VOL. XIII.

MARCH EDITION.

1918.

Wood's Crop Special is issued monthly. No subscription price, but is mailed free each month to customers whose orders indicate a special interest in farming, gardening or trucking. If any of our customers do not receive Wood's Crop Special regularly, and desire to do so, advise us and we will put your name on our regular mailing list.

Seasonable Notes.

Prices of CLOVER SEED have taken a considerable advance recently. This is due to the fact that supplies are very short, and the indications are that there will not be enough seed to supply the demand this season. The high prices of Red Clover are causing a much larger demand for Alsike Clover and Alfalfa, both of which are relatively much lower in price than the Red Clover.

ALSIKE CLOVER usually sells higher than Red Clover; this year it is lower in price, and as it requires a less quantity to seed per acre, it make the cost per acre for seeding considerably lower. The quantity of Alsike Clover required to be sown by itself is 6 to 8 lbs. to the acre; or sown in mixture with Red Clover, 3 lbs. Alsike and 8 lbs. Red Clover to the acre. It is also a good plan to sow 2 or 3 lbs. of Alfalfa to the acre with both Red and Alsike Clover, as this will increase the crop of clover and will also inoculate the land, in case it should be desired to sow the land to a pure alfalfa crop afterwards. It will also determine whether Alfalfa is adapted to the soil or not.

ALFALFA is being much more generally sown in the Spring than heretofore. The experience of farmers in this section for the past two or three years has been that Alfalfa gives splendid results sown on the wheat crop in the Spring, the end of February or during March.

In some sections Alfalfa is sown in the Spring with a nurse crop, such as Oats or Barley, but is likely to give better results sown on the top of Fall-sown wheat, oats or other grain crops. It is, of course desirable to run a harrow over the field at the time of seeding, and this harrowing really benefits the grain crops, rather than injuring them, as it acts as a cultivation for the crop.

Some of our farmers also sow Alsike Clover mixed with Alfalfa, particularly where they desire to use the crop at all for grazing purposes. Two or three pounds of Alsike Clover, together with 15 or 20 pounds of Alfalfa, should give a good seeding to the acre. When sown by itself, Alfalfa is usually sown at the rate of 20 to 30 lbs. to the acre.

After the wheat or grain crops are cut off, in case weeds make any considerable growth, it is desirable to run the mower over the fields, in order to clip off the weeds, so that Alfalfa and Alsike Clover can thrive to best advantage.

When sown by itself, Alfalfa can be sown at any time during March or April. Further South, earlier seedings are advisable. A satisfactory stand secured from Spring seeding will furnish one or two good cuttings this year, and full cuttings the following year.

I have a splendid stand from Alfalfa Seed bought of you a few weeks ago.—B. M. PUGH, Northampton Co., N. C., April 6, 1917.

I have been buying Alfalfa Seed from you now for four years and have found them very satisfactory, and a very particular to plant the best seed I can get.—C. L. BEVILL, Cumberland Co., N. C., Sept. 3, 1917.

TALL MEADOW OAT GRASS is rapidly growing in popularity everywhere. It matures to excellent advantage with Orchard Grass, and makes an excellent combination sown with that grass, both for pasture and hay. Tall Meadow Oat Grass can also be sown by itself, and makes a quick-growing, large-yielding and most nutritious hay grass; also excellently adapted for pasturage purposes. Customers who are sowing this are increasing their acreage, as they find it a very satisfactory and profitable grass. In some sections the saving of the seed of Tall Meadow Oat Grass has proved very profitable in recent years, and it is a crop that is excellently adapted to growing for seed purposes all throughout the Middle Atlantic States. We strongly recommend the more extensive seeding of Tall Meadow Oat Grass, both by itself and in mixtures of other grasses and clovers.

"I have grown Tall Meadow Oat Grass for ten years and am more than pleased with the results. I have never failed to secure a good stand of grass. Have always had an abundance of hay and plenty of pasture early and late when there was a season for any grass. This grass is perennial and will produce on our soils good crops of hay for a number of years without re-seeding and will frequently produce a second crop of a ton or more hay per acre in one season. This is a deep-rooting grass and therefore holds the fertility of the soil better than most grasses."

"I regard the Tall Meadow Oat Grass as superior to all other grasses for our soils for hay, for pasture and for maintaining the soil fertility."—G. F. HOLSINGER, Rockingham Co.

HERDS GRASS or RED TOP continues in popularity everywhere throughout the Middle Atlantic and Southern States. It is one of the best and surest cropping grasses grown, and is indigenous to the soil over large areas through the South. It does better on a larger variety of soils than almost any other grass, succeeding well both on light and heavy soils and is adapted both for uplands and lowlands. It makes one of the best of grazing grasses, and increases and thickens out each successive year, lasting for years after it has been once seeded.

It is also adapted for sowing with Timothy, as it matures with that grass, and it succeeds on a much greater variety of soils and stands longer than Timothy. If sown with Timothy, however, the Timothy will furnish probably a quicker crop, but the Herds Grass will fill in afterwards and make a better crop in succeeding years. It has been and is justly termed "The Blue Grass of the Atlantic Coast Region," and is much better adapted for sowing for hay and pasturage purposes throughout this region than Kentucky Blue Grass.

WOOD'S SPECIAL GRASS and CLOVER MIXTURES are put up from grasses in such proportions as experience has shown are best suited to the different soils and purposes for which they are recommended. These for permanent pasture are composed of grasses which succeed each other in growth and will give a succession from the first of Spring till late in the Winter; while for those desired more for cutting hay we have combined grasses which ripen together. The different mixtures are prepared both as to quantity and varieties best adapted to the soils and situations for which they are recommended. We are continually in receipt of letters from our customers speaking of the fine results which they get from our Special Grass Mixtures.

Clover and Grass Seeds are quite generally sown in the Spring on Fall-sown Wheat or other grain. The light harrowing necessary to cover these grass and other clover seeds

WOOD'S CROP SPECIAL.

does not in any way injure the Fall-sown grain, but rather benefits it, acting as a cultivation, without uprooting the grain. Full information in regard to this seeding and preparation for seeding, or grass and clover seeds, will be found on pages 70 and 74 of our 1918 Catalog. If you have not received a copy of our 1918 Catalog write for it.

It is a very frequent custom to sow grass and clover seeds with Spring Oats as a nurse crop. When this is done, the oats should not be sown as thickly as usual, and the oat crop should be cut for a feed crop before the grain is fully matured.

Every effort should be made to increase the area devoted to grasses, both for hay and grazing, with a view of growing feed for supplying grazing for the raising of hogs, cattle and horses, as the indications are that the raising of live stock will be very profitable for several years to come.

At the same time, land sown to clover and grasses is resting and improving, and will produce better crops when it is desired to put it in cultivation again.

SEED POTATOES. The severely cold weather which we experienced in January and part of February prevented shipping potatoes from the seed-growing districts, and has caused a temporary scarcity, particularly in Maine-Grown Irish Cobbler and Red Bliss, and we have had some delay in filling orders. We have large quantities now en route, however, and hope to be able to fill all orders promptly in the near future.

The Early Ohio Potato is one of the best varieties to grow for home use and near-by market. It is of superior table qualities to other kinds, and is very highly appreciated by those who have grown it, particularly for home use.

The Early Rose, which used to be one of the most popular potatoes in cultivation, seems to be coming in again, and we have some excellent seed stocks, both of Maine and Northern-grown seed. The Northern-grown seed can at the present time be sold at a considerably less price than Maine-grown or other early varieties.

The Early Rose makes very good yields, and the table qualities are superior to some of the kinds which have been grown so largely for market purposes during the past two or three years.

There is a heavy demand for **SEED OATS** at the present time, and prices have taken a sharp advance recently. The Red Rust-Proof is one of the most satisfactory varieties, provided it is sown early. For later seedings, the Durt or 90-Day will probably give better results. The Red Rust-Proof makes a heavier and better quality of oats for feeding purposes.

We have been able to secure this year some excellent qualities of Black Victor and Black Spring Oats. Black Oats are very popular in some sections, as they make a large yield of excellent quality grain.

OREGON SPRING VETCH should be sown in March for best result. It makes a quick-growing crop of very nutritious feed sown with oats at the rate of 25 to 30 lbs. of Vetch with 1 bushel of Spring or Rust-Proof Oats per acre. Spring Vetch also makes a good soil improver even if the crop is cut off for forage.

CANADA FIELD PEAS, like nearly everything else, are higher in price this year than usual. This should always be put in as early as possible. They are entirely hardy, and can be sown to excellent advantage with Spring Oats. They make a large yield and most nutritious crop of feed for horses and all kinds of cattle. Sow at the rate of one bushel to the acre, with one and a half bushels of Rust-Proof or Springs Oats.

CANADA FIELD PEAS are a field variety of the garden pea, and are sometimes used for table or market purposes, although they do not mature as early, nor are they as good in quality as the regular garden peas. When garden peas are high and scarce, we have known pickings to be made for market purposes from these Canada Field Peas.

DWARF ESSEX RAPE is one of the quickest-growing green forage and grazing crops for cattle, sheep, hogs, and poultry. It is hardy and can be sown as early in the Spring as weather will permit. Costs less to seed per acre, and will give quicker green forage than any other crop; also valuable for soil improvement.

When Rape is sown in drills, it is sown at the rate of 3 to 5 lbs. to the acre; sown broadcast, 6 to 8 lbs. to the acre.

I have been planting your Dwarf Essex Rape for several years, and think it is hard to beat for hogs. It grows quick and makes a good grazing crop.—W. H. ANDREWS, Edgecombe Co., N. C., July 22, 1917.

WOOD'S SPRING PASTURAGE MIXTURE. We call special attention to the desirability of sowing this in order to give the earliest and largest yields of Spring and early Summer pasturage. It is a mixture of quick-growing Spring grains, together with Rape and Vetch, combined in proper proportions to make quick and early, nutritious Spring pasturage. It is especially valuable to come in for use earlier than the regular grasses and clovers.

The sowing of large acreages of **COW PEAS, VELVET BEANS** and **SOJA BEANS** as forage and soil-improving crops is particularly important and desirable. Not only do these crops make large yields of forage and nutritious feed, but at the same time they improve the condition and fertility of the soil. The high prices of fertilizer and the necessity for keeping up the productivity of the soil make these crops of special importance at this time.

We would call the special attention of our customers to the advantages of obtaining **SEEDS BY PARCEL POST**. For short distances as much as 50 lbs. can be sent in one package by parcel post; for longer distances 20 lbs. is the maximum quantity, although of course we can put up seeds in two or more 20-pound packages, where a quantity is desired to be ordered in this way. Parcel post transportation at the present time is the quickest method of obtaining supplies, and where customers live on rural routes, the advantage of having seeds delivered at their homes is of course a very great convenience. See inside cover page and page 85 of our Catalog.

FERTILIZERS. We call special attention to the brands of fertilizers which we offer, and of which full descriptions and analyses will be found on pages 94 and 95 of our Catalog.

Labor conditions makes it particularly desirable to make as large yields as possible upon acreages planted, and under these conditions, the liberal use of fertilizer is very desirable, in order to increase crop production and make the largest possible yield with the minimum amount of labor and cultivation.

Sow Lawn Grass Seed Early.

Lawn Grass Seed sown in the Spring should be put in just as early as it is practicable to do so, although it can be sown as late as early in April with good chances of success. Thorough preparation is very necessary in order to secure a successful lawn. The ground should be deeply dug, and roots, stones, etc., removed, and the soil made as smooth and level as possible. The ground must be rich, or must be made so, to start with, and it should have a liberal application of **WOOD'S LAWN ENRICHER** and well-rotted manure, which should be well mixed with the soil. Do not use fresh manure, as the weeds and hay seeds which are in all manure will likely to germinate and fill the land with coarse grasses and weeds. If you cannot get well-rotted manure, use a large quantity of Wood's Lawn Enricher, or in addition to that, a good application of Wood's Pure Animal Bone.

Full information in regard to **Lawn Grass Seed** will be found on Page 16 of our Catalog. For information about Special Mixtures for Golf Courses and Public Parks, see Page 77.

Special Lawn Grass Circular, telling about the preparation and seeding of lawns mailed on request.

I sowed the Wood's Evergreen Lawn Grass Seed I purchased from you. I got a fine stand of grass, which stood up under dry weather fine and made a beautiful lawn.—VERNON L. HOCKADAY, Halifax Co., N. C., Oct. 8, 1917.

I can safely say that your Burt Oats are the best I have ever sown. They give perfect satisfaction.—H. B. WILLIAMS, Pitt Co., N. C., Oct. 25, 1917.

I ordered a lot of the Early Ohio Potatoes last Spring and they suit my land here better than any I have tried.—S. C. OVERAKER, Orange Co., N. C., March 16, 1917.

WOOD'S CROP SPECIAL.

WOOD'S POULTRY FOODS.

	50-Lb. Bag.	5-Bag Lots, 100-Lb. Bag.	100-Lb. Bag.

The Biggs' Seven Ear Corn I bought of you last Spring was all that I expected of it. I think it is the best corn for the Southern farmer to plant.—W. R. NEVILLE, Halifax Co., N. C., Oct. 8, 1917.

I think the Prize-Winning Gold Standard Corn far superior to the Improved Golden Dent Corn, as I had them planted side by side, and Gold Standard will make twice the yield of the Golden Dent, and hereafter I expect to use the Gold Standard.—WM. GOUDY, Buckingham Co., Va., Oct. 25, 1917.

Avery Tractors and Motor Cultivators

We have sold this valuable labor-saving farm machinery very largely during the past season with the very best results and satisfaction to our customers.

The **AVERY TRACTORS** will save labor and enable you to grow larger crops at less cost. Will plow, harrow and seed land, all at one operation, besides being adapted for a variety of other farm work.

We also carry a full line of all

Farm Implements and Farm Machinery.

See or write us for prices and Catalog.

THE IMPLEMENT CO.

1302 East Main Street. Richmond, Va.

WOOD'S SPECIAL GRASS and CLOVER MIXTURES.

MIXTURES Nos. 1 to 5.

Specially prepared for permanent pasturage, but will also make large-yielding hay crops.

- No. 1. For light, gravelly or sandy soils. Sow 30 to 35 lbs. to the acre.
 - No. 2. For good loam soil. Sow 30 to 35 lbs. to the acre.
 - No. 3. For heavy loam or clay soils. Sow 30 to 35 lbs. to the acre.
 - No. 4. For moist bottom land. Sow 25 to 30 lbs. to the acre.
 - No. 5. For wet bottom land. Sow 25 to 30 lbs. to the acre.
- Price of all the above mixtures: 25c. per lb.; 10-lb. lots and over, 23c. per lb.; 100-lb. lots and over, 22c. per lb.

MIXTURES Nos. 6 to 9.

For Mowing for Hay, But will Also Make Splendid Pasturage.

- No. 6. For light, gravelly or sandy soils. Sow 30 to 35 lbs. to the acre.
 - No. 7. For good loam soil. Sow 30 to 35 lbs. to the acre.
 - No. 8. For heavy loam or clay soil. Sow 30 lbs. to the acre.
 - No. 9. For moist bottom land. Sow 20 to 25 lbs. to the acre.
- Price of these mixtures: 25c. per lb.; 10-lb. lots and over, 23c. per lb.; 100-lb. lots and over, 22c. per lb.

PARK MEADOW MIXTURE. We would recommend that it be sown at the rate of about 40 lbs. to the acre. Per lb. 26c.; 10-lb. lots and over, 24c. per lb.; 100-lb. lots, 23c. per lb.

See pages 76 and 77 of our 1918 Descriptive Catalog for further information, letters from customers giving their experience with our Special Mixtures, etc.

WOOD'S LAWN GRASS SEED.

WOOD'S EVERGREEN LAWN GRASS. Qt. 40c.; 2 qt. 75c. 5 lbs. \$1.65 postpaid. By express, qt. 30c.; 5 lbs. \$1.50; bushel (20 lbs.) \$5.00.

WOOD'S PERMANENT LAWN GRASS. By mail, postpaid, 40c. per lb. By express, per lb., 30c.; 5 lbs. for \$1.25 (if by mail, \$1.50); per bushel of 20 lbs., \$4.50.

WOOD'S SEED CORN.

Seed Corn is scarce and prices are advancing.

White Varieties:	Per Pk.	Per Bu.

T. W. Wood & Sons, Richmond, Va., Price-List of Field Seeds

When Sending Orders at Prices Named Here, Please Mention Crop Special No. 989.

March 1, 1918.

United States Food Administration License No. G. 181.

The prices named below are our prices at this date. Prices of Field Seeds are always subject to market fluctuations. We always fill all orders entrusted to us at lowest ruling prices on date order is received. If prices decline, we give our customers the benefit of it. If they advance, we charge the advance prices. In case customers desire to limit us filling order at prices quoted on any particular date they will kindly so state on order, or mention date and number of "Wood's Crop Special" upon which the order is sent.

Terms on all Field Seeds, net cash. Customers who have no regular accounts with us will kindly remit the amount with their order or name business reference as customary before opening new accounts.

Cotton Bags Holding (2½ Bus.) Each 45c. Extra.
