

The Bad influence of social media in Bangladesh

Bangladesh have entered vastly in the social media platform very recently. Not all the people were aware what was social media platform. But nowadays if someone ask anyone in these countries people, they will have at least one person in every family in average who are related to social media platform. The most common sites are Facebook, WhatsApp, Messenger, Imo, TikTok and so on.

In Bangladesh without the capital which is Dhaka and some urban areas most available areas are mostly rural. So, for that Bangladesh government going through the education development and increasement of the literacy rate. Though Bangladesh is developing the literacy rate 74.9%, adult literacy rate of Bangladesh increased from 58.8% in 2011 to 74.9%. But the standard education level is increasing slowly. Forgetting all that terms the main problem of social media use is do not know how to maintain the social media standards and know how to take any content influence positively or negatively or ignore it. Educated people are also doing this same mistake. 128.08 in every 1,00,000 people are doing suicide. This are increasing. Since the country is based on Muslim culture, there are no influence from society. The suicidal influence is mostly coming on the people's mind somehow just for the bad influence from the social media. Thou, this suicide culture is coming from foreign culture. We all know the great way of relate with the world is globalization and social media platforms is a part of it. An Article from Cambridge University Press, Facebook has transformed social communication and offers the opportunity to share personal thoughts to people including suicide ideas, plans and attempts. Suicide after Facebook posts has been reported in different parts of the world and it has become a potential area of research for suicide prevention. The analysis of Facebook posts prior to suicide or Facebook live streaming may help in understanding the etiological factors, patterns of communication and possible prevention approaches for a particular community.

Then get the decision-making factors. The decision-making issues are happening for the young generation. They are stop believing on themselves to boost up their wills and go through something. Most of the adults are having depression for the use of social media platforms. People are obsessed with the social media platforms. Not all but majority of the people believe that, most of the people thinks that social media platforms news, post, sites, etc. are authentic where most the sites are unauthorized and post are irrelevant. The process from the social media platforms is slow to authenticate the post, sites or other news and article related sources just because Bangladesh has no head office of any social media platforms.

Then, if we talk about the violence is also becoming a part to show of their misused powers. This are encouraging people to do this kind of show offs and do violate offensive activities in social media. For this lots of people are facing extremely violence for no reason sometimes just giving likes and do bad comments on the post. How serious and obsessed are people in Bangladesh are with social medias this have become common nowadays. There are also some religion terms also violated on the social media nowadays.
