoyment steal,
And live again in blissful dreaming.

ALBERT D. VANDAM.

ERICA.*

TRANSLATED FOR THE LIVING AGE FROM THE GERMAN OF

FRAU VON INGERSLEBEN.

IV.

THE ARTIST.

SEVERAL weeks had elapsed. The agitation the invalid had evidently felt on reading the letters, and which had even caused a short attack of illness, had gradually lessened. Life in the little house pursued its usual quiet course. Reading, music, and sewing filled the time, and the pastor's lesson hours were regularly attended by Erica. Social intercourse with the latter's family formed, with the exception of a walk or drive, the only amusement of the young girl, whose life had no greater diversity until the middle of summer.

This festive and harvest season to the inhabitants of Waldbad was now approaching. The houses awoke from their winter sleep, opened their shutters, and let the sunlight glitter on their shining windowpanes. The tangled creepers were arranged, and trained over symmetrical walls and pillars. The gay curtains, which were to afford protection from the ardent heat of the sun, appeared in the glass-roofed verandas, while tables, chairs, and benches were arranged within to invite guests. The long-closed doors of the bathing-houses were also opened, and from the chimney of the warm bath rose a column of smoke which announced the opening of this establishment. Waldbad rubbed the winter sleep from its eyes, and waited with

eager, joyous anticipation for the things that were to come.

Erica noticed all these symptoms of awakening life with eager interest. She joyfully informed her mother of finding the first primrose, the first violet, as a token of returning spring, and the invalid was kept exactly informed of the progress of the season — in Waldbad even the rudest fishermen spoke of the season. The villa of the rich merchant M. had now opened its shutters, and would soon receive its owner's family. The castle-like edifice near the down awoke from its repose, and the lawn before it was gay with large and small children. To-day the sailor Peter had rented his house, and to-morrow another fisherman's rooms were to be occupied.

The feeble mother listened to all these reports with a kindly, sympathizing smile. Her sufferings had increased to such a degree that it required all her strength to conceal them from the young girl's eyes, and she was glad to see her attention absorbed and diverted. She, too, rejoiced in the approach of summer, from which she hoped to obtain some mitigation of pain, though she had long since relinquished all hope of cure.

Erica, to whom exercise in the open air was a vital necessity, found herself at this time — when her mother's usually strict rule was somewhat relaxed, and a holiday silently agreed upon — almost constantly out of doors. Even the meals were eaten in the little veranda, if the mild air permitted her mother to remain there. The young girl, whose life was usually so solitary, revelled in the society of companions of her own age, most of whom she had known a long time, as they usually spent every summer in Waldbad with their parents.

Dear as all these friends were to her — youth is quick to bestow this title — she did not omit her lonely walks. The forest and sea she knew and loved in their various changes, and which had so often been the trusted companions of her solitude, retained their attractions even now. As habit had steeled her frame against fatigue and made her fearless, she often extended her walks to a greater distance than other young girls would have ventured to do or even thought proper.

One day, when the sun was pouring its golden rays upon the earth, and sea and sky vied with each other in their radiant blue, Erica set out upon one of these expeditions.

Her round straw hat was soon removed from her head as too hot and uncomfortable, and hung on her arm as a basket, in which she collected flowers and ferns to carry home to her mother, arranged in a beautiful bouquet. Thus she strolled slowly along through the forest, inhaling the spicy odor of the pines, and listening to the monotonous murmur of the waves, which echoed in subdued tones from the distance.

The forest seemed to be taking a noonday slumber, the stiff branches of the firs were motionless, and not a leaf stirred on the trees. The birds were silent, save now and then a low twitter sounded from the boughs. The sea blinked sleepily with its huge blue eye, and its monotonous lullaby seemed to grow fainter every moment. The beetles in the tall ferns buzzed gently, as if in dreams, and the bees, usually so busy, remained motionless in the flowers. Even the little clouds sailing athwart the radiant sky seemed spellbound in their places, as if surprised there by some magic slumber.

The young girl strolling through the forest soon felt as if she were under the ban of this lassitude. Her steps involuntarily slackened, her eager glances rested on the ground, and her head drooped on her breast. To lie down on the blooming heather, under the shade of one of the larger trees, seemed to her a very desirable position, and she looked around for a suitable place.

She happened to be in a little glade, and as she noticed on the opposite side a group of oaks and beeches, whose dense foliage seemed to promise an unusually cool shade, she turned her steps towards it. But she had scarcely reached the open space, when she suddenly stopped and gazed in surprise at an object she now perceived. This was an easel, placed at no very great distance from the clump of trees, but whose owner was nowhere to be seen. A small portable camp-stool stood close by, a large sun, or rather rain, umbrella, lay open beside it, in short everything showed that the artist must have just left the spot.

Erica's curiosity was excited by objects so unusual to her. She did not think that the owner of the property, like herself, might have become tired and thrown himself on the heather; on the contrary, these unclaimed articles, in the midst of the forest, seemed wonderful to her. Her fatigue had disappeared as if by magic, and with all her former eagerness she hurried towards them.

With her eyes fixed steadily on the easel, on which her keen glance already detected

the outlines of the drawing, she sprang forward, and had almost reached her goal, when suddenly stumbling over some object, she almost fell. The hat on her arm actually dropped on the ground and poured its contents over the sleeper, whose foot had been the unseen obstacle. The latter seemed to have fallen into a tolerably sound sleep under the shade of a small thicket, for he gazed languidly up at the young girl without rising, and merely brushed the rain of flowers from his face.

Erica was startled, but she had been educated in too much seclusion to find her situation very embarrassing. She only felt anxious lest she might have hurt the sleeper, and therefore bent frankly over the young man and asked, —

"Did I hurt you? Are you frightened?"

He did not look very much alarmed, and his features also betrayed no pain; on the contrary, he seemed to take the unexpected meeting very quietly. He now slowly raised his head, rested it on his arm, and gazed at the young girl before him, without thinking of rising or answering. Erica instinctively felt the want of respect this conduct expressed, and therefore said in quite a different tone, —

"I asked whether I had hurt you. You can surely tell me if I startled you, and I will cheerfully ask your pardon."

A smile flitted over the face of the recumbent figure. "Surely you can see how I am trembling, little fairy, so pray apologize."

The words, and still more the tone in which they were uttered, aroused the young girl's anger. She seemed to be taken for a child and treated as such. She was uncertain whether to go on and leave the stranger to his fate, or remain and compel him to be more respectful. He was still lying outstretched on the heather, with his head resting on his arm, gazing up at her. His calm, almost weary glance, formed a singular contrast to the angry light that flashed in Erica's brown eyes, which were fixed indignantly on her companion. She had now formed her resolution, and picking up the hat that was lying on the ground, walked hastily away.

But she had scarcely taken a few steps, when — she knew not whether it added to her vexation, or aroused her pleasure — the young man stood at her side. In spite of his apathetic appearance, he must be capable of moving rapidly if he could start up and overtake her so quickly.

"Don't run away, little mystery, I haven't half finished guessing," he said laughing. His tone did not sound particularly respectful, any more than the words, which, however, did not now offend Erica, on the contrary she turned her head towards her companion, and said in the same manner, —

"I think you have had plenty of time."

"My ideas are rather slow, little fairy. You must be indulgent. From whence do you come? Not from the water, for then you would of course have long floating robes and a garland of rushes in your hair. You can't have sprung from a tree either, the costume is not appropriate, and besides ——"

"Well, besides?" asked Erica.

"Besides, my foot, over which you stumbled, plainly proves your corporeal existence. Contact with such ethereal creatures does not usually leave behind the black and blue spots which it can undoubtedly show."

"So I really did hurt you. Very well, you can take it as a punishment. But is it so strange to meet other people in the forest besides nymphs and dryads?"

"So you too are familiar with the world of mythology — well, to be sure, it would not be strange to meet 'other people' in the forest, if the other people did not happen to be a young — very young girl ——"

"I am seventeen years old," Erica could not help interrupting.

"Is it possible? If I were not already so deeply in disgrace with you, I should say that I thought you were only fourteen, but I shall beware of making any such confession. So it is a young girl of seventeen who extends her walks so far, and yet is neither a fisherman's child nor one of the summer visitors."

"How do you know I am not a summer visitor?" asked Erica, quickly. But she had scarcely uttered the words when a look of sudden intelligence flitted over her mobile features. For an instant her face clouded, as if sorrow, anxiety, or mortification had touched her, but the next instant it brightened again, and she pointed to her simple calico dress, saying in a tone of delicate irony, —

"Oh, I understand! The costume is not appropriate."

The young man made no reply; he gazed earnestly into her face, and then said, in a very different tone from the one he had previously adopted, —

"Pardon my inquisitiveness, if I ask your name. Easy as it is to read your thoughts in your face, the hieroglyphics of the name are not imprinted there, and I acknowledge my curiosity."

Again a shadow flitted over Erica's features, Some secret struggle was evidently taking place in her mind, which surprised the young man the more, as there seemed to be no cause for it. At last she said softly, with downcast eyes, —

"I really do not know myself why the name will not cross my lips, but I cannot gratify your wish. But you are going too far from your easel," she added hastily. "Farewell, my path lies in this direction," and with a hurried nod, she turned and walked quickly away.

The young man looked after her in astonishment, and then murmured laughing, "Upon my word, the little one dismissed me like a schoolboy. Poor little thing," he added gravely, "I know very well what deterred you from telling me your name. You are beginning to feel ashamed, and really the pastor's little daughter — for that you undoubtedly are — ought not to appear in such a faded, miserable dress. We Germans must believe our preachers have plenty of heavenly riches, and therefore can dispense with worldly goods, since we allow them to obtain so small a share of them; and yet we talk enthusiastically of the poesy of a country parish, which, however, with the exception of the vine-covered parsonage, often offers little enough of it, but a great deal of want and deprivation. At any rate I will call on the pastor here; I should have no objection to see the little one again. She is a child, and not even a pretty child; but it is interesting to watch the April-like changes of expression in her face; besides she has eyes like a deer, timid and trustful, clear, frank, and yet penetrating."

"Since Katherina — oh, I beg pardon, Kathinka," said the young man, laughing gaily as he corrected himself, "took the whim to come here, I must, in the wilderness of ennui that extends immeasurably before my eyes, consider even meeting a child as an adventure."

Meantime the young artist had returned to his easel, seated himself in his camp-chair, and commenced to draw, but he soon laid the pencil down again, rose, and prepared to leave the spot. "Is it sleep or meeting the pastor's little daughter that makes me unable to work?" he muttered half angrily, as he folded the easel, shut up his camp-chair, and took both under his arm.

"Now I must drag these things over the long road home, it is unfortunate when ennui leads people into these romantic freaks. And the august Kathinka has no idea of the extent of the sacrifice I am making for her; she sets a tolerably high value upon her society, and is just as artless about it as in her exaggerated estimation of the rank, which has brought her nothing but sorrow. But suppose I go towards the sea with my burden; I believe it is the nearest way, and besides there will be a chance of meeting the pastor's little daughter again."

V.

THE FOREIGN SAILOR.

When Erica had so hastily dismissed her companion, she hurried into the forest without any definite object. The excitement in which — though unable to comprehend the cause — she found herself, prevented her from paying any special attention to the path she pursued, and made her only desire to get away as far as possible to be unobserved.

When had she ever before felt her poverty bitter, or been ashamed of the simple dress this poverty forced upon her? Was she not doing an injustice to her mother, who uncomplainingly endured so many deprivations, and by these alone had obtained the means to give her daughter a good education? Why had she never before realized the want of harmony between this education and her circumstances, how had she been so happy in this poverty until now?

Had she not every summer seen the prettily-dressed children of the rich merchants without the slightest envy, without even feeling a wish for similar finery? Had she not really pitied her friends for the restraint their toilettes involuntarily imposed upon them, and considered herself fortunate in being able to wander so freely through the fields and forest, or use the oars? The only blessings which hitherto she had understood how to value God's fatherly hand had bestowed on all with equal lavishness. The sunlight and the blue sky, the fresh sea-breeze, the odor of the forest, the rustling of the wind, and the song of the birds did not require wealth to be enjoyed, the poorest could revel in them with equal delight.

Was not all this beauty now outspread before her in the most abundant measure, and yet she still felt the sting, which pressed the more sharply into the young heart, because it had hitherto never known its pain? She again recalled the scene through which she had just passed, and once more asked herself, "Would that young artist have behaved with the same

carelessness if one of her girl friends had met him? Was it only because he really thought her a child, or because he believed her inferior to him in station, that he had accosted her in such a manner? Even his hurrying after her — which at first had really conciliated her — now appeared in quite a different light, and seemed to show how little respect the young man had paid her.

Erica, who knew nothing about the forms of society, and had scarcely ever had an opportunity to converse with young men — for Waldbad had hitherto possessed few attractions for them, and usually numbered only women and children among its guests — possessed no standard by which to form a correct judgment of his conduct, and therefore the more she reflected upon the young artist's behavior, the ruder it seemed. A bitterness never known before crept into her heart, and naturally prejudiced her against the person who had aroused it. She hoped she should never meet him again, that nothing would remind her of him, and thought that, with the gradual forgetfulness of the event, the unpleasant feelings excited by it would also fade. Absorbed in her meditations, she had paid so little attention to the path she was following, that when she now looked around, she was surprised to find she had wandered so far. She found herself in a ravine filled with stunted pines and bushes, whose steep sides sloped to the sea, whose waves — as if angry at the resistance they encountered — beat violently against the rocky shore. Nature's noontide slumber seemed to be over, for a fresh breeze blew from the water, drove the clouds swiftly over the sky, sighed through the bushes, and wailed in prolonged tones at the end of the ravine, through which it wandered like a prisoner.

Erica listened to the familiar sounds, and her features gradually resumed their usual expression of quiet content. She sat down on the soft moss that covered the ground, for she felt wearied by her long walk, and gazed over the waves. Clouds of mist, like a light veil, began to rise slowly from the water, and gradually filled the air. Near the horizon they seemed to be growing denser, for a thick grey wall obscured the blue sky. Almost imperceptibly, even to Erica's keen eyes, the slender masts of a large ship, rocking upon the waves with furled sails, were relieved against the grey background.

At this time the sea was often covered with vessels going to the harbor of Swienemünd, and Erica would therefore have scarcely thought it worth while to notice the ship, if she had not observed a boat approaching the shore from that direction. Soon after the skiff grounded in an inlet close by, and Erica saw two men jump out, while a third remained in the boat. The new-comers walked hastily up the wooded ravine, and thus soon approached the young girl.

Was it fear that suddenly seized upon her, or merely reluctance to meet other strangers? She did not know, but instinctively concealed herself from the approaching pair by forcing her pliant figure among the bushes, and thus leaving the way open for the new-comers. The latter seemed to be engaged in earnest conversation, and as they drew nearer Erica recognized one as a Waldbad fisherman. The dress of the other was very similar, for he also wore a pea-jacket, long boots reaching almost to the knee, and a cap with a sort of cape hanging down the back. He must therefore probably be a fisherman, only Erica wondered why he had turned up the collar of his jacket so high, and drawn his cap so far over his face that his features could scarcely be distinguished.

As the men were walking so rapidly, she thought she should soon be relieved of their presence, but they stopped at the very spot where she had just been sitting, and she heard the stranger say, —

"I have changed my mind, Wilms; I won't go with you. I can learn the ground well enough afterwards, and I am afraid of being seen and thus exciting useless suspicion."

"But you promised to speak to my wife yourself, sir," replied Wilms.

"Are you afraid of your wife, friend, that you need my help?" said the other, laughing somewhat rudely.

"I am not afraid, you do not think so, sir, but I don't know how to put the matter to her. She is poor, but she is an honest woman, and will scarcely consent."

"Oh! pshaw, no hand shuts itself against money. And, besides, I ask nothing wrong. I want nothing except now and then to have a little information from her, the rest is not her concern. But come, I'll go with you. There is a storm brewing at sea, which will soon burst, and then the fine gentlemen and ladies will stay at home and not annoy me with their stares. Come, let us make haste!"

The two men walked quickly on, their steps soon sounded fainter, and at last no trace of their presence remained. Erica left her hiding-place, and looked around to

see if she were really alone. The stranger was right, a storm threatened to burst.

The bank of mist now almost covered the sky, the water had assumed a strange, greyish-green hue; the wind, which for a time seemed to have died away, the next instant blew in short, violent gusts. The water-fowl circled low over the waves, on which they sometimes appeared to rest, and their light plumage gleamed brightly through the darkening air. The twittering of the birds in the forest had died away, and nothing was audible except the rustling of the branches and the creaking of the pines, shaken by the gusts of wind.

Erica must hasten her steps if she wished to reach home before the storm burst, and thus was obliged to follow the two men. The speed with which she moved prevented her from thinking about the words she had heard, though the whole affair seemed strange, even unpleasant. When the footpath ran in a straight line for a short distance, she saw the dim outlines of the two figures before her, but the men walked forward so quickly that, even with the greatest haste, she did not fear overtaking them. Now a bright flash darted from the sky and vanished in the sea, soon followed by the rolling thunder. It growled menacingly in the distance, and quickened Erica's pace almost to a run. The last patch of blue sky was now covered with clouds, and single heavy drops, messengers of the coming rain, fell upon the earth. Again a jagged line of fire darted from the grey clouds, lingered for an instant in the horizon, and then also disappeared in the sea, while a louder peal of thunder announced the nearer approach of the storm.

Erica glanced around in search of some temporary shelter, for it was impossible to reach home before the outbreak of the tempest. She would not have been afraid to take refuge under a tree, for the storms that rise from the sea rarely pass over the land; but unfortunately there were none near except pines, whose needles — as they did not even stand very close to each other — would have afforded very little protection from a heavy rain. So she had no resource except to go on, although the drops fell faster and faster.

To shorten the distance, she went across the forest, and when she again emerged into the fields encountered such a violent gust of wind that it almost lifted her from the ground. She hastily tried to reach the sand-hills of the neighboring down, where she would at least find some protection from the storm. A fisherman's hut, built close under the down, which now appeared before the fugitive, was a welcome sight, and she walked rapidly towards it.

Just as she was about to enter, she remembered that this was the dwelling of the very Wilms she had just seen with the stranger. She lingered irresolutely a moment, and then pushed the door open.

The dark entry, which seemed to serve both for kitchen and smoking-room, was pervaded with such an oppressive, disagreeable atmosphere, that the young girl was almost tempted to go out again into the rain, now pouring from the sky in torrents. But she had already been seen, for a half-grown boy, who was standing at the inner door, and had probably been listening a little, suddenly started from his stooping posture and approached her.

"Nobody can come in here! Go out again! Go this moment," he said, with the characteristic rudeness which makes such an unnecessary display of strength, because only too conscious of its own weakness.

But this incivility, exaggerated as it was, did not intimidate Erica. On the contrary, she answered laughing, "What are you thinking of, you silly boy, to tell me to go out in this way?"

The "silly boy" did not seem offended by her reply, but instantly changed his rude manner and approached her.

"I have got myself into a nice muddle, to be sure, Fräulein Erica," he stammered in an embarrassed tone, passing his hand through his hair. "Yes, what am I to do now?" he added in a louder voice, looking inquiringly into her face.

"What are you to do? Open the door and let me into the room. One can scarcely see one's hand before one's eyes, and the smoke is suffocating."

"That's all very well, Fräulein Erica, and I should be glad enough to do it; but father put me here to keep watch, and said he would beat me if I let any one into the room."

Erica started; she thought of the stranger and the promised conversation with the fisherman's wife. If it had formerly seemed not altogether agreeable to meet him, he certainly could not possibly know that she had been listening to him, and the desire to obtain protection from the storm had conquered all hesitation. Now, for the first time, she remembered that the man was alone and did not wish to be seen, and was angry with herself for having forgotten the fact and entered the hut.

"Never mind," replied Erica. "I will

stay here a few minutes; it is raining so hard that the storm cannot last long."

"Let the girl come in!" the stranger's voice suddenly exclaimed. There he stood close beside her, still with the collar of his jacket turned up, and his hat pulled low over his face. Her eyes involuntarily sought to distinguish his features, but the darkness was too good an ally for her to be able to perceive more than the dim outlines of a bearded countenance.

Nay, she could not even see whether the beard was light or dark. The stranger had also turned to leave the hut, and Wilms, with officious civility, threw open the inner door, exclaiming, —

"Come in, Fräulein Erica!"

"*Fräulein* Erica?" cried the stranger, in a mocking tone, again turning his face towards her. He said no more, however, but with a slight shrug of the shoulders, walked out of the door into the pouring rain.

A sudden pang shot through Erica's heart at this jeering exclamation. The wound dealt that day, which was scarcely healed, re-opened and bled violently. Yesterday she would probably have attributed the sarcasm to her childish appearance, but now it awoke the deep sorrow of life, mockingly pointed to the abyss on whose edge she had hitherto walked so unsuspiciously.

She was so engrossed in her own thoughts, that she scarcely noticed the singular conduct of the fisherman's wife, who, after a hasty greeting, troubled herself no farther about her visitor, but stared fixedly out of the window at the flashing lightning, which from time to time lit up the room with its dazzling brilliancy, while the peals of thunder made the panes rattle.

Not until Erica — when the rain at last ceased — had set out upon her way home, did she think of the altered manner of the woman, who was usually so lively and talkative, and say to herself that it had probably been caused by her conversation with the stranger.

From Nature.

SINGING MICE.

PERHAPS the following account of a singing mouse may be of interest to your readers.

Last winter we occupied the rooms we now do at Menton. Early in February we heard as we thought the song of a canary, and fancied it was outside our balcony; however we soon discovered that the singing was in our *salon*, and that the songster was a mouse; at that time the weather was rather cold, and we had a little fire, and the mouse spent most of the day under the fender, where we kept it supplied with bits of biscuit; in a few days it became quite tame, and would come on the hearth in an evening and sing for several hours; sometimes it would climb up the chiffonier and ascend a vase of flowers to drink at the water, and then sit and sing on the edge of the table and allow us to go quite near to it without ceasing its warble; one of its favorite haunts was the wood-basket, and it would often sit and sing on the edge of it. On February 12, the last night of the carnival, we had a number of friends in our *salon*, and the little mouse sang most vigorously much to their delight and astonishment, and was not in the least disturbed by the talking. In the evening the mouse would often run about the room and under the door into the corridor and adjoining rooms, and then return to its own hearth; after amusing us for nearly a month it disappeared, and we suspect it was caught in a trap set in one of the rooms beyond. The mouse was small and had very large ears, which moved about much whilst singing; the song was not unlike that of the canary in many of its trills, and it sang quite as beautifully as any canary, but it had more variety, and some of its notes were much lower, more like those of the bullfinch. One great peculiarity was a sort of double song, which we had now and then — an air with an accompaniment; the air was loud and full, the notes being low, and the accompaniment quite subdued. Some of our party were sure that there was more than one mouse until we had the performance from the edge of the wood-basket, and were within a yard or two of it. My son has suggested that many or all mice may have the same power, but that the notes are usually so much higher in the scale that, like the cry of the dormouse and the bat, they are at the verge of the pitch to which the human ear is sensitive; this may be so, but the notes of our mouse were so low, and even the highest so far within the limits of the human ear, that I am inclined to think the gift of singing in mice is but of very rare occurrence. JOSEPH SIDEBOTHAM.

Hotel de Menton, Menton, S. France, October 31.

SUNFLOWERS.

THEY blossom brightly, straight and tall,
Against the mossy garden wall,
Beneath the poplar-trees;
The sunbeams kiss each golden face,
Their green leaves wave with airy grace,
In fresh September's breeze.

On one fair disc of gold and brown,
A purple butterfly lights down;
A sister-blossom yields
Her honey store, content to be
A late provider for the bee,
Flown here from clover fields.

Each dawning day, when climbs the sun,
And steadfast till his course is run,
These royal blossoms raise
Their grand, wide-opened, golden eyes,
To watch his journey through the skies,
Undaunted by his blaze.

The butterfly may sleep or soar,
The bee may steal their honey store,
But still the flowers gaze on,
With burning looks of changeless love,
Toward the day-god, high above,
Until the day is gone.

Fair maid beside the garden wall!
Thy lithe form copies, straight and tall,
The sunflower's stately grace:
The golden tresses of thine hair,
Like sunflower-rays do weave a fair
Bright halo round thy face.

And through their shadows looking down,
We find thine eyes of softest brown
Like sunflowercentres are;
We watch thee standing in the bloom,
The God-given sunflower of our home,
Yet meek as evening's star!

Ah, watching thus, high thoughts arise,
Deep thoughts, that fill our time-worn eyes
With fearful, hopeful tears.
God give thee sunshine on thy way!
God crown thy happy summer day
With peaceful autumn years!

In due time coming, on thy breast
Love's purple butterfly may rest,
And nestle close to thee;
And ere thy summer-time is o'er,
Thy sweetness may yield honey store,
For life's brown working-bee.

But evermore, though love should come
And fold his pinions in thine home,
Lift thy calm gaze above!
Mark thou the sunflower's constant eye,
And follow through life's changing sky,
The sun of faith and love.

All The Year Round.

ADRIFT.

DRIFT, let it drift; the cords are snapped that curbed it;
The rigid anchor holds that bark no more;
Th' impatient sails whose fluttering so disturbed it
No longer flap beside the sombre shore.
Out of the haven, 'thwart the roadstead gleaming,
Beyond the far bright offing hath it passed;
Still of some golden goal a-dreaming, dreaming,
O'er the wide deep that light bark drifts at last.

Let it drift on, nor blast nor billow checking;
No whirlpool to engulf, no rock to break;
The sea a mirror smooth for its bedecking,
The sky a blue pavilion for its sake.
On let it drift, the laughing mermaids weaving
Fantastic rings its devious course around;
And the gay syrens mocking its believing
With sweet, delusive ecstasies of sound.

Yet bright skies change; Hope's refluent tides run widely,
And Fortune wrecks great wonders with her wand.
So on some wintry eve, while I am idly
Counting the dusk waves on the sombre strand,
Haply before me from the offing shaded
A helmless bark shall drift in shattered state,
Its golden name, "The Mary," blurred and faded,
Tangle and bitter brine its only freight.

Spectator. J. S. D.

BEFORE THE WINTER.

THE rain is making rings on the river,
And the dead leaves in the black trees shiver;
The desolate sparrows under the shed
Are dreaming of summer and crumbs of bread.

Thin, dirty children play in the gutter;
A row of rogues by the wall-side utter
Their daily curses, and "watch for a job,"
And know they have something to earn or rob.

O the rain, the rain, in cold winter-time!
And the bitter bread that is bought by crime!
The fog and the frost from morning till night,
And no coal to burn or candle to light!

It is coming, coming: summer is dead;
The comfortless clouds are thick over head;
And snow will soon come to whiten the moor,
And the poor will remember that they are poor.

St. James. GUY ROSLYN.

From The Nineteenth Century.

THE RUSSIANS, THE TURKS, AND THE BULGARIANS.

AT THE THEATRE OF WAR.

I REGRET that for a few lines at the outset I must be egotistical, in order to explain what claims I have to speak on the subject of which this article treats. During the last five months I have been with Russian soldiers on the march or in the field; during the last three months I have been with them in Bulgaria north of the Balkans. I have been a close spectator of much hard fighting; I have been repeatedly with Cossacks or other cavalry acting as the extreme advance; I have traversed Bulgarian territory and entered Bulgarian villages in advance of any Russian troops. I have lived with, talked with, and dealt with the Bulgarian population, and taken great and persistent pains to ascertain their real condition and true character. I cannot profess to have had much close acquaintance with Turks, although I have taken every opportunity of talking (of course, through an interpreter) with prisoners, and with those who remained behind in the villages and towns, or who returned to their homes subsequently to the Russian occupation. But I have striven to note what they had done and what they had left undone. I have seen their conduct in battle, and their handiwork on the battlefield after the battle was over; I have striven from the aspect and surroundings of their deserted habitations to realize the habit of their lives in the time when as yet no enemy was within their gates. In fine, I may aver that my opportunities for observation have been exceptional, if not indeed unique, and I can further aver, in no spirit of boasting, that I have striven very hard to make the most of my opportunities.

Yet another short paragraph of egotism. I believe that I came to the work as completely a *tabula rasa* in the matter of prejudices, or indeed previous familiarity with the subject, as it is well possible to conceive. My work has always been the work of action; of politics either home or foreign I know shamefully little, and for them I ought to blush to own have cared yet less. Of the Eastern question I had not made even that extremely perfunctory study which the wide if thin field of leading articles affords. I had indeed repeatedly seen Turks as well as Russians fight in the Servian campaign of the previous year, but it was not difficult to discern that the fighting in Servia was not always "on the square." Having come thus blank to the observation of what has been passing in Bulgaria during the summer and autumn, I have no right to speak now as an argumentator, or commentator, or speculator; I can only venture to ask for some recognition simply as a witness, to which character in the following article I shall strive to confine myself. I ask to be regarded as an accurate witness, limiting myself to the sphere of my own personal observation: first, because I do in all humility think that I have some faculty of keen observation; secondly, because I am without any conscious prejudice except in favor of a good fighting man and against maudlin cant. And finally, I would ask to be regarded as an honest witness in virtue of the fact that what I am now doing must be greatly to my own detriment. In obeying the compulsion to fulfil a duty, I must offend many whose good-will I would fain cherish, must let go many friendships which I value very dearly. In virtue of this paper I am resigning the promised honor of a decoration which is given to foreigners with extreme rarity, and never given at all — wherein lies the pride of having it — but for some specific act of conduct on the battle-field.

I. THE RUSSIANS.

THE Russian has so many charming qualities, that there is a sense of ungraciousness in referring to his qualities of another character. He is a delightful comrade, his good-humor is inexhaustible, he puts up with hardships with a light heart, he is humane, has a certain genuine if unobtrusive magnanimity, and never decries an enemy. In the whole course of my experiences I encountered only two boorish and discourteous Russian officers. There can be no greater mistake than that the Russians are a suspicious race. The frank simplicity of the army amounted to a serious military error; spies might have

swarmed unchallenged, and I have no doubt were in truth plentiful. Newspaper correspondents, once received, were accorded a freedom of movement, and were unchecked for a boldness of comment, with a liberal toleration, and often indeed a frank encouragement, unprecedented in the annals of war. There was something magnificent, although it was not quite war, in the open candor of the advice given to correspondents, a week or so in advance, to betake themselves to specified points where interest was likely to develop itself. Generals or staff-officers seldom hesitated to communicate to the inquiring correspondent the details of their dispositions, or to allow, indeed to encourage him, to visit the forepost line. It is to the credit of correspondents with the Russians, many of whom were necessarily inexperienced in the discernment of what might probably be published as against what ought to be withheld, that the responsibility of self-restraint was so generally recognized. The Russian officer has the splendid valor of his nationality; he is no braggart, but does his fighting as a matter of course, and as part of the day's work, when he is bidden to do it. As for the Russian private, I regard him as the finest material for a soldier that the soldier-producing world, so far as I am acquainted with it, affords. He is an extraordinary weight-carrying marcher, tramping on mile after mile with a good heart, with singular freedom from reliance on sustenance, and with a good stomach for immediate fighting at the end of the longest foodless march. He never grumbles; matters must have come to a bad pass indeed, when he lets loose his tongue in adverse comment on his superiors. Inured to privation from his childhood, he is a hard man to starve, and will live on rations, or chance instalments of rations, at which the British barrack-room cur would turn up his nose. His sincere piety according to his narrow lights, his whole-hearted devotion to the czar — which is ingrained into his mental system, not the result of a process of reasoning — and his constitutional courage, combine to bring it about that he faces the casualties of the battle-field with willing, prompt, and long-sustained bravery. He needs to be led, however; not so much because of the moral encouragement which a gallant leader imparts, but because, his reasoning faculties, for lack of education, being comparatively dormant, he does not know what to do when an unaccustomed or unlooked-for emergency occurs. He is destitute of perception when left to himself. Somebody must do the thinking for him, and impart to him the result of the process in the shape of an order; and then he can be trusted, while physical power lasts, to strive his pithiest to fulfil that order. But if there is nobody in front of him or within sight of him, to undertake the mental part of the work, the Russian soldier gets dazed. Even in his bewilderment, however, he is proof against panic, and we saw him with sore hearts at Plevna, on the 30th of July, standing up to be killed in piteously noble stubbornness of ignorance, rather than retreat without the orders which there were none to give. The Turkish soldier is his master in the intuitive perception of fighting necessities. The former is a born soldier, the latter a brave peasant drilled into a soldier. If the Turk advancing finds himself exposed to a flank attack, he needs no officer to order him to change his front: he grasps the situation for himself; and this is what the Russian soldier has neither intuitive soldierhood nor acquired intelligence to do.

Of the multitudinous "atrocities" on Turkish refugees charged against the Russian soldiery with so great persistent circumstantiality by Turkish authorities and their abettors, I have never found the smallest tittle of evidence, and on soul and conscience believe the allegations thereof to be utterly false. But as I must not speak of mere belief, it behoves me to say that of all events which occurred south of the Balkans I have merely hearsay knowledge. "Atrocities" in plenty were, however, charged against the Russians north of the Balkans, and respecting these I can speak from a wide range of personal experience. The Turks resident in the towns and villages of Bulgaria were peremptorily enjoined by commands from Constantinople to quit their homes and retire before the advancing Russians. In

the great majority of cases they did so, and their evacuation was accomplished before the first Russian reached the vicinage of their abodes. This was so at Sistova, at Batuk, and at many other places where murder and rapine were circumstantially and lyingly averred against the Russian soldiers. The Turks who anywhere chose to remain were unmolested without exception, so far as I know. The orders that they should be so were strictly inculcated on the Russian *éclaireurs;* the Bulgarians were made acquainted with the injunctions of the emperor by the imperial proclamation widely, although surreptitiously, circulated in Bulgaria before the Danube was crossed. To this day you may see the cadi of Sistova walking about the town with an air as if he owned it. Gorni Lubnica is a large village not two hours' ride south of the imperial and grand-ducal headquarters in Gorni Studeni. Nearly half its population were Turks, more agricultural than most of their fellows, and of these a considerable number chose to remain in their dwellings and take their chance of the Russians. They were unmolested by the Bulgarian inhabitants and equally by the Russians. They dwell contentedly in their cottages, they have reaped their harvests and thrashed out their grain; you may see them fearlessly sauntering about their lanes, turban on head, none making them afraid. About Poradim, on the Plevna front of the Russians, many Turks remained in their dwellings; they met with no molestation, and are now earning a livelihood by carting to the front projectiles to be hurled against their brethren. It happened that by an accident I entered the town of Bjela in advance of the Russian calvary, and while there still remained on its outskirts some Turkish irregulars. These went; nearly the whole of the civilian Turks had already departed, but there remained behind a few, some living openly, some seeking concealment. In the evening the Russian calvary came in. The Turks who had chosen to stay openly at home were simply visited by an officer and bidden to stay where they were; those in concealment were searched for by the Russian soldiers aided in their investigation by the Bulgarians, when discovered kept under guard all night till the general had seen them, and then liberated, to return to their homes and avocations. The pillage of the subsequent night by Russian infantry stragglers was the only instance of serious indiscipline of which I am cognizant, and it was no pillage of Turks, but a rough miscellaneous sack of property, Bulgarian as well as Turkish, in which no personal injury was inflicted. A number of Bjela Turks who with their families had sought refuge in the woods around, and were suffering much from hardship and exposure, were visited and invited to return by order of the emperor. They reoccupied their habitations, reaped their harvests, and I have seen them walking about the place among the Russians and Bulgarians with the utmost independence of bearing. When the Turkish soldiers in a panic evacuated Tirnova, there remained behind some sixty Turkish families. The Russian force was a flying detachment chiefly of Cossacks. Tirnova swarmed with Bulgarians professing bitter hostility to the Turks, fraternizing warmly in copious raki with the Cossacks. Now, if ever, was the train kindled for insult and injury to the Turks at the hands of the Russians, under the temptations of instigation and drink. But by the Russians not a hair of their heads was injured, not a scrap of their property touched. As soon as might be, the officer in command detailed a guard to protect from marauding Bulgarians the section of the Turkish quarter where the population remained, and that guard was maintained till the Russians instituted at Tirnova a civic government. Constantly accompanying Cossacks and other Russian cavalry in reconnaissances on the front of the Rustchuk army, I never noticed even any disposition to be cruel. Where Turks were found they were made prisoners, in virtue of the obvious necessities of warfare; when complained of, the accusations were judicially examined and justice done deliberately according to martial law. I do not aver, remember, that atrocities were not committed on fugitive Turks; but not by the Russians. While the Turks yet remained in their entirety in the mixed villages, the Bulgarians did not dare to meddle with

them. Nor would they venture to interfere with remnants remaining behind from the general exodus, because they knew the terms of the emperor's proclamation, and were afraid to be thus actively vindictive. But reprisals were not to be apprehended from Turks "on the run," encumbered with wives, children, and household substance; there was little danger that any brutality perpetrated on these forlorn fugitives should reach the ears of the Russians; and the Bulgarians in places questionless hardened their hearts, and fell on with bitter, currish venom. But north of the Balkans, at least, Cossack lances and Russian sabres wrought no barbarity on defenceless men, women, and children. The Russian of my experience is instinctively a humane man, with a strong innate sense of the manliness of fair play. The Turkish prisoners I have ever seen well and even considerately treated.

The main causes of the inability of the Russian armies to achieve successes proportionate to the undoubted intrinsic quality of their fighting material are to my thinking three: corruption; favoritism (with its inevitable concomitant and result, intrigue); and general deficiency of a sense of responsibility among the officers all down the roll. Let me devote a separate paragraph to each of these blighting causes.

I tremble to think how high corruption reaches in the Russian army; I shudder to reflect how low it descends. It permeates and vitiates the whole military system. To be venal, so far from not being recognized as a crime, is not so much as regarded as a thing to be ashamed of. Peculation faces the inquirer at every turn; indeed it lies patently, glaringly on the surface. An illustrious personage, high in the army and near the throne, has mines which produce iron. Desiring to sell this iron for military purposes, he, spite of his rank and position, had to accede to the universal usage, and bribe to gain his purpose — a perfectly honest and legitimate purpose. A Vienna contractor comes to intendance headquarters with intent to sell boots to the army. He learns that it is no use to forward his tender direct in a straightforward business way; he must be introduced. He finds the right person to introduce him, and duly arranges with him the terms under which the favor of introduction is to be accorded. The introduction is made, and the contractor displays his samples and states that he is prepared to supply boots of that quality at six roubles a pair. The answer given him is that his offer will be accepted, but that his invoice must be made out at the rate of seven roubles per pair, although the payment will be at the rate of the tender. The Russian government had an account with the Roumanian railway, whereon the statement of the latter showed the former to be a debtor to the amount of ten million roubles. The Roumanian people pressed for payment, but obviously a preliminary duty was a searching audit. The Russian functionary concerned comes to the director of the railway with a proposition. This proposition is that the audit shall be a merely formal operation, on condition that he, the Russian functionary, shall receive a *douceur* or commission of half a rouble on every thousand roubles, for smoothing the track of an operation which if rigidly, far more if hostilely, carried out, must be arduous and vexatious. Fifty copecks on each thousand roubles seems a bagatelle, but where ten millions of roubles are concerned, the *dustouri* reaches the pretty penny of nearly a hundred pounds. Scarcely anywhere are the accumulated Russian stores — at Bucharest, at Fatesti, at Simnitza, at Sistova, at Braila — protected by shedding from the destructive influences of weather. Why should they be, when it is in the interest of all concerned except the State and the army, that the inevitable result should ensue — the rotting and condemnation of a huge proportion of the accumulated stores? The contractors are paid by a commission on the quantity of material laid down by them in certain specified places; their commission is earned when that work has been accomplished; their commission swells in proportion to the quantities of fresh supplies rendered necessary by the unserviceability of what has already been laid down. Every intendant concerned has a pinch, greater or smaller according to his position, of this commission; it is to the direct general and several interest of the gang that as much weather damage as may be shall occur among the supplies when once laid down. If any man wants proof of the universal system of plunder, he has only to visit Roumania and use his eyes. He will find the restaurants thronged with gentlemen of the twisted shoulder-knots. Their pay is a pittance, and it is in arrears: Jews, Greeks, and Bulgarians, the debris of the mercantile class, they have no private fortunes. But each gallant beswordered non-combatant eats of the costliest dishes, and orders sweet champagne in grating French; the *tout ensemble* of him would

not be complete unless his companion were some French or Roumanian beauty, as venal as himself, who is serving him as he is serving Holy Russia. A French correspondent, with a disinclination for going to the front, and a desire to employ his spare time, has been employing himself in collecting and authenticating cases of peculation throughout the Russian army, the record to be published at a safe season when the war is over. The exposure will astonish the world — at least that portion of the world which does not know Russia. In the mean time I venture to assert that every article of consumption or wear supplied to the Russian army costs, by the time it comes into use, more than double what it ought to do under a well-managed and decently honest system. Of other and yet baser corruption — of the little difficulty with which men of whom other things might be expected are to be found willing to be virtual traitors for a consideration, by offering to sell secrets and secret documents — I dare not trust myself to speak. The subject is too grievously melancholy.

Favoritism brings it about that commands are bestowed on men within its ring-fence, with little or no reference to qualifications. The Russian officer does not need merit if he can only attain to "protection." With "protection" a youngster may be a colonel in command of the grizzled veteran of hard campaigns and many decorations, who, destitute of "protection," is still but a first lieutenant. The aim in making appointments at the beginning of this war seems to have been to exclude from active service every man who has ever distinguished himself in a previous command. Todleben has been only sent for now as a last resource. Kauffmann, the conqueror of Khiva, was left behind to chew the cud of his experience. Bariatinsky was not withdrawn from the neglected retirement into which he had been suffered to lapse. Kotzebue's experience of command in active service remained unutilized. Tchernaieff, who with a mass of untrained militia kept the Turks four months at bay, was left for months to cool his heels in Russia, was at length insulted with the offer of the command of a brigade in Asia, and has now finally been ordered back into retirement at the instance of the archduke Michael — jealous of the ovations with which a fine soldier and really capable chief was received on arriving at the former's headquarters. Nepokoitchitzky's claim to be chief of the staff lies simply, so far as I can gather, in his knowledge of the Danubian valley on the Roumanian side of the river, derived by having served in the force which in 1853–4 scarcely covered itself with glory in fighting against the Turks. At Ploesti he seemed to me to fulfil the *rôle* of a superior sort of staff sergeant, always walking about with a handful of returns and states. He is a dumb man — and dumb seemingly from not having anything to say. Levitsky, his *sous-chef*, is a young professor, utterly devoid of experience except in the handling in manœuvres of comparatively small bodies of men; pragmatic and arrogant, but with a strong will, which, in conjunction with his incapacity, has been one of the chief factors in the failure hitherto of the Russian army. But he is within the ring-fence of "protection," and holds his ground against the clamors and murmurs of the army. To be within that pale is to be safe, if not from contumely, at least from open disgrace. If there be one thing more certain than another in connection with this war, it is that Prince Schakoffskoy ought to have been tried and broke for insubordination and disobedience of orders at the battle of Plevna of the 30th of July. But he still commands his army corps, and, so far as I know, did not even receive a direct reprimand. In the old days Krüdener would have been sent to Siberia for the unmilitary and insubordinate act of assembling a batch of correspondents, and essaying to vindicate his conduct through them to the world by the publication of the essentially private orders under which he was forced peremptorily to act. But he holds his position in command of a corps, although his immunity may indeed be owing to the fact of his grimly and threateningly holding the telegrams which exonerate him at the expense of others. Schilder-Schuldner, the hero of the utterly "unspeakable" first fiasco at Plevna, still retains the command of the fragment of that brigade which his crass blundering shattered there. General Kriloff, who the other day, entrusted with a mass of Russian cavalry, and charged with the task of blocking the Sofia road, supinely failed to intercept reinforcements and supplies marching on Plevna, enjoys the equivocal credit of an exploit which the English military reader may be excused for regarding as well-nigh impossible. He commanded for a year a cavalry division at Warsaw, during the whole of which time he possessed no charger, although he drew rations, or rather their money, equivalent for six.

Favoritism as inevitably begets intrigue as rottenness engenders maggots. Under an irresponsible absolutism the Absolute must have an almost impossible thoroughness and strength of purpose if favors do not frequently go through caprice and from other motives than the sheer claims of honest desert. So far as I can see, even the recognition of merit in the Russian court and military circle is too often capricious. Young Skobeloff had fought as splendidly on the grey morning when we crossed the Danube and plashed through the mud on its further bank to come to close quarters with the enemy, as on the day when he gained the name of the "hero of Lovca," or on that other later day when he stood master of the three Turkish redoubts on the south-west of Plevna. But whereas on the news of Lovca he was toasted at the imperial board, and whereas the Plevna fighting worthily earned him his lieutenant-generalcy, after the first exploit, when the emperor embraced Dragimiroff and shook hands with Yolchine, he turned his back ostentatiously on Skobeloff, simply because he was out of favor, and had not yet got back into favor by dint of hard fighting. Every Russian circle I have had experience of — the camp, court, the head-quarter staff, the subsidiary staffs, the regiment, the battalion — each is a focus of unworthy intrigue. Men live in superficial amity one with another, while, to use an Americanism, they are "going behind" each other by every underhand means in their power. Young Skobeloff was under a cloud, and Prince —— was his enemy. Skobeloff, who is not a courtier, cleft the cloud with the edge of his good sword, and the cloud drifts on to settle above Prince ——. General Ignatieff is in high favor, seemingly fixed firmly in his place close to the emperor's right hand, a man of power, influence, and position. The bad fortune of the war goads certain people, on whom the odium lies of that bad fortune, to wrath against the man who had done so much to bring the war about. There is a period of swaying to and fro of the forces of intrigue, and then Ignatieff goes back to Russia to assist his wife in the nursing of her sick sister. The wheel will come full circle again, no doubt, and then that presently afflicted lady will recover. The mischief of this all-pervading intrigue is that it is a distraction of the forces that ought to be concentrated on real and earnest duty. A man cannot concentrate all his energies on aiding in coping with the king's enemies without when he has to spend — or waste — a share of them in plotting to get the better of a man in the next tent, or to foil the devices of that man to get the better of him. And unfortunately, the man who is the greatest adept in intrigue, and benefits by it in the attainment of a high place, has not always — indeed, as intrigue is demoralizing, it may be said seldom — the qualifications which the high place into which he may have intrigued himself demands.

The deficiency in an adequate sense of responsibility is greatly caused by the evil treated of in the last paragraph. But, indeed, it seems to me that the lack of that thoroughness which a sense of responsibility inspires is innate in the Russian military character, so far as preparation, organization, and system, distinguished from mere fighting, are concerned. The Orientalism of the Russian extraction tends to *laissez-faire* — hinders from the patient, plodding, steady industry of the north-German soldiering man. Nobody holds himself directly charged with the responsibility of the urgent mending of a bridge, and the bridge is not mended. Nobody has it borne in upon him that it is a bounden duty he owes to himself, to his comrades, and to the State, to see that reserves are ready at hand to be used in the nick of time, and an enterprise collapses for want of reserves. A general of division gets an order to send forward into the fight two of his regiments. His luncheon is spread under yonder tree. A German or an English general would disregard his food, and concentrate himself on the proper execution of the work; his staff-officers would compete with each other in orderly zeal for the successful fulfilment of the order, and crave furthermore for the good luck of being permitted to take a share in the "fun." It is as likely as not — I have witnessed the scene — that the Russian general endorses the order, and passes it on to the brigadier by the messenger who has brought it, while he and his *fainéant* staff-officers, who have been sitting supinely about when they ought to have been in the saddle, seek the grateful shade of the tree and the contented enjoyment of the refection. Coming down from the Shipka Pass while the fate of the fighting there hung in the scales, I was sent for by the commander-in-chief to give a narrative of what I had seen. The circumstance vividly impressed me, that with the exception of Monseigneur himself, nobody appeared to feel that the general staff, and he himself as a member of it, had intense, engrossing,

overwhelming concern with the issue of that terrible combat. The subject was discussed with vivacious interest — indeed, with curiosity, with more or less of intelligence; but very much in the tone in which it might have been discussed by a coterie in the Army and Navy Club. With the exception indicated, there was no recognition or apparent realization of responsibility. I left the kibitka with the curious sense that I, the stranger and the foreigner, was, save one, the man who felt the most concern in the episode and the result. Except as regards the actual fighting, there is a strange, inappropriate dilettantism about the soldiering of the officerhood of the Russian army. There is a disregard of the grand military fact that if success is to be achieved, every man, each in his place, must put his hand to the work as if he were working for his own hand — ay, for his own honor and his own life.

One word as to the emperor. I would have it to be understood that no word I have written can apply to him. His position, in proportion to the fulness with which his character is recognized, must move to the sincerest respect and the deepest sympathy. He is a true patriot, earnestly striving for the welfare of his country. But he toils amid obstacles, he struggles in the heart of gathered and incrusted impediments, the perception of which on his part must, it seems to me, kindle wrath which is unavailable, bring about misgivings which must awfully perturb, induce a despair which must strike to the very heart. He is not answerable for the growing up of the false system which strikes at the vitals of the Russian army, but he cannot but recognize the blighting curse of it. He is not the Hercules to cleanse the huge Augean stable; but he knows, and in this hour of terrible trial must revolt from the foulness of it with a disgust that is all the more loathing because it is impotent. I sincerely believe that the emperor is the Russian who in all unselfishness suffers the direst pangs of anguish under a Russian disaster.

II. THE TURKS.

THE Turks have blundered greatly in the management of their military affairs, but two mistakes of theirs were of such exceptional magnitude, that they loom high above minor errors. The Turks are barbarians, pure and simple. They have neither part nor lot in civilization: their religion and its injunctions, their origin, the area of their empire, their conservatism, bar them out from membership in the European family circle. It may be and has been contended that this being so, Europe is no place for them; but with this phase of the subject, involving as it does argument, I have no concern. I would merely remark that when it shall have been conclusively proved that they are out of place in Europe, there remains the physical task of acting on the conclusion; and that task, to the lot of whomsoever it may fall, does not quite bear the aspect of a holiday undertaking. Meanwhile they are barbarians, and they are in Europe. As barbarians and as non-aggressives, it would have been quite consistent for them this spring to hold some such language as the following to all whom it might concern: "We do not want to go to war, but if any power thinks proper to assail us, we give due forewarning that we are barbarians, and will defend ourselves by barbarian tactics. Our religion enjoins on us the ruthless slaughter of the infidel. If we are assailed we give fair warning that we will neither ask nor give quarter; that we will, *more nostro*, torture, chop, hack, and mutilate our wounded enemies, encumber ourselves with no prisoners, despise such finicalities as flags of truce; our battle-cry will be *deen* to the Giaour. You are entitled to know this, because the knowledge may be a factor among the considerations which affect your final resolution. If after this intimation you are still bent on assailing us, why, then, come on and see how you like it." This intimation the Turks did not make, but they have consistently acted according to its literal terms. I have myself seen great clumps of mutilated Russian dead on battle-fields. I have watched, without the need of a glass, the Bashi-Bazouks swarming out after an unsuccessful attack on the part of the Russians, and administering the *coup de grâce* with fell alacrity, under the eyes of the regulars in the sheltered trenches. This style of fighting is working its inevitable result on the Russian soldier, who hesitates to face this grim additional casualty of the battle-field, and it is no improbable supposition that the candid premonition of it would have weighed with the Russian authorities on whom would have vested the responsibility of making war in the face of it. But the Turks have tried to blow hot and cold — to profit by their barbarism, and plough with the heifer of civilization. While slaying and sparing not, they have addressed whining, and it may be added lying, appeals to Europe, invoking the enactments

of the Geneva Convention, which they themselves set at naught. Wielding the axe and chopper of ruthless savages, they have acted like a pack of querulous and mendacious old women, in cackling to Europe their trumped-up allegations of violations of civilized warfare on the part of their enemies. They have thus sacrificed the sternly intelligible consistency of an attitude of persistent indomitable barbarism, and have admitted the jurisdiction of a court from whose bar it should have been their policy to stand aloof. This has been one capital error on their part: an error which may cost them infinitely dearer than defiant contumacy would have done.

Their second cardinal error comes within the pale of civilized warfare. Not having chosen to resist in force the Russian crossing of the Danube, and having elected to fall back before the invaders of Bulgaria, it was on the part of the Turks a grave military omission that they did not lay waste the territory which they left open to that invader's occupation. Had the territory been exclusively inhabited by their own people, it would have been none the less a military duty to have destroyed the crops, burnt the villages to the last cottage, and left only desolation behind them. It might have been that some fanatic philanthropists might have clamored of the inhumanity of this line of action; but sensible people would have sorrowfully recognized it as one of the stern necessities of ever-cruel war. The Russians could have uttered no reproach, with the precedent in their own history wrought by Kutusoff, Barclay de Tolly, and Rastapchin. If precedents are wanted of a later date, the American civil war — a war between brethren — swarms with them. If the Turks should have obeyed the demands of a military necessity, had the civilian population been mainly their own people, how much less incumbent on them was it to admit deterrent humanitarian considerations as the case stood! The whole Turkish population was ordered back by a command from Constantinople: there remained only Bulgarians, coreligionists of the invader, notoriously sympathizers with his aims, notoriously disaffected to Turkish rule, sure to become guides, spies, hewers of wood and drawers of water to their "deliverers," willing vendors to these of their substance. To leave behind, instead of reeking desolation, a land flowing with milk and honey, a land swarming with unmolested friends to the invader, was a piece of military lunacy almost unparalleled. The Turks should have driven the Bulgarian population inland before them to the last man, and left extant not a sheaf of barley that could have been destroyed. That they did not do so was the second of the two glaring mistakes I have indicated. When the defects of the Russian supply system are taken into consideration, there is no need to waste space in detailing the certainty, or in speculating on the probabilities, with which desolating tactics were pregnant.

It is no task of mine to inquire why the Turks did not pursue these tactics. It may be said that they did not because of their crassness, their hurry, their carelessness, their lack of military foresight; why suggest further reasons? But the outcome, as a hard fact, stands that the Bulgarian population, left behind unmolested when the Turks fell back, were spared unheard-of suffering. They were in fact left in full enjoyment of their prosperity, it might be forever, certainly for an indefinite period. I want to know, if the Turks choose to assert that they thus sacrificed themselves and spared the Bulgarians from motives exclusively of pure humanity, on what valid grounds is any one to contradict them? If I find my way into a cellar full of untold gold, and am found coming out with empty pockets, am I not, even were I by habit and repute a thief, entitled to claim that my honesty deterred me from plunder? I have said that the Turks are barbarians, and that they are ruthless savages when their fighting blood is up; but there is no inconsistency between this attribute and the attribute of contemptuous good-natured humanity, or rather perhaps tolerant unaggressiveness, when nothing has occurred to stir the pulse of the savage spirit. And I sincerely believe, on the evidence of my own eyes and ears, that the Turks — the dominant race in virture of those characteristics which, until the millennium, will ever continue to insure the dominance of a race — allowed the Bulgarians — the subject race in virtue of those characteristics which, while they exist, will always make a race subject to some one or other — to have by no means a bad time of it. Proof of this belief I will adduce in detail when I come to deal with the Bulgarians. But just cast a hasty glance at the conduct of the barbarian Turks during the past two years. The period opens with the Bulgarians, subject indeed to the Turks, taxed, no doubt, heavily and arbitrarily, annoyed occasionally by a zaptieh who must have been nearly as bad as the omnipotent "agent"

on the estate of an Irish absentee landlord, bound to dismount when encountering a Turk on the road, just as a rural inferior at home is virtually bound to touch his hat to his local superior; but withal prospering mightily. The recently imported Circassians are a thorn in their flesh, against whom they have to put up iron bars and keep numerous fierce dogs, precautions which do not always avail; but the Circassian nuisance may be "squared" by judicious occasional presents of poultry and farm produce to the moullah of the district. The Bulgarian population, it is true, are debarred from aspiring to any, even the meanest public function, not even having the distinguished privilege, so much prized by the business Englishman, of being summoned on a jury when private avocations are exceptionally engrossing. To judge by the manner in which the Bulgarian civic functionaries appointed by Prince Tcherkasky are presently fulfilling their duties, from the municipal councillor who is making haste to be rich by pillaging alike casual Russian and resident countryman, to the street policeman of Tirnova or Gabrova, who, clothed in a little brief authority, whacks about him indiscriminately with his ratan, it may be questioned whether the general progress of the world was seriously retarded by the enforced abstention of the Bulgarians from a share in the management of public affairs.

It was no doubt a sad thing that the stalwart manhood of the Bulgarians was debarred from proving in the defence of the country that it had a heart in keeping with its thews and sinews, although circumstances may inspire a doubt whether the iron of this prohibition ate deeply into the Bulgarian heart. The country was badly governed, or rather in effect it was hardly governed at all, and this is exactly the state of things in which the astute man who knows the trick of buying protection is sure to get on by no means badly. I do not mean to say that it was all smooth and pleasant for the Bulgarians, or indeed for any of the races of which the population of Turkey in Europe is made up; but their lot, from all I have been able to learn, was tolerable enough. It seems to have been a lot for which the practical British philanthropist would gladly see a considerable section of his fellow country-people exchange their own wretched, sodden, hopeless plight. The life of the Bulgarian was eminently preferable to that of the miserable victims of the "sweater" who exist rather than live in Whitechapel garrets. I think Devonshire Giles, with his nine shillings a week and a few mugs of cider, would cheerfully have put up with the zaptieh, exclusion from a share in the management of public affairs — although his home share of that privilege is so large and so highly prized — and would have even been resigned under the dispensation of debarment from military service, for the sake of the rich acres of pasture and barley land, the cattle and brood mares of the rural Bulgarian. I know that the Russian peasant soldier who has crossed the Danube as the "deliverer" of the Bulgarian from "oppression," feels with a stolid, bewildered envy that, to use a slang phrase, he would be glad indeed "to have half his complaint."

The times, no doubt, had a certain roughness, and occasionally there were Bulgarians who could not accept the roughs with the smooths, and who kicked against the pricks. There have been Irishmen who have manifested active discontent with the rule of the "hated Saxon," and who have been made to suffer for their peculiar way of looking at things. The discontented Bulgarians sometimes were sent to prison, but mostly escaped into neutral territory without undergoing this infliction; and wherever they found themselves — in Bucharest, in Galatz, up among the hills at Cronstadt, or down in the flat at Crajovo or Turn Severin — there they seduously plotted against the Turkish dominance over the Bulgaria from which they were exiles. I suppose they had a perfect right to do this, and to strive to implicate in their plots their brethren who still remained "oppressed," if prosperous: only the man who plots and the man who joins a plot must, like the man who speculates, be prepared to take the consequences of failure.

As for the argument that the Turks were new-comers and have no abiding places in European Turkey, but that their tenure there is but the empire of superior power — if that is to be admitted and acted on, there logically follows a revolution in the face of the world, and all but universal chaos. We must quit India, and bid an apologetic adieu to the Maori, the Kaffir, and the Hottentot, the Spaniard from whom we wrested Gibraltar, the Dutchman from whom we masterfully took the Cape. We are to take ship from the jetties over which frown the Heights of Abraham, and leave the French *habitants* and the remnant of red men left at Cachnawaga to settle between them the ownership of Canada East. Poland must

revolt against Austria, Prussia, Russia; the Tartars of the Crimea are to make a struggle for independence; the Irish are to drive forth the Saxon viceroy and his myrmidons at the point of the shillelagh; the Austro-Hungarian empire shall blaze into a chaotic conflagration, in which "furious Frank and fiery Hun," Serb, Magyar, Croat, and Teuton shall seethe confusedly.

The Bulgarians who abode at home, ignoring their substantial prosperity, and stimulated by their grudge against the Turk by reason of his masterfulness and his religion, tempted further by encouragement that came to them from Russian sources in Constantinople, listened to the voice of their exiled countrymen persuading them to insurrection. Persistent efforts have been made to minimize the radius and importance of the organization of that uprising, which collapsed so futilely and for which the penalty was so tragic. But these efforts can avail nothing before hard facts. When Tchernaieff was in England last winter, he detailed to me the widespread ramifications of the organization for the revolt all over Bulgaria, north as well as south of the Balkans, of which documentary evidence and fullest verbal assurances were furnished to him by the various committees outside Bulgaria, as he passed through the south of Russia and Roumania on his way to Servia. I could name several gentlemen with whom Tchernaieff, during the same visit, entered into the fullest particularity of details on this subject. It was by reason of the assurances of support and co-operation on which his knowledge of this organization entitled him to rely, that he dared to violate strict military considerations, and struck across the frontier into Bulgaria as soon as Servia had declared war. We know how feeble and patchy was the rising of the Bulgarians in reality, but that was owing not to the scanty area of the organization, but to the unpracticality of the conspirators and the faint-heartedness of the instruments. There was no outbreak at all north of the Balkans, but do not let it be supposed therefore that there was no organization for revolt. At Poradim, just before the July battle of Plevna, I, in company with a Russian staff-officer of high position, fell in with a Bulgarian who, now a thriving villager there, had during the previous year been the agent in Plevna of the American Book Society. Six years previously he had been imprisoned for active disaffection, but had regained his liberty by bribery. He had been the head centre of the insurrectionary organization in and around Plevna in 1875–6. He showed us the lists of memberships and of subscriptions — the latter not particularly reckless in their liberality. Everything had been prearranged, but when the time came there was not even a "cabbage garden" rising. The conspirators realized that the theory and practice of insurrection were two very different things, and remained content with the former luxury. The "head centre" had thought it prudent to relegate himself to village life, and to make a friend of the local moullah through the medium of presents of poultry.

The Bulgarian risings, then, such as they were, occurred. The Turks probably were unacquainted with the extent of the organization, but we must assume that they at least knew something. For the rest, *omne ignotum pro magnifico*. They had their hands full already. Montenegro and the Herzegovine were harassing them sorely; Servia was getting ready for war with all the energy of which she was capable. Other insurrections threatened in other regions of the great incongruous empire. This one at least was in the hollow of their hand; it must be crushed, stamped out, annihilated. The barbarian had got his provocation, and the savage strain in his blood went aboil. We all know what happened in the hapless regions where afterwards Mr. MacGahan wrote and Lady Strangford worked. It can be the task surely of no decent man to be the apologist of the Turkish wild beasts who ravaged and ravished in those fell days. But, on the other hand, indignation is misplaced against wild beasts, who simply do what "'tis their nature to" when provocation kindles the savage "streak" in their nature. What is the use? It is folly to feel wroth with the elephant who goes "must" and pulverizes his mahout. He is "must," and there is an end of it.*

* Nor can the barbarians, on whom rests the responsibility of the horrors of Batak and Prestovica, urge in extenuation that the history of races claiming the graces of civilization can afford them some instances which, in some sense, they can cite as precedents. It is a calumny that a modern Galgacus might have said of the men restoring quietude to the north of Scotland under the personal superintendence of Duke William of Cumberland, malignantly styled the Butcher, "*Solitudinem faciunt, pacem appellant.*" It is the most baseless chimera that a British general still alive commanded with a suave "Ah, exactly, a thousand thanks!" that a batch of "niggers" should be blown from the mouths of British cannon, whom two words of inquiry would have proved to be performing menial service to his own column, or that British lancers in the same campaign could boast of having three women spitted on their lances at the same time. Pelissier, "alias Le Roy," was one of the mildest of men, and

But the Turkish barbarities, like the Bulgarian actual risings, were localized. Perhaps the Turks were ignorant of the north-Balkan complicity; perhaps they ignored it; perhaps, seeing it had come to nothing, they gave no heed to it at all. Be that as it may, in all my wayfarings, from the Lom near to the Vid, from the Danube to the Balkans, I could neither hear of nor find human being who had suffered because of the business of last year; and I am sure I inquired sedulously enough. I found no man scored with yataghan slashes, no woman with a story of outrage, which from my later experiences I believe she would have been frank enough with if she had cause to speak. Last year's straw-stack stands in the farm-yard of every Bulgarian cottager; the color of its thatch proves that his habitation is not an erection of yesterday. The two-year colt trots on the lea along with the dam and the foal. His buffaloes are mature in their ugliness; his wife's white-metal water-pails are pitted with the dints of years. And if the belongings of the rural Bulgarian furnish testimony to the hitherto stable security of his way of life, not less do the surroundings of the towns-people prove their abiding conviction of non-molestation. Of the vines whose leaves and tendrils spread with verdant green shade over the garden arbors of Sistova, and whose fruit clusters dangle on the brown fronts of Drenova's old oaken houses, the gnarled stems are as thick as my wrist. Pretty Maritza of Tirnova shows you proudly her blooming balsams, and tells you how she took the trouble to bespeak the seed a year in advance from a famous balsam-cultivator across the Balkans in Kesanlik. It is to be doubted now whether he will ever grow balsams more. Her mother displays the yet remaining large stock of her last autumn's preservings. And, by the way, it was of this same mother that the tale was written to England how the pasha had informed her he would hang her, and indeed had even fixed the day for the operation, on the charge of concealing some obnoxious personage. I was given to understand, indeed, that some unpleasant communications had passed between the pasha and the good lady, but how much, or little, she was perturbed thereby, may be gathered from the fact that she did not desist from her placid preparation of paprika paste — no, not on the very day named or reported to have been named for disqualifying her from the further enjoyment of that dainty.

The Turkish soldiers, when the Russians made good their footing on the southern bank of the Danube, evacuated Sistova without so much as breaking a twig on the front of a Bulgarian house. Their civilian brethren had already departed with like unanimity of harmlessness. The disorganized bands of soldiers fell back through the rural villages without so much as filching a Bulgarian goose or requisitioning a Bulgarian egg. A Turkish army abode for days around Bjela, and finally departed, its rearguard consisting of irregulars, without a jot of injury wrought on the townfolk or their property. All along the Turkish retreat from the Jantra to the Lom, the Bulgarian experienced the same immunity. The Turkish inhabitants quitted, and the Turkish troops ran away from Tirnova without a blow or a robbery. It may, in fine, be said that the Turks departed absolutely harmlessly out of the territory from the Danube to the Balkans, of which the Russians stood possessed when their area of occupation was largest. How the Bulgarians requited this forbearance — or immunity, if the other word seems to ask too much — will have to be told later.

As the Russians have drawn in from the outskirts of that area, and the Turks have occupied the vacated territory, the immunity has ceased. It is not given to barbarians to accept with Christian resignation, or civilized phlegm, the spectacle of their dwellings wantonly razed, their crops stolen and sold, their little garden patches obliterated. They know that the miserables they find unaccountably remaining in the villages, deprived of Russian protection, were the culprits. They know that these welcomed the enemy of the Turk, acted as his guides, served him as spies, and found in him a customer for the Turkish crops. They know that these hung on the rear of the hapless retreating Turkish villagers in July, and slew them ruthlessly — men, women, and children — when the safe chance offered. So the "unspeakable" Turk lets the rough edge of his barbarism come uppermost again, and perpetrates atrocities — inflicts reprisals? Bah! what matters it about a form of words?

the insurgent Arabs, who died in the caverns of Dahra, perished from accidental asphyxiation. It is a ridiculous untruth that the military policy of the United States of America, as regards the Red Indian, is that of deliberate extermination. In the annals of Poland, 1831 is a halcyon year, and as for Mouravieff, he was soft-hearted to a fault.

III. THE BULGARIANS.

I HAVE found it impossible to avoid saying a good deal of the Bulgarians when writing under the preceding heading, and so much are the two subjects intermingled that in writing under the present heading I cannot hope wholly to exclude reference to the Turks. It must be understood that as I have never been across the Balkans, my observations in the character of a witness must be held as applying exclusively to the Bulgarians between that range and the Danube within the region of the Russian occupation. Nor must it be forgotten that this country is Bulgaria proper, where the Bulgarian race is purest: the Roumelian Bulgarians are affected, whether for good or evil, by a considerable miscellaneous intermixture of other races.

An outspoken Russian of my acquaintance, after a large campaigning experience of them, gave it as his belief regarding the north-Balkan Bulgarians that they must either be the result of a temporary lapse in the creative vigilance, or that they must be accepted as a refutation of the Darwinian theory of the survival of the fittest. My Russian friend had doubtless good cause of disgust for the Bulgarians, but I venture to regard his expressions as rather too strong. My experience of the Bulgarians, indeed, is that they have fewer of the attributes calculated to kindle sympathetic regard and beget genial interest than any other race of whose character I have had opportunities of judging. But they have some good points, more especially the rural Bulgarians. They have prospered by reason of sedulous industry practised to some extent at least under arduous conditions, and this is an unquestionable merit. Their prosperity has indeed been used as an argument why the Turks, whose bent is far from being so keenly towards industry, and who accordingly do not display evidences of so great material prosperity, should therefore cease to be the master people. It is not for me to combat this or any other argument, but I may venture to suggest that if a maximum of prosperity is to be regarded as the criterion, we Britons must retire *en masse* into private life in favor of the Jewish element in our midst. It tells doubtless in favor of the Bulgarian that he is in name a Christian; although his "evidences of Christianity," so far as I have cognizance of them, consist chiefly in his piously crossing himself in starting to drive a vehicle for the hire of which he has charged double a liberally reasonable sum, after having profusely invoked the name of the Saviour to corroborate his asseverations that the price he asks is ruinously low. He cannot be denied a certain candor, which sometimes has a cynical flavor in it, as when he coolly tells a Russian, who in the character of his "deliverer" is remonstrating against his withholding of supplies or his extortionate charges for them, that "the Turk was good enough for him, and that he didn't want deliverance." The Bulgarian is singularly adaptive. He realized his "deliverance" with extreme promptitude of perception, resulting in bumptious arrogance. He drove his ox-cart with nonchalant obstinacy in the only practicable rut, and grinned affably when your carriage-springs were broken in scrambling out of it to pass him. In the towns he held the crown of the causeway; in the country regions near the forepost lines he sees it to be expedient to pursue the career of a double spy and a double traitor.

In the preceding section I have spoken at length of his material prosperity prior to the arrival of the "deliverers." The two races — Turk and Bulgarian — dwelt apart; and the Bulgarian, as he drove his wainload of bearded wheat, or his herd of plump cattle and fertile brood mares down the slope to his white cottage among its cornstacks bowered among the trees by the fountain, must often have smiled grimly as his eye caught the barer farmyards and the scantier comfort of the Turkish quarter, and the ramshackle hovels among the scrappy tobacco-plots of the Circassian squatters on or beyond the outskirts of the village. The Bulgarian kept the village shop, and the Turk, when he came for his necessaries, had to sniff the hated odor of pork sausages. The village swarmed with Christian pigs, free to roam into the Turkish quarter till chevied by Moslem dogs. If in the towns and large villages the Bulgarian ear had to put up with the call of the muezzin from the minaret of a mosque, the Osmanli were fain to tolerate the clangor of the bells from the glittering towers of floridly ornate Christian churches. For every mosque in Bulgaria there are at least three churches. Draw near to Sistova from what direction you will, the sparkle of the metallic covering of the towers of churches, imposing in all the showy garishness of Byzantine architecture, first meets the eye. From the Russian batteries on the blood-stained height of Radisovo you discern where lies Plevna nestling among the foliage, not by the slender white minarets, but by the glit-

tering domes and stately spires of her Christian churches.

If ever one race owed a deep obligation to another, the Bulgarians did to the Turks, for the forbearance of the latter in leaving them and theirs unmolested in the evacuation before the advancing Russians in the last days of June and in July. The non-molestation on the part of those "unspeakable" barbarians was as thorough as that on the part of the last remnant of the German army of occupation, which Manteuffel marched from out the gates of Verdun through fertile Lorraine and over the new frontier line bisecting the battle-field of Gravelotte. And how was this forbearance requited — a forbearance that might have gone far to dim the memory of the conventional "four centuries of oppression"? The moment the last Turk was gone from Sistova — not before, for your Bulgarian is not fond of chancing contingencies — the Bulgarians of that town betook themselves to the sack, plunder, and destruction of the dwellings vacated by the Turks. They might have served an apprenticeship with the Circassian, so dexterous and efficient was their handiwork. I have seen few dismaler spectacles than that presented by the Turkish quarter of Sistova when I visited it two days after the crossing. To me, as representing a journal whose good-will the Bulgarians cherished, the Bulgarian *patres conscripti* of Sistova strove to mitigate the disgrace of this wanton outrage. It had been wrought by the scum of the place while as yet order had not succeeded to anarchy — the Cossacks had had a hand in it, which was a lie — the town was ashamed of the outburst of spite, for which nevertheless it was hinted there was some palliation in the "four hundred years of oppression." But stern measures had been taken to arrest any further devastation (there was little left to wreck), a committee had been formed to collect into the care of the authorities all the plunder, penalties had been enacted for its retention, and the effects were to be stored to await the return of the owners, to whom in the mean time — some of them being understood not to have gone far — overtures were to be sent begging their return and assuring them of safety. I went out from among the *patres conscripti*, and, ascending the staircase in the minaret of a mosque which had been wrecked and defiled, saw from the summit Bulgarian youths pursuing unchecked the work of wanton destruction on outlying Turkish houses. If the committee was ever formed at all, no results followed. The plunder remained with the plunderers; nobody was punished.

The conscript fathers of Sistova told me also that, to save Bulgaria's discredit in the eyes of Europe, emissaries would be sent out into the villages and towns, praying their inhabitants to behavior more worthy of civilization than Sistova had been able to compass. If they were sent with such a message, it must have been read backwards by the recipients. In every town and village of Bulgaria whence the Turkish inhabitants have fled, their houses were at once wrecked, the huts of the Circassian burnt to the ground. Colonel Lennox and Lord Melgund must be able to testify with how great order the Turks evacuated Bjela. I can speak to the unharmed state of the place when I entered it while as yet the Turkish irregulars were not out of sight. I can speak also to the zest with which its Bulgarian inhabitants began to wreak their spite on the houses of the Turks as soon as they believed that the presence of Arnoldi's dragoons on the heights above the place deprived the work of any risk. Before the emperor came to Bjela, it took some days to repair or clear away the dilapidations wrought in the Turkish bey's house which he was to inhabit, and after all his Majesty could not but have noticed evidences of the ravage which had been wrought on it. Now this bey was a special favorite of the Bjela Bulgarians. He had effectually kept Bashi-Bazouks and Circassians from molesting them, and they had begged the good man not to go, assuring him that they would tell the Russians how much they owed him. He had to reply that his orders from Constantinople were imperative, and farewells passed with protestations of mutual goodwill. If the bey had thought better of it, and had come back next day, he would have returned to a house wrecked by his well-wishers of the day before. For aught I know, the fittings and timbers of the abandoned Turkish houses of Tirnova still furnish its Bulgarian inhabitants with their supplies of firewood. This was so the last time I was in Tirnova, in the end of August.

It would be interesting to hear Prince Tcherkasky's candid opinion as to the fitness of the Bulgarians for civic self-government. I never had but one occasion to appeal to an official Bulgarian, and the result was not encouraging. I had bought a pony from a Bulgarian citizen of Sistova. As I was not prepared for the moment to take the animal away, I handed to the

vendor, in the presence of witnesses, half the purchase-money, and a trifle to keep the pony well till I should send for it in a couple of days. The transaction occurred in the man's own house; he was no horse-coper, but everything around him indicated that he was a respectable citizen. Two days later I sent my servant for the pony. On his way he met the citizen riding the beast. My servant hailed him, whereupon he immediately wheeled about and galloped off to parts unknown. My servant, and subsequently myself, visited his residence, where his sister, who was his housekeeper, smiled blandly upon us, and declared herself ignorant whither he had gone or when he would return. I made a formal complaint in writing to a Bulgarian official in the police-office indicated as the right man to whom to complain, but never again saw either citizen, pony, or money. The complaint died a natural death.

Let me say a few words of what was virtually the civil war between the Turks and Bulgarians, which fringed the edges of General Gourko's operations across the Balkans. I speak, it is true, from hearsay evidence, but there could be no better nor more direct hearsay evidence. The Bulgarians begged arms of the Russians, and received them; then, hot with the fell memories of last year, and conscious that Russians were with and for them, they fell on the Turks with the most ruthless reprisals. I anticipate with interest the publication of his experiences by Mr. Rose, the correspondent of the *Scotsman*, who accompanied General Gourko's advance, and in whose way fell frequent opportunities of witnessing the conduct of armed Bulgarians. Be it understood I am not blaming them for what they did. I neither praise any one nor blame any one. But this I say, that all the Turks are reported as having done on their reoccupation of the districts, the Turkish grip on which was temporarily let go by reason of Gourko's raid, is on credible evidence not one whit more barbarous than was the conduct of the Bulgarians towards the Turks when Gourko's star was in the ascendant. The barbarian has acted like a savage in his reprisals; the Christian acted equally like a savage in what were virtually his reprisals for what happened a year previously. The one "terror" has but followed on the other. Apologists for the proven barbarity of the Bulgarians — men who acknowledge that they saw them driven away with horror by Russian officers from their work of slaughtering Turkish wounded, over whom an advancing Russian column had passed — advance the plea, *ad culpum minuendam*, that the Bulgarians have at least not ravished. There is told a different tale in the sad spectacle of the four Jewish ladies, sisters, now forlornly resident in the house of a merchant banker in Bucharest of their own faith — outraged by God knows what ruffiandom of uncounted Bulgarians in sight of their own father as he lay dying murdered in his own house in Carlovo.

I ought to say that what I have incorporated in the foregoing article has been gathered by me piecemeal with constant assiduity, by dint of personal investigation and questioning. I have tried never to let an opportunity slip of getting even a scrap or a sidelight of information. My medium of questioning was my servant, a Servian of whose truthfulness I have had long experience, and who spoke Bulgarian with the fluency of a native, and Turkish and Russian very fairly. I may add that, as a Serb, he was a bitter Turko-phobe, and that all his sympathies were with the Bulgarians. ARCHD. FORBES.

ERICA.*

TRANSLATED FOR THE LIVING AGE FROM THE GERMAN OF

FRAU VON INGERSLEBEN.

VI.

MOODS.

THE storm was followed by very bad weather, which for several days prevented Erica from taking a walk; but, to her mother's astonishment, she bore her imprisonment very patiently, and sat at the window for hours with her work or a book, gazing at the muddy road, on which nothing was to be seen except now and then some unfortunate wayfarer, wading slowly through the morass. She sometimes laughed gayly, nay, a little mischievously, when the ample light robe of a lady, or the polished boots of a gentleman, by no means suited to such a road and such weather, offered a very unlovely spectacle. The laugh was followed by some roguish remark, which keenly and somewhat pitilessly exposed the ridiculous side of the sight; but directly after the brown eyes gazed dreamily at the raindrops dripping from the trees, or the clouds that swept swiftly athwart the sky, and the lips,

which had just curled so mischievously, now parted in a sweet, sad smile.

The invalid cast searching glances at her daughter. Erica's altered manner excited her surprise, for although seriousness and mirth often alternated in her changeful nature, the gayety had hitherto been untinged by any shade of mockery, nor had she ever before shown any predisposition to dreamy reverie. Her delight in nature, and solitary intercourse with it, had not developed such a side to her character; on the contrary, her eyes had wandered frankly and freely over the outside world, and though she had listened with delight to the chorus of birds around her, it did not prevent her from closely observing to what species the singers belonged. It was the same when her eyes roved over the sea. True her glances were first turned towards the white sails that floated over the blue plain; but from the shape of the vessels and position of the masts, she could determine the ship's nationality as quickly as the best sailor.

"Don't you want to go and see your friend Caroline?" asked the invalid, when Erica's eyes had rested on the clouds a long time, though her dreamy gaze rendered it doubtful whether she was really looking at them.

The young girl slowly turned and glanced at her mother with such a hesitating expression, that it seemed as if her remark required the most profound meditation.

"No, mamma," she suddenly exclaimed, with an impetuosity that formed a singular contrast to this deliberation. "Caroline can come here if she wants to see me."

"Caroline might think the weather too unpleasant; she is not hardened to it, like you."

"Then she can stay at home, I don't ask for her society."

"What is the matter, Erica? Has any one vexed you?"

Erica's lips quivered, her long lashes drooped over her eyes, and the book in her hand trembled so violently that the leaves rustled. She started up, seated herself in her old childish fashion on her mother's little footstool, and laid her head on her lap.

"I wish the whole gay crowd had gone, and we were alone again in Waldbad," she said softly. "I don't like all these people."

"Yet you were anticipating their arrival for weeks, and exulted at the sight of every new-comer."

"I was a child, mamma, and any change pleased me."

"And you are now a week older, Erica. That must make a great difference, of course," replied her mother, smiling.

The young girl's face showed no sympathetic reflection of the smile; it still remained grave, and she answered almost bitterly, "I know now that I was a fool to rejoice over the coming of these people, who live in another world, and have such different views and feelings. Our house and your presence now seem like a quiet, happy refuge, to which I can fly; like a strong castle, around which the storm raves in vain, or a peaceful island, on whose shores the waves dash violently.

"Do you find it so terrible out in the world, Erica?" asked the invalid, forcing herself to smile again, though her lips quivered.

The young girl gazed earnestly into the face of the speaker. "Yes, mamma, I feel like the horseman who was attacked by wolves, and escaped into the farmhouse with so much difficulty. How calmly he must have listened to their useless howling! When I am with *you*, mamma, who can harm me?"

"What a strange comparison, child!" said the old lady, with a shade of sternness in her tone. "I must insist upon your making a frank confession. What has happened to cause this mood?"

"Nothing, nothing," murmured Erica, hiding her face in her mother's lap. But the next instant she raised her head, threw her arms around the invalid's neck, and whispered lovingly, "My dear, dear mother." Then she started up and hurried into the next room.

The old lady looked after her with a sorrowful glance. "Poor child," she murmured sadly, "the battle of life seems to be beginning early. I hoped to have protected you from it, hoped to see your cheerfulness undimmed until my eyes closed. Yet sooner or later it must come."

The following day the weather seemed to be in the best possible humor, and strove to atone for its previous rudeness. The sky was clear, the sun shone in unclouded brightness, a fresh, invigorating breeze blew from the sea, and the trees, bushes, and grass exhaled an aromatic fragrance. Old Christine had therefore set the table in the veranda, and adorned it in the daintiest manner, not only for her "dear lady," but also for the benefit of the passers-by, who must thus perceive that very respectable people lived in the house. She had even placed in the centre a bouquet of heather blossoms and long slender grass, which she had gathered

early in the morning. Dewdrops were still hanging on the flowers, and glittering like tiny diamonds on the delicate spires of grass.

The old lady seemed agreeably surprised when she came out to breakfast, and kindly thanked the servant. Erica, on the contrary — whose features to-day wore their usual expression — only said, roguishly, —

"We should not have had such fine things indoors, eh, Christel?"

She then began a lively conversation with her mother, and the latter smiled as she thought how quickly the clouds had passed away from her child's young heart. But Erica said very positively that she did not want to go out, and after breakfast was over sat down with her work on the steps of the veranda, which afforded a wide view of the sea and country.

The little tract of land immediately in front of it, which had formerly been a well-kept garden, now seemed greatly neglected. As the sterile soil required careful cultivation, Christine was not strong enough to keep it in order, and it had gradually fallen into a condition which was scarcely entitled to the name of garden. Moss and heather had crept into the turf, tiny firs — children of the neighboring forest — were sprouting up everywhere, the few flowers that remained dragged out a miserable existence, and the paths were so overgrown as to be scarcely distinguishable. One alone, which led to the well, Christine, with great difficulty, kept in the neatest order. This well undeniably contained the best water in the whole village, and therefore was the pride of the old servant's heart, but at the same time the object of ceaseless anxiety, for — on account of the very excellence of the water — it suffered constant attacks from the whole neighborhood.

Christine had done everything in her power to put a stop to this unpleasant state of affairs; she had scolded the water-stealers, complained to their mistresses, and nailed to the fence a large plank, bearing the inscription, "No water to be taken from here on pain of punishment." Sometimes she had even hid among the bushes, burst suddenly upon the unsuspicious offenders like a thunder-storm, and driven them from the well with a torrent of abuse. At other times she had stood for hours at her window on the watch to frighten the intruders by her shrill voice. But all her trouble was useless. All the servants in the neighborhood had evidently leagued against her, and whenever poor Christine went to the village to make any purchases, she was sure, on her return, to meet people bearing freshly-filled pails. If she were busy in the house, the pump was sure to be set in motion, and even when, after the toils and troubles of the day, she at last sought her couch, the creaking of the pump-handle, moved by some unauthorized hand, roused her from her bed.

If Christine had been able to read, she would perhaps have consoled herself with the fate of the old lady whose grass-plat was constantly threatened by donkeys, and who, with all her exertions, was unable to drive this dark shadow from the horizon of her life. The thought of the shout, "Janet, donkeys!" would perhaps have made the angry cry, "Go away from the pump!" less shrill. But she was ignorant of the similar calamity endured by the old lady, and firmly convinced that no human being on earth had so many annoyances as she.

Erica, who at first had sewed very busily, soon let her work fall to gaze at the landscape, for she rose and went down the steps of the veranda. Christine was just approaching with a pitcher of water, and a face in which a tempest was brewing. Erica sprang towards her, and said, laughing, —

"Has any one been at the pump, Christel, that such sparks are flashing from your eyes?"

"Well, I shouldn't think that would be much to laugh at," replied Christine, sulkily; "if I can get no water in the course of a few days, Fräulein Erica won't be able to come to me for a fresh drink every fifteen minutes, as she does now. Just look at this yellow water, and the ground around the well is like a sponge, they have poured so much on it."

"They were in too great hurry, for fear you would catch them, Christel, and the rain has made the water yellow."

Christine shrugged her shoulders. "*Our* pump give yellow water on account of the rain! I thought you had more sense, Fräulein Erica. Hundreds of pails have been stolen to-day."

Christine was inclined to indulge in longer lamentations, but Erica had already glided away, and was wandering around the neglected little garden. She then sat down on the grass under the shade of a thick clump of bushes, but had been deprived of the sun too long to find this pleasant; so she soon came out again and watched the rabbits owned by some of the neighbors' children, which seemed to feel perfectly at home here, and conducted themselves accordingly.

Then she joined Christine, who was tak-

ing advantage of the sunny day to air the beds, and, casting sinister looks at the rabbits — next to the attacks on the pump the greatest sorrow of her life — was beating the feathers violently with a slender hazel rod. Now and then a rabbit which boldly approached too near received a vehement blow with the whip, as a tangible proof of her unfriendly feelings, for Christine had unfortunately been compelled to renounce all hope of driving them away entirely.

Here too Erica did not linger long, but went to the street, leaned over the fence, looked at the passers-by, and soon after turned away in the opposite direction, and, again leaning over the railing, gazed at the forest with equal interest.

The old lady watched her daughter's movements with a smile, but did not disturb her by any questions. When dinner had been served on the veranda, and the invalid retired to take her afternoon nap, Erica also disappeared in the house, but a short time after emerged in a very different dress, prepared to go out, and left a message with Christine for her mother, who was not yet visible.

"Why, Fräulein Erica," said the old servant in astonishment, "where are you going, you have made yourself so fine?"

Erica blushed. "I am going to see Caroline Sternau, please tell mamma so."

It had certainly not been her intention to pay the visit, but after this statement she considered her word pledged to do so.

She therefore turned into the street that led to the beautiful villa, whose balconies, supported by pillars, large, bright windows, and numerous verandas, gave it a very stately appearance, which rendered it the principal object in the view from Erica's modest veranda.

The fair weather had tempted countless pedestrians into the open air; a gay crowd thronged the streets, and Erica often met acquaintances to whom she nodded and said a few words. There was so large a majority of ladies in Waldbad that the dark clothes of a gentleman rarely mingled with their airy toilettes. In consequence of this, an independence prevailed which is rarely seen in a watering-place. The passing groups talked and laughed very gaily and loudly, and seemed to have no anxiety about being overheard by strangers. They formed little knots in the middle of the street, or walked alone, hummed songs, and if occasion required unceremoniously climbed a fence which obstructed their progress. The older gentlemen, who sometimes appeared, were undoubtedly the papas, or at least the uncles of the singing and laughing ladies, and therefore their presence did not disturb the universal gaiety.

If, at very rare intervals, a young man displayed his polished boots on the street, his appearance excited a surprise which was by no means comfortable for him. The old ladies eyed him with glances of displeasure, as if indignant at his presumption; the young girls looked after him, less unkindly, it is true, but with an expression of smiling astonishment, and only his position as brother or cousin could in some degree justify his presence to himself, and relieve him from the uncomfortable feeling of being an intruder in this circle.

Erica therefore rarely met young men, but whenever this did occur, a feeling of dread stole over her lest she should see the young artist whom she so eagerly desired to avoid. Her heart throbbed violently at the approach of every young man, and she uttered a sigh of relief when she perceived that he was not the object of her fear.

She had reached the vicinity of the beautiful villa, and as she could now consider all dangers happily passed, felt, strangely enough, a sense of disappointment instead of pleasure. There is a certain charm, even in fear; timid people are most anxious to hear about ghosts, and the human heart has so much need of emotion, that it is sometimes inclined to pay a high price for it.

As Erica walked slowly along the trellis-work fence that enclosed the garden before the villa, she felt a slight shade of ennui, which she had scarcely known before, and would have liked to turn and go home.

The garden was large, and laid out with great taste. Infinite labor had been lavished upon the cultivation of the sandy soil, and the clumps of trees, with their luxuriant foliage, the beautiful plants and patches of flowers that enlivened the fresh green turf, would scarcely allow one to believe that, on crossing the little hill before him, he would have the waves of the Baltic almost at his feet.

When Erica had nearly reached the lawn before the house, she saw through the fence a small party assembled on the gently sloping hillside, and recognized her friend Caroline, her older sister and younger brother. But the flush that suddenly crimsoned her cheeks probably had as little connection with them, as with the old lady seated on the veranda watching her children. Perhaps, however, the responsibility rested on the young man, who,

stretched lazily on the grass, was playing with one of the boys and occasionally exchanging a jesting word with the young girls.

Erica's eyes need not have been as keen they were, to enable her to instantly recognize in the recumbent figure the man she feared. That was the same delicately-cut, oval face she had seen under the oak-tree, the same quiet dark eyes, over which the lids drooped wearily. There, too, was the luxuriant brown hair, framing the handsome countenance, the indolent attitude, the slender, elastic limbs, which were capable of such rapid motion. Doubt was impossible, it was he, and she had been in the act of rushing into the very jaws of the lion.

She thanked the fortunate accident that had prevented it, and wished to turn back at once, but curiosity bound her to the spot. The clump of birches and alders beside which she stood concealed her admirably from the group on the turf, while she could watch it perfectly. Her friend Caroline had probably expected the visit, for she was unusually well dressed. The light, ample, airy summer dress fell gracefully around the slender figure; rose-colored ribbons fluttered from her waist and shoulders, and her fair hair was also bound with a bright pink band and adorned with fresh flowers. Erica had never seen her look so pretty, and the spectacle engrossed her attention so entirely that for the present her thoughts were occupied solely with her friend.

In this particular she seemed to sympathize with the young man, for when she again glanced towards him, she perceived that his eyes were also fixed upon Caroline. He had rested his head lazily on his arm, in the same way that he had done under the oak, but when he spoke to the young girl the words must have been very gay and interesting, for she listened with evident pleasure, and sometimes her musical laugh fell upon Erica's ear. A quantity of flowers lay on the grass beside her, and she now began to weave a wreath. The artist sometimes handed her a bud, or took away one that did not please him, and when the boy — with whom he had just been playing — again tried to claim his attention, he pushed him aside and devoted himself entirely to the beautiful sister.

Erica's eyes involuntarily turned from the bewitching group to herself, and scanned her own appearance with scrutinizing glances. She had not thought herself so ill-dressed before, on the contrary had considered her attire very pretty, but she was forced to acknowledge that it could not compare with Caroline's. The dressmaker in Waldbad might be a very estimable person, but she evidently did not have the latest fashions, and Erica was shocked when she compared her narrow, short little frock with the airy floating robe, whose artistic folds fell so gracefully around its wearer.

Had she been blind that she had not noticed this difference before, not perceived what a wretched appearance she presented beside her charming friend? It was not envy that crept into her heart, but an almost wild agony. That one glance had made her realize how impossible it would be for her ever to enter that circle. That sphere and hers must ever remain aloof from each other, and as if she wished to see no more of it, she turned from the trellis and walked on towards the sea.

VII.

THE LITTLE FAIRY CASTLE.

TEARS hung from Erica's lashes, and her lips quivered painfully, as she walked over the down. She did not suffer the fetters of grief to bind her long, however, but indignantly raised her head and crushed back her tears.

"Is not my world beautiful?" she said to herself. "Have I not my mother, my forest, my sea? Shall I now, like a fool, begin to long for things that hitherto have had so little charm for me, and which I know I shall always be denied? When all these people have gone away again, when I see and hear no more of this other world, my former happiness will return, and I shall remember this time only as a bad dream."

The expectation of this happy future calmed her. An evil which had so evidently been caused by these strangers, must of course vanish with them; this very childish logic was sufficient to console her. She could cheerfully endure a few sorrowful weeks, when she could so distinctly fix the end of her troubles; so she would not spoil her beautiful walk, but heartily enjoy it, especially as the listlessness she had just felt had fortunately entirely disappeared.

This time she took a different direction from the one she usually followed, and rambled over the down, which, though treeless, was covered with moss and heather. But in spite of her efforts, her thoughts would not be controlled, but constantly reverted to that one unpleasant

subject. Her imagination supported them in their disobedience, and with painful distinctness constantly conjured up the group on the turf. She was therefore astonished when she perceived that she was close by the somewhat neglected churchyard.

Single firs — harbingers of the neighboring forest — stood among the smaller clumps of stunted pines, and the grey knots of felled trunks gleamed forth from amid the bristling needles that carpeted the ground. From this spot neither sea nor village was visible, nothing appeared but the monotonous hillocks of former downs — from which the coast had long since receded. At some distance the forest closed the melancholy scene, which seemed well suited for a place of mourning.

Erica entered the open gate of the little churchyard and sat down on one of the graves, where a certain feeling of peace stole over her. "There is rest here," she murmured, leaning her head against the mound. "Here all sleep the same slumber, the eyes that have wept many tears, as well as those which have shed none." The thought of death — which often has less terror for youth than age — stilled the tumult of her heart. Her eyes closed, and dreams conjured up pictures of the gayest life, in lieu of images of death.

She was roused from her slumber by loud words spoken close beside her. "Damnation, it isn't she," said a man's voice, and she hastily started up, for she thought she knew the tone. The speaker had already turned, and she saw him striding off between the graves. He was elegantly dressed, and evidently one of the guests at the watering-place, so she must be mistaken in supposing she had recognized the voice of the foreign sailor. To her astonishment, the sun was already low in the horizon, and she sprang up to go home. She did not take the shortest way through the village — she would have been obliged to pass the garden again — but went across the hills of the down to reach the forest on the other side of Waldbad, and thus gain her own dwelling.

In the midst of these hills, as if conjured hither by fairy hands, stood a beautiful little castle, whose balconies and towers made it resemble some elfin palace. The dreary surroundings also contributed to the striking effect of the edifice, for no trace of a garden was to be seen, nothing but heather and briars, and two huge beeches which stood close to the gabled end, and protected the windows from the sun's rays by their dense foliage.

A rich speculator, whom fortune's wheel had raised to wealth, was the builder of the little palace. Unfortunately, however, he was soon forced to experience the fickleness of her mood, for the edifice had scarcely been completed when its owner was declared a bankrupt. The pleasure-grounds remained untouched, the elegant rooms stood empty and were offered to the guests at the watering-place. But generally the little fairy castle — so the villagers had not inappropriately named the house — was the last to be rented by strangers. It was some distance from Waldbad, as well as the bathing-houses, its elegance made it expensive, and thus only necessity could induce visitors to hire it.

Erica was therefore the more surprised when she perceived that the house already showed traces of being occupied. Most of the windows were open, groups of chairs and tables stood carelessly about on the verandas as if they had just been left, and on the balcony on the first story she even saw books and sewing. Her interest was fully aroused, and as the path led directly by the villa, which was unprotected from curious eyes even by a fence, she quietly took advantage of the circumstance. She had already approached quite near the house, when a white figure suddenly appeared at one of the lower windows, and made Erica pause. The apparition, however, probably did not consider the young girl worth noticing, for not a glance wandered towards her, but with a large white cloth that fluttered like a banner, it seemed to be beckoning to some one, though Erica could not see any human creature on the downs. The latter, however, soon discovered that the cloth was not intended as a greeting, but used for cooling purposes, and was no little surprised at the hot blood of the person she was watching, for it is seldom excessively warm at the seashore, and the day was by no means calculated to require such a vigorous use of any cooling apparatus.

When the hand at last fell by the side of the white figure, as if exhausted, the watcher for the first time perceived that it was not, as she had supposed, a woman, but a man who seemed to suffer so excessively from the heat. A tall white cap surmounted a very round face, a white jacket clothed a portly figure, and a white apron reaching to his neck completed the uniform attire. The person she saw before her was therefore evidently a cook, and Erica was very much excited by this important discovery. A feeling stole over

her like that experienced by a child when it first enters a menagerie and sees the wild animals of which it has so often heard; a roaring lion, a growling bear, or an ape making funny grimaces.

A man cook had hitherto been an unknown personage in Waldbad. The rich merchants had contented themselves with women, and even the inns — or hotels, as they called themselves — had not risen to the dignity of employing masculine rulers of the kitchen. Christine, however, who, probably somewhat against the mother's will, often told the child Erica about the old days of splendor, had described such a cook, who had presided over the kitchen in her parents' house. This cook played a very prominent part in Christine's tales, because she had commenced her career under him as kitchen-maid.

This Herr Mandel had been very prone to sudden fits of passion; he had not only boxed Christine on the ear, but once a saucepan, hurled by his powerful hand, struck her on the head with so much violence that she fell senseless on the floor. But this — as she never failed to add — was only at the commencement of her apprenticeship; afterwards her stern master had acknowledged her many services, and she had kept a reverent memory of him, in which his image was so transfigured, her tales had woven such a nimbus around the extraordinary man, that the idea of a cook had become fixed in the child's imagination as the climax of all earthly splendor.

And now here close before her was a real living cook, who looked, apart from his dress, like any other mortal, nay, to speak frankly, like rather a commonplace person. His desire to cool himself was perfectly intelligible, the more so as Erica, when he turned from the window and afforded her a full view of the interior of the room, saw the kitchen fire blazing brightly, and well supplied with pots and pans. She was somewhat surprised, for at this season Christine would not allow a single coal to glimmer on the hearth, but a cook probably did not submit to the universal sensible rule of saving fire, but boiled and roasted just as he chose.

She now perceived near the hearth a little cook, the exact image of the larger one, and also clad in white from top to toe. Erica smiled: it must be the universal custom of cooks to be served by kitchen-boys, for Herr Mandel had also had one, and all the other servants had used the unfortunate boy as a conductor for the lightnings of Herr Mandel's wrath. This too was probably a fixed habit on the part of cooks, for the stout white man had scarcely turned away from the window, when he seized the lad by the collar and jerked him back from the hearth.

The young girl was extremely eager to see the end of the scene, but unfortunately, just at that moment, the wife of the fisherman, Wilms, came out of the door and approached her. Erica blushed at being caught listening, and though she would have liked to ask the woman with whom she had taken service, she quickly conquered her curiosity and passed her with a slight bend of the head. But she had scarcely turned the corner of the house, which concealed her from the woman's eyes, when she again paused and looked into the windows.

On the ground floor the curtains shut out all curious glances, but on the second story the windows were open, and Erica saw a table handsomely laid for three persons. What was the paltry little bouquet that had adorned her mother's breakfast-table so prettily, compared to the magnificent flowers arranged in a silver vase which stood on this table? Shallow silver dishes contained the finest fruits, the most delicate confectionery; ice-holders of the same metal held long-necked champagne-bottles, decanters and goblets glittered brightly, and Erica gazed in astonishment at the array of glass and silver. Surely only a man cook could suitably provide for such a table, and the little fairy castle seemed to have found occupants worthy of its name.

Her eyes now wandered over the other windows, and remained fixed upon a wonderfully beautiful woman, totally unlike any other Erica had ever seen. Her figure was tall and regal, and the countenance, with its regular features, recalled the statues of the Greek gods. Her chestnut hair fell in luxuriant curls over her snowy shoulders, and a light blue dress of shining silk floated around the Juno-like figure. Costly laces were used upon this costume with lavish abundance, and also arranged with white roses in the brown hair. The white arms were encircled by magnificent bracelets, and a string of pearls rested on the beautifully-formed neck.

A more critical spectator than Erica would probably have thought the lady too richly attired for her country surroundings, but the young girl's delight was unshadowed by the slightest tinge of censure. The cook, the table, the lady, formed such a closely interwoven chain of

magnificence, that she was too full of admiration to be capable of criticism.

The lady was standing quite near the window, and thus afforded the young girl a full view of her person. Now, however, she turned back into the room, raised in her arms a fair-haired little boy about four years old, who must have been sitting on the floor, kissed him, and seated him at the table that she might play with him more easily. Erica, who now looked farther into the apartment, suddenly perceived in a rocking-chair a young man, in whom she instantly recognized the artist. He undoubtedly preferred a recumbent position under all circumstances, for he was lying very far back in the chair, rocking slowly to and fro, and, to Erica's angry surprise, comfortably smoking a cigar.

This time his appearance caused no agitation. The storm in the young heart had wearied it, and rendered it no longer capable of keen impressions, or else the strange surroundings had bewildered her—at any rate it almost seemed as if she had expected his presence here. The beautiful lady now claimed all her attention, and she saw her play with the pretty boy without apparently taking any special notice of her companion. She now approached him with the child, but the young artist put out his hand to keep her away. Meantime the active little fellow had slipped down and was playing about the room, while the lady leaned on the table close beside the rocking-chair. She pushed the young man's hair away from his forehead, and bent down to press her lips upon it, but the latter leaned so far back that she could scarcely reach him, removed his cigar, and — did she really see aright? — puffed a cloud of smoke into the Juno-like face.

The lady did not even seem angry, but laughed and pulled him by the ear. Erica did not know whether she ought to be most angry with the rudeness of the gentleman, or astonished at the indulgent gentleness of the beautiful lady. Yet once more a certain feeling of satisfaction, which she would have found it difficult to explain even to herself, stirred within her.

The door of the dining-room now opened, and a servant, in elegant livery, entered. At the same time a nurse carried the fair-haired little boy — apparently much to his dissatisfaction — into the next room, while the beautiful stranger, leaning on the young man's arm, passed through the open door of the dining-room. Another lady, who had hitherto remained unseen, rose and followed the pair.

Unfortunately, just at this moment several persons appeared, so that Erica was compelled to relinquish her post of observation. She had not gone far when she met her friend Caroline.

"Did you know we had a princess here, Erica?" cried the latter. "Although she is only a Russian one — as her irreverent brother always adds — it is at least a good beginning; German princesses will come too, and then Heringsdorf can't boast of any advantage over Waldbad."

"So the lady in the fairy castle is a Russian princess?" asked Erica breathlessly, "and the young artist is her brother?"

"The young artist? Who is he?"

Erica blushed. "I saw him with an easel, and supposed he was an artist."

"I dare say he may paint now and then; but he's far too lazy to become a real artist."

"And what is his name?" Erica forced herself to ask.

"Herr von Altenborn, or, to speak more correctly, Baron von and zu Altenborn. I believe he has a castle not far from the frontiers of France. The fame of Waldbad is extending farther and farther, I feel proud even of the Russian princess."

"And why isn't a Russian princess just as good as any other?"

"Oh! of course there are distinguished Russian princesses too, but they form a very small minority. Most of them, according to our ideas, have no royal blood in their veins. The Bagadoff family, papa says, is not numbered among those of real princely birth, and he knows all about such things, because he is consul. But we shall have a delightful season; the princess is very fond of pleasure, and has already made a great many gay plans."

"I am very glad of it for your sake, Caroline. But now good-bye, I must go home," and this time Erica took the shortest path — for the garden was no longer dangerous. A tumult of the most contradictory feelings filled her young heart, in which, however, the melancholy that had of late so greatly predominated formed the smallest share.

She had recoiled from the many new impressions that confused, intoxicated her, and yet produced the singular delusion that she had experienced some great joy.

M. THIERS: A SKETCH FROM LIFE.

BY AN ENGLISH PENCIL.

[THREE years ago, at a *soirée* at the house of M. Thiers, the author of this biography asked his assistance in collecting materials for a sketch of his eventful life. He kindly said, "I will give you every assistance in my power. Call on me in the mornings, when I am not so much absorbed by visitors — at six o'clock, if you like. Bring a list of questions. Question me without fear of giving offence. I shall answer truthfully, asking nothing of your friendship, but something of your indulgence." He was as good as his word. To render him the justice he deserves longer explanations would be needed than the space in these pages can afford. — E. C.]

THE French Revolution had a first and second growth. That of 1789 was associated with the storms, the showers, the sunshine, the wild blasts, the freshness, bloom, and promise of spring. It came up in Floréal and Prairial, and ripened in Thermidor and Fructidor. That of 1830 was brilliant, but autumnal. Its flowers came out on the eve of a long winter, and, save in a few exceptional plants, had no great development. The men of the States-General were impelled by lofty motives; in working for France they conceived they were working for the world. In their estimation the loss of a colony was of small importance compared to the denial of a principle. Splendid talents were not wanting in the generation of 1830. But they were deficient in the *vis vitæ* of youth and the sacred fire that inspires noble aims. Of this second growth M. Thiers was one of the highest types. His long life is closely bound up in the French history of the last half-century. The fierce light of journalism which played on him in his zenith, showing with prosaic distinctness his public and private failings, was, as the evening of his career drew nigh, succeeded by a semi-obscurity, which presaged one of the worst political hurricanes of modern times. In his seventy-third year he emerged from the partial retirement in which he had lived after the *coup d'état*, to save France from wreck. He succeeded beyond the hopes of friends confident in his great abilities. The task he accomplished has no parallel in history. The difficulties he had to deal with were many and stupendous. He compared himself to a pilot engaged to bring a shattered hulk safely into port in the face of a raging and dangerous sea, with a jealous captain, and a mutinous crew, who threw him overboard the moment he had refitted the ship. Thiers, president of the Third Republic, well redeemed the errors into which intemperate love of action, passion for his country's glory, and ambition, had hurried him in younger life. His political sun may be said to have set when he was ejected from the presidency in 1873. But after it went down its rays shot up from below the horizon, and cast upon the illustrious octogenarian a brighter glow than it ever did at any earlier period of his career.

There was not much that was epic in the astonishingly rapid and successful struggles of M. Thiers — first against poverty, and then for fame and power. It was not that he was destitute of courage, for in him that quality was carried to the extreme of intrepidity and audacity. But it was allied with an amount of address which we do not generally associate with the heroic character. He was rather the hero of a child's story, than of a poem intended to celebrate great faculties and surplus activities devoted to great ends, although he was in no small measure endowed with both. From youth to old age, when a nettle was raised to strike him, he never shrank from roughly handling it. But he preferred, when it was possible, to talk the person who flourished it into laying it down. Violent conflict with an enemy was repugnant to him. He was often called a worshipper of force, but in reality he had small sympathy with it when not manifestly directed by intellect. In northern races, the barbarian constantly breaks out in the finest gentleman. There was not a trace of barbarism in Thiers, notwithstanding the poverty in which he was reared. Bismarck, who is not a man of very delicate feeling, was charmed with his super-civilization, and at Versailles complimented him upon it. "Talk on, talk on, I beseech you," he said to him, when they had laid aside grave business for lighter conversation. "It is delightful to listen to one so essentially civilized." There was not a trace of the primitive man in Thiers. He was the heir, truly, of all the ages in the foremost rank of time, and of the races who made the Mediterranean basin the centre of antique civilization.

M. Thiers was born in a troublous period of the world's history. The eighteenth century was going out in social and political storm and upheavals at the time of his birth, which happened at Marseilles on the 16th of April, two years and nearly nine months before the nineteenth

century, with its mechanical and industrial revolutions, came in.

In the diary of the physician who attended at this event, this curious entry was made: "A cinq heures ce matin, j'ai assisté à l'accouchement de la fille d'Amic. Douleurs des plus vives, et prolongés pendant vingt heures. Présentation mauvaise. Temps de gestation presque dix mois. Enfant du sexe masculin, turbulent, et très viable, quoique ses membres inférieurs sont peu développés. La jeune mère était en proie à des grands chagrins, ce qui explique ces accidents. Son mari s'est suavé de chez lui, et elle ne sait pas ce qui lui en est devenu. La femme Lhommaça s'est trouvée auprès de sa fille."

An inauspicious entrance truly on life's stage! The deserted young wife, whose miseries are thus briefly recorded, had, ten months previously, made a love-match, and in consequence quarrelled with her family. They were of Levantine origin, and, among themselves, spoke in the Greek dialect. "The woman Lhommaça" was the aunt of the poet Chénier, and the wife of an enterprising and rich merchant named Amic. Taking pity on her daughter in her distress, she gave her and a tribe of stepchildren shelter in a house belonging to herself, which happened to be unlet. It was then numbered fifteen, in the fifth *isle*, or block, of the Rue des Petîts Pères, a new street, connecting the Place St. Michel with the suburb of La Plaine, and called after a Jesuit confraternity which had formerly established itself on a property through which it ran. "40" is the number this house now bears. It is valued at twenty-two thousand francs, but was not worth half that sum in 1797. Madame Amic mortgaged it in 1816, to enable Thiers to study law; and when she went in 1825 to live at Bouc, where he purchased a cottage for her and his mother, she sold it for thirteen thousand francs to a M. Delestrade. Madame Thiers is now negotiating its purchase. She intends to furnish it with part of her late illustrious husband's art collection and books, and present it to the town of Marseilles.

The Amics and Lhommaças belonged to the same Levantine clan. They were warm-hearted people, quick to resent and sharp in their resentment, but soon disposed to forgive and forget. They appear also to have been enthusiastic royalists. Their reputation as such induced Thiers the elder, who was a friend of theirs, to fly for shelter, in the White reaction of Thermidor, to the house of his future father-in-law. While hiding there, Amic's daughter, a young girl of remarkable beauty, energy of character, and keenness of tongue, fell in love with him. She pitied him for his misfortunes, was dazzled by his brilliant parts and plausible manners, and, regardless of his poverty and family encumbrances, insisted on espousing him. To understand a great man well we should know something of his family history. In troubled times Frenchwomen have strong political sentiments, and know how to assert them. Thiers's mother was no exception. The honeymoon over, she quarrelled as much with her husband about his opinions as about his convivial habits, which tended to keep him in the poverty into which he had fallen. Her royalism was not modified later in life by her son's successes, and she mourned over his revolutionary leanings when he arrived at man's estate. Her husband was a little mercurial person of almost universal aptitudes, great wit, too great enterprise, and a petulant temper, which ill disposed him to bear the lash of his wife's tongue. A royalist *émigré*, the Marquis de Fonvielle of Toulouse, sketched a portrait of him in 1808 which might serve for a caricature of our M. Thiers. The marquis made a voyage with him from Genoa to Carthagena in Spain, on board the "*Virgen del Pilar*," and said of him, in writing to a relation in France: "This little man is a talking and gesticulating encyclopædia, and the most amusing creature I ever came across. One cannot start any subject with which he is unfamiliar. It is impossible to have seen any wonderful thing that he has not witnessed. He knows the entire globe, round which he tells us he sailed with Captain le Marchant. I somehow doubt if he ever did, though he bears cross-examination well, and surmounts with address every objection to his story. He is precise in the employment of technical, scientific, and nautical terms, in the description of the countries visited by the captain, in the designation of latitudes, officers, men, and log-book dates. He reasons better than any sailor on the art of navigation, explains with surprising clearness the manœuvres of the crew, demonstrates as pat as the alphabet the laws of storms and currents, and shipbuilding. If asked to give an account of what passss in the moon, he would be at no loss to furnish one. He parrots every scientific theory and system, and really he looks like a parrot raised in some incomprehensible way into a human being."

This "talking encyclopædia," just before

the birth of his son Adolphe Louis, was employed as a dock-porter; but he had seen prosperous days, and had been educated for the bar. His father belonged to the burgess aristocracy which, from 1560 to 1775, when Marseilles lost its liberties, exercised well-nigh uncontrolled sway over that town. Moreover, he was annalist to the Hôtel de Ville, and wrote an erudite history of Provence. The annalist was the son of a notable cloth merchant, a friend of M. de Marbœuf, the governor of Corsica, and had built himself a palatial mansion in the Rue de Mazade. He was magnificent in his expenditure, and a man of brilliant parts. The fame of his suppers — which had an artistic character — reached to Paris, and his house was the resort of the chief people of Marseilles. In making a venture with the American colonies he was ruined. He lived to the age of ninety-seven. His son, the archivist, died in his ninety-fifth year at Mentone, whither he fled from the republicans, who persecuted him for having incited the burgess party to seize on the Jacobins representing the Convention, and throw them into the dungeons of the Château d'If. M. Thiers's father, following the revolutionary current, helped to release the prisoners. For this service he was named registrar to the Tribunal of Public Safety, a position which, under the White Terror, drew upon him the wrath of the royalists, and led to his taking refuge in the house of Amic, where he met his second wife. The illustrious statesman who died last September was not, therefore, as has been frequently said and written, the son of an illiterate workman. His father, as we have seen, was a man of excellent education, and, for the city in which he lived, of high extraction and unquestionably ancient lineage. M. Thiers resembled him in every point, except his incapacity to succeed. He was in the habit of disappearing suddenly, to engage in the strangest kind of mercantile and other ventures, and of not turning up for long periods, when he reappeared empty-handed, but full of hope. The English fleet, which prevented him from executing a military contract obtained in 1797, did not prevent his going, soon after, to Italy. He went there as *impresario* of a company of players which he had formed. At Milan one of his actresses obtained for him the monopoly of the gaming-tables. Thence he pushed on to Naples, where his wit and unflagging spirits gained him influential patrons at court and the favor of Joseph Bonaparte and his wife, whom he had known at Marseilles.

For a while he led a splendid life. Suddenly collapsing, he turned up in Carthagena, where he started a house of business, and then sold it to go to Madrid. In that city King Joseph and Queen Julie (*née* Clary) took him by the hand, and, but for the crash of Vittoria, he might have prospered. The presence of the English, however, served as an excuse for not sending more money than he did to his suffering family; and the direct pressure of their arms on his business speculations helped to foster in his son's mind the intensely national and bellicose spirit which the stirring events of the consulate and empire had generated in it. This brilliant, roving, speculative Marseilles Micawber had a passion for houses, which he transmitted to Adolphe. In 1831, full of hope in the patronage of the creator of the July Monarchy, he hastened to Paris with a scheme for irrigating and reclaiming the Crau desert outside of Marseilles. Thiers severely admonished him, and asked him what he owed him. "Everything," urged the prodigal parent. "Do you think that if, when my grandfather failed, I had resigned myself to a life of penurious economy and stagnation, you would be the man you are?" The argument told. The son, who had a strong instinct of filial duty, granted his father a pension, and sent him to Carpentras to direct the post-office, with authority to appoint a daughter by his first wife deputy post-mistress. There the old man took a cottage at a short distance from the Allée des Platanes, and lived in company with a pack of dogs. He frequently got into the hands of Jews, who speculated upon the scandal it would occasion if they arrested him for debt. In 1833, Thiers, then minister of public works, gave him twelve thousand francs for consenting formally to his marriage with the co-heiress of M. and Madame Dosne. To insure the non-appearance of his troublesome parent at the wedding, the minister for three weeks previously hired all the places in the stage-coaches running from Carpentras and other towns of the Vaucluse to Lyons.

When length of day runs in the blood, traditions are tenacious. Those of the Thiers family went back to the very origin of the city which for generations they had helped to rule, to agitate, and to enrich. It was said that they belonged to a servile Punic colony, transplanted from Africa by the Romans, of which vestiges existed up to a very recent period. There seems to have been in the race that subtlety, that tenacity which hides itself under a flexible

exterior, that genius for dealing with present difficulties, and that repugnance to abstract theories, which distinguished the Carthaginians. At a *fête* given by Marseilles to Mirabeau, an allusion was made to this Punic legend by the committee of management. They decided that at the gala representation in the theatre their illustrious guest should sit between two young ladies of remarkable beauty — Mademoiselle Thiers, aunt of the statesman, and Mademoiselle Noble; Mirabeau between the *noblesse* and the *tiers* was the pun they proposed to put in action. Mademoiselle Noble, or Nobili, of Italian ancestry, was dressed to personify old Rome, and Mademoiselle Thiers, Carthage, the trading state of antiquity. The play was the "*Bourgeois Gentilhomme*." Mirabeau asked the young ladies did it interest them? "What more interests us," replied Mademoiselle Thiers, "is to find ourselves beside the *gentilhomme bourgeois*." The *mot* was repeated by the great orator in the *salon*, and its author became the heroine of the evening.

Thiers was adopted in early infancy by his grandmother Madame Amic. She got two flourishing merchants, named Rollardin and Barthelière, to stand for him at the baptismal font; and it was well for him that she did. Leaving the house in the Rue des Petits Pères to her unhappy daughter — with whom, when her own fortune was engulphed in a subsequent disaster, she went back to live — she took her grandson to her *bastide*, or country-house. It was on one of those limestone hills clad with parasol pines which run east of the city into the Mediterranean. The bright sun, the bright sea, the aromatic herbage, and the balsamic emanations from woods that gave shelter, but did not impede the circulation of the air, were powerful stimulants to mind and body. In his writings M. Thiers recurs to the impressions he received in childhood on that luminous hillside, looking down on the blue glinting bay and crowded port. He was allowed to run about wild. When the *bastide* was sold, and Mme. Amic obliged to share her daughter's lodging, she did not curtail her favorite grandchild's liberty. His playground, after he went back to the Rue des Petits Pères, was another limestone hill, now built over, and called Les Baumettes, from caverns in its flank. Thiers was a young Ishmael among the street Arabs that gathered there. To his latest days he recurred with pleasure to his boyish games and warfare at Les Baumettes. His recollection of them and of the happy tone they gave his intellect prompted him to give a cold reception to schemes for endowing France with infant schools. M. Thiers often sustained against Guizot, who was a thorough schoolmaster, that young children are better employed birdnesting and thrashing each other out of doors, than locked up in ugly, close rooms, poring over lessons which they should be allowed only to glance at.

The boy Thiers had a very narrow escape of receiving no education whatever. His grandmother was loath to part with him. She feared for his health, for which his phenomenal smallness augured ill. Then she dreaded to part with the small sum of money that remained to her after the wind-up of her affairs. When Rollardin — one of the child's godfathers and kind protectors — set on Joseph Chénier to obtain for him a *demi-bourse* at the Lycée, the mother protested against a son of hers ever wearing Bonaparte's livery, or eating bread provided by him. The Duc d'Enghien's execution had revived her old royalist fanaticism. She execrated the emperor and the empire, and thought no good could come of their schools for higher instruction. Barthelière — the other godfather, with whom the young Adolphe spent his Sundays, and who divined the future that was before him — interfered. He threatened to apply to the still absent father, who had a legal right to decide as to the manner in which the boy was to be educated. Under this menace the two ladies yielded, and Thiers was prepared to compete for the *demi-bourse*, for which his cousin Chénier obtained him a nomination. At the examination which was to open to him the doors of the Lyceum he obtained high marks. Rollardin bought his outfit, and Barthelière undertook to pay those school expenses which the municipality did not bear.

Thiers's first Black Monday was in October, 1808. A good boy he certainly was not, but an able boy he constantly proved himself. To keep at the head of his form he scarcely needed to apply himself, so rapid was his apprehension and so tenacious his memory. In the humanities he was weak, unless when asked to comment on the classic authors that he had to study. The leisure his superior capacity secured for him was spent in practical jokes and escapades, cleverly imagined and boldly executed. A more mischievous sprite never tormented an usher. In planning a trick, it was his way to ingratiate himself with the masters, and to secure the favor

of probable witnesses. Under the Marseilles professors his higher faculties did not assert themselves. They were suddenly brought out by the menace of expulsion, conjoined with fresh family disasters, and the arrival from Paris of a teacher for whose memory M. Thiers, to the end of his life, entertained a profound reverence.

For the first time in his life he knew what it was to venerate as well as to love a human being. Maillet-Lacoste, the new professor, was a young man of noble and engaging countenance. His air and manners were those of a perfect gentleman, contrasting strongly with the easily excited provincial pedagogues, under whom Thiers had heretofore been placed. Master of himself in all circumstances, he soon became master of the Lyceans in his class. Thiers was the disciple and pupil of Maillet-Lacoste, who in teaching him mathematics sought to raise his moral standard. The Parisian tutor was a martyr to his political faith. Issuing with a high number in a batch of one hundred and ninety from the Polytechnique, where he had been a comrade of Arago, he elected to be a civil engineer. But, writing a pamphlet against the consulate, and signing a protest against the empire, he was sent in disgrace to teach mathematics at the Lyceum of Marseilles. In talking politics he was reserved. But the precocious intellect of Thiers led him to unbosom himself, and master and pupil discussed political ethics during the evening recreation in the arcades of the court. On the Thursday holidays they visited the museum, and a library formed out of the spoils of the convents and châteaux of Provence. Maillet-Lacoste was alive and in obscurity when Thiers became president of Louis Philippe's council. His old pupil — who, if at times a slippery politician, loved the intimate companionship of honest men, and was firm in his friendship for them — wrote him an affectionate letter in which he offered him an important post in the department of public instruction. Maillet-Lacoste declined in terms which, if read by the light of subsequent events, seem prophetic. "I cannot," he said, "accept anything from you since you have broken with those who wished to found a republic in 1830. You then condemned France to another series of political convulsions. The peasantry still remember with affection the *régime* to which they owe their emancipation. They hate Bonaparte, their recollections being still fresh of how he took their sons for the cannon's maw. They also hate the Bourbons, their secular oppressors. The priests labor among them to distort the republican tradition, and are likely to succeed. You will live, I am persuaded, to see the downfall of your citizen king, and the priest-deceived people refusing to let you have a republic when you want one. They will impose on you some sort of clerical despotism — perhaps the empire *minus* Bonaparte and *plus* the Jesuits. The days of July robbed me of a fondly cherished hope. I used to think your luminous intellect could not long be taken in by a system resting neither on instinct nor principle. Those participating in your government will condemn themselves to a course of unworthy expedients, the example of which will rot the fibre of the nation. You are exposing yourself to be tempted precisely where you are weakest. The best thing I can wish you is to be soon obliged to retire from office, and that for a long time."

Under the quickening influence of Maillet-Lacoste Thiers soon found work, for which he had a prodigious capacity, easier than idleness. The many-sidedness of his mind placed him foremost in most branches of learning. But no effort of the will could enable him to master foreign languages, or commit to memory long passages from the Latin and Greek authors. All he could attain to by persevering labor was to read and understand a Greek or Latin book at sight. The ideas they expressed he rapidly caught up, made his own, and retained; but the words in which they were embodied slipped from him, though when he met them again he remembered them at once. A language of Gothic origin had no hold whatever upon his mind. It was forgotten as soon as learned. When M. Thiers was engaged in his historical work he tried hard to learn German and English, in order to read the pamphlets, newspaper articles, street songs, and state papers bearing on the wars of the First Republic and of Napoleon. The labor was fruitless. The historian acquired Italian because his ears in childhood were familiarized with the Provençal dialect. He believed that but for the fact of his mother's family and friends having spoken among themselves in a Greek *patois*, Homer, in whose spirited battle-pictures he revelled, would have been to him a sealed book. But the literary aliment on which his imagination chiefly fed was not borrowed from antiquity. Boys in the public schools of France, at the beginning of the century, when Thiers was a boy, were encouraged to read

the *Moniteur*. He devoured its accounts of Napoleon's prodigious victories, and triumphal marches and counter-marches over Europe. He followed the *grande armée* over the atlas which lay in his desk, and explained to his class-fellows strategical and geographical points, and the obstacles which the conqueror overcame. The *Bulletin de l'Empire* was read aloud by professors to their pupils in the Lycées. It was written in a tawdry, declamatory style for the ignorant multitude, which furnished raw material for Bonaparte's armies, and facts were too often made to give place for high-flown epithets. Thiers amused himself by taking a bulletin of victory for a theme, and expanding it into a full account of the battle, which he read aloud at recreation in the courtyard, and carried home with him to his relations on the Sunday following. His grandmother carefully stored up these juvenile compositions, suggested by the bombastic poverty of the official newsman's style. A sketch of the bridge of Lodi — a retrospective study — is as full of action as one of Horace Vernet's battle-pieces. These early writings, some few of which still exist, were permeated with the military spirit of the time in which they were written. Thiers's genius was awakened by the increasing din of war, and by the bonfires on the Provence mountains which blazed forth the news of land victories to hostile fleets standing out at sea. In a youthful essay he maintained, with an argumentative skill which must have astonished his preceptors, that France, to avoid being the weakest, should be the strongest of European powers. Her exceptional advantages would render her an object of covetous enmity, and tempt less favored nations to plunder her. In supporting his thesis, Thiers argued against the too easy exchange of agricultural wealth for money, which he thought would weaken the real sinews of war, and tend to the accumulation of treasure and the diminution of defensive power. He maintained that a strong population with simple habits and intelligence had more expansive power than one that was wealthy and luxurious. This idea, in 1872, governed M. Thiers's commercial policy, as shown in the Navigation Bill, and was at the bottom of his opposition to the second emperor's commercial treaties. To mathematics as to composition, Thiers applied himself at school with ardor. He had a taste for them, and knew that proficiency in them would, if he grew tall enough to qualify him for military service, enable him to make a figure in the army. Fifty-eight years later, his early love for science came out again. At Tours, in the month of October, 1870, he procured a whole library of scientific works, which he studied with ardor. This occupation calmed the fever into which he was thrown by the memorable events of that year, and the political inactivity in which he was kept by the jealousy of the delegate government, and the fears of M. Clement Laurier, lest one so expert in the analysis and management of budgets should interfere with the financial schemes in which he had embarked. At Bordeaux he went through a course of physics and chemistry in the following months of November and December.

Thiers having in 1814 completed the university curriculum, his *demi-bourse* dropped, and he returned to the house in which he first saw the light. The long blockade and the naval triumphs of the English had well-nigh reduced Marseilles to a state of inanition. His grandmother, to whom he owed so much, had let the lower floors of her house to a shopkeeper, and had anticipated several years' rent. She was sharing her pittance with Madame Thiers in the garret story. The latter did what she could to earn a little money, sometimes doing needlework for an army contractor, sometimes keeping the accounts of her mother's tenant, and sometimes, in the hot weather, selling iced coffee on a stand in the Place St. Michel. One of her daughters had learned confectionery. She it was who set up a *table d'hôte* in the Rue Basse du Rempart, and placed on the signboard "Pension bourgeoise de Madame Ripert, sœur de M. Thiers, ancien Président du Conseil du Roi Louis Philippe." A stepdaughter had started on a gay career, and subsequently died in a hospital at Carpentras. There were other children in a miserable condition, for whom Adolphe ultimately provided. To Charles he gave a consular appointment, and he bought a farm in Normandy for Isabelle, who died there unmarried, in the year 1874.

Thiers cheated this wretchedness by borrowing books and by reading in the town library. The godfathers continued to ask him to their houses, and were in many ways useful to him. He contributed to his own support by painting miniatures, a branch of art in which he attained excellence. He often exercised himself in oratory in the cockloft in which he slept. His grandmother and a lad of his age were his audience. The former thought him superior to Mirabeau, whom she had heard.

He at that time cultivated the Ciceronian period, and also the bombastic manner of Napoleon's military harangues. At Rollardin's table he sustained discussions with Royalists — who were then on the winning side — in a more natural, and we may suppose more effective style. His warm-hearted old friend advised him to go to the bar, the army being closed against him on account of his dwarfish stature.

Barthelière and Chénier, on the other hand, advised his entering a counting-house, where he would be received on advantageous conditions. But Thiers was too fond of the muses to forsake them. He somehow imagined he was to play a great part in the history of his country, but did not well see how he could open to himself a literary and public career. Old Madame Amic found him the means. Encouraged by her friends, and by a non-juring priest of whom she took counsel, she realized her little property so far as she was able, and went to settle at Aix, an old parliamentary town, rich in historical remains and in châteaux stored with works of art. There there was a law-school of repute, which her grandson entered in 1816. In it he made the acquaintance of Mignet, his true and inseparable friend forever after. Thiers was gifted with an irrepressibly sanguine spirit. He used to divert himself at Aix, planning how to rule France when he should be a minister. "*Quand je serais ministre*," was often in his mouth. On reaching the ministerial altitude, he was to drive an unfortunate old apple-woman, whose stall faced the law-school, in a coach and four through the town, and bid the prefect appoint her son *concièrge* to the prefecture. The latter part of the promise he kept. Moreover, he used to tell his mother and grandmother that out of his ministerial salary he would buy a certain cottage in the romantic village of Bouc, half-way between Marseilles and Aix. He was better than his word. In 1832 he sent for the former to share with him the grandeur of his ministerial residence; but feeling herself out of her element there, and disliking the cold, foggy winter of Paris, she elected for the Bouc cottage, where Mme. Amic was already comfortably installed. In this retreat they both died at advanced ages, as their tombstones testify.

If M. Thiers had sought through France he could not have found at this stage of his career another institution so well fitted to prepare him for the course he was to run as the one to which he went to study law. Aix was the capital of Provence under Réné of Anjou. From the time of its union with France, it was, in the old juridical language, a *pays d'état*. It enjoyed privileges unknown elsewhere, except at Marseilles, and was the seat of a parliament for a hundred years. The scenery about it is superb, and the town and its environs are in themselves an historical museum. There was much wealth in the locality, which, with the liberties enjoyed by a highly gifted race of people, conduced to intellectual activity. Mignet was an Aixois. His social relations there were valuable to Thiers. They embraced opulent and very hospitable parliamentary families spared by the Revolution. The Marquis d'Albertas had a gallery of which any monarch might have been proud, and culled from every modern state in which art had flourished. Vanloo's genius was discovered by an Albertas, and his pencil employed to decorate the château. The Marquis de Lagoy was an amateur of rare medals, in collecting which he had encumbered his estates. He had had the good fortune, when the armies of Bonaparte were plundering Italian villas, palaces, convents, and galleries, to acquire portfolios filled with sketches and drawings of the old masters. The collection formed by the Marquis de Bourguignon de Fabrigoule he had since left to the museum of Aix. The Marquis de la Rochette and M. Sallier, by whom the finances of the Bouches du Rhone were then directed, had also galleries and private museums in which comparative studies could be made of ancient and modern schools, and history learned from Gallo-Roman bronzes, coins, marbles, cameos, and inscriptions. Thiers, who intuitively turned to what was beautiful in art and nature, here formed healthy and refined tastes. He endeavored, when fame and fortune had crowned his industrious youth and manhood, to reproduce in his house in the Place St. Georges what he remembered in the mansions of the parliamentary notables at Aix.

The French aristocracy of the eighteenth century had one very salient virtue: it was disposed to encourage merit wherever it might be found. In its social usages, apart from the court of Versailles, it was in this respect democratic. Rousseau, after giving a picture of the corruption and giddiness of the ladies of rank who directed opinion, hastened to say their faults were redeemed by their penetration in discerning the meritorious, and their generosity in aiding and bringing them forward if they were poor and in obscurity.

The parliamentary families of Aix adhered under the restoration to the intellectual traditions of the last century. Thiers was taken up and cherished by some of them. He was a delicious toy for old Voltairean nobles. No doubt they objected to his politics, which were Jacobin; but they put up with him for the sake of his loquacious wit, and the zest it gave to the conversation in which he mingled. A *salon* or a *cercle* where he talked became an intellectual gymnasium. To exercise himself in full liberty in dialectics, he at this time formed a club called the Cénacle. At first it was intended for none but law-students; but judges tinged with liberalism, and nobles who wished well to the new reforms, having sought to join it and being admitted, it grew into one of the first debating societies in France. Its founder was its youngest member. Mignet was a year older. D'Arlatan de Lauris was already a judge of the court of appeal and a member of the Academy of Aix, a circumstance which enabled him to render the master-mind of the Cénacle a service that opened to him the road to the far-off capital.

Eleven miles from Aix, on the southern flank of Mount Libaou, in the midst of woods and cascades, and standing out on a rocky platform, there is a feudal castle, square, massive, and gloomy, with turrets at its angles. Its vast hall, built by the Romans, was an armory, in which are collected weapons of all ages and countries. The other apartments, some of them of grandiose proportions, are sculptured and painted by master-hands. Cardinal Isoard was the owner of this castle in 1818, and had constructed an oratory wherein to enshrine the body of St. Severin, presented to him by Pius VII. Before the castle had come into his possession it belonged to the Vauvenargues family, and was presented to Joseph de Clapiers Vauvenargues, first consul of Aix, as a reward for his devotion in relieving the victims of the great Marseilles plague. He was the father of Vauvenargues the moralist, who died at the age of thirty-two, in the retreat of Prague, and was styled by Voltaire the "master-mind of the eighteenth century." D'Arlatan de Lauris was connected with the De Vauvenargues, and took Thiers to see their castle. He also recommended him to the cardinal, who received him graciously and asked him to come often and study the old rooms and hall in detail. While there Thiers conceived the idea of writing the life of Vauvenargues, which he confided to D'Arlatan. Being without money he proposed to publish by subscription. His friend not only encouraged him in the idea, but — without revealing his motive, which was to do a kindness to the young student — he suggested to the Academy to grant a prize of five hundred francs for an eulogium on Vauvenargues. His pretext was that they should not be surpassed in liberality by the Academy of Nismes, which had offered the same sum for an essay on Charles VII. That prize had been won by Mignet. He went to Nismes to be crowned towards the end of 1820, and thence to Paris to find materials for another prize offered by the Academy of Inscriptions "on the state of government and legislation in France at the accession of St. Louis, and the institutions founded by that king." But to return to Aix and Thiers.

The essays on Vauvenargues were to be sent in anonymously, with sealed envelopes containing the authors' names. Thiers having read his at the Cénacle, the secret of his authorship got out. One half of the Academy was for him, and the other half against. The adjudication was put off to the next session. Thiers for this paper obtained an honorable mention. But in the interval between the two sessions, he wrote in a different style, and from another point of view, a second essay. The faithful Mignet, to whom he sent it, transcribed and posted the copy in Paris. It had for its epigraph, "Man is in the world to act; the greater his activity the better he accomplishes his destiny." Action, the essayist regarded as the supreme rule and end of life, and freedom and energy to act the supreme felicity of existence. This estimate of happiness was sincere. M. Thiers had no experience of the beatific vision of the Hindoo. Incentives to devouring activity rejuvenated him when he was old, and rescued him from the physician's hands when medicine and hygienics failed. But to pursue the narrative of his life, and show more completely the slender hinge upon which his destinies and the greater ones involved in them turned. The stratagem of the Paris postmark succeeded. Aix rang with laughter when the trick played on the royalists was discovered. There were public rejoicings in honor of Thiers. The Cénacle gave a banquet in his honor, at which he announced his intention of starting immediately for Paris. On the day following he was entertained in the name of the liberal party by M. Borely, an eccentric judge, and an offer was made

him of a seat in the Chamber for Aix at the next vacancy. It was not however accepted before 1830.

It is commonly and erroneously understood that Thiers and Mignet journeyed together from Aix to Paris. His fellow-traveller was Méry, one of the brilliant band turned out by Marseilles under the restoration. They passed through Burgundy in the merry vintage season, seeking hospitality in farmhouses and country inns, often dining at the wayside on bread and cheese and a bunch of grapes, and visiting the noteworthy places lying near their route. Weary of body and sore of foot, but buoyant with hope, Thiers entered the *maison meublée*, in the Passage Montesquieu, in the garret of which Mignet lodged. In the darkness of the unlighted corridor the tired traveller knocked at the wrong door. The room he fell upon was occupied by another Marseillais, Rabbe, a polemist, rugged, violent, forcible, and pitiless, who, for the ill-luck of the monarchy, was drifted by a domestic hurricane to Paris. He was giving a bowl of hot wine to some brother Bohemians, when he heard a knock at the door. On opening, a little man with a bundle in his hand entered, and said he was looking for M. Mignet, whom Rabbe knew to be out. The stranger asked to be allowed to sit down until his friend's return, and advanced towards the table looking wistfully at the hot wine. He wore a coat that had been green and was faded into yellow, tight buff trousers too short to cover his ankles, and dusty and glossy from long use, a pair of clumsy Blucher boots, and a hat worthy of a place in an antiquary's cabinet. He face was tanned a deep brown, and a pair of brass-rimmed spectacles covered half his face.

Mignet, when he entered, embraced him. In the expansiveness of his joy he asked him to share his room. He spoke of himself as a millionaire, which relatively to the recipient of his hospitality he was. Had he not been awarded a first prize by the Academy of Inscriptions and Belles-Lettres for his essay on France under St. Louis? and had not Chatelain, his fellow-townsman, charged him with the foreign editorship of the *Courier Français*, in which he was pelting away at the monarchy in a series of letters on English history? But in sharing his poor chamber he did not forget that Madame Thiers had said to him of her son — "Adolphe will never go afoot. He will first hang on to the back of a carriage, and then work his way to the top, throw the driver over and seize hold of the reins." It may be observed that she spoke in anger, which is cruel. When she so denounced her son, she was excited by the assassination of the Duc de Berri and the birth of the Duc de Bordeaux, events which did not shake his political opinions. But it may here be observed that, in his old age, M. Thiers returned so far to the royalism of his mother as to speak with unfeigned admiration of the good faith and chivalrous impulses of the Comte de Chambord, "*qui n'a jamais voulu mettre son drapeau dans sa poche.*"

While Mignet was deducing from his moral consciousness a system of English policy applicable, as he thought, to France, Thiers was spending his days in the museums and public libraries. Party passions had reached a white-heat pitch in 1821. Napoleon had just died. The government was in the hands of old *émigrés*, who had forgotten nothing of the ancient *régime* and learned nothing of the new, for the simple reason that they were at Coblentz, and elsewhere abroad, while the changes effected by the Revolution were operating. On the other side there was a youthful nation. The carnage of Bonaparte's wars had left France, in 1814, peopled with aged men, women young, old, and middle-aged, and boys. The State might have been likened to a ship in full sail, in a heavy sea, with an inexperienced pilot, and without ballast. There were scarcely any men in the prime of life. Guizot — a patriarch among the liberals of 1821 — was entering his thirty-third year. Royalists tore Voltaire out of his grave, and threw his bones into a ditch, pursued the old Conventionals, and made Louvel's crime a pretext for a movement to restore the lands, confiscated and sold by the revolutionary government, to their rightful owners, and to re-establish entails and primogeniture. Republicans called Marie Antoinette a Messalina, and a traitor to the country over which she reigned. In thus throwing stones at her they hoped to hit the Duchesse de Berri, her niece, a dissipated, thoughtless, and fanatical princess, and her daughter, the childless Duchesse d'Angoulême, to whom misfortune had imparted bitterness, without the majesty of trials nobly borne. She was the queen in expectancy. Her husband — in most things a nullity — had very decided opinions about the Revolution and the liberals: for just then nobody was bold enough to call himself a Revolutionist or a Bonapartist. Thiers — who knew very little

about the Revolution beyond the fact that it enabled Bonaparte, at that time his hero, to overrun Europe — thought he should like to study the men engaged in it. This he did in the *Moniteur* and the other gazettes published in Paris in the interval between Turgot's dismissal and the 18th Brumaire. He found all the journals that he wanted at the Bibliothèque Royale. The notes he took there were the commencement of his history, which grew up under his hand almost of itself. Mignet simultaneously began his history of the Revolution, which was published in 1824, and at once attained a European reputation. Six translations of it were brought out in the course of three years in Germany alone.

Thiers was called to the Aix bar. His acumen and legal knowledge were admitted by his brethren of the long robe, and by the judges there. Rollardin, to keep him in the south, promised to obtain for him the best commercial clients at Marseilles. In emigrating to Paris, he counted a good deal on his professional knowledge as a means of advancement. But when he arrived there, he found that his poverty excluded him from practising as a barrister. To belong to the order of advocates in Paris it is not enough to have passed brilliant examinations. The council of the order must be satisfied that the person seeking admittance is already in receipt of an income placing him above the temptations of want. Moreover, he must have a respectably furnished domicile, and produce proof that the furniture is paid for. The admission fees were not very heavy; but they were altogether beyond the reach of Thiers, whose fortune was comprised in the five hundred francs awarded him by the Aix Academy, and a small sum which his grandmother had squeezed out of her narrow pittance. He had therefore to lay aside the reasonable ambition of making a name and winning honorable ease at the Paris bar. His pen, or perhaps his pencil, was the sole resource that remained to him. Fans were studied in the shop windows, and an attempt was made to paint others. Applications for employment were addressed to booksellers and newspaper editors, and accompanied by copies of the prize essay. A letter of introduction from Dr. Arnaud, a member of the Cénacle, was forwarded to Manuel, the deputy for Marseilles, a narrow-minded, hot-headed man, who, however, was endowed with the fervid eloquence of the south, and was intelligent enough to see the irremediable incompatibility between the Bourbons and revolutionary France. When he received the letter, he made a memorandum of it with the intent of making an appointment with M. Thiers. But in the stirring parliamentary incidents which his daring attacks on the monarchy called forth, he forgot all about it. Thiers heard that the Duc de Larochefoucauld Liancourt wanted a secretary, and lay in wait in the lobby of the Chamber of Deputies for Manuel, from whom, on making himself known, he obtained a recommendation to the duc, with another to Bodin of the *Constitutionnel*. There is hardly a biographer of Thiers who does not confound this passage of his life with the riot in the Salle des Pas Perdus provoked by Manuel's arrest. Manuel was torn from his seat by the collar by two *gendarmes*, and dragged to gaol. Thiers, then reporting for a newspaper, rushed from the gallery, and, reckless of the danger which he ran, harangued the bystanders, and called on them to rescue their outraged representative like men. This happened soon after the death of Louis XVIII. (a king in many points resembling our Charles II.), and in the beginning of the *règne du parti prêtre* under Charles X, the mitigated James II. of the house of Bourbon. General Foy also died this year, and Thiers organized a monster manifestation at his funeral — to protest against the grant of an indemnity of a *milliard* to the *émigrés*, and against the sacrilege law, in virtue of which a man who insulted the host in a street procession was condemned to lose his hand. The *incident Manuel* and the Foy funeral made Thiers known to the turbulent youth, the discontented Bonapartist officers, and the disaffected *prolétaires*. But more than two years before these events took place he had obtained and resigned the secretaryship at the Duc de Liancourt's, and had become a journalist under Manuel's auspices.

This is how he entered the *Constitutionnel*. They wanted an art critic; Thiers was asked if he thought himself equal to a review of the Salon, — a task proposed by an editor anxious at once to honor Manuel's recommendation, and to rid himself of his *protégé*, whose æsthetic education he was far from suspecting. Thiers's first notice was a literary event. Delacroix, then an unknown artist, had exhibited his "Dante and Virgil in Hell." Thiers wrote "that of all the pictures in the Salon, this was the one that most revealed a coming master. One saw in it a powerful conception and the free flow of

talent. It presented with epic force to the critic's eye the selfishness and despair of hell. In the treatment of a subject which lay on the confines of the fantastic, severity of taste was observable. The drawing, which hasty judges might think deficient in dignity, was, whatever were its defects, redeemed by the truth of the details, and the fidelity with which the poet's vision was rendered. The pencil was ample and firm, the color vigorous, though perhaps crude. Delacroix designed his figures, grouped them, and set them in action with the boldness of a Michael Angelo and the fecundity of a Rubens."

Of David's "Rape of the Sabines" he said: "In making these reflections in the interest of art present and future, we do not the less consider David in the light of a great master. A man who has worked a revolution in the taste of a nation with so keen a perception of the beautiful as the French must be an artist of the highest order. He has rendered an important service to our school. But it is undesirable that a superstitious admiration of his works should prevent new geniuses from coming forward. We must take care not to imprison present and future art in the limits of a style which in the hands of imitators must become cold and pedantic. No doubt a prime condition of art is correctness of outline. But it may be asked whether under this pretext critics do not check the inspiration of those artists who seek to throw more life, more health, and more of nature's truth and freshness into their works. M. David delivered us from the conventions of the eighteenth century. He formed others, the destruction of which in their turn should not annoy him and his admirers. One epoch should never be jealous of another; nor should those who have made a step forward prevent others from making another."

Thus M. Thiers's first achievement was to deliver French art from the pseudo-classic tyranny of David, and to obtain justice for Delacroix, whom Baron Gros had publicly called a lunatic and a sign-board dauber. The management of the *Constitutionnel*, judging Thiers by the success of his Salon, gave him permanent and well-paid employment. His department was the "*Variétés*" on the third page. They were to embrace literary criticisms, biographies, and scientific papers well baited to catch idle readers. The next telling article was a review of Montlosier's "French Monarchy." Montlosier was a eulogist of Louis Quatorze, whom Thiers condemned because on its road to St. Denis his body was neglected by his courtiers, and followed by the imprecations of the people. The reviewer maintained that had Louis Quatorze been a great king, who exercised despotism for the glory of the nation, his death would have been attended with a reaction in his favor; and the Parisians — who are prompt to strike in anger, but quick to forget and forgive the faults of patriotic though severe rulers — would have followed his hearse in silent sorrow. Fifty-six years after this judgment was passed the people of Paris, oblivious of the hard chastisement inflicted on them by M. Thiers, escorted his remains in speechless grief to the tomb in Père la Chaise.

Thiers's literary merits and dash rapidly brought up the *Constitutionnel* to be the leading organ of the *bourgeoisie*. He was endowed with nothing short of a genius for journalism. Prompt, agile, gifted with ready tact, and quick to feel the public pulse, and to divine smouldering passions and bring them to the surface, he instinctively eluded the snares and pitfalls in his road. When the superior deities refused to listen to him, he knew well how to array the Acherontians on his side, though in rousing them he ever took high ground. Sentiments and ideas which vaguely agitated the multitude he shaped with ready skill into clear aphorisms, which circulated like current coin. He did not fear repeating himself, but was careful to vary the form of his repetitions. It was an axiom of his that when a speaker wants to carry away a stolid assembly or uncultured mass, he should often present the same argument, but each time in a new verbal dress. Thiers had a native repugnance to what was hazy. His mind turned, of itself, towards the light. However obscure a controverted point, he laid his finger, as if by intuition, on the knot of the question, and, with an address that charmed the bystanders, undid the bewildering tangle. Lonis XVIII.'s death heightened the growing antagonism between royalty and the nation, which had been roused from the passivity of depletion by the liberal movement in Spain, and its suppression by a French army under the Duc d'Angoulême's command. Thiers at this juncture was enjoying literary laurels culled in the Pyrenees, from which he wrote a series of letters to the *Constitutionnel* describing his holiday tour. It was asked if he might not advantageously be promoted to the political department. The manager thought he could, and, finding he struck a national chord, was for letting him work with an

unfettered pen. But the more timid shareholders sought to moderate the trenchant vigor of his polemics. To have a voice in the direction, he purchased a share with borrowed money procured through the instrumentality of Schubart, an obscure German bookseller, the original of Balzac's Schmucke, in "*Le Cousin Pons*." This Schubart used to dine at la Mère Saguet's, a cheap *gargotte* in the Passage Montesquieu, with Charlet the caricaturist, Sigalon, Mignet, and Thiers, for whom his admiration was extravagant. Schubart rendered his idol the service of taking him to Baron Cotta, the opulent German publisher, and asking him to grant the loan the young journalist stood in need of. Under the new impulsion the *Constitutionnel* took a well-defined color, attained the largest circulation a French newspaper was ever known to command, and forced the king to place M. de Martignac, a dynastic liberal, at the head of the government. The debates in the Chamber furnished M. Thiers with his themes. The daily "copy" was written in a clear hand, which advanced steadily across the paper in lines wide apart to leave room for corrections. As each page was filled it was cast on the ground. The task done, a clerk picked up the sheets and set them in order. The blotting-paper was seldom used. Thiers bore interruption in speaking better than in writing. Before sitting down to his desk, he studied authorities with Benedictine patience and minuteness, and classified his subjects. But from the moment he took his broad-nibbed goose-quill in hand until he had done with it he did not raise his eyes from the quire of glazed foolscap before him. This habit, formed in the bureaux of the *Constitutionnel*, he never dropped.

His article sent to press, the rest of the evening was spent in society. As he slept in the middle of the day, he was able without fatigue to sit up late at night. Lafitte, a Bonapartist banker, and the associate in military contracts and other speculations of Ouvrard and Dosne, whose eldest daughter is now Thiers's widow, opened to him the great world of the liberal *salons*. The exquisite man of the world whom this generation will not easily forget, who was never more at home than at the Elysée receiving the representatives of the great powers, "was," says Lomenie, "remarked in Lafitte's and Talleyrand's drawing-rooms for his fluent speech and vivid southern imagination. The dwarfishness of his stature, the oddity of his visage, half hidden by a pair of goggles, the singular cadence of his voice, his jerking motions, the see-saw action of his shoulders, his short legs, his want of manner, fantastic clothing, and manifest genius, contributed to fix attention on him." The fame of a duel arising from a love affair, one of the few really romantic episodes in his long existence, helped to lionize him. At Aix M. Thiers believed himself to be eternally enamored of a young girl of majestic beauty and decayed family. He courted her, wrote verses about her, was affianced, shed bitter tears in parting, and kept up a tender correspondence with her extending over many months. The fame of his newspaper articles reaching Aix, where a maiden's bloom soon fades, the young lady's father came to Paris to call upon Thiers and ask him to fulfil his promise. Poverty was pleaded in stay of execution. A year's delay was asked and granted. At the close of the twelve months there was another visit. M. Thiers vowed unalterable affection, but represented that his income, which was precarious, would not suffice to keep both his mother and a wife. He therefore begged for a further delay, which drew on him the ire of his visitor, who next day insulted him in the lobby of the Chamber. A challenge ensued. The offender's seconds were Rabbe and an Aixois lawyer, and those of the offended party Mignet and Manuel. The young lady's father was allowed to fire first. Aiming low, to make sure of his adversary, he shot between his legs. Thiers fired into the air. The match was broken off; the girl died of grief; her lover preserved an affectionate remembrance of her. Unsolicited, when he became a kingmaker and minister, he gave her brothers and father lucrative situations. Her letters and love-tokens he preserved in a drawer. In his extreme old age he was known to shed tears over them. This episode dropped from the memory of his contemporaries. A second and a hotter duel was fought with Bixio in the garden of the Chamber of Deputies in 1849, that representative having, on Thiers declaring for Louis Napoleon, taxed him with treachery. Want of physical courage was not a defect of the little great man, who in his ministerial uniform headed the troops sent to dislodge the insurgents from the Rue Transnonain, in one of the terrible street wars that disturbed and closed the reign of Louis Philippe. A witness of the discharge of Fieschi's infernal machine yet living says, that on that occasion the king remained cool, and that Thiers, undaunted by the explosion, jumped from his horse, and ran to examine

the house whence the smoke issued. A few inches taller, and his skull would have been carried away. The bullets that went over his head lodged in Marshal Mortier.

Thiers, when he was a journalist, maintained the native vigor of his mind by a strong feeding process. He never suffered his brain to grind chaff. If he wished to describe a battle he visited the fields in which it was fought, talked with the peasants, made notes of current legends, compared them with the more precise evidence, consulted strategists, studied military bulletins and commissariat returns, and checked them with the market prices. A visit to Prince Jerome Bonaparte at Florence for the purpose of obtaining the loan of historical documents, put him on the track of an intrigue carried on by Queen Hortense, Comte d'Orsay, and Lady Blessington. Its object was to open France to Napoleon's proscribed family by procuring the translation of the emperor's remains from St. Helena to the Invalides. Lord Palmerston in 1840 on learning Thiers's bellicose intentions from King Leopold — whose wife was warned by Louis Philippe — lent himself to this intrigue, as a source of embarrassment to "the government of March." Guizot, then ambassador at the court of St. James's, was instructed to defeat it, and to bribe the inhabitants of Gore House to sell him Bonapartist secrets. He declined to enter into relations with Lady Blessington, giving as his excuse the irregularity of her position. "Thus," said M. Thiers to the writer of this article, "through Guizot's false Puritanism, Louis Philippe neglected a clever woman and her still more talented paramour, whose knowledge of Bonapartist conspirators would have been invaluable in showing where to suppress ferments that were not without influence in Feburary, '48."

When Thiers was engaged in publishing his "*Tablettes Historiques*" — which happened in the third year of his sojourn in Paris — Talleyrand met him at the Comte de Flahault's, hailed him as the leader of "*la Jeune Garde*," which he insinuated was to upset the restored monarchy. He encouraged him to visit him at the Hôtel St. Florentin, and ask for information concerning the court of Louis XVI., and the meeting of the States-General. There the young journalist grew to be the head of the liberal party, which embraced three distinct sections. Talleyrand had been offended by the royal family. To avenge himself he encouraged the "*Jeune Garde*" (Thiers, Mignet, De Rémusat, and Victor Cousin) to repeat the English Revolution of 1688, and to discern a William of Orange in the Duc d'Orléans, "who without stirring a step was always advancing to the throne." Louis Philippe kept aloof from the promoters of his candidature. At the same time he made the *bourgeoisie* feel that he was their man. While seeking to render himself popular by placing the Duc de Chartres, his eldest son, in the Lycée Henry IV., he avoided Talleyrand and the *habitués* of his Green Salon, and he never saw Thiers before the Sunday preceding the promulgation of the Ordinances. The circumstances under which they found themselves in the same room are too remarkable to be omitted here.

Thiers was on intimate terms with a Mme. de Courtchamp, the wife of a notary. This lady had a summer residence at Bessencourt, in the valley of Montmorency, near the Château St. Leu, where the children of Philippe Egalité were brought up by Madame de Genlis, where Hortense Bonaparte received the allied sovereigns, and where, on the return of the Bourbons, the last of the Condés went to live with Sophie Dawes, an Englishwoman whom he had imported from Vauxhall, and had married under false pretences to the Baron de Feuchères. At St. Leu there was a theatre, built for Madame de Genlis and her pupils. Mme. de Feuchères was fond of acting on its boards. French ladies who would not enter her drawing-room had no objection to go to her theatricals, and to talk to her and accept her refreshments in the green-room. Marie Amélie, however, with her grown-up daughter, Louise, afterwards queen of the Belgians, and her sister-in-law, Madame Adélaïde, visited the baroness. On the 25th of July there was a theatrical *fête* at the château to which Mme. de Courtchamp was asked along with her family and friends. M. Thiers had come from Paris to spend the Sunday with her, and was taken by her to the *fête*. They were placed close to the Duc d'Orléans and the baroness. Mme. de Courtchamp said in a low voice, pointing to Louis Philippe, "That's your future king." "Do you hear," cried the Englishwoman, joyously, "what this lady calls you? She says you are the future king." As the company were in the green-room in the interval between the acts an aide-de-camp of the Duc de Bourbon, who had galloped the whole way from Paris, came in with the tidings that the Ordinances were signed, and would be posted on the walls

of Paris the next day. Thiers, hearing it, took leave of his friends. The Baroness de Feuchères ran after the notary's wife, and said, "Press him, if there should be a revolution, to think of the Duc d'Orléans. What a wise, noble king he would make! I am sure he will consent. In any case Madame Adélaïde will make him. I have congratulated her, and she takes it well."

Thiers in the days of July went back to Bessencourt. Mme. de Feuchères drove over there to tell Mme. de Courtchamp that she was going to Neuilly to influence the Orleans family. They were looking to her to obtain the Condé heritage for the Duc d'Aumale, who indeed obtained it on the death of the Duc de Bourbon in the month of August following, less seven million francs, secured (in a presumably forged will) to the baroness. M. Thiers, in retailing this anecdote to the person now writing it, ended by saying, "*Je vous dis la vérité comme si j'étais devant Dieu.*" *

The "History of the Revolution" appeared in monthly parts. Its two first volumes came out in the names of Thiers and Felix Bodin, a well-known journalist, who stood sponsor as an attraction to readers, but had no part in the authorship. From the 18th Brumaire to 1823, the date of the opening number, the name of every actor in the Revolution who did not turn against it had been delivered to obloquy. Thiers's temerity in standing up as the champion of the States-General and Convention alarmed the liberals. One newspaper only, the *Constitutionnel*, noticed the first and second volumes. The great defect of the work is its being in ten volumes, as it is the greatest defect of the "Consulate" to be in twenty. Its author had not the time to be briefer. If his style was rapid, clear, simple, and picturesque, it was redundant and often garrulous. His muse was not draped in antique folds. She went slipshod and wore a *bourgeois* dressing-gown. The third volume was rapidly bought up. In proportion to the reactionary violence of the old *émigrés* at court the enthusiasm of the young nation for the "History" rose. Thiers stirred ashes under which fire lay smouldering. Political passions were intensified by proprietary interests which had no other justification than the justice of the Revolution. If we could imagine the French peasants and *bourgeoisie* menaced by the party of moral order with the confiscation of all the real property taken from the privileged classes in '93, we might form a vivid idea of the course of events in Charles the Tenth's reign.

The monthly parts of M. Thiers's "History" affected the nation more deeply than the speeches of M. Gambetta do now. It was unfortunate for France that, in proving the right of the active and intelligent classes to the wealth which had lain idle from time immemorial in the hands of the king, Church, and aristocracy, he provided and indeed suggested arguments to the Socialists, who up to 1830 scarcely counted in French politics. It would have been more conducive to quietness in the ensuing reign if he had simply pleaded the *fait accompli* without attempting its justification in a land where untutored men can be logicians.

Thiers, whose polemics had changed the composition of the Chamber of Deputies and wrested the administration from *le parti prêtre*, did not cease to work for the *Constitutionnel* while pursuing his engagements with the booksellers. He furthermore wrote regularly for the *Globe*, and for De Rémusat's *Encyclopédie Progressiste*. In 1828 he brought out a book on law and his financial system, and on English banking, which he afterwards studied in London, Manchester, and Liverpool, as well as his ignorance of English would admit. While driving these enterprises abreast he also drew up a plan for a universal history, to obtain materials for which he purposed spending ten years in travel along with Victor Jacquemont. La Place was preparing his voyage of circumnavigation; Thiers asked leave to join the expedition as its historiographer. He was named by M. Hyde de Neuville, on condition of his bearing all his own expenses. His outfit was bought and his sea-chest on the road to Havre, where

* Whatever chance there was of the Duc d'Orléans's elevation to the throne being sanctioned by opinion, he threw it away in shielding the Baroness de Feuchères from justice, and in accepting for his son, the Duc d'Aumale, the legacy of the Condé estates. None of the presumed murderers were tried. A property belonging to the domain of St. Leu was given to the official who cut down the duc's body from the window-bolt to which it was found attached by the neck with a cravat, tied, not in a slip, but in a tight knot. Louis Philippe's consort was a pure and virtuous princess; but when it transpired that during the Duc de Bourbon's life she had interested herself in trying to get Madame de Feuchères presented at court, and was in the habit of writing affectionate letters to her, Marie Amélie's virtues militated against the new dynasty. Those personally unacquainted with her unjustly condemned her as a hypocrite, and spoke of her as an accomplice in "the mysterious strangulation." A popular song, called "*La Reine Cagotte*," wrongly attributed to Béranger, was sung under the palace windows. Its vogue was due to the aspersions which it cast on the queen. When Paris learned how she had sent her eldest son to visit the cholera patients at the Hôtel Dieu, this lampoon fell into discredit.

"*La Favorite*" lay, when Charles the Tenth's liberal premier, De Martignac, was brusquely dismissed, and the clerical Prince Polignac, whose policy was guided by the direct inspirations of the Virgin Mary, gazetted in his stead. This act and the May *coup de tête* of Marshal MacMahon are closely analogous. Thiers, overrating the strength of the reaction, turned back to do battle for the *bourgeoisie* against it. The generation brought up in Napoleon's Lycées was at his back. There was scarcely any middle-aged generation to moderate its youthful zeal. Fire is a good servant, but a bad master. It might be said to have had the mastery in France before it burned itself out in the days of July. Thiers, feeling the *Constitutionnel* clogged with timid shareholders averse to risk, yet eager for somebody else to strike, resolved to found a journal of his own, in which to fight the reaction with a free pen. Among all his rich and discontented friends he did not find one to stake a franc on the enterprise. He had to fall back on Mignet, Armand Carrel, and Savelot, a struggling bookseller. The paper was called the *National*. Its object was to hold the Bourbons within the charter, in the avowed hope that, finding the door shut, they would jump out of the window and break their necks. The rich *bourgeoisie* did not answer to his whip as well as he expected. The populace answered too well. At a review the dauphine and the Duchesse de Berri were menaced by the mob, and the troops looked on with folded arms. Thiers, who certainly was urged to action by no mean motive, afterwards regretted, and with reason, that he had not waited a little. France was not yet ripe for the revolution of which he was the artificer. Having hastened its outbreak, he had not the power or the wisdom to bring it to a happy issue.

"Who are they now imitating in Paris?" wrote Cavour to his French Egeria. In 1830 there were two opposing currents of imitation. At the Tuileries the energetic, ruthless, half-barbarous czar Nicholas, the secret ally of the French court in a plan for remodelling the maps of Europe and northern Africa, was set up by the Gascon Polignac as a model to the weak-brained, amiable, and bigoted old king, who had passed his youth at the fancy farm of the Trianon, in playing the part of Colin in the "*Devin du Village*." Benjamin Constant, the founder of the *doctrinaires*, and his adepts were full of the English Revolution of 1688, which, without at all understanding, they wished to repeat, but did not exactly know how. But the last thing they would have thought of was an appeal to the fighting faubourgs. Thiers's love of action, in his prime, was excessive. He was imbued with the military spirit of the empire, and, though not rancorous or revengeful, was fired by a feeling of hatred against the dynasty. Hatred is a distorting medium, and it misled Thiers. Talleyrand, who had an antipathy to straight lines in politics, while encouraging him in his revolutionary strategy, pushed him into the *doctrinaire* current. Armand Carrel stood out against the *bourgeoisie* monarchy when it was mooted to him; Mignet and De Rémusat were committed to it in their newspaper articles, and wonld on no account retract what they had advanced. Thiers, who at the beginning of 1830 had no distinct aim beyond forcing Charles X. to "break his neck," allowed Carrel, who was a downright sort of man, to write in a republican sense. The court winked at his leaders; but it could not help taking issue on the one in which Thiers held up the Duc d'Orléans as the constitutional rival of the unconstitutional king. He was prosecuted. Before a week was over a patriotic subscription covered the fine of seventy-five thousand francs imposed upon him. This manifestation was met by the Ordinances, which cowed the two hundred and twenty-one deputies, who had just been re-elected against the king and De Polignac, and intimidated the *bourgeoisie* which had fattened under the empire and during the sojourn of the Allies in Paris. Thiers, with the utmost difficulty, and as much by dint of finessing — in which he was assisted by De Rémusat — as by force of eloquence, prevailed on forty out of the forty-three editors of journals who, at the first alarm, ran on Monday morning to deliberate at the *National* office — to sign the protest which he drew up in their presence. Having heard of the Ordinances on Sunday night at St. Leu, he was not taken by surprise. He sent the protest to press, and, at considerable personal risk, superintended the printing. Standing on the shoulders of Nestor Roqueplan, a young Marseillais journalist — the only Nestor, the wits remarked, among the men of 1830 — he posted the document on the walls of his own house in the Rue de la Grange Batelière. On the 27th his *doctrinaire* friends and the two hundred and twenty-one were preparing to fly from him. The stone flung by a child from the rubbish of a house in the Palais Royal, which the Duc d'Orleans had freshly de-

molished, and the deadly reprisals taken, happened just as Thiers was beginning to lose heart. The boy's corpse, borne by some masons, was made a rallying-point for the excited populace, which marched through the centre of the city, crying, "Death to the murderers of the innocent!"

Thiers, coming out of the house of Cadet Gassecourt in the Rue St. Honoré — where he was organizing a committee of resistance — met the excited crowd. In the street he found himself between the armed populace and the soldiers, who were headed by a Bonapartist officer known to him. The order to fire was on the colonel's lips. Thiers cried, "*Vive la ligne!*" A glance of intelligence passed between him and the colonel, which the foremost *émeutiers* noticing, gave a sign to the people to disperse to the right and left into the side streets, to rally again in a few moments. The troops marched to the Hôtel de Ville. The same evening De Rémusat, who acted as a scout for Thiers in the days of July, ran to tell him of a meeting at Guizot's. Generals Sebastiani, Gérard, and Lobau, Lafitte the banker, Casimir Périer, Manguin, and others were consulting there on the best way of patching up the quarrel with the court. Thiers flew to the Rue Ville l'Evêque, where he was coldly received, Guizot reproaching him with confounding the desire with the power of the government, which he himself thought too weak to be long dangerous. The generals were ill disposed towards the dynasty. However, on military grounds they advised submission. Assuming that Paris was going to rise, the insurrection would be hemmed in near the Hôtel de Ville and crushed. Prompted by the widow and son of Marshal Ney, his own son-in-law, Lafitte started a plan for sending a deputation to Marmont, the minister of war, avowedly to protest against fratricidal bloodshed, but really to ascertain the price he would set upon inaction. While minister and banker were parleying, which they did with an affectation of blunt honesty, Royer Collard came to warn Thiers that a warrant was out for his arrest and that of his partners in the *National*. Dejected at the weak-kneed attitude of the *bourgeoisie*, who pretended to see nothing but a *gasconade* in the Polignac Ordinances, they all went to hide, first in the Vale of Montmorency, and then at St. Ouen, at the house of a royalist lady, a friend of De Rémusat's, who undertook to keep them informed of the course of events. He sent them word next morning that Paris was well up, and Marmont opposing the revolution feebly. They might return in safety, which they at once did. Had they remained a few hours more away the crisis would have had a different end. In their absence the *National* had become the headquarters of the insurrection. They found it in possession of Cavaignac, Bastide, and Joubert, the inventor of barricades. Thiers was received with the cry of *Vive la république!* Before he had time to look about him De Rémusat again ran in to apprise him of a meeting at Lafitte's to consider proposals expected from the king. Thiers went thither in breathless haste, and got there before Charles's envoys. In vehement terms he addressed the meeting, saying that what the situation required was not a change of government but a change of dynasty. It was argued that the king was too weak to do much harm. Thiers answered that the country did not need a weak administration, but one strong in the confidence of France, and willing and able to restore her to her legitimate rank in Europe. What dynasty would he propose? he was asked. Napoleon II. was, for the time being, out of the question. The few present favorable to a republic only thought of one as an expedient for keeping open the Bonapartist succession. Thiers cited 1688. Louis Philippe's name was advanced. But would that prince risk accepting a crown which the great powers might force him to relinquish?

Thiers thought of what he had heard at St. Leu, which emboldened him to go to Neuilly and make an offer of the crown. But what of the victorious populace which had borne the brunt of the battle? De Rémusat undertook to gain his kinsman Lafayette, and, by his instrumentality, Paris to the Orleans scheme. It was De Rémusat who proposed holding the regal title in reserve, until the victors of the barricades had laid down their muskets. Meanwhile, the Duc d'Orléans was to bear the title of lieutenant-general of the kingdom. Ary Scheffer, the drawing-master of the young Orleans princesses, offered to go with Thiers and procure him an audience of the duc or duchesse, or Madame Adélaïde. The Prince de la Moskowa placed his carriage at their disposal. The roundabout drive they were forced to take to Neuilly was interrupted by dangerous adventures which would have filled a superstitious man with dark apprehensions, and which did shake Thiers's nerves. On reaching the duc's villa the Ulysses sent to negotiate with him was

shown to his Highness's cabinet. A blue-eyed, flaxen-haired lady of noble presence, Marie Amélie, granddaughter of Marie Therèse, a niece of Marie Antoinette, entered. She informed M. Thiers that the duc was at Riancy, in the Forest of Bondy. The envoy then stated his mission. He was dusty and grimy, and his dress disordered; the duchesse treated him with *hauteur*, spoke severely of the part the *National* had taken in working Paris into a revolutionary fever, and refused the crown in her husband's name. Madame Adélaïde here came in. Thiers suspected, and always retained the suspicion, that the Duc d'Orléans was eavesdropping, and had instructed her what to say. It was his opinion that they both thought Marie Amélie had been too categorical. M. Thiers again stated his mission to the princess. No man ever knew better how to bait a hook. Very frank, very outspoken in public, and on the whole very consistent in his politics, which were rather "national than liberal," he was of Carthaginian subtlety in turning difficulties and recruiting adherents. So he audaciously pointed to the flaw in the title to the colossal estates which the giddy, warm-hearted Duchesse de Berri had wheedled the king into restoring to the Orleans family; an illegal act of favor, it may be observed, which gave consistency to the report that the court intended to restore the properties confiscated at the Revolution to their rightful owners. Charles Dix, M. Thiers declared, was down forever; unless Louis Philippe replaced him he would be unable to retain the appanages he inherited from the illegitimate children of Mme. de Montespan and Louis Quatorze. The republicans would — and that legally — take them from him, and then plunder the rest of his property. "I am," said Thiers, "a son of the Revolution. I know the audacity of its *personnel*. The Duc d'Orléans's popularity is our only safeguard. His refusal will facilitate the success of the republicans, who, after devouring him and his, will turn round and rend us." The princess, affecting to be struck by the great and noble part her brother could perform in saving France from a second republic, which she assumed would take the guillotine for its fulcrum, assured M. Thiers that Louis Philippe would devote himself to the country and accept the crown. At his request she agreed to go in the evening into Paris, escorted by General Sebastiani, and repeat this promise to a meeting of the deputies. Two days previously the Baroness de Feuchères had been at Neuilly.

De Rémusat with equal success conducted the negotiations at the Hôtel de Ville, where Lafayette was bent on setting himself up as a second Washington.

Thiers was a fatalist in theory. His whole active life was in contradiction to his fatalism. Yet the consequences of his actions justified his fatalistic doctrines. Wounded patriotic pride moved him at Aix, and in the *Constitutionnel*, to attack the elder branch, whom the Allies had imposed on France. The revolution of his making did not get rid of the subservience of the government to foreign States. Indeed it was a link in the great chain of causes which culminated in the mighty westward roll of the Teutonic wave in 1870. His aim, indefinite in January, when he was founding the *National*, had clearly shaped itself in July. It was to erect a monarchy of which he would be the master, and employ it in restoring the military glory of France. He thought a king owing him his crown, of domestic habits, fond of counting up his money, and intelligent enough to understand his minister's value and his own weakness, would hamper him less than a turbulent democracy, in executing his design. His mistake was in not testing the temper of the tool before he entered on the task. Louis Philippe and Thiers did not complete each other. They got in one another's way. As citizen king, the July monarch was without that social *prestige* in which the English hereditary queen finds a compensation for her limited authority. The day Hélène of Mecklenburg, Duchesse d'Orléans, made her entry into Paris, an apple-woman said to a *grande dame* of the Faubourg St. Germain, "Is it fair of you, who can see the bride at the Tuileries, to shut out my view of her?" "What a mistake!" returned the lady. "You have much more chance than I of being invited to the court balls of the *bourgeois* Philippe." The republicans railed at him for impeding the revolution in accomplishing its destinies. He was fond of power, but under the constitution he was to have no personal action on public affairs, and not being an elector, or a national guard, or a deputy or a juror, he was less than the plainest *bourgeois*. Meanly prudent in his foreign policy, he would risk his good name and the peace of France to further the advantageous settlement of a son or daughter. Lord Palmerston was enabled to defeat Thiers's spirited policy in consequence of the Princesse Louise d'Or-

léans's marriage with King Leopold. Unhampered by Louis Philippe, Thiers would have taken up what was national and progressive in the Bonapartist tradition. The early laurels of Louis Napoleon, and the commanding place he took up in Europe in 1852, show that M. Thiers was not oversanguine in his estimate of the fighting force of France. He urged Louis Philippe to brave the powers whom Talleyrand feared, by sending an expedition into Belgium. "This is," he said, on hearing of the fall of Antwerp, "a good beginning; there must be at least twenty years' war, which I hope to direct, before France will be her own mistress, and Europe find her real balance." In the opening years of the monarchy, the incompatible tempers of the king and the kingmaker did not appear, the latter having thrice refused a portfolio, until he had served an apprenticeship in a subordinate department. To enable himself to master exchequer business, an institution of the empire was revived in his favor, and he was made councillor of state to the finance ministry. Practically he directed this department the whole of the time that he was undersecretary to Baron Louis Lafitte and Casimir Périer. He emerged from the penumbra when he thought "Providence stood in need of him to crush the Duchesse de Berri's Vendean rising." The unlooked-for termination of that Legitimist movement brought much odium on M. Thiers and his monarch. A caricature of 1832 gives a back view of Louis Philippe in a court dress, tricolored clocks to his silk stockings, and tricolored ribbons bordering his sabots. He has a bunch of gaoler's keys in one hand, and the charter in the other, and is seated on three cages. "Blaye" is written on the uppermost, in which there is a fair young lady, the Duchesse de Berri, weeping. In the two lower ones are "La Force," and "La Bicêtre," filled with journalists and beaten *émeutiers*. Underneath is the ditty: —

Le Roi po, po, po,
Le Roi pu, pu, pu,
Le Roi po,
Le Roi pu,
Le Roi po, pu, laire.

Notwithstanding this, the "popular" king was a clement prince, and Thiers was not a bloodthirsty minister. He disliked useless loss of life. But if fighting was inevitable he did not mind what number of men were slain. He had an unavowed leaning towards Lynch law, and a repugnance to executions in cold blood. This explains at once his terrible severity in dealing with insurrections, and his leniency to Prince Louis Napoleon after the Strassburg affair, and to Bazaine and the officials of the third empire. In putting down rebellion he was outwardly a stickler for legality. His hardest actions were sanctioned by the letter of the law. The immorality of a law did not trouble him. Whatever he saw he saw well; but he was too short-sighted to perceive what dreadful ferments would be occasioned by using weapons forged by dishonest legislators. Law was rigorously followed in the military tribunals which went on sitting after the fall of the Commune, and still sit. Yet in itself and in its consequences this expedient was odious and fraught with danger. M. Thiers's excuse before posterity will be that between the White Terrorists of the Assembly and a Bonapartist conspiracy, fostered by Prince Bismarck, he was forced to hurry on the peace negotiations. M. Thiers had nobody near him save M. St. Hilaire, to support him in his wish for an amnesty from which only the murderers of the generals at Montmartre and of the hostages should be excluded. The Republican members of his cabinet were opposed to clemency — M. Jules Simon from fear of passing for a Communard in the Assembly, M. Victor Lefranc from ambition to marry his two children to the son and daughter of Samazeuil the financialist, M. Dufaure from native hardness, and M. Jules Favre from weakness, and incapacity to resist the loud, undiscerning cry for vengeance on the Federals. Thiers pleaded warmly for Rossel before the "Pardons Committee," but his eloquence was lost on M. Piou, the vice-chairman. He secretly protected Rochefort and Courbet, and connived at the escape of numbers of misled but excellent persons, who would have been shot if sent to stand their trials before courts-martial. I heard him say, on the eve of the general elections of 1876, that he had no option between harshness to the prisoners and a revolt which would have brought the Germans down again on France. For a whole week there were twenty thousand captives, and scarcely four hundred police, soldiers, and *gendarmes* to guard them. Orders were given to shoot pitilessly any one who grumbled, any one showing a disposition to mutiny, or to escape; and to arrest anybody found commiserating the vanquished.

Thiers's advent to power, which in all his long career he exercised for little more than five years, was always coincident with wide-spread tumult and insurrec-

tion. His antecedents under the July government deprived him of the moral force which might have enabled him to show more leniency than he did in putting down the risings under Louis Philippe's reign. Workmen did not see by virtue of what divine or other law the middle classes were to have the monopoly of revolt. "The gentleman-premier," Comte Molé, was able to grant the amnesty which Thiers felt bound to refuse. In the "*Procés de la Cour des Pairs*," Carrel and Cavaignac charged him with first inciting the Parisians to rebel, and then cheating them out of the republic they had won, and of which he himself became eventually the patron. The part he acted in the days of July stood in his way in 1848, and again in 1871, when he was suspected of playing the game of the royalists. This suspicion did more than anything else to fan the flames of civil war in 1871. Nevertheless, it was unjust. M. Thiers then wished to stand by the republican form of government, for which he had pronounced at Berryer's funeral, and again at Bordeaux, when the news of the fall of Paris reached him there. Both there and at Tours he repeatedly told the diplomatists in communication with him, that nothing else was possible. When the Orleans princes — who in violation of the law were staying at the Duc Decaze's seat at Grave, near Libourne — came privately to see M. Thiers at the Hôtel de France, he intreated them to go back to England and stay there till France had calmed down, and the statute proscribing them was repealed. They appealed to his *dévouement* as an old minister of Louis Philippe to become their partisan. Thiers expressed his respect for the late king, but told them that he was the servant of his country alone. When they went away Madame Thiers asked whom he had been talking with in his bedroom. "Les Princes d'Orléans. Ces jeunes gens, je les connais, n'est-ce pas? Eh bien! toujours eux; eux d'abord: le pays après. Quand j'ai servi le père, je ne servais pas sa fortune — je servais la France. Je respecte beaucoup la memoire du roi, mais les affaires de ses enfants ne sont pas celles de la patrie. Il les a trop souvent confondus; moi, je ne les confond pas. Ces princes veulent que je me refasse Orléaniste. Moi je désire faire le salut de mon pauvre pays."

In one of our morning conversations M. Thiers gave me a long explanation, the substance of which I here parenthetically give, on the influence of family affairs on Louis Philippe's public actions. The policy of his reign might be divided into two parts. In the first part, the king was ostentatiously constitutional. From first to last he was himself a Voltairean; but from 1832, the date of his eldest daughter's marriage with the king of the Belgians, he took pains to favor the Protestant form of religion and of free thought. Between '40 and '48, his efforts converged towards the transformation of his government into a personal one. The feelings of the court on religious questions underwent a violent change. Jesuitism was encouraged to be aggressive. Marie Amélie, who was a paragon of domestic virtue, was, unhappily for the monarchy, a bigot; but, for reasons that will shortly appear, she kept her bigotry down in the first of the two periods, and sacrificed religious prejudices to the extent of consenting to the marriage of the prince royal with a Protestant princess who was not susceptible of being converted to Catholicism.

About 1841 the queen cast off the reserve she had imposed on herself, and entered into closer relations with her family and those members of the Catholic party who were not Legitimists. Any one expressing sympathy with the Duchesse d'Orléans, a meritorious, enlightened, and unambitious princess, was treated coldly by her mother-in-law. The causes of this change from ostentatious constitutionalism and free thought were traceable to the marriage of Queen Victoria, in the following way. M. Thiers, in 1831, wanted to annex Belgium, the Catholics there being then with the French. When diplomatic obstacles were raised, he proposed to make the Duc de Nemours king of that state. Louis Philippe caught at the scheme; but, unknown to his ministers, the English government having proposed a match between Leopold and the princess Louise of Orleans, Leopold became the king's own candidate. It was the same thing to him to have a daughter queen or a son king, and there was the advantage that the princess could be raised to a throne without disturbance or danger. At Compiègne, where the princess Louise was married, Leopold adroitly, with what motive may be supposed, encouraged a hope, already formed, but not expressed beyond the royal circle. It was to secure the hand of his niece, the Princess Victoria, for the Duc de Nemours.

The Orleanist monarchy was popular with the victors of the Reform Bill agitation, who owed their victory in some degree to the *contre coup* of the July revolu-

tion. England was tired of going to war with France. She might be expected to regard favorably a marriage which would be a pledge of peace. The young princess was being brought up in very liberal ideas. The one objection, and it was a grave one, was the religion of the Duc de Nemours. Liberals and Tories would entertain an equal horror of a Roman Catholic suitor. The duc should become a Protestant before the match could be proposed. Leopold also represented that in William IV.'s lifetime nothing could be done. When William died, the intrigue which had been quietly pursued was actively pushed forward. The marriage of the prince royal was hurried on, and celebrated at Fontainebleau against all precedent, according to both Lutheran and Catholic rites. A family Bible was presented by the officiating pastor to the bride and bridegroom before the whole court. M. Jules Janin, summoned from Paris to furnish the *Débats* with an account of the wedding, was requested to give prominence to this incident, and to the Lutheran celebration. Protestants were appointed to the best places in the new household. The bride's stepmother, a princess of Hesse Homburg, was set on to write letters eulogizing the Orleans family to her connections in England.

Louise of Belgium, who was invited to the coronation of Victoria, undertook to show a miniature of the Duc de Nemours to the young queen. Ary Scheffer was engaged to do a profile likeness in crayon having the same destination. A campaign was got up in Algeria to give the suitor an opportunity of playing the hero. The Chamber being economic, Louis Philippe out of his own pocket doubled the credit opened to furnish the brilliant equipage in which Marshal Soult outshone every other ambassador in the procession from Buckingham Palace to Westminster. Soult was instructed to flatter the Duke of Wellington, and to feast Apsley House veterans. In conversing with English political men, he was to dwell on the king's Protestant leanings and his attachment to constitutional principles. It was with surprise and chagrin that Louis Philippe and his wife received the notification of the queen's engagement with Prince Albert. Marie Amélie felt herself in the situation of one who had sold herself to the tempter, and been cheated by him.

The Duc d'Orléans's accidental death soon followed — an event which she took as a chastisement inflicted for having lent herself to this marriage with a Lutheran. Louis Philippe had no longer any family inducement to clog himself with English constitutionalism. Catholic matches for his sons presented themselves at Naples and Madrid; the nuncio was counted to assist in removing obstacles to them. Christina and Carlotta came to Paris. The Duchesse d'Orléans was isolated, and court favor withdrawn from Protestants. M. Guizot found he would either have to retire or promote personal government, Jesuitism, and the Spanish marriages. He chose the undignified alternative. Quinet and Michelet were silenced at the College of France. Thiers felt called upon to deliver his famous speech on the strides the Jesuits were making; Paris was convulsed with religious agitation; and all because Louis Philippe wanted to make up for the loss of an English match on which he had set his heart, by obtaining for one of his sons a Neapolitan, and for another a Spanish heiress. M. Thiers well said, "*Toujours eux; eux d'abord: le pays après.*"

Thiers's mistake was in not having made his own conditions when he found himself imposed on the Assembly by the national voice and the national disasters. He meant to found a republic. Had he said so in the tribune at Bordeaux the Commune would have never attained the proportions it did. M. Thiers had little in him to draw him to the side of monarchy beyond readiness to adapt himself to what he thought the pressing need of the day. From time immemorial Marseilles, his native city, has been, in manners, customs, and institutions, essentially democratic. He loved power less for what it brought him than for the opportunities it gave him of exercising his vast energies and varied faculties. The reproaches of Carrel and Cavaignac he may have merited, but not the suspicions of the people of Paris at the end of the siege. One of the causes of this misunderstanding was the privacy in which he lived from the *coup d'état* until he was returned by a Parisian *arrondissement* to the Corps Législatif. The multitude does not note slow transformations even in the opinions of men living in the full blaze of publicity. How could it perceive those operated in retirement? Thiers's compatriots in his lifetime fell also into the error of judging him by their own vanity. Self-confident he was, but vain never. He did not mind what the world said of him, provided his own judgment pronounced in favor of his actions.

In his direct relations Thiers was kind and genial, but he was not a benevolent

man. His great rival, Guizot, was not amiable, but he was humane. He mourned over the tragic destiny of the class whom the Greeks personified in Hercules, and the Hebrews in Samson. He wished to restore sight to the poor hoodwinked giant at whose blindness the Philistines made merry, though he did not see much harm either in the worshippers of Dagon or their mirth, and would have preserved their temple to them. The immortal side of the working-man was uppermost in his mind; but he forgot that the way to another world lies through this, and that the soul's health often depends on earthly surroundings. Thiers loved France, the nation; and cared very little for Frenchmen beyond his personal friends and acquaintances, until he became their idol. The popularity he enjoyed as he was descending to the tomb softened him, elevated him, and beautified his whole being. It would not be correct to state that he was enamored of an abstraction. What he liked was the peculiar civilization of which Paris is the centre, and the pleasant land that gave him birth. He would secure to that civilization all the liberties necessary to its easy development; and during the greater part of his life he had no more pity on those it pressed severely upon than a victorious general for the men slain in battle, or a priest of Juggernaut for the votaries under the car-wheels. His easy successes prevented him from sympathizing with the unfortunate, if their misfortune was the only claim urged for his pity. Theoretic fatalism did not hinder him from eliminating luck from the factors which go to build up individual prosperity. If people did not get on, the M. Thiers of 1848 thought it was their own fault. The power which Louis Napoleon and his Elysée accomplices won by bold gambling modified this view, which underwent further changes towards 1870, when he thought charity to the poor, and a large meed of it, a duty of the rich. Speaking of luck, I remember his saying one day that he accounted for the favor the empress Eugénie enjoyed abroad by the belief which her rise in the world induced in a lucky star. Young women, having no fortune but pretty faces, were encouraged to be of good cheer by her dazzling success. For some years after her marriage suicides among shop-girls and seamstresses underwent a remarkable diminution. The hope that Louis Napoleons of some kind would present themselves dissipated suicidal despondency.

Thiers was neither intriguing nor meanly ambitious. When he saw men in power blundering, he was moved to snatch their cards from them and play them out. If he could not use his cards according to his own judgment, he threw down the whole hand and went away. His tenacity in climbing the greased pole with a ministerial portfolio on the top, was only equalled by the agility and grace with which he descended. If he made a mistake he had no difficulty in saying his *mea culpa*. The list of errors into which he fell in trying to carry out great plans was a long one. He was wrong in stirring up the paving-stones to revolt against Charles the Tenth; he was wrong in taking for granted the malleability he wished to find in Louis Philippe; he was wrong in so soon unmasking his foreign policy; he was wrong in giving Louis Napoleon credit for sufficient intelligence to prefer him — the glorifier of the "great emperor," and the unrivalled administrator — to De Morny, De Persigny, De Maupas, and Fleury. Universal suffrage once granted, he was wrong in seeking to withdraw it, however unripe France was for it. At the same time there was wisdom in the speech in which he protested against political power being given to "the vile multitude," since he clearly explained that by that term he meant a swell-mob of vagrants, unwilling to create settled habitations for themselves and their families. He was right in trying to get the *déchéance* of the empire voted by the Corps Législatif, which was preparing to follow his advice when it was invaded, and a provisional government proclaimed. But he was grievously wrong in refusing to join the latter on the 4th of September, and in putting himself at the head of the delegate branch.

Another of his errors was listening to professions of unalterable attachment from M. de Falloux and his party at Tours, and assisting them to secure the return of a "rural" party to Bordeaux. But his prime mistake of all was the negotiating peace, which he alone was competent to negotiate, without first imposing his own conditions on the parties who turned him out of the presidency on May 24. M. Thiers, with a bad grace, accepted Gambetta, who on his return from Russia thought he was conspiring with the Orleanists. From the surrender of Metz he was in open enmity with the dictator. Every effort, after the 30th of October, seemed to him a waste of strength. He wanted to economize the national resources, and recoil the better to spring forward; and, with the aid of such allies

as time and jealousy of Prussia would create, endeavor to reconquer the Rhine frontier. M. Thiers, at the Hôtel de Bordeaux, evoked on every side latent hostility to Gambetta. Sharpshooters of the press were set on against him, and poisonous tongues to clamor. He stood between the dictator and the diplomatists who followed the delegate government to Tours. Lord Lyons, I remember, about the time Lord Odo Russell was at Versailles, called on Gambetta to converse with him on the questions then uppermost. M. Thiers, informed by his ubiquitous agents, came in like the unbidden fairy of the story at the royal christening, and nipped in the bud the negotiations which the dictator was feeling his way to open.

The unwelcome visitor divined the orders given to let nobody pass the anteroom where the churlish Pipe-en-Bois kept guard; found his way up by a back stair, and walked in, unannounced, to where Gambetta and the ambassador thought they were safe from eavesdroppers and intruders. At that time, when mighty issues were at stake, to have offered M. Thiers a share in the government would have been tantamount to abdication. In fact, it was impossible for men of ability, unless they were of docile disposition, to work with him. When they had the quality of docility he grew attached to them, and if they enjoyed a special superiority over him he bowed before it. He accepted M. Barthélemy St. Hilaire's direction on questions of political probity, and was guided by him in advising the Assembly to organize the republic.

On the 25th of May the ex-president occupied a little sunny dusty *entresol* in the Boulevard Malesherbes, in the corner house next to St. Augustine's church. The heat and noise disturbed him at his work. MacMahon was at the Elysée, and the Hôtel Bagration was not yet discovered. Directly he had moved there, he asked M. Leverrier to continue with him the astronomical studies in which in his rare intervals of leisure he had taken refuge from the petty passions that raged around him at Versailles. He received his own visitors in a room littered with botanical and geological specimens and books of science. Vauvenargues's essay on the human mind lay on his desk near an encyclopædia open at the page "*Histoire Naturelle.*" "He had seen a good deal of perverse mankind, and wished now to refresh himself in the works of the great God." Louis, his trusty *valet de chambre*, told his master's friends that he had never known him in a more cheerful state of mind. His conversation was lively and original, betraying no chagrin. When amusing gossip about "the ducs" and "the princes" was retailed to him, his face lighted up, and his eye took an arch expression. He was unfeignedly sorry when he thought that the Comte de Paris "*se déshonorait*" in lending himself to the fusionist intrigue which brought forth the Septennate. M. Thiers's room opened into the garden of the Hôtel Bagration, in which on Sunday mornings he received his visitors between seven and nine o'clock. He wore a padded brown cashmere dressing-gown, a broad-brimmed hat, a black cravat, glazed shoes, and black gaiters. With a magnifying glass he would run off from the subject of conversation to examine a blade of grass, a leaf, a flower, an insect that caught his eye. At half past nine he sat down to answer private letters, which he could not leave to his secretary. His own notes and letters were written on gilt-edged paper. In punctuating he reread what he had just penned, sentence by sentence, as he went on, but seldom from beginning to end.

In the June following his retirement to private life, Bismarck, who wrote to Manteuffel that France was in the hands of an Ultramontanist faction, thought seriously of retaining Belfort as a security for the observance of the treaty of Frankfort by the new government. Thiers got Russia to interfere, and went to Switzerland in August to thank Prince Gortschakoff, who was there, for the service he had rendered to the French nation. Verdun evacuated, and the war indemnity paid, Manteuffel wrote to Thiers requesting a souvenir of their personal relations. The ex-president sent the marshal the "History of the Revolution, Consulate, and Empire," with an autograph dedication. But before he could acknowledge the present, the recipient had to ask his king's — for Manteuffel will never call William by his imperial title — permission to accept it. "And so, marshal," said his majesty, "you are proud of this handsome gift?" "Yes, sire, it is a literary monument" — which in point of bulk it certainly was, for it was in fifty volumes. "And what have you thought of giving in return?" "Nothing as yet, sire." "Well, to pay M. Thiers in his own coin, send him in my name and yours the works of Frederick the Great, which my secretary is charged to hand you."

M. Thiers stood by himself as a parliamentary orator. I do not affirm that he was peerless, but I say that no other speaker

whom I have ever heard, or heard of, resembled him. He was called a *Prudhomme spirituel* by another tribune of his time. Certainly, he spoke to catch the ear of M. Prudhomme, and, in addressing him, let fall pearls and diamonds, which were to be picked up by intelligent listeners. Greek art was the perfection of common sense, so was M. Thiers's oratory when stripped of its *précautions oratoires*, the object of which was to gain a favorable hearing from stupid *bourgeois*. In the tribune, he took the attitude of a man at the wheel in a raging storm. Ascending it, his hands were filled with sheets of paper, in which, at wide distances from each other, notes in black, red, and blue ink were traced in legible characters. These memoranda, however, were not referred to in the course of the interminable, chatty monologue, which sparkled with brilliant traits, and culminated in a period that passed into general circulation directly it was uttered. "All the ideas," said Ste. Beuve, "flowed from facts;" and he might have added, facts well masticated and digested, for whatever Thiers read — and his reading was universal — he made his own. With his small stature and thin, piping voice, he gave the impression of a babe teaching wisdom to doctors. When he rose to philosophical amplitude, and — being assured that Joseph Prudhomme's ear was caught — put forth his dialectic vigor, the contrast between his physical weakness and his mental power was very impressive.

Thiers was respected by time to the last hour of his life. When death struck him his faculties were unimpaired. A premonitory symptom of his end, in the form of acute pains above the nape of the neck, caused him to hesitate just after the 16th May, when Gambetta asked him to lead the Republicans against MacMahon. They were accompanied by bleeding at the nose. Dr. Barthe, however, who was afraid of paralysis of the lungs, did not pay much attention to these symptoms. The family of the statesman conjured him to keep quiet. He said he would, barred his door for three days against strangers, felt the pains worse, and said he would rather die at once.

Resuming his lifelong habits, and throwing himself with ardor into the campaign against "the ducs," he became quite well, and told his friends that in the heat of the agitation he had picked up a store of strength. The one thing that made him uncomfortable was the want of a view from his house, which is at the bottom of a hill. Noisy Philistinism at Dieppe irritated him, and the rolling of the waves on the shingle kept him awake. The terrace of St. Germains commanded a fine view, and there were green pleasant drives in the vicinity; so to St. Germains he went. His last earthly lodging was in the pavilion in which Louis Quatorze was born, with whose funeral, as already mentioned, the national obsequies of M. Thiers so curiously contrasted.*

In the retirement incidental on the *coup d'état*, Thiers began to "educate his conscience." The death of his mother-in-law, which plunged him in the deepest grief, helped forward the purifying work. He rose with the events which brought his country to the brink of ruin. A sense of his popularity mellowed him in his latter days, when his features took a dignity and his manners a sweetness hitherto foreign to them. Bonnat and Mlle. Jacquemart have not made this transfiguration — for transfiguration it was — felt in their portraits of him. The best likeness I have seen is a three-sous engraving, striking, charming, and impressive, signed "Chapon," and published by Alfred Duquesne of the Rue d'Hautfeuille, Paris. His Majesty, *le Petit Bourgeois*, who never sought to rise above the *bourgeoisie*, and whose death made a greater stir in the world than the end of the most powerful king or emperor, is there shown to the life. In one thing it fails. I am sorry to say it does not give the very peculiar hands of Thiers. They were the hands of a toiler and an artist. In their general outline they were square; the last phalanx of the finger was smooth and pointed, and the nail narrow and pinkish. The right hand opened well to gesticulate, and was offered frankly to the visitor, without, however, demonstrative warmth. The left remained shut, with the thumb extended its full length. In looking at a portrait or a statue which pleased him, M. Thiers made use unconsciously of his thumb, as though he were modelling in clay a likeness of what he was admiring.

Thiers's sympathy with animals was one of the lovable features of his disposition. In looking over memoranda of visits paid to him I find some of a breakfast at the Elysée, to which General Chanzy, M. Rouland, the governor of the Bank of France, an African traveller, the president's family and household, and I, sat down. The conversation, which had run upon the war

indemnity, Count Arnim's incredulity as to its payment, and the climates of Versailles and Enghien, turned upon horses, M. Thiers going to visit a horse-show in the evening. He expressed great sympathy with the chevaline race, and spoke in glowing terms of the exquisite sensibility of the race-horse. The modern thorough-bred, the pride of English grooming, was not so picturesque, he said, as the old-fashioned hunter. But it was superior in its capacity to express delicate shades of feeling. Blind people had a sort of facial sense which enabled them, unassisted by their hands, to tell the height of a man in passing him by; whether the shutters of a shop were up or down, or whether the countenance of a person before them was severe or smiling. The whole skin of the thorough-bred horse, he imagined, was endowed with this sense. He thought that if the horse had the organ of speech it would be the most demonstrative being in creation. Nature gave it a mask which, by drawing down the skin tight over its face, debarred mobility of expression. It could not, because of its bulk, rub against a human being like a cat, or paw like a dog, or wag its tail, or whine, or utter sounds that caressed the ear. Yet such was the intensity of its feeling that it found channels for its eloquent expression. What in art or nature was there so eloquent as the eye, the nostril, and the quivering skin of the thorough-bred? M. St. Hilaire here observed that the skin-sensibility of the horse is becoming more developed. I ventured to observe that the race-horse one sees now at Longchamp is a less splendid animal than the thorough-bred of thirty years ago. Thiers agreed that it was less vigorous and picturesque. The exquisite barbs of Gascony were instanced as an argument in favor of the persistence of a fine type, which once fixed is not easily degraded.

M. Thiers's library had a world-wide celebrity. It was an abridgement of the most renowned museums of Europe; a handy edition of the greatest works of art in the cities he had visited in his artistic and historical peregrinations. He commenced his collection on a settled plan in 1833, when he sent Sigalon and Boucoyran to Rome, the one to copy for him "The Last Judgment," and the other Raphael's paintings in the Sistine Chapel. Sigalon died as he finished his work, which was a superb interpretation of the original masterpiece. Thiers wanted it to fill a space over his library mantelpiece. The copyist happily caught the precise, firm touch of Michael Angelo, who painted neatly and with an unfevered hand the prodigious beings that rose before his mind's eye. The transparent water-color tones, as they were managed by Sigalon, came nearer to the old frescoes than could an oil rendering. When the statesman and historian felt his eyes tired he was fond of resting them, especially on wet days, on the souvenirs of galleries he had seen, on the walls around him. They were hung with nice judgment. Each, suiting its next neighbors, retained its full value. From his desk M. Thiers was able to contemplate reductions of the "Sistine Madonna," "The Assumption" of Titian, the Bolognese "St. Cecilia," "St. Jerome's Death," Raphael's "School of Athens," "The Sibyls," "The Acts of the Apostles," and "The Transfiguration," which was opposite "The Last Judgment." Choice prints were transferred to the panels of the doors, and coated with a yellowish varnish. The bookcases, not higher than an English sideboard, were of a tone to harmonize with the pictures and statues. M. Thiers's official relations enabled him to procure photographs and copies of what was best worth reproducing in the royal, papal, grand ducal, and civic palaces of Italy, Spain, Dresden, Holland, and Belgium. The Windsor collection he could never so much as see, beyond that part of it adorning the chambers to which Messrs. Colnaghi's tickets procure admission.

M. Thiers made few hard-and-fast rules in his life. One of the few was to "defend ferociously the public purse," and the other not to give house-room to any but first-rate objects of *virtu*. After finding out for himself what was super-excellent in a gallery, his way was to sit as long as was possible before it, and to return again and again until it was well fixed on his brain. He then got a copy made, if of a fresco, in water-colors, and if of an oil-painting, in oils. Buonarotti — for so he preferred to call Michael Angelo, to associate him with that other giant, Buonaparte — drew him seven times from Paris to Florence. The "Sistine Madonna" attracted him to Dresden; and he travelled twice through Spain to see the portraits at the Escurial. One evening at the Place St. Georges, the wearisome monotony of travelling over plains was talked of. Thiers said to the person who started this subject, "When I find myself in a flat country, I shut my eyes and evoke the statues of Michael Angelo. They are familiar spirits who answer to

my call. I am fond of their companionship. Michael Angelo makes us feel the meaning of the apparently tragic destiny of man. Misery is a spur to effort, and effort is the fountain of all greatness. His works are full of consolation. What can be more consoling to the afflicted than his 'Nursing Madonna' in the chapel of the Medici? Affliction has ennobled her, as it ennobles every one who takes it for what it is — a spur to stimulate us to higher action. In contemplating her I have often thought of the lesson she might have given to a certain king I knew. The tragic destiny of her infant, whose future she divines, fills her with despair. But her maternal love will not be a hindrance to him when the time arrives for him to remain an obscure *prolétaire*, or become the most illustrious martyr of progress. She has the instinct of his grandeur. Noble pride in the struggle with maternal tenderness will gain the victory. A secular tree stripped of its leaves and resisting the wind affects me like that Madonna." He bought from the Salviati family the bronze duplicate of this marble, which was given by Michael Angelo to Salviati, bishop of Florence. Mme. Thiers intends to present it to the Louvre.

The doors of the library were kept by an Apollo and a satyr, copied by Mercie from the antique. "The Last Judgment" was flanked by reductions of the Farnese Hercules, and the "Slave" of Michael Angelo, which is conceived in the spirit of the "Nursing Virgin." Bronzes copied for M. Thiers from the tomb of Lorenzo de' Medici were stolen from the Garde Meuble, where Fontaine, the Communist, placed them. They were never found, and were sorely missed by their rightful owner, who called them the "schoolmasters of his soul." Other copies in marble were since done, but somehow they did not speak to M. Thiers the same language as the lost ones. Between them and the bronzes there was all the difference that a pious old lady might find between a favorite text in the authorized version of the Scriptures and a more accurate rendering in a new translation. "Day" and "Night" and "Dawn" and "Dusk," which had got into the hands of an old-clothes man, were recovered. They stand at the corners of the library. A common sentiment, that of intense grief agitates them. Were a young, heroic, majestic queen, whose heart is open to compassion, to hear each groan, see each scene of woe, and know of every injustice perpetrated in her state, she would look on the world with the profoundly sad eyes of these four statues. Between two of them was placed an *alto rilievo*, in *terra cotta*, of an entombment, also by Michael Angelo.

A mere list of the other grand, glorious, and charming works of art in the library and its ante-room would be tedious; and the space at my disposal does not admit of anything fuller. I shall therefore close with the mention of a pen-and-ink drawing of which M. Thiers once said: "All military and political science is comprised in that sketch." Leonardo da Vinci drew it rapidly, probably to fix a felicitous idea. A band of brave knights, mounted on incomparable chargers, are fighting an army of skeletons on foot. The host of dry bones have the best of the battle. Some are falling, and others rising from the ground to replace them. Infantry, here, sweeps away cavalry. The starving classes swamp the privileged orders. Famine seizes upon power. We admire most the noble cavaliers. But the artist forces us to ask, Why did they feed their horses so well when hunger was decimating their fellow-men? The skeletons, whether we like it or not, will gain the victory, for, again to quote M. Thiers, "They are struggling to infuse a little of God's justice into man's institutions."

GREEN PASTURES AND PICCADILLY.

BY WILLIAM BLACK,

AUTHOR OF "THE PRINCESS OF THULE," "THE ADVENTURES OF A PHAETON," ETC.,

In conjunction with an American writer.

[Entered according to Act of Congress, in the Year 1877, by HARPER & BROTHERS, in the Office of the Librarian of Congress, at Washington.]

CHAPTER L.

A NEW COMPANION.

THE arrival of the new sovereign to take possession of the ceded dominions had been made known to the people at Eagle Creek Ranch; and soon our poor Bell was being made the victim of continual interviews, during which agents, overseers, and lawyers vainly endeavored to get some definite information into her bewildered head. For what was the use of

reporting about the last branding of calves, or about the last month's yield of the Belle of St. Joe, or about the probable cost of the new crushing-machines, when the perpetual refrain of her thinking was, "Oh, good people, wouldn't you take the half of it, and let me have my children?"

Fortunately her husband was in no wise bewildered, and it was with not a little curiosity that he went off to inspect the horses and two carriages that had been sent on to Denver for us from the ranch. My lord was pleased to express his approval of these; albeit that one of the vehicles was rather a rude-looking affair. The other, however — doubtless Colonel Sloane's state carriage — was exceedingly smart, and had obviously been polished up for the occasion; while, as regards the horses, these were able to elicit even something more than approval from this accomplished critic. He went back to the hotel highly pleased. He believed he had got some inkling that life at the ranch was not wholly savage. The beautiful polished shafts and the carefully brushed dark-blue cushions had had an effect on his imagination.

And then, right in the midst of all this turmoil, Lady Sylvia got a telegram from New York. We had just sat down to dinner in the big saloon, at a separate table; and we were a sufficiently staid and decorous party, for Mr. and Mrs. Von Rosen were dressed in black, and the rest of us had donned whatever dark attire we had with us, out of respect to the memory of the lamented Jack Sloane. (One of the executors was to call in on us after dinner; but no matter.) This telegram produced quite a flutter of excitement, and for the moment we forgot all about Texan herds and placer mines. Lady Sylvia became a trifle pale as the telegram was handed to her, and she seemed to read it at one glance; then, despite herself, a smile of pleasure came to her lips, and the color returned to her face.

"But what is this, Mr. Von Rosen?" she said, and she endeavored to talk in a matter-of-fact way, as if nothing at all had happened. "My husband speaks of some proposal you have made to him."

"Yes," said the lieutenant, blushing like a guilty schoolboy.

He looked at his wife, and both were a trifle embarrassed; but at this moment Lady Sylvia handed the telegram across the table.

"You may read it," she said, indifferently; as if it had conveyed but little news to her. And yet it was a long telegram — to be sent by a man who was not worth sixpence.

"*Hugh Balfour, New York, to Lady Sylvia Balfour, Central Hotel, Denver: Have got your letter; all is right. Shall reach you Saturday. Please tell Von Rosen that, subject to your wishes, I accept proposal with gratitude.*"

"Lady Sylvia," said the lieutenant, with his bronzed face as full of triumph as if he himself had brought about the whole business, "will you let me cry 'Hurrah'? Bell, shall I cry 'Hurrah'? Madame, do you object?"

And he held up the bit of paper for a signal, as if we were about to shock the calm proprieties of Denver.

"May I see the telegram, Lady Sylvia?" said Mrs. Von Rosen, taking no notice of her mad husband.

"Certainly. But please tell me, Mr. Von Rosen, what the proposal is. Why do you wish to cry 'Hurrah'?"

"Ah, yes, you may well ask," said the young man, moderating his fervor, "for I was too soon with my gladness. I will have to persuade you before we can cry any hurrahs. What I was thinking of was this — that you and Mr. Balfour would be a whole year with us, and we should have great amusement; and the shooting that I have heard of since yesterday — oh! I cannot tell you of it. But he says it is all subject to your wishes; now I must begin to persuade you to stay away from England for a whole year, and to give us the pleasure of your society. It is a great favor that my wife and myself we both ask of you; for we shall be lonely out here until we get used to the place and know our neighbors; but if you were our neighbors, that would be very pleasant. And I have been very busy to find out about Eagle Creek — oh no, it is not so bad as you would think; you can have everything from Denver — I do not know about ladies' saddles, but I will ask — and it is the most beautiful and healthy air in the world, Lady Sylvia ——"

"My dear Mr. Von Rosen," said Lady Sylvia, interrupting him with a charming smile, "don't seek to persuade me; I was persuaded when I got the message from my husband; for of course I will do whatever he wishes. But if you will let me say so, I don't think this proposal of yours is very wise. It was scarcely fair of you to write to New York and inveigle my husband into it without letting me know. It is very charming, no doubt; and you are very kind; and I have not the least doubt we shall enjoy ourselves very much; but

you must remember that my husband and myself have something else to think of now. We cannot afford to think only of shooting and riding, and pleasant society. Indeed, I took it for granted that my husband had come out to America to find some profession or occupation; and I am rather surprised that he has accepted your proposal. It was too tempting, I suppose; and I know we shall enjoy ourselves very much ——"

Husband and wife had been glancing at each other, as if to inquire which should speak first. It was the lieutenant who took the burden on his shoulders, and certainly he was extremely embarrassed when he began. Fortunately in these Western hotels you are expected to order your dinner all at once, and it is put on the table at once; and then the waiter retires, unless he happens to be interested in your conversation, when he remains, and looks down on your shoulders. In this case, our colored brother had moved off a bit.

"Lady Sylvia," said he, "I wish Mr. Balfour had explained to you what the proposal is in a letter; but how could that be? He will be here as soon as any letter. And I am afraid you will think me very impertinent when I tell you."

He looked at her for a second; and then the courage of this man, who had been through the whole of the 1866 and 1870–'71 campaigns, and done good service in both, fell away altogether.

"Ah," said he lightly — but the Germans are not good actors — "it is a little matter. I will leave it to your husband to tell you. Only this I will tell you, that you must not think that your husband will spend the whole year in idleness ——"

"It is a mystery, then?" she said, with a smile. "I am not to be allowed to peep into the secret chamber? Or is it a conspiracy of which I am to be the victim? Mrs. Von Rosen, you will not allow them to murder me at the ranch?"

Mrs. Von Rosen was a trifle embarrassed also, but she showed greater courage than her husband.

"I will tell you what the secret is, Lady Sylvia," she said, "if my husband won't. He is afraid of offending you; but you won't be offended with me. We were thinking, my husband and myself, that Mr. Balfour was coming out to America to engage in some business; and you know that is not always easy to find; and then we were thinking about our own affairs at the same time. You know, dear Lady Sylvia," — and here she put her hand gently on her friend's hand, as if to stay that awful person's wrath and resentment — "we run a great risk in leaving all these things, both up at Idaho and out on the plains, to be managed by persons who are strangers to us — I mean, when we go back to England. And it occurred to my husband and myself that if we could get some one whom we could thoroughly trust to stay here and look into the accounts and reports on the spot — well, the truth is, we thought it would be worth while to give such a person an interest in the yearly results rather than any fixed salary. Don't you think so?" she said, rather timidly.

"Oh yes, certainly," Lady Sylvia replied. She half guessed what was coming.

"And then," said our Bell, cheerfully, as if it were all a joke, "my husband thought he would write to Mr. Balfour telling him that if he liked to try this for a time — just until he could look round and get something better — it would be a great obligation to us; and it would be so pleasant for us to have you out here. That was the proposal, Lady Sylvia. It was only a suggestion. Perhaps you would not care to remain out here, so far away from your home; but in any case I thought you would not be offended."

She was, on the contrary, most deeply and grievously offended, as was natural. Her indignant wrath knew no bounds. Only the sole token of it was two big tears that quietly rolled down her face — despite her endeavors to conceal the fact; and for a second or two she did not speak at all, but kept her head cast down.

"I don't know," said she, at length, in a very low and rather uncertain voice, "what we have done to deserve so much kindness — from all of you."

"Oh no, Lady Sylvia," our Bell said, with the utmost eagerness, "you must not look on it as kindness at all — it is only a business proposal; for, of course, we are very anxious to have everything well looked after in our absence — it is of great importance for the sake of the children. And then, you see, Mr. Balfour and yourself would be able to give it a year's trial before deciding whether you would care to remain here; and you would be able to find out whether the climate suited you, and whether there was enough amusement ——"

"Dear Mrs. Von Rosen," said Lady Sylvia, gently, "you need not try to explain away your kindness. You would never have thought of this but for our sakes ——"

"No," she cried, boldly; "but why? Because we should have sold off everything at the end of the year, rather than have so much anxiety in England. But if we can get this great business properly managed, why should we throw it away?"

"You forget that my husband knows nothing about it —— "

"He will have a year to learn; and his mere presence here will make all the difference."

"Then is it understood, Lady Sylvia?" the lieutenant said, with all the embarrassment gone away from his face. "You will remain with us for one year, anyway?"

"If my husband wishes it, I am very willing," she said, "and very grateful to you."

"Ha!" said the lieutenant, "I can see wonderful things now — wagons, campfires, supper parties; and a glass of wine to drink to the health of our friends away in England. Lady Sylvia, your husband and I will write a book about it — 'A Year's Hunting in Colorado and the Rocky Mountains.'"

"I hope my husband will have something else to do," Lady Sylvia said, "unless you mean to shame us altogether."

"But no one can be working always. Ah, my good friends," he said, addressing the remaining two of the party, "you will be sorry when you start to go home to England. You will make a great mistake then. You wish to see the Alleghany Mountains in the Indian summer? Oh yes, very good; but you could see that next year; and in the mean time think what splendid fun we shall have —— "

"Ask Bell," said Queen T. with a quiet smile, "whether she would rather return with us now, or wait out here to hear of your shooting black-tailed deer and mountain sheep?"

At this point a message was brought in to us, and it was unanimously resolved to ask Bell's business friend to come in and sit down and have a glass of wine with us. Surely there were no secrets about the doings of Five-Ace Jack unfit for us all to hear? We found Mr. T. W. G—— a most worthy and excellent person, whose temper had not at all been soured by his failure to find the philosopher's stone. It is true, there was a certain sadness over the brown and wrinkled face when he described to us how the many processes for separating the gold from the crushed quartz could just about reach paying expenses, and without doing much more; and how some little improvement in one of these processes, that might be stumbled on by accident, would suddenly make the discoverer a millionaire, the gold-bearing quartz being simply inexhaustible. It was quite clear that Mr. G—— had lost some money in this direction. He was anxious we should go up to Georgetown, when we were at Idaho, to see some mines he had; in fact he produced sundry little parcels from his pocket, unrolled them, and placed the bits of stone before us with a certain reverent air. Our imagination was not fired.

He had known Colonel Sloane very well, and he spoke most discreetly of him; for was not his niece here in mourning? Nevertheless, there was a slight touch of humor in his tone when he told us of one of Bell's mines — the Virgin Agnes — which led one or two of us to suspect that Five-Ace Jack had not quite abandoned his tricks, even when his increasing riches rendered them unnecessary. The Virgin Agnes was a gulch mine, somewhere in the bed of the stream that comes rolling down the Clear Creek cañon, and it was originally owned by a company. It used to pay very well. But by-and-by the yield gradually diminished, until it scarcely paid the wages of the men; and, in fact, the mine was not considered worth working further. At this point it was bought by Colonel Sloane; and the strange thing was that almost immediately it began to yield in a surprising manner, and had continued to do so ever since. Mr. G—— congratulated our Bell on being the owner of this mine, and said he would have much pleasure in showing it to her when she went up to Idaho; but he gravely ended his story without dropping any hint as to the reason why the Virgin Agnes had slowly drooped and suddenly revived. Nor did he tell us whether the men employed in that mine were generously allowed by Colonel Sloane to share in his good fortune.

He asked Bell whether she proposed to start for Idaho next day. She looked at her husband.

"Oh no," said the lieutenant, promptly. "We have a friend arriving here on Saturday. We mean to wait for him."

"Pray don't delay on his account," Lady Sylvia said, anxiously. "I can very well remain here for him, and come up to you afterward."

"Oh, we shall have plenty to do in these three or four days — plenty," the lieutenant said; "I must see about the ladies' saddles to-morrow, and I want to buy an extra rifle or two, and a revolver, and a

hunting-knife. And then this list of things for the house at Idaho —— "

No doubt there was a good deal to be done; only one would have thought that three or four days were pretty fair time in which to prepare for a short trip up the Clear Creek cañon. It was not, however. On the Saturday morning every one was most extraordinarily busy, especially as the time approached for the arrival of the train from Cheyenne. Next day all the shops would be shut; and on Monday morning early we started.

"Lady Sylvia," said the lieutenant, with ingenuous earnestness, "I must really go after those saddles again. Tell Mr. Balfour I shall be back to lunch, will you, if you please?"

Indeed, one went away on one mission, and the other on another, until there was no one of the party left in the hotel with Lady Sylvia but Queen T. The latter was in her own room. She rung, and sent a servant to ask her friend to come and see her. She took Lady Sylvia's hand when she entered.

"I am going to ask you to excuse me," said she, with great innocence. "I feel a little tired; I think I will lie down for an hour, until luncheon-time. But you know, dear Lady Sylvia, if there are none of them down stairs, all you have to do is to get into the omnibus, when it calls at the door, and they will drive you to the station; and you will not have long to wait."

The white hand she held was trembling violently. Lady Sylvia said nothing at all; but her eyes were moist, and she silently kissed her friend, and went away.

About an hour thereafter, four of us were seated at a certain small table, all as mute as mice. The women pretended to be very busy with the things before them. No one looked toward the door. Nay, no one would look up as two figures came into the big saloon, and came walking down toward us.

"Mrs. Von Rosen," said the voice of Lady Sylvia, in the gayest of tones, "let me present to you your new agent —— "

But her gayety suddenly broke down. She left him to shake hands with us, and sat down on a chair in the dusky corner, and hid away her face from us, sobbing to herself.

"Ha!" cried the lieutenant, in his stormiest way, for he would have none of this sentiment, "do you know what we have got for you after your long journey? My good friend, there is a beefsteak coming for you; and that — do you know what that is? — that is a bottle of English ale!"

From Fraser's Magazine.

BUDHIST SCHOOLS IN BURMAH.

BY THE DIRECTOR OF PUBLIC INSTRUCTION IN BRITISH BURMAH.

WHEN, fifteen years ago, the three territories of Pegu, Arakan, and Tenasserim, which form the eastern seaboard of the Bay of Bengal, were united into the province of British Burmah, one of the most difficult tasks which presented itself to the first governor was the direction of the popular education. The battle of education in India had been fought long ago, and by the efforts of Macaulay and his successors the main lines of a system adapted to natives of India had been already laid down. But Burmah is not India, though ruled by the Indian viceroy, and the educational question here presented an entirely new and deeply interesting aspect. The rulers of India have not been slow to recognize the evils of over-centralization, and in nothing has the government of India shown its wisdom more than in the liberal spirit in which it has entrusted to its local governors in each province the determination of measures dependent upon peculiarities of race, custom, or locality. The province of British Burmah affords the most conspicuous example of the wisdom and necessity of such a policy.

Although politically annexed to the Indian empire, and forming indeed one of its richest and most rising provinces, Burmah is in all essential respects far more akin to China than to India; and, while the Aryan provinces of the Indian peninsula, widely as they differ from one another, may be regarded in many ways as forming one compact country, Burmah has not more of kinship with the rest of the empire than the mistletoe with the oak on which it grows. The climate and outward aspect of the country are different; the people belong to another family of the human race, with other individual and social characteristics, and professing another religious creed.

The fair Mongolian people speaking a language akin to the Malay, followers of the Budhist religion, and differing in character more widely from any natives of India than even from their English rulers, require a no less distinct treatment in all matters of public administration, and in this young province all the problems which have for a century exercised the minds of governors in India, and have there been perhaps finally solved, reappear under new conditions.

Among these problems none is of more

interest or of greater importance than that of education.

The initial difficulty which here arose lay not in the organization of a suitable system of instruction, or of a machinery of control, but in the circumstance that a national system of elementary education was already in full possession of the field, was indeed so firmly established and so intimately woven into the national life that it was evident that if any educational measures were to be initiated by the English government those measures must at least not be antagonistic to the existing system, and that if they could be made to harmonize with it their success was certain.

The system to which we refer forms a prominent feature in the combined social and religious organization founded before the era of Christianity by Sakya Muni, to which the general name of Budhism is given; and the contact of this ancient faith, still holding all its primitive forms, customs, and traditions, with the most advanced type of Western civilization affords a rare opportunity of observing the characteristics and tracing the development and influence of one of the least known and most interesting among the religions of mankind.

The whole history of Budhism has, till quite recent years, been a sealed book to all but a few ardent scholars, and even now the sacred Pali language, which enshrines so many of the records essential to a right understanding of its tenets, is only struggling into a prominent place among Oriental studies. We read of the Lamas of Thibet, and even of the Budhists of Ceylon, with a far-off curiosity, such as that with which we regard the Aztecs of Peru, but here in one of the most flourishing provinces of the Indian empire, under the immediate rule of English magistrates, and in a land penetrated by railway, steamboat, and telegraph, is a living manifestation of the influence of the Budhist religion as a national power, with its monastic order in full vigor — its ceremonials unchanged, its rule of asceticism unaltered, and the very garb of its members the same as two thousand years ago.

Into the internal economy and working of this ancient order, as it exists in Burmah, a new light has been thrown in late years by the policy which has enlisted the sympathy of its leaders with the educational measures of the English government, and the results of the experiment have been so interesting that we propose to present, from personal observation, a brief sketch of the field of operation and the method which has been adopted with so much promise.

The most conspicuous object by which the simple Burmese village is first seen on the horizon is the *kyoung* or Budhist monastery. Built usually of wood, raised from the ground on solid timbers, with tall turreted roofs often richly and quaintly carved, its entrance marked by a still taller flagstaff and guarded by colossal masonry griffins, the monastery stands on the best site of the village, on a shady knoll or the bank of a stream or lake. It is a spacious building, containing one or more large rooms with bare boarded floors, and open on one side at least to the winds and to all comers. The approach is guarded only by the numerous wild dogs which trade upon the pious aversion of the Budhist to the taking of animal life, and lurk among the pillars upon which the building is supported. Ascending the wooden staircase, and passing across an open verandah, we are at once within the monastery. The sight is for a moment blinded by the darkness of the interior, the wooden walls being unrelieved by any color, and the ear is at the same time deafened by a chorus of children's voices repeating with the full power of their lungs the traditional Burmese spelling-book.

As we enter, the voices, now raised higher than ever, are found to issue from forty or fifty boys recumbent on the bare floor in regular ranks, each having before him a small oblong blackboard which serves the purpose of a slate. A smart tap from a long cane on the boarded floor causes instant silence, and the visitors advance to an inner recess where mats and cushions are spread, and where the monkish pedagogue is seated on the ground. By his side are curiously-shaped boxes and dishes of lacquer work and silver, containing betal nut, water, and the like. Huge palmleaf fans and monster gilded umbrellas lean against the wall, and in the dim light we find ourselves surrounded by gilded images of Gaudama — the name uniformly given in Burmah to the founder of Budhism — in brass, marble, or silver, piles of dusty palmleaf manuscripts, some of them richly illuminated, and boxes of various size and form ornamented with gilding and a kind of mosaic of colored glass. Above us colored lamps hang from the richly carved ceiling, and amidst the strange medley are carpets and vessels of English manufacture, and, in a conspicuous niche, an American eight-day clock.

Near us lounge a number of tall youths and boys with fair olive complexion,

dressed in the uniform yellow monastic robe, and attentive to every word or signal from their superior. These are the juniors or probationers of the order, who minister to his immediate wants, who daily in solemn procession through the village beg for his morning meal, fan him in the heat. shield him from the sun as he walks, or row him in his boat on a journey.

We are received with an air of apparent indifference and offered a seat on the mats, and while our host continues to chew his betel nut in silence, and awaits our opening of the conversation, we may note his outward appearance, which is striking enough. His skin is dark and his cheeks thin as if with fasting. His head is bare and close shaven, and his dress is the uniform toga of sombre yellow cloth so folded as to leave one arm completely bare. The seams which traverse the robe in so many directions are relics of the original injunction, that the monk should be clothed in rags gathered in the graveyards and stitched together. In his hand he holds a rosary of beads, and his whole aspect is that of the recluse who has neither part nor lot in the things of the world.

Common as this scene is to those who live in the country, it is one worthy of a painter's canvas; and to step aside from a metalled highroad, skirted by a line of telegraph, into one of these quaint retreats is like passing at a step from the nineteenth century back to the years before Christ.

The monk is in no way disturbed by the interruption of our visit, and, unless of an exceptionally rude type, is glad to hold a conversation on general subjects, on education, or even on the tenets of his religion. Recluse though he is, it is natural to him to take pleasure in genial conversation, and he has been trained to habits of courtesy in a way surprising to a stranger, while the consciousness of the high social position which he holds disposes him to court an argument on subjects which may enable him to display to an admiring audience his superiority to the unenlightened foreigner. The Burmese language is necessarily the medium of conversation.

After a time we take our leave without formal ceremony, and the routine of school work is at once resumed.

Such in its outward aspect is the monastic school, as it is found in every town and village throughout Burmah. The richness of the endowment and the size and decoration of the monastery vary with the locality and the circumstances of the lay patrons, but the organization of the religious house and the system of instruction, to which we shall presently revert, are everywhere the same. Open freely to boys of all ages and stations, this is the national public school in which every Burmese boy, rich or poor, receives his earliest education. Its teachers are members of a holy brotherhood supported by the pious laity from whom they literally beg their daily bread, and whose pride it is to do them service, and its lessons are the same which generation after generation has learned within the same walls, and are in harmony with all the most sacred traditions of home life and the national religion.

The universal homage accorded to such an institution is no matter of wonder. Apart from the influence exercised by the unquestioned purity of the moral code of which the Budhist monk is the traditional exponent, the bonds which link together the institutions of civil and religious life in Burmah, the laity and the religious, are closer than under any other social system. Monastic orders have held sway in many countries, but we know of no other nation whose sons of every rank and station pass at one time of their life through the religious house, first as pupils of a school, and a few years later as temporary members of the order itself, which is entered through one of the most striking ceremonies to be seen in the East. At the age of fourteen or fifteen the Burmese boy on a set day is arrayed in the richest of dresses, decorated with gold and jewels, seated on horseback, with followers on foot bearing over him gilded umbrellas, and led in procession round the village to the monastery; there he is dismounted, his finery is stripped from him, his long hair — the pride of the Burman — is shaven, his rich dress is exchanged for the yellow monastic robe, and he submits for a time to the discipline of the monastery, remaining for six months or a year, or even it may be for life; for both entrance to and exit from this strange order are at all times voluntary, and though during membership the strictest rule of life is religiously observed, no vows compel the retention of the garb or forbid a return to the world. It is thus that the order is continually recruited, and thus that the monastery, both as a school and as a religious house, casts its shadow over the life of every native of Burmah. In his infancy he was carried in arms to the *kyoung* to listen in ignorant wonder to the preaching of the law, and among the associations of his childhood none is more deeply impressed on his memory than the daily walks to and from the *kyoung*, the

discipline of the monastic school, and the lessons there learnt, which perhaps form all his stock of learning. Throughout his life it has been his most sacred duty to minister to the daily needs of the religious, and even his hopes of rest beyond the grave are largely based on the offerings made to holy men at special seasons, and the good works done by adding to their dignity or material comforts.

The honor thus universally paid to the holy ascetic has naturally attached itself to the work to which he is specially devoted, the teaching of youth. As the pious Budhist believes firmly in the efficacy of works to insure happiness, or at least a diminution of misery, after death, so of all good works none is more honorable in Burmah than that of the instructor of the young. To this feeling is due the existence side by side with the monastic school of the kindred institution which is found in every Burmese town, and is popularly called the "house-school" as distinguished from the monastery.

The "house-school," of which every town contains several examples, though modelled on the monastic school, is distinct from it in character, and, being free from the disabilities which necessarily fetter to some extent the religious house, promises, as we shall presently see, to attain an even more important position. The master is a layman who has retired from active life, and whose piety at once gives him the confidence of his fellow townsmen, and prompts him to lay up merit for himself by the traditionally good work of teaching. His school is usually conducted in his own private house, of which it occupies the greater part. He is probably not more learned than the monks by whom he was taught himself, and his system of teaching, his text-books and course of instruction, are a reproduction of their own. On the other hand, although an orthodox Budhist, his orthodoxy does not necessarily restrict his teaching; he has a guarantee for attendance which the monk is without in enforcing the payment of fees by his pupils, either in money or kind; and lastly — his chief claim to consideration — his classes are open to girls as well as boys. To these schools the country owes a vast debt of gratitude, for it is through them alone that the learning imparted to boys in the monastery (which excludes from its walls every animal of the female sex) has been handed on to their sisters, while it is to the intelligence of the women, and the free and independent social position which they enjoy — another honorable distinction which stamps Burmah as wholly separate from India — that the Burman owes the order and comfort of his home and the careful management of his affairs.

The instruction given in these time-honored institutions, lay and monastic alike, is naturally as elementary as the method of teaching is primitive. The school hours extend over the whole day with stated intervals, and far into the night the traveller as he passes the village *kyoung* will hear in the stillness the familiar chorus of scholars. The discipline is strict, and the Burmese boy is never spoilt by the sparing of the rod, in the virtues of which both parents and teachers have a firm faith; but there is immense waste of time, the attendance is very irregular, and no schoolboys in the world ever loved to play truant more than the lighthearted children of this happy country.

The pupil's first task is to master the alphabet and the intricacies of the Burmese spelling-book, to form the letters on his blackboard with a stone answering to a slate-pencil, and subsequently to read from palmleaf manuscript and learn by heart the passages read. The text-books universally used are the series of Pali texts (each accompanied by a running paraphrase in Burmese) which form the substance of the *Beedagat* or Budhist holy scriptures. The method of learning is almost exclusively by oral repetition; even the alphabet is learnt by the class *en masse* following a leader in chorus, and he is the best scholar who can repeat by heart, or rather by rote, the longest string of Pali texts, though even the paraphrase intended to translate them probably does not convey to his mind a glimmering of the sense.

In some schools has been added the teaching of a most clumsy system of arithmetic called *badin*, but upon this the strictest orthodoxy has always looked with disfavor.

It need hardly be added that we should look in vain among the most learned of the monks for scholarship, as the word is understood in Europe. Yet it is somewhat disappointing to find among the custodians of traditions and manuscripts so profoundly interesting to foreigners, an ignorance of the classic language of their own scriptures so complete that one of the most venerable and distinguished of the hierarchy could gravely and obstinately contend that the Pali language has no affinity whatever with Sanskrit!

But if the learning imparted is meagre, if the method of teaching is cumbrous,

and if the whole system is hampered by the restrictions of the monastic rule, yet that the entire male population should have been systematically taught to read and write the vernacular language is a distinction among Oriental nations worthy of every honor. And when we look to the still larger benefits conferred by the moral training thus given to the nation — a training which inculcates and has impressed upon the national character such precepts as self-denial, honesty, truthfulness, obedience to parents, reverence for age, tenderness to animals, and faithfulness to the marriage tie — when we think that at a time when England was in a state of barbarism, without the light of Christianity, without even a thought of science or of literature, this lofty morality was already preached in the far East, where the orderly religious house was at once the treasury of precious records of a great religion and the nursery from which a knowledge of letters was disseminated throughout the land; and when we reflect that the exponents of this teaching were men who voluntarily bound themselves by the most rigid rule of poverty and self-denial, our admiration leads us back with a new and genuine veneration to the memory of the wonderful man who headed a great popular movement, and from whose inspired genius emanated the conception which has expanded into such vast proportions.

The foregoing sketch will convey some notion of the nature of the twofold system of education which was found in Burmah indigenous to the soil — a system adapted to the wants and endeared to the hearts of a simple people, and dignified with the accumulated honor of centuries — upon which it was proposed by a foreign government to base new plans which, without jarring upon all that was hallowed by time and association, should be capable of expansion in harmony with modern thought. It needed a bold hand to touch a fabric in every way so sacred, and it was with natural diffidence but with a true instinct, as the event has proved, that Sir Arthur Phayre took the first tentative steps, by authorizing the gratuitous distribution in the monasteries of Rangoon and Moulmein of manuals of arithmetic and geography printed in the Burmese language.

It must be premised here that for many years Christian missionaries, both from Europe and America, had been at work among the Burmese, had founded the first schools conducted on the methods of the West, and — their chief title to fame — had devoted themselves to the study of the native languages, and both translated into them the Christian Scriptures and prepared manuals for use in schools.

The reception accorded to the officers deputed to visit the monasteries, distribute books, and explain the intentions of the government, was considered so far encouraging, that, although the educational authorities themselves were hopeless of any material success, more active measures were resolved upon. The system of school visitation was extended, trustworthy natives being selected for the duty, and the government took in hand the printing of text-books in the vernacular.

Special popularity has been gained by the publishing for the first time in printed form, and at a low price, of the Pali texts in most common use. An edition of six texts with the usual paraphrase, and accompanied by a glossary, was eagerly bought, ten thousand copies being sold in less than twelve months from its issue. A manual of arithmetic, prepared by the American Mission, has been almost as eagerly welcomed, the superiority of the European system of numbers being universally acknowledged, even by the most conservative of the indigenous teachers.

Text-books of geography have been less readily accepted, this being a science which at the outset overthrows theories of the origin and composition of the universe which are closely interwoven with the religious traditions of the Budhist; but even to the introduction of such unorthodox publications, few except the most bigoted of the monks offer more than the passive resistance of a confident incredulity. The readiest sale has naturally been found for the traditional Pali texts, and for the series of classical tales, hitherto written only on the palmleaf, which record the various existences of Budha or Gaudama: and the presentation in a cheap printed form of these classical works, familiar to every Burman, but associated until now with the labor of deciphering the palmleaf manuscript, is a boon which both the religious and the laity have warmly appreciated.

While the instruments of teaching have thus been multiplied, a complete system has been organized for the encouragement and improvement of the indigenous schools, of which the following are the main features.

Fixed standards have been laid down for the examination of pupils in the three subjects most commonly taught, the Burmese language, the Pali language, and

Digitized by CORNELL UNIVERSITY Original from CORNELL UNIVERSITY

arithmetic; and money prizes, varying in value with the standard passed, are awarded at periodical examinations to both teachers and pupils. The difficulty of making such offerings to the monk bound to poverty is overcome either by handing over the amount to the lay patron of the monastery, or by substituting for money a gift of books. The prizes for the Pali language are awarded only for a knowledge of the grammar, or for an intelligent translation into the vernacular, and thus the ancient system of learning by rote is actively discouraged.

A certificate is granted with each prize, and a keen competition has by this means been called forth among rival scholars and between rival achools. A still more useful measure, and one accepted with a no less surprising readiness, even by the monks, has been the attachment to selected schools of masters (natives of the country) trained in a government school, appointed and salaried by government, and accustomed to European methods of teaching and school management. Special grants of public money are also made under stated conditions for school buildings, and for books or school apparatus, and the English school-slate and printed text-book are already widely supplanting the palmleaf manuscript and painted board which have been in the hands of a hundred generations.

The effect produced by these measures has been as rapid as it is remarkable; and while the standard of teaching in existing schools has been steadily raised, numerous new schools on a secular basis have been established under the fostering care of the government.

Annual competitive examinations are now held at the headquarters of each district, at which special prizes of a high value are awarded to the best scholar of the year in each subject; and the popularity of a measure which thus gauges the merits of rival schools within a fixed area is attested by the keenness of the rivalry, and the genuine interest shown by the parents, friends, and teachers, who assemble on these occasions from far and near, to watch the examination and applaud the success of their children.

In the competition so excited the lay schools have shown a general superiority to the monastic schools, although among the latter also are examples of the best type of indigenous school. From the last published report of the education department we learn that, though hardly yet fully extended to the whole province, the system has secured the adherence of no less than eight hundred and seventy-four monasteries and two hundred and fifty-five lay schools, having a total attendance of thirty-three thousand scholars.

The leaven thus introduced into the national system is full of promise for the future of this rising province, and even now the practical fruits of the plans of the government are not insignificant, when the inspector of schools can report of the pupils in a monastic school, aided by a government assistant master: "A stiff sum in compound proportion was worked out correctly and very rapidly by about a dozen boys, and they are good at vulgar and decimal fractions."

The phenomenon here presented is moreover without example. In Ceylon the same monastic order witnesses to the same religious belief, but no such response has been given as in Burmah by the monkish schoolmaster to the efforts of a foreign government to advance the cause of popular education.

It is not the province of this paper to treat of the general work of the department of public instruction, which forms a branch of the local administration, and which provides for a State system of English and Anglo-vernacular education, a system of government scholarships, and of grants-in-aid to missionary and other private schools; which regulates the publication and distribution of educational books, and directs the course of education throughout the province. It would probably excite surprise in many to learn that the English government expends yearly in this remote province not less than 20,000*l.* on education alone, and such readers would certainly be astonished to find in Rangoon and other Burmese towns flourishing schools, numbering from two to four hundred pupils, every one of whom is able to speak, read, and write the English language. Our object here, however, has been to indicate the interest attaching to the lower end of the educational ladder, or rather to the ancient foundation on which it rests; to claim attention for the field here laid open for the study of the history, traditions, and living organization, not only of an ancient educational system, but of a religion which probably numbers among its votaries, even at this day, a larger proportion of mankind than any other.

It is not long since Professor Max Müller, in tracing the steps which have been taken by scholars for the elucidation of

the Budhist religion, remarked that hardly anything had as yet been done for exploring the literature of Burmah and Siam, which opened a promising field for any one ambitious to follow in the footsteps of Hodgson, Csoma, and Turnour; adding that next to Ceylon — which had been already fully explored — Burmah and Siam would seem to be the two countries most likely to yield large collections of Pali MSS. The government in Burmah has, indeed, very lately taken this subject in hand, and through the machinery of the education department has taken steps to search the monasteries, and to form a library of manuscripts at Rangoon.

But when both Burmah and Siam have been made to deliver up their secrets, and as complete a collection has been made as was made by Hodgson in Nepaul, and by Turnour in Ceylon, there will still be need of a scholar with the rare combination of qualifications possessed by Burnouf to wade through the mass, and separate what is valuable from what is worthless, with health and leisure for the task, and aided by a comprehensive and critical knowledge of many languages, by inexhaustible patience and unwearied industry, by a single eye to historical accuracy, and by the modesty which is seldom separated from a sincere love of truth. Such men are rare indeed.

But even were the treasures which, it may be fairly supposed, await the philologist and the historian in the niches of Burmese monasteries to prove delusive, some immediate gain may still be reaped from the contemplation of scenes such as we have tried to sketch. England has learned many new lessons from her Indian empire, which has largely contributed to that breadth of mind which less and less regards mankind from the insular point of view of the centuries gone by; and to the lessons so learnt the province of which we are now treating has contributed not less than the rest.

In the monasteries of Burmah we find among the heirlooms of a remote past, if not accurate scholarship, if not even trustworthy witnesses of history, at least a liberality of spirit, and a wide tolerance, which would put to shame many a scholar and theologian in Europe.

To those resident in the country the courteous hospitality of the Budhist monk had long been known, but even the most observant could hardly have anticipated the genuine liberality which has thrown open the doors of the monastery to the government inspector of schools, and welcomed without jealousy the graft of Western scholarship and science. Nor is this the symptom of any cringing to the secular power. A more independent people than the Burmese does not exist, and the ingenuousness which has astonished even those who knew them best, springs, we cannot doubt, from the same enlightened spirit which more than twenty centuries ago threw off the yoke which still binds India in the bonds of caste and founded the Protestant religion of Budhism.

And the tenderness with which we must regard so venerable a foundation is increased still further, when we reflect upon the certain decay which, after so long and useful a life, seems to threaten the monastic order in the advent of Western civilization. Under native rule, as we have said, civil and religious institutions formed parts of a common national life, but the English government of India, while it tolerates every form of religion, can give no exclusive support to any; the canons and decrees for centuries enforced by the secular arm are now powerless to bind unwilling subjects, and already the Budhist camp in Burmah is split into hostile factions which threaten to disorganize the whole ecclesiastical structure.

We need not be misled by sentiment into exalting too highly the merits of the monastic school, any more than into over-admiration of the system of asceticism to which it is linked. To the latter, however, we cannot refuse the homage due to the earliest struggles of mankind against the powers of evil; and in the same way, although we read in the blue-books of to-day that judged by the easiest modern standards the practical results of the indigenous system of teaching are miserably poor, and that as educational seminaries the majority of the monastic schools are in their primitive state utterly inefficient, we must still admire the temper which at this date prompts an ancient hierarchy to listen impartially to the ambassadors of a strange learning, as well as the wisdom and the patient perseverance which in this corner of the Eastern world have through long years kept alive the knowledge of letters, and given a dignity to the teacher's profession for which we hardly find a parallel in history.

DA CAPO.

BY MISS THACKERAY.

CHAPTER VI.

EN VOYAGE.

PRINGLE, Felicia's maid, did not call her mistress next morning till a very short time before the omnibus was starting for the station; and Felicia, who had lain awake half the night, jumped up half asleep, and proceeded to dress as quickly as she could. They were only just in time. Mr. Bracy was impatiently stamping on the pavement in an agony of punctuality. Jasper had walked on, they said. His luggage was there — three large bags, red, blue, and yellow, with which he habitually travelled. The intelligent Georgina, calm, brown, composed, was sitting in her corner, looking perfectly unmoved. Mrs. Bracy was also installed, checking over the various umbrellas and parcels. She was evidently ruffled: with poetic natures crossness verges on tragedy, and becomes very alarming at times.

"I'm so sorry," said Felicia, and she looked vaguely round, and to her surprise, and disappointment too, discovered no sign of Colonel Baxter. "Where is Colonel Baxter?" she said.

"My dear, how can I tell you?" said Mrs. Bracy, who was in devout hopes that he had been left behind; and Flora stared at Felicia as if in some surprise at her question.

Felicia flushed up; this was not what she had intended. "Mrs. Bracy, we must go back," said the young lady, very much agitated. "I promised that he should come with us. What will he think?"

"What is there to prevent Colonel Baxter from coming with us, if he chooses?" said the elder lady, with freezing politeness. "Certainly, if you wish it, I will desire the omnibus to return."

Felicia was just preparing to say that at all events Pringle should remain with a message, when the object of all this discussion stood up at a street corner to let them pass.

His luggage was also piled on the top of the omnibus, with Jasper's rainbow bags, and he had walked the short distance from the hotel to the railway station.

Felicia, seeing him, was satisfied at once; her sudden energy of opposition passed away; and when they all met at the station she greeted him smiling and composed, gave him her hand and her hand-bag with its many silver flagons.

Baxter could not find a place in the same carriage with Felicia; he climbed up upon the roof, where he sat smoking his cigar, and thinking over a short journey they had once taken together, six years before. Then it was fate that had separated them, honor, every feeling of affection and gratitude; now, only her will and the interference of a foolish woman kept them apart. From where he sat he looked down upon Jasper, who stood outside the carriage door upon a sort of platform with a rail; the artist was hatless; he wished his hair to stream upon the wind.

"Take care, Jasper. Come in here," cries Mrs. Bracy, who had just sent off the colonel, and declared she must have space for her two fat feet upon the opposite seat, and that there was no room for any one else in the carriage.

But Jasper said he preferred the rhythm of motion as it thrilled him where he stood.

A pretty little railway runs between the smiling valleys that lead from Berne to Interlachen.

Felicia looked out of the window, well pleased by the pleasant sights and aspect of the road.

The railway meets a steamer waiting by a certain smiling green landing-place; and all the passengers issue from the train and go on board, and look over the sides of the boat into deep sweet waters lapping the shore, and calmly flowing in long silver ripples across the lake. On either side the green banks are full and overflowing. White *pensions* stand in gardens; people come down to the steps to see the steamer pass. Everything tells of peace, of a placid, prosperous comfort.

Baxter found Felicia a place by an American lady who was pointing out the various scenes of interest to two young ladies, her charges, with an alpenstock, and the help of a Baedeker.

"Oh, Miss Cott, is this the page?" inquire her pupils. "What is the exact distance per rail from Berne to the steamer?"

"Page 47," says Miss Cott, rapidly turning over the leaves.

The steamer started off; all the people clustering on board flapped their wings and hummed their song in the sunshine as it streamed above the awning. The Swiss ladies accepted a respectful share of their husbands' conversation; the American ladies, on the contrary, took the lead. There was one stout and helpless person-

age, covered with rings and many plaits of false hair, to whom Felicia had taken a great dislike, until a little brown-faced girl with earrings ran up and began to kiss the ugly cheeks and to smooth the woman's tumbled locks.

"Look at that child," said Felicia; "how fond she seems to be of the horrid old woman! I am sure I never could tolerate such a mother."

"And yet you care for *her*," said Baxter, looking with no friendly glances at Mrs. Bracy advancing to join them. "Oh, Felicia! won't you tell her that you are going to belong to me, not to her? You must choose between us, you see," he said, with a smile.

"How can you speak so absurdly?" she said, turning away, hurt; "how mistrustful, how unkind you are!"

She did not make allowances for his diffidence, for his boundless admiration, for his natural wish for certainty, now that the die was cast. The colonel, who had less life before him than Felicia, more experience of its chances and disappointments, more intensity of feeling to urge him on, might well be more impatient. He had kept her waiting: did the malicious little creature mean him to feel her power now, and to take her wilful vengeance? Her cousin James had spoiled her so utterly that she imagined that all lovers were like James, and would submit to her quick caprices, her sudden flights. Little she knew Aurelius, who now with black, bent brows, excited, uncompromising, prepared to show her what he felt.

Felicia wanted everybody, not Aurelius only, but others, to be happy and satisfied. It seemed to her to be almost wicked to sacrifice old and tried friends to the fancies of this new-comer.

He had played a part in her life, indeed, but it had been a shadowy part hitherto. Suddenly that shadow had become alive: it spoke for itself; it had a bearing which she could no longer sway at her fancy now. She hardly knew what she felt or what she wanted. Time seemed to her the chief thing that was to explain and harmonize it all, to accustom her to it all. It would be very nice to have him there always, she thought. They might take walks together, and read books together, and little by little he would learn to appreciate her dear kind Bracys, and they would learn to know him. Suddenly a thought struck her. Could it be Emily Flower who had influenced him against her friends? It was not like him to be so unkind.

Baxter, meanwhile, who had thought that all was explained and clear between them, could not understand these recurring doubts and hesitations. He had made up his mind to come to an issue of some sort; and as he stood behind Felicia's bench, he let his fancy drift, as hers had sometimes done — imagined a little scene between them which was to take place in a very few minutes; he was to speak plainly to her — to the woman who had all but promised to be his wife; he meant to tell her how truly he loved her, how unendurable this present state of suspense had suddenly become.

His whole heart went out to her in tenderness and protection. He felt so much and so deeply, surely she would understand him.

The steamer paddled on its way, the hills floated past; the people came on board, and struggled off to shore.

CHAPTER VII.

NO ANSWER.

PRESENTLY a special peaceful hour of sun and calm content seemed to fall on the travellers; the talk became silenced, the waters deepened, the banks shone more green. Aurelius, looking up, saw that his enemy had allowed herself to be overcome by the stillness, by the tranquil rocking of the boat. She was leaning her head on Miss Harrow's shoulder. Mr. Bracy was at the other end of the boat, claiming acquaintance with a benchful of English people. Jasper was drowsily balancing himself against the bulwark, with both arms widely extended. A swan came sailing out from shore; and then Aurelius began his sentence, and in plain words, not without feeling and honest diffidence, he spoke in a low voice, of which Felicia heard every syllable.

"I have been thinking that I perhaps took you by surprise yesterday," he said. "If it is so, you must tell me; you must not be afraid of giving me pain. Anything is better than want of confidence; but this state of indecision is really more than I can bear. It was not without painful uncertainty as to what your answer might be that I came; and yet you know that my heart is yours, and has been yours only for all these years. Now whatever your answer may be, I will abide by it."

Felicia was touched; but she was silent, tapping her foot against the wooden deck.

"If I had come long ago, perhaps I might have had more chance," Aurelius went on, frightened by her silence. "Per-

haps you think me presumptuous. Some one in whom I trust encouraged me to come."

"Emily Flower, I suppose, told you to come," said Felicia.

"Yes," stupid Aurelius answered, slowly. "She told me to come."

Felicia looked away; she did not care to meet his honest eyes. So he had not come of *himself*, but only because his cousin had sent him — only come because he thought she expected it of him. Her cheek burned with indignant fire.

The little heiress was an autocrat in her way — in that gentle, vehement, kind-hearted way of hers. She was an unreasonable autocrat as she sat there, motionless, with her head turned away; her eyes flashed angrily, but then tears came to put out the fire. Was no one to be trusted? Did not even Aurelius love her enough to come straight home to her? He too must needs consult and hesitate and calculate. James would not have left her all this long time. The steamer paddled on while the two waited in their many-voiced silence; but when at last Felicia looked up, the glance that met her own was so sad that she had not the heart to speak the jealous words that had been upon her lips, the crimson had died out of her cheeks, and her eyes softened. Aurelius took it all so humbly with a sudden hopelessness that surprised Miss Marlow, who, as I have said, for all her innocent vanities and whimsicalities, did not realize in what estimation Baxter held her. Something touched her. Suddenly her face changed to the old kind face again; she put out her little hand with its soft gray glove.

"We must have our talk another day," she said; "to-morrow, not now. This is not the time."

"No, indeed," said Aurelius, not without emphasis; for, as he spoke, Mrs. Bracy was awakening with a wild start — an appealing smile to the company such as reviving sleepers are apt to give. In a minute more she had joined Felicia. Baxter walked away to where Jasper, at his end of the boat, had shifted his spread-eagle attitude into one of skewer-like rigidity, while little Mr. Bracy came trotting up, panting and bubbling over with information. "The Alpes! the Alpes!" says he; "I'm told that is the place to go to, Flora; good *table d'hôte*, a magnificent view; the divine for you, my love — for us the creature comforts. That family that you see sitting near the wheel is going there; the gentleman strongly recommends the place — a very pleasant, well-informed person; he was on board the steamer we crossed with to Calais. I think you would like him; but, of course, one can't be sure."

"Edgar," said his wife, "make what acquaintances you like, but *pray* do not introduce them to me. Our party is much too large as it is. It was a mistake bringing Georgina," she added, as Felicia looked up at her with a quick glance.

"You did it out of kindness, my love. The poor girl is thoroughly enjoying herself," cries the little man, anxiously.

Then all the little bustlings and distractions of the road come to divert everybody's mind from personalities.

The travellers by water were turned into passengers by steam, and then again into wretched fares, wedged side by side in a light red velvet omnibus, with gilt looking-glasses to reflect their wry faces. Jasper had more than enough to do grappling with his parti-colored bags. Aurelius shouldered his own small portmanteau and Felicia's dressing-case, leaving Mr. Bracy, with the help of the amiable Miss Harrow, to collect the many possessions of his Flora — her writing-book (carried loose with her pen and her inkstand), her cushions and sunshades, her luncheon in its basket.

Mrs. Bracy's poet nature invariably required a luncheon-basket, the one armchair, the most comfortable bedroom, the wing of the chicken, the shady corner in the garden. The spirit being imprisoned in mortal coil, Flora was wont to say, it required absolute freedom from mere temporary discomfort, in order to have full scope to soar.

"So I have observed," says Baxter, dryly, in answer to the lady's appeal.

"Ah, indeed!" Mrs. Bracy answers, dimly dissatisfied; "you notice everything."

"For comfort," says Jasper, joining in from the opposite corner of the omnibus, and with a glance at the other passengers, "give me cats to stroke. I thought of bringing a couple abroad, but my uncle dissuaded me."

"Cats!" says Baxter, eying Jasper as if he was a maniac.

But here the omnibus stops at the doors of the hotel; the porters, waiters, major-domos, rush forward, breathless, to grip the elbows of the descending travellers.

CHAPTER VIII.

BY A FOUNTAIN.

It is very hot and sultry in the hotel garden. The fountain and the piano from the saloon are playing a duet. The fountain itself must be boiling after the morning's glare, but the sound of the water is not the less delightful to parched ears. An old man sits on a bench by a charming and handsome young woman; a grandchild is playing at his feet. The old man's is a world-known name; he has swayed nations and armies in his life, but he is quietly stirring his coffee in the shadow of the chestnut-tree. Presently, obsequiosity in thread gloves, with a newspaper in its hand, comes up and bows low, takes a respectful chair at the old diplomate's invitation. Felicia is sitting in a little arbor close by, leaning back half asleep, and swinging her little feet. She has taken off her felt hat, pushed back the two plaits that usually make a sort of coronet about her pretty head. The diamond ornament at her throat glistens like the radiating lights of the fountain; the folds of her China silk dress shine with tints that come and go. She is in a peaceful, expectant state of mind, drowsy, prepared for happiness to come to her; it is much too sultry weather to go in search of it. "How can Georgina go on practising as she does through the heat of the day?" Meanwhile Miss Harrow, the musician, leaves off for an instant, looks up at the approach of Colonel Baxter, or answers when he asks her whether she has seen Miss Marlow, "Yes, Colonel Baxter, you will find her by the fountain;" and then she begins again with fresh spirit, and some vague and reanimating sense of an audience. The dry knobbly fingers rattle on, her bony head nods in time, her skinny kid feet beat upon the pedal with careful attention. It would be difficult to say of what use Georgina's monotonous music is to herself, or to art, or to the world in general; but she does her best, while Felicia by the fountain shrugs her pretty shoulders. Miss Marlow is still sleepily watching the old diplomate and his coffee-pot under the tree, and then her soft, heavy eyes travel on to the end of the terrace, where she can see the line of the mountains. Everything to-day is sleepy, and heaped with shadows and tranquil languor. The blue is kindling beyond the line of crests, the lovely azure flows from peak to peak, from pass and glacier to rocky summit; the sky seems to catch fire as Felicia looks, and a white *something* leaps to meet it. The bushes about are all in flower, a whole parterre of olive-green and yellow constellations scenting the air. How hot, how still it is! how straight the paths look, just crossed here and there by some faint shadow! One's life seems passed, she thinks, in straggling from shadow into sunshine, and from shadow into sunshine again. Outside the low wall the people go passing — the prim young German ladies with their tight waists, slightly lame from their clumsy high heels; the little fat Englishman, conscious of his puggaree; the Swiss family, in drab, with hand-bags to match, each shaded by a dome of calico. Then Felicia vacantly stares at the shining ball upon its stick, that grows in front of the hotel, and which reflects the sun and the human beings coming and going upon the face of the earth, all gradually curved; and while she is still looking, the figures issue from the ball, they turn into well-known faces and forms; one sits down beside her on the bench, another holds out with both hands a china plate, which breaks into a star. Felicia's little head falls gently back upon a branch of myrtle. She is asleep, and peacefully slumbering in the valley of ease, with a sweet childish face, breathing softly; and Aurelius, black and determined, who has come to reproach her, to insist upon an explanation, stands watching her slumbers for a moment. As he watches, his face softens and melts, and then he walks away very quietly. When Felicia awoke with a start, about an hour later, she found a soft knitted shawl thrown over her. Baxter did not appear again till dinner-time, and during dinner he said nothing particular, looked nothing remarkable. He sat next Felicia, attended to her wants, and talked very pleasantly in the intervals.

The Bracys were bent upon enjoying the various pleasures of the place; and Mr. Bracy, having learned from the head waiter next day that a band played in the gardens of the establishment from four to five, urged his ladies to attend the entertainment. They consented somewhat lazily, for, as I have said, the weather was hot, and exertion seemed unwelcome, but once there, it was pleasant enough. A little breeze came rustling over their heads; the company sat chattering, turning over newspapers, eating ices; the tunes were dinning gayly; cigars were puffing; friends were greeting. Felicia was sitting between Mr. Bracy and Miss Harrow, under the shade of an awning; Mrs. Bracy was taking a turn on Jasper's indigo arm,

and Mr. Bracy had suddenly started up to greet some of his numerous steamboat acquaintances, when somebody came striding over a low iron fence at the back of Felicia's chair, and sat down beside her in Mr. Bracy's vacant place. I need not say that this was Baxter, who had chosen his time, and began at once.

"We can have our talk now, Felicia. You gave me no chance last night. Miss Harrow, would you kindly leave us for a few minutes?" Georgina vanished in discreet alarm, notwithstanding Felicia's imploring glances, and then Baxter went on, very quietly, but with increasing emphasis: "You *must* face the truth, Felicia; you *must* give me my answer. Ask no one else; tell me what you wish from yourself. This much I have a right to ask. I can bear the uncertainty no longer, and I have kept out of your way all to-day on purpose; now you must let me speak plainly. All night long I lay awake wondering what you would decide. I know," he added, "that I am about as bad a match as you could make, but I don't think any one could ever love you better."

She heard his voice break a little as he spoke, and then he waited for the last time in renewed emotion for the answer that was to decide both their fates. He was really not asking too much. As he said, he had a right to an answer. Was it some evil demon that prompted Felicia? She meant to spare him, as she thought, to gain time for herself.

"Why are you always thinking of my money?" she said, reproachfully. "Mrs. Bracy tells me it can all be tied up if I marry; it need not concern you."

Her words somehow jarred upon Baxter; indeed, they jarred upon Felicia herself as she spoke them. He was overwrought, perhaps unreasonable, in his excitement.

"It is you and Mrs. Bracy, not I, who are always thinking about money," he cried. "If you can suspect me of such unworthy motives, you are not the woman I took you for. Felicia, trust me — make no conditions ——"

She laid her hand upon his arm to quiet him, but he went on all the more vehemently. "You let their flatteries poison your true self. I will agree to none of their bargains. If you love me, marry me with your heart and with all that you have. If you do not care for me, send me away, and I will certainly trouble you no longer. Oh, Felicia! you should not use me so."

He spoke in a voice which frightened her, with a sort of reproachful despotism that startled and terrified Miss Marlow far more than he had any idea of it. When she answered, it was to a sudden scraping of fiddles, with which she unconsciously raised her tones.

"I cannot see what you have to complain of," she said, trembling. "If you insist upon only marrying me with my money, I certainly cannot agree to the bargain, as I told Mrs. Bracy. I do not grudge you the money. If you wanted some, I would give you some, but not myself with it. You ——"

"Felicia!" He started up, and spoke in a cold, rasping voice. "You need not have insulted me. Good-bye. You have given me my answer. You are ruined by your miserable fortune. My truths don't suit you; their lies please you better. Good-bye; be happy your own way, with the companions you prefer."

"Colonel Baxter!" cried Felicia, starting up too, as he turned. "Don't go; you know you promised to come with us to-morrow."

Aurelius looked her hard in the face with his dark, reproachful eyes. "I could only have come in one way," he said; "that is over forever."

"For — forever," Felicia faltered, dropping back into her chair again, for he was gone. The musicians had ended; the whole place seemed suddenly empty and astir; a crowd seemed to surround her; she thought once that Baxter had returned, but it was only Jasper standing beside her. "I came back to look for you," said he. "Aunt Flora is gone to the hotel. What is this?" and he suddenly stooped and picked up a dirty little bit of yellow rag that was hanging to one of the railings. "See what quality! What exquisite modulations of tone!" cries Jasper, holding his prize up in the air.

"Yes," said Felicia, mechanically, she knew not to what, nor did she look at the precious rag. At the first opportunity she escaped from him, and ran up stairs and along the passage that led to her own room. Once there, she locked the door, still in a sort of maze. She sat stupidly upon the red velvet sofa, staring through the window at the great white Jungfrau, which seemed to stare back at her. What had she done? Had she been wise; had she been acting with sense and judgment and sincerity? There are passes in life where it is scarcely possible to realize very clearly the names of the various impulses by which we are driven. Every moment brings a fresh impression, a fresh aspect of things. Each impression is true, but

partial; each aspect is sincere, but incomplete. Perhaps at such times the only clew is the dim sense of a whole to be completed; the craving for more time, for distance that defines and cancels the less important facts, and reveals the truth. Felicia had followed her impulse and let Aurelius go, though in her heart she would fain have called him back to her again. Baxter had set the estimation of others beyond his own conviction. Instead of thinking only of Felicia, he had thought of his shortcomings; and she, instead of thinking of Baxter, had talked about him to Flora Bracy. It had all been so short that she could scarcely realize it. If her happiness had been vague, her unhappiness was still more intangible. What had these two days brought about? A possibility. Aurelius had reproached her; she had answered angrily; but it was all over. "Forever," he had said. She sat there till the loud dinner-bell began to din through the house, and raps at the door reminded her that Pringle was outside, the others were waiting. Could she bear to tell them? Some feeling in her heart shrank from their comments. She felt that it would be best to try and behave as if nothing had happened. She bathed her aching head, let Pringle smooth her hair, and then hurried down-stairs.

From The Academy.

THE MOTION OF "CIRRUS" CLOUDS.

THE researches of Mr. Clement Ley into this subject are well known, and now we have to notice the appearance of a most important work by Prof. Hildebrandsson, of Upsala, entitled "*Atlas des Mouvements supérieurs de l'Atmosphère*," which is published at the expense of the Swedish government, and is copiously illustrated by fifty-two charts. In the discussion the author fairly says that meteorology is still in the first stage of its development as a science, and that what is at present necessary is to determine what are the real facts of air movement before beginning to theorize about them. The paper accordingly contains a most careful digest of the present state of our knowledge of the motion of the air in cyclones and anticyclones, as given by the best recent authorities, and then proceeds to treat the materials for the study of the motions of upper clouds furnished by the observations collected from the various volunteer stations established in different parts of Europe, which are, however, very scanty compared with what is really requisite. He summarizes the final outcome of his labors as follows: — Around a barometrical minimum the air moves along the earth's surface in a spiral path towards the centre, in the direction opposite to watch-hands. At the centre it rises and moves further and further away from the axis the more it ascends. In the upper strata of the atmosphere the air flows away from the region of minimum pressure, and collects itself in a uniform layer above the district of maximum pressure, where it gradually descends to the surface of the ground in order to flow away from the region of highest barometrical readings. These statements are based on the evidence afforded by the charts, and, speaking generally, we find some eight or ten cirrus observations on each chart. The final dictum, however, merits great attention, as it comes from a most painstaking investigator, but it is needless to say that it indicates the necessity of increased efforts to collect observations of cirrus clouds.

A CORRESPONDENT at Waterloo, N. Y., sends us a quotation from *Littell's Living Age*, No. 1741, page 182, where, in an article on Commodore Goodenough, the writer speaks of the ship sailing into port "with yards *scandalized* and flags at half mast." A ship's yards are "scandalized" when instead of being drawn shipshape they are, as a greenhorn expressed it, "every which way," or as a landsman had it, "all at sixes and sevens." It is a common practice for extreme Catholic nations, notably the Spanish and Italians, to *scandalize* (or as the French would say to *dishevel*) the ship's yards when lying in port on Good Friday. The object is to express extreme mourning, as an individual would have done it in the earlier days, with disevelled hair and disordered raiment. The ship puts on a distracted appearance, like an inconsolable mourner plunged in the depth of grief.

LITTELL'S LIVING AGE.

Fifth Series, Volume XX. | No. 1749. — December 22, 1877. | From Beginning, Vol. CXXXV.

CONTENTS.

I. SOME SONNETS OF CAMPANELLA, . . . *Cornhill Magazine*, ... 707
II. ERICA. Part V. Translated for THE LIVING AGE, from the German of . . . . . *Frau von Ingersleben*, ... 717
III. LIFE AND TIMES OF THOMAS BECKET. By James Anthony Froude. Part VI., . . *Nineteenth Century*, ... 723
IV. DA CAPO. By Miss Thackeray. Conclusion, *Advance Sheets*, ... 736
V. THE CASE OF LORD DUNDONALD, . . . *Gentleman's Magazine*, . . . 746
VI. GREEN PASTURES AND PICCADILLY. By William Black. Conclusion, ... *Harper's Bazar*, ... 752
VII. A MIGHTY SEA-WAVE, ... *Cornhill Magazine*, ... 758
VIII. THE SUN'S DISTANCE, ... *Nature*, ... 766

POETRY.

A WAIL FOR THE WHALE, ... 706
A CRY, ... 706
A BALLAD OF THE "THUNER-SEE," . 706

PUBLISHED EVERY SATURDAY BY
LITTELL & GAY, BOSTON.

TERMS OF SUBSCRIPTION.

For EIGHT DOLLARS, *remitted directly to the Publishers*, the LIVING AGE will be punctually forwarded for a year, *free of postage*.

An extra copy of THE LIVING AGE is sent gratis to any one getting up a club of Five New Subscribers.

Remittances should be made by bank draft or check, or by post-office money-order, if possible. If neither of these can be procured, the money should be sent in a registered letter. All postmasters are obliged to register letters when requested to do so. Drafts, checks and money-orders should be made payable to the order of LITTELL & GAY.

Single Numbers of THE LIVING AGE, 18 cents.

A WAIL FOR THE WHALE.

Ah, alas! it is over forever!
Has the climate — which most of us kills —
Settled thee? Say, again shall I never
Read thy name in large type in the bills?

Must I stand at the door with my shilling,
But to hear thy too pitiful tale?
Is it useless to urge that I'm willing —
Quite — to put down one more "*for the whale?*"

Alas, yes, 'tis too true! Though they caught thee,
Prepared for thee honors untold, —
P'raps with *Pongo* to dine might have taught thee, —
They couldn't quite cope with thy cold.

And though M.D.'s abound in thy quarter,
Alas, what could their science suggest?
They might say, "Put its tail in hot water, —
Try a plaster or two on its chest.

"Such a cold! — all our practice can't match it;
It floods diagnosis with doubt.
Where on earth did our young patient catch it!
Has it been in the water — or out?

"We can picture an elephant wheezing,
Or a Python knocked over by cramp,
But a whale! — we can't fancy *that* sneezing,
With a pulse at a hundred — from damp!"

So I wonder, at human invention
If thy too fishy nature took fright,
When each minute, with kindest intention,
Some one soused thee all day — and all night!

If that voyage across the Atlantic, —
Meant to handsomely butter thy bread, —
Made thee long for a voice to cry, frantic,
"Oh! do stop, I've a cold in my head!"

Such a cold! Ah, too late they all rue it!
And denounce thy berth *minus* a lid, —
With a douche! For if *that* didn't do it,
'Tis not easy to tell thee what did!

Ah! but there, — all is over forever!
Though thy tank daily empties and fills,
I shall never again — I shall *never*
Read thy name in large type in the bills!

Punch.

A CRY.

Lo! I am weary of all, —
Of men, and their love and their hate;
I have been long enough life's thrall,
And the toy of a tyrant fate.

I would have nothing but rest,
I would not struggle again;
Take me now to thy breast,
Earth, sweet mother of men.

Hide me, and let me sleep;
Give me a lonely tomb,
So close and so dark and so deep,
I shall hear no trumpet of doom.

There let me lie forgot,
When the dead at its blast are gone;
Give me to hear it not,
But only to slumber on.

This is the fate I crave,
For I look to the end, and see,
If there be not rest in the grave,
There will never be rest for me.

Spectator. H. E. Clarke.

A BALLAD OF THE "THUNER-SEE."

Soft on the lake's soft bosom we twain
Float in the haze of a dim delight,
While the wavelets cradle the sleepless brain,
And the eyes are glad of the lessening light,
And the east with a fading glory is bright —
The lingering smile of a sun that is set —
And the earth in its tender sorrow is dight,
And the shadow that falleth hath spared us yet!

Oh! the mellow beam of the suns that wane,
Of the joys, ah me! that are taking flight;
Oh, the sting of a rapture too near to pain,
And of love that loveth in death's despite!
But the hour is ours, and its beauty's might
Subdues our souls to a still regret,
While the Blumlis-Alp unveils to the night,
And the shadow that falleth hath spared us yet!

Now we set our prow to the land again,
And our backs to those splendors ghostly white,
But a mirrored star with a watery train
We hold in our wake as a golden kite;
When we near the shore, with its darkening height,
And its darker shade on the waters set,
Lo! the dim shade fleëth before our sight,
And the shadow that falleth hath spared us yet!

ENVOY.

From the jewelled circles where I indite
This song, which my faithless tears make wet,
We trail the light till its jemmed rings smite
The shadow, — that falleth! and spares us yet.

Spectator. Emily Pfeiffer.

From The Cornhill Magazine.

SOME SONNETS OF CAMPANELLA.

In every realm of intellectual activity the Italians were the pioneers of modern civilization. It was their destiny to discover and inaugurate, to try experiments and make the first essays, giving the form of final perfection only to the fine arts, but opening new paths in science and philosophy, in politics and commerce, in the analysis of human life, and in the exploration of the globe. Of late years, while acknowledging the æsthetical pre-eminence of the Italians, we have been apt to ignore or to depreciate the services they rendered to philosophy, philology, history, political economy, and science. Yet three centuries have not fully elapsed since the attention of Europe was habitually directed to the south for brilliant discoveries in each of these departments. At the beginning of the modern era Italy was emphatically the mistress and the teacher of the northern and more tardily developed nations in all that concerned their intellectual advancement; and if we have forgotten what we owed to her, it is because those nations, starting from the level gained by the Italians, have carried knowledge further than was possible in the first dawn of thought for them to do.

These general remarks form an introduction to the mention of a name now almost wholly forgotten. Tommaso Campanella is scarcely known by hearsay except to epicures of philosophical antiquities, like Sir William Hamilton, or to essayists on Utopias, who use the "*Città del Sole*" to illustrate the more famous ideal of Sir Thomas More. Yet the writings of this extraordinary man contain, as it were, proleptically, or in germ, nearly all the thoughts that have been fruitful since his day in modern science and philosophy. His poems, with which I am specially concerned in this place, are luminous with ideas remarkable for boldness even at the present time, and truly marvellous when we consider that he who penned those weighty phrases in his southern dungeon was a Dominican monk of the sixteenth century. That Campanella did not or could not mould his teeming thoughts into a system, that he was unable to do more than take a Pisgah-view of modern development, renders his scientific work of little actual value now. In philosophy he was but a precursor; and his fame, like the light of a morning star, has very justly been swallowed up in that of men who make our noon. His poetry has a stronger claim to recognition; for the profound and pregnant thoughts, which Campanella had no opportunity of basing on a solid ground of proof and scientific demonstration, here appear in their true medium of emotional intensity and half-prophetic imagery.

The fate of these philosophical poems is not a little curious. Composed by Campanella at intervals during his imprisonment at Naples, they would probably have remained in manuscript but for an accident. A German gentleman, named Tobia Adami by the philosopher, visited Campanella in his dungeon, and received from him the seven books of his poems. They took his fancy so much that he determined to publish a portion of them; and accordingly in 1622 he gave about a seventh part of the whole collection to the press in Germany. This first edition was badly printed on very bad paper, without the name of press or place. It bore this title: "*Scelta d' alcune poesie filosofiche di Settimontano Squilla cavate da' suo' libri detti La Cantica con l' esposizione, stampato nell' anno* MDCXXII." The pseudonym *Squilla* is a pun upon Campanella's name, since both *Campana* and *Squilla* mean a bell; while *Settimontano* contains a quaint allusion to his physical peculiarities, since the poet's skull was remarkable for seven protuberances. A very few copies of this book were printed; and none of them seem to have found their way into Italy, though it is possible that they had a limited circulation in Germany. At any rate, there is strong reason to suppose that Leibnitz was acquainted with the contents of the obscure little volume, while Herder in his "Adrastea" at a later period published free translations from a certain number of the sonnets. To this circumstance we owe the reprint of 1834, published at Lugano by John Gaspar Orelli, the celebrated Zürich scholar. Early in his youth Orelli was delighted

with the German version made by Herder; and during his manhood, while residing as Protestant pastor at Bergamo, he used his utmost endeavors to procure a copy of the original. In his preface to the reprint he tells us that these efforts were wholly unsuccessful through a period of twenty-five years. He applied to all his literary friends, among whom he mentions the ardent Ugo Foscolo and the learned Mazzuchelli; but none of these could help him. He turned the pages of Crescimbeni, Quadrio, Gamba, Corniani, Tiraboschi, weighty with enormous erudition — and only those who make a special study of Italian know how little has escaped their scrutiny — but found no mention of Campanella as a poet. At last, after the lapse of a quarter of a century, he received the long-coveted little quarto volume from Wolfenbüttel in the north of Germany. The new edition which Orelli gave to the press at Lugano has this title: "*Poesie filosofiche di Tommaso Campanella pubblicate per la prima volta in Italia di Gio. Gaspare Orelli, Professore all' Università di Zurigo. Lugano*, 1834." It has been again reprinted at Turin, in 1854, by Alessandro d'Ancona, together with some of Campanella's minor works and an essay on his life and writings. This third edition professes to have improved Orelli's punctuation and to have rectified the text. But it still leaves much to be desired on the score of careful editorship. Neither Orelli nor D'Ancona have done much to clear up the difficulties of the poems — difficulties in many cases obviously due to misprints and errors of the first transcriber; while in one or two instances they allow patent blunders to pass uncorrected. In the sonnet entitled "*A Dio*" (D'Ancona, p. 102), for example, *bocca* stands for *buca* in a place where sense and rhyme alike demand the restitution of the right word. Speaking briefly, Campanella's poems, though they have been three times printed, have never yet received the care of a scrupulous editor.

At no time could the book have hoped for many readers. Least of all could it have found them among the Italians of the seventeenth and eighteenth centuries, to whom its energetic language and extraordinary ideas would have presented insuperable difficulties. Between Dante and Alfieri no Italian poet except Michael Angelo expressed so much deep thought and feeling in phrases so terse, and with originality of style so daring: and even Michael Angelo is monotonous in the range of his ideas and conventional in his diction, when compared with the indescribable violence and vigor of Campanella. Campanella borrows little by way of simile or illustration from the outer world, and he never falls into the commonplaces of poetic phraseology. His poems exhibit the exact opposite of the Petrarchistic or the Marinistic mannerism. Each sonnet seems to have been wrenched alive and palpitating from the poet's breast, with the drops of life-blood fresh upon it. There is no smoothness, no gradual unfolding of a theme, no rhetorical exposition, no fanciful embroidery, no sweetness of melodic cadences, in his masculine art of poetry. Brusque, rough, violent in transition, leaping from the sublime to the ridiculous, his poems owe their elevation to the passion of their feeling, the nobleness and condensation of their thought, the energy and audacity of their expression, their brevity, sincerity, and weight of sentiment. Campanella had an essentially combative intellect. He was both a poet and a philosopher militant. He stood alone, making war upon the authority of Aristotle in science and of Petrarch in art, taking the fortresses of phrase by storm, and subduing the hardest material of philosophy to the tyranny of his rhymes. Plebeian saws, salient images, dry sentences of metaphysical speculation, logical summaries, and splendid tirades are hurled together — half crude and cindery scoriæ, half molten metal and resplendent ore — from the volcano of his passionate mind. Such being the nature of Campanella's style, when in addition it is remembered that his text is often hopelessly corrupt and his allusions obscure, the difficulties offered by his sonnets to the translator will be readily conceived.

Before presenting any specimens of Campanella's poems, it will be necessary to say something about his philosophy and

his life. At the end of the sixteenth and the beginning of the seventeenth centuries, philosophy took a new point of departure among the Italians, and all the fundamental ideas which have formed the staple of modern European systems were anticipated by a few obscure thinkers. It is noticeable that the states of Naples, hitherto comparatively inert in the intellectual development of Italy, furnished the five writers who preceded Bacon, Leibnitz, Schelling, and Comte. Telesio of Cosenza, Bruno of Nola, Campanella of Stilo, Vanini and Vico of Naples, are the chief among these *novi homines* or pioneers of modern thought. The characteristic point of this new philosophy was an unconditional return to nature as the source of knowledge, combined with a belief in the intuitive forces of the human reason: so that from the first it showed two sides or faces to the world; the one positive, scientific, critical, and analytical; the other mystical, metaphysical, subjective. Modern materialism and modern idealism were both contained in the audacious guesses of Bruno and Campanella; nor had the time arrived for separating the two strains of thought, or for attempting a systematic synthesis of knowledge under one or the other head.

The men who led this mighty intellectual movement burned with the passionate ardor of discoverers, the fiery enthusiasm of confessors. They stood alone, sustained but little by intercourse among themselves, and wholly misunderstood by the people round them. Italy, sunk in sloth, priest-ridden, tyrant-ridden, exhausted with the unparalleled activity of the Renaissance, besotted with the vices of slavery and slow corruption, had no ears for spirit-thrilling prophecy. The Church, terrified by the Reformation, when she chanced to hear those strange voices sounding through "the blessed mutter of the mass," burned the prophets. The State, represented by absolute Spain, if it listened to them at all, flung them into prison. To both Church and State there was peril in the new philosophy; for the new philosophy was the first birth-cry of the modern genius, with all the crudity and clearness, the brutality and uncompromising sincerity of youth. The Church feared nature. The State feared the people. Nature and the people — those watchwords of modern science and modern liberty — were already on the lips of the philosophers.

It was a philosophy militant, errant, exiled; a philosophy in chains and solitary, at war with society, authority, opinion; self-sustained by the prescience of ultimate triumph, and invincible through the sheer force of passionate conviction. The men of whom I speak were conscious of pariahdom, and eager to be martyred in the glorious cause. "A very Proteus is the philosopher," says Pomponazzo; "seeking to penetrate the secrets of God, he is consumed with ceaseless cares; he forgets to thirst, to hunger, to sleep, to eat; he is derided of all men; he is held for a fool and irreligious person; he is persecuted by inquisitors; he becomes a gazing-stock to the common folk. These are the gains of the philosopher; these are his guerdon." Pomponazzo's words were prophetic. Of the five philosophers whom I have mentioned, Vanini was burned as an atheist, Bruno was burned, and Campanella was imprisoned for a quarter of a century. Both Bruno and Campanella were Dominican friars. Bruno was persecuted by the Church, and burned for heresy. Campanella was persecuted by both Church and State, and was imprisoned on the double charge of sedition and heresy. *Dormitantium animarum excubitor* was the self-given title of Bruno. *Nunquam tacebo* was the favorite motto of Campanella.

Giovanni Domenico Campanella was born in the year 1568 at Stilo in Calabria, one of the most southern townships of all Italy. In his boyhood he showed a remarkable faculty for acquiring and retaining knowledge, together with no small dialectical ability. His keen interest in philosophy and his admiration for the great Dominican doctors, Thomas Aquinas and Albertus Magnus, induced him at the age of fifteen to enter the order of S. Dominic, exchanging his secular name for Tommaso. But the old alliance between philosophy and orthodoxy, drawn up by scholasticism and approved by the mediæval Church, had been succeeded by mutual hostility; and the youthful thinker

found no favor in the cloister of Cosenza, where he now resided. The new philosophy taught by Telesius placed itself in direct antagonism to the pseudo-Aristotelian tenets of the theologians, and founded its own principles upon the interrogation of nature. Telesius, says Bacon, was the prince of the *novi homines*, or inaugurators of modern thought. It was natural that Campanella should be drawn towards this great man. But the superiors of his convent prevented his forming the acquaintance of Telesius; and though the two men dwelt in the same city of Cosenza, Campanella never knew the teacher he admired so passionately. Only when the old man died and his body was exposed in the church before burial, did the neophyte of his philosophy approach the bier, and pray beside it, and place poems upon the dead.

From this time forward Campanella became an object of suspicion to his brethren. They perceived that the fire of the new philosophy burned in his powerful nature with incalculable and explosive force. He moved restlessly from place to place, learning and discussing, drawing men towards him by the magnetism of a noble personality, and preaching his new gospel with perilous audacity. His papers were seized at Bologna; and at Rome the Holy Inquisition condemned him to perpetual incarceration on the ground that he derived his science from the devil, that he had written the book "*De tribus Impostoribus*," that he was a follower of Democritus, and that his opposition to Aristotle savored of gross heresy. At the same time, the Spanish government of Naples accused him of having set on foot a dangerous conspiracy for overthrowing the viceregal power and establishing a communistic commonwealth in southern Italy. Though nothing was proved satisfactorily against him, Campanella was held a prisoner under the sentence which the Inquisition had pronounced upon him. He was, in fact, a man too dangerous, too original in his opinions, and too bold in their enunciation, to be at large. For twenty-five years he remained in Neapolitan dungeons; three times during that period he was tortured to the verge of dying; and at last he was released, while quite an old man, at the urgent request of the French court. Soon after his liberation Campanella died. The numerous philosophical works on metaphysics, mathematics, politics, and æsthetics which Campanella gave to the press, were composed during his long imprisonment. How he got them printed I do not know; but it is obvious that he cannot have been strictly debarred from writing by his jailors. In prison, too, he made both friends and converts. We have seen that we owe the publication of a portion of his poems to the visit of a German knight.

In arranging the few poems I have selected for translation, I cannot do better than divide them into four classes:—1. Philosophical; 2. Political; 3. Prophetic; and 4. Personal. The philosophical sonnets throw light upon Campanella's relation to his predecessors, his conception of the universe as a complex animated organism, his conviction that true knowledge must be gained by the interrogation of nature, his theory of human life and action, and his judgment of the age in which he lived. The political sonnets may be divided into two groups—those which discuss royalty, nobility, and the sovereignty of the people, and those which treat of the several European states. The prophetic sonnets seem to have been suggested by the misery and corruption of Italy, and express the poet's unwavering belief in the speedy triumph of right and reason. Among the personal sonnets I have placed those which refer immediately to Campanella's own sufferings, or which describe his ideal of the philosophic character.

1. When Adami published his selection of Campanella's poems, he printed the sonnet which I shall quote first, as the proem to the whole book. The thought expressed in it is this: the true philosopher, who in this place is Campanella himself, is the child of eternal wisdom, the father, and of human science, the mother, of his reason. True philosophy brings men face to face with nature; wherefore Campanella bids his readers leave the schoolmen and the learning of books. He calls upon them to exchange logomachy for positive inquiry, dissolving their pride and prejudice in the heat of the fire, which he, a second Prometheus, has stolen from the luminary of all truth.

Born of God's wisdom and philosophy,
  Keen lover of true beauty and true good,
  I call the vain self-traitorous multitude
  Back to my mother's milk; for it is she,
Faithful to God her Lord, who nourished me,
  Making me quick and active to intrude
  Within the inmost veil, where I have viewed
  And handled all things in eternity.
If the whole world's our home where we may run,
  Up, friends, forsake those secondary schools
  Which give grains, units, inches for the whole!
If facts surpass mere words, melt pride of soul,

Original from CORNELL UNIVERSITY

And pain, and ignorance that hardens fools,
Here in the fire I've stolen from the sun!

The next I mean to quote is addressed to Telesius, the veteran of the new philosophy. The "tyrant of souls" is Aristotle, whose authority Telesius, like Bacon, sought to undermine. The saint of the new school is the science founded upon the immediate interrogation of nature by the senses. What the senses report, reason judges; and nature, thus interrogated, utters through the voice of science oracles that can be trusted.

Telesius, the arrow from thy bow
Midmost his band of sophists slays that high
Tyrant of souls that think; he cannot fly:
While Truth soars free, loosed by the self-same blow.
Proud lyres with thine immortal praises glow,
Smitten by bards elate with victory:
Lo, thine own Cavalcante, stormfully
Lightning, still strikes the fortress of the foe!
Good Gaieta bedecks our saint serene
With robes translucent, light-irradiate,
Restoring her to all her natural sheen;
The while my tocsin at the temple-gate
Of the wide universe proclaims her queen,
Pythia of first and last ordained by fate.

In the third sonnet Campanella expands the ground-notion of the new philosophy. Nature lies before the mind of man like an open book, where God has written his thoughts. This book, then, should be studied, instead of the works of the schoolmen and the sophists.

The world's the book where the eternal Sense
Wrote his own thoughts; the living temple where,
Painting his very self, with figures fair
He filled the whole immense circumference.
Here then should each man read, and gazing find
Both how to live and govern, and beware
Of godlessness; and, seeing God all-where,
Be bold to grasp the universal mind.
But we tied down to books and temples dead,
Copied with countless errors from the life,—
These nobler than that school sublime we call.
O may our senseless souls at length be led
To truth by pain, grief, anguish, trouble, strife!
Turn we to read the one original!

Campanella conceived that the radical evils of the world are tyranny in politics, sophistry in philosophy, and hypocrisy in religion. Ignorance, which has its root in self-love, lies at the bottom of all these vices, and must be fought to the death by the champion of science.

To quell three Titan evils I was made,—
Tyranny, sophistry, hypocrisy;
Whence I perceive with what wise harmony
Themis on me love, power, and wisdom laid.
These are the basements firm whereon is stayed,
Supreme and strong, our new philosophy;
The antidotes against that trinal lie
Wherewith the burdened world groaning is weighed.
Famine, war, pestilence, fraud, envy, pride,
Injustice, idleness, lust, fury, fear,
Beneath these three great plagues securely hide.
Grounded on blind self-love, the offspring dear
Of ignorance, they flourish and abide:
Wherefore to root up ignorance I'm here!

The theme of self-love is further developed in a sonnet, remarkable for its brevity and pregnant thought. Preoccupation with himself makes man fancy that the world is without thought and feeling, that his own race alone has received the care of God; from this he passes to the pride of impiety, and at last can see no other God in the world but himself. Heine might have quoted the last line against Hegel.

Self-love fools man with false opinion
That earth, air, water, fire, the stars we see,
Though stronger and more beautiful than we,
Feel nought, love not, but move for us alone.
Then all the tribes of earth except his own
Seem to him senseless, rude — God lets them be:
To kith and kin next shrinks his sympathy,
Till in the end loves only self each one.
Learning he shuns that he may live at ease;
And since the world is little to his mind,
God and God's ruling forethought he denies.
Craft he calls wisdom; and, perversely blind,
Seeking to reign, erects new deities:
At last "I make the universe!" he cries.

Campanella's own conception of the earth as part of the universal ζῷον, or animated being, and of man as a minor parasitic creature, living on the world as lower creatures live on him, is contained in the sixth sonnet I have marked.

The world's a living creature, whole and great,
God's image, praising God whose type it is;
We are imperfect worms, vile families,
That in its belly have our low estate.
If we know not its love, its intellect,
Neither the worm within my belly seeks
To know me, but his petty mischief wreaks:
Thus it behoves us to be circumspect.
Again, the earth is a great animal,
Within the greatest; we are like the lice
Upon its body, doing harm as they.

Proud men, lift up your eyes; on you I call:
Measure each being's worth; and thence be wise,
Learning what part in the great scheme you play!

The seventh sets forth his profoundly religious fatalism. All things have been ordained by the divine wisdom, and all human lives have been written by God like parts in a play. At the end of the play we shall see by gazing on God himself which part was best; and we shall share the mirth which our past action caused for him.

The world's a theatre: age after age,
Souls masked and muffled in their fleshly gear
Before the supreme audience appear,
As Nature, God's own art, appoints the stage.
Each plays the part that is his heritage;
From choir to choir they pass, from sphere to sphere,
And deck themselves with joy or sorry cheer,
As fate, the comic playwright, fills the page.
None do or suffer, be they cursed or blest,
Aught otherwise than the great Wisdom wrote
To gladden each and all who gave him mirth,
When we at last to sea or air or earth
Yielding these masks that weal or woe denote,
In God shall see who spoke and acted best.

Campanella frequently recurs to the conception of the universe regarded as a drama, in which good and evil are both necessary, and will in the end be found far other than our present imperfect insight makes us think. In the following passage from one of his canzoni he illustrates the difference between evil relative to the world at large and the same evil relative to us.

War, ignorance, fraud, tyranny,
Death, homicide, abortion, woe—
These to the world are fair; as we
Reckon the chase or gladiatorial show.
To pile our hearth we fell the tree;
Kill bird or beast our strength to stay;
The vines, the hives our wants obey;
Like spiders spreading nets, we take and slay.
As tragedy gives men delight,
So the exchange of death and strife
Still yields a pleasure infinite
To the great world's triumphant life:
Nay, seeming ugliness and pain
Avert returning Chaos' reign.
Thus the whole world's a comedy;
And they who by philosophy
Unite themselves to God, will see
In ugliness and evil nought
But beauteous masks; oh, mirthful thought!

2. Passing to those sonnets which contain Campanella's political theories, I will begin with two upon the conception of royalty as independent both of birth and accident. The first lays down the principle that just as the implements of painting do not make an artist, so the possession of lands and states do not make a royal nature.

He who hath brush and colors, and chancewise
Doth daub, befouling walls and canvases,
Is not a painter; but, unhelped by these,
He who in art is masterful and wise.
Cowls and the tonsure do not make a friar;
Nor make a king wide realms and pompous wars;
But he who is all Jesus, Pallas, Mars,
Though he be slave or base-born, wears the tiar.
Man is not born crowned like the natural king
Of beasts, for beasts by this investiture
Have need to know the head they must obey;
Wherefore a commonwealth fits men, I say,
Or else a prince whose worth is tried and sure,
Not proved by sloth or false imagining.

The second illustrates the same subject with examples, showing how accident makes mock kings and nature real ones; and how the bastard breed of tyrants persecutes the royal spirits, but cannot prevent their empire over the souls of men.

Nero was king by accident in show,
But Socrates by nature in good sooth;
By right of both Augustus; luck and truth
Less perfectly were blent in Scipio.
The spurious prince still seeks to extirpate
The seed of natures born imperial—
Like Herod, Caiaphas, Meletus, all
Who by bad acts sustain their stolen state.
Slaves whose souls tell them that they are but slaves,
Strike those whose native kinghood all can see:
Martyrdom is the stamp of royalty.
Dead though they be, these govern from their graves;
The tyrants fall, nor can their laws remain;
While Paul and Peter rise o'er Rome to reign.

The next sonnet expresses a similar doctrine concerning nobility. Wealth and blood do not constitute true aristocracy. That should always be tested by courage and prudence. The allusion to the Turk, the foe of Europe, is curious. Campanella says the Turks are wiser than the European princes, since they honor men according to their deeds, and not according to their birth or riches.

Valor and mind form real nobility,
The which bears fruit and shows a fair increase
By doughty actions: these and nought but these
Confer true patents of gentility.
Money is false and light unless it be
Bought by a man's own worthy qualities;
And blood is such that its corrupt disease
And ignorant pretence are foul to see.
Honors that ought to yield more true a type,
Europe, thou measurest by fortune still,
To thy great hurt; and this thy foe perceives;
He rates the tree by fruits mature and ripe,
Not by mere shadows, roots, and verdant leaves:
Why then neglect so grave a cause of ill?

The whole of Campanella's original and daring genius shines forth in the next sonnet, which treats of the sovereignty of the people. Shelley might have written it, so modern and so democratic is the thought.

The people is a beast of muddy brain,
That knows not its own force, and therefore stands
Loaded with wood and stone; the powerless hands
Of a mere child guide it with bit and rein:
One kick would be enough to break the chain;
But the beast fears, and what the child demands,
It does; nor its own terror understands,
Confused and stupefied by bugbears vain.
Most wonderful! with its own hand it ties
And gags itself, gives itself death and war
For pence doled out by kings from its own store.
Its own are all things between earth and heaven;
But this it knows not, and if one arise
To tell this truth, it kills him unforgiven.

After reading these lines we do not wonder that the Spanish viceroy thought Campanella dangerous to established monarchy.

As specimens of Campanella's opinions about contemporary politics, I may insert two sonnets upon the Swiss Confederation and Genoa. The drift of the first is that, though the Swiss are a race of natural freemen, they sell themselves for hire, and so become the slaves of despots who scorn them.

Ye Alpine rocks! If less your peaks elate
To heaven exalt you than that gift divine,
Freedom; why do your children still combine
To keep the despots in their stolen state?
Lo, for a piece of bread from windows wide
You fling your blood, taking no thought what cause,
Righteous or wrong, your strength to battle draws;
So is your valor spurned and vilified.
All things belong to free men; but the slave
Clothes and feeds poorly. Even so from you
Broad lands and Malta's knighthood men withhold.
Up, free yourselves, and act as heroes do!
Go, take your own from tyrants, which you gave
So recklessly, and they so dear have sold!

It would be impossible to pass a clearer-sighted judgment on the barbarous action of the Swiss during the sixteenth century.

The second follows the same train of thought. In elder days Genoa by her courage and spirit of adventure held the East in fee, stood first in Italy, and discovered new worlds. Now she bows to the Spaniard, not because her people is enfeebled, but because her nobility is pusillanimous.

The nymphs of Arno; Adria's goddess-queen;
Greece, where the Latin banner floated free;
The lands that border on the Syrian sea;
The Euxine, and fair Naples; these have been
Thine, by the right of conquest; these should be
Still thine by empire: Asia's broad demesne,
Afric, America — realms never seen
But by thy venture — all belong to thee.
But thou, thyself not knowing, leavest all
For a poor price to strangers; since thy head
Is weak, albeit thy limbs are stout and good.
Genoa, mistress of the world! recall
Thy soul magnanimous! Nay, be not led
Slave to base gold, thou and thy tameless brood!

3. The transition from Campanella's poems on politics to his prophecy is easy. Here is a very curious sonnet, in which he observes that the black clothes assumed by the Italians under the influence of Spanish fashions suited the corrupt, enslaved, and mournful state of the nation.

Black robes befit our age. Once they were white;
Next many-hued; now dark as Afric's Moor,
Night-black, infernal, traitorous, obscure,
Horrid with ignorance and sick with fright.
For very shame we shun all colors bright,
Who mourn our end — the tyrants we endure,
The chains, the noose, the lead, the snares, the lure —
Our dismal heroes, our souls sunk in night.
Black weeds again denote that extreme folly
Which makes us blind, mournful, and woebegone:
For dusk is dear to doleful melancholy.

Nathless fate's wheel still turns: this raiment dun
We shall exchange hereafter for the holy
Garments of white in which of yore we shone.

The next is a prophecy of a new age, when Christ shall return to reign in peace upon the earth, and when black clothes shall be exchanged for white. It is probable that Campanella was not looking for the millennium in the vulgar sense of the word. Christ was for him always the symbol of right reason and real virtue.

Clothed in white robes I see the Holy sire
Descend to hold his court amid the band
Of shining saints and elders: at his hand
The white immortal Lamb commands their choir.
John ends his long lament for torments dire,
Now Judah's lion rises to expand
The fatal book, and the first broken band
Sends the white courier forth to work God's ire.
The first fair spirits raimented in white
Go out to meet him who on his white cloud
Comes heralded by horsemen white as snow.
Ye black-stoled folk, be dumb, who hate the loud
Blare of God's lifted angel-trumpets! Lo,
The pure white dove puts the black crows to flight!

In spite of persecution, torture, and life-long imprisonment, Campanella never lost his faith and hope — faith in the ultimate triumph of righteousness and justice, hope that even he might live to see it. In the following sonnet he declares his belief that the sophists, tyrants, and hypocrites must in course of time be banished, and the world regain the golden age through communism and brotherly affection.

If men were happy in that age of gold,
We yet may hope to see mild Saturn's reign;
For all things that were buried live again,
By time's revolving cycle forward rolled.
Yet this the fox, the wolf, the crow, made bold
By fraud and perfidy, deny — in vain;
For God that rules, the signs in heaven, the train
Of prophets, and all hearts this faith uphold.
If thine and mine were banished in good sooth
From honor, pleasure, and utility,
The world would turn, I ween, to Paradise;
Blind love to modest love with open eyes;
Cunning and ignorance to living truth;
And foul oppression to fraternity.

The belief that this glorious consummation was not far distant is energetically expressed in a sonnet written in answer to certain friends who had recommended him to try his hand at comic poetry.

Nay, God forbid that mid these tragic throes
To idle comedy my thought should bend,
When torments dire and warning woes portend
Of this our world the instantaneous close!
The day approaches which shall discompose
All earthly sects, the elements shall blend
In utter ruin, and with joy shall send
Just spirits to their spheres in heaven's repose.
The Highest comes in Holy Land to hold
His sovran court and synod sanctified,
As all the Psalms and prophets have foretold:
The riches of his grace he will spread wide
Through his own realm, that seat and chosen fold
Of worship and free mercies multiplied.

It is probable that the majority of the prophetic poems were written in his youth, about the time when he attracted the suspicions of the Spanish government in Naples. The following sonnet, at any rate, must have been composed before 1603, since it foretells a great mutation which he expected in that year.

The first heaven-wandering lights I see ascend
Upon the seventh and ninth centenary,
When in the Archer's realm three years shall be
Added, this æon and our age to end.
Thou too, Mercurius, like a scribe dost lend
Thine aid to promulgate that dread decree,
Stored in the archives of eternity,
And signed and sealed by powers no prayers can bend.
O'er Europe's full meridian on thy morn
In the tenth house thy court I see thee hold:
The sun with thee consents in Capricorn.
God grant that I may keep this mortal breath
Until I too that glorious day behold
Which shall at last confound the sons of death!

I have translated the astrological portion of this sonnet as literally as I could. Campanella's conviction that each part of the universe was endowed with sensibility and reason, and that the stars had more of divinity than we have, rendered him peculiarly open to astrological illusions.

4. I have left for the last those sonnets which describe Campanella's sufferings in prison. We have seen that he was wont to compare himself to Prometheus, and he called his dungeon by the name of Caucasus. Here is one of which the title — "*Sonetto nel Caucaso*" — tells its own tale. The philosopher rejects suicide, because he does not believe in escaping from himself by death.

I fear that by my death the human race
Would gain no vantage. Thus I do not die.
So wide is this vast cage of misery

That flight and change lead to no happier place.
Shifting our pains, we risk a sorrier case;
All worlds, like ours, are sunk in agony;
Go where we will, we feel; and this my cry
I may forget like many an old disgrace.
Who knows what doom is mine? The Omnipotent
Keeps silence; nay, I know not whether strife
Or peace was with me in some earlier life.
Philip in a worse prison me hath pent
These three days past — but not without God's will.
Stay we as God decrees: God doth no ill.

Here is another sonnet on the theme of his imprisonment. The seekers after truth find a dungeon as naturally as stones fall to earth, or mice run into the cat's mouth.

As to the centre all things that have weight
Sink from the surface; as the silly mouse
Runs at a venture, rash though timorous,
Into the monster's jaws to meet her fate:
Thus all who love high science, from the strait
Dead sea of sophistry sailing like us
Into truth's ocean, bold and amorous,
Must in our haven anchor soon or late.
One calls this haunt a cave of Polypheme,
And one Atlante's palace, one of Crete
The labyrinth, and one hell's lowest pit.
Knowledge, grace, mercy are an idle dream
In this dread place. Nought but fear dwells in it,
Of stealthy tyranny the sacred seat.

The next sonnet dates probably from the early days of his imprisonment, when he discovered the incompetence or the baseness of the friends in whom he trusted, and when he had been tempted by the promises of an impostor. It is addressed to God.

How wilt Thou I should gain a harbor fair,
If after proof among my friends I find
That some are faithless, some devoid of mind,
Some short of sense, though stout to do and dare?
If some, though wise and loyal, like the hare
Hide in a hole, or fly in terror blind,
While nerve with wisdom and with faith combined
Through malice and through penury despair?
Reason, thy honor, and my weal eschewed
That false ally who said he came from Thee,
With promise vain of power and liberty.
I trust: I'll do. Change Thou the bad to good!
But ere I raise me to that altitude,
Needs must I merge in Thee as Thou in me.

Who the impostor was who came to tempt him we do not know. It is possible that his enemies sent this mysterious person as a spy to extract his supposed secrets from him. The three last lines of the sonnet are obscure. They seem to mean that Campanella has not lost faith and self-confidence. All he requires is that the human instruments of his great work should not break in his hand. If God will give him true allies instead of covert enemies, he will be able to act, having attempted to cast himself into the divine nature, even as God dwells in us and penetrates us with his spirit.

His conception of the philosopher as a sufferer and yet as royal, doomed to endure pain and scorn in this life, but destined to enjoy eternal fame, and in the midst of wretchedness more happy than the common crowd of fools, is very finely expressed in these lines: —

Wisdom is riches great and great estate,
Far above wealth; nor are the wise unblest
If born of lineage vile or race oppressed:
These by their doom sublime they illustrate.
They have their griefs for guerdon, to dilate
Their name and glory; nay, the cross, the sword
Make them to be like saints or God adored;
And gladness greets them in the frowns of fate:
For joys and sorrows are their dear delight;
Even as a lover takes the weal and woe
Felt for his lady. Such is wisdom's might.
But wealth still vexes fools; more vile they grow
By being noble; and their luckless light
With each new misadventure burns more low.

There is an excellent vein of humor in the next sonnet, which describes the relation of the wise men to the rest of the world in a well-conceived apologue.

Once on a time the astronomers foresaw
The coming of a star to madden men:
Thus warned they fled the land, thinking that when
The folk were crazed, they'd hold the reins of law.
When they returned the realm to overawe,
They prayed those maniacs to quit cave and den,
And use their old good customs once again;
But these made answer with fist, tooth, and claw;
So that the wise men were obliged to rule
Themselves like lunatics to shun grim death,
Seeing the biggest maniac now was king.
Stifling their sense, they lived aping the fool,
In public praising act and word and thing
Just as the whims of madmen swayed their breath.

The last of the personal poems I have marked for quotation refers to an obscure passage in Campanella's biography. Condemned to the galleys, he feigned madness in order to escape that dreadful doom.

He here justifies his conduct by citing the great men of history who did the like, or who committed suicide. The Italian, which I have rendered by the "Mystic," is *l'Astratto*. I am not sure whether the word does not rather mean a man lost to his senses.

From Rome to Greece, from Greece to Libya's sand,
Yearning for liberty, just Cato went;
Nor finding freedom to his heart's content,
Sought it in death, and died by his own hand.
Wise Hannibal, when neither sea nor land
Could save him from the Roman eagles, rent
His soul with poison from imprisonment;
And a snake's tooth cut Cleopatra's band.
In this way died one valiant Maccabee;
Brutus feigned madness; prudent Solon hid
His sense; and David, when he feared Gath's king.
Thus when the Mystic found that Jonah's sea
Was yawning to engulf him, what he did
He gave to God — a wise man's offering.

I have reserved the following three sonnets, which do not fall exactly into any of the four divisions adopted in this article, but which are eminently characteristic of Campanella's bold and original thought. The first is such an adaptation of the parable about the Samaritan as might have occurred to Clough.

From Rome to Ostia a poor man went;
Thieves robbed and wounded him upon the way:
Some monks, great saints, observed him where he lay,
And left him, on their breviaries intent.
A bishop passed thereby, and careless bent
To sign the cross, a blessing brief to say;
But a great cardinal, to clutch their prey,
Followed the thieves, falsely benevolent.
At last there came a German Lutheran,
Who builds on faith, merit of works withstands;
He raised and clothed and healed the dying man.
Now which of these was worthiest, most humane?
The heart is better than the head, kind hands
Than cold lip-service; faith without works is vain.

The second gives Campanella's opinion about the low state of Italian literature. English students, comparing the chivalrous romances of the Italians with the high theme chosen by our Milton, and their comedies with our Elizabethan drama, will feel that the philosopher of Stilo has not used too strong a language of invective.

Valor to pride hath turned; grave holiness
To vile hypocrisy; all gentle ways
To empty forms; sound sense to subtleties;
Pure love to heat; beauty to paint and dress:
Thanks to you, poets! you who sing the press
Of fabled knights, foul fires, lies, nullities;
Not virtue, nor the wrapped sublimities
Of God, as bards were wont in those old days.
How far more wondrous than your phantasies
Are nature's works, how far more sweet to sing!
Thus taught, the soul falsehood and truth descries.
That tale alone is worth the pondering,
Which hath not smothered history in lies,
And arms the soul against each sinful thing.

The third is addressed to a young German knight, Rudolph von Bürnau, who travelled in the company of Adami and visited Campanella in his prison. His name is Italianized into Ridolfo di Bina.

Wisdom and love, O Bina, gave thee wings,
Before the blossom of thy years had faded,
To fly with Adam for thy guide, God-aided,
Through many lands in divers journeyings.
Pure virtue is thy guerdon: virtue brings
Glory to thee, death to the foes degraded,
Who through long years of darkness have invaded
Thy Germany, mother of slaves not kings.
Yet, gazing on heaven's book, heroic child,
My soul discerns graces divine in thee:
Leave toys and playthings to the crowd of fools!
Do thou with heart fervent and proudly mild
Make war upon those fraud-engendering schools!
I see thee victor, and in God I see.

The translations I have now offered to English readers present but a poor likeness of Campanella's rough but energetic and often splendidly impassioned style. It is my hope before long to complete a version of his sonnets, and to print them with such explanations as an unavoidable absence from all libraries or centres of literature will suffer me to make. For students of the Italian genius he has an almost unique interest, not only as the precursor of modern modes of thought, but also as the only poet who, in an age of enervation and effeminacy, preserved a manliness of speech and sentiment worthy of Dante's heroic century.

Here then for the moment I leave Campanella. But before laying down my pen, I must quote the only poetical utterance of the seventeenth century in Italy, which can be at all compared with his verse. The sonnet is commonly attributed to Bruno. It occurs in his dialogue on the "Heroic Love," and is there placed in the

mouth of Tansillo, who is probably the real author. Nowhere has the rapture, the daring, and the danger of the poet-philosopher's flight into super-terrestrial regions of pure thought been described with fervor more intense, and with a feeling for spiritual beauty more impassioned. The spirit of the martyr sages of south Italy vibrates in its thrilling lines.

Now that these wings to speed my soul ascend,
The more I feel vast air beneath my feet,
The more toward boundless air on pinions fleet,
Spurning the earth, soaring to heaven, I tend:
Nor makes them stoop their flight the direful end
Of Daedal's son; but upward still they beat.
What life the while with my life can compete,
Though dead to earth at last I shall descend?
My own heart's voice in the void air I hear:
"Where wilt thou bear me, O rash man? Recall
"Thy daring will! This boldness waits on fear!"
"Dread not," I answer, "that tremendous fall!
"Strike through the clouds, and smile when death is near,
"If death so glorious be our doom at all!"

J. A. S.

ERICA.*

TRANSLATED FOR THE LIVING AGE FROM THE GERMAN OF

FRAU VON INGERSLEBEN.

VIII.

THE DARK LAKE.

About a mile from Waldbad, in the midst of the forest, is a tolerably large lake of singular shape, since its shores are divided into long regular teeth or curves, which are densely overgrown with tall trees and shrubbery. The dark, still water is made even more gloomy by the shade of the thick foliage, and the tall trees are reflected in dim outline from the black mirror, while the smaller bushes look like mere shadows.

A sense of mystery and terror broods over the whole scene, and the spectator does not feel surprised to hear that in this spot the pagan inhabitants of the island formerly offered sacrifices to their gods. The lake must evidently have obtained its peculiar form only by the aid of human hands, and it would probably have been worth while to investigate the connection which had existed between the outline of the water and the old pagan rites.

* Copyright 1877, by Littell & Gay.

At any rate these heathens had no sympathy with that cheerful life, which is so clearly revealed to us in the graceful beauty of the temples reared to the ancient gods of Greece. *Their* gods, images of themselves, are stern and gloomy, and demand a secret, mystical worship. And yet the natives who dwelt in the misty north were not wholly destitute of divine truth, although it could only glimmer through the husk of error like a dim twilight. It required centuries of constant sacrifice to educate the human race to the idea that mercy is better than sacrifice, or rather was the true sacrifice, and it is a consoling, elevating thought that even the rudest worship contains a divine spark which can be developed into a warm, bright flame.

This gloomy water — which had been appropriately named Dark Lake — seems little suited for pleasure parties. The melancholy characteristic of the scene involuntarily claims a sympathetic sadness, or produces a dreamy mood that unconsciously harmonizes with the surrounding landscape, the ghostly, tremulous outlines of the dim reflections in the water, and the mournful rustlings of the tall trees. But reveries only thrive in solitude, and in a large party ennui is sometimes, earnestness but rarely, the predominant feeling.

Nevertheless, an excursion to Dark Lake is one of the pleasures of every visitor to Waldbad. On bright summer afternoons the shores are thronged with groups of merry people, whose lively conversation and gay laughter are repeated by the numerous echoes among the many windings of the banks. On the very spot where perhaps in former days sacrifices were offered to the gods, now stands a rude building, merely intended to afford a sheltering roof beneath which visitors can light a fire to make their coffee, or possibly even cook waffles. It would scarcely have been profitable to establish a restaurant here, so the managers of the baths — for of course there must be such a body in Waldbad — contented themselves with having this hut built in order to satisfy all just demands.

The equipages — or, to designate the Waldbad vehicles more correctly — the wagons of the pleasure-seekers stand about on the turf. The horses try to graze upon the forest grass and moss, or find more abundant fodder in the bags of provender hung over their heads, while they

move their tails regularly from side to side to keep off the flies. Careful drivers pull large boughs from the trees and fasten them on the horses, or swing them over them for the same purpose. The maid-servants who accompany the different families hurry to the springs to get water, then make a fire, and unpack the almost bottomless baskets brought with them.

The elegant figure of a liveried servant very rarely appears among these busy people. Waldbad is not a congenial soil for them, as only a few of its visitors encumber themselves with a footman. To-day, amid the crowd of wagons, horses, coachmen, and servant-girls, only one such bedizened mortal leans idly against a tree. He has folded his arms, and gazes at the bustle around him with a very weary, *blasé* air. Although infinitely superior to it — so superior that those present do not even seem to realize the existence of this sublime personage — his solitary grandeur is at last becoming irksome to him.

He attempts to talk to the prettiest girl, nay, even condescends so far as to offer to help her in her tasks. But the maid is busy, and makes short work with him, so he shrugs his shoulders, yawns, and approaches a carriage, which in its best days doubtless belonged to a fashionable owner, but was afterwards sold as useless, and thus came into the possession of a Waldbad driver. Its springs are not very good, and as the servant enters it the whole vehicle rocks to and fro in such a peculiar manner, that one doubts whether it will prove very comfortable to its occupants while jolting over the forest paths, which are full of roots and stones.

At any rate, the little wagon that now quickly approaches, drawn by two light-brown horses, rolls far more easily. One would scarcely believe that so many people could find room in the small vehicle. But there sit father, mother, a young girl, four children, and a sort of driver — the word boy would probably offend him as much as to call his horses ponies — and all look very happy and comfortable. The young driver springs to the ground quickly enough, and assists the gentleman down, precociously begging the "Herr Pastor" to be careful. Then comes the wife with two children, and next is Fräulein Erica's turn, but she has already leaped out with the two boys on the other side, and laughs gayly at her juvenile assistant.

The liveried servant, who was just in the act of throwing himself back on the cushions of the carriage and into the arms of Morpheus, turns his head towards the new arrivals, but does not consider them worth noticing, for the lady carries a large bundle containing the necessary eatables herself, so he frowns at the disturbance, and sinks back into his corner with a yawn. The little party notice the coach, which, with its venerable, old-fashioned elegance, has a very aristocratic appearance among the open wagons that surround it.

The pastor shakes his head over the ignorance of the summer visitors in taking a "coach" for such an expedition, and the avaricious owner who yielded to their wishes. But Erica has scarcely cast a glance at the inmate when she instantly recognizes him as the servant she saw at the little fairy castle. Her cheeks grow crimson with surprise, bewilderment, or joy, she does not know herself which feeling predominates. The princess is here, she will undoubtedly have an opportunity to see her, and that is very pleasant; but Erica has been anticipating the afternoon at Dark Lake with delight, she loves the spot, and expected that to-day even the lively children would not disturb her dreamy wanderings. Now all that was over, her freedom was destroyed, the day's pleasure would be of a different nature, that of suspense, expectation. Various questions dart through her brain. Will the brother accompany the sister? Will he recognize Erica, or pass her by without notice when they meet?

The vision of the brilliant sister, who cast every one that surrounded her into the shade, now recedes partially into the background, and the young man, the "artist," as Erica still calls him, appears more vividly before her mind. It is with no hostile feelings that she now remembers him, for she is forced to acknowledge that only a small share of his negligent demeanor could be attributed to her personal appearance, but she thinks she should prefer to see the sister without the brother's company. How gladly she would have questioned the sleeper in the carriage, but that would never do, and besides, the pastor's wife is calling her to help make the coffee.

The children had very positively declared that they wanted the coffee at once, instead of first going to walk, and as the little party had brought no maidservant to wait upon them, they were obliged to do the work themselves. But they succeeded admirably; everybody did what he could, and even the pastor did not think it beneath his dignity to collect dry twigs for the fire. Erica, however, was not quite so much engrossed in her occupation as she

would have been but for the sight of the liveried sleeper in the carriage. To tell the truth, she was afraid of completely destroying the freshness of her muslin dress, which already bore only too distinct traces of the narrow space into which she had been crowded in the wagon. Besides, she felt no desire for either coffee or cakes, and in this respect, for the first time, had no sympathy with the children.

At last the coffee was drunk, some of the cakes eaten, and the remainder carefully packed and put back in the wagon, to be brought out again when they returned from their walk. But so much time had been consumed that the others were doubtless already returning, and if they went around the lake on the other side a meeting would be impossible, since their departure would probably take place immediately. This reflection made the walk seem less delightful than Erica had expected, her thoughts were absent, she had no eyes for the melancholy beauty of the scene, and mechanically answered the words of the pastor's wife and laughed with the children without exactly knowing why.

The shores of the lake seemed to be thronged with pedestrians. Light summer dresses gleamed through the trees, and the echo of voices was everywhere repeated from the peculiarly-shaped angles of the rocky hills that surrounded the lake, while the path led close by the water's edge. Each of these tooth-shaped curves enclosed the party in somewhat narrow boundaries, and only permitted the eyes to roam freely over the lake.

This limited view increased the gloomy impression made by the whole landscape, and was all the more favorable to the melancholy reveries, which, however, were interrupted and disturbed by the numerous visitors to the spot.

Loud voices were often heard while the speakers were invisible, until at a bend in the path the two pedestrians almost ran against each other. Thus people were generally in a state of constant expectation to see what the next turn would reveal, and the lake and scenery were therefore cast somewhat into the background.

Seats were found often enough to prevent the walk from becoming tiresome, and the wooden benches or banks of turf were eagerly used by the excursionists. In one of the most melancholy spots on the shore of this gloomy lake, a party of ladies and gentlemen had seated themselves, whose gay, animated conversation ill harmonized with the scene. The view here was more open, for it was not far from the hills of the down which separated the lake from the sea, and when the voices were silent for a moment the monotonous plashing of the waves on the shore was distinctly audible. A tall, slight female figure, whose elegant white dress was clearly relieved against the dark background of trees and bushes, first attracted the attention. She held on her lap a little boy, who must have been wearied by the long walk, for he leaned his head on his mother's shoulder, and closed his eyes.

"You see, Kathinka, I was right in advising you to leave the boy at home," said one of the young men.

The lady — whose beautiful eyes seemed somewhat restless, for they wandered incessantly from one object to another — replied almost sharply, looking at the tree-tops instead of the person addressed.

"You know I never part from him, Elmar, and," she added in a gentler tone, "the sweet boy wanted to come."

"The sweet boy wants a great many nonsensical things," replied her companion, "and he will now become very troublesome to you, especially as his nurse is sick, and consequently not with us."

The sharp, by no means musical tone, which seemed strangely inharmonious from the lips of the beautiful woman, was again audible as the lady replied: "How can you suppose Carlos would ever be troublesome to me?" She bent over the child and kissed it. "Never, never, my sweet angel," she whispered tenderly; then rose, and holding the boy in her arms, went to another lady to whom she gave him. "Take him, Molly, he will go to you, because he loves you."

A smile hovered round the lips of all, and the young man doubtless expressed the feelings of the whole party, as he murmured, "Thank heaven that the boy dosen't love me."

The beautiful lady, whose restlessness appeared by no means confined to her eyes, did not sit down again, but wandered about, pulling moss from the rocks, or leaves from the bushes, now and then exchanging a word with the others, or putting her finger on her lips to impose silence, when any noise attracted her attention. This conduct made the rest of the party extremely uncomfortable, and at last the young man who had previously spoken rose, exclaiming half angrily, —

"You are terribly uneasy, Kathinka. Let us go, you will never stay long in one spot, though I am tired enough."

"Why did you insist upon crossing the

down to the sea. We have it every day in Waldbad."

"And do you really feel no interest in seeing a lake of fresh water so near the sea, and comparing the deep repose of the former with the constant movement of the latter?"

Kathinka shrugged her shoulders. "Really, Elmar, you are childish; I need my attention for other things. But let us go, it is a long distance."

They rose and began to walk along the shore. The beautiful woman went first with one of the older ladies, while the others followed in couples, and the girl holding the boy in her arms brought up the rear.

"Do you not think the walk delightful, your Highness?" asked the old lady, who had obtained a place beside the princess. Although, being the wife of Consul Sternau, she was perfectly aware that the Bagadoff family was not enrolled among those of royal blood, and therefore not entitled to the address of "Highness," she could not help flattering her companion and also herself by its use.

The princess looked up at the sky, then glanced at a beetle buzzing by, and finally fixed her eyes upon the ground. "Oh! yes, it is very pretty, though of course I have seen far more beautiful scenery. Who suggested the singular idea of bringing us here?"

"I really do not know, your Highness," replied the old lady somewhat embarrassed.

"Baron von Altenborn insisted upon the excursion," said her pretty daughter Caroline, coming to her assistance.

"What a slander, Fräulein!" exclaimed the young man, "you proposed it yourself."

"I? No, I only said the pastor's family was coming here this afternoon, and you instantly had the same fancy."

"So we really owe this pleasant excursion to the pastor," said one of the other gentlemen in a somewhat satirical tone. "I doubt, however, whether the reverend clergyman was the magnet, and suspect a pretty little daughter."

Caroline laughed. "The oldest is seven."

"You are not lucky in your inferences, Herr von Wehlen," replied Baron von Altenborn, with ill-suppressed irony; "a beauty of seven years may exert a magnetic influence over you, but she makes no impression on me."

Kathinka turned her head. "What an ado about nothing! I probably should not have allowed myself to be influenced by Elmar's whim, if I had not liked the excursion myself."

No one answered, even the old lady did not seem to understand the princess' train of thought. An uncomfortable pause followed, and every one felt a relief when Kathinka, on reaching a turn in the path, exclaimed, —

"Here comes the pastor and his family."

"So far as I can see, there is a young girl in the party, however," observed Herr von Wehlen, in a jeering tone.

"Yes, but she isn't the pastor's daughter, she is ——"

"Who is that girl?" interrupted Herr von Wehlen, pointing towards Erica.

Caroline's lips curled. "I was in the act of telling you; she is my friend Erica."

"The daughter of Frau von Hohenstädt, who lives in great seclusion at Waldbad;" her mother added.

Herr von Wehlen expressed no thanks for the information, but gazed steadily at the approaching group, while the frown that darkened his brow betrayed no pleasant emotions.

Meantime the two parties had met. Frau von Sternau did not fail to introduce her Highness to the pastor and his wife, and the princess, who, when she chose, could control both her tongue and her eyes, spoke very politely and pleasantly to both.

While so doing, she somewhat inconsiderately continued her way, and civility thus compelled them to alter the direction of their walk, and turn back with the other party.

Erica, who had joined Caroline, was thus brought into the immediate vicinity of the dreaded young man. He evidently did not recognize her, for he treated her as a total stranger, and strangely enough this produced such a feeling of embarrassment that she only answered him in monosyllables, and he therefore soon gave up all attempts at conversing with her, and again turned to his former companion. This afforded her an opportunity to collect her thoughts, and she had almost regained her composure, when Herr von Wehlen, who had remained a little behind, now addressed a question to Caroline. Erica started, and when, on turning round, she looked into the dark, somewhat sinister eyes of a bearded man, visibly changed color.

Wehlen did not seem to notice her alarm, for he continued his sentence with the most perfect unconcern, but her neigh-

bor bent towards her, and said in the tone she remembered so well at their first meeting, —

"How does the little woodland fairy happen to have such weak nerves?"

So he still remembered her, he pretended not to know her intentionally. Pondering over the cause of this conduct somewhat diverted her thoughts from the stranger, but they soon returned to him again, and she became more and more convinced that the foreign sailor in Wilms's hut, and this elegant, aristocratic gentleman, were one and the same person. At the same time she perceived that his attention was attracted towards her, and in spite of his apparent unconcern he watched her incessantly. Nay once, when their glances met, such an angry, threatening look flashed from his dark eyes, that she was on the point of losing her self-control.

A particularly beautiful view, which the pastor pointed out to the princess, made her pause, and the whole party also stood still, thereby enabling Fräulein Molly, who still carried the sleeping child in her arms, to overtake them. Wehlen politely approached, and any who had seen the admiring, languishing glance he cast upon the young lady, would scarcely have believed that those eyes had just flashed with such an angry light.

"The boy is troubling you, Fräulein," he said in a tone that was in perfect harmony with the look, "will you not trust him to me?"

Fräulein Molly, whose eyes had been glittering with indignant tears, felt soothed by the attention — of which she usually received so little — and a pleasant smile played around her pretty mouth as she answered in a jesting tone: "With all my heart, if the precious treasure will allow himself to be trusted to you."

"Let us try," and Herr von Wehlen attempted to take the sleeping child. But little Carlos, roused by the movement, had scarcely fixed his sleepy eyes upon the stranger, when he began to cry and clung firmly to the young lady's neck.

"You see, Herr von Wehlen," said Molly despairingly, "he loves me altogether too much."

"Who could blame him?" whispered Wehlen, with another languishing look.

Erica's attention was now attracted towards the group, and recognizing in the boy the fair-haired little child of the fairy castle, she approached him.

"Is the child so tired that you are obliged to carry him?" she asked sympathizingly, without thinking of the ceremony of an introduction.

Fräulein Molly tossed her head and eyed the speaker from top to toe, then looked her straight in the face, and finally glanced at her companion and slowly asked, —

"Who is this young girl, Herr von Wehlen?"

Erica's face grew crimson; she saw the mocking curl of the gentleman's lip, and — unconscious of her offence against etiquette — attributed this conduct to her simple dress.

"Fräulein Hohenstädt, allow me to make you acquainted with Fräulein Molly Lassnitz," said Elmar's voice close beside her; "Fräulein Lassnitz requires the rules of the drawing-room to be inexorably maintained in the woods and fields, and in case of accident I believe would rather drown, than be pulled out of the water by a person to whom she had not been introduced."

"How fortunate for me that I am perfectly aware you are such an excellent swimmer," replied Fräulein Molly, not quite so pleasantly as she had formerly spoken.

"To judge from the emphasis, your 'perfect' knowledge does not seem very favorable to me," said Elmar, laughing; "but I sue for peace. I have had skirmishes enough to-day, and as for the boy, put him down and let him run, you surely do not wish to carry him all the way."

"I wish? — I must," replied Molly bitterly.

Erica now once more approached the child, whose blue eyes gazed at her so earnestly, and at last so pleasantly, that she ventured to say, "Won't you come to me, may I carry you?"

Carlos held out his arms to the stranger, and Fräulein Molly did not refuse to relinquish her burden. Erica, who often played with the pastor's children, perfectly understood how to manage him. She joked and laughed, cheered and amused him, and it was not long before she could put him on the ground, and he ran merrily along beside her.

The pastor's children now came up to look at the new playfellow. The two parties at first held aloof and watched each other with critical eyes, until the pastor's youngest child at last broke the ice. Going up to the little stranger, he began the conversation by the important information that he had on a new cap to-day, whereupon Carlos raised his little foot to show

his new boots, which seemed to interest all. As the two girls had also new dresses to display, the conversation between the children soon became very animated, and Carlos thought no more of his fatigue.

Erica, who had so kindly relieved Molly of the duties of nurse, thought herself obliged to pay particular attention to the boy, and had plenty of time to do so, for Fräulein Molly was carrying on an eager whispered conversation with Herr von Wehlen, and Caroline laughed and jested so gayly with her companion that Erica's presence seemed almost forgotten.

The meeting which she had anticipated with so much eagerness, such a throbbing heart, now scarcely seemed worth this tremulous expectation, for the princess was so surrounded by the company that she could not keep a close watch upon the beautiful lady of the fairy castle. A feeling of disappointment and sorrow stole over her, as she slowly followed the party, and it was almost a relief when she now perceived the goal of the walk, the open space with the different conveyances.

"Have you already had your coffee, your Highness, or are you going to drink it now?" asked the pastor's wife, as they reached the glade.

Kathinka looked at her in astonishment. "Drink coffee, what do you mean, my dear Frau Pfarrerinn?"

The pastor's wife was somewhat confused, for she did not know what other words she could use to express what seemed to her a matter of course, but Frau von Sternau came to her assistance, and said, with a very dignified air, —

"Her Highness will dine after her return."

"Have you a cup of coffee at your disposal?" cried Elmar; "if so, I shall turn beggar, for I have the appetite of a lion."

"We will see if there is any left in the pot," said the pastor's wife kindly, going towards the hut where it was standing on the glowing coals. There was a sufficient quantity, and the young man not only drank the coffee with much satisfaction, but eat some of the cakes the pastor's children had left.

Little Carlos watched his uncle's proceedings with so much interest that the pastor's wife, unasked, poured him out a cup of coffee, and the other children were philanthropic enough, or perhaps sufficiently well fed, not to grudge the little prince a share of their provisions. Appetite not only seems to come while eating, but also to be contagious, for at last all acknowledged that they were hungry, and the store of food was not large enough to supply them.

"We have always brought cake and coffee," said Caroline pouting, "but to-day mamma did not think it necessary."

"Her Highness laughed when I proposed it," said the old lady, with her former dignity.

"I believe I did. But we might have brought a luncheon; unfortunately no one in my house provides for me, if I don't think of everything myself." The beautiful woman's reproving glance was fixed on the treetops, but Fräulein Molly was no less aware that the words were aimed at her, for she said, apologetically, "We had just left the breakfast-table when we came here."

"Well, let us try to get our dinner as soon as possible. Tell Valentin I am ready to go, Molly."

Fräulein Molly went to perform her errand, and the clumsy coach — from whose cushions the sleepy footman slowly rose — rolled up.

"You have just saved me from starvation, Frau Pfarrerinn," said Elmar, "can't you also preserve me from the terrible jolting of that frightful old box? Is there not a seat for me in your wagon?"

"Oh, yes indeed!" replied the obliging lady; "that is, I don't know how we shall manage; each of us holds a child."

"Well then, I give it up," said Elmar, laughing, "I have enough with one boy in the carriage."

"We mothers think differently, we find no discomfort in our children's presence," said Kathinka to the pastor's wife, as she entered her carriage. The rest of the party followed her example, and the coach, with several other conveyances, rolled away and disappeared in the forest.

Erica had received no farewell from any one except little Carlos; he was the only person who had looked towards the spot where she stood, none of the others had heeded her, even Caroline was too much occupied to think of her. The grave expression that rested on her face lingered there all day, and when she reached home her mother looked at her inquiringly.

"What is the matter, child? You have returned from your excursion in a sorrowful mood."

"It is so melancholy at Dark Lake, mamma, one unconsciously becomes grave and sad."

From The Nineteenth Century.

LIFE AND TIMES OF THOMAS BECKET.

MARTYR for the Church of Christ, or turbulent incendiary justly punished for his madness or presumption? That was the alternative which lay before the judgment of the Christian world. On the response which would be given depended interests which stretched far beyond the limits of Becket's own island home. How vast were the issues, how possible was an unfavorable conclusion, may be seen in the passionate language in which Benedict of Canterbury describes the general feeling, and relates the influences by which alone the popular verdict was decided in the archbishop's favor.

Our crowned head was taken from us, the glory of angels and of Angles. We were orphans who had lost their father. The mother Church was desolate, and her children were not lamenting. She sought for some to comfort her, yet found she none. She was weeping, and her children were glad. Our own noble monastery was speechless, and cruel mockers said it was well done. The brethren mingled their bread with tears, but they kept silence. Had not light risen upon us from on high, we had been lost forever. Praised be He who looked upon us in the day of our affliction! All generations shall now call us blessed. When the martyr was slain our young men saw visions, our old men dreamed dreams; and then came the miracles, and we knew that God had exalted the horn of his anointed one.

The sheep were scattered: the hirelings had fled. There had not been found a man who would stand beside the lord of Canterbury against the workers of iniquity. The second part of Christendom had gone astray after the idol Baal, the apostate, the antipope. Who can say what the end might not have been? In the blood of the martyr of Canterbury the Most High provided an expiation for the sins of the world. The darkness passed away before the splendor of the miracles. The seed of the word sprang up. Unnumbered sinners are converted daily, and beat their breasts and turn back into the fold. Our anointed Gideon had his lamp in a pitcher: the clay of the earthly body was broken, and light shone out. The schismatic Octavian was at once condemned, and Pope Alexander was established in Peter's chair. If Alexander had not been our true father, the martyr who adhered to him would have been defiled by the pitch which he had touched. His miracles prove that he had not been defiled. No man could do such wonders unless God was with him.

And as he died for the universal Church, so especially he died for the Church of Canterbury. Let his successor not abandon the rights which our holy martyr defended. Let him not despise the law of the Church, or depart from obedience to Pope Alexander. Let his Holiness be glad that in these last times, and in the ends of the earth, he has found such a son. Let the children of Canterbury rejoice that the consolation of such miracles has been vouchsafed to them. Let the whole earth exult, and they that dwell therein. On those who walked in darkness the light has shined. The fearful shepherds have learned boldness; the sick are healed; the repenting sinner is forgiven. Through the merits of our blessed martyr the blind see, the lame walk, the lepers are cleansed, the deaf hear, the dead are raised up, the poor have the gospel preached to them. In him all the miracles of the gospel are repeated, and find their full completion. Four times the lamps about his tomb have been kindled by invisible hands. An innocent man who was mutilated by the executioner called on the martyr for help, and is restored: new eyes and new members have been granted to him. Never anywhere, so soon after death and in so brief a time, has saint been made illustrious by so many and so mighty tokens of God's favor.*

Miracles come when they are needed. They come not of fraud, but they come of an impassioned credulity which creates what it is determined to find. Given an enthusiastic desire that God should miraculously manifest himself, the religious imagination is never long at a loss for facts to prove that He has done so; and in proportion to the magnitude of the interests at stake is the scale of the miraculous interposition. In the eyes of Europe, the cause in which Becket fell was the cause of sacerdotalism as against the prosaic virtues of justice and common sense. Every superstitious mind in Christendom was at work immediately, generating supernatural evidence which should be universal and overwhelming. When once the impression was started that Becket's relics were working miracles, it spread like an epidemic. Either the laws of nature were suspended, or for the four years which followed his death the power and the wish were gone to distinguish truth from falsehood. The most ordinary events were transfigured. That version of any story was held to be the truest which gave most honor to the martyr. That was the falsest which seemed to detract from his glory. As Becket in his life had represented the ambition and arrogance of the Catholic Church, and not its genuine excellence, so it was his fate in death to represent beyond all others the false side of Catholic teaching, and to gather round himself the most amazing agglomerate of lies.

The stream which was so soon to roll in so mighty a volume rose first in the humble breast of Benedict the monk. After the murder the body was lifted by the trembling brotherhood from the spot where it had fallen, and was laid for the night in front of the high altar. The monks then sought their pallets with one thought in the minds of all of them. Was the archbishop a saint, or was he a vain dreamer? God only could decide. Asleep or awake — he was unable to say which — Benedict conceived that he saw the archbishop going towards the altar in his robes, as if to say mass. He approached him trembling. "My lord," he supposed himself to have said, "are you not dead?" The archbishop answered, "I was dead, but I have risen again." "If you are risen, and, as we believe, a martyr," Benedict said, "will you not manifest yourself to the world?" The archbishop showed Benedict a lantern with a candle dimly burning in it. "I bear a light," he said, "but a cloud at present conceals it." He then seemed to ascend the altar steps. The monks in the choir began the introit. The archbishop took the word from them, and in a rich full voice poured out, "Arise, why sleepest thou, O Lord? Arise, and cast us not forth forever."

Benedict was dreaming; but the dream was converted into instant reality. The word went round the dormitory that the archbishop had risen from the dead and had appeared to Benedict. The monks, scarcely knowing whether they too were awake or entranced, flitted into the cathedral to gaze on the mysterious form before the altar. In the dim winter dawn they imagined they saw the dead man's arm raised as if to bless them. The candles had burnt out. Some one placed new candles in the sockets and lighted them. Those who did not know whose hand had done it concluded that it was an angel's. Contradiction was unheard or unbelieved; at such a moment incredulity was impious. Rumors flew abroad that miracles had already begun, and when the cathedral doors were opened the townspeople flocked in to adore. They rushed to the scene of the murder. They dipped their handkerchiefs in the sacred stream which lay moist upon the stones. A woman whose sight had been weak from some long disease touched her eyes with the blood, and cried aloud that she could again see clearly. Along with the tale of the crime there spread into the country, gathering volume as it rolled, the story of the wonders which had begun; and every pious heart which had beat for the archbishop when he was alive was set bounding with delighted enthusiasm. A lady in Sussex heard of the miracle with the woman. Her sight, too, was failing. *Divinitus inspiratas*, under a divine inspiration, which anticipated the judgment of the Church, she prayed to the blessed martyr St. Thomas, and was instantly restored. Two days later a man at Canterbury who was actually blind recovered his sight. The brothers at the cathedral whose faith had been weak were supernaturally strengthened. The last doubter among them was converted by a vision.

In the outside world there were those who said that the miracles were delusion or enchantment; but with the scoffs came tales of the retribution which instantly overtook the scoffers. A priest at Nantes was heard to say that if strange things had happened at Canterbury the cause could not be the merits of the archbishop, for God would not work miracles for a traitor. As "the man of Belial" uttered his blasphemies his eyes dropped from their sockets, and he fell to the ground foaming at the mouth. His companions carried him into a church, replaced the eyeballs, and sprinkled them with holy water, and prayed to St. Thomas for pardon. St. Thomas was slowly appeased, and the priest recovered, to be a sadder and a wiser man.

Sir Thomas of Ecton had known Becket in early youth, and refused to believe that a profligate scoundrel could be a saint.* Sir Thomas was seized with a quinsy which almost killed him, and only saved his life by instant repentance.

In vain the De Brocs and their friends attempted to stem the torrent by threatening to drag the body through the streets, to cut it in pieces, and fling it into a cesspool. The mob of Kent would have risen in arms, and burnt their castle over their heads, had they dared to touch so precious a possession. The archbishop was laid in a marble sarcophagus before the altar of St. John the Baptist in the crypt. The brain which De Broc's rude sword had spread out was gathered up by reverent hands, the blood-stains were scraped off the stones, and the precious relics were placed on the stone lid where they could be seen by the faithful. When the body was stripped for burial, on the back were seen the marks of the stripes which he had received on the morning of his death. The hair shirt and drawers were found

swarming (*scaturientes*) with vermin. These transcendent evidences of sanctity were laid beside the other treasures, and a wall was built round the tomb to protect it from profanation, with openings through which the sick and maimed, who now came in daily crowds for the martyr's help, could gaze and be healed.

Now came the more awful question. The new saint was jealous of his honor: was it safe to withhold his title from him till the pope had spoken? He had shown himself alive — was it permitted to pray for him as if he were dead? Throughout England the souls of the brethren were exercised by this dangerous uncertainty. In some places the question was settled in the saint's favor by an opportune dream. At Canterbury itself more caution was necessary, and John of Salisbury wrote to the Bishop of Poitiers for advice: —

> The blind see (he said), the deaf hear, the dumb speak, the lame walk, the devils are cast out. To pray for the soul of one whom God had distinguished by miracles so illustrious is injurious to him, and bears a show of unbelief. We should have sent to consult the pope, but the passages are stopped, and no one can leave the harbors without a passport. For ourselves, we have concluded that we ought to recognize the will of God without waiting for the holy father's sanction.*

The pope's ultimate resolution it was impossible to doubt. The party of the anti-pope in England had been put an end to by the miracles. Many people had begun to waver in their allegiance, and now all uncertainty was gone. It was universally admitted that these wonders displayed in favor of a person who had been on Alexander's side conclusively decided the question.† Alexander would do well, however, John of Salisbury thought, to pronounce the canonization with as little delay as possible.

The epidemic was still in its infancy. The miracles already mentioned had been worked in comparative privacy in the first few weeks which succeeded the martyrdom. Before the summer the archbishop's admirers were contending with each other in every part of Europe which could report the most amazing miracles that had been worked by his intervention or by the use of his name. Pilgrims began to stream to Canterbury with their tales of marvel and their rich thanksgiving offerings. A committee of monks was appointed to examine each story in detail. Their duty was to assure themselves that the alleged miracle was reality and not imagination. Yet thousands were allowed to pass as adequately and clearly proved. Every day under their own eyes the laws of nature were set aside. The aperture in the wall round the tomb contracted or enlarged according to the merit of the visitants. A small and delicate woman could not pass so much as her head through it to look at the relics. She was found to be living in sin. A monster of a man possessed by a devil, but honestly desirous of salvation, plunged through, body and all. The spectators (Benedict among them, who tells the story) supposed it would be necessary to pull the wall down to get him free. He passed out with the same ease with which he had entered. But when the monks told him to repeat the experiment, stone and mortar had resumed their properties.

The blood gathered on the handkerchiefs from the pavement had shown powers so extraordinary that there was a universal demand for it. The difficulty from the limitation of quantity was got over in various ways. At first it exhibited a capacity for self-multiplication. A single drop might be poured into a bottle, and the bottle would be found full. Afterwards a miraculous fountain broke out in the crypt, with the water from which the blood was mixed. The smallest globule of blood, fined down by successive recombinations to a fraction of unimaginable minuteness, imparted to the water the virtues of the perfect original. St. Thomas's water became the favorite remedy for all diseases throughout the Christian world, the sole condition of a cure being that doctor's medicines should be abjured. The behavior of the liquid, as described by Benedict, who relates what he professes to have continually seen, was eccentric and at first incomprehensible. A monk at the fountain distributed it to the pilgrims, who brought wooden boxes in which to carry it away. When poured into these boxed it would sometimes effervesce or boil. More often the box would split in the pilgrim's hand. Some sin unconfessed was supposed to be the cause, and the box itself, after such a misfortune, was left as an offering at the tomb. The splitting

* John of Salisbury to the Bishop of Poitiers. "Letters," vol. ii., pp. 257, 258 (abridged). How John of Salisbury was able to write both to the Bishop of Poitiers and to the Archbishop of Sens, if he was unable to write to Rome because the passages were stopped, does not appear.

† "Dubitatur a plurimis an pars domini papæ in quâ stamus de justitiâ niteretur, sed eam a crimine gloriosus martyr absolvit, qui si fautor erat schismatis nequaquam tantis miraculis coruscaret." — To the Archbishop of Sens. "Letters," vol. ii., p. 263.

action after a time grew less violent, and was confined to a light crack. One day a woman brought a box which became thus slightly injured. The monk to whom she gave it thought it was too good to be wasted, and was meditating in his own mind that he would keep it for himself. At the moment that the wicked thought formed itself the box flew to pieces in his hands with a loud crash. He dropped it, shrieking that it was possessed. Benedict and others ran in, hearing him cry, to find him in an agony of terror. The amusement with which Benedict admits that they listened to his story suggests a suspicion that in this instance at least the incident was not wholly supernatural.* Finding boxes liable to these misfortunes, the pilgrims next tried stone bottles, but with no better success — the stone cracked like the wood. A youth at Canterbury suggested tin; the bursting miracle ceased, and the meaning of it was then perceived. The pilgrims were intended to carry St. Thomas's water round the world, hung about their necks in bottles which could be at once secure and sufficiently diminutive for transport. A vessel that could be relied on being thus obtained, the trade became enormous. Though the holy thing might not be sold, the recipient of the gift expressed his gratitude by corresponding presents; and no diamond mine ever brought more wealth to its owners than St. Thomas's water brought to the monks of Canterbury.

As the time went on the miracles grew more and more prodigious. At first weak eyes were made strong; then sight was restored which was wholly gone. At first sick men were made whole; then dead men were brought back to life. At first there was the unconscious exaggeration of real phenomena; then there was incautious embellishment. Finally, in some instances of course with the best intentions, there was perhaps deliberate lying. To which of these classes the story should be assigned which has now to be told the reader must decide for himself. No miracle in sacred history is apparently better attested. The more complete the evidence, the more the choice is narrowed to the alternative between a real and supernatural occurrence and an intentional fraud.

In the year which followed Becket's death there lived near Bedford a small farmer named Aylward. This Aylward, unable to recover otherwise a debt from one of his neighbors, broke into his debtor's house, and took possession of certain small articles of furniture to hold as security. The debtor pursued him, wounded him in a scuffle, and carried him before the head constable of the district, who happened to be Aylward's personal enemy. A charge of burglary was brought against him, with the constable's support. Aylward was taken before the sheriff, Sir Richard Fitzosbert, and committed to Bedford gaol to await his trial. The gaol chaplain in the interval took charge of his soul, gave him a whip with which to flog himself five times a day, and advised him to consign his cause to the Virgin, and especially to the martyr Thomas. At the end of a month he was brought before the justices at Leighton Buzzard. The constable appeared to prosecute; and his own story not being received as true, he applied for wager of battle with his accuser, or else for the ordeal of hot iron. Through underhand influence the judges refused either of these comparatively favorable alternatives, and sentenced the prisoner to the ordeal of water, which meant death by drowning or else dismemberment. The law of the Conqueror was still in force. The penalty of felony was not the axe or the gallows, but mutilation; and the water ordeal being over, which was merely a form, Aylward, in the presence of a large number of clergy and laity, was delivered to the knife. He bled so much that he was supposed to be dying, and he received the last sacrament. A compassionate neighbor, however, took him into his house, and attended to his wounds, which began slowly to heal. On the tenth night St. Thomas came to his bedside, made a cross on his forehead, and told him that if he presented himself the next day with a candle at the altar of the Virgin in Bedford Church, and did not doubt in his heart, but believed that God was able and willing to cure him, his eyes would be restored. In the morning he related his vision. It was reported to the dean, who himself accompanied him to the altar, the townspeople coming in crowds to witness the promised miracle. The blinded victim of injustice and false evidence believed as he was directed, and prayed as he was directed. The bandages were then removed from the empty eye-sockets, and in the hollows two small glittering spots were seen, the size of the eyes of a small bird, with which Aylward pronounced that he could again see. He set off at once to offer his thanks to his pre-

* "Hoc miraculum tam joco et risui multis extitit quam admirationi." — Materials, vol. ii.

server at Canterbury. The rumor of the miracle had preceded him, and in London he was detained by the bishop till the truth had been inquired into. The result was a deposition signed by the mayor and corporation of Bedford, declaring that they had ascertained the completeness of the mutilation beyond all possibility of doubt.

Very curiously, precisely the same miracle was repeated under similar conditions three years later. Some cavil had perhaps been raised on the sufficiency of the evidence. The burgesses of a country town were not, it may have been thought men of sufficient knowledge and education to be relied upon in so extraordinary a case. The very ability of a saint to restore parts of the human body which had been removed may have been privately called in question, and to silence incredulity the feat was performed a second time. There appeared in Canterbury in 1176 a youth named Rogers, bringing with him a letter from Hugh, Bishop of Durham, to the prior of the monastery. The letter stated that in the preceding September the bearer had been convicted of theft, and had been mutilated in the usual manner. He had subsequently begged his living in the Durham streets, and was well known to every one in the town to be perfectly blind. In this condition he had prayed to St. Thomas. St. Thomas had appeared to him in a red gown, with a mitre on his head and three wax candles in his hand, and had promised him restoration. From that moment his sight began to return, and in a short time he could discern the smallest objects. Though, as at Bedford, the eyes were *modicæ quantitatis*, exceedingly minute, the functions were perfect. The bishop, to leave no room for mistake, took the oaths of the executioner and the witnesses of the mutilation. The cathedral bells were rung, and thanksgiving services were offered to God and St. Thomas.

So far the Bishop of Durham. But the story received a further confirmation by a coincidence scarcely less singular. When the subject of the miracle came to Canterbury, the judge who had tried him happened to be on a visit to the monastery. The meeting was purely accidental. The judge had been interested in the boy, and had closely observed him. He was able to swear that the eyes which he then saw were not the eyes which had been cut out by the executioner at Durham, being different from them in form and color.*

* Materials, vol. i., p. 423.

When the minds of bishops and judges were thus affected, we cease to wonder at the thousand similar stories which passed into popular belief. Many of them are childish, many grossly ridiculous. The language of the archbishop on his miraculous appearances was not like his own, but was the evident creation of the visionary who was the occasion of his visit; and his actions were alternately the actions of a benevolent angel or a malignant imp. But all alike were received as authentic, and served to swell the flood of illusion which overspread the Christian world. For four years the entire supernatural administration of the Church economy was passed over to St. Thomas; as if Heaven designed to vindicate the cause of the martyr of Canterbury by special and extraordinary favor. In vain during those years were prayers addressed to the Blessed Virgin; in vain the cripple brought his offerings to shrines where a miracle had never been refused before. The Virgin and the other dispensers of divine grace had been suspended from activity, that the champion of the Church might have the glory to himself. The elder saints had long gone to and fro on errands of mercy. They were now allowed to repose, and St. Thomas was all in all.*

Greater for a time than the Blessed Virgin, greater than the saints! — nay, another superiority was assigned to him still more astounding. The sacrifice of St. Thomas was considered to be wider and more gracious in its operation than the sacrifice of Calvary. Foliot, Bishop of London, so long his great antagonist, was taken ill a few years after the murder, and was thought to be dying. He was speechless. The Bishop of Salisbury sat by him, endeavoring to hear his confession before giving him the sacrament. The voice was choked, the lips were closed; he could neither confess his sins nor swallow his *viaticum*, and nothing lay before him but inevitable hell, when, by a happy thought, sacrament was added to sacrament — the wafer was sprinkled with the water of St.

† William of Canterbury mentions the case of a man in distress who prayed without effect to the Virgin. "Hujusmodi precibus," he says, "sæpius et propensius instabat; similiter et aliorum sanctorum suffragia postulabat, sed ad invocationem sui nominis non exaudierunt, qui retro tempora sua glorificationis habuerunt, ut et sua tempora propitiationis martyr modernus haberet. Pridem concurrerant quantum potuerunt et quantum debuerunt signis et prodigiis coruscantes: nunc tandem erat et novo martyri currendum, ut in catalogo sanctorum mirificus haberetur, Domino dispensante quæ, a quibus, et quibus temporibus fieri debeant. Eo namque currente et magna spatia transcurrente, illis tanquam veteranis et emeritis interim debebatur otium." — Materials, vol. i., p. 290.

Thomas, and again held to the mouth of the dying prelate. Marvel of marvels! the tightened sinews relaxed. The lips unclosed; the tongue resumed its office: and when all ghostly consolation had been duly offered and duly received, Foliot was allowed to recover.

"O martyr full of mercy!" exclaims the recorder of the miracle, "blessedly forgetful art thou of thy own injuries, who didst thus give to drink to thy disobedient and rebellious brother of the fountain of thy own blood. O deed without example! O act incomparable! Christ gave his flesh and blood to be eaten and drunk by sinners. St. Thomas, who imitated Christ in his passion, imitates him also in the sacrament. But there is this difference, that Christ damns those who eat and drink him unworthily, or takes their lives from them, or afflicts them with diseases. The blessed Thomas, doing according to his master's promise greater things than he, and being more full of mercy than he, gives his blood to his enemies as well as to his friends; and not only does not damn his enemies, but calls them back into the ways of peace. All men, therefore, may come to him and drink without fear, and they shall find salvation, body and soul." *

The details of the miracles contain many interesting pictures of old English life. St. Thomas was kind to persons drowned or drowning, kind to prisoners, especially kind to children. He was interested in naval matters — launching vessels from the stocks when the shipwrights could not move them, or saving mariners and fishermen in shipwrecks. According to William of Canterbury, the archbishop in his new condition had a weakness for the married clergy, many miracles being worked by him for a *focaria*. Dead lambs, geese, and pigs were restored to life, to silence Sadducees who doubted the resurrection. In remembrance of his old sporting days, the archbishop would mend the broken wings and legs of hawks which had suffered from the herons. Boys and girls found him always ready to listen to their small distresses. A Suffolk yeoman, William of Ramshott, had invited a party to a feast. A neighbor had made him a present of a cheese, and his little daughter Beatrice had been directed to put it away in a safe place. Beatrice did as she was told, but went to play with her brother Hugh, and forgot what she had done with it. The days went on; the feast was near. The children hunted in every corner of the house, but no cheese could be found. The nearest town was far off. They had no money to buy another if they could reach it, and a whipping became sadly probable. An idea struck the little Hugh. "Sister," he said, "I have heard that the blessed Thomas is good and kind. Let us pray to Thomas to help us." They went to their beds, and, as Hugh foretold, the saint came to them in their dreams. "Don't you remember," he said, "the old crock in the back kitchen, where the butter used to be kept?" They sprang up, and all was well.

The original question between the king and the archbishop still agitated men's minds, and was still so far from practical settlement that visions were necessary to convert the impenitent. A knight of the court, who contended for the Constitutions of Clarendon, and continued stubborn, was struck with paralysis. Becket came and bade him observe that the judge of truth had decided against the king by signs and wonders, and that it was a sin to doubt any further. The knight acknowledged his error. Others were less penetrable. The miracles, it was still said, might be deceptive; and, true or false, miracles could not alter matters of plain right or wrong. Even women were found who refused to believe; and a characteristic story is told, in which we catch a glimpse of one of the murderers.

A party of gentlemen were dining at a house in Sussex. Hugh de Morville was in the neighborhood, and while they were sitting at dinner, a note was brought in from him asking one of the guests who was an old acquaintance to call and see him. The person to whom the note was addressed read it with signs of horror. When the cause was explained, the lady of the house said, "Is that all? What is there to be alarmed about? The priest Thomas is dead: well, why need that trouble us? The clergy were putting their feet on the necks of us all. The archbishop wanted to be the king's master, and he has not succeeded. Eat your victuals, neighbor, like an honest man." The poor lady expressed what doubtless many were feeling. An example was necessary, and one of her children was at once taken dangerously ill. The county neighbors said it was a judgment; she was made to confess her sins and carry her child to Canterbury to be cured, where, having been the subject of divine interposition, he was "dedicated to God" and was brought up a monk.

Through the offerings the monastery of Canterbury became enormously rich, and riches produced their natural effect. Giraldus Cambrensis, when he paid a visit there a few years later, found the monks dining more luxuriously than the king. According to Nigellus, the precentor of the cathedral, their own belief in the wonders which they daily witnessed was not profound, since in the midst of them Nigellus could write deliberately, as the excuse for the prevalent profligacy of the churchmen, "that the age of miracles was past." It was observed, and perhaps commented on, that unless the offerings were handsome the miracles were often withheld. So obvious was this feature that William of Canterbury was obliged to apologize for it. "The question rises," he says, "why the martyr takes such delight in these donations, being now, as he is, in heaven, where covetousness can have no place. Some say that the martyr, when in the body, on the occasion of his going into exile, borrowed much money, being in need of it for his fellow exiles, and to make presents at court. Being unable to repay his creditors in life, he may have been anxious after death that his debts should be discharged, lest his good name should suffer. And therefore it may be that all these kings and princes, knights, bishops, priests, monks, nuns, all ages and conditions, are inspired by God to come in such troops and take so many vows on them to grant pensions and annuities." *

There is no occasion to pursue into further details the history of this extraordinary alliance between religion and lying, which forced on Europe the most extravagant sacerdotalism by evidence as extravagant as itself. By an appropriate affinity the claims of the Church to spiritual supremacy were made to rest on falsehood, whether unconscious or deliberate, and when the falsehood ceased to be credible the system which was based upon it collapsed. Thus all illusions work at last their own retribution. Ecclesiastical miracles are not worked in vindication of purity of life or piety of character. They do not intrude themselves into a presence to which they can lend no increase of beauty and furnish no additional authority. They are the spurious offspring of the passion of theologians for their own most extravagant assumptions. They are believed, they become the material of an idolatry, till the awakened conscience of the better part of mankind rises at last in revolt, and the fantastic pretensions and the evidence alleged in support of them depart together and cumber the world no more. We return to authentic history.

When the news of the catastrophe at Canterbury arrived in Normandy the king was for a time stunned. None knew better than he the temper of his subjects on the present condition of the dispute with the Church. The death of the great disturber was natural and may, perhaps, have been inevitable. Nevertheless, if the result of it, as seemed too likely to be the case, was his own excommunication and an interdict on his dominions, a rebellion in Normandy was certain, and a rebellion in England was only too probable. Firm as might have been his own grasp, his hold on his continental duchies was not strengthened by his English sovereignty. The Norman nobles and prelates saw their country sliding into a province of the island kingdom which their fathers had subdued. If they were to lose their independence, their natural affinity was towards the land with which they were geographically combined. The revolutionary forces were already at work which came to maturity in the next generation, and if Normandy and Anjou were laid under interdict for a crime committed in England and for an English cause, an immediate insurrection might be anticipated with certainty. The state of England was scarcely more satisfactory. The young princes, who had been over-indulged in childhood, were showing symptoms of mutiny. The private relations between an English sovereign and his family were not yet regarded as the property of his subjects; the chroniclers rarely indulged in details of royal scandals, and the dates of Henry's infidelities are vaguely given. Giraldus says that he remained true to his queen till she tempted her sons into rebellion, but Eleanor herself might have told the story differently, and the fire which was about to burst so furiously may have been long smouldering. As to the people generally, it was evident that Becket had a formidable faction among them. The humpbacked Earl of Leicester was dead, but his son, the new earl, was of the same temper as his father. The barons resented the demolition of their castles, which the king had already begun, and the curtailment of their feudal authority. An exasperating inquiry was at that moment going forward into the conduct of the sheriffs. They had levied tax and toll at

their pleasure, and the king's interference with them they regarded as an invasion of their liberties. Materials for complaint were lying about in abundance, and anything might be feared if to the injuries of the knights and barons were added the injuries of the Church, and rebellion could be gilded with a show of sanctity. The same spirit which sent them to die under the walls of Acre might prompt them equally to avenge the murder of the archbishop. Henry himself was a representative of his age. He, too, really believed that the clergy were semi-supernatural beings whose curse it might be dangerous to undergo. The murder itself had been accompanied with every circumstance most calculated to make a profound impression. The sacrilege was something, but the sacrilege was not the worst. Many a bloody scene had been witnessed in that age in church and cathedral; abbots had invaded one another at the head of armed parties; monks had fought and been killed within consecrated walls, and sacred vessels and sacred relics had been carried off among bleeding bodies. High dignitaries were occasionally poisoned in the sacramental wine, and such a crime, though serious, was not regarded as exceptionally dreadful. But Becket had but just returned to England after a formal reconciliation in the presence of all Europe. The king of France, the Count of Flanders, and the Count of Blois had pledged their words for his safety. He had been killed in his own cathedral. He had fallen with a dignity and even grandeur which his bitterest enemies were obliged to admire. The murderers were Henry's own immediate attendants, and Henry could not deny that he had himself used words which they might construe into a sanction of what they had done.

Giraldus Cambrensis, who when young had seen and spoken with him, has left us a sketch of Henry the Second's appearance and character more than usually distinct. Henry was of middle height, with a thick short neck and a square chest. His body was stout and fleshy, his arms sinewy and long. His head was round and large, his hair and beard reddish brown, his complexion florid, his eyes grey, with fire glowing at the bottom of them. His habits were exceptionally temperate; he ate little, drank little, and was always extremely active. He was on horseback at dawn, either hunting or else on business. When off his horse he was on his feet, and rarely sat down till supper time. He was easy of approach, gracious, pleasant, and in conversation remarkably agreeable. Notwithstanding his outdoor habits he had read largely, and his memory was extremely tenacious. It was said of him that he never forgot a face which he had once seen, or a thing which he had heard or read that was worth remembering. He was pious too, Giraldus says, *pietate spectabilis*. The piety unfortunately, in Giraldus's eyes, took the wrong shape of an over-zeal for justice, which brought him into his trouble with the Church, while to his technical "religious duties" he was less attentive than he ought to have been. He allowed but an hour a day for mass, and while mass was being said he usually thought of something else. To the poor he was profusely charitable, "filling the hungry with good things, and sending the rich empty away." He was *largus in publico, parvus in privato;* he spent freely in the public service and little on himself. As a statesman he was reserved, seldom showing his own thoughts. He was a good judge of character, rarely changing an opinion of a man which he had once formed. He was patient of opposition, and trusted much to time to find his way through difficulties. In war he was dangerous from his energy and his intellect. But he had no love for war, he was essentially a friend of peace, and after a battle could not control his emotion at the loss of his men. "In short," Giraldus concludes, "if God had but elected him to grace and converted him to a right understanding of the privileges of his Church, he would have been an incomparable prince." * Such was Henry, the first of the English Plantagenet kings, a man whose faults it is easy to blame, whose many excellences it would have been less easy to imitate — a man of whom may be said what can be affirmed but rarely of any mortal, that the more clearly his history is known the more his errors will be forgiven, the more we shall find to honor and admire.

He was at Argenteuil when the fatal account was brought to him. He shut himself in his room, ate nothing for three days, and for five weeks remained in penitential seclusion. Time was precious, for his enemies were not asleep. Lewis and the Archbishop of Sens wrote passionately to the pope, charging the king with the guilt of the murder, and insisting that so enormous an outrage should be punished at once and with the utmost severity. The Archbishop of Sens, on his own

authority as legate, laid Normandy under interdict, and Alexander, startled into energy at last, sent persons to the spot to confirm the archbishop's action, and to extend the censures over England. Henry roused himself at last. He despatched the Archbishop of Rouen and two other bishops * to explain what had happened, so far as explanation was possible; and as the danger was pressing and bishops travelled slowly, three other churchmen, the Abbot of Valaise and the Archdeacons of Lisieux and Salisbury, pushed on before them. On their first arrival these envoys were refused an audience. When they were admitted to Alexander's presence at last, the attempt at palliation was listened to with horror. Two of Becket's clergy were at the papal court, and had possession of pope and cardinals, and it appeared only too likely that at the approaching Easter Alexander himself would declare Henry excommunicated. By private negotiations with some of the cardinals they were able to delay the sentence till the coming of the bishops. The bishops brought with them a promise on Henry's part to submit to any penance which the pope might enjoin, and to acquiesce in any order which the pope might prescribe for the government of the clergy. An immediate catastrophe was thus averted. Cardinals Albert and Theodoric were commissioned at leisure to repair to Normandy and do what might be found necessary. To the mortification of Lewis the censures were meanwhile suspended, and the interdict pronounced by the Archbishop of Sens was not confirmed.

Henry on his part prepared to deserve the pope's forgiveness. Uncertain what Alexander might resolve upon, he returned to England as soon as he had recovered his energy. He renewed the orders at the ports against the admission of strangers and against the introduction of briefs from Rome, which might disturb the public peace. He then at once undertook a duty which long before had been enjoined upon him by Alexander's predecessor, and had been left too long neglected.

Ireland had been converted to the Christian faith by an apostle from the Holy See, but in seven centuries the Irish Church had degenerated from its original purity. Customs had crept in unknown in other Latin communions, and savoring of schism. No regular communication had been maintained with the authorities at Rome; no confirmation of abbots and bishops had been applied for or paid for. At a council held in 1151 a papal legate had been present, and an arrangement had been made for the presentation of the palls of the four Irish archbishoprics. But the legate's general account of the state of Irish affairs increased the pope's anxiety for more vigorous measures. Not only Peter's pence and first-fruits were not paid to himself — not only tithes were not paid to the clergy — but the most sacred rites were perverted or neglected. In parts of the island children were not baptized at all. When baptism was observed, it more resembled a magical ceremony than a sacrament of the Church. Any person who happened to be present at a birth dipped the child three times in water or milk, without security for the use of the appointed words. Marriage scarcely could be said to exist. An Irish chief took as many wives as he pleased, and paid no respect to degrees of consanguinity.* Even incest was not uncommon † among them. The clergy, though not immoral in the technical sense, were hard drinkers. The bishops lived in religious houses, and preferred a quiet life to interfering with lawlessness and violence. The people of Ireland, according to Giraldus, who was sent over to study their character, were bloodthirsty savages, and strangers who settled among them caught their habits by an irresistible instinct. But Ireland, religious Ireland especially, had something in its history which commanded respect and interest. A thousand saints had printed their names and memories on Irish soil. St. Patrick and St. Bride had worked more miracles than even the water of St. Thomas. Apostles from Ireland had carried the Christian faith into Scotland, into Iceland, and into Scandinavia.

The popes felt the exclusion of so singular a country from the Catholic commonwealth to be a scandal which ought no longer to be acquiesced in. In 1155 Pope Adrian had laid before Henry the Second the duty imposed on Christian princes to extend the truth among barbarous nations, to eradicate vice, and to secure Peter's pence to the Holy See; and a bull had been issued, sanctioning and enjoining the conquest of Ireland.‡

* The Bishop of Worcester was one of them. The Bishop of Worcester could explain to the pope why his inhibitory letter on the coronation had never been delivered in England.

* "Plerique enim illorum quot volebant uxores habebant, et etiam cognatas suas germanas habere solebant sibi uxores." — Benedict, vol. i., p. 28.

† "Non incestus vitant." — Giraldus Cambrensis, vol. v., p. 138.

‡ Irish Catholic historians pretend that the bull was

Busy with more pressing concerns, Henry had put off the expedition from year to year. Meanwhile, the Irish chiefs and kings were quarrelling among themselves. MacMorrough of Leinster was driven out, and had come to England for help. The king hesitated in his answer; but volunteers had been found for the service in Sir Robert Fitzstephen, Sir Maurice Prendergast, Sir Maurice Fitzgerald, Earl Richard Strigul, with other knights and gentlemen who were eager for adventure; and a Norman occupation had been made good along the eastern coast of Munster and Leinster. The invasion had been undertaken without the king's consent. He had affected to regard it with disapproval; and the Irish of the west, rallying from their first panic, were collecting in force to drive the intruders into the sea. The desirableness of doing something to entitle him to the pope's gratitude, the convenience of absence from home at a time when dangerous notices might be served upon him, and the certainty that Alexander would hesitate to pronounce him excommunicated when engaged in a conquest which, being undertaken under a papal sanction, resembled a crusade, determined Henry to use the opportunity, and at last accomplish the mission which Adrian had imposed upon him. After his return from Normandy, he passed rapidly through England. He collected a fleet at Milford Haven, and landed at Waterford on October 18, 1171. All Ireland, except the north, at once submitted. The king spent the winter in Dublin in a palace of wattles, the best lodging which the country could afford. In the spring he was able to report to Alexander that the obnoxious customs were abolished, that Catholic discipline had been introduced, and that the Irish tribute would be thenceforward punctually remitted to the papal treasury.

Could he have remained in Ireland for another year, the conquest would have been completed; but in April he was recalled to meet the two cardinals who had arrived in Normandy to receive his submission for Becket's death. The Irish annexation was of course a service which was permitted to be counted in his favor, but the circumstances of the murder, and Henry's conduct in connection with it, both before and after, still required an appearance of scrutiny. Not the least remarkable feature in the story is that the four knights had not been punished. They had not been even arrested. They had gone together, after leaving Canterbury, to De Morville's castle of Knaresborough. They had been excommunicated, but they had received no further molestation. It has been conjectured that they owed their impunity to Becket's own claim for the exclusive jurisdiction of the spiritual courts in cases where spiritual persons were concerned. But the wildest advocates of the immunities of the Church had never dreamed of protecting laymen who had laid their hands on clerks. The explanation was that the king had acted honorably by taking the responsibility on himself, and had not condescended to shield his own reputation by the execution of men whose fault had been over-loyalty to himself. Elizabeth might have remembered with advantage the example of her ancestor when she punished Davison, under circumstances not wholly dissimilar, for the execution of the Queen of Scots.

The king met the cardinals at Caen in the middle of May. At the first interview the difficulty was disposed of which was most immediately pressing, and arrangements were made for a repetition of the ceremony which had been the occasion of the excommunication of the bishops. Prince Henry and the Princess Margaret were again crowned at Winchester on the 27th of August by the Archbishop of Rouen and the Bishops of Evreux and Worcester, the same prelates who had gone on the mission to Rome.

At Avranches on the 27th of September, at a second and more solemn assembly, the king confessed his guilt for the archbishop's death. He had not desired it, he said, and it had caused him the deepest sorrow; but he admitted that he had used words which the knights had naturally misconstrued. He attempted no palliation, and declared himself willing to endure any penalty which the cardinals might be pleased to impose.

The conditions with which the cardinals were satisfied implied an admission that in the original quarrel the right had lain

a Norman forgery. The bull was alleged to have been granted in 1155: in 1179 it was acted upon. In 1171–2 a council was held at Cashel, in which the reforms demanded by Pope Adrian were adopted, and the Irish Church was remodelled, and a report of the proceedings was forwarded to Alexander the Third. In 1174 a confirmation of the original bull was published, professing to have been signed by Alexander. In 1177 Cardinal Vivian came as legate from Rome, who, in a synod at Dublin, declared formally in the pope's name that the sovereignty of Ireland was vested in the English king, and enjoined the Irish to submit *sub pœnâ anathematis*. It requires some hardihood to maintain in the face of these undisputed facts that the pope was kept in ignorance that the island had been invaded and conquered under a sanction doubly forged, and that Cardinal Vivian was either a party to the fraud, or that when in Ireland he never discovered it.

with the king. All the miracles at Canterbury had made no difference in this essential point. The king promised to continue his support to Alexander as long as Alexander continued to recognize him as a Catholic sovereign — as long, that is, as he did not excommunicate him. He promised not to interfere with appeals to Rome in ecclesiastical causes, but with the reservation that if he had ground for suspecting an invasion of the rights of the crown, he might take measures to protect himself. He promised to abandon any customs complained of by the Church which had been introduced in his own reign; but such customs, he said, would be found to be few or none. He pardoned Becket's friends; he restored the privileges and the estates of the see of Canterbury. For himself, he took the cross, with a vow to serve for three years in the Holy Land, unless the pope perceived that his presence was needed elsewhere. Meanwhile he promised to maintain two hundred Templars there for a year.

On these terms Henry was absolved. Geoffrey Ridel and John of Oxford, Becket's active opponents, whom he had twice cursed, were promoted to bishoprics. The four knights must have been absolved also, since they returned to the court, and, like their master, took the vows as crusaders. The monastic chroniclers consign them to an early and miserable death. The industry of Dean Stanley has discovered them, two years after the murder, to have been again in attendance on the sovereign. Tracy became justiciary of Normandy, and was at Falaise in 1174, when William the Lion did homage to Henry. De Morville, after a year's suspension, became again justiciary of Northumberland. Fitzurse apparently chose Ireland as the scene of his penance. A Fitzurse was in the second flight of Norman invaders, and was the founder of a family known to later history as the Macmahons, the Irish equivalent of the Son of the Bear.

But Henry was not yet delivered from the consequences of his contest with Becket, and the conspiracy which had been formed against him under the shelter of Becket's name was not to be dissolved by the spell of a papal absolution. Lewis of France had taken up Becket's cause, not that felonious clerks might go unhanged, but that an English king might not divide his own land with him. The Earl of Leicester had torn down Reginald of Cologne's altars, not alone because he was an orthodox Catholic, but that, with the help of an ambitious ecclesiasticism, he might break the power of the crown. Through France, through England, through Normandy, a combination had been formed for Henry's humiliation, and although the pope no longer sanctioned it, the purpose was deeply laid, and could not lightly be surrendered.

Unable to strike at his rival as a spiritual outlaw, Lewis found a point where he was no less vulnerable in the jealousy of his queen and the ambition and pride of his sons. His aim was to separate England from its French dependencies. He, and perhaps Eleanor, instigated Prince Henry to demand after the second coronation that his father should divide his dominions, and make over one part or the other to him as an independent sovereign. The king of course refused. Prince Henry and his wife escaped to Lewis *per consilium comitum et baronum Angliæ et Normanniæ qui patrem suum odio habebant.** The younger princes, Richard and Geoffrey, followed them; and a council was held at Paris, where the Count of Flanders, the Count of Boulogne, William the Lion, and the Earl of Huntingdon from Scotland, and the English and Norman disaffected nobles, combined with Lewis for a general attack upon the English king. England was to rise. Normandy was to rise. William was to invade Northumberland. The Count of Flanders was to assist the English insurgents in the eastern counties. Lewis himself was to lead an army into Normandy, where half the barons and bishops were ready to join him. The three English princes, embittered, it may be, by their mother's injuries, swore to make no peace with their father without consent of their allies.

For a time it seemed as if Henry must be overwhelmed. Open enemies were on all sides of him. Of his professed friends too many were disloyal at heart. The Canterbury frenzy added fuel to the conflagration, by bringing God into the field. The Earl of Norfolk and Lord Ferras rose in East Anglia. Lewis and young Henry crossed the frontier into Normandy. The Scots poured over the Tweed into Northumberland. Ireland caught the contagion uninvited; the greater part of the force which had remained there was recalled, and only a few garrisons were left. Had Alexander allowed the Church to lend its help, the king must have fallen; but Alexander honorably adhered to his engagement at Avranches.

The king himself remained on the Continent, struggling as he best could against war and treason. Chief Justice de Luci and Humfrey de Bohun faced the Scots beyond Newcastle, and drove them back to Berwick. In the midst of their success they learned that the Earl of Leicester had landed in Norfolk with an army of Flemings. They left the north to its fate. They flew back. Lord Arundel joined them, and the old Earl of Cornwall, who befriended Becket while he could, but had no sympathies with rebellion. They fell on the Flemings near Bury St. Edmunds, and flung them into total wreck. Ten thousand were killed. Leicester himself and the rest were taken, and scarce a man escaped to carry back the news to Gravelines.*

The victory in Norfolk was the first break in the cloud. The rebellion in England had its back broken, and waverers began to doubt, in spite of the miracles, whether God was on its side. Bad news, however, came from the north. The Scots flowed back, laying waste Cumberland and Northumberland with wild ferocity. At the opening of the summer of 1174 another army of French, Flemings, and insurgent English was collected at Gravelines to revenge the defeat at Bury, and this time the Earl of Flanders and Prince Henry were to come in person at the head of it.

An invasion so led and countenanced could only be resisted by the king in person. The barons had sworn allegiance to the prince, and the more loyal of them might be uncertain in what direction their duties lay. Sad and stern, prepared for the worst, yet resolute to contend to the last against the unnatural coalition, Henry crossed in July to Southampton; but, before repairing to London to collect his forces, he turned aside out of his road for a singular and touching purpose.

Although the conspiracy against which he was fighting was condemned by the pope, it had grown nevertheless too evidently out of the contest with Becket, which had ended so terribly. The combination of his wife and sons with his other enemies was something off the course of nature — strange, dark, and horrible. He was abler than most of his contemporaries, but his piety was (as with most wise men) a check upon his intellect. He, it is clear, did not share in the suspicion that the miracles at the archbishop's tomb were the work either of fraud or enchantment. He was not a person who for political reasons would affect emotions which he despised. He had been Becket's friend. Becket had been killed, in part at least, through his own fault; and, though he might still believe himself to have been essentially right in the quarrel, the miracles showed that the archbishop had been really a saint. A more complete expiation than the pope had enjoined might be necessary before the avenging spirit, too manifestly at work, could be pacified.

From Southampton he directed his way to Canterbury, where the bishops had been ordered to meet him. He made offerings at the various churches which he passed on his way. On reaching Harbledown, outside the city, he alighted at the Chapel of St. Nicholas, and thence went * on foot to St. Dunstan's Oratory, adjoining the wall. At the oratory he stripped off his usual dress. He put on a hair penitential shirt, over which a coarse pilgrim's cloak was thrown; and in this costume, with bare and soon bleeding feet, Henry, King of England, Lord of Ireland, Duke of Normandy, and Count of Anjou, walked through the streets to the cathedral. Pausing at the spot where the archbishop had fallen, and kissing the stone, he descended into the crypt to the tomb, burst into tears, and flung himself on the ground. There, surrounded by a group of bishops, knights, and monks, he remained long upon his knees in silent prayer. The Bishop of London said for him, what he had said at Avranches, that he had not commanded the murder, but had occasioned it by his hasty words. When the bishop ended, he rose, and repeated his confession with his own lips. He had caused the archbishop's death; therefore he had come in person to acknowledge his sin, and to entreat the brothers of the monastery to pray for him.

At the tomb he offered rich silks and wedges of gold. To the chapter he gave lands. For himself he vowed to erect and endow a religious house, which should be dedicated to St. Thomas. Thus amply, in the opinion of the monks, *reconciliari meruit*, he deserved to be forgiven. But the satisfaction was still incomplete. The martyr's injuries, he said, must be avenged on his own person. He threw off his cloak, knelt again, and laid his head upon the tomb. Each bishop and abbot present struck him five times with a whip. Each one of the eighty monks struck him thrice. Strange scene! None can be found more

characteristic of the age; none more characteristic of Henry Plantagenet.

The penance done, he rose and resumed his cloak; and there by the tomb through the remainder of the July day, and through the night till morning, he remained silently sitting, without food or sleep. The cathedral doors were left open by his orders. The people of the city came freely to gape and stare at the singular spectacle. There was the terrible King Henry, who had sent the knights to kill their archbishop, sitting now in dust and ashes. The most ingenious cunning could not have devised a better method of winning back the affection of his subjects; yet with no act of king or statesman had ingenious cunning ever less to do. In the morning he heard mass, and presented offerings at the various altars. Then he became king once more, and rode to London to prepare for the invader. If his humiliation was an act of vain superstition, Providence encouraged him in his weakness. On the day which followed it William the Lion was defeated and made prisoner at Alnwick. A week later came news that the army at Gravelines had dissolved, and that the invasion was abandoned. Delivered from peril at home, Henry flew back to France and flung Lewis back over his own frontier. St. Thomas was now supposed to be fighting for King Henry. Imagination becomes reality when it gives to one party certainty of victory, to the other the anticipation of defeat. By the spring of 1175 the great combination was dissolved. The princes returned to their duty; the English and Norman rebels to their allegiance; and with Alexander's mediation Henry and Lewis and the Count of Flanders were for a time once more reconciled.

Though the formal canonization of Becket could not be accomplished with the speed which his impatient friends demanded, it was declared with the least delay which the necessary forms required. A commission which was sent from Rome to inquire into the authenticity of the miracles having reported satisfactorily, the promotion of the archbishop was immediately decreed, and the monks were able to pray to him without fear of possible irregularity. Due honor having been thus paid to the Church's champion, it became possible to take up again the ever-pressing problem of the Church's reform.

Between the pope and the king there had never really been much difference of opinion. They were now able to work harmoniously together. A successor for Becket at Canterbury was found in the Prior of Dover, for whose good sense we have a sufficient guarantee in the abhorrence with which he was regarded by the ardent champions of Church supremacy. The reformation was commenced in Normandy. After the ceremony at Avranches the cardinals who had come from Rome to receive Henry's confession held a council there. The resolutions arrived at show that the picture of the condition of the clergy left to us by Nigellus is not really overdrawn. It was decided that children were to be no more admitted to the cure of souls — a sufficient proof that children had been so admitted. It was decided that the sons of priests should not succeed to their father's preferments — an evidence not only of the habits of the incumbents, but of the tendency of Church benefices to become hereditary. Yet more significantly the guilty bargains were forbidden by which benefices were let out to farm, and lay patrons presented incumbents on condition of sharing the offertory money; while pluralist ecclesiastics, of whom Becket himself had been a conspicuous instance, were ordered to give a third, at least, of their tithes to the vicars. At the close of the war, in 1175, a similar council was held at Westminster under the new primate. Not only the Avranches resolutions were adopted there, but indications appeared that among the English clergy simony and license were at a yet grosser point than on the Continent. Benefices had been publicly set up to sale. The religious houses received money for the admission of monks and nuns. Priests, and even bishops, had demanded fees for the administration of the sacrament; while as regarded manners and morals, it was evident that the priestly character sat lightly on the secular clergy. They carried arms; they wore their hair long like laymen; they frequented taverns and more questionable places; the more reputable among them were sheriffs and magistrates. So far as decrees of a council could alter the inveterate habits of the order, a better state of things was attempted to be instituted. In the October following, Cardinal Hugezun came from Rome to arrange the vexed question of the liability of clerks to trial in the civil courts. The customs for which Henry pleaded seem at that time to have been substantially recognized. Offenders were degraded by their ordinaries and passed over to the secular judges. For one particular class of offences definite statutory

powers were conceded to the State. The clergy were notorious violators of the forest laws. Deer-stealing implied a readiness to commit other crimes, and Cardinal Hugezun formally consented that orders should be no protection in such cases. The betrayal of their interests on a matter which touched so nearly the occupation of their lives was received by the clergy with a scream of indignation. Their language on the occasion is an illustration of what may have been observed often, before and since, that no order of men are less respectful to spiritual authority when they disapprove its decrees.

"The aforesaid cardinal," wrote Benedict and Walter of Coventry, "conceded to the king the right of impleading the clerks of his realm under the forest laws, and of punishing them for taking deer. Limb of Satan that he was! mercenary satellite of the devil himself! Of a shepherd he was made a robber. Seeing the wolf coming, he fled away and left the sheep whom the supreme pontiff had committed to his charge."*

The angry advocates of ecclesiastical license might have spared their passion. The laws of any country cannot be maintained above the level of the average intelligence of the people; and in another generation the clergy would be free to carry their crossbows without danger of worse consequences than a broken crown from the staff of a gamekeeper. "Archbishop Richard," says Giraldus, "basely surrendered the rights which the martyr Thomas had fought for and won, but Archbishop Stephen recovered them." The blood of St. Thomas had not been shed, and the martyr of Canterbury had not been allowed a monopoly of wonder-working, that a priest should be forbidden to help himself to a haunch of venison on festival days. In the great charter of English freedom the liberties of the Church were comprehended in the form, or almost in the form, in which Becket himself would have defined them. The barons paid for the support of the clergy on that memorable occasion by the concession of their most extravagant demands. Benefit of clergy thenceforward was permitted to throw an enchanted shield not round deer-stealers only, but round thieves and murderers, and finally round every villain that could read. The spiritual courts, under the name of liberty, were allowed to develop a system of tyranny and corruption unparalleled in the administrative annals of any time or country. The English laity were for three centuries condemned to writhe under the yoke which their own credulous folly had imposed on them, till the spirit of Henry the Second at length revived, and the aged iniquity was brought to judgment at the Reformation.

J. A. FROUDE.

* "Ecce membrum Satanæ! ecce ipsius Satanæ conductus satelles! qui tam subito factus de pastore raptor videns lupum venientem fugit, et dimisit oves sibi a summo pontifice commissas."

DA CAPO

BY MISS THACKERAY.

CHAPTER IX.

TABLE D'HOTE.

ALL the doors were opening, and the tenants coming out of their rooms with various appetites and attempts at adornment. Mrs. Bracy was arrayed in her most gorgeous hues, with an Indian scarf wound about her ample shoulders. But even Mrs. Bracy's colors faded before some of the amazing rainbows that appeared balanced on their high heels — puffed, frizzed, stuffed out with horsehair, tied in by strings, and dabbed with red and yellow — as, male and female, they descended the great staircase and took their places at the long table. Felicia's place was, as usual, by Jasper and Mrs. Bracy. Miss Harrow sat opposite with Mr. Bracy. The day before Baxter had been at Felicia's right hand, and all dinner-time they had chatted comfortably together. To-day she looked round at his empty place; it was filled by a well-worn foreign edition of Miss Harrow — a little haggard woman, with an anxious glance and appetite, who seemed to eat not because she was hungry, but because she had paid for her dinner, and was determined to have her money's worth. She looked at Miss Marlow once or twice. "They will give you ice if you demand them," she said, in tolerable English, to Felicia, "and you have a right to a wing of the chick. Some people have left since yesterday; you have been moved up by Mr. Franz. You are not such a large party as you were. I am all alone; yes, I am always travelling alone. Where is that gentleman who was travelling with you yesterday?"

Felicia felt her cheeks blush up sud-

denly, and then she blushed again with vexation.

"Interlachen is a dull place for gentlemen who can valk. Ah! here comes the salad," said the little woman, who saw it all, but pretended to be looking at her plate. "Do not pass it over. Mr. Franz makes such good salad. I tell the lady what good salad you make," said she to the head waiter; and then the little ghost-like woman began to devour the green lettuce in a curious, hurried way, as if she feared that her food might be taken away from her. "It is sad to be all alone in places like these," she went on, with a quick look at Felicia. "I make friends, but people go away, and it is all to begin again;" and she flirted out a great green fan, and began to whisk it backward and forward.

The great hall grew hotter and hotter; the voices seemed to rise, the clatter to increase; the waiters were flying about; a moraine of smoking dishes, of plates, and scraps of comestibles seemed hurled by some invisible means across the great counter at the far end of the room. Felicia's spirits sank lower and lower. All alone! Something in the woman's voice seemed to rouse a dismal echo in her own mind. The sight of that thin, nervous hand, flickering, darting at the salt, flying at the dishes, in the place of Aurelius's tranquil neighborhood, seemed to play upon every nerve. Where was he? what was he thinking? Would that poor woman never keep quiet? She had a longing to seize the skinny hand and tie it down. If Felicia disliked her unknown companion's eager movements, the firm grasp of Mrs. Bracy's fat familiar fingers was almost as trying.

"Do not talk so much to that horrid woman, my dear," said the poetess. "She wants to join on to our party. I will not have her impose upon you."

"Hush! she will hear you," says Felicia; for she saw the little bat-like lady's eyes fixed upon Mrs. Bracy's lips.

"My dear child, these people have no conscience," said Flora, crossly. "Edgar" (bending forward), "what do you say?"

"We shall have fine weather for our expedition to-morrow," shouts Mr. Bracy across the table. "This gentleman," pointing to a very red face and a flannel shirt, "has come just from Murren, by the Scheideck. He tells me the mountains are looking remarkably fine just now. Who knows what inspirations — eh, Flora my love?" And Mr. Bracy suddenly began confidentially, in an undertone, to his new-found friend, and Felicia could tell from the expression of the little man's eyebrows that he was speaking of the poems. Then her thoughts travelled away from the clatter of the present to the mountains of to-morrow. She impatiently longed to get to them, to breathe their silent, pure air, to escape this stifling valley, which had suddenly lost all interest for her, all vitality. Her heart sank, and sank, into some depth where pain began and no happiness could reach. What was Jasper saying? — did she feel faint? would she come out? A sort of mist fell between her and her neighbors.

"Take my fan," says the strange lady.

Mrs. Bracy looked at her young companion, and thought of proposing to leave the table with her; but the ices were coming round at that moment: they looked so refreshing in their pink pyramids that, on second thoughts, she helped herself largely. "This will do you good, dear Felicia," she said; but Felicia jumped up quickly, and escaped through a door which happened to be behind her chair. They found her sitting quietly on the balcony outside their sitting-room, when they rejoined her. She looked very pale; she was watching the floating snow-range in its evening dream of light and silver and faint azalea tints. Others had come out to see the wonders of that sunset.

The tongues of fire fell that night upon the company assembled in the garden of the Hôtel des Alpes at Interlachen — Parthians with many glances and chignons, clergymen and Jews and infidels taking their hard-earned holidays together, the light fell upon them all, and they all spoke in wondrous words of praise.

The very children seemed impressed. The fire leaped from snow to snow, dazzling in tender might. The mountain seemed to put out great wings, to tremble with a mysterious life and wonder; the snow-fields hung mid-air; the radiance of their summits seemed to spread into space. People came out from the long tables where they had been dining, streaming out into the garden where the miracle was to be seen. Voices changed, people changed; for a few moments one impulse seemed to touch all these human beings, calling them to something most mysterious and beyond them, utterly beyond expression or remembrance. Such a mood coming from without, imposed by inanimate things upon the living, seems to be some ancient history of revelation realized once again. Their faces

shone as they turned toward the mountain, burning with its light.

Upon a balcony of the hotel our poetess had appeared, shrouded in a long gauze veil. She stood, tablets in hand, and pausing for inspiration. Mrs. Bracy hated people to talk when she was taking notes. She desired some one who exclaimed in the room within to be silent now, and presently her own voice was the only one to be heard, upraised in shrill approbation of the solemn beauty of the evening.

One or two people had left the garden and the crowd, and crossed the road, and sat quietly upon the low parapet opposite, watching. The Swiss women, who seem hired at so much a day to walk slowly up and down the avenue, in starched sleeves, with go-carts, ceased to drag for a moment, and stopped to look. So did the sentimental German ladies with their hand-bags, and the eager English tourists, and the Swiss students in spectacles, their arms full of books, and the Russian and American travellers in their well-fitting clothes.

The glory passed on by degrees; an awful shadow rose from the valley, and mounted upward, rapid, remorseless. The beautiful flames of a moment sank away; the pinnacles still dominated, with their fiery points yet burning; an instant more, and all was over in that wonder-world, and the oil lamps resumed the reign upon earth.

The old diplomate on his terrace went back to his evening paper; two young girls at a window clasped each other's hands in youthful enthusiasm and regret; the lady in the balcony continued her remarks.

"Did you not observe the marvellous effect of that last, last tint, succumbing, as it were, to the great ——"

"It is a passion of atmospheric word-painting," interrupted Jasper, who had been hastily making a sketch.

There was a sudden burst of voices from the garden below. "Sugar, absolutely like sugar!" cried a young Russian lady to her partner of the night before.

"Sugar!" cried Mrs. Bracy; "do they liken that noble mass to sugar — that livid, living, loving ——"

"My dear Flora, do see after Miss Marlow!" said little Mr. Bracy, anxiously.

"It is nothing, nothing," said Felicia, trying in vain to hush her sobs. Suddenly the poor little thing had burst into tears, and all the gold stoppers out of her travelling-bag were produced in vain to soothe her troubles. Some remembrance of the night before had come over her, some sudden realization of her lonely state; and yet Baxter was only ten miles off, toiling up the mountain road to Grindelwald, as it lies on the mountain-side at the foot of the Eiger, and of the great Wetterhorn, with its crown of floating mist.

Mrs. Bracy may have had her suspicions, but she bided her time, and kept her words to herself. Felicia was petted, sent to bed, to all sorts of vague, agitated dreams of parting and desolate places, to dreary startings and remorseful awakenings as the night sped on with stars without, to the murmurs and muffled cries from the valley.

And then, after the long night, came morning, as it comes, with a sort of surprise; day breaking once more after the darkness of many hours; the sweet irresistible light reaching everywhere, into every corner — spreading across the valleys as they lie dimly in their dreams. It starts along the mountain-side; the shadows melt, disperse. Crisp ridges come into streaming relief; then the snow-fields are gained, and, lo! mysterious, simultaneous, behold the lights break forth on every side, and the dazzling white Jungfrau floats dominant, supreme, once more.

CHAPTER X.

AN OFFER OF MARRIAGE.

THEY set off for Grindelwald next day in two quick-trotting carriages. The horses were hung with cheerful little bells, and seemed well able to face the steep pass. "How delicious!" cried Felicia, as the wheels of her *Einspänner* rolled across the resounding boards of a wooden bridge. The young lady leaned forward eagerly, and the cool breeze from the torrent came blowing into her blushing face. She looked down with bright-eyed wonder at the foaming water rushing underneath.

"Look, mem," said Pringle; "what a picture!" And so it was, for the snow-capped mountain-heads uprose at the turning of the winding road; the grey river was eddying on its way, and the charcoal-burners had lit a fire that flamed down among the boulders by the running stream. It was almost evening when they reached their journey's end, coming up through the village street, with its busy little shops lighting up, and the friendly clusters of peasant folk gossiping after their day's work. The great mountains actually overhung the little village; huge rocks were rearing their mighty sides, all lined and seamed with intricate network of delicate

shadow; the pale, white crests clustered beyond the rocks. Felicia was almost overpowered by the pomp and stately splendor of this mighty court, to which she was not yet accustomed. She could hardly tear herself away from the terrace in front of the windows.

"Dinner, ladies, dinner!" cried Mr. Bracy, calling from the dining-room. As they came in he made them take their places, talking as usual while he attended to everybody's requirements. Jasper had just seen their friend Colonel Baxter's name in the book. "He slept here last night, and has gone on to the upper glacier," says Mr. Bracy, sharpening his knife.

Jasper had also seen the colonel's departure, not without satisfaction. He had been cross-questioning Georgina in the *Einspänner* coming up.

"There was something," Georgina owned, confidentially. "They had a long, long conversation. I think she is angry."

"She wants a protector," said Jasper, thoughtfully, twirling the silver ring upon his first finger.

I think the same evil imp which so maliciously prompted Felicia, now involved the unfortunate painter in his toils, and began to whisper to him that, Aurelius being gone, Jasper's own hour had come. It was for him to make Felicia forget the faithless colonel. No one knew for certain what had happened; that Felicia was changed and preoccupied was evident to them all. Jasper ate his dinner as usual, but ostentatiously drank a great deal of wine. He began to turn sentimental; from sentimental art to artistic sentiment the step is but short. The next day was Sunday. The English service was duly held in the dining-room of the hotel; the dining-room tables were rolled out of the way, the plates were put inside the wooden dresser, the chairs were set out in three rows, the blinds were drawn halfway down, and a few straggling travellers who came into the room retired again, some discreetly, some blundering, on finding the usual traffic suspended by the congregation. The bell of the village church had been going for an hour before, and Felicia had looked rather wistfully at the figures passing quietly up the street to the Lutheran service.

When the dining-room assemblage was over she hurried out of the house into the open air, oppressed by the incongruity of the form in which a feeling had been expressed that seemed to her almost incompatible with the associations of the place and its appurtenances. As she left she heard the clink of glasses, saw the waiters busily engaged in spreading the dinner-tables once more, and then she had escaped and was walking up the village street toward the little churchyard, across which came the strain of a hymn sung by many voices. Felicia went to the door, and looked in at the quiet old building, where a great number of the villagers were assembled each in his place. The brown-coated men were on one side, and the women filled up the other, the old ones in their coifs, the young ones with their pretty brown braids tied with velvet. The preacher was ascending his pulpit. It was very quiet and decorous. The very bareness of the church seemed to be more impressive than any tawdry ornament. Felicia waited, but she could scarcely follow the German of the pastor, and so she walked on a little way, turning one thing and another over in her mind. She came at last to a narrow bridge across a stream, and as she stood looking thoughtfully down at the rushing water, she heard a step, and looking round, saw Jasper in his riding-suit. He came solemnly up, and then, to Felicia's dismay, he began a long and desultory speech, in which figured gem-like flames of twin lives, rosy raptures of love-greeting, and double stars encircling their own progression. Miss Marlow might not have understood this as a serious proposal had not the unlucky youth seized her by the hand and attempted to thrust the large silver ring which he always wore on to her finger. Felicia fairly lost her temper, and snatched her hand away. What! she had parted from the only man she had ever cared for, in order to be insulted by this absurd and ridiculous supposition! It seemed like a judgment upon her, a mockery of fate. "The companions you have chosen!" she seemed to hear Aurelius's voice saying. What would he say if he were there now?

"How dare you ask me to marry you," she cried, "when you know you do not care for me one bit? Do you know I might have married some one who has loved me for years, if I had not been ill-advised, if I had not been a fool and thrown away my best chance? And do you suppose I should think of marrying you," cried Felicia, "who do not care for me, and for whom I do not care?" And she turned and began hurrying back, through a shower of rain, toward the hotel. Jasper seemed possessed, and went on protesting in the language of a troubadour rather than of a reasonable being. By

this time they had reached the church again. "Do leave me!" cried Felicia, stopping short. "Don't you see I want you to go?" and as she spoke she stamped her foot in a fit of most unlady-like passion; then as suddenly burst into tears. The good old preacher's voice was droning on peaceably meanwhile inside the church, and Felicia's explanations might have been continued even more fully if the sermon had not suddenly come to an end, and the congregation issued forth, opening its umbrellas, walking off with short sturdy legs, tucking up its ample petticoats and trousers. The men, in their brown suits and clumsy boots, looked like good-natured bears trotting down the wet road; the women, with their pretty shining plaits, kind faces, and quaint lace snoods, were like figures out of some long-forgotten dream. They passed on, the younger ones in their white sleeves and black velvet bodices, the elder women wrapping their cloaks around them. Most of them were going straight from the service to their Sunday gathering at the tavern by the bridge. Disconcerted Jasper marched off with the crowd, leaving Felicia to get home as best she could. She found him, however, waiting for her at the entrance of the hotel.

"I'm afraid I carried off the umbrella," he said, with an uneasy laugh. "I've waited to tell you that — er" (here he looked very red and foolish) "you quite misunderstood me, Miss Marlow. You didn't do me justice — indeed you didn't. This shall make no difference on my part, and I hope you will keep a fellow's confidence sacred."

"I have certainly no wish to repeat what has happened," said Felicia, still unrelenting.

"I shall start early to-morrow," said Jasper, irritated. "After a day alone in the mountains, I shall know how to master my feelings. Perhaps if I meet Colonel Baxter," he added, "you would like me to send him down."

This was said with a mixture of feminine spite and masculine jealousy. He felt he had revenged himself on Miss Marlow. Felicia did not answer; she looked Jasper indignantly in the face, and swept past him haughtily to her own room. Poor Felicia! she began to find her circumstances somewhat trying. Mrs. Bracy was especially snappish that evening; Georgina looked tearful and reproachful. Miss Marlow wondered whether Jasper had kept his own sacred confidence. It was quite a relief when kind little Mr. Bracy bustled in with a guide and a programme for the following day.

"What do you say to seeing something of the ongvirongs? We might all start off to meet our artist to-morrow on his return. We can lunch at the châlet at the entrance to the upper glacier — excellent cookery, I am told; fine view of the mountains. Suit you — eh, Flora my love?"

Flora answered severely that she certainly should not go; she needed repose. Then she added, with intention, "Probably Felicia would also wish to remain behind?"

Nothing was farther from Felicia's wish. She merely said she would like to see the upper glacier. Three mules were accordingly ordered, with three brown guides to match.

They were somewhat late in their start next morning. At last they got off, the ladies in their improvised skirts, Mr. Bracy trotting faithfully by their side in knickerbockers, and with an ice-axe which he had borrowed, but which he found some difficulty in managing. After passing the church and the village, and crossing the stream, of provoking associations, the way led up a narrow ledge cut along the side of the rock. The path rose abruptly, and the great plain seemed to sink away at their feet. The mules stumbled on steadily; and, after some half hour's arid climb, the path, with a sudden turn, led into a burst of gentle green and shade and sweetness. Mosses overflowed the huge granite stones; streams rippled; the flowers which were over down below still starred white among the rocks; ferns started from the cracks in the huge fallen masses; the path wound and straggled on across meadows into woods of fragrant pine, flowing green and flowering light, until at last the travellers reached a wide green alp, covered with herds of browsing cattle, open to the clouds, and clothed with exquisite verdure and silence.

There is a little erection, built at the summit of the great alp for travellers to rest, and to eat wild strawberries if they will, while they admire the noble prospect. Felicia dismounted here, and went on a little way ahead into a wood of mountain ash and birch and chestnut. It seemed enchanted to her; so were the tree stems, and so was the emerald turf, still sparkling with the heavy morning dew. Every leaf seemed quivering with life. On every side the sweet abundance lay — tender little stems bearing their burden of seed or flower, leaves veined and gilt and bronzed. The eyebright, with its gentle

velvet marks, sparkled among the roots of the trees; money-wort flung its golden flowers; grass of Parnassus lit its silver stars. Everything was delicate and tender in fragrant beauty. A little higher up Felicia could see the crimson berries growing among gray stones, hairy mosses, and pine roots. The leaves were like crimson, the fruit glowing like rubies. A little peasant girl was climbing down the bank with a bunch of late wood strawberries. The child's little finger seemed the only ones that should pluck such fairy-work. Felicia took the bunch of crimson fruit, and gave the little girl, not money, but a little chain of beads she happened to wear on her wrist. The child clapped her hands, and ran away as hard as her sturdy legs could carry her. Then came the mules and the guides climbing up the road, and the cavalcade set forth once more.

CHAPTER XI.

FROM THE CHALET.

HIGH up at the end of a long winding mountain pass stands a little châlet, where cutlets are grilling, guides sit sipping their wine and cracking their jokes in the kitchen. The parlor with its wooden walls, wooden tables and benches, is filled by caravans of travellers; some are on their way to the glacier, others are returning home; everybody is more or less excited, exhausted, hungry, discursive. The wooden hut echoes with voices, with the clatter of steel upon earthenware. Sometimes, as the kitchen door swings upon its hinges, the guides begin a sort of yodeling chorus; sometimes an impatient horse strikes up a snorting and pawing on the platform outside. From the terrace itself you may look across a great icy abyss to the mountains rising silent and supreme. But the châlet is a little commonplace noisy human oasis, hanging among the great natural solemnities all about — mighty rocks striking their shadows age after age, deserted seas that seem to have been frozen as they tossed their unquiet waves in vast curves against the summer sky: a wide valley blinked at by our wondering eyes as we try to name this or that glittering point. Some one fires off an old blunderbuss, and the echo bangs down among the rocky clefts, striking and reverberating; and then, perhaps, the host comes out courteously to announce that our portion of bread and cheese is served, and hungry travellers forget echoes, fatigue, and wonder in the absorbing process of luncheon. The German party were enjoying potato soup, and shouting over their dish as the ladies entered.

"Here is our table," says Mr. Bracy. "Kalbflesh, hey! I hope you ladies are not tired of veal cutlets." Then, lowering his voice: "Our friend from Berne. I knew him at once — very much altered, poor man; sadly burned by the sun. Has been through a great deal of fatigue since we last saw him."

Felicia looked, and could scarcely recognize their fellow-traveller, so scorched and seamed, so ripped and hacked, was he. His lips were swelled, his eyes were crimson, his wild tumbled hair hung limp about his face, his neat tight-fitting clothes were torn and soiled, burst out at knees and elbows; his enamelled shirt-collar alone remained intact, except that a glittering crack in one place showed the steel. A more forlorn object it would be difficult to imagine. He himself, however, seemed well satisfied with his appearance, and adventures even more colossal than he had hoped for. He had lost his way up among the rocks the evening before, having scrambled up to see the sunset. Then came the darkness. He had been able to descend only by the most desperate heroism.

"He was a madman to put himself into such a situation," said the host, confidentially, to Miss Marlow, as he dusted her plate and wiped a glass which he set before her. "I discovered him by chance. Half an hour later it would have been too late; we could have done nothing. I sent our man off to help him across the glacier. The Herr saw him coming, and called out, 'Have you food?' Peter, our man, said, 'Yes; I have veal you can eat, and gain strength to return.' He came back quite exhausted, and has been drinking all day to refresh himself. Travellers should not go into such places without guides; they get themselves into trouble, and we are blamed. Only this morning two gentlemen set out alone. One had spent the night here — an English colonel; the other arrived from Grindelwald. I said to him, 'Take Peter to show you the way to the upper glacier.' Not he. But it is not safe."

"Which way did they go?" said Felicia, putting down her knife and fork, and looking up into the host's weather-beaten face.

"How can I tell?" said he; "or where they may be now?"

"It couldn't be Jasper," said Mr. Bracy, rather anxiously; "he wouldn't have done

anything rash. Just ask the man what sort of traveller it was, my dear."

"One was black and somewhat silent," said the host — "military, bear-like."

"That couldn't have been Jasper," said Mr. Bracy, relieved.

"And the other?" said Miss Harrow.

"The second" said the man, doubtfully — "he was strangely dressed. He wore a feather, and seemed somewhat out of the common — an actor, perhaps; large ears, like Peter's yonder."

Felicia hoped that Mr. Bracy did not understand, and hastily asked whether they had not written their names in the travellers' book; and sure enough, there upon the long page were the two signatures, Jasper's curling J's and Baxter's close writing. "Jasper is sure to be back," said Mr. Bracy, slightly disquieted still; "he is very careful about keeping people waiting; his aunt has taught him punctuality. He has gone sketching somewhere, or forgotten the time. Of course I don't know anything about the colonel. Very odd of him, wasn't it, to leave us as he did without a word?"

"Very odd," said Felicia, faltering a little. They sat over luncheon as long as they could, and then ordered up coffee to pass the time; and then Felicia left the other two, and went in front, and stood gazing at the great hopeless wall of mountains.

"You don't mind waiting a little for him?" said little Mr. Bracy, fussing up presently. "It is getting rather late, but I'm afraid my wife might be anxious if we went back without the boy. There's a nice bench this way, and an excellent telescope, one of Casella's, if you wish to look through — excellent maker, you know." Felicia eagerly acccepted Mr. Bracy's suggestion. Was it some faint hope that Baxter might return, was it anxiety for Jasper, that made her so reluctant to leave the place? Not long after, Mr. Bracy disappeared, again to reappear in excellent spirits. A party had just arrived — two American gentlemen and their guide. They brought news of Jasper. Not very far off they had passed an artist sketching the crevasses under an umbrella.

"It must have been Jasper," says Mr. Bracy. "Poor dear fellow, how hard he works! I must say I wish he would come down. I have a great mind to go a little way to look for him, if you two girls don't mind being left." Felicia assured Mr. Bracy that she had no objection whatever to being left, and, in truth, drew a great breath of relief when she found herself at last alone. But it was only for a minute; then the host came up and asked her to look through his glass, and Felicia, not liking to refuse, did as he directed, and peeped through the long brass tube. At first everything looked blurred and indistinct; but a little shifting and turning dispelled the clouds by degrees; then clearer and well-defined images grew out of the confused floating visions that bewildered her at first. Then, little by little, she became absorbed in this new wonder-world into which she had come as by a miracle. She forgot the little stage on which she stood; she heeded not the confusion of sounds round about her as she gazed, every moment more and more absorbed, into the spirit of that awful silence and snowy vastness which seemed to spread before her. She seemed carried away on unknown wings into vast regions undreamed of hitherto — snowy cavities, interminable gorges haunted by terrible shrouded figures trailing their stiff grave-clothes, and bending in an awful procession. Then came great fields of glittering virgin snow blazing in the sun; then perhaps a narrow track stitched by human footsteps, curiously discernible. Felicia could follow the line for a while, then she lost it, and again it would reappear, ever ascending, to the foot of a great gully, where all traces seemed lost.

"How absorbed you are!" said Georgina's voice at her ear. "Can you make anything out? May I have a look?" Felicia did not answer. She was trembling convulsively; then suddenly seized the other woman's wrist in a tight clutch. "I see something. Oh, Georgina, for heaven's sake, look, and tell me what you see!" But Georgina, looking, shifted the great glass, and could not adjust it again. Felicia, wildly ringing her hands, began to call for a guide, for any one who knew. "I saw a man hanging to a rock, a tremendous rock," she said. The guides and the host all came up in some excitement, and eye after eye was applied. "You see the track; follow the track lower down, lower down," cried Miss Marlow. "Do you see nothing?" and then, when none could find the place, she pushed the last-comer away, and with trembling hands followed again the tiny thread she had discovered, recalling each jutting peak and form, and there was the great rock shining in the sun, but the man was there no longer. "I saw him, I tell you," she cried. "He is killed; he has fallen. Oh, Georgina, it may have been Colonel Baxter!" and she stamped in an

agony of terror. Georgina, with pale lips, faltered something. The guides tried to reassure the ladies. It may have been fancy; people often were mistaken. "I tell you I saw him slip," cried Felicia; and old Johann, an experienced guide, looked, paused, and looked again. "It is a nasty place," said he, looking puzzled. "It was close by there that we met the Englishman with his paint-box. That is our track the lady has been following, but there is another beside it. I cannot venture to say she is mistaken." Felicia's convictions seemed to have spread to the guides. They examined the track again and again, began talking the matter over. Two of them presently came forward and proposed that they should go off then and there and see if there was anything to be done. "It is like last night's experience over again," said the host. "The sun will be setting in a couple of hours; you must take lanterns if you go, for you won't be back by daylight; and what can you do if so be the man has fallen? What did I say about people's foolhardiness?" he continued, turning to Georgina. "Your papa has taken Peter, our man, with him; that is something reasonable. If this is one of the English travellers I told you off who went off alone, it will show you that I do not speak without thinking."

Poor Mr. Bracy came back with Peter in another hour, to share the general consternation. His first words were to inquire whether Jasper had returned, and then he was told of what had occurred. He kept up with great courage before the girls, declaring all would be well, but his looks belied his words. His face was pale and drawn, the poor little man stood with one helpless eye applied to the telescope long after the darkness had fallen, and it was impossible to distinguish any object at three yards' distance.

Felicia's secret fears were for Baxter, though the others maintained that it must have been Jasper she had seen. As the hours went on, and the painter did not return, it seemed more and more likely that they were right. Baxter was safe enough, if she had but known it. He had not even been alone. He had been all day with the guide whom he had appointed to meet him. It was poor Jasper whose peril had been revealed in that horrible minute.

Baxter was quietly returning with his friend Melchior, the guide, from a long day's walk in the snow, when he happened to see Jasper sitting perched at his easel on a rock, and sketching the surrounding abyss.

"There is a man I wish to avoid," said the colonel to his guide; and the man laughed, and proposed that they should make a short circuit and come back to the track just below where the painter was at work.

Jasper had not returned to luncheon, on purpose; he wished to cause some slight anxiety. Now that the light was beginning to fail, he began to feel the want of his dinner; but a fancy seized him to climb a huge rock that rose abruptly behind him, and to get one last view of the surrounding country before going down. He had left his easel but a few yards behind him; he climbed a steep crag with great agility; with some exertion he got round a sharp projecting block which led, as he thought, to a small rocky platform, and then suddenly his foot slipped. He had fallen a little way, righted himself with difficulty, and slipped again. Jasper was frightened and completely sobered, perhaps for the first time in his life.

There was no one looking on. There were a few rocks and pine-trees down below; overhead the great crags were fading from moment to moment into more terrible impassivity. He could scarcely imagine how he had ever reached his present perilous position. Was it he himself, Jasper Bracy, who was here alone and clinging desperately for life to the face of this granite boulder? What would they all say at home if they knew of his position? He could not face the thought, for he had a heart, for all his vagaries. He seemed to realize it all so suddenly — his aunt's exclamations, his uncle's wistful face, came before him. "Perhaps of them all, he will be the most cut up," thought Jasper; "and poor Georgina, she will not forget me."

All this did not take long to pass through his mind as he clung desperately to the ledge on which he had slipped; even to an experienced mountaineer it would have been an ugly pass. The rocks were hard as iron, worn smooth by a glacier; there seemed to be no foothold; the evening was fast approaching; there was no chance of any one descrying him from the distant châlet.

Jasper tried to say his prayers, poor boy; but he could not think of anything but the burning pain in his hands and back, the choking breath which seemed so terrible. His head swam, he knew that the

end was come, he could hold on no longer. Perhaps five minutes had passed since he fell, but what a five minutes! blotting out the whole of the many, many days and years of his life. He looked his last at the rock shining relentless; he closed his eyes. I think it was at this moment that Felicia was screaming for assistance. If only she had kept her place a moment longer, she would have seen help at hand.

Something struck his face. A voice, not far off, said, very quietly, "Be careful. Can you get at the rope? We will pull you up. One! two! three!" Hope gave him renewed strength, and with a clutch he raised his left hand and caught the saving rope. For three seconds he was drawn upward, scraping the rock as he went; happily its hard smoothness now was in his favor. Bleeding, fainting, he found himself drawn up to a ledge overhead. His senses failed.

When he came to himself, Baxter was pouring brandy down his throat, and the guide was loosening his clothes. They had seen him in the distance. The guide had suddenly stopped short, and exclaimed, —

"Good heavens! that man must be mad. Where is he going to?" and pointed out Jasper's peril to the colonel.

"We must go back," said the colonel, hastily.

"I think I owe you my life," said Jasper, hoarsely, but quite naturally, looking up with bloodshot eyes at Aurelius.

"Nonsense!" said the colonel, kindly; "it was Melchior here who spied you on your perch."

CHAPTER XII.

DA CAPO.

WHILE the travellers delay, the rocks are lighting up to bronze, to gold, to purple. The Wetterhorn rises, marked and crimson-lined; the Mittelburg rocks are turning to splendid hue, the Vieschorns answer like flaming beacons, and the great Eiger is on fire. But the hills to the east are shadowy mist upon palest ether, and a faint cloud, like a sigh, drifts along their ridge. So night comes on with solemn steps. Now the Wetterhorn is dying, the Vieschorn pales to chillest white, though its summits are still flashing, rose-color, flame-like, delicate. The people look up on their way; figures in the valley stand gazing at the wondrous peace overhead; they gaze and drink their fill of the evening, and then the lingering benediction is gone with a breath. The rocks are cold and dead, the ether is changed from incandescence to veiled dimness. Nothing seems left but the sound of the stream, which before was hardly heard, but which now takes up the tale, rushing through the ravine fresh and incessant. A star appears, the washerwoman's window lights up in the valley.

"Will you tea in the balcon?" the waiter asks, coming up with a lamp, which he sets on the little table by Flora's elbow.

"Nong," says the lady; "dedong;" and she looks at her watch and wonders why they are all so late. Then again she reflects with some satisfaction that Mr. Bracy and the two girls are not likely to get into much mischief alone, and *that* colonel is safe out of the way. Mrs. Bracy begins to grow hungry and impatient for her family's return. They are quite absorbed in their own arrangements; they forget everything else. As usual, the spirit suffered from the matter's delay, and the temper also, being frail and troublesome, seemed to trouble our poetess. When Pringle, Felicia's maid, came into the *salle* to ask, a little anxiously, at what hour Mrs. Bracy was expecting them home, Flora snubbed Pringle as that personage was not accustomed to be snubbed, and sent her off in high dudgeon. A minute after, the woman returned, quite changed, with a curious, scared face.

"Oh, mem!" she said, "come out here; there's a boy from the shalley. He says — he says — I can't understand. The cook is talking to him. Oh, mem!"

Flora jumped up, with more activity than she usually showed, and hurried out into the passage, where, surely enough, a crowd stood round a boy dressed in common peasant's clothes, who was emphatically describing something — a fall — a scream. Poor Mrs. Bracy turned very cold, and forgot to analyze her emotions as she pushed her way through the guides and waiters.

"What? what?" she said. "Speak English, can't you? What does he say?"

"Your gentlemen 'ave met with accident," said one of the waiters. "De young lady she see him — call for guide to 'elp; dis young man come down to tell you."

Then the young man said something in an undertone.

Poor Mrs. Bracy, almost beside herself now, asked, with a sort of scream, who was hurt. Was it her husband? was it Jasper?

The boy didn't know, the waiter explained. "He could tell nothing, only that it was a gentleman who had fallen, a long way from the Kulm Hotel. Would ma-

dame please give a *Trinkgeld?* — he had run all the way with the news."

For the next two hours the poor old poetess, brought back to every-day anxiety and natural feeling, suffered a purgatory sufficient to wipe out many and many an hour of selfish ease and hallucination. She ordered guides, brandy, *chaise à porteurs*, for herself and Pringle. No porters were to be had at that hour — not, at least, in sufficient numbers to carry so heavy a lady over the dark and uneven roads. Horses, then. Two tired steeds were at length led up to the door, upon one of which the old lady was hoisted, Pringle devotedly following. So they set forth heroically, with two guides apiece, with brandy, with lanterns, and blankets, which Mrs. Bracy insisted on taking.

I cannot find it in my heart to describe that long, black, jolting, terrifying progress, the bumps and slips, the horrors, the brawling steams, the crumbling mountain-ways along which they climbed.

"Fear nothing," said the guides; but, as they spoke, Pringle's horse came down on its knees, and Pringle gave a wild shriek. So they toiled on, over resounding bridges, up slippery paths, under dark thickets, coming out into a great open alp. Suddenly two huge black forms seemed to rise up and bear slowly down upon them.

The guides only laughed rudely. "*Kühe, kühe*," said they, and then by degrees horns loomed out, and a heavy snuffling breath came through the darkness. The poor women were somewhat reassured. I do not know whether they ever would have reached the top of the long weary pass which mounted in a long rocky ladder before them. Mrs. Bracy's horse had in its turn come down, and been roused with many an oath, as it stood trembling beneath its quavering burden. One lantern had gone out and could not be lighted again. Pringle was crying — when suddenly there was a pause; one of the porters said, "Hist!" The second stopped swearing at the horse to listen.

"What is it?" says Mrs. Bracy.

"People coming this way," said the man.

"I hear 'em talking, mem," says Pringle, hysterically.

Every moment the sound came clearer and nearer. At a turn of the path a light appeared overhead, then another, and another; the tramp of feet, the sound of men talking, and then — could it be? — a laugh coming out of the darkness — a real, hearty laugh.

Poor old Flora threw up her arms as she recognized her husband's voice, and burst into hearty, unaffected tears of relief, excitement, and fatigue.

All must be well, or Mr. Bracy would not have burst out laughing in the dark, at such an hour, on such a road. A minute more, it was a scene of greeting, exclamations, embraces, a snorting of horses, a waving of lanterns. Mr. Bracy was ahead, trotting along, supported on either side by a porter. He was much overcome, and filled with admiration of his wife's devotion. There was something peculiar in his manner.

"Noble woman!" said he. "What exertion! You should have some champagne, Flora my love," he said; "it will revive you. Quite revived by it myself. Have you brought any with you? Baxter, do you happen to have a bottle left?"

Baxter! Poor Mrs. Bracy turned in horror and bewilderment, and by the lantern's light descried only too plainly Baxter and Felicia coming down the path together triumphantly arm in arm.

Shall I attempt to describe the descriptions, or to explain the explanations? Some seemed to be of so extraordinary a character that poor Mrs. Bracy had to exercise all her self-command even to listen to them. But Jasper's safety had melted the poetic heart, and she was really grateful to the colonel for the rescue. Of course, as Baxter said, any one would have done as much; but not the less there do happily exist certain unreasonable emotions of gratitude in human nature which influence it out of the balance of exact debtor and creditor account.

"Fact was, my dear," said Mr. Bracy, looking around and dropping his voice, "the poor dear girl had been so anxious and worked up on Jasper's account that when they all came suddenly on to the platform, just as we had almost given them up, she and Georgina both shrieked, and Felicia, I believe, subsequently fainted into somebody's arms. The colonel caught her; it was all a confusion; I was myself rather overcome. I was much concerned when Jasper told me afterward the guides had been talking about Felicia's emotion. If you had been there, it would have been most desirable. However, Felicia soon recovered; we gave her champagne; and after our hasty meal that champagne was really excellent under the circumstances. Curious thing, Flora my love — the corks come out at a touch up in those high places. It might interest you to see ——"

"Do, Edgar, keep to the important subject in question," said Flora piteously.

She was too severely crushed to be severe.

"You mean about — h'm — h'm" — said Mr. Bracy, getting rather breathless. "Jasper himself first gave me a hint, and then — the fact is, Baxter himself came up in the most gentlemanly manner, and told us both that it was an old affair, that until now he had never had any certainty of his affection being returned."

"And you, Edgar, placed in this most responsible position, what did you say?" asked his wife.

"I said, 'I'll only ask you one question. Which of them is it? They both screamed.'"

Here Mr. Bracy stopped and looked very much confused, if his face could have been seen. But a detachment from the rear now came up to his rescue: Georgina walking — she was too nervous to ride — and Jasper comfortably jogging down upon her mule.

The lovers meanwhile had wandered off, preceded by their lantern, down some short by-road; they seemed to have wings, some power, that made them forget fatigue, darkness, length of way — that bore them safe over stones and briers from step to step along the steep and slippery road. Little Felicia felt no weariness, no loneliness: she had reached home at last.

They came to the little wooden bridge some ten minutes before the rest of the party, and then they stopped for a moment, while Melchior walked on to announce the safe return of the whole party. It was a wonderful minute, silent and shadowy and fragrant, with stars streaming in the dark sky overhead. The water was rushing; as it flowed, it seemed to flash with the dazzling lights of heaven, and to carry the stars upon its stream. They were alone; they were no longer alone, and a blessing of silent and unspeakable gratitude was in their hearts.

And so, after all this long doubt, Aurelius and Felicia had come to the best certainty that exists in this perplexing world — the sacred conviction of love: love, that belongs to all estates and conditions of men, not only to the married, not only to the unmarried, but to all those who with grateful hearts love each other.

From The Gentleman's Magazine.

THE CASE OF LORD DUNDONALD.

On the 21st of February, 1814, about one in the morning, a man was knocking and shouting for admission at the door of the Ship Inn at Dover. There was war abroad; the times were critical and troublous; the night was dark and boisterous. No one had watched that man's approach; none could say from whence he came. Those were not days when the arrival of passengers from the Continent could be timed with nicety. The British mariner had not then the engineer for an ally; he was dependent upon wind and tide. Moreover, he was beset with enemies. We were at war with France; we were at war with the United States of America. The allied armies were pressing Napoleon, whose star had lately fallen at Leipsic, back upon Paris. Three months later the conqueror of Moscow was an exile at Elba.

But on that winter morning, when the people of the Ship Inn were startled in their sleep, men's minds were by no means at ease about Napoleon Bonaparte. The French Senate had voted a new conscription, and, with genius which was unimpaired and renown that covered half the world, he was laboring to drive the united forces of the king of Prussia and the emperor Alexander from the soil of France. The new arrival at the Ship Inn was excited and importunate. He had an appearance somwhat foreign, but he was dressed in the scarlet uniform of a British officer. He was brimming with good news. He had just arrived from the French coast; nobody cared to ask how or by whose assistance. He was Colonel du Bourg, so he said, aide-de-camp to Lord Cathcart. He had the military air, and in the time of George III. hotel people were not likely to cross-examine a colonel. But he did not conceal that he was bearer of intelligence from Paris that the tyrant Bonaparte had fallen in battle; that the allied armies were approaching the French capital; and that, if peace was not actually concluded, the preliminaries were all arranged, and the war as good as over. Colonel du Bourg ordered a post-chaise and four to be got ready (that was the "special express train" of those days), and while the horses were being harnessed for the gallop towards London, he performed the official duty of communicating the news to the port admiral at Deal. About noon there was great commotion in the City. Over London Bridge had rattled a "chaise," in which three persons were exhibiting, by the waving of hats and flags, signs of wild delight. They had gathered the news from Du Bourg at the town of Dartford, and had hastened to be

the harbingers of peace in the monetary centre of the British empire. Up went the funds, one and a half per cent. at a bound, and three per cent. before the closing hour. There were numerous sales and purchases, and it was difficult to determine which was happier — the seller who, believing the end of war had come, rejoiced in his profits, or the buyer who confidently awaited a further rise in the market value of his property.

But the day passed and there came no confirmation of the news. Nothing was heard in official quarters of Colonel du Bourg. Whitehall had not shared the flutter of the City; Colonel du Bourg had not been seen there. He whom the people of the Ship Inn supposed to be at this time the lion of the Horse Guards had in fact no existence; there was no Colonel du Bourg. It was too clear that the City had been hoaxed; that Colonel du Bourg had fought for a victory on the Stock Exchange, had gained the day, and, with his booty, had disappeared. Those who had been duped were furious, and the committee of the Stock Exchange engaged with ardor in pursuit of the missing Du Bourg. We will leave the Bow Street runners active in their service while we survey the career of Lord Cochrane to the point at which it became involved in this guilty enterprise. We shall have to show how colorable circumstances were unfavorably tinged by political prejudice; how tardily the national sense of right repaired the wrong done to this great naval hero; and finally, how it has been left to a select committee of the House of Commons in the present year to recommend the performance of the last act of justice due to the memory and to the successors of this distinguished man.

Every Englishman ought to have read Marryat's novels in his boyhood, and every one who has achieved that duty will understand what the navy was when the late Lord Dundonald was in the service. He remembers the nepotism and corruption which existed with regard to appointments; he will not be surprised to learn that Lord Cochrane was serving sea-time as a cook's mate, while he was actually an officer in the army; and that when he first stepped on board a vessel as midshipman of the "Hind," commanded by his uncle, he had already — according to that great work of fiction, the book of the paymaster of the navy — been many years at sea. From that day, however, to the end of his active service in Greece, he showed himself a brave, skilful, daring seaman. In action he possessed extraordinary presence of mind and ingenuity of resource. He animated with his own habitual heroism those whom he led, by whom he was always followed with enthusiastic devotion. At Palermo, he met with Lord Nelson, and through life adopted as his own the injunction he received from the victor of Trafalgar: "Never mind manœuvres; always go at 'em." In the Basque Roads, his display of courage was most signal. On the 11th of April, 1809, with a volunteer crew of four men, Lord Cochrane set off from the British fleet in an explosive ship loaded with barrels of powder, which were covered with hand grenades and cannon shot, the outer surface of the huge pile of tubs being bound round with strong hempen ropes to direct the explosion upwards. The object was to destroy a boom, to alarm and set fire to the French fleet. When, with his terrible freight, Lord Cochrane touched the boom, he alone remained on board to light the fuses. The explosion was successful, and the day after, in sight of his timid and wavering commander, who was for the most part passive, Lord Cochrane, in the "*Impérieuse*," attacked three French ships of the line, and on the arrival of long-delayed reinforcements compelled their surrender. His ingenuity was often his safeguard. He would have been captured by a Spanish force in the "Speedy" had he not painted her in Danish fashion; and when the sceptical hidalgos approached to board his vessel, most commanders would have given themselves up for lost. But Lord Cochrane's fertile mind remembered the Spanish dread of infection. He ran up the quarantine flag and put forward a Danish sailor in uniform to affirm that the ship was only two days out from Algiers, where the plague was raging. Again he saved himself in a night chase by the tub trick, escaping in the darkness while his pursuers followed a tub illumined by a tallow candle. Another time he succeeded in imposing on the enemy a belief in his superior force by furling his sails with rope yarns, which, being cut simultaneously, suggested that he had so large a crew on board that he could set sail with all the speed of a well-found man-of-war. He taught the venal voters of Honiton a lesson. Beaten in his first contest, he gave those who had voted for him ten guineas each, and was returned without expenditure at the next election. The electors argued insecurely that a man who was generous after defeat would be lavish after victory. The lines

of right and wrong in electoral matters do not seem to have been very clearly marked in those days. It was Lord Cochrane's Parliamentary career which excited against him the prejudices from which he suffered. In May 1807 he was returned, together with the father of Lady Burdett Coutts, for Westminster. In 1810 Sir Francis Burdett was committed to the Tower for an alleged breach of privilege, and in the same year Lord Cochrane attacked with vigor the abuses of the admiralty. He found on looking at the pension list that "the Wellesleys receive from the public £34,729, a sum equal to four hundred and twenty-six pairs of lieutenants' legs, calculated at the rate of allowance of Lieutenant Chambers' legs;" and, to quote his own words, "the name of my worthy and respected grandmother, the widow of the late Captain Gilchrist, of the navy, continuing on the list as receiving £100 per annum, though she ceased to exist eight years ago." Referring to the petty savings paraded by his virulent enemy, Mr. Croker, Lord Cochrane said: "I could point out some savings better worth attention. By adopting canvas of better quality a saving may be made equal to a fourth of the navy. The enemy distinguish our ships of war from foreign ships by the color of the wretched canvas, and run away the moment they perceive our black sails rising above the horizon, a circumstance to which they owe their safety even more than to its open texture. I have observed the meridian altitude of the sun through the foretop-sail, and by bringing it to the horizon through the fore-sail, have ascertained the latitude as correctly as I could have done otherwise." He was imprisoned at Malta for just complaints against the corruption of the Admiralty Court in that island; but the seamen of the fleet threatened to pull the prison down, and Lord Cochrane was furnished with files and a rope-ladder, by which he made a highly successful escape. He wished to regulate and, if possible, to disuse the power of flogging in the navy, and declared in the House of Commons that the cruel excesses of punishment arose from the incapacity of officers appointed to command through shameless interest. He said: "The family interest I have alluded to prevails to such an extent that even the lords of the admiralty have lists made out, and when an officer goes to offer his services, or to solicit promotion for services rendered, he is asked, "Are you recommended by my Lady This, or Miss That, or Madame T'other?" and if he is not, he might as well have stayed at home." Of Greenwich Hospital, he said that, "in place of old retired seamen, not a few of the wards were occupied, and pensions enjoyed, by men who had never been in the navy at all, but were thus provided for, to the exclusion of worn-out sailors, by the influence of patrons upon whose political interest they had a claim."

In the eyes of ministers of that day language of this sort seemed absolutely seditious. They were blind to the fact that such language was the most valuable that could be used in the interests of the country. What energy they possessed was employed against the opponents of the vicious system upon which they had been raised to the head of affairs. Lord Cochrane was debarred from valuable service afloat, and, in the leisure he possessed on shore, devoted himself to invention. He matured a plan for the destruction of fleets and forts, which to this day has remained unpublished. The prince regent appointed a committee to examine it, which reported favorably, but added that, if divulged, it might imperil our colonies. He invented a lamp for streets and another for ships. At length, by favor of his uncle, Lord Cochrane obtained a command. Admiral Cochrane, his father's brother, was appointed to the North American station in 1814, and chose his nephew for flag captain. According to precedent he could do this without reference to the admiralty. Lord Cochrane was preparing to sail with the admiral, when the fraud of Du Bourg was noised throughout the country.

Lord Cochrane had another uncle, a merchant, who had taken the name of Johnstone. This man, Mr. Cochrane Johnstone, was in fact the cause of Lord Cochrane's being charged with partnership in the crime of Du Bourg. Lord Campbell, in his "Lives of the Chief Justices," describes this merchant as "a very unprincipled man, who, in concert with De Berenger, a foreigner, wickedly devised a scheme by which they were to make an immense fortune by a speculation on the Stock Exchange." It is certain that Mr. Cochrane Johnstone was a speculator; that he fled from offended justice on the news of Du Bourg's arrest; and that Lord Cochrane, who was often in his house, himself dabbled in time bargains, encouraged to do so probably by the example of his uncle. At Mr. Cochrane Johnstone's he had become acquainted with the foreigner De Berenger, who had been recommended to him by Mr. John-

stone as a useful man to accompany him in the fleet, ostensibly as a rifle-instructor, but also and chiefly as a skilful pyrotechnist, who could carry out Lord Cochrane's secretly cherished intention of using his discovery for attacking the shores and fleets of the American enemy. De Berenger and Du Bourg were names of the same person, and it appears likely that while Mr. Cochrane Johnstone was willing to make use of Du Bourg, he was anxious that after the fraud was accomplished the foreigner should be carried off by his nephew to the North American station. And it is probable that Lord Cochrane (assuming his ignorance of the fraud), knowing Du Bourg only as De Berenger, was anxious to have the co-operation of a man who, if his skill proved equal to his repute, was likely to ensure the success of his destructive invention. De Berenger, who had been adjutant in the Duke of Cumberland's rifle corps, commanded by Lord Yarmouth, was hopelessly involved in debt, and was, in fact, living in a sort of legal protection within "the rules of the King's Bench."

These were the circumstances of Lord Cochrane and two other alleged accomplices, on the 21st of February, 1814, the day on which Du Bourg knocked at the door of the Ship Inn at Dover. Lord Cochrane left his house in Green Street, Grosvenor Square, on the morning of that day, and drove to a lamp-manufactory near Snow Hill. He was at that time engaged there daily with reference to his lantern, which he hoped would be adopted for the fleet. While thus employed, his servant brought him a letter. The servant said he had never before seen the person who wrote it, and Lord Cochrane declared he could not fathom the contents nor make out the signature, which he said was written very indistinctly. The letter was "to the effect that the writer had something to communicate of an affecting nature." Hearing from his servant that the visitor wore a sword, a military coat, and cap, Lord Cochrane stated that he supposed him to be an officer from Spain, with intelligence of the death of his brother, Major Cochrane, whom he knew from a note received only three days before to be dangerously ill. He hastened home, and was "agreeably surprised" to find De Berenger. His uncle, the admiral, had applied for permission to take De Berenger to America, but the application had been refused on the ground that the man was a foreigner. On the trial, Lord Cochrane gave an account of his interview with De Berenger. He said that De Berenger wore a green uniform and a grey overcoat; that he explained as the cause of his visit his anxiety to get on board Lord Cochrane's ship, the "Tonnant," without the sanction of the admiralty. In fact, he wished Lord Cochrane to assist him to get out of the country without obtaining the requisite permission. Lord Cochrane refused to do this. De Berenger urged as claims to Lord Cochrane's favorable consideration the certificates of good conduct which he had received from Lord Yarmouth and others with reference to his service in the rifle corps. It was proved that De Berenger left Lord Cochrane's house in a coat and hat belonging to his lordship. For this, Lord Cochrane accounted by stating that, when reminded of these certificates, he advised De Berenger to ask those who had written them to exert their influence at the admiralty, adding that he (Lord Cochrane) possessed no influence in that quarter. In reply, he said, De Berenger intimated that he could not go to Lord Yarmouth in the dress he was then wearing, which was not precisely the uniform of the rifle corps, nor could he return to the "rules," where it would excite attention, and suspicion that he intended to escape. He requested the loan of a hat. Lord Cochrane gave him a hat, and then, seeing that the collar of the objectionable uniform appeared above the overcoat, offered him an old black cloth coat which lay on a chair. He accepted it, and, having wrapped his green coat in a towel, went away, taking with him a small portmanteau which he had brought, and in which, said Lord Cochrane, "I have no doubt he had concealed the scarlet coat in which he had made his fraudulent appearance at Dover that morning."

To these circumstances we have only to add the fact that on the 21st there was a sale of stock on account of Lord Cochrane, and it was not denied that it was a sale to his advantage, or that the profit was gained by the fraud of Du Bourg. Lord Cochrane's answer was this: That in the four preceding months — during which it was, indeed, evident that peace was approaching through the downfall of Napoleon and the exhaustion of France — he had, by instructions to a broker, made many purchases and sales of stock, for time, in the funds, and usually at a profit. During that period he had made upwards of £4,000 by what was admitted to be fair speculation. He proved that the amount of stock he held at the time of the fraud, instead of being larger than on former

occasions, was considerably smaller than it had frequently been before, which, he said, " would surely not have been the case had I risked the commission of a fraud with a view to excessive gain; and the sale of the stock on that day took place under the general order which I had, from the commencement of those speculations, given to the broker to sell out without waiting for further directions, whenever a profit of one per cent. could be made. It could not, therefore, be otherwise than that my stock should be sold on that day, when the prices enabled the broker to act on the standing order I had long before given. Had I anticipated any extraordinary rise on that particular day, and had stooped to a fraud to effect that rise, I should either have had a larger amount for sale, or have aimed at more than one per cent. profit; and much more was obtained by many speculators who were never charged with a knowledge of the fraud. It was proved that I did not myself attend the Stock Exchange on that day, and that the whole of my stock was sold in the morning at a gain, on an average, of one and a quarter per cent., which was less than half the profit it might have made had it been held a few hours longer."

The fair presumption from these circumstances is that Lord Cochrane was not guilty; but this presumption becomes certainty when the other circumstances are taken into consideration. Directly De Berenger dismissed his Dover post-chaise at the Marsh Gates, Lambeth, he proceeded in a hackney coach to Lord Cochrane's. That would not have been the plan of Lord Cochrane had he been guilty. He came, Lord Cochrane said, to urge that he should be at once sent off to join the fleet. If Lord Cochrane had been a partner in the fraud, it would certainly not have happened that De Berenger would come in broad daylight to his house, and would leave it with a request refused merely because he had not formal authority. Nothing could be easier than to trace Du Bourg to Lord Cochrane's house. The hackney coachman was found; he expected some part of the advertised reward. He was a bad man; had been convicted of atrocious cruelty to his horses, and was afterwards sentenced to transportation for robbery. He swore that De Berenger entered Lord Cochrane's house in the brown overcoat and scarlet uniform in which he had appeared as Du Bourg at Dover; but this was at the trial, and after Lord Cochrane's affidavit had been published, in which he (Lord Cochrane) declared that De Berenger came to him in a green coat. Nothing is more probable than that the hackney coachman threw in the "scarlet" and "brown" to make sure of the reward, having, perhaps, no real recollection of the garments which De Berenger wore when he was set down in Green Street. It is certain that after the trial this driver appeared in possession "of a new coach and new harness, and horses of the best description."

Early in March, on board his ship in Long Reach, his leave having expired on the 28th February, Lord Cochrane learnt that Du Bourg had been traced to his house. Immediately he applied for leave, returned to town, prepared and published an affidavit detailing, without the least reserve or concealment, all the circumstances to which we have referred. Du Bourg was at once identified with De Berenger, and on the 8th April he was apprehended. By giving up the name of De Berenger, and thus affording a sure clue by which he could be found, Lord Cochrane gave further positive evidence of his innocence. De Berenger was at the time quarrelling with Mr. Cochrane Johnstone about his reward, which he thought insufficient. No knowledge of his whereabouts, no complicity with any design to get him out of the country, was traced to Lord Cochrane; nor was any such thing even suggested. Lord Cochrane had done nothing for De Berenger except that he had given him an old coat and a hat; he had certainly (there could be no doubt of the fact) refused to take him clandestinely on board his ship, the "Tonnant." It was in these circumstances that Lord Cochrane, if guilty, gave up the name of De Berenger, and a more improbable thing for a guilty man to do under such circumstances cannot be conceived. It was represented by his enemies that he supposed De Berenger to have escaped from England; but the man had made no attempt to leave the kingdom, and it is impossible that if Lord Cochrane had been his accomplice he should not have known something of De Berenger's movements. It was urged that Lord Cochrane had committed perjury in swearing that De Berenger arrived at his house in a green coat. He, however, ultimately succeeded in proving that De Berenger had with him at Dover a green coat as well as a scarlet coat, and the inference was plain that in the post-chaise or in the hackney-coach he had exchanged the scarlet for the green. It was proved that De Berenger arrived from London at the Royal Oak Inn at Dover,

on the morning of the 20th February, dressed in a green coat; and although, when he quitted the Royal Oak at about 11 P.M. (two hours before his appearance at the Ship Inn as Colonel du Bourg), there remained a large portmanteau, the green coat was not left behind. The small portmanteau he carried in his hand had probably been concealed in the larger one, and was, at all events, of sufficient size to contain the grey overcoat and green coat in which he appeared at Lord Cochrane's. The publication by Lord Cochrane of his affidavit in all the newspapers of March 12th was an act incompatible with the presumption of guilt. Its frank, simple, truthful story, withholding nothing, giving De Berenger's name, who was then at liberty, and likely, if caught, to be revengeful; the statement as to the gift of a hat and coat — the whole story told, indeed, with no certainty that Du Bourg and De Berenger were the same person, was to most minds conclusive. Lord Cochrane had, in fact, no reason whatever to assume they were identical, except the allegation that Du Bourg had been traced to his house, and this he believed to be mistaken.

But all these things availed him nothing. There was no separation made between his case and that of his uncle, who confessed his complicity by flight. Lord Cochrane was found guilty.

On obtaining the evidence about the green coat at Dover he applied for a new trial, which Lord Ellenborough, to his lasting disgrace, refused on the ground that "the other defendants convicted with him did not attend." He was sentenced by Lord Ellenborough to a fine of £1,000, to imprisonment for twelve months, and to stand in the pillory for the space of one hour. The electors of Westminster, in a general meeting, declared their "full and entire conviction of the perfect innocence of our representative, Lord Cochrane," and the government feared to place him in the pillory. But a motion was made for his expulsion from the House of Commons, and Lord Cochrane was taken from prison to defend himself in his place in Parliament. The motion was carried by one hundred and forty to forty-four, the minority including Sir Francis Burdett, Mr. Whitbread, Lord Tavistock, and Lord William Russell. His name was struck from the navy list and from the roll of Knights of the Bath, and his banner of that order was taken down from its place in Henry VII.'s Chapel and officially and literally kicked out of Westminster Abbey. He was immediately re-elected for Westminster, and, believing that as a member of Parliament he ought not to submit to imprisonment, Lord Cochrane made a daring escape. After passing a few days at his house in Hampshire, he wrote to the speaker to the effect that he was coming to London and would attend in the House of Commons. In the body of the House, he awaited the arrival of the writ of election. But while he waited, and before he had taken the oaths, a posse of constables arrived and by main force carried him out of the building. The ministry, eager to get rid of the Radical reformer, accepted an apology from the marshal of the prison, and explained away the breach of privilege. When the twelve months had expired Lord Cochrane refused to pay the fine. He was detained; but at the end of a fortnight, his health suffering from confinement, urged by his friends, he gave the prison marshal a Bank of England note for £1,000, bearing the following endorsement: "My health having suffered by long and close confinement, and my oppressors being resolved to deprive me of property or life, I submit to robbery to protect myself from murder, in the hope that I shall live to bring the delinquents to justice." That £1,000 note may still be seen in the Bank of England.

Slowly but surely has that justice been accomplished. In the first place, the people, by a "penny" subscription, paid the fine and part, if not the whole, of the legal expenses of Lord Cochrane's trial. Two million six hundred and forty thousand persons gave this practical proof of their belief in Lord Cochrane's innocence and of their sympathy for his misfortunes. He still struggled for reform in Parliament. From 1818 to 1828, he engaged with brilliant distinction in foreign service in South America and in Greece. In 1831 he inherited the title of Earl of Dundonald, and in the following year his efforts to obtain reinstatement in the navy were successful. He was given a "free pardon" and the naval rank which he would have attained, that of rear-admiral. This was the result of a strong public opinion concerning his innocence. Three lord chancellors have made comment upon his case, all of them men who were living witnesses of his trial. Lord Erskine wrote in 1823 of the "disgraceful oppression and injustice" he had suffered. Lord Brougham lamented "the opinion which Lord Ellenborough appears to have formed in this case." In his "Sketches of British Statesmen" Lord Brougham deplored "that most cruel and

unjustifiable sentence which at once secured Lord Cochrane's re-election for Westminster when the House of Commons expelled him upon his conviction;" and referring to his reinstatement in the navy, affirmed "that his honors of knighthood, so gloriously won, should still be withholden, is a stain, not upon him, but upon the councils of his country, and after his restoration to the service it is as inconsistent and incomprehensible as it is cruel and unjust." Lord Campbell, in his "Lives of the Chief Justices," gives his opinion that the case of Lord Cochrane caused "uneasy reflections" in the mind of Lord Ellenborough, and "was supposed to have hastened his end." He imputes to that judge that "the Radical line" in Lord Cochrane's politics "induced Lord Ellenborough to believe that he seriously meant to abet rebellion, and that he was a dangerous character." Lord Campbell charges Lord Ellenborough with having "laid special emphasis on every circumstance which might raise a suspicion against Lord Cochrane," and with having "elaborately explained away whatever at first sight might seem favorable to the gallant officer, and he declares that "in consequence the jury found a verdict of guilty." The present lord chief baron is, we believe, the only living judge who witnessed the trial, and he has regretted that "we cannot blot out this dark page from our legal and judicial history."

When he was restored to the navy Lord Dundonald declared the reparation incomplete. He had lost his place in the Order of the Bath, and he claimed, as a matter touching his honor and as a measure of justice, the half-pay to which he would have been entitled had he not been expelled from the navy for eighteen years. In 1847 the queen made good the first claim in the most gracious manner. Lord Cochrane had been a knight companion of the Bath; her Majesty gave Lord Dundonald the highest decoration in the order. He received the grand cross of the Bath, he was appointed commander-in-chief on that North American station to which he was to have gone as flag-captain in 1814, and when he died, his banner, that had been kicked with contumely from Westminster Abbey, was replaced with ceremonious honour.

To his grandson, the present Lord Cochrane, he bequeathed his pecuniary claim, and with that bequest the duty of vindicating his memory from the last reproach by obtaining it. With an evident sense of honorable obligation, with tact and judgment beyond his years, Lord Cochrane set himself to fulfil his grandfather's legacy. Coldly received by the ministry, his request for an investigation of the case by a select committee was unanimously accorded by the House of Commons. The committee has now reported favorably to the claim, and thus, so far as words are concerned, the jury appointed by the final tribunal has admitted to the fullest extent that demand of Lord Dundonald, including the pecuniary claim, which was denied in his lifetime to a man who suffered much from the public officers of a nation in whose service he never spared himself.

ARTHUR ARNOLD.

CHAPTER LI.

OUR LAST NIGHT TOGETHER.

ON that Monday morning when we left Denver to seek Bell's distant home in these pale blue mountains, there was no great rejoicing among us. It was the last day of our long journeying together, and we had been pleasantly associated; moreover, one of us was going to leave her dearest friend in these remote wilds, and she was rather downhearted about it. Happily the secret exultation of Lady Sylvia, which could not altogether be concealed, kept up our spirits somewhat: we wondered whether she was not going to carry her husband's portmanteau for him, so anxious was she about his comfort.

The branch line of rail that pierces for some distance the Clear Creek cañon takes a circuitous course on leaving Denver through some grassy plains which are intersected by narrow and muddy rivulets, and are sufficiently uninteresting; so that there was plenty of opportunity for these sojourners to sketch out something of their plans of living for the information of the new-comer. But Balfour — who, by the way, had got thoroughly bronzed by

his travelling — would not hear of all the fine pleasure excursions that the lieutenant was for planning out.

"We are under enough obligation to you," said he, "even if I find I can do this thing; but if I discover that I am of no use at all, then your charity would be too great. Let us get to work first; then, if the way is clear, we can have our play afterward. Indeed, you will be able to command my attendance, once I have qualified myself to be your servant."

"Yes, that is reasonable," said the lieutenant.

"I am quite sure," said Lady Sylvia, "that my husband would be a poor companion for you, so long as our affairs are unsettled ——"

"And, besides," said Balfour, with a laugh, "you don't know what splendid alternative schemes I have to fall back on. On the voyage over, I used to lie awake at night and try to imagine all the ways in which a man may earn a living who is suddenly made penniless. And I got up some good schemes, I think: good for a man who could get some backing, I mean."

"Will you please to tell us some of them?" said Queen T., with no apparent sarcasm. "We are so often appealed to for charity; and it would be delightful to be able to tell poor people how to make a fortune."

"The poor people would have to have some influence. But would you like to hear my schemes? They are numberless; and they are all based on the supposition that in London there are a very large number of people who would pay high prices for the simplest necessaries of life, provided you could supply these of the soundest quality. Do you see? I take the case of milk, for example. Think of the number of mothers in London who would pay a double price for milk for their children, if you could guarantee them that it was quite unwatered, and got from cows living wholesomely in the country instead of in London stalls! That is only one of a dozen things. Take bread, for example. I believe there are thousands of people in London who would pay extra for French bread, if they only know how to get it supplied to them. Very well: I step in with my association — for the wants of a great place like London can only be supplied by big machinery — and I get a duke or two, and a handful of M. P.'s with me, to give it a philanthropic look; and, of course, they make me manager. I do a good public work, and I benefit myself."

"Do you think you would succeed as the manager of a dairy?" said Queen T., gently.

"As well, probably," said he, laughing, "as the manager of Mrs. Von Rosen's mines and farms! But having got up the company, you would not ask me to look after the cows."

"Oh, Hugh," said Lady Sylvia, anxiously, "I hope you will never have anything to do with any company. It is that which has got poor papa into such trouble. I wish he could leave all these things for a time, and come out here for a holiday; it would do him a great deal of good."

This filial wish did not seem to awaken any eager response, though Mrs. Von Rosen murmured something about the pleasure it would give her to see Lord Willowby. We had not much hope of his lordship consenting to live at a ranch.

And now we drew near the Rockies. First of all, rising from the plains, we encountered some ridges of brown, seared, earthy-looking hills, for the most part bare, though here and there the crest was crowned by a ridge of pine. At the mouth of one of the valleys we came upon Golden City, a scattered hamlet of small houses, with some trees, and some thin lines of a running stream about it. Then, getting farther into the mountains, we entered the narrow and deep gorge of the Clear Creek cañon, a naturally formed highway that runs and winds sinuously for about thirty miles between the huge walls of rock on either side. It was not a beautiful valley, this deep cleft among the mountains, but a gloomy and desolate place, with lightning-blasted pines among the grays and reds of the fused fire-rocks; an opaque gray-green river rushing down the chasm; the trees overhead, apparently at the summit of the twin precipices, black against the glimmer of the blue sky. Here and there, however, were vivid gleams of color: a blaze of the yellow leaves of the cottonwood, or a mass of crimson creeper growing over a gray rock. We began to wonder, too, whether this small river could really have cut this deep and narrow chasm in the giant mountains; but there, sure enough, far above us on the steep slopes, were the deep holes in the intertwisted quartz out of which the water in bygone ages must have slowly worked the boulders of some alien material. There were other holes, too, visible on the sides of this gloomy gorge, with some brown earth in front of them, as if some animal had been trying to scrape for itself a den there:

these were the "prospect holes" that miners had bored to spy into the secrets of the everlasting hills. Down below us, again, was the muddy stream, rushing between its beds of gravel; and certainly this railway carriage, on its narrow gauge, seemed to tilt dangerously over toward the sheer descent and the plunging waters. The train, indeed, as it wound round the rocks, seemed to be some huge python, hunted into its gloomy lair in the mountains.

We were glad to get out of it, and into the clear sunshine, at the terminus — Floyd Hill; and here we found a couple of stage-coaches, each with four horses, awaiting to carry us still farther up into the Rockies. They were strange-looking vehicles, apparently mostly built of leather, and balanced on leather springs of enormous thickness. But they soon disappeared from sight. We were lost in such clouds of dust as were never yet beheld by mortal man. Those who had gone inside to escape found that the half-dozen windows would not keep shut; and that, as they were flung hither and thither by the plunging of the coach up the steep mountain paths, they lost sight of each other in the dense yellow clouds. And then sometimes a gust of wind would cleave an opening in the clouds; and, behold! a flashing picture of pine-clad mountains, with a dark blue sky above. That jolting journey seemed to last forever and ever, and the end of it found us changed into new creatures. But the coat of dust that covered us from head to heel had not sufficed to blind us; and now before our eyes we found the end and aim of our journey — the far hamlet of Idaho.

Bell looked round bewildered; she had dreaded this approach to her future home. And Queen T., anxious above all things that her friends' first impressions should be favorable, cried out, —

"Oh, Bell, how beautiful, and clean, and bright it is!"

And certainly our first glance at Idaho, after the heat and dust we had come through, was cheering enough. We thought for an instant of Chamounix as we saw the small white houses by the side of the green, rushing stream, and the great mountains rising sheer beyond. There was a cool and pleasant wind rustling through the leaves of the young cottonwood-trees planted in front of the inn. And when we turned to the mountains on the other side of the narrow valley, we found even the lofty pine woods glowing with color; for the midday sun was pouring down on the undergrowth — now of a golden yellow — so that one could almost believe that these far slopes were covered with buttercups. The coaches had stopped at the inn — the Beebe House, as it is called — and Colonel Sloane's heiress was received with much distinction. They showed her Colonel Sloane's house. It stood on a knoll some distance off; but we could see that it was a cheerful-looking place, with a green-painted veranda round the white walls, and a few pines and cottonwoods about. In the mean time we had taken rooms at the inn, and speedily set to work to get some of the dust removed. It was a useful occupation; for no doubt the worry of it tended to allay that nervous excitement among our women-folk, from which Bell, more especially, was obviously suffering. When we all assembled thereafter at our midday meal, she was still somewhat pale. The lieutenant declared that, after so much travelling, she must now take a long rest. He would not allow her to go on to Georgetown for a week at least.

And was there ever in all the world a place more conducive to rest than this distant, silent, sleepy Idaho up here in the lonely mountains? When the coaches had whirled away in the dust toward Georgetown, there was nothing to break the absolute calm but the soft rustling of the small trees; there was not a shred of cloud in the blue sky to bar the glare of the white road with a bit of grateful shadow. After having had a look at Bell's house, we crossed to the other side of the valley, and entered a sort of tributary gorge between the hills which is known as the Soda Creek cañon. Here all vestiges of civilization seemed to end, but for the road that led we knew not whither; and in the strange silence we wandered onward into this new world whose plants and insects and animals were all unfamiliar to us, or familiar only as they suggested some similarity to their English relatives. And yet Queen T. strove to assure Bell that there was nothing wonderful about the place except its extreme silence and a certain sad desolation of beauty. Was not this our identical Michaelmas daisy? she asked. She was overjoyed when she discovered a real and veritable harebell — a trifle darker in color than our harebell, but a harebell all the same. She made a dart at a cluster of yellow flowers growing up among the rocks, thinking they were the mountain saxifrage; but they turned out

to be a composite plant — probably some sort of hawk-weed. Her efforts to reach these flowers had startled a large bird out of the bushes above; and as it darted off, we could see that it was of a dark and luminous blue: she had to confess that he was a stranger. But surely we could not have the heart to regard the merry little chipmunk as a stranger — which of all living creatures is the friendliest, the blithest, the most comical. In this Soda Creek cañon he reigns supreme; every rock and stone and bush seems instinct with life as this Proteus of the animal world scuds away like a mouse, or shoots up the hill-side like a lizard, only, when he has got a short distance, to perch himself up on his hind legs, and curl up his bushy tail, and eye us demurely as he affects to play with a bit of Mayweed. Then we see what the small squirrel-like animal really is — a beautiful little creature with longitudinal bars of golden brown and black along his back; the same bars on his head, by the side of his bright, watchful eyes; the red of a robin's breast on his shoulders; his furry tail, jauntily cocked up behind, of a pale brown. We were never tired of watching the tricks and attitudes of this friendly little chap. We knew quite well that his sudden dart from the lee of some stone was only the pretence of fright; before he had gone a yard he would sit up on his haunches and look at you, and stroke his nose with one of his fore paws. Sometimes he would not even run away a yard, but sit quietly and watchfully to see us pass. We guessed that there were few stone-throwing boys about the Rocky Mountains.

Behold! the valley at last shows one brief symptom of human life; a wagon drawn by a team of oxen comes down the steep road, and the driver thereof is worth looking at, albeit his straw sombrero shades his handsome and sun-tanned face. He is an ornamented person, this bull-whacker; with the cord tassels of his buckskin jacket just appearing from below the great Spanish cloak of blue cloth that is carelessly thrown round his shoulders. Look at his whip, too — the heavy thongs of it intertwisted like serpents; he has no need of bowie-knife or pistol in these wilds while he carries about with him that formidable weapon. The oxen pass on down the valley; the dust subsides; again we are left with the silence, and the warm sunlight, and the aromatic odors of the Mayweed, and the cunning antics of our ubiquitous friend the chipmunk.

"There," said the lieutenant, looking up to the vast hill-slopes above, where the scattered pines stood black among the blaze of yellow undergrowth, "that is the beginning of our hunting country. All the secrets are behind that fringe of wood. You must not imagine, Lady Sylvia, that our life at Idaho is to be only this dulness of walking ——"

"I can assure you I do not feel it dull at all," she said; "but I am sorry that our party is to be broken up — just when it has been completed. Oh, I wish you could stay with us!" she adds, addressing another member of the party, whose hands are full of wild flowers.

"My dear Lady Sylvia," says this person, with her sweetest smile, "what would you all do if you had not us to take back your messages to England? We are to teach Bell's little girl to say Idaho. And when Christmas comes, we shall think of you at a particular hour — oh, by the way, we have never yet fixed the exact difference of time between Surrey and Idaho ——"

"We will do that before you leave, madame," says the lieutenant, "but I am sure we will think of you a good many times before Christmas comes. And when Mr. Balfour and I have our bears, and buffaloes, and elephants, and all these things, we will see whether we cannot get something sent you in ice for your Christmas party. And you will drink our good health, madame, will you not? And perhaps, if you are very kind, you might send us one bottle of very good Rhine wine, and we will drink your health too. Nee! I meant two bottles, for the four of us ——"

"I think we shall be able to manage that," says she; and visions of real Schloss Johannisberg, each bottle swathed in printed and signed guarantees of genuineness, no doubt began to dance before her nimble brain.

But at this moment a cold breeze came rushing down the narrow gorge; and almost at the same instant we saw the edge of a heavy cloud come lowering over the very highest peak of the mountains. Some little familiarity with the pranks of the weather in the Western Highlands suggested that, having no waterproofs, and no shelter being near, we had better make down the valley again in the direction of Idaho; and this we set about doing. The hot afternoon had grown suddenly chill. A cold wind whistled through the trembling leaves of the cottonwoods. The mountains were overshadowed, and by the time we reached Idaho again it seemed as if the night had already come down. The

women, in their thin dresses, were glad to get indoors.

"But it is this very thing," the lieutenant cried — for he was anxious that his wife should regard her new home favorably — "that makes these places in the Rocky Mountains so wholesome — so healthful, I mean. I have heard of it from many people, who say here is the best sleeping-place in the world. It is no matter how warm it is in the day, it is always cold at night: you always must have a blanket here. The heat — that is nothing, if you have the refreshing cold of the night; people who cannot sleep anywhere else, they can sleep here very well. Every one says that.

"Yes, and I will tell you this," he added, turning to Balfour; "you ought to have staid some days more in Denver, as all people do, to get accustomed to the thin air, before coming up here. All the doctors say that."

"Thank you," said Balfour, laughing, "my lungs are pretty tough. I don't suffer any inconvenience."

"That is very well, then; for they say the air of these places will kill a consumptive person ——"

"Oh, Oswald!" his wife cried. "Don't frighten us all."

"Frighten you?" said he. "Will you show me the one who is likely to be consumptive? There is not any one of us does look like it. But if we all turn to be consumptive, cannot we go down to the plains? and we will give up the mountain sheep for the antelope ——"

"I do believe," said his wife, with some vexation, "that you had not a thought in coming out here except about shooting!"

"And I do believe," he said, "that you had no thought except about your children. Oh, you ungrateful woman! You wear mourning — yes; but when do you really mourn for your poor uncle? When do you speak of him? You have not been to his grave yet."

"You know very well it was yourself who insisted on our coming here first," said she, with a blushing face; but it was not a deadly quarrel.

The chillness of the night did not prevent our going out for a walk later on, when all the world seemed asleep. And now the clouds had passed away from the heavens, and the clear stars were shining down over the mystic darkness of the mountains. In the silence around us we only heard the plashing of the stream. It was to be our last night together.

CHAPTER LII.

AUF WIEDERSEHN!

In the early morning — the morning of farewell — we stood at the small window — we two who were leaving — and tried to fix in our memories some picture of the surroundings of Bell's home; for we knew that many a time in the after days we should think of her, and endeavor to form some notion of what she was engaged in at the moment, and of the scene around her. And can we remember it now? The sunlight seems to fall vertically from that blazing sky, and there is a pale mist of heat far up in the mountains, so that the dark pine woods appear to have a faint blue fog hanging around them. On the barer slopes, where the rocks project in shoulders, there is a more brilliant light; for there the undergrowth of cottonwood bushes, in its autumn gold, burns clear and sharp, even at this distance. And then the eye comes down to the small valley, and the scattered white houses, and the small and rustling trees. We seem to hear the running of the stream.

And what was that little bit of paper thrust furtively, almost at the last moment, into our Bell's trembling hand? We did not know that we had been entertaining a poetess unawares among us; or had she copied the verses out of a book, just as one takes a flower from a garden and gives it as a token of remembrance — something tangible to recall distant faces and bygone friends?

> O Idaho! far Idaho!
> A last farewell before we go —

that was all that the companion of this unhonored Sappho managed to make out as the paper was snatched from her hand. No doubt it invoked blessings on the friends to whom we were bidding good-bye. No doubt it spoke of the mother's thinking of her children far away. And there certainly was no doubt that the verses, whether they were good or bad verses, served their turn, and are treasured up at this moment as though their like had never been seen.

On that warm, clear, beautiful morning, when the heavy coach came rolling up to the door of the inn, Balfour and Lady Sylvia did not at all seem broken down by emotion; on the contrary, they both appeared to be in high spirits. But our poor Bell was a wretched spectacle, about which nothing more shall be said here. Her last words were about her children; but they were almost inaudible, through the

violence of her sobbing. And we knew well, as we caught the last glimpse of that waved handkerchief, that this token of farewell was not meant for us: it was but a message we were to carry back with us across the seas to a certain home in Surrey.

Hier hat die Mär' ein Ende; and yet the present writer, if he is not overtaxing the patience of the reader, would like to say a word about the fashion in which two people, living pretty much by themselves down in the solitudes of Surrey, used to try to establish some link of interest and association with their friends far away in Colorado, and how, at these times, pictures of bygone scenes would rise before their minds, soft, and clear, and beautiful; for the troubles and trials of travelling were now all forgotten, and the pleasant passages of our journeying could be separated, and strung like lambent beads on the thread of memory.

Or shall we not rather take, as a last breach of confidence, this night of all the nights in the year — this Christmas-eve — which we more particularly devote to our dear and absent friends? It is now drawing away from us. We have been over to Bell's almost deserted house; and there, as the children were being put to bed, we heard something about Ilaho. It was as near as the little girl could get to it; it will suffice for a message.

And now, late as it is, and our own house being wrapped in silence after all the festivities of the evening — well, to tell the truth, there *was* a wild turkey, and there *were* some canvas-back duck; and we were not bound to tell two eagerly inquisitive boys that these could not well come from Colorado, though they did come from America — a madness seems to come over our gentle Queen Titania, and she will go out into the darkness, though the night is cold and there is snow on the ground. We go forth into the silent world. The thin snow is crisp and dry under foot. The stars are shining over our heads. There is no wind to stir the black shadows of the trees.

And now, as the time draws near when we are to send that unspoken message to the listening ones across the seas, surely they are waiting like ourselves? And the dark night, even up here on Mickleham Downs, where we go by the dusky yew-trees like ghosts, becomes afire with light, and color, and moving shapes; for we are thinking once more of the many scenes that connect us by an invisible chain with our friends of the past. How long ago was it that we sat in the long saloon, and the fog-horn was booming outside, and we heard Lady Sylvia's tender voice singing with the others, "Abide with me; fast falls the eventide," as the good ship plunged onward and through the waste of waters? But the ship goes too slow for us. We can outstrip its speed. We are already half-way over to Bell's retreat, and here we shall rest; for are we not high over the Hudson, in the neighborhood of the haunted mountains? — and we have but to give another call to reach the far plains of Colorado!

. . . .

"Ho, Vanderdecken — Heinrich Hudson — can you take our message from us and pass it on? This is a night of all the nights in the long year, that you are sure to be abroad, you and your sad-faced crew, up there in the lonely valleys, under the light of the stars. Can you go still higher, and send a view-halloo across to the Rocky Mountains? Can you say to our friends that we are listening? Can you tell them that something has just been said — they will know by whom — about a certain dear mother at Ilaho? Give a call, then, across the waste Atlantic that we may hear! Or is it the clamor of the katydids that drowns the ghostly voice? We cannot hear at all. Perhaps the old men are cowering in their cave, because of the sacred time; and there is no mirth in the hills to-night; and no huge cask of schnapps to be tapped, that the heavy beards may wag. Vanderdecken — Hendrick Hudson — you are of no use to us; we pass on; we leave the dark mountains behind us, under the silent stars.

. . . .

Saint of this green isle, hear our prayers;
Oh, grant us cool heavens and favoring airs!
Blow, breezes, blow! the stream runs fast,
The rapids are near, and the daylight's past!

"Look at the clear gold ray of the light-houses, and the pale green of the sunset skies, and the dark islands and trees catching the last red flush. And is not this Bell's voice singing to us, with such a sweetness as the Lake of a Thousand Islands never heard before, —

Soon as the woods on shore look dim,
We'll sing at St. Ann's our parting hymn.

The red flame in the west burns into our eyes; we can see no more.

. . . .

"We were startled by this wild roaring in our ears, as if the world were falling, and we are in a mystical cavern; and the whirling gray cataracts threaten to tear us from the narrow foothold. Our eyes are

blinded, our throats are choked, our fingers still clutch at the dripping rocks; and then all at once we see your shining and smiling face — you giant black demon — you magnificent Sambo — you huge child of the nether world of waters! We KENT GO NO FORDER DEN DAWT? Is that what you say? We shout to you through this infernal din that we can — we can — we can! We elude your dusky fingers. We send you a mocking farewell. Let the waters come crashing down; for we have dived — and drifted — and come up into the white sunlight again!

. . . .

"And now there is no sound at all. We cannot even hear Bell's voice; for she is standing silent in front of the chief's grave; and she is wondering whether his ghost is still lingering here, looking for the ships of the white man going up and down the great river. For our part, we can see none at all. The broad valley is deserted; the Missouri shows no sign of life; on the wide plains around us we find only the reed-bird and the grasshopper. Farewell, White Cow; if your last wish is not gratified, at least the silence of the prairie is reserved to you, and no alien plough crosses the solitude of your grave. You are an amiable ghost, we think; we would shake hands with you, and give you a friendly 'How?' but the sunlight is in our eyes, and we cannot see you, just as you cannot make out the ships on that long line of river. May you have everlasting tobacco in the world of dreams!

. . . .

"You infamous Hendrick Hudson, will you carry our message now — for our voices cannot reach across the desert plains? Awaken, you cowled heads, and come forth into the starlight; for the Christmas bells have not rung yet; and there is time for a solemn passing of the glass! High up in your awful solitudes, you can surely hear us; and we will tell you what you must call across the plains, for they are all silent now, as silent as the white skulls lying in the sand. Vanderdecken, for the sake of heaven — if that has power to conjure you — call to our listening friends; and we will pledge you in a glass to-night, and you and your ghastly crew will nod your heads in ominous laughter ——"

. . . .

But what is this that we hear, suddenly shaking the pulses of the night with its tender sound? O friends far away! do you know that our English bells are beginning to ring in the Christmas-time? If you cannot hear our faint voice across the wild Atlantic and the silent plains, surely you can hear the sounds you knew so well in the bygone days! Over the crisp snow, and by the side of the black trees and hedges, we hurry homeward. We sit in a solitary room, and still we hear outside the faint tolling of the bells. The hour nears; and it is no dire spirit that we expect, but the gentle soul of a mother coming with a message to her sleeping children, and stopping for a moment in passing to look on her friends of old.

And she will take our message back, we know, and tell that other young wife out there that we are glad to hear that her heart is at peace at last. But what will the invisible messenger take back for herself? A look at her children: who knows? A second to twelve. Shall we give a wild scream, then, as the ghost enters? for the silence is awful. Ah, no! Whether you are here or not, our good Bell, our hearts go forth toward you, and we welcome you; and we are glad that, even in this silent fashion, we can bring in the Christmas-time together. But is the gentle spirit here — or has it passed? A stone's throw from our house is another house; and in it there is a room dimly lit; and in the room are two sleeping children. If the beautiful mother has been here with us amidst the faint tolling of these Christmas bells, you may be sure she only smiled upon us in passing, and that she is now in that silent room.

From The Cornhill Magazine.

A MIGHTY SEA-WAVE.

On May 10th last a tremendous wave swept the Pacific Ocean from Peru northwards, westwards, and southwards, travelling at a rate many times greater than that of the swiftest express train. For reasons best known to themselves, writers in the newspapers have by almost common consent called this phenomenon a tidal wave. But the tides have had nothing to do with it. Unquestionably the wave resulted from the upheaval of the bed of the ocean in some part of that angle of the Pacific Ocean which is bounded by the shores of Peru and Chili. This region has long been celebrated for tremendous submarine and subterranean upheavals. The opinions of geologists and geographers have been divided as to the real origin of the disturbances by which at one time the land, at another time the sea, and at yet other times (oftener in fact than either of

the others) both land and sea have been shaken as by some mighty imprisoned giant, struggling, like Prometheus, to cast from his limbs the mountain masses which hold them down. Some consider that the seat of the Vulcanian forces lies deep below that part of the chain of the Andes which lies at the apex of the angle just mentioned, and that the direction of their action varies according to the varying conditions under which the imprisoned gases find vent. Others consider that there are two if not several seats of subterranean activity. Yet others suppose that the real seat of disturbance lies beneath the ocean itself, a view which seems to find support in several phenomena of recent Peruvian earthquakes.

Although we have not as yet full information concerning the great wave which in May last swept across the Pacific, and northwards and southwards along the shores of the two Americas, it may be interesting to consider some of the more striking features of this great disturbance of the so-called peaceful ocean, and to compare them with those which have characterized former disturbances of a similar kind. We may thus, perhaps, find some evidence by which an opinion may be formed as to the real seat of subterranean activity in this region.

It may seem strange, in dealing with the case of a wave which apparently had its origin in or near Peru on May 9, to consider the behavior of a volcano distant five thousand miles from this region, a week before the disturbance took place. But, although the coincidence may possibly have been accidental, yet in endeavoring to ascertain the true seat of disturbance we must overlook no evidence, however seemingly remote, which may throw light on that point; and as the sea-wave generated by the disturbance reached very quickly the distant region referred to, it is by no means unlikely that the subterranean excitement which the disturbance relieved may have manifested its effects beforehand at the same remote volcanic region. Be this as it may, it is certain that on May 1 the great crater of Kilauea in the island of Hawaii, became active, and on the 4th severe shocks of earthquake were felt at the Volcano House. At three in the afternoon a jet of lava was thrown up to a height of about one hundred feet, and afterwards some fifty jets came into action. Subsequently jets of steam issued along the line formed by a fissure four miles in length down the mountain-side. The disturbance lessened considerably on the 5th, and an observing party examined the crater. They found that a rounded hill, seven hundred feet in height, and one thousand four hundred feet in diameter, had been thrown up on the plain which forms the floor of the crater. Fire and scoria were spouted up in various places.

Before rejecting utterly the belief that the activity thus exhibited in the Hawaii volcano had its origin in the same subterrene or submarine region as the Peruvian earthquake, we should remember that other regions scarcely less remote have been regarded as forming part of this great Vulcanian district. The violent earthquakes which occurred at New Madrid, in Missouri, in 1812, took place at the same time as the earthquake of Caraccas, the West Indian volcanoes being simultaneously active; and earthquakes had been felt in South Carolina for several months before the destruction of Caraccas and La Guayra. Now we have abundant evidence to show that the West Indian volcanoes are connected with the Peruvian and Chilian regions of Vulcanian energy, and the Chilian region is about as far from New Madrid as Arica in Peru from the Sandwich Isles.

It was not, however, until about half past eight on the evening of May 9 that the Peruvian earthquake began. A severe shock, lasting from four to five minutes, was felt along the entire southern coast, even reaching Autofagasta. The shock was so severe that it was impossible, in many places, to stand upright. It was succeeded by several others of less intensity.

While the land was thus disturbed, the sea was observed to be gradually receding, a movement which former experiences have taught the Peruvians to regard with even more terror than the disturbance of the earth itself. The waters which had thus withdrawn, as if concentrating their energies to leap more fiercely on their prey, presently returned in a mighty wave, which swept past Callao, travelling southwards with fearful velocity, while in its train followed wave after wave, until no less than eight had taken their part in the work of destruction. At Mollendo the railway was torn up by the sea for a distance of three hundred feet. A violent hurricane which set in afterwards from the south prevented all vessels from approaching, and unroofed most of the houses in the town. At Arica the people were busily engaged in preparing temporary fortifications to repel a threatened assault of the rebel ram "Huiscar," at the moment

when the roar of the earthquake was heard. The shocks here were very numerous, and caused immense damage in the town, the people flying to the Morro for safety. The sea was suddenly perceived to recede from the beach, and a wave from ten to fifteen feet in height rolled in upon the shore, carrying before it all that it met. Eight times was this assault of the ocean repeated. The earthquake had levelled to the ground a portion of the custom-house, the railway station, the submarine-cable office, the hotel, the British consulate, the steamship agency, and many private dwellings. Owing to the early hour of the evening, and the excitement attendant on the proposed attack of the "Huiscar," every one was out and stirring; but the only loss of life which was reported is that of three little children who were overtaken by the water. The progress of the wave was only stopped at the foot of the hill on which the church stands, which point is further inland than that reached in August, 1868. Four miles of the embankment of the railway were swept away like sand before the wind. Locomotives, cars, and rails were hurled about by the sea like so many playthings, and left in a tumbled mass of rubbish.

The account proceeds to say that the United States' steamer "Waters," stranded by the bore of 1868, was lifted up bodily by the wave at Arica and floated two miles north of her former position. The reference is no doubt to the double-ender "Watertree," not stranded by a bore (a term utterly inapplicable to any kind of sea-wave at Arica, where there is no large river), but carried in by the great wave which followed the earthquake of August 13. The description of the wave at Arica on that occasion should be compared with that of the wave last May. About twenty minutes after the first earth-shock the sea was seen to retire as if about to leave the shores wholly dry; but presently its waters returned with tremendous force. A mighty wave, whose length seemed immeasurable, was seen advancing like a dark wall upon the unfortunate town, a large part of which was overwhelmed by it. Two ships, the Peruvian corvette "America," and the American double-ender "Watertree," were carried nearly half a mile to the north of Arica, beyond the railroad which runs to Tacna, and there left stranded high and dry. As the English vice-consul at Arica estimated the height of this enormous wave at fully fifty feet, it would not seem that the account of the wave of last May has been exaggerated, for a much less height is, as we have seen, attributed to it, though, as it carried the "Watertree" still farther inland, it must have been higher. The small loss of life can be easily understood, when we consider that the earthquake was not followed instantly by the sea-wave. Warned by the experience of the earthquake of 1868, which most of them must have remembered, the inhabitants sought safety on the higher grounds until the great wave and its successors had flowed in. We read that the damage done was greater than that caused by the previous calamity, the new buildings erected since 1868 being of a more costly and substantial class. Merchandise from the custom-house and stores was carried by the water to a point on the beach five miles distant.

At Iquique, in 1868, the great wave was estimated at fifty feet in height. We are told that it was black with the mud and slime of the sea bottom. "Those who witnessed its progress from the upper balconies of their houses, and presently saw its black mass rushing close beneath their feet, looked on their safety as a miracle. Many buildings were, indeed, washed away, and in the low-lying parts of the town there was a terrible loss of life." Last May the greatest mischief at Iquique would seem to have been caused by the earthquake, not by the sea-wave, though this also was destructive in its own way. "Iquique," we are told, "is in ruins. The movement was experienced there at the same time and with the same force [as at Arica]. Its duration was exactly four minutes and a third. It proceeded from the southeast, exactly from the direction of Ilaga." The houses built of wood and cane tumbled down at the first attack, lamps were broken, and the burning oil spread over and set fire to the ruins. Three companies of firemen, German, Italian, and Peruvian, were instantly at their posts, although it was difficult to maintain an upright position, shock following shock with dreadful rapidity. Nearly four hundred thousand quintals of nitrate in the stores at Iquique and the adjacent ports of Molle and Pisagua were destroyed. The British barque "Caprera" and a German barque sank, and all the coasting craft and small boats in the harbor were broken to pieces and drifted about in every direction.

At Chanavaya, a small town at the guano-loading deposit known as Pabellon de Pica, only two houses were left standing out of four hundred. Here the earth-

quake shock was specially severe. In some places the earth opened in crevices seventeen yards deep, and the whole surface of the ground was changed. The shipping along the Peruvian and Bolivian coast suffered terribly. The list of vessels lost or badly injured at Pabellon de Pica alone reads like the list of a fleet.

We have been particular in thus describing the effects produced by the earthquake and sea-wave on the shores of South America, in order that the reader may recognize in the disturbance produced there the real origin of the great wave which a few hours later reached the Sandwich Isles, five thousand miles away. Doubt has been entertained respecting the possibility of a wave, other than the tidal wave, being transmitted right across the Pacific. Although in August 1868 the course of the great wave which swept from some region near Peru, not only to the Sandwich Isles, but in all directions over the entire ocean, could be clearly traced, there were some who considered the connection between the oceanic phenomena and the Peruvian earthquake a mere coincidence. It is on this account perhaps chiefly that the evidence obtained last May is most important. It is interesting, indeed, as showing how tremendous was the disturbance which the earth's frame must then have undergone. It would have been possible, however, had we no other evidence, for some to have maintained that the wave which came in upon the shores of the Sandwich Isles a few hours after the earthquake and sea disturbance in South America was in reality an entirely independent phenomenon. But when we compare the events which happened last May with those of August 1868, and perceive their exact similarity, we can no longer reasonably entertain any doubt of the really stupendous fact that *the throes of the earth in and near Peru are of sufficient energy to send an oceanic wave right across the Pacific*, and of such enormous height at starting, that, after travelling with necessarily diminishing height the whole way to Hawaii, it still rises and falls through thirty-six feet. The real significance of this amazing oceanic disturbance is exemplified by the wave circles which spread around the spot where a stone has fallen into a smooth lake. We know how, as the circle widens, the height of the wave grows less and less, until at no great distance from the centre of disturbance the wave can no longer be discerned, so slight is the slope of its advancing and following faces. How tremendous, then, must have been the upheaval of the bed of ocean by which wave-circles were sent across the Pacific, retaining, after travelling five thousand miles from the centre of disturbance, the height of a two-storied house. In 1868, indeed, we know (now even more certainly than then) that the wave travelled very much farther, reaching the shores of Japan, of New Zealand, and of Australia, even if it did not make its way through the East Indian Archipelago to the Indian Ocean, as some observations seem to show. Doubtless we shall hear in the course of the next few months of the corresponding effects of the spread of last May's mighty wave athwart the Pacific, though the dimensions of the wave of last May, when it reached the Sandwich Isles, fell far short of those of the great wave of August 13–14, 1868.

It will be well to make a direct comparison between the waves of May last and August 1868 in this respect, as also with regard to the rate at which they would seem to have traversed the distance between Peru and Hawaii. On this last point, however, it must be noted that we cannot form an exact opinion until we have ascertained the real region of Vulcanian disturbance on each occasion. It is possible that a careful comparison of times, and of the direction in which the wave front advanced upon different shores, might serve to show where this region lay. We should not be greatly surprised to learn that it was far from the continent of South America.

The great wave reached the Sandwich Isles between four and five on the morning of May 10, corresponding to about five hours later of Peruvian time. An oscillation only was first observed at Hilo, on the east coast of the great southern island of Hawaii, the wave itself not reaching the village till about a quarter before five. The greatest difference between the crest and trough of the wave was found to be thirty-six feet here; but at the opposite side of the island, in Kealakekua Bay (where Captain Cook died), amounted only to thirty feet. In other places the difference was much less, being in some only three feet, a circumstance doubtless due to interference, waves which had reached the same spot along different courses chancing so to arrive that the crest of one corresponded with the trough of the other, so that the resulting wave was only the difference of the two. We must explain, however, in the same way, the highest waves of thirty-six to forty feet, which were doubtless due to similar interference, crest

agreeing with crest and trough with trough, so that the resulting wave was the sum of the two which had been divided, and had reached the same spot along different courses. It would follow that the higher of the two waves was about twenty-one feet high, the lower about eighteen feet high ; but as some height would be lost in the encounter with the shore line, wherever it lay, on which the waves divided, we may fairly assume that in the open ocean, before reaching the Sandwich group, the wave had a height of nearly thirty feet from trough to crest. We read, in accordance with this explanation, that "the regurgitations of the sea were violent and complex, and continued through the day."

The wave, regarded as a whole, seems to have reached all the islands at the same time. If this is confirmed by later accounts, we shall be compelled to conclude that the wave reached the group with its front parallel to the length of the group so that it must have come (arriving as it did from the side towards which Hilo lies) from the north-east. It was then not the direct wave from Peru, but the wave reflected from the shores of California, which produced the most marked effects. We can understand well, this being so, that the regurgitations of the sea were complex. Any one who has watched the inflow of waves on a beach so lying within an angle of the shore, that while one set of waves comes straight in from the sea, another thwart set comes from the shore forming the other side of the angle, will understand how such waves differ from a set of ordinary rollers. The crests of the two sets form a sort of network, ever changing as each set rolls on ; and considering any one of the four-cornered meshes of this wave-net, the observer will notice that while the middle of the raised sides rises little above the surrounding level, because here the crests of one set cross the troughs of the other, the corners of each quadrangle are higher than they would be in either set taken separately, while the middle of the four-cornered space is correspondingly depressed. The reason is that at the corners of the wave-net crests join with crests to raise the water surface, which in the middle of the net (not the middle of the sides, but the middle of the space enclosed by the four sides) trough joins with trough to depress the water surface.*

We must take into account the circumstance that the wave which reached Hawaii last May was probably reflected from the Californian coast when we endeavor to determine the rate at which the sea disturbance was propagated across the Atlantic. The direct wave would have come sooner, and may have escaped notice because arriving in the night-time, as it would necessarily have done if a wave which travelled to California, and thence, after reflection, to the Sandwich group, arrived there at a quarter before five in the morning following the Peruvian earthquake. We shall be better able to form an opinion on this point after considering what happened in August 1868.

The earth throe on that occasion was felt in Peru about five minutes past five on the evening of August 13. Twelve hours later, or shortly before midnight, August 13, Sandwich Island time (corresponding to 5 P.M., August 14, Peruvian time), the sea round the group of the Sandwich Isles rose in a surprising manner, "insomuch that many thought the islands were sinking, and would shortly subside altogether beneath the waves. Some of the smaller islands were for a time completely submerged. Before long, however, the sea fell again, and as it did so the observers found it impossible to resist the impression that the islands were rising bodily out of the water. For no less than three days this strange oscillation of the sea continued to be experienced, the most remarkable ebbs and floods being noticed at Honolulu, on the island of Woahoo."

The distance between Honolulu and Arica is about sixty-three hundred statute miles ; so that, if the wave travelled directly from the shores of Peru to the Sandwich Isles, it must have advanced at an average rate of about five hundred and twenty-five miles an hour (about four hundred and fifty knots an hour). This is nearly half the rate at which the earth's surface near the equator is carried round by the earth's rotation, or is about the rate at which parts in latitude sixty-two or sixty-three degrees north are carried round by rotation ; so that the motion of the great wave in 1868 was fairly comparable with one of the movements which we are accustomed to regard as cosmical. We shall

* The phenomena here described are well worth observing on their own account as affording a very instructive and at the same time very beautiful illustration of wave motions. They can be well seen at many of our watering-places. The same laws of wave motion can be readily illustrated also by throwing two stones into a large smooth pool at points a few yards apart. The crossing of the two sets of circular waves produces a wave-net, the meshes of which vary in shape according to their position.

presently have something more to say on this point.

Now last May, as we have seen, the wave reached Hawaii at about a quarter to five in the morning, corresponding to about ten Peruvian time. Since, then, the earthquake was felt in Peru at half past eight on the previous evening, it follows that the wave, if it travelled directly from Peru, must have taken about thirteen and a half hours, or an hour and a half longer, in travelling from Peru to the Sandwich Isles, than it took in August 1868. This is unlikely, because ocean waves travel nearly at the same rate in the same parts of the ocean, whatever their dimensions, so only that they are large. We have, then, in the difference of time occupied by the wave in May last and in August 1868 in reaching Hawaii, some corroboration of the result to which we were led by the arrival of the wave simultaneously at all the islands of the Sandwich group — the inference, namely, that the observed wave had reached these islands after reflection from the Californian shore line. As the hour when the direct wave probably reached Hawaii was about a quarter past three in the morning, when not only was it night-time but also a time when few would be awake to notice the rise and fall of the sea, it seems not at all improbable that the direct wave escaped notice, and that the wave actually observed was the reflected wave from California. The direction, also, in which the oscillation was first observed corresponds well with this explanation.

It is clear that the wave which traversed the Pacific last May was somewhat inferior in size to that of August 1868, which therefore still deserves to be called (as then by the present writer) the greatest sea-wave ever known. The earthquake, indeed, which preceded the oceanic disturbance of 1868 was far more destructive than that of May last, and the waves which came in upon the Peruvian and Bolivian shores were larger. Nevertheless, the wave of last May was not so far inferior to that of August 1868 but that we may expect to hear of its course being traced athwart the entire extent of the Pacific Ocean.

When we consider the characteristic features of the Peruvian and Chilian earthquakes, and especially when we note how wide is the extent of the region over which their action is felt in one way or another, it can scarcely be doubted that the earth's Vulcanian energies are at present more actively at work throughout that region than in any other. There is nothing so remarkable, one may even say so stupendous, in the history of subterranean disturbance as the alternation of mighty earth throes by which, at one time, the whole of the Chilian Andes seem disturbed and anon the whole of the Peruvian Andes. In Chili scarce a year ever passes without earthquakes, and the same may be said of Peru; but so far as great earthquakes are concerned the activity of the Peruvian region seems to synchronize with the comparative quiescence of the Chilian region, and *vice versâ*. Thus, in 1797 the terrible earthquake occurred known as the earthquake of Riobamba, which affected the entire Peruvian earthquake region. Thirty years later a series of tremendous throes shook the whole of Chili, permanently elevating the whole line of coast to the height of several feet. During the last ten years the Peruvian region has in turn been disturbed by great earthquakes. It should be added that between Chili and Peru there is a region about five hundred miles in length in which scarcely any volcanic action has been observed. And, singularly enough, "this very portion of the Andes, to which one would imagine that the Peruvians and Chilians would fly as to a region of safety, is the part most thinly inhabited; insomuch that, as Von Buch observes, it is in some places entirely deserted."

One can readily understand that this enormous double region of earthquakes, whose oscillations on either side of the central region of comparative rest may be compared to the swaying of a mighty see-saw on either side of its point of support, should be capable of giving birth to throes propelling sea-waves across the Pacific Ocean. The throe actually experienced at any given place is relatively but an insignificant phenomenon, it is the disturbance of the entire region over which the throe is felt which must be considered in attempting to estimate the energy of the disturbing cause. The region shaken by the earthquake of 1868, for instance, was equal to at least a fourth of Europe, and probably to fully one-half. From Quito southwards as far as Iquique — or along a full third part of the length of the South American Andes — the shock produced destructive effects. It was also distinctly felt far to the north of Quito, far to the south of Iquique, and inland to enormous distances. The disturbing force which thus shook one million square miles of the earth's surface must have been one of almost inconceivable energy. If directed

entirely to the upheaval of a land region no larger than England, those forces would have sufficed to have destroyed utterly every city, town, and village within such a region; if directed entirely to the upheaval of an oceanic region, they would have been capable of raising a wave which would have been felt on every shore line of the whole earth. Divided even between the ocean on the one side and a land region larger than Russia in Europe on the other, those Vulcanian forces shook the whole of the land region and sent athwart the largest of our earth's oceans a wave which ran in upon shores ten thousand miles from the centre of disturbance with a crest thirty feet high. Forces such as these may fairly be regarded as cosmical; they show unmistakably that the earth has by no means settled down into that condition of repose in which some geologists still believe. We may ask with the late Sir Charles Lyell whether, after contemplating the tremendous energy thus displayed by the earth, any geologist will continue to assert that the changes of relative level of land and sea, so common in former ages of the world, have now ceased? and agree with him that if, in the face of such evidence, a geologist persists in maintaining this favorite dogma, it would be vain to hope, by accumulating proofs of similar convulsions during a series of ages, to shake the tenacity of his conviction —

> Si fractus illabatur orbis,
> Impavidum ferient ruinæ.

But there is one aspect in which such mighty sea-waves, as, in 1868 and again last May, have swept over the surface of our terrestrial oceans, remain yet to be considered.

The oceans and continents of our earth must be clearly discernible from her nearer neighbors among the planets — from Venus and Mercury on the inner side of her path around the sun, and from Mars (though under less favorable conditions) from the outer side. When we consider, indeed, that the lands and seas of Mars can be clearly discerned with telescopic aid from our earth at a distance of forty millions of miles, we perceive that our earth, seen from Venus at a little more than half this distance, must present a very interesting appearance. Enlarged, owing to greater proximity, nearly fourfold, having a diameter nearly twice as great as that of Mars, so that at the same distance her disc would seem more than three times as large, more brightly illuminated by the sun in the proportion of about five to two, she would shine with a lustre exceeding that of Mars, when in full brightness in the midnight sky, about thirty times; and all her features would of course be seen with correspondingly increased distinctness. Moreover, the oceans of our earth are so much larger in relative extent than those of Mars, covering nearly three-fourths instead of barely one-half of the surface of the world they belong to, that they would appear as far more marked and characteristic features than the seas and lakes of Mars. When the Pacific Ocean, indeed, occupies centrally the disc of the earth which at the moment is turned towards any planet, nearly the whole of that disc must appear to be covered by the ocean. Under such circumstances the passage of a wide-spreading series of waves over the Pacific, at the rate of about five hundred miles an hour, is a phenomenon which could scarcely fail to be discernible from Venus or Mercury, if either planet chanced to be favorably placed for the observation of the earth — always supposing there were observers in Mercury or Venus, and that these observers were provided with powerful telescopes.

It must be remembered that the waves which spread over the Pacific on August 13–14, 1868, and again on May 9–10 last, were not only of enormous range in length (measured along crest or trough), but also of enormous breadth (measured from crest to crest, or from trough to trough). Were it otherwise, indeed, the progress of a wave forty or fifty feet high (at starting, and thirty-five feet high after travelling six thousand miles), at the rate of five hundred miles per hour, must have proved destructive to ships in the open ocean as well as along the shore line. Suppose, for instance, the breadth of the wave from crest to crest one mile, then, in passing under a ship at the rate of five hundred miles per hour, the wave would raise the ship from trough to crest — that is, through a height of forty feet — in one thousandth part of an hour (for the distance from trough to crest is but half the breadth of the wave), or in less than four seconds, lowering it again in the same short interval of time, lifting and lowering it at the same rate several successive times. The velocity with which the ship would travel upwards and downwards would be greatest when she was midway in her ascent and descent, and would then be equal to about the velocity with which a body strikes the ground after falling from a height of four yards. It is hard-

ly necessary to say that small vessels subjected to such tossing as this would inevitably be swamped. On even the largest ships the effect of such motion would be most unpleasantly obvious. Now, as a matter of fact, the passage of the great sea-wave in 1868 was not noticed at all on board ships in open sea. Even within sight of the shore of Peru, where the oscillation of the sea was most marked, the motion was such that its effects were referred to the shore. We are told that observers on the deck of a United States' war-steamer distinctly saw the "peaks of the mountains in the chain of the Cordilleras wave to and fro like reeds in a storm;" the fact really being that the deck on which they stood was swayed to and fro. This, too, was in a part of the sea where the great wave had not attained its open sea form, but was a rolling wave, because of the shallowness of the water. In the open sea, we read that the passage of the great sea-wave was no more noticed than is the passage of the tidal wave itself. "Among the hundreds of ships which were sailing upon the Pacific when its length and breadth were traversed by the great sea-wave, there was not one in which any unusual motion was perceived." The inference is clear, that the slope of the advancing and following faces of the great wave was very much less than in the case above imagined; in other words, that the breadth of the wave greatly exceeded one mile — amounting, in fact, to many miles.

Where the interval between the passage of successive wave-crests was noted, we can tell the actual breadth of the wave. Thus, at the Samoan Isles, in 1868, the crests succeeded each other at intervals of sixteen minutes, corresponding to eight minutes between crest and trough. As we have seen that, if the waves were one mile in breadth, the corresponding interval would be only four seconds, or only one hundred-and-twentieth part of eight minutes, it would follow that the breadth of the great wave, where it reached the Samoan Isles in 1868, was about one hundred and twenty miles.

Now a wave extending right athwart the Pacific Ocean, and having a cross breadth of more than one hundred miles, would be discernible as a marked feature of the disc of our earth, seen, under the conditions described above, either from Mercury or Venus. It is true that the slope of the wave's advancing and following surfaces would be but slight, yet the difference of illumination under the sun's rays would be recognizable. Then, also, it is to be remembered that there was not merely a single wave, but a succession of many waves. These travelled also with enormous velocity; and though at the distance of even the nearest planet, the apparent motion of the great wave, swift though it was in reality, would be so far reduced that it would have to be estimated rather than actually seen, yet there would be no difficulty in thus perceiving it with the mind's eye. The rate of motion indeed would almost be exactly the same as that of the equatorial part of the surface of Mars, in consequence of the planet's rotation; and this (as is well known to telescopists), though not discernible, directly produces, even in a few minutes, changes which a good eye can clearly recognize. We can scarcely doubt then, that, if our earth were so situated at any time when one of the great waves generated by Peruvian earthquakes is traversing the Pacific that the hemisphere containing this ocean were turned fully illuminated towards Venus (favorably placed for observing her), the disturbance of the Pacific could be observed and measured by telescopists on that planet.

Unfortunately there is little chance that terrestrial observers will ever be able to watch the progress of great waves athwart the oceans of Mars, and still less that any disturbance of the frame of Venus should become discernible to us by its effects. We can scarce even be assured that there are lands and seas on Venus, so far as direct observation is concerned, so unfavorably is she always placed for observation; and though we see Mars under much more favorable conditions, his seas are too small and would seem to be too shallow (compared with our own) for great waves to traverse them such as could be discerned from the earth.

Yet it may be well to remember the possibility that changes may at times take place in the nearer planets — the terrestrial planets as they are commonly called, Mars, Venus, and Mercury — such as telescopic observation under favorable conditions might detect. Telescopists have, indeed, described apparent changes, lasting only for a short time, in the appearance of one of these planets, Mars, which may fairly be attributed to disturbances affecting its surface in no greater degree than the great Peruvian earthquakes have affected for a time the surface of our earth. For instance, the American astronomer Mitchel says that on the night of July 12, 1845, the bright polar snows of Mars exhibited an appearance never noticed at any preceding

or succeeding observation. In the very centre of the white surface appeared a dark spot, which retained its position during several hours. On the following evening not a trace of the spot could be seen. Again the same observer says that on the evening of August 30, 1845, he observed for the first time a small bright spot, nearly or quite round, projecting out of the lower side of the polar spot. "In the early part of the evening," he says, "the small bright spot seemed to be partly buried in the large one. After the lapse of an hour or more my attention was again directed to the planet, when I was astonished to find a manifest change in the position of the small bright spot. It had apparently separated from the large spot, and the edges alone of the two were now in contact, whereas when first seen they overlapped by an amount quite equal to one-third of the diameter of the small one. This, however, was merely an optical phenomenon, for on the next evening the spots went through the same apparent changes, as the planet went through the corresponding part of its rotation. But it showed the spots to be real ice masses. The strange part of the story is that in the course of a few days the smaller spot, which must have been a mass of snow and ice as large as Nova Zembla, gradually disappeared." Probably some great shock had separated an enormous field of ice from the polar snows, and it had eventually been broken up and its fragments carried away from the arctic regions by currents in the Martian oceans. It appears to us that the study of our own earth, and of the changes and occasional convulsions which affect its surface, gives to the observation of such phenomena as we have just described a new interest. Or rather, perhaps, it is not too much to say that telescopic observations of the planets derive their only real interest from such considerations.

From Nature.

THE SUN'S DISTANCE.

A MOST interesting state paper has just been issued; we refer to the report by the astronomer-royal on the telescopic observations of the transit of Venus of 1874, made by the expeditions sent out by the British government, and the results deduced from them. The astronomer-royal suggests that another report may be called for when the photographs of the transit have been completely measured and worked out, if possible in combination with the results of similar observations made in the expeditions organized by other governments.

It will be seen from the present report that the plan of operations actually pursued has been very nearly that proposed by the astronomer-royal in his communication to the Royal Astronomical Society on December 11, 1868, when for the third time directing attention to the arrangements which it would be necessary to make for the efficient observation of the transits of 1874 and 1882. The method of absolute longitudes was to be applied for observations both of ingress and egress, it being therefore essential that the longitudes of the observing stations should be determined with precision; and the longitudes recommended to be fixed by Great Britain were Alexandria, stations in New Zealand and in the Sandwich Islands, Kerguelen's Land, and Mauritius or the two islands of Rodriguez and Bourbon.

The stations eventually selected for observations by the British expedition were fixed upon "entirely by consideration of the influence which their positions would have in determining with accuracy the necessary alteration of parallax." They were: Egypt, the Sandwich Islands, the island of Rodriguez, New Zealand, and Kerguelen's Land. It was intended to adopt in each of these districts one fundamental station, the longitude of which was to be independently determined, for conversion of local times into Greenwich times, and subordinate to this primary station other stations were proposed to be selected, at such distances that advantage might be taken of different states of weather that might possibly prevail.

In Egypt his Highness the khedive rendered every possible assistance, tents being supplied with military guards for the protection of the observers and their instruments, and telegraph wires erected. The astronomer-royal acknowledges the obligations of the expedition to the liberality of the Eastern Telegraph Company, in affording the means of determining with extreme accuracy and great facility the longitude of the principal station Mokattam. Greenwich was easily connected with Porth Curno, in Cornwall, whence there is an uninterrupted line to Alexandria, the longest submarine line in the world; Alexandria was connected with Mokattam by aid of the special line constructed by the khedive from Cairo to the station. It is further stated that time-communication was also made from Mo-

kattam through Cairo to Thebes, and to Suez by the ordinary telegraph, Thebes and Suez being the other Egyptian stations where the transit was observed.

In the Sandwich Islands much assistance was received from King Kalakaua and members of the reigning family. The principal station was at Honolulu, the longitude of which was determined partly by meridian transits of the moon and partly by transits of the moon observed with the altazimuth instrument. Waimea, in the island Kauai, where observers were also placed, was connected with Honolulu by means of chronometers carried in H.M.S. "Teredos." At the island of Rodriguez the longitudes were determined in the same manner as for the Sandwich Islands stations, for three positions, viz., Point Venus, the Hermitage, and Point Coton; and communication was further made with the Mauritius and with Lord Lindsay's expedition with the aid of H.M.S. "Shearwater," the preliminary results being stated by Sir George Airy to agree closely with those given by the lunar observations. At Kerguelen's Land, again, the operations were similar; Supply Bay and Thumb Peak being the stations chosen.

In New Zealand unfavorable weather much interfered with the observations, and Sir George Airy had at first been led to suppose that all useful observation had been lost; it subsequently appeared, however, that this was not the case, one phase of the transit being well seen at Burnham, the longitude of which was fixed by meridian transits of the moon.

The report is divided into three sections or tables. In the first are given the descriptions of the various phenomena, in the words of the observers, with the Greenwich sidereal times of the different phases, obtained from accurate reduction of the observations for longitude here particularized; where such longitudes depend upon lunar observations the places of the "Nautical Almanac" were carefully corrected by observations on nearly the same days at Greenwich, Paris, Strasburg, and Königsberg. In studying these original descriptions, Sir George Airy was led to infer that it was "possible to fix upon three distinct phases for the 'ingress' and four for the 'egress,'" though it might have been supposed that egress and ingress would exhibit the same number of distinct phases in inverse order; this was not the case in practice. The first phase, α, utilized in the calculations is the appearance of the planet just within the sun's disc, but the light between the two limbs being very obscure. After an interval of about twenty seconds "the light begins to clear, and the observers generally think that the contact is passed;" this is phase β. About twenty seconds later, the light which at phase β was not equal to that of the sun's limb, is free from all shadow, and the phase is called γ. Sir George Airy finds that of these phases β is the most exact, observers, even in the presence of clouds of moderate density, agreeing within three or four seconds, though for other phases much greater discordances are exhibited. Similarly at the egress, the first appearance of a fine line or faint shadow is called δ, this becoming definite, or a "brown haze" appearing, is called ε. When most observers record "contact," the shadow having reached a maximum intensity, the phase is called ζ, and in this phase there is an agreement amongst observers, much closer than in other phases at egress. The "circular" contact at egress is called η.

In the second section of the report, or Table II., these "adopted phases are massed for each district in which the parallax-factor is nearly identical," and several of the details of reduction are included. With the longitudes determined as above, the recorded times of the various phases of the transit were converted into Greenwich sidereal times. With the calculated apparent places of the sun and Venus in the "Nautical Almanac," as deduced from Leverrier's Tables, an ephemeris was prepared exhibiting the predicted geocentric places for every tenth second of Greenwich sidereal time throughout the transit, and from these numbers the apparent positions of sun and planet at each station were computed. Calculations were further made, showing how the predicted place would be affected by alteration of the local longitude, by change in the tabular places of the sun and Venus, and by alteration of their tabular parallaxes; the first two alterations were not essential in these reductions, but the determination of alterations of the third class, as it is remarked, constituted "the special object of the expedition." The form of the reductions was "entirely determined by the consideration that such alterations must be made in the parallaxes as will render the observations of the same phenomena in different parts of the earth consistent with each other." In Table III. we have "the mean solar parallax deduced from every available combination." Thus ingress accelerated at the Sandwich Islands is compared with ingress retarded at Rodriguez and with ingress retarded at Kerguelen's Land; egress retarded at

Mokattam and Suez with egress retarded at Rodiguez, and likewise with egress accelerated at the two stations in Kerguelen's; and again the retarded egress at Thebes is compared with egress retarded at Rodriguez and with egress accelerated at Kerguelen's. The greatest separate value of the solar parallax resulting from these different comparisons is 8·933 seconds, and the least 8·407 seconds. Weights are given to the various determinations depending, firstly, upon the number of observations and the magnitude of the parallax-factor; and secondly, upon the particular phase α, β, γ, δ, ϵ, and ζ being included. Thus it is found that all the combinations for *ingress* give the mean solar parallax 8·739 seconds, weight 10·46, and all the combinations for *egress* give 8·847 seconds, weight 2·53, whence the general result is 8·760 seconds, from which Sir George Airy finds the mean distance of the sun equal to 93,300,000 miles. The New Zealand observations were not included in these calculations; their mean result is 8·764 seconds, almost identical with the above. It is remarked that many persons may perhaps consider that the more closely agreeing phases β and ζ should be employed in deducing the value of the parallax to the exclusion of the others. If this be done we shall have from the *ingress* 8·748 seconds, and from the *egress* 8·905 seconds, or with their due weights a mean value 8·773 seconds.

In this outline of the details contained in the astronomer-royal's first report upon the observations of the transit of Venus, and the conclusions to be drawn from them, we have adhered closely to his own words. Pending the appearance of the deductions to be made from the complete measuring of the photographs, the results before us are perhaps to be regarded as provisional ones only, or we have not yet learned all that may be done from the work of the British expeditions, so laboriously organized by Sir George Airy. Many astronomers, we can imagine, will regard with some suspicion so small a parallax as 8·76 seconds, which is a tenth of a second less than has been given by the most reliable previous investigations, upon different principles. In illustration we may quote the separate results from which Professor Newcomb obtained his value of the parallax, now adopted in most of our ephemerides: —

	s.
From meridian observations of Mars, 1862	8·855
From micrometric observations of Mars, 1862.	8·842
From parallactic inequality of the moon	8·838
From the lunar equation of the earth .	8·809
From the transit of Venus, 1769 (Powalky's reduction) . . .	8·860
From Foucault's experiments on light	8·860

To these may be added Leverrier's value subsequently deduced from the planetary theories, which is also 8·86 seconds. Newcomb's mean figure, taking account of weights corresponding to the probable errors, is 8·848 seconds, which, with Captain Clarke's measure of the earth's equator, implies that the mean distance of the sun is 93,393,000 miles. Sir George Airy's 8·760 seconds would similarly place the sun at a mean distance of 93,321,000 miles.

It is well known that some astronomers have not expected our knowledge of the sun's distance to be greatly improved from the observations of the transit of Venus, regarding such an opportunity as is presented by a close opposition of Mars as affording at least as favorable conditions, and the result of Mr. Gill's expedition to Ascension to utilize the late opposition will be on this account awaited with much interest. Nevertheless, whatever degree of opinion might be entertained by competent authorities, it appears to have been felt by those immediately responsible for action, in different civilized nations where science is encouraged, that so rare a phenomenon as a transit of Venus could not be allowed to pass without every exertion being made to utilize it, and this country may lay claim to an honorable share in the great scientific effort, thanks mainly to the long-continued and admirably-directed endeavors of the astronomer-royal to secure this result.

Several of the stations occupied during the transit of 1874 will be available for the transit of 1882, Kerguelen's Land in particular, where at ingress the sun will be at an elevation of 12°, the factor of par allax being 0·98. In that year there will also be the advantage of observations along the whole Atlantic seaboard of the United States and Canada, where, as pointed out by the astronomer-royal in 1868, the lowest factor is 0·95, and the smallest altitude of the sun 12° for observing the retarded ingress; and for observing the egress as accelerated by parallax, the factors are about 0·85, the sun's elevation varying from 4° at Halifax, to 32° at New Orleans, or Jamaica. Australian and New Zealand stations are important for retarded egress.

As is well known, the transit of Venus on December 6, 1882, will be partly visible in this country.

LITTELL'S LIVING AGE.

Fifth Series, Volume XX. | No. 1750.—December 29, 1877. | From Beginning, Vol. CXXXV.

CONTENTS.

I. BOOKS AND CRITICS, ... *Fortnightly Review*, ... 771
II. DORIS BARUGH. A Yorkshire Story. By Katharine S. Macquoid, author of "Patty." Part IX., ... *Good Words*, ... 783
III. THREE WEEKS WITH THE HOP-PICKERS, . *Fraser's Magazine*, ... 789
IV. ERICA. Part VI. Translated for THE LIVING AGE, from the German of . . *Frau von Ingersleben*, ... 799
V. ANDERSEN'S FRIENDSHIPS. By Annie Wood, *Temple Bar*, ... 807
VI. THE CZAR'S CLEMENCY; A POLISH PRIEST'S STORY, ... *Cornhill Magazine*, ... 812
VII. LAWFUL ENGLISH, ... *Examiner*, ... 821
VIII. THE CAUSES OF THE ENGLISH WORSHIP OF SUCCESS, ... *Spectator*, ... 822
*** Title and Index to Volume CXXXV.

POETRY.

A PICTURE, ... 770
MY FLOWER, ... 770
HOMEWARD, ... 770
INDIAN SUMMER, ... 770

PUBLISHED EVERY SATURDAY BY
LITTELL & GAY, BOSTON.

TERMS OF SUBSCRIPTION.

For EIGHT DOLLARS, *remitted directly to the Publishers*, the LIVING AGE will be punctually forwarded for a year, *free of postage*.

An extra copy of THE LIVING AGE is sent gratis to any one getting up a club of Five New Subscribers.

Remittances should be made by bank draft or check, or by post-office money-order, if possible. If neither of these can be procured, the money should be sent in a registered letter. All postmasters are obliged to register letters when requested to do so. Drafts, checks and money-orders should be made payable to the order of LITTELL & GAY.

Single Numbers of THE LIVING AGE, 18 cents.

A PICTURE.

Two little souls, a boy and a girl,
Wandering on to the foot of the hill.
Bushes of green and blossoms of pearl
Laugh at themselves in the roadside rill.
Crossing the lane a gorgeous jay,
Bathed in the light of a fluttering ray,
Jauntily chatters, "Some day, some day!"

Two sweet souls, a man and a maid
(Beechen branches twisted above),
Picking the daisies which sprinkle a glade,
And trying their luck at a game of love:
"This year!" "Next year!" What do they say?
And out of the beeches the curious jay
Peeps and chuckles, "Some day, some day!"

Two old souls, and the end of the day
Follows them home to the foot of the hill;
One late gleam which has wandered astray
Breaks from a copse and dimples the rill.
Autumn leaves are strewing the way,
And hoarse from the larch the hungry jay
Shouts out to the night, "Some day, some day!"

Two poor souls in the dead of the night,
Side by side, lie stiffened and still;
And the winter's moon just softens her light,
As it solemnly rests at the foot of the hill.
Remembering the bees and the buds and the May,
The summer gold and the autumn gray,
And the warm green lane where the beetles play,
In the crisp cold night the shivering jay
Croaks out of his dream, "Some day, some day!"

Tinsley's Magazine.

MY FLOWER.

Oh! it waited all through the year to bloom,
Waited, and weathered the wind, the gloom,
Pent, and folded, and shaded
Oh! it blossom'd at last for an hour, an hour,
The beautiful, beautiful sun-kiss'd flower!
And at blaze of the noontide faded.

Faded, and fell in the fervid air
That had nursed its waking, and made it fair;
Dead with the passion of living.
Oh! spent and lost, forever and aye!
A year of work for an hour of play!
A gift withdrawn at the giving!

How shall I measure the good, the ill,
The pain of waiting, the pain of fill,
Long hoping, and short fruition?
Shall I nip the buds lest they shed their flowers
In the swift, sweet warmth of meridian hours?
Shall I call the shedding perdition?

No: buds must open, and flowers must blow,
So kiss them passing, and let them go,
With not too heavy a sorrow;
Petals are frail of the fairest flower,
Yet the fruit at its broken heart hath power
To yield new beauty to-morrow.

Examiner. L. S. Bevington.

HOMEWARD.

"There remaineth a rest."

I.

The day dies slowly in the western sky;
The sunset splendor fades, and wan and cold
The far peaks wait the sunrise; cheerily
The goat-herd calls his wanderers to the fold.
My weary soul, that fain would cease to roam,
Take comfort; evening bringeth all things home.

II.

Homeward the swift-winged seagull takes her flight;
The ebbing tide breaks softer on the sand;
The red-sailed boats draw shoreward for the night,
The shadows deepen over sea and land.
Be still, my soul, thine hour shall also come;
Behold, one evening, God shall lead thee home.

Sunday Magazine. H. M.

INDIAN SUMMER.

Her harvests gathered and her wines distilled,
And all fair robes laid by for festal spring,
The year sits down her argosies to build
That shall from Orient climes sweet traffic bring.

With wistful smiles she sets them all afloat,
Beneath blue skies soft veiled with gathering mist—
Like tears that rise in mother-eyes that note
The dear girl-face some beckoning love has kissed—

And says: "Go forth where rarest lilies bloom!
Bear spice and perfume from the nether seas!
When silent grows the winter's crashing loom
Return, with all the joy of buds and bees!"

Evening Post. Kate M. Sherwood.

From The Fortnightly Review.

BOOKS AND CRITICS.*

BEFORE advancing any statements which may appear to you doubtful, I will bespeak your favorable attention by saying something which cannot be contradicted.

A man should not talk about what he does not know. That is a proposition which must be granted me. I will go on to say further — it is not the same thing — a man should speak of what he knows. When it was proposed to me to say something to you this evening, I wished that what I said should be about something I knew.

I think I do know something about the *use* of books. Not the contents of books, but the value and use of them. All men have read some books. Many have read much. There are many men who have read more books than I have. Few in this busy, energetic island in which we live can say, what I have to confess of myself, that my whole life has been passed in handling books.

The books of which we are going to speak to-night are the books of our day — modern literature, or what are commonly called " new books."

So various are the contents of the many-colored volumes which solicit our attention month after month for at least nine months of the year, that it may seem an impossible thing to render any account of so many-sided a phenomenon in the short space of one lecture. But I am not proposing to pass in review book by book, or writer by writer — that would be endless. I am not proposing to you to speak of individuals at all, I want you to take a comprehensive point of view, to consider our books *en masse*, as a collective phenomenon — say from such a point of view as is indicated by the questions, " Who write them? Who read them? Why do they write or read them? What is the educational or social value of the labor so expended in reading or writing?

Literature is a commodity, and as such it is subject to economic law. Books, like any other commodity, can only be produced by the combination of labor and capital — the labor of the author, the capital of the publisher. They would not be written unless the author labored to write them. They could not be printed unless there was somebody ready to advance money for the paper and the work of the printing-press. The publisher, the capitalist, risks his money on a book because he expects to turn it over with a trade profit — say twelve per cent. — on it. On the capitalist side the production is purely a commercial transaction; but on the labor side, *i.e.* on the part of the author, it is not equally easy to state the case as one of labor motived by wages. Certainly authorship is a profession. There are authors, who are authors and nothing more — men who live by their pen, as a counsel lives by giving opinions, or a physician by prescribing for patients. But this is only partially the case with our literature. A large part of it is not paid for; the author's labor is not set in motion by wages. Many other motives come in, inducing men to address the public in print, besides the motive of wages. Disinterested enthusiasm; youthful ardor of conviction; egotism in some one of its many forms, of ambition, vanity, the desire to teach, to preach, to be listened to; mere restlessness of temperament; even the having nothing else to do, — these things will make a man write a book quite irrespective of being paid for doing so. Did you ever hear of Catherinot? No! Well, Catherinot was a French antiquary of the seventeenth century; a very learned one, if learning means to have read many books without understanding. Catherinot printed, whether at his own cost or another's I can't say, a vast number of dissertations on matters of antiquity. David Clément, the curious bibliographer, has collected the titles of one hundred and eighty-two of those dissertations, and adds there were more of them which he had not been able to find. Nobody wanted these dissertations of Catherinot. He wrote them and printed them for his own gratification. As the public would not take his *paperasses*, as Valesius called them, he had recourse to a device to force a circulation for them. There was then no penny-post, so he could not, like Herman Heinfetter, post his lucu-

* lecture, delivered Oct. 29, 1877.

brations to all likely addresses, but he used to go round the *quais* in Paris, where the old bookstalls are, and, while pretending to be looking over the books, slip some of his dissertations between the volumes of the *boutiquier*. In this way the one hundred and eighty-two or more have come down to us. Catherinot is a by-word, the typical case of scribbleomania, — of the *insanabile scribendi cacoethes* — but the malady is not unknown to our time, and accounts for some of our many reams of print. And even if pure scribbleomania is not a common complaint, there are very many other motives to writing besides the avowed and legitimate motive of earning an income by the pen. Why do men make speeches to public meetings, or give lectures in public institutions? It is a great deal of trouble to do so. The motives of the labor are very various. Whatever they are, the same variety of motives urges men to write books.

Notwithstanding these exceptions, the number and importance of which must not be lost sight of in our inquiry, the general rule will still hold that books, being a commodity, are subject to the same economic laws as all commodities. That one which is of importance for us is the law of demand and supply; the law which says that demand creates supply, and prescribes its quantity and quality. You see at once how vital to literature must be the establishment of this commercial principle as its regulator, and how radical must have been the revolution in the relation between writer and reader which was brought about when it was established. In the times when the writer was the exponent of universally received first principles, what he said might be true or might be false, might be ill or well received, but at all events he delivered his message; he spoke as one having authority, and did not shape his thoughts so as to offer what should be acceptable to his auditory. Authorship was not a trade; books were not a commodity; demand did not dictate the quality of the article supplied. In England, at the beginning of the eighteenth century, the transformation of the writer from the prophet into the trading author was pretty well complete. As we trace back our civilization to the cave man, so it is worth while casting a glance at the ancestral authorape from whom is descended the accomplished and highly-paid leader-writer of 1877, who sits for a county, and the "honor of whose company" dukes solicit. The professional author of Queen Anne's time has been delineated to us, by the master hand of Pope, as a disreputable being, starving in a garret "high in Drury Lane," on an occasional five guineas thrown to him by the grudging charity of one of the wealthy publishers, Tonson or Lintot, more likely Curll, "turning a Persian tale for half-a-crown," that he might not go to bed supperless and swearing. He was a brainless dunce without education, a sneaking scoundrel without a conscience. But you will notice that in this his mean estate, now become a hireling scribbler, he continued for long to keep up the fiction that the author was a gentleman who wrote because it pleased him to do so. When he had finished his pamphlet in defence of the present administration, a pamphlet for which he was to get Sir Robert's shabby pay, he pretended, in his preface, that he had taken up his pen for the amusement of his leisure hours. When he had turned into rhyme Ovid's "*De Arte Amandi*" for Curll's chaste press, he said he was going to oblige the town with a poetical trifle. You all remember Pope's couplet, —

> Rhymes ere he wakes, and prints before term ends,
> Obliged by hunger and request of friends.

The second line ought to be read thus, —

> Obliged by hunger and — request of friends,

hunger being the real cause of the hurried publication; "request of friends" the cause assigned, suppose on the title-page. The transformation of the teacher into the paid author was complete; but the professional author, though compelled to supply the article which was in demand, still gave himself the airs of an independent gentleman, and affected to be controlling taste instead of ministering to it.

In our own day, notwithstanding the exceptions to which I have alluded, it is now the rule that the character of general literature is determined by the taste of the

reading public. It is true that any man may write what he likes, and may print it. But if he cannot get the public to buy it, his book can hardly be said to be published. At any rate, books that are not read count for nothing in that literature of the day which is the subject before us.

Let us first inquire what literature is as to its mass, before we look into its composition. And here it will simplify our subject if we divide books into two classes — literature strictly so-called, and the books which are not literature.

Literature does *not* mean all printed matter. Blue-books and Acts of Parliament, Mrs. Beeton's "Household Management," Timbs's "Year-book of Facts," Fresenius's "Chemical Analysis" — these are not literature. The word is not applicable to all the books in our libraries. Most books are didactic — *i.e.*, they are intended to convey information on special subjects. Treatises on agriculture, astronomy, a dictionary of commerce, are not literary works. They are books — useful, necessary for those who are studying agriculture, astronomy, commerce — but they do not come under the head of literature. There are books which the publishers are pleased to advertise as "gift-books," the object of whose existence is that they may be "given" — no doubt they answer their purpose, they are "given" — and there is an end to them. I have seen an American advertising column headed "swift-selling books," the object of which books, I presume, was that they might be "sold," like Peter Pindar's razors. When we have excluded all books which teach special subjects, all gift-books, all swift-selling books, all religious books, history and politics, those which remain are "literature."

I am unable to give a definition of literature. I have not met with a satisfactory one. Mr. Stopford Brooke, in a little book which I can cordially recommend to beginners — it is called "A Primer of English Literature" — has felt this difficulty at the outset. He says in his first page, "By literature we mean the written thoughts and feelings of intelligent men and women arranged in a way which will give pleasure to the reader." It would be easy to show the defects of this definition; but, till I am prepared to propose a better, we may let this pass. Of what books the class literature consists may be better understood by setting the class in opposition to special books than by a description. Catalogues of classified libraries use the term "belles-lettres" for this class of book.

When we have thus reduced the comprehension of the term "literature" to its narrowest limits, the mass of reading soliciting our notice is still enormous — overwhelming. First come the periodicals, and of periodicals first the dailies. The daily newspaper is political or commercial, mainly; but even the daily newspaper now, which pretends to any standing, must have its column of literature. The weekly papers are literary in a large proportion to their bulk. Our old friend the *Saturday Review* is literary as to a full half of its contents, and, having worked off the froth and frivolity of its froward youth, offers you for sixpence a co-operative store of literary opinion of a highly instructive character, and always worth attention. There are the exclusively literary weeklies — the *Academy*, the *Athenæum*, the *Literary World* — all necessary to be looked at as being integral parts of current opinion. We come to the monthlies. It is characteristic of the eager haste of our modern Athenians to hear "some new thing," that we cannot now wait for quarter-day. Those venerable old wooden three-deckers, the *Edinburgh Review* and the *Quarterly Review*, still put out to sea under the command, I believe, of the Ancient Mariner, but the active warfare of opinion is conducted by the three new iron monitors, the *Fortnightly*, the *Contemporary*, and the *Nineteenth Century*. In these monthlies the best writers of the day vie with each other in soliciting our jaded appetites on every conceivable subject. Indeed, the monthly periodical seems destined to supersede books altogether. Books now are largely made up of republished review articles. Even when this is not the case, the substance of the ideas expanded in the octavo volume will generally be found to have been first put out in the magazine article of thirty pages. Hence the monthlies cannot be disposed

of by slightly looking into them; they form at this moment the most characteristic and pithy part of our literary produce. It has been calculated that the insect life upon our globe, if piled in one mass, would exceed in magnitude the heap which would be made by bringing together all the beasts and birds. For though each insect be individually minute, their collective number is enormous. So a single number of a periodical seems little compared with a book; but then there are so many of them, and they are reproduced so fast! A newspaper seems less than it is on account of the spread of the sheet. One number of the *Times*, a double sheet containing sixteen pages, or ninety-six columns, contains a quantity of printing equal to three hundred and eighty-four pages octavo, or an average-sized octavo volume. Even a hard reader might find it difficult within thirty days to overtake the periodical output of the month; and then on the first he would have to begin all over again.

So much for periodicals; we come now to the books.

The total number of new books, not including new editions and reprints, published in Great Britain in 1876, was twenty-nine hundred and twenty. In accordance with the construction I have put on the term literature, we must subtract from this total all religious, political, legal, commercial, medical, juvenile books, and all pamphlets. There will remain somewhere about sixteen hundred and twenty books of literature, taking the word in its widest extent. I may say, by the way, that these figures can only be regarded as approximative. Cataloguing in this country is disgracefully careless. Many books published are every year omitted from the London catalogue. For example, out of two hundred and sixty-seven works published in the two counties of Lancashire and Chesire, only thirty-one are found entered in the last London catalogue. But I will take no account of omissions. I will even strike off the odd one hundred and twenty from my total of sixteen hundred and twenty, and say that English literature grows only at the rate of fifteen hundred works per annum. At this rate in ten years our literary product amounts to fifteen thousand books. Put the duration of a man's reading life at forty years. If he had to read everything that came out, to keep pace with the teeming press, he would have had in his forty years sixty thousand works of contemporary literature to wade through. This in books only, over and above his periodical work, which we calculated would require pretty well all his time.

But as yet we have got only Great Britain. But England is not all the world, as Mr. Matthew Arnold reminds us ("Essays," p. 43). By the very nature of things, much of the best that is known and thought in the world cannot be of English growth, must be foreign; in a survey of literature we cannot afford to ignore what is being said and written in the countries near us, any more than in politics we can afford to ignore what is being done by them. At present Germany and France are the two countries with whom we are most closely connected, and whose sayings are the most influential sayings in the world.

Germany is the country of books, and its output of books is enormous. The average annual number of books printed in that language is about twelve thousand. However, only a fraction of this total of German books deserves to rank as literature. Mere book-making is carried in Germany to a frightful pitch. The bad tobacco and the falsified wines of Mayence and Hamburg find their counterpart in the book wares of Leipsic. The German language is one of the most powerful instruments for the expression of thought and feeling to which human invention has ever given birth. The average German literary style of the present day is a barbarous jargon, wrapping up an attenuated and cloudy sense in bales of high-sounding words. The fatigue which this style of utterance inflicts upon the mind is as great as that which their Gothic letter, a relic of the fifteenth century, inflicts upon the eye, blackening and smearing all the page. An examination of the boys in the Johannenen of Hamburg elicited the fact that sixty-one per cent. of the upper class were short-sighted. A large part of German books is not significant of anything — mere sound without meaning.

Putting aside, however, the meaningless, there remains not a little in German publication which requires the attention of one who makes it his business to know the thoughts of his age. The residuum of these twelve thousand annual volumes has to be sifted out of the lumber of the book-shops, for it embodies the thoughts and the moral ideal of a great country, and a great people. Poor as Germany is in literature, it is rich in *learning*. As compilers of dictionaries, as accumulators of facts, the German bookmaker is unrivalled. The Germans are the hewers of wood and drawers of water for a literature which

they have not got. All the rest of the European nations put together do not do so much for the illustration of the Greek and Latin classics as the Germans alone do — classics by whose form and spirit they have profited so little. It is one of the paradoxes of literary history that in this very country — Germany — which is the world's schoolmaster in learning the Greek and Latin languages, so little of the style and beauty of those immortal models passes into its daily literature.

If style and form alone were what gave value to literature, the first literature now produced in the world would be the French. All that the Germans have not the French have. Form, method, measure, proportion, classical elegance, refinement, the cultivated taste, the stamp of good society — these traits belong not only to the first class of French books, but even to their second and third rate books. No writer in France of whatever calibre can hope for acceptance who violates good taste or is ignorant of polite address. German literature is not written by gentlemen — mind, I speak of literature, not of works of erudition — but by a touzle-headed, unkempt, unwashed professional bookmaker, ignorant alike of manners and the world. In France a writer cannot gain a hearing unless he stands upon the platform of the man of the world, who lives in society, and accepts its prescription before he undertakes to instruct it. French books are written by men of the world for the world. This is the merit of the French. The weak point of French books is their deficiency of fact, their emptiness of information. The self-complacent ignorance of the French writer is astonishing. Their books are too often style and nothing more. The French language has been wrought up to be the perfect vehicle of wit and wisdom — the wisdom of the serpent — the incisive medium of the practical intelligence. But the French mind has polished the French language to this perfection at a great cost — at the cost of total ignorance of all that is not written in French. Few educated Frenchmen know any language but their own. They travel little, and, when they do travel, their ignorance of the speech of the country cuts them off from getting to know what the people are like. We must credit the French with knowing their own affairs; of the affairs even of their nearest neighbors in Europe they are as ignorant as a Chinese. Their newspapers are dependent for their foreign intelligence on the telegrams of the *Times*. Hence their foreign policy has been a series of blunders. Had the merits of the case been known to it, could republican France, in 1849, have sent out an expedition to Rome to set up again the miserable ecclesiastical government which the Romans had thrown off? I was reading in the *Figaro* not long ago a paragraph giving an account of the visit of a French gentleman in England. On some occasion he had to make a speech; and he made it in English, acquitting himself very creditably. "M. Blanc," says the *Figaro*, "being a Breton, spoke English like a native Englishman, on account of the close affinity between the two languages, Breton and English." The *Figaro* is one of the most widely circulated newspapers in France. England is a country with which the French are in close and constant communication, and yet they have not discovered that the English tongue does not belong to the Keltic family of languages. That Germany is as little known to them as England I might instance in the most popular tourist's book of the day. Victor Tissot's "*Voyage aux Pays des Milliards*" has reached something approaching to fifty editions. It is nothing but a tissue of epigrams and witty exaggerations, a farce disguised as fact, and taken by the French nation as a serious description of German life.

It is an error to say, as is sometimes said, that French literature is a mere literature of style. This finished expression embalms much worldly wisdom, the life experience of the most social of modern men and women; but it is an experience whose horizon is limited by the limits of France. It is a strictly national literature. It is, in this respect, the counterpart of the literature of ancient Athens. *We*, all the rest of us, are to the Frenchman barbarians in our speech and manners. He will not trouble himself about us. By this exclusiveness he gains something and loses much. He preserves the purity of his style. The clearness of his vision and the precision of his judgment, from his national point of view, are unimpaired. He loses the cosmopolitan breadth — the comparative standpoint. But the comparative standpoint is the great conquest of our century, which has revolutionized history and created social science and the science of language.

He who aims at comprehending modern literature must keep himself well acquainted with the contemporary course of French and German books, as well as of his own language; and these two are enough. A

Spanish literature of to-day can hardly be said to exist, and the Italians are too much occupied at present in reproduction and imitation to have much that is original to contribute to the general stock of Europe.

English, French, German; the periodical and the volume publication in these three languages, year by year: you will say the quantity is prodigious — overwhelming, if it were to be supposed that any reader must read it all. But this is not the case: what the publisher's table offers is a choice — something for all tastes: one reads one book, another another. As I divided books into two classes, books of special information and books of general literature, so readers must now be divided into two classes — the general public and the professional literary man: the author, or critic, let us call him. I am not proposing that the general public should read, or look at, all this mass of current literature. It would be preposterous to think of it. You must read by selection; but for your selection you will be guided — you are so in fact — by the opinion of those whom I must now speak of as a class, by the name of critics.

Criticism is a profession, and, as you will have gathered from what has been said, an arduous profession; the responsibility great, the labor heavy. Literature is not your profession — I speak to you as the general public — it is at most a solace of your leisure hours; but the critic, he who sits on the judgment-seat of letters, and has to acquit or condemn, to examine how each writer has executed his task, to guide the reading community by distinguishing the good and censuring the bad — he really holds an educational office which is above that of any professor or doctor, insomuch as the doctor of laws or of divinity is authorized to speak to his own faculty, whereas the critic speaks to the whole republic of letters. What is recreation to you is business to the critic, and his business is to keep himself acquainted with the course of publication in at least these three languages. Looking, then, at the mass and volume of printed matter to be thus daily and hourly sifted, you cannot think that the profession of critic is a sinecure.

And before he can be qualified to take his seat on the bench and dispense the law, consider what a lengthened course of professional training must have been gone through by our critic or judicial reader. When he has once entered upon its functions, his whole time will be consumed, and his powers of attention strained to the utmost, in the effort to keep abreast of that contemporary literature which he is to watch and report upon. But no one can have any pretension to judge of the literature of the day who has not had a thorough training in the literature of the past. The critic must have been apprenticed to his profession.

It has been calculated that in a very advanced and ramified science, *e g.*, chemistry, fourteen years are required by the student to overtake knowledge as it now stands. That is to say, that to learn what is known, before you can proceed to institute new experiments, fourteen years are necessary — twice the time which the old law exacted of an apprentice bound to any trade. The 5th of Elizabeth, which used to be known as the statute of apprenticeship, enacted that no person should for the future exercise any trade, craft, or mystery, unless he had previously served to it an apprenticeship of seven years at least. This enactment of 1563 was but the legislative sanction of what had been for centuries the by-law of the trade guilds. This by-law had ruled, not in England only, but over all the civilized countries of Europe. It was a by-law that had not been confined to trades. It had extended over the arts and over the liberal professions. University degrees are nothing more than the application of this by-law to the learned professions. It required study for twenty-eight academical terms, *i. e.*, seven years, to qualify for the degree of M. A. in the universities. Rather, I would say, that the line was not then drawn between the mechanical and the liberal branches of human endeavor; both were alike designated "arts;" and the term *universitas*, now restricted to the bodies which profess theoretical science, was then the common appellation of all corporations and trade guilds, as well as the so-called universities of Paris and Bologna.

Regarding literature as a separate art, we might ask, How long would it require to go through the whole of it to become a master of this art? Even taking the narrowest definition of literature, it seems a vast surface to travel over, from Homer down to our own day! I say the surface, because no one supposes it necessary to read every line of every book which can call itself literature. Remember that in studying the literature of the past, other countries than France and Germany come in. I have dispensed our critic from occu-

pying himself with the Italian and Spanish books of to-day. But with the books of the past it is different. Italy, in the fifteenth and sixteenth centuries, was the most civilized and literary country in Europe. And Spain has its classical writers. Their mere mass is prodigious. Life in Italy was rich and varied, and consequently so were the materials for that true narrative which is stranger than fiction. Villari has computed that the Italian republics of the Middle Ages enjoyed a total of seventy-two hundred revolutions, and recreated themselves with seven hundred grand massacres. The longest single poem, I believe, extant, is an Italian poem, the "*Adone*" of Marini, who lived in the time of our James I. It contains forty-five thousand lines. As for Spain, one single author of the seventeenth century, Lope de Vega, wrote eighteen hundred plays; his works altogether fill forty-seven quarto volumes. Alonso Tostado, a Spanish bishop of the fifteenth century, wrote nearly forty folios, having covered with print three times as many leaves as he had lived days. To come to England. Our William Prynne wrote two hundred different works. Chalmers's collected edition of the English poets only comes down to Cowper, who died in 1800, and it fills twenty-one volumes royal octavo, double columns, small type. The volumes average seven hundred pages. This gives a total of fourteen thousand seven hundred pages, or twenty-nine thousand four hundred columns. Now it takes — I have made the experiment — four minutes to read a column with fair attention. Here is a good year's work in reading over, only once, a selection from the English poets. The amount of reading which a student can get through in a given time hardly admits of being measured by the ell. The rate of reading varies with the subject, the rapid glance with which we skim the columns of a newspaper being at one end of the scale, and the slow sap which is required for a page of, say, Kant's "Critique of Pure Reason" being at the other. Still, just to get something to go upon, make a calculation in this way: Suppose a man to be able to read eight hours a day. No one can really sustain receptive or critical attention to written matter for eight hours. But take eight hours as the outside possibility. Thirty pages octavo is an average hour's read, taking one book with another. This would make two hundred and forty pages per day, one thousand six hundred and eight per week, and eighty-seven thousand three hundred and sixty pages in the year. Taking the average thickness of an octavo volume as four hundred pages only, the quantity of reading which a diligent student can get over in a year is no more than an amount equal to about two hundred and twenty volumes octavo. Of course this is a merely mechanical computation, by which we cannot pretend to gauge mental processes. But it may be worth while knowing that the merely mechanical limit of study is some two hundred and twenty volumes octavo per annum.

It would be clearly impossible, even for an industrious reader, to read, even once, every line of the world's stock of poetry, much less every line of all that can be called literature. In no branch of study is mere mechanical application of much avail. In the study of literature, as in art, mechanical attention, the mere perusal of the printed page, is wholly useless. The student, therefore, has to overcome the brute mass of the material on which he works by artificial expedients. Of these expedients the most helpful is that of selection. As he cannot look into every book, he must select the best. And selection must not be arbitrary. In the literary creations of the ideal world, as in the living organisms of the material world, natural selection has saved us the difficulty of choice. The best books are already found and determined for us by the verdict of time. Life of books is as life of nations. In the battle for existence the best survive, the weaker sink below the surface, and are heard of no more. In each generation since the invention of printing, many thousand works have issued from the press. Out of all this mass of print a few hundred are read by the generation which succeeds; at the end of the century a score or so may be still in vogue. Every language has its classics, and it is by this process of natural selection that the classics of any given country are distinguished from the weltering mass of abandoned books.

It is a great assistance to the student that the classics of each language are already found for him by the hand of time. But our accomplished critic cannot confine his reading to the classics in each language; his education is not complete till he has in his mind a conception of the successive phases of thought and feeling from the beginning of letters. Though he need not read every book, he must have surveyed literature in its totality. Partial knowledge of literature is no knowledge. It is only by the comparative method that

a founded judgment can be reached. And the comparative method implies a complete survey of the phenomena. It is recorded of Auguste Comte that after he had acquired what he considered a sufficient stock of material, he abstained scrupulously from all reading, except two or three poets (of whom one was Dante) and the "*Imitatio Christi*" of Thomas à Kempis. This abstinence from reading Comte called his "*hygiène cérébrale*," healthy treatment of his brain. The citizens of his Utopia are to be prohibited from reading any books but those which had happened to fall in Comte's way before he gave up reading. It is, I think, the case that our student has now to read more than is compatible with perfect equilibrium of faculty. On the other hand, the consequences of cutting off contact with the thoughts of others, as Comte resolutely did, may be seen in the unhealthy egotism and puerile self-complacency which deform his writings, his perpetual "mistake as to the relative value of his own things and the things of others." (Arnold's "Essays.")

We require of our thoroughly furnished critic that he should have prepared himself for his profession by a comprehensive study of all that human thought, experience, and imagination have stored up for us. When we have used all the short cuts to this goal which art and nature have provided, how many years will such an apprenticeship require? The data are wanting on which to found a calculation. Can the work be got through in seven years, in twice seven, or in three times seven? I do not know. Archbishop Usher at twenty began to read the fathers, Greek and Latin, with the resolution of reading them through. The task was achieved in nineteen years. Hammond, at Oxford, read thirteen hours a day. ("Life of Usher." "Life of Hammond," by Fell.) Milton's "industrious and select reading," in preparation for the great work to which he dedicated a whole life, long choosing, and late beginning, are as well known, as the thirty years spent by Edward Gibbon in preparing for and in composing his history.

Of course in this, as in other trades, a man learns while he practises. Buffon told a friend that, after passing fifty years at his desk, he was every day learning to write. The critic's judgment matures by many failures. Without these three elements — time, industry, arduous endeavor — no man can attain to be a supreme judge of literary worth. Perhaps you have been accustomed to set before yourselves quite another ideal of the literary life. You have thought the business of reviewing a lazy profession, the resource of men who wanted industry or talent, who were, in short, fit for nothing better, a profession largely adopted by briefless barristers, by incompetent clerks, by green youths fresh from college examinations, and generally by men who shirk hard work — in fact an easy-chair and slipper business. You have, perhaps, supposed that anybody can write a review, that essay-writing is as easy as talking, that it is only a matter of cheek and fluency. You have imagined that a quarterly or a weekly reviewer merely got his knowledge of the subject in hand out of the book he had under review; that he, thereupon, dishonestly assumes to have known all about it, and with voluble impertinence goes on to retail this newly acquired information as if it were his own, seasoning it with sneers and sarcasms at the author from whom he is stealing. I know these things are said. I have heard even respectable reviews and magazines accused of paying for this sort of thing by the column, *i.e.*, giving a pecuniary inducement to fill out paper with words — to make copy, or padding, as it is called. I don't know if these things are done in practice. If they are, they are fraudulent, and must, I should think, come within the act against adulteration. What I have set before you in the above outline is the honest critic who gives to his calling the devotion of a life, prepares himself by antecedent study, and continues through the whole of his career to make daily new acquisitions and to cultivate his susceptibility to new impressions.

Such are the qualifications of the teacher, of the writer of books. I turn now from the author to the reader, from the producer to the consumer. You to whom I now speak are a portion of the public; you represent the consumer. And first, what is the mechanism by which the consumer is provided with his article? The English are not a book-storing people. Each family has not, as a rule, its own library. In great country houses, it is true, there is always the library. Many treasures are in these old repositories — the accumulated store of half-a-dozen generations. They often go back to Queen Anne, the great book-diffusing period of our annals; sometimes, but more rarely, to the seventeenth century. The family

history may be read in the successive strata, superimposed, like geological strata, one on the other. The learned literature of the seventeenth century, largely composed in Latin, its Elzevirs, and its *variorum* classics, will often be found relegated to a garret. These books have come to be regarded as lumber. They are only not cleared out and despatched to Sotheby's, because the cost of removal would exceed their produce at the auction. This, though hoisted up to the garret by an upheaval, is in point of time the earliest stratum. Upon this will be found a bed of theological pamphlets mostly in small quarto, in which lurk the ashes of passion, once fired by the Revolution of 1688, the non-juring pamphlets, the Dr. Sacheverell pamphlets, the Bangorian controversy. In the great library on the ground-floor we shall find the earliest stratum to consist of the splendid quartos, on thick paper with wide margin, of Queen Anne's time. "The Spectator," "The Tattler," Pope's Homer, a subscription copy; the folios of Carte and Echard, and so down the century over "Junius" and Chesterfield's "Letters" to the first editions of Sir Walter Scott's poems. The mere titles of such a collection, or accretion, form a history of literature. But it is only in our old country houses that such a treat is to be enjoyed, and the number of these diminishes in each generation. Cultivation and intellectual tastes seem to be dying out among the English aristocracy. It has been said ("New Republic") the fop of Charles II.'s time at least affected to be a wit and a scholar, the fop of our times aims at being a fool and a dunce.

In the house of a middle-class family you will also find a few books — chiefly religious books or specialty books — little literature, and that casual, showing no selection, no acquaintance with the movement of letters. There will be nothing that can be called a library. The intellectual barrenness of these middle-class homes is appalling. The dearth of books is only the outward and visible sign of the mental torpor which reigns in those destitute regions. Even in priest-ridden France, where the confessor has all the women and half the men under his thumb, there is more of that cultivation which desiderates the possession of books. In many a French family of no great means is a bookcase of some five hundred volumes, not presents, but chosen, and in which the *chefs-d'œuvre* of French literature will be included. They will be in half morocco, with gilt edges; binding not sumptuous, but elegant, and perfectly clean, neither thumbed nor grease-stained, nor gas-shrivelled — a sign, you will say, that they are not much used. Not so. A Frenchman cannot endure a dirty book. It is an error to suppose that the dirt on the cover and pages of a book is a sign of its studious employment. Those who use books to most purpose handle them with loving care. The dirt on English books is a sign of neglect, not of work. It is disrespectful and ignorant handling. If you have a select cabinet of books, with which you live habitually as friends and companions, you would not choose to have them repulsive in dress and outward appearance.

How insignificant an item of household expenditure is the bookseller's bill in a middle-class family! A man who is making £1,000 a year will not think of spending £1 per week on books. If you descend to a lower grade of income, the purchase of a book at all is an exceptional occurrence, and then it will rarely be a book of pure literature. The total population of the United Kingdom is more than thirty-three millions. The aggregate wealth of this population is manifold more than it was one hundred and fifty years ago, but the circle of book-buyers, of the lovers of literature, is certainly not larger, if it be not absolutely smaller.

One reason which may be assigned for the book dearth among families of small means is want of space. Room in this country is now become very costly. A family of £1,000 a year in a town probably pays out £100 a year as rent. A heavy tax! And what do you get for it? A hutch in which you can scarce put up your family or breathe yourself. You have literally no room for books. This, I grant, is a too true description of the town dwelling. But it is not altogether an account of why you are without a library. A set of shelves, thirteen feet by ten feet, and six inches deep, placed against a wall, will accommodate nearly one thousand volumes octavo. Cheap as books now are, a well-selected library of English classics could be compressed into less room than this, was the companionship of books felt by you to be among the necessaries of life.

If narrow income and cramped premises will not let us have a private library, we may meet our wants in some measure by public libraries. The co-operative store as applied to groceries is a discovery of our generation. But the principle of co-operation was applied to libraries long before. The book-club is an old institution which flourished in the last century,

but is nearly extinct now. There were some twelve hundred of these clubs scattered over England, and their disappearance has had a marked effect on the character of our book-market. Each country club naturally fell under the control of the one or two best-informed men of the neighborhood. The books ordered were thus of a superior class, and publishers could venture upon publishing such books because they knew they could look to the country clubs to absorb one edition. Now the supply of new books has passed away from the local clubs, and into the hands of two great central houses. Smith and Mudie, of course, look only to what is most asked for. And as even among readers the ignorant, the indolent, and the vulgar are in a large majority, it is the ignorant, the indolent, and the vulgar, who now create that demand which the publisher has to meet. Universal suffrage in the choice of books has taken the place of a number of independent centres which the aristocracy of intellect could influence.

It may prove some compensation for the destruction of the country book-clubs, that the great towns are beginning to bestir themselves to look after their book supply. The earliest common libraries were, as we should expect, in universities and colleges, often remote from populous centres, such as the Sharp library in Bamburgh Castle. It is only quite recently that the trading and manufacturing towns have begun to feel the want of books. And the desire is still feeble, and has spread but a little way. Some eighty or ninety cities and towns, I believe, in all Great Britain, have adopted, in whole or in part, Mr. Ewart's Act. There is still a very large number of towns with a population over three thousand who have not yet felt the want of a public library. Your city, always forward where enterprise can go, and where educational matters are in question, stands first, or only second to Manchester in apprehending the public importance of a complete outfit of books.

So much on the book supply. I go on to the question, What is the stimulus which makes men ask for books? Why do English men and women of the present day read?

There are people, I believe, who read books that they may be able to talk about them. Reading from *any* motive is better than satisfied ignorance, but surely *this* motive is both morally and intellectually unsound. Morally, it is an ostentation, an affectation of an interest you do not feel. Intellectually it is on a par with cram; it is no more knowledge than what is got up for the purpose of an examination is knowledge. What is read for the sake of reproducing in talk has neither gone to the head nor the heart. When any one says to me in company, "Have you read so-and-so?" I always feel an inclination to answer, "No, I never read anything," for I know the next question will be, "Did you like it?" and there an end. Those who most read books don't want to talk about them. The conversation of the man who reads to any purpose will be flavored by his reading; but it will not be about his reading. The people who read in order to talk about it, are people who read the books of the season because they are the fashion — books which come in with the season and go out with it. "When a new book comes out I read an old one," said the poet Rogers. And Lord Dudley — the great Lord Dudley, not the present possessor of the title — writes to the Bishop of Llandaff: "I read new publications unwillingly. In literature I am fond of confining myself to the best company, which consists chiefly of my old acquaintance with whom I am desirous of becoming more intimate. I suspect that nine times out of ten it is more profitable, if not more agreeable, to read an old book over again than to read a new one for the first time. . . . Is it not better to try to elevate and endow one's mind by the constant study and contemplation of the great models, than merely to know of one's own knowledge that such a book a'nt worth reading?" (Lord Dudley's "Letters.") We wear clothes of a particular cut because other people are wearing them. That is so. For to differ markedly in dress and behavior from other people is a sign of a desire to attract attention to yourself, and is bad taste. Dress is social, but intellect is individual: it has special wants at special moments, The tendency of education through books is to sharpen individuality, and to cultivate independence of mind, to make a man cease to be "the contented servant of the things that perish."

Dr. Halley used to recommend reading on medical grounds. He said close study prolonged life by keeping a man out of harm's way. But I never met with any one who acted upon Dr. Halley's advice, and chose to read hard that he might live long. And is there not truth in the opposite doctrine, which Mortimer Collins ("Secret of Long Life," p. 136) inculcates, that "the laziest men live longest"?

I have not, remember, raised the ques-

tion, Why *should* we read? This is the most important question of all those which can be raised about books. But I am not to-night presuming to advise you as to what you *should* do. I am only observing our ways with books — recording facts, not exhorting to repentance. Why *do* men read? What is the motive power which causes the flow of that constant supply of new books which flows over at those literary drinking-fountains, Smith's book-stalls?

Making exception of the specialty books — those which we get in order to learn some special subject — there is one, and one only, motive of all this reading — the desire of entertainment. Books are in our day the resource of our leisure; we turn to them in default of better amusement. Of course you will think immediately of the many exceptions which there are to this general statement. But, as I said before, the character of the books offered in the book-market is determined by the nature of the *general* demand. And it is the character of the general literature of the day which fixes our attention at this moment.

In taking the Smith and Mudie counter as the standard of the literature consumed by the English public, I do so because the class of book they supply is the best average class of book going — of "new book." I do not forget how small a fraction after all of the thirty-four millions of Britons the consumers of books of this class are. We sometimes speak of the readers of this class of book as "the reading public." But I do not forget that there exists a wider "reading public," which is below the Smith and Mudie level. Enter a book-shop in a small town in a remote province, and you will find on its counter and shelves a class of literature of a grade so mean that a Smith's book-stall instantly rises fifty per cent. in your imagination. Ask for Thackeray's "Vanity Fair." The well-dressed young person who attends to the shop never heard of Thackeray. The few books she can offer are mostly children's books — grown people don't seem to read in country places — or they are books of a denominational cast, books which perhaps are called religious, but which are, strictly speaking, about nothing at all, and made up of strings of conventional phraseology. Some of these books, unknown as they are to the reviews, have a circulation which far surpasses anything ever reached by one of our "new books" which has been ushered into the world by complimentary notices in all the papers. In estimating the intellectual pabulum most relished by my countrymen, I do not forget that "Zadkiel's Almanac" had a circulation of two hundred thousand. Commander Morrison, R.N., who only died as lately as 1874, was perhaps the most successful author of the day, and a great authority on astrology. He wrote, among other books, one entitled, "The Solar System as it is, and not as it is represented by the Newtonians." He brought an action against Sir Edward Belcher, who had called him in print an impostor. It was tried before Chief Justice Cockburn, and Commander Morrison, who retained Serjeant Ballantyne, obtained damages. The Court of Queen's Bench decided that Zadkiel was not an impostor. The tastes of this widest circle of readers — the two hundred thousand *abonnés* of Zadkiel — are not now under our consideration. We are speaking of the "reading public" in the narrower sense, and of what are called new books. And I was saying that this public reads for amusement, and that this fact decides the character of the books which are written for us.

As amusement I do not think reading can rank very high. When the brain has been strained by some hours' attention to business some form of open-air recreation is what would be hygienically best for it. An interesting game which can be played in the fresh air is the healthiest restorative of the jaded senses. It is a national misfortune that as our great towns have grown up in England there has been no reserve of ground in the public interest. The rich have their fox-hunting and their shooting, their deer-forests and their salmon-rivers. But these are only for the wealthy. Besides, they are pastimes turned into pursuits. What is wanted, in the interest of the humbler classes, is public places of considerable extent, easily accessible, where recreation for an hour or two can be always at hand. After manual labor rest and a book, after desk-work active exercise and a game, are what nature and reason prescribe. As every village should have its village green, so every town should have its one or more recreation grounds, where cricket, fives, tennis, croquet, bowls, can be got at a moment's notice in a wholesome atmosphere, not impregnated by gas, not poisoned by chemical fumes. Our towns are sadly behind in the supply of pleasant places of public resort. The co-operative principle has yet to be applied to open-air amusements. It is surely bad economy of life that in one of our wealth-producing centres

a game of fives should be almost as difficult to get as a salmon-river.

Still, even if these things were to be had, instead of being as they are unprocurable, in the long winter of our northern climate there are many months in the year during which our amusement must be sought indoors. Here come in the social amusements — theatres, concerts, dances, dinners, and the varied forms of social gathering.

It is when all these fail us, and because they do so often fail us, that we have recourse to the final resource of all — reading. Of indoor entertainment the truest and most human is that of conversation. But this social amusement is not, in all circumstances, to be got, and when it is to be had we are not always fit for it. The art of conversation is so little cultivated among us, the tongue is so little refined, the play of wit and the flow of fancy so little encouraged or esteemed, that our social gatherings are terribly stupid and wearisome. Count Pozzo di Borgo, miserable amid the luxurious appliances of an English country house — it is Lord Houghton tells the story ("Monographs," p. 212) — "drew some newly-arrived foreigner into a corner with the eager request, '*Viens donc causer, je n'ai pas causé pour quinze jours.*' Neither our language nor our temperament favors that sympathetic intercourse, where the feature and the gesture are as active as the voice, and in which the pleasure does not so much consist in the thing communicated as in the act of communication, and still less are we inclined to cultivate that true art of conversation, that rapid counterplay and vivid exercise of combined intelligences, which presupposes long and due preparation of the imagination and the intellect."

Instead of stimulating, we bore each other to the death. It is that we may escape from the terrible ennui of society that we have recourse to a book. We go to read not from craving for excitement, but as a refuge from the *tædium vitæ*, the irksomeness of herding with uninteresting fellow mortals. The man who is engaged all the morning, and has his faculties stimulated, his intellect edged to keenness by the details of business, cannot, on his return to his fireside, subside into vacuity. He must have something to whittle at. He reads his newspaper as long as he can, and when the newspaper at last gives out, he falls back upon a book. The native of a southern climate who has no business, and whose mind is never roused to exertion, has no such craving. The Italian noble does without books. He passes his day in listless indolence, content without ideas. There is no vacuity, and therefore no supply of books to fill it.

Here is the key to the character of the literature of our age. Books are a response to a demand. And the demand is a demand for recreation by minds roused to intelligence but not to intellectual activity. The mind of the English reader is not, as in the southern man, torpid, non-existent; it is alive and restless. But it is not animated by a curiosity to inquire, it is not awake to the charm of ideas, it is only passively recipient of images. An idea is an excitant, comes from mind, and calls forth mind. An image is a sedative.

The books, then, which are produced have to meet this mental condition of the reader. They have to occupy his attention without making any call upon his vigilance. There must be no reflex mental action. Meditation is pain. Fresh images must flow as a continuous douche of tepid water over the mind of the reader, which must remain pleased but passive. Books must be so contrived as to produce and sustain this beatific self-forgetfulness. That is called by publishers a successful book which just hits this mental level. To express all I have tried to say in one epithet — a book must be readable. If a book has this quality it does not much matter what it is about. Any subject will answer the purpose if the treatment be agreeable. The book must be so written that it can be read without any force being put upon the attention. It must not require thought or memory. Nor must there be any learned rubbish about. A Latin quotation may be ventured only by an established favorite. Ouida did once hazard "*facilis descensus Avernus;*" but it was ill taken by the critics.

Under these conditions of the public demand, it is not surprising that the species of composition which is most in favor should be prose fiction. In every other style of literary art, prose or poetical, our age looks back to bygone ages for models which it is ever endeavoring to approach, but dare not hope to surpass. In the novel, our age, but especially our own country, may justly boast to have attained a development of inventive power unequalled in the annals of all literature. It is not only that this is the most prolific species of book, more than one novel per working day being given to the world every year, but it is that the most accomplished talent which is at work for the book market is devoted to this class of pro-

duction. If, as I laid down at the commencement of this lecture, supply is governed by demand, it is clear that this result must be so. Entertainment without mental effort being our requirement, we must have our politics, our history, our travels presented in an entertaining way. But fiction, if taken from every-day life, and not calling upon us for that effort of imagination which is necessary to enable us to realize a past age, is entertainment pure, without admixture of mental strain or hitch of any kind.

For our modern reader it is as necessary that the book should be new as that it should be bound in colored cloth. Your confirmed novel-reader has a holy horror of second perusals, and would rather read any trash for the first time than "Pendennis" or "Pride and Prejudice" for the second. The book must be written in the dialect and grammar of to-day. No word, no construction, no phrase which is not current in the newspaper must be used. A racy and idiomatic style, fed by the habitual reading of our old English literature, would choke the young man who does the literature for the *Daily Telegraph*, and he would issue in "the largest circulation in the world" a complaint that Mr. —— seems to write strange English! Our modern reader requires his author's book, as he does his newspaper leader or his clergyman's sermon, to be the echo of his own sentiments. If Lady Flora were to ask me to recommend her a book to read, and I were to suggest Johnson's "Lives of the Poets," do you think she would ever ask my advice again? Or, if I were to mention Trevelyan's "Life of Lord Macaulay," the best biography written since Lockhart's "Life of Scott," she would say, "We had that long ago" (it came out in 1876); "I mean a *new* book."

To a veteran like myself, who have watched the books of forty seasons, there is nothing so old as a new book. An astonishing sameness and want of individuality pervades modern books. You would think they were all written by the same man. The ideas they contain do not seem to have passed through the mind of the writer. They have not even that originality — the only originality which John Mill in his modesty would claim for himself — "which every thoughtful mind gives to its own mode of conceiving and expressing truths which are common property" — ("Autobiography," p. 119). When you are in London step into the reading-room of the British Museum. There is the great manufactory out of which we turn the books of the season. We are all there at work for Smith and Mudie. It was so before there was any British Museum. It was so in Chaucer's time —

> For out of the olde fieldes, as men saythe,
> Cometh all this newe corn fro yere to yere,
> And out of olde bookes in good faithe
> Cometh all this newe science that men lere.

It continued to be so in Cervantes' day. "There are," says Cervantes in "Don Quixote" (32), "men who will make you books and turn them loose in the world with as much despatch as they would do a dish of fritters."

It is not, then, any wonder that De Quincey should account it ("Life of De Quincey," i. 385) "one of the misfortunes of life that one must read thousands of books only to discover that one need not have read them," or that Mrs. Browning should say, "The *ne plus ultra* of intellectual indolence is this reading of books. It comes next to what the Americans call whittling." And I cannot doubt that Bishop Butler had observed the same phenomenon which has been my subject to-night when he wrote, in 1729, a century and a half ago (preface to "Sermons," p. 4): "The great number of books of amusement which daily come in one's way, have in part occasioned this idle way of considering things. By this means time, even in solitude, is happily got rid of without the pain of attention; neither is any part of it more put to the account of idleness, one can scarce forbear saying is spent with less thought, than great part of that which is spent in reading."

MARK PATTISON.

DORIS BARUGH.

A YORKSHIRE STORY.

BY THE AUTHOR OF "PATTY."

CHAPTER XXXIX.

A FENCING MATCH.

FAITH EMMETT had a way of disdaining village news; but when the said news or gossip, for village tongues have marvellous power in creating facts, touched any one of the "family," she listened eagerly and brooded anxiously, making for herself an atmosphere of mystery often wholly fallacious while she was resolute against asking the simple question which would have thrown light on her dark suspicions,

and thus have destroyed their existence. She saw the change in Ralph and wept over it in secret, for Faith thought herself a good and pious woman, and swearing was to her as great a sin as drunkenness.

"Mebbe it's worse," she said; "a drunkard hurts himself most, but a swearer speaks devil's words, and mocks his Maker."

But she had no blame for Ralph; she only registered a deep unspoken curse in her heart against the person she considered the cause of all this mischief. Her fierce temper and her pride had always made Faith's life a solitary one. Ralph had been her only friend and confidant, and now she wanted counsel about him. If Mr. Raine would come to the Hall, she thought she must speak to him, for though there was little real sympathy between her and her master's cousin, there was the common ground of love for Ralph.

Faith now was in great perplexity. Three days ago Ralph had gone away quite suddenly. Miss Masham had arrived the day he left, and it seemed to Faith's jealous eyes that both Mr. and Mrs. Burneston thought a great deal too much of their visitor, and made far more fuss in receiving her than had been made for Ralph.

The young squire had gone away while his father was out riding, and Mr. Burneston had looked very angry when he heard of his son's absence.

"T' lad's not a bairn," Faith said to herself, though she longed to say it to the squire; "he'll nut be guided like a lass wad."

And now to-day, just after the Hall dinner, while she sate in her cosy, exquisitely neat parlor, resting her long back against the carving of a tall quaint oak chair, she began to nod to the lullaby buzzed by the bees below the low open casement, for she was very tired after her long morning of jam-making, and the anxious night about her young master which had preceded it.

Faith had resented her deposition from Phil's nursery, but she enjoyed the rest it had given. Spite of her sparseness and activity, she was beginning to feel the pressure of time on her limbs and joints, and this hour of quiet was much prized and rarely broken in upon by any of the household.

But to-day, before the bees had finished their soothing charm, the door opened and the stillroom-maid put in her head.

In an instant Faith sate rigidly upright, her lips firmly pressed together, and her yellow eyes as open as their long, narrow shape would let them.

"Please, m'm," — the stillroom-maid was from the south, and consequently was a sort of pariah in the opinion of her northern fellows — "here's Sukey Swaddles asking for you."

"Let her come in;" but a grunt of disapprobation followed, and there was no smile of welcome on the housekeeper's dark face when Mrs. Swaddles appeared.

It was Sukey's first visit, and her round blue eyes opened with awe at sight of Mrs. Emmett's orderly, well appointed room. She looked first at the faded Turkey carpet, and then at the fresh chintz curtains, and made a second curtsy to the tall woman, who condescended to smile grimly as she bent her head to the fair-haired sloven.

"Well, Sukey Swaddles, what can I do for you?" Faith asked.

Sukey stared, and pushed her soft fair hair off her flushed face with the palm of her left hand, while the whites of her eyes grew larger and larger. Her ideas, like the rooms in her house, were always in too much confusion to be ready when wanted.

"It's for Missis Duncombe," she said at last in a foolish voice, wondering whether this was the answer expected of her by the stately housekeeper.

Faith's brows knit, and her keen eyes searched the pretty, vacant face.

"An' what call hev yu to meddle wiv Missis Duncombe's affairs? Her gran'dowghter sud cum an' speak wiv me when aught's wanted. She's nowt to do — mair's the pity, poor thing — but to wait on t' awd lass."

The corners of Sukey's eyes drooped, and her mouth opened widely.

"What are yu hauvin' an' gauvin' at?" said Faith fiercely. "Cannot yey speak, lass?"

"Please, Mistress Emmett, Rase is nane at' hoose, sheea's gehn."

"Gehn!" she struck the table with her hand. "Ye talk fond talk, lass. I saw Rose on Sunday, an' ah spoke with her; she told me she sud bide all t' winter thro' wiv her gran'mother."

Sukey shook her fair, untidy head; she had not much choice of words, but at last she made the housekeeper understand that Rose had gone away suddenly. One of the under-gardeners at the Hall had taken her away in the squire's own dog-cart in the early morning.

Faith questioned and questioned, but she could get no further information, ex-

cept that, on the day but one before Rose's journey, the squire had paid her a visit late in the evening.

"Massy!" she said to herself, "an' what's up noo? What wad Mrs. Burneston say if she kenned it? I mun speak wi' Joseph Sunley; he hes eyes atween his shoulders for t' deeains o' his neeaghbors."

"Yu can sit yey down, Sukey Swaddles," she said with dignity, as she turned to go to the still-room. "I'll send yey what Mrs. Duncombe needs, an' she can hev mair when that's ended. Sit yu doon, ah tells yu!" She gave a sudden stamp of the foot, which pulled Sukey into the nearest chair with the suddenness with which a string pulls a puppet; Faith walked away.

"Lors," said Sukey, "what a temper she hes o' her ain! It's lahke thunder and leeghtning — it tak yal my wits oot."

But Faith was not angry; she stamped her foot by way of enforcing obedience. Those who knew Faith Emmett better than Sukey did would have dreaded the yellow gleam of her half-closed eyes far more than any show of open anger.

She gave her orders to her cockney subordinate, and then went up and dressed herself, so as to appear with due dignity in the village.

She went slowly up the hill. Sukey's news had startled her greatly, because, instantly in her mind, and without any preconceived suspicion, the two young creatures, Ralph and Rose, linked themselves together, and a possibility suggested itself which made Faith tremble and whiten. Only a momentary suggestion; she sneered at herself next minute.

"Nae, nae, I'm a fool; he's nut t' saame as his fayther," she said; "*he* hed a taint o' southren blood fra t' mother, an' one cannut expect mair through a pig than his grunt; but Ralph's mother come o' t' reight breed. Nae fear o' mah lad lettin' hisself doon when he weds. Nae, nae, it cum by a chance 'at he sud hev gehn away t' day efter Rose did."

She passed the closed door of Mrs. Duncombe's cottage. There was no use in screeching herself as hoarse as a raven in making the "awd doited body" hear. She went on and tapped at the sexton's door.

"Cum in," he said gruffly; when she went in the sexton was crouching over his fire, though outside the door the sun was hot and bright.

Joseph had had a severe rheumatic attack in the spring, which, he said, had left a chronic chill behind it. He walked very lamely now, and his temper was soured by the consciousness of his own infirmity. He grunted as he rose and set a chair for Mrs. Emmett.

"Guid day, neeaghbor." Faith seated herself in the chair, which he placed just in front of the fire. "Ah's fain to rest," she said; "but wi' yer guid leave, ah'll sit farder fra t' hearth. Ah's hot wi' walkin'."

"Ay" — Joseph gave her a pitying look, while the corners of his mouth drooped expressively — "mebbe yu feels t' mairch o' time, Missis Emmett; ye're gettin' weel on i' years, lahke t' rest on us, ah's thinkin'."

"Never mind me." Faith smiled, but her eyelids fell unpleasantly. "I've cum tu aks efter yer rheumatiks, Mr. Sunley, an' I've browght yu a bottle o' ginger cordial — mah own brewin', so I knaws it's real guid."

Joseph's back had stiffened at the mention of a gift; he considered himself quite above the round of charities doled out by the housekeeper, for Doris rarely visited the cottages in person; but the end of Faith's sentence mollified his pride.

"Varry kahnd on you; ah'll tak it an' welcome, neeaghber, nobbut yu mun taste a glass o' sherry wahne, an' swallo' a mossel o' seed-caake;" he got up and limped to a three-cornered cupboard on one side of the window.

"Rase hes made t' caake afore she ganned," he said; "ah'd nivvers ha' thowt 'at Rase wad turn sae handy, shee war bud a thriblous lass one while."

"Where's she gehn?" Faith said in an every-day tone, though she looked at him keenly. It was some time since she had exchanged more than a chance Sunday greeting with Joseph Sunley, and she had forgotten his singular quickness. He returned her glance as searchingly as it had been given.

"What fer diz yu aks, neeaghbur? T' lass cums an gehs; it's nut t' forst tahme by mair 'an yance 'at Rase Duncombe hes turned her back on Burneston. Sheea's nut ane tu bahde i' t' hoose; sheea's fluff aboot her still, nobbut sheea's steadied in a m'rac'lous way."

Faith was not listening; she sat taking counsel with herself whether there was a chance of finding out what she wanted without taking Sunley into her confidence; it was a struggle to give up her favorite method of gaining intelligence, and to be direct and open, but as she looked into the hard, acute little eyes fixed intently on

her face, she felt powerless to baffle the sexton. Fencing with him now was waste of time.

"I's fain to hear it," she said then with a little cough; "Maister Sunley, I b'lieve t' squire's sent t' lass away, an' I thinks yu ken t' reason o' her goin'."

The old man laughed, his eyes closed, and his network of wrinkles looked browner than ever as he pushed his lower lip up over his upper one.

"Ah kens mitch 'at ah meeans tu keep fer mysel', Missis Emmett, bud ah can tell yu sae mitch as this, donnut yu fash yursel' aboot t' squire's deeain's; he's reet eneeaf tu send t' lass aways."

"While Master Ralph's at home, yes;" she would not move a muscle, but a gleam of triumph shot from her yellow eyes at the sexton's change of countenance; for an instant his discomfiture showed, but he soon recovered himself.

"Hes t' squire said sae, Missis Emmett?" he looked incredulous, "then mebbe he's tellt yu wheer t' lass is gane tu?" He shut his eyes till they made thin lines.

"It's nut fer me to tittle-tattle, Maister Sunley; as yu say, fooaks cooms an' they gans; there's Maister Ralph was here o' Monday an' gane o' Tuesday, an' nane o' yan kens where tiv."

Joseph shook his head. He keenly enjoyed the power of tormenting his fellow-creatures, more keenly perhaps since his rheumatism had interfered with his usual amusements by keeping him in doors.

"Ah kens nowt aboot t' yung squire's ways. Yance he was yalays coomin' oop here; t'waaz Joseph this an' Sunley t'ither, bud noo," he lost his watchful self-control as he got angry, "asteead o' fishin' ur rabbitin' he'll spend his tahme litter-lattering efter t' lasses; he's anoder sort tus his fayther, mahnd ye that, missis."

"Posh," she spoke, angrily, too, "he's all reet; he may lanter away his tahme as ye say he diz, bud he'd nivver do as his fayther did, set a lass fra t' village ower her betters — nae, nae. Ralph's a true Burneston an' his mudher war a lady, sheea war that," then she checked herself and laughed.

Joseph's face had gone back to its usual mocking expression. "Sheea war nut sae bonny as t' new missis," he said, screwing his eyes so as to watch the anger he expected.

But Faith was on guard.

"Missis Burneston's looks are not t' be matched," she said loftily, "if they war, t' squire'd been clean fond, but beauty seems tu hev power even ovver kings ever sin' t' tahme o' David an' Bathsheba; but coom, Maister Sunley, nobbut I thowt yu an awd frind, ah'd nut hev clahmbed t' hill iv sike a swelter; we baith wish well to t' lad and t' lass; tell me noo, hev yu seen Maister Ralph wiv t' lass?"

Joseph looked impenetrable.

"Ah cannut see through stone walls, missis, an' ye'll nobbut be guided ye'll nut mak sae mony questions. Ah telled yu t' squire waaz reet tu send Rase aways. T' lass is reet an' guid, bud it's reet tu keep presarves on a heigh shelf, yey kens, when t' lads is aboot t' hoose."

CHAPTER XL.

A STRUGGLE.

On her way across the court, Mrs. Emmett learnt that the young squire had returned. This was a great relief to the troubled woman, and next morning, to her surprise, she saw Ralph on the lawn fronting the river with Rica Masham. The prayer-bell had not gone, it was only a little past eight o'clock, and as a rule Ralph was a very late riser.

Faith watched them from the window with a satisfied smile.

"I kenned I war reet. Nobbut he'd cared fer Rose he'd nut ha' cared to be wi' yan miss, an' he's fair set on her," she went on, craning her long neck out of window as the two passed out of sight round the angle of the house.

If she could have listened to Ralph's talk, and seen his manner at breakfast, she would have been confirmed in this idea. Ralph seemed transformed; he had not been in such a bright, pleasant mood since his return from France. He even spoke easily and pleasantly to Mrs. Burneston.

Last night he had felt grateful for Rica's mere presence. It saved him from embarrassing questions, and also from the restraint which he felt now with his father as well as with his stepmother. In his brief colloquy with Rose on the moor he had learned his father's interference. He returned home vowing to be revenged on Doris for her meddling, for it seemed to him that she only could have told the squire; but the novelty of finding a young visitor at the hall, and the piquancy he found in Rica's quaint freshness soothed his facile temper, and reconciled him for the time to the dulness of the house.

"You must stay here as long as I do," he said; "that is to say, if you don't find us too dull."

Rica looked up with her bright, amused

smile. "It's I who have to fear that," she said; "I have nothing to talk about, because I've seen nothing and nobody but home and my people — we are a large family, you know, and I — but do I bore you? let us talk of something else." She stopped short and looked inquiringly at Ralph. Her face glowed with health, and her large round grey eyes were full of happiness — not sparkling, for in repose Rica's eyes were pensive rather than bright, but when she was excited or happy the pupils dilated and became liquid with intense expression. Ralph looked at her admiringly.

"Yes, very much," he laughed, "but I'm a remarkable person too. Do you know, I like being bored? But I say, Miss Masham, will you come into the garden now, and I'll show you which are the best gooseberry-trees, as you say you care for gooseberries so much."

He made a grimace at her taste, and opened the door for her.

"Won't you come with us, Doris?" Rica said to Mrs. Burneston, for they were in her sitting-room.

"No, dear, I'm busy," Doris said abruptly, and they went.

Mrs. Burneston sate still after they left her; her straight dark brows had the stern look that Ralph's presence, and even the thought of Ralph, seemed always now to bring to them, and the blue veins showed more plainly than ever on her delicate temples. "How small-minded and contemptible I am! Why do I dislike him to be with Rica? She may do him good. She has a healthy influence, I can feel it myself; I am always brighter and happier for being with her, only" — she got up and began to walk slowly up and down — "she seemed very ready to go with Ralph — will she get to care for him really? Will she — shut up here with no one else? She *shall* not get to like him better than George," and the beautiful eyes lightened with sudden anger.

The dressing-room between her bedroom and the little boudoir in which she sat was now given up to Phil, and she heard him trying to open the door. The sudden joy in her face sent all her cares adrift.

"Why, Phil, darling," she bent down and kissed him, "I didn't know you were in. Come, my pet!"

He came forward slowly, not with his usual bound into her lap, as she seated herself to receive him.

"Why, Phil," she said, "what is it? Aren't you well, darling?"

But though she put her arm round him, Phil did not nestle fondly against her; he returned her kisses and then stood silent, very lovely, lovelier than ever, with his mother's pensive expression on his delicate face — usually it was so full of sunny mirth that it was difficult to say which parent the child resembled most, but in this quiet mood he was singularly like Doris — the small straight nose and the firmly-moulded lips and chin were exactly his mother's.

"Tell mamma," she said, softly between her kisses, "why Phil doesn't laugh to-day."

It was a pity that George could not see his sister's loving solicitude; he could not have believed that Doris could so entirely project herself into the mind of any other human being. She had taken so little notice of children in the days they were together, that he had often wondered how she would endure having a child of her own.

Phil pressed his round lips tighter, then all at once he raised his sweet dark eyes earnestly to his mother's face.

"Is oo anybody, mamma?"

"What do you mean, darling?" a sudden fear had darted into her mind; some one, Ralph possibly — yes, it must be Ralph, there was no one else — had been disturbing the child's baby mind. She stroked his forehead, puckered up with the frown that had gathered there.

"Don't frown; tell mamma all about it."

Phil gave her a quick, uneasy glance, then he nestled his head against her.

"Faith says" — Doris felt a hot glow rise in her face at the name; the housekeeper's influence was an evil she had not dreaded; since Faith's removal from the nursery, his mother had more than once congratulated herself, as she watched Phil's rapid mental development, that the housekeeper had no longer a chance of making mischief — "she says I'se not to tell anybody; is oo anybody, mamma?"

A tempest of anger, one of the rare but strong risings of feeling which affected Doris, swept over her. She grew white, and her hands clenched as she pressed the child closely to her bosom.

"Phil!" at the hoarse sound he looked up in sudden wonder, and Doris tried to clear and steady her voice. "You must always tell me everything, darling; it's very naughty to have secrets from mamma."

He drew himself away and stood upright, stiff and silent as a little statue.

His mother looked puzzled, and then she smiled.

"Tell me, Phil," she spoke gently, "tell mamma."

The child shook his head.

"I doesn't love oo," he said passionately; "oo said I was naughty, an' I wasn't. Oo's naughty to tell a tory."

She folded her arms round the little unyielding figure. "I made a mistake, darling; tell me what is it. 'Anybody' can never mean mamma. Phil always tells me everything."

The little face cleared into a lovely smile. "It's gran'mamma," he said, the perplexed look creasing his forehead again. "Faith says that gran'mamma's not a lady. Isn't she?"

Doris pressed her lips together.

"Faith is silly," she said at last; then with an effort, "you love gran'mamma, don't you, Phil?"

"Oh, yes; I love her like this," he put both arms round her neck and kissed her fondly; "an' Faith says I must love this gran'mamma best," he pointed to old Mrs. Burneston's picture.

"You must love this gran'mamma too," said Doris, "because she was papa's mother, and she loved papa as I love you, darling."

Phil shook his head discontentedly.

"But it's not a gran'mamma, it's a picture. I tant love a picture," he said; "it doesn't kiss me, nor play with me, nor nothing; an' my Cairn gran'mamma is a lady, isn't she? Is you a lady or a woman, mamma? What is a lady?"

Doris had rarely felt so thankful as she felt now to see the door open.

Her husband came in, followed by George. But she was too much absorbed by her own annoyance at Phil's disclosure, to see that George looked strangely agitated, and that her husband also seemed troubled.

Phil ran forward eagerly to his uncle and stood clasping his knees and looking up in his face, even after George had bent down to kiss him.

Uncle George was to Phil a bit of the Cairn, and the Cairn, with its homely outdoor life and absence of all nursery restrictions, was paradise to the child, who loved to ramble on the moor with his grandfather's big collie or to feed his grandmother's chickens far better than his restricted walks in the garden at Burneston.

"Come with me, Phil," his father said; "Uncle George wants to talk to mamma."

Phil shook his head and turned away, so as not to see his father's outstretched hand.

"An' I wants Uncle George;" he tightened his clasp and looked appealingly at his uncle.

Doris was going to speak and then she checked herself. She looked at her husband; she thought this was a good opportunity for him to exercise the fatherly authority he had so neglected in Ralph's education.

"Come along, Phil;" Mr. Burneston smiled, and patted the little fellow's head. "There's the donkey at the door waiting to take Phil a ride, the saddle has come at last."

Phil gave a cry of delight, even Uncle George was forgotten in the thought of the donkey; he had ridden at the Cairn, but only in front of his grandfather, and he had been looking forward with much eager excitement to the arrival of the little saddle on which he had been promised a real ride by himself.

He put his little hand in his father's, and pulled him to the door.

"Come along, papa! Come along quick," he said, then over his shoulder — "mamma, come and see me ride."

But Doris did not smile. She was vexed and disappointed.

"That is just the way he managed Ralph, I fancy," she thought. "He finds it is easier to bribe a child's obedience than to enforce it, and Ralph has never learned to obey; he knows no law but that of self-gratification."

"Doris!" there was so much pain in George's voice that she roused, and, looking at him, saw how pale he was, and how sunken and colorless his eyes had grown.

"Is anything wrong?" she said quickly. She put her hand to her heart; a sudden pang had come to her that George had brought bad news of her father.

"Yes, very wrong," then seeing how white she grew, he put his hand on her arm, and his voice had a tender tone, "but not about what you think, dear; it's about Rose. She was with us at t' Cairn, an' now she's fled away."

"Gone away!" Doris felt shocked. "Oh George, you don't mean to say Ralph came to the Cairn after her?"

George flushed to his hair, then he frowned.

"You're always ower hard on Ralph, Doris. Mebbe, if you'd take to him more kindly, he'd not find t' house so dull, an' he'd not be driven to folly. You sud let bygones be bygones. If I can forgive him, you should."

"I'm not hard on Ralph — if you knew

all you'd not say so. Are you sure he does not know where Rose is?"

George shook his head.

"You're very hard on t' lad; tho' he hes acted a fool's part an' made misery for all, he's but a lad, mind yu. Nobbut it's not 'at I should blame yu, lass, for I thowght such harm on him mysel' that I went down to t' little inn to see what had chanced; but you may be at rest. When I got there I learned he'd started off on horseback for Steersley before I got there; he must ha' ridden pretty hard to get back here as soon as he did."

"Where's Rose, then?" she asked.

"I cannot tell yu yet, lass. I came to t' village first on t' chance o' findin' if she'd gone home, and then I came on to see you all. Now I must go back to Steersley, t' squire thinks I may hear news there. I'll never leave seekin' after her till she's found, you may be sure of that, Doris."

Doris hesitated. Then she said coldly, "Let her go, George, and try to forget her. She's not worth your thoughts. She'll never make you happy after this."

"I shall never forget her." There was a struggle how he should answer, and he flushed painfully. Then he said, with coldness equal to his sister's, "Doris, I shall marry Rose if she will have me."

He walked to the window and looked out: beneath was little Phil on his donkey, laughing with delight as Ralph and Rica fastened roses into the front of the creature's bridle.

George stood watching them for a few minutes and then he turned to Doris.

"You are very wise to have Miss Masham here," he said. "Look at them. They seem admirably suited to one another — mebbe she'll do him good. She's a safe, wise friend for him."

"Oh George! when you know what I wish about Rica!"

A mingling of pity and sorrow shone in his eyes; he felt the tenderest pity for this struggling soul, which must regulate things by its own will, and could trust nothing to a wiser, more loving hand; and deep sorrow, too, for the blindness in which his sister lived. Every time he had appealed to her, on any higher ground than that of mere human reason, she had either smiled or turned away in wearied silence. For some time he had left her in peace, only striving to help her by his prayers, but at this appeal he spoke.

"You are clever, and wise, too, Doris," he said; "but you lack one sort of wisdom; you forget we can't *make* things go as we wish. God settles it all." She put up her hand in protest. "Do not be feared, lass," he said, "there's no sermon comin'; but I want to say one thing, and let it end the matter: if me an' your friend were the last man and woman living we'd never wed. We're not matched — so there now. I may nivver wed Rose; but I'll nivver give up loving her."

There was a pause. Doris tried hard to keep in her feelings.

"I'll say good-bye," her brother said; he kissed her without waiting for a reply, but she recovered herself.

"Good-bye, George. I must tell you what I think, and that is, that about Rose you are very foolish."

He nodded and smiled, and left her, but the set look on his face quenched her hopes.

For some minutes she stood thinking, her hands clasped in front of her waist.

Presently she said, "That boy Ralph has no heart; he means to trifle with Rica as he has trifled with Rose; but I need not be afraid. I'm sure Rica will only laugh at him — still there must be no chance of it. I will write to Mr. Raine and ask him here. Philip said he and Rica were just suited."

From Fraser's Magazine.

THREE WEEKS WITH THE HOP-PICKERS.*

A HOP-GARDEN with the pickers at work is a pretty, idyllic sight, and the looker-on, perhaps, finds his pleasure enhanced by the reflection that many of those he sees are having an "outing" from the great smoky city where they live.

The spirit of gregarious vagabondage is more noticeable among the lower classes in London than elsewhere. The number of cockneys swayed by it is really astonishing. Thousands quit the metropolis for the neighboring counties during the hay-making season. Other thousands leave it for the corn harvest. Large numbers defer their visit until the potato-digging season sets in. But by far the greatest multitude — not less than forty thousand strong — hastens down to the Kentish hop-fields during the month of September.

I had heard much of the manners and customs of these various hordes, of the enthusiasm with which they rushed into the country, of the delight which they took in gipsy life, and of their perfect in-

* [We have reason to believe that this is a genuine narrative of facts. — ED.]

difference for the time being to all the usages and conventions of civilization. I had heard, in fact, that in Kent and elsewhere, but particularly in Kent, they threw off all restraint, and lived almost in the condition of Hottentots. I determined to study the ways of the most important of these hordes of metropolitan vagabonds — the hop-pickers — in the only way in which it seemed to me it could be studied fairly, as one of themselves. I made up my mind to go down to Kent in one of the trains set apart for these people, to work among them during the season, to live among them precisely as they lived — in short, to see everything connected with hop-picking from a picker's point of view. I performed my purpose.

At ten minutes past twelve on the morning of Friday, September 7, I entered the London Bridge station of the South-Eastern Railway. The hoppers' train — fare two shillings — was to start at two o'clock, the travellers being at liberty to get out at any of the six or seven stations, Tunbridge the last. A large number of hoppers were in the station, and they continued trooping in until the train started. Most of them carried a few cooking-utensils, and many of them bundles of bedding. There were men, women, and children — shoals of children, of all ages, from a month old upwards.

The experienced hop-pickers travel in parties, by families and groups of families. Also, people living in the same neighborhood congregate together, and travel to the same destination. This particular train was to bear some hundreds of residents in the "Borough" to Maidstone; a body from Poplar was going to East Farleigh; a mass from Bermondsey was bound for Wateringbury; one from Shadwell was on its way to Paddock Wood.

The hopper generally returns to the farm on which he has spent his first season. Just before the picking commences he writes to the farmer, states the number of his party, and asks for a certain number of "bins." The farmer replies, and thus an engagement is formed before the picker with his family and friends leaves London. In many instances a single member is sent forward in the first place to see how matters stand on the hop-ground, and the remainder follow or not, according to his report. New hands who wish to obtain an engagement usually attach themselves to one of these parties before they start, otherwise their chance of employment is but small. Still, every train carries individuals who go at haphazard — people for the most part who know nothing whatever of hop-picking — generally solitary individuals. The writer was one.

The gathering at the station was noisy. "Chaff" was continually exchanged on all sides. It was good-humored, and not particularly offensive to unaccustomed ears, for which latter there was a reason. The mob was as yet under the supervision of porters and policemen, but the moment the restraint was removed the "chaff" changed character, and became gross in the extreme. It was so in the train, and so it continued on the hop-ground.

Under no circumstances can a London mob refrain from "chaff." Whatever its condition, and whatever the occasion, it is always the same. The half-famished casuals at a workhouse door on a wild winter evening "chaff" one another, just as used to do the crowds who assembled to witness a "hanging," or those who stiil gather to see an illumination.

Judging from appearances one would have set down the whole crowd as belonging to the lowest class — as composed of the scourings of the slums. No greater mistake could have been made. Such beings were there, and too many of them, but they were far from forming a majority. I was soon to discover that it is as customary with working families of comparative respectability to go "a hopping" in September as it is for members of another section of society to go to the moors, the seaside, Switzerland, and Norway, and for similar reasons — relaxation and health.

I was to find also, that no inconsiderable portion of the crowd had another motive which few of them cared to avow. It was this — a hopping expedition afforded ample scope for certain indulgences of which I shall have to write a little later.

One peculiarity of the hop-pickers caused me some surprise. Here were scores of wives who carried with them the whole family, from the baby at the breast to the grown-up son and daughter, while the husband and father remained at work in town.

I observed a number of youths from twelve to fourteen flitting through the crowd, entreating some one to take them with them into Kent, and offering their services in return. These were evidently runaways from home attracted by glowing accounts of life at the hop-fields. Most of them were well dressed; and the greater number obtained their wish, for a willing

lad is very serviceable in many ways to a grown-up picker.

Among the crowd there was a sprinkling, but only a sprinkling, of those who sought the hop-fields from absolute necessity. There were a few clerks long out of employment, a few paupers who had just discharged themselves from the workhouse, and a few thieves fresh from prison or unfortunate of late in their profession. I took some notice of these people in Kent, and found that, without exception, they were altogether useless as pickers. Some of them had not even perseverance enough to obtain an engagement, and the others were either discharged after a day or two as worthless, or took themselves off in a brief space because altogether incapable of sticking steadily to anything.

There was another class of hop-pickers that I must not omit to mention. It consisted of males and females, mostly young, who had formed temporary connections, and who were going down to Kent to live as husband and wife during the hopping month — to separate on their return to town. The women were machinists, tailoresses, and charwomen — with a very few of the distinctly disreputable. The men were chiefly skilled mechanics who had given up lucrative employments for a month of Bohemian life.

Unusual precautions had been taken by the railway authorities with respect to the hop-pickers. The band of porters and policemen on duty was strengthened, and an office for the issue of tickets had been constructed of stout planks for the occasion. Here, however, there was less tumult and bustling than may be observed any day at the first-class ticket-window of any station previous to the departure of a train. There was plenty of time, and the mob was good-humored and on its best behavior. At the proper hour the hoppers were passed through a narrow door to the train in which they were to travel. Here they gave up their tickets, being left at liberty to get out at any of the stations where the train was to stop.

At last, after a delay of two hours, which however were by no means weary hours to me, we were in motion. All this time the "chaff," of which I have already made mention, had been going on; but the moment we were clear of the station it developed into the form which it was to retain all through the hopping season. That form was coarser and far bolder in obscenity and filth than anything of the kind that had ever before come under my notice. The most naked terms invented by prurience and vice were used on all sides, and, I regret to write, by the women and girls far more than by the men and boys. It was peculiar to no age. Over and over again have I heard children of five and six apply the same horrible epithets to their parents that the latter applied to one another and to their children in their anger. But I shall be obliged to say more of this presently. It had one effect on myself. I had intended to alight at Maidstone with the mass of the pickers, but so foul-mouthed had I found them, that in sheer disgust I rode on past Maidstone and two other stations — East Farleigh and Wateringbury. By the time the last mentioned station was left behind the occupants of the carriages had become few and very quiet. I quitted the train at Yalding about half past four in the morning.

Here I found myself in a predicament. I knew absolutely nothing of the hop country, and nothing of hop-picking. I asked myself how was I to obtain the engagement I wanted? I resolved to attach myself to a group and share its fortunes. But the resolve was far more easily formed than carried out. The two or three with whom I left the station allowed me to accompany them to the town from which it takes its name, some mile and a half away by the field path. On the road, however, they found that I was altogether new to the business on which they as well as myself were bent, and with that jealousy of intruders on their profession, which marks the lowest class everywhere, gave me the cold shoulder so unmistakably that I was compelled to quit them.

There was nobody stirring at Yalding when I passed through the town, except a baker intent on doing business with the hoppers. From him I learnt that few hop-farmers had begun picking there, that these few were abundantly supplied with hands, and that the remaining farmers would not commence before the following Monday. He recommended me to try East Farleigh, and designated the route, which I took. By the time I reached this place it was clear to me that I should never obtain an engagement if I continued to search for one alone. Here and there, too, I obtained bits of information, until by about twelve o'clock my knowledge of the theory of hop-picking was tolerably complete.

At East Farleigh I sought to obtain employment with the Messrs. Ellis, the largest hop-farmers in that quarter — men who have a high and well-deserved reputation with the pickers. They, however,

like all the better employers, were already sufficiently stocked with hands, who presented by far the best appearance of any company that I saw in Kent, and the women were neat and modest-looking.

A mile or two farther on, at a short distance from Maidstone, was a hop-ground avoided by all good hop-pickers on account of the evil repute of its owner. He was especially notorious for unjust "measure," a term to be explained hereafter. Here I determined to apply; but even here there was no vacancy. As it turned out, far more pickers than were wanted had left London this year for Kent, the result being a good deal of misery. Some scores of the unemployed subsisted on alms at Maidstone for a week or more. It was the same elsewhere.

At this place I picked up a companion. He was a Londoner of a type that I did not like, full of the superficial sharpness of your low cockney, with gait, features, tone, and expression all bespeaking the picaroon. He had walked from London, like many another, spending two days and a night in the journey. According to his own account he was an experienced picker. I proposed that we should try fortune together. He assented, influenced no doubt by the fact that I had some food and the means of procuring more, while he was altogether destitute.

I saw no danger in this companionship. I was the stronger man; knew how to take care of myself in rough company; was not at all likely to be tempted into devious courses by such a person; on the contrary, I felt in a few minutes that I had acquired a moral supremacy over him. At the same time I was determined to watch him closely and to interrupt him very quickly and decidedly should he venture to attempt any ugly practice. He would be useful in enabling me to obtain an engagement. I would deal with him afterwards as he deserved.

It was now a little past noon. I proposed that we should try another quarter. A few queries were put to passengers, who suggested as the most likely Sutton Valence — one of four or five Suttons that lie in a circle six or seven miles from Maidstone, and eight from where we stood. My comrade would have preferred waiting in Maidstone the chance of an employer seeking hands, but of this I would not hear. He was a choice sample of the listless, wait-for-something-turning-up loungers who haunt the street corners of the lower quarters of London.

We started at once, passing through Maidstone. Here my companion was recognized, and hailed by one of a group that sat on a doorstep. It was a group so characteristic of hop-picking that I must describe it. It consisted of two women, two girls, and three babies. One of the women, about thirty, was dissipated-looking and dirty, and her baby, about eight months old, a poor, withered-looking, sickly thing. This woman was separated from her husband, and led a disreputable life in London; she was going to Sutton Valence, whither some relatives and acquaintances had preceded her. The other was a younger woman, some twenty-four or thereabouts and of a very different type. She was neat, well-dressed, well-nourished, and modest. With her were her children, one three years old, the other a baby born only twenty-four days before! But babies as young were not unusual on the hop-farms. I saw several. With this woman was her sister, a girl of fifteen, and another girl of twelve, the daughter of a neighbor, whose fare she had paid, and whom she was to maintain during the hop-picking, to whose services therefore she had acquired a right. Besides the children, the younger woman had a bag of bedding, which was not a light one, and a set of cooking-utensils. These things the party had carried from the railway station, about half a mile. They were sitting in a helpless, hopeless state, when we happened to pass. Neither of the women had any money, and how they were to reach their destination was more than they could say. Our arrival, however, released them from their difficulty. My companion and myself carried the bedding and the child of three to Sutton. I must allow that it was about the weariest walk I ever had.

On the way I had another specimen of the female hop-picker's tongue. The coarser woman "chaffed" every man she met in the grossest manner, and was imitated by the girls, but the younger woman never joined in the ribaldry. She was one of those who had left husbands at work in London, and was on her way to join her parents, who had left town a few days before.

Our destination was reached at last. Here, and at three or four other places in the same quarter, my companion and myself applied in vain for employment. He was altogether dispirited, and would have abandoned the search long before had he been alone; I, however, was determined to succeed, and bore down his opposition.

At last, about seven o'clock in the evening, when we were both thoroughly worn

out, we obtained an engagement at East Sutton. On this particular farm picking had commenced the Monday before. But the owner, like most owners in that quarter, had a bad repute as an employer. Indeed, many of his hoppers had "struck" on the Wednesday before, and the vacancies had not been filled up, and here, therefore, every applicant was gladly received.

Work being over for the day, we were directed to the "encampment," or "hop-houses," as are termed the lodgings which the hop-farmer is required to provide for his hands. These were situated in a large pasture field, and consisted of every sort of structure used by hop-farmers. There were three barn-like structures. Two of them were of two stories each, the lower story being of brick, and the upper, with the exception of the gables, of wood. The lower stories were divided into compartments, each having a door of its own width and length, but nothing in the shape of a window. The doors being shut at night, rendered them oppressively hot during the first weeks of September. Each compartment was intended for the occupation of a single family. The upper story of the "hop-house" formed one large room, and was reached by a ladder from the outside. It also was occupied by families. Next to the "hop-houses" were the "straw huts," of which there were three. These were long, low structures, with a framework of hurdles of the kind used for sheep-pens. Five hurdles planted in a line, some eighteen inches deep in the ground, formed a side. The roof was also of hurdles, supported on the sides, and meeting at an angle at the top. It was thatched with straw, and the sides were filled in with the same material. The ends were closed with canvas, stretched on a light framework. Each end had a rude door, which it was impossible to close tightly. In consequence there was a draught through, which kept the places healthy, but rendered them exceedingly uncomfortable during the colder nights. Besides the "hop-houses" and "straw huts," there were a number of tents, well constructed, and properly pitched with one exception — there was no trench round any of them.

All these places — "hop-houses," "straw huts," and tents — were littered with straw to the depth of eighteen inches or two feet. On this straw those who had bedding spread it; and those who had none — as the writer — slept in their clothes, taking off nothing but their boots and using their coats as blankets. There were others who borrowed pokes, or hop-sacks, without leave, into which they crept at night *in puris naturalibus*, and then buried themselves in the straw.

There was what was called a cooking-house — a low building with large doors at each end, containing eight huge fireplaces. There were fireplaces too at the ends of the hop-houses. These, however, were by no means sufficient; so the company lit half a dozen other fires every night and morning in the various parts of the encampment, suspending their kettles from sticks. These fires in the open gave the field a romantic appearance as the evening darkened, with the dark figures flitting round them in the red glare.

The hop-farmer provided fuel in the shape of faggots and small coal. As to other accommodation, there was little or none. The only provision for washing was a small square cistern about two feet in diameter, through which a thread of water ran. The surface was at least a foot below the bank, and not to be reached without kneeling. In a day or two a scum of soap and filth gathered upon the water and thickened hourly. The majority of the pickers therefore, myself being one, avoided "the well," as the place was called, and went to various convenient spots in the course of a small stream which ran some three-quarters of a mile from the encampment. Water for drinking and cooking had to be brought from Sutton Valence, more than a mile distant, or from the hop-farmer's house nearly as remote. There were wells much nearer — one for each group of cottagers; but these the cottagers kept locked during the hop-picking. The latrines were shamefully inadequate, and always in a disgusting state.

Such was the encampment in which with more than a hundred others, I lived for three weeks. There were a few better and a great many much worse.

I have stated that the "hop-houses" were appropriated to families. So was one of the "straw huts." Another straw hut was tenanted by single men; here I slept. The third was occupied by families, single men and single women indiscriminately. One or two of the tents held a family apiece; the remainder were filled as the third hut.

In one tent there were five men and one single woman. This woman was one of the characters of the encampment. She was not more than twenty-seven, and in other days and different circumstances she must have been beautiful. Her beauty, how-

ever, was of the most sensuous type. Slightly under the middle height; long curling brown hair and plenty of it; round and rather large head; regular features of the Greek type; rich dark olive complexion; figure, as full as consisted with grace; carriage that would have done honor to any ball-room. Such was the person of "Ellen," the only name by which she was known. It was evident that she had been highly educated. Her voice was low and cultivated, her language choice, and now and then a French or an Italian phrase would slip from her tongue. There was a slight remnant of old taste in her dress and of old modesty in her manners. Her complexion was just beginning to show the first trace of fading, and her features and figure were on the verge of that expansion which is called bloatedness. In a very little time Ellen's beauty will be a thing of the past. She occupied her tent by preference, a thing she did not attempt to conceal or excuse. On the contrary, there were times when she made a boast of it. She drank deeply and with every one who would invite her, but she was never drunk in the common acceptation of the word; she only became communicative — revoltingly so to any one save an habitual hop-picker.

"The only difference between women," she would say with bitter emphasis, "is that some are more cunning and hypocritical than others. I am one of the bold ones. I do not care the value of a pin what the world thinks of me. My own sex I know and despise; with the other sex I can do as I please, and mean to do as I please, so long as my good looks and my youth shall last." "And then?" "Sufficient to the morrow is the evil thereof. I live only for the present, and never bother my head about the future. And pray am I to be blamed for my way of thinking and acting? I did not make myself."

I describe Ellen because she is a representative woman. The class to which she belongs is not indeed a large one, but it is a class, and an exceedingly dangerous one. In the course of wide experience I have met various specimens. I may state for the benefit of the anthropologist, that, in person, they were all cast in the same mould; they had heads of similar shape, similar features, and complexion, the like figure, and the same temperament. Singularly enough, every one of them was accustomed to pronounce the same opinion of her sex as Ellen. The career of these women, so far as I observed it, was invariably the same: a youth of wild indulgence, a maturity wherein indulgence and interest were equally sought, men being victimized and women led to their ruin without the smallest compunction, and in most cases with exceeding skill, just to gratify the selfishness of the terrible creature; and a decline equally grasping and ascetic. Such women as Ellen, providing their constitutions remain unsapped by early excesses, not seldom pass their later years in ease and ostentatious piety.

I was so tired that I entered the hut designated for my lodging with a feeling of thankfulness, and throwing myself on the straw fell at once into a sound sleep, which continued unbroken till morning. Roused by the bustle of my fellow-lodgers, I "shook myself together," as one of them recommended, and went in search of a lavatory, which I found in a neighboring ditch, being as yet unacquainted with the locality, and therefore unaware of the existence of the stream already mentioned. The "well" I had seen to shrink from the night before.

I was up betimes at the picking ground, half an hour or more before the signal was given for work. A very primitive sort of signal it was, made by a man grunting hoarsely — nobody could call it blowing — through a cow's horn. I have heard many queer sounds in my time, but that was about the most ludicrously inartistic that ever puzzled my ears. In comparison the bray of a donkey is harmony itself. And yet I was gravely informed that this same signal is in all respects identical with the one with which Hengist was accustomed to urge his followers in the battle, and dear, therefore, to all true Kentish yeomen.

Here I may sketch the appearance of a hop-field in September, for the benefit of those readers who have never seen one. The hop-poles are planted in long straight rows, reaching from one end of the field to the other. These poles are about fifteen feet in height, and of two sorts, the light and the heavy. The lighter poles are planted by threes and fours, the heavier by twos. The rows stand about four feet apart; the groups of poles in each row about three. Thus the field is traversed in all directions by a number of long straight avenues. The hop plant, a creeper, climbs each pole with three or four stems, from which depend a number of short branches, thickly covered with dark green leaves. The hops grow chiefly at the top of the pole, whence they hang in bunches — yellow or russet, according to their ripeness, and often of such weight

as to bend the poles. These bunches diminish in number, weight, and value towards the base of the pole, where the plant is leafiest. The foliage of the hop-field is pleasant enough to the eye; but when the novelty wears off, as it soon does, one feels all the tameness, monotony, and formality of the arrangement.

The picking is done in this way. The hop-grower provides a number of "bins," ten to sixty or more, according to the extent of his farm; the time spent in picking everywhere being about the same, three weeks to a month, whether the farm be large or small. The "bin" consists of a light wooden framework, about eight feet in length, which opens and shuts like what is called a scissors bedstead. To this is fastened the "bin-cloth," which, when the bin is pitched and opened, forms the receptacle into which the hops are picked, and is capable of containing twenty-six to thirty bushels. Each bin is divided into two equal parts by a piece of canvas fastened to the bottom and sides, and is worked by two grown-up pickers, who may be assisted by children. The poles are laid across the bin, and the hops picked in as fast as the skill of the picker will allow, and with as little admixture of leaf as possible. The perfection of hop-picking is to be quick and clean. Much time is lost by picking too carefully, and at least as much by rough picking, for the superfluous leaves have always to be sifted from the crops previous to every "measure." This is the most disagreeable part of the work, and the most trying to new hands.

Besides the pickers, there are the "pole-pullers," or "bin-men." The common proportion is one puller to every five bins, but grinding farmers break the rule as often as they can in their own favor, and add another bin. The pickers are paid by the bushel; the pole-puller receives a fixed daily wage. He has the command of the company for which he pulls, and may employ his spare time in picking with his wife or a friend.

The companies are so arranged in the field as to remain stationary for a day. A certain number of poles before and behind him is assigned to each picker. Should he be slow, the quicker hands of the company take his poles as they finish their own.

The poles vary in worth; some bear few leaves and great quantities of hops; others abound in leaves, among which the hops have to be sought at much loss of time; in many cases the hops are so small as to be hardly worth the picking — that is, to the picker. In consequence, there is always a good deal of sharp practice and squabbling, and now and then some serious fighting about the poles.

The rate per bushel at which the pickers are paid is fixed at the opening of the season, according to the quality of the hops in the various fields of the farm. The smallest hops are paid for at a shilling for four bushels, the largest at a shilling for six, the medium at five to the shilling.

On this particular farm, as on most others in the vicinity, the price was six to the shilling all round. By far the larger portion of the poles being leafy, and most of the hops small, few pickers made more than eighteen pence a day, the average of the writer. Many did not average more than a shilling. Here, as elsewhere, a superabundance of hands had lowered the rate of wages.

It is the custom on the hop-farms to make the pickers daily advances of subsistence money — in pickers' phrase, "a sub" — of about two-thirds of the money earned. Should the picker leave the farm before the close of the picking he forfeits the remainder, as in this case it is the rule to estimate his earnings at "twelve a shilling all round" — a method of counting which always brings him in a debtor to the hop-farmer.

The hops are measured and the bins cleared four times a day — twice in the morning, and twice in the afternoon. Here lies the great grievance of the picker. The measurers are natives of the locality, men constantly employed on the farm, and having, therefore, interests in common with their employer. On the majority of farms they are accused of measuring against the picker, and, so far as I could judge, with truth. Where I worked it was asserted that the farmer had nine bushels to the shilling instead of six, which meant that his system of measuring defrauded the pickers of one-third of their earnings. It was quite out of the power of the hop-pickers to redress this in a legal way. They had no means of telling the employer, nobody paid any attention to their complaints; they were looked upon, in fact, as pariahs, outcasts, creatures infinitely beneath the native in all things, objects of contempt, and fit to be victimized by everybody dwelling in the county with whom they came in contact. The hop-farmers ground them down, and the local shopkeepers imposed upon them in every way, as I saw and experienced. For in-

stance, I once had a pennyworth of bread weighed out so ridiculously small that I had it weighed again immediately, and found it exactly *three ounces.* I kept the morsel for days as a specimen of the trading morality of Sutton Valence. It was the same in all things — over-charge, under-weight, and adulteration were universal for the hop-picker. And yet Sutton Valence is evidently a pious place. Not a single shop-door opens therein on the Sunday. Everybody goes to church, and, as I proved more than once, the meanest dweller in the place is quite prepared to treat the benighted hop-picker to any quantity of text and cant.

A number of pickers attempted to rectify the wrong practised on them by the measurers in their own way. As fast as they were measured out, the hops were poured into "pokes," or sacks, containing eight or ten bushels each. There was no system used in the removal of these sacks. In consequence a number of them would be secreted at every measuring time, and their contents poured back into three or four bins the moment the measurers turned their backs. This trick was practised exclusively by pole-pullers who had wives and families. The result was to cause still further over-measure against the pickers. For the hops were dried immediately after removal from the ground, then weighed, and as the farmer knew to an ounce what a dry bushel of hops should weigh, the deficiency was immediately discovered, and the measurers were directed to make it up next measure.

None of the pickers could help seeing what the pole-pullers did, and so long as it appeared to them merely cheating the employer, it met with their warm approval. In a day or two the real facts were laid before them, and an attempt made to induce them to stop the cheating in their own interests, and by their own influence, without resorting to the employer. They were shown that by acting thus they would deprive the employer of all excuse for over-measure, and make their own case against him too strong to be disregarded. It was useless; there was neither manliness enough nor honesty enough among them for such a course. Nevertheless, cheating was stopped, but in characteristic sneaking fashion. Within three days some threescore separate informations of what was going on were conveyed to the farm bailiff. In consequence a watch was set on one of the cheats — a fellow whose bullying, rapacity, and general unscrupulousness had rendered him universally disliked — a veritable object of detestation to the females of his own bins. He was caught in the act, and turned off the ground at short notice. Ere he departed, however, the scoundrel — a mongrel Irishman, who denied that there was anything Irish in him — gave the pickers another specimen of his quality. Finding it vain to deny his offence, he endeavored to secure companions in misfortune by denouncing half-a-dozen others by name as just as bad as himself. In return for this I suspect that by this time Mr. Michael C. has received what a good many — quite capable of being as good as their word — promised him on their return to town, "a skinful of sore bones." This incident stopped the cheating of the employer for the rest of the season, but it caused no change in over-measurement.

On the very first day I lost my temporary companion. We were placed at bins in different parts of the field. I, of course, made no great figure as a picker the first day; but he was so conspicuously and hopelessly inefficient that he was discharged before the day was over, and I saw no more of him.

The work was not heavy, and required no particular attention from the pickers, who were therefore at liberty to indulge in their favorite amusement, "chaffing," to the top of their bent. The thing went on endlessly and everywhere, and precisely as it had gone on in the train. After a few hours' experience, I began to perceive that not one of them attached any particular meaning to the horrible expressions they poured forth. They used them because they had been dinned in their ears from infancy. In their view there could be no earnestness in an assertion which was not strengthened by blasphemous adjectives and interjections. In consequence the lie of a cockney may always be detected by the increased energy of the phrases which recommend it to attention. It is much the same with obscene expressions. They are so habitually used that they cease to awaken any sharp sense of their meaning in those who use or hear them. They excite no disgust or other feeling in those accustomed to them. When a low-bred cockney is deliberately filthy, he resorts to ambiguous terms utterly unintelligible to an outsider. All day long I heard phrases round me perfectly innocent as far as the words went, and perfectly unmeaning in the literal sense, but for all that having a meaning which might be surmised from the ges-

tures of those who employed them. Three days in the hop-field went farther towards teaching me to understand parts of Rabelais than all the remarks of his commentators.

There was plenty of gross conduct to match the gross language. Self was the first, almost the sole consideration, from the youngest to the oldest. The grosser self — the body with its appetites — the gratification of the senses, was all they cared for. Parents were everlastingly ministering to self by tyrannizing over their children. And the children were as everlastingly doing the same thing by rebelling against their parents. The oaths and the ugly epithets that the one flung at the other were invariably returned, and nobody seemed surprised. Self was everywhere, stealing, cheating, lying, drinking, indulging. These people were specimens of their class — of the mob of the large town. They are the generation trained by the voluntary system of education; what sort of a generation will the School Board give us?

My bin companion, a young girl of nineteen, was a fair specimen of her class, no worse than her neighbors in conduct, quite as honest as the best of them, and at least as modest, which however is saying very little. A resident in the "Borough," when in town she found employment in a large factory, with some hundreds of other girls, her wages averaging about twelve shillings a week. There are many such factories in and about London, and their effect on the weaker sex was well exemplified in "Joanna." The woman loses all that makes her woman; she becomes hard, coarse, and sensual; she cares little for family ties of any kind; she is ready to form a loose connection at a moment's notice, and as ready to cast it off; she is incapable of lasting affection; her dealings with the opposite sex are regulated by mere interest and animal impulse, and thanks to people whom I need not name she has learnt to follow her grosser inclinations with impunity.

The male pickers, as the females, were fair examples of the class to which they belonged. They were cunning, utterly unscrupulous, selfish, cruel when there was a chance of being cruel with safety, and cowardly except when in gangs. One evening I was returning from the village about nine o'clock. At a lonely part of the road I heard a woman screaming "Murder!" some distance in front. I shouted in return to alarm her assailant, and ran forward. At a turn of the road I came upon a group of fellows, most of them armed with thick sticks, standing stock still, listening to the screams, and peering into the gloom. I could not help addressing a few strong remarks to them. They made no reply, but seeing me running, ran too, keeping well behind, however. As it happened, the noise was over before we arrived, though it might have been otherwise. A pair had been struggling in the hedge while half a dozen women looked on. "Oh, masters!" said one of the latter, "please don't interfere; it's only a man's been a-beating his wife about a penny-worth of tobacco." Nobody had interfered. Had the assault been a murderous one the perpetrator would have met with but small interruption from the cockney spectators. I saw a hundred instances of the low-lived cockney's liking for cruelty. They are cruel in gangs, like the wild dog or the wolf.

These fellows seldom got to blows among themselves. They often quarrelled indeed, but in these cases confined themselves to "roasting;" for example: —

"Yah, yah! Yer ought to putty yer face, yer ought, and get it painted."

"Yer ought to have a smoothing plane run over them cheeks of yourn; yah, yah!"

"Whoa, Emma!" — the burden of a music-hall song — (this because the user had no other answer ready). Then there would be a chorus of "Whoa, Emma!" over the field, after which the roasters would resume their interchange of vulgarisms, "Whoa, Emma!" or some other current cant phrase filling in every hiatus.

The hop-picker's attempts at humor were no more original, and much more objectionable. One would call out the Christian name of another three or four bins off, —

"George!" or "Joanna!"

"Yes — what do you want?"

Then followed some obscene word. This would raise a general laugh, after which came the inevitable chorus of "Whoa, Emma!" Similar questions and answers would be kept up for some time, always with the chorus. Then would come a loud conversation concerning the saying and doings of the frequenters of the lowest town haunts; and so the day would pass.

The day, however, was nothing to the evening.

The first part of the evening was usually spent in one or other of the public-houses in Sutton Valence, the "Swan"

being chiefly patronized by the "gang" to which I belonged. The house was a study in itself, and so was its landlord, but I cannot now notice either. There were two tap-rooms in the "Swan." The larger was appropriated by the English pickers; the smaller was taken possession of by the minority which dared to confess itself Irish. The latter was by far the more amusing. The company in the English tap was divided into many groups; the conversation was never general; there were no racy songs, or racier anecdotes. To understand the people here one had to flit from group to group, pausing long enough with each to enter into its feelings. It was different on the Irish side. Here the company was one, and the chat general, with plenty of song and story. Here, too, there was much more heartiness and good nature, and less quarrelling; for Pat, on this particular hop-ground, seldom made money enough to enable him to get fighting-drunk. On the other hand, the English portion came to the house out of temper, and never drank enough to make them good-humored. In consequence they were always grumbling and quarrelsome.

Most people got down to the encampment by seven o'clock, which was supper-time. After supper came smoking and gossip, most of it about cheating employers, punishing sneaks, and seducing women, among the men — about the latest doings of their neighbors and the latest scandals among the women.

As night fell the greater number would retire to their dormitories and continue the conversation until they fell asleep, or *pretended to fall asleep*. Any one stealing quietly out into the open air for an hour or two, between eleven and one, as I often did, would see forms creeping out of tents, huts, and hop-houses, and stealing away, and others lingering by tent and hop-house until door opening or canvas lifting displayed a hand beckoning in, when the form would creep stealthily forward and disappear under cover to emerge as stealthily. There was no great risk of interruption. The huts in particular contained such a mixed company, and so many were accustomed to come and to go at all hours, that nobody ever thought of lifting head to notice who came or went.

I heard more than one mother lament that to bring a daughter to the hop-ground was to bring her to her ruin; and yet mothers continued to bring their daughters, because the daughters would insist on being brought and the mothers dared not refuse. I heard a mother reprove a daughter for misconduct, and I heard the reply, "I do no more than you do," which silenced the mother.

But, in fact, very few of these intrigues were much of a secret. There was no scruple and no delicacy. Everybody heard, who cared to hear; and most who heard were ready to repeat the story at the first opportunity.

A week's life in the encampment realized for me, in low life, many of the tales of the old French and Italian novelists. At times I was perfectly amazed at the completeness with which one of the stories of Boccaccio or "*Les Cent Nouvelles Nouvelles*" would be reproduced.

The majority of these people have very pronounced political opinions, and in this, as also in the character of their opinions, they are fair representatives of their class. On no other subject are their minds so made up or their feelings so strong. They are every one of them fierce revolutionists. They have no loyalty, no respect for rank or wealth, no regard for existing institutions, no patriotism. They acknowledge no religious or moral restraint of any sort. All they care for is their own interests, so far as they can understand them — which is not far. Any change to suit them must be sweeping and sanguinary. Again and again, and not on the hop-ground only, have I heard some people express an earnest wish for the extermination of the ruling classes. According to them the working-man — that is the mechanic and the laborer — is the creator of all wealth and ought to be its sole possessor. In their view all the present possessors of wealth are robbers and tyrants — so many wild beasts who prey upon the working-man, and who must be dealt with as wild beasts when the working-man shall obtain the mastery. It is useless to reason with them. Complex arguments they cannot comprehend; and for the more simple they are provided with replies perfectly satisfactory to themselves. Point to the benevolence of the upper classes, as manifested in hospitals, etc., and they exclaim, fully believing it too, that all this is done in policy or in terror, in order to throw dust in the eyes of the people. Then they tell the reasoner to look at what the upper classes will do when they dare, pouring forth story after story, carefully gathered from popular prints and from the mouths of popular demagogues, concerning legal inequalities, police delinquencies, poor-law harshness, and especially concerning the oppression practised on the poverty-stricken

by such mischievous associations as that which terms itself "the Association for Charity Organization." All other grievances one might manage to explain away; but there is no excusing the doings of this society. Concerning these doings such people as the hop-pickers wax eloquent, and tell with overwhelming effect harrowing stories — stories abounding in instances of the hard-heartedness of the upper classes. Then follow fierce threats and fiercer hopes. And, founding my opinion upon what I know — and certain circumstances coupled with a long course of steady observation of the lowest class have given me peculiar knowledge — I cannot doubt that the revolutionists (led by the bolder spirits among them) will seize an opportunity. I do not mean to assert that they will be successful in effecting anything but bloodshed and misery, but they will have their outbreak; and considering the temper and training of our urban mobs, it will be a terrible one while it lasts. Here — on the hop-ground — they were perhaps more than usually prone to express their political hopes and hates. For here they felt very keenly that they were oppressed and ground down in every way and that they were utterly without redress. Nobody took any interest in them. The hop-farmers were all banded together; the whole country went with the farmers; and the latter did as they pleased, treating the pickers worse than their dogs. *And all this was to a great extent true.*

One striking instance occurred under my very eyes. A quarrel of children involved the mothers. One of the latter was far advanced in pregnancy, and the result of the quarrel — in which, I may state, very little violence was used — was a premature birth. The mother was one of the many women who had left their husbands at home at work while they carried all their children with them to the hop-field. The baby died in a few days. With the exception of the clergyman of the place, who did his duty, not a single native of Sutton Valence took the slightest interest in the poor hopper. Not a single woman paid her a visit, not even the wife of the farmer, who was a man of means and position. Here I err — one woman belonging to the place did visit her. It was the wife of a laborer whom the Rev. —— sent to the encampment with a bundle of baby-clothes, and who (as was afterwards discovered) took care to appropriate all the better articles on the way.

Some interest was shown in the hop-pickers by a London association which sent down a number of preachers for their benefit. One of these people visited our encampment, and held forth on two or three occasions. He was certainly in earnest, but he was worse than useless. He might have done very well in London visiting from house to house, but he had no power of any sort, native or acquired, intellectual or verbal. The men paid no attention to him, the children mocked him, the women insulted him.

But I must hurry to a close, passing over a number of interesting incidents. We had elopements and pugilistic encounters, and many curious displays of character. The very last night we spent on the ground was marked by perhaps the most singular event of any. There was a good deal of drinking that night and not a little riot. One of the men, hitherto remarkable for quietness, took much more than was good for him, and when excited by beer was assailed by his wife, who was notorious for her bitter tongue. This infuriated him. He cut the tent in which they dwelt to pieces, and then seizing a quantity of loose straw, laid a sort of train from one tenement to another, with the purpose of setting fire to the whole encampment. The man, some twenty-nine or thirty and of remarkable strength, brandished a large knife and acted in all respects so madly that none of the hoppers cared to interfere. He was in the very act of setting fire to the straw when he was knocked down from behind and secured by the local police, about one o'clock in the morning.

That night terminated my connection with hop-pickers. I had seen all I desired to see, and in fact a good deal more; I had no wish to accompany them on their return; I knew pretty well what would happen then. So I quitted the encampment betimes, and anticipated the arrival of my companions in London — that is, of the first batch of them — by half-a-dozen hours.

ERICA.*

ON THE SANDS.

THE news that this summer Waldbad rejoiced in the presence of a princess

spread quickly through the village, and every one felt pleased and elevated by the circumstance. The delicate distinctions of rank were totally unknown here — and a princess from the Caucasus — where every fifth man is said to be a prince — would have been received with the same or perhaps even more reverent homage.

As, in addition to the halo of rank, Kathinka possessed the charm of remarkable beauty, the inhabitants exhausted themselves in showing attention to the lovely woman. Even the guests at the watering-place were carried away by the universal excitement, and made every possible effort to be upon more or less intimate terms with the princess. The latter accepted the attentions offered upon all sides very willingly, but somewhat as a matter of course, for no one could be more thoroughly impressed with the dignity of her position than she herself. Though by no means indifferent to her appearance, which she sought to enhance as much as possible by dress, she laid far more stress upon her rank than her beauty. Perhaps this would not have been the case if she had really belonged to a royal family, and therefore felt sure of her position; but her manner was intended to crush every doubt, and at the same time, in a certain sense, prove her right to the station she claimed.

In consequence of this she showed a strange restlessness which, as she probably knew very well herself, did not harmonize at all with such distinguished rank, but in spite of all her efforts frequently displayed itself, and thus her manners gained a hesitating, capricious, nay sometimes offensive character, which the circle of acquaintances around her would probably have judged very differently and much more harshly if the dear people had not been disposed to look at their princess with very mild eyes, and consider her faults interesting originality.

As Kathinka liked to entertain and did so very frequently, life at Waldbad was much gayer and more brilliant than usual. The beautiful rooms in the little fairy castle were frequently filled with guests, or parties were arranged out of doors, and even those not fortunate enough to belong to the "circle" had the pleasure of seeing and gossiping about the gayety, and were perfectly satisfied with their share.

One of the families most intimate with the princess was that of the rich consul Sternau. The old lady, with her quiet, stately dignity, played the part of a quasi mistress of ceremonies admirably, and her oldest daughter, Flora, assisted Fräulein Molly in the tiresome and sometimes very unthankful task of maid of honor. Pretty, lively Caroline, however, was less disposed to pay homage than to receive it, and therefore was well pleased with Elmar's, while she obtained a very moderate share of his sister's favor. She was, therefore, no favorite of the latter, and it had sometimes happened that the mother and oldest daughter — the father only came from the great commercial city on Sundays — were invited to dine at the fairy castle, while Caroline was obliged to stay at home with her younger brothers.

The pretty, obstinate sinner, instead of fretting about it, only laughed, and on such occasions usually begged Erica to share her solitude. This was almost the only time that the two friends saw each other, for Erica remained entirely apart from the gayety of the visitors at the watering-place, and only heard of them at rare intervals. Besides, she was very willing to accept such an invitation to dinner, for she was sure to hear a great deal said of the princess and her life, which always had a sort of magnetic attraction for her.

A timidity, which she could not conquer, had always prevented her from taking another walk in the vicinity of the fairy castle, and thus she had only occasionally caught a momentary glimpse of the princess. The beautiful lady had scarcely remembered her, for she had answered her greeting very carelessly, while the brother had taken no notice of her at all. The meeting therefore produced a painful impression, and she endeavored to avoid another by taking her walks in lonely, unvisited regions.

Little Carlos alone had treasured a friendly memory of her, and was always delighted to see her. He seldom, however, came to the parsonage to play with the children — on which occasions Erica frolicked merrily with them — but the latter were taken to the little fairy castle. The princess was almost absurdly anxious about the boy, and always uneasy when he was not at her side.

Erica was therefore the more surprised when one day, while taking a long walk, she suddenly perceived little Carlos entirely alone by the seashore, looking for shells. She called him and asked where his nurse was. The latter, however, was close at hand and had heard the question herself, for she came forward in a somewhat confused manner from a clump of bushes, where she had been sitting with the wife of the fisherman Wilms. Cards

were lying upon a roughly hewn stone, which stood like a table before an equally rough stone bench, and as Frau Wilms was famed throughout all Waldbad as an excellent fortune-teller, Erica thought it certain that the nurse had placed the cards there. Both women seemed somewhat annoyed by the interruption, the more as the boy was not willing to leave Erica, but insisted upon going home with her, and in this way frustrated all hopes of learning the desired fortune from the cards.

Frau Wilms took her leave somewhat sulkily, and the nurse walked on beside Erica, who was now eagerly helping little Carlos in his search for the shells. But when they had reached the neighborhood of the fairy castle, notwithstanding the entreaties of the boy, she turned into another path and went back to the beach, where she sat down on one of the hills on the down and gazed over the sea. Its blue surface lay outspread before her in an unfurrowed mirror, and the sunbeams glittered and flashed so brightly from it that the eye could scarcely endure the radiance. The masts of large ship, which seemed to be slowly approaching, were relieved against the distant horizon. Elsewhere the sea was destitute of sails, and only one small black point was recognized by Erica's keen eyes as a boat. She was seated at no great distance from a staging that ran out into the sea and was used for a landing, so she confidently expected the boat to turn in this direction, but it went farther on, almost to the very spot where she had seen the foreign sailor, who now appeared on the list of guests as Herr von Wehlen, disembark.

This circumstance once more attracted Erica's thoughts to the latter and the mystery which surrounded him. What did he want here, what was the meaning of his connection with the wife of Wilms, the fisherman? Had she not just met her, and might not her presence have something to do with the boat now coming towards the land so timidly, as if to avoid all eyes? Had she not seen this same woman come out of the fairy castle and cross the down in the direction of the churchyard, where, as she was now well aware, Herr von Wehlen was waiting for somebody?

And moreover how strange it was that this woman could induce little Carlos' nurse to come so far from home with the boy, when she well knew her mistress's over-anxiety about the child. Did any danger threaten the little fellow? was it her duty to warn the princess? And yet, what could she say to give weight to her words? would she not be laughed at for attaching any special importance to the coming of the fish-woman, who was obliged to deliver her wares at the villa every day?

Erica was so absorbed in the tumult of her own thoughts that she did not hear the sound of approaching footsteps, and only when the new-comer was close beside her did she look up and recognize the "royal brother," as Caroline had often satirically called him.

"So I find you here at last, little woodland fairy," he said, throwing himself down beside her on the sand with as much freedom from embarrassment, as if this meeting had occurred immediately after their first interview in the forest. "You seem to be in possession of the fern that makes its owner invisible, for with all my trouble I have been unable to find you until now."

Erica's heart beat violently, she knew not whether from embarrassment or the anger the young man's conduct excited. After rudely neglecting her in the presence of others, he again, on accidentally meeting her alone, assumed the familiar tone which now seemed more offensive than ever. She did not at first know how to resent this behavior with sufficient indignation, and therefore answered only by the expressive changes of her countenance, while her lips remained mute.

Elmar did not seem to find the pause unpleasant, for he had supported his head comfortably on his arm in his favorite attitude, and was gazing calmly into his companion's face. At last he said slowly, "Well, little April, won't the sun shine out at all to-day?"

This time rain seemed to be nearer, for Erica could scarcely restrain her tears. But she controlled herself, and replied as calmly as possible, though with quivering lips: "I do not know how far Baron von Altenborn's interest ——"

Elmar interrupted her by a hasty gesture, and said laughing, "I most earnestly entreat Fräulein Erica von Hohenstädt to express her anger in some other way. If even here, in the romantic shadow of this bare sand down, I am obliged to give information about Baron von Altenborn's interest, I shall be driven to thoughts of suicide."

Erica's surprise overcame her indignation, and there was really sunlight in her face as she smilingly asked, "But in what special manner am I to address you, you most singular man?"

"In no special manner at all, but your own peculiar method, little heather-blossom. Or"—the speaker paused, and bending forward once more, gazed so intently into his companion's face that her cheeks grew crimson with blushes, "or does the dignity of your seventeen years rebel against the familiar name?"

This time Erica's answer came more quickly, and therefore was not well considered, for after saying, "Not my seventeen years, but"—she faltered, and did not know how to find suitable words to express her thoughts.

Elmar also hastily interrupted her. "But?—you did not wish to say so, but your aristocratic feelings rebelled against it? Don't make me miserable, little woodland fairy! I am so tired of aristocracy that I have an actual horror of it. I really believe I would gladly saw wood a few days, or take part in a sailors' brawl merely to do something thoroughly plebeian."

Erica's face was now all sunlight, as she said laughingly, "Very well, sir, so my conversation is to supply the place of the sailors' brawl."

"That it shall, little fairy. After all the affectation and ill-nature by which I am surrounded, you must strengthen my nerves like a chalybeate spring."

"Really, you make very numerous claims upon me. If I can only satisfy such extensive expectations—but it is strange——"

Erica hesitated again, and as this time Elmar did not interpose, the pause was somewhat long.

"Well, what is strange? I am very eager to learn this peculiarity," he asked at last.

Erica blushed, again either because her companion once more looked inquiringly into her face, or from embarrassment over what she had intended to say, and the consciousness of this change of color oppressed her, and utterly prevented any reply.

"I see I shall be compelled to read my answer from your face. The peculiarity probably existed in my conduct, which seemed to express no desire for this strengthening. Ah! little heather-blossom, I have hit the right mark; that nod confirms it. And you really demand an explanation of this behavior? That is very wrong; for, to be frank, it would be very difficult, in fact impossible for me to give it."

"And why not? Why can't you tell why, in the presence of others, your manner has been so negligent as to border upon actual incivility, for you have not even bowed to me, a courtesy Herr von Wehlen did not omit, if you now seek to represent that this impoliteness was adopted for some wise purpose."

"See how eloquent anger makes you, little fairy, and how well you know how to express your meaning. The 'wise purpose' was uttered as scornfully as if you not only numbered seventeen years, but really had experience beyond them. Before I try to make my wisdom clear to you, however, let me ask one question. Did you feel wounded by my conduct, or only offended?"

"Would it not be the same thing?"

"A wonderful difference, little fairy! I am aware that you were very angry with me, but I should like to know whether there was not a very little sorrow mingled with the indignation. Come, be frank, Fräulein Erica, were you not also a little sad?"

Erica cast down her eyes. The memory of the manifold forms of suffering that had lately oppressed her young heart made the tears spring to her eyes. "I was often sad," she said gently, "but I do not know whether *you* were at all to blame."

"Let me beg your forgiveness, as if I really had a share in the guilt, Fräulein Erica, and give me your hand in token of reconciliation." Elmar spoke gravely, and when he held out his hand to his companion she unhesitatingly placed hers within it. He pressed it lightly, and then released it. An involuntary pause ensued, for both were gazing thoughtfully at the ground. Elmar, however, soon said in his former tone,—

"And now, little daughter of Eve, I must satisfy your curiosity as well as I can, or the war that has just ended will break out anew. So—have you a dove-cot?"

"A dove-cot?" asked Erica, in amazement. "No, but——"

"But it is closely connected with my explanation. If you had one, you would know that when an eagle circles over it you would be obliged to put your little favorites in a safe place as quickly as possible, and above all beware of attracting its attention to any of the birds that were still in danger."

Erica looked at the speaker in bewilderment. Did he too already suspect Herr von Wehlen? Yet what other meaning could his words have? But what cause had she to fear this man? and she was evidently the subject of conversation.

"Well, Fräulein Erica," said Elmar,

laughing, "you look as if you already saw the eagle circling over you, instead of the little dove."

"I am surprised that you should regard Herr von Wehlen with so much suspicion."

Elmar laughed. "How quickly and positively you draw your conclusions; though Herr von Wehlen does not exactly resemble an eagle, he might easily pass for a bird of prey. But I cannot make my comparison more distinct. Fortunately you are too much of a heather-blossom to be able to understand the true state of affairs. But, by the way, what is the matter with Wehlen? Why does he seem to you such a terrible bird of prey?"

"Here he comes!" Erica exclaimed, pointing to a man who was slowly approaching from the beach. "He was certainly in the boat, for he is coming from it now."

Elmar seemed annoyed by the meeting, and therefore perhaps failed to hear Erica's last words. The new-comer was already too near for him to hope to remain unobserved, so he had no alternative except to await his approach. He therefore quietly retained his comfortable position, but turned to his companion with a sigh, saying, —

"Our chat is unfortunately over, little fairy, and who knows when I shall see you again. After this meeting I must be doubly cautious. I would feign an enthusiastic devotion to my little nephew, for that would probably be the quickest way, but unfortunately it is only too well known that I —— "

Elmar suddenly paused, and raising his voice, called: "Holloa, Wehlen! Come here, you lonely wanderer, and rest from your fatigues in the shadow of this down."

Wehlen turned his head towards the speaker, and slowly approached. Erica thought she read an expression of gloomy resolution on his features, nay, it even seemed as if he cast a malevolent glance at her. There really was some resemblance to a bird of prey in his appearance, though perhaps her attention was called to it by Elmar's comparison, and she could not shake off a disagreeable feeling when the dark figure now stood close beside her, and answered Elmar in a tone of suppressed mockery.

"I feared I might interrupt an interesting conversation, and was therefore considerate enough to try to pass quietly on."

"This rare, though at the same time singular consideration, deserves to be handsomely rewarded. Lie down here on the warm sand, and share our very interesting conversation."

"I think it is the *lady's* place to grant me the permission."

The lady did not seem particularly inclined to do so, for the glances she cast at the speaker distinctly expressed fear and aversion. Elmar came to her assistance, by exclaiming with a gay laugh, —

"How delicately you give your reprimands, Wehlen! I really forgot to ask the lady's permission, and sat down here without ceremony. But I see you are not inclined to join us. Well, if you intend going farther, I'll accompany you. Give me your hand to help me up, for I've been rolling in the sand like a chicken."

Wehlen did not offer his hand as requested, perhaps because he knew it was unnecessary, and indeed Elmar was soon standing beside him. He brushed the sand from his clothes and turned to take leave of his companion.

"In order not to be impolite again, I will now, with all due ceremony, express my thanks to you for having graciously permitted me to rest here."

Erica had now partially regained her composure, and answered with tolerable calmness: "I will not accept your thanks, the down is free, and I therefore have no right either to give or withhold the permission."

"Let us be off as quickly as we can, Wehlen!" exclaimed Elmar, "or we shall hear that only the freedom of the down has caused our presence to be endured, and that would be quite too severe a blow to our vanity." With a slight bow to Erica, he turned and walked away with his companion.

She looked after their retreating figures a long time, and then gazed at the dark blue sky, over which solitary silver clouds were sailing. The shadows the presence of the dreaded stranger had cast over her disappeared from her soul, and a feeling of happiness entered it. It seemed as if the spell which had frozen her heart were dissolved, and she could once more breathe freely; as if sea and sky, field and forest, again exerted their old, nay a far greater magic, and she could scarcely realize and enjoy all the riches life was spreading around her.

X.

BROTHER AND SISTER.

THE sun was already setting, when the princess came out upon one of the pleas-

ant verandas of the fairy castle. She walked towards the balustrade, which was densely overgrown with climbing vines, and leaned upon it, while her eyes wandered over the blue waves of the sea. A cold wind blowing from it in gusts, swept over the bare arms and shoulders of the beautiful woman. She shivered, and turning her head, called, —

"Molly, my shawl! Quick, I am freezing!"

Fräulein Molly, who was standing at one of the windows engaged in a conversation with Elmar, did not bring the shawl quite as soon as the speaker's peremptory tone seemed to require. This was perhaps the cause of the heavy clouds that darkened Kathinka's brow, and when the desired wrap was thrown around her shoulders, her thanks sounded cold and constrained.

The little party must have dined alone; for with the exception of the persons just mentioned, no one was in the room but Carlos, who always appeared with the dessert. He now ran up to his mother to show her some toy, but to-day the latter was not inclined to enter into his amusements, for after pressing a kiss on the curly head, she again called her companion.

"Come here, Molly! Take Carlos and play with him, he disturbs me."

Fräulein Molly knew very well that she, rather than the boy, was probably the cause of the lady's annoyance, and therefore took him by the hand and disappeared in the house. Elmar also doubtless suspected the true state of affairs, for he frowned and cast a glance of mingled annoyance and amusement at his sister. The latter had wrapped herself closely in her shawl, and now sat down in one of the chairs, while her eyes rested, not upon her companion, but the sea.

Although she did not utter a syllable, her movements distinctly showed her impatience, which became more perceptible, the more slowly and methodically Elmar set about lighting his cigar. Perhaps his leisurely manner was adopted for some mischievous purpose, for a faint smile hovered round his lips, and when at last the blue rings of smoke rose into the air, he seated himself with equal deliberation, and, turning to his sister, said with a faint sigh, —

"Well, Kathinka, you probably have not caused this solemn stillness for nothing. What is it?"

The beautiful woman turned and gazed steadily at the speaker for a moment; then her eyes wandered away over the veranda into the adjoining room, and finally rested on the down. "I regret my folly in having brought you here, Elmar," she said, now looking steadily at the foliage of the two tall beeches, while her hands plucked restlessly at her shawl.

"I am glad to agree with you, in *one* point at least, Kathinka. I long ago condemned as folly the indulgent weakness that induced me to accompany you to this tiresome, out-of-the-way place."

The beautiful woman's lips quivered, and her hands moved still more restlessly. "If you expect to deceive me, you are greatly mistaken."

"Why, who can think of wishing to deceive such a remarkably sharp-sighted woman?"

The irony in her brother's tone made Kathinka's cheeks grow crimson. She cast a hasty, sullen glance at the speaker, then rose and leaned over the railing, while her hands plucked at the vines instead of the shawl.

"Elmar, I will not endure it! I will prevent it at any cost," she said, her voice trembling with suppressed passion.

"What, my dear Kathinka?"

The unconcern expressed in the calmness and indolent attitude of the speaker was perhaps somewhat affected, but his companion's eyes flashed with no less bitter anger, and she hastily advanced a few paces nearer to him.

"It is my duty, as your older sister," she said, with the same suppressed passion, "not only to warn you, but to hurl you back from the abyss into which you are in the act of plunging."

"Perhaps in so doing you also feel some little sense of obligation towards the Princess Bagadoff, Kathinka," said Elmar, in a tone whose quiet, half-jesting contempt formed the strongest possible contrast to his sister's excitement. "However," he continued calmly, but in a very grave tone, "if I were inclined to plunge into an abyss, your hand would certainly prove too weak to hurl me back."

Kathinka's eyes flashed, and the anger that distorted her beautiful features made them appear almost ugly. She grasped a table, as if she needed some support, and her voice had a sharp, metallic tone as she said, "Do you forget what you owe me? Do you forget that your position in the world is entirely dependent upon my good will, that *I* am really the head of the family?"

Elmar's patience seemed exhausted, a gloomy frown darkened his brow, and he glanced angrily at the speaker. But he

controlled himself, and merely shrugged his shoulders without making any reply.

"I am waiting for your answer, Elmar!" said Katharina, with a sudden show of dignity, which called a smile to her brother's lips.

"I should simply say, 'You are a fool, Katharina,'" he answered in an undertone, "if such a reply were consistent with politeness."

"It is fortunate you can still perceive even that," said Katharina, with a composure which appeared scarcely justified by the new turn in the conversation. "You will also, I hope, perceive that I am perfectly right when I seek to restrain you from taking this mad step."

"It is somewhat difficult to argue with you, Kathinka, for in your primer the letter B does not follow A. So, to put an end to this discussion, let me earnestly entreat you to say distinctly upon what grounds you base my dreaded insanity."

"If you insist upon playing ignorance, I will tell you bluntly that I will never consent to your marriage with that silly, vulgar girl."

"There I am again in the dark. If you had said, with that beautiful, lively, interesting girl, I should have supposed you alluded to Caroline Sternau, but ——"

"Your vanity leads you to this false, ridiculous judgment, Elmar," interrupted the beautiful Katharina, her excitement again casting off all control. "Everybody agrees with me in thinking her silly and commonplace to the last degree, and her pretty face is scarcely sufficient to render her endurable. But men are unfortunately very weak when their vanity is flattered, and so her graciousness has blinded you to an extent that fills me with horror."

Elmar had completely regained his composure, for he said, laughing, "Poor, easily frightened Kathinka, listen to me a moment quietly if possible. You selected this out-of-the-way, and by no means fashionable, watering-place, partly from a passing whim, and partly also from well-considered reasons. One of these motives undoubtedly sprung from your sisterly affection, which strove to protect me from Hymen's chains, and believed that here I should be in a safe haven. My escort, however, was not only necessary on that account, it behoved the Princess Bagadoff to have a cavalier who would seem to be ever at her service, and so the brother was not to be dispensed with in his capacity of chamberlain."

Katharina, whose impatience would no longer be controlled, interrupted the speaker.

"Wounded vanity induces you to say that, for of course you must always play an inferior part when beside the Princess Bagadoff."

"I feel this fact so keenly, that I intend to order the words, '*le frère de Madame la princesse de Bagadoff*,' to be engraved on my visiting card, as that marquis called himself *l'époux de Madame Catalini*."

The princess laughed, a short, harsh laugh, without any tinge of mirth. "You are pleased to be facetious, Elmar, but it is true that my title illumines your name also."

"Let us not digress, my dear sister, in *my* primer at least the alphabet is printed in regular order. My double *rôle* as 'royal brother' and 'possible candidate for matrimony' did not suit me at all. I performed my functions of chamberlain very poorly, and hastened to offer my ardent homage to the prettiest and most interesting girl in the place. This excited my beautiful sister's indignation, and caused many unpleasant scenes between us."

"In which you alone were to blame, Elmar; you alone!"

"I don't deny my guilt, Kathinka. Any one who has any knowledge of your character will consider that a matter of course. But to continue — your displeasure did not fall solely upon me, you gave the young lady very decided proofs of it, and ——"

"I only reproved her want of good breeding, and kept her at a proper distance. The insolent daughter of the wealthy merchant treated me with an indifference, which I will not allow to be shown either to my position or person."

"I am no competent judge in this matter, for you know that in my eyes the Bagadoffs are not surrounded by the halo in which they appear to you. But no matter — I thought it my duty to increase my attentions to the young lady, in the exact proportion in which you loaded her with slights. This seemed to me a proper compensation, since the slights were inflicted upon her on my account. And — understand me fully, Kathinka — I shall continue to pursue this course, and measure my attentions according to the very liberal standard by which you dispense your incivilities. Thus it may happen that, half against my will, I shall be driven into a marriage, to prevent which would scarcely be in your power."

Katharina started up; her face was

again distorted with anger, she approached her brother and hissed through her clenched teeth, "You dare to speak openly of a marriage — you dare to defy me. Beware, Elmar! I am capable of everything if I am roused."

Elmar raised his eyebrows. "I know it, my dear Kathinka! And as we are speaking so frankly to each other — what would you do to prevent my marriage with Caroline Sternau?"

Kathinka paced up and down the veranda in great agitation, then approached the railing and gazed over the sea, and finally resumed her restless wanderings. The shawl had slipped from her shoulders, and the evening breeze, which had grown stronger since sunset, swept over her bare shoulders with an icy chill. She drew the lost wrap over them again, and said, —

"I am freezing, Elmar. These low-necked dresses are really ridiculous."

"The fashion is not so absurd as its adoption. Why do you commit the folly of dressing here on the downs as if you were going to appear at court?"

"These are things you do not understand, my dear Elmar; and so you really will not marry this Caroline Sternau, it was only to tease me that you paid her such marked attention?"

Elmar sighed, and said with comic despair, "Really, Katharina, the gods themselves would argue with you in vain."

"Do you really perceive that, my dear Elmar? Then you will not try it again, and disgrace your family by this *mésalliance*."

"I don't know why a marriage with the beautiful and accomplished daughter of the rich consul Sternau should be such a terrible *mésalliance* for a Baron von Altenborn, to say nothing of the very aristocratic Bagadoffs."

The princess drew herself up, and this time fixed her restless eyes steadily on her brother's face, as she said scornfully, "True, you are right, the family has been accustomed to *mésalliances* of late."

Elmar started, his composure seemed to have deserted him, the veins on his forehead swelled with anger, and his voice grew loud and threatening as he exclaimed, —

"Beware, Katharina! I can bear much from you, but this is the limit of my endurance."

"Pshaw! As if I did not suffer from it just as much as you. What do I say? — as much? — more, far more, for it gave you ——"

"Enough, Katharina! Say no more!" and the usually quiet voice sounded so imperious that the princess timidly cast down her eyes. But the next instant she said coaxingly, —

"You cannot blame me for hating this marriage: I would rather know you were betrothed to the ugly little girl we saw with the pastor's family."

Elmar laughed. "Because you think yourself safe there, Kathinka!"

"Not at all. Though poor, she is at least of good family, her mother, I am told, was a Kroneck."

"Very well; henceforth I will direct my attention to the ugly little girl. I have even anticipated your favorable opinion of the child, for Herr von Wehlen saw me this morning engaged in such a pleasant *tête-à-tête* with her, that he was considerate enough to try to pass by without disturbing us."

Katharina shrugged her shoulders. "You think me a little too simple, my good Elmar. Unfortunately I saw you alone with Herr von Wehlen, when you took leave of him to call on Caroline Sternau, a call which, in defiance of all etiquette, was prolonged for hours."

"Ah! so that was the cause of this scene. Could you not in future direct your glasses towards some more interesting object than your brother? You are wasting your time, for I fear I shall never duly appreciate your sympathy."

The princess laughed, but made no reply, and only plucked at her shawl, whose fringe had been in great danger of being completely destroyed during the conversation.

Elmar continued: "As our subject seems to be exhausted, Kathinka, you will perhaps allow me to retire?"

"Not yet, my dear Elmar, there is still one trifling matter to discuss. Markout has just collected the bills, they amount to the round sum of a thousand thalers for each of us."

"You are joking, Kathinka. That is impossible."

"Unfortunately you men never have an idea of what housekeeping really costs. You know how much I have economized, for it is really almost improper for me to have no carriage here."

"It would certainly have been worth while to bring it from Altenborn to drive up and down the dusty highway; we have learned, to our entire satisfaction, that the forest roads are only fit for light wagons. I will examine Markout's accounts, and next time ——"

"You must not do that, Elmar!" interrupted the fair Kathinka, with all her

former vehemence. "Markout would think we suspected him, and leave my service."

"That would be a great blessing to us both, which he unfortunately will not bestow. I could have spent the season in Paris for the sum we have squandered in this miserable hole, and at least had some pleasure for my money."

"How calculating you are, Elmar! you will be a perfect miser in your old age, if you have such strange ideas at seven-and-twenty."

"I merely want to make the means correspond with the end, and therefore think this constant throwing money away extremely nonsensical."

The beautiful woman's eyes flashed impatiently, and the fringe of her shawl was in greater danger than ever. "Will you tell me what you mean by throwing money away?"

"Very willingly, if you wish it. The mania, for instance, of adorning the table every-day with the rarest flowers, which must be brought from the main land, and then sent from Wollin by a special messenger."

The princess's lips curled scornfully. "That is your German narrow-mindedness, my dear Elmar. With us Russians——"

"How long have you considered yourself a Russian, Kathinka? I think you have very little reason to do so."

"It is unkind to reproach me with my misfortune, Elmar!"

He must have thought so himself, for he rose, and approaching his sister held out his hand. "Forgive me, Kathinka, but you would know how to irritate the most patient man."

She held his hand clasped closely in her own, and, bending affectionately towards him, murmured, "And you will pay the bills, and not vex Markout by examining them?"

"Yes," he answered, sighing, "but only on condition that the next accounts do not exceed one-half of this sum. These mounted messengers, who are despatched to Wollin for every trifle, these telegrams to all quarters of the globe for articles that are not used and finally spoil, must be abolished, and I shall speak to Markout about it."

Kathinka could not have been much alarmed by her brother's seriousness, for she laughed and said roguishly, "Really, I need not grudge Caroline Sternau such a bear of a husband. But don't be uneasy, my dear Elmar, no one is more willing to economize than I. You know I have only one thought, one interest. To secure a brilliant future for my little Carlos is the sole object of my life, and I will cheerfully endure any deprivation to advance a step near to this goal."

Her brother's face revealed none of the amusement so often aroused by the freaks of the fair Katharina; on the contrary, a deep shadow rested upon it, which seemed scarcely justified by his sister's words. He threw his cigar over the balustrade with an impatient gesture, and turning towards her said gravely, —

"I believe our subject is now really exhausted, so farewell for the present, Kathinka. I am going to take a walk on the beach."

The princess looked after him with an expression of quiet satisfaction, and her restless eyes remained fixed upon his figure as he strode over the down. "Resist as much as you choose, my dear Elmar," she murmured, "you are in my power, and my——" She paused, as if startled by what she had intended to say, then hastily rose and, as if afraid of being alone, rang the bell, and told the servant to ask Fräulein Molly to join her with little Carlos.

From Temple Bar.

ANDERSEN'S FRIENDSHIPS.

BY ANNIE WOOD.

HANS CHRISTIAN ANDERSEN has so recently passed away, that his memory must still be fresh and green in the minds of those who knew him personally; but to the much wider outer circle, who only knew him through his marvellous fairy tales, some slight account of his strong personal attachments may neither be out of place nor without interest at the present time.

Two very marked features in Hans Andersen's character were his intense belief in himself, and his infatuated love of admiration. His lonely childhood, struggling boyhood, and the stern hardships of his early career as a young man fostered in him a belief in his own powers which his success in after years perhaps fully justified, and which rendered him so keenly eager for the appreciation and the expressed affection of all those who crossed his path in life, whether young or old, rich or poor, of high or of low estate. Being the centre of his own interest through life he never ceased to live in

a world of fancy and imagination, the existence of which was accepted by those around him, but only vaguely understood — hence it was natural that he imparted to those with whom he stayed a touch of the simplicity of his own nature, and won in return the affection he craved from every human being with whom he came in contact.

As years went on, and his fairy-tales became the charm and delight of homes all over the world, Andersen not only accepted as his rightful reward the expression of personal gratitude and admiration for his efforts to please his readers, but felt hurt and neglected if he did not receive it privately as well as publicly. He was a child in all things, with a man's power of expressing the genius within him, and had a child's delight in praise with a child's eager belief in its genuineness, no matter how humble the source whence it came, or how simple the language in which it was conveyed. In his own country Andersen was loved and welcomed in every household, but children especially worshipped him wherever he went. Ugly and ungainly as he was in outward appearance, he had a peculiar power of fascinating the young that was quite remarkable. A touch of his hand would soothe the most fractious child, angry passions or sullen tempers would disappear like magic under the sympathetic influence of this strange, uncouth being, who seemed to possess the key to that must mysterious thing, a child's mind, and to be able to understand and adapt himself to all their varying moods, and inborn but undeveloped thoughts. Much as he courted the notice of the great and lordly, and delighted in their expressions of praise for his works and affection for himself, Andersen loved best to know that his tales pleased the childen, and that *they* thought it good of him to take so much trouble to amuse them.

"I will show you one of the dearest treasures I possess," said he to me one day, after recounting the fine things kings and princes had given and written to him, and reading to me many charming letters from the gifted and great of Europe. "I carry it next my heart; it keeps me warm, and I love it more than words can express."

From a pocket inside his waistcoat he produced a worn, crumpled paper with writing on it in a large childish hand.

"No, you must not touch it, it is for me alone," he said, in his vain, simple manner, when I put forth my hand to take it. "I will read it to you, and you shall hear how the children love me in England."

It was from Livingstone's little daughter, and was as follows: —

DEAR HANS ANDERSEN, — I do like your fairy-tales so much, that I would like to go and see you, but I cannot do that, so I thought I would write to you; when papa comes home from Africa, I will ask him to take me to see you. My favorite stories in one book are "The Goloshes of Fortune" and some others. My papa's name is Dr. Livingstone. I am sending you papa's autograph. I will say good-bye to you, and a happy new year. — I am your affectionate little friend,

ANNA MARY LIVINGSTONE.

P. S. — Please write to me soon; my address is on the first page, and please send me your card.

When he had finished reading it, he kissed it softly, and putting it tenderly back in its place said, —

"Don't you think I am a happy man, to have all the world love me like that?"

Then he went on to tell me how he had answered the letter, and continued the correspondence with the little English maiden whom he had never seen, and how bitterly disappointed and grieved he felt when he heard that the great traveller her father was dead, and he knew for certain that he should never be able to "press his hand" in this world. For his "dear little Anna's" sake he had often hoped to become personally acquainted with the renowned explorer, and the tears rolled down his old furrowed cheeks in genuine sympathy as he read the daughter's letter to him giving an account of her father's funeral. Nothing perhaps is more characteristic of the dear old man's inborn vanity and appreciation of his own merits than his remark as he folded up the letter.

"Yes, Livingstone was a great man, and did much good, but he was not loved in the hearts of the world as I am. When *I* die *every one* will come and put flowers on my coffin."

And sure enough every one did who could get into the church a year after, during the funeral service read over the remains of the most unique man who ever lived.

The letter is as follows: —

Sept. 24, 1874.

MY DEAR HANS ANDERSEN, — I have often thought of you since you wrote to me last, and wished to write to you, but I could not do so before. You would see from the newspapers the great sorrow we have had this year. I did so expect to have had papa take me to see you in Denmark. Instead of going the dif-

ferent places I fully intended to with papa, I was obliged to take the sad journey to London to see him buried in Westminster Abbey. Both my aunts were there, and also my brothers and sister. We had all wreaths of pure white flowers to put on his coffin. At one o'clock the procession entered the abbey, and the coffin was placed on velvet tressels. It was covered with a black velvet pall, edged with white silk, and the top of the coffin was covered with white wreaths and palm-leaves. While the procession was moving along the organ played most beautifully. Then we all sang that hymn, —

> O God of Bethel, by whose hand
> Thy people still are fed,
> Who through this weary pilgrimage
> Hast all our fathers led.

Then the procession to the grave formed. Immediately after the coffin came grandpapa (Dr. Moffat) and my two brothers, Thomas and Oswell. Next came my sister and myself, and behind us my aunts, and then friends. When the coffin was set down at the grave, which was all draped in black, Agnes, my sister, and I had to lay our wreaths on the coffin, and then my aunts laid theirs. One of my aunts from the south of England laid a wreath of violets and primroses from a lane that papa liked to walk in very much. We were ranged round close to the grave, and a beautiful anthem was sung, called, "His Body was Buried in Peace." Then the dean read the funeral service and all was over. The abbey was crowded, and the vergers of the abbey said they had never seen such a number of people in Westminster Abbey since the death of the prince consort. There was a funeral service preached in the abbey the next Sunday. The picture of me which I send you is taken just as I stood at papa's grave. It was my first visit to London. Papa's two colored servants were here seeing us last week. They were telling us a great many interesting things about papa, and one of them, called Chumah, made a little model of the grass hut in which papa died, and showed us the position of papa's bed in it. It is very interesting to us. I was very sorry to hear you had been ill; I hope you are better now.

I forgot to tell you that our beloved queen sent a most lovely white wreath, and she and the Prince of Wales had their carriages at the abbey.

I have told you all I know, so with much love, I am your ever loving

ANNA MARY LIVINGSTONE.

Andersen had the happy, rare gift of creeping into people's hearts, and of becoming a part of the family in whatever household he entered. Whether it was his quick sympathies with the young people, or the charm of his own simple nature, which accepted each act of affection and kindness as his right by reason of the genius he possessed, it would be difficult to say, but certain it is that in each country he visited, as well as in his own land, he gained the sincere and lasting friendship of all those with whom he sojourned for a time.

Andersen enjoyed writing and receiving letters to an extent that would have been a severe tax on any one who did not live in a world so completely his own as he did. No detail concerning his friends wearied him, so long as it referred to their feelings, thoughts, and hopes of him and his works. He liked to be told over and over again that he was not forgotten, and men as well as women petted and spoiled *him* to his heart's content. He knew every one of any note in the world, and found time to write to them all. One of the friends he loved best was the Swedish nightingale Jenny Lind, whose voice he thought had been lent to us on earth to give us a foretaste of what heaven would be hereafter.

More than thirty years since the sweet singer wrote to him in her earnest, kindly way: —

In a letter just received I hear that you have "shed tears" over my silence. I am sorry for this, so I at once send you a few lines in order to put an end to your distress, and to beg you, my kind friend and brother, to assure me quickly that I am reinstated in your good graces.

Inexpressible thanks for your beautiful tales! I think they are the very sweetest and best, dear friend, you have yet written. . . . I scarcely know to which to give the preference — but perhaps "The Ugly Duckling" is the most beautiful. Ah! it is indeed a wonderful gift to be able to clothe your beautiful thoughts in words . . . to make a slip of paper tell the world so eloquently that the ablest and best is often concealed under a poor exterior, till the day of transformation arrives, when the beauty of soul is revealed at last. Thank you — thank you for such a lovely story! I long for the time to come when I can tell my kind friend face to face how proud I am of his friendship, and express by word of mouth the pleasure his writings give me. . . . Dear friend, everything is so nice around me. . . . My room is bright and sunny, and I have a nightingale and a goldfinch. . . . Sometimes one is silent, and then the other will hop up on his perch, look about him so bright and happy, and putting aside his tiny jealousy do his best to enliven his silent companion by singing a song so high, so deep, so loving, and so ringing, that I take my seat beside him and raise a silent prayer of thanksgiving to Him who "made so much to come from weakness." Ah! I am happy, happy! I feel as if I had found refuge in a peaceful port after buffeting on a stormy sea. . . . I have suffered a great deal . . . but I can bow my head

before the throne of grace and cry from my heart, God's will be done in all things!

Farewell! — Your affectionate sister-friend,

JENNY.

Write to me again quickly. I won't ask for a long letter — but it is always *such* a pleasure to receive and read letters from you.

This correspondence was continued through life, only broken here and there by personal interviews with the sweet singer of the north, which added warmth and vigor to the renewed interchange of letters.

It was Jenny Lind who first impressed Andersen with the sacred holiness of art, and through her, he says himself, he learned to forget himself in the service of the Supreme. No books and no human being had a better or more ennobling influence on him as a poet, than she had; and he worshipped her in consequence, as his ideal of true womanhood.

When Andersen travelled abroad he met many whose names and works were familiar to him, in an incidental, characteristic manner, which charmed his simple, childlike nature, and with whom he afterwards became close and affectionate friends.

Once when travelling through the lakes of Sweden he expressed a great desire to see Fredrika Bremer.

"I am afraid it will be impossible this time," replied the captain of the boat, to whom the remark was addressed, "as she is just now in Norway."

"I know I shall be lucky and see her in spite of that," replied Andersen laughing; "I always get what I most wish for — and I *must* see her this time."

An hour or two later on the captain returned to Andersen's side, and said smiling, —

"You are indeed a lucky fellow to have your wishes so quickly fulfilled. Miss Bremer has just come on board, and will finish the trip with us to Stockholm."

Andersen regarded this announcement as a joke, but the next morning he rose early to see the sunrise, and found a lady, neither young nor old, on deck before him.

"That is Miss Bremer," he said to himself, and forthwith entered into conversation with her and introduced himself by name.

With her, as with others, he at once became intimate, and succeeded so well in interesting her in his personal history, that she wrote to him shortly after this first interview: —

Sept. 3, 1837.

Just as I intended writing to you, dear Herr Andersen, I received your O. T.,* which is an extra and pleasant reason for carrying out my purpose. Thank you warmly and heartily for all. I have only seen you for a few hours, and yet I seem to know you well, and feel as if I must write to you as to an old friend. Accept this confession from me, in the place of all those kindly remarks one makes to a young author, or to a person from whom one expects many acts of friendliness.

I shall read your book with great delight. My mother, who always enjoys your works, desires me to greet you kindly for her, and to forward you her warm thanks.

Farewell, dear Andersen, and be happy. — Your Swedish friend,

FREDRIKA BREMER.

Contrary to Andersen's usual habit of not voluntarily subjecting himself to adverse remarks on the productions of his pen, he sought Miss Bremer's opinion on his works, and begged her more than once to express it fearlessly, and to tell him exactly the impression left on her mind after the perusal of each of his books, which she did, and then in her pleasant, charming style added: —

If I have written too freely all my thoughts and sentiments on your books, then pardon me. But it is your own fault, inasmuch as you have planted in me a strong feeling of confidence in you. I shall never forget all you told me about yourself and your early childhood. I shall always take a warm interest in your future, to which I shall look forward with eager hope, at least as regards your writings. . . .

"I am always a steadfast friend, Andersen," she said the last time she saw him, as she laid her hand on his. She had indeed been a "steadfast friend" to him, and no wonder the tears rolled down his cheeks when he heard of her death, and said softly, "In her letters I have a treasure and a memory."

Another time, when in Paris, Andersen was accosted by a little man of Jewish cast. "I hear you are a Dane," said he. "I am German. Danes and Germans are brothers. Here is my hand!"

"Your name?" asked the fairy-tale writer, thoroughly enjoying this eccentric introduction, and eagerly curious to know the name of the one who thus addressed him.

"Heinrich Heine!"

"Ah! I *am* glad. I have wished so much to see and know you — your songs are the expression of my thoughts and feelings ——"

* "O. T. and Only a Fiddler," a work by Andersen then just published.

"Only phrases," said Heine smiling; "you would have sought me out if you had really wished to see me."

"No," replied Hans Andersen simply; "you might have thought it absurd in me, who am a Danish poet unknown to you, to seek you, and I would rather have gone without seeing you than have had you laugh at me — it would have hurt me all the more because I estimate you so highly."

Thus began an intimacy which in after years ripened into true friendship. Just before Andersen left Paris for Italy, the German poet wrote to him in a strain after Andersen's own heart: —

I should have wished, my dear colleague, to scribble a few verses to you, but to-day I cannot even write prose. Farewell! I wish you a pleasant journey to Italy. When you return home write down in German what you have felt and seen in Italy. That would make me very happy. H. HEINE.

After leaving France, where he had enjoyed many evenings in company with Rachel, Victor Hugo, Dumas, and others of note, Andersen entered Germany. He travelled along the Rhine, and stopping at St. Goar, inquired for the poet Freiligrath.

When he arrived at the house Andersen walked in, found the poet sitting at his table busy with his papers, and said in his low, pleasant tones, "I could not pass by without paying my respects to you."

"That is kind of you," returned Freiligrath coldly, somewhat annoyed at the intrusion, and far from guessing who his visitor might be. "May I ask your name?"

"We have one and the same friend, Chamisso!" replied Andersen quietly.

The poet jumped up from his seat with a cry of joy, exclaiming, "You are then Andersen!" threw his arms round his neck and hugged him to his heart.

"You must stop here a few days," said Freiligrath presently. "My friends will want to see you — and you *must* learn to know my wife, for you were the incidental means of our being married."

"Ah! that is nice — but how?"

"Well, we had a correspondence about your book 'Only a Fiddler,' and that led to our getting fond of one another."

Saying which the poet called to his wife, and presented her to Andersen, with whom she soon became warm friends.

At last, after lingering through the beautiful Hartz Mountains, Andersen reached Leipzig, where he spent what he called a "truly poetical evening" with Robert Schumann. For several years previously he had carried on a correspondence with the German composer. In 1842 Schumann had written to him: —

What must you think of me for leaving your letter, which delighted me to receive, so long unanswered? But I did not wish to appear before you empty-handed — although I know that I am in fact only giving back to you what I at first received from you. Accept my music — the music I have set to your words in a friendly spirit. Perhaps, at first, it will strike you as quaint and peculiar. But then your poems had that effect on me at first! And the more I studied them the more quaint became my music — hence, the fault is yours. . . . My wife has told me so much about you, and I have had your person so often described to me in detail, that I believe I should know you if I met you by accident. Are you not already known to me through your poems, your "Improvisatore" and your exquisite "Only a Fiddler"? Have I not also a complete translation of your smaller poems? Truly they contain many gems for musicians.

What could be more flattering to Hans Andersen than the touching homage of such a letter from a man of Schumann's genius?

Then again, a couple of years later, the German composer writes to say that he will "devote all his powers" to composing the music to one of Andersen's pieces, so no wonder the sweet story-teller of Denmark enjoyed, at last, a face-to-face interview with Schumann, in his own home, with his gifted wife by his side. Andersen never could forget the impression of unmixed pleasure left on his mind by that first evening spent in such goodly company; the poet and the composer alone listening to the exquisite music played and sung to them by Madame Schumann and her accomplished friend, Madame Frege.

In 1847 Andersen visited England. Here he made many friends, went out a great deal, and saw, according to his own account, not only much of "high life," but "several of the country's most excellent men and women." He learned to know Dickens and to love him with a warm and brotherly affection which continued through life. This affection was fully returned by Dickens, for, years after, he wrote to Andersen: —

When are you coming to see us again? In these years you have not faded out of the hearts of the English people, but have become even better known and more beloved than when you saw them for the first time. When Aladdin shall have come out of those caves of science to run a triumphant course on earth and make us all wiser and better — as I know

you will — you ought to come for another visit. We would all do our best to make you happy. . . .

. . . I have had the heartiest pleasure in hearing from you again, and I assure you that I love and esteem you more than I could tell you on as much paper as would pave the whole road from here to Copenhagen. — Ever your affectionate friend, CHARLES DICKENS.

Andersen enjoyed his visit to England, and appreciated to the full the kindness and attention bestowed on him by all those who took pleasure in entertaining him; but the one spot which ever after lay nearest his heart — the place perhaps dearest to him outside his own beloved country — was Seven Oaks — the residence of his loved and esteemed friend, Mr. Richard Bentley. There he felt thoroughly at home.

Andersen's nature was essentially a grateful one. If once assured of the unbiased good-will of those whom he loved, he always remembered and spoke of them with unfailing affection. Now and again he would express his gratitude for past favors in a quaint fashion, so charming in itself, that he made one love him, if possible, more than before.

His visit to Seven Oaks left a halo of fascination in his memory which shone forth in after years at odd, unexpected moments, forcing one to acknowledge the deep, tender affection he had for the family, while one smiled at the simple, childlike way in which it was expressed.

I remember on one occasion at a singularly happy breakfast party, when every one was in a genial, pleasant mood, and the spirit of harmony seemed to have breathed itself into each person present — the coffee was delicious, the bread and fruit and various dishes all that could be desired — Andersen, who had been enjoying himself more than usual, rose from his seat and said quietly, —

"Friends, I will say grace!"

Then raising his hands and bowing his gaunt figure low over the table, he said in a reverential, hushed, but audible tone: —

"I thank thee, O Lord, that thou hast permitted me to enjoy another breakfast such as I had at Mr. Bentley's! Amen!"

For a moment I thought the dear old man had lost his senses, or was making fun, but a glance at his earnest face rebuked the idea, and I felt ashamed of my mistake. Higher praise he could not give, either to those around him or to the good things on the table than to liken them to similar breakfasts enjoyed at Seven Oaks, and in his simple fashion he said so.

His stay with Dickens was a "bright point" in his life, and he found it very hard to say farewell when the time came for him to leave; but over and over again I have heard him say in reference to "home," as he called Seven Oaks, that *there* he felt at peace. "Friends are treated like the sons and daughters while they are there," he said another time, "and to be the son of that old man, the father, warmed my heart to deep feeling."

When Andersen heard of the death of Dickens he said sorrowfully, "All's over, and that happens to all stories," and went away alone to weep. But when the news reached him of the death of his former host at Seven Oaks, he murmured, "My best friend is gone! He loved me, and oh! how I loved him!"

From The Cornhill Magazine.

THE CZAR'S CLEMENCY; A POLISH PRIEST'S STORY.

I.

THE governor of the district of Podlaquia sent for me and said in French, "Casimir Barinski has been pardoned, and will return from Siberia to-day. He is to reside in this town of Dolw. I rely upon you to impress on him that he must show himself deserving of the czar's clemency by the most scrupulous loyalty henceforth."

I bowed humbly and retired.

So many Poles from the district of Podlaquia were transported after the rebellion of 1863–4 that nine persons out of ten might not have remembered who Casimir Barinski was; but I knew very well. I am the priest of the town of Dolw, which has but one Catholic parish, a great number of the population being Jews; and I keep a register, in which I have entered the names and alleged crimes of those among my parishioners who have suffered for our national cause. The police, who pay me frequent domiciliary visits, have asked more than once what I mean by keeping this register; but I have always answered that, in the event of his Majesty deigning to pardon any of the misguided men or women who joined in the civil war, it is good that I should preserve some record of their individual offences, so as to caution them against relapsing into the same on their return. I have also had the honor of explaining to

the chief of the police that the notes, which I have preserved as to the characters of the offenders, would enable me to address each with the words of admonition best suited to him.

The police, seeing how very unfavorable are all these character notes, have been satisfied till now; but I think they would be less pleased could they guess that every censorious epithet bears in my eyes a contrary sense, and that by certain cryptographic signs of my own, such as the shape of capital letters and the position of commas, I am able to reconstruct at a glance the true and private history of the exiles, whom my entries appear one and all to condemn.

Thus, I consulted my register on getting home, and found by a large hooked *k* in Casimir Barinski's name that he had done nothing whatever worthy of punishment; the words *quarrelsome* and *disingenuous* reminded me at the same time of his courage and candor. He was barely twenty when exiled in 1863, along with his father and three brothers, who had all died since, as I heard, in the mines of Oural. His mother was dead likewise, and his only sister, Eveline, was married and settled in France. Every one knows that the Barinskis have been from father to son staunch patriots; and I have no doubt that, if the occasion had offered, Casimir would have drawn his sword for Poland, as others of his family did; but it happened that the insurrection had not yet spread to Dolw when the father and his sons were all arrested one night and sent away to Siberia, without even the form of a trial. Such proceedings were not exceptional in those days. The denunciation of a spy was enough; and a semicolon apprised me that the spy who had betrayed the Barinskis was Countess Paulina Marienha, who still resides in our town.

I stood pensively looking at the semicolon for nearly half an hour, then closed the register, and went out to pay a visit to the Countess Marienha.

She was at home in her large old mansion of the Artillery Square. Her maid, the red-haired Jewess, Rebecca, conducted me to her boudoir, and I found her deep in her favorite occupation of drinking Caravan tea, and telling her own fortune with a pack of cards. She had just turned up the knave of hearts when I entered.

Paulina Marienha was close upon forty, but could have passed herself off for thirty, and I believe did. The proverbial beauty of Polish women was all hers; with her dark hair, large eyes, lithe figure, and dazzling complexion, she quite realized the Lithuanian poet's description of his countrywomen: "Frisky as kittens, white as cream, under their black eyelashes their eyes sparkle like stars." I have never known any woman exercise such fascination on those who approached her, so that even I, her confessor, found that the sins which she avowed to me had not such a bad appearance as the sins of other people. She had coaxing ways and a childlike manner of pouting, by placing her hands before her face and crying real tears when rebuked, the which made me often wonder whether she was as conscious as ordinary grown-up persons of the enormity of the things which she did. Her laugh was as seductive as her weeping; and, notwithstanding that she was so near middle age, there was not a wrinkle on her white brow, though God and I knew too well what deep lines would have been imprinted there if the fearful secrets of her heart had each left a mark.

Rebecca, the Jewess, placed my shovel-hat on a *chiffonnière* and brought me a cup; then left us. When I was alone with the countess, who was wrapped up in a pale-blue satin dressing-gown, and had a number of jewelled rings on her finger, I said to her, —

"Paulina, Casimir Barinski has been pardoned and is coming back."

"That is my knave of hearts," she answered, pointing to her cards; "I knew it announced a fair stranger."

"Casimir has been in exile thirteen years, and those years count double."

"Poor fellow! but a man is still young at thirty-three."

"If Casimir should still be young in heart if he should still feel for you as he once did, you must not trifle with him as you did last time, eh?"

"What an idea, father!" And she laughed with the coquetry of a girl of eighteen. "Who would fall in love with an old woman of my age?"

"Pauline," I said, with more sadness than severity, "not one of the patriot Poles, save myself, whose lips are sealed, knows of the treacherous part you played towards our countrymen. You are respected as one of the mainstays of our cause; you give alms and are beloved; and yet it was you who sent those Barinskis, with numerous others, into exile."

"Well, I confessed it to you, and you gave me absolution," she replied, preparing to pout. "You have no right to reproach me with an old story now."

"I do not reproach you, but being igno-

rant how far you are dealing faithfully with us now, I appeal to you not to do the same thing again. Casimir's only crime was that he made love to you at a time when you were flirting with some one whom you liked better."

"He plagued me with his outbursts of jealousy," she said, assuming her plaintive tone. "As to doing the same thing again, why should you deem me capable of it? Do not I attend your confessional every week, and tell you the smallest of my sins?"

"Alas! it is the smallness of your sins, Paulina, which makes me fear that you have some other private confessor to whom you retail the big ones," said I, stirring my tea, with a sigh, for I knew the duplicity of women. At this I noticed that she changed color, but she laughed at the same moment, and asked where I could have learned of such tricks. "Is it possible that some women can split their confessions into halves, and divide them between two priests?" she said.

"Yes, and I believe that is your case," I replied sternly. "Will you look in my eyes and affirm it is not so?"

"Oh, I will look into your eyes for a whole hour," she ejaculated, opening wide her eyeballs as they do to amuse children. "I am a better penitent than you think, father. There is not a naughty thing I do but you hear of it. However, if you find my sins too small I can make them larger."

I chid her for this profanity, and we talked for a while of other things; then I left her. But I was not without misgivings.

Paulina Marienha had no religion, but she was superstitious as an old peasant woman. I believe she imagined herself adroit enough to throw dust into the eyes of the saints, and get into heaven under cover of her mere good works. What with her prayers and alms, the votive tapers she burned, and the fine gifts she made to adorn our Lady-altar, the account of her benefactions exceeded that of most pious Christians: and she alluded to this fact with the utmost complacency, as though the doors of paradise could never be decently closed to one who had laid up so much treasure there as she. I am afraid that she never scrupled to tell untruths, but she would not have let a week pass without confessing these falsehoods to some priest in order to get absolved from them.

I have observed that women who habitually resort to confession are much more liable to commit atrocities than others. They look upon their shrift as a wiping off of all old scores, and a license to begin sinning afresh. I have heard a peasant woman threaten to poison her husband, adding that when he was safe under ground she would make her confession, do a penance of a long prayers, and then live with a conscience clear, owing to absolution. Paulina Marienha was a Catholic who would have considered herself quit of any crime on the same terms. She had once poured out her whole soul to me, but finding me firm in the doctrine that divine pardon can only be earned by a true repentance as shown in altered modes of life, she grew reticent, and from that day forth began to confess to me only trifles, which it was a trouble to listen to with patience. Evidently she told me many untruths in answer to the searching questions I put her; but what could a few falsehoods signify more or less to a woman who would relieve herself by repairing to the confessional of some obscure village priest, to whom she was unknown, and, after telling him things to make his hair stand on end, purchase absolution by a donation which led him to believe in the fervor of her charity? There are many good men among my country brethren who would not have absolved Paulina Marienha if they had known her as I did, but one cannot marvel that simple-minded ministers should often have been deceived by the well-dressed lady who would kneel and weep by the hour until forgiven. Besides there may have been some of the poorer ones who truly thought that her gifts atoned for a great deal.

Two days after my conversation with the countess, I was saying early mass in our church of St. Stanislas, when a tall man, in furred boots, walked up the nave and knelt reverently near the chancel rail. I recognized him at a glance for Casimir Barinski.

There was never such a handsome family in Dolw as the Barinskis. The men looked proud and bold, though gentle as women; and the women had the high spirit and courage of their brothers. But if I had not known Casimir was coming back I might have gazed twice before guessing which one of the family this was, for he had aged so as to be the image of the dead father. His brown beard was streaked with grey, his shoulders stooped, and his eyes were cavernous, with the melancholy of long suffering. He cast a mild glance at me, and our eyes met as I

faced my scanty congregation, chiefly composed of women, and said, "*Dominus vobiscum.*"

I could not help hurrying a little through the service, for my heart beat as fast as my lips moved, and as I passed down the chancel I beckoned to Casimir to follow me. As soon as we were in the sacristy we fell into each other's arms, and I held him to me as if I had found a lost son.

"Father, father," he sobbed. "I thought I should never see any of you again."

"God is good, my son," I said, wiping my eyes. "And your brothers, your father? is it true that——"

"Yes, they are dead," he replied, with calm sorrow. "You did hear of it, then?"

"Alas, yes! but the news that comes from Siberia is so uncertain that I thought there might be hope."

"They died of privations and of grief, father; I wonder how I survived them."

"Heaven be praised that you did; and you are strong and well?"

"With such strength and health as you see," he answered, pointing to his grizzling beard, which in the dim light of the sacristy looked greyer than in the church.

We said nothing more then because of my sacristan, who came in. Nicholas Levitski, a conceited Jew, was a man in whose presence it was well to hold one's peace, for, without transgressing charity, I may say that words which dropped into his ears were not lost. He smiled with unctuous humility, and walked round Casimir as if smelling him, like a watch-dog does a stranger.

"You will come and breakfast with me?" I said to Casimir, and I had soon removed my chasuble and surplice; then I opened the door, and we stepped across the street to my small presbytery. I promise you that I embraced the poor boy again when I was out of Nicholas Levitski's sight. I made him sit down by the glazed stove in the dining-room, and called to my old servant, Elizabeth, to prepare us the best meal she could.

Elizabeth was apt to grumble when I brought home a guest without having forewarned her, so, before obeying me, she came in to take a peep at the stranger. But when I had pronounced Casimir Barinski's name, she knelt down at his feet, as the women always do before a returned exile, and asked him his blessing as if he had come back from the dead. He made the sign of the cross upon her forehead, and simply said, "God prosper all such of thy wishes as are good!" Thereon Elizabeth, who was crying, went off to the butcher's to fetch some veal chops: the worthy soul would have gone barefoot to market through the snow to feed an exile. As for me I uncorked a bottle of white Crimean wine, and, while we were waiting breakfast, sought to draw from Casimir an account of the things he had suffered. He answered obligingly, but I soon saw that his reminiscences distressed him. He was not like a traveller who returns from a far country, and is happy to astonish people with his marvellous adventures; if I wrote down but a part of what he told me, you would understand that thirteen years of such things as he endured are more gladly forgotten than recounted, even to a friend whose questions are not prompted by idle curiosity. I am too old a man not to know that at Camisir's age it is more natural to look forward than behind, so I ended by asking him what he was going to do now.

"Why, I shall marry my pretty Ioulka (Juliet) Zezioff," he said, brightening, and as though alluding to an affair settled long ago. "Where is the betrothed who has ever remained so faithful as she has to me?"

"Do you mean the late Dr. Zezioff's daughter?" I asked, astonished. "I was not even aware that she knew you."

"Ah, she has kept her secret then!" he said with a smiling face. "Why, she cut her hair off on the day I went away, and she has worn it short till now. She was seventeen then, and thirteen years have passed since then, but they have not rendered her less fair or tender."

"And did you love Ioulka before you went away, Casimir?"

"She loved me, and I love her now. I have done so ever since I thought upon her in my exile, and reflected how blind I had been not to accept the child-heart that was offered me. But it was generous of her to guess that I should repent, wasn't it? and to remain faithful to me exactly as if we had plighted our troths?"

"Does Ioulka's mother approve this match?"

"She approves it, and encouraged Ioulka's fidelity. To-day she placed her daughter's hand in mine, and she says it is owing to her prayers and Ioulka's that heaven sent me back."

It was as though a great weight had been lifted off my heart when I heard that Casimir Barinski was to marry Ioulka Zezioff, one of the most pious and sensible girls in our town. His life would not

be purposeless now, and there was no danger of his falling into trouble with such a good young creature for his wife. My only wonder was that neither Ioulka nor her mother, who were good friends of mine, had ever breathed a word about the engagement; but to be sure, those who remain faithful to Siberian exiles are like those who are wedded to the memory of the dead, and they cherish their love in silence. I had so little hope that Casimir would ever return, that I might have been the first to dissuade Ioulka from wasting her youth in waiting for him.

Now, however, I told Casimir that I trusted he would call upon me to solemnize his marriage as soon as possible; and thereupon we sat down to the veal chops and fried ham which Elizabeth had prepared. I was glad to see Casimir eat with a good appetite, but he was so thorough a gentleman that he may have done this out of politeness to me, his host. While we ate he inquired as to what changes had taken place in the town during his absence, and I could only give him a poor account of the lives we led under the harrows of our oppressors. Elizabeth, too, lifted up her voice, so that I was obliged to check her, for women's tongues often carry them too far.

One point, nevertheless, preoccupied me greatly; and when, breakfast being over, Casimir and I drew our chairs near the stove to drink our black coffee and smoke a pipe, I asked him whether he knew through whose intercession he had obtained his pardon.

He shook his head.

"I have not the least idea. Thousands of others who are more innocent than I will remain in Siberia all their lives. I thought you might know more about it than I."

"If I were speaking to any other but a Barinski," said I, "I might suppose that persecution had shaken your fidelity to our cause, as it has in other cases where the flesh is weak; but I know you too well to think you would crave a pardon by recanting. Have you any friends at court?"

"None that I know of," he replied, "and far from recanting I was often too outspoken in my loathing of Russian barbarity. I expect the chief inspector told me the truth when he said it was my poems that had procured me the pardon I never deigned to seek."

"Your poems, Casimir? Have you turned poet then?"

"A man must do something in those long Siberian evenings, which are eighteen hours long," he answered, with a smile and a slight blush. "I wrote some verses which the exiles repeated over their winter fires, and after I had been ten years at Irmsk, many of them had become familiar in the mouths of the colonists. One day when the chief inspector came on his half-yearly rounds, he alluded to these poems and asked whether I would give him copies of them. I did so, for there was no reason to refuse."

"Were they patriotic poems? Was there politics in them?"

"Oh no, they were ballads and sonnets such as the peasants in Lithuania and Ukraine might sing in wedding-feasts, or drone at funeral wakes. As I had composed them amid perennial snows I entitled them collectively 'Snowflakes.' They were enough to make a small volume."

"Which has been published?"

"So it seems, but not with my name to it, or with my leave. Three years passed after I had seen the chief inspector, and then he came again (it was not always the same man who came). 'I have had your verses printed,' said he; 'here are a thousand roubles as the price of the copyright, and the emperor's pardon along with them.' I thought he was joking, but the next morning the escort arrived to take me away in the sledges, and here I am."

I made no immediate answer, for I was plunged in deep thought. I remembered having seen on Countess Marienha's table a small volume with the title "Snowflakes," and I felt a presentiment that it must be she who had applied for Casimir's pardon. But if my suspicions were correct, and if Paulina had influence enough to bring back a proscript from Siberia, then it was evident that she must still be in the pay of the imperial police, and her treacherous friendship might be as dangerous to Casimir now as it had been of yore. I stood in woful straits, for I could not warn Casimir to stand aloof from a lady who enjoyed the respect of the Poles, and upon whom he would be sure to call as a matter of duty. All I knew to Paulina's disadvantage had been told me by herself in the confessional, and if I had divulged a word of it, I must have betrayed the most sacred trust of my ministry.

I could only rejoice that neither by word nor sign did Casimir give any indication of remembering the boyish passion which had brought him such cruel hardships. He did not once pronounce Paulina's name while we sat together.

II.

It is not all to give an exile his pardon: one must afford him some means of living, and this the Russian government neglects to do. It also throws many obstacles in the way of a Pole's earning his bread as he best can.

The property of the Barinskis had been confiscated: not only their lands, but their personalties, even to the wine in their cellars, had been seized; and Casimir had to begin life afresh with the thousand roubles which a publisher had paid for his poems. He had been educated like a nobleman,—that is, he had learned many things superficially and nothing well, but he completed his education in exile, and he might have prospered either as a professor or a writer of books, had not the government imposed such rigorous conditions to his release as virtually chained both his tongue and his pen. Casimir was compelled to reside at Dolw, and was obliged to report himself at the police-office twice a week; he was prohibited from teaching children, from publishing a line not previously submitted to the press-censorship, and was warned, moreover, that if he attempted to leave the country, or to excite public sympathy for his wrongs, either by dilating upon them among his friends or by communicating with foreign newspapers, his pardon would instantly be revoked. These conditions were not made known to the proscript until his arrival at Dolw, but he had no alternative except submission, unless he would return to Siberia. For want of a better handicraft, he determined upon utilizing the metallurgical knowledge he had acquired in the mines of Oural, and hired himself out as a journeyman to a silversmith.

I felt sad and ashamed upon learning that the heir of the great family of Barinski was going to be employed as a smelter for less than a rouble a day by Solomon Paskoff, who keeps the jeweller's shop in the street of St. Isaac, close to the ancestral mansion of the Barinskis. This very street was formerly called after the Barinskis, and every day, in going to his work and returning from it, Casimir would pass by the home of his fathers, which was now the residence of the general who commands the garrison. He did not seem to mind this much; and as to his work, he said with resignation that he was glad to find a livelihood at all, for that Ioulka and her mother had only just enough to keep them, and he would have scrupled to take a wife, unless he could earn at least the bread he ate. Besides he hoped to be able to get away before long with his wife and mother-in-law and join his sister Eveline in France.

I owed Madame Zezioff and her daughter a call now that I knew of Ioulka's engagement, and so proceeded to their house, after vespers the day following that when I had seen Casimir. The Zezioffs lived in modest lodgings, without a servant, and did their cooking for themselves, though time was when they had had several servants, in the days when Dr. Zezioff was the chief practitioner in Dolw, before the civil war, where he was killed by a bullet in tending the wounded upon a battle-field. Ioulka's hands were covered with flour when she opened the door for me, and at the first compliment I uttered upon her coming marriage, she blushed and ran back to the kitchen. Her mother came forward, laughing, and led me into the drawing-room, where I found Casimir, who was seated near the stove with muddy boots, for he had been walking about the town all day in search of occupation.

It was then he told me that Solomon Paskoff had employed him, and we talked about this matter, Madame Zezioff seeming as concerned as I that no worthier field could be found for his talents. Presently Ioulka came back, with her hands washed, and sat down near her mother to hem a handkerchief, but she was all radiant with inward happiness and saw nothing to fret about, now that Casimir had returned in health. It takes a good deal to persuade a girl in love that the earth is not full of bright prospects. I noticed that there was a striking resemblance between mother and daughter: they looked like copies of the same engraving,—the one in pale tints, the other in bright. Madame Zezioff's hair was silver white, though she was no more than fifty, and her complexion was pale as wax; Ioulka's hair was glossy chestnut, and her features pink; but both had the same large hazel eyes and an identical voice, low and soft, which, as Milton truly says, is an excellent thing in woman.

The Zezioffs wanted me to stay for supper, but I had some parish visiting to do, and wished to avail myself of the evening, for we were in early summer. My visit was only one of congratulation: however, I lingered awhile, when Casimir said he would dictate to me the ages and full names of Ioulka and himself, to put in the banns, as he was desirous that no time should be lost in concluding the preliminaries of

his marriage, which I thought a wise resolve.

"We will be married in three weeks, father," he said, whilst I put on my spectacles and looked at Ioulka, who reddened again. "After that I will see if I cannot give the police the slip, and cross the Gallician frontier, with or without a passport."

"Take care, my son," I answered, for I was always fearful lest some one with ears like those of Nicholas Levitski should be eavesdropping. "Had not you better submit to the discomforts of this country, rather than risk worse by trying to leave it?"

"They will end by driving me mad, if I stay here," said Casimir, rather moodily.

"We will all cross the frontier disguised as peasants," said Ioulka, with as much hopefulness as if she were in her teens again.

"I do not wonder at your wishing to forsake a country which our oppressors render uninhabitable; and yet it is sad to me to see all of Poland's best sons who are not exiled, emigrate of their own will," said I.

"If I could do good by staying, I would stay," said Casimir, taking one of Ioulka's hands from her work and putting it between his own. "But of what use can I be here, father? In France I might take to authorship and publish what things our brothers in Siberia are suffering: not many of us come back to tell the tale."

"And you might write more poems," added Ioulka, softly.

"Yes, Casimir Barinski has turned poet," remarked Madame Zezioff, addressing me with a motherly pride in her glance. "He has told you of his book, has he not, father? The worst of it is that we had never heard of the 'Snowflakes,' and cannot procure a copy. Ioulka and I went the round of the booksellers this morning in vain."

"That proves that my genius has not yet set the world on fire," remarked Casimir, good-humoredly.

I did not say I knew where a copy of the poems was to be obtained, but in the next breath Casimir fortuitously mentioned Countess Marienha's name in a manner that caused me uneasiness.

"I want to find out where my sister Eveline is," he said; "but dare not write to France, for my letters would be opened by the Black Bureau at the post-office. I am told that the Countess Marienha still keeps up relations with the Polish committee in Paris, and I have a good mind to ask her if she will be so obliging as to make inquiries."

"No, don't ask anything of Countess Marienha," I replied, hastily.

"Why not?" he rejoined, in surprise; then added, as he raised Ioulka's fingers to his lips with a smile, "oh, it is because I once allowed my wings to be singed by the flame of her bright eyes! I warn you that is an old, old tale, father."

"The tale of a boy's romance," said Mme. Zezioff, with an air as though she felt sure that there existed no danger for the future.

"And Ioulka is not jealous," continued Casimir.

The excellent girl cast a trustful look at him as she playfully answered: "The countess is still very pretty though — but she is good — oh, so good!"

"Yes, she is good," I grumbled, "but that is precisely why I would not have Casimir requesting any favors that might compromise her."

"God forbid that I should lead her into any trouble," said Casimir seriously. "If you think I might injure her I will refrain. It is my intention to call on her this evening, for they tell me Thursday is still her reception night. I bought a dress suit this morning for the purpose."

"Yes, it is a duty to pay your respects to Countess Marienha," concurred Mme. Zezioff. "She is the providence of all our suffering countrymen."

"There is not a man or woman in want but she relieves them," chimed in Ioulka enthusiastically. "If she were to disappear from amongst us, it would be as if the sun's light were darkened."

It hurt me to hear these honest people join in the praises of a woman who — Heaven help her — was not worthy to tie their shoestrings, so I took my leave in sorry humor; but before reaching the bottom of the stairs I had made up my mind that I too would attend the countess's levee to witness the meeting between her and unsuspicious Casimir.

Paulina Marienha opened her gilded drawing-rooms every Thursday evening, and hers was the only house where anything like social festivity was kept up among Christian Poles of the respectable classes. I say Christians, because the Jews form a class apart in our midst. The insurrection of 1863 was conducted without reference to their interests; perhaps the Catholic nobles who were its leaders, were even too forgetful that the Jews stinted neither their blood nor money, and were consequently deserving of more consideration

than was shown them; anyhow, having been constantly treated as pariahs by our nobility, the Jews have dissociated themselves, in heart, from our cause, and get on well enough with our oppressors. All the trade of Poland is in their hands, and a great many of the smaller government clerkships: they keep open shop, manage the hotels, lend money to Russian officers, and by their numbers, industry, wealth, and general appearance of equanimity, keep up a semblance of life in cities, which but for them would be dead.

A stranger who visited such a town as Dolw in the expectation of finding it silent and mournful, would be mistaken. The garrisons are so large, and the officers and civil functionaries are so fond of gaiety, that they of themselves are enough to make the streets lively. They have their clubs, where they gamble wofully, their theatre, their regimental bands, which play on the summer evenings in the Artillery Square, their dinner-parties and balls; but from all these rejoicings the true Poles remain absent, and by their very absence contribute to the idea that they are nonexistent. If you would find traces of Russian oppression, you must seek it in the schools, where our language is not allowed to be taught; in our Catholic churches, where priests dare not speak a word that would revive the patriotism of their countrymen; in the conscription, which takes off our young men to serve for years in regiments where they have no chance of promotion, and where they are harshly treated by officers who dread and hate them; in our country districts, where the confiscated estates of patriot noblemen are all managed by the agents of absentee court favorites; and in the general air of moroseness prevalent amongst our Christian countrymen, who are terrorized by police espionage. There are no exponents of Polish grievances in the local press; a Catholic Pole, unless he be some shameless renegade who has joined in spoiling us, is not suffered to hold any public pòst of trust; and such of the Polish nobles who remain in our towns lead hole-and-corner lives in lodgings, whose walls seem to have ears, judging by the promptness with which any unguarded word is carried to the police-office and punished.

I have often wondered that the fact of Countess Marienha's being permitted to retain her estates, and exercise such lavish hospitality as she did, should not have opened the eyes of some of our better-educated countrymen to her true character; and yet I myself certainly attended her receptions for a long time without suspecting aught of what I subsequently learned. The truth is, that, as she herself told me, the Russian government find it convenient to tolerate a social outlet for the national discontent, which else might ferment under the surface in conspiracies; and Paulina was instructed to join in the disaffected talk of her countrymen, nay, to promote disaffection, so that she might become possessed of the secrets of the patriots, and skilfully lead them to a pass where sudden detection (resulting apparently from chance) should place them at the mercy of the police. Whether she played this evil game during all the thirteen years of Casimir Barinski's absence, I am unable to say, wishing only to write of such things as I know; and, in any case, her work during this epoch would have been comparatively light, for the repression of 1864 had been so bloody and thorough that there was no spirit left in any of us. But at the time of Casimir's return rumors were rife of the Eastern war now raging; and I began to feel convinced from what our young exile had told me, that Paulina was once again about to cooperate with our enemies in thwarting whatever national impulses the troubled state of political matters might call forth.

It was about eight o'clock, and the crowds of Russian soldiers and nursemaids, mingled with young Jews and Jewesses, were streaming homewards from the Artillery Square, where the band of the Kherson regiment of hussars had been playing, when I, having put on my Sunday cassock and plated shoe-buckles, presented myself at the countess's house. The major-domo, in black livery, made me a bow and conducted me to the chief drawing-room, where several guests were already assembled, among whom my arrival excited no surprise, for I had long been free of the house. I thought I could detect, however, that Paulina colored slightly and bit her lips, though she received me with much outward cordiality and deference. She was very beautifully dressed in white silk looped up with bunches of carnations, the assortment of these two colors forming those of our Polish flag — scarlet and white. I had no need of introduction to any of the company, who were all known to me. There were two or three aged nobleman, who had been too old at the time of the rebellion to take part in it, and some young men who had been boys at the same date, but there was not a single man of middle age. A few pretty young ladies in white muslin,

and some elderly ones, attired in somewhat worn-out finery, completed the circle in which, needless to say, there was not a Russian uniform to be seen.

While tea and sweetmeats were being handed round, Paulina, who was an active hostess, organized the card-tables, where the old noblemen sat down to play whist at two kopecks the point. Casimir had not yet come, but as the clock on the mantel-shelf struck nine, the major-domo opened the door and announced: "Count Barinski."

All eyes converged towards the threshold, and by a common movement of sympathy and respect, every one of the guests, men and women, stood up. Like my old servant Elizabeth, they were disposed to look upon the young exile as returned from the grave. Irreproachably dressed, and looking quite the well-bred nobleman that he was, Casimir advanced to greet our hostess, but she with an impulse which would have been charming in any other person, put her hands on his shoulders, and kissed him on both cheeks. Many of the other women did the same, and so did the men. As for the young ladies, hearing that Casimir was only thirty-three, though his hair and beard were grey, they began to cry, and peeped at him out of the corners of their eyes, while drying them with their handkerchiefs.

I forget whether Paulina cried or not: if my memory serves me, she was all of a flush, and led Casimir to a sofa, where she sat down beside him, while the rest of the company clustered around to hear the sound of his voice. At all events everybody was so enwrapped in the hero that no attention was paid to my doings, and this suited me very well, for I commenced prowling about the rooms to seek for the countess's copy of the "Snowflakes."

I found it at last behind a bookshelf in her boudoir, where it had evidently been thrust out of sight. This boudoir was a wondrous chamber, furnished with yellow satin, and it had a fireplace after the French fashion, with pine-logs burning; so I sat down by the hearth, and put on my spectacles to examine the pages of the volume.

The first poem on which my eyes lit was this little ode, which I have translated into prose: —

To Paulina.

The snowflakes fall and cloak the ground — Whiter than the feathers of the holy dove — Whiter than bridal veil or virgin's shroud — But not whiter than thy snowy breast — Paulina!

Soft they fall over land and sea — Their touch could not wake a sleeping child — Softer than the balm of May's mild breeze — But not more soft than thy kiss — Paulina!

Cold is the earth where the snowflakes fall — Cold as the hand that rests in death — Colder than marble which hides the grave — But not more cold than thy heart — Paulina!

It is not possible to render in any other tongue — not even in our Polish — the dreamy beauty of these verses written in the Lithuanian dialect. There were many others like them addressed to the countess, and, from what I could conjecture, they must have been indited before Casimir went into exile, whilst he was completely under the thraldom of his dangerous charmer, and he must have kept them in his collection after his love had grown cold, merely from the vanity usual to young poets. However, as I conned over one amorous sonnet after another I was at no loss to account for the reason which must have impelled Paulina to sue for Casimir's pardon: beyond a doubt she was in love with him. She was a widow, and nearing the age when the adoration of men was likely to cease, but she had yet several years of beauty before her, and what more likely than that, finding (as she must have supposed) the heart of the noble young exile still faithful to her, gratified self-love, mixed with remorse, may have induced her to dream of devoting the remainder of her life to one whom she had so fearfully wronged? Paulina Marienha was quite capable of forming a plan of this sort, for, in her, good was curiously wrought up with evil, as in the clay-footed beast of the apocalyptical vision. I sat so long by the fire in the boudoir, reading the pretty poems, that midnight struck before I was aware of the flight of time, whereon, straining my ears to hearken, it seemed to me that all the company had gone. However, two persons were still conversing in the adjoining room, and upon my walking to the door, which was closed by a silk hanging, I saw through the lace-work of the fringe Paulina and Casimir wishing each other good-night.

They were alone. Her face was tinted with a bright glow, and her eyes glistened. Casimir maintained the deeply respectful attitude of a man who believes he is speaking to a kind of saint upon earth.

"Good night, Casimir Barinski," said the countess, in a voice soft as music, though it quavered slightly. "Mind, you must come often to see me, for I wish to hear you relate all your sorrowful adventures."

"Dear lady, those sorrows are half for-

gotten now that you shed such a kindly compassion on them."

"I have constantly thought about you," she said. "And I may hope that you did not quite forget me, judging by the verses in your charming book of poems?"

"You have read those verses, then?" he rejoined, with a little surprise. "Dear lady, my poems conveyed a homage scarcely worthy of your acceptance. It remains for me to offer with my lips the expressions of worship which your grace, beauty, and virtues call for."

"I like the homage in the book very well," she remarked, with a quiet archness. "Good night again; you have come back upon me like a vision of my youth."

"You have made me feel that it was but yesterday I last saw you," he replied, and, with an exquisite gallantry that was not of love, but of simple worldly courtesy, he stooped to kiss the hand she extended, then made a low bow and retired.

For a few minutes after he was gone Paulina stood motionless, pensively gazing after him; then she glided to the window and lifted the curtain, apparently to see him once more as he crossed the square outside. When he was out of view she dropped the curtain, thrilled from head to foot, and walked off with a slow step to her private apartments, without coming into the boudoir where I was ensconced.

Glad at not having been detected spying, I hastened down-stairs and left the house, just as the porter, who thought that all the guests were gone, was barring the door; but in my hurry I left the volume of Casimir's "Snowflakes" open on the boudoir table, and the shagreen case of my spectacles inside it.

From The Examiner.

LAWFUL ENGLISH.

An American striving to keep pure "the well of English undefiled" is a noble spectacle, and it is not surprising that Mr. W. C. Bryant should have received many compliments on his *Index Expurgatorius*, as it has been called. The mere fact that an American editor should have drawn up for the guidance of his staff a list of words which he would not permit to be used in his journal because he did not consider them good English, is sufficient in itself to draw closer the bonds between the two countries. It is reassuring for those who despair of the future of the English language in the lawless hands of ready writers on the other side of the Atlantic that any voice should be heard preaching respect for established usage, and trying to make the forces of innovation march in straight lines. That there should be champions of purity in America is satisfactory even for those who, however scant their sympathy with the narrow views and perverse caprices of purists, still regard their efforts as an important factor in preventing liberty of word-coining from degenerating into license. At the same time, there are so many words in Mr. Bryant's list against whose use in their proper place pedantry only could protest, that we can hardly suppose that Mr. Bryant, in interdicting his staff from the use of such words, wished to see them banished from the language altogether. It is quite possible that there were members of Mr. Bryant's staff so attached to particular expressions that they wearied his ear with them, and drove him in desperation to lay an interdict upon their favorites. Such things occasionally happen even in this country, though here, with our constitutional habits, the editor can hardly venture upon a dictatorial prohibition, and generally some compromise is effected, such as that a contributor must not use a darling adjective more than ten times in the same column, or must not draw from a beloved mediæval author more than half-a-dozen illustrations in one article. In no other way can we account for Mr. Bryant's hatred to such harmless words as "seaboard," "beat" (for defeat), "Brother Jonathan," "John Bull," "loafer," "rough," rowdy," "humbug," and so forth, all legitimate enough in their proper place, and not beneath the dignity of journalism, though they might sound startling in a bishop's pastoral.

Some of the words in Mr. Bryant's list show that he was bitten with the Anglo-Saxon mania which raged so furiously some years ago. It is evident that the list was drawn up, or at least added to, after Dean Alford's agitation in favor of what he called the queen's English, and after the publication of Dickens's novel, "Our Mutual Friend." We may fairly conjecture this from the presence, in the *Index*, of such words as "mutual," "commence," "conclusion," "*début*," "*employé*," "endorse," "jubilant," "realized," "repudiate," "residence," "subsequently," "proximity," "vicinity," "reliable." None of these words deserve the sentençe of condemnation which a few zealots tried to get passed upon them; they are useful words — sometimes for variety, sometimes for brevity, sometimes for sound, sometimes for

sense, and no sentence from any authority would prevent people from using them when they had occasion. With regard to the word "reliable," which we see is condemned by one of our contemporaries as a word which "every one who has not lost his sense of propriety in language must detest," an excellent little book has recently been written by Mr. Fitzedward Hall.* This monograph is a masterpiece of minute scholarship, and may be commended to the numerous army of writers who dogmatize upon questions of philology without having taken the trouble to qualify themselves to form an opinion. The objection to the word "reliable" is of the kind that may be called "vulgar," in the inoffensive sense of that adjective. The untrained mind is caught at once by the sophism that if we are to have an adjective based upon "rely" with the meaning "capable of being relied upon," it ought to take the form "relyonable," and readily believes the statement that the form "reliable" is contrary to the usage of English derivation. It takes careful reading and philological acumen to prove, as incontestably as Mr. Hall has done, that though "reliable" belongs to a small family, it is not without congeners, and that it can plead in its favor the authority of some of the most eminent names in English literature. Nothing could be wider of the mark than to stigmatize "reliable" as an Americanism, as was the fashion when the crusade against the poor word was begun. So far as Mr. Hall has been able to trace the use of the word, its father or godfather in English was Coleridge, who used it first in the *Morning Post* in 1800, and frequently afterwards when it suited his meaning. Among modern authorities for *reliable*, Mr. Hall enumerates Mr. J. S. Mill, Mr. Charles Dickens, Dean Mansel, Father Newman, Mr. Gladstone, Miss Martineau, Mr. Leslie Stephen, Mr. Charles Reade, Professor Whitney, Mr. G. P. Marsh. Nor does he forget to mention the *Saturday Review*, into which the innocent word has often crept, in spite of the denunciations, ferocious and oracular, of one of its contributors. Mr. Hall's argument from analogy is equally conclusive. It is true that, after a searching examination, he can produce only two words in common use which have been formed in the same way as *reliable*—*conversable* and *disposable*, "capable of being conversed *with*," and "capable of being disposed *of*." But he shows, in the course of his elaborate disquisition, that it is quite in accordance with the genius of the language to make an ellipsis of the preposition when such formations are resolved upon.

Some of those who object to *reliable* show an equal antipathy to *objectionable*. In fact, their idea seems to be that all adjective in *-able* should be banished from the language, except such as are formed from verbs with an active or a passive sense. Such impetuous philologers would do well to read Mr. Hall's list of adjectives in "-able," which have sprung from substantives. It comprises such respectable and well-assured words as *actionable*, *companionable*, *conscionable*, *creditable*, *equitable*, *exceptionable*, *fashionable*, *hospitable*, *impressionable*, *marriageable*, *peaceable*, *personable*, *rateable*, *reasonable*, *seasonable*, *serviceable*, *statutable*, *treasonable*, *veritable*. It would be rash to make a clean sweep of these words, the recognized and established results of a process of formation which has operated for centuries, in order to reconcile the actual usage of the suffix "-able" with pedantic conceptions of what the usage ought to be. Language repudiates such lawgivers. A vigilant editor may draw up an *Index Expurgatorius*, and see that its prohibitions are carried out, but a word that has once struggled into existence cannot be extinguished by an act of Parliament. It will insist upon living its life, and, when it dies, it dies a natural death. There is no law for words but usage. When a new word comes to supply a felt want, it may always depend upon being aided and abetted to break any other law. People who object to its formation, or whose ears are offended by its sound, are of course perfectly right in urging their objections to it; but, on the other hand, people who find it useful to give a shade to their meaning, or who are caught by some charm in the sound of it, are equally entitled to employ it, without fear or trembling, and to deride as pedants all who seek to interfere with them.

* "On English Adjectives ending in -able, with special reference to reliable." Trübner.

From The Spectator.

THE CAUSES OF THE ENGLISH WORSHIP OF SUCCESS.

MR. GOLDWIN SMITH, in his recent essay upon the resemblance between the positions of the Southern slave-owners and the Ottoman Turks, remarked that the

same people in England had defended both, and would, he fancied abandon the Turks when beaten, with the rapidity with which they had abandoned the Confederates when defeated. The remark, though a little bitter, is perfectly justified by the facts of the Confederate case, and indeed, by much of the history of English opinion. Of all races in the world, the English, in spite of their tenacity and their indifference to general opinion — an indifference quite as great as Cato's — seem to have the least persevering sympathy for lost political causes. A strong minority must have loved the Protectorate, but the moment it had disappeared all overt sympathy for it was over, and for two hundred years no one ventured to say a word in defence of the great Protector, whose descendants, moreover, never resumed his name. There was danger to the throne for a moment from the old army, but none from the body of the people. The Jacobites, who lingered so long in Scotland, were never a popular party here, and their traditions and literature as an English party are so utterly extinct that the common people believe all the Jacobites were Scotch, and save so far as they have read Scott's novels know absolutely nothing about them. After the Italian war the English Tories absolutely forgot the petty princes of Italy, and in 1866 English society, till then almost entirely Austrian in its sympathies, suddenly wheeled round, and for years held the composite southern empire to be almost beneath contempt. The feeling for Denmark so died away, that no single reference has ever been made in Parliament by a politician of the first class to the position of north Schleswig. About the Confederates the change was marvellous. Up to the time of General Sherman's march into space, five sixths of English income-taxpayers were on the side of the Confederates. So powerful were their sympathizers that they almost plunged us into war, they advanced six millions to the government of Richmond, and they shook the confidence of the most determined Liberals, till at last hardly any one would believe that the war would have any result but the independence of the South. Nobody but the "sentimentalists" held on, and they had intervals of great depression. Six months after Sherman had reappeared behind General Lee there was not a Confederate in England, not a man who would allow that he had ever believed the defeat of the North a certainty, and the continual irritation of the North with English feeling was treated as an irrational display of temper. It seemed as if Englishmen believed only in success, and this impression, universal on the Continent, is deepened by some smaller evidences. English opinion rarely adheres to an unsuccessful hero. Its foreign idols are forgotten in a few years. It scorned the Ulysses of France the moment he ran away. It adored Napoleon III. while he was on the throne, and despised him as soon as he was taken prisoner. It is wholly at this moment in favor of the Republican party in France, and would believe France fitted only for a tyranny if another *coup d'état* re-established the second empire. And as we have said, if the sultan loses his dominion in Europe, there will probably not be a Tory newspaper, or a Tory orator, or a club-man who one year after will acknowledge that he exulted when the Turks won, who will regret the Turks, or who will remember that he believed the independence of Turkey essential to the interests of India. Erzeroum will be as forgotten as Ocsakoff, the loss of which was said, in a great debate in which Charles Fox took part, to be fatal to British prestige, and the very name of which has for half a century been absolutely forgotten. The new masters of European Turkey, whoever they may be, will be judged without the slightest reference to the Turks, and the remnant of Turkish dominion seated at Broussa will be studied like any other semi-barbaric kingdom.

There is something in this worship of success, this readiness to abandon and even to forget a lost cause, which is scarcely consistent with the persistency and conservatism inherent in the English character; and it is worth while to see if it can be explained by any theory more reasonable than the one usually advanced, the reverence for power. The Englishman does not worship power, as a rule. On the contrary, he rather dreads and dislikes power. He fought the first Napoleon for twenty years because he was so powerful; he hated the American republic because it seemed dangerously strong; he strongly dislikes Bismarck because he can move such armies; and he loathes Russia mainly because he thinks the Colossus too big for the good of the world. We believe that reverence for power enters very little into his worship of success, which arises from other and somewhat mixed motives, the main one being this. With the single exception of Italy, an exception which it would take a volume to explain, the average Englishman does not

care very greatly about any foreign power, or any form of government established in any foreign country. He does not detest despotisms until they are cruel, or republics until they are disorderly, or mixed monarchies until they are obviously too weak to work. There is in his mind a governing idea that one main test of any new organization — or old organization, for the matter of that — is the work it can do; and if it cannot do any work, if it fails in its first objects or the objects he thinks first, he casts it out of his mind, and waits, looking about for the next weapon. The princes of Italy could not keep down popular revolt, which was all they were fit for, and he forgot them. The Confederate States could not break up the Union, which in his judgment was their *raison d'être*, and the moment that was clear he wanted to hear nothing more about them. Napoleonism could neither maintain itself nor keep France from subjugation by foreigners, and as these were the first ends of that system, Napoleonism died out of his mind. Turkey exists in the ordinary British mind in order that Russia may be kept back. By a series of occurrences, some of them accidental, Turkey has been compelled to show all by herself whether she is fit to perform this function. As yet the result is not quite clear, but if it becomes clear and Turkey is totally defeated, Turkey's *raison d'être* in the British mind will have vanished, and she may go, without lingering regrets. The Englishman does not value Turkey, or any other power, or any form of government for itself, but for what he thinks it can secure, for its meaning in his own mind; and the moment it does not secure what he desires, or loses its meaning, he gives it up at once, and usually forever. This may be said to be pure selfishness, but it is not so, though, no doubt, selfishness may enter very deeply into it. It is rather practicalness, the love of efficiency natural to a very powerful, though very *borné* kind of nature. Sometimes the quality displays itself without any selfishness at all. There was no selfishness whatever in forgetting Denmark, any more than in the strong sympathy originally felt for her. Her defeat brought England no advantage, but rather considerable harm; but still Englishmen forgot Denmark, because it was of no use remembering her. The independence of the small States could not be defended there, and the Englishman, though as disposed as ever to wish well to small States, turned his regard away to other scenes. He had no energy to waste on the impossible. It was just the same with Napoleonism. The fall of Napoleonism brought England no good, but rather harm, for Englishmen thought Napoleon a very good friend; but they did not regret it, far less weep over it, for in the fall it was revealed to them that their admiration had been mistaken, that the strong government, which, as they thought, maintained order without doing mischief to France, could not maintain order as against invasion, and had done to France an enormous and, as it might prove, an irreparable mischief. The feeling for Napoleonism therefore, in spite of English interests, died instantly away, and has not yet revived, even when the struggle is seen to be between Napoleonism and the republic. Moreover, though the English forget the lost cause, they often do it without admiring the winning one. They forgot the Confederates without liking the North. They forgot the princes of Germany, without loving Bismarck, and they will forget the Turk, without in the least appreciating his successor. Their defect of sentiment, for it is a defect, and one which greatly deforms the outward aspect of the national character, arises not from baseness, but from a narrow-minded practicalness, akin to that of the artisan who, breaking his tool, selects another from his box, without a regret, except for the waste of means.
