OF

PHONOGRAPHY;

OR,

WRITING BY SOUND;

A NATURAL METHOD OF WRITING ALL LANGUAGES

By One Alphabet,

COMPOSED OF SIGNS THAT REPRESENT THE

SOUNDS OF THE HUMAN VOICE;

ADAPTED ALSO TO THE ENGLISH LANGUAGE SO AS TO FORM

A COMPLETE SYSTEM OF

PHONETIC WRITING,

APPLICABLE TO EVERY PURPOSE:

Being six times briefer and more easily read than the common long hand, and when adapted to Reporting, a speaker can be followed verbatim without the use of any arbitrary marks, and the report read at any distance of time with the greatest facility.

BY ISAAC PITMAN.

Third American Edition-(with Additions.)

[Entered according to Act of Congress, in the year 1844, in the Clerk's Office of the District Court of the Southern District of New York]

NEW YORK:

PRINTED AND PUBLISHED BY JOHN DONLEYY, 105 FULTON ST.

And sold at the principal Book-Stores in the United States.

1844.

INTRODUCTION.

Phonography is a system of writing by sound, or of Daguerreotyping speech on paper in so scientific a manner as to represent, with infallible accuracy, all the sounds of the human voice; consequently, not only the English, but all other languages can be written by it, and in a mode, too, beyond comparison, shorter than any other short-hand in existence, and at the same time so legible that it can be read as easily as common print.

This art is creating an extraordinary excitement in England. Public meetings and festivals are being held in the of the human voice; consequently, not only the English,

land. Public meetings and festivals are being held in the principal cities and towns in that kingdom, to "commemorate its introduction," and to do honor to its inventor. The Gentlemen of the Press have unanimously adopted it. It has been introduced to the King's College, London, and the University of Glasgow, and also to the principal Schools orate its introduction," and to do honor to its inventor. and Mercantile establishments. A Phonographic Association has been formed, and a monthly Journal is printed in the Phonographic character, upwards of a thousand copies of which have been put in circulation, and the art bids fair, in a very short time, to supersede the present cumbrous system of writing.

The importance of such an art as this, to society generally, and particularly to a great community like ours, cannot be too highly estimated. Its introduction will effect a

449170

revolution in the present monotonous method of education—render it much more effective, and thereby considerably increase the conservatism of our Institutions. It will give increased celerity to the movements of the public press, by obviating the necessity, which reporters are now under, of translating their notes, as the persons employed in the mechanical department of the press, (who really desire to retain their situations,) will be compelled to acquire the art (as is being done by contemporary classes in England.)

To clerical, legal, and literary gentlemen, it is sufficient to state, that this invaluable art is so self-evidently superior to its stenographic predecessors, that a glance at the "system" will show that he who is unacquainted with it is

in arrears of the age.

To dwell on its importance to the commercial portion of the community, would be to insult their intelligence; as, from the principal in his private office, anxiously awaiting the receipt of important advices, to the copying-clerk at his desk---who spends twelve hours at an unhealthy employment, which Phonography will enable him to perform

in two---all will alike be benefitted.

Secretaries, Teachers, Book-keepers, and Clerks generally, will consult their professional and pecuniary interests, by an immediate acquaintance with the art; for, apart from the laudable ambition of becoming as perfect in one's profession as possible, by which all intelligent individuals are supposed to be stimulated, reasoning from the rapid progress of Phonography since its introduction—the day is not far distant when gentlemen of the professions enumerated, if not previously Phonographers, will find as much difficulty in obtaining situations, as a Chinese coaster would in getting a cargo, if about to sail from one of our docks, in opposition to the Great Western.

Educated but unemployed goung men may now earn an honorable and lucrative livelihood, by learning the art, forming classes, and teaching their less enterprising or more busily employed fellow-citizens; for, unlike the old "systems" of stenography, which, in consequence of their impracticability, were confined to the closets of the learned, or practised only by the professional adept---Phonography is brought to such a degree of perfection that any individual of the most ordinary capacity can acquire it with the

greatest ease, and practice it with perfect success.

To the people, the greater portion of whose time is spent in toil, or whose habits of business, in consequence of the keen competition which every branch of trade and manufactures has to contend, are such as to occupy almost all the working hours, and too often many of those which should be devoted to rest, but which are incompatible with the pursuit of those studies, which the requirements of the present enlightened age demand of those who desire to attain a "status in society," or who would not rank amongst the most ignorant and uneducated portion of the community, this noble art will prove an invaluable desidera-

tum, "a royal road to knowledge."

Its acquisition will inconceivably benefit all classes, as by it they will be enabled to retain, for future study, the substance of lectures, sermons, and such other information as they are daily in the habit of acquiring; by it they can record and preserve those germs of thought, which spring up, as it were, spontaneously in the mind of every thinking, intelligent being, and which now are forever lost to the memory. How many ideas, which have been presented to the mind in our moments of thought and reflection, which, had we possessed some ready and expeditious method, would have been treasured up as the materials of thinking for the future, have been suffered to sink into oblivion, like letters

traced in the sand of the sea shore, which the succeeding tide has completely obliterated! How many of the thoughts and experiences of others, in verbal conversation with us, might be made our own, by judiciously noting down what was worth remembering, in the occasional review of which we should find great advantage, resulting in that practical wisdom in our conduct in life, which is as estimable in the sight of others, as it is invaluable to its possessors; elevating the individual character, and benefitting, by its example, the world at large.

We can scarcely take up a volume, if our books be judiciously selected, without finding some happy turn of thought or expresssion, or some fact of sufficient interest, to merit a brief transcription; and here Phonography lends a ready aid, by concentrating, in the smallest compass, and in the shortest time, those valuable resources to which the mind can continually have recourse for food and

strength.

To the student, this power of appropriating to his own purposes those gems which, but for it, would lie forgotten amongst the literary accumulations of modern times, must

be regarded as every way worthy of attention.

In short, the attainment of this art is indispensable to success in the acquisition of knowledge, in the pursuits of science, in the routine of business, or in the pleasures of literature; it will do for mind what steam has done for matter, almost literally annihilate time and space, facilitate mental communication, materially contribute to the general diffusion of knowledge, and accelerate the progress of civilization to an extent almost inconceivable.

THE PRINCIPLES OF PHONOGRAPHY.

1. The communication of the thoughts and affections from one person to another, may be accomplished either by changes of the countenance and by gestures in general, by spoken sounds, or by written signs. On the first of these modes of conveying thought we, in an "Introduction to Phonography," (which is professedly the WRITING OF SOUNDS,) have nothing to say, and shall proceed at once

to the subject of spoken and written language.

2. Hitherto, among all nations, there has existed the greatest disparity, in point of facility and dispatch, between these two methods of communication: the former has always been comparatively rapid, easy and delightful; the latter, tedious, cumbrous, and wearisome. It is most strange that we, who excel our progenitors so far, in seience, literature, and commerce, should continue to use a mode of writing, which, by its complexity, obliges the readiest hand to spend at least six hours in writing what can be spoken in one. Why do we use a long series of arbitrary marks to represent what the voice utters at a single effort? Why, in short, are not our written signs as simple as our spoken sounds? It cannot be said that this is impracticable; for, the System of Writing here presented, is really and entirely practical, as it may at once be written with fluency and ease, and deciphered, after any length of time, with rapidity and accuracy. To the surprise and delight of the Author, it has been gradually unfolding its beauties to his research, ever since he discovered its principles a few years ago; until he is now able to present it apparently perfect and harmonious in all its parts. The System offers a method of really exhibiting

speech on paper, by signs as simple and intelligible as the

sounds they represent.

3. The great and desirable object which the author believes he has accomplished, is briefly this; the representation of every sound and articulation that occurs in any language, by a simple and easy formed sign, which will readily enter into every combination required, and which is never used to represent more than that one sound or articulation: here, as not only every sound has a sign, but as, also, every sign represents a sound, all ambiguity ends, and all difficulty in reading what has been written, vanishes.

4. These signs being of the briefest description, (simple dots and strokes,) Phonography is necessarily a system of SHORT HAND; but, it must be seen from what has been stated, that it is radically distinct from every other that has appeared. In Phonography, it may almost be said, that the very sound of every word is made VISIBLE: whereas, in deciphering any former system of Short Hand, the context, the memory, the judgment, all must be called in to assist the eye. This is the great obstacle which has hitherto prevented Short Hand from coming into general use. Its illegibility when written has rendered it unsafe to commit our thoughts to its faithless keeping, and quite insufficient to supersede common writing as a means of communication. It has, indeed, become proverbial, that it is more difficult to READ than to WRITE Short Hand. The very opposite of this is the case with regard to Pho-NOGRAPHY, it is easier to READ than to WRITE it: at the same time, it may be asserted that it is as easy to write this as any other system. It may be well here to remind the reader, although the fact is obvious, that, swiftness in performing writing of any kind, can be attained only by PRAC-TICE.

5. To any person whose desire may be awakened to learn the few marks or signs by which the sounds and articulations are represented, the following brief observations, illustrative of PRINCIPLES, and entering a little into practice, will prove an easy guide, either to read or write the system, in a very short space of time.

6. It is a fact but little known, that there are in the English language, not more than six essentially different sounds, usually called vowels, which are combined into words by not more than thirteen simple articulations, or consonants, and one aspirate, or breathing. This division of speech into sounds and articulations, it may be remarked, is a natural one, and exists in all languages.

7. In the formation of the present system, the organs of speech have been carefully and minutely studied, and it has been deemed expedient to arrange the vowels and articulations, not alphabetically, but according to their natural order. Thus, the letter p stands first; it is the least complicated of all articulations, being formed by the very edges of the lips, and not requiring the assistance, either of the teeth, the tongue, or the palate, in its production. Next in order stands b, then t, d, &c. The rest follow in a perfectly natural arrangement, as will be perceived upon making a few trials with the Phonographic Alphabet.

8. It has been found that the Articulations or Consonants do not consist of a long series of different formations, but only about half the number are essentially varied, and that the remainder are merely the flattened sounds of the others; thus, p and b; t and d; f and v, &c., are precisely the same articulations, modified by being sharpened or flattened by utterance. If we followed nature, our signs to represent these would equally correspond; and thus not only is the memory not burdened with a multitude of signs, but the mind perceives that a thin stroke harmonizes with

a thin articulation, and a thick stroke with a thick articulation. After a few months' practice in writing the system, every pupil finds that the heavy strokes are made without any additional effort; they flow from the pen with as much facility as their corresponding heavy sounds do

from the lips.

9. It has also been found that these simple articulations which have been adverted to, such as p, b; t, d, &c., are, in a vast number of words, indissolubly united with the two letters l and r into a kind of double letter, pronounced, however, by a single effort; as, for instance, the words place and praise, are not pronounced "pelace," "peraise," but the p and l, and p and r, become actually one, by a trill of the tongue against the palate, while the lips are producing the p. These two letters also coalesce into a single utterance in the last syllable of the words temple, people, paper, cooper, &c.

10. The natural way of expressing these combinations in writing, would undoubtedly be, to effect some marked and uniform modification of the *simple* letters, which should yet leave their characteristic forms untouched; this has been accomplished in the Phonographic system.

11. It has been further ascertained, that not only do the various articulations combine, as just described, with l and r, but that these two letters also coalesce with the others in the opposite direction; thus, l and p in utterance, become one in help, pulp, &c.; l and d are one in field, bold, &c.; r and p become one in sharp, harp, &c.; r and p in garb, barb, &c.; and the Phonographic signs for the simple articulations, are again used to represent these, as before, only subject to analogous modification. In short, these two letters, l and r, appropriately called Liquids, will combine, and do combine in speech, with every other consonant, except the nasal ng (eng) both before and after;

and each double consonant, thus produced, is represented in Phonography by a single mark, formed, by the application of a simple principle, from the letter with which the

liquid enters into combination.

12. A word as to the *Vowels*, or *Sounds* of the language. There are in the English language about forty sounds, reckoning both the simple and compound, but there is not any such amount of signs to be learned; a serious difficulty would indeed exist if there were. By the discovery of their real affinities, they admit of a most simple arrangement. The vowels, like the articulations, separate into two great classes; those having a full, and those having a sharpened pronunciation. If the word feet be distinctly pronounced, and then immediately the word fit, it will be perceived that the vowel in fit is actually nothing but the sharpened sound of that in feet.

13. The following list exhibits all the pure vowel sounds. The reader is requested to pronounce them aloud in natural

gradation, and to mark them carefully.

1. e. 4. au. 2. a. 5. o. 6. oo.

Each of these vowels has also a sharp sound; thus No. 1. the rowel in feet when short is heard in fit.

1	7.0	110	0	v	v	010	1000 00	100	10	011	.01	 U	100	u	14	·	10 1100
	2						mate										met.
							path										
	4		٠				law			٠							lot.
							note										
							fool										

They are numbered for ease of reference.

14. A little attention to what follows, will insure the right understanding of the principle upon which the short hand signs for these vowels are arranged. A line of writing necessarily occupies a certain space upon the paper, and

this is taken advantage of in Phonography to make a simple change in the position of the vowel-sign, answer all the purposes of a multitude of different characters. For instance, the sign for the vowel sounds, 1, 2, 3, is a full point, placed before or after the articulating letter, as the case may be.

- 15. From these six pure or simple vowels, a double series of compound ones is produced. They are expressed in long hand by prefixing the letters y and w to the simple vowels, e, o, &c.; thus e becomes ye and we; o becomes yo and wo, &c. &c. The y (which is in fact the vowel e) and w (which is really oo) here coalesce with the vowel that follows, and a single sign should, therefore, represent them. Phonography, from its own resources, and without the least change of principle, meets the demand, and points out a just and simple mode of writing these compound yet perfectly united vowels. It represents the y and w compounds by small curves. The preceding explanation of the position of the simple vowels applies equally to these; and adapts them, small as is their number, to every varied requirement.
- 16. The double vowels, *i*, *oi*, and *ou*, form part of another series, which includes also, several foreign and provincial sounds. They are produced by the union of the intermediate vowels, Nos. 2, 3, 4, 5, with Nos. 1 and 6.
- 17. As a system of Short Hand, Phonography takes the first place; its signs are simpler and briefer than those of any other system, and shorter by at least two fifths.
- 18. Many other points, of equal interest, might be noticed; but, let it suffice to say, the system harmonizes in all its parts; and, however viewed, presents simplicity as its beauty, and commends itself to notice by its adaptation to our wants.

19. Particular attention is called to the general truths exhibited in this introduction; for, beyond them, there is scarcely any difficulty. Indeed, so reduced is every portion of the system to certain and easy understood principles, that the perception of one part almost necessarily leads to the attainment of the rest.

A Summary View of twenty-one different Languages, Showing their Origin and Character, with the number and Derivation of the Letters in their respective Alphabots.

It will be observed that this Alphabet is arranged differently from most others in the order of its Letters. Before the use of paper or the like materials, for writing, the Irish wrote with iron pencils, or styles. on planed tables of beech wood: hence. their letters are called Feadha, or

This summary view of languages and more minute comparison of some alphabets, by exhibiting the clashing of numbers in the marks or signs of different languages, shows that there has been no acknowledged general standard for letters, and that the present arrangement of the representatives of sounds is exceedingly arbitrary. An acquaintance with the art developed in the subsequent pages, will prove that the Phonographic Alphabet is a natural one, and the only one which is adequate to universally represent the sounds of all languages,

INSTRUCTIONS

On Commencing the Study of Phonography.

The pupil should first learn the Phonographic Letters, taking them in the natural order of pronunciation. He is recommended to learn the consonants first, then the vowels, because the vowels are placed

TO the consonants.

There are only thirteen consonants in the English language; namely, four Mutes, P, T, CHe, Ke; with their flat sounds, B, D, Je, Ge; four semi-vocals, F, eTH, S, eSH; and their flat sounds, V, THe, Ze, ZHe; two Liquids, L, R; three Nasals, M, N, eNG. From these the double consonants are formed, by adding a hook on the right-hand side for i; as, p, pl, lp; and on the left-hand side for r; as, pr, rp. It will be seen, that the characters for lp and rp, are the same as those for pl and pr, reversed. Pl and pr have the hook at the beginning, because these letters generally commence words; and lp and rp have the hook at the end, because they always conclude words; these observations apply to all the other hooked letters. So, from t, are formed tl, tr, lt, rt, and tn, in the same upright posture. Pt is a stroke half as long as p. All the double consonants are derived from the single ones in the same manner; and, from the double consonants, the treble ones are formed; as, pr, spr, prd, rp, rps, etc. Then learn the six single vowels, e, a, ah; au, o, oo; from which all the double and treble vowels are derived, both as to sound, and the position which the Short Hand marks occupy.

REMARKS.

ON THE VOWELS.

The Short Hand marks for the Vowels, are, the small dots, strokes, curves, and angles. The upright stroke is the letter t, placed with them to indicate their exact position; the vowels being placed against the beginning, or middle, or end, of the consonants. [See table entitled "Method of placing the Vowels," plate 4.] The words the, in, fc., in Roman, are Arbitrary Words, that is, the vowels alone, are written for such words. Mate, met, fc., in italic, are merely examples, containing the sounds of the vowels to which they are placed. An asterisk* indicates that, in English, the sound is not used.

There exist other vowels which belong to the Angular Series, and to the List of Treble Vowels, but they occur only in Foreign Languages and Provincialisms. They may be seen on referring to plate 6, under

head of "Foreign Sounds and Provincialisms."

The Aspirate (h) is represented by a comma turned backwards.

ON THE CONSONANTS.

The first five columns of the table of "Single and Double Consonants," plate 1, contain the single consonants. The remaining col-

unins, commencing with pl, contain the double consonants

The letters s and z have each two forms, namely, a loop or small circle, and a stroke. The loop is to be always used, excepting when it is necessary to place a vowel to s. Such words as sigh, use, &c., that contain no other consonant than s, must be written with a stroke; but the loop should be used where there is another consonant, against which to place the vowel; as, soap, case.

The additional character, or s and z, represents the following words:

o so, o as.

R also may be written as a straight up-stroke, when it is more convenient.

Write ch and j, downwards. Sh, zh, and l, may be struck either up-

wards or downwards.

All the other letters are to be written from the top to the bottom, or from the left to the right.

ON PLACING THE VOWELS.

In the table entitled "Method of Placing the Vowels," plate 4, the vowel is, in every instance, placed after the consonant; thus, the first line is pe, pa, pa, pau, po, poo; the second line, be, ba, bah, &c. If the vowel be required before the consonant, it is, of course, written on the other side; as, ep, ap, ahp, aup, op, oop. It will be seen that the strokes which represent the vowels au, o, oo, may point in any direction; they are generally most conspicuous when placed at right angles with the consonants; but, when they are written for Arbitrary Words, they must always incline to the left.

The Double and Treble Vowels are written in the same way as are the single ones in the table above referred to, except that they must never be turned about to the different positions of the consonants, but

preserve a uniform direction.

ON PREFIXES AND AFFIXES.

PREFIXES.

The syllables which most frequently occur as prefixes, such as circum, discom, &c., are each represented by some prominent letter that is found in its sound. Thus, d in discom, s in circum. In writing, place this letter near to the following part of the word, as in the examples of Prefixes and Affixes, plate 3. The commonest prefix in the language, com or con, is made by a small dot, at the commencement of the consonant which next follows it in the word: accom is expressed by a heavy dot.

AFFIXES.

Various common affixes are also represented by some single letter, written separate from the preceding part of the word. Next to the syllable tion, sion, cion, &c., pronounced shun, and which is provided for by the double letter shn, the most frequent ending in the English language is ing, which is written by a small dot at the end of the preceding consonant, as in sending. The plural, ings, is a larger dot, as in sittings.

ON THE JOINING OF THE CONSONANTS.

The examples given in each paragraph, will be found in Phonographic characters, arranged in corresponding numbers, in the table

entitled, "On the Joining of the Consonants," plate 4.

1. All the Consonants in a word should be written without taking off the pen; the second letter commencing where the first ends, and the third being continued from the end of the second, &c.; as, p t pat, d n den, j m gem, v n vain, l k d liquid, B r t Beyrout, r m n remain.

The manner in which the circle's is joined to a straight letter, either at the commencement or end of a word, is shown on plate 2. It is to be written in precisely the same way, if the other end of the stroke has a hook; as, Selby, salt, sort, sealed, sword, search, silk,

please, bless, trees, dress, cross, grease, glass.

3. When s is joined to a curved letter, the circle should follow the direction of the sweep of the curve; as, sm, ms, sn, ns, sth, ss, ths, ss; and not, sm, ms, ns, &c.

4. But when s comes between two other consonants, the circle should be turned in the way that is found most expeditious; as, rust, cost, post, chest, must, fast; and not, rust, cost, post, must, &c.

5. S between two straight lines running in the same direction, should be joined like s at the end of a straight line; as, precept, taste,

trust, deceit, desert, Cassock, &c.

6. When s comes in contact with a hooked character, the circle must be turned so as to accommodate itself to the formation of the hook; as, express, possible, Exeter, disciple, personal, &c.

7. Sometimes the hook will not be perfectly formed, as in Gospel, Explain, Bristol, Manchester, obscure, &c.: still, such words cannot

easily be mistaken.

8. There are few instances in which the hook does not follow the circle s with facility; in these cases it is better to write the two letters of which the hooked character is composed; thus, the first way of expressing the following words is the best: visiter, minister, philosopher.

9. When it is requisite to join s to a right-hand side hook, at the beginning or end of a word, it must be made rather smaller than usual;

as, supplication, sable, holds, settle, cycle, silks.

10. The following words contain hooked letters, in various positions: people, paper, table, trickle, copper, cooper, Tucker, decree, dagger, chopper, cattle. In a few cases, where no hook at all can be produced, it is well to attach it after the other part of the word is written; write the following words as in the first pattern, then add the hook as in the second method: former, charmer, Redeemer, novel.

RULES FOR WRITING.

The examples given in the subsequent sections will be found in Phonographic characters, and arranged in corresponding numbers under the head, "Examples Illustrative of Rules for Writing," plate 5.

RULE 1. WRITE BY SOUND.

Notice accurately the sounds of which a word is composed, and write the Short Hand letters which represent them; thus, the word "knew" consists of the two sounds n u [See ex]; (tr,00,) true; (d,a,) day; (au t,) ought; (d,e,kn,) deacon; (th,a,) they; (we,p,) weep; (n,i,) nigh; (ko,u,) cow.

It is not always necessary to write every vowel; as, (i,ns,ns,) incense; (s,nt,) cent; (n,m,) name; (kn,tr,e,) country; (k,tt,) cart; (k,u,ri,) courage. As the safest rule with respect to the insertion or omission of vowels, the pupil is recommended to put in as many as will enable himself or any other Phonographer to read his writing with ease.

Whenever, in the common spelling, two consonants of the same name come together, as one only is pronounced, more than one need not be written; as, (a,t,nd,) attend; and so of many other points, too obvious to require notice; but, seeing that not more than one word in a thousand is pronounced as it is spelled, it is impossible here to enter into full directions for the discovery of the sound of every word from its spelling. The sounds contained in any word, must be ascertained by the ear; their phonographs should then be written.

Pronounce all the letters according to their real Power, and not according to their old NAMES. This is a point of great importance, and

attention to it will very much facilitate the pupil's progress.

The true sounds of the vowels are contained in the words that are placed after them in plate 1. The short vowels should preserve the

names of the long with the addition of the word "short;" thus, o is to be called "short au," wi "short we," &c. H is to be called "the aspirate."

The phonetic names of the Single Consonants are given in the Ta-

ble, plate 1.

The Double Consonants are to be pronounced thus:

pl, pr, lp, rp, pt; bl, br, lb, rb, bd, tl, tr, lt, rt, tn; pll, pir, elp, arp, ept; bil, bir, elb, arb, ebd; til, tir, elt, art, tln; dl, dr, ld, rd, dn; chl, chr, lch, rch, cht, chn; jl, jr, lj, &c. dil, dir, eld, ard, din; chil, chir, elch, arch, echt, chin; jil, jir, elj,&c. and so on with all the others that are formed from the Single Consonants in the same way:

nd, nch. nj. rl. mb. mt, mp, nt. arl. emt. ent, end. ench, en] lir. emp. emb.

Pronounce ngk like the word enk.

Pronounce ngg like engle, omitting the l.

The following are the names of the Treble Consonants:

pld, prd, lpt, rpt, bld, brd, lbd, rbd, tld, trd, ltd, rtd. pild, pird, elpt, arpt; bild, bird, elbd, arbd, tild, tird, elted, arted. dld, drd, ldd, rdd, chld, chrd, lcht, rcht, jld, jrd, ljd, rjd, dild, dird, elded, arded, child, chird, elcht, archt, jild, jird, eljd, arjd. The others of this class follow in a similar way:

spr, sbr, str, sdr, &c.; rps, rbs, rts, rds, &c; spir, sbir, stir, sdir, arps, arbz, arts, ardz.

The Quadruple Consonants should be similarly pronounced, each as one syllable; thus,

prt or sprd, strt or strd, skrt or skrd, &c. spirt or spird, stirt or stird, skirt or skird

RULE 2. CONSONANTS.

1. Nearly all the consonants are written from the top downwards; as, p, t, ch, pld; or, from the left to the right; as, k, m, &c. The only exceptions to this rule will be found in sections 10, 12 and 15.

When a consonant is repeated, if it is a straight line, make a stroke twice the usual length, as, b, b, in bib; if it is a curve, as n, n, in

none, let the two curves be joined.

2. Join the consonants of a word together, without taking off the pen; as, sense, physical, and turmoil. See also, the examples given

in the chapter on the Joining of the Consonants.

3. Whenever a SHORT straight letter follows a long one in the same direction, without an angle, the pen should be taken off; as, (d,e,md) deemed; or, as every short letter is a double consonant, it is sometimes better to write the two single letters of which it is composed;

as, (kr,e,k,t) correct. It would not do to put the half length letter (kt) at the end of the other (kr), as they might be mistaken for one letter (kr) made a little too long, or two letters (kr,k) not made long enough.

4. 'There are many words, which, containing double and treble letters, may be written in more than one way; it will be worth the pupil's while to choose, by a little attention, the neatest and best form; as, wident, should be written with the letters e,vd,nt, rather than e,v,d,nt; also, (con,vn,nt) convenient, is better than con,v,n,nt. Numerous examples, illustrative of this rule, will be found in the Phonographic Journal, which is published monthly, in the phonographic character, for the re-publication of which arrangements are being made.

5. If a word would reach too far below the line, take off the pen;

ae, footstep, steadfast, substituted, constituted.

6. It occasionally happens that a hooked letter will not join with the preceding or following letter; in such cases the pen must be taken off, or the word be written in another way; as, defensible, Georgium Sidus, partner.

7. The Greek aspirate is used in Phonography for the letter h; as,

heat, inhabit inherit, white, when, overwhelm.

 As the h is of little practical value, it may always be omitted without causing any difficulty in reading; as, hill, heap, hair, half, him, whom, haughty, cohere.

9. When a word consists of h and one or more vowels, also when h comes in connection with two or three vowels in any word, the aspirate may be increased to the size of a consonant, and the vowels placed to it; as, lay, ahoy, Ohio. Ahoah, Ehi, Ahalah, hieroglyphic.

10. Except ch and rch, which are always made downwards, and the upstrokes r and rl, every full sized right inclined letter, such as l, sh, &c., may be struck either upwards or downwards, at the discretion of the writer; as, lecture, life, fresh, cash, Mitchell, Fisher.

11. When either of these right inclined sloping letters is joined to the loop s only, strike it downwards, that all who write the system

may agree; as, sell, less, soul, sash, satchel, search, seller.

12. R may be written two ways, either as a cueve downwards, or as a stratght upstroke. The proper alphabetical form of the letter is the curve. Which must always be used when r stands alone; as, ear, air, arrow, raw, roe, rue, war, wire; also, when a word contains no other consonant than r s; as, hears, hers, oars, rose, sir, sorry, sore, sour.

In all other cases the pupil may use either of the forms, according as he finds it most convenient in conjunction with the other letters;

the upstroke should be generally preferred.

13. Rl has also two forms, the downward heavy CURVE, as in the alphabet, and a hooked UPSTROKE. The same rule must be observed here as with r; the upstroke should never be written when standing alone, or joined to s only, that it may not be confounded with rch. This hooked upstroke will become the treble consonant rld, when made half length, as in cw led, &c.

14. The stroke s is to be written in the following cases only, when a word begins with a vowel followed by s; as, ease, ask, asked, ways, ice, eyes, oyster, useful; or, ends with a vowel preceded by s; as, see, saw, rosy, neisy, greasy, heresy, busy; also, when it is necessary to put a vowel to s; as, genius, Eleazar. S may be repeated either by writing both the stroke and the circle, or by making a loop twice the usual size; as, guesses, glasses, supposes, dresses.

15. The small sized right inclined letters shn, zhn, sht, and zhd, are upstrokes, and cht, jd, chn, and jn, which are the same marks, are written downwards; as, caution, portion, session, vision, brushed,

cashed, scratched, touched, raged, mixtion, gudgeon.

16. When shn or zhn follows n, or comes in connection with the upstroke r, make it curve to the left, to render it distinct; as, nation, mention, coercion, dictionary, derision. The letters nch and nj are written downwards.

RULE 3. VOWELS.

For the "Method of placing the Vowels" to single consonants, see the table, plate 4.

1. But when a vowel comes between two consonants, if it is a first or top place vowel, (that is, No. 1, or 4,) place it after the first consonant;

as, keep, quoit.

2. If it is a second or middle place vowel, (No. 2, or 5,) it may be written, either after the first consonant, as came, or before the last, as, cut.

3. But, if it is a third, or bottom place vowel, (No. 3, or 6,) put it

before the last consonant; as, man, doom.

4. These three rules do not apply, if either of the consonants is the loop s, which is not large enough to have vowels placed to it; as, sit, same, noose; in all such cases, the vowel is placed with reference to the letter which is joined with S.

5. When two vowels come between two consonants, give one to

each; as, diary, quiet.

6. If two vowels commence a word, put the first at a little distance, and the second close to the consonant; as, Æolus. If two vowels end a word, put the first close to the consonant, and the other at a little

distance; as, dewy.

7. In making use of a double consonant, it is impossible to insert a vowel that is pronounced between the two letters of which the double consonant is composed; thus, if fl be written for fall, the vowel au must be dropped, for if it were put after the consonant, it would be flaw, and if written before the consonant, it would be awful. The only way to express the vowel in fall, is to write the single consonants f and l. The same rule must be observed in the use of the treble and quadruple consonants: if fld be put to fled or flood, the vowel that is heard between the fl and the d cannot be inserted; and if the context will not readily suggest the proper word, it should be written with the separate letters fl and d, and the vowel between; as, fled, flood.

8. When either of the consonants that have both an upward and a downward direction, enters into combination with other consonants, the vowels' places must be counted upwards if the stroke runs upwards, and downwards if the stroke runs downwards; as, leek, push; because the three positions of the vowels are always reckoned from the commencement of the consonant. When either of these letters stands alone, reckon the vowels' places from the top to the bottom; as, loo, she.

RULE 4. ARBITRARY WORDS.

1. Almost every letter is used to represent a whole word; thus, e stands for the, n for no, &c.; a few letters stand for short phrases; as, the stroke z, stands for the phrase it is, &c. They are called arbitrary words, or arbitraries, and should be committed to memory. It is, however, allowable, at any time, to write an arbitrary word with all its letters; as, no, &c.

2. Any such word as be, bee, pea, tea, &c., will, of course, require only the b, or p, or t; there are a great many words thus pronounced like the names of letters Any letter will necessarily represent a word of this sort, in addition to the arbitrary that is placed to it in the alphabet;

as. wa will stand for way, as well as where.

If the name of any letter is similar to the sound of a word, such letter may be written for the word; as, i will stand for high, ou for how, fl (pronounced fil) for full, mr (named mir) above the line for mere, and on the line for more, nr for near, thr for their and there, th for it will, trd

for toward, strt for start, skrt for skirt, &c.

3. If any other word is pronounced like an arbitrary, the same letter will represent both; as, s, standing for so, will also represent sow, and sow; n, no and know; th, forth and fourth; a, and and hand; au, all, hall, and haul, 4c. The practised Phonographer may extend this rule to embrace such words as are pronounced nearly like arbitraries; as, fellow, as well as follow, may be represented by ft; important and importance may both come under mp; and so in other cases.

4. In a few instances, a letter represents two words; but, in all such cases, there is a great similarity in the sound; as, de, do and done; bl,

public and publish; mt, meet and might.

5. When the double vowels wa and we, are used to represent words, place them on the line; as, where, were; to keep them more distinct from No. 1, we and wi, and because No. 3, wah and wa, are not used for arbitraries.

6. In the List of Arbitrary Words, when a word is printed thus, "for-e," it signifies that the letter f represents both for and fore.

7. The horizontal and half-sized consonants, are placed above the line for words that contain first or upper-place vowels; and on the line for words that contain either middle or bottom-place vowels; as, God, (o, first-place vowel;) good, (oo, third-place vowel;) me, (first-place;) may, (second-place.) When a word that is represented by a horizontal or small letter, consists of two or more syllables, it is the vowel in the

cocented syllable that determines its place; as, s, above the line for "society." because the accented syllable contains a first-place vowel; gd, ow the line for "glorify," because o is a second-place vowel; and rg, on the line for "regard," because the vowel in the last, or accented

syllable, is a third-place one.

The only exception to this rule is the word any, which is placed to a above the line, although it contains a second-place vowel in its accented syllable. It was necessary that it should be in the list of abtracies, and it could not be placed on the line, because it would interfere with a word of opposite meaning, no, which it was also needful to have in the list.

8. When a hooked letter represents a verb as an arbitrary, as, kl for call, the past tense called will be written by the same letter made half its length; as, (kld) called; (deliver) delivered; (observe) observed; (remember) remembered; (represent) represented, dc, according to the rule for the formation of treble consonants from all hooked letters.

9. Compound words, made up of arbitraries, may be reduced to their primitives; as, also, (all, so), cannot (can, not), into (in, to), income, al-

ways, therein, d.c.

10. The plural of any arbitrary may be written by adding s to the letter that represents the singular; as, object, objects; remark, remarks; heart, hearts; word, words, &c.

11. Any other word derived from an arbitrary, may be written by putting the additional letters separately; as, generality, systematic, 4c.

RULE 5. PREFIXES AND AFFIXES.

1. A prefix or an affix must not be joined to the other part of the

word; as, transact, element, &c.

2. When the single consonant ng follows the preceding letter, with out an angle, it is better to write it, than the terminational dot; as, wrong, bring, being, spring, long, willing, feeling

3. S may be added to an affix or termination, in the same manner as it may to an arbitrary; as, monuments, subscriptions, upwards, king-

dores.

4. An arbitrary word may be used as a prefix or affix; as, understand,

downwards, forward, unchristian, &c.

5. It is allowable to use any prefix or affix that is similar in sound to one in the tables, plate 3; as, enterprise, indivisible, signature, recognise.

RULE 6. ALLOWABLE ABBREVIATIONS.

1. Write the second person singular of verbs, like the third; as, shall and shalt, would and wouldst, has and hast. Thou loves (for lovest) right-coursess, and hates (hatest) wickedness.

2. Abbreviate long words, either by intersection, writing any two prominently sounding letters across each other; or by contraction, leav-

ing out the latter part of the word.

INTERSECTED WORDS.

Beneficial, benevolent, everlasting, notwithstanding, gratification, regeneration, nevertheless.

Let the beginning of the second letter cross the middle of the first, or the middle of the second letter cross the end of the first, as it may be convenient.

CONTRACTED WORDS.

Extraordinary, extravagant, manufacture.

3. Abbreviate the following phrases thus: as far as, as well as, as much as, as soon as, as good as, as great as, as cheap as, as dear as, as early as, as long as, &c:, making the loop twice the usual size.

4. The hook of pr, tr, chr, and kr, may be omitted, when these letters follow a straight stroke in the same direction, terminated by ϵ ; as, prosper, prosperity, tasture, gesture, excruciate; because, in add ing the single consonants p, t, ch, and k, the circle would be placed on the other side.

5. The aspirate, in connection with the single vowels, may be expressed in this manner: he, ha, hah, haw, ho, hoo; as, in the words heat, hit; hale, hell; haul, holly; home, hum; hoof, hoop. The pronouns he and who should therefore be written thus, he, who.

6. The double vowels i and ou, when written for arbitrary words, may be abbreviated; as, I, how; the pupil is recommended to strike

them upward.

7. When a hooked letter follows the circle s, and is of difficult formation, the hook may be dispensed with, and the writing will remain almost as clear as though it were inserted; as, explore, explanation, disclaim, disclaimer, manuscript, described, discourse, disagree.

RULE 7. PRACTISE AND PERSEVERE.

PUNCTUATION.

1. Stops may be written thus: : comma, ... colon, * period. They should, however, be generally omitted, and spaces he left instead. Only three stops are necessary to indicate the various divisions of a sentence: the comma, to mark or cut off the smallest part of a sentence; the colon, to separate a principal member; and the period, to show the comma and the period, much confusion has arisen in punctuation; there being no absolute rule to determine where the semicolon and the colon should be inserted. The pupil may write the notes of interrogation? exclamation! brackets[] parentheses () and quotation marks "" as usual, but the parentheses must be twice the length of the letter th. The hyphen is ... For mark of irony, see plate 5.

2. The ACCENT is indicated by drawing a line across the accented letter; as, below, billow. Mark EMPHATIC words and sentences as in

long hand manuscript, by drawing one, two, or more lines underneath; a single line below a single word, must be made wave-like, to prevent its

being mistaken for the letter k.

3. INFLECTIONS.—For rising and falling inflections, see Punctuation table, plate 6. The circumflex, which is the union of the rising and falling, or falling and rising, may be indicated by uniting these two marks. These signs should be placed over any word on which it may be required to express the inflection. Figures, and the character for et cetera, (&c.) write as usual, or express the words in Phonography.

FOREIGN SOUNDS AND PROVINCIALISMS.

To Phonographic examples, see table of "Foreign Sounds and Provincialisms," plate 6.

1. Single Vowels.—The long vowel No. 7, heard in the first syllable of aside, Mamma, &c., (see introduction note on paragraph No. 13, is expressed by a small circle placed in the middle of a consonant; as, aside, Mamma, &c. The single vowels, No. 2 and 5, are the nearest to this sound, as to the confirmation of the chamber of the mouth by which it is produced. To express it in long hand we adopt the digraph uh.

The French u, which is a closer pronunciation of so than the English method, is represented by the same mark, put in the place of so; as

ın tu.

2. Double Vowels.—For the representation of Y preceding uh,

and W preceding ul, see plate 6.

The Angular set of double vowels, plate 1, consists of eight, three of which are spoken in pure English, namely, i [composed of Nos. 3, 1], or [4,1], and o [4,6.] The double vowel i [3,1], heard in the polite pronunciation of time, five, &c., is really compounded of the indistinct vowel No. 7 with No. 1. The double vowel oi is heard in the words Stoic, Joey [Joseph], owing, &c.; but as the sound is very rare in the English language, it has been deemed prudent to keep it out of the list in plate 1, lest it should confuse the learner.

3. Treble Vowels.—Y and W [which are in fact e and oo] will precede all the Double Vowels of the Angular Series, equally as they will the single vowels. The treble vowels thus produced will be seen

by referring to plate 6.

4. Consorants.—The guttural semivocal kh [pronounced ekh] and its flat sound gh [called ghe] heard in German, Welsh, Hebrew, &c., is expressed in the table. This letter must be made twice the length of the curves for n and m; and to represent l and r added to it, it may be hooked, according to the law observed with the other semivocals.

This guttural sound, like all others, must be heard before it will be understood.

5. The French nasal sound in mon, enfant, &c., is written in the same manner as the English nasal in long, sang, &c.; but care must be taken, in reading French, not to give this sound so hard an utter-

ance as it has in English.

For the Welsh $L\bar{l}$, [which is represented by the heavy l,] and the rough trilled R, see table. As these two sounds do not occur in English, the signs are used as a convenient mode of expressing the double consonants lr and rl.

NOTES ON THE RULES FOR WRITING.

For Phonographic illustrations of the Notes, see plate 6.

Rule 2, Sec. 10.—The heavy strokes j, zh, and lr, cannot be struck upwards with a pen; with a pencil they may. The pupil must be careful not to write upwards any letter that does not slope from left to right. This caution is necessary, because it often happens that learners make the perpendicular t or d upwards.

Rule 2, Sec. 14.—The repetition of s generally occurs with the vowel No. 1 between. In reading, it may therefore be assumed, that the large

circle represents the syllable sis or siz or ziz.

A word that contains no other consonant than ss, must be written with the stroke and the circle, or the circle and the stroke, as may be convenient; as, cease, seize, says, saucy, size, assizes, Swiss.

When the circle s is written by itself, or an arbitrary word, it should be struck round in the way that the hands of a clock move. If the learner will make balf a dozen circles in this way, and then the same number backward, as the letter o is written, he will find the former to be the more expeditious method.

When the circle is joined to another letter, no pains need be taken in common writing to make the circle heavy; as, noise (which is pro-

nounced n,oi,z,) pays (p,a,z,) teas (t,e,z.)

Rule 3, Sec. 3.—The non-observance of Sec. 1 would in some words lead to error. If pit were written with the vowel No. 1 before the t, it might be read as No. 3 before the p, producing apt. But when the vowel cannot be misread, and its sound belongs more properly to the second consonant than to the first, it should be written to the second; as in Corinth; kir inth being nearer to the sound of the word than krinth; so with sanguine, &c.

In the second method of writing man, Sec. 3, the vowel is within a hair's breadth of the place of e following n, gving many. In drab, if the vowel be put after the first consonant, it would be Derby. Another reason for adhering to the rule is this: when two consonants form by their junction an acute angle, there is not room to put a third place vowel between them, after the first consonant; as, in Rajah, crowch.

Instances, however, will arise, in which the Sections 1 and 3 may be neglected without danger; as in sheet, ma'am; still it is advisable that the vowels should be written uniformly by all Phonographers. This will be secured, by always placing a first place vowel after the first consonant, and a third place vowel before the last consonant, except where there is an advantage in doing otherwise.

In Sec. 2, uniformity will be maintained, if a long vowel be always written after the first consonant; as, main, coat; and a short vowel before the second consonant; as, men, cut. There will also arise this additional advantage: the reader will know by its situation whether the vowel is long or short, should it not be indicated by its size.

Rule 4, Sec. 1.—These words are placed to their respective letters in plate 6. It has been considered unnecessary to burthen these lists with those arbitrary words that are contained under the subdivisions of

this rule, in Sections 2, 3, and 8

There are a few of the vowels that do not represent arbitraries, either because no common words contain the sounds, as yah; or to prevent the possibility of mistaking one word for another; thus, if the single vowel No. 2, represented a word, it might be supposed to be the vowel No. 1,

written a little too low, or No. 3, written a little too high.

The only letters among the consonants that are not allowed to stand by themselves as representatives of words, are, pt and bd, lest they should interfere with the vowels au, o, and oo; cht and shn, that they may not be mistaken for the abbreviated i and ou, [see Rule 6, Sec. 6]; sht, that it may not interfere with chn; and zhn, that it may not be read as jd.

It will, therefore, be observed, that the words printed in *italic*, and placed to the letters in plate 1, (yoke, one, stretched, etc.) are not arbitraries, but merely examples containing the sounds of the letters to

which they are placed.

The letters cht, sht, and zhn, must never be written disjointed from another consonant, lest they should be confounded with shn, zhn, and jd, which are allowed to stand alone, the two latter as representatives of arbitrary words, and the former in such words as ocean, observation, etc., where it cannot be mistaken for the abbreviated i or ou. Instead of writing the double letters, cht, sht, and zhn, in words that contain other consonants, write the single letters of which they are composed;

as, watched, wished.

Rule 4, Sec. 2.—As the pupil advances, this rule may be extended even to the writing of I (named el) for will and well; r (named ar) for her and here; b for by; f for if; n for an; kr for care; rl for real and rait; skr for square and score; and so with other letters; thus saving the time that it would take to insert the vowel. It is recommended, however, that pupils do not use this privilege till they can write with rapidity. In reading Phonography, the pupil will first say the arbitrary word for a given letter, and if that does not agree with the words immediately preceding, he will say the name of the letter, and that is the word, or nearly to.

Rule 4, Sec. 7.—It is easy to distinguish two places with regard to these letters; but, three positions, two above the line, and one on the line, would not be distinguishable. It is on this account that words containing second place vowels, are written upon the line, together with words containing third place vowels; and as there is a reason for every thing in Phonography, it may be observed, that the second and third place vowels are put together in this instance and not the frest and second, because there are more words containing first place vowels, from which to select one to go above the line, than there are containing second or third place vowels, from which to select one to go

upon the line.

The pupil is recommended to attend to the principles of this rule, with regard to the situation of non-arbitrary words that do not fill the whole breadth of the space occupied by the writing; as, mean, sky, cause, want, short, &c., should be written above the line, and many, grow, part, &c., should be placed upon the line. The advantage of writing the words thus, will be found in deciphering a verbatim manuscript report; in which, most of the vowels having been omitted, they will be partly indicated in these words by their situation. If the Phonographer should neglect this rule in his common writing, he will not be able to attend to it in reporting. Two exceptions must be made with respect to this rule. Him and himself, should be written on the line, in order that they may not be mistaken for me and myself, when the vowel happens to be omitted. Men should be written above, and man, on the line, in order to preserve a distinction between them, under the same circumstance.

Rule 6, Sec. 2.—A list of all the words which it is expedient to abservate in this manner, in order to take a verbatim report, will be given in a work which is now in the press, entitled "Phonography adapted to Reporting," and which will be re-published, with

the least possible delay, for the use of Reporters.

Rule 6, Sec. 3.—When the pupil is so far advanced as to think of reporting, he may, even in his private writing, adopt the reporting principle of joining any arbitrary words that commonly occur together; such as, I have, you will, cannot, it will be, it will not, to be, may be, etc. Words and sentences may also frequently be briefly expressed by the leading sounds; as, must be, which it will be, Give us this day, etc. Numerous abbreviations of this kind will be given in "Phonography adapted to Reporting."

EXERCISES IN PHONOGRAPHY.

PSALM 23.-(Addison.)-[See plate 6]

T.

The Lord my pasture shall prepare. And feed me with a shepherd's care, His presence shall my wants supply, And guard me with a watchful eye; My noon-day walks he shall attend, And all my midnight hours defend.

11.

When in the sultry glebe I faint, Or on the thirsty mountain pant; To fertile vales and dewy meads, My weary, wandering steps he leads; Where peaceful rivers, soft and slow, Amid the verdant landscapes flow.

III.

Though in the paths of death I tread, With gloomy horrors overspread;
My steadfast heart shall fear no ill.
For thou, O Lord, art with me still;
Thy friendly crook shall give me aid.
And guide me through the dreadful shade.

IV.

Though in a bare and rugged way, Through devious lonely wilds I stray, Thy bounty shall my pains beguile, The barren wilderness shall smile; With sudden greens and herbage crowned, And streams shall murmur all around.
