tested
lawn grass
MIXTURES

For a finer, smoother lawn, use Wyatt's tested lawn grass mixtures. Listed on the next page we offer mixtures that have been found, in actual field tests, to be the best mixtures for this section of the country.

Select the mixture that suits your soil and conditions best and you will have taken the most important step in the production of a fine lawn. A good lawn requires constant care so read what we have to say on the next page on "How to Build a Lawn" or write us giving full particulars concerning soil, sun, shade, trees, etc.

Beautify your home with WYATT'S Lawn Grass Seeds

*How to make
a BEAUTIFUL
LAWN*

Wyatts Carolina LAWN GRASS MIXTURE

F-60. WYATT'S CAROLINA mixture of lawn grass seeds is an improvement on all of the better mixtures offered heretofore, at comparative prices. Our constant experiments have taught us just what grasses are best suited to the Eastern and Southern states. The finest seeds of these varieties are carefully re-cleaned and blended into our Carolina mixture so as to give the very best results obtainable. Sow 5 lbs. per 1,000 sq. ft. Read the column "How to make a beautiful Lawn" on this page. Prices: lb. 45c; 5 lbs. \$2.00; 10 lbs. \$3.50; 25 lbs. \$8.00; 100 lbs. or more at 30c per lb., prepaid.

Wyatts Colonial LAWN GRASS MIXTURE

F-58. WYATT'S COLONIAL MIXTURE—The continued demand for a mixture of the finer leaved grasses have led us to prepare this Colonial mixture consisting largely of the best varieties of bents and fescues. While the price per pound is higher only a fraction of the quantity required of other grasses is required of the Colonial mixture, leaving very little if any difference in the total cost for seeding. Once the lawn is seeded to these grasses of vastly superior beauty, all other varieties will be discarded. Use 2 lbs. per 1,000 sq. ft. Prices: Lb. \$1.25; 2 lbs. \$2.25; 5 lbs. \$5.25; 10 lbs. \$10; 25 lbs. or more at 95c per lb., prepaid.

Wyatts Sunny South LAWN GRASS MIXTURE

F-59. WYATT'S SUNNY-SOUTH MIXTURE—For lighter soils and soils that become extremely dry, and in locations subjected to extreme heat during the summer months Wyatt's Sunny-South mixture of lawn grasses is recommended. The grass varieties used on golf greens over the entire south predominate this mixture. Only the purest stocks are used. Sow 5 lbs. per 1,000 sq. ft. Prices: Lb. 45c, 5 lbs. \$2.00; 10 lbs. \$3.50; 25 lbs. \$8.00; 100 lbs. or more at 30c per lb., prepaid.

Wyatts Shady Nook LAWN GRASS MIXTURE

NO. F-61. WYATT'S SHADY NOOK LAWN GRASS—A carefully blended mixture of grasses best adapted to shaded situations. Use 5 lbs. per 1,000 sq. ft. Where the soil is acid from poor drainage or drippings from trees, occasional applications of agricultural lime should be made at the rate of 5 to 6 pounds per 100 sq. ft. Prices: Lb. 45c; 5 lbs. \$2.00; 10 lbs. \$3.50; 25 lbs. \$8.00; 100 lbs. or more at 30c per lb., prepaid.

OTHER GRASSES AND CLOVER FOR LAWNS

F-40. KENTUCKY BLUE GRASS—Prefers slightly sweet soil and is best suited to semi-shade. Average soils should be limed for Kentucky Blue. In the South this variety should never be cut shorter than 2 inches. For lawn work we select and offer only the purest seeds obtainable. Prices: Lb. 45c; 5 lbs. \$2.00; 10 lbs. \$3.50; 25 lbs. \$8.00; 100 lbs. or more at 30c per lb.

F-43. ITALIAN RYE GRASS—Generally referred to as "Winter Grass" in the south where it is grown extensively for winter lawns. It will grow in any soil from early September till June. Sow 10 lbs. per 1,000 sq. ft. Prices: Lb. 25c; 5 lbs. 75c, postpaid. Not prepaid, 25 lbs. \$2.75; 50 lbs. \$5.00; 100 lbs. or more at 8½c per lb.

F-49 SEASIDE BENT GRASS—Finest of the bents for lawns where it withstands drought and abuse. Use 2 lbs. seeds thoroughly mixed into 5 to 10 lbs. of dried sand, and sow evenly over each 1,000 sq. ft. of lawn area. Prices: Lb. \$1.50; 5 lbs. \$7.00, postpaid. Write for quantity prices.

For other grasses see page 47.

F-80. WYATT'S FANCY WHITE DUTCH CLOVER—Our carefully grown Fancy White Dutch Clover is produced especially for lawns. It is extremely hardy to cold or heat and its even, dwarf habit of growth adds to its value in the lawn. Prices: Lb. 85c; 2 lbs. \$1.50; 5 lbs. \$3.50, postpaid. Write for quantity prices.

F-79. KENTISH WILD WHITE CLOVER—A dwarf spreading and unusually rugged clover especially adapted to lawns and athletic fields. Prices: Lb. \$1.75; 5 lbs. \$7.50, postpaid. Write for quantity prices.

Other clovers listed on page 45.

PEAT MOSS

For new lawns 1 bale should be thoroughly pulverized and mixed in each 300 sq. ft. of lawn area. Nothing is so beneficial to establish lawns as a bale of peat mixed with 100 pounds of Vigoro or Sheep Manure applied to each 2,000 sq. ft. 3 or 4 times each summer. Peat should also be used liberally in gardens, flower beds and borders, and as a mulch for shrubbery, because of its capacity to hold 15 times its own weight in water.

Prices: Large bale (approximately 20 bus.) \$3.00
¼ size bale 1.50

A D C O

Converts grass clippings, weeds, leaves and other non-woody matter into valuable compost. 7½ lb. box \$1.00; 25 lb. bag (enough for 20 wheelbarrows of debris) \$2.00; 150 lb. bag \$10.00.

ALUMINUM SULPHATE

Used 1 lb. to 25 sq. ft. to make soils acid for acid loving plants. Mountain Laurel, Rhododendrons, Azaleas, etc. Prices: Lb. 25c; 5 lbs. \$1.00, postpaid. Not prepaid, lb. 15c; 2 lbs. 25c; 5 lbs. 60c; 10 lbs. \$1.00.

WIZARD SHEEP MANURE

Best of all natural manures, highly concentrated, free from straw and rubbish, with all weed seeds killed. It puts new life into worn out soils.

For lawns use 6 to 10 lbs. to every 100 square feet. For vegetable or flower gardens use 10 to 15 lbs. to every 100 square feet. Prices: 5 lbs. 35c; 10 lbs. 60c; 25 lbs. \$1.00; 50 lbs. \$1.50; 100 lbs. \$2.75; 500 lbs. \$13.00; Ton \$47.50.

RAW BONE MEAL

Excellent for rose beds, flower beds, garden and field crops, and for top-dressing lawns. Prices: 5 lbs. 25c; 10 lbs. 50c; 25 lbs. \$1.00; 100 lbs. \$3.00; 200 lbs. \$5.75. Not prepaid.

COTTONSEED MEAL

A splendid fertilizer for all kinds of plants. Prices: 5 lbs. 25c; 10 lbs. 40c; 25 lbs. 75c; 50 lbs. \$1.00; 100 lbs. \$1.85. Not prepaid.

L I M E

Finely ground agricultural limestone. Use 10 lbs. per 100 sq. ft. to sweeten acid soils. 100 lb. bag 75c, write for quantity prices.

TOBACCO DUST

Supplies organic potash and nitrogen. It will increase the value of any chemical fertilizer when used in equal parts. Prices: 100 lb. bags \$2.50.

The first requisite for a lawn of any kind, be it permanent or merely temporary, is good soil. Good soil from a point of plant growth must have these three vital parts: Plant food, moisture, humus. Most of us are familiar with the first two of these but some of us are not so familiar with the third—humus. Humus is that part of an ideal soil that renders it porous and loamy. It prevents heavy soils from packing or baking and adds "body" to light or sandy soils, thereby increasing their moisture holding capacity. Therefore, since plant foods must be in a liquid form before they are available to plants, humus is the most important of the three vital parts of an ideal soil. Heavy soils without humus are so tightly packed that they have no room for moisture. Loose sandy or light soils, while having great capacity for moisture, drain so rapidly that they become very dry too often for healthy plant growth. And so we see then that humus added to heavy soil increases its capacity for moisture while preventing its packing or baking and when added to sandy or light soil increases its ability to retain moisture.

Wyatt's Peat Moss, listed on this page, is the finest type of humus available since it is perfectly pure, containing no weed seeds nor harmful bacteria and has a moisture capacity of 15 times its own weight. Where the area is too great to permit the use of commercial peat for humus we recommend successive plantings of cover crops for turning under, legumes much preferred. Humus derived in this manner has the advantage of being much higher in plant food content than commercial peat. A third source for humus is through the use of animal manures. We do not recommend manures unless they are known to be thoroughly rotted and free of weed seeds and harmful bacteria. As the humus diminishes it must be replaced from a compost heap made of leaves from trees or grass clippings or from some equally generous source, and scratched into the lawn from time to time. However, once the soil is well built up with humus and a constant supply for the future is provided the problem of growing a permanent lawn or anything else is solved.

After the soil has been thoroughly broken apply 4 lbs. of Vigoro per 100 sq. ft. Prepare a fine seed bed and allow to settle. The seeds may be sown, on the scarified surface, using 1 pound to each 200 square feet. After seeding the lawn should be rolled. Germination will be hastened if the surface is moistened with a very fine mist from the hose every day until the grass is up. When the lawn is established it should never be sprinkled, but instead soaked once a week.

Established lawns should be fed regularly. 100 lbs. Vigoro or 100 lbs. Sheep Manure thoroughly mixed in 1 half of peat should be applied as a top dressing to each 2,000 sq. ft. 3 to 4 times each summer followed by an application of 6 lbs. of bone meal per 100 sq. ft. each fall.

What is meant by

"TESTED SEEDS"?

The term "tested seeds" as used in this catalog, and in all of our advertising means that every bag or package of seeds purchased at Wyatt's is supplied from a lot that has been carefully tested by the North Carolina Seed Testing Laboratory and the seeds are known to grow. Every lot of seeds reaching our warehouse is sampled and tested before the seeds are moved into our store for packaging or for sale in bulk. This accounts for the fact that "Wyatt's Tested Seeds" are more and more in demand in North Carolina and in the South.

Plant Wyatt's Tested Seeds and be sure of success.

58 YEARS EXPERIENCE

For over a half century the Job P. Wyatt & Sons Company has served thousands of friends and customers throughout the entire South. Fifty-eight years of service means more than mere proof of our ability to serve—it means that we have had 58 years of experience in selecting strains and varieties best adapted to the conditions of the South. This year we offer again seeds that are the Standard of Quality and varieties that represent the very latest improvements.

VEGETABLE PLANTING CALENDAR

The chart below lists the more popular vegetables showing approximate dates, space for sowing, depth, etc. The dates for sowing and maturing would, of course, vary with the locality and the depth for sowing varies with soil consistency. The chart should be used as a general guide. We invite correspondence at all times relative to gardening or farming activities and are always glad to furnish any information that may be in our possession.

WYATT'S CABBAGE SEEDS

Days indicated represent time from setting plants to heading

CULTURE—If the plants are started in a seed-bed, they should not be crowded or they will run up weak and slender and will not endure transplanting well. When 4 to 6 inches high, transplant to open field, setting the plants as deep as the first leaf stems; give frequent and deep cultivation, drawing the earth to the plants at each working. Set the early varieties 18 inches apart in rows 2½ feet; the larger and later sorts, 2 feet apart in 3-foot rows. They need a light and well watered soil, rich in nitrogen. One ounce will produce about 1,500 plants; ½ lb. will produce sufficient plants to set an acre. Thousands of successful growers depend on Wyatt's Tested Cabbage Seed. Be sure to plant the best seed from Wyatt's.

WYATT'S FAR WESTERN GROWN CANTALOUPE

CULTURE—The Melon delights in warm rich soil with perfect drainage, and can never be grown to perfection under unfavorable conditions. Very good Melons, however, can be grown on almost any land if the trouble is taken to dig boles 2 feet square, filling them with a rich compost of woods-mould and cow-pen manure. Plant three-fourths to one inch deep from April to June in rows 6 feet apart, leaving not less than 4 feet between the hills, putting about

10 seeds to the bill. As insects are often very destructive, it is best not to thin at all until the plants are well started. When they are large enough to be safe, thin to two in a bill, and keep the ground mellow and free from weeds. Those who make a specialty of Muskmelons will find it advantageous to start the seed under protection of glass, so as to have the plants ready by the time seeds could be usually planted in the open ground.

WYATT'S PARSNIPS

CULTURE—1 ounce is enough for 100 feet of drill; 4 to 6 pounds will sow an acre. Sow very thickly from March to August ¼ of an inch deep in drills 18 inches apart in deep, rich, sandy loam, which has been well manured for a previous crop. When the plants are 2 to 3 inches high, thin out from 4 to 6 inches apart and cultivate frequently to keep down weeds. The roots, which are excellent for stock as well as for the table, are much improved in flavor by being left in the ground during the winter. As the seeds do not germinate well in hot weather, sowing should be done as early as possible.

It pays to enrich each hill with rotted manure or commercial fertilizer. During the early stages of growth keep the plants well sprinkled with "Slug Shot" or Tobacco Dust, to save them from insects. The Winter Squashes may be grown in cornfields in the same manner as pumpkins. In the small garden, Squash may follow early beets, early cabbage, corn salad and spinach.

TOMATOES

All Treated With Semesan To Prevent Damping Off and Wilt

An Extra Service—No Extra Cost

CULTURE—1 ounce is sufficient for 100 feet of drill; 4 ounces will produce enough plants to set an acre. The tomato flourishes best in warm, light soil, moderately rich. For early use sow $\frac{1}{2}$ of an inch deep in January or February in a hot-bed, or, if only a few plants are wanted, they may be sown in a box. In order to get the plants strong and stocky, they should be transplanted when 2 to 3 inches high. When all danger of frost has passed set out in the open ground in rows 3 feet apart, leaving the same distance between the plants, and if convenient, furnish a support for the vine. For late crops sow in the open ground as above directed. Wyatt's Tomato Seeds are planted by many of the leading truckers in the South.

No. 745—New Break O' Day Tomato

HERBS FOR BEAUTY-FLAVOR-FRAGRANCE

In Cultivation Before the Christian Era, Herbs Form the Most Fascinating Group of Subjects in Modern Gardening*

For all-round interest most gardeners will admit that the versatility of the aromatic herbs make this group of plants among the most fascinating. A small assortment of herbs will furnish food, flavoring, medicine, fragrance in the garden and in the home, besides their beauty as garden subjects and cut flowers. Herbs thrive in most soils and should be sown early in the spring. Thin out to about one foot apart. Those grown for foliage should be cut before they come into full bloom and hung in bunches or spread thinly where they can dry quickly.

This fascinating study, one that was practised so diligently thousands of years ago—Herb gardening—is once more coming into popularity. Be the first to have a complete herb garden in your neighborhood. Our stock of herb seeds is one of the most complete in America.

Keys to the Modern Garden

No. 1749 Russell's Lupins

No. 1864—Pansy, Coronation Gold—Silver Medal 1938—

A striking addition to one of the most useful of all plant families and in a color especially welcome for the period during which it blooms. What could be more valuable for bulb or perennial borders, or alone in beds of bright yellow, blooming as they do here in the South periodically throughout the winter and until almost mid-summer. The flowers are very large, round, lightly ruffled, spicy scented, canary yellow flushed with gold. Pkt. 25c.

Scarlett O'Hara

No. 1482—Cosmos, Sensation—

The surprisingly large pink, rose and white flowers of this real Sensation sometimes reach 4 to 5 inches across! The plants, with rather heavy foliage, grow about 4 feet, bloom extremely early (10 weeks from seeds) and are very free flowering. Cosmos, Sensation, is one of the easiest flowers to grow. Disbud for largest blooms. Pkt. 10c; 3 pkts. 25c.

No. 1945—Phlox (drummondii) New Art Shades Mixed—

A giant flowering new strain of the popular annual Phlox. The abundant flowers are produced in the most delicate pastel shades. The plants bloom the entire summer disregarding heat and drought and where the soil is suitable they seed themselves for the next year's crop, reappearing year after year from one sowing. Pkt. 10c; 3 pkts. 25c; 1-16 oz. 35c.

No. 2161—Verbena, Beauty of Oxford Hybrids—

A real triumph in plant hybridization and selection gives the world a great new variety from a grand old family. Beauty of Oxford Hybrids Verbena is of the gigantea type, producing immense flowers in beautiful new shades of clear pink, rose pink, salmon pink to deep rose red on strong vigorous plants, adaptable to most any situation. Thriving, as do all other verbenas in poor soil. Beauty of Oxford Hybrids adapt themselves wherever put, but with best results in a hot, sunny situation where the soil is neither too rich nor too damp. Pkt. 10c; 3 pkts. 25c; 1/2 oz. 50c.

 No. 1946
 Salmon, Glory Phlox

No. 1749—Lupin—Russell's— This outstanding novelty of 1939 comes to us from England where for many years an obscure Yorkshire gardener has been carefully selecting and improving this strain until at last it is ready for thousands of anxious and impatient enthusiasts. RUSSELL'S Lupins produce an extraordinarily wide range of colors including selfs and combinations of blues, pinks, yellows, reds, maroon, purple and others. The plants grow 3 to 5 ft. high with numerous flower spikes measuring 15 to 30 inches in length. Pkt. 25c.

PETUNIAS

Sow the small seeds in a warm, sunny, open place outdoors, thinning to 15 inches apart, or in frames for transplanting. Scatter seeds thinly, barely cover and firm soil over them; water seedlings with a fine spray to prevent drying out. The weakest looking seedlings usually produce the finest flowers, so save the weak plants for transplanting. Seed of the double and fringed sorts should be pressed into a shallow pot of sifted soil and covered with only a sprinkling of sand. The pot should be watered from below by placing it in water. Never allow to become too dry nor too moist.

No. 1909—Petunia, Burgandy—

Burgandy is one of those rugged individualists of the garden, a strong growing type, with very showy flowers in a shade of deep red which is rather difficult to combine with other colors. Since, however, its own color is so showy in itself, it is well worth growing as an accent or specimen group. The flowers which are plain edged, are of good size and substance, the strong red contrasting boldly with the snowy white throat. The plants make a heavy growth and are very free blooming. Pkt. 25c; 2 pkts. 40c.

WYATT'S GIANT ORCHID FLOWERING SPENCER SWEET PEAS

WYATT'S SPENCER SWEET PEAS are produced for us under almost perfect growing conditions in the fertile Lompoc Valley in California. As is true of all other Wyatt's seeds, our special strain of Sweet Peas is the very best. Four tremendous ruffled flowers on long stems often 14 inches, clear refined colors and vigorous, long blooming plants are characteristics of all varieties of Wyatt's Sweet Peas.

CULTURE—One ounce will sow from 15 to 20 feet. Sow from November to March. For spring plantings we recommend the sowing of Sweet Pea seeds slightly below the ground level in a bed thoroughly pulverized 2 feet wide by 12 to 18 inches deep. Well rotted (but no other) compost or a liberal sprinkling of Bone Meal might be added when the bed is prepared and when the peas are growing slight applications of Bloomaid or Vigoro at 4- to 6-week intervals should be made.

FIELD AND FARM SEEDS

RECLEANED CLOVER SEED

PRICES CHANGE FROM DAY TO DAY

No. F97—Alfalfa, Kansas Grown—We offer nothing but the very finest grade of genuine Kansas Grown Alfalfa and our seed is usually 99 per cent or better pure Alfalfa. The hay is remarkably palatable and the feeding value worth nearly twice that of the very best Timothy. Droughts have no effect upon Alfalfa, as its roots penetrate to astonishing depths. Alfalfa can be sown in either fall or spring. The cleaner the ground, the better the stand will be. Sow on deep, well drained, good loamy land. Alfalfa will not grow on acid soils, and to correct this condition spread 1 to 1½ tons of finely ground lime to the acre after plowing and a few weeks before sowing. Cutting should be done always as blooming begins. Sow 40 lbs. to the acre. Prices: Lb. 50c; 5 lbs. \$2.40, postpaid. Not prepaid, 10 lbs. \$3.50; 25 lbs. \$8.50; 100 lbs. or more at 32c lb.

No. F87—White Blossom Sweet Clover—

This is known as Melilotus Alba. It is adapted to a wide variety of soils: is used for pasture, for forage, for ensilage, for bees, for turning under to improve the land. The deep roots break up, aerate and drain stiff subsoils and add humus. Spring sowings will yield a crop the following fall and two crops the following year. The first season it grows 1½ to 2½ feet high, but if cut when 6 inches high it stools out and makes a more tender growth for grazing. Sow 20 lbs. per acre. Prices: Lb. 30c; 5 lbs. \$1.00, postpaid. Not prepaid, 10 lbs. \$1.50; 25 lbs. \$3.25; 100 lbs. or more at 12c lb.

No. F82—Red Clover—

A valuable farm crop in northern part of the Cotton Belt. Equally good for pasture, hay or soil improvement. Even the first crop makes rich feed and is most valuable for hay. Sow in fall or spring. September and March being the best months. 15 lbs. per acre. Prices: Lb. 40c; 5 lbs. \$1.75, postpaid. Not prepaid, 10 lbs. \$3.00; 25 lbs. \$7.00; 100 lbs. or more at 27½c lb.

No. F81—Mammoth Clover—

Also known as Sapling Clover. Grows much taller than Red Medium, with larger, leafier stalks; 10 to 15 lbs. of seed per acre. Prices: Lb. 45c; 5 lbs. \$2.00, postpaid. Not prepaid, 10 lbs. \$3.25; 25 lbs. \$7.50; 100 lbs. or more at 28c lb.

No. F86—Alsike or Swedish Clover—

One of the best for mixing with timothy; it is perfectly hardy in every climate. It is sown early in the spring or late summer. Sow 10 to 15 lbs. per acre alone, or 8 lbs. per acre with timothy. Prices: Lb. 40c; 5 lbs. \$1.75, postpaid. Not prepaid, 10 lbs. \$3.00; 25 lbs. \$7.00; 100 lbs. or more at 27½c lb.

No. F83—Crimson Clover—

Should be sown from August to December. When sown by itself, 25 to 30 pounds are required to the acre; sown with grain or vetches, 15 pounds would be sufficient. Prices: Lb. 35c; 5 lbs. \$1.50, postpaid. Not prepaid, 10 lbs. \$1.75; 25 lbs. \$4.00; 100 lbs. or more at 15c lb.

No. F85—Burr Clover—

Is an annual winter legume, coming from seed each year, and furnishes grazing during the winter. If allowed to go to seed, it will reseed the ground for another winter's grazing. Burr clover at the rate of 20 to 25 lbs. per acre of hulled, recleaned seed to the acre broadcast, or if sown in the burr 60 to 80 lbs. per acre. Prices: Lb. 40c; 5 lbs. \$1.50, postpaid. Not prepaid, 10 lbs. \$1.75; 25 lbs. \$4.00; 100 lbs. or more at 15c lb.

No. F80—White Dutch Clover—

A dwarf clover, green summer and winter. Best for pastures and lawns. Prices: Lb. 75c; 5 lbs. \$3.25, postpaid. Not prepaid, 10 lbs. or more at 55c lb.

No. F93—Kobe Lespedeza—

A variety particularly adapted to lowlands. Kobe is only about 10 days later than Common and grows fully as tall as Tennessee 76. The leaves and stems are slightly coarser making a heavier hay crop. This variety with the Tennessee 76 is being highly recommended by the N. C. Experiment Stations for all but the mountainous regions of North Carolina, South Carolina and Virginia. Sow 25 to 30 lbs per acre.

PRICES: KOBE—Not prepaid, 25 lbs. \$3.00; 100 lbs. or more at 11c lb.

No. F92—Korean Lespedeza—

This popular new Japanese type clover is coming into large demand. Korean Lespedeza will grow on any soil, wet or dry, rich or poor, sour or sweet, and has never been killed by a drought. When a good crop of Korean Lespedeza is turned under it will double the corn yield in one year. Unexcelled for hay crop since it will produce from 2 to 4 tons of good hay per acre on a good thick even stand. It is equal to alfalfa in feeding value, and compares favorably in fineness, palatability and protein content. A good stand will make one ton hay per acre for each 4 to 5 inches above cutter bar. The hay is easier to cure and handle than soy beans, red clover, or alfalfa. When cutting for hay cut in August or early September. If hay crop is to reseed the land, hay must be either early and high enough for stubble to make sufficient growth to produce seed; or wait until seed have formed on bottom branches, which seed shatters to the ground for reseeding. Korean Lespedeza is earlier than other lespedezas, this insures harvest before fall rains and early frost and gives time for seed bed preparation for small grain that fall. If a good stand is expected the first year sow from 20 to 25 pounds of seed per acre. Prices: 25 lbs. \$2.25; 100 lbs. or more at 8c lb.

No. F91—Common Lespedeza or Japan Clover

It grows on galled hillsides and on all soils, even on the poorest, and being a legume will extract nitrogen from the atmosphere and store it in the roots for later crops. Its abundant long tap-roots and laterals, when decayed, open up the subsoil and leave in it great quantities of nitrogenous matter that will increase the yield of succeeding crops. Once started it soon spreads and takes possession. Sown on old pastures, it will add very materially to the value of the pasture. Sow 25 lbs. per acre. Prices: 25 lbs. \$3.50; 100 lbs. or more at 13c lb.

No. F94—Tennessee 76 Lespedeza—

This variety is best for eastern North Carolina, Virginia and South Carolina. The leaves and stems are fine and it produces a great quantity of hay even on poor land. Tennessee 76 grows 12 to 24 inches high and is three weeks later than Common. The close resemblance in the seeds of these two varieties prompts us to urge all of our customers to use every care when buying Tennessee 76. Why not buy pure stock direct from Wyatt's? Then you'll know you've got the genuine Tennessee 76. Sow 25 to 30 lbs. per acre.

PRICES: TENNESSEE 76—25 lbs. \$3.50; 100 lbs. or more at 13c lb.

F95 LESPEDEZA SERICEA Scarified Seeds

LESPEDEZA SERICEA is the perennial variety being grown so largely over the south. Prices: Lb. 30c; 5 lbs. \$1.40, postpaid. Not prepaid, 10 lbs. \$2.25; 25 lbs. \$5.00; 100 lbs. or more at 20c lb.

WYATT'S GRASS SEEDS FOR HAY AND PASTURE

Sudan Grass No. F73

No. F73—Sudan Grass—A wonderful quick growing summer hay crop. As big a yielder as Johnson grass, but it has none of the latter's objectionable features, for Sudan grass can never become a pest, as it is an annual. Its greatest value is for hay, which is well liked by stock. The hay is equal to timothy in feeding value. It is also strongly drought resistant. Sow it after the ground becomes thoroughly warm, either broadcast or in rows two feet apart, and cultivate like corn. When sown in rows it grows six to seven feet high; when sown broadcast it grows four to five feet high. Sudan grass may be profitably grown with cowpeas and soybeans, as being of erect growth it supports the pea vines and makes the cutting easier and allows them to cure more quickly; the mixture will give a better-balanced ration than either fed alone. When grown with cowpeas or soy beans make the sowing of Sudan grass after the peas or beans are planted and covered. Almost any soil, from heavy clay to light sand, will grow Sudan grass. Sow 5 to 6 lbs. to the acre in 2-foot rows; 20 to 25 lbs. broadcast. Prices: Lb. 20c; 5 lbs. 55c, postpaid. Not prepaid, 10 lbs. 75c; 25 lbs. \$1.50; 100 lbs. or more at 5c lb.

No. F43—Italian Rye Grass—American Grown—Highly recommended for hay crops on rich land. An annual grass with tall, broad flat leaves; very valuable for winter pastures, either alone or in mixtures. Sow 5 lbs. per 1,000 square feet for lawn; 30 to 40 lbs. per acre for pasture. Our seed is thoroughly re-cleaned and is 98 per cent pure or better. Prices: Lb. 25c; 5 lbs. 75c, postpaid. Not prepaid, 10 lbs. \$1.25; 25 lbs. \$2.50; 100 lbs. or more at 9c lb.

No. F42—English Rye Grass—It produces an abundance of foliage that remains bright and green throughout the season, will bear frequent and close cropping, is relished by all kinds of stock, and is not easily injured by tramping. It prefers a stiff wet soil. Prices: Lb. 30c; 5 lbs. \$1.25, postpaid. Not prepaid, 10 lbs. \$2.25; 25 lbs. \$5.00; 100 lbs. or more at 18c lb.

No. F48—Bermuda Grass—Makes a vigorous and persistent growth in every part of the South; lasts for years; stands a long, hot summer without injury; grows well in any soil that is not too wet. Sow at the rate of 8 to 10 lbs. to the acre for pasture; 15 to 20 lbs. for lawns and golf courses. Plant from March until June. Seed will not germinate when ground is cold, and under favorable conditions, takes 30 to 40 days to germinate. Prices: Lb. 45c; 5 lbs. \$2.00, postpaid. Not prepaid, 10 lbs. \$3.00; 25 lbs. \$7.25; 100 lbs. or more at 28c lb.

No. F51—Carpet Grass—It is remarkable for its ability to grow on poor sandy soils, thriving far better than Bermuda grass; it thrives vigorously on any kind of soil if moisture conditions are favorable, even if the land is acid, and will furnish more grazing than Bermuda grass. WYATT'S BLOOD TESTED BABY CHICKS

100% LIVE DELIVERY GUARANTEED—POSTPAID

You are guaranteed 100 per cent live delivery of chicks from us, so with a good brooder and house 500 or more may be purchased and cared for, fed and reared with much less expenditure of time and money than was required with one-half that number under the old method. You can get your chicks early and raise early pullets that will begin laying in the early fall and continue through the winter, when eggs are high. Your broilers may be sold on an early market when the price is always high.

HOW TO ORDER

To avoid any delay, use the order blank. Orders are filled in turn, so book your's in advance, if possible. State second and third choice if you can use other breeds.

Straight orders of one kind are best. Do not order too many different kinds at one time. We do not always have chicks of every breed hatching and this may delay your order. Do not wait until a week before you are ready for the chicks and expect to receive them by return mail, for the wise poultryman has placed his order weeks in advance and is likely to be getting them the same day you want them.

TERMS

Our terms are cash with order. We will book orders with a 25 per cent cash deposit, balance on remittance to be made when we notify you. No chicks are shipped C. O. D. Refusal to accept chicks or remit balance forfeits first payment. Remittance may be made as customer prefers, but all payments must be honored before shipment is made.

100 PER CENT LIVE DELIVERY

Chicks Shipped Either Parcel Post or Express

All shipments will go forward by either Parcel Post or Railway Express. Whenever possible we suggest that they be shipped by express. The express offices are properly heated and ventilated and the employees use the utmost care in handling the little chicks. The express companies are usually willing to make a reasonable adjustment on all losses that are properly signed for.

Price, \$6.50

A new extremely attractive garden barrow, strongly and durably made. Has large wheel 19 inches in diameter with tire 2½ inches wide. Front ends of frame are clamped together, making frame perfectly solid. Wheel runs free on replaceable axle tubing or bushing.

MASSEY-HARRIS

PROFIT-PRODUCING FARM EQUIPMENT

RACINE DISC HARROW

Curved draft bars and adjustable bold-down struts at inner ends of the gangs hold both inner and outer ends down to their work. The Racine Disc Harrow insures thorough pulverization and uniform, deep penetration at all times. 8 and 10 disc sizes with pole or truck carried in stock.

NO. 20 COMBINED GRAIN AND FERTILIZER DRILL

Two drills in one. A combination grain and fertilizer drill. A double-run positive force feed insures an even accurate stand and maximum yield under all conditions, with any kind of seed. Strong main frame. Large, built-in, combination hopper.

NO. 8 MANURE SPREADER

Spreads 6, 8, 12, 16, or 20 loads to the acre. Built low down for easy loading. Light draft, wide spread, fine shredding, simple adjustments, narrow tread, short turning, large capacity, rigid construction.

NO. 33 OIL BATH MOWER

A new mower—quieter, smoother-running, easier-pulling, cleaner-cutting, longer-lasting. Only two sets of gears—enclosed in gear case and running in oil. The bulk of gear weight is back of the axle, eliminating neck weight. Quality ball bearings, heavy-duty roller bearings.

A new precision-lined cutting bar, developed by many exacting tests, gives free knife action with no binding or clogging.

The sturdy frame is well braced. Extra large wheels, well-lugged—prevent side slip. Latchless levers are convenient to operate. Many other advanced features.

WHEEL GUIDE CULTIVATOR

A pivot axle cultivator with parallel gang movement. Quick dodging. Axle standards rest on a ball in the sleeves, making the machine easy to guide. One lifting lever raises and lowers both gangs. Clean and thorough cultivation.

CLOSED END LEVER HARROW

There are no bar ends to catch on trees or posts when working near fences. Of ample strength, this harrow is flexible enough to render the most satisfactory field service. Each tooth bar hinges perfectly for angling or following the lay of the land.

NO. 30 TRACTOR DISC HARROW

A strongly built harrow that is easily controlled from the tractor. Hard maple bearings insure long life and reduce friction. Provision is made to take up end thrust in gangs. This harrow draws lighter and there is less wear on the standards.

NO. 10 DUMP RAKE

The teeth are designed to pick up all the hay without a tendency to dig in and collect dust and trash. A touch of the foot on the trip will dump the basket.

STEEL TURN PLOW

The Massey-Harris sandy or mixed land plow works equally well in mixed sandy loam or clay. The mouldboard is made of high grade soft-center steel, is of medium length, and the turn is gradual and easy. It has a slip type share and adjustable heel.

New Columbus Cane Mill

NEW COLUMBUS CANE MILLS

New Columbus Cane Mills, Rocker Furnaces and Pans are carried in stock in the sizes priced on this page. These mills have been on the market for years and being made of the best of materials, give perfect satisfaction. The rolls are perfectly balanced, shafts made of extra quality steel, turned true, gears accurately bored and boxes fitted with removable brass bushings.

Bottom Plate is flat on bottom—having four elevated lugs at corners so as to make them easy to handle.

The Sockets in which the lower Bearings fit are cast onto inside of Bottom Plate. They are heavy and strongly ribbed. By reason of this unique construction, it is impossible for any oil or grease to get into the juice. This makes it easy to get at bottom Set Screws for adjustment.

Bottom and Top Plates, also the Staves, are heavy and plain, having smooth, beveled, paneled edges, the metal being carefully distributed so as to afford greatest strength where most needed.

OLIVER FARM EQUIPMENT

OLIVER TRACTOR DISC HARROW

OLIVER TRACTOR DISC HARROW in 20-disc size is made for use with the small size tractor. It is controlled by the operator of the tractor and in this way requires only one man to operate both tractor and harrow. Built especially durable at each wearing point, easily operated and doing the best possible job of discing—that, in short, is the story of the construction, the operation and the work of the Oliver NTDH Harrow.

OLIVER STALK CUTTER

OLIVER STALK CUTTER is steel built throughout with heavy angle steel frame and equipped with latest type steel wheel with dust-proof boxing, which makes it one of the strongest and most durable machines on the market, one that has had a thorough test under the most exacting conditions, thereby proving its worth.

Oliver 8 Foot, 24 Tooth Rake

OLIVER SELF DUMP RAKE

THE OLIVER SELF DUMP RAKE is built with a strong rigid frame of hot riveted angle steel. A heavy truss rod runs the entire length of the frame and supports the center of the rake. It is a bridge trussed frame that is built to prevent sagging or twisting.

The rake teeth are lifted, and the hay dumped, by a pair of strong lift rods operating from each wheel. The ends of the lift rods are shaped into pawls to fit into the ratchets in the wheel hubs. The large number of ratchet teeth in the wheel hubs cause the rake to dump, the instant pressure is applied to the foot dump pedal. The rake teeth drop to the ground immediately, without leaving an unraked strip next to the windrow.

The teeth are made of heat treated high carbon spring steel. They are strong, but have sufficient springiness to prevent breakage when they encounter an obstruction.

The wheels are unusually strong. The concave tires are 1 1/4 inches wide and 54 inches in diameter.

Oliver 9 Blade Stalk Cutter

OLIVER MOWER

THE OLIVER MOWER is a fast-cutting, long-lasting machine, in which every part does its share.

The Oliver Mower Frame is strongly built and braced with a solid cross member to the pitman drive end, and braced back again to the tongue. This Big Frame holds the driving parts in rigid alignment and provides the solid base that allows the cutter bar the flexibility it needs, while holding it to its straight cutting line. The Oliver Frame is big, sturdy and solid. It will last and do its work, for many years to come.

In the big frame the full length solid axle runs in long roller bearings, spaced far apart, to give the lightest bearing load, which aids in securing the easiest draft.

All gear teeth of the spur gears, and also the bevel gears are correctly designed to mesh and secure the greatest power with the least loss to play and friction.

The clutch is of the four-jaw dog type, wide on its faces to keep down wear, positive and sure in action. It is controlled by a two pad, double acting foot lever that throws it quickly, either in or out.

No mower has any higher cutter bar speed than the Oliver—many are slower. This higher speed is very essential in cutting wild hay and especially so when mowing roadsides.
