11 Jan 1947

SUBJECT: Deaths in Ueno Station.

TO : SCAP Public Health and Welfare Section.

1. In January thus far 11 deaths have been reported from Ueno Station. Of these 9 autopsies were performed by the medical examiners. The diagnoses made were: Pneumonia - 7 cases (1 fibrinous, 2 broncho pneumonia, 4 lobar pneumonia); Pulmonary Tbc - 1 case; Dystrophy - 1 case.

2 cases were diagnosed as dystrophy at inquest without autopsy.

The dates for these cases were:

3 January	-	3
4 January	-	1
5 January	-	1
6 January	-	1
7 January	-	5

3 additional cases occurring 9 January are being investigated now.

2. During November there were 3 death in Ueno. The autopsy diagnoses were: Hirschsprungs Disease - 1; Pulmonary Tbc - 1; Dystrophy - 1;

3. During December there were 11 deaths. The autopsy diagnoses were: Dyp trophy - 4; Pneumonia - 4; Heart Disease - 1; Pulmonary Tbc - 1; Uterine disease - 1;

4. The constant vagrant population of Ueno has been about 2000 persons. The indigent and sick have been institutionalized from time to time. So the majority of the people have been earning a living wage and the lack of shelter has been the main problem.

The number has remained high because of constant newcomers. At present active plans are in progress for shelter for all and closing of the subway.
