PAULUS, HEINRICH EBERHARD GOTTLÖB, was born on September 1, 1761, at Leonberg, near Stuttgart. He at first proposed devoting himself to the study of medicine, but becoming attached to the sect of Pietists, he soon turned his attention to theology, and proceeded to Tübingen, where he pursued his studies. By the liberality of the Baron von Palm he was shortly enabled to travel in Franconia and Saxony, in order to examine the state of education. He afterwards studied the oriental languages at Göttingen, and then, again assisted by Palm, proceeded to London and Oxford to prosecute his studies. On his return to Germany he was appointed in 1789 professor of the oriental languages in the University of Jena. Here he occupied himself in illustrating and explaining the Old and New Testaments in a philological-historical manner, which he first developed to the world in his '*Clavis über die Psalmen*,' 1791, and '*Clavis über den Jesajas*,' 1793, with others. To these succeeded his '*Philologisch-kritischer und historischer Commentar über das Neue Testament*,' which was given to the world in 4 volumes from 1800 to 1804, which made a great impression, and added much to his reputation. In 1793, on Döderlein's death, he was created professor of theology, but on account of his health, he removed in 1808 to Würzburg in a similar capacity, where he became also a counsellor of the consistory and government. On the abolition of the Protestant theological professorship at Würzburg, he was sent to inspect the state of the schools and churches, in 1808 to Bamberg, in 1809 to Nürnberg, and in 1811 to Ansbach. In this year a call to the chair of exegesis and church history in the University of Heidelberg restored him to his academical life, and to his literary activity. In 1814, the endeavours then being made to give a constitution to his native state of Würtemberg excited his attention, and in 1819 he commenced writing in a periodical work called '*Sophronizon*,' in which his essays upon passing important subjects, such as proselytising, upon the influence of the Papist government on the national Roman Catholic Church of Germany, and others, gained great applause. In this he continued to write till 1829. As a theological writer he was anxious to warn his readers equally against a one-sided nationality, and a speculative deviation from the original doctrines of Christianity, as from mysticism and Jesuitism. With these ideas he began in 1825 a theological year-book, called '*Der Denkgläubige*,' published from 1825 to 1829, and another journal called '*Kirchenbeleuchtungen*,' published in 1827. Among his other numerous writings we may mention '*Memorabilien*,' published in parts from 1791 to 1796; '*Sammlung der Merkwürdigsten Reisen in dem Orient*,' in 7 vols., published from 1792 to 1803; '*Leben Jesu, als Grundlage einer reinen Geschichte des Urchristenthums*,' 2 vols. 1823; '*Aufklärende Beiträge zur Dogmen-, Kirchen- und Religions-Geschichte*,' 1830; '*Exegetisches Handbuch über die drei ersten Evangelien*,' 3 vols., 1830 to 1833; '*Skizzen aus seiner bildungs- und Lebens-Geschichte, zum Andenken an sein fünfzigjähriges Jubiläum*,' 1839; and the '*Vorlesungen Schelling's über die Offenbarung*,' accompanied with critical remarks. Few men have had a wider influence upon religious

opinions in Germany than Paulus, though many of his views have been contested as too rationalistic. In 1844 on account of his great age he was allowed to retire from his situation on a pension, and he died on August 10, 1851, aged ninety.

PAULUS, JULIUS, one of the most distinguished of the Roman lawyers, was the contemporary of Ulpian, and may be most conveniently referred to the time of the Emperor Alexander Severus. The place of his birth is unknown. The reasons alleged for supposing him to be a native of Syria—namely, his intimacy with Ulpian, who was a native of Tyre, and with Marcia, the mother of Alexander Severus, who was a native of Emesa—are manifestly no proofs at all. It has also been supposed that he was a native of Padua, from the fact of there being at Padua a statue which bears the name of Paulus; but the statue and inscription may refer to another person. The Grecisms, supposed to characterise his style, and his familiarity with the Greek language, have been adduced as arguments confirmatory of his alleged foreign origin. Paulus was a contemporary of Papiasian [PAPRIANUS], and apparently rather his rival than his pupil, as some writers have supposed. He was made *Præfectus Prætorio* by Alexander Severus, or, according to others, by his predecessor Elagabalus. He was banished by Elagabalus, but restored by Alexander Severus (Aurel. Vict., c. 24); unless Victor has confounded Paulus with Ulpian. (Lamprid., 'Elag.', c. 16.)

Paulus was perhaps the most voluminous of all the Roman writers on law, and the extracts from his works contained in the '*Digest*' are more numerous than those from any other writer except Ulpian. According to Haubold, the '*Digest*' contains 2462 extracts from Ulpian, and 2083 from Paulus. Paulus wrote under the Emperor Antoninus Caracalla and his successors to the time of Alexander Severus. His style, as far as we can judge from the extracts in the '*Digest*,' is concise, and sometimes obscure, owing to his leaving the reader to supply some of the steps in his argument. Like the rest of the great Roman jurists, he was subtle in thought and clear and comprehensive in his judgments. He has been accused of violent hatred of the Christians, but the accusation is not supported by proof.

The following are the titles of a few of the works of Paulus:—80 books on the '*Edict*,' 26 books of '*Questiones*,' 23 books of '*Responsæ*,' 23 books of '*Brevia*,' 5 books of '*Sententiæ*,' dedicated to his son, 3 books on '*Adultery*,' &c. A complete list of the works of this laborious jurist is given by Zimmern ('*Geschichte des Römischen Privatrechts*,' &c.). Of all these works there only remain the excerpts in the '*Digest*,' and the five books of the '*Recepta Sententiæ*,' which are preserved in an imperfect shape in the compilation made by the order of Alaric II., commonly called the '*Breviarium Alaricianum*.'

A very full account of Paulus and his writings, by Bertrand, is contained in the '*Jurisprudentia Vetus Ante-Justiniana*' of Schulting.

PAUSANIAS, son of Cleombrotus, was of that royal house in Sparta which traced its descent from Eurytheneus. Aristotle calls him 'king,' but he only governed as the cousin-german and guardian of Pleistarchus, who succeeded to the throne on the death of Leonidas.

Pausanias comes principally into notice as commander of the Grecian army at the battle of Platæa. The Spartan contingent had been delayed as long as was possible, but owing to the representations made by the Athenian ministers at Lacedæmon it was at last despatched, though not until the Persians had advanced into Bœotia. This delay had however one good effect, that of taking the Argives by surprise, and defeating their design of intercepting any troops hostile to Persia which might march through their territory. The Spartans, under the command of Pausanias, got safe to the Isthmus, met the Athenians at Eleusis, and ultimately took up that position which led to the battle of Platæa.

The result is well known. Pausanias, elated by his success, took all methods of showing his own unfitnes to enjoy good fortune. Being sent with twenty ships, and in the capacity of commander-in-chief of the confederates, to the coast of Asia Minor, by his overbearing conduct he disgusted the Greeks under his command, and particularly those Asiatic Greeks who had lately revolted from Persian rule. To his oppression he added an affectation of Eastern luxury; and what we know of Spartan manners seems to lead to the conclusion that no mixture could possibly be more repugnant to persons accustomed at once to Persian elegance and Ionic refinement than a clumsy imitation of both, such as the conduct of Pausanias probably presented. Prejudice in favour of the Athenians, who were of the Ionic race, was also active; intrigues commenced, the Athenians encouraged them, and Pausanias was recalled.

Much criminality was imputed to him by those Greeks who came to Sparta from the seat of war, and his conduct was clearly more like the exercise of arbitrary power than of regular military command. He was accordingly put on trial. Private and public charges were brought against him: from the former he was acquitted, but his Median (or leaning to Persia) seems to be clearly proved. Dorcis was sent in his place; but the Spartan supremacy had received its death-blow, and thenceforward Lacedæmon interfered only sparingly in the prosecution of the contest with Persia. Pausanias however,

with the feelings of a disappointed man, went in a private capacity to the Hellespont, on pretence of joining the army. After the taking of Byzantium, which happened during his command, he had winked at the escape of Persian fugitives of rank, and by means of an accomplice had conveyed a letter to the Persian monarch, containing an offer to subjugate Greece to his dominion, and subjoining the modest request of his daughter to wife. A favourable answer had elated him to such a degree as to disgust the allies in the manner already stated. On his second journey he was forcibly prevented from entering Byzantium, upon which he retired to a city in the Troad. There too his conduct was unfavourably reported at home, and a messenger was despatched with orders for his immediate return, under threats of a declaration of war against him. Pausanias returned; but it was still hard to bring home any definite charge against him, and the Spartans were shy of adducing any but the strongest evidence. At last however one of his emissaries having discovered that he was, like all his predecessors, the bearer of orders for his own death, as well as of his master's treason, denounced him to the Ephori. By their instructions this slave took sanctuary, and through a partition made by a preconcerted plan in a hut where he had found refuge, they had the opportunity of hearing Pausanias acknowledge his own treason during a visit which he paid to his refractory messenger. The Ephori proceeded to arrest Pausanias, but a hint from one of their number enabled him to make his escape to the temple of Minerva of the Brazen House, only however to suffer a more lingering death. He was shut up in the temple, and when on the brink of starvation was brought out to die (B.C. 467). By such means Spartan superstition was satisfied, and the actors in the tragedy held themselves innocent of sacrilege. Thirty-five years after a contest arose on this very point. [PERICLES.]

The Hippodrome of Constantinople still contains, although sadly mutilated, the brazen tripod which Pausanias dedicated at Delphi, with an inscription to the effect that it was in gratitude for having destroyed the Persian host.

PAUSANIAS, the author of the 'Description or Itinerary of Greece' ('Ελλάδος Περιήγησις'), appears, according to his own account, to have been a native of Lydia (v. 13, 7); though the passage cited hardly proves this. Little or nothing is known of him, except what may be collected from his own work. The 'Description of Greece' consists of ten books: the first contains the description of Attica and Megaris; the second, Corinthia, Sicyon, Phlius, and Argolis; the third, Laconia; the fourth, Messenia; the fifth and sixth, Elis; the seventh, Achæa; the eighth, Arcadia; the ninth, Bœotia; and the tenth, Phocia.

It appears from incidental notices in the work, that Pausanias not only visited the places which he has described, but also many other remote parts. He must have been at the temple of Ammon, in Libya (ix. 16, 1); at Cnosus in Crete; in the island of Delos (ix. 40, 3); at Capua in Campania (v. 12, 3); and at Rome (viii. 46, 5.) A traveller who visited all these places must have visited many others. Pausanias made his tour of Greece in the time of Antoninus Pius. In speaking of the Odeion of Herodes, he says that he had not described it in his account of Attica (i.), because it was not built when he was writing that part of his work (vii. 20, 6). Herodes died in Attica about the end of the reign of M. Aurelius.

The work of Pausanias is different in character from that of Strabo: it contains no general geographical description of the surface of the country; it is a description of places only. He describes each place as he comes to it, and every object in each place in the order in which it comes before him. His description is minute and generally complete; he seems to have busied himself as a man would do if he were making an inventory or catalogue. There is no attempt to set off the things which he describes by any ornament of language; and yet such is the power of beautiful objects when portrayed in the simplest words, that some of his descriptions are beautiful merely by virtue of the beauty of the objects described. Buildings, monuments, statues, and paintings were the chief objects which he has registered: in connection with them he collected and recorded local traditions and mythological stories in abundance. Natural objects, as rivers, mountains, caves, are also noticed in his description; but nearly always in connection with the mythological stories attached to them. Yet he was a careful observer of natural phenomena, and many curious facts of this kind are scattered through his work. In describing a kind of marble (λίθος κογχίτης) which was much used in the buildings of Megara, he observes that it is very white, softer than other stone, and full of sea shells (L. 44, 6). In another passage (vii. 24) he has some curious remarks on earthquakes. His work also abounds in historical facts, many of which are exceedingly valuable. He not unfrequently digresses, something after the manner of Herodotus, whom he resembles in some degree, and consequently a man will find in his work much curious matter that he would never expect to see there. Pausanias was superstitious, and it would be hard to find an ancient usage, however absurd, which he does not treat with respect. This work contains an inexhaustible treasure of facts, historical, topographical, and mythological: its value and accuracy as a topographical description have been well tested by some of our own countrymen, especially Leake. The style of Pausanias has often been censured as obscure, and his sentences as ill constructed. There is some truth in this;

but if we deduct the passages that are corrupt, and some that are scarcely intelligible without ocular view of the places described, it can hardly be said that he is a difficult writer to those who have studied him.

Pausanias, in his numerous accounts of works of art, although he seems to have described with equal attention and indiscriminately all that came under his eye, has left us many notices of the highest value; and several of the most important productions of ancient painting would be known to us merely by name but for his circumstantial detail, as the great works of Polygnotus at Delphi ('Phocica,' c. 25-31) and the paintings by various artists in the Peecile at Athens, and others of minor importance.

Although Pausanias made his tour of Greece nearly five hundred years after the flourishing period of Grecian art, and notwithstanding the extensive system of plunder which had been carried on for centuries, he still found several hundred specimens of painting; and of sculpture, probably owing to the more durable and less portable nature of the material used in that art, he found a much greater number. He has named altogether about two hundred artists of all descriptions: nine only however are painters of great fame, Polygnotus, Micon, Panæus, Ephiraon, Parthasius, Nicias, Apelles, Pausias, and Protogenea. The proportion of sculptors is much greater, for the reason already mentioned: we have notices of works of Phidias, Alcamenes, Polycleitus, Myron, Naucydes, Calamis, Onatas, Scopas, Praxiteles, Lysippus, and others. Though Pausanias, in matters of art, was certainly not a critic, yet perhaps in no instance does he confound an obscure with a celebrated name; his attention appears to have been generally engrossed by the parts and detail of what he describes, and seldom, if ever, by the style and composition, or any of the higher merits of art. This has been adduced as a serious objection to his work; but so far from that, it rather enhances its value than otherwise. Pausanias has described impartially all that he saw, without distinction of either style or school; whereas an artist probably, or even a connoisseur, biased by the prejudices of his own peculiar education, would have selected only that which might have happened to coincide with his own taste, neglecting everything else as unworthy of notice, and thus handing down only a very partial and imperfect account. Certainly no such objection can be made to the work of Pausanias. On the contrary, somewhat more of system would have been desirable in the description of the more important works; "but the minute and scrupulous diligence," says Fuseli, "with which he examined what fell under his own eye, amply makes up for what he may want of method or of judgment. His description of the pictures of Polygnotus at Delphi, and of the Jupiter of Phidias at Olympia (v. 10), are perhaps superior to all that might have been given by men of more assuming powers, minus of information and inestimable legacies to our art." (Introduction, 'Works,' vol. ii.)

The first edition of Pausanias is that of Venice, 1516, fol. Ald.: it is said to be very incorrectly printed. An edition, begun by Xylander and finished by Sylburg, was printed at Frankfurt, 1583, fol., and again at Hanau, 1613. The edition of Kühn, Leipzig, 1696, fol., is accompanied with the Latin translation of Romolo Amaseo, which first appeared at Rome, 1547, 4to. The edition of Siebelis, 5 vols. 8vo, Leipzig, 1828, contains a corrected text and the translation of Amaseo improved, with an elaborate commentary and complete index. The edition of Bekker, Berlin, 1828-27, 2 vols. 8vo, is an exact copy of the Paris manuscript, 1410, in every instance in which the editor has not noticed his deviation from that text: this edition has a very good index. A later edition is that of Schubart and Wals, 3 vols. 8vo, Leipzig, 1866-40. A new German translation, by Wiedasch, appeared at Munich, 1896-28. The best French translation is by Clavier. There is an English translation by Thomas Taylor, the translator of Aristotle and Plato.

PAUSIAS, a native of Sicyon, after he had learned the rudiments of his art from his father Brietas, studied encaustic in the school of Pamphilus, where he was the fellow pupil of Apelles and Melanthius. Pausias was the first painter who acquired a great name for encaustic with the cestrum: he excelled particularly in the management of the shadows; his favourite subjects were small pictures, generally of boys, but he also painted large compositions. He was the first also who introduced the custom of painting the ceilings and walls of private apartments with historical and dramatic subjects: the practice however of decorating ceilings simply with stars or arabesque figures (particularly those of temples) was of very old date. Pausias undertook the restoration of the paintings of Polygnotus at Thebes, which had greatly suffered through time, but he was judged inferior to his ancient predecessor; his failure however is explained by the fact that he generally worked with the cestrum, but the paintings of Polygnotus were with the pencil, which Pausias consequently also used in this instance.

The most famous work of Pausias was the sacrifice of an ox, which in the time of Pliny was in the hall of Pompey. In this picture the ox was foreshortened, but to show the animal to full advantage, the painter judiciously threw his shadow upon a part of the surrounding crowd, and he added to the effect by painting a dark ox upon a light ground.

Pausias in his youth loved a native of his own city, Glycera, who earned her livelihood by making garlands of flowers and wreaths of

roses, which led him to paint flowers, in which art he eventually acquired great skill. A portrait of Glycera with a garland of flowers was reckoned amongst his masterpieces; a copy of it was purchased by L. Lucullus at Athens, at the great price of two talents (about 432*l.*). This picture was called the 'Stephaneploos,' or garland wreather. Pausias was reproached by his rivals as being a slow painter, but he silenced the censure by completing a picture of a boy, in his own style, in a single day, which on that account was called the 'Hemerocoe,' or work of a day. (Pliny, 'Hist. Nat.,' xxxv. 11, 40.)

Pausanias mentions two pictures by Pausias at Epidaurus, the one a Cupid with a lyre in his hand, his bow and arrows lying by his side; the other, the figure of Metha, or drunkenness, drinking out of a glass, through which his face was seen (ii. 27). Pliny mentions two pupils of Pausias, his son Aristolaus, a painter 'e severissimis,' and a certain Mechopanes, who was distinguished for a high finish and an excessive use of yellow: he was also hard in colouring, yet he had his admirers notwithstanding these peculiarities. We may collect from the allusion of Horace ('Sat.,' ii. 7, 95) that the pictures of Pausias were well known at Rome.

PAUW, CORNELIUS, was born at Amsterdam in 1739. He studied at Göttingen, and was afterwards made canon of Xanten, in the duchy of Cleves. He applied himself to literature, and wrote several works in French on the history and physiology of various nations and countries. His 'Recherches historiques sur les Américains' contain some curious information, many sensible reflections, and also many unsupported assertions set forth in a dogmatic tone. Pauw had not visited America, and his object seems to have been to collect all the passages which he could find in other writers, and which could support some preconceived opinion of his concerning the great inferiority of that part of the world, its productions, and its native races. (Pernety, 'Dissertation sur l'Amérique et les Américains contre les Recherches historiques de M. de Pauw,' which is found at the end of some editions of Pauw's work.) In his chapter on Paraguay, Pauw shows himself particularly hostile to the Jesuita. His 'Recherches sur les Grecs,' in which he had better guides, is written with greater sobriety of judgment; but even in this work his dogmatic spirit is perceptible. Pauw published also 'Recherches sur les Egyptiens et les Chinois.' The French Revolution, and the subsequent invasion of the duchy of Cleves, deprived Pauw of his peace of mind. He became dejected, and burnt all his papers, among others his 'Recherches sur les Germains,' which is said to have been the most elaborate of his works, but which was never printed. He died at Xanten in 1799.

Another member of the same family, John Cornelius Pauw, born at Utrecht towards the end of the 17th century, was a good classical scholar, published editions of several Greek classics, and wrote notes on Pindar, and also a 'Diatriba de Alea Veterum.'

PAXTON, SIR JOSEPH, M.P., was born at Milton-Bryant, near Woburn, Bedfordshire, in 1803, and educated at Woburn Free School. A younger son of parents in very moderate circumstances, he was obliged at an early age to seek means of supporting himself. Having become a skilful gardener, he obtained employment at Chiswick, the seat of the Duke of Devonshire. There he had the good fortune to attract the notice of the duke, who removed him to Chatsworth, and gave him a situation of increased responsibility; and eventually he was made not only director of the magnificent gardens and grounds at Chatsworth, but manager of the duke's vast Derbyshire estates. At Chatsworth he had the superintendence of the extensive works which changed that already famous seat and grounds into the most splendid ducal residence in England. The gardens and grounds were entirely remodelled from the designs of Mr. Paxton, and while in a horticultural point of view they were considered to have been raised to the foremost place among English gardens, as regards elegance of design they have met with general admiration; though in this latter respect much has always been supposed to be due to the fine taste of the duke himself. One great feature of the work, the Grand Conservatory, however was known to be entirely the production of Mr. Paxton. This erection, in size far beyond anything then existing, being 300 feet long by 145 feet wide, and covering nearly an acre of ground, was not merely an expansion of an ordinary conservatory. With perfect simplicity it combined much beauty of form, and it was constructed on a foundation of the greatest solidity; it has an underground railway for the use of the gardeners and workmen, an elaborate and successful system of heating and ventilation, and an ingenious ridge-and-furrow arrangement of the glass for the double purpose of increasing its power of resisting hail-storms and facilitating the rapid passage of rain water—contrivances since common enough in gigantic glass and iron buildings, but then novel. It may be added as an illustration of the mechanical ingenuity of Mr. Paxton, that the forty miles of sash-bar required for the conservatory were made by a machine of his own invention. This remarkable edifice was in fact the parent of the far more famous Crystal Palace.

During the many years he was engaged in carrying out these works, the buildings at Edensor, and other extensive operations connected with the estates of the Duke of Devonshire, Mr. Paxton was of course brought into close professional and friendly intercourse with eminent artists, architects, engineers, and manufacturers; and a high estimate of his constructive talent and business skill became widely spread, which the unbounded confidence in his integrity and warm admiration

of his ability, which the Duke of Devonshire took every opportunity of expressing, did no little to extend and strengthen. There was a general readiness therefore when the Building Committee of the Great Industrial Exhibition of 1851 had brought everything connected with the building into a state of uncertainty by their absurd proceedings—first rejecting the 233 designs sent in as unsuitable and impracticable, and then substituting one of their own infinitely more unsuitable and impracticable—to listen with respect to the entirely original plan which Mr. Paxton put forward; and the more his design was examined the more evident it became that he had formed a clear conception of what was really required and of the best means of supplying it. His design, as is well known, was, with very slight modifications, carried out under his superintendence. With the general public the building was from the first a favourite, and it gained rather than otherwise by familiarity. Architects were disposed to sneer at it as the work of a 'gardener,' and termed it a huge conservatory; but it had the merit, so extremely rare among modern English buildings, of being exactly adapted to the purpose for which it was erected, and it won from all competent judges the praise of displaying remarkable constructive ability. As a recognition of his merit, Mr. Paxton received the honour of knighthood; and when the Crystal Palace Company was formed he was invited to prepare a revised design for the building on its new site at Sydenham, and was appointed director of the garden, park, &c. He availed himself of the opportunity so to remodel the plan and adapt it to the new site as to show in a very striking manner the artistic capabilities of the new style he may be said to have created. By breaking the uniformity of surface and varying the outline he not only obtained a number of very picturesque features, but by the formation of deep recesses in the garden-front produced a brilliant play of light and shadow of which mere glass walls were hardly supposed capable. Yet it is scarcely possible to look at the building from the garden without being struck as much by the largeness and simplicity of style which it exhibits as by its lightness and brilliancy. In this building Sir Joseph Paxton had carried out probably to the fullest extent the ideal he had been led to imagine in the course of his Chatsworth experience in building; and in the grounds and gardens may in like manner be traced the influence of his Chatsworth studies. Costly and beautiful as are the Chatsworth gardens and terraces, the fountains and waterworks, they have but served as models for the nobler gardens, terraces, and fountains of the Crystal Palace; and whatever objections may be raised to particular points of detail, it must be regarded as no small triumph to have designed and carried out works so various, so vast, and so beautiful.

Since the completion of the Crystal Palace, Sir Joseph Paxton has appeared inclined to pursue the profession of an architect, but the only work of any consequence that, so far as we know, he has erected, is a mansion of very costly and fanciful design at Ferrières, in France, for the Baron James de Rothschild; he has also made extensive alterations at the seat of Baron M. A. de Rothschild, Mentmore, Buckinghamshire. It is only necessary to mention the remarkable plan for girdling London with a magnificent arcade resembling the transept of the old Crystal Palace, in which were to be included lines of railway worked on the atmospheric principle and bordered by handsome dwellings and shops, which Sir Joseph laid, in 1855, in full detail before a committee of the House of Commons for considering means of improving communications, &c. in London. But besides this railway in the air, Sir Joseph has been a good deal connected with more substantial and matter-of-fact lines, and of late with other large commercial undertakings. We ought perhaps also to notice that his versatile ability was well shown in the suggestion and subsequently in his admirable organisation of the Army Works Corps, which rendered such important service to our army in the Crimea.

In 1854 Sir Joseph Paxton was elected, without opposition, M.P. for Coventry. He was elected Fellow of the Horticultural Society in 1826, and of the Linnean Society in 1833; and in 1844 he was created a Knight of the Order of St. Vladimir by the Emperor of Russia. Sir Joseph has contributed somewhat extensively to the literature of horticulture. Among other things he wrote a 'Practical Treatise on the Culture of the Dahlia,' 1838, and a 'Cottage Calendar,' which has had an enormous circulation; he also edited wholly or in part, 'Paxton's Flower Garden,' 'Pocket Botanical Dictionary,' 'Horticultural Register,' and 'Botanical Magazine.' [See SUPPLEMENT.]

PEARCE, ZACHARY, an eminent divine and scholar, and a prelate of the English Church, was born in 1690. He was the son of a distiller in Holborn, and went to Westminster School, whence he passed to Trinity College, Cambridge. At Cambridge he was best known as a polite classical scholar, and it was in 1716, before he took orders, that he published his edition of Cicero 'De Oratore.' He inscribed it, at a friend's suggestion, to Lord Chief-Justice Parker, though he was not known to him, and this circumstance led to a friendship and patronage which were of the greatest use to him. The Lord Chief-Justice, being made Lord Chancellor soon after, took Mr. Pearce into his family as his domestic chaplain. Preferment now flowed in upon him. He was presented to the living of Stapleford Abbots in Essex, St. Bartholomew, near the Royal Exchange, and finally of St. Martin-in-the-Fields, London. The last appointment was in 1723. He was made Dean of Winchester in 1739, in 1748 Bishop of Bangor, and in 1756 Bishop of Rochester, with the deanery of Westminster annexed, which he after-

wards resigned. He wished also to resign his bishopric, that he might complete certain literary labours in which he was engaged, and have, as he expressed it, some interval of repose between the business of life and eternity. Such a resignation was a novelty however, and difficulties having been suggested, the king, George III., intimated personally to the bishop that it must not be thought of. He died at Little Ealing, January 29, 1774.

Passing over single sermons, or small tracts, of which Bishop Pearce was the author, he published, after his edition of Cicero's 'Orator,' an edition of Longinus, with a new Latin version; a Review of the Text of 'Paradise Lost;' and the 'Miracles of Jesus Vindicated;' but the theological work by which he is best known, and which is a valuable addition to biblical literature, was not published till after his death, when it appeared with the title of 'A Commentary, with Notes, on the Four Evangelists and the Acts of the Apostles, together with a new translation of St. Paul's First Epistle to the Corinthians,' 2 vols. 4to, 1777. There are also four volumes of Sermons on various subjects by him, another posthumous work, published in 1778. An account of his life is prefixed to the 'Commentary.'

PEARSON, EDWARD, D.D., was born about 1760, at Ipswich, and educated at Cambridge, where he was for awhile fellow and tutor of Sidney College, and afterwards master, and elected the Christian advocate in 1809. He was also appointed rector of Rempston in Nottinghamshire. Beside numerous single sermons preached by him on public occasions, Dr. Pearson was the author of a volume of thirteen Sermons addressed to Academic Youth, delivered in St. Mary's Church, Cambridge. He published also a 'Collection of Prayers for the use of Families,' and various tracts in divinity not professedly controversial. But his fame chiefly rests on his controversial writings against antagonists of two very opposite descriptions. There are two treatises of his against those who adopt Dr. Paley's views on the general theory of moral obligation, and those who follow him in some of the practical conclusions to which that celebrated divine and moralist conducts his readers. These treatises excited, when first published, great attention, and well deserve to be read by all in connection with the treatise on 'Moral and Political Philosophy' to which they relate. On the other side, Dr. Pearson was among the first to sound an alarm respecting the danger to which the church was exposed by the spread in it of Calvinistic views of the Christian doctrine. On this subject he published various tracts at the beginning of the present century, several of which were expressly directed against Mr. Simeon, who was the great maintainer of Calvinism in the university to which Dr. Pearson belonged. In fact, he stood forth the champion of the Arminian clergy in the church, and the champion at the same time of the church itself against whatever seemed to threaten its integrity and its perpetuity.

It seems unnecessary to give the titles of a long list of writings in divinity; but it may be useful to say that a complete list, arranged chronologically, may be seen in the 'Gentleman's Magazine' for 1811, where it is also said of him that he was a good man, of gentle and benevolent manners, kind and charitable, easy and pleasant in conversation, modest, unassuming, much respected, and beloved. He died on August 17, 1811.

PEARSON, JOHN, a prelate of the Church of England, and the author of 'An Exposition of the Creed,' a work which, having been greatly used up to the present time as a kind of text-book in the examination of candidates in divinity, has maintained a high celebrity, and been several times reprinted. He was born in 1618 in the village of Snoring, Norfolk, of which his father was rector, and was educated at Eton, from whence he went to Cambridge, and took holy orders in 1639, on the eve of the civil wars. Lord-Keeper Finch appointed him his chaplain, and presented him to the living of Torrington, in Suffolk. But the chief scene of his labours as a parochial minister was in London, where he had the living of Saint Clement, Eastcheap, and it was to the inhabitants of that parish that the lectures were delivered which afterwards formed his celebrated 'Exposition,' and to them that work when so published was dedicated. The first edition was in 1658, and in the same year he published the works of Hales of Eton, giving to them the title of 'Golden Remains of the ever-memorable John Hales.'

On the Restoration a proper regard was had for Pearson's eminent merits as a rational divine and diligent preacher. He was created doctor of divinity by the king's mandamus, made a prebendary of Ely, archdeacon of Surrey, and finally master of Jesus College, Cambridge. All this was accomplished before the end of the year 1660, in which the king was restored. In 1661 he was appointed Lady Margaret's professor of divinity, and in 1662 master of Trinity College, Cambridge. In 1672 he succeeded Wilkins in the bishopric of Chester. He died at Chester July 16, 1686.

The 'Exposition of the Creed' is the work by which Bishop Pearson is chiefly remembered, which has not only been reprinted, but abridged by various persons. Besides this work he is the author of a 'Vindication of the Epistles of St. Ignatius,' and of 'Dissertations on the Rise and Succession of the early Bishops of Rome.' The last was a posthumous publication, which also contains the 'Annales Paulini,' a critical dissertation on the series of events in the life of St. Paul.

PE'CCIO, GIUSEPPE, was born at Milan in 1785, studied in the college of Somaschi under the well-known Father Soave, and after

wards proceeded to Pavia to study the law. After taking his degree in that university he returned to Milan, and in 1810 was appointed assistant counsellor of state for the departments of finances and the interior of the kingdom of Italy. In 1814 he lost his situation, in consequence of the Austrian occupation of Lombardy, a circumstance which gave occasion to his work entitled 'Saggio Storico sulla Amministrazione Finanziaria dell' ex-Regno d'Italia dal 1802 al 1814,' which is a useful book of reference for the history and statistics of that kingdom. In 1819 he was appointed deputy to the Congregazione, or provincial assembly of Milan. In 1821, being seriously implicated in the attempt at an insurrection against the Austrian government, he was obliged to emigrate. He first went to Switzerland, and from that country to Spain, which was then making a second experiment of a constitutional government. Pecchio had thus an opportunity of observing the national character and the spirit of the various political parties. His observations on Spain are in the shape of letters, and were published under the following title:—'Sei Mesi in Ispagna nel 1821.' In 1822 he proceeded to Portugal, where the same passions and parties were at work, and he likewise recorded the impressions which he received in that country in another series of letters—'Lettere à Lady G. O. dal Portogallo.' Returning to Spain, he visited the southern provinces of that kingdom, and was at Cadiz at the fall of the constitutional government in the summer of 1823. He then embarked at Cadiz for England, where he met several Italian friends and brother emigrants. In 1825 he was appointed, together with Count Gamba, by the Philhellenic committee to convey to Greece the sum of 60,000*l.*, the fruits of a loan made for the Greeks. Having executed his commission at Nauplia, Pecchio visited Smyrna, whence he embarked for England. In his short stay in the Levant, Pecchio found time to make and record his observations, as he had done in Spain and Portugal. That was a critical period for the Greek cause, as the Egyptians under Ibrahim were carrying everything before them in the Morea. Pecchio's account of the affairs of Greece was published in English, with that of other contemporary travellers: 'A Picture of Greece in 1825, as exhibited in the Narratives of James Emmerson, Joseph Pecchio, and W. H. Humphreys,' 2 vols. 8vo. The book was translated into French and German. Pecchio's account was afterwards published separately in the original Italian: 'Relazione degli Avvenimenti della Grecia.'

On his return to England, towards the end of 1825, Pecchio repaired to Nottingham, where he gave lessons in the modern languages, and he afterwards removed to an academy at York in the same capacity. Towards the end of 1828 he married an English lady of property, and went to reside with her at Brighton. He remained for seven or eight years in Brighton, where he wrote several works, in which he embodied his remarks upon England and the English. Those remarks are expressed in a spirit of fairness and discrimination rarely found in the accounts of England by foreign writers. He died at Brighton, in June 1835.

Besides the works already mentioned, Pecchio wrote—1. 'Osservazioni semi-serie di un Esule sull' Inghilterra,' being a series of sketches of English habits and manners, each sketch forming a separate chapter, and showing the shadows as well as the lights of English life. The sketches are true, humorous, and interesting. Many things strike a foreigner which appear commonplace to a native; but even a native may learn from Pecchio's book to form a more just estimate of his own country. In a chapter entitled 'England the Refuge of the Oppressed,' he describes with much humour the curious mixture of emigrants of all countries whom he saw in London in 1823. 2. 'Storia della Economia pubblica in Italia,' 8vo, Lugano, 1829. This is perhaps the most important of Pecchio's works. A collection of the Italian economists was made by Custodi, which fills about fifty volumes. Pecchio has taken the principal of those writers in order of time, and has given a short but clear abstract of the works of each. He has added, first, an introduction on the progress of political knowledge in Italy; second, at the end of the work a comparison between the English and the Italian writers on political economy; and third, a statement of the improvements effected in the various Italian states during the 18th century in consequence of the writings of the economists. 3. 'Una Elezione di Membri del Parlamento in Inghilterra,' in which he describes a contested election at Nottingham in 1826. Like all Pecchio's sketches it is true, vivid, and entertaining. 4. 'Vita di Ugo Foscolo.' 5. 'Storia Critica della Poesia Inglese,' 4 vols. 12mo, 1834, which he left unfinished; besides other minor works, which are noticed in his biography by Ugioni.

PECK, FRANCIS, a learned and industrious antiquary, was born at Stamford in Lincolnshire, May 4, 1692; and was educated in his native town. He afterwards went to Trinity College, Cambridge, where he took the degree of B.A. in 1715, and M.A. in 1727. In 1723 he was presented to the rectory of Godeby Maureward in Leicestershire; and in 1736 he received a prebendal stall in the cathedral of Lincoln. His principal works were—1. 'The Antiquarian Annals of Stamford, in Lincoln, Rutland, and Northampton Shires,' fol., London, 1727. 2. 'Desiderata Curiosa,' the first volume of which was printed in folio, London, 1732, followed by the second in 1735, both reprinted in 4to in 1779. 3. 'A Catalogue of all the Discourses written both for and against Popery in the time of King James II.,' 4to, London, 1735. 4. 'New Memoirs of the Life and

Poetical Works of Mr. John Milton,' 4to, London, 1740. And 5, 'Memoirs of the Life and Actions of Oliver Cromwell,' 4to, London, 1740. Besides these he published several sermons and poems, and, in 1742, his last work, a volume of religious discourses. He contemplated various other works, some of which appear to have been completed, but none were made public. Among his manuscripts, the greater part of which became the property of Sir Thomas Cave, Bart., were five volumes in 4to, fairly transcribed for the press, entitled 'Monasticum Anglicanum.' These are now deposited in the British Museum. Mr. Peck concluded a laborious and useful life, August 10, 1743, and was buried in his church of Godeby.

PECQUET, JEAN, was born at Dieppe in 1622. He studied medicine at Montpellier; and while a pupil there, in 1647, he made the discovery, for which he is chiefly celebrated, of the receptaculum chyli and the thoracic duct. He afterwards went to Paris, and continued his researches on the lymphatic system, and showed that the lacteals do not, as had been imagined, terminate in the absorbent glands, or the liver, or the spleen, but in the receptacle which he had discovered; and that their fluid is thence transmitted by the thoracic duct to the left subclavian vein. His discovery may be said to have put an end to the idea long entertained, that the blood was formed in the liver, and to have added important confirmation of the Harveian account of the circulation. Pecquet died in 1674.

PEDRO, DON, Emperor of Brazil and King of Portugal, was the son of John VI., king of Portugal, and was born at the castle of Queluz on the 12th of Oct., 1798. From early youth he was the active witness of the long series of political troubles which distracted Portugal; at the age of nine he accompanied his father, then regent for the Queen Maria Isabella, in their exile to Brazil. The misfortunes which had befallen his family became the means of developing the activity of his mind, by depriving him of the hope of depending on other sources than those which should arise from his own talents and energy. He applied himself with considerable success to the acquisition of various languages, while he devoted the hours usually spent in recreation to the cultivation of poetry and music. At the general peace of 1815 a marriage was contracted for the young prince of Brazil, the title by which he was then known, with Maria Leopoldina, archduchess of Austria. At that period the colony of Brazil was raised to the rank of a kingdom, and, when in 1820, John VI. was recalled to Portugal by the Cortes, Don Pedro remained as regent in that country.

His first position in political life was one of peculiar difficulty; to preserve the authority with which he had been intrusted, and to secure the peace and prosperity of the kingdom, required the exercise of diplomatic skill, and a firm resolution of no ordinary kind. The Cortes of Portugal were desirous of reducing Brazil to its ancient position as a colony, and to confine its commerce to the mother country; they also designed for it a new system of government by dividing it into provincial administrations. The prince regent, sensible of the impolicy and injustice of this scheme, placed himself at the head of the popular opposition which it excited, and refused obedience to the attempted innovations. The Portuguese troops stationed at Pernambuco and Rio Janeiro were sent back to Europe, while, on the other hand, the Portuguese commandant at Bahia retained possession of that town, and expelled from it the militia. Civil war was the necessary consequence of these proceedings, and on the 13th of May Don Pedro was proclaimed protector and perpetual defender of Brazil; and, finally, on the repeated refusal of the Portuguese Cortes to abandon their design, the independence of Brazil was declared; and the prince, yielding to the popular wish, was proclaimed emperor on the 12th of October 1822, and was crowned on the 1st of December in the same year.

Though Don Pedro appears to have satisfied the exigencies of the new state by granting it a constitution based upon liberal principles, partial outbreaks of resistance to his government continued to manifest themselves. The long anarchy which had existed in the provinces rendered the inhabitants indisposed to submit to regular rule, and the instinctive hatred of the Brazilians against the Portuguese diminished the popularity of the ruler. Insurrections broke out at Pernambuco, San Salvador, and Bahia, which were however speedily checked. In 1825 the independence of Brazil was recognised by Portugal. The following year a dispute arose between Brazil and the neighbouring republic of Buenos Ayres, respecting the possession of the territory named the Banda Oriental, the inhabitants of which were desirous of annexing themselves to the new empire, and a war was the result, which terminated unfavourably to the interests of Brazil. To this cause of discontent another was added by the death of John VI. in March 1826, and the consequent succession of Don Pedro to the crown of Portugal, the Brazilians being afraid that he would prefer the kingdom which descended to him by hereditary right, and thus Brazil should again become reduced to the position of a dependency of Portugal. These fears however he endeavoured to dispel by abdicating the crown of Portugal in favour of his daughter Donna Maria da Gloria, reserving to himself the regency, with the title of king, during her minority. The succeeding years of his reign were marked by continual disturbances of a political nature throughout the country. In 1830 the French revolution gave a new impulse to the democratical party, and an affray which took on the 6th of April

1831, determined Don Pedro upon abdicating the throne in favour of his son, to whom, being under age, he appointed a guardian, and the following day he left the country.

The throne of Portugal, which Don Pedro had resigned in favour of Donna Maria, had been usurped by his brother Don Miguel, whom in 1827 he had appointed regent of the kingdom. His object was now to recover the country from the usurper, and to reinstate his daughter in the rights of which she had been deprived. The plan of the enterprise was matured during a somewhat lengthened sojourn in Paris, where he was joined by the exiled Portuguese who had espoused his cause, at the head of whom was General Saldanha, and a great number of foreign adventurers. It is unnecessary here to enter upon the details of the civil war which ensued; it will be enough to state that on the 26th of May 1832, Don Miguel was reduced to the necessity of signing a convention, which left the young queen in quiet possession of the throne of Portugal under the regency of Don Pedro.

The acts of his short administration were calculated to secure for him the good will of the more liberal party in his dominions; but many of them, though they may have been expedient, were certainly unjust. He strengthened the external relations of Portugal by a close alliance with England and France, and in order to give an interest to the people in the new revolution he confiscated for the use of the state the property of the numerous monastic establishments in his kingdom. The anathemas of the Vatican were the natural result of these sweeping measures, and they were soon followed by his own excommunication. In September 1832 the declining state of his health compelled him to resign the regency, and his daughter, having been declared of age, was placed in full possession of the royal authority. He did not long survive to assist the young queen with his counsels, and the palace where he had been born was the scene of his death on the 24th of September 1834.

PEEL, SIR ROBERT, the first baronet, was born 25th April 1750, at Peel's Cross, near Lancaster, a small property belonging to his father, Mr. Robert Peel, whose third son he was. The family, though not wealthy, appears to have been of some respectability for several generations. It is said that the subject of this notice early gave evidence both of remarkable business talents, and of a decided ambition and determination to raise himself in the world. He and most of his brothers were brought up to different branches of the cotton-trade, then fast extending under the effect of the inventions of Arkwright, whose personal success in the acquirement of wealth and station was also of course operating as a powerful example and incentive. The mechanical processes of the trade are said to have early engaged much of Peel's attention, though they were never indebted to him for any improvement, so far as we are aware. He made his fortune by his general ingenuity and sagacity, by his unremitting activity and attention, by his comprehensive boldness of enterprise, and by his admirable conduct of business, alike in its largest scope and in its minutest details.

In 1773 Mr. Robert Peel entered into partnership with Mr. William Yates in an extensive factory at Bury, in Lancashire; and on the 8th of July 1783 he married Ellen, daughter of Mr. Yates, who had then just completed her seventeenth year. His career from this time was one of great and uninterrupted prosperity. About the time of his marriage he purchased a considerable estate in Lancashire; and in the course of a few years he invested large additional sums of money in land in the counties of Stafford and Warwick.

It has been asserted that Mr. Peel's principles were originally favourable to the French revolution, or at least to the class of opinions in which that movement originated; but this, we apprehend, must be a mistake. He appears to have first come forward as a politician in 1780 by the publication of a pamphlet entitled 'The National Debt productive of National Prosperity,' a title which may be taken as evidence that his views at that date were the very reverse of revolutionary or disaffected. In 1790 he was returned to parliament as one of the members for Tamworth, in and near which borough he had acquired large property; and it is indisputable that from the moment he entered the House of Commons, in which he sat for the same borough in seven successive parliaments, or to the end of the reign of George III., he was a steady and zealous supporter of the government.

In 1797 Messrs. Peel and Yates distinguished themselves by the considerable subscription of 10,000*l.* to what was called the Loyalty Loan. In 1798 Mr. Peel further showed his loyalty and public spirit by the part which he took in encouraging the volunteer system. Besides assisting in the formation of the Lancashire Fencibles, and the Tamworth Armed Association, he raised, chiefly from among his own workmen, six companies of what were called the Bury Loyal Volunteers, and got himself commissioned as their lieutenant-colonel. On the 14th of February 1799, he made a speech in the House of Commons in favour of the Union with Ireland, which was soon after printed and extensively circulated in that country. On the 29th of November 1800, he was created a baronet.

Sir Robert Peel, the number of persons employed by whom is said to have amounted in 1803 to fifteen thousand, lived for ten years after his retirement from parliament in 1820, dying at his seat of Drayton Park, in Staffordshire, on the 3rd of May 1830. On the 18th of October 1805, he had married a second wife, Susanna, sister of the Rev. Sir William Henry Clarke, Bart., Rector of the parish of Bury, who died on the 19th of September 1824. By his first wife, who died on the

28th of December 1803, he had six sons and five daughters. It may be remarked that, with the exception of two daughters who died in infancy, he saw all his children married before his death. Besides his large landed property, which he entailed upon his eldest son, together with, it is supposed, near half a million in money, he left about 150,000*l.* to each of his younger sons, and above 50,000*l.* to each of his daughters. He had also previously advanced to or settled upon his several children above 240,000*l.*, besides an income of 9000*l.* per annum secured to his eldest son.

PEEL, SIR ROBERT, the second baronet of the name, was born on the 5th of February 1788, near Bury in Lancashire, the eldest son and third child of the subject of the preceding notice. He was educated first at Harrow school, where he had Lord Byron for his classfellow, and afterwards at Christ's Church, Oxford, where he graduated B.A. in 1808. Both at school and at the university he was distinguished by his talents, his studiousness, and the solid perseverance of his character; and, on quitting the university he took what was then (the modern examination system having been but recently introduced) the unprecedented honour of a double first-class — i. e. of paramount excellence both in classics and in mathematics. He had scarcely left college when, in 1809, at the age of twenty-one he was returned to the House of Commons as member for Cashel. His father had destined him for a political career, and from his first entrance into Parliament he was placed in a position of absolute independence by an allowance out of his father's income equal in amount to the fortune of many a nobleman.

On entering Parliament Mr. Peel attached himself to the Tory party, to which his father already belonged. Perceval was then prime minister, and Canning and Castlereagh were his most powerful coadjutors; while on the Whig benches sat Sheridan, Tierney, Whitbread, Horner, Brougham, Romilly, and Sir Francis Burdett. The elder Peel had made no secret of the great expectations he entertained of his son's success in Parliament; and the young man's first steps in the walk of life for which he had been confessedly trained, were looked at with much interest and with some jealousy. But Mr. Peel was prudent, and was in no haste to measure himself against the established orators of the House. His first speech of any length was in January 1810, when he seconded the address at the opening of the session. His subsequent votes and speeches gained him the reputation of a steady and able young man, from whom much might be expected; and this, coupled with the weight which he possessed as the son of a man of so much commercial influence, led to his appointment, in 1811, to the office of under-secretary for the colonies. It was the time of the Peninsular War, and of the great struggle with Napoleon, of which that war formed a part; and as purely colonial questions were of comparatively small importance in the midst of events of so engrossing a nature, Mr. Peel had not many opportunities of displaying his powers in his first office, whether as an administrator or as a parliamentary speaker. Whatever he did however brought him a clear accession of parliamentary reputation.

The assassination of Mr. Perceval on the 11th of May 1812 occasioned the formation of a new Tory ministry. The Earl of Liverpool became premier with Lord Castlereagh as foreign secretary, Lord Sidmouth as home secretary, Lord Eldon as chancellor, and others of the seniors of the same party in other places of the cabinet; while among the ministers out of the cabinet were Viscount Palmerston as secretary at war, the Duke of Richmond as lord-lieutenant of Ireland, and Mr. Peel as chief secretary for Ireland. The post accepted by Mr. Peel in this ministry, stationing him as it did in the midst of the tempestuous sea of Irish politics, was no very enviable one. The Irish agitation connected with the union of 1800 had not yet subsided; the agitation for Catholic emancipation was fiercer than ever; and Mr. O'Connell had just become the leader of the Irish people, and was singling out objects against which to direct the full force of the popular wrath. The young secretary for Ireland was identified with the anti-Catholic policy of the existing ministry; he was nick-named 'Orange-Peel;' and Mr. O'Connell seemed from the first to conceive an implacable hatred to him personally. After various manifestations of this animosity, Mr. O'Connell in May 1815 attacked him in one of his public speeches in terms so directly insulting that a challenge was the consequence. Some delay however having occurred in settling the preliminaries, the duel was prevented by the interference of the police. It became more evident afterwards than it was at that time that, though Mr. Peel opposed the claims of Roman Catholic emancipation, and backed the ministry with which he was connected in their resistance to those claims, his notions with respect to the government of Ireland were by no means those of the extreme orange party. "From his first entrance," says one of his biographers, "upon the tumultuous arena of Irish politics to the end of his life, he would, if he could, have quenched the fiercer polemics that consumed the country amid their fires, in the cooler element of practical and secular education; but this was far beyond his power. His encouragement of schools, where the strife of religious proselytism might be merged in the soberer pursuits of ordinary mental culture, was only attributed to lukewarmness by one party and to infidelity by the other; and by the diligence alone with which he sought to remedy the multiform abuses and total want of order which existed in the details of his own office, did he gain credit in Ireland with either party. In all else, for his own

party he was too temporising, for the emancipationists too exacting." To all intents and purposes however he acted consistently with his position as Irish secretary under the Liverpool administration. Not only did he oppose Mr. Grattan's motion for a committee to consider the Roman Catholic claims in February 1813, and again Sir Henry Parnell's motion on the same subject in 1815, but his speeches on both these occasions were the ablest that he had yet delivered, and among the most telling on that side of the debate. They scarcely grappled with the question on the ground of essential principle, but strongly and skillfully laid hold of the points of real practical difficulty. The truth is that a mind so thoroughly cool, English, and moderate as that of Peel, must have felt itself out of its element when charged, in a subordinate capacity, with the management of Irish affairs at a time of such heat and frenzy. Accordingly, as soon as an opportunity offered, he vacated the Irish secretaryship. The war with Napoleon I. was at an end; Waterloo had brought peace; Europe had been re-arranged by the Treaty of Vienna; and the Liverpool-Castlereagh ministry, with gradually-increasing unpopularity, was addressing itself to the home-questions the discussion of which forms the chief part of the history of the Regency. Such was the state of affairs when Mr. Abbott, the Speaker of the House of Commons, having retired into the Upper House as Lord Colchester, and a vacancy having in consequence occurred in the representation of the University of Oxford, Mr. Peel was elected his successor (1818). Mr. Canning aspired to the honour; but the influence of Lord Eldon, and the conviction entertained by the university of the orthodoxy of Mr. Peel's views on the Roman Catholic question, determined the choice. Mr. Peel then, greatly to the regret and not a little to the damage of the government, already far from firm, resigned his post without accepting another.

From 1818 till 1822 Mr. Peel had no official connection with the Liverpool-Castlereagh ministry. He continued however to give it his extra-official support in all measures of consequence. It was during this period, too, that by the leading part he took in the pressing currency questions of the day, he laid the foundation of his subsequent fame as a financier. He had already shown his sympathy with the views of what was then called the Economist party, of which Mr. Horner during his life had been the head, and to which the House about this time received a powerful accession in Mr. David Ricardo; and on the appointment of a Bank-Committee in February 1819, to consider the question of a resumption of cash-payments and other allied questions, rendered necessary by the commercial distresses attending the transition from a state of war to one of peace, Mr. Peel, then only thirty-one years of age, was appointed chairman, having among his colleagues Canning, Castlereagh, Vansittart, Tierney, Huskisson, Frederick Robinson, and Sir James Mackintosh. In the proceedings of this committee and the debates which arose out of them, Mr. Peel displayed his ability both as a speaker and as a man of business; and it was in May 1819 that, in moving resolutions involving a resumption of cash-payments, he constituted himself the champion, to use his own words, of "the old, the vulgar doctrine, as some called it, that the true standard of value consisted in a definite quantity of gold bullion." "Every sound writer on the subject," he said, "came to the same conclusion, that a certain weight of gold bullion, with an impression on it denoting it to be of that certain weight, and of a certain fineness, constituted the only true, intelligible, and adequate standard of value." Though these views were carried into effect by parliament, there were not wanting members who demurred to them; and among these was Mr. Peel's father, Sir Robert. Besides this currency question, the further history of which we need not trace, Mr. Peel in the same year took part with the Liverpool government in their opposition to the then revived agitation for Parliamentary Reform. He approved of the famous 'Six Acts;' and—what was long afterwards remembered by the other party to his discredit—he defended, with a vigour all the more remarkable that he was not called upon to exhibit it by any official connection with government, the conduct of the magistracy in the so-called "Manchester massacre" of August 1819. He kept aloof however, with studious caution, from the ministerial proceedings in the case of Queen Caroline, which followed the demise of George III. and the accession of George IV. to the throne (January 29, 1820), and which were terminated by the queen's death in August 1821. It was in the midst of this storm of matrimonial politics that Mr. Peel himself married. His wife was Julia, the youngest daughter of General Sir John Floyd, Bart. The marriage took place on the 8th of June 1820.

George IV. having retained the Liverpool ministry in office, Mr. Peel was induced again to become a member of it. In January 1822 he took office as secretary of state for the home department. A further modification of the ministry was caused by the suicide, in August, of Lord Castlereagh, whom Mr. Canning succeeded in the foreign secretaryship. Till the fatal illness of Lord Liverpool (April 1827) broke up this ministry, Mr. Canning and Mr. Peel continued to be the most prominent and active members of it—agreeing sufficiently to co-operate, but having at the same time certain differences. While Mr. Canning was liberalising the foreign policy of the country, Mr. Peel was busy with new forms of the currency-question peculiar to a time of unusual commercial distress and panic. While Mr. Canning was favourable to a consideration of the Roman Catholic claims, Mr. Peel, as before, opposed them, though with a growing conviction that the opposition could not be long continued. Both remained opposed

to parliamentary reform. Prior to the time of Lord Liverpool's resignation his ministry was broken into two parties—the Old Tory or Eldon-Peel party who stood opposed to the Roman Catholic claims, and of whom Mr. Peel was the active leader; and the more liberal party, who, with Canning as their leader, were approximating to the Whigs. The question, on Lord Liverpool's retirement, was whether by the appointment of a nobleman of high rank and influence, such as the Duke of Wellington, to succeed him, the two parties could be held together, or whether a new ministry should be formed of which Canning should be the head. The second was the alternative which actually came to pass. The king, though personally hostile to the Roman Catholic claims, empowered Mr. Canning to form a ministry in which the Roman Catholic question should be an open one, but which should be pledged to resist parliamentary reform or any repeal of the Test and Corporation Act. In this ministry, the formation of which was regarded as a new epoch in the political history of the country, and was accordingly welcomed by many of the leading Whigs, Mr. Canning held the chancellorship of the Exchequer together with the premier's usual office of first Lord of the Treasury; and the blanks in the administration caused by the secession of Lord Eldon, Mr. Peel, the Duke of Wellington, Lord Melville, and others, were filled up by the selection of men willing to act along with Mr. Canning—among whom was Mr. Robinson (now created Lord Goderich) as colonial secretary, and Mr. Copley (now Lord Lyndhurst) as lord chancellor (April 1827) [CANNING, GEORGE.]

On Mr. Canning's death (Aug. 8, 1827), his anomalous ministry, so delicately poised between the Tories and the Whigs, was continued for a few months by Lord Goderich; but on his resignation, in January 1828, a new ministry was formed of the old Tory construction, with the important and significant exception, that Lord Eldon was not re-instated in the chancellorship, but Lord Lyndhurst continued in it. The following was the composition of the cabinet of this memorable administration, which, from the names of its two chiefs, is now usually called the Wellington-Peel Administration:—First Lord of the Treasury, the Duke of Wellington; Chancellor of the Exchequer, Mr. Goulburn; Lord-Chancellor, Lord Lyndhurst; President of the Council, Earl Bathurst; Lord Privy Seal, Lord Ellenborough; Foreign Secretary, Lord Dudley and Ward; Colonial Secretary, Mr. Huskisson; Home Secretary, Mr. Peel; Master of the Mint, Mr. Herries; President of the India Board, Lord Melville; President of the Board of Trade, Mr. Grant; Secretary at War, Lord Palmerston. The ministry was afterwards modified by the secession of Mr. Huskisson. Its great act was the passing of the Roman Catholic Relief Bill—a measure the eventual necessity of which Mr. Peel had been prepared for; which was now pressed to an issue by the overwhelming influence of the Catholic Association in Ireland, as shown in the election of Mr. O'Connell to the House of Commons for the county of Clare, and which the ministry determined on as soon as the king had given his reluctant consent. On the 5th of March 1829, Mr. Peel—who had in the meantime been rejected by the University of Oxford in favour of Sir Harry Inglis, whose anti-Roman-Catholic principles recommended him—brought forward the Relief Bill in the Commons, as member for the close borough of Westbury. His speech on this occasion was not only powerful at the time, but is interesting now as revealing what may be called the cardinal principle of Mr. Peel's career as a statesman. "We are placed," he said, "in a position in which we cannot remain. We cannot continue stationary. There is an evil in divided cabinets and distracted councils which cannot be longer tolerated. . . . Supposing this to be established, and supposing it to be conceded that a united government must be formed, in the next place I say that government must choose one of two courses. They must advance or they must recede. They must grant further political privileges to the Roman Catholics, or they must retract those already given. . . . I am asked, what new light has broken in upon me? Why I see a necessity for concession now which was not evident before! The same events, I am told, have happened before, and therefore the same consequences ought to follow! Is this the fact? Are events in politics like equal quantities in numbers or mathematics, always the same? Are they, like the great abstract truths of morality, eternal and invariable in their application? May not the recurrence—the continued recurrence—of the very same event totally alter its character, at least its practical results?" Mr. Peel on this occasion spoke out, as a statesman, the general sense of the nation; and the Emancipation Act, after running the gauntlet of the Upper House, became law. Besides this great measure, Mr. Peel, as Home Secretary, introduced other measures, including the New Metropolitan Police Act, which provided London with its efficient body of 'Peelers,' subject to the Home Office, in lieu of the old 'Charlies.' Questions of currency also occupied him during this administration.

Though the Wellington-Peel government had yielded on the Roman Catholic Relief question, they were not prepared to yield on the great constitutional question of Parliamentary Reform. When in February 1830, Lord John Russell moved the question of disfranchising one or two corrupt small boroughs, and transferring the representation to some of the large commercial towns then unrepresented, Mr. Peel opposed the motion, "because it introduced a principle into the system of representation—that of mere numbers—which he said was the ultra-democratic principle, and with which the aristocratic and

monarchical principle could not long co-exist." The death of George IV. however (June 26, 1830), and the accession of William IV., followed as it was by an immediate dissolution of parliament, and a general election (not to speak of the concurrent influence of the French Revolution of July), rendered the continued refusal of Parliamentary Reform impossible. After the re-assembling of parliament on the 2nd of November 1830, the Duke again repudiated reform absolutely; but Mr. Peel's language, though also negative, was more guarded. Amidst violent excitement, the ministers resigned; and a Reform ministry—the first Whig ministry since 1807—was constituted the same month under the premiership of Earl Grey. Lord Brougham became Lord Chancellor; Lord Palmerston, Foreign Secretary; the Marquis of Lansdowne, President of the Council; Lord John Russell, Paymaster of the Forces; Lord Althorp, Chancellor of the Exchequer; and Mr. Peel was succeeded in the Home secretaryship by Lord Melbourne. It was at this juncture that the death of Mr. Peel's father raised him to the baronetcy and the estates.

For the first time in his life Sir Robert Peel was now in open opposition. He opposed with great determination the Whig schemes of reform, but in such a manner as to indicate his private conviction, from an observation of public opinion, that some change in the representative system was inevitable. His conduct in fact, during the whole of the Reform Bill crisis, had an important influence on the result. He declined at the last moment to join with the Duke of Wellington in the attempt to form a ministry to supersede that of Earl Grey. The Duke of Wellington withdrew his opposition: on the 4th of June 1832 the Reform Bill passed the Lords, and three days afterwards it was law. In January 1833 the first reformed parliament met. Sir Robert Peel was returned for Tamworth, which he continued to represent during the rest of his life.

Acquiescing in the new state of things, and abandoning all idea of abrogating the constitutional change which had occurred, it was now Sir Robert's aim to organise, what he called a 'Conservative' party, as distinct either from that of the Whigs, or that of the inveterate Tories. Supported in this aim by the Duke of Wellington and others, whose views took the same shape, he acted as a vigilant, but not factious, critic of the various important measures introduced by the Whigs into the Reformed Parliament; first, under the premiership of Earl Grey; and, next, under that of Lord Melbourne. He gave his support to the Irish Coercion Bill; he advocated the abolition of negro slavery in the colonies, but advised great caution in the practical steps for carrying it into effect; and he acted a cautious part in the debates on the Poor Law Amendment Act of 1834, but, on the whole, approved of that momentous change. These measures were carried while Earl Grey was still premier; but before the prorogation of Parliament in August, 1834, Lord Grey had been succeeded by Lord Melbourne, with Lord Althorp as his Chancellor of the Exchequer. The death of Lord Althorp's father, Earl Spencer, in November, 1834, having raised him to the Upper House, the King, to the surprise of all, availed himself of the ministerial difficulty thus occasioned to dismiss the Whig Ministers altogether, and call the Duke of Wellington to his councils. Sir Robert Peel, who had not expected any such event, was then at Rome with his family. Being sent for, however, he hastened back to London, where he arrived on the 9th of December; the Duke, who had, in the meantime, acted provisionally as minister, immediately consulted with him, and a Conservative Ministry was arranged as follows:—First Lord of the Treasury and Chancellor of the Exchequer, Sir Robert Peel; Lord Chancellor, Lord Lyndhurst; President of the Council, Lord Rosslyn; Privy Seal, Lord Wharnclyffe; Foreign Secretary, the Duke of Wellington; Home Secretary, Mr. Goulburn; Colonial Secretary, Lord Aberdeen; First Lord of the Admiralty, Earl de Grey; Master of the Ordnance, Sir George Murray; President of the Board of Trade and Master of the Mint, Mr. Alexander Baring; President of the India Board, Lord Ellenborough; Paymaster of the Forces, Sir E. Knatchbull; Secretary at War, Mr. Herries; Secretary for Ireland, Sir Henry Hardinge.

Sir Robert Peel's first premiership was but short. It began in December 1834, and in April 1835 it was at an end. On assuming office, Sir Robert, in a letter to the electors of Tamworth, had made a manifesto of the intended policy of his Conservative ministry. "With regard to the Reform Bill," he said, "I will now repeat the declaration which I made when I entered the House of Commons as a member of the Reformed Parliament, that I consider the Reform Bill a final and irrevocable settlement of a great constitutional question—a settlement which no friend to the peace and welfare of this country would attempt to disturb, either by indirect or by insidious means." Proceeding on this as a fixed principle, the new ministry was to govern the country in a Conservative spirit, but with a readiness to carry into effect certain minor domestic reforms which were indicated. This policy however, while perhaps it was not satisfactory to the remnant of the old Tories, was certainly not satisfactory to the country at large. The Reform Bill had not, indeed, produced all the results that the more eager had anticipated; the Whigs had not, in all respects, come up to the mark of popular expectation, and the disappointment had begun to show itself among the Radical party, who criticised the Whigs severely and were bent on carrying farther constitutional changes. Still, the re-action against Whig rule was not such that Sir Robert Peel's "Conservative" ministry could stand its ground.

This was shown by the result of the elections which followed the dissolution of parliament—a dissolution thought necessary by Sir Robert himself. As soon as the new parliament met, government was defeated by a majority of 316 votes to 306 on the election of a speaker—Mr. Abercromby, the nominee of the Whigs (now Lord Dunfermline), being chosen instead of the former speaker, Sir Charles Sutton. This was on the 19th of February 1835; and on the 25th of the same month government was again beaten in the Commons by a majority of seven, on a motion by Lord Morpeth for an amendment on the address. Sir Robert's speech on this occasion was extremely able. Singling out the fact that the strength of the opposition to him arose from the co-operation of Mr. O'Connell and the Irish members with the Whigs, he animadverted in cutting terms on this conjunction, seeing that in point of fact the Irish party and the Radicals had been far more unfriendly to the defunct Whig ministry than he and the Conservatives had been, and seeing also that even now the Whigs did not pledge themselves, any more than he did, to the Ballot, the exclusion of bishops from the House of Lords, the repeal of the Corn Laws, or any other of those measures upon which the Radicals had split with the Whigs. The gist of his argument was, that a Whig ministry could not really be a whit more innovative than his own would be. The answer to this given at the time, says Mr. Doubleday, was "that the Whigs would be more 'squeezable' than the Conservatives;" and, accordingly, though Sir Robert remained in office, showing wonderful patience and wonderful practical talent, till April, he was then defeated by so considerable a majority, in a skilfully framed series of motions of Lord John Russell's, relative to the temporalities of the Irish Church, that he had no option but to resign (April 8, 1835). Lord Melbourne was again placed at the head of a Whig administration, consisting of nearly the same men who had been in office four months before, the chief exception being that in the interim the famous rupture had taken place between the Whigs and Lord Brougham, so that the chancellorship was given not to him but to Lord Cottenham. Lord John Russell became home secretary.

The second Melbourne administration lasted throughout the rest of the reign of William IV. (who died June 20, 1837) and during nearly four years of the reign of Queen Victoria. During those six years (1835-1841) though many questions were agitated, their chief success was in the Municipal Reform Bill, passed during the first year. From 1836 to 1839 they were able to do little, and, robbed of their strength as they were by the growth of the more extreme party and of the party who desired a repeal of the Corn Laws, they were becoming more and more unpopular. At last, Sir Robert Peel, whose popularity had been in proportion increasing, and who had in the meantime been acting as a critic of their measures, and husbanding his own strength, opposed their bill for suspending the constitution of the Colony of Jamaica; and the majority for ministers was so small, the numbers being 294 against 289, that the Whigs resigned on the following day (May 7, 1839), and Sir Robert was called upon to form a new ministry. In this he failed, owing to the refusal of the Queen to consent to the removal of some ladies of her household, whose connection with the Whig party Sir Robert deemed inconsistent with their holding official place under a Conservative government. The Whigs accordingly resumed office, and kept it for more than two years longer—weakened, as before, by the pressure upon them of Mr. O'Connell's party, and the Anti-Corn-Law League on the one hand, and of Sir Robert Peel and his well-drilled Conservatives on the other. A general election in 1841, instead of giving them fresh strength, so increased the force of the Conservatives, that, immediately on the opening of the new parliament, Sir Robert had a majority of 360 against 269 in the Commons on a motion for an amendment to the address so framed as to involve a vote of want of confidence in the policy of ministers, more especially their financial policy and their conduct in reference to the Corn Laws (Aug. 27, 1841). Three days afterwards Lord Melbourne and his colleagues resigned, and Sir Robert Peel was once more premier.

The new Conservative cabinet consisted of the following members:—First Lord of the Treasury, Sir Robert Peel; Lord Chancellor, Lord Lyndhurst; President of the Council, Lord Wharfedale; First Lord of the Admiralty, Lord Haddington; Lord Privy Seal, the Duke of Buckingham; Home Secretary, Sir James Graham; Foreign Secretary, the Earl of Aberdeen; Colonial Secretary, Lord Stanley; President of the India Board, Lord Ellenborough; Secretary at War, Sir Henry Hardinge; President of the Board of Trade, the Earl of Ripon; Chancellor of the Exchequer, Mr. Goulburn; Paymaster-General, Sir Edward Knatchbull. Among the ministers not in the cabinet, was Mr. W. E. Gladstone, as Vice-President of the Board of Trade. At the head of this ministry, and with the command of a working majority of about a hundred in the House of Commons, Sir Robert entered on the greatest period of his political career. The history of his ministry from August 1841 to July 1846 is full of interest. Having committed himself to no definite line of policy, except in his preference for a sliding-scale of corn-duties over a fixed duty, and such other general avowals, the country, on his accession to office, was left to form its own auguries and anticipations. Nor during the remainder of the session of 1841 would he bring forward any explicit statement of intended measures—resolved as he was to mature them during the prorogation. On the reassembling of parliament in February 1842, he was prepared with his measures. They were of a bold and compre-

hensive character. First, in the matter of the Corn Laws, he proposed his famous sliding-scale (Feb. 9, 1842), according to which the duty on foreign corn, commencing in the case of wheat at 20s. per quarter when wheat was at 50s., should gradually diminish, as the price rose,—becoming, for example, 17s. when wheat was at 55s., 12s. when wheat was at 60s., 8s. when wheat was at 65s., 5s. when wheat was at 70s., and only 1s. when wheat should be at 78s. or upwards. There was a corresponding scale for oats and another for barley. The measure, displeasing as it was on various grounds to various parties—to the Whigs, because they had declared for a fixed duty, to the Anti-Corn Law League, because they desired a total repeal, and to many of the landed proprietors, because they disliked any relaxation of protection—roused much discussion; but after several motions against it on different principles had been rejected, it became law. Next came the important question of the means of repairing the deficit which had been going on in the revenue, at such a rate that the total for the five years ending April 5, 1842 was 7,502,638*l.*, while for the year 1842-3, it was calculated by anticipation at 2,570,000*l.* On this head, says Mr. Doubleday, Sir Robert argued "that the maximum of indirect taxation was then reached, and that to accumulate the already unbearable load of imposts upon the necessaries or even the luxuries of life would be ruinous as well as futile. The conclusion, therefore, was that nothing but a direct tax upon income could be relied upon to fill up the hiatus in the exchequer." Accordingly it was proposed to levy for three years an income-tax of sevenpence in the pound, or nearly three per cent. This also, in spite of opposition, was carried. Then came the revision of the tariff, by which the premier abandoned the duties on a great variety of minor foreign commodities, such as drugs and dye-woods; and diminished the prohibitory duties on cattle, sheep, pigs, salted meat, butter, eggs, cheese, and lard. Though the new tariff was also carried, it caused dissension between Sir Robert and many of his Protectionist supporters; the more so that, in the course of the debates upon it, it distinctly appeared that he was a convert to the theory of free-trade. "I believe," he said, in his speech on the tariff, "that on the general principle of free-trade, there is now no great difference of opinion, and that all agree in the general rule that 'we should purchase in the cheapest market and sell in the dearest.'" This statement drew rapturous cheers from the economists and opposition generally; and though Sir Robert went on to say, that he deemed corn and sugar exceptional cases, the ulterior tendency was evident. With the exception of some debates on the poor-law, and some on foreign policy in reference to France, Spain, America, and China, the foregoing measures of taxation and finance engrossed the parliament of 1842. The most important events of 1843 were extra-parliamentary. The permission of the disruption of the Scottish established church in May 1843 has been accounted by some a strange oversight of a ministry constructed on the principles of conservatism, and has been attributed to false or insufficient information on the part of government. The contest with Mr. O'Connell, who was then agitating Ireland to the verge of revolution by monster-meetings and the organised action of an association which had 'repeal' for its motto, occupied a greater share of the energies of the government. For a time, Sir Robert, confident, as it afterwards appeared, that Mr. O'Connell himself did not mean to go beyond a certain length, allowed him to proceed without check; but at length (October 1844) the government took their measures, the Clontarf meeting was forbidden, and Mr. O'Connell, his son John, and seven of their associates, were arrested on charges of conspiracy and sedition, and, being tried, were sentenced to fine and imprisonment. From that moment Mr. O'Connell was virtually crushed; for, though he survived during the remainder of Peel's administration, he was never able again to be what he had been. This however arose partly from causes which could not have been foreseen.

The year 1844, with its Banking Act and its extraordinary activity in railways, had passed away; and 1845 opened with every outward show of prosperity. The parliamentary session of that year was comparatively easy; the renewal of the income-tax for three years longer, the augmentation of the Maynooth grant, and the proposal for erecting six new Irish colleges, open to all sects, were carried by government; and though the Anti-Corn-Law League, represented in the House by Messrs. Cobden and Bright, were making way, and were gaining over the Whigs, the stability of the existing administration was not materially affected. But the events of the long recess of 1845 were of a kind to disturb all existing arrangements and all ordinary calculations. The potato rot, followed as it was by a dreadful famine in Ireland, rendered it absolutely necessary to come to some conclusion on the great question which the Anti-Corn-Law League had been maturing. Lord John Russell announced this in his famous letter of the 22nd of November, written from Edinburgh, to the electors of London. Sir Robert Peel lost no time in declaring to his colleagues his conviction, that the Corn Laws must be totally repealed. In this Lord Stanley and others would not go along with him; and on the 6th of December, Sir Robert advised the queen to send for Lord John Russell. As Earl Grey refused to join with Lord John in attempting to form a cabinet, Sir Robert was recalled after a few days, and re-accepted office at the head of his ministry (Lord Stanley seceding) with the avowed intention of repealing the Corn Laws. Accordingly, a few days after the meeting of parliament (Jan. 27, 1846), he brought out a new tariff, and with it his proposition to modify the action of

the sliding-scale for the next three years, and after that period to abolish all duties on corn, except the nominal one of a shilling per quarter. Vehement debates followed, in which Lord Stanley, Lord George Bentinck, and Mr. Disraeli, as the heads of a new Protectionist party, attacked Sir Robert with every weapon of sarcasm and argument. The Duke of Wellington however, and other Conservatives of great weight, remained firm to their leader; and the repeal was carried. Defeated on the Irish Coercion Bill, only a few hours after the Tariff Bill had passed the Lords, Sir Robert resigned office (June 29, 1846). Before doing so he made a magnanimous declaration to the effect that the merit of the repeal of the Corn Laws was more due to Mr. Cobden than to himself, or to any other man in the House. Never perhaps was a minister followed into his retirement with such general applauses as followed Sir Robert Peel.

Sir Robert's popularity continued unabated during the next four years. During two of these he lent a general and cordial support to the Whig government of Lord John Russell—voting with them on the question of the Navigation Laws, and also for the removal of Jewish disabilities. The European revolutionary movements of 1848-49 however, brought in a new set of questions, and Sir Robert disagreed seriously with the foreign policy of Lord Palmerston. Anticipations were general of his speedy return to power when, riding up Constitution-hill on the 29th of June 1850 he was thrown from his horse, and injured so severely that he died on the 2nd of July.

This is not the place for any attempt to appreciate Sir Robert's character as a man and a statesman. Many reviews of his career, some in the form of elaborate biographies, have been published since his death—among which may be mentioned 'The Political Life of Sir Robert Peel, by Thomas Doubleday,' 2 vols., 1856; and M. Guizot's more recent biographical tribute. Memoirs of Sir Robert from his own papers, referring particularly to his conduct in the Roman Catholic Emancipation movement, and in the Corn Law Repeal movement, have also been published by his literary executors. Almost all who have written about him have agreed in their general estimate of him as a man of high conscientiousness, and of a species of ability peculiarly English and peculiarly fitting him for the work which fell to him—ability not of the speculative or philosophical, but of the practical, deliberate, and considerate order. His political genius consisted in perceiving when the necessity for carrying a great social change arose, and in devising the parliamentary means for carrying it. As the leader of a party, and as a master of the art of parliamentary management, he was probably unrivalled; the House of Commons was his element; and though there have been greater orators there, there have been few speakers combining such dignity, tact and courtesy, with fine powers of eloquence. Apart from his parliamentary duties, his chief pleasure seemed to be in art. He was a noted collector of pictures, and left valuable collections both in his town mansion and at Drayton manor. He was generous in his patronage of artists, and many kind and munificent actions done by him privately have come to light. His tastes in literature, though he did not himself practise authorship except in connection with practical politics, were high and scholarly, and more wide in their range than might have been supposed.

Sir Robert left five sons—the present baronet, Sir Robert (born May 4, 1822), formerly secretary of legation in Switzerland, and now (1857) a junior lord of the Admiralty; Frederick (born 1823) also a member of parliament, and under-secretary of war; William (born 1824) a captain in the Royal Navy; John Floyd (born 1827) an officer in the Scots Fusilier Guards; Arthur Wellesley (born 1829). Of two daughters, one married (1841) Viscount Villiers, eldest son of Earl Jersey; the other married (1855) the Honourable Mr. Stonor.

PEELE, GEORGE, is supposed to have been a native of Devonshire, and to have been born not later than 1552 or 1553. In 1564 he was a member of Broadgates Hall, now Pembroke College, in Oxford; he took his degree of Bachelor of Arts in 1577, and was made Master of Arts in 1579. In no long time afterwards he appears to have removed to London, and thrown himself upon the world as a literary adventurer; but he was also during a portion of his career a professed actor. In that age the precariousness always incident to the profession of authorship was so distressingly great that the pursuit, if entered on by a poor man, was barely compatible with the preservation of personal respectability; and, though the particulars of Peele's career are but very imperfectly known, there is evidence enough to show that it was not only unfortunate but disreputable. His conduct is represented as having been even more irregular than that of Marlowe and Greene, who were his intimate associates and his coadjutors in the improvement of the early English drama. A tract, frequently reprinted, entitled 'The Merrie Conceited Jestes of George Peele,' represents him as nothing short of a common swindler. Some of the exploits which it relates are doubtless exaggerated, and others may have been erroneously fathered upon him; but it cannot be doubted that he suffered many pecuniary distresses, and was no way scrupulous in the shifts by which he sought relief. He was dead in 1598, when Meres, in the second part of his 'Palladis Tamia,' described his death as having been caused by his debaucheries. In the 'Jests' he is spoken of as a married man; and his letter to Lord Burleigh, asking for relief, describes the bearer as his eldest daughter.

The earliest of Peele's compositions that is known is a copy of

verses prefixed to Watson's *Ἐκατομυθία*, which was published in 1581, and his earliest known drama was printed in 1584. In 1823 Mr. Dyce published an excellent edition of 'The Works of George Peele, with some account of his Life and Writings,' 2 vols. post 8vo. A reprint of this edition, with improvements and additions, appeared in 1829; and in 1839 the same editor published a third volume. The non-dramatic poems, except a few short miscellaneous pieces and a long piece on the 'War of Troy,' are speeches for pageants (such as 'The Device of the Pageant borne before Woolstone Dixie, Lord Mayor of London, 1585'), or celebrations of public occasions, like the 'Polihymnia,' which describes a tilting-match held in the Queen's presence in 1589, and 'The Honour of the Garter displayed,' which commemorates the installation of the unfortunate Karl of Northumberland in 1598. The dramas in Mr. Dyce's collection are six in number: 1, 'The Arraignment of Paris,' published anonymously in 1584, and assigned to Peele on the authority of his friend Nash; 2, 'The Famous Chronicle of King Edward the First,' printed in 1593 and 1599; 3, 'The Old Wives' Tale, a pleasant conceited Comedie,' printed in 1595, and chiefly remarkable as treating, in a coarse and prosaic fashion, a story closely resembling that of Milton's 'Comus'; 4, 'The Love of King David and Fair Bethsabe, with the tragedie of Absolon,' printed in 1599; 5, 'The Battle of Alcazar,' printed in 1594; 6, 'The Historie of the two valiant Knights, Sir Clyomon and Sir Clamydes,' printed in 1599, with no author's name, but attributed to Peele by Mr. Dyce, on the faith of a manuscript marking in a very old hand on the title-page of a copy, to which not a little corroboration is afforded by the play itself. "Those of his dramatic works which have come down to us," says Mr. Knight, "afford evidence that he possessed great flexibility and rhetorical power, without much invention, with very little discrimination of character, and with that tendency to extravagance in the management of his incidents which exhibits small acquaintance with the higher principles of the dramatic art." His inferiority to Marlowe is great and unquestioned; and perhaps it is only his musical though monotonous versification that entitles him to be compared even with Greene.

PEIRESC, NICOLAS-CLAUDE-FABRI DE, a councillor of the parliament of Aix, was born at Beaugensier in Provence, on the 1st of December 1580. His father Renaud de Fabri, was a councillor of the Court of Aides. He received his earliest education among the Jesuits at Avignon, whence he was removed to Aix in 1595. It was during this period that his father being presented with a coin of the Emperor Arcadius, found at Beaugensier, young Peiresc begged to have it; and being delighted at finding that he could decipher the inscriptions, carried it to his uncle, who gave him two more, together with some books upon medals. This incident led him to the study of antiquities, in which he afterwards distinguished himself.

In 1599 he visited Italy, in the various cities and countries of which he spent nearly three years. In 1604 he took the degree of Doctor in Law at Aix. In 1605 he accompanied Duvaire, the first president of the parliament of Aix, to Paris, where he formed an acquaintance with De Thou, Isaac Casaubon, Papire Masson, Nicolas le Favre, the brothers St. Marthe, Bongars, and Francis Pithou; and in the following year came in the suite of La Boderie, the French ambassador, to England, where he was graciously received by King James. He visited Oxford, and formed an intimacy with Camden, Sir Robert Cotton, Sir Henry Saville, and other learned men. From England he passed over to Holland, and through Antwerp and Brussels back to Paris. In 1618 he procured a faithful copy and published a second edition of 'The Acts of the Monastery of Maren in Switzerland,' in defence of the royal line of France against the title of succession of the Austrian family to the French crown.

Peiresc was a liberal patron of letters; Bayle gave him the title of 'Le Procureur Général de la Littérature;' and the authors of his life show how imperfect the labours of Scaliger, Holstenius, Saumaise, Sicard, and Kircher would have been, unaided by the literary treasures which he procured for and presented to them. It was at his instigation that Grotius undertook his great work 'De Jure Belli et Pacis.' The multiplicity of his engagements and the extent of his correspondence prevented Peiresc from finishing any considerable work. He left behind him, besides some of his own composition, a great number of manuscripts, ancient and modern, on local history and antiquities, mathematics, astronomy, the medallist science, languages, &c. A catalogue of these, in number more than 700, is preserved among Sir Hans Sloane's Manuscripts in the British Museum, No. 767.

Of his writings there have been published forty-eight Italian letters addressed to Paul and John Baptist Gualdo in the 'Lettere d'Uomini Illustri;' a considerable number among those of Camden published by Smith; and a long and learned dissertation on an ancient tripod found at Frejus in the 'Mémoires de Littérature et de l'Histoire,' by Desmalets, in 1731. A considerable number of Peiresc's inedited letters were of late years communicated from time to time to M. Millin for his 'Magazin Encyclopédique,' by the president Fauris de Saint Vincens, who again published them separately, in five different tracts or portions, 8vo, Paris, 1815.

Peiresc died in the arms of his principal biographer, Gassendi, on the 24th of June 1637. He is stated to have purchased more printed books than any man of his time, yet the collection which he left was

far from large. As fast as he purchased books and manuscripts he made presents of them to learned men, to whom he knew they would be useful. His remaining library was purchased by the Collège of Navarre.

(*Vita Nic. Claudii Fabricii de Peiresc*, à Petro Gassendi, 4to, Par., 1641, transl. into Engl., by W. Rand, 8vo, Lond., 1657, &c.)

PEKAHIAH, the son of Menahem, succeeded his father on the throne of Israel in B.C. 760. He is wholly undistinguished in Holy Writ, except that he "departed not from the sins of Jeroboam, the son of Nebat, who made Israel to sin;" and after a reign of two years was slain by Pekah.

PEKAH, a captain of the army of Pekahiah, was the son of Ramiah, who, with fifty men of the Gileadites, conspired against his master, slew him in his palace, and succeeded him on the throne in B.C. 758. He followed the worship of his predecessors. After reigning seventeen years he formed an alliance with Rezin, king of Syria, against Jotham, king of Judah, but he dying the war was continued against his successor Ahaz. The Syrians took Elath, which was restored to the Edomites, and Pekah defeated Ahaz in a battle wherein 120,000 men of Judah, "all valiant men," were slain, and 200,000 captives were made, "women, sons, and daughters," with much spoil, with which they returned to Samaria. But a prophet named Oded commanded that the captives should be released. Certain chiefs of Ephraim "then stood up against them that came from the war," saying, "ye shall not bring in the captives hither;" because of the threatened anger of the Lord. The captives were therefore refreshed with meat and drink; clothed with the spoil that had been taken, conducted to Jericho, and restored to their country. Ahaz then sought the assistance of Tiglath-Pileser, king of Assyria, who overran Gilead and Galilee, and removed the inhabitants to Assyria and Media. Then Hosea formed a conspiracy against Pekah, and slew him in the twentieth year of his reign, B.C. 738. The government of Israel had now become a military anarchy, in which the strongest chiefs assumed the kingly office. There was an interregnum of ten years after the death of Pekah, probably in consequence of dissensions in the army, which was at length terminated by the accession of Hosea or Hoshea.

PELAGIUS. Respecting the early life of this celebrated leader of one great section of the Christian Church very little is really known. He is believed to have been born during the 4th century in Britain. His ordinary appellation is a translation of that borne by him in his own country. He settled in Italy as a monk, where by his purity of life and earnest denunciation of the immorality, then so shamefully prevalent among both clergy and laity, he gained much esteem. He began to disseminate his peculiar doctrines in Rome about A.D. 400. Accompanied by his friend and admirer Cælestius (once an advocate, but subsequently a monk, and who from temper, talents, age, and the habits of his former profession, was better fitted to head a party than his aged and simple-hearted leader), Pelagius visited Africa and Palestine. After escaping censure from the Council of Diospolis, he was subsequently condemned by Pope Zosimus (who had hitherto protected Cælestius), and banished from Italy by an edict of the Emperor Honorius in 418. It is supposed that on his expulsion from his retreat in Palestine, which he was induced to select from the similarity of his own views with those of the Eastern Church, he retired to his native country. Of his subsequent history no authentic particulars are recorded. Very little of his writings has come down to us, and these were transmitted (in an expurgated form) as the writings of Jerome, in whose collated works they are printed. The following are their titles:—'Expositionum in Epistolas Pauli Libri XIV.,' 'Epistola ad Demetriadem,' 'Libellus Fidelis ad Innocentium Papam.' Though traces of the views of Pelagius on original sin are easily discoverable in these writings, it is quite certain that they have been considerably altered from their original form.

We proceed to notice briefly the doctrines that have made the name of Pelagius play so memorable a part in the history of the Christian Church. The disputes in the earlier centuries of the Christian Church, when first liberated from external violence and obloquy by its formal establishment, related to the fundamental dogma of the Trinity. Christian writers, when freed from this struggle for life, and from the task of drawing up apologies in defence of the dignity, consistency, and purity of the faith which they professed, were occupied until the commencement of the 5th century with stating and enforcing the Catholic doctrine on this head. This task accomplished by the leaders of the Eastern Church (for whose speculative predilections a suitable field of labour seemed thus opened), a succession of controversies arose of a blended dialectic and practical nature, and for this reason equally fitted to occupy the attention of the principal intellects of the West. Such were the questions respecting grace, election, and predestination.

Whether the great fathers of the Church, anterior to the controversies of Augustine and Pelagius, had propounded sentiments which might be fairly considered as favourable to either party, is a doubtful question, and one, consequently, which has been the parent of much violent controversy. St. Augustine himself, as is well known, quoted the earlier fathers in support of his principles; but this asserted coincidence will hardly stand the test of a close examination. The case of St. Gregory of Nazianzum, whose sentiments were quoted by St. Augustine as identical with his own, will serve to illustrate this remark. St. Gregory of Nazianzum, according to the deliberate judgment of

his biographer, was not so consistent as either Augustine or Pelagius. He appears to have held a mean between the doctrines of unqualified freedom, as laid down by Origen, and those of grace, as subsequently taught by Augustine. His theory, if carried out (for the germs only of a theory are to be found in his writings), would have led him, in all probability, as an admirer of Origen, to the system of Pelagius rather than of Augustine; but precise dogmatic statements not being called for (as no theory on these subjects had been formally put forward), the sentiments of St. Gregory seem to have remained to the last an anticipation of what, in the days of the Reformation, would have been called Synergism.

Previous to the 5th century, the moral incapacity and the fallen condition of man, and the necessity of grace to change his nature and enable him to live aright in the sight of God, were admitted as doctrines of the Church; but no controversy in connection with them having as yet arisen, they had not been treated so precisely as the subjects of the Trinity and the Divinity of Christ. The seeds of dispute may be plainly discerned in the statements put forward by various fathers on these important topics. The usual differences in tone between the theology of the Eastern and Western Churches are to be observed in the course of these controversies—the first, more directly philosophical, taking a paramount interest in the Trinitarian question; the second being chiefly directed to the effects of certain doctrines on human practice. To tax the Greek fathers with tenets equivalent to Pelagianism is unfair, although, according to Hooker and Jackson, they approached somewhat too nearly to it; but it would be an arduous task to establish their entire freedom from a leaning to that side. Such must ever be the case with regard to the recorded sentiments of the class of divines so happily designated as "superstructure men," whose mission was rather to set forth the fruits of a change of heart than the means ordained of God to effect the change itself. Accordingly, some expressions of Clement of Alexandria, when speaking of the natural condition and powers of man, can be explained only by such means. The admiration of Origen evinced by Pelagius was erected, by the jealousy of Jerome, into a proof of his heterodoxy. Annianus, a follower of Origen, employed himself during the period of his disgrace by translating some of the homilies of St. Chrysostom, in order to establish the identity of the doctrines contained in them with those for which he suffered. On the other side, Tertullian and Cyprian in Africa, and subsequently Hilary and Ambrose, asserted very different doctrines, the precursors of the controversy which at last broke out in the 5th century.

Pelagius himself, of a cold and passionless temperament, had not gone through the fiery trials of St. Augustine. Although fully alive to the deadly evils of Antinomianism, he fell into an error equally pernicious when he proposed to preach, as an antidote, the limitation of the sin of Adam (in its consequences) to himself; and the power of man to "do good works pleasant and acceptable to God," so as to merit eternal happiness, without the aid of divine grace. Not merely the culminating points of the system of Augustine, the doctrines of irresistible and absolute predestination, were repudiated by Pelagius, but the fundamental doctrines of the Gospel, of the necessity of pardoning mercy and sanctifying grace, were degraded from their proper rank in the Christian scheme, and the Atonement deprived of its essential virtues.

Differing so widely as did the systems of Pelagius and his great antagonist, it was not difficult to foresee that attempts at compromise would hardly be successful. The Church of the south of Gaul was at that time in a flourishing condition, its leaders were pious and learned, and an active ecclesiastical spirit pervaded the whole body. The first attempt to reconcile these contradictory dogmas was made at Marseille. Its supporters were consequently designated as Semi-Pelagians. They agreed with St. Augustine in that they ascribed (*generally*) a holy life as such to the grace of God; but, on the other hand, they approached more nearly to Pelagius, as they attributed the beginning and end, or the commencement and sum of a course of acceptable actions, to the force of human merit. Its internal character, as well as the circumstances under which it originated, contributed to give it some popularity, and to rank among its defenders the names of Cassian, and the better known one of Vincentius Lerinensis. But the received belief found active champions in Hilary and Prosper. To the exertions of the latter the formal document of Pope Cælestine condemnatory of Pelagian doctrines is principally attributable.

Subsequently to the decisions of the Council of Orange in 529, the system of Augustine may be considered as the established standard of orthodoxy throughout the West. But the seeds of future discussion were contained in the authoritative declarations of the Church, which were studiously couched in wide terms. And the subject of predestination was treated indirectly and in general expressions, with a view to avoid controversy. But this temporising policy for the hope of present security proved, as usual, the parent of weakness. Various attempts were made to turn the embarrassing doctrine of predestination. The most celebrated among these is that which arose during the 9th century, with which the name of the unhappy Gottschalk is connected. The condemnations, disgrace, and punishment inflicted on this unhappy man, in consequence of his ultra-Augustinianism with regard to the doctrine of predestination, which brought upon him the hostility of the ruling Semi-Pelagian party, are well known. It is manifest how

ever from several treatises by the most eminent theologians of the day, as well as the decisions of the various councils and synods held in connection with this affair of Gottschalk, that ecclesiastical and orthodox leanings were on the side of Augustine and his admirer.

Thus professedly Augustinian as the spirit of Catholic theology undoubtedly was, there arises a question—by what means did the antagonist principle of Pelagianism enter so largely and actively into the church system of the middle ages? Ignorance of the real principles of Augustine was one cause, which enabled the leading schoolmen to engraft their perversions upon his doctrines. For the Pelagianism of one great doctor of the middle ages, Duns Scotus, is clear and undoubted; and the leanings of another, St. Thomas Aquinas, Augustinian as he has often been deemed, are found, when closely regarded, to be at least Semi-Pelagian. Most close and natural was the connection between Pelagianism and the paramount attention bestowed by the schoolmen on speculative questions in morality, to which the interests of religion were often sacrificed. The naturalism of the system of Pelagius is well known. In this also some of the leading schoolmen were his followers. In their high and unbounded admiration for Aristotle, in whom they professed to discover the best and most eligible guide to Christian truth, they left, like Pelagius, the line of demarcation between Christianity and heathenism faint and indistinct. The modern Arminians, called also in the first instance Remonstrants, and in more homely phrase Free-Willers, correspond very nearly in doctrine with the Semi-Pelagians above mentioned. [ARMINIUS.]

PELAGIUS I. succeeded Virgilius in the see of Rome in 555. Like his predecessor, he was involved in dogmatical controversy with most of the Western bishops, concerning certain theological tenets condemned by the council of Constantinople, and known in controversial history by the name of the three chapters, being supported in his view of the question by the Emperor Justinian, who was fond of interfering in theological disputations. (Norris, 'Dissertatio de Synodo quinta.') Pelagius died in the year 560, and was succeeded by John III.

PELAGIUS II. succeeded Benedict I. in 578. He was likewise embroiled in disputes concerning the three chapters above mentioned. In the meantime a council which assembled at Constantinople bestowed on the patriarch of that city the title of Œcumenic or 'universal' bishop, at which Pelagius was greatly offended. He died at Rome in 590, and was succeeded by Gregory I.

PELAYO, first king of Asturias, was the son of Favila, duke of Cantabria, and a descendant of Chindaswind, the twenty-eighth in order among the Gothic kings of Spain. After the disastrous battle of Guadalete (A.D. 711), all those Christians who either feared the cruelties of the Moorish conquerors or could not bear their yoke, fled for refuge to the inaccessible mountains of the Asturias, where the arms of the invaders had not yet reached. Among them was Pelayo, who, according to some authorities, had fought bravely on the plains of Xerez, and witnessed the defeat of the Christian arms, but who, if we follow the account of the Arabian writers, escaped from Cordova, where he was retained as a hostage for the fidelity of his countrymen. On his arrival among the refugees, Pelayo was appointed their chief. At first these relics of the Gothic monarchy seem only to have been animated by the wish of self-preservation, but on their numbers increasing, they thought of reviving the expiring embers of liberty. Al-horr Ibn-Abd-el-rahman, who governed Spain in the kalif's name, having been apprised of their intentions, despatched a considerable force under Alkama, to crush the rising insurrection, but the followers of Pelayo had already gained possession of the mountain pass of Auseva, near the river Sella, and concealed part of their force in the cavern of Covadonga. While the Moslems were ascending the steep acclivity where the Christians were encamped, and where the chapel of St. Mary now stands, a sudden attack upon one of their flanks, accompanied by a shower of stones, and fragments of rocks hurled down from the top of the mountain, threw their ranks into confusion. Pelayo and his followers then issued from the cavern, and the Moslems fled precipitately from the field of battle, leaving their general and thousands of their men (718).

Pelayo's success did not end here. Munuza, or Al-munayzir, the governor, some say, of Leon, others, of Gijon, who hastened to the assistance of his countrymen, lost his life in a like manner, and his army was completely defeated. These memorable events fixed the destiny of the infant kingdom. The important city of Leon, long the court of Pelayo's successors, was next reduced (722), as well as Zamora, Lugo, and Astorga, and although the Mohammedans in 724 recovered some of these places, the intestine wars in which they themselves were engaged, and the repeated incursions of Pelayo, helped to consolidate the little kingdom which the Asturian hero transmitted to his successor Alonso el Casto. The remainder of Pelayo's reign is unknown. He died in 737, and was buried in the church of Santa Eulalia at Cangas de Onis.

(Mariana, *Historia General de España*, lib. vii., chap. i.; Masdeu, *Historia Crítica*, vol. xii.; Conde, *Historia de la Dominación de los Arabes en España*, vol. i., p. 73; Bordon, *Cartas para ilustrar la Historia de España*, Mad., 1806.)

PÉLISSIER, AIMABLE-JEAN-JACQUES, MARÉCHAL, DUC DE MALAKOFF, was born in a small borough near Rouen, on the 16th of November 1794. Having enjoyed the benefit of a sound education at

college, he went through a course of military training at the *École de St. Cyr*, and then entered the French army as sub-lieutenant, in March 1815, during the Hundred Days. After the peace he devoted himself to those serious studies of military science which have at all times kept up in France the supply of competent generals. He distinguished himself under Moncoy in the Spanish campaign of 1823, was rewarded for his gallantry with several orders and crosses, and became a captain in the King's Guards in 1828.

The following year (1829) he took an active part in the campaign in Greece, receiving fresh marks of distinction for his good conduct. He was already known as one of the most promising officers in the French army, and was therefore summoned to join the great expedition against Algiers, in 1830, under Marshal Bourmont. For his dashing behaviour in this war he was appointed to the rank of major, and created an officer of the legion of honour. In Africa he continued two years, constantly employed in that novel but trying and fatiguing mode of war, which has completely altered the nature of military service in the French army, and produced even a very marked change in the physical organisation of the French soldier, as all observant travellers report. This laborious life broke his health, compelled him to return to France, and kept him for several years at a distance from the scene of war. Still, during this interim the government availed itself of his talents and experience on several employments at home—half civil, half military. From the autumn of 1832 until the close of 1839 Péliissier was occupied in this manner. In 1840 he returned to Africa, was appointed successively chief of the staff to General Schramm and other commanders, and was made a colonel in July. During the next four years he was continually engaged in those desultory excursions and skirmishes which constitute the campaigns of war among the wandering tribes of Algeria.

He had now been thirty years in the French army, and was not only admired for his valour and capacity, but was generally liked by men of all ranks in the service for his private character and frank manners. It was then that, unfortunately for his fame, he was ordered to take charge of an expedition against the Kabyles in the Sahara; a wandering tribe of hardy and resolute men, who called themselves invincible, partly because they do not fear death, and partly because the tortuous passes and labyrinths by which their territory is secured, had long prevented the approach of a conquering enemy. Accordingly, in 1845, Colonel Péliissier marched in pursuit of the Ouled Riaha, one of the most desperate of the Kabyle tribes, and entered their territory on the 18th of June. The Ouled Riaha, finding themselves closely pursued, took refuge in the spacious caverns in which that gregarious people dwell. Summoned repeatedly to surrender, they refused, and fired on the messengers sent to offer them terms. Then, to terrify them, and oblige them to come out, fascines were placed at the entrance of the caves, and kindled. Letters, offering to spare their lives and liberty, if they gave up their arms and horses, were next thrown into their retreat. They would not comply. Fresh fascines were now lighted, and pushed still closer to the mouths of the caverns, which produced a great tumult within. Some of them wished to submit, but the greater number continued stubborn. Still wishing to save them, Péliissier sent several Arabs amongst them, to exhort them to surrender; and on their refusal sent a flag of truce into the caverns, but the Africans received it with a discharge of musketry. Twenty-eight hours thus elapsed, when for the last time the fire was kindled, and kept burning until the groans of the sufferers had died away. Nearly six hundred dead bodies were afterwards found lying about, and of those who were got out still living about two hundred more sunk soon after. When the dismal intelligence reached Europe it was received with universal horror and reprobation, and it was as loudly denounced in Paris as it was in London; yet Marshal Bugeaud, who commanded in Algeria, defended the character of Péliissier, and called the operation "a necessity of war."

In 1847 Péliissier became a *maréchal de camp*, and a lieutenant-general in 1848. In this capacity he remained serving in Africa until the early part of 1855, when he was suddenly ordered to take the command of one of the corps d'armés in the Crimea. At the head of that corps, and second in command to General Canrobert, he soon imparted an increased energy to the French army before Sebastopol, and induced many comparisons between him and his chief, derogatory to the latter. Canrobert, being hurt by these reflections, wrote to the Emperor Napoleon for leave to resign. [CANROBERT.] Accordingly, on the 19th of May 1855 General Péliissier was raised to the chief command, and his corps transferred to his predecessor. The expedition to Kertch soon after justified by its success the expectations formed of the new leader. To this succeeded the well-known advance on the Tchernaya, and several bold attacks on the great Russian works. Finally, on the 8th of September 1855, the great fort of the Malakoff was stormed and carried by the French, and the south of the town of Sebastopol fell into the hands of the allies in consequence. For these exploits Péliissier was created a marshal, and soon after Napoleon III. gave him the title of Duc de Malakoff. Marshal Péliissier has likewise received the Grand Cross of the Bath from Queen Victoria. [SUPP.]

PELL, JOHN, an eminent English mathematician, descended from an ancient family in Lincolnshire, was born at Southwick in Sussex, March 1st, 1610, where his father was minister. From an astrological horoscope, preserved among Ashmole's collections at Oxford, we learn

that he was born at twenty-one minutes after one o'clock on that day. He received his grammar education at the free-school of Steyning in Sussex, and made so rapid a proficiency in the Latin, Greek, and Hebrew languages, that at the early age of thirteen he was sent to Trinity College, Cambridge. He never offered himself however a candidate at the election of scholars or fellows of his college. In 1631 he was admitted to an 'ad eundem' degree in the University of Oxford, having proceeded to the degree of Master of Arts at Cambridge the previous year. In 1632 he married Ithamar, second daughter of Mr. Henry Reginolles, of London, by whom he had four sons and four daughters. During this time he had acquired a mathematical reputation by the publication of several works, and when a vacancy occurred in the mathematical chair at Amsterdam, in 1639, Sir William Boswell, the English resident with the States-general, used his interest that he might succeed to that professorship. It was not filled up however till 1643, when Pell was chosen; and he greatly distinguished himself in this situation by his lectures on Diophantus, and on various other parts of the mathematics. In 1646, on the invitation of the Prince of Orange, he removed to the new college of Breda, as professor of mathematics, with a salary of 1000 guilders per annum. In 1652 he returned to England, but in two years afterwards, in 1654, he was chosen, by the Protector Cromwell, agent to the Protestant cantons in Switzerland. He continued in Switzerland till June 23, 1658, when he set out for England, where he arrived about the time of Cromwell's death. His diaries and correspondence during this period are still preserved among the Lansdowne manuscripts in the British Museum, and are particularly curious and valuable for the history of this period. His negotiations abroad gave afterwards general satisfaction, as it appeared he had done no small service to the interest of King Charles II. and of the Church of England. Having entered holy orders, he was instituted, in 1661, to the rectory of Fobbing in Essex, with the chapel of Battlesden annexed, on the presentation of the king. In 1673 he was presented, by Dr. Sheldon, then bishop of London, to the rectory of Laingdon in Essex; and about the same time he took the degree of Doctor of Divinity. Shortly afterwards his patron was translated to the archbishopric of Canterbury, and made him one of his domestic chaplains. Such an appointment is generally considered to be a step to higher preferment, but Dr. Pell was so intent on the philosophical and mathematical sciences, that he neglected his own interest, and was so imprudent with respect to the management of his worldly affairs, that he would have disgraced the station of a dignitary. Anthony Wood says that "he was a shiftless man, and his tenants and relations dealt so unkindly with him, that they cozened him of the profits of his parsonage, and kept him so indigent that he wanted necessaries, and even paper and ink, to his dying day." In the midst of his incessant application to his studies, owing to the neglect of his affairs his embarrassments increased, and he contracted debts, which proved the occasion of his being twice in the King's Bench prison. Being at length reduced to great indigence, he was invited by Dr. Whistler, in March 1682, to live in the College of Physicians. Here he continued only for a few months, the ill state of his health rendering it advisable for him to remove to the house of a grandchild of his in St. Margaret's, Westminster. He afterwards removed to the house of Mr. Cothorne, reader of the church of St. Giles-in-the-Fields, where he died, on the 12th of December 1685, in the seventy-fourth year of his age, and was interred at the expense of Dr. Busby, master of Westminster school, and Mr. Sharp, rector of St. Giles's, in the rector's vault under that church.

Dr. Pell's reputation as an algebraist and mathematician was great in his own time, and he deservedly holds a high position in the history of the mathematics of the 17th century. It was to Pell that Newton first developed his invention of fluxions; and the original letter containing his method, which was printed in the 'Commercium Epistolicum,' was discovered by the late Professor Rigaud in the library of the Earl of Macclesfield. Dr. Pell published the following works:— 1, 'A Refutation of Longomontanus's Discourse, De vera Circuli Mensura,' 4to, Amst., 1644, 2pp. 2, 'A Letter to Theodore Haak concerning Easter,' 4to, Lond., 1664. The original manuscript is in the British Museum, manuscript Sloan., 4410. This is merely in favour of what was then called the New Style, and consists only of seven pages. 3, 'An Idea of the Mathematics.' Printed at the end of Mr. John Durie's 'Reformer Library-keeper.' 4, 'A table of Ten Thousand Square Numbers, viz. of all the Square Numbers between 0 and 100 millions, and of their Sides or Roots, which are all the whole numbers between 0 and ten thousand,' folio, Lond., 1672. Fl. 16. 5, 'Rhoniuss's Algebra, translated out of the High Dutch into English by Thomas Branker, much altered and amended, by Dr. John Pell,' 4to, London, 1668. In this work Dr. Pell first invented the mode of registering the steps of difficult equations, which was then adopted by several writers, but has now fallen out of use: the last work that we know of which contains it is Butler's 'Introduction to the Mathematics,' published in 1816. Here also he introduced the character  $\div$  for division, which is now employed. 6, 'An Essay on the Day Fatality of Rome.' Printed in Aubrey's 'Miscellanies,' edit. 1721, p. 22.

Besides these, he published several single-leaf controversial pamphlets. His manuscripts and letters still remaining are numerous, and perhaps in no similar instance have papers been so carefully preserved. In the British Museum alone are nearly forty folio volumes, none of

them very small, of his letters and mathematical scraps. These were supposed by Dr. Hutton to have been deposited in the library of the Royal Society, but it has been shown (Halliwell's 'Life of Sir S. Morland,' pp. 27-30) that they are all deposited in the Birch collection of manuscripts in the British Museum, with the exception perhaps of a few manuscript letters. In the Harleian collection there are three other similar volumes, which no doubt belonged to the series, and it is difficult to say how they could have been transferred to that library. Dr. Hutton says that he left some of his manuscripts at Brereton in Cheshire, where he resided some time, being the seat of William Lord Brereton, who had been his pupil at Breda. In August 1644 he was preparing for the press a new edition of Diophantus, one of his most favourite books, in which he intended to correct the translation and make new illustrations, but this project was never perfected. He designed likewise to publish an edition of Apollonius, but laid it aside in May 1645, at the desire of Golius, who was engaged in an edition of that author from an Arabic manuscript given him at Aleppo eighteen years before. Pell's letters in the Royal Society are addressed principally to Cavendish; and one out of the series has accidentally found its way into a manuscript in the British Museum, manuscript Harl., 6796.

PELLERIN, JOSEPH, was born at Marli-le-Roi, near Versailles, April 27, 1684. He studied at Paris, and, besides the Latin and Greek languages, made himself master of the Italian, Spanish, and English. After completing his college studies, he learned Hebrew, Syriac, and Arabic. His knowledge of the three modern languages procured him, in 1706, a situation in the navy-office (bureau de la marine), where he was employed in making translations and extracts in those languages from the foreign correspondence of the minister. Several letters written in cipher having been seized on board a Spanish frigate on her voyage from Barcelona to Genoa, in 1709, Pellerin in a few days deciphered them without the keys. They were found to be important communications, some in French for the court of Turin, and some in Italian for the court of Naples. Torcy, then minister for foreign affairs, had an interview with Pellerin, who was soon afterwards appointed private secretary (secrétaire de cabinet) to the secretary of state for the navy; and he held the situation when, on the death of Louis XIV., the business of the office was transacted by a council. The Comte de Thoulouse, grand admiral of France, made Pellerin a commissioner of the navy in 1718, and sent him on service to the great harbours of France, and in 1723 he was destined to make a general inspection of all the harbours, but a change of ministry took place, the council of the navy was suppressed, and other measures were decided on. Pellerin however still continued attached to the department of the minister for the navy, by whom he was appointed commissioner-general, and afterwards was made first clerk of the navy, in which office his activity, probity, and firmness, combined with the suavity of his manners, met with universal approbation. In 1745 bodily infirmities compelled him to retire from the public service. His son, who had served in the navy and in the naval department of the government, succeeded him in his office.

Pellerin, during his long service of about forty years, had used the opportunities which his situations afforded him in the collection of a considerable number of coins and medals, at first from curiosity, but afterwards from a taste for them as monuments of antiquity. To occupy his leisure and alleviate his sufferings, after his retirement, he began to read, explain, classify, and arrange them. His early studies in the oriental languages, as well as in Latin and Greek, were renewed, and became a source of much gratification to him. Such was the origin of that magnificent collection of coins and medals which he formed in the course of the subsequent forty years of his life. He died at Paris, August 20, 1782, in his ninety-ninth year.

In the arrangement and classification of his medals Pellerin adopted a system different from that of any previous collector. Instead of distributing them in drawers according to difference of metals, and arranging them alphabetically without reference to the countries to which they belonged, he placed them according to certain great geographical divisions, preserving however an alphabetical arrangement of the medals of kings, nations, and towns included in each of those divisions. His descriptions of the medals, with his comments and remarks, formed a large Catalogue Raisonné, which he published under the title of 'Recueil de Médailles de Rois, Peuples, et Villes,' &c., 10 vols. 4to, Paris, 1762 to 1778. His delight in his favourite study was such that when upwards of ninety years of age and blind, he composed and wrote with his own hand, by means of an ingenious contrivance, the last volume of the work, which is entitled 'Additions,' &c. A system of arrangement and classification similar to that of Pellerin was adopted by Eckhel, in his 'Dooctrina Numorum Veterum.' [ECKHEL, J. H.] Pellerin and Eckhel were probably the two greatest numismatists who have ever lived. Pellerin's collection, which consisted of 32,500 medals, was bought by the King of France, in 1776, for 300,000 francs. The king afterwards allowed Pellerin, as long as he lived, the use of the whole of the royal collection, which then amounted to about 44,000.

PELLICO, SILVIO, was born in 1789, at Saluzzo, in Piedmont. His father was Onorato Pellico, of a respectable family, and in good circumstances. His mother was a native of Chambéry in Savoy, who, retaining her maiden name in addition to that of her husband, was

called La Signora Pellico-Tournier. They had six children. Luigi and Giuseppina were the two eldest; Silvio and Rosina, twins, followed; Francesco and Marietta were next in succession. Luigi and Silvio were educated at home under the care of their parents. Onorato Pellico, while his children were yet young, having established a manufactory for winding silk at Pinerolo, resided there some time; but removed to Turin, where he was appointed to a situation under the government. There Luigi and Silvio were instructed in Latin and Greek, and other branches of education, by Don Manavella, a clergyman. Onorato Pellico, who had a taste for poetry and the drama, wrote scenes and short plays, which were performed by his children and others of a similar age, on a small stage constructed in his house. Luigi afterwards became a dramatic writer as well as Silvio.

Silvio Pellico's twin-sister Rosina, who is described as having been extremely beautiful, was married at the age of eighteen to a cousin by the mother's side, who was prosperously established in business at Lyon in France; and Signora Pellico-Tournier, with her son Silvio, accompanied the bride to the residence of her husband. The mother after a short stay returned home, but Silvio continued to reside with his sister's husband during four years. While at Lyon in 1807 Ugo Foscolo's poem 'I Sepolcri' ('The Tombs') was published, and was sent to him by his brother Luigi. The reading of it excited him greatly, and stimulated him to the prosecution of his poetical studies. Meantime his father had obtained a situation under the minister of war at Milan, and had removed to that city with his family. His brother Luigi was secretary to the Marquis Caprara, grand equerry of the kingdom of Italy.

Silvio Pellico returned from France in 1810, and went to Milan, where he became a teacher of French in the Collegio degli Orfani Militari, an occupation which required two or three hours of the day. The rest of his time was devoted to his poetical studies and to the acquisition of the German and English languages. He became acquainted with Ugo Foscolo and Monti, who were then at Milan, and occasionally saw Pindemonte, who resided at Verona. He was for a time tutor to the son of Count Briche, and afterwards to the two sons of Count Luigi Porro Lambertenghi, in whose mansion he became a resident, and at whose assemblies he associated with the most intellectual men of Italy, and with many distinguished foreigners, among whom he himself mentions Madame de Staël, Schlegel, Davy, Byron, Hobhouse, and Brougham. After the fall of Napoleon I., Onorato Pellico returned with the rest of his family to Turin, where he had again an office under the government. Silvio Pellico continued to reside at Milan with Count Porro.

Silvio Pellico's first dramatic production was the tragedy of 'Laodamia,' which was followed by his tragedy of 'Francesca da Rimini,' founded on a well-known passage in the 5th canto of the 'Inferno' of Dante. This tragedy was much admired, was acted with great applause in the principal cities of Italy, and established his reputation as a dramatic poet. Byron translated it into English verse, but did not publish it, and Pellico translated Byron's 'Manfred' into Italian prose. He was desirous of publishing his next tragedy, 'Eufemia da Messina;' but so many passages were objected to by the censorship that he sent it to Turin, where it was published by his father. It was afterwards published at Milan, but was not allowed to be acted. In 1818 Silvio Pellico was the chief agent in establishing a periodical entitled 'Il Conciliatore,' of which he became the secretary. It was mainly of a literary character, and Silvio Pellico, Manzoni, and similar literary men, were the chief contributors; but it was of too liberal a tendency to be endured by the Austrian government, and was suppressed.

On the 13th of October 1820 Silvio Pellico was arrested, and was confined in the prison of Santa Margherita at Milan. He seems to have become a member of the revolutionary society called Carbonari, but does not say so. He was transferred thence to a prison on the island of San Michele, near Venice; and while there was tried at Venice, found guilty, and condemned to death. That sentence however was commuted to fifteen years of 'carcere duro.' In April 1822 he was removed to the prison of Spielberg, near the city of Brünn, in Moravia. Some of those sent to this prison are condemned to the 'carcere duro' (severe imprisonment), and some to 'carcere durissimo' (very severe imprisonment). Silvio Pellico says:—"Those condemned to 'carcere duro' are obliged to labour, to wear chains on their feet, to sleep on bare boards, and to eat the poorest food. Those condemned to 'carcere durissimo' are chained more heavily, and with a band of iron round the waist, the chain being fastened in the wall, so that they can walk only just by the side of the boards which serve them for a bed. Their food is the same, though the law says only bread and water." In the earlier part of his imprisonment, during about eighteen months, he was treated with indulgence by his jailer, and read the Bible, Homer in Greek, Dante, Petrarch, Shakspeare, Byron, Scott, Schiller, Göthe, and other writers, and was allowed some paper, and pen and ink. His friendly jailer having been removed to another situation, during the whole of the years 1824-25-26-27 his imprisonment was excessively severe, and his health was much injured. His imprisonment was afterwards less stringent, and on the 1st of August 1830 he received the announcement that he was to be set at liberty. This promise was soon afterwards performed, and he returned to his parents at Turin. In 1831 he published the account of his imprison-

ments, entitled 'Le Mie Prigioni,' which has had a very large circulation, and has been translated into all the languages of Europe. It is written in a style of great simplicity, with much apparent truthfulness, and is very interesting. In 1832 he published at Turin 'Tre Nove Tragedie,' which were 'Giasonda da Mandrisio,' 'Leoniero da Dertona,' and 'Erodiade;' and in 1832 his tragedy of 'Tommaso Moro.' His mother died in 1837, his father in 1838, and his brother Luigi in 1841. In 1837 appeared his 'Opere Inedite,' 2 vols. One of his latest works was a treatise in prose, 'Dei Doveri degli Uomini' ('On the Duties of Men'). During his later years Silvio Pellico was secretary to the Marchesa Barola, and he died at her villa of Moncaglieri, near Turin, January 1, 1854.

PELLISSON-FONTANIER, PAUL, was born at Béziers in 1624. He was deprived of his father at an early age, and was educated by his mother in the principles of the Reformed church. His family had for a long time been distinguished in the profession of the law, and to that profession he was also destined. He studied successively at Castres, Montauban, and Toulouse, and acquired an intimate knowledge of the best classical writers, and of French, Spanish, and Italian literature. To the study of civil law and jurisprudence he especially devoted himself; the fruits of which shortly afterwards appeared in a paraphrase of the Institutes of Justinian, which was published at Paris in 1645. He commenced his legal career with considerable success at Castres, but it was soon interrupted by a most severe attack of small-pox, which permanently affected his sight and so disfigured him that Mad. de Scuderi, though sincerely attached to him ('Menagiana,' vol. ii. p. 331, Paris, 1715), could not refrain from making him the object of her wit, by remarking that he abused the permission of being ugly.

Compelled by his infirmities to abandon the practice of his profession, he retired into the country and devoted himself to general literature. In 1652 he settled in Paris, where his writings had already made him advantageously known. The French Academy, in acknowledgment of the services he had rendered it by writing its history (the work perhaps by which he is best known), decreed that he should be appointed a member of it on the first vacancy that should occur, and that in the meantime he should be permitted to attend their sittings: to enhance the honour, they further decided that a similar privilege should on no consideration be granted in future to any man of letters. The same year Pellisson purchased the office of secretary to the king; and in 1657 he was appointed first clerk to the intendant of finances, Fouquet, of unfortunate celebrity. In an employment where vast sums of money passed through his hands he maintained his reputation for integrity, while his increased means enabled him to render pecuniary services to the distressed men of letters in the capital. His services were rewarded by Fouquet with the appointment, in 1660, to the office of state counsellor. The following year he partook of the disgrace of his patron, and, as being the principal sharer in his fortunes and the supposed confidant of his secrets, was imprisoned in the Bastille. He remained upwards of four years in captivity. During this imprisonment he composed three Memoirs in behalf of Fouquet, which have been reckoned the finest models of that species of writing in the French language. They became however the plea for additional severity towards Pellisson. In order to increase the rigour of his confinement he was deprived of the use of ink and paper, the want of which compelled him to have recourse to divers ingenious expedients, such as writing on the margin of his books with the lead of the casements. The persevering influence of his friends was at length successful in restoring him to liberty; and he was even received into favour by a king whose characteristic was seldom to forgive any opposition to his despotic will. The sufferings he had undergone at the Bastille were compensated for by a pension and the appointment of historiographer to the king. In 1670 he abjured Protestantism for the Roman Catholic faith. This change, followed soon after by his entrance into holy orders, enabled Louis XIV. to bestow upon him the abbacy of Gimont and the priory of St. Orens, a benefice of considerable value in the diocese of Auch. However he is favourably distinguished from most proselytes by the lenient and tolerant disposition which he evinced towards those who disagreed with him in opinion, and, when high in royal favour, he publicly disapproved and opposed by his influence and writings the violent measures which were employed by the king's command to bring his Protestant subjects within the pale of the Roman church. In 1671, on the occasion of the reception of the archbishop of Paris as member of the Academy, he delivered a panegyric on Louis XIV., which was translated into the Latin, English, Spanish, Portuguese, Italian, and even Arabic languages. In 1673, having incurred the displeasure of Madame de Montespan, he was deprived of his office of royal historiographer, but at the special request of Louis, he continued to write the Life of the King, and for that purpose accompanied him in several of his campaigns. Nearly every succeeding year of Pellisson's life was marked by some instance of royal favour. His death took place at Versailles, in February 1693. The fact of his not receiving the Sacrament in his last moments has been explained by the Roman Catholic writers to be owing to the suddenness of his death, by Protestants to his unwillingness to sanction a conversion, which they allege to be insincere, by a solemn act of hypocrisy. The arguments on both sides will be found impartially stated by Bayle (art. 'Pellisson.')

The principal works of this writer, who enjoyed a greater reputation in his life-time than has been accorded to him since his death, are 1, 'Histoire de l'Académie Française,' which was first published at Paris, in 1653; the best edition is that by l'Abbé d'Olivet, by whom it has been continued, Paris, 1730. The fault of this work is its diffuseness. 2, 'Histoire de Louis XIV.,' which extends from the death of Mazarin, in 1661, to the peace of Nimeguen in 1678; this history has the faults to be expected in the work of a professed courtier; the best edition is that of Paris, 3 vols. in 12mo, 1749. 3, 'Abrégé de la Vie d'Anne d'Autriche,' 1666 in 4to; a panegyric rather than a history. 4, 'Histoire de la Conquête de la Franche Comté,' in the 5th vol. of 'Les Mémoires du Père Desmolets;' this work has been greatly praised by Voltaire. 5, 'Lettres Historiques et Œuvres diverses,' 3 vols. in 12mo, 1749; the letters, 273 in number, are a journal of the king's journeys and encampments in the above-mentioned campaign. 6, 'Recueil des Pièces Galantes,' 5 vols., 1695, being a correspondence in prose and verse between him and the Comtesse de la Suze; his verse partakes of the elegance of his style in prose, but it is deficient in imagination. 7, 'Réflexions sur les Différends de la Religion,' 4 vols. 12mo, an answer to the arguments of Jurieu on religious toleration; on this treatise Bayle has made several valuable remarks in his notes on the article 'Pellisson.' 8, 'Traité de l'Eucharistie,' a work he left unfinished. The Prologue in verse of the comedy 'Les Facheux' of Molière is stated in the 'Ménagiana' (vol. i. p. 90) to be by Pellisson. An edition of his select works was published by Desessart, 12mo, Paris, 1805, 2 vols.

PELOPIDAS, the son of Hippoclus, belonged to one of the principal families of Thebes. He distinguished himself at the battle of Mantinea (B.C. 385), in which the Thebans took part as allies of the Lacedæmonians under the Spartan king Agesipolis. In this battle Pelopidas, being wounded and thrown down, was saved from death by Epaminondas, who protected him with his shield, maintaining his ground against the Arcadians until the Lacedæmonians came to their relief and saved both their lives. From that time a close friendship was formed between Epaminondas and Pelopidas, which lasted till the death of the latter. When the Lacedæmonians surprised the citadel of Thebes and established the power of the aristocracy in that city, Pelopidas, who belonged to the popular party, retired to Athens, together with a number of other citizens. After a time he and his brother exiles formed a plan with their friends in Thebes for surprising and overthrowing the oligarchy, and restoring the popular government. Pelopidas and some of his friends set off from Athens disguised as hunters, found means to enter Thebes unobserved, and concealed themselves in the house of a friend, whence they issued in the night, and having surprised the leaders of the aristocratic party, put them to death. The people then rose in arms, and, having proclaimed Pelopidas their commander, they obliged the Spartan garrison to surrender the citadel by capitulation (B.C. 379).

Pelopidas soon after contrived to excite a war between Sparta and Athens, and thus divide the attention of the former power. The war between the Thebans and the Lacedæmonians was carried on for some years in Bœotia by straggling parties, and Pelopidas, having obtained the advantage in several skirmishes, ventured to encounter the enemy in the open field at Tegyra near Orchomenus. The Lacedæmonians were defeated, and thus Pelopidas demonstrated for the first time that the armies of Sparta were not invincible, a fact which was afterwards confirmed by the battle of Leuctra (B.C. 371), in which Pelopidas fought under the command of his friend Epaminondas. [EPAMINONDAS.] In the year 369 B.C., the two friends being appointed two of the Bœotarchs (Plut. 'Pelop.', c. 24), marched into Peloponnesus, obliged Argos and Arcadia and other states to renounce the alliance of Sparta, and carried their incursions into Laconia in the depth of winter. Having taken Messenia, they invited the descendants of its former inhabitants, who had gone into exile about two centuries before, to come and repopulate their country. They thus reduced the power of Sparta to the boundaries of Laconia. Pelopidas and Epaminondas, on their return to Thebes, were tried for having retained the command after the expiration of the year of their office, but were acquitted. Pelopidas was afterwards employed against Alexander, tyrant of Pheræ, who was endeavouring to make himself master of all Thessaly, and he defeated him. From Thessaly he was called into Macedonia, to settle a quarrel between Alexander, king of that country and son of Amyntas II., and his natural brother Ptolemy. Having succeeded in this, he returned to Thebes, bringing with him Philip, brother of Alexander, and thirty youths of the chief families of Macedonia as hostages. A year after however Ptolemy murdered his brother Alexander and took possession of the throne. Pelopidas, being applied to by the friends of the late king, enlisted a band of mercenaries, with which he marched against Ptolemy, who entered into an agreement to hold the government only in trust for Perdicas, a younger brother of Alexander, till he was of age, and to keep the alliance of Thebes: and he gave to Pelopidas his own son Philoxenus and fifty of his companions as hostages. Some time after, Pelopidas, being in Thessaly, was treacherously surprised and made prisoner by Alexander of Pheræ, but the Thebans sent Epaminondas with an army, who obliged the tyrant to release Pelopidas. The Thebans soon after, having discovered that the Spartans and Athenians had sent ambassadors to conclude an alliance with Artaxerxes, king of Persia, sent on their part Pelopidas to support

their own interest at that court. His fame had preceded him, and he was received by the Persians with great honour, and Artaxerxes showed him peculiar favour. Pelopidas obtained a treaty, in which the Thebans were styled the king's hereditary friends, and in which the independence of each of the Greek states, including Messenia, was recognised. He thus disappointed the ambition of Sparta and of Athens, which aimed at the supremacy over the rest. The Athenians were so enraged at this, that they put their ambassador Timagoras to death on his return to Athens. Pelopidas after his return was appointed to march against Alexander of Pheræ, who had committed fresh encroachments in Thessaly. But while the army was on the point of starting, an eclipse of the sun took place, which dismayed the Thebans, and Pelopidas was obliged to set off with only 300 volunteers, trusting to the Thessalians, who joined him on the march. Alexander met him with a large army at a place called Cynocephala. Pelopidas, by great exertions, although his army was much inferior in numbers, obtained an advantage, and the troops of Alexander were retreating, when Pelopidas, venturing too far amidst the enemy, was killed (B.C. 364).

The grief of both Thebans and Thessalians at this loss was unbounded; they paid splendid funeral honours to his remains. The Thebans revenged his death by sending a fresh army against Alexander, who was defeated, and was soon after murdered by his own wife. Pelopidas was not only one of the most distinguished and successful commanders of his age, but he and his friend Epaminondas rank among the most estimable public men of ancient Greece.

PEMBERTON, HENRY, was born in London in the year 1694. After studying the classics under Mr. John Ward, afterwards professor of rhetoric in Gresham College, he attended the lectures of Boerhaave in the University of Leyden, and also resided some time at Paris, where his attention was directed to anatomical manipulation, in which he appears to have excelled. About this time also he became a student in St. Thomas's Hospital, London, in order more effectually to qualify himself for the medical profession, which he was afterwards precluded from following by the delicate state of his health. In 1719 the University of Leyden conferred upon him the degree of doctor of medicine, on which occasion he read his inaugural dissertation entitled 'De Facultate Oculi ad diversas Rerum Computarum Distantias se accommodante,' Lugd. Bat., 4to, 1719, and confirmed his friendship with Boerhaave, which continued uninterruptedly till the death of the latter in 1738. In 1728 he succeeded Dr. Woodward as professor of physic in Gresham College, when he commenced a course of lectures on chemistry, which were published by his friend Dr. James Wilson in 1771, London, 8vo. At a later period he was requested by the College of Physicians, of which he was early elected a Fellow, to remodel their Pharmacopœia, of which, in an improved form, he published a translation in 1740, London, 8vo. He died April 9th, 1771.

Although chemistry, anatomy, and medicine had been his chief objects of study, there were probably few departments of science in which he did not possess more than ordinary knowledge. This was particularly the case in the mathematics and astronomy, with which his writings show that he had considerable acquaintance. Besides editing the edition of Newton's 'Principia' which appeared in 1726, he published—1, 'Epistola ad Amicum de Cotesii Inventis,' London, 4to, 1722; 2, 'View of Sir Isaac Newton's Philosophy,' London, 4to, 1728; and 3, 'Lectures on Physiology,' London, 8vo, 1733. His communications to the 'Transactions' of the Royal Society, of which body he was admitted a Fellow on the 8th of December 1720, extend from vol. xxxii. to vol. lxii., and among them may be noticed—1, 'Remarks on an Experiment by which it has been attempted to show the Falsity of the common Opinion respecting the Force of Bodies in Motion,' 1723; 2, 'On the Locus for three and four Lines, celebrated among the ancient Geometers,' 1768; 3, 'Kepler's Method of computing the Moon's Parallax in Solar Eclipses demonstrated and extended to all Degrees of Latitude,' 1771; 4, 'Geometrical Solutions of three celebrated Astronomical Problems,' 1772, &c. Among the manuscripts found by his executors were—1, 'History of Trigonometry;' 2, 'Comment on Newton's Principia;' 3, 'Treatise on Spherics and Spherical Projections;' 4, 'Dissertation on the Screw of Archimedes;' 5, 'Principles of Mercator's and Middle Latitude Sailing;' and some others enumerated in Dr. Hutton's 'Dictionary.' His library contained a choice collection of mathematical works, a large proportion of which was purchased at the sale of the library of the Abbé Gallois, which took place during his stay in Paris. The whole of them, together with those of his friend Dr. Wilson, were sold by auction soon after his death. The number of lots was 3885, and the gross proceeds 7011. 17s. 6d. (See 'Catalogue,' with price of each lot annexed, in the library of the British Museum.)

PENN, SIR WILLIAM, was born in 1621 at Bristol. Having entered into the sea-service, he was made a captain in 1642, and an admiral in 1653 for his services against the Dutch. He was one of those who commanded when Jamaica was taken from the Spaniards in 1655, in which year he returned to England, and was elected member of parliament for Weymouth, but was committed to the Tower by the republican government on the charge of having left his command without leave. After the Restoration he was created a knight, and was made a commissioner of the navy, governor of Kinsale, and a vice-admiral. He again went to sea in 1664, and was commander-in-chief

under the Duke of York in the naval victory over the Dutch in 1665. In 1666 he retired from service at sea, but continued to perform his other duties till 1669, when he went into retirement at Wanstead in Essex, where he died, September 18, 1670.

PENN, WILLIAM, the only son of Admiral Penn, was born in London, October 14, 1644. He was educated with much care at Chigwell in Essex, and then at a private academy in London. In 1660, he was entered a gentleman commoner of Christchurch, Oxford. His first bias towards the doctrines of the Society of Friends, or Quakers, as they are commonly called, appears to have been produced by the preaching of Thomas Loe; the effect of which was, that, while at Oxford, Penn, together with some of his fellow-students, began to withdraw from attendance on the public worship of the established church, and to hold private prayer-meetings. They were fined by the college for non-conformity, but this did not deter them; for, an order from the king having required that the ancient custom of wearing surplices should be revived, Penn and his associates attempted to tear them from the backs of those students who wore them. For this display of intemperate zeal they were expelled from the college.

Admiral Penn, who was in high favour with Charles II. and the Duke of York, and ambitious for his son's advancement at court, was much displeased with this event, and still more with the change which had taken place in his son's manners. He tried to turn him from his religious observances and company, but in vain, and at length was so highly incensed as to have recourse to blows, and finally turned him out of doors. The admiral soon relented so far as to try another expedient. He sent him, in 1662, on a tour to France. After remaining a considerable time in Paris, Penn went to Saumur, and studied under the popular preacher Moses Amyraut. He afterwards proceeded to Turin, whence he was recalled by his father to England, in 1664, who, on his return, was greatly pleased with the polish and courtliness of manners which he had acquired. He was now admitted a student of Lincoln's Inn, where he continued till 1666, when his father sent him to Ireland, for the purpose of managing his estates in that country. This duty he performed to the entire satisfaction of his father; but, happening to attend a religious meeting at Cork, where Thomas Loe delivered a discourse, beginning "There is a faith that overcomes the world, and there is a faith that is overcome by the world," he was so deeply impressed, that from this time he constantly attended the Quakers' meetings. At one of these, held at Cork, in 1667, he and others were apprehended by order of the mayor, who would have set Penn at liberty on his giving bail for his good behaviour, but he refused, and was sent to prison with the rest. He wrote however to the Earl of Orrery, then lord president of Munster, requiring the release of all, but the earl contented himself with ordering Penn alone to be set at liberty.

Admiral Penn, on being informed that William had decidedly joined the Quakers, summoned him home, and reprobated with him and threatened him, but in vain; the son was firm, but respectful. The admiral at last restricted himself to the demand, that he should take off his hat in the presence of the king, the Duke of York, and himself. But Penn refused to pay even this limited degree of 'hat worship,' at which the admiral was so much incensed that he again turned his son out of doors; but in a short time he allowed him to return home.

In 1668 Penn began to preach, and also published his first work, 'Truth exalted.' In this year, a preacher named Vincent accused the Quakers of being opposed to the doctrine of the Trinity. A public disputation took place, from which both parties retired without being convinced. In prosecution of this controversy Penn wrote 'The Sandy Foundation shaken,' in which he professed his belief in the doctrine of the Trinity, but objected to the language in which it was expounded by the Church of England; and for this he was committed to the Tower. During his imprisonment, which lasted nearly seven months, he wrote his 'No Cross, no Crown,' one of his most popular works. In 1669, after his liberation, an entire reconciliation took place between him and his father, and he again went to Ireland to look after his father's estates, in which country he remained about twelve months.

In 1670 the Conventicle Act was passed, and Penn was one of the first sufferers under it. He was committed to Newgate for preaching to what was called "a riotous and seditious assembly," which consisted of the Quakers, who had been excluded from their chapel, and who now met in the open street, as near to it as they could. The trial took place at the Old Bailey Sessions, and is remarkable not only for the firmness and ability of Penn's defence, but for the admirable courage and constancy with which the jury, in opposition to the direction of the Bench, and in defiance of its threats, pronounced a verdict of acquittal. The jury were fined, and ordered to be imprisoned till the fines were paid; but this proceeding was declared illegal by the Court of Common Pleas, on which occasion, chief-justice Vaughan delivered an able speech in defence of the rights of juries. Soon after this Admiral Penn died, perfectly reconciled to his son, to whom he left estates worth 1500*l.* a year, and, while on his death-bed, he sent a request to the Duke of York that he would use his good-offices for his son: a request with which the duke promised to comply. In February 1670-71, Penn was again committed to Newgate on a charge of preaching publicly, and he remained in prison six months.

In 1672 Penn married Gulielma Maria, daughter of Sir William

Springett, who was killed in the civil wars at the siege of Bamber. He now took up his abode at Rickmansworth in Hertfordshire, but afterwards settled at Worminghurst in Sussex.

In 1677, in company with George Fox and Robert Barclay, he made a sort of religious tour in Holland and Germany, and was received with marked distinction by the Princess Elizabeth of the Rhine, daughter of the King of Bohemia, and granddaughter of James I. of England. After his return he was heard before a committee of the House of Commons in behalf of the Quakers, who were oppressed by Exchequer prosecutions under statutes which had been enacted against the Roman Catholics; he was also admitted to plead before a committee of the house that the solemn affirmation of the Quakers should be admitted in the place of an oath, and to this effect an enactment passed the Commons in 1678, but was lost in consequence of a prorogation before it had passed the Lords.

We now come to an important event in Penn's life, the establishment of the colony of Pennsylvania. A tract of country on the west side of the Delaware was granted on petition by Charles II. to Penn and his heirs, in consideration of a debt of 16,000*l.* due from the crown to Admiral Penn for money advanced for the service of the navy. To this the Duke of York added by cession a contiguous portion of territory lower down on the Delaware. The king's patent was dated March 4, 1680-1; and in this document he named the province, in honour of the founder and his father, Pennsylvania. Penn was constituted absolute proprietor and governor of the province. He published 'Some Account of Pennsylvania,' &c., and also 'Certain Conditions or Concessions,' &c., in which he offered easy terms of settlement to those who might be disposed to emigrate. Three ships soon set sail with settlers from England and Wales, chiefly Quakers. In the beginning of 1682 he published 'The Frame of the Government of the Province of Pennsylvania in America, together with certain Laws agreed upon in England by the Governor and divers Freemen of the aforesaid Province, to be further explained and confirmed there by the first Provincial Council that shall be held.' Having previously opened a friendly intercourse with the native Americans by presents and conciliatory letters, in the autumn of 1682 he sailed for Pennsylvania, leaving his wife and children in England; and soon after his arrival summoned an assembly of the freemen of the province, by whom the frame of government, as formed in England, was accepted. He had sent out instructions before he left England to negotiate a treaty of sale with the Indian nations; and tradition records that a great meeting of the Indian nations and European settlers took place under an enormous elm-tree, near the site of Philadelphia, when the treaty was ratified, and a league of friendship established, "a friendship," says Proud, the historian of Pennsylvania, "which for the space of more than seventy years was never interrupted, or so long as the Quakers retained power in the government."

Having founded the city of Philadelphia on the banks of the Delaware, and spent about two years in the province adjusting its political constitution, and bringing the colony into a state of prosperity and order, he returned to England about Midsummer 1684. Within this short period no less than fifty sail arrived in the province with settlers from England, Ireland, Wales, Holland, and Germany.

In February 1685, soon after Penn's return to England, Charles II. died; and the favour with which James II., when Duke of York, had regarded Admiral Penn, was transferred to his son. Macaulay has charged Penn with having acted during the reign of James as a kind of court agent in, among other things, selling for the maids of honour pardons for the girls at Taunton who were condemned for having presented Monmouth with a standard on his entry into that town; as having gone to Holland to endeavour to persuade the Prince of Orange to assent to the promulgation of the Declaration of Indulgence; and in trying to seduce the fellows of Magdalen College to submit to the king's illegal measures. But Mr. Dixon, in an 'Extra Chapter' of his 'Life of Penn,' 1851, has sought to prove that the Penne who acted as pardon-broker at Taunton was not William Penn, but a certain George Penne, who was by no means unused to such disreputable traffic; and the other charges he has shown to be not sustained by the authorities cited. Macaulay did not however, it may be noted, withdraw any of these charges in subsequent editions of his work, but in that of 1857 maintained their accuracy in elaborate notes.

After the revolution in 1688, Penn's intimacy with James II. exposed him to suspicions, and he was four times arrested on accusations of being a concealed Papist and a Jesuit; but he always cleared himself before the king and council, till one Fuller, who was afterwards declared by parliament to be an impostor, in 1690 accused him on oath of being concerned in a plot to restore the late king. Unwilling to expose himself to the risk of being convicted upon the oath of such a man, and the evidence which he might get up, he lived in great seclusion in London till 1693, in which year, through the mediation of his friends at court, he was admitted to plead his cause before the king and council, and was honourably acquitted. Soon after this his wife died. In 1696 he married Hannah, the daughter of Thomas Callowhill, a merchant of Bristol.

In 1699 he again sailed for Pennsylvania, with his wife and family, with the intention of making it the place of his future residence. He had been deprived of the government of Pennsylvania in 1692, and it had been annexed to that of New York; but it was restored to him

in 1694 by an instrument of William and Mary. An attempt was afterwards made to take possession of the proprietary governments in North America, and to convert them into regal ones. A bill for this purpose was already before the Lords, when it was delayed by petition of the friends of Penn, who immediately embarked for England, where he arrived in December 1701. The bill was dropped after his return, and the accession of Queen Anne once more restored him to favour at court. In the meantime Penn had become encumbered with debt. He had mortgaged Pennsylvania in 1708 for 6600*l*. In 1712 he agreed to sell his rights to the English government for 12,000*l*., but was unable to complete the transaction by three apoplectic fits which followed each other in rapid succession, and considerably impaired both his memory and understanding. He survived however in a tranquil state, though with his bodily and mental vigour gradually decaying, till the 30th of July 1718, when he died, at his seat at Ruscombe, in Berkshire.

Penn left children by both of his wives, and to them he bequeathed his property in Great Britain and America. The government and quit-rents of Pennsylvania devolved to the surviving sons of the second family, with the title of Proprietaries, and by them were sold to the state of Pennsylvania, after the American revolution, for 130,000*l*.

Penn's writings, which are numerous, were collected and published, with a life prefixed to them, in 1728, 2 vols. folio.

Penn is one of the great names in English history which Mr. Macaulay has, throughout the four volumes of his great work, pursued with unceasing enmity. We have already referred to those charges as far as they relate to his conduct during the reign of James II.; in like manner Mr. Macaulay ('Hist. of Eng.,' vols. iii. and iv.) charges him with speaking "something very like a lie, and confirming it with something very like an oath"—with seeking to bring about the return of James by means of a foreign army—and other "scandalous conduct." But every one of these charges has been fully, and for the most part, as it would seem, satisfactorily met by Penn's latest biographer; and it will therefore be enough here to refer the reader to Macaulay's 'History,' and to 'William Penn: an Historical Biography, by Hepworth Dixon; a New Edition, with a Reply to Mr. Macaulay's Charges against Penn,' 8vo, 1856.

PENNANT, THOMAS, was born of an ancient Welsh family, at Downing in Flintshire, on the 14th of June 1726. He was educated at Wrexham School, and subsequently at Oxford, but took no degree in that university, though the honorary distinction of LL.D. was afterwards conferred on him. When about twelve years old he received a present of Willughby's 'Ornithology,' and he dated the commencement of that fondness for natural history which distinguished his future life from the perusal of this book. Immediately after leaving Oxford he made an excursion into Cornwall for the purpose of examining the mines and investigating the objects of natural history which that county possesses. His first literary production was an account of the shock of an earthquake felt at Downing in 1750, which was published in the 'Philosophical Transactions.' In 1756 a memoir appeared by Pennant in the same work on certain coralloid bodies found in Shropshire; this attracted the attention of Linnaeus, upon whose recommendation the author was elected a member of the Royal Society of Upsal, a distinction of which Pennant was always particularly proud.

In 1761 he commenced the publication of his first great work, the 'British Zoology,' which was printed in large folio, and when complete contained 132 plates. It afterwards went through many smaller editions, and received numerous additions. Latin and German translations with the plates were published abroad. The best copies of this work are those which came out in 4to in 1773 and 1777, in 4 vols. The 'British Zoology' included nearly the whole of the species of the animal kingdom (at that time known) inhabiting this island, with the exception of the class of insects, which was entirely omitted. In 1765, during the progress of this work, Pennant made a tour on the Continent, where he was introduced to some of the celebrated foreign naturalists. He visited Buffon at Montbard, and he afterwards maintained a correspondence with this great man. From France he proceeded to Switzerland, and at Berne became acquainted with Baron Haller. He then travelled through Germany and Holland, and formed an intimacy at the Hague with Pallas, who at Pennant's suggestion undertook to draw up a history of quadrupeds on the system of Ray. Pallas however went to Russia, and never accomplished this project; but Pennant followed out the idea himself, and in 1771 published a work with the title of a 'Synopsis of Quadrupeds,' illustrated with about thirty plates. The 'Synopsis' was afterwards enlarged, and republished with the name of a 'History of Quadrupeds.' The descriptions in this work were short and meagre, and the synonyms few in number and not always correct; nevertheless it was very well received, for it was the first detailed work on quadrupeds in which they were methodically arranged, and it contained a number of new species and many original figures, which were correctly though not very elegantly drawn. It went through several editions, and Buffon availed himself of the matter contained in it for his supplements. After his return to England, Pennant commenced a work on 'Indian Zoology,' of which 15 folio plates were published, the expense of which was partly defrayed by Sir Joseph Banks: it was soon discontinued.

In 1769 Pennant set out on a tour through Scotland, the northern

part of which had at that time been little explored by the traveller or the naturalist. He kept a journal in which he noted down all the objects of interest that he met with, and published it after his return, with plates illustrating the scenery, &c.; this work went through many editions. He made a second excursion into Scotland in 1772, of which he also published an account. He was accompanied in this tour by Dr. Lightfoot, who then collected a great part of the materials for his 'Flora Scotica,' in the preparation of which Mr. Pennant was of great assistance to him.

The next work which Pennant commenced was a systematic catalogue called the 'Genera of Birds;' this was intended to be similar in plan to the 'Synopsis of Quadrupeds,' but it was never completed. His last great work was his 'Arctic Zoology,' which appeared in 3 vols. 4to in 1784-85-87, and contained 26 plates. This (which was necessarily a compilation, as the author never visited the native haunts of the animals which he described) included an account of the northern coasts of Europe, Asia, and America, with their productions, taken from the writings of different travellers, and from the examination of specimens of different animals sent to the author or preserved in museums. Pennant received considerable assistance during the progress of this work from many foreign naturalists, among whom Pallas, Thunberg, Sparman, Müller, and Fabricius may be mentioned. The 'Arctic Zoology' acquired considerable reputation among naturalists, and was valuable from containing descriptions and figures of many animals and birds previously unknown; and it retains much of its value.

When in his sixty-seventh year he planned an extensive work on the model of the preceding, which was to embrace an account of every country in the world, with their productions; he published two volumes of this, in 4to, entitled a 'View of Hindostan.' Two more were brought out by his son after his decease, with the name of 'Outlines of the Globe,' which also include the description of India and the adjoining countries. Pennant wrote, among several other works, a 'Journey from Chester to London,' a 'History of London,' and a 'Tour in Wales,' which contain much interesting matter on antiquities and natural history. He never followed any profession, but spent almost the whole of his life as a retired country gentleman at his seat of Downing, in the midst of his favourite pursuits. He enjoyed nearly uninterrupted health till within a few years of his death, which took place on December 16, 1798.

\*PENNEFATHER, LIEUT.-GENERAL SIR JOHN LYSAGHT, is the third son of the late Rev. John Pennefather, of the county of Tipperary, and nephew of the venerable Baron Pennefather, one of the oldest members of the judicial bench in Ireland. He was born in 1800, and entered the army in 1818. Here he rose by the regular grades of promotion, and in 1839 had attained the rank of lieutenant-colonel. In 1843 he served as brigadier in India under the late gallant General Sir Charles James Napier during his operations in Scinde, and contributed in no small degree to the victory which he gained over the faithless Ameers at Meeanee. He was severely wounded in this battle, and, on returning home, received the companionship of the Bath and the thanks of Parliament for his services in India; he also for some time held the post of deputy quarter-master-general in Ireland. On the breaking out of the war with Russia in 1854, Colonel Pennefather was entrusted with the command of the first brigade of the second division, consisting of the 30th, 55th, and 95th regiments. His behaviour at the head of his brigade at the battle of the Alma was mentioned in the highest terms by Lord Raglan in his despatches home. On the 26th of October following he again highly distinguished himself by repelling a large force of Russian infantry, which had assaulted the position of the Second Division; and at the battle of Inkermann (Nov. 5) he was compelled to assume the command of the entire division, on account of the severe illness of General Sir De Lacy Evans, which obliged him to remain on board ship. On the return of that general to England, Pennefather succeeded to the permanent command of the division which he had led at Inkermann. In the same year he was promoted to the rank of major-general, and in 1861 he was created lieutenant-general.

\*PENNETHORNE, JAMES, architect, who holds the offices of Architect and Surveyor of Her Majesty's Parks, Palaces, and Public Buildings, and Architect and Surveyor of Land Revenues in London, and has been concerned in many of the London improvements of recent years, was born at Worcester June 4th, 1801, and was educated at Dr. Simpson's academy in the same town. Mr. Pennethorne's first connection with his present profession was due to the late John Nash. Mrs. Nash was first cousin to Mr. Pennethorne's father, and an elder brother of Mr. Pennethorne's had been brought up by Mr. Nash; and on the death of this brother Mr. Nash offered to take another of the family—the subject of this notice—into his office. The arrangement being made, Mr. Pennethorne came to London on February 20th, 1820. With Nash he was employed chiefly in office accounts, for about a year and a half; but, towards the middle of 1822, Mr. Nash placed him in the office of Augustus Pugin (who was much engaged in assisting Nash) with a view to the study of Gothic architecture. With Pugin he remained two years. Subsequently he devoted a year to preparatory study for foreign travel, and in October 1825 he left England, and spent two years abroad, chiefly in Italy and Sicily. In January 1828, he commenced his duties as prin-

cial assistant to Nash, in connection with Carlton-house Terrace, and afterwards was engaged upon all Nash's works, except those of Buckingham-palace. During this time the walks and garden of St. James's-park, planned by Nash, were set out on the ground by Mr. Pennethorne. In 1880 Mr. Pennethorne began to practise on his own account. In the course of the next few years he designed and superintended the buildings for Mr. Crookford, till lately known as the St. James's Bazaar; the church in the Gray's-Inn-road, and one in Albany-street; houses at Newmarket for Lord Chesterfield, the Marquess of Exeter, and Mr. Crookford; a house for Mr. Herries at St. Julien's; one for Mr. Butler Danvers at Leicester; one for Mr. Lee at Ilminster, and others. In 1838 he was appointed to an office under the department of the Woods and Forests, in regard to metropolitan improvements, and in 1840 he succeeded Mr. Rhodes as Surveyor of Land Revenues in London, in connection with the same board. Amongst the London improvements, out of those which he has designed during the period of his official duties, may be named, as already carried into execution under his management, New Oxford-street, Cranbourne-street, Endell-street, and the new street in Spital-fields; the Victoria Park; and Battersea Park, now approaching to completion. It should be understood that his duties referred to, do not allow of a complete control of the architectural design of the individual buildings; but in another department of his practice as an architect, he has designed and superintended the building of the Museum of Practical Geology in Piccadilly and Jermyn-street; the additions to the Ordnance Office in Pall-mall; those to Somerset-house, where he has adhered strictly to the manner of the older portion of the building; the General Record Repository, only a portion of which is completed; and the new ball-room and supper-room at Buckingham-palace. Mr. Pennethorne's best manner combines the results of attentive study of both the Greek and the Italian systems of architecture, the latter being taken as the basis. His details of mouldings and ornament have always the mark of character; and his doorways, amongst which may be instanced that in Jermyn-street, and those in the ball-room at Buckingham palace, are especially good as compositions. Mr. Pennethorne is a Fellow of the Royal Institute of British Architects, and a member of the Academy of St. Luke at Rome. In July 1856, on the completion of the exterior of the wing of Somerset-house, a testimonial signed by about a hundred members of the architectural profession in London, was presented to Mr. Pennethorne, which expressed their sense of the ability with which he had treated that and other public buildings, of the skill and intelligence which he had brought to bear upon difficult technical subjects, and of his anxious attention to the public interests in the very extensive purchases of property entrusted to his care; and with those feelings they desired to offer him a copy in gold of a medal of Sir William Chambers, the architect of Somerset-house.

\*JOHN PENNETHORNE, younger brother of James, though he has not been much engaged in the practice of architecture, claims notice on account of the importance of the researches which he made into the mathematical principles of the Greek artists, especially in relation to the curved lines, and other optical refinements in the design of the Athenian buildings, which had long been the subject of doubt and difficulty in the comprehension of the descriptions of Vitruvius. Mr. Pennethorne spent some time at Athens in investigations on this subject, but at the time gained less credit for them, except with his immediate contemporaries interested in the subject of Greek architecture, than he deserved. The subject has since been pursued in Athens by Mr. F. C. Penrose, and is treated of in his elaborate work, published by the Society of Dilettanti, and entitled 'An Investigation of the Principles of Athenian Architecture.' In 1844 Mr. Pennethorne printed for private circulation a pamphlet addressed to the late Sir Robert Peel, under the title, 'The Elements and Mathematical Principles of the Greek Architects and Artists, recovered by an Analysis and Study of the remaining works of Architecture designed and executed in the age of Pericles,' in which he urged the national importance of the subject, and gave some of the conclusions from his researches, the value of which is now acknowledged. Mr. Pennethorne made preparations for a work on 'The Principles of the Greek Architects and Artists,' which it is to be regretted he has not completed. He some time since retired to the Isle of Wight, and took to agricultural pursuits.

PENNI, GIOVANNI FRANCESCO, called IL FATTORE, was born at Florence in 1488, and received the name of Il Fattore, or the Steward, from his having been entrusted with the management of the domestic affairs of Raffaele. He however soon became one of his principal assistants. Dr. Waagen is of opinion that Penni executed many parts of the cartoons at Hampton Court, especially those of the 'Death of Ananias,' 'St. Paul and Barnabas at Lystra,' and 'St. Paul preaching at Athens.' Of Penni's own works no frescoes and very few oil-paintings remain. His characteristics are said to have been facility of invention, graceful execution, and singular felicity in landscape. After the death of Raffaele, Penni went to Naples, where he died in 1528, at the age of forty.

PENTZ, PENCZ, or PENS, GEORG, a celebrated German painter and engraver, was born at Nürnberg about 1500. He was first the pupil of Albrecht Dürer, and he afterwards studied the works of Raffaele at Rome, probably after the death of Raffaele, but before

his school was dispersed in 1527. If however Pentz were born in 1510, as some accounts give, it must have been after the dispersion of the school of Raffaele that he was in Rome. He died, according to Doppelmayr, in 1550, at Breslau. Pentz was one of the most correct in design of the early German masters. His prints are numerous, but his pictures are scarce; there are some at Nürnberg, and a few in the galleries of Berlin, Munich, and Schleissheim. Bartsch enumerates and describes 126 engravings by Pentz, of which the best are seven of the history of Tobias. He was the pupil of Marcantonio, and assisted him in some of his prints after Raffaele.

PEPAGO'MENUS, or more properly DEMETRIUS PEPAGOMENUS, one of the latest of the Greek physicians, is the author of a short treatise on the gout, which is still extant. Nothing is known of the events of his life, but as his work was composed at the command of the Emperor Michael Palaeologus, it must have been written between the years 1260 and 1282. "This discourse," says Freind, ('Hist. of Physic,' vol. i.), "though containing little extraordinary, and being collected out of other writers, chiefly Alexander, of whose work the eleventh book treats of this disease at great length, yet is far from deserving the character which M. Musurus, his translator, bestows upon the author (by name unknown to him), of *infans et elinguis*, &c., as if he could not express what he meant." It consists of forty-five short chapters, besides the preface and conclusion, and, in the opinion of Sprengel ('Hist. de la Méd.') does not deserve to be classed among the numerous worthless productions of the modern Greeks. He says that the author certainly does not depart from the system of Galen, but that his theory of the disease is more reasonable, and more in accordance with the observations of the moderns than that of most of his successors. He sets out with a true and precise axiom, namely, that the gout is a disease affecting the whole organised frame, and produced by weakness of the digestive organs and excesses in the matter of diet, &c. (cap. 7). The morbid principle, which is the result, is directed by nature towards the weakened articulations (cap. 8). Hence it follows that sobriety and temperance are the only means of preventing the disease (cap. 10). With respect to the cure, he seems chiefly to have trusted to emetics and cathartics, and gives several prescriptions, some of which are borrowed, and others are apparently original.

The treatise *περί ποδάγρας* ('De Podagra') was first published in Latin, by Marcus Musurus, 8vo, Romæ, 1517, with the title 'De Podagra Libellus incerti Auctoris e Græco in Latinum conversus,' &c. This translation is inserted in the 'Medicæ Artis Principes,' by H. Stephens, fol. Paris, 1567. The Greek text was first published at Paris, ap. G. Morelium, 1558, 8vo, with a Latin translation (probably) by Turnebius. The best edition is by I. S. Bernard, 8vo, Lugd. Bat., 1748, Gr. and Lat., which is sometimes found with a new title-page, Arnheim, 1753. There is a French translation by Fred. Jamot, 8vo, Paris, 1573.

There is extant a treatise entitled *Διγνώσις τῶν ἐν νεφροῖ, καθάρ, καὶ θεραπέια* ('Dignotic Morborum in Renibus, eorum, que Curatio'), which is commonly printed among Galen's works, but which is however manifestly spurious, as the author professes himself to be a Christian. Fabricius, in his list of Galen's works, conjectures that Demetrius Pepagomenus may have been the author, but in the opinion of Freind and Haller there seems to be no good reason for such a supposition. In the collection of writers, 'De Re Accipitraria et Venatica,' published by Nic. Rigaltius, 4to, Paris, 1612, are two treatises, which are perhaps the works of this same Demetrius. One is entitled *Ἱερακοσόφιον, ἢ περὶ τῆς τῶν ἱεράκων ἀνατροφῆς τε καὶ ἐπιμελείας* ('Hieracosophium, sive De Accipitrum Educatione et Curatione'), containing an account of the different species of hawks, the mode of catching and training them, the diseases to which they are subject, and the remedies proper for each. The other is called *Κυνοσόφιον, ἢ περὶ τῆς τῶν κυνῶν ἐπιμελείας* ('Cynosophium, sive De Canum Curatione'), and is sometimes attributed to Phæmon. It has been several times reprinted, but is not of much worth. He attributes madness in dogs to a worm underneath the tongue.

PEPIN D'HERISTAL (so called from a place in the kingdom of Austrasia, or Metz, called Heristal), or PEPIN LE GROS, was the son of Ansegisus, and grandson of Arnoul, who was duke of Austrasia in the reign of Dagobert I., afterwards bishop of Metz, and who was finally numbered among the saints. The mother of Pepin, named Begga, was the daughter of another Pepin, called Pepin the Old, or Pepin of Lander, who was Maire of the Palace under Dagobert I. and under his son Siegbert, king of Austrasia, was much respected for his personal character, and who died in 640. Pepin d'Heristal became Duke of Austrasia under Dagobert II., after whose death, in 679, he governed the country as sovereign under nominal allegiance to Thierry III., king of Burgundy and Neustria. Thierry however became dissatisfied with Pepin, who revolted and defeated him in 690, and obliged him to recognise him as Maire du Palais, or, in other words, the governor of the whole Frankish monarchy. Here begins the series of the 'Rois fainéants,' or 'do-nothing kings,' who succeeded one another as mere crowned pageants, whilst the Maire du Palais had all the real authority. Pepin ruled as such under Thierry, Clovis III., Childbert III., and Dagobert III., and thus made his authority respected not only by the natives, but also by foreigners. He died in 714, having appointed his grandson Theodebaud to succeed him as Maire du Palais. But Charles

Martel, a natural son of Pepin, was proclaimed Duke of Austrasia by the acclamations of the people in 716, and in 719 he obliged Chilperic II. to acknowledge him as *Maire du Palais* as his father Pepin had been. [CHARLES MARTEL.]

PEPIN, King of France, called 'le Bref,' or 'the Short,' son of Charles Martel, was *Maire du Palais* after his father's death, under the nominal King Childeric III., for the kingdom of Neustria and Burgundy, whilst his brother Carloman governed that of Austrasia in a similar capacity. The two brothers defeated the Saxons, Bavarians, and Slavonians; and Pepin, in 744, defeated the Duke of Aquitania, who had revolted. Soon after, Carloman, in a fit of devotion, gave up the government of Austrasia, and retired to a monastery at Rome, where he ended his days. All the authority was now concentrated in Pepin. What followed has been briefly and obscurely told by the chroniclers: "King Childeric was dethroned, A.D. 750, his head was shaved (long hair was an essential appendage of royalty with the Merovingian kings), and he was confined in the monastery of Sithin, or St. Bertin, at St. Omer, and his son Thierry was sent to the convent of Foutenelle in Normandy, where he was brought up in obscurity." (Henault, 'Histoire de France.') Eginhardt, the historian of Charlemagne, says, that "Burokard, bishop of Wurzburg, and the priest Fulrad, a chaplain, were sent to Pope Zacharias at Rome, to consult him concerning the state of France, in which the kings had merely the name of kings, without any royal power, and that the pope replied that it was better that he who exercised the royal authority should bear also the royal title; in consequence of which sanction, Pepin was constituted king." And the continuator of the chronicler, Fredegarus, writing under the direction of Count Childebrand, Pepin's uncle, says, that "by the consent of the Frankish nation, supported by the sanction of the Apostolic see, the illustrious Pepin being consecrated by the bishops and recognised by the princes, was raised to the kingdom, together with his Queen Bertrada, according to the ancient usages." We have no circumstantial account of this important event, except that Pepin was anointed at Soissons, in March 752, by Boniface, bishop of Mainz, called the Apostle of Germany before the assembly of the nation. It seems that the ceremony of anointing the new king was introduced on this occasion, having been unknown under the first or Merovingian dynasty. (Siemondi, 'Histoire des Français.')

Siemondi thinks, with some degree of plausibility, that this accession of a new family to the throne of the Franks was not a mere change of dynasty, nor the usurpation of one family over another, but that it was really a national revolution effected by the German population of Austrasia under their leaders Pepin d'Heristal, Charles Martel, and his son Pepin, who conquered Neustria and the other provinces of ancient Gaul, and placed their own dynasty on the Frankish throne. During the two centuries and a half which had elapsed since the first conquest of Gaul by the Franks under Clovis, the conquerors had become mixed with the Gallo-Roman population, had adopted their language, manners, and effeminacy, and the original families of the Franks had almost entirely disappeared in Neustria, Aquitania, and Provence. But Austrasia, which extended far on the right bank of the Rhine, had remained German. The family of Pepin led the Austrasian bands into the rest of Gaul, which thus received a fresh infusion of German manners, language, and military spirit. Pepin le Bref, in order to conciliate the conquered Neustrians, raised Childeric III., of the old dynasty, to the throne, but this pageant was in reality the king of the conquered, while Pepin retained all the authority in his hands. The Neustrians looked upon the Austrasian bands as strangers and enemies. When Pepin found that he could dispense with the puppet king, he put him aside with the sanction of Rome.

Pepin was grateful to the see of Rome, and when Pope Stephen III., Zacharias's successor, applied to him for assistance against the Longobards, he marched with an army into Italy, defeated Astolphus, and made him promise to give up the Exarchate and Pentapolis to the Roman pontiff. Pepin waged successful wars against the Saxons, the Bavarians, and other German nations; he defeated the Duke of Aquitania, and reunited his duchy to the domains of the crown; he favoured the clergy, and fixed the annual general assemblies of the Frankish nation for the month of May. He died of the dropsy, at St. Denis, in September 768, at fifty-four years of age, in the seventeenth year of his reign. His son Charlemagne succeeded him as king of the Franks.

PEPIN, son of Louis le Débonnaire, and grandson of Charlemagne, was made by his father king of Aquitania in 817. He revolted repeatedly against his father, and died in 838 or 839. The emperor disinherited Pepin's children of their father's kingdom, and gave it to his own son Charles the Bald.

PEPUSCH, JOHN CHRISTOPHER, an eminent musical theorist and composer, was born in 1667, at Berlin, in which city his father was minister of a Protestant congregation. At the early age of fourteen his talents attracted the notice of the Prussian court, in which he held some appointment till he attained his thirtieth year, when, being eyewitness of a murderous act of tyranny perpetrated by Frederick I., he resolved to quit the country. He first visited Holland, where he remained upwards of a year; then proceeded to London, and about 1700 was engaged to take the harpsichord at Drury-lane theatre, and, it is supposed, assisted in preparing for the stage 'Thomyris,' as well

as other operas. At the same time he commenced his inquiries concerning the music of the ancients, for which pursuit his knowledge of the learned languages and studious habits highly qualified him. In these investigations he received no inconsiderable aid from his friend De Moivre, the mathematician. Though he had persuaded himself that the music of the Greeks was far superior to anything that the moderns were capable of producing, yet he did not hesitate to compose much, and was successful; though but one of his many works is known to the present age—the cantata, 'See from the silent grove Alexis flies,' which has always been admired by every person of true taste.

Pepusch was one of the founders of the Academy of Ancient Music in 1710, which was formed on so judicious a plan that it subsisted upwards of eighty years. In 1712 he, together with Handel, was engaged by the Duke of Chandos (Pope's 'Timon') to compose for the chapel at Cannons. The next year he was admitted by the University of Oxford to the degree of Doctor in Music. In 1724 he was persuaded by Dr. Berkeley to join in the scheme for establishing a college at the Bermudas, and actually embarked for the purpose; but the ship being wrecked, the project was speedily abandoned. He now entered into the matrimonial state with the celebrated singer Signora Margarita de l'Epine, who brought him a fortune, acquired by her profession, of 10,000*l.* This addition—great in those days—did not induce him to relax in his pursuits: he selected and adapted, with admirable skill, the music for 'The Beggar's Opera,' for which he composed the overture. In 1731 appeared his 'Treatise on Harmony,' which long continued a standard work, and is still read by students who make themselves acquainted with the best writers on the art. In 1737 he was chosen organist of the Charter House, an appointment he solicited chiefly for the sake of the apartments and the learned and agreeable society it afforded. Three years after this he lost his wife; his only son having died some time before. He now found relief in his studies, to which, and in giving instructions to a few favourite pupils, he devoted himself wholly. In 1746 was read before the Royal Society his account of the 'Ancient Genera,' which appears in volume 44, No. 481, of the 'Philosophical Transactions;' previous to which however he had been elected a Fellow of that learned body. Dr. Pepusch died in 1752, and was buried in the chapel of the Charter House.

PEPYS, SAMUEL, secretary to the Admiralty in the reigns of King Charles II. and King James II., was born February 23, 1632, of a family which had some pretensions to gentility, though he himself confesses it had never been "very considerable." His father, John Pepys, was a citizen of London, where he followed the trade of a tailor. We learn from his diary that Pepys passed his boyish days in or near London, and was educated at St. Paul's school, where he continued till 1650, early in which year his name occurs as a sizar on the boards of Trinity College, Cambridge. Previously however to his going to reside in that university, March 5, 1650-51, he had removed to Magdalen College. How long he continued at Cambridge, or what were his academical pursuits, we are not informed. In 1655 he married Elizabeth St. Michel, a girl of fifteen. The consequences which might naturally have been expected to attend such an imprudent step were averted by the kindness of a relation, Sir Edward Montagu (afterwards Earl of Sandwich), who gave the young couple an asylum in his family. In 1658 he accompanied Sir Edward Montagu in his expedition to the Sound, and on his return became a clerk in the Exchequer. Through the interest of the Earl of Sandwich however, he was soon nominated clerk of the acts of the navy, and he entered on the duties of his office early in June 1660. This was the commencement of his connection with a great national establishment to which his diligence and acuteness were afterwards of the highest service. In this employment he continued till 1673: and during those great events, the plague, the fire of London, and the Dutch war, the care of the navy in a great measure rested upon him alone. The Duke of York being lord-high-admiral, Pepys was by degrees drawn into a close personal connection with him, and as he enjoyed his good opinion, he had also the misfortune to experience some part of the calumnies with which he was loaded during the time of "The Popish Plot." The absence not only of evidence, but even of ground of suspicion, did not prevent Pepys being committed to the Tower (May 1679) on the charge of being an aider and abettor of the plot, and he was for a time removed from the Navy Board. He was afterwards allowed, with Sir Anthony Deane, who had been committed with him, to find security in 30,000*l.*; and in February following, upon the withdrawal of the deposition against him, was discharged. He was soon replaced in a situation where his skill and experience could not be dispensed with, by the special command of Charles II., and rose afterwards to be secretary of the admiralty, which office he retained till the Revolution. James II. was sitting to Sir Godfrey Kneller for a portrait designed as a present to Pepys, when the news of the landing of the Prince of Orange was brought to him. The king commanded the painter to proceed and finish the portrait, that his friend might not be disappointed.

Upon the accession of William and Mary, Pepys lost his official employments; but he retired into private life without being followed either by persecution or ill-will. He died May 26, 1703, and was buried in the church of St. Olave, Hart Street.

Pepys had an extensive knowledge of naval affairs. He thoroughly understood and practised music; and he was a judge of painting,

sculpture, and architecture. In 1684 he was elected president of the Royal Society, and held that honourable office two years. As a patron of learning, it may be sufficient to say that he contributed no fewer than sixty plates to Willughby's 'Historia Piscium.' To Magdalen College, Cambridge, he left an invaluable collection of manuscript naval memoirs, of prints, and ancient English poetry, which has often been consulted by critics and commentators. One of its most singular curiosities is a collection of English ballads in five large folio volumes, begun by Selden, and carried down to the year 1700. Percy's 'Reliques' are for the most part taken from this collection.

Pepys published 'Memoirs relating to the State of the Royal Navy of England for ten years, determined December 1688,' 8vo, London, 1690, and there is a small book in the Pepysian library entitled 'A Relation of the Troubles in the Court of Portugal in 1667 and 1668,' by S. P., Esq., 12mo, Lond. 1677, which Watt, in his 'Bibliotheca Britannica,' ascribes to Pepys. But the work by which he is best known and by which he will continue to be remembered is his 'Memoirs' comprising his 'Diary' from 1659 to 1689, which after lying unread in the original stenographic characters for more than a century and a half was deciphered by a young collegian, Mr. John Smith (subsequently rector of Baldock, Herts), and published with a selection from his private correspondence by Lord Braybrooke, in 2 vols. 4to, Lond. 1825; it has since been several times reprinted in an octavo form. Perhaps no work of the kind was ever discovered that presented so lively and characteristic a series of pictures of the manners of a past age; and every one who reads the 'Diary' feels how imperfect would be the knowledge of the court and times of Charles II. without this naive narrative, whilst as a mere book of amusement it is in its way without a rival.

PEPYS, WILLIAM HASLEDINE, F.R.S., was born in the year 1775, in the city of London, where his father conducted in the Poultry a superior business as a cutler and maker of certain classes of surgical instruments. His early history is connected in a remarkable manner with that of the progress of chemistry, and of some other branches of science in this country, as well as with that of the various institutions formed for their advancement. In March 1796 the Askesian Society (from *Askesis*, exercise), was established by the association of a number of young men for their mutual improvement by the discussion of philosophical subjects. Of these Mr. Pepys was one. He became a member of the Committee for Apparatus appointed by the society, and took an active part in the experimental elucidation to the members of facts generally understood, and in the repetition and examination of new discoveries. Mr. Pepys also contributed papers to the same body, which, from the residence or occupation of its members in the city of London, eventually led to the foundation of the London Institution, and, through the British Mineralogical Society, in part also to the establishment of the Geological Society of London, of all which Mr. Pepys was an early member and office-bearer. His skill and ingenuity in the construction of apparatus proved most important auxiliaries in the progress of chemical and electro-chemical science in England for a period exceeding thirty years. His researches on respiration, prosecuted in conjunction with Mr. Allen [ALLEN, WILLIAM], and published in the 'Philosophical Transactions,' may be said to have established the foundation of our exact knowledge of the chemical changes produced in air by that process; while their preliminary experiments on carbon and carbonic acid, recorded in papers contained in the same collection, confirmed several points in the chemical history of those bodies, which had remained in doubt or been insufficiently examined. In 1808 Mr. Pepys was elected a Fellow of the Royal Society, in the proceedings of which he took an active part for many years.

As just intimated, he was one of the earliest promoters of the London Institution for the Advancement of Literature and the Diffusion of Useful Knowledge, which was founded in 1805 and 1806, with the intention of supplying for the City of London, advantages corresponding to those derived in the west of the metropolis from the establishment of the Royal Institution, a few years before. He is named as one of the managers of the London Institution in the Charter of Incorporation, dated January 21st, 1807, and for many years continued to be an active member of the Board. The arrangements for the laboratory, the collection of chemical and philosophical apparatus, and subsequently for the lectures, were mainly carried out by him, and from 1821 to 1824 he was honorary secretary. After an interval of some years he was again elected a manager, and afterwards a vice-president, which office he continued to hold during the remainder of his life. Under his direction a voltaic battery of 2000 double plates of zinc and copper was constructed for the laboratory, with which many of Sir Humphry Davy's experiments on the magnetic phenomena produced by electricity were made, with the personal assistance of Mr. Pepys and other friends. In the 'Philosophical Transactions' for 1823 is described another voltaic battery devised by Mr. Pepys, for the performance of electro-magnetic experiments, and constructed for the London Institution, consisting of two plates only, one of copper, the other of zinc, but those each fifty feet in length and two in width, coiled around each other. A remarkable experiment repeated by Sir H. Davy with this apparatus is described in a paper by him in the same volume. A similar apparatus was produced, about the same time, but quite independently, by the late Dr. Seebeck, of Berlin.

For some years prior to his decease, the progress of age and infirmity withdrew Mr. Pepys in a great degree from scientific society, but he retained to the last his interest in the progress of science, together with a vivid recollection of the part which he and his friends and fellow-labourers had taken in the production of the English school of Chemistry, among the contemporaries of Davy and Wollaston. He died at his house in Earl's Terrace, Kensington, London, on the 17th of August 1856, at the age of eighty-one.

PERCIER, CHARLES, an architect of celebrity, whose name is intimately associated with that of his friend and professional colleague, Pierre François Leonard Fontaine, both their buildings and their publications being the productions of their joint talents. [FONTAINE, PIERRE-FRANÇOIS-LEONARD.] Percier, whose father was a colonel of dragoons, was born at Paris, August 22, 1764; and had for his first instructor in art one Poirson, a water-colour draftsman. In 1783 he entered the school of Peyra, and afterwards studied under the elder Gisors, another architect of considerable repute; and having obtained the prize for a project for a Jardin des Plantes, in 1786, he went to Rome. It was at Rome that his friendship and connection with Fontaine commenced, and there he also became acquainted with Flaxman, Canova, and other artists, who afterwards rose to eminence. During their residence in that city, Percier and Fontaine made the drawings which form the subjects of their first publication, viz. 'Palais, Maisons, et autres Edifices modernes, dessinés à Rome,' Paris, 1793, a folio with 100 plates, beautifully delineated and engraved in outline. In the interim, and for a while after their return, they had to contend with necessities and difficulties for a subsistence; the agitated state of public affairs was most unpropitious to their profession, more especially to beginners in it; they were therefore fain to provide for their actual subsistence by making designs for various articles of ornamental manufacture and furniture. The careful study and superior taste displayed by them, rescued them from the obscurity to which they seemed doomed, by bringing their talents in some degree before the public. Various decorations, executed by them at Malmaison for the First Consul and Madame Bonaparte, secured for them the powerful patronage of the Emperor Napoleon I.; and almost immediately after the commencement of his reign they were employed to restore, complete, and embellish the two palaces of the Tuileries and the Louvre, of which latter more especially the very extensive, numerous, and complicated works fully occupied them for a series of years extending to some time after the restoration of the Bourbons. This accounts for their having, with all their high reputation, been employed on so few buildings; and flattering and favourable as it was, it was not wholly without drawback, because they could not lay claim to those edifices as their own architectural creations, and their fame in them merged in the renown of their original authors. One distinct work of theirs is the arch (1806) in the Place du Carrousel, before the east front of the Tuileries; and such also are the ground staircase and other separate portions of the interior of the Louvre. The chief other monument by them is the Chapelle Expiatoire erected after the Restoration, in memory of Louis XVI. The line of houses called the Rue Rivoli adds nothing to their professional fame, it being no more than a handsome and regular piece of street architecture.

For the general celebrity attached to their names, Percier and his colleague are perhaps, after all, mainly indebted to their publications, and not least of all to that entitled 'Recueil de Decorations Interieures, contenant tout ce qui a rapport à l'ameublement,' folio, Paris, 1812. [FONTAINE.] Another publication brought out by them about the same time was the 'Choix des plus belles Maisons de Plaisance de Rome et ses Environs,' a series not of strictly architectural studies, but pictorial views of Roman villas and their gardens. To these may be added two magnificent graphic works, one of them recording the ceremonies and pomps at Napoleon's coronation; the other, those which took place on his marriage with Marie Louise. Besides these there is another work attributed to Percier, but which does not appear to have got into public circulation, 'Parallèle entre plusieurs Résidences de Souverains de France, d'Allemagne, de Suède, de Russie, et d'Italie,' Paris, 1833, with thirty-eight plates. Percier died September 5th 1838.

PERCIVAL, THOMAS, M.D., was born at Warrington in Lancashire, in the year 1740. He was brought up under the care of an elder sister, having lost both his parents at an early age, and received his education at the grammar-school of his native town. Having chosen the medical profession, he was sent to the university of Edinburgh, where he studied for three years. He afterwards visited London and Leyden, and having spent some time in both of these places, he took his Doctor's degree at Leyden in 1765. In 1767 he settled his practice at Manchester, and quickly met with great success, being highly respected by all classes for his professional talents as well as for his high moral and religious worth. Amidst his professional avocations, he found time for the pursuit of many experimental inquiries on subjects connected with medicine, and wrote many papers, which appeared in the Philosophical Transactions of London; and possessing considerable eloquence, he was fond of scientific discussion, and was mainly instrumental in the foundation of the Manchester Philosophical Society. This institution originated in a weekly meeting of literary men, who used to assemble at Dr. Percival's house for the purposes of conversing and reading papers on medical

and scientific subjects. A number of these communications, many of them by Dr. Percival himself, were collected and published in 1781, and were so well received, that a regular organised 'Literary and Philosophical Society' was established, of which Dr. Percival was elected the first president, and which has since numbered among its members many distinguished persons, and produced many volumes of valuable Transactions.

Dr. Percival endeavoured to establish public lectures on mathematics, commerce, and the fine arts in Manchester, but was not able to succeed. He devoted a considerable portion of his time during the later period of his life to the study of moral philosophy, and he published several popular works on this subject. In his religious tenets he was a strict dissenter from the Church of England, but was very temperate and unobtrusive in his opinions. He died, universally respected by the inhabitants of Manchester, August 30th, 1804.

Dr. Percival's earlier medical and philosophical papers were collected and published in one volume, London, 8vo, 1767, with the title of 'Essays, Medical and Experimental.' To this two other volumes were afterwards added, one in 1773, and the other in 1778. These essays went through several editions, and acquired for the author considerable reputation. Besides the 'Essays,' we may mention some 'Observations and Experiments on Water,' 8vo, Lond., 1768; 'Observations on the Poison of Lead,' 8vo, 1774; 'Moral and Literary Dissertations,' 8vo, Warrington, 1784; 'A Father's Instructions, consisting of Moral Tales, Fables, and Reflections, designed to promote the Love of Virtue,' 8vo, London, 1788; 'Medical Ethics, or a Code of Institutes and Precepts adapted to the Professional Conduct of Physicians and Surgeons,' 8vo, Manchester, 1803. This work was republished with additions in 1827. All his works were collected and published together after his death by his son, in 4 vols. 8vo, London, 1807. To this edition is prefixed a memoir of his life and writings, and a selection from his literary correspondence.

PERCY, THE FAMILY OF, one of the most illustrious families in England. Percy was in use as a name of addition in England as early as the reign of the Conqueror, when, as appears from Domesday Book, William de Percy held numerous manors in the counties of Lincoln and York. It is presumed that he was one of the persons who accompanied the Duke of Normandy, and as there are three places called Percy in Lower Normandy it is a reasonable supposition that the name was derived from residence at one of those places.

From this William descended several persons of the name who occur in the chronicles and as benefactors to the Church, till the reign of Henry II., when another William de Percy died without male issue, leaving two grand-daughters (children of a son who died before him) his heirs. These great heiresses made splendid marriages; Maud marrying the Earl of Warwick, and Agnes, Josceline of Louvain, a brother of Adeliza, the second wife of King Henry I. By the death of Maud without issue, the descendants of Agnes became the sole representatives of the first race of Percys, and they adopted the name of Percy as their name of addition. This Josceline, who was the male ancestor of the Percys of whom we read so much in the English history, was of the family of the dukes of Brabant, one of the most illustrious in Europe. One of his sons was active among the barons at the time when King John granted the great charter, and his descendants for two centuries after his time were conspicuous on all occasions when the barons acted in a body. It was a Henry de Percy who, in the reign of Edward I., acquired Alnwick and other lands in Northumberland, which thenceforward became the county to which the Percys are particularly supposed to belong. Warkworth was granted to his son. Another Henry de Percy, in the reign of Edward III., married Mary of Lancaster, daughter of Henry (Plantagenet) earl of Lancaster, grandson of King Henry III. This marriage brought the succeeding Percys into near alliance with the crown, and the two sons who issued from it were made the one Earl of Northumberland, the other Earl of Worcester. Both these titles were conferred by King Richard II. The title of Earl of Worcester soon ceased in this family, the earl having engaged in the rebellion against King Henry IV., and being beheaded at Shrewsbury soon after the battle which was fought near that town. In the same battle Henry Percy (Hotspur), nephew of the Earl of Worcester, son to the elder brother, the Earl of Northumberland, was slain; and the Earl of Northumberland himself, uneasy under the rule of his near relative Henry IV., was slain by the posse comitatus of Yorkshire in 1408.

The son of Hotspur was restored by Henry V. to the title of Earl of Northumberland. He was slain at the battle of St. Alban's in 1455, and his son, the third earl, fell at the battle of Towton, 1460. The fourth earl was slain in a tumult at Thirak, in 1489. The fifth earl died in peace in 1527; he is the earl whose 'Household Book' is published, a volume which exhibits very much of the customs of the time in the houses of the great. As the sixth earl, his son, died in 1537 without issue, there was danger lest the honours of this great family should be lost, for the next heir male descended from an attainted member of the family, and so could not succeed. It seems to have been intended that the title of Northumberland should pass from them; for John Dudley, earl of Warwick, was made by King Edward VI. duke of Northumberland. His honour was however

BIOG. DIV. VOL. IV.

short-lived; and he being dead and attainted, Queen Mary restored the male heir of Percy to the earldom of Northumberland. But the same evil fate pursued him. He engaged in rebellion against Queen Elizabeth, and was put to death at York in 1572. His brother Henry Percy succeeded, in virtue of limitation in the patent of restoration granted by Queen Mary. This earl came to a violent end, being imprisoned in the Tower, and found dead in his bed in 1585, shot with three pistol-bullets. After him were several other earls of Northumberland of this family, the last of whom was Earl Josceline, the eleventh earl, who died at Turin in 1670, being then aged twenty-six. In this earl the principal male line of Percy became extinct. There were living at the time persons who believed themselves to be of the blood, and some of them indisputably were so, but only one of them, a trunk-maker in Dublin, whose descent is very dubious, prosecuted any claim to the honours of the family, and his claim was disallowed.

Josceline, earl of Northumberland, left an only daughter and heir, Lady Elizabeth Percy: this lady married, first, Henry Cavendish, earl of Ogle, who thereupon took the name of Percy. He died very soon after the marriage. She was then contracted to Thomas Thynne, Esq., who was assassinated just at the time in Pall Mall. She then married, in 1682, Charles Seymour, duke of Somerset, who undertook to relinquish his hereditary name, and to call himself and his posterity by the name of Percy. Such was the determination to keep up the splendid name. Some time after however the duke was released from the obligation, and retained his name of Seymour. The Duke of Somerset had Algernon, his son and heir, duke of Somerset, who was created, in 1749, Earl of Northumberland, with remainder to his son-in-law Sir Hugh Smithson, who had married Lady Elizabeth Seymour, his only daughter and heir.

Sir Hugh Smithson became earl of Northumberland on the death of his father-in-law, when he took the name of Percy. In 1766 he was created Duke of Northumberland. From him descend the two existing peers of the family of Percy, namely, the Duke of Northumberland and the Earl of Beverley.

PERCY, THOMAS, D.D., an elegant scholar, and a prelate of the Irish Church, was the son of a grocer at Bridgnorth in Shropshire, where he was born in 1728. He affected to be considered of the noble house of Percy, or it has been affected for him; but his better and surer honour is that he was the maker of his own fortunes, and by his valuable writings and the honourable discharge of his episcopal duties has reared for himself a high and permanent reputation. He was educated at Christchurch, Oxford, and early in life obtained the vicarage of Easton Mauduit, on which he resided, and the rectory of Wilby.

He began his literary career by the publication of what purports to be a translation from the Chinese of a novel, together with other matters connected with the poetry and literature of that people. This is a translation by him from a Portuguese manuscript. It was soon followed by another work, entitled 'Miscellaneous Pieces relating to the Chinese.' He next published translations from the Icelandic of five pieces of Runic poetry. These appeared in 1761, 1762, and 1763. In 1764 he published a new version of 'Solomon's Song,' with a commentary and notes; and in 1765 a 'Key to the New Testament,' which has been reprinted several times. In the same year, 1765, appeared the work by which he is best known, and which is indeed one of the most elegant and pleasing works in the whole range of English literature, to which he gave the title of 'Reliques of Ancient English Poetry.' It contains some of the best of the old English ballads, many very beautiful lyrical pieces by the poets of the Elizabethan period and the age immediately succeeding, a few extracts from the larger writings of the poets of those periods, and a few lyrical pieces by modern writers. Each piece is well illustrated. It has been many times reprinted.

The publication of so popular and pleasing a work naturally drew attention to the author or editor; and particularly the Duke and Duchess of Northumberland took notice of one who bore their name, and in or about 1766 he was appointed domestic chaplain in the family. In 1769 he was made one of the chaplains of the king, in 1778 dean of Carlisle, and in 1782 bishop of Dromore. During this period he continued his literary labours. In 1770 he printed the 'Northumberland Household-Book,' and a poem, the subject of which is connected with the history of the Percy family, called 'The Hermit of Warkworth.' In the same year appeared his translation, with notes, of 'The Northern Antiquities,' by Mons. Mallet. The assistance which he gave to other authors is often acknowledged by them, and especially by Mr. Nichols, in several of his works.

When he became an Irish bishop he thought it his duty to devote himself almost entirely to his diocese. He resided from that time almost constantly at the palace of Dromore, where he lived greatly respected and beloved. After a life in the main prosperous and happy, he tasted of some of the afflictions of mortality. In 1782 he lost an only son. His eye-sight failed him, and he became at length totally blind. He died at the palace of Dromore, on the 30th of September 1811.

PERDICCAS, the son of Orontes, was one of the generals of Alexander the Great, to whom that conqueror on his death-bed delivered his royal signet, thus apparently intending to designate him as pro-

3 B

ceptor or regent of his vast empire. Alexander's wife Roxana was then far advanced in pregnancy, and his other wife, Statira, the daughter of Darius, was supposed to be in the same situation. In the meantime the Macedonian generals agreed to recognise as king, Arrhidæus, a natural son of Philip, a youth of weak intellects, with the understanding that, if the child of Roxana should prove a son, he should be associated in the throne with Arrhidæus. Perdicas contented himself with the command of the household troops which guarded the person of King Arrhidæus, but in that capacity he was in reality the guardian of the weak king and the minister of the whole empire. He distributed among the chief generals the government of the various provinces, or rather kingdoms, subject to Alexander's sway: Antipater had Macedonia and Greece; Lysimachus, Thrace; Eumenes, Paphlagonia and Cappadocia; Antigonus, the rest of Asia Minor; and Ptolemæus had Egypt. For the distribution of the other provinces see Justinian (xiii. 5). Roxana, being soon after delivered of a son, who was called Alexander, became jealous of Statira, for fear that the child she was pregnant with might prove a rival to her own son; and in order to remove her apprehensions, Perdicas did not scruple to put Statira to death. He endeavoured to strengthen himself by an alliance with Antipater, whose daughter he asked in marriage, while at the same time he was aspiring to the hand of Cleopatra, Alexander's sister. Olympias, Alexander's mother, who hated Antipater, favoured this last alliance. Antipater, having discovered this intrigue, refused to give his daughter to Perdicas, who in the end obtained neither. The other generals, who had become satraps of extensive countries, considered themselves independent, and refused to submit to Perdicas and his puppet kings. Perdicas above all fearing Antigonus as the one most likely to thwart his views, sought to destroy him, but Antigonus escaped to Antipater in Macedonia, and represented to him the necessity of uniting against the ambitious views of Perdicas. Antipater, having just brought to a successful termination a war against the Athenians, prepared to march into Asia, and Ptolemæus joined the confederacy against Perdicas. The latter, who was then in Cappadocia with Arrhidæus and Alexander the infant son of Roxana, held a council, in which Antipater, Antigonus, and Ptolemæus being declared rebels against the royal authority, the plan of the campaign against them was arranged. Eumenes, who remained faithful to Perdicas, was appointed to make head against Antipater and Antigonus, while Perdicas, having with him the two kings, marched to attack Ptolemæus in Egypt. He was however unsuccessful, owing to his ill-concerted measures: he lost a number of men in crossing a branch of the Nile, and the rest became discontented, and in the end Perdicas was murdered in his tent, B.C. 321, after holding his power for two years from the death of Alexander. Eumenes, who had been more successful against Antipater in Asia Minor, carried on the war for some years, but was at last betrayed by his own soldiers into the hands of Antigonus, who put him to death. [EUMENES; ANTIGONUS.]

PEREIRA, JONATHAN, an eminent physician and pharmacologist, was born in the parish of Shoreditch, London, on the 22nd of May 1804. He received his early education in his native parish, and was distinguished at school for his knowledge of classics. At the age of fourteen he was apprenticed to Mr. Latham of the City-road, who practised as a surgeon and apothecary. His master having died, he commenced attending on the practice of the Aldersgate-street Dispensary in 1821. At this time this dispensary was recognised by the Apothecaries' Society as one of the institutions, the attendance on the practice of which qualified medical students as candidates for the Apothecaries' licence. The physicians and surgeons of the dispensary gave lectures, which were also recognised by the Society of Apothecaries. In 1822 Pereira became a pupil of St. Bartholomew's Hospital, and in March 1823 obtained his licence to practise from the examiners of the Society of Apothecaries. He was not nineteen years old, and the facility with which he obtained his licence, indicates very plainly how small an amount of education was required for the medical man at this time. He was shortly after appointed apothecary to the Aldersgate-street Dispensary, and thenceforward his name was connected with the falling fortunes of this at one time somewhat celebrated school of medicine.

On his appointment young Pereira at once established himself as a private tutor or "grinder" as teachers of this class are technically called. In this capacity he was very efficient, and his early publications all had reference to the wants of medical students about to present themselves for examination. He published an English translation of the Latin Pharmacopœia of the London College of Physicians. He also published a collection of Latin prescriptions entitled 'Selecta e Prescriptis,' a large number of which have been printed. He devoted much time to chemistry and published 'A general table of Atomic Numbers.' In 1825 he became a member of the Royal College of Surgeons. In 1826 he was appointed lecturer in chemistry in the Aldersgate-street School of Medicine, and subsequently he delivered the course of lectures on *Materia Medica*. These lectures were the foundation of his great work on *Materia Medica* and his reputation as a pharmacologist. These lectures were first published in the *Medical Gazette*, and the matter was subsequently re-arranged and published in two volumes in 1839, under the title 'Elements of *Materia Medica* and Therapeutics.' Dr. Pereira's mind was eminently discursive. Even while lecturing on Chemistry and

*Materia Medica* in Aldersgate-street he undertook to lecture on chemistry and botany at the London Hospital. This fitted him for working successfully at the *Materia Medica*, and he produced a work more scientific and practical than any which had before been devoted to the prolific subject of medicines and their actions. Up to this time he had practised as a general practitioner; but his position as lecturer at the London Hospital School of Medicine, prepared the way for his appointment as physician to that institution. He accordingly in 1840 obtained the degree of doctor of medicine from the University of Erlangen, and was appointed in the same year assistant physician to the London Hospital. He subsequently submitted to the examination of the College of Physicians, and became a London licentiate of that body. He was elected a fellow of the College in 1845. In connection with *Materia Medica*, Dr. Pereira devoted himself to the *Materia Dietetica*, and in 1842 he published a treatise on 'Food and Diet,' which, like his work on *Materia Medica*, was by far the best that had been published on that subject.

His works brought Dr. Pereira into considerable note as a physician, and increasing practice compelled him to give up his various lecturerships. In 1851 he was appointed full physician to the London Hospital. His great knowledge of *Materia Medica* pointed him out as the most fitting person to fill the post of examiner at the London University, an office which he held till his death.

Although Dr. Pereira occupied himself more with compiling and arranging the information obtained from others than with original observation, he nevertheless displayed considerable ability in chemical and physiological research. He published a series of 'Lectures on Polarised Light,' and many original papers and observations in the *Pharmaceutical and Medical Journals*. He took an interest in the formation of the Pharmaceutical Society, and delivered several courses of lectures on *Materia Medica* in connection with that Society. He was a Fellow of the Royal and also of the Linnean Society. His death, which occurred in 1853, was sudden, and was thus described:—"A few weeks previous to this occurrence he had been to consult Professor Quckett (of the College of Surgeons, London) on a scientific question, and whilst descending a staircase leading to the Hunterian Museum, made a false step, fell, and ruptured the rectus femoris muscle of both legs. In all probability at the same time some internal injury was sustained by the heart or larger vessels; but as only local inconvenience was experienced, no danger was apprehended; but whilst getting into bed on the 20th of January he felt a violent throb in the region of the heart, when he became fully aware that a speedy termination of his life was at hand, and this impression was verified within twenty minutes after." A bust was erected to his memory in the London Hospital by his friends.

PEREZ, ANTONIO, was the natural son of Gonsalo Perez, a writer and statesman who had been for forty years sole secretary of state to Charles V. and Philip II. After the death of his father, whom he used to assist in his administrative duties, Antonio was appointed by Philip to succeed him in that charge. At first the confidence which his sovereign placed in him, and the favours lavished upon him, seem to have been unbounded; but he soon experienced the inconstancy of royal favour. John of Austria, an illegitimate son of Charles V., elated with his victories over the revolted Moors of Granada, and still more by the glorious victory of Lepanto (1571), could not rest contented with the second place in the kingdom, and nothing short of a throne would satisfy his ambition. At first he solicited his brother to grant him the kingdom of Tunis, to be held as a fief of the Spanish crown. A marriage with Elizabeth of England, the sworn enemy of Spain, was also seriously contemplated, and negotiations were carried on to that effect by his secret agents. It has even been surmised that he meditated at one time to put himself at the head of the rebels of Flanders. The soul of these intrigues, as well as the promoter of John's ambitious designs, was his secretary, Juan de Escovedo, notwithstanding he had been appointed to that office by Philip for the express purpose of counteracting them. No sooner therefore had Escovedo arrived at court for the purpose of furthering his master's views, than Philip, who was already acquainted with the whole intrigue, decided upon his ruin; but unwilling, from motives of state, to try him by the common forms of law, he committed to Perez the execution of his wishes. Accordingly, and in compliance with Philip's orders, Perez hired some assassins, who murdered Escovedo in March 1578. A few months after the perpetration of this crime, Philip ordered Perez to be arrested at the same time with Doña Ana de Mendoza, princess of Eboli, the supposed object of the king's affection; in all appearance to yield to the solicitations of Escovedo's relatives, and the threats of John of Austria, but in reality from other motives, which, though we may guess at them, are far from being satisfactorily known. In his 'Relaciones,' published several years after the tragedy, Perez treated at length of all these events; but such was his dread of Philip that he always expresses himself in very ambiguous and enigmatic terms, and the whole transaction remains wrapped up in mystery. It has been supposed by some that Perez was imprudent enough to communicate his secret to the princess, whom he used to visit without the knowledge of his master, and to hint at the king's implication in the murder of Escovedo; by others, that Philip was an unsuccessful suitor to the princess, and jealous of the intimacy of Perez with her. Be this as it may, Perez was delivered into the hands of justice; a pretended

investigation was instituted into his conduct, and the result was that he was condemned to two years' imprisonment, eight years' exile from court, and a heavy fine. At first his own house was assigned as his place of confinement, Philip still continuing to employ him and to promise him his protection and favour; but that wily monarch having, it is asserted, through threats and promises, obtained from him what he most wanted, namely, all the papers that might prove his own share in the murder, Perez was by his orders removed to a prison, and soon after put to the rack, where he confessed his participation in the murder of Escovedo, but at the same time stated that he received the king's orders to that effect. Perez would undoubtedly have suffered capital punishment had not his wife, Doña Maria de Coello, assisted by his friends, procured him the means of escaping from his prison, and taking refuge in Aragon, his native province. On arriving at Saragossa, Perez appealed, in virtue of the Aragonese laws, to the protection of the Justizia, and insisted upon a fair and open trial; but Philip, regardless of the authority of the Justizia, of the people's liberties, and his own oaths to maintain them, commanded the magistrates of Calatayud to seize the secretary and confine him in the royal prison. At this arbitrary violation of their constitution the people of Saragossa rose in arms, and by force released the prisoner. A third and last expedient was then tried by Philip. As Perez was known to be in correspondence with Catherine, the sister of Henri IV. of France, and a Protestant, he was accused of heresy and witchcraft, and lodged in the dungeons of the Inquisition. The patriotic Justizia protested against this new infraction of the people's privileges, and the inhabitants of Saragossa, infuriated to the last degree, invested the palace of the Inquisition and delivered the prisoner, after putting to death the Marquis de Almenara, Philip's representative, and committing other excesses. No sooner did Philip hear of the revolt, than he ordered a considerable army to Aragon. The Saragossians rose in arms: a tumultuous body, headed by Don Martin de Lanuza, the Justizia, went out to meet the royal troops; but having hastily fled at their approach, the unfortunate nobleman was taken prisoner and immediately executed, the forms of liberty being thus for ever extinguished in Aragon. In the meanwhile Perez made his escape into France, where he published the narrative of his sufferings, and found protection. He also visited England, and was kindly received by Elizabeth's ministers, and other illustrious men of the time, such as the Earl of Essex, Lord Southampton, Francis and Anthony Bacon, &c., with whom he maintained a correspondence in Latin. He seems even to have entertained an idea of going to Scotland, as appears from a letter of his to James VI., and another addressed to him by Thomas Parry, which are preserved in the library of the British Museum among the Cotton Manuscripts, Caligula, E. vii. During Perez's stay in France several unsuccessful attempts were made by Philip to have him assassinated. Estolle ('Journal de Henry IV.,' vol. ii., p. 263) says that a Spaniard, named Rodrigo Mur, was executed at Paris in 1596 for attempting to murder Perez; and that, when he was put to the rack, he confessed that he was sent by Idiaquez, minister of Philip II. Perez died miserably poor, at Paris, on the 3rd of November 1611, and was buried in the monastery of the Celestins, where his tomb, bearing a Latin epitaph, was still to be seen shortly before the revolution. Besides his 'Relaciones,' which appeared for the first time at Paris in 1598, and were afterwards reprinted there in 1624, and at Geneva in 1631, 1644, and 1654, and his 'Cartas y Aphorismo,' published at Paris in 1608 and in 1605, besides other subsequent editions without date, Perez is said to have written a history of Philip II., and some political works. There is also a collection of letters by him addressed to the Connetable de Montmorency, preserved in the royal library at Paris. Part of the former work was translated into French and also into Latin, with this title, 'Institutiones Imperiales,' Amst., 1657.

PERGOLESI, GIOVANNI-BATTISTA, was born, according to Dr. Burney, at Casoria, near Naples, in 1704; Mattei says at Pergola in 1707; while the Marchese di Villarosa tells us, on the authority of a baptismal register, that he was born at Jesi in 1710. All agree however that Pergolesi was educated at the Neapolitan Conservatorio dei Poveri in Giesu Cristo, under Gaetano Greco and Durante, and that at the age of fourteen, fully persuaded that melody and true taste were sacrificed to what was called learning, he was withdrawn, at his own request, from school, and immediately adopted the style of Vinci and Hasse. His first productions, among which was Metastasio's 'Olimpiade,' were coldly received both at Naples and Rome, for his new manner was not understood. But the Prince di Stigliano, discovering his merit, procured an engagement for him at the Teatro Nuovo. There his light but elegant intermezzo, 'La Serva Padrona,' which afterwards made so extraordinary a sensation in Paris, was brought out in 1731.

Though the dramatic compositions of Pergolesi met with little success during his short life, his productions for the church were duly appreciated, and received with the applause they deserved. His fine mass in D, in which is the no less popular than beautiful movement, 'Gloria in excelsis!' was heard "with general rapture," says Dr. Burney, at Rome; where also his grand motet, 'Dixit Dominus,' and his 'Laudate, Pueri,' were equally admired. At this time he began to show decided symptoms of pulmonary disease, and removed, for change of air, to Torre del Greco, at the foot of Veauvius. Here he composed his pathetic 'Stabat, Mater,' likewise the motet, 'Salve,

Regina,' his latest work. He died in 1736. According to Walpole, Gray the poet first made Pergolesi's works known in England. Pergolesi's opera, 'L'Olimpiade,' was first performed at the King's Theatre in 1742; the 'Serva Padrona' in 1750. His sacred compositions were performed at the Academy of Ancient Music shortly after they reached this country, and have never since ceased to be admired by all true lovers and judges of the art.

PERIANDER, tyrant of Corinth, succeeded his father Cypselus about B.C. 625. While towards the great body of the people his rule appears to have been gentle and considerate, he seems from the first to have aimed at securing in his own hands an absolute authority. To this the story points, however differently told, of the indication of his policy of getting rid of the more powerful nobles, by the symbolic action of cutting off the taller ears of corn in passing through a corn-field. He appears in fact to have conciliated the mass of the citizens, in order that he might the more easily crush the higher orders, and impoverish the wealthy, and thus consolidate the supreme power in his own person. Among the domestic measures enforced by him, were, the suppression of public education, of common tables, clubs, and houses of resort, the establishment of a court for trial of citizens who wasted their patrimony, and the enforcement of certain sumptuary laws: it is probable that to the enforcement of one of these edicts may be traced the story of his stripping the Corinthian women of their ornaments. On the other hand he is said to have encouraged commerce, literature, the arts, and philosophy, and to have constructed many splendid buildings and public works. In external affairs he was careful, by maintaining a strong army and a powerful navy, and by entering into alliances with the tyrants of other Grecian cities, to make himself respected, and the friendship of Corinth courted. Yet he seems to have engaged in few wars, his conquest of Epidaurus, his subjection of Corcyra, and his engagement with the Mytilenæans against Athens, being the principal. For his own security he kept a body guard of 300 mercenaries.

In his private life Periander was extremely unhappy. He is said by several writers to have unintentionally committed incest with his mother; and by some it is added that on becoming acquainted with the fact his disposition was suddenly changed from kindness to misanthropic cruelty. Later in life, in a sudden fit of jealous rage, he by a violent blow killed his wife Melissa (who was far advanced in pregnancy), and then on discovering her innocence caused her accusers to be burned alive. Periander is said to have loved Melissa ardently, and to have felt the keenest remorse for her death. She had borne him two sons, Cypselus and Lycophron, and the last years of Periander's life were embittered by the unappeasable exasperation of his favourite son Lycophron at his mother's death. The anger of Lycophron was stimulated by Procles, tyrant of Epidaurus, the father of Melissa; and Periander in revenge attacked Epidaurus, and made Procles prisoner. Cypselus was of weak understanding, and unfit to reign, and Periander finding that Lycophron persisted in refusing to be reconciled, and share the sovereignty with him, proposed to abdicate in his favour; but the inhabitants of Corcyra seized Lycophron, and put him to death, about B.C. 586. Periander died about B.C. 585, after a reign of above forty years. He was succeeded by a nephew or cousin, Peanmetichus, the son of Gordias.

Periander is usually placed among the Seven Sages of Greece. Diogenes Laertius mentions a didactic poem of 2000 verses which he wrote; but he appears to have obtained his reputation for wisdom on account of his skill in governing men, and the prudence of his policy, and not on account of his philosophical discernment. Aristotle indeed says, that he was reputed to be the first who reduced the policy of despotic governments to a system.

PERICLES, was the son of Xanthippus, who defeated the Persians at Mycale, and of Agarista, niece of the famous Clisthenes. (Herod. vi. 131.) He was thus the representative of a noble family, and he improved the advantages of birth by those of education. He attended the teaching of Damon, who communicated political instruction in the form of music lessons; of Zeno the Eleatic; and, most especially, of the subtle and profound Anaxagoras. Plutarch's account shows that he acquired from Anaxagoras moral as well as physical truths, and that while he learned enough of astronomy to raise him above vulgar errors, the same teacher supplied him with those notions of the orderly arrangement of society which were afterwards so much the object of his public life. But all these studies had a political end, and the same activity and acuteness which led him into metaphysical inquiries, gave him the will and the power to become ruler of Athens.

In his youth old men traced a likeness to Pisistratus, which, joined to the obvious advantages with which he would have entered public life, excited distrust, and actually seems to have retarded his appearance on the stage of politics. However, about the year B.C. 469, two years after the ostracism of Themistocles, and about the time when Aristides died, Pericles came forward in a public capacity, and before long became head of a party opposed to that of Cimon, the son of Miltiades. Plutarch accuses Pericles of taking the democratic side because Cimon headed that of the nobles. A popular war usually strengthens the hands of the executive, and is therefore unfavourable to public liberty; and the Persian war seems to have been emphatically so to Athens, as at its termination she found herself under the guidance of a statesman who partook more of the character of the general than of the prime

minister. Cimon's character was in itself a guarantee against aggrandisement, either on his own part or others; but we may perhaps give Pericles credit for seeing the danger of so much power in less scrupulous hands than Cimon's. Be this as it may, Pericles took the popular side, and as such became the opponent of Cimon.

About the time when Cimon was prosecuted and fined (B.C. 461), Pericles began his first attack on the aristocracy through the sides of the Areopagus; and in spite of Cimon, and of an advocate yet more powerful (the poet Æschylus), succeeded in depriving the Areopagus of its judicial power, except in certain inconsiderable cases. This triumph preceded if it did not produce the ostracism of Cimon (B.C. 461). From this time until Cimon's recall (B.C. 453), we find Pericles acting as a military commander, and by his valour at Tanagra preventing that regret which Cimon's absence would otherwise undoubtedly have created. What caused him to bring about the recall of Cimon is doubtful; perhaps, Thirlwall suggests, to strengthen himself against his more virulent opponents by conciliating the more moderate of them, such as their great leader himself.

After the death of Cimon, Thucydides took his place, and for some time stood at the head of the stationary party. He was a better rhetorician than Cimon, in fact more statesman than warrior; but the influence of Pericles was irresistible, and in B.C. 444 Thucydides was ostracised, which period we may consider as the turning point of Pericles's power, and after which it was well nigh absolute. We are unable to trace the exact steps by which Athens rose from the situation of chief among allies to that of mistress over tributaries; but it seems pretty clear that Pericles aided in the change, and increased their contributions nearly one-third. His finishing blow to the independence of the allies was the conquest of Samos and Byzantium. He secured his success by planting colonies in various places, so as to accustom the allies to look on Athens as the capital of a great empire, of which they themselves were component parts, but still possessed no independent existence.

From this time till the beginning of the Peloponnesian war, Pericles appears to have been engaged in peaceful pursuits. He constructed a third wall from Athens to the harbour of the Piræus. He covered the Acropolis with magnificent buildings, and encouraged public taste by the surest of all methods—the accustoming the eye to statuesque and architectural beauty. At Athens, as is usually the case, poetry had the start of the kindred arts, but during the age of Pericles it attained to a greater height than had ever before been reached. The drama was then at perfection in the hands of Sophocles; and by enabling the poor to attend theatrical representations, Pericles nurtured their taste and increased his own popularity by thus throwing open the theatre to all. This precedent, whether made by Pericles or not, ultimately proved more ruinous to the state than any defeat. It made the people a set of pleasure-takers, with all that restlessness in the pursuit of pleasure which usually belongs to the privileged few. Another innovation, of which Pericles is supposed to have been the author, was equally injurious in its consequences, namely, that of paying the dicasts in the courts. At first the pay was only moderate, but it operated as a premium on attendance at law-suits, the causes became a mode of excitement for a people whose intellectual activity made them particularly eager for anything of the kind, and thence resulted that litigious spirit which is so admirably ridiculed in the 'Wasps' of Aristophanes. But we may well excuse mistakes of this kind, grounded probably on a false view of civil rights and duties, such as an Athenian, with the highest possible sense of the dignity of Athens, would be most likely to fall into. Pericles no doubt had an honest and serious wish to establish such an empire for Athens as should enable her citizens to subsist entirely on the contributions of their dependent allies, and, like a class of rulers, to direct and govern the whole of that empire, of which the mere brute force and physical labour were to be supplied by a less noble race.

Pericles was descended, as we have seen, by his mother's side, from the family of Cleisthenes, and he was thus implicated, according to the religious notions of those times, in the guilt of the murder of Cylon's partisans, which was committed at the very altars in the Acropolis. (Thucyd., i. 126; Herod., v. 70, &c.) The Lacedæmonians, before the actual commencement of the Peloponnesian war, urged on the Athenians the necessity of banishing the members of the family who had committed this offence against religion, which was only an indirect way of attacking Pericles and driving him into exile. The Athenians retorted by urging the Lacedæmonians to cleanse themselves from the guilt incurred by the death of Pausanias. [PAUSANIAS.]

Pericles lived to direct the Peloponnesian war for two years. His policy was that of uncompromising although cautious resistance, and his great effort was to induce the Athenians to consider Attica in the light merely of a post, to be held or resigned as occasion required, not of hallowed ground, to lose which was to be equivalent to the loss of all. In the speech which he made before war was declared, as it is recorded by Thucydides, he impressed the Athenians with these opinions, representing the superiority of their navy and the importance of avoiding conflicts in the field, which, if successful, could only bring temporary advantage—if the contrary, would be irretrievable. At the end of the first campaign, Pericles delivered an oration upon those who had fallen in the war, as he had done before at the close of the Samian war. From that speech (at least if Thucydides reported well)

we learn what Pericles considered to be the character of a good citizen, and we see in what strong contrast he placed the Spartan to the Athenian method of bringing up members of the state. This speech, the most remarkable of all the compositions of antiquity—the full transfusion of which into a modern language is an impossibility—exhibits a more complete view of the intellectual power and moral character of Pericles than all that the historian and biographer have said of him. The form in which the great orator and statesman has embodied his lofty conceptions, is beauty chastened and elevated by a noble severity. Athens and Athenians are the objects which his ambition seeks to immortalise, and the whole world is the theatre and the witness of her glorious exploits. His philosophy teaches that life is a thing to be enjoyed: death a thing not to be feared.

The plague at Athens soon followed, and its debilitating effects made restraint less irksome to the people; but while it damped their activity it increased their impatience of war. In spite of another harangue, in which he represented most forcibly how absurd it would be to allow circumstances like a plague to interfere with well-laid plans, he was brought to trial and fined, but his influence returned when the fit was over.

Pericles, from a bust in the British Museum.

In the third year of the war, having lost his two legitimate sons, his sister, and many of his best friends, by the plague, he fell ill, and after a lingering sickness died. Some beautiful tales are told of his death-bed, all tending to show that the calm foresight and humanity for which he was so remarkable in life did not desert him in death. It is an interesting question, and one which continually presents itself to a student of history, how far those great men who always appear at important junctures for the assertion of some principle or the carrying out some great national object, are conscious of the work which is appointed for them to do. It would for instance be most instructive, could we now ascertain to what extent Pericles foresaw that approaching contest of principles, a small part only of which he lived to direct. Looking from a distance, we can see a kind of necessity imprinted on his actions, and think we trace their dependence on each other, and the manner in which they harmonise. Athens was to be prepared by accessions of power, wealth, and civilisation to maintain a conflict in which, had she been vanquished, the peculiar character of Spartan institutions might have irreparably blighted those germs of civilisation, the fruit of which all succeeding generations have enjoyed. But how should this be? Her leader must have been a single person, for energetic unity of purpose was needed, such as no cluster of contemporary or string of successive rulers could have been expected to show. That ruler must have governed according to the laws, for a tyrant would have been expelled by the sword of the Spartans, as so many other tyrants were, or by the voice of the commonalty, every day growing up into greater power. Moreover, without being given to change, he must have been prepared to modify existing institutions, so as to suit the altered character of the times. He must have been above his age in matters of religious belief, and yet of so Catholic a temper as to respect prejudices in which he had no share, for otherwise in so intolerant an age he would probably have incurred the fate of Anaxagoras, and destroyed his own political influence without making his countrymen one whit the wiser. He must have been a man of taste, or he would not have been able to go along with and direct that artistic skill which arose instantly on the abolition of those old religious notions forbidding any departure from

traditional resemblances in the delineation of the features of gods and heroes, otherwise he would have lost one grand hold upon the people of Athens. If Pericles had not possessed oratorical skill, he would never have won his way to popularity, and later in life he must have been able to direct an army, or the expedition to Samos might have been fatal to that edifice of power which he had been so long in building. Lastly, had he not lived to strengthen the resolve of the wavering people while the troops of Sparta were yearly ravaging the Thriasian plain, the Peloponnesian war would have been prematurely ended, and that lesson, so strikingly illustrative of the powers which a free people can exercise under every kind of misfortune, lost to posterity.

Pericles's connection with Aspasia can hardly be passed over without a trifling notice. Some misunderstanding exists on this subject from not taking into account the fact that Aspasia was a foreigner. She came, it is true, as an adventurer to Athens, and it is also probable that she was the cause of the separation of Pericles and his first wife, the widow of Hipponicus. He lived with her after divorcing his wife, who consented to the separation, and he is said to have been strongly attached to her. The relation which subsisted between Pericles and Aspasia may have been of the same nature with the morganatic marriage at present in use on the Continent. Whether the jokes of Aristophanes as to the real origin of the Peloponnesian war had any foundation, we cannot now tell. It is hardly probable that a man like Pericles should have been a coarse and vulgar voluptuary. [ASPASIA.] (Thucydides; Plutarch, *Pericles*; Grote and Thirlwall, *Histories of Greece*; Clinton, *Fasti Hellenici*.)

PERIZONIUS, JAMES VOORBROEK, was born at Dam in the province of Groningen, in 1651. He studied at Deventer, and afterwards at Leyden under Gravina. He chiefly applied himself to philological and historical studies. In 1674 he was appointed rector of the gymnasium of Delft; in 1681 he was made professor of eloquence and history at Franeker. In 1693 he removed to Leyden as professor of history and the Greek language. He died at Leyden in 1715. Perizonius was one of the most distinguished scholars that Holland has produced. He published numerous dissertations on subjects of classical learning, and editions of Qu. Curtius, of Diotys Cretensis's 'Trojan War,' and of other Latin and Greek authors. Nicéron, in his 'Mémoires,' has given a list of his works, which however is not complete. Among his more important works, the following deserve notice: 1, 'Animadversiones Historicas, in quibus quamplurima in priscis Romanarum rerum utriusque linguae autoribus notantur; multa etiam illustrantur atque emendantur,' 8vo, Amsterdam, 1685. In this work the author compares many passages of various historians relating to particular events, and also to other subjects of language, habits, and civil polity; it is a work full of erudition, and useful to classical scholars; 2, 'De Usu atque Utilitate Græcæ Romanæque Linguae,' 3, 'Rerum per Europam sæculo XVI. gestarum Commentarii historici,' a work imitated by Durand, in his 'History of the Sixteenth Century'; 'Disquisitio de Prætorio'; 5, 'Dissertatio de Ære Gravi'; 5, 'Dissertatio de Morte Judæ'; 6, 'Origines Babilonicæ et Ægyptiacæ,' 2 vols. 8vo, Leyden, 1711; a work, the importance of which has been superseded by the more recent investigations into Egyptian chronology and antiquities. The 'Opuscula Minora' of Perizonius, consisting of orations and dissertations, were published at Leyden in 1740, with a biography of the author. Perizonius left his manuscripts to the Leyden library.

PEROUSE, JEAN-FRANÇOIS-GALAUP DE LA, a distinguished French seaman and navigator of the last century, was born at Alby in the department of Tarn, in 1741. He entered early into the French navy, and was appointed midshipman in 1756. He distinguished himself in the battle of Belleisle (1759), and was taken prisoner. After the peace of 1762 he returned to his native country. In 1773 he visited the East Indies, where he served till 1777. In the war from 1778 to 1783 he distinguished himself on several occasions, and in the beginning of 1782 he was sent with three vessels to take possession of the establishments of the Hudson's Bay Company, on the shores of the bay from which the company derives its name. He took Fort York on the 24th of August, without resistance, as there was no garrison, and after having ordered the fort to be destroyed, he re-embarked and abandoned it. Having been informed that several Englishmen had escaped into the woods, and fearing that they would perish with hunger or fall into the hands of the savages, he left some provisions and arms, an act of humanity which was acknowledged by the English with gratitude. At Fort York he found the manuscript of Hearne's 'Journey to the Coppermine River,' which he was inclined to take to France, but Hearne declaring that it was his private property, he restored it to him, on the express condition that it should be printed on his return to England. The promise was made, but only performed thirteen years after.

After the re-establishment of peace (1783), the French government wishing to rival the English in making discoveries in the Pacific, La Perouse was appointed commander of a squadron, consisting of two frigates, the *Boussole* and the *Astrolabe*. He sailed from Brest on the 1st of August 1785, and went round Cape Horn. After doubling Cape Horn, he sailed to 60° N. lat., and then coasted along the western coast of North America to Monterey in Upper California, which coast had previously been examined by Cook and Vancouver. From Monterey

he went to Canton, and thence along the eastern coast of Asia to Avatsha in Kamtchatka. This is the most important part of his voyage, as he surveyed a coast which previously was very imperfectly known. From Avatsha he sent one of his officers, Lessep, with an account of his voyage, to Paris by land. After leaving Avatsha he sailed to the Navigators' Islands, where the *Astrolabe* lost her captain and eleven of the crew, who were killed by the natives. After touching at the Friendly Islands, he sailed to Botany Bay, where he found that Governor Phillip had arrived for the purpose of founding the first British colony in Australia. From this place he sent, Feb. 7, 1788, the continuation of the account of his voyage, and after leaving Botany Bay he was never heard of. It was supposed that his vessels were wrecked, and the French sent several ships to ascertain his fate. It was finally ascertained that his vessels had been wrecked on one of the islands of Santa Cruz, also called Queen Charlotte Islands. This island is called by the English Wanicoro, or Wanicolo, and by the French *Isle de Recherche*. (*La Perouse, Voyage autour du Monde*.)

PERRAULT, CLAUDE, born at Paris in 1613, has earned a memorable name in the history of art as the designer of one of the finest monuments of modern architecture. He was the son of an advocate, and was brought up to the medical profession, but extended his studies to other branches of science, particularly mathematics and architecture. His attention became more especially directed to architecture on being engaged by Colbert to undertake a translation of Vitruvius, the first edition of which appeared in 1673, in a folio volume, with plates after his own drawings. If he did not always comprehend the meaning of that obscure writer, he had in the meanwhile given indisputable proof of his practical ability and superior taste in architecture in the east front and colonnades of the Louvre, in regard to which edifice, Bernini (invited to Paris in 1614) and other eminent artists had been consulted. It appears to have been at the instance of his brother Charles that Perrault entered into the competition, in which he bore off the prize from his rivals; and his superiority on this occasion has by one of his biographers been attributed to his being unchecked by professional prejudices and habits.

Perrault's other chief works are the Observatory (not particularly remarkable in point of design), and the Grotto, &c., at Versailles. The monument which, after the Louvre, would have best maintained his fame, the grand triumphal arch at the entrance of the Faubourg St. Antoine, was never executed, notwithstanding that the foundations were built, and a temporary plaster model of the whole was erected. Besides his translation of Vitruvius, an enlarged edition of which appeared in 1684, he published an abridgement of it, 1674; a work 'On the Five Orders,' folio, 1683; 'Essais de Physique,' 2 vols. 4to, 1680; and a work on natural history; to which may be added a posthumous one (1700), giving an account of several machines of his invention. He died at Paris, October 9th, 1683.

CHARLES PERRAULT, brother to the preceding, born January 12th, 1628, possessed also some talent for architecture, which procured for him the appointment of 'premier commis des bâtimens du roi.' He is now chiefly known as the author of the 'Parallèle des Anciens et Modernes,' Paris, 1690, wherein he extols the latter at the expense of the former; and whatever may be thought of his judgment, he must be allowed to have shown no little courage when he ventured to express his preference of such writers as Scuderi and Chapelain to Homer. Such an extravagant opinion was hardly worth serious refutation, yet it was formally opposed by Boileau, in his 'Reflections on Longinus,' intended as an answer to the 'Parallèle,' and this literary squabble was prolonged for some time. Of Perrault's work entitled 'Les Hommes illustres qui ont paru en France pendant ce Siècle,' folio, the first volume appeared in 1696, the second in 1701. A collection of his miscellaneous pieces in verse and prose appeared at Paris in 1676, previously to which he had produced some other poems, which have long since been forgotten. One of his most interesting literary productions is his own 'Mémoires,' first published at Avignon, in 1759. He died May 16, 1703. His son, PERRAULT D'ARMANCOURT, also a writer, is remembered by the 'Contes de ma Mère l'Oye,' which contain the nursery stories of Cinderella, &c., and are a classical work in that branch of literature; the 'Biographie Universelle' however states that though published in his name these tales were really written by his father.

PERROT, NICOLAS. [ABLANCOURT.]

PERRY, JAMES, was born in Aberdeenshire on the 30th of October 1756. He received the rudiments of his education at the rural parish school of Chapel of Garioch, studied Latin at the grammar-school of Aberdeen, and in the year 1771 was entered a student of Marischal College. He seems to have been destined for the profession of the law, and was for some time employed in the office of one of the attorneys, or, as they are by local usage termed, advocates, of Aberdeen. From Aberdeen he proceeded to Edinburgh, where he in vain attempted to procure the means of livelihood. He went afterwards to Manchester, and was rather more fortunate, obtaining employment as clerk to a manufacturer. He had all along occupied his hours of involuntary leisure in cultivating his mind, and fitting himself for those higher walks of industry which he felt an innate capacity to occupy. He had shown intelligence and ability as a member of a debating society in Manchester, and went thence in 1771 with introductions to people of some influence in London. Among the friends

who had made him general promises of assistance in procuring a situation was Mr. Urquhart the bookseller. Perry had in the meantime dropped some anonymous contributions into the letter-box of the 'General Advertiser,' which duly appeared in its columns. In one of his unsuccessful visits to Urquhart, that gentleman, who had been highly pleased with the last subject of his reading, pointed to an article in the 'Advertiser,' and told Perry that if he could write like that he would at once procure an engagement. The delighted aspirant claimed the article as his own, and produced from his pocket the next contribution, which he was about to drop into the letter-box. He was immediately engaged as a stipendiary contributor, both to the 'General Advertiser' and the 'Evening Post.' During the trials of Keppel and Palliser, he surprised the London world by the rapidity and completeness of the reports of the proceedings. Becoming subsequently editor of the 'Gazetteer,' he systematised the method of rapid reporting, by establishing the employment of relays of reporters, which has made so marked a change in the nature of the daily press. He became afterwards joint proprietor and editor of the 'Morning Chronicle,' to which he communicated a decided Whig spirit. From his marked position he was the first selected to be the victim of Sir Vicary Gibb's attempt to crush the independent press. On the 24th of February 1810 his case came on for trial before Lord Ellenborough and a special jury, on an 'ex officio' information for libel. The substance of the charge was a reprint in the 'Chronicle' of a paper in the 'Examiner' descriptive of the blessings which might be anticipated from a new reign commencing with a change of system. This was interpreted as an insinuation that the existence of George III. was a barrier to improvement. Perry defended himself, maintaining his right to inculcate the necessity of improvement, and to look with hopeful anticipations towards any quarter whence it might come. The jury pronounced a verdict of not guilty, and the other official informations were dropped. Mr. Perry died at Brighton December 6, 1821. He was the author of some pamphlets and poetical pieces, the reputation of which was temporary.

PERSEUS, son of Philip V., king of Macedonia, began at an early age to serve in his father's army, and distinguished himself by some successes against the barbarous nations which bordered on Macedonia. His younger brother Demetrius was carried away as a hostage by the Consul Flaminius at the time of the peace between Rome and Philip, and after remaining several years at Rome, where he won the favour of the senate, was sent back to Macedonia. After a time he was again sent by his father to Rome, on a mission, in consequence of fresh disagreements which had sprung up between the two states. Demetrius succeeded in maintaining peace; but after his return to Macedonia he was accused of ambitious designs, of aspiring to the crown, and of being in secret correspondence with Rome. Perseus, who was jealous of him, supported the charges, and Philip doomed his younger son to death; but not daring to have him openly executed, for fear of the Romans, he caused him to be poisoned. It is said that having discovered his innocence, his remorse and indignation against Perseus hastened his death. Perseus ascended the throne in the year B.C. 179.

Perseus had been brought up by his father with sentiments of hatred against the Romans for the humiliation which they had inflicted upon Macedonia; however, he dissembled his feelings at the beginning of his reign, and confirmed the treaty existing between his father and the senate. But he soon began to prepare himself for war, and he endeavoured to form alliances with the states of Greece, and especially with the Achæans. The senate, hearing of this, sent legates to Macedonia to examine the state of affairs. Eumenes, king of Pergamus, a staunch ally of the Romans, was also closely watching the doings of Perseus, and he even went to Rome to report to the senate the hostile preparations of the Macedonians. On his return from Italy, as he was going to visit the temple of Delphi, an attempt was made upon his life by assassins hired by Perseus. Eumenes escaped, and the Roman senate declared Perseus to be the enemy of Rome, B.C. 172.

The consul P. Licinius was appointed to proceed with an army to Macedonia. At the same time commissioners were sent to Greece to exhort the allies of the Romans to join in the impending struggle against Perseus. Perseus had a conference with Q. Marcius, one of the commissioners, who granted him a truce, during which the king might send ambassadors to Rome to plead his cause. When the commissioners returned to Rome they boasted of having deceived Perseus by holding out the hope of peace, in order to give time to Rome to prepare for war, whilst the delay could only be of disadvantage to the king, whose army was ready to take the field. Some of the older senators are said to have disapproved of this conduct as more deserving of the name of Punic than of Roman faith; but the majority of the senate, "who cared more for what was advantageous than for what was honest," supported the commissioners. (Livy, xlii. 47.) The legates of Perseus, after being heard by the senate, were dismissed without any satisfactory answer. Licinius, on arriving in Thessaly, B.C. 171, met the army of Perseus on the banks of the Peneus, but only partial engagements took place, in one of which the Roman cavalry was defeated, but in another it had the advantage, after which both armies went into winter-quarters. The following year, B.C. 170, seems to have been spent by both parties in preparations and desultory engagements. The Consul Hostilius Mancinus made some attempts

to enter Macedonia from Thessaly, but did not succeed. His legate Appius Claudius, being sent to Lyncidus in Illyria, attempted to surprise a town called Uscana, which was held by Perseus; but he was foiled, with the loss of most of his men. Meantime the exactions of the Roman prætors Lucretius and Hortensius had indisposed several of the cities of Greece against Rome, and produced a feeling favourable to Perseus. Those officers plundered Chalcis in Eubœa, a town allied to Rome, and allowed their soldiers to abuse the wives and children of the citizens. A citizen of Chalcis, who came to Rome to complain, said it had been found much safer to shut the gates against the Roman prætors than to receive them; for those who had shut their gates had escaped unhurt, whilst the allies of Rome were plundered. The people of Abdera, being required to furnish a heavy contingent of money and corn for the army, asked for a respite; but Hortensius entered the town, beheaded the principal citizens, and sold the rest as slaves. Envoys being sent to Rome by those unfortunate cities, the senate ordered the Abderites to be restored to liberty, and Lucretius, being summoned to Rome, was tried before the tribes, and fined a million of asces. (Livy, xliii. 4, 7, 8.) The Roman commissioners to the friendly states of Epirus, Ætolia, and Achæa, acted with less disregard to appearances, but with equal dishonesty. Those states, like all weak countries that submit to the dictates of a powerful stranger under the specious name of alliance, were divided into two parties: one willing to keep on friendly terms with Rome, but still mindful of their national honour and independence; the other servilely devoted to Rome. The leaders of the latter party sought the favour of the Roman consuls and prætors by accusing those whose views were not the same as their own of being secret enemies of Rome. Some of the persons thus accused were summoned, or in other words transported to Rome, to await the pleasure of the senate.

In the next year, B.C. 169, the new consul Q. Marcius came to take the command of the army against Perseus. He entered Macedonia unopposed, and took possession of the town of Diium; but finding it difficult to get supplies for his army, he withdrew to the frontiers of Thessaly, retaining possession however of the strong defile of Diium, which commanded the entrance of Macedonia on that side. On this occasion Polybius, with others of his countrymen, being sent by the Achæans to offer their assistance to the consul, remained some time with the Roman army.

In the year B.C. 168 Paulus Æmilius was sent to command the army against Macedonia. He passed the mountains from Thessaly and advanced to Pydna, where he met Perseus with his army. The Romans found means to break through the Macedonian phalanx, and a frightful confusion and butchery followed, in which 20,000 Macedonians are said to have lost their lives. This single battle decided the fate of a powerful and ancient kingdom: all Macedonia submitted to the Romans. Perseus fled, almost alone, without waiting for the end of the battle. He went first to Pella, the ancient seat of the Macedonian kings, then to Amphipolis, and thence to the island of Samothrace, whose asylum was considered inviolable; thence he attempted to escape by sea to Thrace, but a Cretan master of a vessel, after having shipped part of his treasures, sailed away, leaving the king on the shore. The king's attendants having also forsaken him except one, Perseus, with his eldest son Philip, came out of the temple where he had taken refuge and surrendered to the Romans. He was treated at first by Æmilius with considerate indulgence, but was obliged to parade the streets of Rome with his children, to grace the triumph of his conqueror. He was afterwards confined, by order of the senate, at Alba, in the mountains of the Marsi, near the Lake Fucinus, where he died in a few years. His son Philip also died at Alba. Another and a younger son is said to have become a scribe or writer to the municipality of Alba.

PERSIUS, AULUS FLACCUS, a Roman satirist, was born at Volaterræ, a town of Etruria, about the 20th year of the reign of Tiberius, A.D. 34. He was of equestrian rank. At the early age of six years he lost his father. His mother, who was afterwards married to another Roman knight, appears to have bestowed extraordinary care upon Persius; and he appears to have shown towards her the strongest filial affection. Persius was trained at Volaterræ till his twelfth year, and he then proceeded to Rome, where he studied grammar under Rhemnius Palaemon, and rhetoric under Virginius Flaccus. At the age of sixteen he became a pupil of Annæus Cornutus, a Stoic philosopher, who had come from Leptis in Africa to settle at Rome. Lucan, the poet, was his fellow-disciple in the school of Cornutus. Persius and Cornutus were bound to each other by feelings more like those of father and son than such as usually subsist between preceptor and scholar. This friendship continued without interruption till the death of Persius, which took place on the 24th of November, A.D. 62. He bequeathed his books and a large sum of money to Cornutus, who however declined to receive the latter, and gave it up to the sisters of Persius.

The materials for a life of Persius are scanty; but they are sufficient to show him in a very favourable light. Amidst prevailing corruption, he maintained a high moral character. He consistently applied his principles as a Stoic to the purposes of self-discipline. His acquaintance with men and things was the result of private study more than of actual converse with the world, so that, as his writings testify, he viewed human life as he thought it should be, rather than as it really

was. Different opinions are formed of Persius as a satirical poet. Quintilian and Martial, with some of the early Christian writers, bear a high testimony to his merits, as do likewise several modern critics. Others consider him not worth reading.

The works of Persius consist of six Satires with a prologue, which seems however not a very suitable introduction either to the first satire or to the six satires taken as one work. The metre of this prologue, which comprises 14 lines, is of the kind called choliambic (lame iambic), or scazon (halting), of which kind are seven of the poems of Catullus. The Satires contain altogether only 650 hexameters; and in some manuscripts they are given as one continuous work. Whether Persius wrote more than we now possess, as the author of his life attributed to Suetonius affirms, we know not; but since Quintilian and Martial speak of his claims to distinction, though he left "only one book," we should conclude that no other production of his was known in their time. Much has been said respecting the obscurity of Persius, and it has even been stated that he meant not to be easily understood. It is not very likely that a man ever wrote seriously with the intention of being obscure. It is granted that Persius is obscure; but he was, no doubt, plain enough to his contemporaries, who were acquainted with the principles of the Stoic philosophy, and with the persons and things generally referred to. Modern readers without such a key will of course find difficulties in Persius. Commentators have however thrown much light upon this author, and among them Isaac Casaubon may be mentioned first; but his comment is copious enough to frighten most readers of the present day. The comment of Koenig is briefer. "But that of Bond may be recommended as the best, particularly because it comes directly to the point, and brings forward short passages from other writers in such a way as greatly to illustrate the phraseology of Persius." The English reader may derive a correct idea of Persius from the translation and notes of Gifford. The best editions of Persius are those of Isaac Casaubon, revised by his son Meric, London, 1647; Bond, Norib., 1631; Koenig, Gött., 1803; Passow, Lips., 1809; Jahn, Lips., 1843; and Heinrich, Lips., 1844. English translations have been made by Holyday, Dryden, Brewster, Sir Wm. Drummond, and Gifford.

PERTHES, CHRISTOPH FRIEDRICH, one of the most distinguished booksellers of Germany, was born April 21, 1772, at Rudolfstadt, the capital of the petty German principality of Schwarzburg, where his father was secretary of the exchequer, who, dying in 1777, left his widow and son unprovided for, except by a pension of twenty-one florins to the widow. The widow sought to maintain herself by going to service as a nurse, while young Perthes was confided to the care of his grandmother. On her death in 1779 he was transferred to his maternal uncle, Friedrich Heubel, also a state official of the Prince of Schwarzburg, who as far as he was able instructed the young Perthes, instilling good principles into him, but little of literature. At the age of twelve he was sent to the gymnasium of Rudolfstadt, but his previous deficiencies rendered him unable to profit much by the instruction here afforded, a loss which he continued to lament in later life, and which he then made great efforts to repair. While at this seminary however he took great delight in reading travels, and they appear to have had much influence in developing a feeling of self-dependence on his own exertions; and another relation, Lieutenant-Colonel Heubel, the superintendent of public buildings, by taking young Perthes in his occasional visitations, gave him a liking for natural scenery. A brother of his father's was a bookseller at Gotha, and this seems to have led to the idea of dedicating Perthes to that trade. In 1786, therefore, he was taken to the great bookselling mart at Leipzig, as to a statute fair, to find a master for him. He was rejected by one because he could not construe *amo*, and by another as too delicate; but one, Böhme, agreed to accept him as an apprentice at the end of another year. On September 11, 1787, he entered upon his new occupation. His master was not unkind, but strict; he was employed in the lower and more irksome duties of his trade, particularly as a collector; his feet were frost-bitten in the winter; he was confined to his room for nine weeks, during which his master's daughter, Frederika, then only twelve years old, attended him, and read to him a translation of Muratori's 'History of Italy.' He recovered, and became fondly attached to his nurse. While serving his apprenticeship his desire for acquiring knowledge was great, but his means were so restricted that he had little opportunity of doing so beyond his own unaided exertions. His mother's pension (about 2*l.* a-year), a few occasional presents from his uncle Heubel, and two dollars yearly from his master, formed the extent of his funds, and with these he had to supply himself with shoes and clothes. After he had been apprenticed some time, a new apprentice, named Nesaig, was introduced. This associate became a candidate for the affections of Frederika. The rivalship revealed to Perthes that he was in love, and like a true German, he made a confidant of his rival. They agreed to each attempt to gain her, and that the unsuccessful suitor was to submit uncomplainingly to his fate. In 1792, when the French revolution broke out, both uncle and nephew took a great interest in its progress; but Perthes saw and expressed in his letters to his uncle reasons for apprehending danger. His manners appear to have been all his life peculiarly attractive, modest yet firm; and while with Böhme he became acquainted with Göthe, Herder, and Schiller. At the Easter fair of 1793, Hoffmann, a large publisher in Hamburg, having ex-

pressed a wish to hire him as an assistant, his master released him from his apprenticeship, which had yet a year to run, and he departed with Hoffmann to Hamburg. While here, though he sedulously attended to his business, he did not forget his first attachment, and corresponded with his rival, Nesaig, who undertook to give a faithful account of Frederika, and the state of her affections. His notions of bookselling appear to have far exceeded those of either of his masters. In 1794 he writes: "Where will you find a body of men so deficient in the requisite information, and so negligent of the duties of their calling, as the booksellers? Germany is deluged with wretched and abominable publications, and will be delivered from this plague only when the booksellers shall care more for honour than for gold." After a residence of about three years with Hoffmann, during which he had won the esteem of many eminent literary men, and made great efforts to repair his defective education by study and by intercourse with the numerous French emigrants then in Hamburg, and having received a promise of the reversion of his uncle's business in Gotha, for which he was not inclined to wait, he determined to begin business for himself. This he effected on borrowed capital, and in partnership with his old fellow-apprentice, Nesaig. As soon as this was effected, they both offered themselves to Frederika Böhme, who declined to marry either, though she owned that she loved both—a good reason, perhaps, for her resolution. Perthes was in despair. He writes, "my whole life-plan is ruined—ruined by her." But he immersed himself in business, in hopes of thus overcoming his apprehended ruin—and succeeded. The partnership with Nesaig did not last long, as it was found that, though not unsuccessful, the profits were not enough for two; and he now proceeded on his own account. His acquaintance with literary men extended. Fred. H. Jacobi, the Stolbergs, Voss, and Count Reventlow were among them. By Jacobi he was introduced to Claudius, the editor of the 'Wandsbecker Bote' (Messenger), whose daughter Caroline he married, after a short courtship, on August 2 of that year. She was a delicate retiring woman, possessed of strong religious feelings, and an ardent love for her husband; but his active bustling habits gave her occasional uneasiness, and she would have preferred his being more calm and less worldly. To her gentle remonstrances he replied, "I am persuaded that I am a man born to turn my own wheel, and that of others, with energy." In 1799, with an addition of capital, also borrowed, he entered into partnership with Besser, who, from his integrity, activity, and great literary knowledge, was of most essential service in the business. This went on happily and successfully till 1803, when the French occupied Hanover, placed Hamburg in a state of blockade, and in 1806 occupied the town itself; and though for a short time released by the peace of Tilsit, it was incorporated in 1810 with the French empire. Still the firm went on, though embarrassed by the Milan and Berlin decrees, and the censorship to which the press was subjected. Perthes had, in his correspondence, lamented the apathy of Germany under the French yoke, and when the French retired before the Russians in 1813, he took an active part in restoring the old constitution, and became a member of the burgher guard. But the French under Davoust and Vandamme almost immediately returned, regained possession of Hamburg, levied enormous contributions, and devastated the town. Perthes had sent his wife and family to Wandsbeck, but he was a marked man, and one of those exempted from the general pardon which was proclaimed. He was forced to fly, the shop was plundered, and sealed up as sequestered. It was now that the calm heroism and devoted attachment of his wife displayed itself. She thanked him from her heart "that your name stands among the ten enemies of the tyrant;" and subsequently, though suffering extreme deprivation, with one of her children dying, she exhorts him to persist in fulfilling his duty. In 1814 they were enabled to return to Hamburg, where, by the exertions of Besser, they met all their trade obligations, and the business again proceeded prosperously. In 1821 his excellent wife died, soon after which he resigned the Hamburg business to his partner, and in 1822 removed to Gotha, where he adventured more largely as a publisher, the works he chiefly produced being on theology and history. In theology he published for Neander, Ullman, Tholuck, Bunsen, and many others, who were opponents of the rationalistic opinions; and in history he published the 'General History of the States of Europe,' edited by Heeren and Ukert, to which many of the most eminent writers of Germany contributed. He was also the publisher of the well-known 'Almanach de Gotha.' In all these undertakings he was not only publisher, but a most efficient adviser, and his opinions were highly valued, not only by the contributors, but by men like Niebuhr and Schlegel. In 1825 he married a second time, and his choice was almost as fortunate as his first. Charlotte Becker, a widow, was an excellent mother to his children, and an attentive and affectionate wife to himself. Some few years before his death he resigned the business to his son Justus, by whom it is now carried on, and of which an establishment for printing maps on a large scale forms a part. He retired to the village of Friedrichroda, a few miles from Gotha, where, with a cheerful and tolerant piety which had always distinguished him, he awaited his dissolution, which took place on May 18, 1848.

Perthes' correspondence was very extensive, and was both instructive and entertaining. Excellent specimens of it are given in 'F. Perthes' Leben. Nach dessen schriftlichen und mündlichen aufzeichnungen.'

in 3 vols. 8vo, published, 1848-55, by his son, Clemens Theodor, who is professor of law in the University of Bonn. Besides these, some of his correspondence was published in 1819 in 'Etwas über den Deutschen Adel, in Briefen,' a correspondence between Perthes, Fouqué, Moser, and others; and in 'Beiträge zur Geschichte Deutschlands in den Jahren 1805-1809, aus brieflichen Mittheilungen,' letters between Perthes, Johann von Müller, and others, issued in 1808. His son Clemens, beside the Memoirs of his father, is the author of 'Der Deutsche Staatsleben vor der Revolution. Eine Vorarbeit zum deutschen Staatsrecht,' 1845; and 'Einverleibung Krakaus, und die Schlusacte des Wiener Congresses,' 1846. The Memoirs have been translated with some condensation, in 2 vols. 8vo, published in 1856.

PERTINAX, PUBLIUS HELVIUS, born about A.D. 126, at Villa Martia, near Alba Pompeia, now Alba in Piedmont, on the banks of the Tanarus, was the son of a freedman who dealt in charcoal, an important article of fuel in Italy even at the present day. His father gave him a good education, placing him under the tuition of Sulpicius Apollinarius, a celebrated grammarian, who is repeatedly quoted by Aulus Gellius. Pertinax became a proficient in the Greek and Roman languages; and after the death of his master, he taught grammar himself. But being dissatisfied with the small profits of his profession, he entered the army; and being assisted by the interest of Lollianus Avitus, a man of a consular family and his father's patronus, he was promoted to a command.

He was sent to Syria at the head of a cohort, and served with distinction against the Parthians, under L. Verus, the colleague of Marcus Aurelius. He was afterwards sent to Britain, where he remained for some time. Subsequently he served in Moesia, Germany, and Dacia; but upon some suspicion of his fidelity, he was recalled by Marcus Aurelius. Having cleared himself, he was made prætor and commander of the first legion, and obtained the rank of senator. Being sent to Rætia and Noricum, he drove away the hostile German tribes. His next promotion was to the consulate, and he publicly received the praise of Marcus in the senate and in the camp for his distinguished services. In Syria he assisted in repressing the revolt of Avitus Cassius. He was next removed to the command of the legions on the Danube, and was made governor of Moesia and Dacia, and afterwards returned to Syria as governor, where he remained till the death of Marcus. Capitolinus says that his conduct was irreprehensible till the time of his Syrian government, when he enriched himself, and his conduct became the subject of popular censure.

On his return to Rome, he was banished by Perennis, the favourite of Commodus, to his native country, Liguria. Here he adorned Villa Martia with sumptuous buildings, in the midst of which however he left his humble paternal cottage untouched. He remained three years in Liguria. After the death of Perennis, Commodus commissioned him to proceed to Britain, where the licentiousness of the troops had degenerated into mutiny. On his arrival, the soldiers wished to salute him emperor, and were with difficulty prevented by Pertinax, who seems to have found the discipline of the legions in that remote part of the empire in a most deplorable state. One of the legions revolted against him; and in trying to repress it, he was wounded, and left among the dead. On his recovery, he punished the mutineers, and solicited the emperor for his recall, as his attempts at restoring discipline had rendered him obnoxious to the army. He was then sent proconsul to Africa, and was afterwards made præfect of Rome, in which office he showed much temperance and humanity.

Coin of Pertinax.  
British Museum. Actual size.

After the murder of Commodus, two of the conspirators, Lætus and Electus, went to Pertinax and offered him the empire, which Pertinax at first refused, but afterwards accepted, and was proclaimed emperor by the senate in the night previous to the 1st of January, A.D. 193. Pertinax recalled those who had been exiled for treason under Commodus, and cleared from obloquy the memory of those who had been unjustly put to death. But his attempts to restore discipline in the army alienated the affections of the soldiers, who had been accustomed to licence under the reign of Commodus. As he found the treasury empty, he sold the statues, the plate, and all the valuable objects amassed by Commodus, and even his concubines. By this means he collected money to pay the Prætorians, and to make the usual gifts to the people of Rome. He publicly declared that he would receive no legacies or inheritance from any one, and he took away several taxes and tolls which had been imposed by Commodus. Pertinax

was cherished by the senate and the people; but the turbulent Prætorians, secretly encouraged by the traitor Lætus, conspired against the new emperor. After offering the empire to several persons, they went to the palace, three hundred in number. The friends of Pertinax urged him to conceal himself till the storm had passed; but the emperor said that such conduct would be unworthy of his rank; and he appeared before the mutineers, and calmly remonstrated with them upon the guilt of their attempt. He was making an impression upon them, when one of the soldiers, a German by birth, threw his spear at him and wounded him in the breast. Pertinax then covered his face, and praying the gods to avenge his murder, was finished by the other soldiers. Electus alone defended him as long as he could, and was killed with him. The soldiers cut off the head of Pertinax and carried it into their camp, and then put the empire to auction, offering it to the highest bidder. [DIDIUS, JULIANUS] Pertinax was sixty-seven years of age, and had reigned eighty-seven days.

PERUGINO, PIETRO, or PIETRO VANNUCCI DELLA PIEVE, or as he subscribed himself, 'DE CASTRO PLEBIS,' was the son of a certain Cristofano, a poor man of Città della Pieve, where Pietro was born, in the year 1446. His father is said to have placed him as a shop-boy (fattorino) with a painter of Perugia. When about twenty-five years of age, according to Vasari, he visited Florence, and became a pupil of Andrea Verrocchio, the master of Lorenzo di Credi and Leonardo da Vinci; but this fact seems very doubtful, and Mariotti questions whether he visited Florence thus early. Be that as it may, in the course of a few years he attained considerable reputation, and his works were so much esteemed as to be exported. In 1475 we find him employed by the magistrates of Perugia, and the order for a payment to him in that year appears on the public records of the town. In 1480 he executed some frescoes for Sixtus IV. in the Sistine chapel at Rome: only one or two of these now remain, the greater part having been destroyed to make room for the Last Judgment of M. Angelo in the time of Paul III. The Dead Christ, and other figures so much praised by Vasari, were painted for the nuns of Santa Chiara at Florence in 1485. Francesco del Pugliese is said to have bid for this picture three times the original price, and a duplicate by Perugino, but the offer was refused. In the year 1500 Pietro executed the frescoes in the Cambio at Perugia. He afterwards visited Florence, but, in consequence of a quarrel with the artists there, returned to the city whence he derives his name. He died at Castello di Fontignano, in 1524.

The fame of Perugino has certainly been widely spread, from the circumstance of his having been the teacher of Raffaele; but, at the same time, the superior genius of the pupil has served to throw into comparative obscurity the great merit of the master. Perugino was a most unequal painter: his early works are far better than those executed after 1500. The popularity of his pictures, and the facility which he had acquired, produced repetition and mechanical execution. Vasari says "he gave all his figures one and the same air;" but that "air" is unquestionably far superior to the contortions of Vasari himself and his fellow-pupils in the school of M. Angelo. Perugino lived to see the conflict between the old and simple style and the very different principles of the great master just named. With M. Angelo himself he is reported to have had a public quarrel: Vasari's account therefore of his moral character must be received with some little suspicion. He says that Perugino was an infidel, who could never be brought to believe in the immortality of the soul, and who would do anything for money. At the same time he gives him great credit for his technical skill, especially in colouring. Perugino's pictures however are singularly pure in style, and certainly such as seems scarcely compatible with the character which Vasari gives of the painter.

Among the best pictures of Perugino now extant are:—An 'Infant Christ, Virgin, and Angels,' painted in 1480, and preserved in the Albani Palace at Rome; a Fresco in Santa M. Maddalena dei Pazzi at Florence, executed at a later period; the 'Dead Christ,' before alluded to (now in the Pitti Palace, No. 164); one or two pictures in the Accademia at Florence; and his frescoes in the Cambio at Perugia. In the National Gallery are two pictures by Perugino—'The Virgin and Infant Christ, with St. John;' and 'The Virgin adorning the Infant Christ,' with, in one of the side-compartments, the Archangel Michael and in the other the Archangel Raphael and Tobias.

Raffaele was a pupil of Perugino, and his early works, such as the 'Marriage of the Virgin,' greatly resemble those of his master. After Raffaele the following painters were among the most eminent scholars of Perugino:—Pinturicchio of Perugia; Andrea Luigi d'Assisi, called L'Ingegno; Giovanni Spagnuolo, surnamed Lo Spagna; and Rocco Zoppo of Florence. All of these closely imitated Perugino's manner, and many of the works attributed to the master are doubtless by one or other of the pupils.

(Vasari, *Vite dei Pittori*; Mariotti, *Lettere Pittoriche Perugine*; Rumohr, *Italienische Forschungen*; Lanzi, *Storia Pittorica*, &c.)

PERUZZI, BALDASSARE, an architect of less celebrity than many greatly inferior to him in design, was born in 1481 at Volterra, to which city his father Antonio had removed, in order to avoid the civil dissensions which agitated Florence. A few years afterwards Volterra itself was besieged and sacked, and Antonio fled to Siena, where the family lived in reduced circumstances, having lost nearly all their property. On his father's death, Baldassare, who had enjoyed

opportunities of access to many artists and their works, determined to apply himself to painting, which he did with so much assiduity, both from his natural inclination and from his wish to aid his mother and sister, that he made extraordinary progress. After executing some subjects in a chapel at Volterra, he accompanied a painter of that city named Piero to Rome, where the latter was employed by Alexander VI. The death of that pope frustrated their scheme of working in concert at the Vatican: however, Baldassare remained for awhile at Rome, where he painted some frescoes in the church of S. Onofrio, and in that of San Rocco à Ripa; and distinguished himself by some others at Ostia, particularly by one in chiaroscuro, representing a siege by Roman warriors, and remarkable for the strict fidelity of the ancient military costume, which he derived from bas-reliefs and other existing monuments.

On returning to Rome he found a liberal patron in the celebrated Agostino Chigi (a native of Siena), by whom he was enabled to continue at Rome for the purpose of devoting himself chiefly to the study of architecture. The acquirements he thus made soon displayed themselves in what was then quite a new career of art, namely, architectural perspectives and scene-painting; and the science of perspective and its application to pictorial illusion and effect. Vasari relates, as an illustration of the perfection to which he brought this branch of art, that on his taking Titian to see some of Peruzzi's works, that great painter could hardly believe at first that the objects were not real. Of his performances in scene-painting there is now no evidence, but some idea of his extraordinary ability in it may still be formed from the painted architecture, &c., with which he decorated a gallery in the Farnesina. It was not however in scenic and fictitious architecture alone that he displayed his talent for that art; he designed many elegant façades at Rome, and gave proof of his superior ability in the Palazzo Massimi, one of the most original and tasteful edifices of its class in that city. Instead of being perplexed by the awkwardness of the site, he availed himself of it to curve the front of the building, and thereby produce so happy an effect that such form seems to have been entirely the result of choice, and independent of other circumstances. The loggia and small inner court are singularly beautiful, and the whole edifice deserves the attention it has received in a folio work, by Suys and Haudebourg, expressly devoted to it, and containing outline engravings of all its parts and details (Paris, 1818).

In 1520 Peruzzi was appointed by Leo X. to succeed Raffaello as architect of St. Peter's; and he made a design for St. Peter's on the plan of a Greek cross, which, had it been executed, would perhaps have surpassed the present structure. He likewise made two different designs for the façade of San Petronio at Bologna. On Rome being taken and sacked by the Constable Bourbon, it was with extreme difficulty that Baldassare escaped from the hands of the soldiery; and after being pillaged of everything reached Siena, where he was most kindly received, and employed on various buildings. He returned however to Rome, and it was then that he built the Palazzo Massimi, but did not live to see it quite completed. He died in 1536, and was buried in the Pantheon, near Raffaello.

There are two works attributed to Peruzzi in the National Gallery—'The Adoration of the Magi,' which however was probably painted by a scholar; and a drawing in chiaroscuro of 'The Adoration of the Kings.'

PESCE, NICOLA or COLA, a famous Sicilian swimmer and diver, who lived towards the end of the 14th century. His name was Nicholas, and he was surnamed 'Pesce' (the 'Fish') on account of his expertness in diving. Frederic II., king of the Two Sicilies, employed him and encouraged his feats. The most incredible stories are told of him: it is said that he passed whole hours under water, and whole days in the water; that he used to swim from Sicily to the Lipari Islands, carrying letters and despatches in a leathern bag, &c. The truth seems to be that he was a most expert swimmer and diver, and that he could remain longer under water than any other person on record. He had been accustomed from his boyhood to dive for oysters and coral along the coast of his native country. It is reported that King Frederic once asked him to dive into the sea off the Point of Faro, where the current forms a whirlpool known by the name of Charybdis; and as Pesce hesitated, the king threw a golden cup into the sea, when Pesce plunged in, and after remaining a considerable time under water brought up the cup, to which the king added a purse of gold as a gift. Pesce was induced to repeat the experiment, but he never rose again from the sea. (Kiroher, 'Mundus Subterraneus,' b. i.)

Mariotti, in his 'Riflessioni' on the Lake of Perugia, speaks of a fisherman called Nonno di San Feliciano, who was "a great swimmer and diver, like Pesce Cola of Sicily, and lived almost entirely in the water. He lived till past ninety years of age." It must be observed however that the Lake of Perugia is not very deep.

PESNE or PENE, JEAN, a French painter and engraver, distinguished chiefly for his excellent prints after Nicolas Poussin, was born at Rouen in 1623. The chief merit of his prints after Poussin is the preservation of the peculiar style of that painter: they are generally of a large size, and are valued by collectors. He engraved also many prints, chiefly landscapes, after Annibal Caracci. He died at Paris in 1700.

PESTALOZZI, JOHANN HEINRICH, was born January 12, 1746, at Zürich, in Switzerland. His father, who was a medical practitioner, BIOC. DIV. VOL. IV.

died when Pestalozzi was about six years old; but his mother, with the assistance of some relatives, procured him a good education. He studied divinity and afterwards law, but instead of adopting either the clerical or legal profession, turned to farming as a means of support. At the age of twenty-three he married the daughter of a merchant of Zürich, purchased a small landed property which he named Neuhof, and went to reside upon it and cultivate it. The reading of Rousseau's 'Emile' had drawn his attention to the subject of education, and he began in 1775 to carry out his views by turning his farm into a farm-school for instructing the children of the poorer classes of the vicinity in industrial pursuits as well as in reading and writing. In this however he was little more successful than he had been in his agricultural operations: at the end of two years his school was broken up, and he became involved in debt. In order to relieve himself from his incumbrances, and to procure the means of subsistence, he produced his popular novel of 'Leinhardt und Gertrud,' 4 vols., Basel, 1781; in which, under guise of depicting actual peasant life, he sought to show the neglected condition of the peasantry, and how by better teaching they might be improved both morally and physically. It was read with general interest, and the Agricultural Society of Bern awarded him for it a gold medal, which however his necessities compelled him at once to sell. It was followed by 'Christoph und Elise,' Zürich, 1782. During 1782-83 he edited a periodical entitled 'Das Schweizer-Blatt für das Volk' ('Swiss-Journal for the People'), which was collected in 2 vols. 'Nachforschungen über den Gang der Natur in der Entwicklung des Menschengeschlechts' ('Investigations into the Process of Nature in the Improvement of the Human Race') appeared at Zürich in 1797; and he wrote also other works of less importance.

In 1798, with the assistance of the Swiss Directory, he established a school for orphan children in a convent which had belonged to the Ursuline nuns at Stanz, in the canton of Unterwalden. Stanz had been sacked by a French army, and the children were such as were left without protectors to wander about the country. In the bare and deserted convent he had, without assistance and without books, to teach about eighty children of from four to ten years of age. He was thus driven by necessity to set the elder and better-taught children to teach the younger and more ignorant; and thus struck out the monitorial or mutual-instruction system of teaching, which, just about the same time, Lancaster was under somewhat similar circumstances led to adopt in England. [LANCASTER, JOSEPH.] In less than a year Pestalozzi's benevolent labours were suddenly interrupted by the Austrians, who converted his orphan-house into a military hospital. He then removed to Burgdorf, eleven miles north-east from Bern, where he founded another school of a higher class, and produced his educational works, 'Wie Gertrud ihre Kinder lehrt' ('How Gertrude teaches her Children'), Bern, 1801; 'Buch der Mütter' ('Mothers' Book'), Bern, 1803; and some others. During this period of political excitement he joined the popular party, and in a considerable degree incurred the disapproval of the upper class. In 1802 the people of the canton of Bern sent him as their deputy to an educational conference summoned by Bonaparte, then First Consul, at Paris. His establishment at Burgdorf was prosperous, became celebrated, and was resorted to from all parts of Europe by persons interested in education, some for instruction and others for inspection. In 1804 he removed his establishment to Münschen-Buchsee, near Hofwyl, in order to operate in conjunction with Fellenberg, who had a similar establishment at the latter place; but the two educational reformers disagreed, and in the same year Pestalozzi removed to Yverdon, in the canton of Vaud, where the government appropriated to his use an unoccupied castle. This establishment became even more prosperous and more celebrated than the one at Burgdorf, and had a still greater number of pupils and of visitors. Unfortunately dissensions arose among the teachers, in which Pestalozzi himself became implicated, and which embittered the latter years of his life. The number of pupils rapidly diminished, the establishment became a losing concern, and Pestalozzi was again involved in debt, which the proceeds of the complete edition of his works ('Pestalozzi's Sammtliche Werke,' 15 vols., Stuttgart and Tübingen, 1819-26) hardly sufficed to liquidate. This edition was the result of a subscription got up in 1818 for the publication of his works, the names of the Emperor of Russia, the King of Prussia, and the King of Bavaria, standing at the head of the list.

In 1825 Pestalozzi retired from his laborious duties to Neu Hof, where his grandson resided. Here he wrote his 'Schwanengesang' ('Song of the [Dying] Swan'), 1826; and 'Meine Lebensschicksale als Vorsteher meiner Erziehungsanstalten in Burgdorf und Iferden' ('My Life's Fortunes as Superintendent of my Educational Establishments at Burgdorf and Yverdon'), 1826. He died February 17, 1827, at Brugg, in the canton of Aargau.

PETAU, DIONYSIUS, was born at Orleans in 1588. He studied at Paris, and afterwards entered the Order of the Jesuits. He lectured on rhetoric in the colleges of Reims, La Flèche, and lastly at Paris, in which he was made professor of theology in 1621. Applying himself assiduously to classical and historical studies, he became a distinguished scholar and critic. In 1627 he published his great work on chronology, 'De Doctrinâ Temporum,' 2 vols. folio, which was republished with considerable additions by himself, as well as by Hardouin and others, in 3 vols. folio, Antwerp, 1703. The 'Doctrinâ

Temporum' consists of thirteen books. In the first eight books Petan discusses the principles of the science of chronology, ancient and modern; in books nine to twelve he examines the application of chronology to history, the various eras, &c.; and in the last or thirteenth book he gives chronological tables of the principal events from the creation to the reign of Justinian. After the publication of the work, Philip IV. invited Petan to Madrid to fill the chair of history; but he declined the offer, as well as an invitation to go to Rome by Pope Urban VIII., preferring the tranquillity of his cell in the Jesuits' College of Clermont, at Paris, where he died in 1652. Just before his death he published 'Rationarium Temporum,' 2 vols. 8vo, 1652, which is a kind of abridgement of his great work, and forms a useful manual of universal chronology. It has gone through many editions, and has been translated into French, 'Abrégé Chronologique de l'Histoire Universelle, sacrée et profane,' 5 vols. 12mo, Paris, 1715. Perizonius published an edition of the 'Rationarium Temporum,' with a continuation down to 1715. At the end of the work are lists of the Roman consuls, the popes, the emperors of the Eastern and Western empires, of the various dynasties of modern Europe, as well as of the councils, and of the various heresies and schisms. Petan wrote also 'De Theologicis Dogmatibus,' 3 vols. fol., Antwerp, 1700. He edited the Breviarium of Nicephorus, in Greek and Latin, with notes, Paris, 1648; the works of Synesius, bishop of Ptolemais, in Cyrenaica; and those of St. Epiphanius, with a Latin translation, 2 vols. fol., Paris, 1622. He also wrote a dissertation upon Photinus, 'De Photino Heretico.'

**PETAUVS.** [PETAU, DIONYSIUS.]

**PETER, SAINT,** one of the twelve Apostles, was born at Bethsaida, on the western side of the lake of Genesareth. His name at first was Simon, which was changed by our Lord into Cephas, a Syriac word signifying a stone or rock; in Greek, 'petra,' whence Peter. In conjunction with Andrew his brother, he followed the occupation of a fisherman. Both were hearers of John the Baptist, by whom they were taught that Jesus Christ was the Messiah. While plying their business on the sea of Galilee, the Saviour called them to be his disciples:—"Follow me, and I will make you fishers of men:" immediately they quitted their boats and nets, and became his intimate friends and constant associates. Peter was one of the three, James and John being the others, who were favoured by our Lord with peculiar marks of his confidence.

Peter was a man of an open and generous nature, strong in his attachments, ardent, and precipitate. He was prompt on every occasion to exhibit his zeal in behalf of his Master, of which we have a memorable instance in his conduct towards the high-priest's servant, whose ear he cut off when the Jewish officers were about to apprehend our Lord. Yet, notwithstanding the ardour of his character and his solemn declaration to the contrary, he denied Christ when he was in circumstances of danger. After the denial, "Jesus turned and looked upon Peter." That look entered his heart; and, stung with deep compunction, he went out and wept bitterly.

On the day of Pentecost which succeeded the ascension of our Lord, the Holy Ghost descended upon the Apostles, and produced the most astonishing and extraordinary results. The gift of tongues came upon them; and they were enabled to address the inhabitants of different nations, each in his own language. On this occasion the character of St. Peter sustained a singular change; and he preached with so much effect, that three thousand were converted to the Christian faith. He now took a prominent position among the Apostles. When a miracle is performed, it is Peter who avails himself of the opportunity, and preaches to the people. When brought before the council for declaring the resurrection of their Master, it is Peter who speaks in reply to the charges against them. In the case of Ananias and Sapphira, it is Peter who detects and punishes the fraud.

Being at Joppa in the course of his apostolic labours, he converted Cornelius, a Roman centurion, the first Gentile who was admitted into the Church without circumcision. This event was considered satisfactory evidence that the benefits of the Gospel were intended, not for the Jews only, but for mankind universally. Shortly after, the zeal and success with which he propagated the new religion induced Herod Agrippa to cast him into prison, from which he was miraculously delivered by an angel. The last important transaction in which we find him engaged was in the apostolic council held at Jerusalem, A.D. 49, when it was decided that Christianity required of its converts neither circumcision nor the observance of any other rite of the Jewish institute. It is supposed that he afterwards preached to the Hebrew Christians dispersed through Pontus, Galatia, Cappadocia, Asia Minor, and Bithynia; and that he visited Rome in 63, where he soon after suffered martyrdom.

St. Peter was the author of two Epistles, both of which make part of our canonical Scriptures. The first, whose genuineness and authenticity have never been questioned, is addressed "to the strangers scattered throughout Pontus, Galatia, Cappadocia, Asia, and Bithynia." There is much difference of opinion among the learned with respect to the persons here denominated 'strangers.' Some suppose they were Jewish Christians; others, that they were in the first instance proselytes to Judaism; and then converts to Christianity; others again, that they were Christians in general. There are two considerations which induce us to hold that the first is the more probable opinion.

The word 'strangers' (*Πατριδῆμοι*) properly signifies persons from another country; and therefore it is very suitably applied to those Jewish believers who, in consequence of persecution in Judaea, were obliged to take refuge in distant provinces: and again, since the ministry of the circumcision was committed to St. Peter, it is more likely that he should address himself to his own converts than to Gentiles.

Another controversy has been agitated with respect to the place where the Epistle was written. In the concluding verses, it is implied that the Apostle was then at Babylon; but whether the word is used in a real sense to designate the city of that name, or mystically to signify Jerusalem or Rome, is the matter in debate. In all probability the term is employed for Rome; for the Jews were fond of using figurative appellations, especially in their national distresses. Edom was frequently a name for their heathen oppressors; and as Babylon was the cause of their first dispersion and captivity, it is not unlikely that Rome, the instrument of their second, and which so closely resembled Babylon in her "abominations, idolatries, and persecutions of the saints," should be denominated by the same title. As St. Peter arrived at Rome, in 63, and suffered martyrdom about 65, the Epistle may be dated in 64. It was written in a period of general calamity to the Church; and the design of the Apostle is to console and strengthen his converts in their trials, and teach them how to bear persecution. He exhorts them to honour and obey the civil authorities; and, above all things, to lead a holy and blameless life, that they might stop the mouths of their enemies and calumniators, and by their example gain over others to the side of Christianity.

The best critics speak highly of the excellence of this Epistle. The writer displays a profound knowledge of the Gospel, and a deep conviction of the truth and certainty of its doctrines. Careless about the disposition of his words and the rounding of his periods, his heart is absorbed and his thoughts swell with the importance and grandeur of his subject. His style is vehement and fervid, and he speaks with the authority of the first man in the Apostolic college.

The second Epistle was written soon after the first. Its object is to confirm the instructions which he had formerly delivered, to establish his converts in the religion that they had embraced, to caution them against false teachers, to warn them against profane scoffers, and to prepare them for the future judgment of the world.

**PETER OF BLOIS,** better known by the Latinised name Petrus Blesensis (Blois being his birth-place), a writer of the 12th century, who spent much of his life in England, being invited thither by King Henry II., who gave him the archdeaconry of Bath. There is a large volume of the writings of this Peter, consisting very much of letters, from which a far better account of his life might be collected than any which has yet been prepared. He was in great favour with Richard, who succeeded Becket in the archbishopric of Canterbury, and was his chancellor. He had also in England the archdeaconry of London, having resigned his archdeaconry of Bath. Peter was a scholar of John of Salisbury; and before he came to England he had studied at Paris and Bologna, and had been secretary to William II., king of Sicily. He died in England in 1200. The edition of his works by Pierre de Goussainville, folio, 1667, is accounted the best. His works belong to the series known as the Fathers of the Church.

Peter visited Bologna for the purpose of acquiring a knowledge of Roman law, and his letters contain numerous indications of his acquaintance with this subject. A work of his on canon law and process was discovered a few years back; an account of it is given in the 'Zeitschrift für Geschichtliche Rechtswissenschaft,' vol. vii., p. 207.

(Savigny, *Geschichte des Römischen Rechts im Mittelalter.*)

**PETER THE CRUEL, DON PEDRO I.,** son of Alonzo XI., after his father's death succeeded to the united crown of Castile and Leon, in 1350, being then only sixteen years of age. His first step was to put to death Leonora de Guzman, the mistress of his father, who had several children by her. His next proceeding was to command the city of Burgos to pay a certain tax without the sanction of the Cortes, but the people resisted and killed the collector. Upon this Pedro went to Burgos, accompanied by Don Juan de Albuquerque, his unprincipled councillor, and having summoned Garcilaso de la Vega, the adelantado of Castile, into his presence, ordered him to be instantly put to death by his ballasters, or men-at-arms. In 1352, he assembled the Cortes at Valladolid, and endeavoured, but without success, to obtain the abolition of the Behetrias, which was the name given to the political condition of certain towns that had placed themselves under the protection of some powerful noble, and were in great measure independent of the crown. He next proceeded to Ciudad Rodrigo, where he had a conference with his maternal uncle, Alonzo or Afonso IV., king of Portugal, who gave him the best advice as to the necessity of moderation, and above all as to adopting conciliatory measures towards his half-brothers, the sons of Donna Leonora, who possessed great influence in the country. Pedro listened to the advice, and he even invited the eldest of his natural brothers, Don Enrique, called Enrique of Trastamare, to his court, where another brother, Don Tello, already was. But his brothers did not trust him, and they soon left Pedro, rebelled, were defeated, and emigrated into Aragon. In 1353, by the advice of his ministers, Pedro solicited and obtained the hand of Blanche of Bourbon, a princess of the royal house of France. Pedro, who had a mistress, Maria de Padilla, behaved with

coldness to his bride, and soon confined her in the fortress of Arevalo. He next conceived a passion for Donna Juana de Castro, a young lady of a noble family, and in order to marry her, he pretended that his marriage with Blanche was null, and he found some prelates, the bishops of Salamanca and Avila, who took his part. In 1354, he publicly married Juana at Salamanca, but he soon abandoned her also, on the ground that he had deceived her as well as the prelates. Not long after Juana was brought to bed of a son. Her brother Fernando Perez de Castro, a powerful lord of Galicia, incensed at his sister's treatment, raised the standard of revolt, and joined the king's brothers and other discontented nobles. Queen Blanche being rescued from her guards, the citizens of Toledo declared themselves her champions and defenders. The league thus formed became too powerful for Pedro, and on the interference of the pope's legate, the king promised to discard Maria de Padilla and to live with Blanche. On this condition the papal legate abstained from excommunicating him, but Pedro shortly after, having obtained supplies from the Cortes at Burgos, resumed the war, confined Blanche to the fortress of Sigüenza, surprised the towns of Toledo and Toro, and put to death many of the leaders of the league; the rest escaped into Aragon. In 1358 Pedro having got into his possession his natural brother Fadrique, grand-master of the order of St. Iago, ordered him to be put to death by his guards in his own presence. Fadrique's brothers Enrique and Tello kept up a desultory warfare against Pedro on the borders of Aragon and Castile.

Pedro now entered into an agreement with his cousin and namesake, King Pedro of Portugal, for the mutual surrender of their respective subjects. Pedro of Portugal was nearly as cruel, though not quite so unprincipled as his cousin of Castile, and he was then busy in discovering and putting to death all those who had been in any way concerned in the murder of his mistress Inez de Castro. [ALONSO IV. OF PORTUGAL.] In 1360 the exchange of blood was made. The Castilian gave up the Portuguese emigrants, who were put to death, and he obtained the persons of several of his revolted subjects who had fled to Portugal, and whom he speedily despatched, except the archbishop of Toledo, the protector of Blanche, who was only banished. In 1361 that unhappy lady was put to death, it is said by poison, at Xeres, by order of her husband. Soon after, Maria de Padilla died a natural death, and Pedro, having assembled the Cortes at Seville, declared that she had been his lawful wife, and produced witnesses who swore to the nuptials as having taken place before his marriage with Blanche. The Cortes acknowledged the issue of Maria de Padilla to be legitimate.

It was about this time, 1362, that Pedro committed another atrocious murder, on the person of Abu Saïd, the Moorish king of Granada, who had come to him at Seville with a safe conduct, for the purpose of doing homage for his kingdom as a fief of Castile. The Moor came with numerous attendants and servants in splendid attire, and brought much valuable property with him. He was invited by Pedro to an entertainment, in the midst of which a number of armed men entered the hall, seized the Moors, rifled their persons, and dragged them to prison. The following day Abu Saïd, mounted on an ass, and thirty-seven of his companions, were paraded through the streets of Seville, preceded by a herald, who cried that they were condemned to death by King Don Pedro for dethroning their lawful sovereign Mohammed Ben Yusef. Being conducted to a field behind the Alcazar, Abu Saïd was stabbed to the heart by Pedro himself, whilst his companions were despatched by the Castilian guards.

The king of Aragon, joined by the king of Navarre, as well as by Bertrand Duguesclin and other French leaders and soldiers who resented the cruel treatment of Blanche, invaded Castile in 1366, entered Calahorra, and proclaimed Enrique, Pedro's natural brother, as king. Pedro, who was at Burgos, fled to Seville without fighting. Enrique was acknowledged throughout all Castile, and the people of Seville soon after revolted against Pedro, who fled into Portugal. From Portugal he went into Galicia, where he had some partisans, who urged him to try the fortune of arms; but Pedro, having already in 1363, formed an alliance with Edward III. of England, depended chiefly upon the assistance of the Black Prince, who was then in Gascony. While passing through St. Iago he committed another deed of atrocity, the motive of which is not clearly ascertained. The archbishop of St. Iago, called Don Suero, was lord of several towns and fortresses, and he was one of those who had urged Pedro to make a stand against his enemies. All at once Pedro sent for him, and on the archbishop reaching the gate of his own cathedral where the king stood as if to receive him, he and the dean were suddenly pierced by the spears of the guards, and the church was plundered. The strongholds of the archbishop were then occupied by the king's troops, after which Pedro embarked at Coruña, and sailed for Bayonne, in 1366.

Edward the Black Prince engaged to restore Pedro to his throne. Pedro on his part promised him the lordship of Biscay, with a supply of money for himself and his army. Besides the alliance existing between his father and Pedro, the French king, Charles V., being the ally of Enrique, the English prince found it his interest to put his weight on the other side of the scale. In the spring of 1367 the Black Prince, together with Pedro, put themselves in motion with an army of English, Normans, and Gascons, and passing through the defile of Roncesvalles, they crossed Navarre, with the consent of that king, and entered Castile.

The Black Prince, was joined on his march by Sir Hugh de Calverley and Sir Robert Knowles, at the head of several thousand men, who had served as volunteers in the army of Enrique, but would not bear arms against their own countrymen. The army thus reinforced amounted to about 80,000 men. The army of Enrique was much superior in numbers, but the men were not all true to his cause. The two armies met at Najera, a few miles from the right bank of the Ebro, on the 3rd of April. The battle began with the war cry of 'Guienne and St. George' on one side, and 'Castile and St. Iago' on the other. Enrique fought bravely, but his brother Don Tello fled from the field at the head of the cavalry, and the Castilian infantry, being charged by the Black Prince in person, gave way. Enrique escaped with very few followers, and retired into Aragon. Pedro, whose ferocity had not been tamed by adversity, wished to kill the prisoners, but was prevented by the Black Prince as long as he remained in Castile. Pedro proceeded to Burgos, and all Castile acknowledged him again. But he behaved faithlessly to his ally; he only paid part of the money which he had promised for the troops, and as for the lordship of Biscay, Pedro excused himself by saying that he could not give it without the consent of the states of that province. The Black Prince, disgusted, and out of health, with his troops half starved, returned to Guienne, where he arrived in July. After his departure Pedro gave vent to his cruelty, and put to death many persons at Toledo, Cordova, and Seville. This gave rise to a second insurrection, and Enrique having again made his appearance, many of the towns of Castile declared for him. Some towns however, and Toledo among the rest, held out for Don Pedro, and a desultory but destructive warfare, as all Spanish wars have been, was carried on for two years. The circumstance of Pedro having still a strong party in many towns, notwithstanding all his cruelty, gives weight to the supposition that while Pedro ruled the nobles with an iron sceptre, he was not so obnoxious to the mass of the people, who were out of the reach of his capricious ferocity.

In March 1369, Enrique, being joined by Duguesclin with 600 lances from France, laid siege to the town of Montiel, where his brother then was. Pedro, through one of his knights, made great offers to Duguesclin if he would assist him to escape. Duguesclin informed Enrique of these offers, and it was agreed, with a cold-blooded treachery, equal to that of Pedro himself, that he should entice Pedro to his tent. On the evening of the 23rd of March, Pedro came to Duguesclin's tent, when Enrique, who lay in wait, fell upon him with his dagger. They grappled together and fell to the ground, but Enrique with the aid of his attendants soon despatched his brother. Enrique II. was then proclaimed throughout Castile.

PETER THE HERMIT was born about the middle of the 11th century in the diocese of Amiens in France, of a gentleman's family according to Gibbon. He received a careful education, at first in Paris, and afterwards in Italy. He then embraced the profession of arms, and served under the Count de Boulogne in the wars against Flanders in 1071. Being of small stature he did not distinguish himself as a soldier, so he retired, married, and had several children. His wife dying, he retired first to a convent, then became a hermit. Here, says Gibbon, "his body was emaciated; his fancy was inflamed; whatever he wished he believed; whatever he believed he saw in visions and revelations." He undertook a pilgrimage to Jerusalem, was oppressed with sorrow at the miseries to which he saw the pilgrims were subjected, and was encouraged by Simon, the patriarch of Jerusalem, to make their state known in Europe. He returned on this mission to Rome, and was favourably received by Pope Urban II., who commissioned him to preach the deliverance of the holy city. He traversed Italy, France, and other parts of Europe, mounted on an ass, with his feet bare, his head uncovered, clothed in a coarse vestment bound with a cord, and bearing a crucifix in his hand. He possessed fluency of speech, an earnestness that impressed with an opinion of his sincerity, and an intelligent and expressive countenance. He conjured the faithful to take up arms, and to hasten to deliver the city of God from the captivity in which it was held by infidels, and his success was enormous. While he was thus agitating the community, Pope Urban summoned a council, which was held at first at Placentia, and then at Clermont in Auvergne, at which he detailed the sufferings of the believers. A crusade for the recovery of Jerusalem was proclaimed, and Peter proceeded again on his mission to assemble forces. In 1093 an immense crowd undertook to follow him, and still mounted on his ass, but clothed in a woollen mantle, with sandals on his feet, he undertook to lead the mighty host, which was estimated to amount to 100,000 men. It was divided into two parts, of which one was commanded by Peter, the other by Walter the Pennyless, who was by far the best fitted to be a leader. Peter had no qualities to enable him to govern the undisciplined mob who followed him. He involved himself in hostilities against the Hungarians, who had been provoked by the misconduct of his troops, and his army was beaten and dispersed at Semlin. With difficulty he conducted the remnant of his host to Constantinople, where the Emperor Alexis had been long wishing for the assistance of Europeans against the growing power of the Turks, but the predatory and barbarous habits of his new allies soon made them unbearable. He furnished them with provisions, and gladly accelerated their passage into Asia, where, refusing to wait the junction of other Christian forces, they engaged in battle with the

army of Solyman, near Nice, where they miserably perished, "and a pyramid of bones," says Gibbon, "informed their companions of the place of their defeat." Alexis sent troops to succour the three or four thousand that escaped. Peter had not accompanied them in this last expedition, and he remained with the succeeding armies of the Crusaders, but wholly undistinguished until the siege of Antioch in 1097. The forces under Godfrey were here suffering extreme privations; the soldiers and even the chiefs were deserting. Peter's enthusiasm, which had excited so many, could not support himself through these sufferings, and he, together with the celebrated Tancred, attempted to escape, but were taken and brought back to the camp, where, says Knollie, they were "enforced to take a new oath of fidelity and perseverance." After Antioch was taken, he accompanied the crusaders to Jerusalem, where he addressed a discourse to the soldiers on the Mount of Olives. Nothing further is known of him in the Crusades, but he returned to Europe, where he founded a monastery near Huy, in the diocese of Liège, where he died peaceably on July 7, 1115, one of the few out of the many thousands whom his fanatic eloquence had led to their destruction during the preceding years.

PETER I., called the 'Great,' Czar of Russia, was born at Moscow, on the 11th of June 1672. His father, Alexis Michaelovich, was twice married: by his first wife he had two sons and four daughters; and one son (the subject of this notice) and one daughter (Natalia Alexowna) by his second wife. The Czar Alexis commenced the work of improvement among his barbarous subjects; established manufactures, reduced the laws into a code, resisted the usurpations of the clergy, and invited foreign officers to discipline his armies. He died in 1677, and was succeeded by his eldest son Theodore, a youth of delicate constitution, who died in 1682, leaving no issue. The next brother, Ivan, was subject to epileptic fits, and of so weak intellect that Theodore named Peter as his successor. The Princess Sophia, an ambitious woman, who had intended to reign herself, through the medium of her incompetent brother, being enraged at this appointment, engaged the strelitzes on her side, and fomented an insurrection, which was only appeased by Ivan being proclaimed joint sovereign with Peter, and Sophia as regent. Peter narrowly escaped with his life on this occasion, for, having fled with his mother to the Troitaki convent near Moscow, at the commencement of the insurrection, he was pursued by some of the strelitzes, who found him before the altar, and were only deterred from striking a fatal blow by feelings of reverence or superstition. When Peter was seventeen, his party brought about a marriage between him and the daughter of the boyar Feodor Abrahamovich, during the absence of Prince Galitzin, who had been associated by the Princess Sophia with her in the government. On the pregnancy of the Czarina being declared, Galitzin, whose plans were entirely deranged by this event, raised an insurrection, which however was soon suppressed, and Galitzin was banished to Archangel, and forfeited his estates. The Princess Sophia was confined to a convent for the rest of her life, which terminated in 1704.

From this time (1689) Peter reigned supreme; his brother Ivan never interfered, and died in 1696. Peter was now in the eighteenth year of his age. He was tall, stout, and well made; his features were regular, but indicated, when grave, a great degree of severity; at other times he was lively and sociable, and always full of energy and activity. His education had been much neglected, and it is said that the Princess Sophia had encouraged every species of excess by placing about him corrupt companions. Although there is no doubt that much of his time was passed in debauchery, yet it is a strong proof that a portion of it must have been devoted to better objects, that he immediately commenced the vast undertaking of reforming the whole system of government and the manners of the people, in which he had to encounter the jealousies of every class of his subjects, who looked upon these changes as subversive of their ancient constitution. Peter's indomitable energy however overcame all obstacles. He first directed his attention to the army, in which department his plans were ably seconded by Generals Le Fort and Patrick Gordon, who, with other foreigners, had entered into his service. He himself entered the army as a private soldier, and rose through all the intermediate ranks before he obtained a commission. He caused all the young boyars to follow this example. He made the soldiers lay aside their long coats, shave their beards, and dress their hair, and in a very short time he had a corps of 5000 men disciplined and trained on the German plan. The sight of a small vessel built by some Dutchmen in his father's time, on the river which runs through Moscow, made a great impression on him, and he determined to have a navy. He hired Dutch and Venetian shipwrights, who built some small vessels at Pakov, in which he used to cruise on the Lake Peipus, until that becoming too confined a space for him, he went to Archangel, where he passed two summers cruising on board English and Dutch ships, and learning the duties of a practical seaman. His taste for everything connected with ships and navigation soon amounted to a passion. He resolved to be no longer dependent on foreigners for his ships, and accordingly sent a number of young Russians to Venice, Leghorn, and Holland, to learn the art of ship-building. By these measures his expenditure had been so much increased that it was necessary to take some steps towards augmenting the revenue, which he did, through the advice of his foreign councillors, by raising the custom-house duties from 5 to 10 per cent., which caused an increase of nearly 2,000,000 rubles in the

first year. In 1696, he besieged and took Azof. During the rejoicings which followed this first victory by the army and navy of his own creation, some of the discontented boyars and strelitzes conspired to put him to death, but, being betrayed by certain of the confederates, the plot was defeated by their arrest and execution.

Russia was not at this period represented at any of the courts of Europe, but Peter, being more than ever convinced of the pre-eminence of the inhabitants of Western Europe over his own barbarous subjects, resolved to visit these countries himself, and for this purpose he despatched an extraordinary embassy to Holland, accompanying it himself incognito. Before he set out on his travels in 1697, he took the precaution of leaving General Gordon, with 4000 of his guards, in Moscow, with orders to remain in that capital. He only took with him twelve attendants, among whom were his favourites, Menschikov and Galitzin, and his dwarf, then a necessary appendage to all great men in Russia. He went straight to Saardam in Holland, took a small lodging with two rooms and a garret, and a shed adjoining. He purchased carpenters' tools and the dress of the dockyard artificers, and there he and his companions spent almost all their time in working as common shipwrights. Peter went by the name of Pieter Timmerman; he rose early, boiled his own pot, and received wages for his labour. He was described by a native of Holland as being "very tall and robust, quick, and nimble of foot, rapid in all his actions, his face plump and round, fierce in his look, having brown eyebrows and curling brown hair, and swinging his arms in walking." He spent much time in sailing on the Zuider-Zee, and with his own hands made a bowsprit for his yacht; he also assisted at rope-making, sail-making, and smiths' work. A bar of iron which he forged at Olonets some years later, with his own mark stamped upon it, is preserved in the Academy of Sciences at St. Petersburg. In the same spirit of inquiry and eagerness to learn, he visited every manufactory, examining into all the details of each. He attended the hospitals, where he learned to bleed and draw teeth; he was very fond of practising in a surgical way. From Holland he proceeded to England, where he arrived in January 1698. As his chief object in coming to this country was to learn the theory of ship-building, and the method of making drafts, and laying them off in the mould-lofts, he did not disguise his annoyance at the crowds which assembled to see him, and at the festivities given in his honour.

The Marquis of Carmarthen was appointed by King William to attend upon the Czar, and they are reported to have passed their nights together in drinking pepper and brandy. Peter visited the dockyards at Deptford, Woolwich, and Chatham. At Deptford he lived at Saye Court, the seat of John Evelyn, who bitterly complains of the havoc which the Czar and his attendants made in his famous gardens: it was a favourite amusement of Peter's to be wheeled about the garden, and especially through a holly-hedge of which Evelyn was very proud, in a wheelbarrow. Peter spent much of his time at Rotherhithe, where a ship was building for him. After his day's work, he and his companions were in the habit of retiring to a public-house near Tower-hill, to smoke and drink beer and brandy. The house still bears the sign of the Czar's Head. He went to Portsmouth, to witness a grand naval review and sham fight. In April he quitted England, taking with him several men of science, engineers, and officers for his army and navy. He spent a short time in Holland, and then proceeded to Vienna to make himself acquainted with the dress, discipline, and tactics of the emperor's army, then considered the best in Europe; thence he was preparing to visit Italy, when he received news of a rebellion having broken out among the strelitzes, fomented, it was said, by the priests and the Princess Sophia. His prudence in leaving General Gordon in Moscow was now made manifest. That officer entirely defeated the rebels, many of whom lost their lives, and others were thrown into prison to await the return of the Czar. Peter quitted Vienna immediately on the receipt of this intelligence, and arrived at Moscow, after an absence of seventeen months.

The dark side of Peter's character now showed itself in the savage nature of the punishments inflicted on the rebels; in palliation of which it can only be said that this being the third insurrection during his reign, a severe example was required to deter other malcontents. He next ordained that all persons, civil as well as military, should cut off the skirts of their Tartar coats, and shave their beards: a tax was levied on all who disobeyed, which, from the love of the Russians for these appendages, became a fruitful source of revenue. He regulated the printing-press, and caused translations to be published of works on various arts and other subjects, established schools for the marine and the teaching of languages, obliged his subjects to trade with other countries, which formerly subjected them to the penalty of death, and he altered the calendar, much to the horror of the priests, ordering that the year 1700 should commence on the 1st of January, instead of the 1st of September, which day used to commence the Russian year. He also instituted the order of St. Andrew, the patron saint of Russia.

In the year 1700 Peter entered into an offensive league with Poland and Denmark against Sweden. His army was defeated before Narva by Charles XII., on the 19th of November in that year; but far from being dispirited at this event, he was only excited to renewed exertion, and he observed that the Swedes would at length teach his soldiers to beat them. In 1703 he laid the foundation of St. Petersburg; and in

the previous year the Russian army, under Scheremator, had gained a complete victory over an inferior force of Swedes, and immediately after took the town of Marienburg. The war continued with more or less success until the year 1709, when Charles XII., having rashly marched into the Ukraine, was completely defeated by the Russian army under Peter at Pultowa, on the 15th of June. Charles himself escaped to Bender, but his army was totally annihilated.

We have seen that Peter, in his seventeenth year, had a wife forced upon him, who bore him one son, Alexis. The Czarina having encouraged the factious party, who opposed all innovation, Peter divorced her and confined her in a convent before he had been married three years (1696). His son Alexis was left in her guardianship. When the prisoners taken at Marienburg filed up before him, General Bauer was much struck with the appearance of a very young girl, who appeared to be in the greatest distress. She had been married only the day before to a Livonian sergeant in the Swedish service, whose loss she was then mourning. The general took compassion on her, and received her into his house. Some time after, Meusobikov being struck by her beauty, she was transferred to him, and remained his mistress till 1704, when, in the seventeenth year of her age, she became the mistress of Peter, and gained his affections so entirely that he married her, first privately and afterwards publicly. On the 17th of March 1711 he declared the Czarina Catharine Alexina his lawful wife. She accompanied her husband immediately afterwards to the war in Turkey, which had just broken out. Peter, following the rash example of Charles XII., entered the enemy's country before his whole army was concentrated. Without sufficient force to keep up his line of communication with Russia, he crossed the river Pruth near Jassy, marched some way down the right bank, and was hemmed in by the army of the grand-vizier on one side and the Tartars of the Crimea on the opposite shore of the river. After three days' action the situation of the army became desperate, when Catharine, unknown to her husband, sent a letter to the grand-vizier, with a present of all the plate and jewels she could collect in the camp. After some delay a treaty of peace was signed, by which Peter gave up the towns of Azof and Taganrog, and the vizier supplied the Russian army with provisions. Peter's health was so much impaired after this campaign that he went to Carlsbad to drink the waters. From Carlsbad he proceeded to Dresden, where his son the Czarovich Alexis Petrovich was married to the Princess of Wolfenbuttel. From Dresden he went to St. Petersburg, where he solemnised anew his marriage with Catharine with great pomp. Peter now determined to strip Sweden of every place which could be an annoyance to his new capital. Before the close of 1713 Stralsund was the only spot in Pomerania remaining to the Swedes: Peter himself gave the plan for its siege, and then leaving Menschikov to carry it out, went to St. Petersburg, and thence with a squadron of galleys and flat boats made himself master of Abo and the whole coast of Finland. The library of Abo was transferred to St. Petersburg, and was the foundation of the present library of that city. He next defeated the Swedish fleet in a naval engagement, and instituted the female order of St. Catharine on the occasion, in honour of the Czarina, who alone could bestow it. The senate was removed from Moscow to St. Petersburg in 1718, and the emperor's summer and winter palaces were completed in 1715. He employed about 40,000 men in finishing his dockyard, building ships, wharfs, and fortifications. Goods imported into Archangel were prohibited from being sent to Moscow; and under these favourable circumstances St. Petersburg soon became a place of great commerce and wealth.

Peter had now taken the whole of Finland, and the provinces of Esthonia and Livonia; and having nothing to fear from Charles XII., he made a second tour through Europe in 1716, accompanied by the empress. They visited Mecklenburg, Hamburg, Pymont, Schwerin, Rostock, and Copenhagen, where he remained some months. While he was at Copenhagen an English and a Dutch squadron arrived: Peter proposed that the four fleets should unite, and proceed to sea in search of the Swedish fleet. The chief command was given to the Czar, who declared the moment in which he hoisted his standard to be the proudest of his life. From Copenhagen he went to Lübeck, where he had an interview with the King of Prussia, and then to Amsterdam, where he remained some time. Catharine, who had been left behind, was brought to bed at Wesel of a third child, which died the next day. She remained at Amsterdam while her husband went to Paris, where he was received with great splendour. On his return to Amsterdam he visited Berlin on his way to Russia. During this tour he purchased great quantities of pictures, cabinets of birds and insects, books, and whatever appeared likely to enrich or ornament the city of his creation. The King of Denmark presented him with a great hollow globe 11 feet in diameter, whose inside represented the celestial and the outside the terrestrial sphere. Peter showed everywhere the same dislike to parade and formal etiquette which he had always evinced, and avoided them when possible.

His eldest son, Alexis, who had unhappily been left to the guardianship of his mother, had always been a source of inquietude and trouble to Peter; and when he grew up, far from showing any desire to tread in the footsteps of his father, he chose his friends and advisers from among the disaffected and turbulent boyars and priests, who were opposed to all change. The unfortunate princess, wife of

Alexis, had fallen a victim to the brutal conduct of her husband, after giving birth to a son, Peter Alexiovich, afterwards Peter II. While yet grieving for the loss of his daughter-in-law Peter remonstrated with his son on his conduct, and told him that he should not be his successor unless he altered his mode of living. These remonstrances being treated with complete neglect by Alexis, who still pursued his vicious courses, Peter forced him, on the 14th of February 1718, to sign and swear to a deed wholly renouncing the succession to the crown; he also required from him the names of his advisers in his misconduct. The answers given by Alexis to the queries put to him were such that Peter thought it necessary to try him by the great officers of state, the judges, and the bishops, who unanimously condemned him to death. On the day of his condemnation he was seized with a violent illness, which terminated in two days, on the 7th of July 1718. His mother was strictly confined, and his advisers punished. In 1719 the Czar's son by Catharine, in whose favour Alexis had abdicated, died at five years of age. On the 10th of September 1721 the peace of Neustadt was concluded, by which Sweden ceded to Russia, Livonia, Esthonia, Ingria, Carrelia, Wyburg, and the adjacent islands, but secured the possession of the Gulf of Finland.

Peter had now attained the summit of his glory: he was requested, and after some hesitation consented to adopt the titles of 'Peter the Great, Emperor of all the Russias, and Father of his Country.' This was done amidst great rejoicings, which continued for fifteen days. He now turned his undivided attention to the arts of peace. He commenced canals to unite navigable rivers; encouraged by bounties the manufactures of woollen and linen cloths, the erection of corn, powder, and sawing mills; established a manufactory of small-arms; instituted hospitals, and established a uniformity of weights and measures; paved the streets of Moscow and St. Petersburg; and ordered the young nobility to carry their wives to visit foreign courts and countries, in order to acquire more civilised manners. Some of his measures were not so politic, although equally well intended, such as the attempt to fix the prices of provisions and the limit of expense in dress.

In 1722 Peter led an expedition to the Caspian, which however failed in producing any results. In 1723 he went to St. Petersburg to found the Academy of Sciences, and to erect a memorial of the establishment of a navy in Russia. Peter took his idea of the academy from that of Paris, of which he had been elected a member during his visit to that capital. In the same year he caused Catharine to be crowned, and his eldest daughter was married to the Duke of Holstein Gottorp. He suffered greatly at this time from a strangury in the neck of his bladder, which painful disorder he endeavoured to stifle by an unlimited indulgence in strong liquors, which so much increased the violence of his temper that even the empress is said to have feared his presence. Being partially relieved, he went, in October 1724, contrary to the advice of his physicians, to inspect the works on Lake Ladoga. On his return he proceeded to Lachta, on the Gulf of Finland, and had scarcely anchored there when a boat full of soldiers, being cast on the shore, Peter, in his ardour to assist them, waded through the water, which brought on violent inflammation in the bladder and intestines. He was conveyed to St. Petersburg, where his complaint made rapid progress, giving him intense and constant pain. He at length sunk under the disease, and expired on the 28th of January 1725. His body lay in state till the 21st of March, when his obsequies, and those of his third daughter, Natalia Petrovna, who died after her father, were performed at the same time.

Peter I., deservedly named the Great, was compounded of contradictions: the greatest undertakings and the most ludicrous were mingled together; benevolence and humanity were as conspicuous in him as a total disregard of human life; he was at once kind-hearted and severe even to ferocity; without education himself, he promoted arts, sciences, and literature. "He gave a polish," says Voltaire, "to his people, and was himself a savage; he taught them the art of war, of which he was himself ignorant; from the sight of a small boat on the river Moskwa he created a powerful fleet, made himself an expert and active shipwright, sailor, pilot, and commander; he changed the manners, customs, and laws of the Russians, and lives in their memory as the 'Father of his Country.'"

Menschikov, whose birth was so obscure as to be totally unknown, and who had risen through the favour of the Czar to be a prince and governor of St. Petersburg, caused Catharine to be proclaimed empress immediately after the death of Peter, and during her reign possessed unlimited power. Catharine died of a cancer in her breast, aggravated by excessive indulgence in wine of Tokay, in 1727, at the age of thirty-eight, having survived her husband only two years and a few months. She was succeeded by Peter II., son of the unfortunate Alexis.

Among other works connected with the mechanical arts, Peter the Great translated 'L'Architecture de Sebastien Leclerc,' 'L'Art de Tourner, par Plumier,' and 'L'Art des Ecluses et des Moulins, par Sturm.' The manuscripts of these, with his journal of the Swedish campaigns from 1693 to 1714, are preserved at St. Petersburg.

PETER II., ALEXEVICH, the grandson of Peter the Great by his son Alexis, was born in 1714, and ascended the throne in 1727, on the

death of Catharine, in virtue of a will procured by Menschikov her minister, who hoped to possess more influence with the young prince than if the sceptre passed to the Princess Anne of Holstein. He had also caused to be inserted in the will that the prince should marry one of his daughters, while his son was to marry the emperor's sister. The plan however wholly failed. Peter had taken a dislike to his proposed consort, and he had a young favourite named Dolgorouki. With his assistance, and that of some older and abler heads among the ministers of the deceased empress, Menschikov was seized, all his property confiscated, and he was banished to Siberia, where he died in poverty in 1729. Peter showed that he had some good qualities for a governor, but he was young and easily misled by his favourites, who had no desire that he should govern for himself, but by them, and sought to bring about a marriage with Dolgorouki's sister. He was encouraged in dissipations that told upon a frame not naturally strong. He fell sick, and being attacked with small pox died on January 29, 1730, and was succeeded by Anna Ivanovna. Peter was the last male representative of the family of Romanov.

PETER III., FEODOROVICH, the grandson of Peter the Great by his daughter Anna Petrovna, who had married the Duke of Holstein Gottorp, was born in 1726. In 1742 he was named heir to the throne, and went to Russia, where Oranienbaum was assigned him for a residence, but he was carefully excluded from all participation in public affairs. He had been ill educated, and while grumbling at his position, abandoned himself to drunkenness and licentiousness. In 1745 he was married to the Princess Sophia Augusta of Anhalt Zerbst, who on her re-baptism in the Greek Church took the name of Catharine. Herself an abandoned and intriguing woman, she certainly effected no reformation in her husband. On January 5, 1762, Elizabeth died, and Peter succeeded. His wife's intrigues against him immediately commenced, and Peter laid himself too open to them, even by his best qualities. He concluded a peace with Prussia, and soon afterwards joined that state against Austria; this was made use of to spread discontent among the officers; he reduced the revenues of the Church, and this displeased the ecclesiastics; he pardoned all the political criminals of the late reign and recalled them, but without receiving much gratitude. At length the conspiracy was fully organised, Catharine was proclaimed empress in St. Petersburg on July 9, 1762. Peter was then at Oranienbaum, and old Marshal Munich, the only one of the exiles that showed any disposition to serve him, advised him either to advance to St. Petersburg with the troops he had, or to retreat to his fleet at Cronstadt. Peter hesitated till it was too late. He was forced to surrender himself, was removed to Ropscha, where, poison failing, he was finally strangled by Count Orlov, and Catharine was empress. [CATHARINA II.; ORLOV.]

PETERBOROUGH, LORD. [MORDAUNT.]  
PETERMANN, AUGUST HEINRICH, was born April 18, 1822, at Bleicherode, near Nordhausen in the Prussian province of Saxony. He was educated at Nordhausen with the view of entering the Church, but showing a decided preference for the study of geography, he was transferred in 1839 to Potsdam, where Professor Berghaus had established an academy. For six years he remained here, and became Berghaus's private secretary and librarian. While here he became acquainted with many of the most eminent men of Germany, and in 1841 drew the map to illustrate Baron Humboldt's 'Central Asia.' In 1845 he went to Edinburgh to assist Mr. A. K. Johnston in preparing his 'Physical Atlas,' based upon Berghaus's 'Physical Geography,' on which Mr. Petermann had been previously occupied. In 1847 he came to London, where he published, in conjunction with the Rev. Thomas Milner, an 'Atlas of Physical Geography.' He also wrote an 'Account of the Expedition to Central Africa,' in which subject he has ever taken a great interest. He promoted with much success the missions of Dr. Barth, Overweg, and Vogel, and wrote frequent communications of their progress in the 'Athenæum.' His published views respecting the existence of a Polar Sea, have received much confirmation from the discoveries of Dr. Kane. He also contributed to the new edition of the 'Encyclopædia Britannica,' and to the Geographical Division of the 'English Cyclopædia.' In 1854 the Duke of Saxe-Coburg-Gotha created him professor of geography at Gotha; and the University of Göttingen bestowed the degree of Doctor of Philosophy on him in 1855. At Gotha he is now employed in superintending the large establishment of Justus Perthes for preparing maps, and he edits for the same publisher a monthly journal, consisting of communications of maps, charts, and narratives, relating to all important modern discoveries in geography.

PETERS, BONAVENTURA, one of the most eminent marine painters of the Low Countries, was born at Antwerp in 1614. The subjects which he in general preferred were storms at sea, which he represented with great truth and feeling. Especially was he skilful in depicting storms and wrecks with their accompanying circumstances of terror or pathos. Sometimes however he painted calms and views of castles, or towns on the sea-shore, with equal merit. There is the same light and spirited touch, the same transparency in his colouring, and his water, whether agitated or still, has equal truth and delicacy. The figures are extremely well designed and exquisitely finished. In a few of his works (which perhaps are erroneously ascribed to him) the colouring is too coarse, and the draperies of the figures mingled with tints that do not harmonise with the whole. His best works are very

valuable and scarce, for he died, in 1653, at the early age of thirty-eight years.

PETERS, JOHN, brother of Bonaventura, was born at Antwerp, in 1625. He painted the same subjects as his brother, and his pictures are nearly as finely touched, as well coloured, and as transparent; they are also like those of Bonaventura enriched with excellent figures. His sea-fights were much admired; and he also painted views of villages, towns, and fortresses on the banks of rivers, which he designed after nature. He died in 1677.

PETERSEN, NIELS MATTHIAS, an eminent Danish antiquarian and historical writer, bears one of the commonest names in Denmark, the list of the Petersens occupying no less than twenty pages in the last edition of the Copenhagen directory. He was born towards the end of October 1791 at the country town of Sanderm, in the island of Funen, and adopted at the age of two by his uncle, a burgher of Odensee, the chief town of the island. In 1801, at the age of ten, he was sent to the cathedral school of Odensee, where he was joined in the same year by another scholar, whose company and conversation decided the future course of Petersen's life. This was Rasmus Rask [RÆSK], afterwards the great philologist, at that time a boy of fourteen, very small for his age. Rask, who soon received the name of the 'little professor,' exercised so strong an influence over his fellow-scholars, that when a few years after he obtained a copy of the Icelandic 'Heimskringla' for a school-prize, and by the aid of the annexed translation compiled from it an Icelandic dictionary in two tolerably thick octavos, three other boys took copies of it for their own use, one of whom was Petersen. Many interesting particulars of Petersen's school-days are contained in his Life of Rask, prefixed to Rask's 'Samlede Afhandlinger,' or 'Collected Essays,' published after his death in 1834; and also in his life of Krejdal, another school-fellow, who became an eminent mathematician, prefixed to Krejdal's 'Omridet af Pananalysis,' or 'Outline of Pananalysis,' in 1833. Though Petersen was led by Rask's example to acquire a knowledge of Icelandic, his inclinations led him to historical rather than philological studies. After taking a degree at the University of Copenhagen, he became teacher at the normal school of Brabotrolleborg in Funen; but on that school being broken up in 1826 he was left without a position, and in unfavourable circumstances. A prize was offered by the Society for the Promotion of Danish Literature for the best essay on the history of the Scandinavian languages, and he obtained it by what has now become a standard work, 'Det Danske, Norske og Svenske Sprogts Historie,' 2 vols., 1829-30. Rask, who had returned from a long journey of philological exploration to Russia, India, and Ceylon, was one of the judges who awarded him the prize; and on the 21st of November 1829, when Rask was appointed librarian to the University of Copenhagen, Petersen obtained the post of assistant-librarian. The next year he was appointed registrar to the Secret Archives; in 1841 he received the title of professor; in 1845 he was made professor-extraordinary of the northern languages at Copenhagen; and by the Danish calendar we observe that he now holds the office of professor-ordinary, which is a step in promotion. He is a member of the Danish Academy of Sciences, and other learned societies of Copenhagen.

His works are numerous and important. His 'Danmarks Historie i Hedenold,' 3 vols., 1834-38, 'History of Denmark in Heathen Times,' is a lucid compendium of the present state of knowledge on a subject with many interesting points. The sketch of the political, religious, and domestic condition of the ancient Danes, which occupies the third volume, is considered of high value. His 'Handbook of Ancient Northern Geography,' 1834, has unfortunately never advanced beyond the first volume. The index to the names of places mentioned in the collection of Icelandic Sagas, called the 'Formanna Sögur,' published in twelve volumes by the Northern Antiquarian Society, and finished in 1837, was compiled by Professor Petersen as an assistance in these studies. Both the index and the handbook have an interest for English antiquarians. The index shows, for instance, that London Bridge is mentioned four times in the 'Formanna Sögur.' In the learned and entertaining 'Chronicles of London Bridge,' by Mr. Richard Thomson of the London Institution, we find that almost the earliest mention of the bridge in history is an account in one of these Sagas of its destruction by a Norwegian sea-king named Olave, the very man who, already a Christian, afterwards became a saint, and whose church now stands at one end of the bridge, while a church dedicated to his son St. Magnus stands at the other. Professor Petersen translated seven volumes of these Sagas into Danish, and published a work in four volumes on the 'Voyages and Travels of the Icelanders at Home and Abroad,' 1839. A 'Danish Mythology' from his pen appeared in 1849. He edited, in conjunction with Professor Molbech [MOLBECH], a 'Selection of hitherto unpublished Danish Documents and Letters of the 14th, 15th, and 16th centuries.' A very important work from his pen is now in progress—his 'Contributions to the History of Danish Literature' ('Bidrag til den Danske Literaturs Historie'), of which the first volume, comprising the middle ages, appeared in 1853, and the second, comprising the time of the Reformation, in 1854. He purposes to continue it to the death of Oehlenschläger in 1850. The contributions of Professor Petersen to the 'Athene,' the 'Danske Magazin,' and other periodicals are numerous; one in the 'Athene' is a poem in honour of Shakspeare. He is one of the supporters of the new system of Danish orthography

proposed by Raak, and which Raak first mentioned to him when they were both at school at Odensee. [See SUPPLEMENT.]

PETIS DE LA CROIX, FRANÇOIS, a learned French Orientalist, was born at Paris, towards the close of 1653. He was the son of the king's interpreter for the Oriental languages, and received an education to qualify him for the same employment. At the early age of sixteen he was sent by the minister Colbert to reside in the East. He spent several years at Aleppo, Ispahan, and Constantinople, where he became master of the Arabic, Persian, and Turkish languages. During his stay at the first-named city he translated into elegant Arabic an account of the campaign of Louis XIV. in Holland, which his contemporary Pellisson published in 1671. He returned to Paris in 1680, and two years afterwards was sent to Morocco, as secretary to M. de Saint Amand, who had been appointed ambassador to Muley Ismail, the reigning sultan. He is reported to have pronounced before that sovereign a speech in Arabic, which excited the admiration of the whole court by the facility of the delivery and the elegance and purity of the style. In the two following years he accompanied the French armaments against Algiers, under Duquesne, Tourville, and D'Amfreville, filling under each of these generals the situation of secretary-interpreter of the marine, in which capacity he was employed to translate into Turkish the treaty of peace, concluded in 1684, between France and the regency of Algiers. In 1685 he performed the same office with respect to the negotiations with Tunis and Tripoli, when he gave decisive proofs of his integrity and patriotism. It is asserted that while the negotiations with the latter power were going on (one of the conditions of the treaty being that the Bey of Tripoli should pay to the King of France the sum of 600,000 livres) Petis was offered a considerable bribe if he would put down in the original treaty Tripoli crowns instead of French ones, which would have made a difference of a sixth part; but his fidelity to his sovereign was incorruptible. In 1687 he assisted the Duke de Mortemart in concluding a treaty of peace and commerce with the empire of Morocco. In short, it was through his intervention that all the affairs between France and the Eastern courts were transacted from the year 1680, when he was first employed in diplomacy, to the time of his death. As a reward for his eminent services, Petis was appointed, in 1692, Arabic professor to the Collège Royal de France, and after the death of his father (1695) the office of Oriental interpreter was also conferred upon him. From this period Petis never left his native country, but employed himself in various translations from the Eastern languages, with most of which he was familiar; for, besides the Arabic, Turkish, and Persian, he is said to have been well acquainted with the Mogul, Armenian, and Ethiopian.

He died at Paris, on the 4th of December, 1713, at the age of sixty, leaving a son named Alexandre Louis Marie, who succeeded him in his office of secretary-interpreter of the marine, and made likewise several translations from the Persian and the Turkish.

His principal publications are—'Les Mille et un Jours' ('The Thousand and One Days'), translated from the Persian, 5 vols. 12mo, Paris, 1710-12; 'Contes Turcs,' a translation from Sheikh Zadeh, 12mo, Paris, 1707; 'The History of Timur,' translated from the Persian of Sheref-ed-din Ali Yezdi, 4 vols. 12mo, Paris, 1722. Most of his works however still remain in manuscript: these are his 'Travels through Syria and Persia, from 1670 to 1680;' a 'History of the Conquest of Syria by the Arabs,' translated from the Arabic of Wakedi; 'The Bibliographical Dictionary of Haji Khalfah,' from the Turkish; a 'History of the Ottoman Empire,' from the same language; a 'Dictionary of the Armenian Language;' a work on 'The Antiquities and Monuments of Egypt;' an 'Account of Ethiopia;' a treatise entitled 'Jerusalem, Modern and Ancient;' and several others, the titles of which are given at full length in the 'Mémoire sur le Collège Royal,' by Goujet, Paris, 1758. In some biographies of Petis de la Croix, a 'History of Gengis-Khan,' from the Persian (Paris, 1710), is attributed to him; but this is an error, since the above translation, though edited by Petis, was the work of his father, whose Christian name was also François.

PETIT, JEAN-LOUIS, was born at Paris in 1674. Litter, a celebrated professor of anatomy, being a resident in his father's house, inspired the young Petit with such a zeal for the same study, that at twelve years of age he acquired sufficient dexterity in dissecting to be appointed to prepare the subjects for his preceptor's lectures, and to be placed at the head of his anatomical class. At sixteen he was apprenticed to a surgeon; and so great was his zeal in his studies that Mareschal, the chief surgeon of the Hospital La Charité, on going very early in the morning to visit his patients, more than once found Petit asleep by the door, awaiting his arrival, that he might secure a good place during the operations. In 1692 he obtained the post of surgeon in the army, and was in active service till 1700, when he returned to Paris, and obtained the degree of Master in Surgery. Here he delivered several courses of lectures to a school of anatomy and surgery which he established, and in which many of those who were afterwards among the first surgeons in Europe were pupils. His reputation rapidly increased, and he was elected a member of the Academy of Sciences at Paris, of the Royal Society of London, and of many learned societies. In 1731, at the foundation of the Academy of Surgery in Paris, of which he was one of the most active promoters, he was elected director. He died April 20, 1750.

Petit was for many years the most renowned surgeon in Europe, and contributed more to its advancement as a science than any one who had preceded him. He not only raised the character of surgery in France, but many of his pupils were invited to take charge of important offices in different parts of Europe; and by carrying thither his improvements, and some of his zeal, gave a fresh stimulus to its progress. At the time of his death, Petit had been engaged twelve years in the composition of an extended 'Treatise on Surgery.' It was completed and published in 1774 by De Leane, and is still a standard work. The other most important of his surgical writings are a 'Treatise on the Diseases of the Bones,' and numerous papers published in the memoirs of the academies of surgery and of the sciences.

PETIT, PETER, was born 31st of December 1598 (Niceron), or 8th of December 1594 ('Biog. Univers.'), at Montlucan, a small town in the present department of the Allier. When young he occupied himself in mathematical studies and experimental philosophy, which he afterwards evinced considerable aptitude in applying. In 1626 he succeeded his father in the office of Contrôleur en l'Election de Montlucan, which office he sold in 1633, after the death of his parents, and then removed to Paris. Here he was introduced to the Cardinal de Richelieu, and appointed by that minister to inspect the sea-ports of France and Italy. Between this time and 1649 there were conferred upon him the appointments of provincial commissary of artillery, intendant of fortifications, and geographer, engineer, and councillor to Louis XIII. Upon his return from Italy he communicated to Mersenne a critical examination of the 'Dioptrica' of Descartes, which led to his being introduced to Fermat, who had also questioned the soundness of the Cartesian theory. Subsequently however he became very intimate with Descartes, and an unreserved supporter of all his doctrines. In 1646-47 a series of experiments, made by Pascal and Petit, confirmed the explanation then recently given by Torricelli of the phenomena of the barometer and common pump. Petit died on the 20th of August 1667, at Lagni on the Marne, about five leagues from Paris.

The following list of his works is given by Niceron in the forty-second volume of the 'Mémoires des Hommes Illustres':—1, 'L'Usage du Compas de Proportion,' 8vo, Paris, 1634; 2, 'Discours Chronologiques,' 4to, Paris, 1636; 3, 'Carte du Gouvernement de la Capelle;' 4, 'Avis sur la Conjonction proposée des Mers Océane et Méditerranée par les Rivières d'Aude et de Garonne,' 4to; 5, 'Observations touchant le Vide fait pour la première fois en France,' 4to, Paris, 1647; 6, 'Discours touchant les Remèdes qu'on peut apporter aux Inondations de la Rivière de Seine dans Paris,' 4to, 1658; 7, 'Observations aliquot Eclipsium—Dissertatio de Latitudine Lutetiae et Magnetis Declinatione—Novi Systematis Confutatio,' published in Duhamel's 'Astronomy,' Paris, 1659-60 (the object of the second of these tracts is to prove that the latitude of Paris was not permanent, an opinion which had been entertained with regard to geographical positions generally by the Italian astronomer Maria); 8, 'Dissertation sur la Nature des Comètes,' 4to, Paris, 1665 (written at the desire of Louis XIV., to lessen the alarms of the people occasioned by the appearance of the comet of 1664); 9, 'Lettre touchant le Jour auquel on doit célébrer la Fête de Pâques,' 4to, Paris, 1666; 10, 'Dissertations sur la Nature du Chaud et du Froid,' 12mo, Paris, 1671.

PETITOT, JOHN, an eminent painter in enamel, the son of a sculptor and architect, was born at Geneva in 1607. Being designed for the trade of a jeweller, he was placed under the direction of Bordier, and in this occupation was engaged in the preparation of enamels for the jewellery business. He was so successful in the production of colours, that he was advised by Bordier to attempt portraits. They conjointly made several trials, and though they still wanted many colours which they knew not how to prepare for the fire, their attempts had great success. After some time they went to Italy, where they consulted the most eminent chemists, and made considerable progress in their art, but it was in England, whither they removed after a few years, that they perfected it.

In London they became acquainted with Sir Theodora Mayern, first physician to Charles I., and an intelligent chemist, who had by his experiments discovered the principal colours proper to be used in enamel, and the means of vitrifying them, so that they surpassed the boasted enamelling of Venice and Limoges. Petitot was introduced by Mayern to the king, who retained him in his service and gave him apartments in Whitehall. He painted the portraits of Charles and the royal family several times, and copied many pictures, after Vandyck, which are considered his finest works. That painter greatly assisted him by his advice, and the king frequently went to see him paint.

On the death of Charles, Petitot retired to France with the exiled family. He was greatly noticed by Charles II., who introduced him to Louis XIV. Louis appointed him his painter in enamel, and granted him a pension and apartments in the Louvre. He painted the French king many times, and, amongst a vast number of portraits, those of the queens Anne of Austria and Maria Theresa. He also occupied himself in making copies from the most celebrated pictures of Mignard and Lebrun.

Petitot, who was a zealous Protestant, dreading the effects of the revocation of the Edict of Nantes, solicited leave, but for a long while in vain, to return to Geneva. The king employed Boissuet to endeavour

to convert him to Romanism, in which however that eloquent prelate was wholly unsuccessful. At length Louis permitted him to depart, and leaving his wife and children in Paris, he proceeded to his native place, where he was soon after joined by his family. Arrived now at eighty years of age, he was sought by such numbers of friends and admirers, that he was forced to remove from Geneva, and retire to Vevay, a small town in the canton of Berne, where he continued to labour till 1691, in which year, whilst painting a portrait of his wife, he was suddenly attacked by apoplexy, of which he died.

Bordier, in conjunction with whom he worked for fifty years, and who painted the hair, backgrounds, and draperies of his pictures, married his wife's sister. In the museum of the Louvre there is a collection of fifty-six portraits by Petitot; but his principal work is a magnificent whole-length portrait of Rachel de Rouvigny, countess of Southampton, in the collection of the Duke of Devonshire, painted from the original in oil by Vandyck, in the possession of the Earl of Hardwicke. The enamel is nine inches and three-quarters high, by five inches and three-quarters wide—a prodigious size for a work of this description, and by far the largest that had been then, and for a century and a half afterwards, executed: it is dated 1642. This work was some years ago entrusted to the late Mr. Bone, the enamel-painter and royal Academician, to repair, it having been seriously damaged by a fall, by which a large portion of the enamel had been displaced. Different from the practice now adopted, the plate on which this was painted is formed upon a very thick piece of gold, the back having cross-bars attached of the same metal, filled up with enamel, the metal alone weighing more than three ounces.

In the earlier part of his career Petitot received twenty guineas for a portrait, which price he afterwards raised to forty. He generally used plates of gold, but seldom copper, and sometimes, it is said, silver, though this seems improbable, for that metal generally has the effect of tinging the enamel with yellow. Amongst a vast number of his works painted in England, we have never met with one the plate of which was composed of silver. His custom was to have a painter to draw the likeness of his sitter in oil, from which he commenced his enamel, and then finished it from life. He copied those of Louis XIV. from the best portraits of him, but generally obtained one or two sittings for the completion.

The pictures which Petitot painted in England are executed in a more free style, and have a greater depth and richness of tint than those executed in France, whilst the latter are remarkable for the extreme delicacy of touch and the exquisitely elaborate finish. He may be called the inventor of enamel-painting; for though subjects of fruit and flowers were long before painted on this material for the purposes of jewellery, he was the first who made the attempt to execute pictures, and it was he who at once brought the art to perfection. The principal objection to the tone of colour of his works—a defect observable in the pictures of all other practitioners in enamel till the present century—is a prevalence of purple in the flesh-tints.

He had a son, John, who followed this art in England, but his pictures, though possessing great merit, are inferior to those of the father.

PETÖFI, SANDOR or ALEXANDER, an eminent poet, and more especially an eminent song-writer, who may be called the Burns of Hungary, was born at Félégyház, in the district of Little Kumania, in the county of Pesth, on the 1st of January 1823. His father, who had migrated from the mountains of the north of Hungary to the plains, bore then and till his death the name of Petrovics, equivalent to 'Peterson,' which showed that he was of Slavonic descent; the son changed the name to Petöfi, which has the same meaning in the Magyar or Hungarian language. The fact is worthy of note, as showing, in conjunction with some similar instances, that in a country where the rivalry of different nationalities has been pushed to a disastrous extreme, the most vehement defenders of one nationality may be recruited from the ranks of another. Petöfi's father was a butcher, who, having succeeded in trade, was anxious to see his son in a profession of some kind, and seems to have been indifferent whether in divinity, law, or medicine. The youth was wild and unruly, and extravagantly stage-struck, and was expelled from the school at Selmecz, to which his father had sent him, for engaging in some theatrical performances. Not daring or not wishing to return home, he went to Pesth, where at the age of fourteen he gained a precarious livelihood by assisting as a scene shifter at the theatre, but spent most of his time in the streets. His father came to Pesth in search of him, took him home by force, and kept him as a sort of prisoner for about two years, after which he again sent him to school at Oedenburg.

The first thing that Petöfi did on arriving there was to go to the barracks and enlist as a soldier in an Austrian regiment, which he understood was to be quartered in the Tyrol, when he intended to desert, and enjoy a free life among the mountains. The regiment was sent instead to Croatia, and his disappointment was so great that he fell ill, and continued seriously affected so long that the regimental doctor in 1841 recommended his discharge. Being now of the age of eighteen he resumed his studies at the college of Pápa, near Raab, and became acquainted with two young men who have since attained to some eminence—Orlay as a painter, and Jokai as a novelist. At that time Orlay was ambitious of becoming a poet, Jokai a painter, and Petöfi an actor, and all three failed in their respective ambitions. Petöfi, who

soon left college to commence his career as a strolling player, seems never to have met with even the most moderate degree of success, and was soon plunged in the most abject poverty. He had long been in the habit of composing songs for his own amusement, and on a visit to Pesth in 1843 he called with some of them on Bajza, the editor of the 'Athenæum,' a popular periodical, mentioning to him that they were the composition of one Petöfi, but not mentioning that Petöfi was himself. The poems awakened the attention of Vörösmarty, at that time the leading poet of Hungary, who predicted that the author would soon stand high, and began to exert himself to bring him into notice. Some other friends procured him literary employment to translate into Hungarian a novel of G. P. R. James's, entitled, 'Forest Days,' and with the money thus obtained he set off for Debreczin, to gratify his theatrical aspirations, by appearing as the Prince of Morocco in a translation of the 'Merchant of Venice.' He found his way back to Pesth on foot, and Vachot, the editor of the 'Divatlap,' or 'Journal of Fashion,' engaged him as a regular contributor of poetry to its pages. At this period he suddenly burst into fame, and became in a few weeks the most popular poet in Hungary. Two or three of his short poems appeared every week, and they were at once on the lips of the nation. The ease and fluency of his language recommended him even to the lowest classes, while he counted some of his warmest admirers among the highest. The sudden tide of success seems to have carried him off his feet, and even his eulogists speak of him as having become perhaps the proudest man in Hungary. His triumphs however were not unmingled; a novel which he wrote at the suggestion of Eötvös, entitled 'A' Hohér Kötelo' ('The Hangman's Rope'), dropped still-born, and when, in 1845, he offered a play to the managing committee of Pesth, it was unhesitatingly rejected. Though in the same year he was allowed to make an appearance on the stage at Pesth, in the character of 'the Deserter,' the result was what is called 'a dead failure,' and he then finally took the hint and withdrew from the stage. For some time afterwards he continued in the enjoyment of a wide-spread popularity; a larger poem under the title of 'A' Vitez Janos' ('the Hero John'), was received with unbounded applause, and he had a train of imitators, even in the particular of costume in which he was somewhat eccentric. He was at the height of his fame at the outbreak of the revolution of 1848, which found in him one of its most ardent admirers and supporters. He had always been an uncompromising advocate of the independence of Hungary, and distinguished for hostility to the aristocracy, as well as by a warm feeling of personal independence.

On the 15th of March, it was Petöfi who incited the students of the university to action by reading aloud in the yard of the university his poem of 'Talpra Magyar' ('Hungarians, up!') which was received with shouts of applause; the poem was the same day issued in innumerable copies, being the first poem printed in Hungary without passing the censorship; and at the theatre that evening, after the great events of the day, it was sung again and again, the whole audience joining in the chorus. His other poems, 'Most vagy soha' ('Now or Never'), and 'Csatadal' ('Battle-Song'), had a great influence on the popular mind. He failed however as a candidate for a seat in the National Assembly for Little Kumania, but seized every opportunity of demonstrating his adhesion to the principles of Kosuth. When on the 21st of August 1848, the two parties of the Moderate and the Extreme Liberals in the National Assembly came to a conflict on the question, if the words of command to the Hungarian army should be given in Hungarian, or as they had always been before, in German, Vörösmarty, who was one of the deputies, gave his vote on the side of the Moderates, who, on that occasion were first brought into a minority by the party of Kosuth. Petöfi, who, only a few months before had dedicated the collected edition of his poems to Vörösmarty, "as a sign of love and esteem," on this occasion wrote a poetical address to him renouncing his friendship, each stanza concluding with the lines,

"I do not tear the laurel from thy brow,  
'Tis thy own hand has torn it now;"

and in spite of the remonstrances of mutual friends, gave it to the public in the 'Életkepek' ('Pictures of Life'), a periodical he was then publishing in conjunction with Jokai. Soon after he exchanged the pen for the sword, and joined the division of the army under the command of General Bem, who appointed him his aide-de-camp. A dispute with General Mészáros, who found fault with the poet's inattention to discipline, induced him to throw up the appointment in May 1849, and quit the service, his enemies remarking that the quarrel was between a butcher (the meaning of Mészáros in Hungarian) and a butcher's boy. The approach of the Russians led him to take up arms anew; he again became aide-de-camp to Bem, and he shared the last terrible campaign of that general in Transylvania. After one of the most desperate fights of that period, he was seen no more, and it was universally believed that he was one of the slain. One of his most spirited poems contained an ardent aspiration that he might meet death on the battle-field. His body however was never found, and in 1852 a report was in circulation among the Hungarian refugees in London and elsewhere, that Petöfi was still alive and in concealment. Fifteen additional years have now elapsed without any tidings being heard of him; his wife has been long re-married, and there

seems little probability that he is still among the living. In the last poem of the first collection of his works beginning "Egy gondolat bánt engemet," he expresses a horror of dying in bed, and puts up an ardent prayer for death on the battle-field.

There is a collected edition of the poems of Petöfi up to 1846, in two small volumes, of which a first edition was published at Pesth in 1847, and a second in 1848. Two additional volumes, containing his subsequent works, were seized and suppressed by the Austrian government after the defeat of the revolution of Hungary. Many of them are to be found in a volume entitled 'Hangok á multból' ('Sounds from the Past'), published at Leipzig in 1851, of which a German translation by Vassó and Benkö, with interesting notes, was issued at Brunswick in 1852, under the title of 'Nationallieder der Magyaren.' As the wonderfully idiomatic elegance of the language is always spoken of as one of the principal charms of the poems of Petöfi, the foreign reader can hardly expect to appreciate them with any approach to the relish of a native; but there is a lightness and airiness about the songs which make it easy to believe in the effect they are said to produce on the sympathies of an Hungarian reader. It may be remarked, that though Petöfi has often been spoken of as a wild son of nature, he had, as has been shown, enjoyed ample opportunities of education; and he was in reality well acquainted with the German, French, and English languages and literature. Gyulai, from whose biographical article in the 'Uj Magyar Muzeum' our information is chiefly taken, informs us that in English his favourite authors were Shakspeare, Byron, Moore, and Dickens; and that he was accustomed to call Dickens, from the kindness which his writings tend to inculcate, a "benefactor of mankind." Characteristically enough in a song-writer, he regarded Béranger as "the world's greatest poet." His own long poems are very inferior to his short ones; and in prose he can only be considered to have succeeded in some short tales and articles in the 'Életkepek.' Translations by Sir J. Bowring appeared in 1866.

PETRARCA, FRANCESCO, born at Arezzo, in July 1304, was the son of Pietro, or Petracco (an idiomatic form of Pietro), a notary of Florence, who was banished in 1302, at the same time as Dante and others of the Bianchi faction. [DANTE.] The true name of Petrarca was Francesco di Petracco, or 'Francis the son of Petracco,' which he afterwards changed into the more euphonic name of Francesco Petrarca. After losing all hope of being restored to his native town, Petracco removed with his family to Avignon, where Pope Clement V. had fixed the residence of the Papal court, and whither strangers from every country resorted. His son Francesco, after studying grammar and rhetoric, was sent by his father to Montpellier, and afterwards to Bologna to study law, which was considered the most profitable profession. Young Petrarca however had little taste for the law, especially as it was taught in that age, and he devoted much of his time to reading and copying manuscripts of the classic writers. His father and mother having died at Avignon nearly about the same time, Petrarca left Bologna, and on his arrival at Avignon he found that his paternal inheritance was but little. He assumed the clerical dress, without however having taken priestly orders, that habit being then, as it still is, the customary dress of good company at the Papal residence. The Papal court at Avignon was very gay and even licentious; and Petrarca, who was then only two and twenty years of age, and of a handsome person, was one of the gayest in the fashionable circles. But his love of pleasure was tempered by the love of study. He contracted a friendship with the jurist Soranzo, with the canon John of Florence, who was apostolic secretary, and with James Colonna, bishop of Lombes in Gascony, and other distinguished men, who were fond of learning, and who supplied him with books, a scarce and expensive commodity in those times. Petrarca accompanied the Bishop of Lombes to his diocese at the foot of the Pyrenees, where they spent much of their time in literary discussions and excursions in the mountains, with two other friends of similar tastes, whom Petrarca has recorded under the classical names of Socrates and Laelius ('Trionfo d'Amore,' ch. 4). On his return to Avignon, the Cardinal John Colonna, brother of James, gave Petrarca apartments in his own palace, and became his patron; and when his father, Stephen Colonna, a sturdy warlike old baron, but not illiterate, and well known for his quarrels with Boniface VIII., came from Rome to Avignon on a visit to his sons, Petrarca was introduced to him, and soon won his favour. Azzo da Correggio, lord of Parma, having come to Avignon to defend, before Pope Benedict XII., his title to that sovereignty against the claims of Marsiglio Rossi, became acquainted with Petrarca, and prevailed on him to act as his advocate at the Papal chancery. Petrarca undertook the cause and won it. Azzo had brought with him Guglielmo Pastrengo, a learned man of Verona, the author of a work 'De Originibus Rerum,' a kind of historical dictionary in alphabetical order, which is considered the first specimen of that kind of work. Petrarca formed an intimacy with Pastrengo as well as with the Calabrian monk Barlaam, who came to Avignon on a mission from the emperor Andronicus the younger, and from whom he learned the rudiments of Greek. But before this time an incident had occurred which exercised a powerful influence over Petrarca's life.

On the 6th of April 1327, while he was attending service in the church of St. Clair, at Avignon, he was struck with the beauty of a young lady who happened to be near him, and he conceived a violent passion for her. The lady's name was Laura. According to the

received opinion, supported by documents, for Petrarca himself never mentions her family name, she was the daughter of Audibert of Noves, a small place in the territory of Avignon; she had a considerable fortune, and had been married about two years to Hugh de Sade, a gentleman of Avignon; when Petrarca first saw her, she was nineteen years of age. The attractions of Laura's person have been so fully described and probably exaggerated by Petrarca, that it is needless to say anything on the subject. But the qualities of her mind, which he also praises, seem to have been truly remarkable in a provincial lady of those times and of no very exalted rank. In her conduct for a long course of years towards her handsome, accomplished, and impetuous admirer, whom she could not help meeting wherever she went, at parties of pleasure, in walking, or at church, she exhibited a rare mixture of firmness and courtesy, of respect for her own character with a considerate regard for her enthusiastic lover. She has been called a coquette, but we ought not to judge the conduct of a Frenchwoman of the 14th century by the standard of manners in England or even France in the 19th century. To those acquainted with the manners of Italy and Spain even at the present day, the passion of Petrarca for Laura de Sade is nothing uncommon. Such attachments are frequent, and though often of a platonic nature, are certainly not always so. That the attachment of Petrarca continued to be platonic, was owing to Laura's sense of duty, or to her indifference, or to both, but that it did not drive her lover to madness and ruin was owing to her consummate address, of which we have abundant evidence in Petrarca's own confessions. When he ventured on a declaration, she sternly rebuked him, and avoided his presence; but when she heard that he was ill, she assumed towards him the manners of a friend interested in his welfare; she succeeded in purifying his passion, and in making him satisfied with her conversation, and with giving vent to his feelings in poetry. (Petrarca's Latin 'Epistle to James Colonna, bishop of Lombes.') She was probably flattered by his praise, which brought no imputation on her character, and made her the most celebrated woman of her day. Petrarca's sonnets and canzoni in praise of Laura circulated throughout Europe. When Charles of Luxembourg, afterwards the Emperor Charles IV., came on a visit to Avignon, one of his first inquiries was after the Laura celebrated by Petrarca, and being introduced to her in the midst of a large assembly, he respectfully begged to be allowed to kiss her on the forehead as a mark of his esteem. (Petrarca, 'Sonnet' 201.) It was not however without a violent struggle that Petrarca allowed himself to be led by her better judgment. For ten years after he had first seen Laura, his life was one continued strife between his passion and his reason. He left Avignon repeatedly, travelled about, returned, but was still the same. Wishing, if possible, to forget Laura, he formed a connection with another woman, and had by her a son, and afterwards a daughter. But still his mind recurred perpetually to the object of his first attachment. He took care of his illegitimate children, but broke off the connection. For several years he fixed his residence at Vaucluse, a solitary romantic valley near Avignon, on the banks of the Sorga, of which he has given some beautiful descriptions. In a letter addressed to James Colonna, and dated June 1338, he assigns as a reason for his retirement, that he was disgusted with the vice and dissoluteness of the Papal court of Avignon, in leaving which, he says, he sang to himself the psalm 'In exitu Israel de Aegypto.' He also says, that he was tired of waiting for the fulfilment of the promises of honour and emolument made to him by the pope.

Meantime, year after year rolled on, and the beauty of Laura faded away. She became the mother of a large family. But Petrarca continued to see her with the eyes of youth. In the year 1348, while Petrarca was staying in Italy, the plague spread into France and reached Avignon. Laura was attacked by the disease, and she died after three days' illness, on the 6th of April, in the fortieth year of her age. Her death, from the account of witnesses, appears to have been placid and resigned as her life had been. Petrarca has beautifully described her passing away like a lamp which becomes gradually extinct for want of nourishment. ('Trionfo della Morte,' ch. i.)

When the news reached Petrarca in Italy, he felt the blow as if he had lost the only object that attached him to earth. He wrote on a copy of Virgil, his favourite author, the following memorandum: "It was in the early days of my youth, on the 6th of April, in the morning, and in the year 1327, that Laura, distinguished by her virtues, and celebrated in my verses, first blessed my eyes in the church of St. Clair, at Avignon; and it was in the same city, on the 6th of the very same month of April, at the same hour in the morning, in the year 1348, that this bright luminary was withdrawn from our sight, whilst I was at Verona, alas! ignorant of my calamity. The remains of her chaste and beautiful body were deposited in the church of the Cordeliers, on the evening of the same day. To preserve the painful remembrance, I have taken a bitter pleasure in recording it particularly in this book, which is most frequently before my eyes, in order that nothing in this world may have any further attraction for me, and that this great bond of attachment to life being now dissolved, I may by frequent reflection, and a proper estimation of our transitory existence, be admonished that it is high time for me to think of quitting this earthly Babylon, which I trust will not be difficult for me, with a strong and manly courage, to accomplish." Petrarca's 'Virgil,' with this affecting memorandum, is now in the Ambrosian library at Milan.

Here begins a new period of the life of Petrarca, and with it the second part of his love poetry. Hitherto he had written verses in praise of Laura; he now wrote verses 'on Laura's death.' He fancied himself in frequent communion with her spirit; he describes her appearing to him in the middle of the night, comforting him, and pointing to Heaven as the place of their next meeting. (Sonnet beginning 'Levommi il mio pensier,' and the other 'Né mai pietosa madre.') The second part of Petrarca's poetry is superior to the first in purity of feeling and loftiness of thought. He himself felt this, and blessed the memory of her who, by the even tenour of her virtue, had been the means of calming and purifying his heart. (Sonnet 249.) More than twenty years after Laura's death, when he was himself fast verging towards the grave, and when he was able to think of her with more composure, he drew from his memory a picture of the heart, the principles, and the conduct of the woman who had made all the happiness and all the misery of his life. He describes Laura as appearing to him through a mist, and reasoning with him on the happiness of death to a well prepared mind; she tells him that when she died she felt no sorrow except pity for him. On Petrarca entreating her to say whether she ever loved him, she evaded the question by saying that although she was pleased with his love, she deemed it right to temper his passion by the coldness of her looks, but that when she saw him sinking into despondency, she gave him a look of consolation and spoke kindly to him. ('Trionfo della Morte,' ch. ii.)

We have dwelt at some length on this subject because it has acquired an historical importance, and has been the subject of much controversy. Unable to comprehend feelings with which they were unacquainted, some critics have sneered at the passion of Petrarca for Laura; others have doubted its existence; whilst others again have disbelieved the purity of Laura's conduct. We have now however sufficient evidence to establish two facts: 1, that the attachment of Petrarca for Laura was real and lasting; 2, that Laura's conduct was above suspicion. What her inward feelings were towards the poet we have no means of knowing, and Petrarca himself does not seem to have ever known. Laura appears to have been imbued with religious sentiments, united with serenity of mind, self-possession, discretion, and good sense. There have been doubts expressed concerning the identity of the Laura of Petrarca with Laura de Sade, but the evidence seems to be strong in favour of that identity. (De Sade, 'Mémoires pour la Vie de F. Pétrarque,' Foscolo, 'Essays on Petrarch,' Baldelli, 'Del Petrarca e delle sue Opere,' 2nd edition, Fiesole, 1837; and the article 'Noves, Laure de,' in the 'Biographie Universelle'.)

But the life of Petrarca was not spent in idle though eloquent wallings. He was an active labourer in the field of learning, and this constitutes his real merit and his best title to fame. Besides the works which he wrote, he encouraged literature in others, and he did everything in his power to promote sound studies. Petrarca was a great traveller for his age; he visited every part of Italy, he went several times to France and Germany, and even to Spain. Wherever he went, he collected or copied manuscripts, and purchased medals and other remains of antiquity. At Arezzo he discovered the 'Institutions' of Quintilian; at Verona, Cicero's Familiar letters; in another place, the epistles to Atticus; at Liège he found some orations of Cicero, which he transcribed; he also speaks of Cicero's book 'De Gloria,' of Varro's treatise 'De Rebus Divinis et Humanis,' and of a compilation of letters and epigrams of Augustus, which he had once seen or possessed, but which have not come down to us. ('Rerum Memorandarum,' b. i.) He was liberal in lending manuscripts, and thus several of them were lost. He applied himself also to the diplomatic history of the dark ages, and he investigated the means of distinguishing authentic diplomas and charters from numerous others which were apocryphal. ('Epistolæ Seniles,' b. xv., ep. 5.) He was the friend and instructor of Boccaccio, John of Ravenna, and other Italian and foreign contemporaries. He was the founder of the library of St. Mark at Venice. He encouraged Galeazzo Visconti to found the University of Pavia. In his extensive correspondence with the most distinguished persons of his time, he always inculcated the advantages of study, of the investigation of truth, and of a moral conduct; he always proclaimed the great superiority of intellectual over corporeal pleasures. He and his friend Boccaccio are justly considered as the revivers of classical literature in Italy. His admiration of antiquity was carried to excess, not being tempered by the light of criticism which arose much later in Europe. It was this classical enthusiasm that led him to support the tribune Rienzi, and attach too great importance to his abortive schemes. Petrarca beheld Rome as entitled to be again what she had once been, the mistress of the world, as if the thing were possible, or even desirable. This error he perpetuated by his writings, and his authority has contributed to that classical tendency of recollections and aspirations which has led astray many Italian minds. By aspiring to be what they cannot be again, they have lost sight of what they might and ought to be as members of the great modern European family.

Petrarca acted an important part in the affairs of state of his time. His influence over the great and powerful is one of the most extraordinary parts of his character, but it is a well ascertained fact. He enjoyed the friendship of several popes, of the Correggio lords of Parma, of the Colonna of Rome, the Visconti of Milan, the Carrara of Padua, the Gonzaga of Mantua, of Robert, king of Naples, and of Charles IV.,

emperor of Germany. He was invited in turn by them all, was consulted by them, and was employed by them in several affairs of importance. He was sent by the nobles and people of Rome as their orator to Clement VI., in order to prevail on that pope to remove his residence from Avignon to Rome. He afterwards wrote a Latin epistle to Urban V., Clement's successor, urging the same request, and the pope soon after removed to Rome, at least for a time. In 1340 the senate of Rome sent him a solemn invitation to come there and receive the laurel crown as a reward of his poetical merit. Petrarca accepted the invitation, and, embarking at Marseille, landed at Naples, where King Robert, himself a man of learning, in order to enhance his reputation, held a public examination in presence of all his court during three days, in which various subjects of science and literature were discussed. At the termination of these meetings, King Robert publicly proclaimed Petrarca to be deserving of the laurel crown, and sent an orator to accompany him to Rome to attend the ceremony, which took place on Easter-day in the year 1341, when Orso dell' Anguillara, senator of Rome, crowned the poet in the Capitol, in presence of a vast assemblage of spectators, and in the midst of loud acclamations.

Petrarca had ecclesiastical benefices at Parma and at Padua, which were given to him by his patrons of the Correggio and Carrara families, and he spent much of his time between those towns. From Padua he sometimes went to Venice, where he became acquainted with the Doge Andrea Dandolo, who was distinguished both as a statesman and as a lover of literature. Venice was then at war with Genoa. Petrarca wrote a letter to Dandolo from Padua, in March 1351, in which he deprecated these hostilities between two Italian states, and exhorted him to peace. Dandolo, in his answer, praised his style and his good intentions; but he defended the right of Venice, after the provocations that she had received from her rival. In the following year, after a desperate battle between the fleets of the two nations in the Sea of Marmara, Petrarca wrote from Vaucluse, where he then was, to the doge of Genoa, for the same laudable purpose, that of promoting peace. In the next year, 1353, the Genoese fleet was totally defeated by the Venetians off the coast of Sardinia; and Genoa in its humiliation sought the protection of John Visconti, archbishop and lord of Milan, the most powerful Italian prince of his time. Petrarca was staying at Milan as a friend of Visconti, who had made him one of his councillors, and as such he was present at the solemn audience of the deputies of Genoa and at the act of surrender. In 1354 Visconti sent Petrarca on a mission to Venice to negotiate a peace between the two republics. He was received with great distinction, but failed in the object of his mission. Soon after John Visconti died, and his three nephews divided his dominion amongst them. The youngest and the best of them, Galeazzo, engaged Petrarca to remain at Milan near his person. In November, 1354, the Emperor Charles IV. arrived at Mantua from Germany; and he wrote to Petrarca, who had been in correspondence with him before, to invite him to his court. Petrarca repaired to Mantua, spent several days with the emperor, and accompanied him to Milan. Petrarca wished to persuade him to fix his residence in Italy; but the emperor, after being crowned at Milan and at Rome, hastened to return to Germany. However, before he left Italy, peace was proclaimed between Venice and Genoa. In 1356 Petrarca was sent by the Visconti on a mission to the emperor, whom they suspected of hostile intentions towards them. He met Charles at Prague, and having succeeded in his mission, he returned to Milan. In 1360 he was sent by Galeazzo Visconti on a mission to Paris to compliment King John on his deliverance from his captivity in England. In his "familiar epistles" he describes the miserable state of France, and the traces of the devastation perpetrated by fire and sword. He was well received by the king and the dauphin, and after three months spent at Paris, he returned to Milan. The next year he left Milan to reside at Padua. The introduction into Italy of the mercenary bands called 'Companies,' which the marquis of Montferrat and other Italian princes took into their pay, and which committed the greatest outrages, and the plague which they brought with them into Lombardy, were the reasons which induced Petrarca to remove to Padua. In 1362, the plague having reached Padua, he retired to Venice, taking his books with him. Soon after his arrival, he offered to bequeath his library to the church of St. Mark. The offer was accepted, and a large house was assigned for the reception of Petrarca and his books. This was the beginning of the celebrated library of St. Mark, which was afterwards increased by Cardinal Bessarion and others. At Venice, Petrarca was visited by his friend Boccaccio, who spent three months in his company. Petrarca passed several years at Venice, honoured by the doge and the principal senators, and now and then making excursions to Padua, Milan, and Pavia, to visit his friends the Carrara and Galeazzo Visconti. In 1368 he was present at the marriage of Galeazzo's daughter Violante with Prince Lionel of England. From Milan he returned to Padua, where he received a pressing invitation from pope Urban V., who had fixed his residence at Rome, and who wished to become acquainted with him. Petrarca had a great esteem for Urban's character; and he determined, notwithstanding his age and his infirmities, on a journey to Rome; but, on arriving at Ferrara, his strength failed him; he fell into a swoon, and remained for thirty hours apparently dead. Nicholas d'Este, lord of Ferrara, and his brother Hugo, took the

greatest care of him, and he was restored to life; but the physicians declared that he was unable to proceed to Rome, and he was taken back to Padua in a boat. Petrarca had been long subject to palpitations and epileptic fits, the consequence of his too great application to study. From Padua he removed, in the summer of 1370, to Arquà, a pleasant village in the Euganean Hills, where he enjoyed a pure air and retirement. He built a house there, and planted a garden and orchard: this is the only residence of the numerous houses which he had at Parma, Padua, Venice, Milan, Vauluse, and other places, which still remains, and is shown to travellers. In this retirement he resumed his studies with fresh zeal. Among other things, he wrote his book 'De sui ipsius et multorum aliorum Ignorantia,' intended as a rebuke to certain Venetian freethinkers who, inflated with the learning which they had gathered from Averroes' 'Commentaries on Aristotle,' of which a Latin translation had spread into Italy, sneered at the Mosaic account of the creation, and at the Scriptures in general. Four of these young men had sought the society of Petrarca while he resided at Venice, and he was at first highly pleased with them; they were accomplished and witty, and fond of study. But this sympathy did not last long. Petrarca had no blind veneration for Aristotle, and still less for Averroes; he was a believer in the Scriptures, and moreover he had no great bias for natural history, in which his visitors were skilled, and he used to observe to them that it was of greater importance to "investigate the nature of man than that of quadrupeds, birds, and fishes." The four admirers of Aristotle were scandalised at his own freethinking concerning their oracle, and they held a kind of jury among them to decide upon the true merits of Petrarca. The verdict was, that Petrarca was a good kind of a man, but destitute of real learning, "Bonus vir, sine literis." This judgment spread about Venice, and made a great noise. Petrarca at first laughed at it, but his friends took up the business seriously, and urged him to defend himself, which he did in his retirement at Arquà, by the book already noticed. In this work he acknowledges his own ignorance, but at the same time he exposes the ignorance of his antagonists. With regard to Aristotle he says what others have said after him, that "he was a great and powerful mind, who knew many things, but was ignorant of many more."

The air of the Euganean hills did not prove sufficient to restore Petrarca to health. His physician Dondi told him that his diet was too cold; that he ought not to drink water, nor eat fruit and raw vegetables, nor fast, as he often did. But Petrarca had no faith in medicine. He absolutely wrote four books of invectives against physicians. He valued Dondi, not as a physician but as a philosopher, and he used to tell him so, but Dondi still remained attached to him. The news of Urban V.'s return to Avignon, and of his subsequent death, caused much grief to Petrarca, who had a great esteem for that pontiff. His successor Gregory XI., to whom he was also personally known, wrote to Petrarca, in 1371, a most kind letter inviting him to his court. But Petrarca was unable to move. He was often seized with fits, and sometimes given up for dead. He wrote to Francesco Bruni, the Apostolic secretary, that "he should not ask the pope for anything, but that if his Holiness chose to bestow on him a living without cure of souls, for he had enough to take care of his own soul, to make his old age more comfortable, he should feel grateful, though he felt that he was not long for this world, for he was waning away to a shadow. He was not in want; he kept two horses, and generally five or six amanuenses, though only three at the present moment, because he could find no more. He could have more easily obtained painters than transcribers. Although he would prefer to take his meals alone, or with the village priest, he was generally besieged by a host of visitors or self-invited guests, and he must not behave to them as a miser. He wanted to build a small oratory to the Virgin Mary, but he must sell or pledge his books for the purpose." ('Variarum Epistolarum,' the 43rd.) Some months after (January 1372), writing from Padua to his old college friend Matthew, archdeacon of Liège, he says, "I have been infirm these two years, being given up several times, but still live. I have been for some time at Venice, and now I am at Padua, performing my functions of canon. I am happy in having left Venice, on account of this war between the republic and the lord of Padua. At Venice I should have been an object of suspicion, whilst here I am cherished. I spend the greater part of the year in the country; I read, I think, I write; this is my existence, as it was in the time of my youth."

In September 1378 peace was made between Venice and Francis of Carrara, lord of Padua. One of the conditions was that the latter should send his son to Venice to ask pardon and swear fidelity to the republic. The Lord of Padua begged Petrarca to accompany his son. Petrarca appeared before the senate, and pronounced a discourse on the occasion, which was much applauded. After his return to Padua he wrote his book 'De Republica optime administranda,' which he dedicated to his patron and friend Francis of Carrara.

The following year his health grew worse: a slow fever consumed his frame. He went as usual to Arquà for the summer. On the morning of the 18th of July one of the servants entered his library and found him sitting motionless, with his head leaning on a book. As he was often for whole hours in that attitude the people of the house at first took no notice of it, but they soon perceived that their master was quite dead. The news of his death soon reached Padua.

Francis of Carrara, accompanied by all the nobility of Padua, the bishop and chapter, and most of the clergy repaired to Arquà to attend the funeral. Sixteen doctors of the university bore his remains to the parish church of Arquà, where his body was interred in a chapel which Petrarca had built in honour of the Virgin Mary. Francesco da Brossano, his son-in-law, raised him a marble monument supported by four columns; and in 1667 his bust in bronze was placed above it. On one of the columns the following distich was engraved:—

"Inveni requiem; spes et fortuna valet;  
Nil mihi vobiscum est, iudite nunc alios."

Petrarca had had two natural children, a son and a daughter. The son died before his father. The daughter, Tullia, married in her father's lifetime Francesco da Brossano, a Milanese gentleman, whom Petrarca made his heir. He left legacies to various friends, and among others to Boccaccio, who did not survive him long. The portraits of Petrarca are numerous, but they differ from one another; that which is considered the most authentic is at Padua, in the Episcopal palace, above the door of the library. It is a fresco painting, which was cut out of the wall of the house of Petrarca at Padua, when it was pulled down in 1581. (Valéry, 'Voyages Littéraires.') An engraving of it is given at the head of the handsome edition of Petrarca's verses by Marsand.

The works of Petrarca are of three kinds: 1, his Italian poetry, chiefly concerning Laura; 2, his Latin poetry; 3, his Latin prose. His Italian poetry, called 'Il Canzoniere,' or 'Rime di Petrarca,' consists of above 300 sonnets, about 50 canzoni, and three short poems, in terza rima, styled 'Trionfo d'Amore,' 'Trionfo della Morte,' and 'Trionfo della Fama.' Petrarca's 'Canzoniere' has gone through more than 300 editions, with and without notes and commentaries. The best is that edited by Professor Marsand, 2 vols. 4to, Padua, 1819-20, with a biography of Petrarca, extracted from his own works. The character of his poetry is well known; its greatest charm consists in the sweetness of numbers, "enlivened by a variety, a rapidity, and a glow which no Italian lyric has ever possessed in an equal degree." (Foscolo.) That in Petrarca's sonnets there is too much ornament, that he indulges too much in metaphors, that his antitheses are often forced, and his hyperboles almost puerile—all this is true; and yet there is so much delicacy and truth in his descriptions of the passion of love and of its thousand affecting accessories which he brings before the mind of the reader, that he awakens many associations and recollections in every heart; and this is perhaps the great secret of the charm of his poetry, notwithstanding its perpetual egotism. There is much to choose among his sonnets, many of which, especially those which he wrote after Laura's death, are far superior to the rest in loftiness of thought and expression. He borrowed little from the Latin poets, and much from the Troubadours; but his finest imitations are drawn from the sacred writings. He improved the materials in which the Italian language already abounded, and he gave to that language new grace and freshness. No term which he has employed has become obsolete, and all his phrases may be and still are used in the written language. Far inferior to Dante in invention, depth of thought, and in boldness of imagery, Petrarca is superior to him in softness and melody. Dante was a universal poet; he describes all passions, all actions: Petrarca paints only one passion, but he paints it exquisitely. There are some of his canzoni which soar higher than the rest in their lyric flight, especially the one which begins "Italia mia," and which has been often quoted; and another which he wrote in 1333, when a new crusade was in contemplation. His beautiful canzone, or 'Ode to the Virgin,' with which he closes his poetry about Laura, is also greatly admired for its sublimity and pathos.

Petrarca's Latin poetry consists, 1, of the 'Africa,' an epic on the exploits of Scipio in the second Punic war, a dull sort of poem, with some fine passages: it was however much admired at the time; 2, Epistles, in verse, addressed to several popes, for the purpose of urging their return to Rome, and also to several friends; 3, Eclogues or Bucolics, which are acknowledged by himself to be allegorical, and were in fact, like Boccaccio's eclogues, satires against the powerful of his time, and especially against the papal court of Avignon.

Ginguené, in his 'Histoire Littéraire,' and others, have endeavoured to find the key to these allegories. The sixth and seventh eclogues are evidently directed against Clement VI.; and the twelfth, entitled 'Confictatio,' has also some violent invectives against the Papal court. This circumstance has given rise to strange surmises, as if Petrarca were a secret heretic, an enemy of the church of Rome, belonging to some supposed secret society. We know from Petrarca's own letters, especially those styled 'sine titulo,' that he spoke very plainly to his friends concerning the disorders and vices of the Papal court, which he called the modern Babylon, the Babylon of the west. He says that Jesus Christ was sold every day for gold, and that his temple was made a den of thieves; but we also evidently see that in all these invectives he spoke of the discipline of the Church, or rather of the abuses of that discipline, and not of the dogmas—things which have often been confounded, both by the advocates and the enemies of Rome. Petrarca, like many other observing men of that and the succeeding century, could not be blind to the enormous abuses existing in the Church; but their indignation was poured out against the individuals who fostered those abuses, and they never thought of attacking the fabric itself. This was especially the case in Italy. There might

be in that country secret unbelievers and scoffers at revelation, but there were no heretics. There were many who openly charged the pope and his court with heinous crime, but who at the same time felt a sort of loathing at the very name of heretic or schismatic. The influence of traditional veneration for the authority of the Church, the persuasion of its infallibility, remained, although divested of all devotion, of all enthusiasm, of all respect even for the person of the head of that Church.

Petrarca was not a man of extremes: his dislike of the Papal court of Avignon originated in two feelings, one of honest indignation against its corruptions, and another of national, or rather classical attachment to Rome, which made him urge with all his powers of persuasion the return of the head of the Church to a residence in that city. When he spoke of Babylon he alluded to the captivity of the Jews, to which he compared the residence of the popes at Avignon. Of several popes, such as Urban VI. and Gregory XI., he speaks in his letters with great respect and personal attachment. He went to Rome expressly to attend the jubilee of 1350, and, as he states in his letters to Boccaccio ('Epistolæ Familiæres'), for the sake of obtaining the plenary indulgence, and "with a firm resolve of putting an end to his career of sin." He had an accident on the road, which made him lame, and which he said was a salutary punishment for his sins. He gives some account of that jubilee, and of the vast number of pilgrims who resorted to Rome on the occasion. After having visited the churches and performed his devotions, he wrote that "he had now become free from the plague of concupiscence, which had tormented him till then, and that in looking back to his past life he shuddered with shame." ('Epistolæ Seniles,' viii. 1.) So much for those who would persuade us that Petrarca was a concealed heretic. His hostility was local and personal; it was directed against Avignon, and not against Rome; against the corrupt dignitaries of the Church, not against the Church itself. Petrarca however, although religiously disposed, was far from superstitious. He was one of the few of his age who spurned astrology, and yet, strange to say, a cardinal had nearly persuaded Pope Innocent VI. that he was a magician, because he was familiar with strange books—a very serious charge in those times. Petrarca's letter of advice to Boccaccio, when he thought of turning monk, is a lasting monument of sound religion and good sense.

The Latin epistles of Petrarca, which are very numerous, are the most important of his prose writings. They embrace a stormy and confused period of nearly half a century, for the history of which many of them afford trustworthy materials. Petrarca was one of the earliest and most enlightened travellers of modern Europe; he was an eye-witness of many important events; he corresponded with kings, emperors, popes, statesmen, and men of learning.

Professor Levati, of Milan, has composed out of the 'Epistles' of Petrarca an entertaining work descriptive of the manners and history of his age, in which he gives copious extracts translated into Italian, 'Viaggi di Francesco Petrarca in Francia, in Germania, ed in Italia,' 5 vols. 8vo, Milan, 1820. Professor Meneghelli, of Padua, published in 1818 'Index F. Petrarche Epistolarum quæ editæ sunt, et quæ adhuc ineditæ;' but his list, as he himself admits, is not complete. Domenico de' Rosetti, of Trieste, has published a bibliography of the works of Petrarca, their various editions, commentators, &c.; and he has also edited a biography of Petrarca by his friend Boccaccio, 'Serie cronologica di edizioni delle Opere di Petrarca,' Trieste, 1834.

The other prose works of Petrarca are:—1. 'De Remediis utriusque Fortunæ,' libri ii. 2. 'De Vita Solitaria,' lib. ii. 3. 'De Otio Religiosorum,' lib. ii. 4. 'Apologia contra Gallum.' 5. 'De Officio et Virtutibus Imperatoris.' 6. 'Rerum Memorandarum,' libri iv. In this work, in which he has imitated Valerius Maximus, without however borrowing from him, Petrarca quotes a vast number of facts from ancient and modern history, each illustrative of some principle of moral philosophy; it is in fact a treatise of practical ethics. 7. 'De verâ Sapientiâ,' being dialogues between a sophist and an uneducated man. 8. 'De Contemptu Mundi,' being imaginary dialogues between the author and St. Augustine. Petrarca had studied the Latin fathers attentively. 9. 'Vitarum Virorum illustrium Epitome.' Another and ampler work of Petrarca under the same title, of which the one just mentioned is only an abridgement, has remained inedited, but an imperfect Italian translation, by Donato degli Albanzoni, was published at Venice in 1627 (D. de Rossetti, 'Petrarca, Giulio Celso, e Boccaccio, illustrazione Bibliologica,' Trieste, 1828). 10. 'De Vita Beata.' 11. 'De Obedientiâ ac Fide Uxorâ.' 12. 'Itinerarium Syriacum.' 13. Several orations, 'De Avaritiâ vitandâ,' 'De Libertate capescendâ,' &c. Of his Latin style the following judgment is given by an Italian scholar:—"In modelling his style upon the Roman writers, he was unwilling to neglect entirely the fathers of the Church, whose phraseology was more appropriate to his subjects; and the public affairs being at that period transacted in Latin, he could not always reject many of those expressions which, although originating from barbarous ages, had been sanctioned by the adoption of the universities, and were the more intelligible to his readers. In sacrificing gravity he gained freedom, fluency, and warmth; and his prose, though not a model for imitation, is beyond the reach of imitators, because it is original and his own." (Foscolo 'On the Poetry of Petrarch.') Petrarca's 'Opera Omnia' were published at Basel in 1581, 2 vols. folio.

PETRONIUS ARBITER is the name of the author, or supposed

author, of a kind of novel in Latin, of which we have only fragments, descriptive of the licentious manners of the Romans under the empire. Several young debauchees, one of whom is the chief narrator, are represented strolling about Campania, and then proceeding by sea to Croton; they meet with numerous adventures with men and women of various ranks, but all as profligate as themselves. Both the descriptions and the dialogue are extremely obscene, and serve to corroborate the testimony of Juvenal and other writers as to the excessive depravity of morals under the empire. As a picture of manners the work is not without its value, though it is totally unfit for general readers. The style is fluent, and the language is considered classical. The episode entitled 'Trimalcion's Feast' is a curious description of a banquet given by a pompous wealthy freedman. The narrative is intermixed with verses and fragments of poems, one of which refers to the civil wars of Cæsar, and contains a very strong invective against the corruption of Roman manners. The prose narrative has been supposed by some to be a satire on Nero and his court, but this supposition does not seem to rest on sufficient evidence. Indeed the age of the work is not ascertained, and some date it as late as the time of the Antonines. (Ignarra, 'De Palaestra Neapolitana.') Caius Petronius, a man of high rank, is mentioned by Tacitus ('Annal,' xvi. 18, 19) as being for a time a favourite of Nero, and minister of his pleasures, "arbitrarius elegantiarum," which may be translated "umpire of fashion and master of the ceremonies." Being afterwards discarded by Nero through the jealousy of Tigellinus, and expecting his sentence of death, he anticipated it by causing his veins to be opened in the bath, and allowing himself to die gradually while conversing with his friends on light subjects (A.D. 66). He is stated during this interval to have written an account of Nero's secret debaucheries, which he sent to the emperor. Whether the fragment which we have was part of this work, or whether it was written by another Petronius, has been much disputed. The best edition of Petronius is that by P. Burmann, 2 vols. 4to, 1743, in which all the various opinions on the work and its author are given.

PETROV, VASSILI PETROVITCH, was the son of a clergyman at Moscow, where he was born in 1736. While in the Zaikonospasskoi school in that city he distinguished himself by his aptitude for ancient and modern languages, and also by a natural eloquence, and fluency of ideas and words. It was not however until his twenty-seventh year that he composed the ode on Catharine's coronation, which obtained for him the notice and protection of the empress, and of many of the nobles at her court, and especially of Prince Potemkin. For a time he held the appointment of reader to the empress, but at his pressing solicitations obtained leave to travel. He visited England, and several other countries, from the year 1772 to 1774. After his return he was made imperial librarian, which situation however he resigned in 1780 on account of ill-health, and he retired with a pension to a village in the government of Orlov. Here he divided his time between literary and agricultural pursuits, visiting Moscow every winter for the purpose of availing himself of its libraries. So diligent were his habits of study, that at the age of sixty he began to learn the modern Greek language. He died December 4-16, 1799, in his sixty-fourth year.

A complete edition of his original works appeared in 3 vols. 8vo, 1811; besides which there is a translation by him of Virgil's 'Æneid,' in 2 vols., 1781-86. His poems consist chiefly of odes and epistles; and although they have now lost much of their first interest, having been written upon particular occasions, many of the odes are stamped by high poetical beauty and merit, by vigour and originality of ideas, and by energy of expression, though his versification is occasionally harsh and his diction not sufficiently polished. It should be borne in mind however that at the time Petrov began to write the language itself had not received that refinement which it now possesses, and he certainly did much for his native literature. Merzliakov calls him the "philosopher bard," and says that he "abounds in transcendent imagery, traced with a pen of fire."

PETRUS APONIS. [ABANO, PIETRO DI.]

PETRUS HISPANUS, a native of Lisbon, son of a physician named Julian, became eminent for his acquaintance with the sciences, particularly that of medicine, the practice of which he followed for some time with great reputation. He afterwards entered holy orders, and advanced by degrees to high preferment. After being Archbishop of Braga in Portugal (Bracara Augusta), he was made cardinal by Gregory X. in 1273; and on the death of Adrian V. he was elected to the pontifical dignity, September 13, 1276. He took the name of John, and styled himself on his seal Joannes XX.; but in his epitaph at Viterbo he is called Joannes XXI. One of the first acts of his pontificate was to confirm Adrian's revocation of the famous constitution of Gregory X. (enacted at the Council of Lyon, 1274), which ordered that the cardinals should be strictly shut up in the conclave during their election of a new pope. He did all in his power to assist the Christians in the East, and sent legates to the different princes of Europe to persuade them to engage in a fresh crusade against the Saracens. He died at Viterbo, about eight months after his elevation to the holy see, May 17, 1277, of the injuries occasioned by the falling of the roof of his bed-chamber. He was a very learned man himself, and a great patron of learning in others; but he does not seem to have been eminent for piety and holiness of life. He wrote several works on medicine, logic, &c., of which the greater part are still

unpublished. A list of their titles may be seen in Ciaconius, 'Vitis Pontiff. et Cardd.,' tom. ii., p. 213. The most celebrated is a short medical treatise entitled 'Thesaurus Pauperum, seu de Medendis Corporis Humani Morbis per Euporista,' of which there are several editions. It was first printed in 1476, fol., Antwerp; the last edition was published in 1577, 16mo, Paris, with a sort of continuation by J. Liebault, entitled 'Thesaurus Sanitatis, Paratu facilis.' A Spanish translation was published at Valladolid in 1672, and an English one by Humphrey Lloyd, 8vo, London, 1585. It consists of ninety chapters, containing a short account of a great number of diseases, and at the end of each is given a quantity of medical formulæ taken from the works of the Greek, Latin, and Arabic physicians, to which is now and then added the word 'expertum.' It is not of much value, and contains a great deal that is foolish and superstitious. In the collected edition of the works of Isaac (commonly called 'Isaac Israelita'), fol., Ludg., 1515, there are three treatises by Petrus Hispanus: one entitled 'Commentarium aſurgulare super Librum Diatarum Universalium Isaac,' fol., xi. ciii.; the second a commentary on Isaac's work, 'De Distis Particularibus,' fol., ciii. clvi.; and the third on his work 'De Urinis,' fol., clvi. cciii.

PETTIGREW, THOMAS JOSEPH, was the son of an apothecary in Fleet-street, London, who placed him at St. Bartholomew's Hospital under the celebrated Abernethy. He became a member of the Royal College of Surgeons in 1812. In early life he obtained the patronage of the Dukes of Kent and Sussex, and obtained the appointment of surgeon to each. He was afterwards appointed his librarian by the Duke of Sussex. In this capacity he published the 'Bibliotheca Sussexiana,' a descriptive catalogue, with historical and biographical notices of the manuscripts and printed books contained in the library of H. R. H. the Duke of Sussex. His introduction to the library of the Duke of Sussex may be said to have laid the foundation of his antiquarian pursuits. He particularly directed his attention to the history of the Egyptians, especially in connection with the light thrown on it by the examination of the mummies, or embalmed dead of Egypt. He investigated a large number of these personally, and formed a collection of the antiquities of ancient Egypt. He has given an account of his various researches on this subject in his 'History of Egyptian Mummies, and an account of the worship and embalming of the Sacred Animals;' and he has pursued the same subject in his 'Preliminary Essay and Specimen of an intended Encyclopædia Egyptiana.' The antiquities and history of the profession of medicine have also occupied Mr. Pettigrew's attention, and he has written a work on this subject, entitled, 'On Superstitions connected with the History and Practice of Medicine and Surgery.' This work was published in 1844, and contains a variety of curious information on the subject to which it is devoted. Mr. Pettigrew was one of the founders of the British Archæological Association, of which he is at present the treasurer. He has been one of the most constant attendants at the meetings of this association, and has contributed largely to the interest of its proceedings. He has also contributed extensively to the 'Archæological Journal' published by this association.

Although so well known as an archæologist, Mr. Pettigrew has not neglected the cultivation of his profession. Early in his medical career he published his 'Views of the basis of the Brain and Cranium.' He has also published papers on hydrophobia, cholera, and other professional subjects. He was formerly surgeon to the Charing-cross Hospital, to the Royal Dispensary for Children, and the Asylum for Female Orphans.

As a literary man Mr. Pettigrew is known by his 'Memoirs of the Life and Writings of Dr. Letteom;' his 'Medical Portrait Gallery, or Biographical Memoirs of the most celebrated Physicians and Surgeons;' and his 'Life of Lord Nelson.' He is a Fellow of the Royal Society, and a Fellow of the Royal College of Surgeons of England, Doctor of Philosophy of the University of Göttingen, and a member of the Academy of Medicine of Marseille, and other scientific and professional societies in Europe. [See SUPPLEMENT.]

PETTY, SIR WILLIAM, an eminent political economist, was born May 16th, 1623, at Romsey in Hampshire, where his father carried on the business of a clothier. After remaining until the age of fifteen at the grammar-school of his native place, he went to pursue his studies at Caen in Normandy. On his return he is said to have entered the navy, but the time which he spent in this service must have been short, as in 1643 he again visited the Continent, and spent three years in France and the Low Countries. During this interval he studied medicine and anatomy. In 1648 he published a small work, addressed to Mr. Samuel Hartlib, recommending the extension of education to objects connected more immediately with the daily business of life. Soon afterwards he went to Oxford, where the visitors appointed by the parliament had ejected the royalists, and employed himself in giving instruction in anatomy and chemistry; in 1649 he was created Doctor of Physic, and elected a Fellow of Brazen-nose College. In 1650 he was appointed to the anatomical professorship in the university. He was an active member of a society instituted in Oxford for the cultivation of natural science, and which was the immediate precursor of the Royal Society. When the Royal Society was established, he was one of the council. In 1652 the period of his good fortune commenced by his appointment as physician to the army in Ireland. In

1654 he was employed in that country in the survey of forfeited estates, a work which he performed with great ability. He was subsequently engaged as a commissioner in dividing these lands amongst the officers and soldiers of Cromwell's army, when, besides the land allotted to him, he made advantageous purchases. He also acted as secretary to Henry Cromwell, lord-lieutenant of Ireland. He appears however to have been well received by Charles II. at the Restoration, and in 1661 was knighted. Sir William Petty died at his house in Westminster, December 16th, 1687, and was buried in the church of his native town, where a plain stone marks his grave, with the simple inscription:—"Here lies Sir William Petty." The widow of Sir William Petty was created Baroness Shelburne. He left two sons and a daughter. The eldest son succeeded to the title, but dying without issue, it was revived in Henry, the second son, great uncle of the first Marquis of Lansdowne.

Sir William Petty was the author of several scientific works and inventions, and various papers on mathematical and chemical subjects in the 'Philosophical Transactions;' but he is far better known in the present day as a writer upon trade and commerce and political arithmetic. Notwithstanding the great variety of his pursuits, he had emancipated himself from nearly all the errors and prejudices of his contemporaries. The 'Political Anatomy of Ireland,' one of his best works, contains valuable information respecting the state of Ireland in the latter part of the 17th century, and gives the first comparatively authentic account of the population. Sir William Petty clearly foresaw the advantages of a union of Great Britain and Ireland, and of a free commercial intercourse between the two countries. The survey of Ireland which he made during the Protectorate continues, after the lapse of nearly two centuries, to be a work of reference in courts of law in matters relating to landed property. His treatise on 'Taxes and Contributions,' published in 1667, contains in general sound views on the subjects of finance and revenue; and in this work the doctrine was first clearly stated, though only in an incidental manner, that the labour required for the production of commodities alone determines their value. The 'Political Arithmetic' treats chiefly on the subject of population, particularly with reference to London. His predictions concerning the growth of the metropolis are amusing, and do not exhibit his usual acuteness. At the time when he wrote, he calculated that the population of London doubled itself in 40 years, and that of England in 360 years; and hence he concluded that the population must reach a stationary point before 1840, at which period it would be ten millions for the metropolis, and also ten millions for the rest of England. "Wherefore (he remarks) it is certain and necessary that the growth of the city must stop before the said year 1840." Sir William Petty published his 'Quantulumcunque' (a treatise on money) in 1682, at which period the question of the monetary circulation was of great interest. He recommended that one metal should be made the uniform measure of value, in which view he was supported by Locke: Sir Isaac Newton proposed both the precious metals. The subject is treated with great ability, but the error of his time is perceptible in some of his arguments, which show that he entertained the false notion that there was something about gold and silver distinguishing them as articles of commerce from all other commodities. In this work he condemned laws regulating the rate of interest, observing that there might as well be laws to regulate the rate of exchange; and he exposed the prevailing fallacy that a country may be drained of cash by an unfavourable balance of trade. A list of the remainder of Sir William Petty's works is given in Watt's 'Bibliotheca Britannica.'

PEYER, JEAN-CONRAD, was born at Schaffhausen in 1658. He studied medicine at Basel and at Paris, and having taken the degree of doctor of medicine at the former university, returned to practise at his native town. He held there successively the professorships of eloquence, of logic, and of the physical sciences: but his present reputation is derived chiefly from his having first clearly described the little bodies which are scattered in patches along the end of the small intestines, and which are therefore commonly called Peyer's glands. He died in 1712. Besides his work on the intestinal glands, Peyer wrote numerous detached papers on morbid anatomy, of which he was one of the most assiduous of the early cultivators, and a few on practical medicine and comparative anatomy.

PFEFFEL, GOTTLIEB CONRAD, was born June 28th, 1736, at Colmar, where his father held an appointment in the office for foreign affairs. His parent dying in 1738, Pfeffel was left entirely to the charge of an excellent mother. At the age of fifteen he was sent to the University of Halle for the purpose of applying himself to the study of jurisprudence; but this plan was entirely frustrated by a severe attack of ophthalmia, which terminated in his total blindness at the age of twenty-one. He married about two years after this misfortune, and at a later period (1773) obtained permission to establish at Colmar a military seminary for the education of Protestant youths, in conducting which he had an able colleague in his friend Hofrath Lersse. Among his pupils, who were chiefly the sons of Swiss families, were many who afterwards distinguished themselves. The changes produced by the French Revolution however caused his school to be broken up, and Pfeffel henceforth applied himself entirely to those literary occupations which, notwithstanding his blindness, he had before pursued at intervals. In 1803 he was made president of

the Evangelical Consistory at Colmar, then recently established. He died May 1st, 1809, just after the publication of the ninth volume of his 'Poetischen Versuche.'

His poems generally display shrewdness and humour, together with a strong vein of moral and religious feeling; but his peculiar power shows itself most in his fables, which have frequently an epigrammatic energy and a piquant turn of expression that render the moral couched in them additionally striking and effective. Besides these and his tales, his other productions consist chiefly of poetical epistles, epigrams, ballads, and lyrical pieces. In addition to these original compositions he translated (very freely) a great many dramatic pieces from the French, which he published in five separate volumes or collections, from 1765 to 1774. His own dramatic attempts were deficient in sustained interest and effect.

PFEIFFER, MADAME IDA, celebrated for the extent of her travels, including two journeys round the world, was born about 1795 in the city of Vienna. Her maiden name was Reyer. She says that from her infancy she had a longing to see the world; that when she was a girl of ten or twelve years old she read nothing so eagerly as voyages and travels; that she made many journeys with her parents, and, after she was married, with her husband; and that she only took to staying at home when, her husband's affairs requiring his presence partly in Vienna and partly in Lemberg, the superintendence of the education of their two sons was committed entirely to her. Her husband having died, and the sons being established in life, she resolved to make a journey to Palestine, in order "to have the ineffable delight of treading those spots which our Saviour had hallowed by his presence." She had accumulated in the course of about twenty years funds sufficient for the purpose. She left Vienna in March 1842, and returned to that city in December the same year. She kept a diary, which she published after her return, without her name, under the title of 'Reise einer Wienerin in das Heilige Land' ('Journey of a Vienna-Woman in the Holy Land'), 12mo, Vienna, 2 vols. This journey included Constantinople, Brussa, Beirut, Jaffa, Jerusalem, the river Jordan and the Dead Sea, Nazareth, Damascus, Baalbeck, the Libanus, Alexandria, Cairo, and the Desert to the Red Sea; then back by Malta, Sicily, Naples, Rome, &c., to Vienna.

Madame Pfeiffer's next travels were performed in 1805, in Sweden, Norway, and Iceland, and were published with her name, under the title of 'Reise nach dem Skandinavischen Norden und der Insel Island, im Jahre 1845,' 2 vols. 12mo, Pesth, 1846.

On the 29th of June 1846 Madame Pfeiffer set out from Hamburg in a Danish brig, on her first journey round the world, and reached Rio de Janeiro on the 16th of September. She left Rio on the 8th of December in an English vessel for Valparaiso, where she landed on the 2nd of March 1847. After remaining there a fortnight she took passage in a Dutch ship for Macao, touching on the way at Otaheite, and reached Macao on the 8th of July. She went in a Chinese junk to Canton, accomplished her return safely to Hong-Kong, and then took passage by a British steamer to Ceylon. She landed at Point de Galle on the 17th of October, visited Candy, and took her departure from Colombo on the 17th of October in another British steamer for Calcutta, where she landed on the 4th of November. In December she steamed up the Ganges to Benares, and then travelled overland by Allahabad and Agra to Delhi, where she arrived on the 19th of January 1848. From Delhi she travelled in a bullock-wagon, with native drivers only, and reached Bombay on the 15th of March. From Bombay she proceeded in an English steamer to Bassora, calling at Muscat and Bushira. She was next taken by the government-boat from Bassora up the Tigris to Baghdad, where she arrived on the 12th of May. On the 17th of June she set out to ride with a caravan to Mosul, and thence to Tabriz, where she arrived on the 5th of August, after a journey of great danger, difficulty, and privation, without another European in company, and entirely unacquainted with the native languages. She travelled by caravan to Erivan, and by post to Tiflis, whence she made her way to Redout-Kalè on the eastern shore of the Black Sea. By a Russian steamer she reached Kertch, and by another Odessa, calling on the way at Sebastopol on the 29th of September. From Odessa, which she left on the 2nd of October, she proceeded by steamers to Constantinople, Smyrna, Athens, and Trieste, where she arrived on the 30th of October. She entered Vienna on the 4th of November 1848, having gone round the globe in two years and three months, and traversed, by her own reckoning, about 40,000 miles by water, and 2760 miles by land, independently of many small excursions. She published an account of these travels under the title of 'Eine Frauenfahrt um die Welt; Reise von Wien nach Brasilien, Chili, Otaheiti, China, Ost-Indien, Persien, und Klein-Asien,' 3 vols. 12mo, Vienna, 1850. The work has been translated into English under the title of 'A Woman's Journey round the World, from Vienna to Brazil, Chili, Tahiti, China, Hindoستان, Persia, and Asia-Minor; an Unabridged Translation from the German of Ida Pfeiffer,' 12mo.

In April 1851 Madame Pfeiffer came to London, preparatory to undertaking another journey, towards which the Austrian government had given her 100*l*. She was present at the opening of the Great Exhibition of Industry, and took her departure from the Thames on the 27th of May, in a sailing-vessel, for the Cape of Good Hope, where she arrived on the 11th of August. From the Cape she passed by

Singapore to Borneo, in which island she travelled much in the interior among the wild tribes of Dyaks. She left Borneo on the 22nd of May 1852, and proceeded to Batavia at the north-western end of the island of Java, whence she passed to the island of Sumatra, reaching Padang, the chief town of the Dutch settlements, on the 13th of July. In Sumatra she visited the cannibal tribes of the Batacks, and by her calm and fearless bearing converted them into friends. This was an exceedingly fatiguing as well as dangerous excursion. She reached Padang on her return on the 7th of October, having travelled in Sumatra altogether 700 miles on horseback, and 150 miles on foot. She afterwards returned to Batavia, whence she proceeded by sea to Samarang, on the west coast of Java, and visited several places in the interior of the island. From Java she went by steamer to Macassar, the chief settlement of the Dutch on the island of Celebes. Thence, after a very short stay, rain having set in, she went to the islands of Banda, Ceram, and Ternate, and returned to Celebes on the 7th of March 1853. After making several excursions into the interior of the island, she returned to Batavia, whence, on the 7th of July, she sailed in an American vessel for California, a voyage of nearly half the circumference of the globe through the seas of Java and China, and across the wide Pacific Ocean. On the 27th of August she entered the bay of San Francisco, and remained in the "execrable city," as she calls it, and its vicinity, including a voyage of 300 miles northwards to the Crescent City in Oregon, till the 10th of December, when she took her departure by steamer for Panama, which was reached on the 28th of December. From Panama she proceeded by steamer to Callao, the port of Lima, where she arrived at the end of January 1854. She went over a portion of Peru, crossed the chain of the Andes to the sources of the river Amazonas, and returned to the coast at Guayaquil. Thence she returned to Panama, crossed the Isthmus, sailed to New Orleans, and ascended the Mississippi as far as the Falls of St. Anthony, which she saw on the 8th of August. Thence she went to Chicago, on Lake Michigan, and afterwards to Lake Superior, Lake Huron, Lake Erie, and the Falls of Niagara, which she beheld with unbounded admiration on the 10th of August, remaining there several days. She passed over Lake Ontario, and descended the St. Lawrence to Montreal and Quebec. Returning to Montreal on the 20th of August, she crossed the river into the United States, and then by railway, and by steamer across Lake Champlain and down the Hudson, reached New York. On the 10th of November she left New York by steamer for Liverpool, where she arrived in safety, and reached London at the end of December 1854. At the beginning of 1855 she went to the island of St. Michael, one of the Azores, where one of her sons was a resident, and after remaining some months with him returned to Vienna. She published an account of this second series of travels, and the work has been translated into English under the title of 'A Lady's Second Journey round the World, from London to the Cape of Good Hope, Borneo, Java, Sumatra, Celebes, Ceram, the Moluccas, &c., California, Panama, Peru, Ecuador, and the United States,' 2 vols. cr. 8vo, London, 1855. There have been two or three translations into English of each of her series of Voyages and Travels.

Madame Pfeiffer's accounts of her travels are not of much value as works of information. They are generally meagre, vague, and unsatisfactory. Her travels in the Holy Land and in Iceland are more interesting than her two journeys round the world. She was then less hurried, and her observations and remarks are more copious, distinct, and interesting, than the greater part of her subsequent travels. Calm courage, steady perseverance, and womanly tact, distinguished Madame Pfeiffer throughout the whole of these arduous journeys, and she has probably accomplished what no male traveller ever has or could have done. Though always practising the most rigid economy, her funds would have been quite inadequate to meet the expenditure required had she not been aided to a large extent by the free conveyances and gratuitous hospitality afforded to her by the English and Dutch colonial governments and embassies, and especially by American captains and railway proprietors, who behaved to her with unbounded liberality as well as with uniform kindness and respect. [See SUPP.]

PHÆDRUS, a Latin writer of the Augustan age, according to the general opinion. Little is known of his life except that it appears that he was born in Thrace, was brought to Rome in his youth as a slave, found friends at Rome, applied himself to study, and became a perfect master of the Roman language, and was made free by Augustus, who patronized him. He wrote several books of fables in iambic verse, borrowing, as he says in his prologue, his subjects from Æsop. The fables of Phædrus have long been a favourite work, for the graceful simplicity of their style, the pointedness of their humour, and the general soundness of their morality. They were first published by Pithou in 1596, from a manuscript supposed to have been written in the 10th century, and which is called the Rosamboanus manuscript, from the name of the owner of it. Another manuscript, which existed at Rheims, was destroyed by fire in the last century, but it had been previously collated with Pithou's edition, and the variations had been copied, as well as those in another manuscript, called Danielinus, and they have been used in the later editions of Phædrus. Perotto, bishop of Manfredonia in the 15th century, made a collection of Latin fables from Phædrus, Avienus, and others, for the instruction of his nephew, among which were thirty-two fables which are not contained in the usual editions of Phædrus, in five books. These fables,

'*Fabulae Novae*,' were published at Naples, in 1808, as an additional or sixth book of Phaedrus. Perotto's manuscript however was found much damaged, and the fables were in a mutilated state. Since that time Angelo Mai discovered in the Vatican Library another manuscript of Perotto, in a state of good preservation, with a prefatory letter of the bishop to his friend Mannus Veltrius, of Viterbo, and from this manuscript the additional fables were published in a correct form: 'Phaedri Fabulae Novae XXXIII., e Codice Vaticano reintegratae ab A. Maio, Supplementum Editionis Orellianae,' Zürich, 1832. There seems little doubt now that these fables belong to Phaedrus; they are perfectly similar in style and manner to the rest. The Fables of Phaedrus were also edited by Bentley, and appended to his edition of Terence. The best edition of Phaedrus is that of J. C. Orelli, 8vo, Zürich, 1832.

PHA'LARIS, a tyrant of Agrigentum in Sicily, of whom very little is known. He was a native of Aestypalea in Crete. It is generally agreed that he reigned sixteen years, but accounts differ in regard to the commencement of this period. Eusebius and Suidas place his accession in Ol. 52 (a.c. 570); Jerome, in Ol. 53, 4 (a.c. 565). A still earlier date than the former has also been given, namely, Ol. 31, 2 (B.C. 655); but this is contradicted by the statement of Aristotle ('Rhetor.,' ii. 20, sec. 5), who speaks of Phalaris as the contemporary of Stesichorus, and by Diodorus Siculus ('Excerpta Vaticana,' xxviii. p. 25), who mentions Phalaris between Aesop and Croesus. Phalaris was deposed and put to death by Telemachus, the great-grand-father of Theron and Xenocrates, who flourished in the time of Pindar. ('Schol. Pind.,' Ol. iii. 68.) Phalaris was infamous for his cruelty, and especially for the particular device, which he owed to Perillus, of burning the victims of his savage tyranny in a bull of bronze, in order that he might enjoy the pleasure of hearing their cries. (Cic., 'De Republ.,' iii. 30, sec. 41.) This appears to have been the tradition widely spread even in the time of Pindar, who says ('Pyth.,' i. 95):—"Croesus's reputation for hospitality fades not away, but an evil report everywhere attaches itself to the cruel Phalaris, who burned people in a brazen bull; nor is he praised in festive meetings where the harp resounds in the hall and where the youthful choruses sing." Perillus, the maker of the bull, was the first of those who perished in this way; and when Phalaris was deposed, the mob rose against him, and practised upon him the same cruelty to which he had often subjected others. (Cicero, 'Off.,' ii. 7, § 26; 'De Nat. Deorum,' iii. 33, § 82; 'Verr.,' v. 56, § 145; 'De Fin.,' iv. 23, sec. 64.) Ovid, 'Ibid.,' 439, says that his tongue was first cut out ('lingua prius ense resecta'); and Heracleides Ponticus, that his mother and his friends were burnt with him. The other accounts of his death are not trustworthy. (Bentley's 'Phalaris,' p. 135.) This bull was carried to Carthage: the image which was shown by the people of Agrigentum in the time of Timaeus was not the bull of Phalaris, but a representation of the river Gela; the bull of Phalaris was however afterwards restored to the Agrigentines by Scipio. (Cic., 'Verr.,' iv. 33, sec. 73; 'Diodorus Siculus,' p. 614, 90. On the bull of Phalaris, see Ebert, *Zweites*, Regiomont, 1830, p. 10, seqq.) There were other stories about this tyrant: as that he was an eater of human flesh (Aristot., 'Ethic. Nicom.,' vii. 5, § 7); that he used to devour sucking children ('Clearchus, apud Athenaeum,' p. 396); and that he even fed upon his own son (see the passages quoted by Bentley, 'Phal.,' p. 369). The name of Phalaris is best known in modern times from the celebrated controversy between Bentley and Boyle with regard to the authenticity of the epistles attributed to him, the spuriousness of which was most satisfactorily established by Bentley in his admirable 'Dissertation on the Epistles of Phalaris.' These epistles, which were probably written by some rhetorician or sophist in the time of the Caesars, are utterly worthless in a literary point of view, though Sir William Temple ventured to select them as one of the greatest works of antiquity. They have been reprinted several times since Boyle's notorious edition. The best edition is that by Schäfer ('Phalaris Epistola, Gr. et Lat., cum notis Lennepii, Valckenaerij, et Schaeferi,' Lips., 1823.)

PHANODEMUS, an historian of Athens, is referred to by Dionysius of Halicarnassus, as having written upon Attic antiquities. (Hoffmann's 'Lexicon;' Fabricius, 'Bibl. Graeca.') His age and place of birth are both uncertain, but he must have lived before the time of Augustus. Fragments of Phanodemus, together with some of Demon, Clitodemus, and Ister, were edited by Siebelis, 8vo, Leipzig, 1812; and by C. and T. Müller, 'Fragmenta Historicorum Graecorum,' Paris, 1841.

PHAVORINUS VARINUS, a native of Favara, a place near Camerinum in Italy, whence he called himself Favorinus, in Greek Phavorinus (*Φαβρίπιος*). His family name was Guarino, which he turned into Varinus. He is also called Camers, from the town of Camerinum. The precise time of his birth is unknown, but it was probably some years after the middle of the 15th century. He is represented about 1490 as a pupil of Angelo Poliziano, and as exquisitely skilled in Greek and Latin. He devoted himself to the service of the Church, and joined the order of the Benedictines. In 1512 he became librarian to Giovanni de Medici, afterwards Pope Leo X.; and in 1514 he was made Bishop of Nuceria, over which diocese he presided twenty-three years. He died in 1537.

Phavorinus, assisted by two other eminent scholars, Charles Antenorius and Aldus Manutius, edited, in 1496, 'Cornu Copiae et Horti Adonidis,' consisting of seventeen grammatical tracts in Greek,

selected from thirty-four ancient grammarians. In 1517 he published a collection of apophthegms from Stobaeus, which he dedicated to Leo X. But the work by which he is chiefly known is his Greek Lexicon, which, after the labour of many years, he completed in the lifetime of Leo X. It was published at Rome in 1523, fol., and reprinted at Basel in 1538, fol., under the direction of Joachim Camerarius, with several improvements. The last edition, still further improved, was printed at Venice in 1712, by Antony Bartoli, in a neat type and in a handsome form: this is by far the best edition for all the purposes for which a lexicon is consulted. The words are given in alphabetical order, and all the definitions and explanations are in Greek, which Phavorinus is said to have spoken and written as well as a native Greek. Henry Stephens appears to have been greatly indebted to the work of Phavorinus in the compilation of his Greek Lexicon, though he nowhere acknowledges his obligation.

PHEIDON, the supreme ruler of Argos, lived about the middle of the 8th century before the Christian era. The Parian marble (No. 31) and several ancient writers make him contemporary with Iphitus and Lycurgus; but the statement of Pausanias (vi. 22, § 2), that he celebrated the eighth Olympic games, places him in B.C. 748, which date is also supported by the testimony of Ephorus (apud Strab., viii. p. 358), that he was in the tenth generation from Temenus. Pheidon is usually called Tyrant of Argos, but he was in fact the hereditary king. He appears to have obtained the name of tyrant on account of having made himself absolute (Aristot., 'Rep.,' v. 8, § 4.) Pheidon was an active and enterprising prince; and while Sparta was weakened by her wars with the Messenians, he greatly extended the dominions of Argos, and appears to have acquired possession of the whole eastern coast of Laconica as far as Cape Males, and of the island of Cythera, which, as we learn from Herodotus (i. 82), once belonged to Argos. He attacked the towns which were said to have been taken by Hercules, and claimed the right of presiding over all the festivals which Hercules had instituted. On this ground he deprived the Eleians of their presidency of the Olympic games, which he presided over in conjunction with the Pisians. (Strabo, viii. 358; Paus., vi. 22, § 2.) But his usurpation united the Eleians and Lacedaemonians against him, and thus led to his overthrow.

Pheidon is said to have invented weights and measures, which bore his name (Strabo, viii. 376; Plin., 'Hist. Nat.,' vii. 56; Pollux. x. 179), and is also stated by most ancient writers to have been the first person to coin silver money; though, according to Herodotus (i. 94), the Lydians were the first people who put a stamp upon gold and silver.

PHERECRATES (*Φερεκράτης*), a writer of the old comedy, was contemporary with Plato, Aristophanes, Phrynichus, and Eupolis. (Suidas, 'Plato.') His play, called the 'Countrymen' (*Ἄγριοι*), was represented B.C. 420. (Athen., v. p. 218, d; Plato, 'Protag.,' c. 47, p. 327, d.) He wrote seventeen comedies (Suidas, 'Pherocrates'), of which a few fragments remain, which have been published, together with those of Eupolis, by Runkel, Leip., 1829. Pherocrates is only mentioned once by Aristophanes ('Lysist.,' 158). He invented a particular kind of metre, which has been called from him the Pherocratic.

PHERECYDES (*Φερεκύδης*). There were two Greek writers of this name, the philosopher and the historian, who are frequently confounded, as in Lucian, 'Macrob.,' c. 22; Clem., 'Strom.,' v. p. 567, c; Euseb., 'Chron. ad Olymp.,' 59, 4.

PHERECYDES, the philosopher, was a native of Syros. His father's name was Babis, and he was born, according to Suidas ('Pherocydes'), in the 45th Olympiad, that is, about B.C. 600. Diogenes Laertius informs us (i. 121) that he flourished in the 59th Olympiad, that is, about B.C. 544, which date agrees with the account of Cicero, who says ('Tusc.,' i. 16) that he was contemporary with Servius Tullius. He is said by some writers to have obtained his knowledge from the sacred books of the Phoenicians, or from Egypt, and by others to have been a disciple of Pittacus. (Diog. Laert., i. 116.) He taught Pythagoras (Suidas; Cic., 'Tusc.,' i. 16; 'De Div.,' i. 50), and appears to have had a considerable acquaintance with natural science. (Diog. Laert., i. 116.) He is said by Cicero ('Tusc.,' i. 16) to have taught the immortality of the soul. According to Suidas, one of his works was entitled *Ἐπτάμυθος*, or the 'Seven Secrets,' and another *Θεολογία*, which gave an account of the generation and succession of the gods. Theopompus says (apud Diog. Laert., i. 116) that Pherocydes was the first among the Greeks who wrote on the nature of the gods. There are no particulars of the life of Pherocydes worth recording. His death is variously related: some writers say that he died in the territory of Magnesia in Asia Minor; some, that he threw himself down from the Corycian rock above Delphi; and others, that he died in Delos.

PHERECYDES, the historian, was contemporary with Herodotus, and flourished between B.C. 480 and 456. Suidas mentions two historians of this name, and says that one was born at Athens and the other at Leros; but Vossius ('De Hist. Gr.,' iv. 4) has shown that they are the same person. It appears probable that Pherocydes was born at Leros, and afterwards settled at Athens, whence the mistake of Suidas arose. The work of Pherocydes, which is often quoted by the Scholiasts and by Apollodorus, was a mythological history in ten or twelve books; but it also included events subsequent to the mythological period, as the Scythian invasion of Darius (Clem., 'Strom.,' v. p. 567, c.), and the

Ionic migration led by the sons of Cadmus (Strabo, xiv. p. 682). Compare Clinton's 'Fast. Hell.,' vol. ii. p. 372. The fragments of Pherecydes have been published by Sturz under the title of 'Pherecydis Fragmenta, e variis scriptoribus collegit, emendavit, commentationem de Pherecyde utroque, et historico et philosopho præsinit, &c.,' Gerae, 1787; 2nd edition, Lip., 1824; also by C. and T. Müller, in 'Frag. Hist. Græc.,' Paris, 1841.

PHIDIAS, one of the most celebrated artists of antiquity, was a native of Athens. His father's name was Charmidas. The exact time of his birth is not known, but, as far as can be judged from the ascertained dates of some of his works, it seems to be generally admitted that it must have occurred between the seventieth and seventy-third Olympiads, that is, from 490 to 480 B.C. It is said that in early life Phidias practised painting, but there is no authority for his having followed it as a profession, and if he ever practised it, as it is probable he did, from some of his family being painters, he doubtless soon relinquished it for the sister art of sculpture, in which he afterwards became so eminent. Phidias, according to ancient writers, had two masters, Hippias, and Eladas, Geladas or Ageladas. Hippias is mentioned only by one author (Dion. Chrysostom., 'Orat.,' lv.), and the modern writers on the life of Phidias seem disposed to reject that testimony. (Emeric David, Müller, Sillig, and others.) Ageladas was one of the most distinguished artists of the age. He was a native of Argos.

The times in which Phidias lived were peculiarly favourable to the development of his genius and talents, and his ability must have been shown at a very early age, as it appears he was extensively employed upon great public works, even during the administration of Cimon. Afterwards, when Pericles attained the supreme power in Athens, Phidias seems to have been consulted on all occasions in which the embellishment of the city, either by magnificent buildings or by sculptured decorations, was contemplated. "It was Phidias," says Plutarch ('Pericles'), "who had the direction of these works, although great architects and skilful artificers were employed in erecting them." Among the more remarkable objects upon which his talents were at this time exercised, the temple of Minerva, called the Parthenon, justly claims pre-eminence. No pains and no expenses were spared to make this one of the most splendid and perfect monuments of art; and, fortunately, enough exists in the present day, both of its architecture and sculptural decorations, to confirm the high encomiums passed upon it by those who saw it in its perfection. The temple itself was constructed of marble. The architects employed upon it, under the direction and superintendence of Phidias, were Calliades and Ictinus; but the statue of the goddess within the temple was the work of Phidias himself, and, with the exception of the statue of the Olympian Jupiter, which he made at Elis, was the most celebrated of his performances. Minerva was represented standing. In one hand she held a spear; in the other a statue of Victory. Her helmet, highly decorated, was surmounted by a sphinx. The naked parts of the figure were made of ivory. The eyes were of precious stones, and the drapery throughout was of gold—of which metal, it is said, no less than forty talents' weight was used. We are told that by the advice of Pericles, Phidias so arranged the drapery that it could at any time be removed without injury. This seems to have been suggested by the feeling that the Athenians might possibly desire to ascertain whether the gold was fairly appropriated; and subsequent events proved the wisdom of the counsel. The people, desiring to have all the glory of this work, had a decree passed prohibiting Phidias from inscribing his name on the statue, but he contrived to introduce his own portrait (as an old bald-headed man, hurling a stone) in the representation of the combat of the Athenians and Amazons which decorated the shield. A likeness of Pericles was also introduced in the same composition. The exterior of this temple was likewise enriched with sculpture; the two pediments, the metopes, and the frieze being filled with statues and reliefs, many of them from the hand and all of them executed under the direction of Phidias. Part of these (known now as the Elgin Marbles, from their having been brought to this country by the earl of Elgin) form a portion of our collection of sculpture in the British Museum. [BASO RELIEVO; ELGIN MARBLES, in ARTS AND SCIENCE DIV.] Of their merits it is enough to say that the most eminent judges of modern times have without exception added their testimony to that of the ancients by bestowing on them the highest commendation.

The enemies of Pericles, with the view of implicating him also in the charge, accused Phidias of having misapplied part of the gold entrusted to him for the statue of Minerva, and desired that he should be brought to trial. The prudent foresight of Pericles saved both Phidias and himself. He immediately ordered the gold to be taken off and weighed before the people. This however was not done, and the accusation of embezzlement fell to the ground. They then declared the sculptor was guilty of sacrilege in having placed his own portrait on the shield of Minerva. Some accounts say he was thrown into prison, and there died by poison; others that he was banished. Some affirm there was no sentence passed, but that fearing the consequences of this charge, the sculptor fled from Athens and took refuge in Elis, and that he was employed there to execute a costly statue of the Olympian Jupiter, to be erected in his temple in Altia. This statue was the most renowned of the works of Phidias. It was

of colossal dimensions, and was what the ancients called 'chryselephantine;' that is, composed of gold and ivory. The god was represented seated on his throne. His brows were crowned with a wreath of olive, and he held in his hand a statue of Victory. The accessories and enrichments of the throne, footstool, and pedestal, which were of the highest quality of art, are described by Pausanias (v. 11, 14, 15), Strabo (viii. p. 358, Casaub.), and other ancient writers; and in the valuable work by M. Quatremère de Quincy, 'Sur le Jupiter Olympien.'

A tradition connected with this statue is interesting from its exhibiting the importance which the Greeks attached to works of art of high character and merit. Phidias, after the completion of his design, is said to have prayed Jupiter to favour him with some intimation of the divine approbation. A flash of lightning immediately darted into the temple and struck the pavement before him. This was hailed as a proof of the favour of the god, and in commemoration of the event a brazen urn or vase was placed on the spot. Pausanias (v. 11) says that this existed in his time. It is pretended that Phidias was again accused of robbery by the people of Elis, and that he died in prison. There are however strong reasons for thinking that these accusations against Phidias not only are false, but that the accounts of his death and disgrace are not founded on fact. There can be little doubt, from an expression in Aristophanes ('Peace,' 605, &c.), that an unjust feeling had been excited against Phidias, though it is not clear whether he fled or was exiled; and it seems highly probable that he died at Elis. Müller ('De Vitâ Phidiæ'), on the other hand, supposes that Phidias executed the Minerva of the Parthenon, and was then invited by the people of Elis to execute for them the statue of Jupiter; that he returned to Athens, and was, after a time, accused by the enemies of Pericles, who threw him into prison, where he died in the 87th Olympiad. The scholiast on Aristophanes ('Peace,' 604) says he died at Elis: it is also said that he was put to death by the people of Elis, but for what reason is not stated, though some say it was to prevent his ever producing a work that should eclipse their statue. An honour which was paid to his memory would go far to disprove the assertion that he suffered the death of a criminal. The care of his masterpiece, the statue of the Olympian Jupiter, was entrusted to his family under the title of Phaidruntal. His study or workshop near the temple was also preserved with great respect, and in the middle of it an altar was raised, consecrated to all the gods. Pausanias (v. 14) tells us that the Phaidruntal, descendants of Phidias, existed in his time—600 years after the erection of the statue of Jupiter. The death of Phidias is placed about B.C. 432.

Phidias has been called the "sculptor of the gods" (Quintilian, xii. 10) from the grand and sublime character which he threw into his productions. Reference has already been made to his two greatest works, the Minerva of the Parthenon, and the Jupiter at Elis. He also executed much admired statues, some in marble, but chiefly in bronze, of Venus, Apollo, Mercury, an Amazon, &c., &c. (See Pausanias, passim; Plin., 'Hist. Nat.,' xxxvi.; Lucian, 'De Imag.')

His statues of Minerva were numerous: no less than eight or nine are recorded. One of these, the Minerva Areia of the Platæans, was of wood, gilt; with the exception of the extremities, which were made of the marble of Pentelicia. Although Phidias exercised his skill as a sculptor in all the materials which were in general use for the purposes of art, gold, ivory, bronze, marble, and even wood, yet his productions in a mixture of the two former (chryselephantine sculpture) appear to have been the most highly esteemed, both from the extensive scale upon which he used such rich materials, and from the great importance of the works to which they were applied. This is a branch of what the ancients called *toraitic art*, which seems to mean the union of metal with any other material.

Phidias brought to perfection the grand or sublime style of sculpture. The artists before him are represented as having a hard, stiff, dry manner. Phidias improved upon this by making a more careful selection and use of the finest models in nature. After Phidias a softer style was introduced, in which Praxiteles, and after him Lysippus, were eminent. The age of Phidias is justly considered the grand and golden age of sculpture.

PHILARETUS (*φιλάρητος*), the reputed author of a short treatise 'De Pulsibus,' which is written in Greek, but of which only a Latin translation has hitherto been published. Nothing is known about his life, nor the time when he lived; nor is it even certain that he is the author of the work in question, as it is sometimes attributed to Philotheus and sometimes to Theophilus Protospatharius. It was written (as the author tells us) because he thought all former writers on the subject were either too superficial and inaccurate or too prolix; but it is not of much value, and seldom if ever ventures to differ from Galen. It consists of ten chapters, and was translated by Albinus Torinus, and published, Basel, 1638, 8vo. An older and barbarous translation is inserted in the various editions of the curious old collection of medical works called 'Articella.' The translation by Albinus Torinus is to be found also in the second volume of the 'Medicæ Artis Principes,' by H. Stephens, Paris, 1687, folio.

PHILEMON (*φίλημων*), a writer of the new comedy, was born at Soli in Cilicia, according to Strabo (xv. 671), or at Syracuse, according to Suidas ('Philemon'). Philemon began to exhibit comedies a little

earlier than Menander, and before the 113th Olympiad, that is, B.C. 328. He lived to the age of ninety-six or ninety-seven (Lucian, 'Macrob.', 25), and died in the reign of the second Antigonos, son of Demetrius; he must consequently have been alive subsequent to B.C. 283. He is said to have written ninety-seven comedies, of which Fabricius, in his 'Bibliotheca Græca' (vol. ii, p. 476, ed. Harles), has preserved the titles of fifty-three. Of these comedies, fragments only have come down to us, which are usually published with those of Menander. It seems possible that some of these plays may exist; at least there is evidence that some if not all of them were in existence in the 17th century.

Philemon was the great rival of Menander, and was considered superior to him by many of their contemporaries; but posterity, as Quintilian informs us ('Inst. Orat.', x. l, p. 222, ed. Pipont), regarded him as inferior to Menander. From the 'Mercator' of Plautus, and the fragments which remain of his plays, Philemon appears to have closely resembled Menander, of whose style, and of the new comedy in general, an account is given under MENANDER.

The son of Philemon is also said to have written comedies. ('Athen.', vii., p. 291, E.) Suidas says that they were fifty-four in number.

There is extant a grammatical work entitled 'Lexicon Technologicum,' written by a grammarian of the name of Philemon, who probably lived in the 12th century of the Christian era. This work is divided into eight books, according to the eight parts of speech, which are respectively treated of in each book. The Greek text was first published by Burney, 8vo, London, 1812; but a more accurate edition, with valuable notes, was published by Osann, Berlin, 1821.

PHILES or PHILE (MANUEL), (Μανουήλ Φίλης, or Φίλη), a native of Ephesus, was distinguished (according to Fabricius, 'Bibl. Gr.') from four other persons bearing the same surname. As his work is dedicated to the Emperor Michael Paleologus the younger, he must have lived about the beginning of the 14th century. He was born of poor parents, came at an early age to Constantinople, became one of the pupils of George Pachymer, and made great progress in literature. He afterwards gave offence to the emperor by some expressions made use of by him in one of his works, called 'Chronographia,' which is no longer extant, and was thrown into prison. He is supposed to have died somewhere about the year 1340. He is known chiefly as the author of a work, *Περὶ ζώων ιδιότητος*, 'De Animalium Proprietate,' written in a sort of barbarous Greek iambics, called 'versus politici.' It is a curious work, but of little or no value to a zoologist, taken almost entirely from Ælian's 'Natural History,' and full of the most absurd fables. It was first published at Venice, 1533, 8vo, Græce, by Arsenius, archbishop of Monembasia (a town on the east coast of Laconia, now called Napoli di Malvasia). An edition was published at Leipzig, 1574, 4to, (or, with a fresh title-page, Heidelb., 1596), Gr. and Lat., by Wernsdorf, with notes and an excellent preliminary dissertation on the life and works of Philes. The longest poem in the volume is one of nearly a thousand lines, written in the same barbarous kind of verse, in the form of a dialogue between the author and the city of Constantinople, which he designates by the name *Néris*, 'mens.' It is composed in praise of Joannes Cantacuzenus, who was afterwards emperor. The other poems consist of epigrams and various shorter pieces, together with one of nearly four hundred verses on the 'Elephant,' addressed to an emperor named Leo, which (as no emperor of that name was contemporary with Philes) probably belongs to some other person. Two other short poems, in the same metre as the rest, are to be found in the first volume of Cramer's 'Anecdota Græca Parisiensis,' p. 43, 8vo, Oxon, 1839. Wernsdorf gives, in his 'Preliminary Dissertation,' a list of several works by Philes which still remain unedited in various libraries of Europe.

PHILETAS, a grammarian and poet of the island of Cos, who, according to Suidas, flourished in the times of Philip and Alexander the Great, and was preceptor to Ptolemy Philadelphus: Clinton places his death about B.C. 290. He wrote epigrams, elegies, and other poems, and died of emaciation brought on by excessive study. (Suidas, 'Lexicon.') Fragments of Philetas and two other poets were edited by Bach, 8vo, Halle, 1829; they are also included in the editions of the Greek 'Anthology.'

PHILIDOR, ANDRÉ, a French dramatic composer of eminence in his day, but better known out of his own country as a most distinguished and unrivalled chess-player, was born at Dreux in 1726. His grandfather was musician-in-ordinary to Louis XIII.; his father held the same office; and his uncle established in 1726 the famous Concert-Spirituel. André was admitted at the usual early age as a page, or chorister, in the chapel of Louis XV., and studied under Campra, Maître de la Chapelle. In 1737, when he had only completed his

eleventh year, he produced a motet for a full choir, for which the Grand Monarque deigned to thank him; but it does not appear that this condescension was followed by any acknowledgment of a more solid kind, for after quitting the chapel on his voice changing he subsisted for some time by copying music and giving a few lessons. But all his vacant hours, and these were many, he devoted to the game of chess, in which his proficiency was so great that he sought to profit by his skill, and in 1745 commenced a tour in Holland, Germany, and England. This also enabled him to improve his knowledge and taste in music, by hearing the best works of the great masters. He tried his strength as a composer in London in 1753 by setting Congreve's 'Ode to Harmony,' which Handel heard, who approved his choruses, but thought him defective in melody. Chess however had occupied more of his thoughts than his avowed profession, and he had previously, in 1749, published his 'Analysis of the Game of Chess,' for which he obtained a great list of subscribers, and his reputation was established. This work gives several games, with notes explaining the reasons for the moves; and thus it was by far the most useful book of any then published for those who study chess.

In 1754 he returned to Paris, and devoted himself wholly to his profession. He composed some sacred music, which the king thought too much in the Italian style, and thus his effort to obtain the appointment of Maître de la Chapelle was frustrated. Four years after this he turned his attention to dramatic music, and produced at the Opéra-Comique many works, most of which proved eminently successful. The author of the 'Dictionnaire des Musiciens' considers him to have been, together with Duni and Mousigny, the joint father of the Opéra-Comique; but adds that, though he was a profound harmonist, he was not so happy in melody.

In 1777 Philidor reprinted his treatise on chess, considerably augmented. In 1779 he produced at Freemasons' Hall, in London, the 'Carmen Seculare' of Horace, set to music, consisting of airs, choruses, &c. This was published in 1788, in a splendid volume in score, dedicated to Catharine of Russia. It was again performed, under the composer's direction, in 1788, at an entertainment of a mixed kind given by the Knights of the Bath at the Pantheon. From that period Philidor seems to have passed much of his time in London, chiefly occupied by the game of chess, at which he played at Parsloe's Club in St. James's-street, where, we believe, persons were admitted to witness his exploits on the payment of a small fee. It was there he exhibited his marvellous powers by playing three games, against different adversaries at different boards, all at the same time; and only two months before his decease he played two games, blindfolded, simultaneously, against very expert players, and was victorious.

His health now rapidly declining, he applied for a passport to return to his native country, but was refused, having been, most unjustly, proscribed by the French government as a suspected person. This affected him deeply; his grief admitted of no alleviation; and he died in London in 1795. Philidor was a very worthy and amiable man; but it was the generally-received opinion that his mental powers were almost exclusively confined to music and chess.

PHILINUS, a Greek physician, born in the island of Cos, was one of the pupils of Herophilus, and (according to Galen, 'Introduct.') the founder of the sect of the Empirici. He lived somewhere about the year B.C. 250 (Ol. 132, 3), wrote a work on botany (Athen., 'Deipnosa,' lib. xv., sec. 28, pp. 681, 682), which is probably the work quoted by Pliny ('Hist. Nat.,' lib. xx., cap. 91), and some commentaries on the aphorisms of Hippocrates, neither of which works is now extant. With respect to the system of the Empirici, the rejection of anatomy, physiology, and pathology as useless studies, would of course, at least in the opinion of modern physicians, prevent their ever attaining any higher rank than that of clever experimentalists; but still it must not be denied that *Materia Medica* is indebted to them for the discovery of the properties of many valuable drugs.

PHILIP, the name of several kings of Macedonia, of whom two deserve particular notice.

PHILIP II., a younger son of Amyntas, succeeded (B.C. 359) at the age of twenty-three years to a throne which, since the death of his father, and during the reigns of his two elder brothers, Alexander and Perdiccas, had been shaken to its foundation by foreign invasion and civil war. Fortunately for the independence of his kingdom, the young monarch was endowed with talents and energies of the highest order; and a residence during his boyhood at Thebes, whither he had been sent as a hostage in the best days of the republic, while the celebrated Pelopidas and Epaminondas were in power, had obtained for him all the advantages of a liberal Grecian education. On his accession to the throne, his inheritance was overrun by the victorious Illyrians, who had defeated and slain his brother Perdiccas; his own title was disputed by two pretenders to the crown; and the people of Macedonia were dispirited by accumulated national calamities. But his courage and eloquence revived the hopes of his subjects; and his military skill and activity soon inspired them with confidence. While these qualities were successfully exerted in the field, negotiations and bribes were as artfully employed to induce the supporters of the rival claimants to abandon their cause; and Philip finally not only repelled the Illyrian and Pæonian invaders of his country, but penetrated in turn into their territory, and extended his own dominions at their expense. He subsequently further strengthened himself by a marriage with Olympias,

daughter of the king of Epirus, who became the mother of Alexander the Great, but whose temper and conduct made her so little agreeable to her husband that he finally divorced her.

From the period of the full establishment of his authority over his native kingdom, Philip seems to have commenced the design, which he thenceforth steadily pursued and ultimately accomplished, of destroying the power and influence of the Athenian people on the northern shores of the Ægean Sea. As his projects, both on the present occasion and subsequently, brought him into frequent collision with that republic, the state of affairs at Athens throughout his reign requires some detailed notice.

After the general peace which followed the battle of Mantinea and death of Epaminondas (B.C. 362), Athens had again become the most prominent state in Greece. The naval successes and moderation of Timotheus and a few other officers of similar character had won her the public respect; and the people of the Ægean islands and coasts, to secure the protection of her navy against piracy, had resumed their relations to her as subject allies. She had thus nearly recovered the naval supremacy lost by the fatal termination of the Peloponnesian war; but this brief renovation of glory was soon obscured by a relapse into former habits of oppression towards her allies; and these produced (B.C. 358) the Confederate or Social War, by a league of some of the dependent islands and towns against her, which lasted three years, and ended in the loss of her sovereignty. Philip ably took advantage of the distraction of Athens in this contest to reduce or win over in succession Amphipolis, Pydna, Potidea, and other towns on the northern shores of the Ægean Sea, until in those parts Methone alone remained in the Athenian interest. Some conquests in Thrace also gave the Macedonian prince possession of the gold-mines of Pangæus; and near these he built or enlarged a city, which he peopled with Greeks from the conquered towns, and named after himself Philippi. Here, under his personal inspection, the mines were worked to such advantage that they produced him one thousand talents annually; and the gold 'Philippe' which he coined served him in the sequel both to bribe the venal orators of the Grecian states and to hire the mercenary troops with which he now openly assailed their freedom.

The ambition of Philip indeed soon taught him to extend his views of aggrandisement into Greece itself; and at whatever epoch the plans were organised which he formed and realised for the acquisition of a general supremacy over the Grecian states, the first occasion for interfering in their domestic politics was afforded to him by the Phocian or Sacred War, which had already commenced before the close of the contest between Athens and her allies. The real cause of the persecution of the Phocians was the hatred with which that people had inspired the Thebans by refusing to join them in the late war against Sparta. To this source of political enmity were added some uncertain motives of personal offence between individuals of the neighbouring communities; and, moved by such passions of public and private revenge, the Thebans rashly excited a commotion which was doomed eventually to bring destruction upon their own state, as well as to annihilate the general liberties of Greece. Availing themselves of their influence in the Amphictyonic Council, of which they hoped also to obtain the absolute control, as well as the command of the temple of Delphi and its treasures, by destroying the Phocians, they accused that people of having cultivated lands which had been devoted to the Delphic god. The Phocians were found guilty by the compliant Amphictyons, and condemned to pay a fine so enormous, that for its liquidation their whole country was declared forfeit to the god. Perceiving that their only appeal against this iniquitous sentence must be to arms, the Phocians anticipated their enemies by boldly seizing upon Delphi (B.C. 357), and, supported by Athens and Sparta, they commenced a sanguinary war with the Thebans and their allies.

During the progress of this struggle, Philip gained a footing in Thessaly by assisting some of the Thessalian nobles, or Aleuadae (the ancient allies of Macedon), against the tyrants of Phæra, who were supported by the Phocians and their Athenian confederates. The successful interference of Philip in this quarter brought him into opposition with Athens; but the jealousy of that republic was still more excited by his continued machinations against her influence on the Thracian coasts. When she attempted, in conjunction with the people of Methone, to repel these injuries by hostilities, he suddenly appeared before that place, and took it after an obstinate siege, in which he lost his left eye by an arrow. The people of Olynthus, hitherto his allies, now taking alarm at his ambition, applied to Athens for aid against him; but though the Athenians, moved by the eloquence of Demosthenes, repeatedly sent reinforcements to the Olynthians, Philip defeated the confederates, and finally besieged and captured Olynthus (B.C. 347). After this event, both the Athenians and the Macedonian princes were equally desirous of peace, and in the following year a treaty was concluded between them. But the ambassadors who were sent to Philip to arrange the terms suffered themselves to be either outwitted or bribed by the artful monarch; and the Phocian allies of Athens were excluded from the benefits of the treaty.

That brave and unfortunate people, who had hitherto maintained the war with advantage, were now abandoned to the mercy of their more numerous and powerful enemies. The Thebans, who were nearly exhausted in the struggle, applied to Philip for aid, which he was but too happy to render. From Thessaly, passing the defiles of Ther-

mopylae, which had been left unguarded, he marched rapidly into Proper Greece, and profiting by the misconduct of party leaders and the treachery of the Phocian general, he was completely successful. The Phocians were compelled to surrender unconditionally; the Amphictyons assembled, and decreed that their towns should be destroyed and the inhabitants disarmed and heavily assessed; and their privileges at Delphi and votes in the Amphictyonic Council were solemnly transferred to the pious monarch of Macedon. Thus ended (B.C. 346) the Sacred War, which ruined an innocent people and destroyed the little reverence for religion that had yet remained in Greece.

The crisis was now approaching in the great struggle between Athens and Philip, which, on the part of the former, was for the independence of Greece, and on that of the latter for the general supremacy in her national government and councils. But the contest was almost as much one of factions at Athens itself, as between the republic and the Macedonian king. The aristocratic party in that city inclined, perhaps naturally, to the side of Philip, through conviction of the degenerate character of the democracy and consequent hopelessness of a successful collision with the power of Macedon, which they either thought it useless to resist, or considered not likely to be injurious to their country. They might also sincerely believe that in Greece, for all the evils of intestine commotions of which they were weary, there remained no cure but a general diversion, headed by Macedon, of the national energies against Persia. Their leaders were the venerable Isocrates and upright Phocion, both patriots of unquestionable integrity, and anxious for the independence of Athens. But it was the misfortune of this party, that its ranks gave shelter to the venal orators, such as Æschines, Demades, and others, who were undoubtedly in the pay of Philip, and who basely promoted his designs. On the other hand the democratic, or war party, as a modern historian has termed it, eager for the licence and plunder which were promised by a state of hostilities, was principally guided by the infamous Chares, to whom, together with the mercenary Charidemus, the conduct of military expeditions was often entrusted. But to this party, through a well-founded persuasion of the ambitious project of Philip, and a generous and patriotic enthusiasm for the independence of his country, had the great Demosthenes attached himself; and a view of the principles upon which he acted will be found in a former article. [DEMOSTHENES.]

After the conclusion of the Phocian war, Philip turned his attention for a time again to the northward of Greece, and laboured to consolidate his empire in that quarter by obtaining possession of the cities of the Propontis and Thracian Chersonese. But Demosthenes had now roused the Athenians to so much alarm and energy, that when the Macedonian attacked and invested Perinthus and Byzantium, a strong armament was fitted out at Athens, which, under the command of Phocion, compelled him to raise the siege of those cities (B.C. 339). This was perhaps the most glorious moment in the life of Demosthenes, and the most mortifying check in the successful career of Philip. But the triumph of the great orator and the disappointment of the ambitious prince were alike momentary; and the event soon proved how unequal was the conflict between the desultory impulses which could be given to a feeble and divided democracy, without secrecy, unity, or consistency of purpose, and the concentrated power of a monarch of high talent and immense resources, whose political designs were veiled in the profoundest mystery until they were ripe for execution, by adroit ministers, experienced generals, and well-disciplined armies. In the very next year after his repulse before Byzantium, Philip found a pretext for appearing again in arms in Greece itself. He was appointed by the obsequious Amphictyonic Council their general in a new sacred war which they had denounced against the people of Amphissa for cultivating some devoted lands; and after reducing that city, he suddenly threw off the mask by seizing Elateia, the key of Bœotia, at the head of 32,000 veteran troops. The Athenians were filled with dismay; but the eloquence and activity of Demosthenes both animated them to signal exertions, and induced the Thebans, Corinthians, and others to join with Athens in the cause of independence. The numerical superiority of the confederates however, though they fought with great bravery, could not prevail against generalship and discipline; and the fatal battle of Chæroneia (B.C. 338) for ever extinguished the liberties of ancient Greece.

Nothing was more characteristic of the disposition and policy of Philip than his conduct after the battle of Chæroneia. As soon as the victory was secured, he immediately, with his usual humanity, stopped the slaughter; and when, on revisiting the field next morning, after a night carousal, he beheld the dead Thebans of the Sacred Band lying in ranks where they had valiantly fought and fallen, he is said to have shed tears, and exclaimed, "Perish they who imagine these to have done or suffered shame!" But this burst of admiration did not prevent him from treating the party that had been hostile to him at Thebes with great severity; and he imposed a Macedonian garrison upon the subjugated city. To the Athenians, on the contrary, he behaved with the greatest clemency, dismissing without ransom those among them who had been made prisoners, and granting their republic peace upon very easy terms, the principal condition being that they should send deputies to a general congress of the Amphictyonic states at Corinth. Here the great object of the ambition of

Philip seemed to approach its fulfilment. After his orators had set forth the injuries which Persia had continually inflicted upon Greece, it was unanimously resolved in the assembly that a national war should be declared against the Persian empire, and that the Macedonian king should be appointed commander-in-chief, with power to apportion the contingent of each Grecian state. But when he was making the most active preparations for the great expedition which he meditated, and which his son was destined to accomplish, his days were cut short by the hand of an assassin. While celebrating the nuptials of his daughter Cleopatra with the king of Epirus, he was stabbed by a young Macedonian of his own body-guard, Pausanias, whose motive for the deed, as he was himself put to death on the spot, could not be ascertained, but has been most probably ascribed to personal revenge, on the king's refusal to grant him redress for an intolerable insult which he had received from the queen's uncle.

Thus fell Philip (B.C. 336), at the early age of forty-seven years, and in full vigour of life and intellect, at the moment when he seemed to be entering on the meridian splendour of his career of glory.

The character of Philip of Macedon has often been sketched, like too many other historical portraits, in the spirit of party. Too favourably estimated by the opponents of democracy, the ardent advocates of republican freedom have not unnaturally been led to regard the Macedonian king with strong prejudice as the exemplar of monarchical tyranny. Of all the princes of antiquity, however, it would be difficult to name one worthy of comparison with Philip in the fairer features of his character. His government of his own kingdom must be judged, by the silence of his opponents, to have been mild, just, and popular. Personally kind to his enemies, he was to a singular degree free from that cruelty which was the common reproach of the Greeks of his age: humane, generous, and magnanimous, he often showed himself capable of forgiving injuries, of sparing the vanquished, and of using success with moderation. It was indeed his boast and his truest glory, that he conquered more by mercy and conciliation after victory than by mere force of arms. His splendid abilities were equally conspicuous as a statesman and a general; and his intellectual tastes for literature and philosophy, for the drama and the arts, were alike refined and passionate. He made his court therefore no less the seat of eloquence and mental cultivation than it was the school of consummate political science. Yet he was as insatiable in his ambitious schemes as he was unscrupulous in the means which he employed to advance them: he hesitated as little as the worst politicians at corruption and perfidy. The vicious intemperance of his private life will not bear any comment; but his vices, like his accomplishments, were those of the Greeks, and of the state of society which produced them: his virtues were peculiar to himself, and superior to his times.

Coin of Philip II.  
British Museum. Actual size.

PHILIP V., the only other of the Macedonian kings of that name whose life and reign merit some attention, ascended the throne (B.C. 220) at the age of 17, on the death of his uncle Antigonus Doon. He was the grandson of Antigonus Gonnatas, and therefore lineally descended from the first Antigonus, one of the generals of Alexander the Great, whose family, in the vicissitudes which succeeded the dismemberment of that conqueror's empire, had finally obtained the crown of Macedon and a general ascendancy over the affairs of Greece. Philip was an able prince, whose character, both in its political energies and personal vices, was not without some points of resemblance to that of his greater namesake and predecessor on the Macedonian throne. At the commencement of his reign, the struggle between the Ætolian and Achaean leagues, in which the latter people had been worsted, caused them to call in his aid; and in the war which followed, and in which he was placed at the head of the Achaean confederation, his activity and military skill were much distinguished. His successes soon disposed the Ætolians to peace, which he as readily granted them, in order that he might direct his sole attention to Italy, where the disasters of the Romans in the second Punic War inspired him with the hope that, by throwing his weight into the Carthaginian scale, he might finally acquire the preponderance of power for himself. With this view, after the battle of Cannæ (B.C. 216), he formed with Hannibal an alliance offensive and defensive, which he prosecuted with little vigour, but which ultimately proved his own ruin; for the Romans, after the great crisis of their fate was over in Italy, no sooner began to prevail in the struggle with Hannibal, than they determined to take vengeance upon Philip for his aggression. After some intervals of indecisive hostility and hollow pacification, during which they found means to deprive him of most of his allies in Greece, they declared war anew against him on various pretexts; and at length he sustained from the consul T. Quintus Flaminius, at Cynoscephalæ, in Thessaly (B.C. 197), a defeat so decisive as for ever to break the Mace-

donian power. Philip however, after this calamity, obtained peace on terms less severe than might have been anticipated: but his proud and restless spirit could ill brook the subjection to which he was reduced; and the remaining years of his life were passed in covert preparations for a new war with Rome, which he saw to be inevitable. He died (B.C. 179) just before the last crisis in the fortunes of Macedon, leaving his unworthy son Perseus to abide the struggle which was to bereave him of his crown and liberty.

PHILIP, ST., was the first disciple of Jesus Christ, and one of the twelve apostles. He was a native of Bethsaida, a town near the sea of Tiberias. After his call to the apostleship not much is recorded of him in the New Testament. He has sometimes been confounded with Philip the Deacon, mentioned in the Acts of the Apostles; but a little examination will plainly show that they were quite different persons.

Nicophorus Callisti tells us that in the distribution of regions made by the Apostles for their respective spheres of labour, St. Philip had Syria and Upper Asia assigned to him, with St. Bartholomew; and that having there made numerous converts, he came into Hierapolis in Phrygia, where he succeeded in bringing many of the inhabitants from gross idolatry to the belief and practice of Christianity, on which account he was at length seized by the authorities, imprisoned, and scourged, and then martyred by being hanged upon a pillar, but in what year is not stated.

The Gnostics attributed a book to St. Philip, which they called his Gospel; but no other sect ever pretended that this apostle left any writings.

The feast of St. Philip is observed by the Eastern churches November 14th, but by the Western on the 1st of May.

PHILIP was the name of five Spanish sovereigns, four of whom were of the house of Austria, and one of the Bourbon family.

PHILIP I., King of Castile, surnamed the Handsome, was the son of Maximilian I., emperor of Germany, by Mary of Burgundy, in right of whom he inherited and transmitted to his posterity of the house of Austria the seventeen provinces of the Netherlands. In the year 1496 he married Joanna, or Jane, eldest daughter of Ferdinand the Catholic and Isabella, sovereigns of Aragon and Castile; and in 1504, on the death of Isabella, who bequeathed the kingdom of Castile to her daughter Jane, Philip, as well as his consort, assumed the regal title. He was crowned at Burgos with her; and in consequence of her mental weakness, exercised all the functions of government during the short remainder of his life, which closed September 25th, 1506, at the early age of twenty-eight.

His queen Jane survived him for fifty years, in a state between insanity and fatuity; and her malady is said to have been much aggravated by grief at his death, though he had never loved her. She traversed her kingdom, carrying his dead body with her, and causing it to be uncovered at times that she might behold it, until she was at last persuaded to permit its removal and interment. She had by Philip, besides daughters, two sons, both in the sequel emperors of Germany, as Charles V. and Ferdinand I., the elder of whom, Charles, on the death of his grandfather Ferdinand the Catholic, finally re-united the crowns of Castile and Aragon. But such was the attachment of the nation to their insane queen, that throughout her long life she was always recognised as sovereign of Spain in conjunction with her son; and their names were mentioned together in every formal act of government.

PHILIP II., King of Spain, the only legitimate son of the Emperor Charles V. by Isabella of Portugal, was born on the 21st of May 1527, and ascended the Spanish throne on his father's abdication in January 1556, having in the preceding year entered on the government of the Netherlands, which Charles had in the same manner resigned to him. His inheritance also included the kingdom of the Two Sicilies, Milan with other Italian provinces, and the empire of the New World; and it was a true and expressive phrase for the extent of his power, that "the sun never set upon his dominions." The revenues which he drew from the American mines and his European realms far exceeded those of any prince of his times, and are declared to have amounted to 25,000,000 of ducats yearly. His navy was more numerous than that of any other power; and his veteran armies were composed of the best troops, led by the ablest generals of the age.

As the reign of Philip II., which fills a long and important period in European history, received its dark colouring from his personal qualities, a slight preliminary sketch of his private character will best illustrate the features of his policy and the events which it produced. He was naturally of a stern and morose temperament, and as he had also been deeply imbued from his youth with the sternest Romanist doctrines, the very sincerity of his belief acting upon a cold heart, a gloomy temper, and a narrow mind, was sufficient to render him obstinately bigoted and inexorably cruel. In temporal affairs, the despotic principles in which he had been brought up had filled him with extravagant ideas of regal authority; and his father's example had taught him to aspire to universal monarchy. With a superstitious creed he therefore mingled the most unbounded schemes of worldly ambition; and perhaps conscientiously believing that with his own projects of dominion he was promoting at the same time the glory of God, he pursued without remorse the most inhuman course of religious persecution and civil tyranny.

Philip has therefore truly been represented as a monster of bigotry and cruelty; but it appears unjust to add to these revolting qualities, as some writers have done, the reproach of hypocrisy. Charles was a persecutor only from policy, but Philip from conviction. Charles made religion subservient to his views of temporal aggrandisement; Philip often sacrificed his true political interests to what he conceived to be the service of religion. The emperor held the pope a prisoner, while he burnt others for denying his supremacy; his son engaged only with deep reluctance in a legitimate war against Pope Paul IV., and in order to purchase a reconciliation with that arrogant pontiff he abandoned the fruit of victory like a repentant criminal. The indulgence of sensual passion has been adduced as another proof, no less than his cruelty, of the hypocrisy of Philip's religious pretensions; but the licence of his private life in this respect was one of those inconsistencies which have sullied purer minds.

The marriage of Philip II. with Mary, queen of England, which had taken place in 1554, enabled him, soon after his accession to the Spanish crown, to engage his consort's kingdom with his own, in 1557, in a war against France. The only memorable event of this contest was the victory of St. Quentin, gained by his troops. He was not himself present at the battle; but at the subsequent assault of the town he showed himself in armour to encourage the soldiery, though without sharing their danger; and it was observed that this was the first and last time in which he appeared on the field, and the only other occasion on which he assumed a military suit was when he directed the arrest of his son, the unhappy Don Carlos. The war was concluded in 1559 by the peace of Cateau Cambresis, upon terms advantageous for Philip. He had meanwhile, by the death of Mary, to whom he had been a cold and unkind husband, lost his connection with England. Leaving his provinces of the Netherlands under the government of his natural sister Margaret, duchess of Parma, Philip sailed for Spain, which he never quitted again; and his arrival in that kingdom was immediately followed by a sanguinary persecution, through which he succeeded in crushing the germs of the Reformation in the peninsula. He was present at an *auto-da-fe*, or public act of faith, at which forty unhappy persons were led to the stake by the Inquisition. When passing him, one of the victims in this dreadful procession appealed to him with loud cries of mercy. "Perish thou, and all like thee!" was his merciless reply; "If my own son were a heretic I would deliver him to the flames."

It was amidst such scenes that he accomplished a vow, made to heaven and to St. Lawrence, on the day of which saint the battle of St. Quentin had been gained, to testify his gratitude for that victory. At the village of Escorial, near Madrid, he built a superb palace, to which, in honour of the saint and of the instrument of his martyrdom, he gave the form of a gridiron. At the same period he transferred the seat of government from Toledo, the ancient capital of Castile, to Madrid, which latter city thenceforth became the metropolis of Spain. In the south of that kingdom his persecution goaded to revolt the Moorish population, who had compounded for the quiet possession of their native seats by a pretended conversion to Christianity; and after a furious contest, embittered by religious hatred and marked by horrid atrocities on both sides, a portion of the Moors were driven to seek refuge in Africa, and the remainder (1571) reduced to submission.

Meanwhile Philip diligently applied himself to the extirpation of herey in the rest of his dominions. In his Italian possessions, both of Milan and Naples, fire and the sword were successfully employed for this purpose; but the attempt to establish the Spanish Inquisition in the Netherlands with the same view first provoked a spirit of insurrection (1566), which, throughout the remainder of his long reign, exhausted his immense resources of men and money, and after the frightful devastation of those fertile and flourishing provinces, for ever tore seven of them from the Spanish monarchy. When Philip found that the government of Margaret of Parma wanted strength to enforce his religious edicts in the Netherlands, he replaced her by the ferocious Ferdinand Alvarez de Toledo, duke of Alva. The character of this man's administration may be estimated by his sanguinary boast that in less than six years he had consigned 18,000 heretics to the stake and the scaffold, before his master was compelled, by the failure of his cruel measures, to recall him. The milder government of his successor Requesens—the warlike renown, the energies, and the artifice of Don John of Austria, natural brother of Philip (who had gained for him the great naval victory of Lepanto over the Turks in 1571)—and the military genius of Alessandro Farnese, duke of Parma, the ablest general of his times—were all in succession equally ineffectual to suppress the revolt of the Netherlands. William the Silent, prince of Orange, whose deep enmity Philip had provoked, proved the most dangerous of his insurgent subjects; and under that prince and his son Maurice they successfully prosecuted a struggle, of which the principal events are related under another head. [NASSAU, HOUSE OF.]

While the cruel and bigoted tyranny of Philip was thus dissevering seven provinces of the Netherlands from his dominions, he unexpectedly acquired possession of another kingdom. On the death of Henry, king of Portugal, without issue, Philip, as his nephew, asserted his title to the succession; and his power easily enabling him to prevail against his feeble competitor, Don Antonio de Crato, his troops,

under the Duke of Alva, entered Lisbon, and in two months (1580) annexed the Portuguese crown and colonial dependencies for sixty years to the Spanish monarchy.

This acquisition seemed but a step to the universal dominion at which Philip aimed; and in the pursuit of his double ambition of extending his sway and extirpating the Protestant faith, the remainder of his life was passed in designs for subjugating both France and England. In the former country, after secretly allying himself with the queen-mother, Catherine de' Medici, and the Romish party, for the destruction of the Huguenots, he subsequently and openly supported the Roman Catholic league, under the Guises, against Henri IV.; and it was not until that sovereign by changing his religion completed his victories over the league, that the subtle tyrant of Spain abandoned his hopes of reducing France to subjection. His project for the conquest of England was more avowedly proclaimed, more perseveringly pursued, and more disgracefully defeated; but it is needless in this place to repeat the narrative, so glorious in our annals, of the destruction of the magnificent fleet of 150 vessels of war which, under the presumptuous title of the Invincible Armada, Philip had equipped for the reduction of this island (1588). [ELIZABETH, vol. ii., col. 761-764.] The manner in which he received the mortifying intelligence of the annihilation of his fondest hopes by the shipwreck as well as the defeat of his navy, displayed some greatness of mind as well as religious resignation: "I sent my fleet," said he, "to combat with the English, but not with the elements: God's will be done!"

The close of Philip's reign and life was embittered by the failure of all his plans of ambition and intolerance. The contest in the Low Countries was daily becoming so adverse to the Spanish arms, that one of his last acts was an abdication of his title over the whole of those provinces in favour of his daughter Isabella and her consort the Archduke Albert. His haughty spirit was reduced to submit to this measure, as the only remaining expedient for preventing the total alienation of the Netherlands from his house. England and France also had escaped from his toils; and the peace of Vervins, which he was compelled to conclude with Henri IV., left that sovereign securely established on the French throne. Philip died September 13th. 1598, at the age of seventy-two, after protracted and excruciating suffering, under a complication of dreadful maladies.

Philip II. was four times married. The Queen of England, by whom he had no issue, was his second wife. His first was his cousin, Mary of Portugal; and by her he had one son, Don Carlos, whose fate has deepened the sombre aspect of his reign. That young prince, who appears to have been of a haughty and violent temper, was exasperated by his father's refusal to admit him to a share in the administration of the kingdom, though he had never shown any capacity for public affairs. After giving many proofs of a discontented and disordered mind, he was, on the charge, as it would seem from the researches of Mr. Prescott, of aiming at the king's life, and of having shown heretical tendencies, arrested in his bed by Philip himself at midnight on the 18th of January 1568. To the council of state, and to foreign courts, Philip merely assigned as his reason for so acting the necessity laid upon him by "his duty to God and regard for the welfare of the monarchy." Philip it was clear had come, for some reasons, to regard his son with settled aversion, and it soon came to be understood that he was condemned to an imprisonment from which there was no hope of release, and in which he was to be treated with the utmost rigour; and that it was a subject on which every one must be silent. Happily for him, death in the course of a few months terminated his miserable existence (July 24, 1568), at the age of twenty-three years. The horrid suspicion that his death had been hastened through poison or other means by his father's command, which prevailed at the time, has been frequently repeated since, and is directly though inconclusively stated by Llorente, the secretary of the Inquisition, in his 'Histoire de l'Inquisition,' tom. iii., p. 171, &c. Be the manner of his death however what it may, there can be little doubt that, as Mr. Prescott observes, "the responsibility to a great extent must be allowed to rest on Philip, who, if he did not directly employ the hand of the assassin to take the life of his son, yet by his rigorous treatment drove that son to a state of desperation that brought about the same fatal result." ('Hist. of Philip II.,' book iv., chap. 7.) But the authentic version, which we have related, of this mysterious and tragical affair, has been still further variously discoloured by calumny and fiction. Writers, who believed Philip to be the murderer of his son, have upon this foundation formed the superstructure for a romantic tale of a mutual and criminal passion between Don Carlos and his father's third wife, the Princess Elizabeth of France, who had originally been betrothed to himself, and whose life, which closed quickly afterwards, is also said to have been sacrificed to the jealous vengeance of her husband. For this charge against all the parties, there seems however to have been no foundation. (See a full sketch of the career of Don Carlos, and an elaborate, able, and just examination of the whole question of his connection with Elizabeth, and his treatment by his father, in Prescott's 'History of the Reign of Philip the Second,' vol. ii., book-iv., chaps. 6, 7, and 8.) By Elizabeth, Philip had two daughters, who, together with his son and successor by his fourth wife Anne, daughter of the Emperor Maximilian II., were the only legitimate issue which he left. In the midst of his persecuting zeal he had given one purer proof of his regard for religion, and sacred literature owes an obligation to him

memory for the publication of the beautiful Polyglot Bible which bears his name, and which was printed at Antwerp in 1669-72, in 8 vols. folio.

PHILIP III was a prince, in everything except the bigotry of his faith, of a character most opposite to that of his father. Gentle, humane, and unconquerably indolent, he surrendered himself and the whole management of his affairs, from the very commencement of his reign, to the guidance of his favourite, the Marquis of Denia, who had been his chief equerry, and whom he raised to the dignity of Duke of Lerma. This nobleman, who governed Spain as prime minister with unbounded power for twenty years, was a personage of dignified mien and of a mild and beneficent disposition; but as a statesman, though he wanted neither prudence nor firmness, he was otherwise of only moderate capacity, and he rendered his administration injurious to the state by his love of pomp and lavish expenditure, and the consequent derangement of the national finances. He was supplanted at last in the affections of his feeble master (1618) by his own ungrateful son, the Duke of Uzeda, under whom the kingdom was not better governed; and the aged Lerma was solaced by the Pope in his unmerited disgrace with a cardinal's hat, which he had used the foresight to solicit a little before his fall, as a protection from the persecution of his enemies.

The principal circumstances which distinguished the reign of Philip III were the recognition of the independence of the revolted provinces in the Low Countries, and the expulsion of the Moors from Spain. Notwithstanding thecession by Philip II. of the general sovereignty of all the Netherlands to his daughter Isabella and her husband the Archduke Albert, which was ratified by Philip III. immediately after he ascended the throne, the war in those provinces continued with unabated fury, and with indifferent success to the Spanish arms, until the year 1609; when the exhaustion of the immense revenues of the monarchy compelled the Duke of Lerma to conclude in his master's name a truce for twelve years with the Seven United Provinces, by which the king of Spain acknowledged them free and independent states. In the same year, under the plea that the remains of the Moorish population in Spain, notwithstanding their pretended conversion to Christianity, continued in their hearts to be obstinate infidels, and to hold treasonable intercourse with their African brethren, a royal edict was issued, commanding all the Moors in the kingdom of Valencia to quit the Spanish dominions; and, soon after, a decree, extending this sentence of banishment to all the Moors in the peninsula, completed in 1610 the fatal measure from which Spain has never recovered. On the impulse of a blind superstition, and contrary to every dictate of wise policy, above a million of the most industrious subjects of the Spanish crown were driven into exile, and the most flourishing provinces were depopulated by their removal to the opposite shores of Barbary.

After these events Spain may be said to have languished, rather than found refreshment, in peace, which was interrupted but slightly, by the commotions of the times in Italy and Germany, during the remainder of the reign of Philip, who died of a fever, March 31, 1621, at the age of forty-three years. By his queen, Margaret of Austria, he left three sons: Philip, who succeeded him; Charles, who died in 1682; and Ferdinand, for whom, at the age of only ten years, he obtained from the pope a cardinal's hat, with a dispensation to hold by proxy the archbishopric of Toledo, and who, in consequence of these ecclesiastical dignities, is known in history under the title of the cardinal-infant. Of his daughters, the eldest, Anne, married Louis XIII. of France; and the second, Maria Anne, after having been contracted to Charles I. of England, when Prince of Wales, was finally married to the king of Hungary, who subsequently ascended the Imperial throne under the title of Ferdinand III.

PHILIP IV. was only sixteen years of age when he ascended the throne; and, like his father, after he had become the sovereign of his people, he remained the subject of a favourite. This was the famous Count-Duke Olivarez [OLIVAREZ], who affecting to condemn the supine inactivity of the last reign, and to pursue a more vigorous course of policy, concluded for his sovereign with the emperor a strict family league for the aggrandisement of both branches of the house of Austria. The means proposed for this object were the renewal of the war in the Low Countries at the expiration of the twelve years' truce, and the consolidation of the Spanish power both in these provinces and in Italy; while in Germany the Imperial authority should be secured by the subjugation of the Protestants. It was hoped that France, torn by religious wars, could offer no resistance to these designs; and England was to be amused with that matrimonial treaty which produced the strange journey of Prince Charles, attended by the Duke of Buckingham, to woo the Infanta Maria Anne at Madrid.

These intrigues were among the preludes to the long and sanguinary wars which were only terminated in Germany by the peace of Westphalia, and which continued between Spain and France above ten years later, until the treaty of the Pyrenees. In the Netherlands, during the life of the renowned Spinola, the Spanish arms long maintained an ascendant: but in the maritime war which extended to the New World, the Dutch fleets were everywhere victorious over those of Spain; and the policy of Olivarez drew upon his country the temporary assaults of England as well as the more lasting hostilities of France. Directed by the genius of Richelieu, the energies of that monarchy were ably and successfully applied to humble the power of

the house of Austria; and the ambitious projects of foreign dominion, which Olivarez had built up, crumbled one after another to the ground. Meanwhile a dangerous insurrection in Catalonia, provoked by the imprudent measures of that minister, and the revolt of Portugal in 1640, were added to the distresses of the Spanish monarchy. Olivarez announced this last event to his master as a subject of congratulation: "Sire, the Duke of Braganza has had the madness to suffer himself to be proclaimed king of Portugal. His imprudence will bring a confiscation of twelve millions into your treasury." Portugal was irrevocably lost by mismanagement and defeat to the Spanish crown; but Catalonia, after a desperate struggle of many years, was finally reduced to obedience. Olivarez, whom Philip IV. was himself at last compelled to recognize as the cause of these multiplied disasters, was disgraced in 1647, and was succeeded as prime minister by his nephew Don Louis de Haro, who however was neither attached to him nor disposed to imitate his measures.

In 1648 was concluded the peace of Westphalia, by which Philip IV., for himself and his successors, finally and formally renounced all claim of sovereignty over the Seven United Provinces. The war with France, which still continued for eleven years, and the reverses of which were increased by the league of England, under the protectorate of Cromwell, with France, was little else than one long train of loss and disgrace to Spain; and the peace of the Pyrenees in 1659, which closed the struggle, was only obtained by territorial sacrifices.

This treaty was also distinguished by the marriage of Maria Theresa, eldest daughter of Philip IV., to Louis XIV. of France, an event which, despite of the solemn renunciation of the French king, was destined to convey the crown of Spain to the house of Bourbon. After this pacification Philip continued his vain efforts to recover the crown of Portugal for some years; and his death, September 17th, 1665, is said to have been hastened through grief at the continued defeat of his troops by the Portuguese. He left one son, who succeeded him under the title of Charles II., and died childless; and two daughters, Maria Theresa, married to Louis XIV., and Margaret Theresa, who became the wife of the emperor Leopold.

PHILIP V., king of Spain, was great-grandson of Philip IV., through his daughter Maria Theresa, granddaughter of Louis XIV. of France, and second son of the dauphin. He was born in 1683, received the title of Duke of Anjou in his infancy, and was called by the last testament of Charles II. to the throne of Spain and the Indies in the year 1700. The circumstances which attended this inheritance, and produced the memorable war of the Spanish succession, belong more appropriately to the reign of his grandfather [Louis XIV.]; and it will suffice in this place to sketch the principal events of his life after his recognition as king of Spain by the treaty of Utrecht in 1713. He had married, two years before, Maria Louisa, a princess of Savoy, to whom he became so tenderly attached that on her death in 1714, he abandoned for a time all care of business, and resigned himself to the guidance of the celebrated princess Des Ursins, a French woman of spirit and intelligence, the favourite of the deceased queen, who had accompanied her into Spain from Italy; and retained equal influence after her death on the mind of Philip. He desired to follow her advice in the choice of a second consort, and she was induced by Alberoni, an Italian priest, to select for his queen Elizabeth Farnese, daughter of the Duke of Parma. But the new queen proved of a very different character from that which Alberoni had artfully ascribed to her; and instead of exhibiting the pliant temper and feeble mind which the princess Des Ursins had been taught to expect and reckoned upon governing, her first act was to cause the astonished favourite to be sent out of the kingdom.

Alberoni succeeded immediately to the influence of the discarded princess [ALBERONI, GIULIO], was shortly appointed prime minister; and soon obtained from the pope the dignity of cardinal. He had conceived the design of restoring Spain to her rank and power among nations, and he began by the attempt to recover for her the Italian provinces, which had been lost by the treaty of Utrecht. But this open violation of a solemn treaty, though only a part of the extensive schemes which he had formed, was sufficient to alarm the leading powers of Europe; and it produced the quadruple alliance of England, France, the Empire, and Holland (1718), which Spain was unable to withstand, and Philip, towards the end of 1719, yielded to the demands of the allies by disgracing and banishing Alberoni. A few years later, Philip, who was of a weak and melancholy disposition, abdicated his crown in favour of his son Louis (1724), and retired with his queen to a religious seclusion at St. Ildefonso. But on the death of Louis, who, in a few months after his accession, fell a victim to the small-pox, Philip found himself compelled to resume the toils of government.

The period of his second reign, which was protracted for twenty-two years after his son's death, was occupied chiefly in obtaining possessions in Italy for his two sons by his ambitious queen Elizabeth Farnese, both of whom she succeeded in establishing in that country, Don Carlos as king of the Two Sicilies, and Don Philip as duke of Parma and Piacenza. In other respects the transactions of this long reign present nothing remarkable which does not belong to the general history of Europe rather than to that of Spain; and Philip died in 1746, leaving an only surviving son by his first wife, who succeeded him under the title of Ferdinand VI., and a numerous family

by his second queen, one of whom, Don Carlos, afterwards ascended the Spanish throne as Charles III.

PHILIP OF ORLEANS, Regent. [ORLEANS, HOUSE OF.]

PHILIPPE I., King of France, son of Henri I., and third both in descent and succession from Hugues Capet, founder of the third dynasty of France, was born in 1053, and succeeded his father in 1060. His mother was Anne of Russia, daughter of the Czar Jaroslaw I. On his death-bed Henri committed the care of the child and the administration of the government to his brother-in-law, Baudouin or Baldwin, count of Flanders. Baudouin did little more till the time of his death (1067) than occasionally visit his ward, who was brought up sometimes at Paris, sometimes at one or other of the royal castles. The death of Baudouin removed from Philippe the restraint which his station and inexperience required, and he plunged into a series of excesses of the most disgraceful character. The means of indulgence were supplied from various sources, especially from the sale of ecclesiastical benefices and dignities, which subsequently drew upon him the hostility of the Church, but, although he had not sufficient energy vigorously to struggle against the growing spirit of ecclesiastical domination, his necessities and his profligacy prevented his entire submission to the claims of the popes, who desired to engross to themselves all the higher ecclesiastical appointments. Philippe was engaged not long after the death of Baudouin in a war with Robert le Frison, or the Frisian, who had usurped the county of Flanders from his nephew Arnolphe, the grandson of Baudouin. The hasty and inadequate force assembled by Philippe was surprised and routed by Robert near Cassel in 1071; the young Count Arnolphe was killed, and the king only saved himself by a hasty and inglorious flight. In a second attempt to subdue Robert, Philippe met with no better success. He then made peace with him, and married Bertha of Holland, his step-daughter.

From 1075 to 1087 Philippe was engaged in occasional hostilities with William, duke of Normandy and king of England, which kingdom he had acquired by conquest (in 1066) during Philippe's minority. But the war was languidly conducted, on the part of Philippe from indolence, and on that of William from full occupation in other quarters, and perhaps from the feudal sentiment of respect for his suzerain. Philippe however encouraged the discontented vassals and rebellious children of William; and the contest did not finally terminate until the death of the Conqueror (1087). He had become excessively corpulent, and a coarse jest of Philippe, who inquired "when he would be put to bed," excited his indignation. "When I go to be churchd at St. G enevi ve, I will offer a hundred thousand tapers," was the reply of the angry veteran. He entered the territory of Vexin, and stormed Mantes; but a hurt which he received by his horse falling proved mortal, and relieved Philippe from his hostility.

The year 1092 was marked by the most important incident of Philippe's life. He had become weary of his wife Bertha, by whom he had four children, and had confined her in the castle of Montreuil, which had been settled on her by way of dower. He now married Bertrade, wife of Foulques le Rechin, count of Anjou, who, dreading her husband's inconstancy, forsook him and took refuge with Philippe. This marriage was so glaringly inconsistent, not only with good morals and decency, but with ecclesiastical law, that it was with difficulty that any bishop could be procured to solemnise the union. It involved Philippe in two wars, one with Robert le Frison, who took up the cause of the repudiated Bertha; and another with Foulques of Anjou, who sought to recover Bertrade. The Church also took up the matter, and Philippe was daily attacked with remonstrances, censures, and threats of excommunication. In return he threatened the bishops, and even subjected one of them to a short imprisonment. Philippe had obstinacy enough to retain Bertrade, but not sufficient strength of character to silence the bishops. Some of them indeed embraced his cause after the death of his injured wife Bertha (1094), and in a council held at Reims showed a disposition to attack the Bishop of Chartres, his sturdiest opponent. But the majority of the French bishops, in a national council at Autun in 1094, excommunicated both Philippe and Bertrade. The pope, Urban II., did not however pursue him to extremity, and the sentence was only so far enforced as to deprive him of the liberty of wearing the ensigns of fealty, and to prevent the celebration of public worship in the place where he was. He retained the exercise of such power as he possessed, and was allowed to perform his devotions in his private chapel.

Near the close of the 11th or the beginning of the 12th century, Philippe, being engaged in hostilities with William II., who then held Normandy, associated with himself on the throne his son Louis VI., then only eighteen or twenty years of age, afterwards known as Louis le Gros. The activity and good conduct of the prince gradually raised the royal power from the contempt into which it had fallen, but excited the jealousy of his step-mother Bertrade. The court was divided: Louis is charged with seeking a pretext to have Bertrade murdered, and Bertrade practised on his life by poison. Neither the divisions of his family nor the power of the church could prevail on Philippe really to put away Bertrade, or to deprive her of the title of queen. A declaration of penitence, and engagement no longer to regard her or live with her as a wife, which engagement he afterwards openly violated, were accepted by the church, and the excommuni-

cation was taken off in 1104. Bertrade afterwards succeeded in reconciling both herself and Philippe with her former husband, Foulques le Rechin. The remaining years of Philippe were marked by little except the intrigues of Bertrade for the advancement of her children by both marriages.

Philippe died at Melun, of premature old age, the result of his intemperance, in 1108, having nearly completed the forty-eighth year of his reign, and was succeeded by Louis VI. His worthless character, combined with the low state of the regal power, rendered him a spectator rather than an actor in the events of his reign. France possessed at this time little national unity, and the history of the time is the history of the great nobles and of the provinces, rather than the history of the king or the kingdom. From the time of Philippe the royal power revived. The activity of Louis had given an impulse to it even in his father's time, and his activity and that of his immediate successors gave permanence to the movement.

PHILIPPE II., better known as PHILIPPE AUGUSTE (a name which he is thought to have derived from being born in the month of August), was the son of Louis VII., surnamed Le Jeune, and Alix, daughter of Thibaut le Grand, count of Champagne, his third wife. He was born in 1165, and was crowned at Reims, when little more than fourteen years of age, in his father's lifetime, upon whose death in the following year, 1180, he came to the throne. He had however exercised the sovereign power from his first coronation, his father being disabled by palsy, and one of his earliest acts was a general persecution of the Jews, whom, when assembled in their synagogues on the Sabbath, he caused to be surrounded by soldiers, dragged to prison, and despoiled of all the gold and silver that was found on them. He also published an edict, by which all debts due to them were to be annulled on condition that the debtor should pay to the royal treasury a fifth part of the amount due. Other acts of persecution followed, and in 1181, the Jews were commanded to dispose of all their moveable property and quit the kingdom for ever; all their real property was confiscated to the crown, and their synagogues were ordered to be converted into Christian churches. The intercession both of nobles and ecclesiastics, for whose good offices they paid large sums, was in vain; and after experiencing a heavy loss from the enforced sale of their effects, they were expelled from all the domains of the crown. The great vassals of the crown were in no hurry to repeat the royal edict, and in the county of Toulouse especially the Jews remained undisturbed. Other acts of persecution followed, and the king is recorded "not to have allowed to live in all his kingdom a single individual who ventured to gainsay the laws of the church, or to depart from one of the articles of the Catholic faith, or to deny the sacraments."

The pride and ambition of Philippe led him, even before his father's death, to embroil himself with the queen his mother and her four brothers, the counts of Blois, Champagne, and Sancerre, and the Archbishop of Reims, who had taken advantage of the weakness of Louis VII. to govern France in his name, and who concluded that it belonged to them to direct the administration of a minor king. The good offices of Henry II. of England arranged the dispute. Philippe married, before his father's death, Isabella, niece of the Count of Flanders, his godfather; and was, with her, crowned a second time at St. Denis by the Archbishop of Sens. This marriage was one of the causes of dispute with his mother and uncles. He soon alienated the Count of Flanders, as well as most of the other great vassals of the crown, who united to oppose his rising power; but the good offices of Henry of England again restored quiet (1182). It was a little after this that he caused some of the streets of Paris to be paved. After an interval of three years (1185), war between Philippe and the Count of Flanders again broke out, and ended, after a short campaign, by a peace which added to the territory and resources of the king. A struggle with the Duke of Bourgogne (1186) also terminated favourably for the king. Hostilities with Henry II. of England followed, and were attended with success; and that powerful monarch died at Chinon in 1189, broken-hearted at seeing his own sons in league with his enemy.

In 1188 Philippe had taken the cross. In 1190 the combined forces of Philippe and Richard I. of England rendezvoused at Vezelay, not far from Auxerre; and in the autumn of the same year they embarked, Philippe at Genoa, and Richard at Marseille. They met and wintered at Messina in Sicily, and in 1191 proceeded to the Holy Land; but before long, Philippe, jealous of the superiority of Richard as a warrior, made ill-health an excuse for returning to France, and reached Paris in December 1191. He had left his mother Alix, and his uncle, the Archbishop of Reims, regents of his kingdom. The incidents of the crusade had made Philippe and Richard rivals; and the former, on his return, commenced his attack on the other, at first by intrigues, and afterwards by force. He made some acquisitions in Normandy, but failed (1194) in attacking Rouen. The following years were occupied with alternate periods of truce and hostility, in which the policy and steadiness and the feudal superiority of the French king rendered him a match for the more soldier-like qualities of Richard; and on the death of Richard (1199), the incapacity of John, his successor, enabled Philippe to establish decisively the superiority of the Capet race over the rival family of Plantagenet. During this war, Philippe, now a widower, married, in 1193, Ingeburge, or Isamburge,

sister of Canute VI., king of Denmark; but having in a short time obtained a divorce in an assembly of prelates and barons, he married, in 1196, Marie, or Agnes, daughter of Berchtold, duke of Merania, a German noble, in contempt of the authority of the Pope, before whom the case of Ingeburge had been carried, and by whom the divorce had been annulled. The struggle between the king and the pope (Innocent III.) continued for some years, until an interdict laid on Philippe's dominions obliged the king to submit the affair to an ecclesiastical council at Soissons (1201); but he evaded their decision by a pretended reconciliation with his queen Ingeburge, whose real condition was however little improved. Marie of Merania, from whom he had been obliged to separate himself, died soon after, leaving two children, whom the pope did not scruple to declare legitimate.

The murder of Arthur of Bretagne, by his uncle John of England, having roused general indignation, Philippe seized the occasion to attack Guienne, Normandy, Touraine, Anjou, and Poitou. These, except Guienne, he speedily conquered; and prosecuting John before the court of the twelve peers of France, by a sentence quite unprecedented in France and unauthorised in such a case by the institutions of feudalism, procured the confiscation of all his French dominions (1205). Crimes, however flagrant, which did not violate the duty of the noble to his feudal superior, had not hitherto been cognisable in the great feudatories; and the Court of Peers, which Philippe professed to revive from the institutions of Charlemagne, was probably an innovation, founded on romances to which the ignorance of the age gave the credit of being faithful historical traditions. It consisted of twelve members, viz.: six of the great nobles (the dukes of Normandie, Bourgoigne, and Aquitaine; and the counts of Toulouse, Flanders, and Vermandois, for the last of whom the Count of Champagne was substituted), and six prelates, by means of whom the king sought to influence the decisions of the tribunal. As in judgments involving a capital sentence the ecclesiastics could not take part, it is probable that the number of twelve was made up out of the higher nobility who were at court at the time. The nobles forming the court, proud of sitting in judgment on a crowned head, lent themselves to the purpose of Philippe, who met with no opposition in thus establishing a jurisdiction which might hereafter promote the aggrandisement of the crown. John succeeded in preserving Guienne and recovering Poitou and part of Touraine; but Normandy, and his other dominions to the north of the Loire, were finally lost.

In the interval of peace which followed, Philippe endeavoured to consolidate the institutions of his kingdom by holding national assemblies; but his authority in the south of France, where the crusade against the Albigois was about this time (1207—1213) carried on, continued to be merely nominal. He embellished Paris, protected the university of that city, and sought the favour of the church by sending to the stake those charged with heresy. Under pretence of supporting the cause of the church against John of England, Philippe prepared for the invasion of that kingdom; and when John had submitted to the church, under the protection of which he placed himself, Philippe turned his arms against Flanders, the count of which had refused to join in the invasion of England. He obliged the chief towns to surrender, and committed great ravages; but lost his fleet, part of which was taken by the English, and the rest burnt in the port of Dam to prevent its falling into their hands (1213). Next year Philippe was attacked on the side of Poitou by John, and on the part of Flanders by the Flemish nobles and burghers, supported by the Emperor Otho IV.; but John was repelled by Louis, the son of Philippe; and the emperor, whose army consisted almost entirely of Flemings, was defeated by Philippe himself at Bouvines, between Lille and Tournay (1214).

In 1216, Louis, son of Philippe, went over to England, whither he was invited by the malcontent barons; but he was obliged to return the next year. In 1219 he took part in the crusade against the Albigois; and was afterwards (1221) engaged in hostilities in the provinces held by the English king Henry III. The Count of Montfort, unable to retain the conquests which his father, Simon de Montfort had made in the county of Toulouse, offered to cede them all to Philippe Auguste; but the king, who had never taken much interest in the affairs of the south, declined engaging in the negotiation. The feebleness of his health increased the natural caution of age, and he took little part in the affairs of foreign lands. He employed himself chiefly in strengthening and improving the domains of the crown, which he had so widely extended; and he walled in the towns and villages which it comprehended. His regular management of his revenues enabled him to effect this, and yet to bequeath to his various legatees an immense sum, of which the maxims of the time enabled him to dispose as if it had been his own property. He died at Mantes, in 1223, in the fifty-eighth year of his age, having reigned forty-three years.

PHILIPPE III., surnamed LE HARDI, was the eldest son of Louis IX. (or St. Louis). He was born in May, 1245; and was proclaimed king in the camp before Tunis, which city his father was besieging at the time of his death, August, 1270. The army remained two months longer in Africa, suffering much from the climate: at length peace was made with the king of Tunis; and part of the besiegers determined to proceed with Alphonse, Count of Poitou and Toulouse, the king's uncle, to the Holy Land; another part with

Charles of Anjou, another of his uncles, for Constantinople; while the remainder, under Philippe himself, were to return to France. Before their final separation, the division destined for the Holy Land was shattered by a tempest, and many vessels were lost. The expeditions to the Holy Land and to Constantinople were consequently given up, except by an auxiliary division of English, which proceeded under Prince Edward (afterwards Edward I.) to Acre; and the wreck of the army, diminished by sickness, proceeded with Philippe to France. His father and one of his brothers had died at Tunis, and he lost, on his way through Sicily and Italy, his brother-in-law, the king of Navarre, through disease, and his wife, Isabella of Aragon, who died through premature childbirth, the consequence of a fall. It was not till May 21st, 1271, that he reached Paris. He was crowned at Reims in the following August, and shortly after, by the death of his uncle Alphonse, acquired the counties of Poitiers and Toulouse, which that prince had possessed.

It was the object of Philippe to render the great feudal nobles more completely subject to his sceptre, and he reduced to subjection the Count of Foix, who had refused obedience to his commands (1272). He married, in 1274, Marie, daughter of the Duke of Brabant, who was crowned as queen the following year. He interfered in the affairs of Navarre, during the minority of his kinswoman Jeanne, heiress of that kingdom, who was designed to be married to one of his sons; and in the affairs of Castile, to support the claims of the Infants of La Cerda, his sister's children, and heirs in the direct line to that kingdom, whom the Cortes had set aside in favour of Sanchez, their maternal uncle. He succeeded in retaining Navarre for some years, but his projects in Castile failed of success.

During the earlier years of his reign Philippe was much under the influence of Pierre de la Brosse, who had commenced his career at court as barber-surgeon to Saint Louis, and had risen to the rank of chamberlain. His elevation, and the abuse, real or supposed, of his influence over the king, caused his downfall; he was arrested, in 1278, tried on some charge never promulgated, before a commission of nobles, condemned to be hung, and executed in pursuance of his sentence. The immediate cause of his downfall is supposed to have been his inspiring Philippe with a suspicion that his queen, Marie of Brabant, had poisoned her step-son Louis, Philippe's eldest son by his first wife, in order to open a way for her own children to the succession.

In 1283 Philippe engaged in war with Pedro, king of Aragon; the crown of which kingdom had been offered by the pope (who had excommunicated Pedro) to Charles of Valois, Philippe's second son, to be held in feudal subjection to the holy see. The French king assembled his barons and prelates to deliberate on the matter, and by their advice accepted the pope's offer. The prelates and nobles formed on this occasion two separate chambers. In 1285 he invaded Catalonia, took the town of Elna by assault and massacred the inhabitants, compelled Rosas and Figueras to submit, fought an indecisive battle at Hostalrich, and took Gerona by capitulation. But the long siege and severe loss which this last-mentioned town had cost him, the superiority of the Aragonese and Sicilians by sea, and the wasting of his army by disease, compelled him to commence a retreat, which he did not effect without considerable loss. Philippe was himself seized by the disease which had wasted his army, and died, on his return to France, at Perpignan, 5th October, 1285.

PHILIPPE IV., better known as PHILIPPE LE BEL, son of Philippe le Hardi, by his first wife, Isabella of Aragon, was born in 1268; and succeeded his father on the throne of France, October 1285, having previously acquired, in right of his wife Jeanne, the crown of Navarre. He was crowned at Reims in January 1286. The war with Aragon continued, but was carried on languidly. The young king gave, from the first, his confidence to the lawyers, who were gradually working the overthrow of the feudal system, and giving consistency and stability to a system of jurisprudence favourable to despotism. It is probable, from his continual poverty, that in the earlier period of his reign he indulged the love of luxury and refinement then prevalent. In 1290 he despoiled the Jews; and in 1291 he ordered the Italian merchants, who engrossed nearly all the commerce of his kingdom, to be imprisoned; and by the apprehensions of further violence, with which he inspired them, induced them to ransom themselves by heavy payments. Most of them speedily quitted the kingdom. Two brothers, Florentines, Boccio and Musciatto Franzesi, are supposed to have prompted Philippe to this deed of violence and injustice, by which they not only filled the king's coffers, but acquired for themselves the monopoly of the French markets. The success of these experiments encouraged the king to make the lawyers the instruments of his exactions.

In 1290 Philippe paid a visit to the south of France, in order to form with his allies a plan of combined operations against Aragon, to confirm his authority over his remote vassals at the foot of the Pyrenees, and to gain the affections of the nobles of Guienne, then subject to Edward I. of England, of whom Philippe began to be jealous. In 1291 he proposed to renew the attack upon Aragon, refusing to ratify the treaty which had been concluded by the other belligerent parties at Tarascon in the early part of the year: but the proposal was probably a mere feint to raise money.

In 1292 a quarrel between some English and Norman sailors at

Bayonne, followed by mutual hostilities between the vessels of the Cinque Ports and France, ripened the jealousy of Philippe into determined hostility to Edward. He summoned Edward, under certain penalties, to appear before the parliament at Paris, to answer for the hostilities committed by his vassals; and Edward, observant of his subordination as a vassal of the King of France, obeyed the summons by sending his brother Edmond to appear for him (1294). Anxious to avoid a continental war, he consented to deliver up six towns in Guienne to commissioners appointed by Philippe; and to surrender twenty of the persons most deeply implicated in the previous hostilities, to take their trial before the parliament of Paris. Instead of six towns, Philippe caused the whole of Guienne to be occupied by an armed force; and when he had thus obtained possession, he charged Edward with contumacy, and cited him again before the parliament, under heavier penalties for non-appearance than before. Enraged at being thus outwitted, the English monarch renounced his allegiance, sent an army to recover Guienne in 1295, and formed alliances with various continental princes against Philippe. But the war was languidly carried on, for Edward's attention was engrossed by Scottish affairs, and his continental allies made few efforts, except the Flemings, who were unfortunate. Hostilities were terminated by a truce of indefinite length, and by the arrangement of some matrimonial alliances between the two royal houses, concluded by the mediation of the Pope Boniface VIII. in 1298. By the terms of this truce, part of Guienne was restored to Edward, but the final adjudication of that great fief was reserved for the future decision of the pope. The expenses of this war increased the necessities of Philippe, and these led him into disputes with the clergy and the pope, and made him persecute the Jews in order to extort from them a portion of their wealth. One beneficial result sprang from his desire of money—he emancipated the serfs of Languedoc, commuting his rights over them for a pecuniary payment.

Philippe was anxious to avenge himself on the princes who had allied themselves with Edward. The defeat and death of Adolphus of Nassau, king of the Romans, in 1298, may be ascribed to his intrigues. The Count of Flanders was imprisoned and his county seized; but the oppressions of the French caused a revolt of the Flemings, in attempting to suppress which the French suffered a complete defeat at Courtrai in 1302. Philippe advanced next year into Flanders with a vast army, but effected nothing; and in order to have his hands free for this war, and for a dispute with the pope, which he had been long carrying on, he made a definitive peace with Edward of England, to whom he restored the whole of Guienne (1303). He advanced into Flanders, defeated the Flemings both by sea and land in 1304, but found still so obstinate a resistance, that he made peace, contenting himself with the cession of a small part of the country, and conceding the independence of the rest. The pope had meanwhile been seized by Nogaret, Philippe's envoy at Anagni; and though released by the populace, had died about a month after of a fever, the result probably of the agitation to which he had been exposed (1303). The exactions and the depreciation of the coinage, by which Philippe provided resources for the Flemish war, provoked discontent in various parts of his dominions, which he endeavoured to suppress by merciless severity. The seizure and banishment of the Jews of Languedoc, and the confiscation of their property, was another of the measures to which he had recourse at this time (1306).

Among the methods which Philippe employed to fill his exchequer, the depreciation of the coinage had been one of the most usual. He had paid in this depreciated coinage the sums he had borrowed in a currency three times more valuable. When however he found that his plan began to tell against himself, his revenues being paid in the depreciated coinage, he found it necessary to correct the abuse, and to issue money equal in value to that of previous reigns. This however caused fresh disturbances; debts contracted in the depreciated money had now to be paid in the new and more valuable coinage; and this hardship led to commotions, which Philippe repressed with atrocious cruelty. He found it necessary however to publish some new edicts, in order to remedy the evil complained of (1305). In order to conciliate the nobility, whose alliance he wished to make a counterpoise to the popular discontent, Philippe restored the practice of judicial combat in all heavier accusations against the nobility.

It was probably the desire of Philippe to obtain their wealth, that led to the suppression of the great military order of the Templars. They were accused of crimes the most revolting by two worthless members of their own order; and Philippe gave secret orders for the arrest of all who were in France; and these orders were executed in all parts of his dominions at the same time. The trials were carried on before diocesan tribunals; and though the pope (who was a creature of Philippe) at first claimed for himself the investigation of charges affecting an ecclesiastical body, he gave up the point, reserving to himself only the trial of the grand-master and a few other chief men. The judges were eager to convict the accused; confessions were wrung from many by torture; numbers were brought to the stake for denying the confessions thus extorted; others were condemned to various inferior penalties. The persecution became general in Europe, but out of France the Templars were generally acquitted of the charges brought against them. The pope, however, at the instance of a council assembled at Vienne, suppressed the order by virtue of his

papal authority, and granted their possessions to the Hospitallers (1311). But Philippe and his nobles had already seized their French possessions, and the Hospitallers were obliged to redeem them with heavy payments. Jacques de Molay, grand-master of the Templars, and the commander of Normandy, were burnt in Paris in 1314, for retracting their confessions.

The last years of Philippe's reign were signalised by these infamous proceedings. He managed about the same time (1310) to gain possession of Lyon, which had previously enjoyed a considerable degree of independence, though nominally subject to the empire. He also interfered as mediator in 1313 between Edward II. of England, who had married his daughter Isabella, and the discontented barons of that kingdom. His necessities induced him to persecute afresh the Jews and the Lombard merchants; and his severe and suspicious temper led him to reiterated cruelties. The wives of his three sons were charged with adultery, and two of them were declared guilty, and condemned to imprisonment; while their lovers, and those who were supposed to have aided in their crimes, were put to death by the most horrid tortures. The wife of Philippe, Count of Poitiers, his second son, was acquitted (1314). Philippe le Bel died at Fontainebleau, from the effect of an accidental fall while hunting on the 29th of November 1314, in the thirtieth year of his reign, and the forty-sixth of his age.

It was in the reign of Philippe le Bel that the 'Tiers Etat,' or commons, were admitted for the first time to take part in the national assemblies subsequently designated 'les Etats Généraux, or States-General.' They were present at a council held in 1302 on occasion of Philippe's dispute with the Pope Boniface VIII. It was in this reign also that the sittings of the parliament, the supreme judiciary court, into which, by the substitution of the lawyers for the nobles, the ancient Cour de Pairs [PHILIPPE II.] had been transformed, became fixed at Paris.

PHILIPPE V., known as PHILIPPE LE LONG, the second son of Philippe IV., or 'Le Bel,' was born in 1294, and succeeded to the throne in 1316. His elder brother, Louis X., or Louis le Hutin, had died 5th of June 1316, leaving by his first wife a daughter, who succeeded him on the throne of Navarre, and his queen, who was his second wife, pregnant. On the news of his brother's death, Philippe, who was at Lyon, where the conclaves of cardinals were engaged in the election of a pope, hastened to Paris, and assumed the government, which was confirmed to him by the barons of the kingdom, who were assembled for the purpose, until the birth of the child, of which the widowed queen was then pregnant. If she produced a son, he was to retain the government as regent during the minority of the child; if a daughter, he was to be recognised as king. The child, which was a boy, died a few days after birth (November 1316), and Philippe assumed the sovereignty in full right, and was crowned at Reims, January 9th, 1317.

It was upon this occasion that the Salic law, by which females were excluded from the succession to the throne, was established as a constitutional law in France. Louis X. had left a daughter, Jeanne, queen of Navarre; and there appears to have been no just ground, either from precedent or from analogy of the laws of succession which prevailed in other kingdoms, or in the great fiefs, for her exclusion. The ground urged by the legal supporters of Philippe's claim was an ancient law excluding females from the succession to the Salic lands, a peculiar species of allodial possessions, but which law could only by a remote analogy be made to bear on the succession to the throne. The case of a sole heiress to the crown had not however occurred before; and if there was no precedent for the exclusion of a female, there was no instance of one having really occupied the throne. Jeanne was, besides, a female and a minor: the Duke of Bourgogne, her maternal uncle, who was her natural supporter, was induced to surrender her claim: the States-General, being convoked, confirmed the title of Philippe; and the death of his only son induced his brother Charles to assent to it, in the hope of turning against Philippe's own daughters the law of which he was desirous to avail himself to the exclusion of his niece. The Salic law was thus firmly established as the fundamental law in the French monarchy.

The States-General were assembled three times in this reign; first to confirm Philippe's title to the throne, then to regulate the finances, and lastly for a general reform of abuses. In the first of these assemblies Philippe issued an edict, giving a military organisation to the communes, though he was subsequently obliged, by the jealousy of the nobility, to make some modifications in it. Another of his edicts revoked the grants made by his father and brother from the royal domain, and became the foundation of the constitutional principle that that domain was inalienable. In other edicts he gave increased regularity to the legal and fiscal institutions which were gradually superseding the arrangements of the feudal system. These edicts were issued by the king as from himself, and the States-General were carefully precluded from the exercise of any properly legislative functions.

The south of France was during this reign the scene of cruel persecutions, directed by the influence of the pope, John XXII., against those accused of sorcery, and against the Franciscan monks. In 1320 an immense body of the French peasantry assembled from all parts for a crusade, attracted by two priests, who preached that the

deliverance of Jerusalem was reserved not for the high-born and noble, but for the meek and lowly. They soon became disorderly, and perpetrated the most merciless outrages on the Jews, until they were put down by force, or died of famine and disease. The most fearful severities were exercised against those of them who were taken. In 1321 a dreadful persecution was directed against those afflicted with leprosy (a disease which the crusaders had brought from the East), on a charge of having poisoned the wells; and also against the Jews, on a charge of having instigated them. A hundred and sixty Jews of both sexes were burnt in one fire at Chinon near Tours; others were banished and their goods confiscated. It was while engaged in these cruel proceedings that Philippe le Long died, January 3, 1322, at Longchamps near Paris, after a reign of rather more than five years. He left four daughters; but the Salic law excluded them from the throne, and he was succeeded by his brother Charles IV., or Charles le Bel.

PHILIPPE VI., or, as he is usually called, PHILIPPE DE VALOIS, succeeded to the throne shortly after the death of Charles le Bel (1328), and was the first king of the collateral branch of Valois. He was son of Charles, count of Valois, a younger son of Philippe III. le Hardi, and cousin to Louis X. le Hutin, Philippe le Long, and Charles le Bel, who successively wore the crown. In the reign of Philippe le Long he had headed an expedition of the nobles and gentry of France to overthrow some chieftains of the Ghibelin party in Lombardy. His presumption and incapacity involved him in difficulties, from which he was relieved only by the policy or generosity of his opponents, who allowed him to retire with his army into France (1320).

Charles le Bel died February 1, 1328, and left no male heirs; but his widow was pregnant, and the nobles of the kingdom determined to wait the result of her confinement; and in the meantime the sovereign power, with the title of regent, was confided to Philippe de Valois. When the queen was delivered of a daughter (April 1), the right of succession was far from clear. All the doctors of civil and canon law agreed that women were excluded from the succession; but they were divided on the question whether a woman, being disqualified merely by sex, might transmit a right to her descendants, just as a lunatic or an idiot might be supposed to do; or whether the disqualification affected not only the woman herself, but all who might otherwise have derived a claim through her. But however the lawyers might agree as to the exclusion of females, the operation of the Salic law had been too recent, and too obviously the result (in part at least) of the superior power of the male claimant, to be entirely satisfactory to the public mind, or to those whose interests were concerned in the dispute; and Philippe, count of Evreux, who had married the daughter and heiress of Louis le Hutin, and was, in right of his wife, the nearest in direct succession, might have been a powerful rival, had he not readily exchanged a right of so doubtful a character for the peaceful possession of the throne of Navarre. The daughters of Philippe le Long and Charles le Bel, all yet in childhood, wanted either the inclination or the power to advance their claims against so formidable a competitor as Philippe de Valois; and Edward III. of England, who was next in succession, as being son of Isabelle, sister of the last three kings, was as yet also a minor, and too closely beset with difficulties at home to think of serious measures to vindicate his claim. The power therefore of Philippe as regent, his mature age, his large hereditary possessions, and his popular character, added to the plausibility of his claim, as the nearest male heir claiming through male ancestors, enabled him quietly to ascend the throne. He was crowned at Reims, May 29, 1328. Isabelle, in the name of her son Edward III., protested against this invasion of his rights; but as Edward did homage to Philippe the next year for Guienne, he may be considered as having renounced his claim, which would probably never have been revived but for subsequent events.

The first important enterprise of Philippe after his coronation was an expedition into Flanders, to put down the burghers of the great towns, who had revolted against their count. The Flemings surprised him in his camp at Cassel, but were defeated with great slaughter (August 23, 1328), and Philippe returned to France with all the glory of victory. The early years of his reign were also occupied in regulating the coinage by successive edicts, in settling the boundaries of the civil and ecclesiastical jurisdictions, and in determining the succession to the county of Artois, to the exclusion of Robert, count of Beaumont, more familiarly known as Robert of Artois, and in favour of his aunt Mahaut, who had usurped the county in his minority, and had been confirmed in possession by the parliament of Paris, influenced by the king Philippe le Bel. Robert subsequently retired into England (1333), and instigated Edward III. to renew his claim to the French throne.

A crusade against the Moors of Granada was a favourite project of Philippe; but the concessions which he demanded of the pope, as the price of his services in this affair, were too exorbitant, and the project failed. He also sent assistance to David Bruce, king of Scotland, against Edward III., and afforded him a refuge at his court: these measures, and disputes which arose in Guienne, tended to hasten the approaching rupture between France and England. He renewed his project of a crusade, and visited the pope, Benedict XII., at Avignon in 1336, but the project never took effect: and he endeavoured to

RIOG. DIV. VOL. IV.

obtain by exchange possession of the duchy of Bretagne; but this plan also failed. At length in 1337 war between Edward III. and Philippe broke out. Edward assumed the title of king of France, and formed an alliance with the Flemish burghers, at that time under the influence of James Arteveldt of Ghent. His fleet took and destroyed Calais in 1337, and he made two fruitless campaigns on the side of Flanders (1338, 1339). In 1340, the French, first under Jean, son of Philippe de Valois, and then under the king in person, attacked Hainault, the count of which was in alliance with Edward; but the defeat of the French fleet at Sluys (June 24), induced Philippe to retire; and after some other hostilities, an armistice of six months was concluded.

It is unnecessary here to particularise the incidents of the struggle which was carried on, both in Bretagne, where Edward and Philippe engaged as auxiliaries [EDWARD III.], and in other parts. In the course of it, Philippe sought to obtain money by depreciating the coinage, and by establishing the gabelle, or government monopoly of salt (1343). Some regulations were issued (1344) in order to revive commerce and regulate the administration of justice, the last almost the only acts of his reign that were really useful. He arrested the Lombard and other Italian merchants in his dominions, and confiscated their goods (1347). The latter years of his reign were as unfortunate as his measures were unjust. He sustained a great defeat at Crécy in 1346; lost Calais, the key of his kingdom on the side of England in 1347; and was unsuccessful on the side of Guienne and Poitou in 1346, and 1347. A dreadful pestilence, which swept away a third part of his subjects in 1348, filled up the measure of his adversity. The acquisition of the district of Viennois, ceded to him by the dauphin or lord of that country, was a poor counterbalance to these calamities.

The death of Philippe was owing to debility, the result of an unseasonable marriage with the princess Blanche of Navarre, a girl of eighteen, who had been promised to Jean, Philippe's eldest son. During Jean's absence, the king married her himself. He died at Nogent-le-Roi, near Chartres, August 22, 1350, the fifty-seventh year of his age, and the twenty-third of his reign. [BOURGOGNE.]

PHILIPPIDES of Athens, a poet, and a writer of the new comedy, flourished about A.C. 335. He wrote forty-five plays, of which the titles of twelve are mentioned by ancient authors. He died of joy at an advanced age, after he had obtained a prize which he did not expect. (Suidas, 'Lexicon;' Fabricius, 'Bibl. Græca.'). Some fragments of Philipptides have been collected by Hertelius and Grotius.

PHILIPPUS was the name assumed by the impostor Andronicus, who, by pretending to be the son of King Perseus, induced the Macedonians to acknowledge him as their king, and met with so much success as to defeat one of the Roman officers. But he was ultimately driven out of Macedon by Q. Cæcilius Metellus, and given up to the Romans by a Thracian prince with whom he had taken refuge.

PHILIPPUS, M. JULIUS, a native of Boetra in Trachonitis, according to some authorities, after serving with distinction in the Roman armies, was promoted by the later Gordianus to the command of the imperial guards after the death of Mithridates, A.D. 243. [GORDIANUS; MARCUS ANTONINUS PIUS.] In the following year he accompanied Gordianus in his expedition into Persia, when he contrived to excite a mutiny among the soldiers, by complaining that the emperor was too young to lead an army in such a difficult undertaking. The mutineers obliged Gordianus to acknowledge Philippus as his colleague; and in a short time, Philippus wishing to reign alone, caused Gordianus to be murdered. In a letter to the senate, he ascribed the death of Gordianus to illness, and the senate acknowledged him as emperor. Having made peace with the Persians, he led the army back into Syria, and arrived at Antioch for the Easter solemnities. Eusebius, who with other Christian writers, maintains that Philippus was a Christian, states as a report that he went with his wife to attend the Christian worship at Antioch, but that Babila, bishop of that city, refused to permit him to enter the church, as being guilty of murder, upon which Philippus acknowledged his guilt, and placed himself in the ranks of the penitents. This circumstance is also stated by John Chrysostom. From Antioch, Philippus came to Rome, and the following year, 245, assumed the consulship with T. F. Titianus, and marched against the Carpi, who had invaded Moesia, and defeated them. In 247 Philippus was again consul, with his son of the same name as himself, and their consulship was continued to the following year, when Philippus celebrated with great splendour the thousandth anniversary of the building of Rome. An immense number of wild beasts were brought forth and slaughtered in the amphitheatres and circus. In the next, under the consulship of Æmilianus and Aquilinus, a revolt broke out among the legions on the Danube, who proclaimed emperor a centurion named Carvilius Marinus, whom however the soldiers killed shortly after. Philippus, alarmed at the state of those provinces, sent thither Decius as commander, but Decius had no sooner arrived at his post than the soldiers proclaimed him emperor. Philippus marched against Decius, leaving his son at Rome. The two armies met near Verona, where Philippus was defeated and killed, as some say by his own troops. On the news reaching Rome, the prætorians killed his son also, and Decius was acknowledged emperor in 249. Eutropius states that both Philippi, father and son, were numbered among the gods. It is doubtful whether Philippus

was really a Christian, but it seems certain, as stated by Eusebius and Dionysius of Alexandria, that under his reign the Christians enjoyed full toleration and were allowed to preach publicly. Gregory of Nyssa states, that during that period all the inhabitants of Neocæsarea in Pontus embraced Christianity, overthrew the idols, and raised temples to the God of the Christians. It appears that Philippus during his five years' reign governed with mildness and justice, and was generally popular.

British Museum. Actual size.

PHILIPPUS, the name of several ancient physicians enumerated by Fabricius ('Biblioth. Græca'). The most celebrated is Philippus of Acarnania, the friend and physician of Alexander the Great, who was the means of saving the king's life when he had been seized with a violent attack of fever, brought on by the excessive coldness of the waters of the river Cydnus, *Ol. 111, 4* (B.C. 333). Parmenio sent to warn Alexander that Philippus had been bribed by Darius to poison him; the king however did not doubt his fidelity, but, while he drank the draught prepared for him, put into his physician's hands the letter he had just received. His speedy recovery fully justified his confidence, and proved at once the skill and honesty of Philippus.

PHILIPS, AMBROSE, was born about 1671, and is said to have been descended from an old Leicestershire family. He was educated at St. John's College, Cambridge, and his first printed performance is a copy of English verses in the collection published by that university on the death of Queen Mary in 1695. From this date nothing is known of him till the appearance of his six Pastorals, which, Johnson observes, he must have published before the year 1708, because they are evidently prior to those of Pope, but they appear to have been first published along with Pope's, in Tonson's 'Miscellany,' which appeared in 1709. Philips's next performance was his 'Letter from Copenhagen' (in verse) to the Earl (afterwards Duke) of Dorset, dated March 9, 1709, which was printed in the 12th No. of the 'Tatler,' (May 7, 1709), with an introductory eulogium by Steele, who styles it 'as fine a winter-piece as we have ever had from any of the schools of the most learned painters.' He afterwards translated the 'Persian Tales' from the French for Tonson, and brought out an abridgment of Hacket's 'Life of Archbishop Williams.' In February 1712, his tragedy of the 'Distressed Mother,' was played at Drury Lane, and although little more than a translation of the 'Andromaque' of Racine, was received with great applause, and long continued to keep possession of the stage. Pope, who a year or two before had bestowed high praise upon the 'Letter from Copenhagen,' calling it the performance of a man "who could write very nobly," but who had now been divided from Philips partly by feelings of poetical rivalry and jealousy, partly by their opposite party politics, told his friend Spence that the 'Distressed Mother' was in great part indebted for its success on the first night to a packed audience. The author's Whig friends certainly did their best for the play. It was elaborately praised, before its appearance, in the 290th No. of the 'Spectator' (for February 1st, 1712); and Addison, in the name of Budgell, wrote an epilogue for it, which took so greatly that, according to Johnson, on "the three first nights it was recited twice; and not only continued to be demanded through the run, as it is termed, of the play, but, whenever it is recalled to the stage, the epilogue is still expected, and is still spoken." Other 'Spectators' were devoted (No. 335, for March 25th, 1712, by Addison) to an account of the strong impression made by the tragedy on Sir Roger de Coverley; and (Nos. 338, for March 28th, and 341, for April 1st) to an animated controversy about the merit of the epilogue, issuing of course in a triumphant vindication of

it. A short time before, Philips's translation of 'Sappho's Hymn to Venus' had been printed, with strong commendation from Addison, both of that poem and of the author's "admirable pastorals and winter-piece," in the 'Spectator,' No. 223 (for November 15th, 1711); and the pastorals are again highly praised in Nos. 400 (for June 9th, 1712) and 523 (for October 30th), by Addison; and likewise in the 'Guardian,' No. 30 (for April 15th, 1713). But now Pope managed to play off a singular trick upon the guileless or careless nature of Steele, by imposing upon him as a serious critique an ironical discourse on Philips's Pastorals as compared with his own, in which, while the superiority was in terms assigned to Philips, every quotation and the whole treatment of the subject were artfully adapted to turn him into ridicule. It is surprising that any degree of simplicity could be so taken in; but Steele at once printed the paper, which forms the 40th No. of the 'Guardian' (for April 27th, 1713). Its appearance must at first have perplexed and puzzled the public; but Addison's quick eye detected at once the mockery which had escaped his more inattentive or more unsuspecting friend. This affair gave rise to an open feud between Pope and Philips, which was never healed. For many years Pope continued to make his unfortunate contemporary his butt; in particular, Philips's verses will be found to furnish, along with those of Blackmore, Theobald, and Welsted, the choicest specimens in the famous treatise of Martinus Scriblerus on the 'Art of Sinking in Poetry.' To all this persecution Philips had nothing to oppose but threats of personal chastisement, which had however the effect of making the satirist keep out of his way. Meanwhile his poetical reputation, which had previously been in a most flourishing condition, was undoubtedly very seriously damaged even by Pope's first insidious attack; he continued indeed to rhyme, but nothing which he produced after that paper in the 'Guardian' brought him much reputation. Conceiving himself to have a turn for simplicity and natural expression, he fell into a peculiar style of verse, in which the lines were very short, and the thoughts and phraseology approaching to the infantine; and this the public were taught to call 'Nambypamby,' a name first bestowed, we believe, not, as has been stated, by Pope, but by Henry Carey, the clever author of 'Sally in our Alley' and 'Chrononhotonthologos,' a volume of poems published by whom in 1737 contained one so entitled in the form of a burlesque on one of Philips's productions. If the muses failed him however, Philips was consoled by the favour of his party and by considerable success as a politician. Soon after the accession of the House of Hanover, which fixed his Whig friends in power, he was made a commissioner of the lottery and one of the justices of the peace for Westminster, the latter, in those days, an appointment more lucrative than honourable. In 1721 he produced two more tragedies, 'The Briton,' and 'Humphrey, Duke of Gloucester,' both now forgotten. He next engaged in a periodical paper called 'The Freethinker,' in which one of his associates was Dr. Boulter, who was afterwards made Bishop of Bristol and then Archbishop of Armagh, and who, when he went over to Ireland, took Philips with him, and provided so well for him as to enable him to represent the county of Armagh in the Irish parliament. He at last rose to be judge of the Prerogative Court in Ireland; but resigned that place in 1748, and returned to his native country, where he died of a stroke of palsy, on the 18th of June, 1749.

PHILIPS, JOHN, was the son of Dr. Stephen Philips, archdeacon of Salop, and rector of Bampton in Oxfordshire, at which latter place he was born in 1676. Having received his school education at Winchester, he was entered at Christ Church, Oxford, in 1694. It is said that he intended to follow the medical profession; but it does not appear that he pursued that object further than by engaging with much zeal in the study of botany and natural history. He first became known beyond his college, or university, by his poem entitled 'The Splendid Shilling,' which appeared in 1703. The 'Splendid Shilling' is a composition of the mock heroic kind, the verse being an imitation of that of Milton. Of course it is absurd to contend, as has been done, that Philips here makes the little appear great, and is therefore to be distinguished from and set far above such parodists as only make the great appear little, as, for example, Cotton and Scarron. The truth is, that in both cases the great is made to appear little: what of piquancy there is in Philips's poem does not arise from any exaltation of the shilling, but from the application of the versification and expression of Milton to so mean a subject. In 1705 Philips produced his next poem, entitled 'Blenheim,' at the instigation, it is understood, of the Tory party, who wanted a poetical effusion on that victory to rival Addison's; but, notwithstanding an imitation of Milton of a more legitimate kind than in the 'Splendid Shilling,' Philips's 'Blenheim' found comparatively few admirers in that day, and has been generally forgotten since. Philips's chief work, his 'Cider,' a poem in two books, was published in 1706: like everything else that he wrote, it is in blank verse, and an echo of the numbers of 'Paradise Lost'; but as a poetical composition it belongs to the same class as Virgil's 'Georgics,' and consequently it is, as well as the 'Blenheim,' a serious, not a mock imitation of Milton. Johnson says he was told by Miller, the eminent gardener and botanist, that there were many books written on the same subject in prose which do not contain so much truth as that poem. A complication of consumption and asthma put a period to the life of this amiable man on the 15th of February 1703, when he had just completed his thirty-second year.

His friend and patron Sir Simon Harcourt, afterwards lord-chancellor, erected a monument to his memory in Westminster Abbey, which carries a long inscription in very flowing latinity, said by Johnson to be the composition of Bishop Atterbury, though commonly attributed to Dr. Friend. There is justice in the contempt expressed by Johnson for the mimetic Miltonism of Philips, who was without any true passion, or strength or elevation of fancy, and whose poetry in its most ambitious passages has little more than merely something in the sound to remind us of that of Milton.

PHILISTION, an ancient Greek physician, the tutor of Eudoxus and Chrysippus. He is called a Sicilian by Diogenes Lærtius ('Vit. Phil.' lib. viii., sec. 86), but (if the same person be meant) he is said to have been an Italian by Rufus Ephesius ('De Corp. Hum. Part. Appell.' p. 41, ed. Clinch), and a Locrion by Plutarch ('Sympos.' lib. vii., quest. 1, sec. 3), Aulus Gellius ('Noct. Att.' lib. xvii., cap. 11, sec. 3), and Athenæus ('Deipnos.' lib. iii., sec. 83, p. 115). He lived about B.C. 370, Ol. 102, 1. According to Plutarch and Aulus Gellius, he defended the opinion that part of what is drunk goes into the lungs, which is the more remarkable as Galen informs us that he was well skilled in anatomy. He belonged to the sect of the Empirici, and was supposed by some persons to be the author of the treatise 'De Vieta Salubri,' commonly attributed to Hippocrates. He is quoted several times by Pliny ('Hist. Nat.' lib. xx., cap. 15, 34, 48, ed. Tauchn.); Oribasius ('De Machinam.' cap. iv.) attributes to him the invention of a machine for reducing luxations of the humerus; and (if the same person be meant) Athenæus ('Deipnos.' lib. xii., sec. 12, p. 516) mentions him among those who had written on cookery.

PHILISTUS was a native of Syracuse, and a person of great wealth and influence. He was very intimate with the elder Dionysius, whom he assisted in obtaining the supreme power, B.C. 406; but having displeased the tyrant, he was banished from Syracuse. He retired to a city on the Adriatic Gulf, probably one of the Greek cities in southern Italy, and did not return to Syracuse till the accession of the younger Dionysius (Plutarch, 'Dion.' c. 11; Diod. Sic., xiii. 91), during whose reign the direction of public affairs appears to have been almost entirely in the hands of Philistus. When Syracuse was taken by Dion (B.C. 356), Philistus used great exertions in favour of Dionysius. He passed over into Italy, and procured from Rhegium alone 500 horse. After making an unsuccessful attempt upon Leontini, which had declared in favour of Dion, he joined Dionysius in the citadel, and was shortly after killed in a naval engagement, or, according to other accounts, was taken prisoner and put to death. (Plutarch, 'Dion.' c. 35; Diod. Sic., xvi. 16.) Philistus must have lived to a considerable age, since he was an eye-witness of the Athenian defeat at Syracuse, in B.C. 415, fifty-nine years before his death. (Plutarch, 'Nic.' c. 19.)

Philistus wrote a history of Sicily, which appears to have been a work of great merit, but of which we have only fragments. Cicero, in a letter to his brother (ad 'Qu. Fr.' ii. 13), speaks of the style of Philistus as brief and terse, and considers him as resembling though inferior to Thucydides; and in another passage ('Brut.' c. 85) he also classes him with Thucydides, and says that these two writers were superior to all others. (Compare 'De Div.' i. 20; Quint., 'Inst. Orat.' x. 1, p. 222, ed. Bipont.) The Sicilian history of Philistus was divided into two parts, of which the first contained seven and the second four books. The first part embraced a period of 800 years, and terminated at the archonship of Callias and the battle of Agrigentum, that is, B.C. 406; the second part, which commenced at the point where the first terminated, contained the history of the elder Dionysius, and terminated at B.C. 363. The fragments of Philistus are printed (with a life of him, by C. Müller) in the 'Fragmenta Hist. Græc.' Paris, 1841. (Diod. Sic., xv. 89; Clinton, 'Fast. Hell.' ii. p. 119.)

\*PHILLIPS, JOHN, M.A., F.R.S., Reader in (Professor of) Geology in the University of Oxford, and Assistant-General Secretary of the British Association for the Advancement of Science. Professor John Phillips claims attention in this work in a variety of characters; as a geologist, accurately versed in the principles of the science, an explorer of geological phenomena, an accomplished palæontologist, an author of valuable treatises on geology, general and local, a successful public and academic teacher of that and some collateral branches of knowledge, and an indefatigable secretary for scientific affairs. Nephew by the mother's side of William Smith [SMITH, WILLIAM], the "Father of English Geology," he was associated with him as pupil, companion in geological exploration and surveying, and fellow-labourer in research for twenty-five years, from 1815 till the decease of his uncle in 1839. His connection with geology thus extends over more than forty years, from the period of the production of Mr. (afterwards Dr.) Smith's celebrated 'Map of the Strata of England and Wales,' to the present epoch in the 'Geological Survey of the United Kingdom.' The great map having been published on the 1st of August 1815, Mr. Smith commenced shortly afterwards the preparation of a large series of geological sections and county maps, coloured upon the same system, and carrying out to greater minuteness the delineation of the boundaries and areas of strata. In the surveys made expressly for these works, and in their actual production, he was assisted by his nephew, John Phillips. The excursions made for this purpose were necessarily chiefly pedestrian. In the winter of 1819-20, Mr. Smith having undertaken to walk from Lincolnshire

into Oxfordshire, and ultimately to Swindon in Wiltshire, his nephew, who had been his companion on almost every journey for the preceding three years, accompanied him, and, according to an established custom on all such tours, he was employed in sketching parts of the road, and noticing in maps the geological features of the country. Early in 1821 Mr. Phillips walked through the eastern parts of Yorkshire, and rejoined his uncle at Doncaster, from this point accompanying him in a walking excursion through the coal district of the West Riding. In this excursion particular attention was given to determine the true general order of the coal beds, ironstone courses, and characteristic rocks, and the result is seen in a comprehensive section on the large and valuable geological map of Yorkshire in four sheets, produced by Mr. Smith in 1821, to which nothing similar had before been attempted in this country, perhaps not in Europe. For the purpose of assisting in obtaining the requisite materials for this map, Mr. Phillips made a variety of journeys subsequently. The desire to finish others of these interesting county maps led Mr. Smith to devote the whole of the remainder of 1821 to long and laborious wanderings on a peculiar plan, in which his nephew was associated with him. Two lines of operation were drawn through the country which required to be surveyed for the purpose of completing such maps, or rather such parts of the maps as had been inevitably left imperfect. On one of these Mr. Smith moved with the due deliberation of a commander-in-chief; the other was traversed by his more active subaltern, who found the means often to cross from his own parallel to report progress at head-quarters. This mode of "strata-hunting" permitted Mr. Phillips to walk over 2000 miles of ground, and to preserve memoranda of almost every mile along that line. In these surveys, and the production of the twenty-one geological county maps, in which their results were graphically recorded, the uncle and nephew were associated from 1819 to 1824; and thus was acquired by the latter that intimate acquaintance with the physical structure and the stratification of England, by which he is distinguished, and that practical knowledge of geology which has rendered him so acceptable and valuable a teacher.

One of Mr. Phillips's earliest contributions to geological literature was a paper 'On the Direction of the Diluvial Currents in Yorkshire,' read before the Philosophical Society, which had a few years previously been founded in that county, November 7, 1826, and communicated by the society to the 'Philosophical Magazine' for August 1827. He had now become a lecturer on geology, and also on zoology; and shortly afterwards was appointed keeper of the museum of the Yorkshire Philosophical Society, becoming a Fellow of the Geological Society of London in 1828. As a lecturer at York and in the great towns of that and the adjoining counties, he acquired a deserved popularity; his instruction being accurate and definite, his language simple and perspicuous, and his illustration vivid. A great part of the interest which is now taken by persons of almost every rank among the more educated classes in Yorkshire in the objects and pursuits of natural science, may certainly be ascribed to the effect produced and the knowledge diffused, by the zealous teachings of Mr. Phillips. Besides these discourses of a popular character, which have also been delivered in the metropolis, at the Royal and the London Institutions, he gave at University College, London, under its former style of the University of London, an extended course of lectures on geology for students; and he has occupied in succession, the chair of geology in King's College, London, and in the University of Dublin (1844). His knowledge of the allied departments of science—of general physics, chemistry, mineralogy, and natural history—render his lectures as well as his printed works of great value in conveying comprehensive views of the earth's structure and physical history; while the skill in drawing which is shown by the graphic illustrations both of his lectures and publications (and in which the late Thomas Webster was his only rival among English geologists), has imparted to him great advantages in describing natural phenomena, and forcibly recommends the practice of drawing to all students of natural history.

We have next to record the circumstances relating to the connection of Mr. Phillips with the British Association for the Advancement of Science, a connection which has proved of such inestimable benefit to the Association, and through it to the progress of natural knowledge, in almost every department, for more than a quarter of a century, first in this country, and reflectively throughout the world. The meeting in the theatre of the museum at York on the 27th of September 1831, in which the British Association originated, had been proposed to the Yorkshire Philosophical Society by Dr. (now Sir David) Brewster [BREWSTER, DAVID], in a letter to Mr. Phillips, who had become one of the secretaries. The proposal was approved and encouraged by the society, and it received the most zealous and effective support in Edinburgh from Mr. (the late Sir John) Hobson, Mr. (now Professor James) Forbes, and Mr. (the late Professor J. F. W.) Johnston; and in London, as already recorded in the proper article, from Mr. (now Sir R. I.) Murchison. The association having been constituted, Viscount Milton, president of the Yorkshire Philosophical Society, became the first president, and the secretaries of the society were appointed secretaries of the association for that city. At the second meeting, held at Oxford under the presidency of the late Dr. Buckland in 1832, the Rev. W. Vernon Harcourt, F.R.S., was made general secretary, while Mr. Phillips received the appoint-

ment of assistant-secretary, subsequently termed assistant-general secretary, which he continues to hold. In this position, giving most effective aid to the eminent men of science who have successively filled the office of general secretaries, he has conducted the details of the correspondence of the association, and arranged and edited the twenty-five volumes of 'Reports,' "including the Proceedings, Recommendations, and Transactions," which it has issued—a work which could only have been carried on by one who was at once a zealous cultivator of science himself, and an equally zealous and sincere friend of all its cultivators. The preparations for the successive annual meetings have of course also devolved upon Mr. Phillips, in co-operation with the local officers, together with much of the actual business, official and general, as well as scientific, of the meetings themselves. The lectures on special subjects adapted to general audiences, and the oral expositions of the most important researches previously brought before the sections, to which the evening meetings have usually been devoted, have constituted a marked feature of the association. In these Mr. Phillips has taken a prominent part from the first, and it has been remarked that his contributions of this kind to the more popular yet strictly relevant labours of the association resemble in their character those happy illustrations of special truths, or their applications, which Professor Faraday has given for so many years at the "Friday evening meetings" of the Royal Institution, and occasionally at the meetings of the British Association itself.

In vol. iv. of the 'Bibliographia Zoologica et Geologica' of Agassiz, edited by the late Mr. Strickland and Sir W. Jardine, published at the end of the year 1854, thirty-one works, papers, or collections of articles by Professor Phillips, are described, relating to geology in general, to many distinct portions or subjects of the science, and also to various subjects of palaeontology. This list however is incomplete. Among the works enumerated are a 'Treatise on Geology,' forming two volumes of the 'Cabinet Cyclopaedia,' first published in 1837 and 1839, and reprinted with corrections in 1852; also articles on the science in the 'Encyclopaedia Metropolitana,' and in the seventh edition of the 'Encyclopaedia Britannica.' Many articles in the 'Penny Cyclopaedia' are likewise from his pen, including 'Geology,' 'Organic Remains,' 'Silurian Strata,' &c. His 'Illustrations of the Geology of Yorkshire,' in addition to the details of the physical features and structure of that county, contain systematic and accurate descriptions of the organic remains characterising the strata described, many of them new, and others newly figured. Professor Phillips has also figured and described, in a separate work published in 1841, the 'Palaeozoic Fossils of Cornwall, Devon, and West Somerset, observed in the Ordnance Geological Survey [now the 'Geological Survey of the United Kingdom'] of that District.' He is also author of a memoir of his uncle, William Smith, published in 1844; and of an interesting work of local natural and archaeological history, entitled 'The Rivers, Mountains, and Sea-Coast of Yorkshire,' 1853. His 'Geological Map of the British Isles (issued by the Society for the Promotion of Christian Knowledge) appeared in 1842, and Geological Map of Yorkshire' in 1853.

After Dr. Buckland had been withdrawn by mental disease from the duties of the chair of geology at Oxford, the late Mr. Strickland was appointed deputy reader in, or professor of, that science in the university; and upon his lamented death in 1853 Mr. Phillips succeeded to that office, having also the degree of M.A. conferred upon him. Since the recent demise of Dr. Buckland, Mr. Phillips has been appointed reader in geology in the University of Oxford.

PHILLIPS, RICHARD, F.R.S., some time President of the Chemical Society of London, first Curator and Chemist of the Museum of Practical Geology, an eminent mineralogical and pharmaceutical chemist, was younger brother of William Phillips the mineralogist, the subject of a succeeding article, and was born in the year 1778. He was educated as a chemist and druggist, under WILLIAM ALLEN, at the well-known pharmaceutical establishment, Plough-court, Lombard-street, London; but he received his first instructions in chemistry from Dr. George Fordyce. The two brothers, together with William Allen, Luke Howard, and several other members of the Society of Friends, and three young men who were not Quakers, were among the founders, eight in number, of the Askesian Society, already noticed in a preceding article on Mr. Pepys, who was one of those three. To Richard Phillips, says Dr. Daubeny, in his anniversary address as president of the Chemical Society in 1852, "we are indebted for the first correct analyses of the Bath waters, in the course of which investigation he discovered the cause of the apparent uncertainty in the indications afforded by the common tests for iron, caused by the variations that occur in their effects, according as carbonate of lime is present or not." The elaborate paper stating the process and results of these analyses, was first communicated to the Askesian Society, and published in the 'Philosophical Magazine.'

His labours in mineralogical chemistry were characterised by great neatness and precision, so that they may indeed be appealed to at the present time as models of skilful and exact research. The analyses of the Bath waters were succeeded by examinations of other celebrated mineral springs, and of several rare minerals. In 1828 he discovered that the mineral called uranite was not the hydrated oxide of uranium, as it had been previously supposed to be, but a hydrated double phosphate of that metal and copper. The presence of phosphoric acid

in uranite had escaped the scrutiny of Berzelius, who was thus as much outdone in this particular respect by the subject of this notice, as Davy had been by him when he detected the presence of the same acid in wavellite, which the great English chemist had overlooked!

The late Dr. Thomas Thomson, Regius Professor of Chemistry in the University of Glasgow, the author of the celebrated 'System' of the science, in his 'History of Chemistry,' forming part of the 'National Library,' published in 1831, when reviewing the progress of analytical chemistry in Great Britain, bore the following honourable testimony to the merits of Mr. R. Phillips—a testimony involving also considerations relative to the social position of the cultivators of science in this country, which thinking men of all ranks perceive to be of daily augmenting importance to the community:—"Of modern British analytical chemists," says Dr. Thomson, "undoubtedly the first is Mr. Richard Phillips, to whom we are indebted for not a few analyses, conducted with great chemical skill, and performed with great accuracy. Unfortunately of late years he has done little, having been withdrawn from science by the necessity of providing for a large family, which can hardly be done in this country except by turning one's attention to trade or manufactures."

It was however in the pharmaceutical branch of practical chemistry that Mr. R. Phillips's services were most conspicuous, as might be expected from one of his peculiar acuteness of mind, after a training in the establishment in Plough-court, of which the chemical reputation ranked justly so high. Indeed, the perfect familiarity he possessed with the processes in use, enabled him to detect the errors into which the framers of the London Pharmacopoeia had fallen; whilst the keenness of his reviews gave currency to his censures, of which even those who smarted under their severity, could scarcely help acknowledging the justice. Accordingly, at a subsequent period he was especially consulted on the drawing up of two of the editions of the London Pharmacopoeia by the College of Physicians itself, whose previous labours in that department he had so severely criticised, and thus led the way to many of the much needed corrections in the processes since introduced. Indeed, during the latter part of his life, he was appealed to as perhaps the highest living authority in this branch of chemistry; and his translation of the London Pharmacopoeia, the last edition of which he was engaged at the time of his death in superintending, was looked upon as the best book of reference on all chemical questions involved in the preparation of medicines.

From the year 1821 Mr. R. Phillips conducted the 'Annals of Philosophy,' with the assistance of Mr. E. W. Brayley, jun. (now F.R.S., and librarian to the London Institution), and when that periodical was incorporated with the 'Philosophical Magazine' in 1827, his services were secured as one of its editors, a post he held till his death. The principal articles on subjects of chemistry and mineralogy in the 'Penny Cyclopaedia,' were contributed by him.

Mr. Phillips was successively lecturer on chemistry at the London Hospital, at the Government Military College at Sandhurst, at Mr. Grainger's School of Medicine in Southwark, and at St. Thomas's Hospital. In 1839 Mr. (afterwards Sir Henry) De la Beche, knowing that in the first instance chemical investigations of mineral products would be those chiefly appreciated by the government and the public, wisely selected him for the appointment of curator and chemist of the Museum of Economic Geology, now the Museum of Practical Geology in Jermyn-street, an office which he continued to hold till the date of its formal opening under the auspices of H.R.H. Prince Albert, on May 11, 1851, on the very day before which he breathed his last, in his seventy-third year, after a very short illness, having been absent from the museum for three or four days only.

On the institution of the Chemical Society of London, in the year 1841, its founders had offered Mr. R. Phillips the honourable position of the first president, deeming it due alike to his seniority among English chemists and his distinguished reputation; and although he declined the office then, he became the president in 1849 and 1850. He had been elected a Fellow of the Royal Society in 1822.

"He might indeed be regarded," remarks Dr. Daubeny, "during the latter part of his life, as a connecting link between the chemists of the last generation and of the present, having been the contemporary of Davy and Wollaston no less than of Faraday and Graham; and in his death we have lost one of the last of that distinguished band of philosophers, who, before chemical science had so enlarged its boundaries, as to include within its domain and to comprehend within the operation of its laws the products of animal and of vegetable life, occupied themselves almost exclusively in the investigation of the combinations of which mineral bodies are susceptible."

PHILLIPS, SAMUEL, LL.D., was born in 1816. His father, who was of the Jewish faith, and a tradesman in Regent-street, London, struck by the boy's liveliness of manner and skill in mimicry, conceived that he would make a successful actor. He accordingly trained him for the stage, and in June 1829, "Master Phillips, a young gentleman only fourteen years of age," was announced to appear at the Haymarket Theatre in the character of Richard III. Fortunately some powerful friends—the late Duke of Sussex being one—thought that the boy's cleverness deserved a better culture than it would find in such a school, and they induced his father to send him, in 1832, to the London University, whence he proceeded in the following year to the University of Göttingen. Having changed his religious views, he

afterwards went to Sidney-Sussex College, Cambridge, with the intention of ultimately taking holy orders. His father's death, and the necessity there appeared of continuing the business for the support of his mother and family, changed his plans, and he returned, after a single term, to carry on in conjunction with his brother the Regent-street shop. In this the brothers were unsuccessful, though they were highly commended for their honourable conduct.

He now (1841) turned to literature as a profession. His first work was the novel of 'Caleb Stukeley,' which originally appeared in 'Blackwood's Magazine,' but has since been two or three times reprinted in a separate form. He afterwards wrote other tales in the pages of that and other periodicals, but none of them we believe were published with his name. For a brief space—during the summer months of 1844—he resided at the seat of the Marquis of Ailesbury in Wiltshire, in order to read with Lord F. Bruce; and whilst there he was thrown from a horse and seriously hurt. He had perhaps always had a tendency to consumption; it was developed by the hurt, and during his remaining days he worked with the weight of that terrible malady pressing upon him. But he worked steadily on, and was able to secure himself a handsome income, and an honourable position among his literary contemporaries. Writing exclusively in newspapers and periodicals, it was only in the last year or two of his life that Mr. Phillips was at all known by name to the general public, yet he probably exercised a much more considerable influence on public opinion and public taste than many much better known men. For some time he wrote political leaders in the 'Morning Herald;' but he afterwards became one of the chiefs of the literary staff of the 'Times,' and during some years his brilliant criticisms on current literature afforded an agreeable relief among the news and politics of that powerful journal. In the 'Times' his pen was entirely confined to literary criticism,—at any rate he never wrote 'leaders'—and he continued to write its more important reviews down to his death. Two volumes of 'Essays from the Times,' by him, were published, though still without his name, in 1852 and 1854. Lucid, picturesque, often eloquent, and sometimes bitterly keen, yet discriminating, and with all the appearance of being scrupulously fair, they will no doubt keep their place as a permanent addition to our store of that class of essays: and some that were attributed to him, but which appeared after the publication of these volumes, are of at least equal merit. Besides his papers in the 'Times,' Mr. Phillips wrote reviews in the 'Literary Gazette,' &c. He also purchased, and for about a year edited, the 'John Bull' newspaper, but without much pecuniary success. In the formation of the Crystal Palace Company he took an active part; and for a time acted as secretary, and subsequently as 'literary director' to the company, and many of the arrangements are said to have been suggested by him. He wrote likewise the general 'Guide to the Crystal Palace and Park,' and the 'Portrait Gallery of the Crystal Palace.' He died at Brighton, where he had gone on account of his health, on the 14th of October, 1854, from the rupture of a large vessel on the lungs. He left a widow and five children, for whom he had been enabled to make a comfortable provision. In 1852 the University of Göttingen conferred on him the honorary degree of LL.D.

PHILLIPS, THOMAS, R.A., a distinguished portrait painter, was born at Dudley, Warwickshire, October 18, 1770. He was placed very early with Mr. Edgington at Birmingham to learn to paint on glass; and he came to London in 1790 with a letter of introduction to West, who employed him at Windsor on the glass paintings in St. George's Chapel. In 1792 Phillips exhibited a view of Windsor Castle from the north-east; and in the following year he exhibited two historical pictures—the 'Death of Talbot Earl of Shrewsbury, at the Battle of Cassillon,' and 'Ruth and her Mother-in-law.' He exhibited likewise two pictures of similar classes in 1794—'Cupid disarmed by Euphrosyne,' and 'Elijah returning the recovered Child to the Widow.' In 1796 he seems to have already turned his attention to portrait painting, for from that year he appears chiefly in the exhibition notices as a portrait painter, though he occasionally painted some historical pieces. It is as a portrait painter however that he acquired his reputation, and as such he will be known; for nearly half a century he was a favourite exhibitor, and for a great portion of the time he was fully occupied, notwithstanding the rivalry of Hoppner, Owen, Jackson, Lawrence, and others of nearly equal reputation; few however of the nobility sat to him.

In 1804 he removed into No. 8, George-street, Hanover-square, where he remained until his death. In 1808 he was made a member of the Royal Academy, to which he presented a picture of 'Venus and Adonis' as his diploma piece: there is likewise a large picture of this subject by him in Stafford House. In 1824 he succeeded Fuseli in the professorship of painting, an office which he held until 1832; and he delivered in all ten lectures, which he published together in one volume 8vo. in 1833, dedicated to the Earl of Egremont, under the title 'Lecture on the History and Principles of Painting:' the first four lectures are on the History of Painting; the fifth is on Invention; the sixth on Design; the seventh on Composition; the eighth on Colouring; the ninth on Chiaroscuro; and the tenth on the Application of the Principles of Painting. These lectures are clear and simple in their style, and instructive in substance and arrangement, especially in some of the author's expositions of his views of the principles of art. Mr. Phillips made a tour in Italy in company with Hilton, in

1824, after his appointment to the professorship, and before the delivery of any lectures, in order to be able to discharge the duties of his office more efficiently. He died April 20, 1845. He was one of the trustees of the Royal Academy.

The following are some of Phillips's principal portraits:—A portrait of Lord Thurlow, painted in 1802; one of Napoleon, painted in the same year, chiefly from memory; the Prince of Wales, 1806; Blake the painter, 1807; Sir Joseph Banks as President of the Royal Society, 1809; two of Lord Byron, 1814, one in an Albanian dress; Hetman, Count Platoff, the Cossack general, on his charger, 1816, the horse was painted by J. Ward, R.A.; Sir F. Chantrey, 1818; the poet Crabbe, for Mr. Murray, 1819; Earl Grey and Lord Brougham, 1820; the Duke of York for the town-hall of Liverpool, in 1823; Major Denham, the African traveller, the best of his portraits according to Lawrence, 1826; Lord Stowell, Sir E. Parry, and Sir I. Brunell, 1827; Wilkie, 1829; Mrs. Somerville and Sir Francis Burdett, 1834; Mr. Justice Littledale and Lord Lyndhurst, 1836; W. Currie, Esq., first mayor of Liverpool under the Municipal Reform Bill, painted for the town-hall of Liverpool, and Lord William Bentinck, 1838; Dr. Thos. Arnold, and the late Earl of Egremont, a posthumous portrait, 1839; the Duke of Sussex in the chair of the Royal Society, and Sir Nicholas C. Tindal, late Lord Chief Justice of the Common Pleas, 1840; Dr. Shuttleworth, late bishop of Chichester, and George Green, Esq., for the town-hall, Poplar, 1842. He painted also portraits of Lord Byron and some other poets and writers for Mr. Murray, of Albemarle-street, comprising those of Sir Walter Scott, Campbell, Southey, Coleridge, Crabbe, and others. Among the few pictures besides portraits which he exhibited after the establishment of his name as a portrait-painter, were—'Field Sports,' in 1832; 'Rebecca,' 1833; a 'Nymph Reposing,' 1837; and 'Flora MacIvor,' 1839. His last picture of this class is said to be the 'Expulsion from Paradise,' at Petworth. Phillips was the author of several articles on painting in Rees's 'Cyclopaedia.'

PHILLIPS, WILLIAM, F.R.S., F.G.S. The name of the subject of this notice "stands very creditably prominent in the list of persons, fortunately numerous in England, who, though constantly occupied in commerce, increase their own happiness, and promote useful knowledge, by devoting their hours of leisure to the pursuit of natural science." He was born on May 10th, 1773, and was the elder brother of Richard Phillips, the subject of a preceding article. They were the sons of James Phillips, a member of the Society of Friends, who carried on the business of a printer and bookseller, in George-yard, Lombard-street, London, a locality which the publications of William Phillips afterwards rendered classical in the history of English science. It has already been stated that he was one of the founders of the Askesian Society, to which in 1801 he contributed a paper, probably his first, 'On the Virgula Divinatoria, or Divining Rod,' which was published in the 'Philosophical Magazine' for the following year. The objects of his pursuit were those of geology, mining, mineralogy, and crystallography. The latter sciences are indebted to him for an extraordinary number of accurate measurements of crystals by the reflective goniometer of Wollaston, which he was almost the first mineralogist to employ; and his elementary works on that science and on geology, especially on the geology of the British Islands, contributed in a great degree to extend their culture in this country, and to render the latter subject one of general knowledge and interest in society.

In the use of the reflective goniometer, Dr. Whewell remarks, in his 'History of the Inductive Sciences,' "no one was more laborious and successful than William Phillips, whose power of apprehending the most complex forms with steadiness and clearness, led Wollaston to say that he had a 'geometrical sense.'" Three editions of his 'Elementary Introduction to the Knowledge of Mineralogy,' were published in the years 1816, 1819, and 1823, the last on the day on which he attained the fiftieth year of his age. It is this edition which Dr. Whewell also pronounces to have been "an extraordinary treasure of crystallographic facts." No greater tribute, perhaps, to the value of this work, could have been paid by the author's successors in science than its selection, after the lapse of thirty years, as the foundation of Mr. Brooke and Professor W. H. Miller's 'Mineralogy,' published in fact as a new edition of it. [MILLER, WILLIAM HALLOWS.]

The members of the Society of Friends have been honourably distinguished by the care and interest they have taken in the welfare and intellectual culture of young people. William Phillips manifested a more than ordinary amount of this, and his elementary publications originated in his delivery of lectures on geology, mineralogy, and astronomy, principally to young persons, at the village of Tottenham, near London, where he resided. Of these works the 'Outlines of Mineralogy and Geology' was the first, and of the purely mineralogical part of which, as first published, the first edition of his 'Mineralogy' was an expansion. Four editions of these 'Outlines' appeared, the second in 1815, and the fourth, which was his last work, in 1826. In 1818 he produced a most useful compilation entitled 'A Selection of Facts,' forming 'an Outline of the Geology of England and Wales,' on which was founded the celebrated 'Outlines' of the same subject, which had so extraordinary an influence in the extension of geological research. In Dr. Whewell's work, already

cited, the following view of the singular effects of this work occurs:—"Among the events belonging to the diffusion of sound geological views, we may notice the publication of a little volume, entitled 'The Geology of England and Wales,' by Mr. Conybeare [CONYBEARE, WILLIAM DANIEL], and Mr. Phillips, in 1821 [1822]; an event far more important than, from the modest form and character of the work, it might at first sight appear. By describing in detail the geological structure and circumstances of one part of England (at least as far downwards as the coal), it enabled a very wide class of readers to understand and verify the classifications which geology had then very recently established; while the extensive knowledge and philosophical spirit of Mr. Conybeare rendered it, under the guise of a topographical enumeration, in reality a profound and instructive scientific treatise. The vast impulse which it gave to the study of sound descriptive geology was felt and acknowledged in other countries, as well as in Britain."

Now, in reference to this high commendation, it must be recorded, that to the just appreciation of Dr. Conybeare's proposed contributions by William Phillips, the production of this work was owing, and therefore, that though undoubtedly the inferior collaborator in point of high talent and extended geological information, a fair share of the praise awarded to it, and of the merit of having conferred such benefits on geology, is due to him, who possessed the rare endowment of conscientiously estimating the accomplishments of his superiors in science.

Each of the five volumes constituting the first series of 'Transactions of the Geological Society' contains papers by William Phillips. Of these, six are elaborate communications on subjects of mineralogy and the measurement of crystals; and two are geological—an admirable paper 'On the Veins of Cornwall,' in vol. ii.,—and, in vol. v. a paper, 'On the Chalk Cliffs near Dover, and on the opposite coast of France, in which he proves that the cliffs on the two sides of the English Channel, though evidently portions of strata once continuous, must always have been separated by a considerable space, while the once connecting mass must have been removed at a remote period. Some minor papers of geological observations he communicated to the 'Annals of Philosophy,' and the 'Philosophical Magazine.' He was an early, if not an original member of the Geological Society, and is named as a member of the council in the first published list; he was also an honorary member of the Cambridge University Philosophical Society, to which honour, as being himself a Quaker, he often referred with great interest. In 1827 his merits were fully recognised by his election as a Fellow of the Royal Society; but this recognition he did not long survive, for after a short but severe illness he died at his house at Tottenham Green, in the spring of 1828, aged fifty-eight.

PHILLPOTTS, HENRY, D.D., Bishop of Exeter, the son of a respectable hotel-keeper of Gloucester, was born in that city in 1777. At the age of fifteen he was elected to a scholarship at Corpus Christi College, Oxford, and having taken the degree of B.A., gained the chancellor's prize for an English essay in 1795. He was elected in the following year to a fellowship at Magdalen College, which he vacated on his marriage in 1804 with Miss Surtees, a niece of the late Lord Chancellor Eldon. In 1806 he became chaplain to Dr. Barrington, bishop of Durham, and in that capacity distinguished himself by a controversy which he maintained against the late learned historian, Dr. Lingard, and subsequently by the publication of some pamphlets, vindicating the established clergy in the north from the attacks of Lords Grey and Durham. For these services he was rewarded with the rich living of Stanhope. In 1825 he again entered the lists of controversy, as the opponent of Mr. Charles Butler's 'Book of the Catholic Church.' In 1827 he published his celebrated 'Letter on Catholic Emancipation' addressed to Mr. Canning, soon after which he was promoted (in 1828) to the deanery of Chester, which he exchanged in October 1830 for the bishopric of Exeter. As a member of the House of Lords, Bishop Phillpotts has proved the zealous champion of Tory principles, and consequently opposed the Reform Bill, the Irish Church Temporalities Bill, the Poor Law Bill, the Ecclesiastical Commission, the National Education Bill, and every measure of a liberal tendency. Dr. Phillpotts has been for many years in that assembly the recognised episcopal head and representative of the extreme High Church party, and by his writings and speeches has warmly advocated the revival of convocation, and of other innovations on the established system of ecclesiastical affairs. In 1849 he rejected Mr. Gorham, who was nominated by the crown to a living in Devonshire, on the ground that he held erroneous opinions as to the effects of infant baptism; and though he was supported by the ecclesiastical courts, their judgment was set aside on appeal by a decision of the judicial committee of the privy council in 1850. On this Dr. Phillpotts published a 'Letter,' in which he formally excommunicated the Archbishop of Canterbury, who had been a party to the decision. In the following year he held a synod of his clergy at Exeter, which was pronounced illegal by the officers of the crown, and has never since been summoned. The list of Dr. Phillpotts' controversial pamphlets occupies no less than twelve pages in the new catalogue of the British Museum.

PHILO (*Φίλων*), the name of several ancient physicians, though it is difficult to determine exactly how many. Fabricius ('Biblioth. Græca') supposes four, of whom the most eminent was the author of the cele-

brated antidote called, after his name, Philonium. He left behind him directions for composing this medicine in a short Greek poem, of twenty-six lines, written in a very enigmatical style, which, together with an explanation of it, may be seen in Galen. ('De Compo. Medicam., κατὰ τόπους, lib. ix., cap. 4, p. 267, ed. Kühn.) It seems to have been something like the Mithridate, the Theriaca, and the Hiera Archigenis, and was, as Galen tells us, one of the most ancient as well as one of the most esteemed of this kind of medicines. Philo was born at Tarsus in Cilicia (Galen, *loc. cit.*), and is supposed to have lived about the beginning of the Christian era.

Another physician of this name, probably contemporary with Plutarch, in the 2nd century of our era, is quoted by him ('Sympon.' lib. viii., quæst. 9, sec. 1) as having said that Elephantiasis first appeared shortly before his time. In this opinion however he is probably mistaken. See a treatise by Jul. Alb. Hofmann, entitled 'Rabiel Caninae ad Celsum usque Historia Critica,' 8vo, Lipsæ, 1826, p. 53.

PHILO JUDÆUS, that is, Philo the Jew, was a native of Alexandria. The precise time of his birth is unknown; but he represents himself as of advanced age about A.D. 40, when he was sent as chief of an embassy from the Jews of Alexandria to the Emperor Caligula, for the purpose of pleading their cause against Apion, who charged them with refusing to pay due honours to Cesar. He went again to Rome in the reign of Claudius, and after this nothing is known with certainty about him.

Philo had a brother employed in the affairs of government at Alexandria, named Alexander Lysimachus, who is supposed to be the Alexander mentioned in Acts iv. 6, as a man "of the kindred of the high-priest." That Philo was a member of the sacerdotal family is asserted by Eusebius and others, and his own writings indirectly testify that such was the fact. There is also reason to believe that he belonged to the sect of the Pharisees.

Philo was eminent for his learning and eloquence. To the attainments usually made by the Jews of his condition he added an extensive knowledge of the Greek philosophy, and especially of that of Plato. He has been represented by Scaliger and Cudworth as ignorant of Jewish literature and customs, but Fabricius and Mangey have clearly shown that such representation is entirely groundless. As an interpreter of the Jewish scriptures he is fond of allegorising, a species of interpretation which had long prevailed at Alexandria. That Philo was a follower of Plato in philosophy there can be no doubt, but it must not therefore be concluded that his style is Platonic or his language Attic. He writes well indeed, but still as an Alexandrian Jew. Mangey styles him "the chief of the Jewish, and not much inferior to the Christian writers."

The principal editions of Philo are those of Geneva, 1618; Paris, 1640; Mangey, London, 1742; Richter, Leipzig, 1825-30. Mangey's edition, in 2 vols. folio, was printed by the learned William Bowyer. It is a splendid book, and does great honour to the English press. The works of Philo, as they are here presented, amount to forty-seven treatises, with six fragments, upon subjects mostly referring to the Jewish religion. The arrangement of these treatises appears to be arbitrary, and it would perhaps be impracticable to reduce them to order. Richter's edition, in 8 vols. small 8vo, follows Mangey's text, but does not give the Latin version. It contains two more tracts of Philo, on the 'Feast of the Basket' and on 'Honouring Parents,' which tracts Angelo Mai discovered in the Laurentian Library at Florence, and published with a Latin version at Milan in 1818. Richter's edition contains moreover a Latin translation of seven treatises of Philo existing in an Armenian version, supposed to have been made in the 4th or 5th century, and published in Armenian and Latin by John Baptist Aucher, at Venice, in 1822 and 1826.

An ample account of Philo and his writings may be found in the 'Bibliotheca Græca' of Fabricius, and in Mangey's preface, whose materials are derived from Josephus, Justin Martyr, Clemens of Alexandria, Eusebius, Jerome, and others, including of course Philo himself.

PHILO. Many other Philos are named; but as they do not appear worthy of particular notice, it may suffice to state that a catalogue of them, to the number of more than forty, is given in the third volume of the 'Bibliotheca Græca' of Fabricius.

PHILODE'MUS was an Epicurean philosopher and poet, and is mentioned by Cicero and Horace. Fragments of his epigrams are in the Greek Anthology. (Fabricius, *Bibliotheca Græca*.)

PHILOLA'US, a native of Crotona, flourished about B.C. 374. He was a Pythagorean, a disciple of Archytas, and the first who wrote on the subject of physics. It is said that Plato bought, at an enormous price, three books of Philolaus, with the aid of which he composed his 'Timæus.' In several ancient writers quotations are made from Philolaus. (Fabricius, *Bibliotheca Græca*.)

PHILOCEMEN, the son of Craugis or Crausis of Megalopolis in Arcadia, was born about B.C. 253. Having lost his father when he was still a boy, he was educated by Cleander of Mantinea, an intimate friend of Crausis. He was afterwards placed under the tuition of Ecdemus and Demophanes, two distinguished citizens of Megalopolis and friends of Aratus. Philoemen studied philosophy and the art of war, of which he was very fond from early youth; "he considered it," as Plutarch says, "the most important and useful occupation of

men, and despised those who were not versed in it." When he attained the age of manhood, he engaged in predatory incursions which the people of Megalopolis, the constant enemies of Sparta, made into Laconica. In his leisure he applied himself to agricultural pursuits for the purpose of improving his paternal estate.

Philopomen was thirty years of age when Cleomenes, king of Sparta, surprised Megalopolis by night [CLEOMENES III.], and he was one of the last to leave the town. Some time after, the Achæans, in order to oppose Cleomenes, having by the advice of Aratus allied themselves with Antigonus Doseu, king of Macedonia, that prince came into Peloponnesus, and defeated Cleomenes at the battle of Sellasia, B.C. 222, to which victory Philopomen mainly contributed. He received a severe wound in this battle. His reputation now rose high, and he was offered by Antigonus a command in his army, which he declined. Philopomen now repaired to Crete, and engaged as a volunteer in the war which distracted that island. During this campaign he greatly improved himself in strategy. Aratus died B.C. 213, and Philopomen, on his return home, was made general of the Achæan cavalry. He improved the discipline of that body, recruited its strength, and made it completely efficient. In a battle which was fought near the river Larissus, he defeated the united Ætolians and Eleans, and killed with his own hand Demophantus, the Elean general. He also effected many improvements in the tactics and discipline of the Achæan infantry, and introduced the Macedonian order of battle. War having broken out between the Achæans and Machanidas, tyrant of Sparta, Philopomen marched against the Spartans, and defeated him near Mantinea. Machanidas fell in the battle, by the hand of Philopomen. In consequence of this exploit, the Achæans voted him a statue of bronze, which was placed in the temple of Delphi. In B.C. 201 Philopomen was made strategos, or captain-general, of the Achæan league, of which, from that time till his death, he was considered as the principal leader, having succeeded Aratus in the confidence of the people. Philopomen being a great obstacle in the way of Philip of Macedonia, who wished to extend his sway over the independent states of Greece, the king tried to have him assassinated, but the plot was discovered, and only served to increase the influence of Philopomen. Nabis, who had succeeded Machanidas as tyrant of Sparta, seized Messenia; but Philopomen drove him out of that country, and restored the Messenians to their independence as allies of the Achæans. Wanting employment at home, he went a second time to Crete, at the request of the Gortynians, and served in the wars of that island. Returning home about B.C. 197, he found Philip beaten by the Romans under Flamininus, and obliged to sue for peace, the Achæans allied to Rome, and Nabis at war both with the Achæans and with Rome. Philopomen equipped a fleet against Nabis, but he failed in his naval operations. He then attacked him by land and defeated him; and Gythium and the other sea-ports of Laconica, being taken from Nabis, were occupied by Achæan garrisons under an agreement with Flamininus, the Roman commander. When Nabis was murdered by his Ætolian auxiliaries, B.C. 192, Philopomen marched upon Sparta, which was in a state of great confusion, and obliged the citizens to join the Achæan League, which then included all the Peloponnesus, with the exception of Elia.

During the subsequent war between Antiochus and the Romans, Philopomen, who was more clear-sighted than most of his countrymen with respect to the ambitious policy of Rome, recommended caution, and tried to confirm the Spartans in their friendship with the Achæans. Some time after however the citizens of Sparta, impatient at being cut off from the sea-coast, attempted to surprise a seaport called Las, but were repulsed by the Achæans, joined to the Lacedæmonian emigrants who had been exiled by Nabis. The Achæans passed a decree requiring Sparta to give up the authors of the attempt upon Las. The pride of the Spartans was roused; they refused compliance, put to death several of their countrymen who were in favour of the Achæans, and sent envoys to the Roman Proconsul Fulvius, who had just effected the subjugation of the Ætolians, B.C. 189. Philopomen, who was strategos of the Achæans for that year, devastated Laconica. Fulvius came into Peloponnesus, and advised both parties to send messengers to Rome, and to suspend hostilities. The Achæans sent Diophanes and Lycortas, the father of the historian Polybius. The senate returned an ambiguous answer, which the Achæans interpreted in their favour; and Philopomen, being re-elected strategos for the following year, B.C. 188, marched into Laconica, and again demanded the authors of the attack upon Las and of the withdrawal from the Achæan alliance, with a promise that they should not be punished without a trial. Upon this several of the persons implicated in this affair came forward and went voluntarily to the Achæan camp, accompanied by others of the principal citizens of Sparta. As they approached the Achæan camp, the emigrants who formed the Achæan advanced-guard fell upon their own countrymen, and killed seventeen of them, when Philopomen interfered and saved the rest (sixty-three in number) from immediate destruction. The next day he brought them before the assembled Achæans and Lacedæmonian emigrants, and, after a mock trial, they were sentenced to death and executed. The Spartans in dismay submitted to Philopomen, who dictated to them hard conditions, namely, that the walls of the town should be razed, that all emigrants should be restored, that all the mercenary troops should quit Laconica, as well as all the slaves who

had been emancipated by Nabis and other tyrants. About 3000 of these refusing to leave the country, Philopomen sold them, and applied the money thus produced to rebuilding a portico in Megalopolis which had been destroyed by Cleomenes. But the hardest condition which Philopomen imposed upon Sparta was that of abolishing the laws and discipline of Lycurgus, and obliging the Spartans to adopt the institutions of the Achæans and bring up their children after the Achæan fashion, being convinced, says Plutarch, "that their spirit could never be humbled so long as they adhered to their old institutions." Thus, in the year B.C. 188, the laws of Lycurgus were abrogated, after having subsisted for seven centuries, (though for a long time ill-observed) during which Sparta had maintained a proud station among the states of Greece. The Spartans again appealed to Rome, and the consul Q. C. Metellus, on his return from Macedonia, where he had been on an embassy, appeared before the council of the Achæans assembled at Argos, and complained that they had treated the Spartans with undue severity. Aristenus, the strategos for the year, was in the Roman interest, and Diophanes also blamed the conduct of Philopomen; but Lycortas defended his conduct, and the council resolved that the decree concerning Sparta should not be repealed. It was perhaps on this occasion that Philopomen, indignant at the servility exhibited by Aristenus towards the Romans, is reported by Plutarch to have exclaimed, "And why in such haste, wretched man, to see an end of Greece!" Envoys were sent to Rome by the Achæans to justify their conduct, and the Spartans, on their side, sent two of the restored exiles, who took a violent part against the Achæans. The senate, having heard both parties, sent Appius Claudius and others as commissioners to the Peloponnesus. A general congress of the Achæans being called, Appius Claudius declared that the senate was displeased with the manner in which Sparta had been treated, the massacre of eighty of its citizens, the demolition of its walls, and the abrogation of the laws of Lycurgus. It was on this occasion that Lycortas made that eloquent speech in reply which is given by Livy (xxxix. 36, 37), in which, after defending the conduct of the Achæans, he retorted upon the Romans their own conduct towards the free state of Capua during the second Punic war. Appius haughtily advised the Achæans to do with a good grace that which otherwise they would be obliged to do against their will. The congress then declared, that rather than reverse their own decrees, they left it to the senate to make what changes they thought proper. The senate, seemingly satisfied with this submission, allowed Sparta to continue in the Achæan league, on the condition of a general amnesty and the restoration of all political exiles.

In the year beginning May 183 B.C., Philopomen, then seventy years of age, was elected strategos for the eighth time. About this time, Messene, through the influence of one of its citizens named Dinocrates, threw off its alliance with the Achæans. Flamininus, the Roman general, who had been just appointed ambassador to Prusias, king of Bithynia, to demand of him the person of Hannibal, on arriving at Naupactus, wrote to Philopomen, requesting him to call together a general congress of the Achæans to discuss the affairs of Messene. Philopomen, knowing that he had no instructions from the senate for the purpose, declined to do so, and prepared for war against Messene. He marched with a body of cavalry, but finding a stout resistance, he was obliged to fall back. Being the last to retire, he was surrounded by the enemy, thrown from his horse, wounded in the fall, and taken prisoner to Messene. The citizens of Messene felt for his age and his misfortune, but a few of the leading men of the faction of Dinocrates determined on getting rid of him. They put him in a dark dungeon called "the Treasury," and in the night they sent the executioner to him with a cup of poison. Philopomen asked the man whether he knew what had become of the Achæan cavalry, and especially of his friend Lycortas! The man answered that they had retired in safety. "Then we are not altogether unhappy," observed the aged general, and he took the cup and drank the poison which soon put an end to his life (B.C. 182). The news spread rapidly through Achæa. Lycortas, being appointed strategos, marched to avenge the death of his friend. The Messenians opened their gates, Dinocrates killed himself, and the remains of Philopomen being burned, the ashes were collected in an urn, which was carried by young Polybius in solemn procession of the Achæan army to Megalopolis. The Messenian prisoners who had been concerned in the death of Philopomen were stoned to death. Statues to his honour were set up in most Grecian cities. Philopomen has been styled by some the last of the Greeks: he was certainly the last of their successful commanders.

PHILOSTORGIUS, a native of Cappadocia, was born A.D. 364. He went to Constantinople to complete his studies, and afterwards wrote a History of the Church, in twelve books, from the beginning of the schism of Arius, to A.D. 425. The work is lost, but we have an epitome of it by Photius, independent of a short notice of it in his 'Bibliotheca.' ('Myrobiblon,' Cod. 40.) Photius inveighs against the author as a heretic, and an apologist of Arius, Eusebius of Nicomedia, Apollinaris, and other heretics. Philostorgius was a man of general information, and he inserted in his narrative many geographical and other details of remote countries, especially of Asia and Africa. He was rather credulous with regard to prodigies, monsters, and other wonderful things, and Photius censures his credulity in attributing

miracles to those whom the Patriarch considered as heretics. The epitome was translated into Latin, with comments, by J. Gothofredus, 4to, Geneva, 1642, and also by H. de Valois, 'Compendium Historiæ Ecclesiasticæ Philostorgii, quod dictavit Photius Patriarcha,' Paris, 1673, with notes. There is also a French version: 'Abregé de l'histoire de l'Eglise de Philostorge,' Paris, 1676.

PHILOSTRATUS, FLAVIUS, a native of the island of Lemnos, was born in the second half of the 2nd century of our era; Clinton conjectures about 182, but perhaps it was a little earlier. He taught rhetoric first at Athens, and afterwards at Rome, where he became known and was patronised by the Empress Julia, the wife of Septimius Severus, who was partial to the learned. She commissioned him to compile the biography of Apollonius of Tyana from some memoirs written by a certain Damis of Nineveh, who had accompanied Philostratus in his peregrinations, and which had come into her possession. Philostratus professes also to have used in his compilation a collection of letters of Apollonius, which were at one time in the possession of Hadrian, and were placed by that emperor in his palace at Antium, together with certain responses of the Oracle of Trophonius, which Apollonius had also collected. The biographer availed himself also, according to his own statement, of the narrative of a certain Maximus who had known Apollonius. [APOLLONIUS OF TYANA.] The book of Philostratus displays great credulity in the compiler, and a great want of critical discrimination; it also contains many anachronisms and geographical errors. Huet and others have imagined that the object of Philostratus was to write a parody of the life of Christ, but this seems doubtful: the parody, if intended as such, is too gross; besides which, it appears from the testimony of Lampridius ('Life of Alex. Severus'), that Christ was really worshipped by some of the later heathen emperors, together with Abraham, Orpheus, and Apollonius, these being all looked upon as holy men and tutelary geni. That Apollonius of Tyana was a real character, a philosopher, and a traveller, appears from various passages of ancient authors; but it is remarkable that no one mentions him until nearly a century after the time assigned for his death. The Empress Julia, a Syrian by birth, was probably fond of the marvellous; and Philostratus, intending to entertain her, inserted in his book all the wonderful stories he could collect relative to his hero. It seems however that in the time of the great struggle between the heathen and Christian religions, under Diocletian and his immediate successors, some of the heathen writers thought of availing themselves of the Life of Apollonius as a kind of counterpoise to the Gospel narrative. Hierocles, prefect of Alexandria, and an enemy of the Christians, wrote a book with that object, in the shape of a comparison between the life of Apollonius by Philostratus and that of Christ, of which book Eusebius wrote a refutation: 'Eusebii Pamphili Animadversiones in Philostrati de Apollonio Tyanensi Commentarios ob institutam cum illo ab Hierocle Christi comparationem, adornata.' Lactantius ('Divin. Institut.,' v. 3) also combats the same notion as absurd. St. Augustine ('Epiat.,' 4) alludes to Apollonius as a magician whom the heathens compared with Christ. (See Tillmont, 'Hist. des Empereurs Romains,' vol. ii., and Bayle's article 'Apollonius de Tyane.')

The other works of Philostratus are: 1, 'The Lives of the Sophists,' in two books; 2, 'Heroica,' or comments on the lives of some of the heroes of Homer, in the shape of a dialogue; 3, 'Icones,' or descriptions of 64 paintings which were in a portico near Neapolis by the sea-shore (these descriptions contain valuable information concerning the state of ancient art); 4, Epistles, mostly erotic, excepting a few on matters of literature; one, which is inscribed to Julia Augusta, is an apology for the sophists. Philostratus wrote other works, such as a 'Lexicon Rhetoricum,' orations, &c., which are lost. His nephew, who is styled Philostratus the Younger, and who lived under Macrinus and Elagabalus, wrote also a book of 'Icones,' which are not descriptions of actual paintings, but are so many subjects proposed to painters.

Editions of all the existing works of Philostratus have been published by Morellus, Paris, 1608; Olearius, fol., Leipzig, 1709; and by Kayser, 4to., Zurich, 1844, with a valuable body of notes on each work. There are separate editions of the lives of the 'Sophists,' by Kayser, Heidelberg, 1838; of the 'Heroica,' by Boissonade, Paris, 8vo. 1806; and of the 'Icones,' by F. Jacobs, and F. G. Welcker, Leipzig, 8vo. 1825.

#### PHILOTAS. [PARENIO.]

PHILOXENUS, a native of Eretria, was the pupil of Nicomachus of Thebes, whom he imitated, and even surpassed in rapidity of execution: he is said by Pliny ('Hist. Nat.,' xxxv., 10, 36) to have discovered some more expeditious methods of operation in painting. Philoxenus was particularly distinguished for a 'Battle of Alexander and Darius,' which, according to Pliny, was not inferior to any of the productions of ancient painting. It was painted by order of Cassander, king of Macedon, and therefore probably not long after the 116th Olympiad, or *s.c.* 316.

It is not improbable that the large mosaic, apparently representing the battle of Issus, which was discovered in the year 1831, in Pompeii, in the so-called house, 'del Fauno,' and is still preserved there, is a repetition of the celebrated picture by Philoxenus of that subject; for, independent of Alexander and Darius being the two most conspicuous figures, the design and composition of the work are so supe-

rior to the execution, that its original has evidently been the production of an age long anterior to the degenerate period of the mosaic itself. With the single exception of the execution, the mosaic exhibits, in every respect, merits of the highest order, and it is certainly one of the most valuable relics of ancient art. Pliny has mentioned only two works by Philoxenus, the one alluded to, and a lascivious piece, in which were three satyrs feasting, a style of art much in vogue with Grecian painters, even of the best days.

PHLEGON (Φλέγων), a native of Tralles in Lydia (Suidas), a freedman of the Emperor Hadrian. Nothing is known of the events of his life, and the date of his death is uncertain; however, as one of his chronological works, which is no longer extant, carried the history down to Ol. 229.2—*A.D.* 141 (Suidas), he probably lived to the middle of the 2nd century *A.D.* Some fragments of his works are all that remain; the longest belongs to a treatise *περί θαυμασίων*, 'De Mirabilibus.' It is a curious work, divided into thirty-five chapters (some of which are very short), and containing (as might be expected from the title) a great many absurd fables. The same may be said of a shorter fragment of four chapters, *περί μακροβίων*, 'De Longævitâ.' The third fragment that remains is a chapter *περί τῶν Ὀλυμπίων*, 'De Olympiis,' which is supposed by Salmasius ('Ad Spartan,' p. 43) to be the preface to a lost work, 'De Olympioniciâ.'

But what has made Phlegon's name more familiar among the moderns is his being cited, though a heathen, as bearing witness to the accomplishment of Christian prophecies. (Origen, 'Cont. Cels.,' lib. ii., § 14, p. 69, ed. Spencer., Cantab., 1677); but see Lardner's 'Credibility,' pt. ii., 'Heathen Testimonies,' ch. 13, who concludes that "upon the whole this citation is of no great moment." But there is another passage of this author which may be reckoned more material, as it has been supposed to relate to the miraculous darkness which prevailed at the time of our Lord's crucifixion. In St. Jerome's Latin version of the 'Chronicle' of Eusebius (p. 155, ed. Pont., Burdig., 1604), the passage occurs as follows:—"And so writes Phlegon, an excellent compiler of the Olympiads, in his thirteenth book, saying, 'In the fourth year of the two hundred and second Olympiad there was a great and extraordinary eclipse of the sun, distinguished among all that had happened before. At the sixth hour the day was turned into dark night, so that the stars in the heavens were seen, and there was an earthquake in Bithynia which overthrew many houses in the city of Nice.'" (Compare Origen, 'Cont. Cels.,' lib. ii., § 33, p. 80; *Ib.*, § 59, p. 96; and other authorities quoted by Lardner.) This passage was the origin of a controversy in England in the early part of the last century between Mr. Whiston, Dr. Sykes, Mr. Chapman, and others, a long and complete account of which may be found in the English translation of Bayle's 'Dictionary,' and in Chaufepié's 'Supplement' to it. The immediate cause of the controversy was the omission of the passage in the eighth edition of Dr. S. Clarke's 'Boyle Lectures,' published soon after his death in 1732, although it had been inserted in the first edition, which came out in 1706. This was done at the persuasion of Dr. Sykes, who had suggested to Clarke that an undue stress had been laid upon the passage.

The principal objections against the authority of the passage in question are thus briefly summed up by Dr. Adam Clarke ('Comment. on Matth.' xxvii. 45):—1, All the authors who quote Phlegon differ and often very materially, in what they say was found in him; 2, He says nothing of 'Judæa': what he says is, that in such an Olympiad (some say the 102nd, others the 202nd) there was 'an eclipse in Bithynia,' and 'an earthquake at Nice'; 3, He does not say that the earthquake happened at the time of the eclipse; 4, He does not intimate that this 'darkness' was 'extraordinary,' or that the eclipse happened at the 'full of the moon,' or that it lasted 'three hours,' all of which circumstances could not have been omitted by him if he had known them; 5, He speaks merely of an ordinary though perhaps total eclipse of the sun, and cannot mean the darkness mentioned by the Evangelists; and 6, He speaks of an eclipse that happened in some year of the 102nd or 202nd Olympiad, and therefore upon the whole, little stress can be laid on what he says as applying to this event.

The three remaining fragments of Phlegon were first published in 1568, Basil, 8vo. Gr. et Lat., by Xylander, together with Antonini Liberalis, 'Transform. Conger.'; Apollonii, 'Hist. Mirab.'; Antigonii Caryæti, 'Hist. Mirab.'; and M. Antoninus, 'De Vitâ suâ.' An improved edition, with notes by Meurinius, appeared in 1620, Lugd. Bat., 4to. Gr. et Lat., which is reprinted by Gronovius, in his 'thesaur. Antiquit. Græc.,' vol. viii., p. 2690, sq. and vol. ix., p. 1289, sq.; and also inserted among the works of Meurinius, vol. vii., p. 77, sq. The best edition is by Westermann, in his 'Scriptores Rerum Mirabilium Græci,' Bruna, 1839.

PHOCAS, a native of Asia Minor, of an obscure family, entered the army under the reign of the Emperor Mauritius, and attained the rank of a centurion. He happened to be with his company on the banks of the Danube when one of those mutinies so frequent in the history of the Eastern empire broke out among the troops on that station, and having probably made himself conspicuous among the disaffected, he was tumultuously proclaimed leader of the insurgents, and he marched with them to Constantinople. At the approach of the rebel an insurrection broke out in the capital, and the emperor and his family were obliged to escape in a boat to Chalcædon. Phocas was proclaimed emperor and crowned by the patriarch, *A.D.* 602. Mauritius, being

taken, was put to death, together with his five sons, and some time after the rest of his family shared the same fate. Phocas sent ambassadors to Khosru II. to announce his accession to the throne, but the Persian monarch having learned the circumstances, took up arms to avenge the cause of Mauritius, and carried on a destructive war in the Asiatic provinces. Phocas found more favour with Rome. Gregory I. wrote him some complimentary letters in which he extols the condition of the Italian subjects of the empire as being free men in comparison with those who were subject to the Lombard and other kings, who treated them as little better than slaves. Phocas remained on good terms with Boniface III. and Boniface IV., the successors of Gregory. He is said by Anastasius, the Papal chronicler, to have acknowledged Boniface III. as the head of all the Christian churches; but that which is better authenticated is his act of donation of the Pantheon at Rome to Boniface IV., to be transformed into a Christian church, in 607.

In the meantime insurrections broke out in several parts of the Eastern empire, which the suspicions and cruelties of Phocas only served to exasperate. Heraclius, exarch of Africa, sent two expeditions, one by sea and the other by land, under his son Heraclius and his nephew Nicetas, who joining before Constantinople, took possession of the city, after some resistance. Phocas was taken and put to a cruel death by order of the younger Heraclius, who succeeded him in the empire, October 4, 610.

PHOCION (*Φωκίων*), an Athenian general and statesman, was a contemporary of Demosthenes. His first appearance in history is at the battle of Naxos, B.C. 376, when Demosthenes was seven years old, being himself twenty-seven. He survived Demosthenes four years, and may be regarded as the representative of that party in Athens to which Demosthenes was the constant antagonist.

Plutarch relates that Phocion was the son of a tanner, but he disbelieves the story on account of the goodness of his education and the liberal turn of his mind. Whatever was his rank, Phocion found admittance into the school of Plato, and afterwards studied under Xenocrates, whose lessons had perhaps greater influence on his character than even those of Plato. To a stern and forbidding aspect, a stoical demeanour, and habits of rigid simplicity, Phocion united a kind and generous heart. These qualities secured for him so great a measure of popularity that he was forty-four times elected general, and that in an age when public offices were generally obtained by bribery. He was also heard with so much attention in public that even Demosthenes dreaded the effect of his terse and pithy harangues.

Plutarch records many of his sayings. There is much wit and point in most of them; indeed they go quite beyond the style of antique jokes, usually so dull to modern ears, and there is much political wisdom in them; but still they have an air of intended wit and a striving after effect which make them look different from the strong and genuine thoughts of an earnest and true-hearted patriot. But after all, when biographer, and subject each lived in an age more distinguished for smartness than solidity, we need not hold these speeches inconsistent with that high character for wisdom which Phocion bears.

The public incidents recorded of Phocion's life are, as is natural for the head of the peace party, not numerous. He commanded many times and often successfully, but he seems to have acted the part of an ambassador better than of a general. His death (B.C. 317) took place under circumstances much like those which accompanied that of Socrates. During the confusion which ensued after the death of Alexander a revolution occurred at Athens, and the democratic party, drunk with success, condemned their chief opponents to death. Among these was Phocion: he died with the greatest composure, and left an injunction to his son to preserve no remembrance of the wrongs which Athens had done to his father. As in the case of Socrates, the people soon saw their error; repentance however does not usually atone for political crimes, and the parallel between Phocion and Socrates holds good with regard to the evil times which followed their respective executions, showing public ingratitude to be the parent as well as the child of civil corruption.

PHOCYLIDES, of Miletus, was a philosopher and poet, and flourished about B.C. 535. An admonitory poem is attributed to this Phocylides; but it is uncertain whether it was written by him or by another of the same name in later times. The reader is referred for a discussion of this question to the first volume of the 'Bibliotheca Græca' of Fabricius.

There are several editions of Phocylides, both separate and along with Theognis and others. A convenient and correct edition of these Greek gnomic or sententious poets is that printed by Tauchnitz, Leipz., 1819, which includes seven fragments of Phocylides, besides the above-mentioned poem.

PHOTIUS was born in the early part of the 9th century, of a patrician family of Constantinople. He studied in that city, and attained great proficiency in all kinds of learning, which was enhanced by an irreproachable morality. He was noticed by the Emperor Michael III., who employed him in various important offices. The emperor sent him on a mission to Assyria (probably Persia is meant), and on his return made him proto-spatharius, or commander of the guards, and proto-secretarius and member of the emperor's privy council. Bardas, the uncle and colleague of Michael, was very partial

BIOG. DIV. VOL. IV.

to Photius; and having, on account of some dispute as to jurisdiction, removed and banished the patriarch Ignatius, he determined to put Photius in his place. Photius, being a layman, took all the various clerical orders one after the other in six consecutive days; and after being ordained priest, he was installed in the patriarchal chair in 858. But the informality of his appointment was too glaring, especially as Ignatius, although threatened and imprisoned in order to enforce him to abdicate, refused to do so. A subservient council was assembled at Constantinople in 858, which deposed Ignatius and confirmed the appointment of Photius. Photius sent two bishops to Rome with letters for Pope Nicholas I., in which he gave a specious account of his election, and invited the pope to send legates to Constantinople, in order to co-operate with him in putting down the remains of the Iconoclastic heresy. The legates came; and a new council being assembled in 859, which the legates attended, Ignatius was brought before it, and was again deposed on the score of incapacity and other charges, and obliged to sign his own abdication, with the concurrence of the papal legates.

The see of Rome had for more than a century past been disputing with that of Constantinople on a question of jurisdiction. During the period of the superiority of the Iconoclasts at the court of Constantinople, the patriarchs of that city, supported by the emperors, had appropriated to themselves the spiritual jurisdiction over the extensive provinces of Illyricum, Macedonia, Achaia, and Sicily, which had formerly been subject to the Roman see. A fresh subject of contention afterwards served to embitter the quarrel. The heathen inhabitants of Bulgaria being converted to Christianity by both Latin and Greek missionaries, Photius placed the new churches of Bulgaria under his own jurisdiction—a measure which seemed justified by the proximity of Bulgaria to Constantinople. But the pope alleged that his own missionaries had been first in the field, and that the king or chief of Bulgaria had sent his own son to Rome, which was a sort of acknowledgment of spiritual obedience. In short Nicholas demanded the restitution of the provinces of Illyricum, Macedonia, Achaia, Sicily, and Bulgaria, which Photius stoutly refusing, the pope assembled a council at Rome in 862, in which he pronounced the election of Photius to be illegal, and excommunicated him with all his abettors. Photius however remained quietly in his see; and in the year 866, having assembled a council at Constantinople, he produced five charges, some relating to doctrine and others to discipline, against the Roman or Western Church. The charges were held to be proved; and Photius, at the head of his council, excommunicated the pope, and declared him and his abettors to be removed from the communion of orthodox Christians.

In the year 867, after the murder of the Emperor Michael, Basilus the Macedonian ascended the throne. It is said by some that Photius refused him the sacrament, and reproached him with the murder of his benefactor. However this may be, Basilus soon after deposed Photius, exiled him to Cyprus, and restored Ignatius to his see; and this act was confirmed by a general council assembled at Constantinople in 869, which was attended by legates of Pope Adrian II., and in which Photius was condemned. This is called the eighth Œcumenical council, having been acknowledged by both the Eastern and Western churches.

Photius in his exile found means to deprecate the hostility of the emperor, and after some years he was allowed to return to Constantinople. He is said to have composed a genealogy of Basilus, in which he made him descend from Tiridates, king of Armenia. At the end of the year 877, the patriarch Ignatius died; and the canonical impediment to the exaltation of Photius no longer existing, he was replaced on the patriarchal see; and Pope John VIII. was induced to approve his nomination, with the view of restoring peace to the church. In 879 Photius assembled a new council at Constantinople, in which the word 'filioque' which Photius charged the western church with having inserted in the Nicene creed in the 5th or 6th centuries, was erased from the creed. The separation however between the two churches was not finally consummated till nearly two centuries later, when the patriarch Michael Cerularius, after a long and angry correspondence with Leo IX., was excommunicated, with all his adherents, by the pope's legates, who solemnly deposited the written excommunication on the grand altar of Sancta Sophia, and having shaken off the dust from their feet, departed from Constantinople, A.D. 1054.

In the year 886, Leo, the son and successor of Basilus, exiled Photius, for reasons not clearly ascertained, into Armenia, where the patriarch died some years after; but the epoch of his death is not exactly known. Photius was of an ambitious and turbulent disposition, and this was his chief failing. Much has been written for and against him; the Greek and Protestant writers being mostly in his favour, and the Roman Catholics against him. All however agree in admitting his very extensive learning, which was truly wonderful for his age, as well as his exquisite critical judgment.

The following are his principal works:—1, 'Myriobiblon, sive Bibliotheca librorum quos legit et censuit Photius,' with a Latin translation, fol. 1653. Imm. Bekker published the Greek text, corrected after a Venetian and three Paris manuscripts, with an index, Berlin, 1824, 2 vols. 4to. The Bibliotheca is a kind of review of the works which he had read, many of which have been since lost. Photius gives a brief

3 a

epitome of each, adding his own critical judgment of the merits of the writer, and of his statements and opinions. In this manner Photius reviews more than fifty historians, a still greater number of divines, besides orators, philosophers, grammarians, rhetoricians, &c., in all 279 works which he had read and examined. Fabricius (*'Biblioth. Græca,'* v. 35) gives an accurate list of the works noticed by Photius. 2, a Greek Lexicon, published by Hermann, 4to, Leipzig, 1808: another edition by Porson appeared after his death, under the superintendence of Dobree, London, 1822; it is entitled *Ἐπιτομὴ τῶν Περὶ τῶν Λεξιῶν ἐπιτομή*. E. Cod. Galeano, descripsit R. Porsonus, 2 vols. 8vo. 3, 'Epistles,' fol., London, 1661. 4, 'Nomocanon, being a Collection of the Acts of the Councils, to the Seventh Œcumenical, with the corresponding decrees of the Emperors concerning Ecclesiastical Matters,' Basel, 1662. 5, A treatise, 'Adversus Latinos de Processione Spiritus Sancti,' and other theological and controversial works, several of which are still unpublished: among others, one against the Paulicians, of which Montfaucon gives some fragments in his *'Bibliotheca Cosliniana.'* 6, 'Amphilochia, being Answers to Questions relative to various Passages in the Scriptures, with an Exposition of the Epistles of St. Paul.'

PHRYNICHUS. Several persons of this name are mentioned by Suidas and others.

PHRYNICHUS of Athens, the son of Polyphradmon, was a disciple of Theopis, and a writer of tragedy. He was upwards of twenty years the contemporary of Æschylus, and probably he was about so many years his senior. The titles of fourteen tragedies of Phrynichus occur, of which five have been supposed to be the productions of another Phrynichus, the son of Melanthes: but Bentley has clearly proved that this supposition is without any foundation, and that these were only one tragic poet of this name.

Phrynichus first exhibited B.C. 511, and he gained the prize for his 'Phoenician Women,' B.C. 476, the subject of which was drawn from contemporary history, being the victories of Athens in the Persian wars. It appears from these dates that he was a dramatic writer during thirty-five years, but we know not the time either of his birth or his death.

Phrynichus effected a great improvement in the tragedy which Theopis had introduced. He no longer sanctioned the ludicrous diversion in which Bacchus and the Satyrs only were personated; but he derived the subjects of his plays from the graver parts of the mythology and history of his country. With the example of Æschylus to stimulate him, he made still further advances. One of his tragedies, 'The Capture of Miletus,' referring to an event which took place B.C. 494, five years after Æschylus won his first prize, is particularly mentioned by Herodotus (vi. 21). He relates that the poet melted the spectators into tears by his vivid picture of the sufferings of their Ionian brethren. It may be presumed that his 'Phoenissæ,' which won the prize B.C. 476, was marked by equal if not superior excellence. Aristophanes on several occasions brings in the name of Phrynichus in such a way as to show that he was esteemed a poet of no ordinary powers. But Phrynichus did not invent the dialogue; he had only one actor, at least until Æschylus introduced the dialogue; the choral ode still constituted the chief part of the performance. The improvement of first adding the dialogue and shortening the chorus is due to Æschylus; Phrynichus first introduced female parts. No fragments of Phrynichus are extant.

PHRYNICHUS OF ATHENS, a comic poet, who flourished B.C. 430. Ten comedies of his are mentioned by ancient writers. (Suidas; Bentley.) A few fragments of this poet have been collected by Hertelius and Grotius. He is once quoted by the Phrynichus who forms the subject of the next article.

PHRYNICHUS (called Archabius by Photius; and by Suidas, the Sophist of Bithynia), flourished under the emperors M. Aurelius and Commodus, from A.D. 170 to 190. He has left a work entitled 'A Selection of Attic Verbs and Nouns,' the object of which is to point out the proper use of certain words, and of certain forms of words, as alone authorised by the writers of pure Attic diction. This work has been several times printed. The best edition is that of Lobeck, 8vo, Leipzig, 1820, which contains the substance of all the annotations of the preceding editions, and is enriched with many original remarks. A fragment of Herodian, the grammarian, upon the same subject, accompanies the work of Phrynichus.

PIAZZETTA, GIOVANNI BATTISTA, one of the most celebrated of the later Venetian painters, was born at Venice in 1682 or 1683, and was first instructed in design by his father, Jacopo Piazzetta, a carver in wood. He was taught painting by Molinari, but he acquired his style in Bologna from the works of Spagnoletto and Guercino. Piazzetta is one of the 'Naturalist' school of painting, and he is one of the darkest of those who are sometimes called 'Tenebrosi': they generally painted on dark grounds. He died at Venice in 1754. Piazzetta's pictures are doubtless much darkened through time: they are distinguished by their strong contrasts of light and shade. His masterpiece is considered the 'Beholding of John the Baptist' at Padua. He excelled in caricature. Many of his works have been engraven. (Zanetti, *Della Pittura Venetiana, &c.*; Lanzi, *Storia Pittorica, &c.*)

PIAZZI, JOSEPH, was born at Ponte in the Valteline (Switzerland), July 16, 1746. His education appears to have commenced at Milan,

where he assumed the habit of the Théatins, and became an inmate of the convent of St. Anthony. Here and at Turin he studied the classics and mathematics under Tiraboschi and Beccaria, and at Rome under Lesueur and Jacquier, the editors of the Jesuits' edition of the 'Principia.' He began to teach philosophy at Genoa; but having expressed himself too openly on certain theological points, he was threatened with the persecution of the Dominicans, from which he escaped by accepting the professorship of mathematics in the new University of Malta, conferred upon him by the Grand-Master Pinto. Upon his return to Italy he became professor of philosophy and mathematics in the College of the Nobles at Ravenna, but here again his religious opinions made him many enemies. Soon after the publication of two philosophical theses, which were deemed "too bold for so young a divine," he found it expedient to retire, first to Cremona and thence to Rome, where he was for some time reader of dogmatic theology at San André della Valle. In 1780, at the recommendation of Jacquier, he was appointed professor of the higher mathematics in the Academy of Palermo, where, with the co-operation of the viceroy, he founded an astronomical observatory. In 1787 he visited Paris, where he made the acquaintance of Lalande, Jaurat, Pingré, Delambre, and Bailly; also of John Cassini, Mechain, and Legendre, who were at that time occupied in determining the difference of longitude between the observatories of Paris and Greenwich. He next visited England, where he became intimate with Maskelyne, Herschel, Vince, and more particularly with Ramsden, to whom he confided the construction of the instruments for his new observatory. Much of his time during his stay in England was passed at the Observatory of Greenwich. Here, with Dr. Maskelyne, he observed the solar eclipse of June 3, 1788; and the year following he communicated a paper to the Royal Society ('Phil. Trans.' vol. 79, p. 55), containing the observations of that eclipse by twelve other astronomers, and the consequences thence deduced by himself relative to the longitudes of the several observatories. At that time the longitude of the Dublin Observatory was taken at 24° 58"; Piazzi gives 25° 18' 4", and expresses his confidence that this is within two seconds of the truth: the longitude now given in the 'Nautical Almanac' is 25° 22". This paper is understood to be his earliest production as an astronomer. Having after much importunity obtained the completion of his instruments, he returned with them to Sicily in the latter part of the year 1789, and very soon after became one of the most active and accurate of modern observers. The Observatory of Palermo was at that time the most southern in Europe, that at Malta having been recently destroyed by fire. In the course of the first ten years he determined the positions of no less than 6748 stars. His first catalogue was published in 1803 under the title of 'Stellarum Inerrantium Positiones,' which was deservedly honoured by the Academy of Sciences of Paris, and acquired for its author the esteem and admiration of astronomers. It was while thus occupied that he discovered, January 1, 1801, the first of the forty-two minor planets now (1856) known to be situated between the orbits of Mars and Jupiter, and to which he gave the name of Ceres Ferdinandea, out of compliment to his patron the king of Naples. Ferdinand would have commemorated the event by circulating among the astronomers of Europe a gold medal bearing the effigy of Piazzi; but the latter suggested that the money would be more usefully applied in the purchase of an equatorial, of which the observatory was in need.

In 1817 he was called to Naples to put into activity the new observatory erected by Murat on the heights of Capo di Monte. He was succeeded in the Observatory of Palermo by M. Cacciatores, to whom he had previously confided the difficult task of re-examining Maskelyne's thirty-six principal stars. The observations of Cacciatores, which were extended to 120 stars, form the basis of Piazzi's second catalogue of 7646 stars, published in 1814. Speaking of this catalogue, the council of the London Astronomical Society remark, in their seventh annual report, that "it exceeds everything of the kind which preceded it, and shows more powerfully than words can express what may be effected by the talents and assiduity of one individual." Piazzi was a member of the principal scientific societies of Italy, France, and Germany. Of the Royal Society of London he was elected a fellow in 1804, at the same time with Baron Zach and Professor Gauss. He died at Naples, July 22, 1826. His library and instruments he bequeathed to the Observatory of Palermo, and a liberal annuity in perpetuity, to be appropriated in succession to the education and maintenance of young men who evince a marked partiality for astronomical science.

The preceding notice is chiefly drawn from an article in the 'Bulletin des Sciences' for 1826, drawn up by De Angelis under the eye of the Baron Zach. The published works of Piazzi mentioned in different numbers of the 'Bulletin des Sciences,' are collected and appended to a translation of the above article in Brewster's 'Journal' for 1827 (vol. vi., p. 168). They are as under:—

1, 'Discourse on Astronomy,' Palermo, 1790; 2, 'Description of the Observatory of Palermo,' in 9 books, of which four were published in 1792 and five in 1794; 3, 'On the Discovery of the Planet Ceres,' Palermo, 1802; 4, 'Observations on the Obliquity of the Ecliptic,' 1804 ('Mem. Soc. Italiana,' tome xi.); 5, 'On the Precession of the Equinoxes,' 1804 ('Ephem. de Milan'); 6, 'On the Parallax of some of the Fixed Stars' ('Mem. Soc. Italiana,' xii.); 7, 'On the Measure

of the Tropical Year' (Id., tome xiii.); 8, 'On the Proper Motion of the Fixed Stars' ('Mem. de l'Inst. Nat. Ital., tome i.); 9, 'The Metrical System for Sicily,' 1812; 10, 'Lessons in Astronomy,' 1817; 11, 'On the Observed and Calculated Solstices' ('Mem. de l'Inst. de Milan,' tome ii.); 12, 'On the Italian and European Clock' ('Giorn. de Scienze par la Sicilia, Aug., 1824); 13, 'On the Progress of Astronomy' ('Giorn. de Soc. Lett. et Art. par la Sicilia,' April, 1824); 14, 'Description of the Meridian of the Cathedral of Palermo, established by Piazzi in 1798,' by M. Cacciatori (Id., August, 1824).

PICARD, JEAN, was born 21st July, 1620, at La Flèche in the present department of the Sarthe, and became priest and prior of Rille in the same department. Scarcely anything is known of his early history. Even the names of his parents appear to have been forgotten, as they are not mentioned by Lalande, who visited his birth-place. Pezenas, in his 'Critical History of the Discovery of the Longitude,' referred to by Delambre, speaks of one Picard, a gardener of the Duke of Crequi, whom the astronomer Le Valois instructed so successfully in the use of astronomical instruments, that he became one of the most celebrated observers of his age. As the subject of this article is the only Picard who is known to have acquired any celebrity as an astronomical observer, it may be conjectured that he was the humble individual here alluded to. The earliest event with which his name is associated, and of which the date is recorded, is the solar eclipse of the 25th August, 1645, which he observed with the astronomer Gassendi, whom he succeeded, in 1655, as professor of astronomy in the College Royal of France. He was one of the eight individuals selected by Colbert, in 1666, to originate the Academy of Sciences. The following year he made his first application of the telescope to the measurement of angles; which alone, observes Delambre, would entitle him to the esteem and remembrance of astronomers. Prior to this, plain sights only had been used, with which not only are distant objects frequently altogether invisible, but of those which can be seen the outline is seldom distinctly defined, while in some cases, as in the fixed stars, they have an apparent magnitude which they do not really possess. According to Lahire however the merit of this great improvement (which was eagerly adopted by every astronomer of note, Hevelius excepted) is divided between Picard and Azout, who were in partnership, though, from Picard's description of his invention, in his work entitled 'Figure de la Terre,' it would appear to be exclusively due to himself. Soon after this he introduced an entirely new system of astronomical observations, wherein the pendulum, then recently invented by Huyghens, is first brought into use in determining the right ascension of the stars by noting the instant of their passage across the meridian. This method, observes Delambre, which is adhered to at the present day, "insures to those two authors, Huyghens and Picard, an incontestable superiority over all the astronomers of the time without a single exception." In the memoir wherein these views are more fully developed, and which he read before the Academy of Sciences, in April 1670, he urges the necessity of forming more correct tables of the sun and fixed stars, as also tables of refraction, which he regarded as the chief foundation of all sound practical astronomy. For this purpose he solicited the erection of a mural quadrant, which after many years of needless delay was finally adjusted in the plane of the meridian, not however till Picard was upon his death-bed.

In 1671, with a view of giving astronomers greater confidence in employing the observations of Tycho Brahe, Picard visited the island of Høhne in order to determine the position of Uraniberg. Scarcely a vestige of the observatory remained; sufficient however to enable him to detect an error of one minute in the latitude and several minutes in the longitude, as given by Tycho, which confirmed the suspicions previously entertained by astronomers. While absent on this occasion he met with Røemer, then a young man, with whose mathematical talents he was so well pleased that he brought him to Paris and introduced him to the academy. The observatory of Paris, the plan of which had been furnished by Picard, was completed in 1671, when it was immediately occupied by Dominique Cassini, who, at Picard's recommendation, had been invited by Colbert to take up his residence in France. It was not till two years later that inferior accommodation within the same building was allotted to Picard. "He saw," says Delambre, "all his projects neglected or their execution deferred; all expenditure and encouragement lavished upon objects of less utility, though to the eye of the vulgar of a more brilliant character, such as the rotation of the three planets, and the four new satellites of Saturn; while telescopes of great cost were imported from Italy to verify these discoveries, which, though certainly very curious, were and always will be useless." The astronomical ephemeris entitled 'La Connaissance des Temps,' originated with Picard in 1679, and was continued by him till his death. The same year he was nominated with Lahire, by the king, to conduct certain surveys along the coast of Gascony, the result of which sufficiently indicated the necessity of constructing an entirely new map of the country. For this purpose he proposed the extension of the arc of the meridian passing through the Paris observatory as far as the extremities of the kingdom: a proposal which has since been carried into effect. As an observer, he was no less industrious and accurate than, as a philosopher, he was enlightened. His observations from 1666 to 1682, collected and published by Lemonnier in 1741, under the title of 'Histoire Céleste,'

are a sufficient proof of his activity; while his perseverance for ten years in observing the minute variations which, from causes then unknown, are continually taking place in the altitude of the polar star, is equally conclusive as to his zeal and the perfection which astronomical observation attained in his hand.

What Picard is however now chiefly remembered for, is his measurement of an arc of the meridian of Paris between Amiens and Malvoisine. This was begun in 1669, and forms the subject of his work entitled 'Mésure de la Terre,' Paris, 1671, a large folio of 80 pages. The base extended along a paved road from Villejuive to Juvisy; it was twice measured, the results being 5662½ and 5663½ toises, the mean of which was taken. The difference between the latitudes of Amiens and Malvoisine he found to be 1° 22' 55", and the length of the intermediate arc 78,850 toises; whence it followed that the length of one degree between those latitudes was 57,067. The toise employed was that of Chastelet. "Leet," says Picard, "this toise should share the fate of those employed in former surveys, of which only the name remains [it has since been lost], we will connect it with a measure which, being taken from nature herself, must be invariable and universal." He then states that he determined with great care the length of the pendulum vibrating seconds (which he supposed was constant for all latitudes), and which at Paris he found to be 440.5 lignes, according to the toise of Chastelet. ('Mésure de la Terre,' p. 4.) The most accurate determinations which have since been made do not differ from this result by so much as the 1/50 of a ligne. (Fraucœur, 'Géographie,' p. 256.) At the date of this survey the law of refraction was imperfectly known, and its effects were neglected. The effects arising from what have since been termed aberration and nutation had been felt, but astronomers then, and for more than half a century afterwards, knew not how the requisite corrections should be applied. These were therefore sources of error which vitiated the observations of Picard in common with those of all other astronomers of that time; and in addition an error of six toises was committed in the measurement of the base. The whole of the operations have since been repeated by Lemonnier ('Degré du Méridien,' Paris, 8vo, 1740) and Lacaille, and still more recently by Delambre. The final result gives 57,074 toises for the length of the degree, which differs from Picard's by 17 toises (85.6 English feet); and, thus rectified, this measurement is one of those on which the greatest reliance is now placed. The care with which the whole of Picard's operations were conducted, and the superiority of his instruments and methods over those employed in any previous survey, naturally produced considerable confidence in his result. Astronomers would not indeed have been justified had they regarded the results of former surveys in any other light than rough approximations which enabled them to assign the limits within which the true dimensions of the earth would one day be found, but which were useless in determining what its dimensions and figure really were. Newton, in 1666, failed to establish the truth of his theory of gravitation by employing an erroneous measure of the earth's radius, and did not resume its consideration till he heard of Picard's survey, by which it was confirmed. Norwood's measurement of the arc of the meridian between London and York, which took place in 1633, gave results which have since been shown to be correct, and were doubtless known to Newton. But his measurement differed too considerably from those which preceded it to be admitted on the strength of the imperfect apparatus employed by him. Norwood's measure is called by Delambre a great piece of good fortune. [NORWOOD, RICHARD.]

Picard died at Paris, 12th of July, 1682 (Delambre); according to other authorities, his death took place in 1683 or 1684. Besides the works already mentioned, the following are inserted in the 'Memoirs' of the Academy of Sciences. The numbers refer to the volume:—vi, De la Pratique des Grands Cadran par le Caloul; De Mensuris; De Mensura Liquidorum et Aridorum; De Proportione Aquarum Effluentium; Fragments on Dioptrics; Treatise on Levelling. All but the last are in the 'Divers Ouvrages,' &c., folio, Paris, 1693. vii, Measurement of the Earth; Astronomical Observations made in Denmark; Astronomical Observations made in various parts of France (4 papers). x, Immersion and Emergence of Jupiter's Satellites observed at Paris in 1668; Observation of the Lunar Eclipses of 7th July, 1676, and 11th January, 1676, by Cassini, Picard, Røemer (2 papers); Experiments relative to the Phenomenon observed in the Vacuum of the Barometer; Occultation of Saturn by the Moon, observed by Cassini, Picard, Røemer, and De La Hire.

(Delambre, *Astronomie Moderne*, and *Biographie Universelle*; Lalande, *Biographie Astronomique*; Condorcet, *Eloge de Picard*; Fontenelle, *Eloge de Picard*; Montucla, *Hist. des Mathématiques*, &c.)

PICARD, LOUIS BENOIT, member of the French Academy, and one of the most successful dramatists of his age, was born at Paris in 1769. His first production for the stage was 'Le Badinage Dangereux,' which was followed by a very long succession of comedies, displaying novelty in their subjects, faithful and well-hit-off portraits of contemporary manners, playfulness of dialogue, and clever traits of satire; to such degree indeed that by some he has been styled the Molière of his day. Not only were his productions eminently popular at home, but many of them were either translated or remodelled by Iffland, Hell, and other German writers. Among his pieces in verse, 'Medioere et Rampant,' 'Le Mari Ambitieux,' and 'Les Amis de Collège,' are

generally considered his best; while the 'Contrat d'Union,' 'La Petite Ville,' and 'Les Marionnettes' are regarded as his master-pieces among those in prose. Besides their literary merits and the strong comic talent they evince, it is not the least recommendation of Picard's dramas that they have for the most part a useful or moral aim. Numerous as are his productions of this class, they by no means constitute the whole of his literary compositions, for he likewise wrote the 'Gil Blas de la Révolution,' and several other novels which obtained considerable vogue. Among these, 'L'Honnête Homme,' has been translated into English under the title of 'The Novice, or Man of Integrity.' In addition to these various labours with his pen, Picard was at one time a performer at the Théâtre Louvois, and from 1801 director of that theatre. He was afterwards successively manager of the Opera and the Odeon theatre. He died December 31st, 1828.

PICART, ETIENNE, called 'Le Romain,' a celebrated French engraver, was born at Paris in 1681. His prints, chiefly portraits and history, are very numerous: they are firmly executed, but want harmony. He worked with the graver and the etching-needle, much in the style of Poilly. He is supposed to have been called Le Romain from his long sojourn in Rome, or he assumed the name that he might not be confounded with another engraver of the name of Picart. He was engraver to the king, and a member of the French Academy of Painting, &c. He died at Amsterdam in 1721.

BERNARD PICART, the son of Etienne Picart, born at Paris in 1668, was a designer, and as an engraver superior to his father. He was the pupil of Le Clerc. His best works are those executed in France. In Amsterdam, to which place he accompanied his father in 1710, he worked exclusively for the booksellers, and became mannered, metallic, and merely ornamental. A great many of his prints are from his own designs, in which he imitated the style of composition of Antoine Coyvel. He had a facility in imitating the styles of other earlier engravers, and he published many prints of this class which are said to have deceived collectors; Picart used to call them 'Impostures innocentes,' and they were published under this title, to the number of 78, with a list of his works, at Amsterdam, in 1734, after his death. His prints altogether amount to about 1800, and one of the best of them is a 'Slaughter of the Innocents,' after a design of his own: there are various impressions of it. 'Darius opening the Tomb of Nitocris,' after Le Sueur, is also one of his best prints; it is much in the style of Girard Andran. He died at Amsterdam in 1738.

PICCINI, NICOLO, was born at Bari in the Neapolitan dominions, in 1728. His father, a musician, intended him for the Church; but the predilection of the son for his parent's profession was too strong to be overcome, and at the age of fourteen he was entered at the Conservatorio Santo Onofrio, where he completed his studies under Leo and Durante. The first marked proof of his genius for composition was evinced in his serious opera 'Zenobia,' produced at the theatre 'San Carlo' in 1756. This led to his being invited to Rome, where he brought out 'Alessandro nell'Indie,' which was eminently successful. Four years after appeared, in the same city, his comic opera, 'La buona Figliuola,' the drama by Goldoni, founded on Richardson's 'Pamela,' which has always been considered as Piccini's masterpiece, and is especially admirable for the originality, beauty, and appropriateness of its airs, as well as for the judicious manner in which the accompaniments are written, simple as they are, compared with those of a later age. It saved the manager of the Teatro delle Dame at Rome from ruin, and excited a degree of enthusiasm amounting to extravagance: dresses, wines, and even buildings took the name of the principal character in the piece, *La Cocchina*. The opera was given in London in 1766, with an effect but little less than it had produced at Rome. Next year saw his 'Olimpiade,' in which is the aria 'Se circa, se dice,' a chef-d'œuvre. He now was applied to from all quarters in Italy to furnish the various theatres with operas, and he composed many, most of which were very successful, though now forgotten—a circumstance which ought to excite no surprise, as we are informed by M. Ginguené, that in a very few years he had produced 134 operas, besides a vast number of masses, cantatas, and detached pieces.

Piccini having received a pressing invitation to Paris arrived there in 1776, and prepared himself to compose for the Académie Royale de Musique. His first difficulty was an utter ignorance of the French language; but Marmontel, by becoming his instructor, soon removed this impediment. He next had to contend against national prejudices, and also very formidable rivals, namely, Gluck, and afterwards Sacchini. For some account of the musical feuds in Paris to which his visit gave rise, we must refer to our notice of GLUCK. His 'Roland' (a drama by Quinault), by which he introduced himself to a Parisian audience, met with every possible success, and though it led to a furious war among the connoisseurs as well as amateurs of all degrees, the composer was, by its means, firmly established in the French capital, and chosen as director of L'Ecole de Chant, having previously been appointed singing-master to the queen.

The revolution drove Piccini back to Naples, after losing nearly all his property. He was at first received with smiles by his own sovereign; but having carried with him to his native country political opinions not likely to be pleasing to the ears of an absolute monarch, and which he had the imprudence to pour into them, he was disgraced, proscribed, and placed under the surveillance of the

police. In 1798 he contrived to return to Paris, where his friends obtained for him a pension of 5000 francs, besides a gratuity of 2400 more from the society Des Encouragemens Littéraires, with the addition of apartments in the Hôtel d'Angivillier. His various anxieties however brought on a paralytic affection, from which he recovered, and was received with kindness by the first consul, who appointed him inspector of the Conservatoire de Musique. But shortly after, oppressed by domestic afflictions, he experienced a return of his former attack, under which he finally sunk in 1800, and was interred at Passy, where a handsome tomb is erected to his memory.

PICCOLOMINI, ALEXANDER, titular archbishop of Patras, and coadjutor of the archbishop of his native place, was born at Siena in 1508. No events of his life are particularly worth recording, but the addition of apartments in the Hôtel d'Angivillier. His various anxieties however brought on a paralytic affection, from which he recovered, and was received with kindness by the first consul, who appointed him inspector of the Conservatoire de Musique. But shortly after, oppressed by domestic afflictions, he experienced a return of his former attack, under which he finally sunk in 1800, and was interred at Passy, where a handsome tomb is erected to his memory.

PICHEGRU, CHARLES, a general of the French republic, was born of humble parts, in 1761, at Arbois in Franche-Comté. He studied at the college of Brienne, enlisted as a common soldier, and accompanied his regiment to America. On his return he was promoted to be serjeant-major. He embraced the principles of the revolution, and in 1793 commanded the army of the Rhine. In the following year (1794) he succeeded General Hoche in the command of the army of the North, which was in a state of great disorder. He succeeded in restoring order and discipline in the army, and when the French went into winter-quarters, they were masters of the whole country to the line of the river Wahl, excepting Nimeguen, the isle of Bommel, and Breda. The winter proved exceedingly severe, and as soon as the ice was sufficiently strong to bear artillery, Pichegru made a simultaneous and completely successful attack on the above places, and crossed the Wahl in January 1795. The English were obliged to embark, the prince of Orange abandoned his army, and recommending the states to make no more resistance, fled to England, and nothing remained for the French but to take possession of the entire country. The plan of the early part of the campaign is said to have been traced out by Carnot, but Pichegru deserves the reputation that he gained by the energy and foresight he displayed in this winter campaign. On his return to Paris, he was appointed general of the army of Paris during the insurrection of the faubourgs in April 1795, and, by the confidence with which his presence inspired the troops, he mainly contributed to restore tranquillity. He then joined the army of the Rhine, where he entered into correspondence with the prince of Condé, with a view of restoring the Bourbons to the throne. His treason being suspected, he was superseded in the command of the army of the Rhine by Moreau, in 1796. The embassy to Sweden was offered to him and declined, and he retired to Jura, for which department he was elected in 1797. Thiers says "he had too much tact and was too prudent to conceive any project of counter-revolution at this time; but he received the royalists' money, and gave in return plenty of promises." He next became president of the Council of Five Hundred, and being detected in a conspiracy to overthrow the republican party, he was arrested September 4, 1797, sent to the Temple, and with Barthelemy, Willot, and several more, immediately transported to Cayenne. After eight months he made his escape to England, where he was well received as a partisan of the Bourbons. In 1804, Pichegru and Georges Cadoudal were employed with several of the Vendean leaders to organise a plot to overthrow the government of the First Consul. Being detected by the police, Pichegru was arrested at Paris on the 17th February, and sent to the Temple. While a process was being commenced against him, he was found on the morning of the 6th of April 1804, strangled, but whether he died by his own hand or not is uncertain. An attempt was made to affix the stigma of his murder on Bonaparte, but there do not seem to be grounds sufficient to establish this charge.

PICHLER, CAROLINE, one of the most prolific and popular novelists of Germany, was born at Vienna on September 7, 1769, the daughter of the Counsellor von Greiner and his wife Caroline, who had been reader to the Empress Maria Theresa. She was carefully educated at home, was taught Latin with her younger brother, and enjoyed the society of the most distinguished and intelligent men in that capital. Among them was Andreas Pichler, whom she married in 1796, and as her mother had not neglected to instruct her as well in household duties as in accomplishments, the union was a happy

one. Her frequent intercourse with eminent literary men and poets had led her very early to become a writer, and she had contributed many small poetical pieces to the German almanacs. But it was not till after her marriage, and by the persuasion of her husband, that some of her previously written papers were published under the title of 'Gleichnisse' ('Parallels'), but without her name, in 1800. Encouraged by the praises of some eminent men, she next issued the novel of 'Olivier,' which first appeared, still without her name, in 1802, in the 'Österreichische Taschenkalender.' To this succeeded 'Idyllen,' mostly youthful productions, in 1803; the novel of 'Leonore,' in 1804, in two volumes; and 'Ruth,' a poem, in 1805. Her next work was an attempt, in the novel of 'Agathocles,' published in 1808, to depict the influence of Christianity in elevating the character of mankind, in opposition to Gibbon's depreciatory remarks in his history. Hormayr and others, struck with the talent this work displayed, now advised her to relinquish poetry, and to devote herself to the popularising the history of her native country. This she did in the 'Count von Hohenburg,' 'The Siege of Vienna in 1565,' 'The Swedes in Prague,' 'The Reconquest of Ofen,' 'Henrietta of England,' and 'Frederic the Fighter,' in all of which the historical material is worked up with considerable skill, and a good picture afforded of the manners of the time. These all appeared between 1811 and 1832, and the earliest of them therefore preceded the labours of Sir Walter Scott in elevating the character of the historical novel. Their great fault consists in a diffuseness occasioning a frequent flatness, which pervades all her productions. She also wrote, on similar subjects, two or three dramas, but with no great success. Her other novels were 'Frauenwürde' ('The Worth of Women'), in 1808, and 'Die Nebenbuhler' ('The Rival'), in 1821, both of which obtained and deserved considerable applause and popularity. Her next work was the 'Zeitbilder' ('Pictures of the Times'), which was published in 1840. She died in Vienna on July 9, 1843. After her death appeared 'Denkwürdigen aus meinem Leben' ('Memorable Events of my Life') which was published in 4 volumes in 1844; and her collected works have been issued in 60 volumes.

PICKERSGILL, the name of two distinguished painters.

HENRY WILLIAM PICKERSGILL, R.A., born Dec. 3, 1782, at the commencement of his artistic career painted some historical and mythological subjects, but he eventually devoted himself exclusively to portrait-painting, and it is as a portrait-painter that he has obtained his present high position. Mr. Pickersgill has painted the portraits of a great number of members of aristocratic and wealthy families, and, especially since the death of Mr. Phillips [PHILLIPS, THOMAS, R.A.], he has had an unusually large proportion of sitters eminent in the world of politics, science, and letters; he has likewise been greatly in request to paint honorary and presentation portraits for public bodies, &c. His style is quiet and pleasing, and his likenesses are generally faithful and expressive. Mr. Pickersgill was elected R.A. in 1825; in 1855 he succeeded Mr. Uwins as librarian to the Royal Academy. In the Vernon Gallery is an excellent likeness, painted by Mr. Pickersgill in 1846, of Robert Vernon, the munificent donor of the Vernon Collection to the nation: the same collection also contains a portrait in a fancy dress by Pickersgill, entitled 'A Syrian Maid.' [See SUPPLEMENT.]

\* FREDERICK RICHARD PICKERSGILL, R.A., a nephew, we believe, of the preceding, was born in London in 1820, and studied at the Royal Academy. He exhibited his first oil picture, 'The Combat between Hercules and Achelous' in 1840; to which succeeded 'Amoret delivered by Britomart,' 1841; 'Œdipus,' 1842; 'Dante's Dream,' and 'Florinel in the Cottage of the Witch' (now in the Vernon Gallery), 1843; 'The Lady in the Enchanted Chair (Comus),' 1844; 'Amoret, Æmilia, and Prince Arthur in the Cottage of Sclaunder,' and 'The Four Ages,' 1845; 'The Flight of Stephano Colloprino,' 1846; and 'The Christian Church during the persecutions by the Pagan Emperors of Rome,' 1847. At the Cartoon exhibition in Westminster Hall, 1843, Mr. Pickersgill received one of the ten additional prizes of 100*l.* for his cartoon of 'The Death of King Lear.' In 1845 he sent a fresco to Westminster Hall; and in 1847 one of the three first-class prizes of 500*l.* was awarded to him for his painting of 'The Burial of Harold,' and the picture was purchased by the Commissioners, for an additional 500*l.*, for the House of Lords. Mr. Pickersgill was elected A.R.A. in 1847, and R.A. in 1857. Among others he has contributed the following works to the exhibition of the Royal Academy: 'Idleness,' 'Britomart unveiling Amoret,' 1848; 'Circé' and 'The Maids of Aloyna tempting Rogero,' 1849; 'Samson betrayed,' 'Pluto carrying away Proserpine,' and 'A scene during the invasion of Italy by Charles VIII.,' 1850; 'Rinaldo,' 1851; 'Pan and Syrinx,' and 'The Adoration of the Magi,' 1852; 'Angelo Participazio,' and 'Arrest of Francesco Novello da Carrara,' 1853; 'The death of Francesco Foscarini,' 1854; 'Britomart unarming,' 'Christian in the Valley of Humiliation,' and 'John sendeth his Disciples to Christ,' 1855; 'Love's Labour Lost,' and 'Christ blessing little Children,' 1856. Mr. Pickersgill's pictures are pleasing rather than impressive in character; his style is apparently formed on that of Sir Charles Eastlake, alike in range of subjects, composition, colour, and general treatment.

PICO, GIOVANNI DELLA MIRA'NDOLA, born in 1463, was the son of Giovanni Francesco Pico, count and sovereign of the little state of Mirandola and Concordia, which now forms part of the Modenese territory. He was a precocious youth, and gifted with a prodigious

memory; he studied almost every branch of learning which was then taught, philosophy, law, philology, general literature, and poetry. He learned Latin, Greek, Hebrew, Chaldaic, and Arabic. With regard to philosophy, he followed the Platonic, or rather the Neo-Platonic, or Alexandrine school. He travelled through France and Italy, and sustained public scholastic disputations in several universities. He was pleased to argue on both sides of a question, and he thus acquired a wonderful reputation for learning. When twenty-three years of age he went to Rome, where he drew up nine hundred propositions on all kinds of subjects, logic, ethics, physics, metaphysics, theology, mathematics, astrology, and the cabbala, inviting all the learned of Europe to argue with him upon each and all of them. This challenge was accepted in some instances, in which he is said to have come off victorious. But this display of erudition was not without danger, especially in that age. Out of the 900 propositions, 13 were picked out by officious persons which savoured of heresy, or incredulity, or something of the kind, and were denounced to Pope Innocent VIII., who ordered a strict inquiry upon so grave a subject. Pico wrote his defence, which was drawn up with great modesty, and in which he professed his submissive orthodoxy. In conclusion the pope condemned the propositions, but acquitted the author of any heretical intention.

At last Pico chose Florence for his residence, being attracted thither by the renown of Lorenzo de' Medici and his friends. (Machiavelli, 'Stor. Fiorent.,' vi.) He there disputed and wrote upon the Platonic philosophy, which he strove to reconcile with the scriptures. He also wrote a work against astrology, in 12 books, which is perhaps the best of his writings, and likewise a dissertation on ancient mythology, and a commentary on the book of Genesis. His works have long since been forgotten. He died at Florence, in November 1494, at the age of thirty-one, on the very day that Charles VIII. of France entered that city. His nephew Gian Francesco Pico wrote his biography.

PICTOR, FABIVS. [FABIUS PICTOR.]

PIERMARINI, GIUSEPPE, an eminent Italian architect, was born at Foligno, July 18th, 1734. His father (Pietro) was a merchant, and intended that Giuseppe should apply himself also to business; but his bent of mind led him to give his attention more willingly to mechanics and scientific pursuits. Having constructed for himself a geographical globe, 20 Roman palms (about 14½ English feet) in diameter, it attracted many visitors, and among others the celebrated mathematician Boscovich, who recommended his father to send him to Rome to pursue his studies systematically under proper instructors. He was nearly twenty years of age when he went to Rome, and, eager to make up for lost time, he applied himself with ardour to mathematics and architecture. He studied architecture first under Poggi, and next under Vanvitelli [VANVITELLI, LUIGI], who conceived a particular regard for him, and afforded him every opportunity of gaining practical instruction, the means for which were abundantly supplied by Vanvitelli's numerous engagements. On Vanvitelli's going to Naples to erect the palace of Caserta, he took Piermarini with him as his principal assistant in that extensive work. Again, when Vanvitelli was afterwards invited to Milan, by the Austrian government, for the purpose of altering and embellishing the palace there, or that now called the Palazzo Imperiale, for the Archduke Ferdinand, Piermarini accompanied him; and for Piermarini this proved a singularly important event. Meeting with obstacles and having other engagements that demanded his attention, Vanvitelli contented himself with making some general designs and explaining his ideas, and recommended his pupil as fully competent to supply his place. The work was accordingly transferred to Piermarini (1769), who thus unexpectedly found himself established at Milan, the city destined to become the chief theatre of his professional labours, with the title of architect to the archduke, and inspector-general of buildings. Afterwards on the Academy of Fine Arts at the Brera being established, he was appointed to the professorship of architecture. For thirty years Piermarini was constantly employed at Milan, which is indebted to him for most of the principal structures erected at that period. Had he executed nothing of any note besides the theatre Della Scala, that edifice alone would have secured his professional fame: but he erected, or else altered and improved, so many buildings as greatly to enhance the architectural character of the city. Among the private palaces or mansions by him are the palazzi Greppi, Moriggia, Lasnedi, Sannazari, Litta, Cusani, and the magnificent and extensive façade of the Palazzo Belgioioso; also one of the fronts of the archbishop's palace. Among his public buildings are the Monte di Pietà, the Monte Napoleone, the Luoghi Pii, the Teatro della Canobbiana, and the Porta Orientale, his designs for which were adopted in preference to Cagnola's. [CAGNOLA.] He likewise conducted many general public improvements, such as several new streets, the Piazza del Tagliamento, and almost the whole of the new quarter called the Contrada di S. Redegonda; to which may be added the Public Gardens and their buildings. Nor were his labours confined to Milan itself, for he was the architect of the elegant imperial villa at Monza; also of the Villa d'Adda in Cassano, and of the Villa Cusani at Desio, at which last place he improved and completed the church.

Some years before his death, political changes and the state of public affairs induced him to withdraw altogether from Milan, and retire to his native town Foligno, where he occupied himself with his

favourite studies, and formed a valuable collection of books, especially rich in works upon art. There he died, February 18th, 1808. The Academy of the Brera, at Milan, honoured his memory with a monument in the portico of their building.

PIERRE, BERNARDIN DE ST., was born in 1787. After studying at Paris he entered the department of civil engineers under the government, or 'ponte et chaussées,' as it is styled in France. A reduction however which took place some time after left him unemployed, and he entered the army as military engineer; but having quarrelled with his superior, he was dismissed from the service. He went to Malta with the promise of a commission, but found himself disappointed. He next visited Russia, where he obtained a situation as engineer in the Russian service, in which he remained some time, and executed several surveys. He drew up the project of a colony of foreigners, to be established on the eastern bank of the Caspian Sea, with a republican government, under the protection of Russia; and presented his plan to the favourite Orlov, who told him coldly that such plans could not suit the policy of Russia. Becoming weary of that country, he went to Poland, with the intention of fighting against the Russians; but a love intrigue which he had at Warsaw detained him there for about a year without doing anything. From Poland he went to Dresden and Berlin, and at last returned to France, when the Baron de Breteuil procured him a commission as engineer in the Isle of France, or Mauritius, on the understanding that he was to proceed to the island of Madagascar to endeavour to realise there his favourite plan of a republican colony. While on the voyage he found out that his companions, instead of being intent on establishing liberty on the Madagascar coast, were proceeding thither for the purpose of procuring a supply of slaves. He quarrelled with them, and having landed in the Isle of France, he lived two years there; after which he returned to Paris, where he became acquainted with D'Alembert, Mademoiselle d'Espingasse, and other literary characters, who encouraged him to publish a narrative of his voyage. From that time his career as a literary man began. He afterwards wrote his pretty story of 'Paul and Virginia,' one of the best works of its kind in the French language, and which has established his rank among French writers. His other works are:—1, 'Etudes de la Nature;' 2, 'La Chaudière Indienne;' 3, 'Harmonies de la Nature;' 4, 'A Narrative of his Journey to Russia;' 5, 'Essais sur J. J. Rousseau,' besides several plays. He had a situation under the government, when the revolution broke out and again reduced him to poverty. The principles of the revolution were however in accordance with his own theories of government, but when the reign of terror came he was in some danger, especially as he ventured publicly to profess his belief in God. At last he found a protector in Joseph Bonaparte, brother of the victorious general of the army of Italy, who generously assigned him a pension. Napoleon himself showed him kindness; he gave him the cross of the Legion of Honour, with a pension, and placed his son in a lyceum and his daughter in the imperial school of Ecouen. He died January 21, 1814.

Bernardin de St. Pierre was a kind of visionary for the greater part of his life, and his writings bear the stamp of his character. There is a good edition of his collected works in 2 vols. 4to, with his biography, 'Œuvres de J. H. Bernardin de St. Pierre, mises en ordre par L. Aimé Martin,' Paris, 1836.

Bernardin de St. Pierre must not be confounded with CHARLES ANNE DE ST. PIERRE, a philanthropist, born 1658, died 1743, and known for his project of a perpetual peace, which he laid before the diplomatists assembled at Utrecht, 'Projet de Paix Perpetuelle,' Utrecht, 1718; also a 'Projet pour perfectionner l'Education,' and numerous other works, which Cardinal Dubois used to call the dreams of an honest man, but some of which however have been since acknowledged to be susceptible of being realised.

PIGAFETTA, ANTONIO, was born at Vicenza, in the latter part of the 15th century, of a patrician family, and applied himself to the study of mathematics and geography. Being highly interested in the discoveries which were then being made by Spanish and Portuguese expeditions, he set out for Spain in the suite of the papal nuncio to that country. Finding that an expedition was going to set out from Seville under the direction of Magalhaens, he asked and obtained of the Emperor Charles V. permission to join it as a volunteer. The expedition sailed from San Lucar in September 1519. [MAGALHAENS.] Pigafetta, being a volunteer on board, and having no obligatory duties to perform, wrote day by day a journal of the voyage. Being gifted with a robust frame and healthy constitution, he bore the hardships and escaped the diseases which destroyed most of the crew. He was present at the landing on the Philippine Islands, where Magalhaens lost his life, and was wounded in the affray. He returned to Spain in the admiral ship Victoria, the only one that remained out of the five which had sailed together. He landed at Seville in September 1522, having performed in the course of three years the first voyage round the globe. After repairing to church with his travelling companions in solemn procession and barefooted to thank God for their safe return, Pigafetta went to Valladolid, where he presented a copy of his journal to Charles V.

Pigafetta afterwards returned to Italy, and, at the request of Pope Clement VII., he wrote a more elaborate narrative of his voyage, with a description of the strange countries he had visited, and short vocabularies of the languages of the Philippine and Molucca Islands.

This narrative he dedicated to the Grand-Master of Rhodes, L'Iale Adam, and he sent a manuscript copy to the Princess Louisa of Savoy, from which a French abridgment was made by a certain Fabre, and published at Paris without date. Of this abridgment, Ramusio inserted an Italian translation in the first volume of his 'Raccolta di Navigazioni e Viaggi,' fol., Venice, 1550. At last Amoretti discovered in the Ambrosian Library at Milan a complete copy of Pigafetta's original narrative, which he published, 'Primo Viaggio intorno al Globo,' 4to, Milan, 1800, with plates, drawn from the maps and sketches which accompanied the manuscript. Pigafetta's was the first account that Europeans had of the islands in the Pacific Ocean. Of Pigafetta's personal history after his return to Italy nothing is known, except that he was made a knight of the Order of St. John.

PIGALLE, JEAN BAPTISTE, a celebrated French sculptor, was the son of a carpenter, and was born at Paris in 1714. He was the pupil of Robert le Lorrain and the elder Lemoyne, and studied three years in Rome. On his return to Paris he attracted great notice and obtained a permanent reputation for a statue of Mercury. The king (Louis XV.) purchased the statue, and the Royal Academy of Painting and Sculpture elected Pigalle a member. Louis XV. ordered the sculptor to make a Venus as a companion to this Mercury, which however was considered unequal to it, and the king presented them both to Frederick the Great of Prussia: they are still at Sans Souci. Another celebrated work by Pigalle is the statue of Louis XV. at Rheims; but his masterpiece is the great allegorical monument of the Maréchal de Saxe, or Moritz von Sachsen, who commanded the French at Fontenoy, in the church of St. Thomas at Strasbourg, commenced, by the order of Louis XV., in 1765, and finished in 1776. It is a group of five figures against a pyramid, which proclaims the glories of the marshal: the idea is singular—the marshal is represented in his own costume, and crowned with laurel, entering a tomb; on one side is Death, as a skeleton; on the other, Hercules mourning; an impersonation of France is endeavouring to restrain the marshal and avert death; a weeping Genius is also in attendance, with an inverted torch; many military trophies are introduced as accessories. The marshal is most elaborately modelled. It has been several times engraved.

Pigalle was much employed by Madame Pompadour, and his great success is said to be originally owing to her patronage. There is no great work by Pigalle in Paris: the tomb of the Comte d'Harcourt, in Notre Dame, is the principal. Among his smaller works, a figure of a child holding a cage from which a bird has escaped, obtained him great applause. He is considered one of the best sculptors of the 18th century, though his taste cannot be called classical. He died in 1785, as chancellor of the ancient Academy of Painting and Sculpture. The bronze equestrian statue of Louis XV., by Bouchardon, which was in the Place Louis XV., and was destroyed by the populace in 1792, was finished and put up by Pigalle.

PIGHIIUS, STEPHANUS VINAND, was born in 1520, at Kempen in the province of Overysel, in the Netherlands. He was nephew, on his mother's side, of Albert Pighius, a learned controversialist of the 16th century, who lived at Rome, and wrote against the Lutherans. Stephan Vinand, after studying in his native country and at Cologne, entered the ecclesiastical profession, and repaired to Rome, where he was well received on account of his uncle's reputation (his uncle being then dead), in honour of whom he added the name of Pighius to his paternal name of Vinand. He spent eight years at Rome in studying antiquities, examining monuments, copying inscriptions, &c. This labour was preparatory to the great work which he afterwards wrote on the Roman annals. On his return to the Netherlands he was made librarian to Cardinal Granvelle, after whose death he was appointed by the Duke of Cleves preceptor to his son, with whom he travelled through Italy about 1575. The young man however died at Rome, and Pighius returned to his native country, and retired to the town of Xanten, of which he was a canon. He died in 1604, after publishing the first volume of his great work 'Annales Romanorum,' leaving the manuscript of the remainder to the Jesuit Andreas Schott, who published the two following volumes. The full title of the work is 'Annales Magistratum et Provinciarum S.P.Q.R. ab Urbe Condita, ex Auctorum Antiquitatumque variis Monumentis suppleti; in quibus Reipublicae Mutationes, Potestatum ac Imperiorum Successiones, Acta, Leges, Bella, Clades, Victoriae, Manubiae atque Triumphii, necnon industria Stemmata Familiarumque Propagines ad Annos et Tempora sua reducuntur,' 8 vols. folio, Antwerp, 1615. Pighius gives a chronicle of Rome year after year, from the building of the city, to the death of Vitellius, A.D. 69, the names of the consuls, tribunes, censors, aediles, quaestors, praetors, pro-consuls, pro-praetors, and other governors of the provinces, wherever their names can be ascertained from ancient writers or monuments. He also notices briefly the principal events of each year, carefully quoting his authorities. Wherever an inscription bears upon a fact, he transcribes it. He also mentions the titles of the principal laws and senatus consultus, under their respective years. It is altogether a work of vast research and erudition, which cost the author more than twenty years' labour. His chronology has been found faulty, as most Roman chronologies are. Pighius also published a good edition of Valerius Maximus, with valuable notes, Antwerp, 1585.

PIGNOTTI, LORENZO, was born in 1739, at Figlioli in the Val d'Arno. He studied medicine at Pisa, where he took his degree of

Doctor of Medicine. After practising for some time at Florence, he was made professor of natural philosophy at Pisa, where he spent the greater part of his life, and died in 1812. His principal work is the history of Tuscany: 'Storia della Toscana sino al Principato, con diversi Saggi sulle Scienze, Lettere, ed Arti,' 9 vols. 8vo, which was published after his death. He begins his history with the ancient Etruscans, and continues it through the long period of Roman dominion. He describes the vicissitudes of the Tuscan cities after the fall of the Western Empire, the glorious period of the independence of Florence, Pisa, and Siena, and concludes his work with the fall of the Florentine republic and the assumption of supreme power by the second house of Medici. Galluzzi has written the latter part of the history of Tuscany: 'Istoria del Gran Ducato di Toscana sotto il governo della Casa Medici,' 5 vols. 4to, Florence, 1787. Pignotti came late for his historical subject, after numerous and able writers who had treated the same matter either wholly or in part, and the historical portion of his work may be considered rather a compilation than an original composition, yet he contributed to it something new by means of his own researches into the archives and libraries. But the essays which he has added in distinct chapters appended to the political narrative, on the Italian language, on the art of war in the middle ages, on the revival of sciences, letters, and the arts, and on the commerce of the Tuscans, are entirely his own. His sentiments are liberal in the genuine sense of the word; he is no party man; he always avoided controversial politics, and maintained his own independence of opinion. Pignotti wrote also a series of fables or apologues in Italian verse, which have been often reprinted. Pignotti is acknowledged to be one of the best Italian fabulists. He also wrote some odes and other poetical compositions: 'Poesie di Lorenzo Pignotti,' Florence, 1820. Pignotti was buried in the Campo Santo of Pisa, where a monument has been raised to his memory.

(*Elogio di Lorenzo Pignotti*, by Antonio Benci, in the Florence 'Antologia,' 1821.)

PILATE, PONTIUS, is chiefly known by the part which he occupies in the New Testament history. Nothing is recorded of his extraction. Some of the early Christian writers have dwelt upon the etymology of his names, and have supposed them descriptive of his character; but, as Bishop Pearson says, "in vain." They are simply the names and cognomen of the Romans, as Pontius Aquila, Pontius Herennius, &c. Pilate was a man of the equestrian order, and he was appointed governor of Judæa by Tiberius, A.D. 26. By the variety of terms used to designate Pilate in this office, it seems difficult to understand precisely the nature of his governorship. Tacitus calls him procurator; Philo Judæus and the Greek fathers *ἐπιτροπος*. In the Greek Testament he is called *ἑταίρος*, and in Josephus both *ἐπιτροπος* and *ἑταίρος*. In King James's translation he is called governor, and so also in the Rheish translation. Dr. Campbell calls him procurator, and this is no doubt the best word to point out the office of Pilate, though it is evident that the power of life and death, which he had over the Jews, exceeded that which procurators usually possessed.

The character of Pontius Pilate is sufficiently developed in the New Testament. Philo Judæus and Josephus represent him in a similar light, as a self-willed, avaricious, and hard-hearted man. Josephus states moreover that the Samaritans, having been treated by Pilate with great barbarity, made a complaint to Vitellius, governor of Syria, who ordered him to Rome to give an account of his conduct to the emperor. This was after he had been procurator of Judæa ten years. Before he arrived at Rome, Tiberius was dead; but Eusebius and others relate that Pilate was banished to Vienne in Gaul, and that, unable to endure his disgrace, he killed himself with his own hand about the year 38.

PILES, ROGER DE, who belonged to one of the best families in that part of France of which he was a native, was born in 1685, at Clamecy, in the province of Le Nivernois (now the department of La Nièvre). His parents gave him a solid education, but as he evinced a decided inclination for the art of painting, he was allowed to follow the bent of his genius. Circumstances however prevented him from devoting himself exclusively to his art. Having been engaged by President Amelot in 1662 as tutor to his children, he accompanied young Amelot to Italy, and on his return published some essays on painting. He was an intimate friend of Alphonse Dufresnoy, whose Latin poem on painting he translated into French, with explanatory notes. Amelot de la Housaye, his pupil, having been appointed ambassador to Venice, De Piles was employed as his secretary of legation. He also accompanied him on some other missions: thus he went to Lisbon in 1685, and to Switzerland in 1689, and was the bearer to Louis XIV. of the treaty of Neutrality, which his ambassador had just concluded with the thirteen cantons. The reputation which he had acquired both in the arts and public affairs, induced Louis to send him to the Hague, under the pretext of following his profession as a painter, but in fact to enter into secret negotiations with a party in Holland which was desirous of peace. Being discovered, he was arrested by order of the Dutch government, and during his confinement he wrote his 'Lives of the Painters.' When he returned to France, a pension was granted him. Amelot being appointed ambassador to Madrid, De Piles accompanied him, but his health being very indifferent, the climate of Spain did not agree with him, and he was obliged to return to Paris, where he died on the 5th of May 1709.

Though his diplomatic occupations prevented him from devoting himself to the practice of his art, he was well versed in its theory; and there exist several of his portraits which are much esteemed, especially those of Boileau and Madame Dacier. His printed works are distinguished by a clear and unaffected style and refined taste; but his predilection for the Flemish school has sometimes rendered him partial in his judgments. Besides his 'Lives of the Painters,' which have been translated into English, he wrote several other works on painting. A collection of the whole was published at Paris in 1767, in 5 vols. 12mo. He likewise composed 'Abrégé de l'Anatomie accommodé aux Arts de la Peinture et de Sculpture,' folio, Paris, 1667, with plates, all after Titian.

PILON, FREDERICK, a minor dramatist, born about 1750 in Cork. He studied medicine, but at an early age went on the stage, and played for some years with little success at Edinburgh and other places in the north. Abandoning the stage, he sought his fortune in London, where he was for some time employed on the 'Morning Post' newspaper, in writing occasional tracts, and in the composition of theatrical pieces, chiefly for Mr. Colman. He was a man of jovial temperament, and was at one time obliged to take refuge in France from his creditors. He died in 1788, and was buried at Lambeth. His printed plays, in number twelve or thirteen, are hasty and imperfect productions. A place is usually found in dramatic collections for the two best of them, the farce of 'The Deaf Lover,' and the comedy 'He would be a Soldier.'

PILON, GERMAIN, a celebrated French sculptor of the 16th century, or of the 'Renaissance,' who died at Paris in or about 1590, though some French writers place his death as late as 1605: the year and the place of his birth are doubtful. Pilon was the favourite sculptor of Henri II. and Catherine de' Medici, and there are still many works by him in Paris, executed in that reign. Among his most remarkable works are the statues of the tomb of Henri II. in St. Denis, Le Tombeau des Valois; but the group of three graces clothed, on a triangular pedestal, supporting on their heads a gilded bronze urn, which contains the hearts of Henri and Catherine, formerly in the convent church of the Celestins, but now, owing to the praiseworthy exertions of Alexander Lenoir, preserved in the Louvre in the 'Musée des Sculptures de la Renaissance,' is considered his masterpiece. Other works by Pilon, and many interesting sculptures of the period, are in the same collection. Pilon was very successful in the working of draperies. There are works extant by him in clay, stone, alabaster, marble, and bronze. Alabaster was very much used by the French artists of the 16th century; it was easily procured from the alabaster quarries of Lagui near Paris.

PILPAY, as it is commonly written, but more correctly BIDPAI. With the exception of the Bible, there is probably no work that has been translated into so many languages, and at so early an epoch, as the collection of tales which passes by the title of the 'Fables of Bidpai,' or Pilpay. A tradition very generally received attributes to the Hindoos the first composition of this work, and recent discoveries in Oriental literature have fully confirmed the truth of this report.

Fables and tales in which animals are introduced as actors, and in which moral principles and maxims of prudence are inculcated by example and precept, seem from an early age to have been current among the Hindoos. Several collections of such stories, written in Sanskrit, are still in existence. The oldest of them, and evidently the parent-stock of the 'Fables of Bidpai,' is the work known in India under the name of the 'Pancha Tantra,' or the 'Five Sections,' so called from its being divided into five books. This work has been translated from the Sanskrit into the Tamul language, and again from the Tamul into French, by the Abbé Dubois. An analytical account of it, drawn from the Sanskrit original by Mr. H. H. Wilson, is printed in the 'Transactions of the Royal Asiatic Society,' vol. i., pp. 155-200. An abridgment of the 'Pancha Tantra,' called the 'Hitopadées,' or 'Salutary Instruction,' has become more generally known in Europe than the great original work. It has been translated into English by Sir Charles Wilkins (8vo, Bath, 1787), and by Sir William Jones ('Works,' vol. vi., 4to edition): several editions of the Sanskrit text have been published. Both the 'Pancha Tantra' and the 'Hitopadées' consist of prose intermixed with poetry: the stories are told in prose, but the narrative is constantly interrupted by sentences in verse, borrowed from the works of nearly all the celebrated poets that preceded the epoch of their composition. The names of the compilers of the 'Pancha Tantra,' as well as of the 'Hitopadées,' are unknown. Vishnuserman, who is sometimes called the author of the 'Hitopadées,' is only one of the principal interlocutors in both works, and is the narrator of the greater number of fables contained in them. The age at which the 'Pancha Tantra' must have been composed can however, at least approximately, be determined. In the first book a passage of an astronomical work by Varāhamihira is cited, which occurs, without variation, in the two best manuscripts of the original that Mr. Wilson had an opportunity of consulting; and as it is pretty well ascertained that Varāhamihira wrote during the latter half of the 5th century ('Asiatic Researches,' vol. ix., p. 263; Bohnen, 'Das alte Indien,' ii. 280), it follows that the 'Pancha Tantra' must have been composed subsequently to that epoch.

According to an ancient tradition (recorded in the introduction to the extant Arabic and Persian editions of the 'Fables of Bidpai,' in

the Sháhnameh of Ferdusi, and by nearly every oriental writer on the history of the Sassanide dynasty), Barzúyeh, an eminent physician at the court of the Persian king, Nushirwan, who reigned between A.D. 531 and 579, visited India in search, it is said, of a plant which had been reported to possess the power of restoring dead bodies to life; and on his return to Persia, instead of that fabulous drug, imported into his country a translation into Pehlvi of the collection of stories now under our consideration. Some circumstances to which Baron de Sacy draws our attention, render it not unlikely that Barzúyeh may have been a Christian monk. (See the 'Mémoire' prefixed to De Sacy's edition of 'Callah wa Dimnah,' pp. 36, 37.) Certain it is that this Pehlvi version of the Indian tales, or rather the Arabic translation made from it two centuries later, became the channel through which these fables subsequently found their way to nearly every other nation of western Asia and of Europe. The author of the Arabic translation was a Persian, who had originally professed the religion of the Magi, and was named Rúzbeh, but on his conversion to the Mohammedan faith took the name of Abdallah-ben-Mocaffa. He lived during the first half of the 8th century, and was murdered by order of the Abbasside kalif, Mansur, probably between the years 137 and 139 of the Hegira (A.D. 754-756). His Arabic translation of these fables is in the East usually called the 'Book of Callah and Dimnah.' It is thus designated in allusion to the names of two jacks which act a conspicuous part in the first story of the Arabian version, and which we recognise in the Sanskrit original under the forms Carataca and Damanaca. (See the beginning of the first book of the 'Pancha Tantra,' where this is likewise the first story; and the first story in the second book of the 'Hitópadesa,' p. 47, edit. Sohlegel.) In the title of a Syriac translation mentioned by Ebed Jesu, and attributed by him to Búd Periódenta, the same two animals are called Callag and Damag. Every trace of this translation is now lost; but if Assemani is correct in saying that Búd lived early in the 6th century, this Syriac translation must have been made from the Pehlvi version, or perhaps from the Indian original itself.

The narrator of the stories is, in the Arabic version, called Bidpai: in the Sanskrit original no name similar to this occurs, and the explanations of it proposed by several Oriental scholars do not appear to us satisfactory; but it is certain that the name Pilpay, by which the work is most generally known in Europe, is a corruption of Bidpai.

From the Arabic text of Abdallah ben Mocaffa sprung several translations into the (modern) Persian. One of the earliest into verse is attributed to Rudeghi, a blind poet who flourished during the earlier part of the 10th century. It was followed by a translation into prose by Nasrallah, who wrote about the year 615 of the Hegira (A.D. 1121). The most admired Persian translation is however that written about the commencement of the 16th century, by Hussain Váz Cáshefi, and known under the title of 'Anwári-Sohelli;' though less exact and complete than the later one by the celebrated visir Abulfazi, named 'Ayá-i-Dánsh.' The Anwári-Sohelli was, soon after its appearance, translated into Turkish, under the title 'Humáyún-Námeh,' by Ali Chelebi, who dedicated his performance to the Osman sultan, Suleiman I.

The earliest translation of the work of Abdallah ben Mocaffa into a European language is the Greek version by Simeon, son of Seth, who flourished towards the close of the 11th century. S. G. Stark published it, from a Hamburg manuscript, in Greek and Latin, but without the introductory chapters prefixed to the work partly by Barzúyeh and partly by Ebn Mocaffa, under the title 'Specimen Sapientis Indorum Veterum, &c. (Berlin, 1697, 8vo.) The chapters wanting in the Hamburg manuscript were edited, though still incomplete, from a manuscript preserved at Upsala, by J. Floder. ('Prolegomena ad librum Στεφανίου καὶ Ἰχνηλάτης, Upsala, 1780.) It does not appear that translations into other European languages flowed from the Greek text of Simeon.

The means by which the Indian stories first became known to most of the nations of Europe, was a translation from the Arabic into Hebrew, made by Rabbi Joél, a learned Jew, probably a native of Spain, who seems to have flourished during the 12th century. Of his Hebrew version of the book of 'Callah and Dimnah,' a single incomplete manuscript has been preserved in the Royal Library at Paris, of which Baron de Sacy has given an ample account in the ninth volume of the 'Notices et Extraits des MSS. de la Bibliothèque du Roi.' The Hebrew text of Rabbi Joél was, in the 18th century (probably between A.D. 1262 and 1278), turned into Latin by Johannes de Capua, a converted Jew, who dedicated his translation to his protector, the Cardinal Matthew de' Rossi (Matthæus de Rubeis). It bears the title 'Directorium Humane Vite, alias Parabolæ Antiquorum Sapientum;' and has been printed once, without date, but probably in 1480. This Latin interpretation was again translated into Spanish by Maestro Fadrique Aleman de Basiles, under the title 'Exemplario contra los Engaños y Peligros del Mundo' (printed at Burgos, 1498, fol.), and into German by Count Eberhard of Würtemberg, under the title 'Beispiele der Weisen von Geschlecht zu Geschlecht' (printed at Ulm, 1488). The 'Exemplario contra los Engaños' seems to have been the source from which Agnolo Firensuola drew the substance of his 'Discorsi degli Animal;' here, however, the scenes of the several narratives are laid in various real localities, transferred to Italy. (See

'Opere di Messer Agnolo Firensuola,' Florence, 1763, 8vo, tom i. pp. 6-89.) Another Italian version of these stories, in Doni's 'Filosofia de' Sapienti Antichi, is little more than a translation of the Latin text of Johannes de Capua. In the Royal Library at Paris there is a manuscript of another Latin translation, which was made in the year 1313 by Raymundus de Byterris (Raimond de Béziers), by order of Queen Johanna of Navarra, the wife of Philip le Bel. The author says that he had a Spanish original before him, which is now lost, but which was probably a translation from the Hebrew of Rabbi Joél.

Besides the Latin version from the Hebrew by Johannes de Capua, there seems to have existed another Latin translation made from the Arabic, which became the source of a translation into the Castilian language, said to have been made about the year 1289 at the command of King Alfonso X. of Castilia.

(See the *Mémoire Historique sur le livre intitulé Callah et Dimna*, prefixed to Baron de Sacy's edition of the Arabic text of the Fables of Bidpai, Paris, 1816, 4to, and the dissertations on the same subject, and by the same authors, in vols. ix. and x. of the *Notices et Extraits des MSS. de la Bibliothèque du Roi*; H. H. Wilson's *Analytical Account of the Pancha Tantra*, in the *Transactions of the Royal Asiatic Society*, vol. i. p. 155; and *Bidpai's Fables, aus dem Arabischen von P. Wolf*, 2 vols. 12mo, 1837.)

PINCIANO, ALONZO LOPES, MEDICO CESARCO (physician to Charles V.), born about the middle of the 16th century, is known in Spanish literature as having attempted the epic in his 'El Pelayo;' he also wrote in a series of letters the 'Philosophia Antiqua Poetica,' an extraordinary performance for the age. It appeared at Madrid for the first time in 1596. Pinciano was the first modern scholar who ventured to think for himself on the subject of poetic art; he established a philosophical system, and went farther than his master Aristotle. To him is due the credit of having by a careful and minute study of all the writings of Aristotle, discovered that his 'Poetic' was but the first part of the work so entitled: a fact which had escaped the notice of all previous commentators. Pinciano endeavoured to restore dignity to poetry, and to develop its true character; he treats minutely of the senses, of the affections, the faculties of the understanding, and the pleasures of cultivated minds.

PINDAR, son of Daiphantus (or, as others say, of Pagondas, or Scopelinus and Clidice, was born at Cynoscephala, a village between Thebes and Thespia, in Ol. 65, 3 (a.c. 518), according to Clinton ('Festi Helen.' iii. p. 609), or in Ol. 64, 3 (a.c. 522), according to Böckh (Pindar, tom. iii., p. 14), and died, according to the former computation, in a.c. 439, according to the latter in a.c. 442, having completed his eightieth year. He was born at the time of the Pythian games (about the beginning of July: Arnold; Thuoyd., ii. p. 418), and he speaks himself ('Fragm. incert., 102) of "the festival recurring at the beginning of every five years, at which I was first laid upon the bed in swaddling clothes." His wife was Megacles, daughter of Lysitheus and Callina: he seems also to have been married to a woman named Timoxena. He had a son Daiphantus, and two daughters, Eumetis and Protomache.

Pindar's family were hereditary flute-players; their profession was of great reputation at Thebes, though flute-playing did not come much into fashion at Athens till after the Persian war. Accordingly, he seems to have applied himself at first to that branch of poetry which was peculiarly adapted to a flute accompaniment; and his first instructor was Lasos of Hermione, a celebrated dithyrambic poet, whose favourite instrument was the flute. (Plutarch, 'De Mus.' c. 29.) But Thomas Magister, in his 'Life of Pindar,' says that his father began to teach him the flute, and finding that his capacity was of a higher order, placed him under Lasos, who initiated him into lyric poetry. It is clear however, from what we know of the style of Lasos, that he could not have had much to do with the formation of Pindar's style as a lyric poet. It is more probable that Pindar, as is expressly stated, profited chiefly by the advice and example of Corinna, the Tanagran poetess, whose odes were of the same mythical character with those of Pindar, and who was not an imitator of the Lesbian school, but a teacher of choruses, like Pindar himself. Plutarch tells us ('De Glor. Athen.' c. 4) that Corinna recommended Pindar to introduce mythical narratives into his odes, for that this was the proper business of the poet—the rhythm, music, and ornamented diction being only vehicles of the subject-matter; and that when, in obedience to her suggestion, the young poet composed a hymn full of Theban mythology, she remarked with a smile, that "he ought to sow with the hand, and not with the whole sack." This Corinna frequently contended against her pupil in the musical contests, and gained five victories over him (Pausan., ix. 22; 'Elian., 'V.H.,' xiii. 24), though she found fault with the poetess Myrtis for doing the same thing: "I blame the clear-toned Myrtis, I, that she, a woman born, should enter into rivalry with Pindar." (Apollon., 'Dyscol., 'De Pronom.,' p. 64, B.) He had another instructor, Agathocles, or Apollodorus, of Athens, who allowed him to teach the cyclic or dithyrambic chorus there, while he was a mere boy. Pindar must have commenced at a very early period his career as a professional composer of choral odes for special occasions. At the age of twenty he composed an Epinician ode in honour of Hippocles, or Hippocleas, of Pellina in Thessaly, who had won the prize at the Pythian games; and this ode, which is still extant ('Pyth.,' x.,

composed in B.C. 502), exhibits no marks of a want of skill or practice on the part of the author. He soon rose to the highest rank in his profession, and spent his long life in lucrative intercourse with the tyrants and wealthy men of Greece and its colonies. The free states vied with one another in honouring the great lyric poet. He had the *προφρα*, or complimentary franchise, at Athens, Ægina, and Opus; and although the people of Ceos had two celebrated poets of their own, namely, Simonides and Bacchylides, they employed Pindar to compose a *προσδῖον*, or procession-ode, for them. At Delphi he had an iron chair to sit upon when he sang the Apollinean hymns (Pausan., x. 24, sec. 4), and, by order of the Pythia, he received a portion of the banquet of the Theoxenia. (Plutarch, 'De Sera Num. vindict.', c. 13.) A long time after his death, and not, as the pseudo-Æschines states, in his lifetime, his statue was erected at Athens. He was courted by Hiero, tyrant of Syracuse; by Thero, tyrant of Agrigentum, and his brother Xenocrates; by Thrasydæus, son of Thero, and Thrasybulus, son of Xenocrates; by Arcesilaus IV., king of Cyrene; by Thorax, one of the Aleuads; and by Alexander, the son of Amyntas, king of Macedonia, who was an active patron of lyric poetry. Pindar, as might have been expected, from the nature of his employment, was very religious, or rather very observant of particular superstitions. He had consecrated a temple to the Magna Mater and Pan near his own house at Thebes; this was probably in his character of hereditary flute-player, for the Magna Mater and Pan were Phrygian deities, in whose honour the first flute-music was composed. He also dedicated statues to Jupiter Ammon, and to Mercury of the Agora, and also perhaps to Apollo Boëdromius.

The entire specimens of Pindar's works which have come down to our time (with the exception of the 11th Nemean) belong to one class, that, namely, of the Epinician or triumphal odes. Besides these however, Pindar wrote dithyrambs, psalms, dirges, drinking songs, mimic dancing songs (*πρωχματα*), songs of maidens (*παρθενια*), and encomia or panegyrics on princes, of all which we have numerous fragments. From Horace's enumeration of the various kinds of poetry which Pindar cultivated ('Carm.,' iv. 2), we may infer that Pindar was not regarded by the ancients as pre-eminently or exclusively a composer of Epinician odes. On the contrary, it is likely that Pindar was quite as celebrated in other departments of lyric poetry; and from his education under Lasos, and his hereditary profession of a flute-player, it is not improbable that the dithyramb, which is placed first by Horace, was his favourite style of composition. We have still a very beautiful fragment of a dithyramb by Pindar; and if the others were like it, we may well regret the loss which we have sustained. As however all Pindar's extant odes (with the one exception just mentioned, of an ode composed for the installation of a Prytanis at Tenedos) were composed for the celebration of some victory in the public games, we must be content to form our judgment of his poetical power from these specimens, and in order to this we must bear in mind the very peculiar nature of the occasion for which they were composed, for it was this which gave the ode itself the particular character by which it was distinguished. An Epinician ode was the celebration of a victory gained at one of the public games, either by the speed of horses, by strength of body, by skill in gymnastic exercises, or by proficiency in music. Along with the victor's name the herald proclaimed that of his native city, which was considered to derive great renown from the achievement of its citizen. The games themselves being a religious institution, it is obvious that the celebration of the victory must also have had something of a religious character. It was in fact a mixture of the solemnities of religious worship with the joy and revelry of the feast, a mixture very common among the Greeks, whose sacrifices to the gods were often only a constituent part of the banquet. The victor either went in procession to the altar of the god of the games, as at Olympia, in the evening of the contest, accompanied by a 'comus,' which sang the *καλλικος* of Archilochus, or an ode composed for the occasion by some other poet; or he celebrated his victory on his return to his native city by a procession to a temple, a sacrifice, a banquet, and a comus. The poet praised both the victor himself, and his native city: the victor was praised either for his wealth (*δολος*), as in the case of the horse-race, for it was only the wealthy who could contend for this prize, as Pindar himself says; or for his valour (*ἀρετή*), if he had been exposed to any danger in the contest. The city of the victor is generally praised with some reference to the mythical legends of its early history. This mythical element always formed the chief part of Pindar's ode, and it is allowed to run into every sort of digression, not however at random, but with some fixed purpose, which we have generally no difficulty in determining. Although Pindar's Epinician odes were performed by a chorus, the poet is always considered to speak in his own person. He avails himself of this, to deliver advice to the victor whose praise he is singing; to defend himself against the calumnies of his enemies; to criticise and depreciate rival poets, such as Simonides and Bacchylides; and sometimes even to address the person whom he employed as his *χοροδιδασκαλος* when his own absence prevented him from teaching the chorus. Thus in 'Olymp.' vi., v. 88, he addresses the Stymphalian Æneias, who had been sent to receive the ode, and to instruct the chorus of his countrymen in the words and music of it. He often makes boastful comparisons between himself and other poets, as when he says ('Ol.,' ii., 83):—"I have many swift arrows within

BIOG. DIV. VOL. IV.

my quiver; they have a voice for the wise; but for the common herd they need an interpreter: wise is he who has learned much by his natural abilities; but those two (Simonides and Bacchylides), whose expertness comes from practice only, babbling in their garrulity like a brace of jack-daws, clamour in vain against the god-like bird of Jove (i.e., himself)." The most striking feature in Pindar's poetry is its picturesqueness. He has great skill and power in description, and his style abounds in the most racy and vivid metaphors. From the festal nature of most of his odes, we find in them, not unfrequently, coarse jocularities which are repugnant to the spirit of modern lyric poetry, and which therefore offend the modern reader, who comes to the perusal of Pindar with vague expectations of that continued flow of sublime imagery and dignified but pompous diction which are generally considered essential to the lyrical poem. It should never be forgotten, that though the occasions for which Pindar wrote required much of solemnity and religious gravity, they admitted, at the same time, every variety of jocose merriment which such a joyful event might suggest. In a word, the Epinician odes of Pindar were performed by the comus as much as by the chorus; they were sung to the loud-booming flute as much as to the tranquil melodies of the harp; and the rhythms were Æolian, or Lydian, as often as Doric.

The best edition of Pindar is that by August. Böckh, Lipsie, 1811, 1821, 3 vols. 4to. The sound criticism which Böckh has applied to the text of the author, and his comprehensive and masterly explanations, have thrown an entirely new light upon the music, metres, lyric poetry, &c., of the Greeks. Ludolf Dissen, who wrote the explanations to the Nemean and Isthmian odes for Böckh's edition, subsequently (1830) published a smaller edition, which may be considered as an abridgment of Böckh's. There is a very good translation of Pindar into English verse by the Rev. H. F. Cary (London, 1833), which would have been still better if the translator had taken Böckh and Dissen for his guide instead of Heyne. The translations by West and Moore are very inferior to Cary's, as representatives of the sense of the original, though there is much of taste and vigour in those of the latter author. A prose translation by Dawson Turner, with the metrical version of Moore, forms a volume of Bohn's 'Classical Library.'

PINDEMONTE, IPPOLITO, born at Verona, in 1753; was a younger son of a patrician family of Verona. His elder brother, Giovanni Pindemonte, wrote some tragedies, among others, 'I Baccanali,' which were much esteemed at the time. Ippolito studied at the college of Este, and afterwards at Modena. On completing his studies, he travelled through Europe, and visited France, Germany, Holland, and England, of which last country he speaks in his verses with affectionate remembrance. Being made a knight of the order of St. John, he went to Malta, where he resided some time, as well as in Sicily. When he was about thirty years of age, a serious illness, which showed the constitutional weakness of his frame, induced him to give up active life and retire to the country. He fixed his residence at Avesa near Verona, where he wrote his 'Prose e Poesie Campestri,' published first in 1785, and often reprinted since. The philosophy of his prose is of the contemplative kind, but it is warm-hearted and liberal. His poetry is harmonious and flowing. In his next production, 'Epistole in Versi,' he alludes to the revolutionary war then raging in Italy, and its fatal effects upon morals and social happiness. The catastrophe of Venice is especially deplored by him, as well as the devastation of his own native town, Verona, in 1797, and the plunder of the Italian works of art, which were carried to Paris. Pindemonte afterwards published a volume of Sermoni, also in verse, being a kind of satires after the manner of Horace, in which he lashes, though in a good-humoured strain, the follies of his age.

Pindemonte wrote a drama, 'Arminio,' in which he introduced the chorus, a novelty on the Italian stage. He published together with it, three dissertations, one on recitation, another on tragical poetry, and the third on the drama of Merope, a subject treated by both Voltaire and Maffei. These dissertations contain much sound criticism. He also published a translation of the 'Odyssey,' in Italian blank verse, which was well received. When Foscolo published his beautiful little poem the 'Sepolcri,' addressed to Pindemonte, the latter replied to it by another poem on the same subject, which is full of pathos, and at the same time of consolatory thoughts on man's immortality. The two poems are generally published together.

The last work of Pindemonte was his 'Elogi di Letterati,' a biographical work in prose, 2 vols. 8vo, 1825-26. Pindemonte's health had always been delicate, and in his latter years he suffered from depression of spirits, which the death of his early friends, and especially of Foscolo and Monti, seems to have increased. He died at Verona, 18 November, 1828, a month after the death of Monti. His unblemished character, his amiable disposition, and his great accomplishments, contributed as much as his writings to mark him as one of the most distinguished Italians of his age. A monument was raised to his memory by his townsmen of Verona.

PINEDA, JUAN DE, was born at Seville, in 1557. He entered the order of St. Francis, and not of the Jesuits, as stated in the 'Biographie Universelle.' He acquired a great reputation for general erudition, especially in the Greek, Hebrew, and Oriental languages. On being appointed counsellor to the court of the Inquisition, he was commissioned to visit the principal libraries of Spain, in order to

register those works which might be obnoxious to the Roman Catholic religion. The result of his inquiry was an 'Index novus Librorum Prohibitorum,' Seville, 1631, published by order of Cardinal Zapata, grand-inquisitor of Spain. Pineda published a version of Theodore Peltar's 'Catena Græcorum Patrum in Proverbia Salomonica.' He also published—1, 'Commentarius in Job,' 2 vols. fol., Madrid, 1597; 2, 'Salomo Prævius, sive de Rebus Salomonis Regis,' libri octo, Lyon, 1609; 3, 'Commentarius in Ecclesiasten,' Antwerp, 1620; 4, 'Monarchia Ecclesiastica, o Historia Universal del Mundo desde su Creacion hasta estos Tiempos,' 5 vols. fol., Barcelona, 1620. This work is a universal history of the world in 80 books, and is written with some display of erudition but no discrimination, and with all the intolerant spirit of an inquisitor. He died, January 27, 1637.

PINELLI BARTOLOMEO, an eminent modern artist at Rome, was born in the year 1781. He painted in oil and water-colours, but is chiefly known for his etchings from Roman history and Roman costume. He etched about two hundred plates illustrating the most remarkable events in the history of ancient Rome, and the habits and customs of the modern Italians, besides groups of banditti, and a few prints from the works of some of the earlier Italian painters. Pinelli's drawings in chalk and water-colours were very popular. His etchings are very bold, and evidently executed with perfect ease, but all, ancient and modern, are mere costume pieces, and his figures are heavy, uniform in character, and without expression beyond that of the attitude and costume: in design they resemble the ancient bas-reliefs. The works by which he is chiefly known out of Rome are published under the following titles: 'Istoria degli Imperatori inventata ed incisa in cento Rami da B. Pinelli,' 1829; 'Raccolta di Costumi pittoreschi incisi all'acqua forte da B. Pinelli Romano,' Roma, 1809; 'Nuova Raccolta di cinquanta costumi pittoreschi,' &c., 1816. Pinelli died at Rome, in the vigour of life, in 1835. He was in the habit of going daily to a tavern opposite the Fontana di Trevi, which was known by his name; he there held a conversazione which was regularly attended by a certain portion of the artists of Rome, among whom he had a species of oracular authority.

PINGRÉ, ALEXANDER WILLIAM, was born at Paris on the 4th of September 1711, and educated in a religious establishment at Senlis. At the age of twenty-four he was appointed professor of theology, but during the persecution of the Jansenists he was deprived of his situation by the government, for some years after which he gained a livelihood by teaching the elements of grammar in an obscure college. Disgusted with his theological career, at the age of thirty-eight or thereabouts, he began the study of astronomy, and his friend Lecat, a celebrated physician of his day, having shortly afterwards founded an academy at Rouen, the department of astronomy in that establishment was placed under Pingré's direction. His observation of the transit of Mercury, on the 6th of May 1768, led to his being nominated a correspondent of the Academy of Sciences, of which, in 1766, he was elected a free associate. About this time also he was appointed chancellor of the University of Paris, and librarian of the abbey of Sainte Geneviève, on the summit of which building a small observatory was erected for his use. In connection with Lemonnier he computed a nautical almanac, called the 'État du Ciel,' for the years 1754-57. In this work his chief object was to render an essential service to the mariner by supplying the means of determining a ship's longitude, which he proposed to deduce from the moon's hour angle by the aid of tables computed by himself with very great labour. The method however inspired little confidence, and was shortly afterwards superseded by the method suggested by Lacaille.

In 1760 Pingré, by order of the government, sailed for the island of Rodrigó, in the Indian Sea, in order to observe the transit of Venus, which took place on the 6th of June of the ensuing year. The ultimate object was the determination of the sun's parallax, which Pingré, from his own observations, inferred to be about 10", but in later years his calculation was found erroneous. The same phenomenon was observed by him at the island of St. Domingo in 1769, during one of four voyages undertaken by him to try the chronometers of Berthoud and Leroy. He died at Paris on the 1st of May 1796. The memoirs contributed by him to the 'Transactions' of the Academy of Sciences consist chiefly of accounts of his observations, and will be found between the years 1768 and 1770. Of his published works the only one to which the least interest is now attached is his 'Cométographie, or an Historical and Theoretical Treatise on Comets,' 2 vols. 4to, Paris, 1783.

Besides a very complete account of all that was then known concerning the nature and motions of comets, it contains the elements of no less than eighty orbits computed by himself. The readiness with which he engaged in the most lengthy numerical calculations appears to have been the most prominent point in his character. Lacaille had computed, for the 'Art de vérifier les Dates,' a table of the eclipses visible in Europe during the first eighteen centuries of the Christian era. Pingré, without any obvious motive, repeated the whole of the working, adding however a list of the eclipses during the ten centuries preceding. He had also reduced a very large number of observations of different astronomers, beginning with Tycho Brahé, for a work which he intended to call the 'History of Astronomy during the Seventeenth Century.' Several sheets of the work were printed, when further progress was suspended by the depreciation of

the assignats, and the publication has not since been, nor is it likely to be, resumed.

(Delambre, *Biog. Univ.*; *Mémoires of the French Institute*, 1790; *Notice of Pingré*, by M. Prony.)

PINKERTON, JOHN, was born at Edinburgh in 1758. After finishing his school education he was articled to a writer to the signet, in whose office he spent five years; but it does not appear that he ever engaged in the practice of that or any other profession. He commenced author in 1776 by the publication of an elegy entitled 'Craigmillar Castle;' and on the death of his father in 1780 he came to London, and settling there gave himself up to a literary life. In 1781 he published an octavo volume of poetical pieces under the title of 'Rimes,' which reached a second edition; and this was followed the same year by the first edition of a less forgotten publication, an octavo volume entitled 'Scottish Tragic Ballads,' a second edition of which appeared in 1783, accompanied with a second part containing 'Ballads of the Comic Kind,' the whole being now included under the general title of 'Select Scottish Ballads.' Of these pretended ancient ballads however a considerable number were fabrications of Pinkerton's own. Meanwhile in 1782 he had published 'Two Dithyrambic Odes on Enthusiasm and Laughter,' in a sixpenny quarto pamphlet; and soon after another original volume of the same form, entitled 'Tales in Verse.' In 1784 he produced his 'Essay on Medals,' in 2 vols. 8vo, a work of considerable merit for the time, though now of little use, but in which Pinkerton is stated to have been much indebted to the assistance of the late Mr. Douce and another friend. It has been twice reprinted since with improvements.

In 1785 he gave to the world, under the 'nom de guerre' of Robert Heron, an octavo volume of 'Letters on Literature,' in which some singular opinions on the value of the Greek and Roman writers were attempted to be made still more startling by a new and very strange system of spelling, in which however the inventor had the good sense not to persevere after it had answered its temporary purpose. This book procured Pinkerton the acquaintance of Horace Walpole, and through him of Gibbon and other distinguished literary characters. His next publication was one which has retained its interest and value, his 'Ancient Scottish Poems, never before in print, from the MS. Collections of Sir Richard Maitland of Lethington, Knight,' 2 vols. 8vo, London, 1786. It is a mistake to describe this work as a literary forgery, as has sometimes been done; the poems from the Maitland and Bannatyne manuscripts, of which it consists, are all genuine. [MAITLAND, SIR RICHARD.] It is here however, in a 'List of all the Scottish Poets, with Brief Remarks,' that he makes his confession of the forgery of several pieces in the previous collection.

In 1787, besides a compilation in 2 vols. 12mo entitled 'The Treasury of Wit,' which he published under the name of Bennet, he produced the first edition of his 'Dissertation on the Origin and Progress of the Scythians or Goths,' 8vo, a work which, whatever may be thought of some of the conclusions at which he arrives, exhibits much ingenuity and various learning. Here he first announced that strong anti-Celtic feeling which colours all his historical and antiquarian disquisitions, and which made him so many enemies. This publication was followed in 1789 by a collection of 'Lives of Scottish Saints,' 8vo, in Latin; an edition of Barbour's poem of 'The Bruce,' 3 vols. 8vo; and by one of his most important works, 'An Enquiry into the History of Scotland, preceding the Reign of Malcolm III.,' 2 vols. 8vo (with the 'Dissertation on the Goths' appended). This inquiry (which was reprinted, along with the 'Dissertation,' in 1794, and again in 1814), with all the perversity or want of judgment on some points by which it is distinguished, is still a very valuable work for the many curious documents it contains, all rare, and some of them nowhere else to be found in a printed form. It was succeeded by 'The Medallie History of England, to the Revolution,' 4to, 1790; 'Scottish Poems,' reprinted from scarce editions, 3 vols. 8vo, 1792; 'Iconographia Scotica, or Portraits of Illustrious Persons of Scotland, with Biographical Notes,' 2 vols. 8vo, 1795-97; and 'The History of Scotland, from the Accession of the House of Stuart to that of Mary,' 2 vols. 4to, 1797, another work of original research and great importance, although most repulsively written, from an unfortunate fancy of imitating Gibbon which had taken possession of the author. Prefixed to this work is a portrait of the author, with spectacles on, and surrounded by his books, with an inscription which takes care to inform us that he was as yet only in his thirty-eighth year: and he was certainly entitled to take to himself the credit of a large amount of literary performance for that age.

After the death of his friend the Earl of Orford in 1797, Pinkerton communicated notes of his conversation in a series of papers to the 'Monthly Magazine,' which he afterwards collected and published along with a memoir of Walpole, in 2 vols. 12mo, under the title of 'Walpoliana.' His next publication was 'The Scottish Gallery, or Portraits of Eminent Persons of Scotland, with their Characters,' 8vo, 1799. In 1802 appeared the first edition of his 'Modern Geography, digested on a new plan,' in 2 vols. 4to, a second edition of which, extending to 3 vols., was brought out in 1807. There is also an abridgment of this work in 1 vol. 8vo.

In 1802 Pinkerton left England, and for the rest of his life resided chiefly in Paris, continuing however to give occupation to the press of his native country with his usual industry. Two thick but not very well-filled octavos, entitled 'Recollections of Paris in the Years 1802-3-

4-5, which he published at London in 1806, exposed him to much ridicule by the Frenchified style of thinking and air of 'petit-maitreship' affected by the quondam laborious antiquary. Returning however to his proper beat, he commenced in 1808 his great 'General Collection of Voyages and Travels,' which was completed in 16 vols. 4to in 1813. This was accompanied by a 'New Modern Atlas,' published in parts, which was begun in 1809 and finished in 1815; and while occupied with these compilations he also found time to write his 'Petrelology, or a Treatise on Roaks,' which appeared in 2 vols. 8vo in 1811, and was his last original work. He died at Paris on the 10th of March 1826.

The above detail of his literary labours is evidence sufficient that Pintelli was no ordinary man; and his best performances, such as his 'Dissertation,' his 'Enquiry,' his 'History,' and his edition of the 'Maitland Poems,' with all their faults, not only overflow with curious learning, but bear upon them the impression of a vigorous and original mind. His violence and dogmatism, his arrogance and self-conceit, his pugnacity and contempt for all who dissented from his views, and above all his shallow and petulant attacks upon the common creed in religion and morals, are however unhappily even more prominent than his learning and ingenuity. Two octavo volumes of his correspondence were published in 1850, the contents of which however are of little interest.

PINTELLI, BACCIO, the architect of the Capella Sistina. He is supposed to have been a Florentine. He was very active in Rome in the pontificate of Sixtus IV. (1471-84), for whom the Capella Sistina was built. This chapel architecturally is of little interest, but as containing some of the greatest works of modern painting it is of considerable importance in the history of art; it is a simple rectangular oblong, with a vaulted roof: 132 feet 8 inches long, 43 feet wide, and 57 feet 10 inches high. (See Ground-plan and Sections in the Appendix No. 14 to the Third Report of the Commissioners on the Fine Arts.) The fresco of the 'Last Judgment,' by Michel Angelo, on the altar-wall, is 47 feet 1 inch in height, and 43 feet wide. The chapel was built in 1473; the fresco was painted in 1533-41, for Pope Paul III. The Sistina Chapel is the especial chapel of the pope, and the Church ceremonies of the first Sunday in Advent, and of the Holy Week, are always performed in it; the scrutiny also of the votes for the papedom takes place in this chapel, when the Conclave is held in the Vatican. Before the execution of the 'Last Judgment,' two horizontal series of paintings went round the chapel below the windows, of which there are six on each side; the upper is a series from the Old and New Testaments, illustrating the acts of Moses and of Christ; the second, or lower, consists of imitations of hangings, with the arms of Sixtus IV. The side walls remain as they were originally painted, and on great festivals of the Church the painted hangings used to be formerly covered by the tapestries made for the purpose from the celebrated cartoons of Raffaello which are now preserved in the corridor in the museum of the Vatican, built for them by Leo XII.; they were placed in the museum by Pius VII. in 1814, in the apartments of Pius V. There are twenty-two tapestries in all, but only ten are in the style and of the size of the cartoons at Hampton Court; the rest were not ordered or purchased for the Sistina Chapel. The subject of these ten is the history of the Apostles; and besides the seven at Hampton Court there are the following three—the 'Martyrdom of St. Stephen,' 'St. Paul in Prison at Philippi during the Earthquake,' and the 'Conversion of St. Paul.' The ten cartoons of these tapestries were executed in 1515 and 1516 by the order of Leo X., and Raffaello received for them about fifteen pounds each. The second set of tapestries of the 'Life of Christ,' which are larger than the others, are supposed, from their style and their bad drawing, to have been executed from cartoons made by Flemish masters, probably Van Orley and Michael Coxie, from small sketches by Raffaello, and certainly not from cartoons from Raffaello's own hands. The two sets are called 'Della Scuola Nuova' and 'Della Scuola Vecchia,' those ordered by Leo X. being of the 'Scuola Vecchia.'

The ceiling of the Sistina Chapel is decorated with the frescoes executed in 1512 by Michel Angelo, illustrating the creation of man, the fall, and the early history of the world. Michel Angelo intended to paint the 'Fall of Lucifer' on the wall opposite the 'Last Judgment,' but this design was never carried into execution. The whole series of illustrations would have represented the complete cycle of the creation and fall of man, and his final salvation, if this last design had been executed; it would have offered one vast 'speculum humane salutacionis,' as such a series was termed by the early artists of the Roman Catholic Church; it repeatedly occurs in early manuscripts.

Pintelli was the principal architect of Sixtus, and he executed several other important works for this pope. Between the years 1472 and 1477 Pintelli erected the church and convent of Santa Maria del Popolo, in the church of which he built a beautiful chapel for Domenico della Rovere, cardinal of San Clemente, and, according to Vasari, nephew of Sixtus IV.; he built a palace for the same cardinal at the Borgo Vecchio. About 1478-75 he built the old Library of the Vatican: Platina was installed by Sixtus as librarian in 1475. Pintelli restored also the hospital of Santo Spirito in Sassia, which was burnt down in 1741. He built also the Ponte Sisto over the Tiber; the churches San Pietro in Vinculis, Sant' Agostino, Santa Maria della Pace, and Sant' Apostolo (since rebuilt); and probably San Pietro in

Montorio and San Jacopo were built from his designs. In 1480 Pintelli strengthened the celebrated church and convent of San Francesco at Assisi by raising enormous buttresses against the northern walls.

Dr. Gage (*Kunstblatt*, 1836) attributes some other works in Rome to Pintelli, and he has shown that after the death of Sixtus, in 1484, he went to Urbino to continue the ducal palace of Urbino, which Lucianus Lauranna of Slavonia had been engaged upon from 1468 until 1483, for Federico II., duke of Urbino. Pintelli may have remained at Urbino until 1491, when he built the church of Santa Maria delle Grazie at Sinigaglia, for the Duke Giovanni della Rovere. He probably died at Urbino, where he was apparently naturalised, as he took the surname of Urbina. He appears to have been influenced by the style of Brunelleschi in his designs, in which there are still characteristics of the previously prevailing pointed architecture. His works are said to be well constructed, as appears from the cupola of Sant' Agostino and the Ponte Sisto, still in perfect state of preservation.

PINTO, FERNAM MENDEZ, a celebrated Portuguese traveller, was born at Montemor-o-Velho, near Coimbra, of obscure parents, about 1510. He entered the service of a Portuguese gentleman, in which he continued eighteen months. An adventure, by which he had well nigh lost his life, but which he does not disclose, obliged him to emigrate, and he sailed in a vessel bound for the East Indies. Scarcely however had he lost sight of the coast of Portugal when the vessel was attacked and plundered by pirates, and Pinto was obliged to return to Lisbon, where he entered the service of Dom Francisco de Faria. Some time after, with the expectation of making his fortune, he embarked for India, and arrived at Diu in 1537, where he enlisted among the crew of a vessel designed to cruise against the Turks. He was captured at the entrance of the Red Sea, carried to Mocha, and there sold to a Greek renegade, and afterwards to a Jew, in whose possession he remained till he was redeemed by the Portuguese governor of Ormuz, who procured him the means of going to India. On his return to that country, Pinto met at Goa the captain-general of Malacca, Pedro de Faria, who took him into his service, and gave him the command of a small vessel employed in the trade with China. Having been attacked at the mouth of the river of Lagor by a Chinese pirate, who boarded and plundered his vessel, Pinto, though wounded, succeeded in making his escape, and arrived at Pattan, on the gulf of Siam.

Antonio de Faria (a brother of Pedro), on hearing the news of the loss of the vessel, swore he would have his revenge, and having enlisted a crew of Portuguese adventurers, and Pinto among them, he sailed from Pattan on the 19th of May, 1540. The Chinese pirate was overtaken, his vessel captured, and himself put to death. From this period Pinto's life seems to have been one of constant vicissitudes. He was one day the master of countless treasures, on the next groaning in captivity. In the intervals he was employed on a mission to Japan, and in other important transactions, which he fully describes in his work. He seems even to have entered at one time the Jesuit convent at Malacca, a circumstance which explains why the earliest account of his travels is found in the first collection of their letters, published in Italian, at Venice, in 1565, in letters written by him, and dated from the convent. He was present at the death of San Francisco Xavier; and Lucena, in his *Life of that saint* ('*Historia da Vida do Padre Francisco Xavier*,' Lish., 1600), admits that he derived most of his information from papers procured from Pinto's widow. After twenty-one years' residence in various parts of the East Indies, China, Japan, Siam, &c., Pinto returned to his native country in 1558 (28th of September). He died at Almada, near Lisbon, on the 8th of July, 1583. The history of his travels and adventures was written for the amusement of his children. It abounds in gross exaggeration, and although there can be no doubt that Pinto visited the countries which he describes, it is also an ascertained fact that most of his descriptions are altogether imaginary, and that whatever curious and important matter is contained in his work is adulterated with idle and extravagant fictions. His expedition to the island of Calempuy, where, he tells us, "he saw the tombs of the emperors of China," and his route by land through part of the Chinese empire, are of this kind. Pinto's travels were not published until many years after his death, by Francisco de Andrade, Lisbon, 1614, in 4to, under the title of '*Peregrinacão de Fernam Mendes Pinto*,' &c. Six years after they were translated into Spanish by Francisco de Herrera, who added a prefatory discourse, intended to establish the authenticity of the narrative, Mad., 1620, fol. They were translated into French by Bernard Figuer (Paris, 1628 and 1645, in 4to, and 1830, 3 vols. 8vo), and into English by H. Cogan (London, 1663, and 1692, in fol.). There are also editions of the original Portuguese work (Lish., 1678, 1711, 1725, and 1762), with the '*Itinerario de Antonio Tenreiro*.'

PINTURICCHIO, BERNARDINO, or BERNARDINO BETTI, was born in 1454 at Perugia. He was a disciple of Pietro Perugino, under whom he made great progress, and was often employed by his master as his assistant. He painted chiefly history; but he also painted grotesque subjects, and he excelled in portraits. Among his best portraits, peculiar praise is given to those of popes Pius II. and Innocent VIII., of Giulia Farnese, Cesare Borgia, and Queen Isabella of Spain. He executed numerous works at Rome and other

cities of Italy. His manner was singular; he not only finished his paintings very highly, but endeavoured to give them greater splendour by introducing rich gilding blended with architectural ornaments, painted so as to resemble high relief, a style incompatible with true taste and the simplicity and dignity of history. His most celebrated performance is the history of Pius II., painted in ten compartments, in the library of Siena, in which Raffaele, then a very young man, and his fellow-student under Pietro Perugino, gave him some assistance. The last work that he executed was a Nativity for the monastery of St. Francis at Siena, respecting which a story is told by Vasari, which seems eminently absurd and improbable. The monks, he says, assigned Pinturicchio a chamber where he might work undisturbed, from which, at his request, they removed the furniture, except a large old chest quite decayed by time. This too he insisted should be removed, in doing which it fell to pieces, and was found to contain 500 pieces of gold. This was a source of great joy to the monks, but the artist, say these writers, was so grieved that he had lost the treasure by his obstinately insisting on the removal of the chest, that he died of vexation, December 11, 1513. In the National Gallery are a 'Madonna and Child,' and a 'St. Catherine of Alexandria,' by him.

PIOMBO, SEBASTIANO DEL., an eminent painter, both of portrait and history, was born in 1436 at Venice, whence he was called also 'Venesiano.' His surname, according to Lanzi, was Luciano, though it does not appear that he was known by it in his own time, or that he ever marked his pictures with it. On his principal performance in oil, the 'Raising of Lazarus,' the words 'Sebastianus Venetus faciebat' appear in characters no doubt traced by himself. He was a skilful musician, particularly on the lute, but abandoned that science for painting, the rudiments of which he acquired under Bellini, but afterwards became the disciple of Giorgione, whose style of colouring he carefully studied and successfully imitated. He first distinguished himself as a portrait-painter, to which his powers were peculiarly adapted. His portraits are boldly designed and full of character; the heads and hands are admirably drawn, with an exquisite tone of colour and extraordinary relief. The most famous of his works in this class were portraits of Giulia Gonzaga, the favourite of Cardinal Hippolito de' Medici, which by writers of that age was called a divine performance, and of Pietro Aretino.

The first historical picture which established his reputation was the altar-piece in the church of San Gio. Crisostomo, at Venice, which from its richness and harmony of colouring has frequently been mistaken for a work by Giorgione. Sebastiano was invited to Rome by Agostino Chigi, a rich merchant who traded at Venice, by whom he was employed in ornamenting his palace of the Farnesina, in conjunction with Baldassare Peruzzi, where Raffaele had painted his celebrated Galatea. Thus painting in competition, he found his own deficiency of invention, to remedy which he studied the antique, and obtained the instruction and assistance of Michel Angelo. Indeed it is said that that illustrious painter, growing jealous of the fame of Raffaele, availed himself of the powers of Sebastiano as a colourist, in the hope that, assisted by his composition, Piombo might successfully rival the efforts of Urbino. Michel Angelo accordingly furnished the designs for the 'Pietà,' in the church of the Conventuali at Viterbo; and the 'Transfiguration' and the 'Flagellation' in San Pietro, in Montorio, at Rome, the execution of which however in consequence of Piombo's tedious mode of proceeding, occupied six years. The extraordinary beauty of the colouring, and the grandeur of Michel Angelo's composition and design in these celebrated productions, were the objects of universal surprise and applause.

At this time Cardinal Giulio de' Medici commissioned Raffaele to paint his picture of the Transfiguration, and being desirous of presenting an altar-piece to the cathedral of Narbonne, of which he was archbishop, he engaged Sebastiano to paint a picture of the Raising of Lazarus, of the same dimensions. Vasari states that in the composition of this work he was assisted by Michel Angelo; and, in the magnificent collection of drawings belonging to Sir Thomas Lawrence, there were two careful sketches of the Lazarus, made by Michel Angelo and several alighter ones of other parts of the design. On its completion the picture was publicly exhibited at Rome, in competition with the Transfiguration, and it excited general admiration, although thus brought into direct competition with the crowning glory of Raffaele's pencil. It was sent to the Cathedral of Narbonne for which it was painted, and remained till the middle of the 18th century, when it was removed, by the regent of France, into the Orleans collection. Having been brought to England with the rest of that collection in 1792, it was purchased by the late J. J. Angerstein, Esq., for two thousand guineas; and is now deposited in the National Gallery. It was painted on wood, but has been transferred to canvas; its size is twelve feet six inches high, and nine feet six inches wide.

Sebastiano was greatly patronised by Pope Clement VII., who conferred upon him the office of keeper of the papal signet, which was the cause of his name, Del Piombo, in allusion to the lead of the seal. This post rendering it necessary that he should assume a religious habit, he abandoned the profession of a painter, and was thenceforth called Fra Sebastiano del Piombo. His last work was the chapel of the Chigi family, in Santa Maria del Popolo, which he left imperfect, and it was afterwards finished by Francisco Salviati. He died of a fever, at Rome, in 1547, at the age of sixty-two years. He is said to have

been the inventor of painting upon walls with oil-colour, and of preventing the colours from becoming dark by applying, in the first instance, a mixture of mastic and Grecian pitch, or, according to some authorities, a plaster composed of quick-lime, pitch, and mastic.

Besides his masterpiece, 'The Raising of Lazarus,' the National Gallery possesses his celebrated portrait of Giulia Gonzaga, "a divine picture" Vasari calls it, which was formerly in the Borghese Gallery: the picture is really a representation of St. Agatha, but may be a portrait. The national collection also contains a picture entitled 'Portraits of Sebastiano del Piombo and the Cardinal Ippolito de' Medici,' which is attributed to the pencil of Sebastiano, though, as it was entitled, when it hung in the Borghese Gallery, 'Borgia and Macchiavelli,' and attributed to Raffaele, both the painter and the portraits must be considered somewhat doubtful: like the former picture it was bequeathed to the nation by the Rev. W. H. Carr.

PIOZZI, MRS., was originally Miss Esther Lynch Salusbury, being the daughter of John Salusbury, Esq., of Bodval in Carnarvonshire, where she was born in 1739. Her good looks and vivacity early acquired her some distinction in the London world of fashion, which ended in her marriage, in 1763, to Mr. Henry Thrale, an opulent brewer in Southwark, and then one of the members for that borough. It was soon after she became Mrs. Thrale that her acquaintance with Dr. Johnson commenced, which is the circumstance to which her name principally owes any place it may hold in the annals of our literature. But Thrale having died in 1781, his widow retired, with her four daughters, to Bath, and there, having met with an Italian music-master, of the name of Gabriel Piozzi, fell in love with and married him in 1784; and that proceeding, from which her old friend earnestly endeavoured to dissuade her, produced a complete rupture between them a short time before Johnson's death. This nevertheless did not prevent Mrs. Piozzi from publishing, in 1786, an octavo volume of gossip, entitled 'Anecdotes of Dr. Samuel Johnson, during the last Twenty years of his Life.' Many things in this publication gave great offence to Boswell and Johnson's other friends, who professed to regard it as having been prompted mainly by feminine spite and revenge; but although there was ample matter in its inaccuracies and misrepresentations for this conclusion, there was also ground for some retaliation from the other side; and the view which a large portion of the public took of the feud between the parties may be seen in Dr. Wolcott's (Peter Pindar's) satirical poem entitled 'Bossy and Piozzi.' Meanwhile Mrs. Piozzi followed up her first book by another, 1788, entitled 'Letters to and from Dr. Samuel Johnson,' in 2 vols. 8vo. But before this she had gone with her husband to Florence, and there, in conjunction with three gentlemen, named Merry, Greathead, and Parsons (the once famous but now almost forgotten founders of the Della Crusca school of poetry), she printed but did not publish, in 1786, a collection of pieces in prose and verse, under the title of 'The Florentine Miscellany.' Mrs. Piozzi's other works are, 'Observations and Reflections made in the course of a journey through France, Italy, and Germany,' 2 vols. 8vo, 1789; 'British Synonymy, or an Attempt at regulating the Choice of Words in Familiar Conversation,' 2 vols. 8vo, 1794; and 'Retrospection, or a Review of the most striking and important Events, Characters, Situations, and their Consequences, which the last Eighteen Hundred Years have presented to the view of Mankind,' 2 vols. 4to, 1801. She is said to have also contributed many anonymous pieces, both in prose and verse, to the periodical publications of her day; but it has generally been admitted that nothing she wrote at a later date is so good as some poems she contributed so early as in 1765 to the volume of 'Miscellanies' published by Anna Maria Williams, particularly one called 'The Three Warnings,' the superior merit of which, rather than any proper authority for the fact, has led to the opinion that she was materially assisted in its composition by her friend Johnson. Her 'Remains,' edited by A. Hayward, appeared in 2 vols. 8vo, 1861. Mrs. Piozzi survived her second husband, and died at Clifton near Bristol, on the 2nd of May, 1821.

PIPPI, GIULIO. [GIULIO ROMANO.]

PIRANESI, GIOVANNI BATTISTA, one of the most distinguished artists of the last century, and in his own peculiar walk unrivalled, was born at Venice, in 1720. At the age of eighteen, he was sent by his father (who was a mason) to study architecture at Rome. To this study he devoted himself with enthusiasm, and on being summoned to return home, he refused, observing that Rome with its monuments was the birth-place of his talent. On this, his father withdrew his allowance, but instead of being tamed into submission, or at all discouraged, the young artist soon after (in 1741) brought out his first work on triumphal arches, bridges, and other architectural remains of antiquity. This production instantly established his reputation, the engravings being treated with such mastery, and being altogether so decidedly superior to any former representations of similar subjects, as to make an epoch in chalcography and architectural delineation; which latter had till then been almost uniformly very coarse, tasteless, and insipid, and nowhere more so than in Italy itself. With occasional exaggeration of chiaroscuro and effect, there is great vigour of execution in Piranesi's productions, which may partly be ascribed to his singular manner of working, it being his usual practice to draw his subject at once upon the plate itself, and complete it almost entirely by etching in aquafortis, with very little assistance from the graver. Hence his works are marked

by a freedom and spirit that can otherwise hardly be preserved. The same circumstance also accounts for that astonishing rapidity of execution which enabled him to produce, within less than forty years, about two thousand engravings, most of them of very large dimensions and full of detail.

It is true he was not wholly without help from other hands, for all his children (three sons and two daughters) were brought up by him to assist him in his labours; and he had likewise several pupils, among others Piroli. [PIROLI, TOMMASO.] Still such aid must have been comparatively inconsiderable, since it is evident from the peculiar manner and spirit which pervade his works, and which were never caught by any of his scholars, that his plates must have been executed chiefly by his own hand. The following is a list of his principal works:—'Architectura Romana,' 208 plates, 4 vols., atlas folio; 'Fasti Consulares Triumphalesque Romanorum;' 'Antichità d'Albano,' 85 plates; 'Campus Martius,' &c., 54 plates; 'Magnificenza dei Romani,' 44 plates; 'Vedute di Roma,' 2 vols., 180 plates of modern buildings at Rome; 'Collection of Candelabra, Vases,' &c.; 'Collection of Chimney-pieces,' a series of most splendid designs; 'Carosì d'Invenzione,' 16 plates, filled with exceedingly wild but most picturesque conceptions; 'A Collection of Ancient Statues and Busts,' 350 subjects; 'The Trajan and Antonine Columns;' 'Antiquities of Herculaneum and Pompeii.' A complete set of his works (comprising many not here enumerated) amounts to no fewer than twenty-nine folio volumes, many of which are of unusually large dimensions, some of them being on double elephant paper, and the plates opening to ten feet in length. Their contents afford an almost inexhaustible mine of antiquity, both as regards architecture and sculpture; and indeed his 'Magnificenza' alone, containing as it does many specimens and fragments of ancient architecture till then little known, and so different from the usual routine examples of the orders, would alone have sufficed for his fame. Several of these, and other specimens of ancient art engraved by him, such as vases, candelabra, &c., have been since copied in later works, yet even where they have been correctly and tastefully delineated, they are very far inferior to the same subjects as touched by Piranesi.

In addition to his other numerous and extensive labours, he executed one or two of the plates in the 'Works' of Robert Adam, the English architect, where their superiority to the rest manifests itself very strongly. Piranesi did not execute much as a practical architect: the wonder is, that he should have found time to accept any professional engagements of the kind. Nevertheless he did so, and among the churches which he was employed by Clement XIII. to repair or rebuild, are those of Santa Maria del Popolo and the priory of Malta. It is in this last-mentioned edifice that a monument by Angolini, a life-sized statue of him, has been erected to his memory. Piranesi died at Rome, November 9, 1778.

PIROLI, TOMMASO, a distinguished Italian designer and engraver, was born at Rome in 1750. He was the pupil of Giambattista Piranesi. Among Piroli's numerous prints, mostly etched in outline, and many in the chalk manner, the following are the most interesting:—The Prophets and Sibyls of Michel Angelo in the Cappella Sistina, in large slightly-shaded outlines; a copy of Metz's prints from the Last Judgment in the same chapel; the story of Cupid and Psyche, from the frescoes of Raffaello, in the Farnesina; the frescoes of Masaccio in the Brancacci Chapel at Florence, and the original editions of Flaxman's outlines to Homer, Hesiod, Æschylus, and Dante, which were first published at Rome. His drawing is correct and his line firm. There are also several sets of engravings, after remains of ancient art, by Piroli, some of which were published at Rome and at Paris, by Francesco and Pietro Piranesi, sons of Giambattista Piranesi. He died at Rome in 1824.

PIRON, ALEXIS, born at Dijon, in 1689, studied the law, took his degree, and practised as an advocate in his native town, but he afterwards forsook the bar, and lived for a time in gay and dissipated society. Being distressed in his circumstances, he repaired to Paris, and employed himself as a copyist, and afterwards wrote for the stage. He produced several light comedies and farces, which succeeded very well, but he failed in his attempt to write tragedy. At fifty years of age he composed his drama 'La Métromanie,' the best of his works, which established his reputation as a writer. He had been himself in his youth seized by a kind of mania for writing verse, and was therefore a competent judge on the subject. Piron had much ready wit and a great facility for repartee, and his epigrams were very celebrated in his time. He wrote also tales, odes, and other light poetry, most of them grossly licentious, according to the prevailing taste of his age, which was that of the reign of Louis XV.: before his death however he had expressed his regret at the publication of some of his more obscene odes, which had proved a bar to his being received among the members of the Académie Française. Piron may be considered as a representative of his time and country, witty, thoughtless, and licentious. He had however some attractive personal qualities, and he found friends among a higher order of men. Montesquieu obtained for Piron a pension from the king of 1000 livres; the Count of Livry, Maurepas, the Duke of Nevers, and other noblemen also patronised him. He married at a mature age a woman of mature years, and lived very happy with her till her death. Piron's sight was very weak, and a fall which he had in the park of the Count of Livry hastened his

death in 1778. His works were collected without discrimination, and published by Rigoley de Juvigny, 7 vols. 8vo.

PISA, LEONARD OF, or LEONARDO FIBONACCI (a corruption of *Miles Bonaccii*), was the son of one Bonacci, a merchant of Pisa, and was born some time in the 12th century. He states that his father was employed for the merchants of his own city at the custom-house of an African port, and there made him study arithmetic; he afterwards travelled in Egypt, Syria, Greece, and Provence, and from the various systems of numeration which he saw learnt to value the superiority of the Indian method, which was probably that which his father had taught him. His inattention to matters of commerce, and preference for mathematical pursuits, procured for him, from his countrymen, the contemptuous epithet of 'Bigollone.' His 'Liber Abbaci' was first written in 1202, and with additions in 1228, when it was dedicated to Michael Scott. The 'Practica Geometria' was written in 1220. Commandine intended to have published the latter, and Bernard the former, but neither effected his purpose, and, with the exception of the parts which Pacioli afterwards used [PACIOLI, LUCA], and the extensive citations in the notes of M. Libri's second volume of his 'Histoire des Sciences Math. en Italie,' nothing of Fibonacci's has appeared. There was also a work on square numbers, of which the manuscript is known to have existed at Florence in 1768, but cannot now be found.

The 'Liber Abbaci' is a work on arithmetic and algebra. M. Libri is of opinion that no Christian writer can be shown to have introduced the Arabic or Indian numerals into any part of Christendom before the publication of this treatise. Such manuscripts as exist, and which seem to have a prior date, are thought by him to have been written either by Jews or by Spanish Christians among the Moors. Dr. Peacock ('Encycl. Metrop.,' Arithmetic) had arrived at the conclusion that Fibonacci's works were the earliest in which these figures can be traced. It is remarkable that their writer was only known by name in the middle of the last century, when the manuscripts of which we now speak were discovered at Florence by Tozzetti. But the intentions of Commandine and Bernard show that they were known at an earlier period.

The fifteenth chapter of the 'Liber Abbaci,' which contains the treatise on algebra, has been cited in full by M. Libri. Any one who will compare it with Dr. Rosen's translation of Mohammed ben Musa will see a resemblance which tends to confirm the general supposition (which also, according to Cardan, may be inferred from the express words of Fibonacci himself) that the Arabic work just named was that from which algebra was made European, though there is every appearance of the avowed translations of it being posterior to Fibonacci. But the latter must either have known other works, or have been an original investigator of great merit. Several things known to the Hindoos, but not mentioned by Ben Musa, are contained in his writings. He may have come to these by himself; but it is also certain that the name of the Hindoos is frequently mentioned in the manuscripts of the time as that of a nation excelling in these branches of study. A close analysis of the writings of Fibonacci would probably settle whether he is to be considered as having himself enlarged the boundary of the science, or as nothing but the compiler of Oriental works. His merit is great either way. The influence of his writings was long felt in Italy, which became from his time the great school of arithmetic.

PISANO is the name of several distinguished artists of Pisa in the 13th century, namely, Giunta, Niccola, Giovanni, and Andrea Pisano. Of two of these artists, Niccola and his son Giovanni, some account has already been given under NICCOLA DI PISA.

GIUNTA PISANO is the earliest known Tuscan painter. Niccola was a sculptor, and Giunta appears to have preceded him for a time, though he was eventually much surpassed by him in design; and as they were contemporaries, the name of Niccola accordingly takes the lead in the list of celebrated Tuscan artists. Giunta may have been born about 1180 or 1190. He is said to have learned painting about 1210, from some Greek artists, who were then engaged probably at Pisa, a tradition which is disputed by some Italian historians of art, who suppose that Pisa had at that period its native artists. The arts were very active at Pisa, owing to the construction of the cathedral there, which was commenced in 1063.

Giunta appears to have attained considerable reputation, for Frat' Elia of Cortona, general of the Minorites, invited him about 1235, or sooner, to Assisi, to execute some works there in the upper church of San Francesco. There are still some remains of the paintings of Giunta in this church, around the window behind the altar. He painted also a Crucifixion in 1236, in which he introduced the portrait of Frat' Elia. The painters of this time were acquainted with some excellent water-colour medium, for another Crucifixion at Assisi, with other figures, painted upon a wooden cross in the church of Santa Maria degli Angeli, by Giunta, is remarkably solid in impasto and unaffected by water; it was painted probably about 1236, and has the following inscription upon it, according to the restoration suggested by Lanzi:—"Santa Pisanus Justinus me fecit." Lanzi assumes Giunta di Giustino to be the name, from the occurrence of this name in an old manuscript mentioned by Morrona in his 'Pisa Illustrata.' Other existing works ascribed to Giunta are—a Crucifixion in San Ranieri at Pisa, a picture (a panel) of Saints in the chapel of the Campo Santo,

and a Martyrdom of St. Peter in the church of San Francesco at Assisi (it is engraved by Lasinio in the 'Etruria Pittrii' of Lastrici). The Campo Santo was built or commenced by Giovanni Pisano in 1278. ('Archæologica,' vol. xxiii. pt. 1.) Giunta was contemporary with Guido di Siena and Bonaventura Berlingieri of Lucca; and all belong to the Byzantine school in style—brown carnations, positive colour in the draperies, emaciated faces, drawn in coarse outlines with hatchings for the shadows, and elongated extremities, even with occasional short thick figures; but their forms are generally attenuated and emaciated. This meagreness of form however, often had an historical and illustrative signification; as sorrow, resignation, or bodily suffering are almost exclusively the sentiments expressed in early paintings; as we also generally find to be the case in manuscripts. These peculiarities of style were not much improved until the time of Giotto, and not wholly corrected until Masaccio, two centuries later than Giunta. They were, says Lanzi, faults of the times rather than of the men. Mr. W. Y. Otley possessed an old Italian distemper picture of the Crucifixion, which he supposed was a work by Giunta. Vasari has omitted the Life of this painter. There is no notice of him later than 1286, but he may have lived some time beyond this date.

ANDREA PISANO was another early artist of Pisa, but nearly a century later than Giunta and Niccolò Pisani. He was born in 1280, was distinguished both as architect and sculptor, and particularly as a metal-founder, in which art he was the first of his age. He is said by Vasari to have imitated the design of Giotto in the Campo Santo. He was invited early to Florence, where he executed several celebrated works. The first were statues of Pope Boniface VIII. and St. Peter and St. Paul, from designs by Giotto, for the façade of Santa Maria del Fiore; they are now, with other works by Andrea, in the Stozzi garden at Valfondi; the pope is engraved in Cicognara's 'Storia della Scultura.' Vasari attributes to Andrea the colossal Madonna and Child, and the two accompanying angels, in marble, in the chapel della Misericordia of the Piazza San Giovanni at Florence, but this was the work of Alberto di Arnolfo in 1364; the error was detected by Vincenzio Follini: the documents are given by Cicognara and Rumohr. The half-figure of the Madonna above a side door of the Misericordia, on the wall of the Cialdonai, is the work of Andrea, and was a celebrated work, because, says Vasari, contrary to his usual custom, he imitated the antique. Andrea's great work in sculpture however, was the bronze gate for the Baptistery of St. John, which he undertook to make from a design by Giotto, who was in the time of Clement residing at Avignon. He had a few years previously sent Pope Clement V. (1305-14), through Giotto, a bronze crucifix as a present, and the excellence of this work led to the important commission to model and cast two of the bronze gates of the Baptistery, which, after the lapse of twenty-two years, says Vasari (Baldinucci says eight years), in 1339, with the assistance of his son Nino, he successfully accomplished; not that he was all this time exclusively occupied on this work, for he executed many others in the meanwhile. The sculptures are from the life of John the Baptist, and were gilded, and the gates were fixed up in the central entrance to the Baptistery; but upon the completion of the much more excellent gates of Ghiberti, they were removed to one of the side entrances, and those of Ghiberti were put in their place. The year 1339 in Vasari appears to be a misprint; for, according to most good authorities, the gates bear the following inscription: Andreas Ugolini Nini de Pisis me fecit anno domini MCCCXXX. (Cicognara, 'Storia della Scultura,' iii. 396; and Lasinio, 'Le tre Porte del Battisterio di Firenze,' Florence, 1823, in which all the gates (six) are well engraved.) But this date, according to Giovanni Villani, one of the superintendents of the work, is the year in which they were commenced; if therefore they occupied twenty-two years from this time, they were not finished until 1362, seven years after Andrea's death, and accordingly by Nino, Andrea's son; but this is impossible, as Villani, who died in 1348, saw the completion of the work—the date therefore, 1330, is apparently the year of the commencement of the casting in metal, which was done by Venetian artists, the model only being finished in that year. As an architect, Andrea designed the Castello di Scarperia in Mugello at the foot of the Alps; and Vasari says, according to report, the Arsenal of Venice, where he spent a year; he raised part of the walls of Florence eight ells in 1316; he designed the church of San Giovanni at Pistoja, commenced in 1337, and he executed many works for Gualtieri, duke of Athens and tyrant of Florence, until the duke was expelled from Florence in 1348.

Andrea was made a citizen of Florence, and had other honours conferred upon him. He died in 1345, and was buried in Santa Maria del Fiore. His son Nino completed the unfinished works of his father, and executed many original works of merit. Tommaso Pisano, another pupil of Andrea, is supposed also to have been his son.

(Vasari, *Vite de' Pittori*, &c., and the notes to the German translation by Schorn; Lanzi, *Storia Pittorica*, &c.; Cicognara, *Storia della Scultura*; Köhler, *Kunstblatt*, 1827; Rumohr, in the *Kunstblatt*, 1821, and *Italienische Forschungen*; D'Agincourt, *Histoire de l'Art par les Monumens*.)

PISISTRATIDÆ. Hippias and Hipparchus were the two sons of Pisistratus, after whose death Hippias, the elder, succeeded to the rule. Thucydides tells us that the general opinion in his time was, that Hipparchus succeeded his father; this however he asserts to be a

mistake, although in the same chapter (Thucyd., vi. 54) he observes incidentally that Hipparchus was not unpopular in his government, thereby implying that he had some share therein. Thucydides gives the brothers a character for encouraging manly virtue and cultivation, for success in war, for piety, and for lenity in taxation. He says they only levied a rate of five per cent. on produce, and that they rather interfered in the appointments to offices than with the administration of the laws themselves. He gives Pisistratus, son of Hippias, as one among others of the family who served the office of archon.

Hipparchus, the younger son, lost his life by a conspiracy during the rule of his brother. He made offers of a degrading nature to Harmodius, a young Athenian, and meeting with a repulse, insulted his sister by refusing her admittance to a procession on the score of unworthiness. Harmodius resented the double indignity, and formed a plan with his friend Aristogeiton and some few others to relieve themselves from so hateful a tyranny. Hippias was their first object, but finding themselves detected, they attacked Hipparchus with the violence of insulted men, and slew him at the cost of their own lives. The other conspirators were detected. Hippias exchanged popular manners for suspicious cruelty, and at the same time took measures for ingratiating himself with Darius, king of Persia. In the fourth year of his rule he was expelled, with Spartan aid, by the fugitive Alcæmonida, and retired to Sigeum on the Hellespont, thence to Lampascus, and lastly to the court of Persia, to return again in old age as the companion of the enemies of Greece, and to witness their overthrow at Marathon nineteen years afterwards. Herodotus relates that the Spartans repented of having expelled him, but that their plans to restore him were opposed by the Corinthians, and fell to the ground. (Herodotus, v. 91-96; Thucydides, vi. 54-59.)

PISISTRATUS (*Πεισιστρατος*), son of Hippocrates, lived at the same time with Croesus, king of Lydia. He was the friend and relation of Solon, and, during the lawgiver's absence, had formed and led one of the three parties into which Athens was then split, namely, that of the Highlands: Megacles and Lycurgus heading those of the Coast and of the Plain. In B.C. 560 Pisistratus, having matured his plan of self-aggrandisement, drove into the market-place, himself and his mules marked with wounds inflicted by his own hand. He attributed these wounds to the enemies of the people, whose friend he was, and asked a guard, to which his brilliant services gave him some claim. Fifty mace-bearers were granted him, with whose help he made himself master of the Acropolis. His triumph however in the first instance did not last above five years, as Herodotus tells us, the other two factions joined to drive him out before his rule became deeply rooted. A new quarrel between Megacles and Lycurgus proved the means of his recall, and he strengthened himself by taking a daughter of Megacles for his second wife. As one of the Alcæmonida, she was held to be stricken with a curse, and Pisistratus, as his mother-in-law discovered, slighted her in consequence, so as to leave her a wife only in name. Pisistratus was again expelled, and continued in exile for about thirteen years; indeed he seems to have hesitated whether he should ever attempt to return. The judgment of his son Hippias however prevailed, and after many years' preparation, he landed at Marathon, took his foes by surprise, routed them, spared the fugitives, and was master of Athens. He strengthened himself by foreign and native mercenaries, by gaining the favour of the poor, and taking hostages of the rich, and ruled till his death, which took place B.C. 527.

Herodotus observes that Athens, great as she was under the tyrants, waxed yet greater afterwards: a way of expressing that the rule of Pisistratus was a breathing-time, after the reforms of Solon, which gave opportunity for those reforms to sink into the heart of the people, to become not merely enacted but active, and which rendered the next age more brilliant in production than it otherwise would have been. To Pisistratus also were owing the first step in art taken at Athens, the first important public buildings, the first poor-rate, under the guise of a tax on the rich to defray the expense of those public buildings, and lastly the first library, and the collection (as it is said) of the poems of Homer.

PISO, C. CALPU'RNIIUS. [CÆSAR; CICERO.]

PITCAIRNE, ARCHIBALD, M.D., was born at Edinburgh in 1652. He studied divinity and afterwards law at that university with ardour; but being obliged by the failure of his health to go to Montpellier, he there acquired a love of medicine. On his return to Edinburgh, he devoted himself to the pursuit of its several branches and to the study of mathematics, by the application of which he believed (as many of his contemporaries did), that much light might be thrown upon the phenomena of life. He afterwards studied in Paris, and thence returning to his native place, he soon became the most renowned practitioner in it. In 1692 he was invited to the professorship of medicine at Leyden; but his mathematical theories being less agreeable than the doctrines of vitalism, which were then becoming prevalent, he held the appointment little more than a year, and then returned home, having reaped no other honour than that of having had the celebrated Boerhaave among his pupils. He died at Edinburgh, October 13, 1713.

Dr. Pitcairne's chief work was published after his death, under the title of 'Elementa Medicinæ Physico-Mathematicæ;' but, like most others of the same class, it contains little that is now considered valuable. He also wrote a work to prove Harvey's claim to the

discovery of the circulation of the blood, and several dissertations on the utility of mathematics in the study of medicine.

PITISCUS, SAMUEL, was born at Zutphen, March 30, 1637, and in his younger days was the scholar of John Frederick Gronovius. He was appointed master of the public school at Zutphen in 1685, and about the same time was entrusted with the direction of the college of St. Jerome at Utrecht. This last employment he retained till 1717, when, being in his eightieth year, he resigned it. His most important works were his 'Lexicon Latino Belgicum,' the best edition of which is that published at Dort in 1725, and his 'Lexicon Antiquitatum Romanorum,' 2 tom. fol., Leov., 1718. His editions of Quintus Curtius, Sallustius, and Aurelius Victor are well known to classical scholars. He likewise edited Pomsy's 'Pantheon Mythicum' and Rosin's 'Antiquitatum Romanorum Corpus,' 4to, Utrecht, 1701. He prepared large collections for a 'Lexicon Catallo-Tibullo-Propertianum.' He died February 1, 1727. He acquired considerable property by his works, and is said to have left at his death ten thousand florins to the poor.

PITS, or PITSEUS, JOHN, an English biographer, was born at Alton in Hampshire, A.D. 1560. He received his early education at Winchester school, whence, at the age of sixteen, he was elected a probationer fellow of New College Oxford, but in less than two years he left the kingdom as a voluntary Romish exile, and went to Douay. He went thence to Rheims, and a year afterwards to the English college at Rome, where he studied seven years, and then returned to hold the professorship of rhetoric and Greek at Rheims. Toward the end of 1590, he was appointed governor to a young nobleman, with whom he travelled into Lorraine, and afterwards went through Upper Germany and Italy. He subsequently returned to Lorraine, where he was preferred to a canonry of Verdun. When he had passed two years at his new residence, Antonia, daughter of the Duke of Lorraine, who had married the Duke of Cleves, invited him to Cleves to be her confessor. He continued in her service twelve years, till her death, when he returned a third time to Lorraine, and was promoted to the deanery of Livardun, where he died in 1616. The leisure he enjoyed while confessor to the Duchess of Cleves enabled him to compile a work which alone has made him known to posterity. 'The Lives of the Kings, Bishops, Apostolical Men, and Writers of England.' They were comprised in four large volumes; the first containing the lives of the kings, the second of the bishops, the third of the apostolical men, and the fourth of the writers. The three first are preserved in the archives of the collegiate church of Verdun; the fourth only was published after his decease, 4to, at Paris, 1619 and 1623, under the title of 'Joannis Pitsei Angli, S. Theologiae Doctoris, Livarduni in Lotharingia Decani, Relationum Historicarum de Rebus Angliis Tomus Primus,' &c.; but the running title by which it is most frequently quoted is 'De Illustribus Angliæ Scriptoribus.' In this work Pitt took much from Bale's book 'De Scriptoribus Majoris Britannia' without acknowledgment, pretending at the same time to abhor both Bale and his work. He also quotes Leland's 'Collectanea de Scriptoribus Angliæ,' which Wood asserts he never could have had the means of perusing, but must likewise have taken at second hand from Bale. His partiality is also great. He leaves Wycliffe and his followers, together with the Scotch and Irish writers, entirely out of his work, and in their room gives an account of the Roman Catholic writers, such especially as had left the kingdom after the Reformation in Queen Elizabeth's time, and settled at Rome, Douay, Louvain, &c. This however is the best and most valuable part of Pitt's work. He published three small treatises, which are less known: 'De Legibus,' Trier, 1592; 'De Beatitudine,' Ingolst., 1595; 'De Peregrinatione,' 12mo, Dusseldorf, 1604. The last is dedicated to the Duchess of Cleves.

PITT, WILLIAM, EARL OF CHATHAM, was the second son of Robert Pitt, Esq., of Bocconoc, near Lostwithiel, in Cornwall, by Harriet Villiers, sister of the Earl of Grandison (an Irish peer), and the grandson of Thomas Pitt, governor of Madras, the possessor of the celebrated Pitt diamond, which, according to an account published by himself, he bought in India for 24,000*l.*, and sold to the French king for 135,000*l.* William Pitt was born at Bocconoc on the 15th of November 1708. He was educated at Eton, whence he went in 1726 as a gentleman commoner to Trinity College, Oxford. Through ill-health he left the university without taking a degree, and made a tour through France and Italy. On his return to England he obtained a cornetcy in the Blues, and entered parliament in January 1735, as one of the representatives for the borough of Old Sarum, which was the property of his family.

He immediately joined the opposition, of which the head at this time was Frederic, prince of Wales, but for the first session he took no part in the proceedings of the house beyond giving his vote. His maiden speech was delivered on the 29th of April 1736, on occasion of a motion made by Mr. Pulteney, for an address of congratulation to his majesty on the recent marriage of the prince. The motion was seconded by Mr. Pitt, and was supported by his friend George Lyttelton (afterwards the first Lord Lyttelton), who held the office of secretary to his royal highness. The animosity between the prince and his father now rose to a great height, and, among the other adherents of the prince, Pitt experienced the vengeance of the court by being deprived of his commission within a few days after the

delivery of his speech. For this loss however he was recompensed by being appointed by the prince one of the grooms of his bed-chamber. The next occasion on which he is recorded to have taken any part in the debates of the house was on an opposition motion for a reduction of the army, on the 3rd of February 1738; nor did he become a frequent speaker till some years later. He made another speech, of more energy and vehemence than he had yet displayed, in the debate on the 8th of March 1739, on the convention with Spain; but his name does not again occur in the reports of the debates, either in that or in the following session. He appears to have first taken a prominent part as a debater in the discussion of the successive motions directed against Walpole, in January and February 1741, towards the close of the seventh and last session of this the first parliament in which he had a seat. It was in one of these debates, professedly on the second reading of the ministerial bill for the encouragement and increase of seamen, which took place on the 27th of January, that he is made, in the report drawn up by Johnson for the 'Gentleman's Magazine,' to have delivered his celebrated philippic in reply to the elder Horatio Walpole (the minister's brother, and afterwards Lord Walpole of Woolterton), beginning—"The atrocious crime of being a young man, which the honourable gentleman has with such spirit and decency charged upon me, I shall neither attempt to palliate nor deny, but content myself with wishing that I may be one of those whose follies may cease with their youth, and not of that number who are ignorant in spite of experience." It is believed however that this brilliant declamation is almost entirely Johnson's own; the style at any rate is certainly his, and not Pitt's.

To the next parliament, which met in December 1741, Pitt was again returned for Old Sarum. Walpole resigned in the beginning of February 1742, but his retirement did not leave the road to office open to Pitt, against whom the king had conceived a violent prejudice, not only on account of the prominent and effective part he had taken in the general assault upon the late administration, but more especially in consequence of certain strong opinions he had expressed on the subject of Hanover, and the public mischiefs arising from his majesty's partiality to the interests of that electorate. It is understood also that Pulteney, the framer of the new ministry, owing to a dislike which existed between his friend Lord Carteret (afterwards Earl of Granville), who now became one of the secretaries of state, and Lord Cobham, the friend and relation of Pitt, Lyttelton, and George Grenville, found it impossible or unadvisable to bring any one of the three last-mentioned persons into office for the present, although the most distinguished members of his party. Grenville's elder brother Richard (afterwards Earl Temple) and Lyttelton's father had married sisters of Lord Cobham, and Pitt's elder brother was married to a sister of Lyttelton's.

The nominal head of the new ministry was Lord Wilmington, who held the office of first lord of the treasury; but when Walpole, in a few months after his own fall, had contrived to extinguish Pulteney by forcing him into the House of Lords, where, from being the most popular and powerful man in England, he suddenly dropped down into a nonentity as Earl of Bath, the real supremacy in the cabinet was divided, or rather contended for, between Carteret and the two Pelhams, the elder of whom, the Duke of Newcastle, was the other secretary of state, his brother Henry Pelham being paymaster-general. Wilmington died in July 1743, and although by Walpole's advice Mr. Pelham was then appointed first lord of the treasury and chancellor of the exchequer, Carteret notwithstanding derived from the favour of the king a power really superior to that of his rival, and upon which his bold and impetuous character made him presume in a manner equally offensive to the public and to his colleagues. In this state of affairs Pitt soon threw himself again into opposition, and became more active and acrimonious in his denunciations of the new ministry than he had ever been in inveighing against Walpole himself. On the subject of the king's Hanoverian partialities in particular, to his sympathy with which Carteret was understood chiefly to owe his influence over the royal mind, the eloquent commoner was now louder and more eloquent than ever. He and Lyttelton are also said to have both been members of the secret committee of six, headed by Bubb Dodington (afterwards Lord Melcombe), by which all the operations of the opposition were now directed.

Carteret, now become Lord Granville, was dismissed a few days before the opening of the session of parliament in November 1744; and what was called the 'Broad-Bottom Ministry' was formed, with Mr. Pelham in reality, as well as in appearance, at its head. But although his friends George Grenville and Lyttelton both obtained places in the new arrangement, Pitt's time was not yet come: his recent conduct in fact had given additional provocation to the king. From this date however he ranged himself among the supporters of the administration, and not merely softened his tone touching Hanover and other delicate points, but even did not scruple to unsway a good deal of what had in past years formed the staple of his oratory.

In the beginning of 1746 an attempt was made by the Duke of Newcastle to overcome the king's repugnance to the admission of Pitt into office; but the insinuations of Pulteney are said to have been employed to strengthen the royal aversion, and his majesty made a desperate struggle to escape the threatened infliction. On the 10th of February Lord Bath was actually named first lord of the treasury,

and the head of a new administration, with his friend Grenville for secretary of state; but it was found that this project could not be carried through, and four days afterwards Pelham and all his colleagues were again in the occupation of their several offices. On the 22nd Pitt was appointed one of the joint vice-treasurers for Ireland, and on the 6th of May following he was promoted to the more lucrative office of paymaster-general. After each of these appointments he was re-elected for Old Sarum. To the next parliament however, which met in November 1747, he was returned by the influence of the government for Seaford, one of the Cinque Ports. On this occasion the Duke of Newcastle is said to have personally interfered in the election in the most open manner; but when the return was petitioned against on this account, Mr. Pitt, according to the report of the debate, "treated the petition with great contempt, and turned it into a mere jest;" and the motion for its being taken into consideration was negated by a great majority. The opposition in fact was now reduced to a helplessly inconsiderable fraction of the house.

A few years before, Pitt's pecuniary circumstances had been rendered much easier by a legacy of 10,000*l.* left to him by the Duchess of Marlborough, "in reward," as her will expressed it, "for the noble disinterestedness with which he had maintained the authority of the laws, and prevented the ruin of his country." He had thereupon resigned his post in the household of the Prince of Wales, and indeed had separated himself entirely from his royal highness, who still remained the recognised head of the opposition, such as it was, till his death in March 1751. Mr. Pitt distinguished himself in his new place by an honourable disdain of certain sources of emolument of which his predecessors had been accustomed to avail themselves; and also by the frank and courageous style in which he went on urging and defending the course of national policy, especially in relation to foreign affairs, which his previous parliamentary life had been spent in opposing and reprobating.

The discussions upon the Regency Bill, which in this session followed the death of the Prince of Wales, first brought out that opposition between Pitt and Henry Fox (afterwards the first Lord Holland) which not only made them rivals during their lives, but gave rise to a competition for the chief power in the state in which their two celebrated sons also spent their days. For the present the influence of the Pelham section of the cabinet, which Pitt represented, prevailed over that of the Bedford section, which supported Fox. Fox himself, who was secretary at war, kept his place, as well as Pitt; but his patron the Duke of Bedford resigned, along with one or two friends who also belonged to the cabinet, and whose seats were immediately filled by connections or dependants of the Pelhams. The arrangements now made subsisted till the sudden death of Mr. Pelham in March 1754, upon which the Duke of Newcastle was appointed first lord of the treasury and premier. A few weeks after the parliament was dissolved. This year Pitt drew closer his connection with the Grenvilles by his marriage with Hester, sister of the Right Hon. George Grenville, and of his brother, the then Viscount Cobham, afterwards Earl Temple.

To the new parliament, which met in November 1754, Pitt was returned for the Duke of Newcastle's borough of Aldborough in Yorkshire. Before the end of the session however a complete breach had taken place between Pitt and his grace, which ended, after about a year, in a reconstruction of the government. On the 15th of November 1755 Fox was appointed secretary of state, and five days after Pitt and his friend Grenville both received intimations that his Majesty had no further occasion for their services. But after about another year Newcastle, already deserted by Fox, found it necessary to resign a position for which the nearly unanimous voice of the public had pronounced him unfit, and his occupation of which had only been signalled by a series of national disasters and disgraces. In this crisis of affairs the king, after a short struggle, found it necessary to call in the popular favourite; and although the office of first lord of the treasury was given for the present to the Duke of Devonshire, Pitt, appointed secretary of state, became the actual premier, with a cabinet consisting of his personal friends and the other chief members of his party, in December 1756. He was now returned both for the town of Buckingham and for Oakhampton, and chose to sit for the latter. But this first ministry of Pitt's lasted only for a few months. The king's old aversion had not been weakened by the manner in which the man of the people had been forced upon his acceptance; and in April of the year following (1757) his Majesty abruptly sent Lord Temple his dismissal from the post he held of first lord of the Admiralty—an act which was immediately followed, as must have been foreseen and designed, by Mr. Pitt's resignation. For two months and a half the country remained without a government, during which time the court applied in succession to almost every section of party-men in the country, without being able to prevail upon any individual to undertake the management of affairs. At last, on the 11th of June, Lord Mansfield received full powers from his Majesty to open negotiations with Mr. Pitt and the Duke of Newcastle, the result of which was that before the end of the month Pitt was again premier, with the seals of secretary of state. Newcastle was re-appointed first lord of the treasury; Pitt's friends, Earl Temple, George Grenville, and Mr. Legge, became respectively lord privy seal, treasurer of the navy, and chancellor of the exchequer;

Mr. Fox was made paymaster of the forces; and even Lord Granville obtained a seat in this comprehensive cabinet as president of the council. Upon this new appointment Mr. Pitt was chosen member for Bath, for which he was also returned to the next parliament, which met in November 1761, and which was the last place he represented.

The detail of the brilliant military successes which distinguished Mr. Pitt's administration belongs to the general history of the country, but an enumeration of the principal results of his conduct of the war may be found in the article on GEORGE II. The new reign however brought along with it the ascendancy in the cabinet of Lord Bute and his friends [BUTE, EARL OF, and GEORGE III.]; and on the 5th of October 1761, a few weeks before the meeting of parliament, Mr. Pitt, on the refusal of his colleagues to acquiesce in his proposition of declaring war against Spain, resigned, along with his friend Earl Temple, the only member of the cabinet who had supported his views. On his retirement a pension of 3000*l.* a year for the lives of himself, his wife, and his eldest son, was conferred on Pitt, and his wife was made a peeress with the title of Baroness Chatham. These honours and rewards did not increase the popularity of the late premier.

In his new position nevertheless Pitt acted a sufficiently independent part. Without engaging in any factious opposition, but on the contrary giving a general support to the government, he directed his eloquence against certain of their measures with all his old energy and fervour. In particular he denounced the preliminaries of peace signed in November 1762; resisted as far as he could, though ineffectually, the famous bill for extending the excise regulations to the manufacture and sale of cider, brought forward in the same session; and the next session took a conspicuous part in maintaining against ministers the illegality of general warrants on the proceedings that arose out of the affair of Wilkes and his 'North Briton.' Before this last question arose, the premiership, by the sudden resignation of Lord Bute in April 1763, had fallen for a time into the hands of George Grenville, who had continued in office when his brother Lord Temple and Pitt had retired in October 1761, and had ever since remained separated from his old friends. In September 1763 an attempt had been made to bring Pitt again into the cabinet, but he declined the overtures made to him when he found he was not to have the first place; and when parliament met in November the head of the ministry was considered to be the Duke of Bedford, who, on the failure of the negotiation with Pitt, had been appointed to the office of president of the council.

Another attempt which the king made in May 1765 to obtain the assistance of Mr. Pitt in forming a new cabinet proved equally unsuccessful with the last, and so did a renewal of it in June following. The result of these negotiations was the accession of the Rockingham administration, in which Pitt had no place, but whose measures generally had his support, although in the debate on the address in January 1766 he declared that he could not give them his confidence, adding, while he bowed to the treasury bench, "Pardon me, gentlemen, confidence is a plant of slow growth in an aged bosom; youth is the season of credulity." It was upon this occasion that he announced his peculiar view of the constitutional question involved in the dispute already begun with America:—"It is my opinion," he said, "that this kingdom has no right to levy a tax upon the colonies. At the same time I assert the authority of this kingdom over the colonies to be sovereign and supreme in every circumstance of government and legislation whatsoever. Taxation is no part of the governing or legislative power. The taxes are a voluntary gift and grant of the Commons alone. In legislation the three estates of the realm are alike concerned; but the concurrence of the peers and the crown to a tax is only necessary to close with the form of a law. The gift and grant is of the Commons alone." To this singular and not very intelligible theory Pitt clung to the end of his days, dying indeed, it may be said, in the utterance and vindication of it.

Meanwhile in the difficulties to which this ministry also soon found itself reduced, another application was made to Pitt, so early as the end of February 1766. At that time it came to nothing, but the attempt was renewed after a few months; and in the end Pitt received a 'carte blanche' to frame a new cabinet, which was completed about the beginning of August. And a very extraordinary piece of handy-work it turned out. "He made an administration," as Burke has said in a famous passage, "so chequered and speckled: he put together a piece of joinery so grossly indented and whimsically dovetailed; a cabinet so variously inlaid; such a piece of diversified mosaic; such a tessellated pavement without cement; here a bit of black stone, and there a bit of white; patriots and courtiers, king's friends and republicans, Whigs and Tories, treacherous friends and open enemies, that it was indeed a very curious show, but utterly unsafe to touch and unsafe to stand on." What most astonished the public in the whole arrangement was the manner in which Pitt disposed of himself: he appropriated the almost sinecure place of lord privy seal, and, leaving the old scene of his glory, went to the Upper House as Viscount Pitt and Earl of Chatham. "The joke here is," wrote Lord Chesterfield to a friend on the occasion, "that he has had a *fall upstairs*, and has done himself so much hurt that he will never be able to stand upon his legs again."

We cannot enter into the history of the rickety administration thus

attempted to be set up. Suffice it to say that it was in a state of confusion and embarrassment all the time it subsisted, and that Lord Chatham, its nominal head, was soon withdrawn from all share in the conduct of affairs by a serious illness, which, from the evidence furnished by his recently published correspondence, clearly appears to have been chiefly mental, and to have taken the form of a deep hypochondria, making him shrink with horror from business and from intercourse with any person beyond the circle of his own family. At last, on the 15th of October 1768, he sent his friend Lord Camden to the king with a resignation of his office.

This decision, and the relief from responsibility which it brought with it, probably had a beneficial effect on his health. In the session of parliament which began on the 9th of January 1770, he again appeared in his place, and took as prominent and active a part in debate as he had ever done in his best days. One of the chief questions on which he exerted himself in this and the next session was that of the conduct of the House of Commons in the affair of Wilkes's election for Middlesex, which he condemned vehemently and without reserve, and contended to be a flagrant outrage on the first principles of the constitution. He also appeared occasionally in the session which began on the 21st of January 1772; in one speech in particular, which he delivered in May that year, in support of a bill for the relief of Protestant Dissenters, he showed, according to the report of the debate, "as much oratory and fire as perhaps he ever did in his life." But his name does not appear again in the debates till towards the end of the session of 1774, on the 27th of May in which year, though still labouring under a state of ill-health, which had long kept him absent from the House, he spoke warmly and impressively in opposition to one of Lord North's bills for subduing the resistance in America. He spoke also several times on the same now all-engrossing subject in the earlier part of the first session of the next parliament, which met in November of this year; but then a return of ill-health sent him back for nearly two years into retirement. When he again made his appearance in the House, in the end of May 1777, it was to reiterate with increased earnestness his views and warnings on American affairs; and he continued to come down for the same purpose during the next session as often as the little strength remaining in his racked and shattered frame would permit. At last, on the 7th of April 1778, after he had spoken once on a motion for an address to the king on the state of the nation, he attempted to rise again to notice something that had been said by the Duke of Richmond in reply, when he dropped senseless into the arms of those beside him. He was carried home to his house at Hayes, in Kent, but never again rose from his bed, and died on Monday, the 11th of May, in the seventieth year of his age.

All the enthusiasm which had been stirred by his name in former days was revived for the moment by the death, in circumstances so affecting, of the orator and statesman who for more than forty years had filled so large a space in the public eye, and whose memory was associated with so much of popular principle and national glory; and to a funeral and a monument in Westminster Abbey at the public expense, were added the more substantial rewards of a grant of twenty thousand pounds for the payment of his debts, and a pension of 4000*l.* a year to his descendants.

As to Lord Chatham's real claims, either as an orator, a minister, or a patriot, we may observe in general that in each of these capacities he appears to have been at best the man merely of his own time. His eloquence, of the immediate effects of which there can be no question, must have partaken very much of the only half-intellectual art of acting, and been indebted for its power to his voice, his eye, and other mere external advantages, as much as to any higher qualities. At least no report that has come down to us of any of his speeches conveys an impression at all answering to their traditional fame. Earnestness and fervour there is, as well as clearness and distinctness, with occasional point or happy aptness of expression; there is generally forcible reasoning, and a luminous disposition of the subject; but that is nearly all. Lord Chatham's eloquence is rarely irradiated by any imaginative colouring, and is without any remarkable depth or novelty of thought; its ordinary rhetorical characteristic is tawdriness, and its vein of reflection common-place. Indeed it is probably to this last-mentioned quality that it was in great part indebted for its immediate success; it hit the popular or general understanding, as it were, between wind and water. And to this effect also contributed the thoroughly English character of Lord Chatham's mind; a proud love of his country was his master-passion, and her greatness and glory ever the object on which he kept his eye. He was also altogether a public man—amiable and beloved, indeed, in his domestic circle, and both enjoying and returning very cordially the affection of his family, but, as his enemies admitted, free from dissipation of every kind, and having as little of vice or indolence or any other kind of sensuality in his composition or habits as any man of his time. On the subject of his ambition indeed it would be easy to say much, as much has been said; and some of his letters lately published go to show that his love of power was combined not only with great haughtiness of bearing towards his inferiors, but also with no small degree of what would now at least be called subserviency to those above him. But even in regard to this last most unfavourable exhibition which he makes of himself, something is to be allowed for the manners and indeed

BIOG. DIV. VOL. IV.

established etiquette of the age, which in all departments of social intercourse exacted a degree of formality and ceremonious observance which now seems extravagant and ridiculous, and if practised in the present day would really indicate a much greater degree of servility than it then implied. It can hardly be disputed that Chatham, whatever faults he may have had, was essentially a high-minded man, and it is most reasonable, when we find him appearing otherwise in any particular case, to set down the defect as one of manner rather than of character.

The Life of Lord Chatham has been written by Almon, the bookseller, in 3 vols. 8vo, under the title of 'Anecdotes of the Life of the Earl of Chatham;' and much more accurately, as well as fully, by the Rev. Mr. Thackeray, in his 'History of the Earl of Chatham,' 2 vols. 4to. Of his own writings nothing has been given to the world except a small volume of letters addressed to the son of his elder brother, afterwards Lord Camelford, which were published a few years ago by the late Lord Grenville, and his 'Correspondence,' in 4 vols. 8vo, 1838-40. The 'Correspondence' abounds in matter illustrative both of the life of Chatham and of the political history of his time. By his wife, who survived till 1803, besides two daughters, he had three sons, the political distinction acquired by one of whom, the subject of the next article, rivalled that of his illustrious father.

PITT, THE RIGHT HONOURABLE WILLIAM, second son of the first Earl of Chatham, was born at Hayes, in Kent, on the 23th of May 1759. His elementary education was conducted at home, under the immediate care of the Reverend Edward Wilson, afterwards canon of Windsor, and anxiously superintended by his father, whose favourite he was, and who early formed high anticipations of the figure he would make in life. He was sent in 1773 to Pembroke Hall, Cambridge, where his studies were principally under the direction of Dr. Pretyman (who afterwards took the name of Tomline, and became bishop of Winchester, and the biographer of his distinguished pupil). "Although he was little more than fourteen years of age when he went to reside at the university," says Bishop Tomline, "and had laboured under the disadvantage of frequent ill health, the knowledge which he then possessed was very considerable; and, in particular, his proficiency in the learned languages was probably greater than ever was acquired by any other person in such early youth. In Latin authors he seldom met with difficulty; and it was no uncommon thing for him to read into English six or seven pages of Thucydides, which he had not previously seen, without more than two or three mistakes, and sometimes without even one." Mr. Pitt was probably very well taught when he went to the university; but this way of stating the matter only shows that the bishop's own scholarship was small.

After leaving Cambridge, Mr. Pitt visited France, and studied for a time at Rheims. On his return to England, being intended for the profession of the law, he entered himself of Lincoln's Inn; and he was called to the bar in 1780. But after having gone the western circuit only once or twice, he was returned to parliament for the borough of Appleby, the patron of which was then Sir James Lowther (afterwards Earl of Lonsdale); and from this date his original profession was given up for the House of Commons and a political career. He took his seat on the 23rd of January 1781, and his first appearance in debate was on the 26th of February following, on the motion for the second reading of Mr. Burke's famous bill for the regulation of the civil list establishments. He gave his hearty support to the measure, and, says the report, "in a speech directly in answer to matter that had fallen out in the course of the debate, displayed great and astonishing power of eloquence. His voice is rich and striking, full of melody and force; his manner easy and elegant; his language beautiful and luxuriant. He gave in this first essay a specimen of eloquence not unworthy the son of his immortal parent." He afterwards spoke repeatedly on the side of the opposition in the course of this and the following session, before the termination of which it may be said that he had taken his place with Burke, Fox, and Sheridan (the last also a member of only the same standing with himself), in the front rank of the debaters of the day.

It was on the 7th of May 1782, a few weeks after the fall of the North and the appointment of the second Rockingham administration, that Mr. Pitt made his first motion for the reform of the representation of the people. The motion was defeated by an inconsiderable majority; but the mover continued for some years after this to advocate, if not to hold, the principles or opinions which he announced on this occasion. At this date indeed he was so zealous a friend of reform as to take a leading part in some proceedings out of doors for the promotion of that object.

The death of the Marquis of Rockingham in the beginning of July having dissolved the administration of which he was the head, and that of Lord Shelburne having succeeded, Mr. Pitt was appointed to office and to a seat in the cabinet as chancellor of the exchequer, having just entered his twenty-fourth year. This was the administration to which it was left to finish the contest that had arisen out of the attempt to tax the Americans, by acknowledging the independence of the United States, and concluding peace with France and Spain. It was assailed upon these and various other grounds by the famous coalition formed between the adherents of the two immediately preceding ministers, as respectively represented by Lord North and Mr.

Fox; and the issue was, that in March 1778 Lord Shelburne and his colleagues were driven from office by the united force of this new opposition, and a cabinet was formed, nominally under the premiership of the Duke of Portland, but in which the chief power was actually lodged in the hands of North and Fox, who were appointed secretaries of state. The alliance of Whigs and Tories however, which had carried this victory, was now opposed by another body of similar composition, formed by the Shelburne Whigs and the Tories who, seceding from North, professed themselves the friends and supporters of the court, which was well understood to bear with impatience the yoke of the new ministry. Of this opposition Pitt was the recognised leader in the House of Commons. Among other means to which he had recourse with the view of damaging the government, was the renewal of his motion for parliamentary reform. The effect, as had been anticipated, was to array Fox and North against each other in the debate and the division; but the motion nevertheless was negatived in rather a full house by a majority of nearly two to one. The serious opposition to the government did not begin till the next session, when Fox brought forward his India bill; but even that measure was carried through all its stages in the House of Commons by great majorities, and only encountered a formidable resistance when it reached the Lords, where the personal influence of the king was exerted to procure its defeat. This object being attained, his majesty, with his characteristic decision, followed up his advantage by dismissing Mr. Fox and Lord North, when they would not resign, and by appointing Mr. Pitt prime minister, with the offices of first lord of the treasury and chancellor of the exchequer. This was in the middle of December 1783.

The state of parties was now very extraordinary, and gave rise to the most remarkable contest in the history of parliament. In the House of Commons the force of the opposition very considerably outnumbered that of the government, even after all the impression that the influence of the crown had been able to make upon the ranks of the former; so that if the issue of the struggle had depended solely upon that assembly, it could not have been doubtful or long deferred. But, if Mr. Pitt had the representatives of the nation against him, he had decidedly the nation itself on his side, and with this, backed by the support of the crown, his position was impregnable, for, if it came to the worst, a dissolution could in a moment put an end to the existence of the present House of Commons, and secure another in accordance with the prevailing popular feeling. Such an appeal to the people however was for obvious reasons far from palatable to the crown, and not to be resorted to if it could be avoided, although in this case the circumstances were as favourable for such an experiment as they could ever be expected to be, the permanent body of the House of Lords, whose union with the Commons might have considerably strengthened the latter, being already ministerial by a steady, though not a very large majority. Theoretically, indeed, the crown might have made a majority for itself in that branch of the legislature more directly than in the other house; but practically, a creation of peers for such a purpose would have been a more violent and unconstitutional measure than a dissolution in any circumstances, and, ventured upon contemporaneously with a dissolution, would have been an unexampled stretch of the prerogative, the effect of which would have been to counteract all the good effects that were to be hoped for from the other expedient. The policy which Mr. Pitt adopted was very masterly, and it was carried out with a steadiness and courage which would have been wonderful in the most veteran statesman. He did not dissolve the parliament immediately, but first suffered the opposition to waste their strength and damage themselves in the public opinion to an infinitely greater extent than ever by a long succession of infuriated and unavailing attempts to drive him from office; and then, when, after a battle which lasted for three months, he had reduced their majority from between fifty and sixty to one, he sent them back to their several constituencies, to be one-half of them rejected at a new general election. About 160 of them in fact lost their seats, and were dismissed to private life, with little to console them in their retirement except the name they received of 'Fox's Martyrs.'

Mr. Pitt's biography from this date is little else than the history of the public affairs of the kingdom so long as he lived. He continued at the head of the ministry which this great victory had established in power, for about seventeen years—a most eventful and important period, in the course of which the relations of parties were altogether changed, and this country and Europe were suddenly and violently translated from a state of profound peace into the most general and most convulsive war that had been known in modern times. [BONAPARTE, NAPOLEON I.; BURKE; GEORGE III.] The elder Pitt, as we have seen in the last article, owes his chief fame as a minister to his conduct of the war in which he found the country involved on his first accession to power; but it has been generally thought unfortunate for his son's political reputation that he should have been transformed from a peace into a war minister. In point of fact the nation certainly continued to make a very steady economic progress during the first nine peaceful years of his administration, and the military results of the last eight were on the whole disastrous. During the former period the trade of the kingdom was estimated to have increased by very nearly a third; and in the five years from 1783 to

1788, the revenue had received an augmentation of 5,000,000*l.*, of which not more than 1,500,000*l.* was calculated to have arisen from new taxes. At the same time the expenditure was not greater in 1790 than it had been in 1784, being in both years under 12,000,000*l.* The establishment of a new constitution for the East India Company (1784), the establishment of a new sinking fund (1786), the arrangement of a commercial treaty with France on very liberal principles (1786), the consolidation of the customs (1786), acts passed for the relief of the Roman Catholics in England, Scotland, and Ireland (1791, 1792), besides various minor measures for the suppression of smuggling, were the administrative innovations that chiefly distinguished this period, and that were understood to owe their origin mainly to the premier. In 1785 Mr. Pitt also once more brought forward the subject of the amendment of the representation of the people in parliament; but he did not call in the aid of his authority as minister to ensure the success of his motion, which was negatived by a considerable majority, and which he never renewed. Afterwards, when the question of reform was taken up by the Society of the Friends of the People, and brought forward at their instance by Mr. (afterwards Lord) Grey, the proposal found in Mr. Pitt one of its most determined opponents. To the exertions that were now begun to be made for the abolition of the slave trade, he lent the aid of his eloquence and of his own vote; but upon this question also he declined to use his power or influence as the head of the government. He took much the same course in regard to the prosecution of Warren Hastings, and the correction of the abuses of the Indian government. All the measures, it may be observed, to which Pitt gave only this kind of support, failed of success during his administration.

One of the most remarkable of the contests and victories that illustrate this first period of his government, occurred in the session of 1788-89, when he successfully maintained against Mr. Fox the right of parliament to supply the temporary defect of the royal authority occasioned by the incapacity of the reigning king—a right which seems to be now received as an established doctrine of the constitution.

Almost the only memorable legislative measure of the latter years of Mr. Pitt's first ministry was the union with Ireland, which was effected in 1799. It is now known that the disappointment of the expectations which he considered himself entitled to entertain of the abolition, or at least very great mitigation, of the penal and disabling laws affecting the Roman Catholics, was the reason which he assigned to the king for retiring from office soon after the passing of this measure. He and his friends resigned in March 1801.

For some time Mr. Pitt gave his support to the administration of his successor Mr. Addington; but when the rapidly growing conviction of the incompetency of the new cabinet began to foretell its speedy downfall, he joined in the general cry against it, and the result was that, in May 1804, he became again prime minister. He remained at the head of affairs till his death, on the 23rd of January 1806, the consequence partly of a wasted constitution—partly, it is generally believed, of a broken heart. The overthrow of the new coalition which he had succeeded in forming against France by the series of successes achieved by that power in the latter part of the year 1805, is supposed to have combined with the vexation arising from the impeachment of his friend Lord Melville to destroy him. He had for some years been accustomed to stimulate his overtaxed powers of body and mind by a lavish indulgence in wine; and this habit also no doubt had its share in shortening his days.

The public bearing of Mr. Pitt was cold and lofty; but he is said to have unbent himself very gracefully among his intimate friends, and the few who really knew him well seem to have been strongly attached to him. Whatever were his faults, there was no meanness in his character. As to the merits of his general system of administration, opinion is still nearly as much divided as ever. With regard to the character of his oratory there is perhaps beginning to be a more general agreement; and we may venture to say, without incurring the chance of any very loud or extended dissent, that, imposing and effective as it was at the moment of delivery, it owed its success as much to the impression which it made upon the ear, and to what we may call its mere mechanical qualities, as to any diviner inspiration. It wanted even the earnestness and occasional fire of his father's eloquence; and of either splendour of imagination or any remarkable depth or force of thought, it must be admitted to have been utterly destitute. Its highest quality appears to have been a power of sarcasm, which was the proper expression of a nature like that of Pitt, cold, proud, and contemptuous, and having little sympathy either with the ordinary vices and weaknesses, or with the better feelings and enjoyments, of his fellow-men.

PITTACUS, one of the so-called seven wise men of Greece, was the son of Hyrradius, and born at Mitylene in the island of Lesbos, about B.C. 652. Nothing is known of his education and the early part of his life, and the first facts which his biographer, Diogenes Laertius, mentions are—that, with the assistance of the brothers of Alceus, he delivered his native island from the tyranny of Melanochrus (B.C. 612), and that when the Mityleneans were involved in a war with the Athenians about the possession of the town of Sigeum on the Hellespont, Pittacus gained the victory over the Athenian general Phrynon by a singular stratagem. He came into the field

armed with a casting-net, a trident, and a dagger, and first entangled and then despatched his adversary (B.C. 606). In this war Alcæus left his shield a trophy to the enemy. It must have been soon after this war that Mitylene was distracted by the two political parties which about this time began to appear in various parts of Greece. The aristocratic party, to which Alcæus and his brother Antimenidas belonged, were driven from the town, and the popular party unanimously elected Pittacus to the office of *æsymnetes* to defend the constitution. During his administration, which lasted from B.C. 590 to 580, he overcame his adversaries, and gained them by his clemency and moderation. Even Alcæus, who had assailed him in his poems with the greatest bitterness, became reconciled. Pittacus regulated the affairs of his country by salutary laws and institutions, and in B.C. 580 he voluntarily resigned his office and withdrew from public life. Valerius Maximus (vi. 5, ext. i) erroneously states that Pittacus was made *æsymnetes* at the time of the war with the Athenians for the purpose of conducting it: but this is sufficiently refuted by the authority of Strabo, the fragments of Alcæus, and Diogenes Laërtius. Pittacus passed the last ten years of his life in quiet retirement, enjoying the esteem and love of the best and wisest of his countrymen; and when the Mityleneans wished to reward him for his services with an extensive tract of territory, he refused to accept it for himself, but had it made consecrated ground, which to the time of Diogenes Laërtius retained the name of the grounds of Pittacus. He died in B.C. 570, at the age of eighty-two.

Pittacus was the author of a considerable number of elegies, of which a few fragments are still extant. Diogenes Laërtius has preserved a short letter ascribed to Pittacus, and addressed to Croesus, king of Lydia, which contains an answer to an invitation of the king to come to see his magnificent treasures. Many of the numerous maxims of practical wisdom current among the ancients were ascribed to Pittacus, and are preserved in the works of Diogenes Laërtius, Plutarch, Ælian, and others.

PITTS, WILLIAM, was born in London in the year 1790, and brought up by his father to his own business, which was that of a gold-chaser, or what would have been termed in Italy an 'orefice': whether Pitts subsequently studied under any sculptor we do not know. His marriage, at about the age of nineteen, would seem to indicate that he was even then following his profession on his own account. It is likely that for what instruction in sculpture he ever had he was chiefly indebted to Flaxman, by whom he was employed in chasing the shield of Achilles. Indeed there seems to have been great similarity of feeling and taste between Pitts and Flaxman. As a counterpart to the shield of Achilles by the one, may be placed the shield of Æneas by the other; also the shield of Hercules, from Hesiod, and the Brunawick shield, which is a large circular relief, representing George IV. in a car in the centre, and in the other compartments the principal events of the house of Hanover. Pitts was also employed on the Wellington shield, which was executed under the immediate inspection of Stothard. By way of parallel to Flaxman's two series of designs from Homer and Dante, may be mentioned similar graphic compositions by Pitts from Virgil and Ossian, only the first of which has been engraved, being etched by himself in 1831.

Both for the exquisite fancy which they display and for their masterly graces of execution, some of his smaller subjects in relief have obtained for Pitts with many the title of the 'British Cellini,' but their only resemblance consists in their congenial fancy and artistic power. William Pitts was an unassuming enthusiast entirely devoted to his own art, and utterly unskilled in the art of winning his way to popularity and fortune: hence it is a matter of regret rather than surprise that he should not have obtained patronage at all in proportion to his ability and his genius, or that he encountered many disappointments, and was latterly involved in embarrassments. How far these last had any share in impelling him to the fatal act by which he terminated his life it is difficult to judge. He destroyed himself by poison, on the 16th of April 1810.

The following is a list of his chief productions, arranged according to their dates:—'The Deluge,' 1823; 'Samson slaying the Lion,' the 'Creation of Eve,' and 'Herod's Cruelty,' 1824; a 'Chariot-race,' 1826; the 'Pleiades,' and 'Shield of Æneas,' 1828; the 'Rape of Proserpine,' and the 'Nuptials of Peirithous,' two bas-reliefs, about eight feet long, executed for Mr. Simmons, of the Regent's Park, 1829; the 'Brunswick Shield,' 1830; the 'Apotheosis of Spenser, Shakspeare, and Milton,' and another series of reliefs in two of the drawing-rooms at Buckingham Palace, 1831; the 'Shield of Hercules,' 1834; a long bas-relief or frieze of all the English sovereigns from the Conquest, 1837; a design for a masonic trophy, 1839; the 'Triumph of Ceres,' a small subject modelled in wax, exhibited at the Royal Academy, 1840; the 'Kemble Tribute,' presented to C. Kemble, Esq.; and a vase, executed for her Majesty, as a sponal present by her, of exquisite design as to its general form, and poetically embellished with groups in relief, signifying Birth, Infancy, Instruction, Education, and Love.

PIUS I., a native of Aquileia, succeeded Hyginus as bishop of Rome in 142. Little is known of him. Several decretals have been attributed to him by Gratian, but they are generally considered apocryphal. Pius died in the year 157, and was succeeded by Anicetus.

PIUS II., ÆNEAS SYLVIUS PICCOLOMINI, born in 1405, at Corsignano, in the state of Siena, succeeded Calixtus III. in 1458. He was

a man of extensive learning, and had distinguished himself in the Council of Basel (1431-39), that celebrated assembly which attempted earnestly, though with little success, the reformation of the Church, and in which Piccolomini acted as secretary, and of which he wrote a history, 'Commentarius de Gestis Basil. Concilii,' in two books—a very important work for the history of the Church. At that time Piccolomini was a strong advocate for the supremacy of the council, and its right to judge and depose even the pope, "who," he argued, "ought to be considered as the vicar of the Church rather than as the vicar of Christ." These tenets however were condemned by Eugenius IV.; but the council asserted its authority by suspending the pope from his dignity; and then began a long struggle, which terminated in an open schism, the council deposing Eugenius and electing Felix V. [AMADEUS VIII.] Piccolomini was appointed secretary of the new pope or anti-pope, and was sent by him as his ambassador to the Emperor Frederick III., who was so pleased with him that he prevailed upon him to give up his precarious situation and accept the place of imperial secretary. Frederick afterwards sent him on several missions and loaded him with favours. Piccolomini was not ungrateful; he wrote several works in praise of his patron and in support of his imperial prerogative—'De Origine et Autoritate Romani Imperii ad Fridericum III. Imperatorem, Liber Unus;' 'Historia Rerum Friderici III.;' 'De Itinere, Nuptiis, et Coronatione Friderici III. Commentariolus;' 'De his, qui Friderico III. Imperante, in Germaniam, et per totam Europam memorabiliter gesta sunt, usque ad annum 1458, Commentarius.' At last Frederick sent Piccolomini as his ambassador to Pope Eugenius. This was a delicate errand for him who had been one of the avowed antagonists of that pontiff; but he managed so well by his dexterity, his captivating address, and, above all, his eloquence, that the pope not only forgave him, but became his friend; and Piccolomini had hardly returned to Germany from his mission when he received a papal brief appointing him apostolic secretary. He accepted an office congenial to his clerical profession, and also as the means of fixing his residence in Italy; but he still retained a lively sense of gratitude towards his imperial benefactor. From that time a marked change took place in the opinions, or at least in the professions of Piccolomini, and he became a stout advocate for the claims of the see of Rome. Eugenius died in 1447, and his successor Nicholas V., was recognised by the Fathers of the Council of Basel, who, being forsaken by both the emperor and the French king, made their peace with Rome. Felix V. also having abdicated in favour of Nicholas, the schism of the Church was healed. Nicholas made Piccolomini bishop of Trieste, and afterwards of Siena, and sent him as nuncio to Germany and Bohemia, where he had several conferences with the Hussites, which he relates in his Epistles. ('Epistola,' 130.) He had however the merit (rare in that age) of recommending mild and conciliatory measures as the most likely to reclaim dissenters to the bosom of the Church. He wrote a work on the history of Bohemia and the Hussites, in which he states fairly and without any exaggeration the tenets of that sect, as well as those of the Valdenses, which he calls 'impious,' but which are mainly the same that have since been acknowledged by the Protestant and Reformed churches throughout Europe. He relates the burning of John Huss and Jerome of Prague, and speaks of their fortitude, "which," he says, "exceeded that of any of the philosophers of antiquity," and he recapitulates literally their charges against the corruption of the clergy. (Æneas Sylvii, 'Historia Boemica.')

In the year 1452 Piccolomini, being then in Italy, was present at the solemn coronation of Frederick III. at Rome, and delivered an oration to the pope in the name of that sovereign, whom he afterwards accompanied to Naples. On their return to Rome he delivered another oration before the pope, the emperor, and other German and Italian princes, and the ambassadors of other European courts, for the purpose of exhorting them to form an effectual league against the Turks, who were then on the point of taking Constantinople. Piccolomini felt the great danger to Christian Europe from the rapid advance of the Ottoman conquerors, and his paramount object through the remainder of his life was to form a strong bulwark to protect Italy and Germany; but at the same time he was too well acquainted with the politics of the various Christian courts, and their selfish and petty jealousies, to expect much union in their councils, and he expresses his views and his doubts in a masterly manner in several of his 'Epistles.'

Calixtus III., the successor of Nicholas V., made Piccolomini a cardinal; and in 1458, after the death of Calixtus, he was unanimously elected pope by the name of Pius II. His pontificate lasted only six years, but during this period he distinguished himself by promoting learning, by inculcating peace and concord among the Christian princes, and exhorting them to unite their efforts against their common enemy, the barbarous Turks. The year after his election he convoked a congress of the ambassadors of all the Christian sovereigns to arrange the plan of a general war against the Ottomans. The pope himself repaired to Mantua, accompanied by the learned Philæphus, who spoke eloquently in favour of the proposed league. Most of the Italian states were willing to join in it, but Germany and France stood aloof, and nothing was decided. Pius assisted Ferdinand, king of Naples, in his war against the Duke of Anjou, the pretender to that crown. At the same time he was obliged to make war in his own states against Sigismondo Malatesta, lord of Rimini, and against the Savelli and

other feudal barons, and he was successful. By a bull addressed to the universities of Paris and of Cologne, Pius condemned his own writings in defence of the Council of Basel, concluding with these words:—"Believe what I, an old man, now say to you, and not what I wrote when I was young; believe the pontiff rather than the private individual; reject *Æneas Sylvius*, and accept Pius II." In several of his letters to his friends also, and especially to Pietro di Noceto, he expresses sorrow for his juvenile weaknesses, for he had once been too fond of the fair sex, and had even written accounts of some of his amorous adventures, and of those of other persons, which are found among his 'Epistles.'

A vacancy having occurred in the archiepiscopal see of Mainz, two candidates appeared for it—Adolph, count of Nassau, and Dietrich of Isenberg. The latter had the majority of votes, but Pius, who by the concordat had the right of deciding in cases of contested elections, refused to confirm the choice of Dietrich unless he engaged not to assert the supremacy of a general council, not to convoke of his own authority an imperial diet, and further to pay to Rome double the sum fixed for the annates, or first fruits. Dietrich demurred to the first two conditions, and positively refused to accede to the last; and as proceedings were instituted against him in the apostolic court, he appealed to the next general council. Pius declared such appeals to be heretical, and excommunicated and deposed him, appointing Adolph of Nassau in his place. The emperor acknowledged Adolph, but Dietrich being supported by the Count Palatine and the Elector of Bavaria, a war ensued which, after much mischief, ended in the submission of Dietrich. Those who remembered the sentiments of Piccolomini when imperial secretary, and especially his letter ('Epistola 25') to the papal nuncio John Carvaia, concerning the supremacy of the council, were inclined to think that change of station had, in him as well as in most men, produced a corresponding change of opinions. Pius took also the pains to write a long letter to Sultan Mohammed II., to convince him of the errors of Islamism, and to induce him to turn Christian.

In the year 1464 an armament intended against the Turks was directed to assemble at Ancona, and soldiers began to repair thither from various parts. Matthias, king of Hungary, and Charles, duke of Burgundy, had promised to be of the expedition. The Venetians also had promised the use of their fleet to forward the troops across the Adriatic into Albania. Pius II. set off from Rome for Ancona, but on arriving there he found that the soldiers were in want of arms, clothes, and provisions; the foreign princes did not come; and instead of the Venetian fleet, only a few galleys made their appearance. The aged and disappointed pontiff fell ill, and on the 14th of August he expired, after having taken leave of his cardinals and begged forgiveness if he had erred in the government of the Church. He was generally regretted, especially throughout Italy. He was succeeded by Paul II. Pius II. before his death raised his native town, Corsignano, to the rank of a bishop's see, and gave it the name of Pienza, by which it is now known.

As a learned man and a writer he is best known under the name of *Æneas Sylvius*, the most important part of his career being passed before he was elected pope. He was one of the first historians of his age, a geographer, a scholar, a statesman, and a divine. He was also a great traveller by sea and by land; he lived many years in Germany, he repeatedly visited France, went to Great Britain and as far as Scotland, and to Hungary. His biographer Campanus, bishop of Arezzo, speaks at length of his peregrinations, and his diligence in informing himself of everything worth notice in the countries which he visited. His principal works, besides those already mentioned, are:—1, 'Cosmographia, vel de Mundo Universo Historiarum,' liber i (a second book treats especially of Europe and its contemporary history); 2, 'In Antonii Penormitæ de Dictis et Factis Alphonsei Arragonum Regis, libri quatuor, Commentaria;' 3, 'Epitome supra Decades Flavii Blondi Forliviensis, ab inclinatione Imperii usque ad tempora Johannis XXIII., Pont. Max.,' in 10 books; 4, 'Historia Gothica,' published first at Leipzig in 1730; 5, 'A Treatise on the Education of Children, with Rules of Grammar and Rhetoric;' 6, lastly, his numerous 'Epistles,' which contain much varied information. A collection of his works was published at Basel, '*Æneas Sylvii Piccolomini Senensis Opera quæ extant*,' fol., 1551; but this edition does not include all. Domenico de Rosetti has published a catalogue of all his works and their various editions, and also of his biographers and commentators, 'Serie di Edizioni delle Opere di Pio II., o da lui intitolate,' Trieste, 1830. Biographies of Pius II. by Platina and Campanus are annexed to the Basel edition of his works, but a much more ample biography is found in the 'Commentaries' published at Frankfurt, 1614, under the name of John Gobelinus, his secretary, but which are known to have been written by himself or under his dictation, 'Pii II., Pont. Max., Commentarii Rerum Memorabilium quæ Temporibus suis contigerunt,' libr. xii., with a continuation by his intimate friend James Ammanato, cardinal of Pavia, who had, at his desire, assumed the name of Piccolomini.

PIUS III., CARDINAL FRANCESCO TODOSCHINI PICCOLOMINI of Siena descended from a sister of Pius II., was elected pope in 1503, after the death of Alexander VI., and died himself in less than a month after his election.

PIUS IV., GIOVANNI ANGELO MEDICI, or MEDICINI, of Milan, not

of the great Florentine family of Medici, succeeded Paul IV. in 1559. He made his nephew Charles Borromeo a cardinal, who afterwards became celebrated as Archbishop of Milan. He instituted proceedings against the nephews of the late pope, Cardinal Carlo Caraffa, and his brother the Duke of Paliano, who were accused of various crimes, which were said to be proved against them, and both were executed. But in the succeeding pontificate of Pius V., the proceedings being revised, the two brothers Caraffa were declared to have been unjustly condemned. At Easter, 1561, Pius re-assembled the Council of Trent, which had been prorogued under Paul III. He was particularly intent upon checking the spread of heresy, which had taken root in several parts of Italy, besides the valleys of Piedmont, and especially in some districts of Calabria. The Spanish viceroy of Naples sent his troops, assisted by an inquisitor and a number of monks, to exterminate by fire and sword the heretics of Calabria. Emmanuel Philibert, duke of Savoy, after attacking with an armed force the Valdenses, who made a gallant resistance, agreed to allow them the exercise of their religion within their own districts, subject to certain regulations. The quarrels between the Catholics and Protestants, in France, were more difficult to settle. Some of the French Catholic prelates, among others Monluc, bishop of Valence, and the Cardinal of Lorraine, recommended large concessions to be made to the Protestants with the hope of reconciling them to the Church, and Queen Catherine de' Medici wrote to the pope to that effect. The pope referred the matter to the council, and in the meantime Catherine published the edict of pacification, in January 1562, which allowed the Protestants liberty of conscience, and leave to perform their worship in country places, but not within walled towns.

The prelates sent by France to the Council of Trent, and several councillors of the parliament of Paris who were also ordered to attend in the name of the king, spoke loudly of the necessity of an extensive reform in the Church, and seemed disposed to render the bishops more independent of the see of Rome. The Cardinal of Lorraine was of opinion that the mass and other offices should be performed in the vulgar or popular language of each country; but the Italian prelates, and Lainez, general of the Jesuits, supported the maintenance of the established form of worship, as well as of the papal authority in all its existing plenitude. The discussions grew warm, and it was only in the following year, 1563, that the two parties came to an understanding. The council terminated its sittings in December of that year, and the pope confirmed its decrees by a bull. This was the principal event of the life of Pius IV. He died in December, 1565. His disposition was generous; and he embellished Rome; but he was guilty of the common fault of nepotism.

PIUS V., CARDINAL MICHELE GHISLIERI, a native of Alessandria in Piedmont, and a Dominican monk, succeeded Pius IV. in 1566. He had distinguished himself by his zeal in support of the Inquisition, of which tribunal he was one of the leading members. At the same time he was austere in his morals, and wished to enforce a strict discipline among the clergy, and especially the monks and nuns, more than fifty thousand of whom are said to have been at that time living and strolling about Italy out of their respective convents, regardless of any of the obligations enjoined by their order. (Botta, 'Storia d'Italia,' b. xii.) There was also a monastic order in Lombardy called the 'Umiliati,' possessed of considerable wealth, the heads of which led openly a most dissolute life, and even kept bravoos, or hired assassins, to execute their mandates. Charles Borromeo, archbishop of Milan, who endeavoured to check these atrocities, was shot at by one of the monks while at prayers in his oratory. The ball however only grazed the skin: the assassin was taken, and revealed his employers; and several preposti, or superiors of convents of the Umiliati, were executed. Pius V., having examined the whole affair, suppressed the order, and gave their property to the Jesuits and other orders.

Pius V. enforced the authority of the Inquisition over all Italy. There were at that time in several towns, especially in Tuscany, some scholars and other men of learning who advocated the doctrines of the Reformation. Some ladies also of high rank, who enjoyed a reputation for learning, such as Vittoria Colonna, Giulia Gonzaga, and Margaret, the wife of Emmanuel Philibert, duke of Savoy, were suspected of a similar bias. Pius demanded of Cosmo, duke of Florence, the person of Carnesecchi, a Florentine nobleman who made a public profession of opinions considered as heretical; being given up to the Inquisition, he was put to death at Rome. The same happened to Palearius, Bartocci, and Giulio Zanetti; the last, who was at Padua, being given up to the pope by the Venetian senate, on the plea that he was a native of Fano and a subject of the Papal State. Numerous informers were kept by the Inquisition in every town of Italy; and such was the terror produced by these severities, that the University of Pisa became almost deserted both by teachers and students. The pope also enforced the strict observance of the index of forbidden books, and enacted severe penalties against those who printed or introduced or kept such books. The printing-presses of Italy, those of Giunti of Florence, and others, declined greatly in consequence, and many printers emigrated to Switzerland or Germany. Pius V. enforced the canons against those priests who kept concubines; but instead of leaving to the civil magistrates the repression of this abuse, he insisted upon the bishops acting both as magistrates and judges, by means of armed men attached to their episcopal courts, and of

prisons for the same purpose. This gave rise to frequent collisions between the secular and the ecclesiastical authorities, especially at Naples and Milan. Similar disputes took place concerning the ecclesiastical inspectors and collectors sent by the pope to visit and demand accounts of all church property throughout Italy. Pius proceeded on the principle asserted in the false decretals, that the pope has the disposal of all clerical benefices throughout the world. He also reproduced the famous bull called 'In omnia Domini,' which excommunicates all princes, magistrates, and other men in authority, who in any way favour heresy, or who attempt to circumscribe the ecclesiastical jurisdiction, spiritual and temporal, or to touch the property or revenues of the church; and all those who appeal from the decision of the pope to the general council, as well as those who say that the pope is subject to the council. He ordered this bull to be read every Thursday before Easter in every parish church throughout the Christian world. France, Spain, and the Emperor of Germany strenuously resisted the publication of this bull. In Italy the senate of Venice likewise forbade its publication. At Naples and Milan the Spanish governors did the same, but the bishops and monks refused absolution to those who in any way opposed the bull. After much altercation and some mischief, the civil power attained its object, and the bull was set aside. In Tuscany the bull was allowed to be published, but rather as a matter of form than as a measure upon which judicial proceedings could be grounded. The monks and some of the parochial clergy however pretended by virtue of the bull to be exempt from all taxes, and refused the sacrament to the collectors and other revenue officers and their families. The duke of Florence, Cosmo de' Medici, threatened to put the monks in prison and prosecute them. The Tuscan bishops tried to conciliate matters, and to repress the arrogance of the clergy, but the disturbances continued till the death of Pius V.

By a bull dated August 1569, Pius created Cosmo de' Medici, who till then had only the title of duke of Florence, grand-duke of Tuscany, and his successors after him, and sent with the bull the model of a crown, ornamented with a red lily, the former ensign of the Florentine republic. Pius was a great promoter of the Christian league against the threatening arms of the Ottomans. After the glorious naval victory of the Curzolari, or of Lepanto, won by the Christian combined fleet against the Turks, in September 1571, Pius caused Marcantonio Colonna, commander of the Papal galleys, who had distinguished himself in the battle, to make his triumphal entrance into Rome on horseback, preceded by the Turkish captives and spoils, and accompanied by the magistrates, noblemen, and heads of trades of the city of Rome. Pius V. died of stone, in May 1572. The Roman Church has numbered Pius V. among its saints. He was succeeded by Gregory XIII.

PIUS VI., CARDINAL ANGELO BRASCHI, a native of Cesena, was elected pope in 1775, after the death of Clement XIV. He was then fifty-five years of age, and had the reputation of being of a generous disposition, and fond of learning and the arts. He had also, besides the advantages of a handsome person, a graceful demeanour and easy and affable manners. In his previous office of treasurer he had managed the financial affairs of the country with prudence and disinterestedness.

In 1777, Pius VI. had a serious dispute with Leopold I., grand-duke of Tuscany, and Ricci, bishop of Pistoja, on the subject of some grave moral offences which had been discovered in several convents. [LEOPOLD II. of Germany, and I. of Tuscany.] The question of jurisdiction was at last settled, but it left a coldness between the courts of Rome and Tuscany. A more important disagreement took place between the pope and Joseph II., Leopold's brother, and emperor of Germany. Joseph was busy in suppressing superfluous convents, and emancipating the clergy of his dominions from the supremacy of Rome in matters of discipline. Pius VI. perceived in these reforms of Joseph II. a design to weaken the power and influence of the see of Rome, and he determined to make an effort to turn the emperor from his purpose. Accordingly he set out for Vienna in 1782, to visit the emperor, and to converse with him personally on the matters in question. For several centuries no pope had left Italy, and this movement of Pius VI. attracted universal attention. Monti wrote a poem on the subject, entitled 'Il Pellegrino Apostolico.' Pius was received at Vienna with every honour; but he made little impression on the emperor, who referred the matter in discussion to his ministers, who were not favourably disposed towards Rome. The pope returned to his capital in disappointment, and was censured by many for having lowered the dignity of the holy see without obtaining any good result. Next came the synod of Pistoja, which was assembled by the Bishop Ricci in 1786, and passed several propositions that were considered highly censurable at Rome. Pius condemned these propositions by a bull, and suspended Bishop Ricci from his functions; but Ricci, being supported by his sovereign, continued in his see. Ricci was in reality a Jansenist, but he was not a heretic: he proposed to restore the ancient discipline of the church.

Pius VI. was also busily employed in other matters besides controversy. He undertook and partly effected, through the direction of the engineer Rapini, the draining of the marshy region, containing near two hundred square miles, called the Pomptine marshes, by which a considerable proportion of it was made cultivable. He restored the ancient Via Appia, which had become impassable, and

built villages and post stations along the same. He also restored the port of Terracina, and adorned it with handsome buildings. He greatly enlarged the museum of the Vatican, which he made one of the richest in Europe in works of sculpture, vases, precious marbles, and other remains of antiquity; and he caused a splendid set of engravings of the objects in this museum to be published, under the title of 'Museo Pio Clementino.' He made additions to the church of St. Peter's, and embellished Rome with new palaces, fountains, and other structures.

The internal administration of Pius was liberal and mild. An unusual freedom of opinion and speech prevailed at Rome, a number of learned men gathered thither from other parts of Italy, many foreigners came to settle in that capital, the fine arts were encouraged by the pope and by several of the cardinals, and modern Rome had perhaps never been, since the times of Leo X., so brilliant and so pleasant a residence as it was under the pontificate of Braschi. But the storms of the French revolution darkened the scene, and rendered the latter years of Pius as gloomy and calamitous as the earlier part had been bright and prosperous. In the first period of that revolution, Pius VI. solemnly condemned the abrupt changes made in France concerning the discipline and the property of the clergy; but with regard to general or secular politics he showed great temperance. An accident which occurred at Rome in January 1793, widened the breach already existing between France and Rome. A young man, Hugo Basseville, an agent of the French republican party, being on his way to Naples, where he had been appointed secretary of embassy, made a foolish demonstration in the Corso, or high street of Rome, apparently to sound the opinions of the people. He appeared in a carriage with several tricoloured flags, and distributed revolutionary tracts, vociferating something about liberty and against tyrants; but a mob collected; he was dragged out of his carriage, and mortally stabbed in several places by the populace. The military came to the spot, but too late; some of the murderers were taken and tried; and yet the papal government, though innocent of the fact, was charged by the French Convention as being a party to it. [MONTI.] The pope then joined the league of the sovereigns against France, and strengthened his military establishment.

When General Bonaparte invaded Northern Italy in 1796, he took possession of the legations, but at the same time offered to the pope conditions of peace. After some negotiation, the pope refused to submit to the onerous conditions imposed on him by the Directory. Bonaparte, who was then threatened by fresh armies from Austria, openly blamed the Directory for their harshness towards the court of Rome, saying that was not the way to make friends in Italy; and he spoke very highly of several cardinals and prelates with whom he was in friendly intercourse. ('Correspondence of General Bonaparte,' Letters of the 8th of October 1796 and 1st of January 1797.) Meantime however he took possession of Ancona and Loreto, after defeating the papal troops on the banks of the river Senio; but the pope having sent envoys to sue for peace, Bonaparte granted it to him at Tolentino upon more moderate conditions than might have been expected. After the peace of Campoformio (October 1797), and Bonaparte's departure from Italy, the agents of the Directory added vexation to vexation against the unfortunate pope, who, old and infirm, was unequal to the difficulties which crowded upon him. The papal treasury being drained, in order to pay the contribution of thirty millions of livres (1,200,000*l.*), the pope was obliged to seize the deposits in the Monte di Pietà, by which many families lost all they had. A tragical incident hastened the catastrophe. On the 28th of December 1797 a small band of revolutionists of Rome and other parts of Italy, with some Frenchmen among them, among whom was General Duphot, who was attached to the French embassy at Rome, having dined together in the palace of the French academy of arts, and being heated with wine, took into their heads to renew the former attempt of Basseville. Raising the tricoloured flag, they sallied into the streets, calling out that they were going to hoist the ensign of liberty on the Capitol. A body of military came to disperse them, which was effected at first without bloodshed; but the fugitives ran to the palace of the French ambassador, followed by the soldiers, who fired and wounded some of the insurgents; the remainder rushed into the vestibule and court of the palace. The papal soldiers halted outside; but being provoked and mocked by those within, they rushed into the court, in order to clear it of the insurgents. The ambassador then made his appearance on the great staircase, in company with General Duphot, to appease the tumult. The soldiers cried out that the rebels should immediately quit the palace; but Duphot, who was young and hasty, drew his sword, and encouraged the insurgents to drive the papal soldiers out of the court. The soldiers then fired, and Duphot, with several of the insurgents, fell. This affray was by the French Directory made the pretext for invading Rome and dethroning the pontiff, a thing on which they were bent, and would have effected long before had it not been for Bonaparte's cooler policy. After issuing manifestoes calling in plain terms the court of Rome a nest of assassins, the Directory ordered Berthier to march upon Rome. The pope gave orders that no opposition whatever should be made, as it would only serve to aggravate the evil. On the 10th of February 1798 Berthier entered Rome with his army, took possession of the castle St. Angelo, and went himself to live in the Quirinal Palace.

Pius VI., forsaken by most of the cardinals, who had escaped, remained in the Vatican. On the 15th a tree of liberty was raised in the Campo Vaccino, and Rome was formally declared a republic. Berthier afterwards sent an officer to intimate to the pope that he must renounce his temporal sovereignty. Pius answered that he had received it from God and by the free election of men, and could not renounce it; that he was eighty years old, and his troubles could not be of long duration, but that he was determined to do nothing derogatory to his high office. Next came the commissary-general of the French army, who, after taking an inventory of all the valuables that still remained in the papal residence, ordered Pius to prepare to set out in two days. The pope said he could not oppose force, but protested against this new act of violence. On the 20th of February Pius VI. left the Vatican with a few attendants, and, escorted by a strong detachment of cavalry, took the road to Florence. He was lodged at first in a convent near Siena, and afterwards in the Carthusian convent near Florence, where he remained till the following year, when the French, having driven out of Tuscany the Grand-Duke Ferdinand, and being threatened by the Austro-Russians, who were advancing to the Adige, ordered the pope to be transferred to France. He was taken to Grenoble, and afterwards to Valence on the Rhône, where he died, in August of that year (1799), in the eighty-second year of his age and the twenty-fourth of his pontificate. Just before his death the Roman republic had ceased to exist, the French being driven out of Italy by the Austro-Russians, and Rome was occupied by Austrian and Neapolitan troops. In the year 1802, after the restoration of the papal government, the remains of Pius VI. were transferred to Rome by leave of the first consul Bonaparte, at the request of his successor Pius VII., and deposited with solemn pomp in the church of St. Peter.

PIUS VII., CARDINAL GREGORIO BARNABA CHIARAMONTI, was born in 1742, of a noble family of Cesena, which is supposed to have been originally a branch of the French house of Clermont. He first studied in the college of Ravenna, and subsequently entered the order of Benedictines, in 1758. He was appointed lecturer on philosophy, and afterwards on theology, to the novices of his order, first at Parma and then at Rome. Pius VI. appointed him bishop of Tivoli, and in 1785 made him a cardinal and bishop of Imola. When Bonaparte took possession of the legations, and annexed them to the Cisalpine republic, Cardinal Chiaramonti in a homily exhorted his flock to submit to the new institutions, and to be faithful to the state of which they had become a part. This conduct is said to have acquired him the good opinion of Bonaparte. When the news of the death of Pius VI., in his exile at Valence, in August 1799, came to Italy, the conclave being summoned to assemble at Venice, then under the dominion of Austria, as Rome was in a state of anarchy, Cardinal Chiaramonti repaired to the former city. Thirty-five cardinals assembled at Venice, in the Benedictine convent of S. Giorgio Maggiore, in order to elect a new pope, a dignity apparently not very enviable in those troubled times. The deliberations of the conclave lasted several months, and at last Cardinal Chiaramonti was chosen, on the 14th of March, 1800, and crowned pope on the 21st of the same month, under the name of Pius VII. In the following July the pope made his entrance into Rome, and soon after appointed Cardinal Consalvi his secretary of state, or prime minister. [CONSALVI.] In the following year the peace of Luneville, between France and Austria, was made, and Bonaparte, first consul of France, ordered his troops to evacuate the Papal territories, with the exception of the legations, which had been formally incorporated with the so-called 'Italian Republic.' Meantime the ecclesiastical affairs of France were in a state of the greatest confusion. France was still nominally Roman Catholic, but the clergy were no longer in communication with the see of Rome, and were divided into parties. In the midst of this confusion about one half of the population of France followed no mode of worship, and professed no religion whatever. A vast number of parish churches were shut up, and had been so for ten years. Bonaparte wished for a concordat with Rome. The pope appointed the prelate Spina and the theologian Caselli, who proceeded to Paris, and Bonaparte named his brother Joseph, Cretet, councillor of state, and Bernier, a Vendéan priest, to treat with the pope's negotiators. But on an intimation from Bonaparte who was above all things anxious that the matter should be promptly settled, the pope despatched to Paris Cardinal Consalvi, who smoothed down all difficulties, and the concordat was signed at Paris, the 16th of July 1801, and was ratified by Pius at Rome, after some hesitation and consultation, on the 14th of August following. The principal scruples of the pope were concerning certain articles called 'organic,' which Bonaparte appended to the concordat, as if they had formed part of it, and which were proclaimed as laws of the state. ('Botta,' b. xxi.; Thibaudan.)

From 1801 till 1804 Pius VII. enjoyed tranquillity at Rome, which he employed in restoring order to the finances, in ameliorating the judicial administration, in promoting the agriculture of the Campagna, and in other similar cares. His personal establishment was moderate, his table frugal, his habits simple, and his conduct exemplary. In May 1804, Napoleon was proclaimed emperor, and some time after he wrote to the pope requesting him to crown him solemnly at Paris. After considerable hesitation Pius consented, and set off from Rome at the beginning of November of that year. The ceremony of the

coronation took place in the Cathedral of Notre Dame, after which the pope spent several months in Paris, visiting the public establishments, and receiving the homage of men of all parties, who were won by his unassuming yet dignified behaviour, and his unaffected piety. In May 1805, he returned to Rome; and his troubles began soon after. In October 1805, a body of French troops suddenly took military possession of Ancona. Pius remonstrated by a letter which he wrote to Napoleon, who was at that time at the head of his army in Austria. It was only after the peace of Presburg that he received an answer, in which Napoleon said, that he considered himself as the protector of the Church against heretics and schismatics, like his predecessors from the time of Charlemagne, and that as such he had occupied Ancona to prevent it falling into the hands of the English or the Russians.

Soon after, Napoleon officially required the pope, through his ambassador at Rome, to expel from his dominions all English, Russian, Swedish, and Sardinian subjects, and to forbid his ports to the vessels of those powers who were then at war with France. Pius replied at length in a letter to Napoleon, representing to him that his request was destructive of the independence of the Papal State and of its political neutrality, which were necessary to the welfare of the Church and for the security of the numerous members of it who were living in those very countries with which the emperor was then at war. He said that the head of the Church ought to be a minister of peace, and not to take part in a war which has no religion for its object; that if some of his predecessors had not always abided by this rule, he at least should not follow their example. Napoleon however insisted, and an angry correspondence was carried on between the two courts for about two years on this subject of contention, the neutrality of the Papal State being all the while merely nominal, as the French troops marching from and to Naples crossed and recrossed it at their pleasure, and the French also kept a garrison at Ancona, the only papal port of any importance. By degrees they extended their posts all along the Adriatic coast, and garrisoned the various ports. Some time after, a body of French troops, coming from Naples, passed through Rome, ostensibly to proceed to Leghorn; but they suddenly turned out of the main road and surprised in the night the town of Civita Vecchia, of which they took military possession. In all these places they confiscated whatever English property they could find. The papal troops at Ancona, Civita Vecchia, and other places, were ordered to place themselves under the direction of the French commanders, and some officers who refused to do so were arrested and kept in confinement. Napoleon in the meantime found fresh grounds of quarrel with the pope. He wished to declare the marriage of his brother Jerome with an American Protestant lady null; but Pius refused, saying that although the Church abhorred marriages between Catholics and heretics, yet if they were contracted in Protestant countries according to the laws of those countries, they were binding and indissoluble. ('Letter of Pius VII.' on this important subject in Artaud, 'Vie du Pape Pie VII.,' Paris, 1826.) He next accused the pope of dilatoriness in giving the canonical institution to the bishops elected to vacant sees in the kingdom of Italy. Eugene Beauharnais, viceroy of the kingdom of Italy, wrote an able and conciliatory letter to the pope, in order to bring about an arrangement; and the pope was induced to invite the bishops elect to Rome in order to receive the canonical institution, when a threatening letter came, written by Napoleon from Dresden after the peace of Tilsit in the summer of 1807, in which he said that "the pope must not take him for a Louis le Débonnaire; that his anathemas would never make his soldiers drop their muskets; that he, Napoleon, if provoked too far, could separate the greater part of Europe from the Roman Church, and establish a more rational form of worship than that of which the pope was the head; that such a thing was easy in the actual state of people's minds," &c.; and he forbade Eugene to correspond any longer with the pope, or send the bishops elect to Rome, for, he said, "they would only imbibe there principles of sedition against their sovereign." Matters were now brought to an open rupture. A French force under General Miollis entered Rome in February 1808, took possession of the castle and the gates, leaving however the civil authorities undisturbed. The pope was prevailed upon to send Cardinal de Bayanne as his legate to Paris, to make a last effort at reconciliation; but the cardinal had not arrived at his destination when a decree of Napoleon, dated 2nd of April 1808, united the provinces of Ancona, Macerata, Fermo, and Urbino to the kingdom of Italy. Fresh remonstrances on the part of Pius were answered by threats of further hostile measures on the part of Napoleon, unless the pope entered into an offensive and defensive league with the kingdoms of Naples and Italy, and by a declaration that "the pope would lose his temporal sovereignty and remain Bishop of Rome as his predecessors were during the first eight centuries, and under the reign of Charlemagne." ('Note de M. de Champagny, Ministre des Affaires Étrangères à S. Eminence le Cardinal Capara,' 18th of April, 1808.)

The war which began soon after in Spain prevented Napoleon from occupying himself with the affairs of Rome, which remained in a state of uncertainty amidst frequent clashing between the French military authorities and the papal civil officers. The papal territory, impoverished as it was by the loss of its finest provinces, was obliged to pay the French troops which garrisoned the towns that still

nominaly belonged to the pope. All the disaffected and the turbulent, trusting to French protection, openly insulted the papal government. The pope remained confined to his palace on the Quirinal with his Swiss guard at the gates, not wishing to expose himself to violence by venturing out. On the 17th of May 1809, Napoleon, who was then making war against Austria, issued a decree from Vienna, in which he resumed the grant of his illustrious predecessor Charlemagne, and united the remainder of the Roman states to the French empire, leaving to the pope his palaces and an income of two millions of francs. On the 10th of June 1809, the pope issued a bull of excommunication against all the perpetrators and abettors of the invasion of Rome and of the territories of the Holy See. The bull was affixed to the gates of the principal churches of Rome and in other public places. The text of the bull is given by Cardinal Pacca, in his 'Memorie Storiche,' Appendix to the 1st part, No. v. The French commander, Miollis, being afraid of an insurrection of the people of Rome, who had shown unequivocal signs of attachment to their sovereign, thought it expedient to remove Pius from the capital. The Swiss guards made no resistance, having orders to that effect from the pope: and protesting that he "yielded to force," Pius, taking his breviary under his arm, accompanied the general to the gate, where his carriage was ready, and drove off under an escort. He was taken first to Grenoble in Dauphiné, from whence he was removed, by order of Napoleon, to Savona in the Riviera of Genoa, where he remained till June 1812, when he was removed to Fontainebleau, by an order of Napoleon. During his stay at Savona, Napoleon convoked a council at Paris of the bishops of his empire, but he found that assembly less docile than he expected, and he dissolved it without any conclusion being come to. The great question was how to fill up the vacant sees, when the pope refused the canonical institution. The pope at the same time would not recognise Napoleon's divorce from his first wife Josephine. In short, Napoleon found that unarmed priests were more difficult to conquer than the armies of one half of Europe. (Thibaudeau, 'Le Consulat et l'Empire,' ch. 77; Botfa, 'Storia d'Italia,' b. 25.) The plan of Napoleon was to have the pope settled at Avignon, or some other town of his empire, as his subject and his pensionary, and to have himself the nomination not only of the bishops, but of the Cardinals also, by which means he would have added to his already overbearing temporal power the incalculable support of a spiritual authority which extends over a great part of the world. The resistance of Pius disappointed his views. Napoleon at last imagined that by removing Pius to Fontainebleau, he might succeed in overcoming his firmness. Pius was again obliged to make a long journey with the greatest secrecy. He arrived at Fontainebleau in June 1812, and was lodged in the imperial palace, and treated with marked respect. Napoleon had set out on his Russian expedition. After his return from that disastrous campaign, in December 1812, he went to see the pope, embraced him, and treated him with studied attention; he also allowed several cardinals who were at Paris to repair to Fontainebleau, and at last, chiefly through their persuasions, he prevailed upon the pope to sign a new concordat, the 25th of January 1813. It is not true, as some have stated, that Napoleon, in one of his conferences with Pius, had lifted his hand against him and struck him. Pacca ('Memorie Storiche,' part iii. ch. 1) denies this on the authority of Pius himself, but thinks it very probable that Napoleon spoke to his prisoner in an authoritative and threatening tone.

Napoleon hastened to publish the articles of the concordat, and to give them the force of laws of the empire; after which he granted free access to the pope, to all cardinals, and others who chose to repair to Fontainebleau. Pius, who had scruples concerning some of the articles which he had signed, laid them before the cardinals, and asked their opinion. Several of the cardinals, especially the Italian ones, such as Consalvi, Pacca, Litta, and Di Pietro, stated that some of the articles were contrary to the canon law and the legitimate jurisdiction of the Roman see, and pregnant with the most serious evils to the Church, and they urged the necessity of a prompt retraction. They quoted the example of Paschal II., who, in similar circumstances having ceded to the Emperor Henry V. the right of investiture, hastened to submit his conduct to the judgment of a council assembled in the Lateran, and the council revoked the cession. [PASCHAL II.] Upon this Pius wrote to Napoleon, on the 24th of March, retracting his concessions, but proposing a new basis for a concordat; Napoleon however took no notice of the retraction, except by exiling some of the cardinals who, he thought, had influenced it. Napoleon soon after set off for his army in Germany, and the affair with the pope remained in suspense. It was only after the defeat of the French armies and their expulsion from Germany that Napoleon proposed to restore to the pope the Papal States south of the Apennines, if the pope would agree to a concordat. Pius answered, that he would not enter into any negotiations until he was restored to Rome. On the 22nd of January 1814, an order came for the pope to leave Fontainebleau the following day. None of the cardinals were allowed to accompany him. He set off accompanied by an escort, and was taken to Italy. On arriving at the bridge on the river Nura, in the state of Parma, he met the advanced posts of the Neapolitan troops under Murat, who was then making common cause with the allied powers against Napoleon. Murat had taken military occupation

of the Roman state, but he offered to give up Rome and the Campagna-Pius however preferred stopping at Cesena, his native town, until the political horizon was cleared up. After the abdication of Napoleon and the peace of Paris, Pius made his entrance into Rome, on the 24th of May 1814, in the midst of rejoicings and acclamations. His faithful Consalvi soon after resumed his office of secretary of state. By the articles of the congress of Vienna the whole of the Papal States were restored, including the legations, which were not however evacuated by the Austrian troops until after the fall of Murat, in 1815.

The remaining years of the life of Pius were spent in comparative tranquillity, though not in idleness. He applied himself to adapt, as far as it was practicable, the civil institutions of his dominions to the great changes which had taken place in the social state. By a 'motu proprio' of the year 1816 he confirmed the suppression of all feudal imposts, privileges, monopolies, and jurisdictions; he abolished every kind of torture, including that called the 'corda,' or 'estrapade,' which was formerly a frequent mode of punishment at Rome; he diminished the land-tax; retained the register of 'hypothèques,' or mortgages, instituted by the French; laid down the basis of a new code of public administration, and in November of the following year he published a new code of civil procedure, in which he regulated the costs of judicial proceedings. He maintained the commercial courts established by the French, as well as the new system of police, enforced by a regular corps of carabinieri, instead of the old 'sbirri,' who were ineffective and corrupt. (Tournon, 'Etudes Statistiques sur Rome,' b. iv., ch. 6.) Unfortunately however the old system of secret proceedings in criminal matters was restored, as well as that of the ecclesiastical courts, which have jurisdiction also over laymen. Pius however made some important alterations in the form of proceeding of the Inquisition, abolishing torture as well as the punishment of death for offences concerning religion. He did perhaps all that he could do as a pope, and certainly more than any pope had done before him. Cardinal Consalvi took vigorous measures to extirpate the banditti of the Campagna; and in July 1819 he ordered the town of Sonnino, a nest of incorrigible robbers, to be razed to the ground. With regard to spiritual matters, Pius concluded a new concordat with France, Naples, Bavaria, and other states. He condemned by a bull the political society of Carbonari, as well as other secret societies.

In the month of July 1823, Pius, who was then eighty-three years of age, had a fall in his apartments, and broke his thigh. This accident brought on inflammation, and after a few weeks he died on the 20th of August, universally regretted. He was succeeded by Leo XII. Thorwaldsen was commissioned to make his monument, which has been placed in St. Peter's.

Pius VII. stands prominent among the long series of popes for his exemplary conduct under adversity, his Christian virtues, and his general benevolence and charity. Free from nepotism, modest, unassuming, and personally disinterested, he was a staunch though temperate defender of the rights of his see; and his meek bearing and unblemished character engaged on his side the sympathies of the whole Christian world, without distinction of community or sect, during his long struggle with his gigantic and ungenerous adversary.

PIUS VIII. (CARDINAL CASTIGLIONI), was elected in March 1829 to succeed Leo XII., and died November 30, the following year. He was succeeded by Gregory XVI. Nothing remarkable occurred during his short pontificate.

\* PIUS IX. GIOVANNI MARIA MASTAI FERRETTI, who assumed the name of Pius on his election to the papal see, is a member of a noble Italian family, and was born at Sinigaglia near Ancona, May 13, 1792. As a youth he was distinguished for a mild disposition and for his works of charity. While still a child he was saved from drowning by a poor 'contadino,' who lived to see him seated on what the historian Macaulay calls the most ancient and venerable throne of Europe. At the age of eighteen he went to Rome for the purpose of entering the body-guard of the reigning pontiff, Pius VII. An epileptic attack however prevented the attainment of his wishes, and seems to have determined the course of his after-life. He entered a religious seminary, where his gentleness and devotion proved the foundation of his future distinction. In due course of time he was elevated to the priesthood, and exercised the sacerdotal functions in the hospital of Tata Giovanni at Rome, an institution founded for the education of poor orphans. These duties however he was obliged to resign on being sent out to South America on a special mission, as auditor to M. Mugi, Vicar-Apostolic of Chili. In this capacity he gained some insight into the secrets of politics and diplomacy, the study of which led him to draw out on paper a system of political amelioration for the Papal States. On his return to Europe he was appointed prelate of the household to Pope Leo XII., and president of the hospital of St. Michael. While holding this post his time was chiefly devoted to the education of the youth of Rome and the preaching of spiritual 'retreats.' In 1829 he was nominated Archbishop of Spoleto, from which he was translated in 1832 to the see of Imola, where his charities to the poor greatly endeared him to his flock. Not long afterwards he was sent to Naples as Apostolic Nuncio, and in 1840 he was raised to the dignity of a cardinal by the title of Saint Peter and St. Marcellinus. In June 1846, on the death of Pope Gregory XVI., he was elevated to the papacy. The state of affairs in the Papal

States at this time was such as to call for a large measure of reform. The financial system he found on the verge of national bankruptcy; the system of taxation was oppressive and capricious; and high posts of the administrative and executive departments were openly bought and sold. Speculation prevailed largely in high quarters; the army was filled with mercenaries; civilians were excluded from official life; and the very idea of representation was unknown. The states themselves were under Austrian protection, and the Austrian government is proverbially jealous of all improvements, both civil and social. Pius IX. is said to have found on his accession no less than 2000 of his subjects in exile or in prison, by order of the Austrian authorities. Some attempts at political reform in the Papal States had been made by his predecessor Gregory, but they were set aside by the civil disturbances of 1830 and 1831.

The first step of the new pope was to grant an amnesty to all political offenders, to recall the exiles, and to liberate the prisoners. The name of Pius IX. became instantly the watchword of liberality and reform. The first year of his pontificate resulted in a mitigation of the censorship of the press, a relaxation of the civil disabilities under which Jews and other religious bodies laboured, a better-regulated system of taxation, and a customs-union with the other Italian states, laying as it seemed the foundation of a new era of commerce and national independence.

In February 1848 however occurred the French revolution which dethroned Louis Philippe. The spirit of republicanism spread through Europe. Unhappily the excitable populace of Rome were not satisfied with the reforms which Pius had introduced. On November 15 Count Rossi, the minister of the pope, was assassinated; the populace rose, established a republican administration in Rome, and detained the pope himself a prisoner within his own palace. He escaped from Rome in disguise, and took up his abode at Gaëta, near Naples.

In April 1849 a French army, under Marshal Oudinot, advanced against Rome for the purpose of enforcing the pope's restoration. After a siege that lasted from June 3 to July 3 Rome surrendered unconditionally to the French, and was garrisoned by them. It was not till April 12, 1850, that Pius IX. again entered Rome, which was (and is yet) in the military possession of the troops of France, and where Pius has embodied a Swiss guard of considerable strength, and restored to a great extent the old ecclesiastical governments.

Soon after this event Pope Pius IX. issued a brief restoring a Roman Catholic hierarchy in England. This step led to a violent outbreak of public feeling, which resulted in passing a bill forbidding the assumption of ecclesiastical titles in England by the papal bishops. Since that time Pius IX. has spoken in condemnation of the Queen's colleges established in Ireland, and has aided the efforts to found a Roman Catholic university in Dublin under the Very Rev. Dr. Newman. [NEWMAN, J. H.] He also about the same time founded at Rome a college, called after his own name, for the reception of such English clergymen as may seek to be admitted into holy orders of the Roman Church. Another event by which his pontificate will be hereafter signalled in the history of the world, is the formal definition of the doctrine of the Immaculate Conception, which took place in St. Peter's on December 8, 1854, in the presence and with the concurrence of Roman Catholic bishops from all parts of Christendom. A magnificent pillar has since been erected in Rome in commemoration of the doctrinal decision. He also succeeded in concluding a Concordat with the Austrian government by which the ecclesiastical privileges wrested from former popes by previous Austrian emperors have been abandoned, the papal authority has been greatly enlarged, and religious freedom proportionally abridged. [See SUPPLEMENT.]

PIZARRO, FRANCISCO, the discoverer and conqueror of Peru, was the natural son of Gonzalo Pizarro, an officer who served with considerable distinction under the Great Captain in the Italian wars. Gomara relates that Francisco was born upon the steps of a church, and in his earliest days was suckled by a sow. Garcilaso denies this, but all agree that he was born at Truxillo, about the year 1480. His education was so completely neglected, that he never learned to read or write, and he was employed by his father in tending pigs; but getting tired of his occupation, he ran away to Seville with some of his companions, became a soldier, and shortly afterwards embarked to try his fortune in the New World. The first occasion on which he gained distinction was during the expedition of Ojeda to Tierra Firme, in 1510, by whom he was left as his lieutenant in the new conquest. He gained the confidence of Vasco Núñez de Balboa, whom he accompanied in his expedition to Mexico. On these occasions Pizarro showed himself superior to all his companions in courage, enterprise, and powers of endurance, and he became a favourite leader of the soldiers, who never felt so much confidence as when they were under his orders.

Pizarro had seen fourteen years of arduous service, and was still one of the least wealthy of the Spanish colonists, when he joined Hernando de Luque and Diego de Almagro in the project of extending the Spanish conquests along the southern coast. Pizarro and Almagro could only give their personal labour and experience, while the wealthy priest, their associate, advanced 20,000 ounces of gold towards defraying the expenses of the expedition. Pizarro sailed from Panama in November, 1524, with one small ship, eighty men, and four horses, to attempt the conquest of a great country; leaving Almagro

to follow with reinforcements as soon as he could raise them. Pizarro shaped his course to the south-east, but having in ignorance selected that period of the year in which the winds and currents were opposed to him, his progress was very slow. He touched at several places in Tierra Firme, where he found a most uninviting country, the low grounds of which were covered with swamps, the higher with impenetrable forests, having few inhabitants, and those fierce and hostile. Fatigue, famine, and disease having wasted his little band, Pizarro was compelled to wait the arrival of Almagro at Chicama, who at length joined him, having undergone equal hardships.

With unbroken spirit they decided on their course of action. Pizarro remained at Chicama while Almagro returned for fresh forces, which Luque with difficulty persuaded Pedrarias, the governor of Panama, to furnish. With these reinforcements, in the year 1526, Pizarro advanced from Chicama to the south, and explored the coast of Quito. He entered the bay of Saint Matthew, where he found a fertile country, the inhabitants of which were clothed in garments of woollen and cotton, with ornaments of gold and silver. This country being too populous to attack, Almagro returned to Panama for further aid, and Pizarro retired to a neighbouring island. The new governor of Panama, Pedro de los Rios, not only would not permit any new levies to be made, but sent a vessel to bring away Pizarro and his band. Pizarro refused to obey this order, and drawing a line on the sand with his sword, desired those who chose to remain with him to cross to his side: thirteen alone of his hardy veterans had sufficient courage to do so, with whom, and a crew of a vessel subsequently sent to his aid from Panama, he prosecuted his examination of the coast of Peru. He landed at Tumbes, where there was a palace of the Incas, and he ranged for some time peaceably along the coast. The abundance of gold and silver used by the inhabitants not only for ornaments, but for utensils of common use, filled Pizarro and his companions with wonder.

He returned to Panama in 1528, having encountered, during his absence of three years, greater hardships and dangers than any other adventurer of the age. The governor was not moved by his accounts of the opulence of the newly-discovered country, and it was settled by the associates that Pizarro should proceed to Europe to obtain the sanction of the emperor. By his address he succeeded in gaining the attention of Charles V. and his ministers, and without bestowing a thought upon his associates, he obtained for himself the appointments of governor and captain-general, and adelantado over all the country to be discovered, with supreme authority, both civil and military, stipulating in return to equip a certain force, and remit one-fifth of all the treasure that he should acquire to the crown. Pizarro was so poor, that without the assistance of Cortez he could not have performed his part of the agreement, and at length he sailed from Spain with only half the number of men required, among whom were his three brothers. He returned to Panama in 1530, and having with difficulty effected a reconciliation with Almagro, who was indignant at his perfidy, he sailed in February 1531, with 186 soldiers, of whom 36 were horsemen, leaving Almagro to follow with reinforcements.

Pizarro first surprised the principal town of the province of Coaque, where he obtained a great booty, which enabled him to despatch two of his ships to Panama and Nicaragua with remittances, which soon procured him recruits. Proceeding southward he attacked, and, after a fierce resistance, took the island of Puno, in the bay of Guayaquil. At Tumbes he was forced to remain three months, in consequence of a violent distemper among his men. At the mouth of the river Piura he founded the first Spanish settlement, and called it San Michael. Fortunately for Pizarro a civil war was at this period raging in Peru between the brothers Atahualpa and Huascar, and each party requested his assistance against the other; Pizarro seized the opportunity, and marched up the country to Caxamarca. Having posted his little band in a strong position, he visited Atahualpa, who was encamped near that city, where the sight of a profusion of the precious metals that he found inflamed his cupidity to such a degree, that he resolved upon a plan as daring as it was treacherous and dishonourable. At a given signal, when Atahualpa was returning Pizarro's visit, the Spaniards opened a fire upon the followers of the Inca, the suddenness and surprise of which completely stupified them, and as no resistance was attempted, Pizarro carried off the unfortunate Atahualpa a prisoner to his quarters, where he was confined in a room 22 feet long by 16 feet broad. Having soon discovered the insatiable avarice of the Spaniards, Atahualpa offered as his ransom to fill this room with gold as high as he could reach. The offer was eagerly accepted by Pizarro, without the smallest intention of performing his part of the agreement. Before the whole was collected, the soldiers became so excited at the sight of such vast treasure, that it was found impossible to restrain their impatience, and after setting aside the fifth part for the crown, and a share for Almagro's party, 1,528,500 pesos, or ounces, were divided. Pizarro's share was 2350 marks of silver, and 57,220 ounces of gold. Having obtained all that he could from Atahualpa, his feelings were soon excited to hatred and a desire of revenge, on perceiving that he was an object of scorn and contempt to Atahualpa, who had discovered that Pizarro was ignorant of the arts that he most admired in the Spaniards, reading and writing. Pizarro accordingly caused him to be put to death in 1533. The government of Peru was now so far overthrown, and the country so torn by intestine convulsions, that no

effectual opposition was offered to Pizarro, who marched upon and captured Cuzco, the plunder of which city exceeded in value the ransom of Atahualpa.

In 1534, Ferdinand Pizarro landed in Spain with the royal share of Atahualpa's ransom, when Francisco's authority was confirmed with new powers and privileges, and Almagro was appointed adelantado of a country to be conquered to the southward of Pizarro's government. The reconciliation between Almagro and Pizarro had never been sincere; their evil passions were however for the present suppressed, and Almagro marched to the conquest of Chile, while Pizarro busied himself with the internal government of Peru, in the arrangement and administration of which he showed considerable judgment. In January 1535, he founded the city of Lima, to which he gave the name of Ciudad de los Reyes. In 1536 the Peruvians rose and endeavoured to throw off the Spanish yoke: they cut off several detachments, and completely blockaded Pizarro in Lima, and his brother in Cuzco. This brought Almagro from Chile, who, having defeated the Peruvians, attacked Cuzco, took prisoners Pizarro's brothers, and subsequently Alvarado also; but certain compunctions preventing him from attacking Pizarro immediately after, the viceroy was enabled to collect his forces and attack Almagro, whom he took prisoner, and soon afterwards tried and executed in 1538. Pizarro's partiality in entirely leaving out the followers of Almagro in the subsequent allotment of lands, completely alienated them, and they attached themselves to the young Almagro, who soon became the rallying point for all who were disaffected towards Pizarro. A conspiracy was formed against him, and on Sunday, June 26, 1541, the conspirators, sixteen in number, headed by Herrada, entered the governor's palace at mid-day, the hour of repose in hot climates, and succeeded in reaching the staircase before an alarm was given. Pizarro, with his half-brother Alcantara, and a knot of faithful friends, defended themselves to the last. They fell, one after another, till Pizarro remained alone. At length, exhausted by the long conflict, and unable to parry the numerous blows aimed at him, he received a thrust in the throat, and expired in the sixty-second year of his age, full of strength and vigour, leaving a reputation unsurpassed for courage, activity, patience under suffering and privation, penetration, judgment, and decision; but on the other hand sullied by craft, deception, treachery, unscrupulousness, avarice, and cruelty.

PLACITUS PAPYRIENSIS, SEXTUS, sometimes called by mistake SEXTUS PLATONICUS, or SEXTUS EMPIRICUS, the author of a work entitled 'De Medicamentis ex Animalibus.' His age is unknown, but he is supposed to have lived about the 4th century of the Christian era. By some persons he is called Papiensis; but all that is known of him is that he was a physician, as appears from various parts of his work (cap. 27, &c.). It is written in Latin, and consists of thirty-four short chapters, each of which treats of some animal that was considered to have certain medical properties in different parts of its body. It is of little or no value, as may easily be seen from the following specimens:—Against a quartan fever he directs the heart of a hare to be hung round the arm or neck (cap. 2); in order to be delivered for ever from pain in the bowels, he recommends a very young puppy to be dressed and eaten (cap. 11); for persons affected with phthisis, or a bad cough, he orders the saliva of a horse to be taken, mixed with wine or water: "This," says he, "I have myself tried, but it is a matter of notoriety (expertisimum est) that the horse will die" (cap. 14). The work has been frequently published, both separately and in different collections, and it has been several times translated. It was first published in 1538, 4to, Norimb.; in the same year, 8vo, Basel. It is inserted in the first volume of the 'Medicæ Artis Principes,' published by H. Stephens, Paris, 1667, in the collection edited by And. Rivinus, 8vo, Lips., 1654; in the 13th volume of the old edition of Fabricius, 'Biblioth. Græca;' and in Ackermann's 'Parablium Medicamentorum Scriptores Antiqui,' 8vo, Norimb. et Altorf., 1788. It should be mentioned that Constantinus Afer, in his work entitled 'De Remediis ex Animalibus,' has borrowed very freely from this treatise, and indeed copied great part of it almost word for word.

\* PLANCHÉ, JAMES ROBINSON, was born in Old Burlington-street, near Bond-street, London, on February 27, 1796. His father was a descendant of a French family which had sought refuge in England on the revocation of the Edict of Nantes in 1685. His mother was possessed of considerable literary abilities, and published an elementary work on education; she carefully attended to his instruction in his earlier years, but he lost this advantage through her death when he was only eight years old. His education however was not neglected, and the bent of his mind early displayed itself. 'Amoroso, King of Little Britain,' was a burlesque written for private performance; but on being shown to Mr. Harley, the comedian, he was struck with its merit—had it laid before the committee which had then the management of Drury-Lane Theatre, who accepted it, and it was performed with great applause in May 1818. This success led Mr. Planché to adopt the drama as a field for his further exertions, and he wrote several other pieces for various theatres, which were uniformly well received. Among these pieces was the opera of 'Maid Marian' (founded on Mr. Peacock's clever novel with the same title), to which Mr. Bishop furnished the music; and that of 'Oberon,' which he wrote expressly for Weber's music. His taste was also called

into requisition to prepare adaptations of some of the plays of our elder dramatists; among them 'The Woman never Vexed,' 'The Merchant's Wedding,' &c. Mr. Planché had also paid considerable attention to the subject of antiquities, particularly as connected with costume. He was therefore commissioned by the proprietors of Covent Garden Theatre to attend the coronation of Charles X. to make drawings for the purpose of reproducing the pageant on the English stage, which was accordingly done. He also, at the desire of Mr. Charles Kemble, designed the costumes for the plays of 'King John,' 'Henry IV.,' 'As You Like It,' 'Othello,' and 'Cymbeline.'

In 1826 he travelled through a considerable part of the north of Europe, and on his return published 'Lays and Legends of the Rhine.' In 1827 he visited Germany again, descending the Danube from Regensburg to Vienna, an account of which was published under the title of 'Descent of the Danube' in one volume, and which has been since reprinted as a guide-book. During this time however he had continued to follow his dramatic pursuits, and in November 1828 he produced at Drury Lane Theatre his clever and popular drama of 'Charles XII.,' being his fifty-fifth dramatic production. In 1830 he was elected a member of the Society of Antiquaries, from which he retired in 1852. In 1834 he wrote 'The History of British Costume,' forming a volume of the series of the 'Library of Entertaining Knowledge;' he wrote also the 'Costume' for Mr. Charles Knight's 'Pictorial Shakspeare;' the 'Costume and Furniture' in the chapters on 'Manners and Customs' in the 'Pictorial History of England;' and he contributed articles on dramatic biography to the 'Penny Cyclopædia.' On the occasion of the coronation of Queen Victoria in 1838 he produced 'Regal Records' (coronations of queens); and in 1852 'The Pursuivant of Arms, or Heraldry founded upon Truth.' In March 1854 he was created Rouge Croix Pursuivant of Arms, and in 1866 Somerset Herald. In 1855 he translated 'The Fairy Tales' of the Countess d'Aulnoy. All these avocations have not withdrawn him from the drama. Of one description or another, down to 1857, he has placed upon the stage nearly two hundred pieces, some of the more remarkable being the extravaganzas produced for performance under the management of Madame Vestris; besides a variety of songs, essays, &c., in various periodicals. Few dramatic authors have been so constantly successful as he has been; and so much industry with so much talent deserves the reward they have received.

PLANTAGENET. [HENRY L. II.]

PLANTIN, CHRISTOPHE, was born in 1514 at Mont-Louis, in the French province of Touraine, of poor parents. He went to Paris in his youth, and worked there some time in a bookbinder's shop; but afterwards went to Caen in Normandy, where he learned the art of printing. After working in several of the printing-offices of France, and especially at Lyon, he returned to Paris; but the religious disturbances, which commenced about that time, induced him to remove to Flanders, and he is known to have been a master-printer at Antwerp in 1555. The beauty as well as the correctness of the works which issued from his presses extended his reputation rapidly, and he soon acquired a considerable fortune. He employed as correctors of the press several men distinguished for their learning, among whom were Cornelle Kilian (who was fifty years in his establishment), Pulman (Poelmann), Giselin, and Raphelengius (Ravleghien). Plantin's house was resorted to by learned men from all countries. He died July 1, 1599, and was buried in the cathedral at Antwerp. Besides his printing establishment at Antwerp, he had one at Paris and another at Leyden.

The work which has given most celebrity to Plantin's printing establishment at Antwerp is the edition which he printed of the great Polyglott Bible, which had previously been printed at Alcalá, in Spain, under the direction of Cardinal Ximenes. [CISNEROS.] Plantin was engaged to perform the work by Philip II. of Spain, who sent Arius Montanus to superintend it, and he was employed four years (1568 to 1572) in this occupation. [ARIUS MONTANUS.] Guillaume Lebé was sent for from Paris to engrave the punches and superintend the casting of the type. The work, in addition to the contents of the Alcalá Polyglott, gave a Chaldaic paraphrase and a Syriac version of the New Testament in Hebrew and Syriac characters. The proofs of the Antwerp Polyglott were all revised by Raphelengius, and the work was published in eight large folio volumes, 1568 to 1572. Plantin was not so learned as the Aldi of Venice or the Estiennes of Paris, but his Latin prefaces to several of the works which he printed seem sufficiently to establish that he had acquired considerable scholarship.

PLANUDES, MAXIMUS, a Byzantine monk, was born, as he himself in one of his works says, at Nicomedia. The time of his birth is unknown, and almost the only circumstance of his life which is beyond doubt is, that in the year 1327 he was sent on an embassy to Venice by the Emperor Andronicus the elder. At this time he must have been of a mature age. That he was still alive in 1340 is evident from a letter still extant, which he wrote to the Emperor Johannes Palæologus, who ascended the throne in that year. D'Orville places his death in 1353, for which however he adduces no testimony. Gerhard Voessius prolongs his life to the year 1370, and others still later. Towards the close of his life Planudes is said to have been imprisoned on account of his partiality for the doctrines of the Church of Rome; and when afterwards compelled to write against that Church, to have done so in such a manner, and with such feeble arguments,

that Cardinal Bessarion declared that the heart of Planudes had no share in what he had written on that occasion.

We are indebted to Planudes for the preservation of a number of valuable Greek poems. He made a collection of Greek epigrams, in seven books, extracted from the comprehensive 'Anthology,' in fifteen books, which Constantinus Cephalas had compiled in the 10th century. Planudes, in his collection, omitted those poems which seemed to him obscene or of little importance. This collection, though the compiler had displayed little taste or discernment, was at the time of the revival of letters in Italy the only one which was known, and was first printed in 1494 at Florence by John Lascaris. This edition was reprinted at Venice in 1503, and at Florence in 1519. A better edition, and with some additional poems, was published by H. Stephanus at Paris in 1566, which was likewise reprinted several times. It has been translated into Latin by Grotius. In 1606 Salmassius discovered, in the Palatine library at Heidelberg, a manuscript belonging to the 10th century, which contained the complete 'Anthology' of Constantinus Cephalas, upon which our present 'Anthologia Græca,' revised by Brunck and edited by Fr. Jacobs, is based. Planudes also made, without any critical discrimination, a collection of fables, ascribed to Æsop, to which he prefixed a 'Life' of the father of fabulists, which is full of absurdities. [Æsop.] Planudes also made a translation of the 'Metamorphoses' of Ovid into Greek prose, which was edited in 1822 by Boissonade; and a Greek translation of Cæsar's 'Gallic War,' which was printed by Jubgermann in his edition of Cæsar, Frankf., 1606; but it is a disputed point whether this is the translation of Planudes. Most of his other translations, such as that of some works of St. Augustine, and Macrobius on the 'Dream of Scipio,' as well as his numerous original works, partly on theological, partly on scientific, and partly on grammatical and rhetorical subjects, have never been thought worth being published, and are scattered in various libraries. His literary character on the whole is low; he wanted perseverance and honesty, and was guilty of several forgeries, especially in his 'Anthology,' his 'Life of Æsop,' and the collection of fables ascribed to him.

#### PLATINA. [PAUL II.]

PLATO (Πλάτων) was born, according to the most consistent accounts, on the seventh day of Thargelion, in Ol. 87, 3, that is, in May, B.C. 429. (Athenæus, v. 217, B.) His father was Ariston, the son of Aristocles, and Plato is said to have been originally called after his grandfather, according to a custom very common among the Greeks. The old anecdote collectors have thought it necessary to find some explanation for the second name, by which he is now known, as for instance, that he was so called from the breadth of his style (*διὰ τὴν πλατύτητα τῆς ἔμπροσθεν*), or from his expansive forehead (*ὅτι πλατὺς ἦν τὸ μέτωπον*); but this seems quite idle, as the name Plato was of common occurrence among the Athenians of that time. The philosopher's mother was Perictione. The later writers attribute to her a lineal descent from Exæcæstides, the father of Solon.

It seems doubtful however whether Dropides, through whom the pedigree is traced, was really a brother of Solon; that they were intimate friends and connections appears from the words of Plato himself in the 'Timæus' (p. 20, E.); but perhaps the claim of a direct descent from Exæcæstides originated only in later times, when the admirers of the great philosopher lost no opportunity of exalting his family and investing his early youth with the wonders of fable. It is also stated that he was born in the island of Ægina, which was, about the time of Plato's birth, stripped of its inhabitants, and occupied by Athenian colonists, among whom was Aristophanes, the comic poet.

As might have been expected from his connection with the most distinguished Athenian family, Plato received the best education that Athens could furnish: Dionysius taught him reading and writing (*γράμματα*); he was instructed in gymnastic exercises by an Argive wrestler named Ariston; his masters in music were Metellus of Agrigentum, and Draco of Athens, a pupil of the celebrated Damon. He was sufficiently skilled in wrestling to contend at the Pythian and Isthmian games, and his first literary attempts, the composition of dithyrambic, lyric, and tragic poems, show that he had profited by the instruction of his music-masters. He is also said to have applied himself to painting.

Plato's connection with Socrates is said to have commenced in B.C. 410. He had previously, and while very young, learned the doctrines of the Heraclitean philosophy from Cratylus (Aristot. 'Metaphys.,' i. c. 6; Apuleius, 'De Dogm. Plat.,' p. 2), who appears to have been a friend or acquaintance of Socrates. (Plato, 'Cratyl.,' p. 480, C.) The assertion of Diogenes Laertius (iii. 6) that he learned the Eleatic doctrines from Hermogenes seems to be derived from this statement with regard to Cratylus, and from the circumstance that Hermogenes maintains the Eleatic opinions against Cratylus in the dialogue which bears the name of the latter.

On the death of Socrates (in May, B.C. 399), Plato betook himself to Megara, in company with several of his late master's followers. Related as he was to Critias and Charmides, who fell fighting side by side against Thrasybulus and his party, and professing, as he always did, sentiments harmonious rather with the oligarchical faction at Athens than with those of the patriots who wished for a restoration of the older constitution under which Athens had so long and so

pre-eminently distinguished herself, it cannot be doubted that he was driven to this self-banishment from a fear for his own safety; and we shall be the more inclined to draw this inference when we recollect how intimately the prosecution of Socrates was connected with that re-action against the Thirty Tyrants and their supporters in which Lysias took so prominent a part. [SOCRATES.] We are not disposed to charge Plato, at this or at any other time of his life, with absolute treason against the liberties of his country; we are inclined however to hold with Niebuhr ('Kleine Schriften,' p. 476; 'Philol. Mus.,' i., p. 494), that Plato may have been prejudiced against his native city in its constitutional form of government by the warm feelings of his youthful heart; "but it is not the less true," adds the historian, "that, if so, he was not a good citizen." While at Megara, he is said to have attended the lectures of Euclid, who was the head of a school there [EUCLID], and we find traces in several of his dialogues of an acquaintance with the peculiar doctrines of the Megaric philosophy. He afterwards went to Cyrene to visit Theodorus, the mathematician, who is introduced in the 'Theætetus' as living at Athens before the death of Socrates, and advocating the doctrines of Protagoras against that philosopher. From thence, we are told, he travelled to Egypt, where he spent thirteen years, collecting all the traditions which the priests could teach him; and it is said that he afterwards went to Persia to learn the doctrines of the Magi, and even became acquainted with the laws and religion of the Jews. (Lactant. 'Institut.,' iv. 2; Clemens Alexandr., 'Protrept.,' p. 46, A.) So late as in Strabo's time the traveller to Heliopolis was shown the house where Plato and his companion Eudoxus had lodged, (Strabo, p. 806, C.) That Plato visited Egypt is also stated by Cicero, in a remarkable passage ('De Republ.,' i. 10), and the story is not in itself improbable, especially if we admit the truth of his journey to Cyrene; it seems however exceedingly unlikely that he resided there so long as thirteen years, for he never speaks of Egypt like a person who was familiarly acquainted with the peculiarities of the country, and his philosophy was so much cultivated at Alexandria in later times, that a lie circumstantial, like that which Strabo relates, might easily have been fabricated on the spot. The other exaggerations with regard to Plato's travels in the East are highly absurd, and can only be accounted for from the great importance attributed to his philosophy by the early Christian writers, and by their wish to make out that the apparent coincidences between his system and the Christian revelation were not anticipations so much as proofs of his acquaintance with the traditions and prophecies of the East. There is probably more truth in the statement that, on his return from Egypt, he went to Tarentum to visit or renew his acquaintance with some renowned teachers of the Pythagorean school; he certainly did not go to Italy to learn the doctrines of this school: he might have learned them nearer home, for the celebrated Pythagorean Philolaus had been at Thebes before the death of Socrates; Cebes and Simmias heard him there (Cicero, 'De Fin.,' v. 29; Diog. Laert., viii. 46); and Plato shows in his earliest works that he was not unacquainted with the tenets of the Pythagoreans.

This journey to Magna Græcia seems to be connected with the first of three visits which he paid to Sicily. Curiosity to see an eruption of Mount Ætna is said to have been the motive for this first voyage to Syracuse, which, it is stated, he undertook in the fortieth year of his age, therefore in B.C. 389. (Athen., xi. p. 507, B; Diod. Sic., xv. 7; Pseudo-Plat., 'Epist.,' vii. p. 324, A.) It was on this occasion that he became acquainted with Dionysius I., tyrant of Syracuse, with his son Dionysius II., and with Dion, brother-in-law of the former and uncle of the latter. He had the misfortune to offend the elder Dionysius by some freedom of speech, and the tyrant got Pollis, the Spartan ambassador, in whose ship he was returning to Greece, to sell him at Ægina as a slave. He was bought by Anniceris of Cyrene, who gave him his freedom; and on returning to Athens he set up a school in the Academy, where he taught for twenty-two years. After this he paid a second visit to Syracuse, at the request of Dion, to endeavour to form by philosophical instruction the ill-educated mind of his nephew, the younger Dionysius. He failed in doing this; and Dion being banished soon after, Plato returned to Athens with the tyrant's permission. This second journey is placed in B.C. 367, and Plato stayed four months in Sicily. His third journey to Sicily is placed in B.C. 361; it seems to have been undertaken in the hope of reconciling Dion and Dionysius. Plato's stay at the tyrant's court became disagreeable and dangerous to himself, and it was not without difficulty that he obtained permission to return again to Athens, which he did in the following year. In B.C. 357 Dion collected an expedition in Greece for the purpose of liberating Syracuse from the tyranny of Dionysius: among the volunteers who joined this expedition was Speusippus, a nephew of Plato, who had accompanied him on his second journey to Sicily. Dion succeeded in this object, but was soon after murdered (B.C. 353), and with his death Plato's connection with Syracuse ceased.

Plato spent the last years of his life in the diligent prosecution of his philosophical and literary pursuits. Cicero tells us ('De Senect.,' c. 5) that he was actually engaged in writing at the moment of his death. His lectures were at first delivered in the garden of the Academy itself, but afterwards in a garden which he had bought, near the Academy, and between it and the village Colonus. Plato died in

Ol. 108, 1 (B.C. 347), and was succeeded as lecturer in the Academy by his nephew Speusippus, though he had left Heraclides of Pontus, another of his disciples, as his deputy there, when he took Speusippus with him on his second journey to Sicily.

The following is the list of his scholars as given by Diogenes of Laërte:—Speusippus, Hippothales, and Callippus of Athens; Xenocrates of Chalcedon; Aristotle of Stagira; Heraclides of Pontus; Philippus of Opus; Hestisus of Perinthus; Dion of Syracuse; Amyolus of Heracleia; Erastus and Coriscus of Seopis; Timolaus of Cynicus; Evason of Lampascus; Pithon and Heraclides of Ænus; and Demetrius of Amphipolis; to which list some added the Athenian orators Demosthenes, Hyperides, and Lycurgus, and the philosopher Theophrastus. See also the contradictory lists of tyrants and good statesmen who proceeded from the school of Plato, in Athenæus, xi. p. 508, fol.; and Plutarch, 'Adv. Colot,' p. 1126.

The works of Plato consist of a long series of dialogues, in all of which, excepting the 'Laws,' the principal interlocutor is Socrates. The form of the dialogue was not first introduced by Plato; he is said to have been preceded in that species of composition by Alexamenus of Teos, and by Zeno of Elea. It is probable however that Plato's adoption of the form of dialogue resulted rather from the nature of the case than from any direct imitation. The spirit of the dialectics of the Eleatic school, with which Plato's philosophy was so strongly imbued, depended mainly on its being in the form of question and answer. The very name 'dialectics' points to this: the word *διαλεκτική* signifies merely 'to converse,' as appears from the use of the common word *dialaxis* (*διδαξις*), 'conversation,' to signify 'dialectics,' in Aristotle, 'Nu.,' 817; for of course no weight will be attributed to the explanation of the verb which Xenophon puts into the mouth of Socrates (Xen. 'Memor.,' iv. 5, sec. 12), an explanation which is obviously derived from its secondary and technical meaning. That Plato then should write in the form of dialogue seems to be the natural consequence of his wish to investigate and analyse, dialectically and after the manner of Socrates, the various questions of philosophy then in vogue. Nor is it at all necessary to suppose that Plato was immediately indebted to any one for the dramatic tone which characterises his dialogues: indications of a real dramatic genius, and of imitative powers of the highest order, are scattered so plentifully over all his works that we cannot fail to recognise everywhere the hand of an artist who copies nature alone. It is not improbable that he studied, and with great profit, both Epicharmus and Sophron: Alcimus, quoted by Diogenes of Laërte (iii. 18), says that he transcribed most of the writings of the former; and according to Quintilian (l. 10, sec. 17), the philosopher was so fond of the mimes of Sophron that he had a copy of them under his pillow when he died. It seems however likely that he did not become acquainted with the writings of these two authors till his first journey to Magna Græcia and Sicily; and it is certain that several of his dialogues, and some of those in which the dramatic element is most prominent, were composed long before that time, so that he did not probably owe anything to them in the first instance.

But though the form of Plato's works was not much influenced by his acquaintance with other writers, it is impossible to overlook the fact that, for their matter, they were composed with a continual reference to the labours of his predecessors. In fact Plato's whole system is rather critical and eclectic than dogmatical, and many of his dialogues are rather reviews of the speculations of former philosophers than formal enunciations of any doctrine of his own. The view which he took of philosophy was decidedly a literary one; he was the first of the Greek philosophers who can be considered as a student as well as an expounder of philosophy, as may indeed be inferred from the statement of Heraclides of Pontus, that he was among the first to collect books and import them to Athens. (Proclus, in 'Tim.,' l. p. 28; Diog. Laërt., viii. 15.) Besides the great ideas and peculiar system of Socrates, which he had learned during his intercourse with that philosopher, Plato was thoroughly conversant with the systems of Pythagoras, Heraclitus, Parmenides, Zeno, Anaxagoras, and Protagoras; his works abound with references to their writings, and some of his dialogues are controversial tracts directed against one or more of these philosophers; nor had he neglected his contemporaries of the Socratic school, some of whom, as Aristippus, Euclid, and Antisthenes, he criticises rather severely. Cicero, in the passage of his treatise 'De Republicâ' (l. c. 10), referred to above, seems to consider that the philosophy of Pythagoras, combined with the dialectics of Socrates, formed the main groundwork of Plato's philosophy. But that this is only a partial account of the matter we shall see presently; though Cicero is undoubtedly right in attributing a great deal to the influence of the Pythagorean philosophy on the opinions of Plato. It was from this, no doubt, that Plato was induced to pay so much attention to Epicharmus, who was not only a great comedian, but also a renowned Pythagorean philosopher. (See Clinton's 'Fasti Hellenici,' vol. ii. p. 36, note g.) The benefits which Plato derived from a study of Epicharmus are distinctly asserted by Diogenes Laërtius (iii. 9-16), and some lines are very pointedly quoted from one of his comedies, in which he prophesies that some future writer would confute and overthrow all opponents by adopting his sayings and clothing them in a different dress. Plato sometimes quotes Epicharmus by name (as in the 'Gorgias,' p. 506, D),

and in one passage he pays him the high compliment of naming him and Homer as the two chief poets, the one of comedy, the other of tragedy. ('Theætet.,' p. 152, E.) Plato seems to have been also familiar with the works of Empedocles, who stands half-way between the Pythagoreans and the Eleatics, and who, as Thirlwall suggests ('Hist. of Greece,' ii. p. 139, note), may probably be looked upon as the predecessor of Plato in his eclectic view of philosophy. There is certainly a direct reference to the doctrines of Empedocles in the 'Sophistes,' p. 242, D; perhaps, also, as Heindorf thinks, in the 'Lysis,' p. 214, B, though Stallbaum considers that Anaxagoras is there referred to; and Hermann ('Opuscul.,' vol. vii. p. 106) has not hesitated to recognise the very words of Empedocles in a celebrated passage of the 'Phædrus,' p. 246, B-C.

On the whole then it is clear that Plato was well acquainted with the labours of his predecessors and contemporaries. But though he may have learned much from them, and though he certainly had borrowed some of his leading views from his great teacher Socrates, we should nevertheless do him great injustice if we regarded him merely as a compiler and systematiser of what had been already advanced, and denied his claim to a place among the originators of great thoughts. Plato's whole system is based upon some grand and novel ideas, which may indeed have been faintly conceived by others, but which were never distinctly uttered and proclaimed till Plato made his appearance. The opposition between the law and the facts, between the general and the particular, between the objects of reflection and the objects of the senses, between the world of intelligence and the visible world, was never clearly pointed out till Plato's time. It is very true that Socrates did awaken the idea of science, and so lay the foundation of dialectics, on which the philosophy of Plato was chiefly built up (see this distinctly stated by Aristotle, 'Metaphys.,' xii. 4, § 5); and it is for this reason that Plato has put into the mouth of his master his speculations on this subject. The merit of Plato is that he expressed distinctly and systematically what Socrates only struggled to articulate. The comprehensive view which Plato took of philosophy in all its bearings implied a critical acquaintance with all the branches of his subject and with the works of all his predecessors. From the nature of the case, it was impossible that Socrates should fulfil these previous conditions; he was not and could not have been a literary man, and it does not appear that he was qualified by his character and habits, even if he had possessed the necessary opportunities, to study the systems of other philosophers in an enlightened and critical spirit. The kindred genius of Plato was luckily fostered by every encouraging influence, and he stepped in to elaborate completely the plan of which his master had sketched the rude outline. With many features totally dissimilar, the relation between Socrates and Plato very nearly resembles that between Kepler and Newton; for Kepler's laws stand related to the 'Principia' of Newton much in the same way as the Socratic idea of science does to the dialectical system of Plato. In fact, the case is much the same with every great advance in philosophy; the conception must precede its articulate utterance.

Before we attempt to exhibit the method of Plato's philosophy as it appears in his writings, it will be as well to consider briefly the chronological arrangement of his dialogues, and the natural division according to which they may be classified. Owing to the great admiration in which Plato has been held from his own time down to the present, we have not only a complete collection of his works, but also several dialogues included among them, which, beyond all manner of doubt, were written by some imitators of the great philosopher. Thus, the 'Eryxias' and 'Axiochus' were probably written by Æschines, the Socratic philosopher; the 'Epinomis' by Philip of Opus; and 'The Second Alcibiades' by Xenophon. Leaving out of the question, then, these and other dialogues generally admitted to be spurious, we may divide the genuine dialogues into three classes, which we will arrange in the following chronological order, for reasons most of which have been adduced by Schleiermacher, Ritter, and others, but which our limits will not permit us to enter on in this place. In the first class we would place the dialogues composed by Plato before he set out upon his travels, namely, the 'Lysis,' 'Phædrus,' 'Laches,' 'Hippias major,' 'Protagoras,' 'Charmides,' 'Ion,' 'Meno,' 'Alcibiades I.,' 'Euthydemus,' 'Euthyphro,' 'Apology,' and 'Crito.' To the second class we refer those which he wrote after returning from his travels, and before his second journey to Sicily, namely, the 'Gorgias,' 'Theætetus,' 'Sophistes,' 'Politicus,' 'Cratylus,' 'Parmenides,' 'Symposium,' 'Menexenus,' 'Philebus,' 'Phædo,' and perhaps also the 'Republic,' the 'Timæus,' and the 'Critias.' In the third class we place by itself the long dialogue on the 'Laws,' which is but loosely connected with the general system of Plato's works, and seems to be quite an extraneous part of his philosophy. However, notwithstanding this and other dissimilarities, we do not hesitate to recognise in the 'Laws' a genuine work of Plato. It is true that it is the only one of his dialogues in which Socrates does not bear a part; it is true that there is a striking difference of style between the 'Laws' and the other works of Plato; there is in fact a greater difference between the style of the 'Laws' and Plato's ordinary style, than between this last and the style of the epistles, or even than that of the dialogues which are confessedly spurious; there is a profusion of anacolutha in it to an extent of which we find no example in the other works of Plato: and Ast has objected that the whole plan of

the work is inconsistent with Plato's views as developed in the 'Republic.' But with regard to the non-introduction of Socrates, surely no argument of spuriousness can be drawn from this: because Socrates was generally the chief speaker, it was not necessary that he should always be so, and it is probable that the 'Laws' were written with an object totally different from that which Plato generally proposed to himself. With regard to the style, it may be argued, with Cousin, that the 'Laws' had not received the last touches of the author's pen; and it is said that Philippus found the work on the waxen tablets, and copied it out: and with regard to the discrepancies between the 'Laws' and the 'Republic,' Ast seems to have overlooked the distinction which Plato himself has drawn between the two works; for the philosopher says that the second state is not intended to be a perfect one, but only so relatively; besides, the points of discrepancy which have been noticed are not such as to affect any leading principle in Plato's system of ethics; the age fixed for marriage is different in the two works, there is no military caste in the 'Laws,' and the cruel and heartless socialism of the 'Republic' is not mentioned in it: but all these are objections of little weight, and even if they were more difficult to encounter, they would be at once overthrown by the express and positive testimony of Aristotle to the genuineness of the work, and by the internal evidence which must convince every intelligent reader that no man but Plato then living in Greece could have written a treatise at once so comprehensive and so profound. Schleiermacher's arrangement of the works of Plato corresponds in its main features with the one suggested above; it deserves however a separate mention on account of the celebrity of this writer and the important effects which have been produced by his acute and careful examination of the connection of thought running through the dialogues. He also divides them into three classes,—1, elementary dialogues, or those which contain the germs of all that follows, of logic as the instrument of philosophy, and of ideas as its proper object; consequently, of the possibility of the conditions of knowledge; these are the 'Phaedrus,' 'Lysis,' 'Protagoras,' 'Laches,' 'Charmides,' 'Euthyphro,' and 'Parmenides,' to which he subjoins, as an appendix, the 'Apologia,' 'Crito,' 'Io,' 'Hippias minor,' 'Hipparchus,' 'Minos,' and 'Alcibiades II.'; 2, progressive dialogues, which treat of the distinction between philosophical and common knowledge in their united application to the two proposed and real sciences, 'Ethics' and 'Physics'; these are the 'Gorgias,' 'Theætetus,' 'Meno,' 'Euthydemus,' 'Cratylus,' 'Sophistes,' 'Politicus,' 'Symposium,' 'Phædo,' and 'Philebus,' with an appendix containing the 'Theages,' 'Erastus,' 'Alcibiades I,' 'Menexenus,' 'Hippias major,' and 'Clitophon'; 3, constructive dialogues, in which the practical is completely united with the speculative; these are the 'Republic,' 'Timæus,' and 'Critias,' with an appendix consisting of the 'Laws,' the 'Epistles,' &c. We cannot here enter upon a criticism of this arrangement; we will only remark that we strongly object to Schleiermacher's separation of the 'Theætetus' from the 'Sophistes' and 'Politicus,' which form, with it, a trilogy of dialogues, like the three which are placed together in his third class; and we think that, according to his own principle, as the 'Phædo' is preparatory to the 'Timæus,' and as the 'Philebus,' as an approximate discussion of the idea of the good, is preliminary to the 'Republic,' these two dialogues should occupy the same relative position as the two which they precede. Thus much may suffice for the arrangement of the several dialogues according to some real train of succession. According to their contents, they also form three classes: the dialectical, ethical, and physical dialogues. The formal division of philosophy into these three parts is subsequent to Plato's time, as it was first established by Xenocrates and Aristotle (Sextus Empir., 'Adv. Math.,' vii. 16); but Plato certainly had started the idea of such a division, which is distinctly attributed to him by Cicero ('Acad. Post.,' i., c. 5, § 19), and it is clearly discernible in his works, though many of them may not be assignable to any one part in particular: thus the 'Theætetus' and its two connected dialogues are clearly dialectical; the 'Republic' and 'Laws' ethical; and the 'Timæus' physical. In endeavouring therefore to give a general view of Plato's philosophical system, we shall adhere to this division, and consider first his views on dialectics, on which his whole system was based, and then his applications of these views to the two provinces of moral and natural philosophy.

I. Plato's system of dialectics is based upon a view of the definition 'real,' which he was the first to bring forward. The definition, he saw, consists in generalisation and division—namely, it is made either *per genus* or *per differentiam*. The former process is the base of the second; the second is the development of the former. Consequently, as science, according to Plato, depends upon dialectics, and dialectics on the definition 'real,' in order to general scientific reasoning we must generalise and classify—κατ' εἶδη σκοπεῖν and κατὰ γένος διακρίνειν. The ideas of Plato are, strictly speaking, nothing more than general terms, the main part of the definition 'real,' as Leibnitz calls it, and Plato seems to have constructed his theory of ideas as a mean between the contradictory systems of Heraclitus and the Eleatics. The *Heraclitean* doctrine of a perpetual flux, modified into the dogma of Protagoras, πάντων μέτρον ἄνθρωπος,—“The individual man is the standard of all things,”—was directly opposed to Plato's notion of science as based upon an idea or general definition, which is in itself its own ground and authority; for it peremptorily denied *being* (εἶναι, οὐσία), and set up in its stead a mere *genesis* or

*becoming* (γίγνεσθαι), so that nothing could be predicated of anything as fixed. On the other hand, the *Eleatic* doctrines—1, that all is one, and that there is no multiplicity; 2, that all is one immutable being, and that there is no *becoming*, no change, no generation, augmentation, or decay—were equally opposed to Plato's belief in the reality of sensation, for they absolutely denied the *genesis*. Now as Plato was convinced of the reality, both of the permanent being (οὐσία), namely, of the genus signified by the general term, and of the mutable *genesis* of the phenomena, of the idea as well as of the multiplicity of things, it was necessary that he should form some conception of science which would admit of both. The general science which Plato set forth with this view was called *dialectic*, or the art of conversing, and was based on an examination (the first which had been attempted) of the syntax of the Greek language. In order to make a sentence, to affirm or deny anything, to express a judgment of the mind, it was necessary, he saw, to have at least a *subject* of which something was to be affirmed or denied, and a *predicate* which affirmed or denied something of the subject. This predicate would generally be a verb, but it might be an adjective, as the Greek sentence tolerated an omission of the copula. Words, he says, whether subjects (ὀνόματα) or predicates (ῥήματα), express neither *entity* (οὐσία) nor *action* (πράξις), neither *being* nor *becoming*, unless they are joined together in a sentence, and then some tense of *becoming* is predicated of some state of *being*: δηλοῖ γὰρ ἕβη που τότε περὶ τῶν ὄντων (the predicates), ἢ γιγνομένων (present), ἢ γεγονότων (past), ἢ μελλόντων (future), καὶ οὐκ ὀνομάζει μόνον, ἀλλὰ τι περαινέει συμπλέκων τὰ ῥήματα τοῖς ὀνόμασιν. ('Sophist,' p. 262, D.) He speaks here of the mere name of the subject as predicating *being* of it, for we may always predicate *being* of every individual which has a name, in addition to the particular nature which it has ('Sophist,' p. 251, A); indeed the act of naming or of affixing a general name, the name of the genus, to the individual, is the first step in classification, and in itself gives a fixity to things which is opposed to generation and becoming. ('Theætetus,' p. 157, A.) *Thinking* being the discourse of the soul with itself ('Theætetus,' p. 189, E; 'Sophist,' p. 263, E), and *speech* being a combination of words so as to form discourse for the cognisance of another ('Sophist,' p. 259, E), thinking is a similar combination of thoughts for the cognisance of a man himself: and thus the science which regulates the combination of thoughts may be called *διαλεκτική*, or the science of discourse. ('Sophist,' p. 252, E.) It is a science presiding over the faculty which investigates the properties of all sensations. (Theætetus, p. 185, B.) This science depends upon definition. Now definition necessarily presumes that some general term should be given, including a multiplicity of objects ('Euthyphr.,' p. 6, D; 'Theætetus,' p. 146, D; p. 185, D), and it must then be explained wherein the term to be defined differs from others which belong to the same genus with it. ('Euthyphr.,' p. 11, E; 'Theætetus,' p. 208, D.) The second process, or the *per differentiam*, is subordinate to the former, which is the all-important one in this science of dialectics.

The great object then of the dialectician is to establish what are those general terms which are the object of the mind when a man thinks. It is clear that they cannot be objects of sense, for these are in a continual state of transition. ('Parmenid.,' p. 152, A.) They must therefore be of the number of those things which we know by means of reflection (διάνοια) through the understanding (λογισμός, νοῦς, νόησις), for these things being fixed, belong to οὐσία, and can become the objects of science or certain knowledge. ('Parmenid.,' p. 129, E; 'Phædo,' p. 65, C; 'Respubl.,' vii., p. 532, A.) Every thing of this kind is an εἶδος, that is, a general term, ('Resp.,' x., p. 596, A; 'Legg.,' x., p. 835-6), or quiddity ('Phædo,' p. 237, B.) Consequently there is an *idea*, or εἶδος, of everything that is called by a general name. Hence the formula for the universal is neither εἶναι only, as the Eleatics said, nor πολλά only, as the Heracliteans asserted, but εἶναι καὶ πολλά, “the one and the many,”—namely, the subject of which many predicates may be asserted, and which therefore appears as manifold. ('Respubl.,' v., p. 476, A; 'Sophist,' p. 251, A; 'Parmenid.,' p. 129, E, &c.) From all this it will appear that Plato, like a writer of our own time, regarded philosophy as an undressing of the world, as the means of discovering the certainty and eternity, which are in this world hidden and wrapped up in the garb of the mutable and the temporal. For if the sensible is true, which he maintains against the Eleatics, it is true only through the essence of which it partakes ('Phædo,' p. 100, C; 'Euthydemus,' p. 300, E; 'Sympos.,' p. 210, E), and therefore the object of philosophy must be to strip off this garment of the sensible, and ascend to the supreme idea which contains all the subordinate ones, and which has nothing in it capable of being apprehended by the senses, for individual ideas are but hypothetical notions, for which a true ground can only be given by a higher hypothesis. ('Respubl.,' vi., p. 511, B. compared with 'Phædo,' p. 100, A, 'Philebus,' p. 20, D, and 'Respubl.,' p. 610, C.) This supreme idea is *God*; and thus God is the common standard of all things, and not the individual man, as Protagoras said. ('Legg.,' iv., p. 716, C.)

Before we pass from this outline of Plato's dialectical system to its application to ethics and physics, it will be advantageous to the reader that he should see how Plato made this application himself. With this view we shall give a sketch of the mode of reasoning which the

philosopher has adopted in two most important and interesting dialogues, the 'Gorgias' and 'Theaetetus,' which are the counterparts of one another, and which Schleiermacher places at the head of the second class of Plato's works, the dialogues of which occupy a middle position between the elementary and constructive ones, and treat not of the *method* of philosophy, as is the case with dialogues of the first class, but of its *object*. The opposition between these two dialogues has been well pointed out by Schleiermacher, in his introduction to the former of them (p. 5, seqq.). The highest and most general problem of science is to seize upon essence and being while still enveloped in the fleeting and transitory phantasmagoria of the senses, to represent the essence as that which is real and good in the being, and to point out and reconcile the apparent opposition between these two contrasted objects of contemplation. There are two ways of effecting this: the immediate method, or that by which we pass at once from the true to its semblance; the indirect method, or that by which we pass from the feeling of opposition, as a datum, to the primary intention, which forms the starting point in the other case. In the opposition which it is the object of these methods to reconcile, the antithesis is between *being* and *semblance*: in ethics this amounts to the antithesis of *moral good*, in the province of being, to *pleasure*, or *pleasurable feelings*, in the province of semblance; and in physics this is the antithesis of *science*, in the one domain, to *sensation*, in the other. The 'Gorgias' is the development of the former antithesis; the 'Theaetetus' of the latter.

The interlocutors in the 'Gorgias' are—Gorgias, the celebrated sophist and rhetorician; Polus, a rich and arrogant Agrigentine, who had written a book on rhetoric; and Callicles of Acharnae, an ambitious demagogue; to whom are opposed Socrates and his friend Chærophon, the latter of whom however takes but little share in the discussion. The business of the dialogue is divided into three parts. I. The refutation of Gorgias with regard to the subject of rhetoric. Gorgias says the subjects of rhetoric are justice and injustice, but that the rhetorician sometimes acts unjustly: "but," says Socrates, "if justice and injustice are the subjects of the rhetorician's art, the rhetorician, as such, must be just always; therefore Gorgias contradicts himself." II. The refutation of Polus with regard to the distinction between the good or the beautiful, and the pleasant. Polus says "to act unjustly has less of the *beautiful* (it is *αἰσχρὸν*) than to suffer injury, but the latter has less of the good (it is *κακίον*) than the former." Socrates replies "the *beautiful* (τὸ καλόν) excels in pleasure (*ἡδονή*), in utility (*ὠφελεία*) or in both: the *deformed* (τὸ αἰσχρὸν) is so called from the pain (*λύπη*) or evil (*κακόν*) which attends it, or from both: to act unjustly (τὸ ἀδικεῖν) does not surpass the suffering of an injury (τὸ ἀδικεῖσθαι) in the pain which attends it; consequently it must surpass it in the *evil* or *badness* of it, therefore it is both worse (*κακίον*), and has also less of the beautiful (τὸ καλόν); and therefore it will not be a reasonable object of preference. Again, it is well for the unjust man to be punished; for the act and the suffering are homologous: now the act of punishing an unjust man is just; therefore the suffering of the unjust man is just also: consequently, as before, it is *καλόν*; therefore it has some excellence either of pleasure or of profit: but its excellence is not of pleasure; therefore it is profitable for him. III. The refutation of Callicles with regard to the proposition that all *good* is exhausted in the *pleasant*. Callicles asserts that though τὸ ἀδικεῖν has more of deformity than τὸ ἀδικεῖσθαι, this is only by law or convention, and not by nature. For τὸ ἀδικεῖν is an endeavour to get more than others, and this is natural. Socrates first confutes Callicles' idea of a distinction between law and nature (p. 488, B. 489), and then brings three decisive arguments against his position that everything pleasant is good, the first in p. 495, D, the second in p. 495, E—497, D, the third in p. 499, E—499, B. To escape from the consequences of these arguments, Callicles makes a distinction between good and bad pleasures; but Socrates refutes this at once by showing that if we are to make this distinction, it follows that we seek for an object not because it is pleasurable, but because it is good (p. 499, B, 500, A); and then maintains that the rhetoric, or what is the same thing, the political principles of demagogues, like Callicles, are morally bad, for they have *pleasure* for their object, not *good*. Socrates then proceeds by himself to show that happiness consists in justice and order (p. 506-508); that life is not in itself desirable (p. 508-512), and so on; and the dialogue concludes with a fable relating to the state of the soul after death.

The interlocutors in the 'Theaetetus' are Theodorus, a mathematician of Cyrene, who is represented as attached to the materialism of Protagoras, and a young Athenian named Theaetetus, who carries on nearly the whole of the argument with Socrates. The dialogue consists of a refutation of three positions with regard to science (*ἐπιστήμη*), which are put into the mouth of Theaetetus. (I.) That science is sensation (*αἰσθήσις*). This, says Socrates, is much the same as the dogma of Protagoras, "the individual man is the standard of all things" (*πάντων μέτρον ἄνθρωπος*); for his *φαίνεται*, 'it appears,' is equivalent to your *αἰσθάνομαι*, 'I perceive;' but in this opinion of Protagoras is implied (1) that there is only a *genesis* and no *being*, and that all things are the offspring of flowing and motion; (2) that the objects of the senses have neither an objective nor a subjective existence, but exist only by the concurrence of object and subject; that is to say, according to his principle, τὸ πάν κίνησις ἐστί, 'every thing is motion.' Now there are

two kinds of motion, (1) active, (2) passive; the first comprehends the *αἰσθήσεις* (perceptions), the second the *αἰσθητά* (things perceived), and qualities are generated from the concurrence of the percipient and the perceivable. Hence it follows, according to Protagoras, that nothing is of itself, but *comes into being* by the instrumentality of something else.

Socrates next proceeds to show, in defence of Protagoras, that the objection in respect of dreams and madness is of no force, and that the perceptions of a person mad or asleep are true as far as they go; for, in the first place, we have no means of proving that we are not asleep when we think ourselves awake; and next, it may be shown that, whatever we perceive, we alone perceive it, and that therefore the perception, if it is a perception at all, must be a true one. The opinion of Theaetetus, thus far established, is of no validity unless we admit that Protagoras has overthrown his pretensions to superior wisdom by advancing this doctrine. Socrates however concedes that Protagoras might reasonably object to this confutation as not amounting to a regular proof. In the next place then he shows that if perception is science, we arrive at the absurd conclusion that it is possible to remember a thing once known, and yet not to know it. He checks himself however by suggesting (p. 114, C) that this *reductio ad absurdum* has been obtained by an acquiescence in the common acceptations of terms, and then undertakes to defend the doctrine of Protagoras as far as it will go. Speaking then in the person of Protagoras, he begins by denying that perception (*αἰσθήσις*) and memory (*μνήμη*) are the same affection (*πάθος*). Next, he denies that he considers all men alike in wisdom. He says that some opinions may be better than others, but he denies that any are false; and having, in the name of Protagoras, found fault with himself for his mode of arguing, he invites Theodorus to answer him in Protagoras's name. Theodorus having reluctantly consented to do so, Socrates proceeds (p. 170, A) to refute seriously the *πάντων μέτρον ἄνθρωπος* of Protagoras. In the first place he asserts that almost every action of man implies the belief that there are different degrees of wisdom, and therefore that there is such a thing as false opinion. Next he shows that Protagoras himself must confess his opinion to be false, if it be conceded that most people think it so, and that all these think rightly. Again, this rule of Protagoras will not apply to the profitable; and this Socrates, after a digression on the difference between the babbling politician and the true philosopher, proceeds (p. 177, C) to prove by showing that the profitable belongs to the *future*, and that no one excepting the man of science can judge of the future as respecting the object of his science. These two last conclusions Theodorus admits to be decisive (p. 179, B, C); but Socrates doubts if the refutation of Protagoras as regards the *present* be made out, unless the Heraclitean doctrine be also refuted. This then is the next step. In the first place he makes Theodorus concede that all things are moved according to both kinds of motion, that is, change of place and change of form. Then alluding to his former distinction of τὰ παύοντα = τὰ αἰσθητά, and τὰ κινούμενα = τὰ αἰσθημένα, and to what he said about the effects of their concurrence, he shows that, according to this doctrine, no quality can be predicated of anything; and that we neither can be said to perceive, nor yet not to perceive, that is, neither to have science nor to have it not; and hence every proposition is equally right and equally wrong, and nothing is left but the *οὐδ' ἔστω*. To this Socrates adds (p. 184, C) that the senses are the *δὲ οὐ*, not the *ἢ αἰσθανόμεθα*—the mere instruments, not the causes of sensations; we perceive each sort or quality by a different *δὲ οὐ*, or organ, and consequently must compare them, &c., by some other means than by the senses themselves, that is, the *ψυχὴ ἀπὸ καθ' αἷμα*, "the soul considered as unconnected with the senses," is the subject of essence and truth, and therefore science and sensation are different, for science is not without essence and truth. "Hence it follows," says Socrates, "that we must seek for science in that name, whatever it is, which is given to the soul when it is engaged in abstract speculation" (p. 187, A). From this, Theaetetus asserts (II.) that science is right conception (*ἢ ἀληθὴς δόξα*); and when he is driven from this, after a series of subtle disquisitions on the nature of false conception, he maintains (III.) that science is right conception combined with reasonable explanation (p. 201, D). This is discussed with reference to the different meanings of *λόγος*, and the opinion is finally refuted. The dialogue ends with this recapitulation of the results obtained:—"Therefore neither perception nor right conception, nor right conception combined with reasonable explanation, can be science."

We have dwelt at some length upon these two dialogues because they furnish a direct transition to Plato's application of his dialectical system to the departments of ethics and physics. The 'Gorgias' points out the steps by which Plato would proceed in handling the moral questions of common occurrence in his time; for ethics was always treated in those days as a part of politics, and the sophists, to whom he was opposed, were principally dangerous from the bearing of their doctrines on political morality. The 'Theaetetus' is a critical review of certain materialistic opinions, which it was necessary to confute before a new system could be fairly set on foot. Plato himself says, "It is better to do a little well than a great deal in an unsatisfactory manner" ('Theaet.', p. 187, E); and as Sir C. Wren gained nearly as much credit for the scientific manner in which he removed the ruins of the old St. Paul's church as for the genius and skill with which he

planned and constructed the new edifice, so Plato should receive the commendation which is due to him for the elaborate and searching scrutiny to which he subjected the erroneous views current in his time, before he ventured to propound the grand and original conceptions on which his own philosophy was built up.

II. The ethical system of Plato, though traces of his views in this field are discernible in many of his other dialogues, is most fully developed in his two largest treatises, the 'Republic' and the 'Laws,' and most distinctly in the former. From Plato's general plan of considering everything controversially and with reference to the theories of his predecessors, we might draw two conclusions with regard to his system of moral philosophy: 1st, that he would at once discard the notion that the pleasure resulting from sensible impressions could be the highest good, for this would be to allow the influence of the senses to be paramount, the very point in which he was so directly opposed to the Heracliteans; 2ndly, that he would also reject the claim of knowledge alone to be considered as the good, for that would lead him to coincide, more nearly than would have suited his general views, with the positions of the Eleatics. We see the first germs of his opinions on these two points in the contrast which we have pointed out between the 'Gorgias' and 'Theætetus,' and in the 'Philebus,' which may justly be considered as an introduction to the 'Republic,' he formally confutes the dogma that the *summum bonum* is either pleasure or knowledge alone. The highest good, as is hinted in the 'Philebus,' and distinctly shown in the 'Republic,' is moral virtue: this principle is the basis of man's intellectual and moral constitution; it is his good *quo* man, that is, as far as he is an intellectual and moral agent. Moral virtue, according to Plato, is the subordination of man's lower faculties to his reason as the sovereign faculty: a man is virtuous when the will acts as the servant of the reason in controlling the appetite. When this subordination is perfect in the individual, it constitutes his rectitude, righteousness, justice, or, in general, his virtue or goodness; consequently, his happiness in this world. When a corresponding subordination exists in the state, that is to say, when the guards, or military caste, in perfect subordination to philosophic rulers, assist the reasoning and governing power in regulating and controlling the passions of the populace, the state is a perfect one. The 'Republic' of Plato is a development of this analogy between the ideas of the perfect man and the perfect state. This analogy depends upon the old and well-known division of virtue into the four cardinal virtues, as they are called, namely (1), prudence or wisdom (*φρόνησις*); (2), courage, constancy, or fortitude (*ἀνδρεία*); (3), temperance, discretion, or self-control (*σωφροσύνη*), and (4), justice or righteousness (*δικαιοσύνη*); and on the supposition that the whole province of virtue is exhausted by these four virtues. We cannot agree with Schleiermacher ('Einführung zum Staat,' p. 26), that "Plato manifestly took up his description of the four connected virtues only out of respect for the existing classification, just as they had passed in a similar manner from common conventional usage into the philosophy of Socrates." To us it appears that the classification of the four cardinal virtues is so intimately connected with the very groundwork of Plato's whole physical and dialectical system, that it must have been in the most serious earnest, and with the most deliberate choice, that he assumed this division of virtue as the basis of his moral philosophy. In the 'Republic,' Plato argues thus with regard to the fourfold division of virtue ('De Repub.,' iv., p. 427-434):—The state, being a perfect one, must exhibit in itself the four cardinal virtues; not that every one of its citizens must exhibit them all perfectly: but the philosophic rulers will represent its *φρόνησις*; the courageous standing-army its *ἀνδρεία*; and the well-conducted populace and craftsmen its *σωφροσύνη*. The remaining virtue, *δικαιοσύνη*, is the virtue of the whole; it is the principle and cause of the existence of the other three virtues, compelling each portion of the state to keep to its own business and to abstain from all interference with the affairs of the other portions. Passing from the state to the individual, Plato recognises three distinct principles in the soul of man: τὸ λογιστικόν, τὸ θυμοειδές, and τὸ ἐπιθυμητικόν (p. 439, D); the first belongs to the rational part of the soul; the two last to the irrational part, with this distinction, that the *θυμοειδές*, though it is classed under the same general head with the *ἐπιθυμητικόν*, is very different from it, and often assists the *λογιστικόν* in governing and controlling the *ἐπιθυμητικόν* (p. 440, A; p. 441, E). These three principles correspond in our philosophical language to the reason, the will, and the appetite. The second is often rendered 'the irascible principle,' and Cicero translated it by *ira* and *iracundia* ('De Repub.,' i. 38); but we follow Hooker, who translates it 'the will,' and Hemsterhuys the younger, who substitutes for it the scholastic synonym *velleit*. These three principles in the soul of man Plato considers to be analogous to the three classes in the perfect state: the philosophic rulers represent the reason, the standing army is the will, and the populace the appetite; and as there was a virtue corresponding to each of the divisions of the perfect state, and also one which kept them altogether, so, in the righteous or virtuous man, the reason is full of wisdom, the will is strong in fortitude, and the appetite is under the healthy influence of self-control; and all three are kept together by justice, as the musical harmony keeps together the highest, the lowest, and the middle sound, or the octave, the bass, and the fifth (p. 443, D); or, to express the whole in

the words which Shakspeare has apparently borrowed from Plato ('Hen. V.,' act i., sc. 2):—

*Exit.* While that the armed hand doth fight abroad,  
The advised head defends itself at home;  
For government, through high, and low, and lower  
Put into parts, doth keep in one consent,  
Congreering in a full and natural close,  
Like music.

*Chor.* Therefore doth heaven divide  
The state of man in diverse functions,  
Setting endeavour in continual motion,  
To which is fixed, as an aim or butt,  
Obedience.

This idea of the three principles in the human soul, and of the subordination of the two inferior faculties to the sovereign reason, is most beautifully and clearly worked out in the mythus which forms a prominent part of Plato's earliest dialogue, the 'Phædrus' (p. 246, A, seqq.), where the soul is compared to a charioteer (the reason) driving a pair of winged steeds, one of which is well-bred and well trained, and the other quite the contrary: the quiet horse (the will) is obedient to the rein, and strives to draw its wilder yoke-fellow (the appetite) along with it, and to induce it to listen to the voice of the charioteer (the reason); but they have both of them much pain and trouble with it, and the whole object of their charioteering is lost if it contrives to get the better of them. In this allegory the aim of the reason in exacting obedience from the lower faculties is not merely this obedience or subordination itself, which constitutes the goodness of man; the reason endeavours, by keeping under control the senses, with all their cravings for gratification, to take a calm view of abstract truth, and to gaze upon the eternal realities which are here clothed in the garb of space and time. This is described as if the soul, in its state of previous existence, went the circuit of the universe in the train of the gods: if, in performing this journey, the reason, or charioteer, could control the restive steed so as to raise his own head above the surface of the heavenly vault, he was borne round with the revolution of the sphere, and, in that position, though struggling and striving with his unruly steed, he saw, however faintly and imperfectly, the essence of things which are collected in that super-celestial region, and the remembrances of which furnish the soul with ideas after it has descended to earth and become united with the body. Now this is carrying the definition of moral excellence, or virtue, one step farther. A man is in a state of virtue, righteousness, or moral excellence, when his will and his appetite are subordinated to his reason; but this subordination is necessary as a previous condition, in order that a man may contemplate the idea of the good; or, in our phraseology, a man must be in a moral state before he can place himself in a religious state. This idea of the good, the real *summum bonum*, the complement of all morality, is discussed in a remarkable passage of the 'Republic' (vi. p. 505, A, seqq.), in which Plato takes up and finishes the argument in the 'Philebus.' It was there shown that the *summum bonum* is not to be sought either in pleasure or in knowledge: it remained to be shown then in what this *summum bonum* actually consists; in other words, what is its *idea*.

In the language of Plato, *idea* and *essence* are synonymous. Thus by the idea of the good, he only means the nature and essence of good, or of the sovereign good, that is, of God, and not in this case the abstract and intellectual images which we form of it. In opposition to this idea or essence, Plato uses the term *generation*, or *becoming*, by which he means all sensible things, everything that is born and perishes. Corresponding to this opposition of *generation* to *essence*, Plato, following Parmenides (Simplicius, on Aristotle's 'Phys.,' fol. 7, B), supposed two worlds, the world of matter and the world of mind, the visible and the ideal world; the former being on the model of the latter. Immutable essences, or ideas, are contained in the ideal world. Material essences, or substances, are not real essences, for they are subject to generation and corruption; we cannot predicate *εἶναι* of them; they can only be said *γίγνεσθαι*. Having premised, or rather reminded his readers of this opposition of the *ἄρᾳς τόπος* to the *νοητός τόπος* (p. 507, B), Plato proceeds in the following strain:—The sun is an image of the idea of the good; for while the other senses, such as the hearing, need nothing intermediate or additional in order to the perception of objects, sight, on the other hand, does need the intervention of light, otherwise the colour and the form will not be visible: this light is derived from the sun, and the benefit which our sight derives from the sun is analogous to the benefit which our reason derives from the idea of the good; for as the eye cannot see without the intervention of light, so the reason cannot discern the things of the ideal world without the light of truth. Consequently, the idea of the good is that which imparts truth to the objects of our reason and the power of discerning truth to the reason itself. The idea of the good is therefore far above truth and the knowledge of truth; and as light and the power of seeing are akin to the sun, but not identical with it, so truth and the knowledge of truth are related to the idea of the good, but are not identical with this idea. The sun is also an image of the idea of the good in this, that as the sun not merely enables the eye to see, but likewise supplies nourishment and growth to the visible objects; so the idea of the good not merely enables the reason to discern and know, but likewise gives to the ideas of the

reason their being and reality. Accordingly, as the sun, to borrow a phrase from Milton, looks from his sole dominion like the god of this lower world of sense, so the idea of the good, the sovereign good, even God himself, reigns supreme in the higher world of ideas which is cognizable only to the reason. Plato concludes this discussion with a classification which may be considered as a supplement to the negative argument of the 'Theætetus,' in the same way as the first part of this disquisition completes the negative argument of the 'Philebus.' As there are two provinces or worlds, the ideal and the visible—the world of reason and the world of sense, so there are in each two sorts of essences or substances, namely, the pure and the mixed. First, then, the essences or objects of the pure reason are of two sorts: 1, pure, as the ideas of good, beauty, justice, &c.; 2, mixed, or into the conception of which an image necessarily enters: as the idea or essence of a triangle or circle, &c. Secondly, the material substances or objects of sense are also of two sorts: 1, bodies; 2, images, or shadows of bodies. To these four species of objects, four species of knowledge correspond, the two first of which, or those pertaining to the objects of the ideal world, are alone worthy to be called by the name of that *ἐπιστήμη*, or science, which Theætetus sought for in vain.

#### I. Science (*ἐπιστήμη*).

1. *Nóēsis*, the knowledge of pure ideas.
2. *Διάνοια*, that of mixed ideas.

#### II. Opinion (*δόξα*).

3. *Πίστις*, knowledge of bodies and of what pertains thereto.
4. *Εἰκασία*, knowledge of the images or shadows of bodies.

To return however to Plato's ethical system: in this the end is the same as that of his dialectics; from first to last there is a resolute struggle with the domineering pretensions of the senses and a striving after a something higher and holier than this world can furnish. Everything is ascribed to reason and faith: to reason, as the highest faculty of man, to which every other faculty should be subject; to faith, as the evidence of those unseen objects which the reason worshipped and set up in opposition to the *εἰδωλά* of the senses. From this general explanation it will be seen what is the tendency of such questions as "whether virtue is capable of being taught?" (Plato, 'Meno,' with the criticism in Aristotle, 'Ethic. Nicom.,' vi. 13); and it may also be inferred from this that Aristotle has completely misunderstood and misrepresented his master in his criticism of Plato's "idea of the good." ('Ethic. Nicom.,' i. 6; 'Metaphys.,' xii. 1, seqq.)

It will not be expected that we should here enter upon a minute examination of the political theories which Plato has based upon his ethical system. It will be sufficient to say briefly that Plato's views decidedly tended towards oligarchy, or, as he would have called it, aristocracy. He had a great admiration for Dorian institutions, and a great aversion to democracies, especially to that of Athens. His connection with the chief agents in the oligarchical revolution at Athens may have had some share in this, and it is certainly some proof of the intimate connection between his political opinions and those of the party to which we refer, that the interlocutors in the great trilogy of dialogues, which contains the 'Republic,' the 'Timæus,' and the 'Critias,' are (besides Socrates, whose political character is not altogether without suspicion) the Syracusan Hermocrates, the deadliest foe of Athens, Critias, the head of the thirty tyrants, and Timæus the speculative Locrian legislator. From a set of dialogues managed by such persons as these we should hardly expect anything different in politics from what we find in them, an attempt, namely, to recommend by argument and fiction, a system of government based upon Dorian and immediately upon Lacedæmonian institutions. There is something eminently unfeeling in the manner in which Plato, after the example of the Lacedæmonians, considers marriage in a gross and physical light, and subordinates all the better sentiments of human nature to the harsh jurisdiction of an uncompromising aristocracy. It has been supposed by Morgenstern ('Commentat. de Republ. Platonicis,' p. 73, seqq.) that one of the later comedies of Aristophanes, the 'Ecclesiazusæ,' is directed against this *λακωνομανία* of the great philosopher. Stallbaum ('Prolegom. ad Platon. Rempub.,' p. 68, seqq.), has opposed this conjecture with some chronological arguments, which Meineke ('Hist. Crit. Com. Græc.,' p. 239) does not consider satisfactory. Meineke thinks that Plato's scheme for a community of property and wives is undoubtedly ridiculed in the 'Ecclesiazusæ,' and adduces as an additional argument for this the satirical remarks of Aristophanes upon one Aristyllus ('Eccles.,' 646; Plut., 313), whose name Meineke, following some old grammarians (Eustath., p. 989; 'Etym. M.,' p. 142, F), regards as a diminutive form of Aristocles—Plato's original name. We know that in general the Greek comedians were not unwilling to seize upon an opportunity of ridiculing the leader of any philosophical school, and Plato certainly did not escape literary satire of this kind. (Meineke, 'Hist. Crit. Com. Græc.,' pp. 286, 240.) Of the 'Laws' as related to the 'Republic' we have already said as much as seems to be necessary.

III. Plato's physical speculations have less interest for the modern reader than either his dialectics or their application to moral philosophy. In this, as in the other departments, Plato starts with a critical review of the systems which preceded him. The earliest philosophical systems among the Greeks, those namely which we assign

to the Ionian school, were solely physical; and they started always from some theory with regard to the origin of things. According to Thales, this primitive element was *water*; according to Anaximenes, it was *air*; according to Heraclitus, it was *fire*; Anaximander considered the world, in its primitive state, as a vast and infinite chaos; Diogenes regarded it as originating in a rational and intelligent principle; and Anaxagoras, uniting in one the views of the two last-named philosophers, recognised a supreme mind (*νοῦς*) as the principle of life, which imparted motion and form to the material elements, and reduced to order the chaotic mass of primitive atoms. The Eleatic school of philosophy began with the position which thus formed the culminating point of the Ionian school—the admission of a supreme intelligence. According to the Ionians, and in the very language of Thales and Heraclitus, "All the universe was full of gods." (Aristot., 'De Anima,' i. 5; 'De Part. Animal,' i. 5.) According to the pantheism of the Eleatics, on the contrary, the universe itself was the Deity; in the words of Xenophanes, the one being (*τὸ εἶναι*), the *universe*, was God. (Aristot., 'Metaphys.,' i. 5, sec. 12.) "As Thales saw gods in all things, so it may be said that Xenophanes saw all things in God." (Thirlwall, 'Hist. Gr.,' ii. p. 186.) Parmenides endeavoured to demonstrate this pantheistic view of Xenophanes by arguments deduced from the idea of existence, which denied the possibility of creation and total destruction. In this view he was followed by Empedocles, who also held the doctrine of uncreated and indestructible existence. At an earlier period, Pythagoras had maintained that *numbers* are the principles and essences of all things, and that the world subsists by a numerical harmony, a view which his contemporary and rival, Heraclitus, adopted under a modified form (Plato, 'Sympos.,' p. 187, A); and Empedocles, who seems to have combined many views peculiar to the Eleatics with some of the doctrines of Anaxagoras, also, as has been mentioned above, forms the link of connection between the Eleatics and Pythagoreans. As this was the general state of physical science when Plato wrote, and as he seems to have been always striving to reconcile the contradictory systems of Heraclitus and the Eleatics, and to extract from them their common element of truth, we may see both how Plato would proceed in constructing a theory of the universe, and how this theory would be connected with his dialectical system and his theory of ideas. It is obvious that he would maintain a creation, in opposition to Parmenides and Empedocles, and would oppose himself in this, as in his dialectics, to the perpetual flux of Heraclitus: and this we shall find to have been his method, if we compare the 'Philebus' and the 'Parmenides' with the 'Timæus,' which contains the fullest development of Plato's physical and cosmogonical system. We also observe in the 'Timæus,' and in a celebrated passage of the 'Republic' (viii. ad init.), that Plato attached a great weight to the numerical theory of Pythagoras, though we do not know enough of the latter to be able to determine the exact amount of Plato's obligation to him in the musical harmony on which he makes his universe depend, and the complicated numerical relations by which he estimates the durability of his state. In the 'Timæus,' as in everything else, he starts with the opposition of immutable essences to mutable substances, and begins by stating the contrast between the unity of the idea, as real existence, and the multiplicity of things, as only a seeming existence. The latter, according to Plato's system, are treated after the semblance of the former, which is their *βέβα*, or *παρόδραμα*. In this way of viewing the subject, Plato's physical theory at once assumes the form of a history of the creation, a *κοσμογονία*, and is therefore in itself, to a certain extent, necessarily mythical.

The first great principle (the *τὸ εἶναι* of the later Ionians, which is the *τὸ εἶναι* of the Eleatics) is described as engaged in reducing to order the chaos of material substances. That this must have been done at some time,—that there must have been a beginning to the world (*δὲ οὐρανός, δὲ κόσμος, τὸ πᾶν*), that the world which we see must have been *created*, for this position Plato argues most distinctly, in opposition to the Eleatics. As the world which we see is within the domain of the senses, it is, for this very reason, one of those things which are liable to generation and decay. It must therefore have had its maker, or *δημιουργός*. Now this maker can be no other than the formative principle—the *one*, the *existent*. From the beauty, order, and constancy discernible even in this lower world, it is clear, Plato says, that the creator must have constructed it after the model or pattern of a perfect and eternal world ('Timæus,' p. 29, A); and in order that this might be done in the most perfect manner possible, he made it a *ζῶον ἐμψυχόν ἐντρον τε*, 'a living animal, gifted with intelligence' ('Tim.,' p. 30, B), by enduing it with a living soul. The body of this animal was composed of the four elements (and here Plato modifies and combines the theories of Empedocles and Anaxagoras), and the soul of the world was not, as the Eleatic pantheism would have maintained, God himself, but an emanation and product of that intelligence which is the cause of all things. For Plato, both in the 'Timæus' and in the 'Philebus,' speaks distinctly of the *mind* as of the nature of the cause. In the 'Philebus' (p. 27 B, seqq.), after enumerating four kinds of being—the infinite, the limit, the mixture of these two, and the cause—and alluding to the universally received dogma that the mind (*νοῦς*) is the sovereign of heaven and earth (p. 28, C), he proceeds as follows (p. 29, A):—"We find that fire, water, air, and earth must naturally be in the composition of all bodies.

Those elements which we find in individual bodies receive their being from the elements which we find in the universe, and this little body of ours owes its nourishment and all that it has received or possesses to the great body of the world. Now these bodies of ours are animated by souls; and whence should they derive their souls, if the great body of the universe, which has all the same elements with them, only in far greater purity and perfection, did not possess a soul as our bodies do? Since then we admit in all bodies four sorts of being—the infinite, the limit, the compound of these, and the cause; and since we find in the part of the universe to which we belong that there are causes which create souls, produce health of the body, and effect cures for diseases of the body; and causes which put together other compositions and amend them when impaired—all of these causes having names which betoken some kind of wisdom or skill;—this being the case, we cannot but think that the whole heaven, possessing the same four sorts of beings, but possessing them pure and undepraved, has for its cause the nature of those things which are most beautiful and noble, a cause which may most justly be called wisdom and mind; and as wisdom and mind cannot be without soul, it follows that the world has a soul and mind from the power of the cause, and that mind is of the nature of the cause of all things.

It should be remarked that Plato distinguished, both in the 'Timæus' and in the 'Philebus,' between the *αἰτία*, or δὲ δ (the inducement or moving cause for the creation), and the *αἴτιον*, or δὲ δ' οὐδ (the efficient cause of the creation). "The nature of that which effects (*τὸ ποιοῦν*) differs only in name from the moving cause (*ἡ αἰτία*), and we should be right in identifying that which effects with the efficient cause (*τὸ αἴτιον*)." ('Phileb.,' p. 26, E.) Now the *αἰτία* of the creation is the goodness of the creator ('Tim.,' p. 29, E), and its *αἴτιον* was the universal intelligence. Or, as Philo Judeus says (i., p. 162), "Behold this world! you will find that its efficient cause is God, by whom it was brought into being; its moving cause, the goodness of the creator." The mind, which thus operates as a cause in setting bounds to the infinite, and so combining the infinite with the limit, was not the deity himself, but was taken by the deity and placed in the world as its soul. It was a function of the soul which the deity infused into the world, and was akin to the soul existing in each individual man. The great difference between the individual man, and the world out of which he was formed, consisted in the need of organs by the former, whose soul is thus necessarily connected with the faculty of perception (*αἰσθησις*). So far as the soul of man is connected with perception, it is mortal; it dies with the body of the percipient. But, as the individual body after death unites itself with the great body of the universe from which it sprung, so also the soul, so far as it is not represented by the bodily perceptions, returns to the great soul of the world, of which it is an emanation, and remains undestroyed and indestructible. In this part of the subject, the views on the immortality of the soul, developed in the 'Phædo' (pp. 78-80), come to the aid of the physiological investigations in the 'Timæus.' It was a necessary consequence of this way of considering the origin of things, that Plato should maintain the reality of time in opposition to Parmenides. ('Timæus,' p. 37, C, 39, E.) As the multiplicity of things (the *πολλὰ*) presumes the universal (the *ἓν*), and as the bound points to the infinite, so, conversely, there must be time as the image and product—the limitation or bound—of eternity. Thus much may suffice for a general view of Plato's physical theory, for it would not be possible within our narrow limits to enter upon a discussion of his speculations in astronomy and natural history, and of his notions with regard to the origin of evil in general ('Epist.,' ii., p. 313, A), and of diseases in particular ('Tim.,' pp. 81-86); and from this the reader will easily see that the method which Plato followed in this department was uniformly consistent with that which he adopted in other fields of inquiry. His object in this, as in everything else, was to discern the one in the many, and, while he demonstrated the existence of the former against the Heracliteans, to assert the reality of the latter against the Eleatics. This, we have seen, was from first to last Plato's great general object: this idea was the foundation of his dialectic system; it was the guiding-post which directed him to the right end in his moral and physical speculations; it was the clue by which he sought, and seldom sought in vain, for the truths which had eluded the search of all his predecessors.

From this general review of Plato's philosophy, necessarily an imperfect one, the reader has, we hope, formed some estimate of the Catholic spirit of this great writer, and the grand and original conceptions by which he endeavoured to unite in one great system all that was true in the results of previous investigations. Plato was the greatest of all philosophers, because he was the first who adopted a true method, and followed it out in all its bearings and applications. It would not be easy to overrate the influence which Plato's works have exercised upon the speculations of all subsequent inquirers. Although his name has not been so much bandied about for good or for ill as that of his scholar Aristotle, his intellectual empire has been neither less extensive nor less durable. Coleridge has said that all men are born disciples of either Aristotle or Plato ('Table-Talk,' p. 95); a saying which, as far as it goes, is perfectly true. It means that the doctrines which Plato was the first to proclaim to the world, will always be adopted by those who come to the hearing of them, if their minds are akin to his; otherwise, they will have recourse to the

modification of those doctrines which was propounded by Aristotle, whose mind was no less repugnant than their own to the spirit of Platonism. There is one field in which the immediate influence of Plato's philosophy has always been most especially active, namely, in Christian theology. Many of the opinions which are stigmatised as heretical may be traced to the Platonism of the early fathers of the Church, and this is particularly the case with regard to the doctrine of the Trinity. That Plato himself entertained none of the opinions which have been attributed to him on this subject, has been most satisfactorily proved in an able 'Investigation of the Trinity of Plato and of Philo Judeus, and of the Effects which an Attachment to their Writings had upon the Principles and Reasonings of the Fathers of the Christian Church,' by Dr. Cesar Morgan (London, 1795).

The Greek text of Plato's works was first established on a careful examination of all the manuscripts by Immanuel Bekker (Berlin, 1816-23). His edition was followed by the very elaborate one of Frederic Ast, the first volume of which appeared in 1819, and the ninth in 1827: two volumes of notes have since been added. Godfrey Stallbaum, who published a critical edition in 1821-26, has also edited an elaborate, critical, and explanatory edition of all Plato's works, 1827, &c. A complete French translation of Plato has been published by Victor Cousin. Schleiermacher's German translation is unfortunately incomplete. We have no good English version of Plato's whole works; that by Taylor is far from satisfying the critical reader; Floyer Sydenham's translations are admirable, as far as they go, but this unfortunate scholar was unable to complete more than a very small portion of his design of presenting Plato in an English form; there are also translations of considerable merit of some of Plato's chief works in Bohn's 'Classical Library.' The books which have been written on Plato's philosophical system are very numerous. There is a voluminous work by Tennemann expressly on this subject; it is written too much with a reference to the Kantian philosophy, and, though very learned, appears to us rather heavy and unsatisfactory. Mr. Grote's 'Plato and his Disciples,' it is needless to say, should be carefully studied. A good deal may be learned from Ast's 'Platons Leben und Schriften,' Leipzig, 1816, though the author has advanced some inadmissible paradoxes with regard to the genuineness of a number of works unquestionably written by Plato. There is also much valuable matter in the four books of 'Prolegomena' to Stallbaum's edition of the 'Parmenides' (Lips., 1839, pp. 4-343.) But Plato is above all others a writer who must be studied in his own works; no exposition can give an adequate idea of the beauty of his style, or the clearness and cogency of his arguments, and he would escape many of the misrepresentations by which his literary character has been assailed if his readers were more numerous, and if there were fewer persons to pronounce sentence upon him without having read a syllable of his writings.

PLATON, the celebrated Archbishop of Moscow, whose family name was Levasin, was born June 24th, 1737. He was the son of a village priest near Moscow, in the university of which capital he received his education, and, besides studying the classical tongues, made considerable proficiency in the sciences. His talents soon caused him to be noticed, for while yet a student in theology, he was appointed, in 1757, teacher of poetry at the Moscow academy, and in the following year teacher of rhetoric at the seminary of the St. Sergius Lavra, or convent. He shortly afterwards entered the church, became successively hieromonach, prefect of the seminary, and, in 1762, rector and professor of theology. That same year was marked by an event in his life that greatly contributed to his advancement, for on the visit of Catharine II. to the St. Sergius Lavra, after her coronation, he addressed the empress in an eloquent discourse, and on another occasion preached before her. So favourable was the impression he made, that he was forthwith appointed court preacher and preceptor in matters of religion to the Grand-Duke (afterwards the Emperor Paul), for whose instruction he drew up his 'Orthodox Faith, or Outlines of Christian Theology,' which is esteemed one of his best and most useful productions.

During the four years of his residence at Petersburg he frequently preached before the court, and also delivered on various occasions many of the discourses and orations which are among his printed works. After being created member of the synod at Moscow, by an imperial order, he was made archbishop of Tver in 1770. His attention to the duties of his new office was assiduous and exemplary; for he not only set about improving the course of study pursued in the various seminaries throughout his diocese, but established a number of minor schools for religious instruction, and drew up two separate treatises, one for the use of the teachers, and the other for their pupils. He was also entrusted with the charge of instructing the princesses of Würtemberg-Stuttgart, Maria Pheodorovna, the grand-duke's consort, in the tenets and doctrines of the Greco-Russian Church. At the beginning of 1775 he received the empress at Tver, and proceeded with her and the grand-duke to Moscow, where he was advanced to that see, with permission to retain the archbishopric of the Sergius Lavra. With the exception of some intervals occasioned by his being summoned to St. Petersburg, where he preached before the court, it was in that convent that he chiefly resided, until he erected another in its vicinity at his own expense, in 1785, called the Bethania. Two years afterwards he was made metropolitan of

the Russian Church, in which capacity he crowned the emperor Alexander, at Moscow, in 1801, delivering on that occasion a discourse that was translated into several modern languages, besides Latin and Greek. He died in his convent of Bethania, November 11-23, 1802.

His works, printed at different times, amount in all to twenty volumes, containing, besides various other pieces, 595 sermons, discourses, and orations, many of which are considered masterpieces of style and of eloquence. A selection from them, consisting of the finest passages and thoughts, was published in two volumes in 1805.

PLAUTUS, MARCUS ACCIUS, was the greatest comic dramatist of Rome. His parents and the time of his birth are unknown, and scarcely anything that has come down to us respecting his personal history is worthy of credit. It is however generally supposed that Plautus was born at Sarsina, a town in Umbria; and in common with other humorous writers of antiquity, he is described not only as a man of low birth, but of such bodily deformities that nature would seem to have purposely designed to make his countrymen laugh at his person as well as his wit.

It appears that Plautus commenced writing comedies very early, for A. Gellius (iii. 8. 14) relates, on the authority of Varro, that after having made some money by his works which he seems to have sold to the ædiles, who had the superintendence of dramatic representations (Prolog. of 'Amphitruo,' v. 72), and having embarked it in commercial speculations, he lost it all, and was reduced to poverty. Upon his return to Rome, he entered into the service of a baker, who employed him in grinding his corn by a hand-mill. While he was thus occupied he wrote three comedies, the 'Saturio,' the 'Addictus,' and a third, the name of which was not known to Gellius. Of the first two, only a few fragments are preserved. St. Jerome (in Euseb. 'Chron.,' Ol. 145) describes his working in a bakehouse not as the consequence of a failure in commercial undertakings, but of a great scarcity then prevailing at Rome. But these statements, if there be any truth in them, may easily be reconciled by supposing that after he had lost his property, on his return to Rome his distress was increased by scarcity and dearth of provisions. From these isolated accounts we must infer that it was believed among the ancients that after he had gained enough to enable him to leave his employer, he continued to live at Rome, devoting his time to his favourite pursuits. Whether he enjoyed the rights of a Roman citizen is not known. The time of his death is differently stated by Cicero and St. Jerome. The latter places his death in Olymp. 145, leaving it uncertain whether it took place in the first or the last year of that Olympiad. Cicero ('Brutus,' c. 15) says that Plautus died during the consulship of P. Claudius and L. Porcius, that is, B.C. 184, or Olymp. 148, 2. So much is certain, that the best period of the life of Plautus was the time immediately before and during the second Punic war.

The plays which then amused his countrymen retained their popularity for several centuries, for we see, from a passage of Arnobius, that the 'Amphitruo' was performed in the reign of Diocletian. It is impossible to ascertain the number of comedies which Plautus wrote, for in the time of Gellius about one hundred and thirty pieces bore the name of Plautus; most of them however were acknowledged not to be by him, but either, as Varro supposed, the work of one Plautius, or, as seemed more probable to Gellius, plays of earlier Roman dramatists which had been revised and improved by Plautus, and, on account of their similarity in style to his own works, were attributed to him. Many critics and grammarians, according to Gellius, were engaged in endeavouring to ascertain what comedies really belonged to Plautus. Varro, who wrote a work upon the subject entitled 'Quæstiones Plautinæ,' reduced their number to twenty-one, which were designated 'Varronianæ,' and which were generally acknowledged to be the real works of Plautus. L. Ælius added four others. Servius ('ad Æneid. I. init.') says that some ascribed to Plautus twenty comedies, others forty, and others one hundred. Amidst these various statements, it would be hopeless for us to attempt to discover the real number of his comedies, especially as we have no means of comparison, for the twenty comedies still extant were undoubtedly contained among the twenty-one 'Varronianæ,' and the names and fragments of the other and doubtful plays are of such a nature that we are unable to draw any conclusions from them. The names of the plays still extant are 'Amphitruo,' 'Asinaria,' 'Aulularia,' 'Captivi,' 'Curculio,' 'Casina,' 'Cistellaria,' 'Epidicus,' 'Bacchides,' 'Mostellaria,' 'Mensæschmi,' 'Miles gloriosus,' 'Mercator,' 'Pseudolus,' 'Poenulus,' 'Persa,' 'Rudens,' 'Stichus,' 'Trinummus,' and 'Truculentus.' The lost play of the twenty-one 'Varronianæ' is the 'Vidularia.' The 'Querulus' evidently does not belong to Plautus.

The great number of comedies ascribed to Plautus shows the popularity which his style and manner of treating a subject must have had among his countrymen, and this conclusion is confirmed by the laudatory expressions of the ancients themselves. L. Ælius Stilo (Quintil., x. 1) said that if the Muses were to speak Latin, they would adopt the language of Plautus; and Cicero ('De Off.,' i. 29) places Plautus, in respect to the elegance, refinement, liberal feeling, and humour, on an equality with the old Attic comedy. This character is not confined to single passages, but pervades his whole plays. The nature of his humour consists in looking at the bright side of the world in every respect, even under the most unfavourable circumstances. In modern times, with the exception of one or two critics, it is universally agreed

BIOG. DIV. VOL. IV.

that Plautus was one of the first poets of antiquity; and Lessing, to whom we are indebted for the best essay on the life and works of Plautus that has been written in modern times, admits that although he had repeatedly read the 'Captivi' for the purpose of discovering some fault, he never was able to find any, but that, on the contrary, each time he found more reason to admire the play. Horace ('Ad Pisones,' 270) indeed, who was both a sound critic and a great poet, seems to speak with contempt of the verses and the jests of Plautus. But on a close examination of the passage of Horace, it will be found that in reality he only censures his inharmonious verses, and some jests which he thought too coarse for the refined and polished manners of what was called the good society of his own age, which however were a very imperfect standard for estimating the manners described by a dramatist who wrote more than 150 years before him. As for the inharmonious verses of Plautus, they may be excused on this same ground, in addition to which it must be observed that rugged verses and metrical licences in general are much more pardonable in comedy than in any other kind of poetry. But Horace, like Cicero, disliked the early poets of his country.

A question which naturally presents itself with regard to every Roman author is, in what relation did he stand to the Greeks. There is a remarkable passage in Horace ('Epist.' ii. 1. 58, 'Plautus ad exemplar Siculi properare Epicharmi'), which has generally been interpreted as if it implied that Plautus had taken great pains to imitate Epicharmus. But *properare* cannot by any means have this signification: it only expresses the liveliness and rapidity of the dialogue and the action, which are indeed peculiar to the comedies of Plautus; and it must have been this peculiarity in which Horace meant to say that Plautus followed the example of Epicharmus. The old and middle Attic comedies can have served as models to Plautus only in a very general way, as Rome was anything but a proper place for that kind of dramatic poetry; but the new Attic comedy must have exercised a much greater influence upon him, and it is here that we find many plays the titles of which correspond with those of Plautus, though this is no ground for believing that in all instances of this kind he took the Greek drama as his model. The manner in which he treats his characters is one of singular boldness and freedom: they are Greeks, and yet speak and act entirely like Romans; their manners and situations always remind us of Rome: and this is not an accident; but it is evidently the spirit and design of the poet that this impression should be made, for he knew well that the nearer he brought his characters to those of his audience, the greater would be the effect produced; thus Alcomena, in his 'Amphitruo,' is a faithful picture of a Roman matron. Philemon, Diphilus, and Antiphon seem to have been his principal models in single pieces, for some of their plays bore the same or similar titles as some of those of Plautus: others of his plays seem to have had nothing analogous in Greek literature, and may therefore be considered as entirely original. Plautus himself set most value on his 'Epidicus,' as he himself intimates in the 'Bacchides,' and Cicero says that he was particularly partial to the 'Pseudolus' and the 'Truculentus.' But although he has impressed upon all his plays the stamp of his peculiar genius, still there is not one which, in comparison with the rest, does not appear new and striking. His metres are still a matter of difficulty, but mainly on account of the various readings, and more especially as all the manuscripts of Plautus are derived from one which is very corrupt. A. Mai, in 1815, discovered at Milan a 'codex rescriptus,' containing some plays of Plautus, but it is so much mutilated and so illegible that we cannot hope to derive any considerable benefit from it.

It is well known that there exist a number of spurious scenes in the comedies of Plautus, which, as Niebuhr has shown, were written for the purpose of supplying either actual or imaginary gaps in the original manuscript. Some of them may be very old and written by skillful hands, but others are very absurd, and betray their modern origin. The scene in the 'Poenulus' which is considered spurious was indeed found by A. Mai in a very old manuscript at Milan, but this cannot prove its genuineness, as some of these supplements may have been written even before the 5th century of our era. Compare the excellent essay of Niebuhr, in his 'Kleine Schriften,' p. 159, ff.

The best among the earlier editions of Plautus are that of Camerarius (Basel, 1558, cum frag. et not. G. Fabricii) and that of J. F. Gronovius (2 vols. 8vo, Ludg. Bat., 1664, which was reprinted in 1669, and at Amsterdam in 1684). The recent editions of Bothe (4 vols. 1809-11), Weise (2 vols. 8vo, 1837-38), and Lindemann are good; the latter especially, who has edited separate plays, has made great progress towards the establishment of a good text. The comedies of Plautus have been translated into almost all the languages of Europe. The Italian literature is very rich in translations of Plautus. Madame Dacier published in 1683, her French translation of the 'Amphitruo,' 'Epidicus,' and 'Rudens.' In 1719 there appeared two complete French translations, the one by Limiers, at Amsterdam, in 10 vols. 8vo, the other by Gusudeville, at Leyden, likewise in 10 vols. 8vo. The Germans have numerous translations of single plays; and there is a translation of all the works of Plautus by Kuffner, published at Vienna, in 5 vols. 8vo, 1806; and another by G. G. S. Köpke, in 2 vols., 1809-20, which is much better, but not complete. English translations were published, in 1716, by Echard (comprehending the 'Amphitruo,' 'Epidicus,' and 'Rudens'); in 1754, by Cooke; and in

3 L

1827, by Cotter. There is an excellent translation by Bonnel Thornton, 'The Comedies of Plautus translated into familiar Blank Verse,' 2 vols. 8vo, Lond., 1767. It was continued by Richard Warner, vols. iii. and iv., 8vo, Lond., 1772; vol. v., 8vo, Lond., 1774.

PLAYFAIR, JOHN, was born at Benvie in Forfarshire, on the 10th of March 1749. His father was minister of the united parishes of Liff and Benvie, and to him he was indebted for his education till he attained the age of fourteen, when he was sent to the University of St. Andrew. Here he soon became remarkable for his love of study, but more particularly for the rapid progress which he made in mathematics and natural philosophy. So great indeed was his early proficiency that, very few years after his matriculation, Dr. Wilkie, the professor of natural philosophy, finding himself, through indisposition, unable to discharge the duties of his office, delegated them to Playfair. In 1766, when eighteen years old, he distinguished himself as a candidate for the professorship of mathematics in Marischal College, Aberdeen. The examination was a strict one, and lasted eleven days, some say fourteen. The candidates were six in number, of whom two only were judged to have excelled him, namely, the Rev. Dr. Trall, on whom the appointment was conferred, and who attributed his success solely to the disparity of years, and Dr. Hamilton, who subsequently filled the same appointment with much credit.

Upon the death of Dr. Wilkie in 1772 Mr. Playfair offered himself as his successor, but was again unsuccessful. The same year the responsibility of providing for the support of his mother and her family having devolved upon him by the decease of his father, he considered it his duty to adopt the clerical profession, notwithstanding his intense and growing predilection for scientific pursuits. Having accordingly applied for and obtained the living of Liff and Benvie, he entered in 1773 upon the duties of his ministry, in the discharge of which and in the education of his younger brothers his time was chiefly occupied during the following nine years. Such a mode of life was not unfavourable to the prosecution of those researches in which he had already engaged with so much avidity. The first fruit of his leisure hours in this respect was a paper communicated to the Royal Society of London, and inserted in their 'Transactions' for the year 1779, 'On the Arithmetical of Impossible Quantities,' which evinced a greater taste for purely analytical investigation than can be conceded to the generality of British mathematicians of that day. A subject involving difficulties of a higher order had some years previously engaged his attention, while on a visit at Schehallion to witness the experiments of Dr. Maskelyne on the attraction of the mountains in that district, on which occasion he made the acquaintance and acquired the friendship of that astronomer. His investigations upon this subject are contained in his 'Account of the Lithological Survey of Schehallion,' published in the 'London Philosophical Transactions' for 1811.

He resigned his living in 1782 to superintend the education of the sons of Mr. Ferguson of Raith; and in 1785 he was appointed professor of mathematics, jointly with Dr. Adam Ferguson, in the University of Edinburgh, an appointment previously held by Dugald Stewart. In 1789 he succeeded Dr. Gregory as secretary to the physical class of the Edinburgh Royal Society; and about the same time, owing to the illness of Dr. Robison, the duties of general secretary and the labour of arranging the society's memoirs for publication devolved chiefly upon him; but the nominal appointment of general secretary was not conferred upon him till the death of Dr. Robison in 1805, whom he likewise succeeded as professor of natural philosophy in the University of Edinburgh. This obliged him to resign the chair of mathematics, on which occasion the mathematical class expressed their sense of the obligation they were under for his past exertions in their behalf by presenting him with a valuable astronomical circle, now in the observatory of the Astronomical Institution. The dispute which followed the nomination of Mr. Leslie to the vacant chair has been already noticed under LESLIE, SIR JOHN (the date of whose appointment to the chair of natural philosophy was 1819, and not 1809, as is there incorrectly stated). The extreme illiberality of the measures adopted by Mr. Leslie's opponents, and the manifest desire of the clergy to cripple scientific emulation by restricting to their own class appointments totally unconnected with theology, and hitherto filled by laymen with honour and advantage, roused the indignation of Mr. Playfair, who exposed "the new-sprung zeal for orthodoxy" in a satirical pamphlet published at Edinburgh in 1806, under the title of a 'Letter to the Author of the Examination of Mr. Stewart's Short Statement of Facts relative to the Election of Professor Leslie.'

His intimacy with Dr. James Hutton led to his becoming a strenuous supporter of the doctor's geological theory, and to his writing 'Illustrations of the Huttonian Theory of the Earth,' Edin., 1802, 8vo ('Works,' vol. I.). Of the necessity of more extensive observation Mr. Playfair was fully aware; and, besides many journeys undertaken for the purpose of examining the geological features of his own country, immediately after the restoration of peace, in 1815, he set out upon a geological tour through France, Switzerland, and Italy, in search of material for an enlarged edition of his 'Illustrations,' which however other occupations prevented him from maturing for the press. He died at Edinburgh on the 20th of July 1819. Francis Jeffrey, in an elaborate notice of him, which appeared in the 'Annual Biography' for 1820, says very truly, that "he possessed in the highest degree all the characteristics both of a fine and powerful understanding; at

once penetrating and vigilant, but more distinguished perhaps by the caution and success of its march than by the brilliancy or rapidity of its movements;" . . . and that "as a teacher he took care to imbue the minds of his pupils, from the very commencement of their study, with that relish for the truths it disclosed, and that high sense of the majesty with which they were invested, that predominated in his own bosom . . . and formed them betimes to that clear, masculine, and direct method of investigation by which, with the least labour, the greatest advances might be accomplished."

From the year 1804 he was a frequent contributor to the 'Edinburgh Review,' and most of his articles in that periodical still possess considerable value. They are—1, Review of Mudge's 'Trigonometrical Survey,' v., 1805; 2, Review of Mechain and Delambre, 'Base du Système Métrique Décimale,' ix., 1807; 3, Review of Laplace, 'Traité de Méchanique Céleste,' xi., 1808; 4, Review of 'Le Compte rendu par l'Institut de France,' xv., 1809; 5, Review of Lambton's 'Indian Survey,' xxi., 1813; 6, Review of Laplace, 'Essai philosophique sur les Probabilités,' xxiii., 1814; 7, Review of Baron de Zach, 'Attraction des Montagnes,' xxvi., 1815; 8, Review of 'Kater on the Pendulum,' xxx., 1818. The whole of these are reprinted in the fourth volume of the collected edition of his works, published at Edinburgh in 1822, in 4 vols. 8vo, to which is prefixed a memoir of the author by Dr. James G. Playfair. To the 'Encyclopædia Britannica' he contributed the articles 'Æpinus' and 'Physical Astronomy,' and an incomplete 'Dissertation on the Progress of Mathematical and Physical Science since the Revival of Letters in Europe' ('Works,' vol. ii.). The proofs of this were under revision at the time of his death. His contributions to the 'Transactions of the Edinburgh Royal Society' are: 1, 'On the Causes which affect the Accuracy of Barometrical Measurements,' i., 1788 ('Works,' vol. iii.); 2, 'Life of Matthew Stewart,' i., 1788 ('Works,' iv.); 3, 'Remarks on the Astronomy of the Brahmins,' ii., 1790 ('Works,' iii.); 4, 'On the Origin and Investigation of Porisms,' iii., 1794 ('Works,' iii.); 5, 'On the Trigonometry of the Brahmins,' iv., 1798 ('Works,' iii.); 6, 'Theorems relative to the figure of the Earth,' v., 1805 ('Works,' iii.); 7, 'Biographical Account of the late Dr. James Hutton,' v., 1805 ('Works,' iv.); 8, 'On the Solids of greatest Attraction,' vi., 1809 ('Works,' iii.); 9, 'On the Progress of Heat in Spherical Bodies,' vi., 1812 ('Works,' iii.); 10, 'Biographical Account of Dr. John Robison,' viii., 1816 ('Works,' iv.); 11, 'On the Naval Tactics of the late John Clerk, Esq.,' ix., 1821 ('Works,' iii.). His separate works not already mentioned are:—1, 'Elements of Geometry,' Edin. 1795, 8vo; it contains the first six books of Euclid, the elements of plane and spherical trigonometry, and a supplement on the geometry of solids and the quadrature of the circle, and has passed through four editions since it ceased to be used as a text book in the university of Edinburgh. 2, 'Outlines of Natural Philosophy,' Edin., 1812 and 1816, 2 vols. 8vo. This contains the heads of lectures delivered by the author at the university of Edinburgh. Merely the enunciations of the several propositions and the formulae as adapted to practical application are given, but references is made to other works, where the demonstrations will be found. The first volume comprises statics, dynamics, hydrostatics, hydraulics, and pneumatics; the second refers wholly to astronomy; a third volume was contemplated to comprise optics, electricity, and magnetism, but was never executed.

PLAYFAIR, LYON, distinguished as a chemist. He is the son of Dr. George Playfair, and was born at Bengal, in the East Indies, in 1819. His father's family resided at St. Andrews, in Scotland, to the university of which place he was sent to receive his early education. Here he evinced an inclination for chemistry, which led his friends in 1834 to send him to Glasgow, where he studied chemistry under Professor Graham, the present Master of the Mint. In 1835 he went out to India, and during his short stay found time to cultivate his favourite science, and give to the world some chemical analyses. On returning to England he again studied under his old teacher, Professor Graham, who was now professor of chemistry in University College, London. The fame of Liebig however attracted him to Giessen, where he commenced the study of organic chemistry in 1838. In Liebig's laboratory he successfully cultivated original analysis, and was the discoverer of several new compounds. He took the degree of Doctor of Philosophy in the University of Giessen. On his return to England he made himself known as the translator of Liebig's 'Reports on the Progress of Organic Chemistry' to the British Association. [LIEBIG.] His first position in England was that of chemical director of the large calico works of the Messrs. Thompson at Clitheroe. In 1843 he accepted the post of Professor of Chemistry at the Royal Institution of Manchester. In this position he became a successful popular teacher, and in conjunction with Dr. Smith and Mr. Joule prosecuted many original chemical researches. During this period he was placed on the commission for investigating the state of health of the large towns of England. He was a very active commissioner, and several of the reports of the Health of Towns Commission were drawn up by him. He was subsequently appointed chemist to the Museum of Economic Geology, then in Craig's-court. The laboratory of the present building in Jermyn-street was constructed under his direction. In conjunction with Sir Henry de la Beche he investigated the combustible properties of the various kinds of coal. He analysed the qualities of the gas given off by burning coals, and the results of his labours on these sub-

jects have been given in the 'Memoirs of the Museum of Economic Geology.'

In the movements preliminary to the opening of the Great Exhibition in 1851 he took an active part, and was appointed special commissioner to communicate with local committees. In this capacity he was of signal service in securing the success of the Exhibition. When the Exhibition was opened, and the juries had been appointed to give their awards to the exhibitors, he was appointed special commissioner in charge of the department of juries. For his services in connection with the Great Exhibition he was made by his sovereign a Companion of the Bath; and Prince Albert, to show his sense of the same services, offered him the position of gentleman-usher in his household, which he accepted. He was also removed from the Museum of Economic Geology and made joint-secretary with Mr. Cole of the government Department of Science and Art, and was afterwards for a time sole secretary; but in 1858 he resigned his connection with South Kensington on being appointed Professor of Chemistry in Edinburgh University.

PLEYEL, IGNACE, or IGNAZ, a composer in great repute towards the close of the last century, was born in 1757, at Rupperstahl, near Vienna. He was the twenty-fourth child of Martin Pleyel, a schoolmaster, and of a lady of noble family, who incurred the resentment of her parents by her marriage, and was disinherited. In giving birth to the subject of this notice she died; and the widower, having again married, had fourteen children by his second wife, and lived to attain his ninety-ninth year.

Ignace was, according to the Austrian custom, initiated in Latin and music at a very early age. When sufficiently advanced in music he had Vanhall for a master, and subsequently Haydn; but the last was far from a good teacher, and the student acquired more knowledge of his art during an extensive tour which he made in Italy by hearing the best works of the celebrated composers, and more taste by listening to the distinguished performers of that country, than by all the lessons he had received in Vienna. In 1783 Pleyel was appointed *Maitre-de-Chapelle* of Strasbourg cathedral, and there composed many masses and motets, the whole of which were destroyed in a great fire shortly after they were written. During the next ten years he produced nearly all those works which carried his name into every city in Europe. In 1791 he visited London, on the invitation of the managers of 'The Professional Concert,' who engaged him as a kind of rival to Haydn (whose services had been secured by Salomon for his concerts), and composed for them three symphonies, for which and his personal assistance he received a large sum, which he invested in the purchase of an estate near Strasbourg. In 1793, during the phrensy of the French revolution, he became a suspected person, and having been several times denounced, at length deemed it prudent to fly, but was pursued and taken. He then pleaded his acquiescence in the new order of things; nevertheless, as a proof of his sincerity, he was required to set a kind of drama for the anniversary of the 10th of August. This he accomplished under the surveillance of two gendarmes, and saved his life. He now sold his property, went to Paris, and entered into a widely-extended commercial speculation as publisher of music and manufacturer of pianofortes. This proved successful, and after a long, active, laborious career, he retired to an estate near Paris purchased by the fruits of his talents and industry, and indulged his taste for agriculture. But the revolution of 1830 excited in him fresh though unnecessary alarm, and violently agitated a frame not naturally strong. His health failed, and, after much anxiety and suffering, he died November 14, 1831. He left one son, who inherited some portion of his father's genius, but soon abandoned music as an art, and, following his parent's steps, pursued it very prosperously as a trade.

Pleyel, in the height of his popularity, was over-valued, and afterwards, when the tide of fashion turned against him, was under-rated. Through nearly all his compositions a stream of agreeable melody flows; they are marked by a style peculiarly his own, generally light, sometimes very trivial, but occasionally bold and vigorous: a few of his quartets especially possess much beauty, as do also his admirable Concertante, his Sonatas dedicated to the Queen of England, and his Scottish airs.

PLINIUS VALERIANUS, a name mentioned in a Latin inscription found at Como (Gruter, l. 635), and given to the author of a work entitled 'Medicines Pliniane Libri Quinque.' Nothing is known of his life, but the work is supposed to have been written about the 4th century A.D. It is a book on domestic medicine, compiled from Pliny the Elder, Dioscorides, Galen, and others, and is not of much value. The first three books are taken up with a list of diseases, beginning with the head and descending to the feet, and contain an account of a great number of medicines, partly taken from the elder Pliny and partly from later writers. The fourth book treats of the properties of plants according to their names, and is in a great measure taken from Galen. The fifth book, which is almost entirely extracted from Alexander Trallianus, is upon diet as accommodated to different diseases. There is a little book by Just. Godofr. Güns, entitled 'De Auctore Operis de Re Medicâ, vulgo Plinio Valeriano ascripti,' 4to, Lips., 1736, in which, with much learning and ingenuity (but, in Haller's opinion, unsuccessfully), he tries to prove that the work in question was written by a Christian physician named Siburinus, who is mentioned in the preface to Marcellus Empiricus. It was published at Rome, 1609, fol., by Th. Pighinucius; it was

reprinted (and, according to Haller, 'Biblioth. Med. Præc.' much more accurately), fol., Bonon., 1516. It is also to be found in some of the collections of the old medical writers, namely, in that of Torinus ('Thorer'), fol., Basil, 1523; and in the Aldine, fol., Venet., 1547.

PLINY THE ELDER. CAIUS PLINIUS SECUNDUS was born, as is commonly supposed, A.D. 23. The place of his birth is very uncertain, and has been the subject of much learned controversy. The ancient writer of his life, ascribed to Suetonius, and after him St. Jerome (in 'Chron.'), call him a native of Como (*Nasocomensis*); while in an old anonymous life he is said to have been born at Verona, and in the preface to his 'Natural History' he calls Catullus (who was certainly born there) his fellow-countryman (*costrerraneum*). A full account of the arguments on both sides is given by Reszonico, in his 'Disquisitiones Pliniane,' who is himself inclined to give the honour to Como.

Very little is known of the events of Pliny's public life; we are merely told that he was of a noble family, and after distinguishing himself in the field, and filling the office of *sagur* at Rome, was appointed procurator of Spain. These employments however he did not suffer to hinder his studies; and his manner of life, as it is described by his nephew (Plin., 'Epist.' iii. 5), exhibits a degree of industry and perseverance scarcely to be paralleled. In summer he always began his studies as soon as it was light; in winter, generally at one in the morning, but never later than two, and often at midnight. No man ever spent less time in bed; and sometimes he would, without retiring from his books, indulge in a short sleep, and then pursue his studies. Before day-break it was his custom to wait upon Vespasian, who likewise chose that season to transact business; and when he had finished the affairs which the emperor committed to his charge he returned home again to his studies. After a slender repast at noon, he would frequently, in the summer, if he was disengaged from business, recline in the sun, during which time some author was read to him, from which he made extracts and observations. This was his constant method, whatever book he read; for it was a maxim of his, that "no book was so bad but something might be learned from it." When this was over he generally went into the cold bath, after which he took a slight refreshment of food and rest; and then, as if it had been a new day, resumed his studies till supper-time, when a book was again read to him, upon which he would make some remarks as they went on. His nephew mentions a singular instance ('Epist.' iii. 5) to show how parsimonious he was of his time, and how eager after knowledge. His reader having pronounced a word wrong, some one at the table made him repeat it, upon which Pliny asked that person if he understood it, and when he acknowledged that he did, "Why then," said he, "would you make him go back again? We have lost by this interruption above ten lines." In summer he always rose from supper by day-light, and in winter, as soon as it was dark. Such was his way of life amidst the noise and hurry of the town; but in the country his whole time was devoted to study without intermission, excepting only when he slept, and when he bathed, that is, was actually in the bath; for during the operation of rubbing and wiping he was employed either in hearing some book read to him or in dictating himself. In his journeys he lost no time from his studies, his mind at those seasons being disengaged from all other thoughts, and a secretary or amanuensis constantly attended him in his chariot; and that he might suffer the less interruption to his studies, instead of walking, he always used a carriage in Rome. By this extraordinary application he found leisure to write a great number of volumes.

The circumstances of his death, like his manner of living, were very singular, and are also described at large by the elegant pen of his nephew. He was at that time, with a fleet under his command, at Misenum, in the Gulf of Naples, his sister and her son the younger Pliny being with him. On the 24th of August, A.D. 79, about one in the afternoon, his sister desired him to observe a cloud of a very unusual size and shape. He was in his study; but immediately arose, and went out upon an eminence to view it more distinctly. It was not at that distance discernible from what mountain this cloud issued, but it was found afterwards to ascend from Mount Vesuvius. Its figure resembled that of a pine-tree; for it shot up to a great height in the form of a trunk, which extended itself at top into a sort of branches; and it appeared sometimes bright, and sometimes dark and spotted, and it was either more or less impregnated with earth and cinders. This was a noble phenomenon for the philosophic Pliny, who immediately ordered a light vessel to be got ready; but as he was coming out of the house with his tablets for his observations, the mariners belonging to the galley stationed at Retina earnestly entreated him to come to their assistance, since that port being situated at the foot of Mount Vesuvius, there was no way for them of escape but by sea. He therefore ordered the galleys to be put to sea, and went himself on board, with the intention of assisting not only Retina, but several other towns situated upon that beautiful coast. He steered directly to the point of danger from which others were flying with the utmost terror, and with so much calmness and presence of mind as to be able to make and dictate his observations upon the motion and figure of that dreadful scene. He went so near to the mountain that the cinders, which grew thicker and hotter the nearer he approached, fell into the ships, together with pumice-stones and black pieces of burning

rock: they were likewise in danger not only of being aground by the sudden retreat of the sea, but also from the vast fragments which rolled down from the mountain, and obstructed all the shore. Here he stopped to consider whether he should return, to which the pilot advised him: "Fortune," says he, "befriends the brave; carry me to Pomponianus." Pomponianus was then at Stabia, a town separated by a gulf which the sea, after several windings, forms upon that shore. He found him in the greatest consternation, but exhorted him to keep up his spirits; and the more to dissipate his fears, he ordered, with an air of unconcern, the baths to be got ready. After having bathed, he sat down to supper with apparent cheerfulness. In the meanwhile the eruption from Vesuvius flamed out in several places with much violence, which the darkness of the night contributed to render still more visible and dreadful. Pliny, to soothe the apprehensions of his friend, assured him it was only the burning of the villages which the country-people had abandoned to the flames: after this he retired, and had some sleep. The court which led to his apartment being in the meantime almost filled with stones and ashes, if he had continued there any longer it would have been impossible for him to have made his way out; it was therefore thought proper to awaken him. He got up, and went to Pomponianus and the rest of the company, who were not sufficiently unconcerned to think of going to bed. They consulted together whether it would be most prudent to trust to the houses, which now shook from side to side with frequent and violent rockings, or to fly to the open fields, where the calcined stones and cinders, though light indeed, yet fell in large showers and threatened destruction. In this distress they resolved for the fields, as the less dangerous situation of the two; and went out, having pillows tied upon their heads with napkins, which was all their defence against the storms of stones that fell around them. They thought proper to go down farther upon the shore, to observe if they might safely put out to sea; but they found the waves still running extremely high and boisterous. There Pliny, taking a draught or two of water, threw himself down upon a cloth that was spread for him; when immediately the flames, and a strong smell of sulphur which was the forerunner of them, dispersed the rest of the company, and obliged him to arise. He raised himself, with the assistance of two of his servants (for he was corpulent), and instantly fell down dead, suffocated, as his nephew conjectures, by some gross and noxious vapour; for he had always weak lungs, and was frequently subject to a difficulty of breathing. As soon as it was light again, which was not till the third day after, his body was found entire, and without any marks of violence upon it, exactly in the same posture that he fell, and looking more like a man asleep than dead.

Such is the interesting account given by the younger Pliny, in a letter to Tacitus ('Epist.,' vi. 16), of the death of this remarkable man. The titles of several of his works are given by his nephew ('Epist.,' iii. 5); of these the only one that is still extant is his 'Natural History,' which may well be called "a work of great compass and erudition, and as varied as nature herself." (Ibid.) To give anything like a complete critical analysis of this work would require the immense and multifarious learning of Pliny himself, and a thorough knowledge not only of all that the ancients have written on the same subjects, but also of all the improvements and discoveries of modern times. Accordingly in the great French translation, published by Panckoucke, the assistance of a great number of scientific men was secured, each of whom laboured to illustrate Pliny's opinions on his own particular branch of knowledge. The work consists of thirty-seven books, all of which are still extant, though the text is in many places in a very corrupt state, and several passages are quite lost. The first book is a table of the contents of the other thirty-six; the second treats of the world, the elements, the stars, the winds, &c.; the third, fourth, fifth, and sixth contain a geographical account of the whole of the then known world; the seventh treats of the generation and organisation of man, the most remarkable characters that have ever lived, and the most useful inventions; the eighth, ninth, tenth, and eleventh contain a system of zoology, and treat of beasts, fishes, birds, and insects, and of human and comparative anatomy; sixteen books, from the twelfth to the twenty-seventh, are given up to botany, and give an account of trees, herbs, fruit, corn, &c., and the medicines which they furnish; five books, from the twenty-eighth to the thirty-second, treat of medicines derived from different animals; the thirty-third and thirty-fourth, of different kinds of metals, &c.; the thirty-fifth, of colours and paintings; the thirty-sixth, of stones and sculpture; and the thirty-seventh, of different kinds of gems, &c.

This will give some idea of the miscellaneous nature of the contents of this extraordinary work; and if the judgment of the writer had been equal to his industry and learning, it might well have been considered as one of the greatest monuments of human ability. The contrary however is notoriously the case. Cuvier ('Biog. Univers.,' tome xxxv.) gives the following character of it:—"Pliny's great work is at the same time one of the most precious monuments left us by antiquity, and a proof of the astonishing learning of a warrior and a statesman. In order justly to appreciate this vast and celebrated composition, it is necessary to consider the plan, the facts, and the style. The plan is immense," &c. &c. "It was impossible but that the author, in treating of this prodigious number of objects, however rapidly, should record a multitude of remarkable facts, which are to

us the more valuable as he is the only extant author who mentions them. Unhappily the way in which he has collected and arranged them causes them to lose much of their value by the mixture of truth and falsehood which is met with in almost equal proportions, and especially by the difficulty (and in most cases the impossibility) of recognising the precise creatures that he means to describe. Pliny was not an observer, like Aristotle; still less was he a man of genius, capable, like that great philosopher, of seizing the laws and relations which have guided nature in her productions. In general he is only a compiler, and indeed for the most part a compiler who has not himself any idea of the subjects on which he collects the testimonies of others, and therefore cannot appreciate the truth of these testimonies, nor even always understand what they mean. In short he is an author devoid of criticism, who, after having spent a great deal of time in making extracts, has ranged them under certain chapters, to which he has added reflections that have no reference to science properly so called, but display alternately either the most superstitious credulity or the declamations of a discontented philosophy, which finds fault continually with mankind, with nature, and with the gods themselves. . . . A comparison of his extracts with such of the original authors as are still extant, and especially with Aristotle, shows us that Pliny was far from selecting either what was most important or most exact. In general he prefers whatever is singular and marvellous, whatever helps him in establishing the contrasts he so much delights in, or the reproaches he is so fond of uttering against Providence. It is true that he does not give the same degree of faith to everything that he mentions, but it is quite by chance that he believes or doubts; and it is by no means the most childish stories that always provoke his incredulity. . . . Another great fault in Pliny is, that he does not always give the true sense of the authors that he translates, especially in the designation of different species of animals; and though we have so few materials remaining to enable us to judge of this kind of error with any degree of certainty, it is easy to prove that in several instances he has mistranslated the names of the animals mentioned by Aristotle. . . . It must then be confessed that, as far as his facts are concerned, the only part of his work which has any real interest for us in the present day is that which relates to the manners and customs of the ancients, and to their proficiency in different arts, besides some historical and geographical details, which are to be found nowhere else. . . . With respect to his style, wherever he introduces general ideas or philosophical views, his language assumes an energy and vivacity, and his thoughts acquire an unexpected boldness, which make some amends for his dry enumerations, and excuse him, in the opinion of many of his readers, for the deficiencies of his scientific information. He is perhaps too fond of point, and contrast, and emphasis; and there is in some places an obscurity, which results less from the nature of his subject than from a desire of expressing himself with a pregnant brevity and conciseness; but he is always grave and noble, and everywhere shows a love of justice and respect for virtue, a horror of the cruelty and meanness of which he had before his eyes such terrible examples, and a contempt for the unbridled luxury which had in his time so deeply corrupted the Roman people. In these respects he cannot be too much commended; and in spite of the defects which we cannot but recognise in him when we consider him as a naturalist, we must nevertheless allow that of all the authors who wrote after the Augustan age, he deserves to be regarded as one of the most valuable and most worthy to be ranked among the classics."

Not the least important part of Pliny's work is his compendious history of the arts amongst the Greeks, in books xxxiv., xxxv., and xxxvi.; for though so often minute and circumstantial in his details of unimportant matters, and often negligent and careless about subjects of the highest interest, Pliny's account is upon the whole clear and succinct, and evidently contains many extracts from the writings of ancient artists themselves. The errors that we have to reproach him with are either unimportant inaccuracies inseparably connected with so great an undertaking as his 'Natural History,' or some few misconceptions owing to his want of a practical acquaintance with the arts, and which may be easily remedied by an artist. At the same time it cannot be denied that he is frequently credulous and his matter irrelevant, and his accounts are occasionally such a confusion of tradition and legend that it is almost impossible to distinguish what is authentic from what is fabulous; such is his account of the origin of the imitative arts (xxxv. 12, 43). It is also evident that he frequently did not clearly understand what he has endeavoured to convey to others, and the consequence is that he is sometimes unintelligible. He also lavishes encomiums upon the most trivial objects and examples of purely mechanical excellence, and passes cursorily over the greatest works.

Pliny commences his historical sketch, but more particularly that of painting, from the time of Polygnotus and Phidias; everything that took place before that time he very summarily terms the "incunabula," or first efforts of art. His immediate authorities probably gave him no satisfactory account of an earlier period. Concerning this period however he has given us many valuable though unconnected remarks. Yet, when we consider the original sources that he appears to have consulted—the writings of ancient painters and sculptors, the works of Apelles, Euphranor, Antigonus, Xenocrates, Pasiteles, and Menochmus, all of which are mentioned by Pliny himself (and there were many

others that he might have consulted) (Junius, 'De Pic. Vet.' ii. 3), the volumes of Melantheus, Pamphilus, Protagoras, and others—we cannot help feeling surprise that he has given us so little. However, out of about one hundred artists of great celebrity, of whom more than the third were painters, the rest sculptors, statuaries, and workers of gems, &c., and more than twice that number of artists of less note, whose names have been handed down to us, Pliny has scarcely omitted one name of importance, but has on the other hand preserved notices of the works of many artists of whom we have no mention whatever in any other ancient writer. In his dates he seldom errs.

The 'Geography' of Pliny is an important part of his 'Natural History,' but the same general remarks will apply to it that apply to the whole compilation: it is the work of a man who had abundant materials before him, but either knew not how to use them or did not take pains enough. This geographical sketch, which comprehended the then known world, is much too brief to be perspicuous; so much is crowded into a narrow compass, that it is often almost a bare catalogue of names, and if we had no other guides it would continually mislead us. Pliny's description of what he calls Græcia, which commences with Attica, is a good example of his careless and confused compilation; and yet he has, even in his 'Geography,' preserved many curious facts, and he must have often had access to excellent materials.

The number of editions that have been published of his work is immense, and more than twenty appeared before the end of the 15th century. However, only the most curious and the most valuable can here be noticed. The first edition was published at Venice, 1489, folio, by Joannes de Spira, which is a very beautiful example of ancient typography, but of little critical value. The second edition, a volume of great rarity, was printed by Sweynheym and Pannartz, Rome, 1470, folio. Those most worth mentioning for their critical excellence are—that by Hardouin, Paris, 1685, 4to, 5 vols., of which a second edition was published, Paris, 1723, folio, 3 vols.; that by Franzius, 8vo, 10 vols., Lips., 1778-91; and that published by Panckoucke, Paris, 8vo, 20 vols., 1829-33, with a new French translation by Ajasson, de Grandsagne, and copious notes by many of the most eminent scientific men of France. The edition by Sillig, Lips., 1831-36, 12mo, 5 vols., is particularly worth noticing on account of its containing the various readings of a manuscript at Bamberg, which had never before been collated, and which inserts words and clauses in several passages that had never been suspected of being unsound (thus proving beyond a doubt that much of the obscurity of Pliny's style may be attributed to the corrupt state of the text). Perhaps the two most useful works in illustration of Pliny are the 'Exercitationes Plinianas' of Salmasius, 2 vols. folio, Paris, 1629; and the 'Disquisitiones Plinianas' of Latour-Rezonico, 2 vols. folio, Parma, 1763-67. It has been translated into almost all languages; into Arabic by the famous Honain Ibn Ishak (better known perhaps by his Latinised name 'Joannitius'); into Italian by Landino, by Brucioli, and by Dom-nichi; into German by Denso, and by Grosse; into Spanish by Huerta; into old French by Dupinet, Lyon, 1562, 2 vols. folio; and into modern French by Poinssinet de Sivry. The best French translation is that in the edition by Panckoucke mentioned above. A Dutch translation was published at Arnheim, 4to, 1617. There is a pretty good old English translation by Holland, 1601, and a new translation, published in Bohn's 'Classical Library,' by Boscock and Riley.

PLINY THE YOUNGER. CAIUS PLINIUS CÆCILIUS SECVNDVS was born at Comum, a town on the Lake Larius in Insubria. The date of his birth is A.D. 61 or 62; for he himself tells us ('Ep.' vi. 20) that he was in his eighteenth year when the extraordinary eruption of Mount Vesuvius took place which occasioned the death of his uncle; and this event was in 79. Of his father nothing is known, except that his name was Caius Cæcilius, that he was of equestrian family, and that he died in the early days of his son. His mother was Plinia, the sister of Pliny the Elder, at whose house, after losing her husband, she, with her son, took up her abode. The young Cæcilius was adopted by Pliny ('Ep.' v. 8), and was thenceforward called by his name.

His education commenced under the care of his mother and uncle. Verginius Rufus, of whom his pupil has left a grateful record ('Ep.' ii. 1), was left his tutor. His youthful attainments were of no ordinary kind, for he composed a Greek tragedy in his fourteenth year. After this he went to Rome and studied rhetoric under Quintilian and Nicetes. At the age of nineteen he began to practise in the court of the Centumviri, and he subsequently appeared as an advocate in several cases before the senate; but though he may have had a competent knowledge of law, it is clear from his own letters that he had no great capacity for difficult legal questions. The following references will show in what kind of cases he was chiefly employed:—v. 8; ii. 14; iv. 16; ii. 11, 12; iii. 4, 8; iv. 9, 16, 24; v. 20; vi. 5, 18, &c.

In his twenty-first year he went as military tribune into Syria, where he met with Euphrates the stoic and Artemidorus, whose society he made available to his improvement in the study of philosophy. He seems, within the space of two years, to have returned from Syria; and we find him resident at Rome until, about the forty-second year of his age, in 103, he was appointed by Trajan proconsul of Bithynia, after he had, with the greatest honour to himself, dis-

charged numerous other offices in the state, and had attained the rank of senator, as is inferred from his letters. (iii. 20; iv. 25.)

He cultivated a friendship with many eminent men, particularly with Tacitus the historian, his senior by a few years, whom he strove earnestly to imitate. Tacitus, on the other hand, held him in no less admiration, and entrusted him with the correction of his own works. Indeed the friendship of Pliny and Tacitus became in a manner proverbial; and they were esteemed the most learned men of their time, "the duumviri of letters," as Cellarius calls them.

Pliny was a man of strict frugality and temperance; he was affable and kind to all men; and being possessed of an ample fortune, he was exceeded by none in acts of beneficence, whether public or private. He was twice married, though his second wife only (Calpurnia) is mentioned by name, and she was a very accomplished woman. He had no children. The time and other circumstances of Pliny's death are uncertain. It is however generally believed that he died about the end of Trajan's reign, which was in 116.

Of many works written by Pliny we have only his 'Epistles,' in ten books, and his 'Panegyric upon Trajan.' The latter has been always admired as a composition of great excellence. The first nine books of the 'Epistles' are addressed to various persons; the tenth book consists of epistles addressed to Trajan only, with a number of Trajan's answers.

The name of Pliny the Younger has, from the days of Tertullian, been mentioned with peculiar interest by Christian writers on account of the testimony which he bore concerning the Christians of his day in Bithynia. They form the subject of a rather long letter (x. 97) to Trajan, written about forty years after the death of St. Paul, and followed by a short answer from Trajan. With all his advantages of education, Pliny was superstitious and credulous. Though a kind-hearted man even to slaves (viii. 1, 16, 19), he was intolerant and cruel to the Christians; and, according to his own account, he put to death the Christians of Bithynia who would not abjure their religion, though he considered it only an innocent superstition.

The materials for Pliny's life may be collected from his 'Epistles,' from which a brief notice has been drawn up by Cellarius, and one more elaborate by Maason; there is also a very complete Life of Pliny, with abundant references to his letters, prefixed to E. Thierfeld's German translation of the 'Epistles and Panegyric,' Munich, 1828. But the reader is referred to the 'Epistles' themselves for the most gratifying notice of Pliny the Younger, every epistle being, as Melmoth observes, "a kind of historical sketch, wherein we have view of him in some striking attitude either of active or contemplative life." Pliny's 'Epistles' have been translated into English by Lord Orrery and Mr. Melmoth. The best edition of Pliny's 'Epistles' is that of Curtius and Longolius, 4to, Amst., 1734. Of the editions of the 'Epistles and Panegyric' together may be recommended those of Christopher Cellarius, 12mo, Leipzig, 1693; Hearne, with Life by Maason prefixed, 8vo, Oxford, 1703; Gierig, 2 vols. 8vo, Leipzig, 1806; and Gesuetan and Schaefer, Leipzig, 1805.

PLOOS VAN AMSTEL, CORNELIS, a celebrated Dutch amateur engraver and designer, was born at Amsterdam, in 1726. He is chiefly distinguished for his imitations of the drawings of old masters, of which he possessed one of the best collections known, amounting to 5000 drawings by celebrated Italian, German, French, Flemish, and Dutch masters, from Giotto to his own time. Born of a good and wealthy family, he had every opportunity for improving his taste and advancing his pursuits. Being acquainted with all the principal collectors of Amsterdam, he commenced making his own valuable collection at a very early age. He had likewise a very valuable collection of prints and etchings, especially of the works of Lucas van Leyden, Albert Dürer, Goltzius, Cornelis and Jan Visser, N. Berchem, and especially Rembrandt.

Ploos van Amstel's own works consist chiefly of imitations of drawings of old masters, in chalk, washed, and coloured; the coloured imitations were accomplished by printing with several plates. In 1765 he published a collection of forty-six such imitations in various styles, after drawings by A. Vanderveelde, Rembrandt, Ostade, Gerard Dow, Baekhuysen, Metz, Berchem, A. Bloemart, Wouvermann, Mieris, Terburg, and others. There are altogether upwards of one hundred imitations of drawings by Ploos van Amstel, and many of these are published in various stages of progress, but very few impressions were taken of any. They are enumerated and described by Weigel in the 'Kunst Katalog,' and in Nagler's 'Künstler Lexicon.' A collection of one hundred of Van Amstel's and some additional similar imitations, with a portrait of Van Amstel, was published by C. Josi, in London, in 1821, royal folio; but only one hundred copies were printed, and at the enormous price of forty guineas per copy.

Ploos van Amstel died at Amsterdam, December 20, 1798, and on March 3rd, 1800, his valuable collection, with the exception of the etchings of Rembrandt, was sold by auction, and realised the large sum of 109,406 florins.

(Van Eynden en Vander Willigen, *Geschiedenis der Vaderlandsehe Schilderkunst sedert de helft der XVIII. Eeuw.* 1816-42.)

PLOT, ROBERT, LL.D., was the son of Robert Plot, of Sutton-Barne in Kent, and born in that county in 1641. He had his early education in the school at Wye, from which he passed to Magdalen Hall, Oxford. He took his Master's degree in arts and both his

degrees in law, and then removed to University College. In 1677 he published a 'Natural History of Oxfordshire,' intending to publish similar works on other counties, a work which gained for him considerable reputation. In 1682 he was elected one of the secretaries of the Royal Society, and in the succeeding year was appointed by Ashmole the keeper of the museum which he had founded at Oxford. About this time also he was chosen professor of chemistry in that university. In 1685 he published a tract on the origin of springs, and in 1686 a 'Natural History of Staffordshire,' on the plan of his work on Oxfordshire.

So far his life is that of a naturalist and man of science; but having attracted the attention of the Duke of Norfolk by an encomiastic speech which he pronounced when the duke was admitted to the degree of D.C.L. in the University, he was appointed his secretary, and in 1688 was made by King James II. historiographer-royal, a privilege being granted to him of access, without the payment of fees, to all the depositories of the public records. In 1694 he was made Mowbray Herald Extraordinary, and registrar of the Court of Honour. What he might have done in the department of history and antiquities we cannot determine, as he lived not long after he thus deviated from his original path, dying at his hereditary estate at Sutton-Barns, in 1696, at the age of fifty-five. He was a credulous and uncritical writer, and has left no permanent reputation.

PLOTINUS, the most celebrated writer and teacher of the Neo-Platonic school at Alexandria, was born at Lycopolis in Egypt, A.D. 204. At the age of twenty-eight he betook himself to the study of philosophy, and attended the lectures of most of the teachers who then flourished at Alexandria. He attached himself more particularly to Ammonius, the founder of the eclectic school, and studied for eleven years under that master. The expedition which the emperor Gordian undertook against the Parthians in 243 furnished an opportunity, which Plotinus had long coveted, of forming a personal acquaintance with the sages of the East, whose doctrines were so much commended by the philosophers of the Alexandrian school, and were supposed by them to have formed the basis of many of the speculations of their great master Plato. Accordingly, Plotinus joined the army of Gordian, which he accompanied as far as the Euphrates, and when the emperor was murdered there, he fled first to Antioch and then to Rome. During the first ten years of his residence at Rome, Plotinus contented himself with giving oral instruction to his pupils, but at last, in his fiftieth year, he was induced by the importunities of Porphyry, the most famous of his disciples, to commit to writing the substance of his lectures. He remained at Rome till his death in 274, and during all that time he was busily engaged as a teacher of the eclectic or Neo-Platonic doctrines. He was a great favourite with the emperor Gallienus, who was on the point of allowing him to rebuild a ruined city in Campania, in order that he might try the experiment of establishing a Utopia there after the model of Plato's republic. He died in Campania, not on the scene of his projected city of philosophers, but at the house of a friend, who maintained and attended him during his sufferings under an accumulation of diseases.

The works of Plotinus consist of fifty-four books, which were divided into six 'Enneads,' or sets of nine books, by his pupil Porphyry, who endeavoured to reduce them to intelligible order, and to correct the obscurities and other faults of style under which they laboured. He is perhaps one of the most mystical and confused authors in any language, and we shall not wonder at this if we recollect some of the facts which Porphyry has told us about his method of composing. We have already mentioned that he did not begin to write till he was fifty years old, and then he seems to have set down his thoughts quite at random and as they occurred to him. His hand-writing was very bad, and his spelling very indifferent; his eyesight was so weak that he could hardly read his own writing, and he could never be brought to revise his works. When we add to this that his subjects were the most abstract that could be devised—'On entity and unity;' 'On the essence of the soul;' 'On the unity of the good;' 'Whether there be many souls or only one soul;' and so forth—it will perhaps be considered that he is not a very inviting author. Nevertheless he has found many admirers, and has, either directly or through his follower Proclus, exercised a most important influence on the opinions of more recent philosophers, especially among ourselves. Oudworth, Henry More, Norris, Gale, and others, were students rather of Plotinus and Proclus than of Plato himself; and the gnosticism of some sects of Christians, with the pantheism of Spinoza and others, may be fairly traced to this obscure writer and his school. We know nothing further of Plotinus than what is contained in his life by his pupil Porphyry.

A superb edition of the works of Plotinus, in 3 vols. 4to, has been published at the Oxford University Press, with this title: 'Plotini Opera Omnia. Edidit Fridericus Creuser. Oxon. E typographeo Academicæ, 1835.' There is an English translation of 'Select Works of Plotinus,' by Taylor.

PLOWDEN, EDMUND, serjeant-at-law, was an eminent lawyer, who flourished in the reign of Mary and the early part of that of Elizabeth. He was the representative of an ancient family, Plowden of Plowden in Shropshire, and was born about 1518. After having in early life studied medicine and surgery, first at Cambridge, and afterwards at Oxford, he is said by Anthony à Wood to have changed the

course of his studies to the common law when he was thirty-five years of age. But this statement is totally at variance with Plowden's own account of himself, for he says, in the preface to his 'Commentaries,' that he entered on the study of the law in the twentieth year of his age, and in the thirtieth of the reign of King Henry VIII. He was twice a reader of the Middle Temple, and about the close of the reign of Mary was called to the degree of serjeant-at-law; but he was omitted in the call of serjeants in the 2 Elizabeth, possibly because, as is suggested in a note to Wood's account of him, he was an "unalterable papist." He died Feb. 6, 1585, and was buried in the Temple church, where a monument to his memory still remains. His devotion to legal studies was so great, that there is a professional tradition that "in three years, he went not once out of the Temple." (Wood's 'Athens,' vol. 1, p. 504, note.)

The high reputation of Plowden in the legal profession rests entirely upon the character of his 'Reports' or 'Commentaries.' This work consists of a collection of the reports of important cases, executed with great fidelity and care, and extending from the reign of Edward VI. to the middle of the reign of Elizabeth. The first complete edition of Plowden's 'Commentaries' is in black-letter and Norman French, folio, 1684; the second edition, likewise in folio, is translated into English, folio, 1761. There is also an octavo reprint of the 'Commentaries,' London, 2 vols., 1816.

PLUNKETT, WILLIAM CONYNGHAM, first Lord Plunkett, of Newtown, county Cork, was the second son of the Rev. Thomas Plunkett, a Presbyterian minister at Bunnickillen, in which town his son William was born in July 1764. Having some scruples as to the received doctrine of the Trinity, the elder Plunkett removed to Dublin, where he became minister of the Strand-street chapel. His eldest son practised for many years as a physician in that metropolis, and bequeathed to his brother a large library and a considerable fortune. William was still a boy when his father died, leaving the care of his family to the piety and zeal of his congregation. His dying request was not in vain, and the sons received by their assiduous a good education. William was sent to Trinity College, Dublin, where he obtained a scholarship and a degree, and where he was the friend and contemporary of the late Dr. Magee, archbishop of Dublin. Mr. Plunkett was called to the bar in 1787. He had already gained some reputation by his speeches delivered in the debating club of the university, then known as the Historical Society; and the late Karl of Charlemont soon afterwards introduced him into the Irish Parliament, as member for the borough from which he derived his title.

Mr. Plunkett commenced his public career by bold and sarcastic oratory, reserving himself almost entirely for great occasions. Hence his name is but little associated with the every day business of legislation; the fame which he acquired in the Irish House of Commons is principally connected with the zeal with which he opposed the legislative Union in 1800. The vehement oratory with which he denounced the ministry on this occasion, proved the means of increasing his professional engagements in the Irish courts of law. His income now rose rapidly, and with its proceeds he repaid, with liberal interest, the contributions of his father's congregation which had been the means of enabling him to get a start in life. About the same time he married Catharine, only daughter of John McCausland, Esq., who had represented the county of Donegal in four successive parliaments. When the rebellion of 1798 broke out, Mr. Plunkett gave the aid of his professional talents to its victims, and indeed was at one time so intimate with Robert Emmett and his associates, that he was more than once publicly accused of being concerned in their unhappy proceedings. The accusation however was shown to be unfounded.

In 1803 he was appointed solicitor-general for Ireland, from which post he was promoted in 1805 to that of attorney-general. In the following year the Whigs, with Lord Grenville at their head, came into office, and he determined to throw in his lot with them. Accordingly he retained the attorney-generalship under their administration, whose well known views offered an opportunity for the Catholic Association to press upon their notice the importance of granting Roman Catholic emancipation. Of this subject, Mr. Plunkett was always an able and energetic advocate. The death of Mr. Fox having broken up the Grenville administration in 1807, Mr. Plunkett retired, and applied himself to the pursuit of chancery practice with such success, that for several years he was engaged as leading counsel in almost every important Irish chancery suit, and rapidly accumulated a large fortune.

Mr. Plunkett first entered the British House of Commons in 1807 as member for Midhurst. In 1812 he was elected to represent the University of Dublin, which at that time returned only a single member; and he was re-elected in 1818. Of his first speech in the House of Commons, which at once secured for him a high reputation, Mr. Canning affirmed, that it brought back the days of Burke and Pitt, of Fox and Sheridan. In 1823 a number of ministerial changes took place on the death of the Marquis of Londonderry, and among others Mr. Plunkett was re-appointed attorney-general for Ireland, the late Marquis of Wellesley being lord-lieutenant, and in that capacity he was engaged to prosecute on behalf of the crown a large number of the Dublin Orangemen, and of the insurgents in the south of Ireland. Early in 1827 Mr. Canning proposed to appoint Mr. Plunkett master of the rolls in England, but the intention was ultimately abandoned.

In the following June however he was elevated to the post of lord chief-justice of the common pleas in Ireland, and created a peer of the United Kingdom. He held the chief-justiceship for three years, and resigned it at the downfall of the Wellington administration. His judicial career was not marked by any great brilliancy or success, which indeed there were no remarkable or stirring events to call forth. But it was otherwise in the English House of Lords, where he sat by the Duke of Wellington, at his Grace's especial request, to advise with him at every step of the Roman Catholic Emancipation Bill, of which he 'took charge' in its passage through the Upper House.

With the passing of this measure the political career of Lord Plunkett may be said to have closed, though he was appointed Lord Chancellor of Ireland by the ministry of Earl Grey at the close of 1830. This post he occupied for eleven years, with the brief interval of a few months in 1834-35, during which the seals were held by Sir Edward Sugden (now Lord St. Leonards). He ultimately only resigned the chancellorship a few months before the removal of the Liberal administration of Lord Melbourne from office in 1841, when he was induced to resign in order to make way for Lord Campbell. During his later years Lord Plunkett had almost wholly retired from political life, and indeed for several years before his death he had not come over to England to take his seat in the House of Lords, but spent his declining days in the enjoyment of the society of his family and private friends, at his country villa near Bray, where he died on the 4th of January 1854. His eldest son, now second Lord Plunkett, is also Bishop of Tuam.

On the whole, nature was bountiful to Lord Plunkett, and accident favoured him at almost every step of his long and brilliant career. He was sixty-six years of age when he took his seat in the Irish Court of Chancery, and it could scarcely be expected that as chancellor he could add much to his previous fame. His reputation shot upwards from a narrow ground-work. His speeches were at once few and famous; they excited the unqualified applause of his contemporaries, and his name is still foremost among the orators of the 19th century. But the great principles of legislation, which men seek and find in the speeches of Pitt and Burke, are seldom met with in the startling orations of Lord Plunkett. He could hardly be called a statesman—scarcely even a sound or experienced practical politician; and there were abler judges and more learned men than himself among his brethren on the Irish bench, though probably there were none of equal powers of native eloquence.

PLUTARCHUS was a native of Chaeronea in Bœotia. The time of his birth is uncertain, and can only be approximately ascertained from the circumstance stated by himself, that he studied philosophy under Ammonius at Delphi, at the time when Nero was making his progress through Greece, which was in the twelfth year of the emperor's reign, or A.D. 66. The family of Plutarch was one of some consideration in Chaeronea, and had held the chief offices in that city. He has not mentioned his father's name in his extant works. He had two brothers, Timon and Lamprias, to whom he was much attached. When a young man, he was sent with another person on a mission to the proconsul of the province; his companion was from some cause left behind, and Plutarch executed the business himself.

It has sometimes been asserted that Plutarch visited Egypt, but there is no authority for this assertion, and such a conclusion cannot be drawn, as it sometimes has been, from such slender premises as are furnished by the fact of his writing an essay on Isis and Osiris. Plutarch visited Italy and Rome, perhaps more than once, and he spent some time there, as appears from his own writings ('Life of Demosthenes,' c. 2); but he did not learn the Latin language in Italy, according to his own account, and the reason that he gives for not then learning it is a curious one: "he had so many public commissions, and so many people came to him to receive his instruction in philosophy." "It was therefore," he adds, "not till a late period in life that I began to read the Latin writers." It appears clearly enough from his own writings that he never thoroughly mastered the Latin language, and was very imperfectly acquainted with the ancient institutions which formed the groundwork of the Roman polity and the Roman character. It has been conjectured with reasonable probability that his moral writings contain much of the matter which he delivered in his public lectures in Italy. He wrote his 'Life of Demosthenes' at Chaeronea, after he had visited Rome; but whether he wrote any of his Lives during his long residence in Rome is uncertain. It may be that they are the work of his old age, and that all of them were written or finished in his native city.

It is generally said that Plutarch was the preceptor of Trajan, and raised by him to the consular rank; but these facts rest on the assertion of Suidas (Πλούταρχος), and on an extant letter addressed to Trajan, which is attributed to Plutarch. But the letter to Trajan, which is attributed to Plutarch, bears conclusive internal testimony of being a fabrication. Besides this, it only exists in Latin, and in the 'Policraticus' of John of Salisbury; the Greek original has never been produced, and it is not known where John found this letter. Plutarch seems to have enjoyed considerable distinction at Rome, and his lectures, which of course were delivered in the Greek language, were attended by most of those who affected philosophy. His lectures were given as early as the reign of Domitian, or perhaps even in the reigns of Vespasian and Titus, as we learn from a curious anecdote

of his own (περὶ πολιπραγμοσύνης, c. 15); and he enjoyed the friendship of several distinguished Romans, as Arulenus Rusticus, whom Domitian put to death (Tacit., 'Agr.' 2), and Sosius Senecio, a man of consular rank, whom he addresses in the introduction to the Life of Theseus, and elsewhere in his writings. Among his contemporaries at Rome were Persius, Lucan, the younger Pliny, Martial, Quintilian, and others, but none of them have made any mention of Plutarch, though he must have been known to them. Sosius Senecio, one of his intimate friends, was also a friend of the younger Pliny, who addresses him in his Letters. He retired to Chaeronea in the decline of his life, where he appears to have lived in comfort. He faithfully discharged various magisterial offices in his native town, and he had also the honour and emoluments of a priesthood.

Plutarch had a wife, Timoxena, to whom he was tenderly attached, and four sons, and a daughter, Timoxena. Two of his sons died before him, and he lost his daughter while an infant. It was on the occasion of this child's death that he wrote that affectionate letter of consolation, full of good sense, in which he has perpetuated the virtues and fortitude of a most exemplary wife and mother. The time and circumstances of Plutarch's death are unknown, and indeed the events of his life, as will appear from this sketch, are imperfectly ascertained; but the character of the man is as familiar to us from his own writings as if we possessed the most elaborate biography of him.

The great work of Plutarch is his 'Parallel Lives' (Βίοι Παράλληλοι), which contains the biography of forty-six distinguished Greeks and Romans, besides the Lives of Artaxerxes Mnemon, Aratus, Galba, Otho, and Homer, which last is probably not by him. The forty-six Lives are arranged in pairs or sets, each of which contains a Greek and a Roman, and the two lives in each pair are followed by a comparison of the characters of the two persons. These Lives are—Theseus and Romulus, Lycurgus and Numa, Solon and Valerius Publicola, Themistocles and Camillus, Pericles and Fabius Maximus, Alcibiades and Coriolanus, Timoleon and Scipio Africanus, Pelopidas and Marcellus, Aristides and Cato Major, Philopœmen and Flaminius, Pyrrhus and Marius, Lysander and Sulla, Cimon and Lucullus, Nicias and Crassus, Eumenes and Sertorius, Agesilaus and Pompeius, Alexander the Great and Julius Cæsar, Phocion and Cato Minor, Agis and Cleomenes and the two Gracchi, Demosthenes and Cicero, Demetrius Poliorcetes and M. Antonius, Dion and M. Brutus. The biographies of Epaminondas, Scipio, Augustus, Tiberius, Caligula, Claudius, Nero, Vitellius, Hesiod, Pindar, Crates the Cynic, Diophantus, Aristomenes, and the poet Aratus, are lost.

Plutarch's son Lamprias made a list of his father's works, which is partly preserved, and printed in the 'Bibliotheca Græca' of Fabricius.

In the department of biography, Plutarch is the only writer of antiquity who has established a lasting reputation. The plan of his biographies is briefly explained by himself in the introduction to the 'Life of Alexander the Great,' where he makes an apology for the brevity with which he is compelled to treat of the numerous events in the lives of Alexander and Cæsar. "For," he says, "I do not write histories, but lives; nor do the most conspicuous acts of necessity exhibit a man's virtue or his vice, but oftentimes some slight circumstance, a word or a jest, shows a man's character better than battles with the slaughter of tens of thousands, and the greatest arrays of armies and sieges of cities. Now, as painters produce a likeness by a representation of the countenance and the expression of the eyes, without troubling themselves about the other parts of the body, so I must be allowed to look rather into the signs of a man's character, and thus give a portrait of his life, leaving others to describe great events and battles." The object then of Plutarch in his biographies was a moral end, and the exhibition of the principal events of a man's life was subordinate to this his main design; and though he may not always have adhered to the principle which he laid down, it cannot be denied that his view of what biography should be is much more exact than that of most persons who have attempted this style of composition. The life of a statesman or of a general, when written with the view of giving a complete history of all the public events in which he was engaged, is not biography, but history. This extract from Plutarch will also in some measure be an apology for the want of historical order observable in many of the lives. Though altogether deficient in that critical sagacity which discerns truth from falsehood, and disentangles the intricacies of confused and conflicting statements, Plutarch has preserved in his 'Lives' a vast number of facts which would otherwise have been unknown to us. He was a great reader, and must have had access to large libraries. It is said that he quotes two hundred and fifty writers, a great part of whose works are now entirely lost.

There are two purposes for which the 'Lives' of Plutarch may be read. We may read them for the pleasure of the perusal, which arises from a conviction of the integrity of the writer, and his graphic representations, his benevolent disposition, and the moral end which he always keeps before him. We may also read them for the purpose of a critical investigation into the facts which he has recorded, and for the purpose of supplying from him the defects of other ancient authorities. With this latter object we must institute a searching inquiry into the authorities for the several lives, which vary greatly in value; and above all we must be careful in reading his Lives of the Romans not to be misled by any notions that he had formed of the

institutions of a people with whose language he was imperfectly acquainted, and to whose ancient history he was nearly a stranger. On the sources of Plutarch's 'Lives' the reader may consult an essay by A. H. L. Heeren, 'De Fontibus et Auctoritate Vitarum Parallelarum Plutarchi Commentationes IV.', 8vo, Goettingen, 1820.

Besides the 'Lives,' a considerable number of Plutarch's essays may be styled historical. They may all be read with pleasure and some of them with instruction, not so much for their historical value as for the detached curious facts that are scattered so profusely through Plutarch's writings, and for the picture which they exhibit of the author's own mind. In one of these essays, entitled 'On the Malignity of Herodotus,' he has, unfortunately for his own reputation, attacked the veracity and integrity of the father of history, and with the same success that subsequent writers, more ignorant and less honest, have made their puny attacks on a work the merit of which the closest criticism may enhance but can never depreciate. The 'Lives of the Ten Orators,' which are attributed to Plutarch, are of little value, and may not be his; still they bear internal evidence, at least negatively, of not being of a later age than that of Plutarch.

The 'Lives' of Plutarch first appeared in a Latin version by several hands, at Rome, in 2 vols. fol., about 1470. This Latin version formed the basis of various Spanish and Italian translations. The first Greek edition was printed by Philip Giunta, fol. Florence, 1517. Among more recent editions are those of Bryan, London, 5 vols. 4to, 1729, in Greek and Latin, which was completed by Moses du Soul, after Bryan's death; that of Coray, Paris, 6 vols. 8vo, 1809-15; and that by Schaefler, Leipzig, 6 vols. 8vo, 1826. The translations are very numerous. The best German translation is said to be by Kaltwasser, Magdeburg, 10 vols. 8vo, 1799-1806. Another German translation appeared at Vienna, in 1812. The best Italian translation is by Pompei. The French translation of Amyot, which appeared in 1559, has considerable merit, and has been often reprinted. The English translation of Sir Thomas North, London, 1612, which is avowedly made from that of Amyot, is often very happy in point of expression, and is deservedly much esteemed. The 'Lives' were also translated into French by Dacier, Paris, 8 vols. 4to, 1721. The translation sometimes called Dryden's, the first volume of which was published in 1688, was executed by a great number of persons. According to a note by Malone (Dryden's 'Prose Works,' ii. p. 831), there were forty-one of them. Dryden himself translated nothing, but he wrote the dedication to the Duke of Ormond, and the Life of Plutarch, which is prefixed to the translation. The translation by John and William Langborne, an insipid and tasteless version, has the merit of being tolerably correct in rendering the meaning of the original. The last and best English translation is that of Professor Long, which however only includes the lives of those Romans who were concerned in the Civil Wars of Rome: this translation, which is enriched with a valuable body of notes, formed five volumes of Knight's 'Monthly Volumes,' 1844-47.

The other writings of Plutarch, which consist of about sixty essays, are generally comprehended under the title of his 'Moralia,' or Ethical Works, many of them being entirely of an ethical character. The minor historical pieces already referred to, of which that on the malignity of Herodotus is one, are usually comprised in the collection entitled 'Moralia.' Plutarch was fond of the writings of Plato; he was strongly opposed to the Epicureans: if he belonged to any philosophical sect, it was that of the Academics. But there is nothing like a system of philosophy in his writings, and he is not characterised by depth of thought or originality. He formed for himself a system, if we may so name that which had little of the connected character of a system, out of the writings of various philosophers. But a moral end is always apparent in his 'Moralia' as well as in his Biographies. A kind humane disposition and a love of everything that is ennobling and excellent, pervade his writings, and give the reader the same kind of pleasure that he has in the company of an esteemed friend, whose singleness of heart appears in everything that he says or does. Plutarch rightly appreciated the importance of education, and he gives many good precepts for the bringing up of children. His philosophy was practical, and in many of its applications, as for instance his 'Letter of Consolation to Apollonius,' and his 'Marriage Precepts,' he is as felicitous in expression as he is sound in his precepts. Notwithstanding all the deductions that the most fastidious critic may make from Plutarch's moral writings, it cannot be denied that there is something in them which always pleases, and the more the better we become acquainted with them; and this is no small merit in a writer.

Plutarch's style bears no resemblance to the simplicity of the Attic writers. It has not the air of being much elaborated, and apparently his sentences flowed easily from him. He is nearly always animated and pleasing, and the epithet pictorial may be justly applied to him. Sometimes his sentences are long and ill constructed, and the order of the words appears not the best that could be chosen to express his meaning: certainly it is not the order in which the best Greek writers of an earlier age would have arranged their thoughts. Sometimes he is obscure, both from this cause and the kind of illustration in which he abounds. He occasionally uses and perhaps affects poetic words, but they are such as give energy to his thoughts and expression to his language. Altogether he is read with pleasure in the original by those

who are familiar with him, but he is somewhat harsh and crabbed to a stranger. It is his merit, in the age in which he lived, treating of such subjects as biography and morals, not to have fallen into a merely rhetorical style, to have balanced antitheses, and to have contented himself with the inanity of commonplaces. Whatever he says is manly and invigorating in thought, and clear and forcible in expression.

The first Greek edition of the 'Moralia,' which is exceedingly incorrect, was printed by the elder Aldus, with the following title, 'Plutarchi Opuscula, lxxxii.' Gr., Venetis, fol. 1509. It was afterwards printed at Basel, by Froben, fol. 1542, and fol. 1574. The only good edition of the 'Moralia' is that printed at Oxford, and edited by D. Wyttenbach, who laboured on it twenty-four years. This edition consists of six volumes of text (1795-1800), and two volumes of notes (1810-21), 4to. There is a print of it which is generally bound in 5 vols. 8vo, with two volumes of notes. The remarks of Wyttenbach were printed at Leipzig, in 1821, in two vols. 8vo.

The first edition of all the works of Plutarch is by H. Stephens, Geneva, 13 vols. 8vo, 1572, which is said to be correctly printed. This edition was reprinted several times. A complete edition, Greek and Latin, appeared at Leipzig, 12 vols. 8vo, 1774-85, with the name of J. J. Reiske, but Reiske did very little to it, for he died in 1774. An edition by J. C. Hutten, appeared at Tübingen, 14 vols. 8vo, 1791-1805. A good critical edition of all the works of Plutarch is still wanted.

The 'Moralia' have been translated into French by Amyot. Amyot's complete translation of all the works was reprinted at Paris by Didot, 25 vols. 8vo, 1818-20. The 'Moralia' have been translated into German by Kaltwasser.

POCOCK, EDWARD, an eminent divine and learned Orientalist, was the son of the Rev. Edward Pocock, vicar of Chiveley in Berkshire. He was born at Oxford, in November 1604, and received the early part of his education at the free-school of Thame. At the age of fourteen he was entered a commoner of Magdalen Hall. After two years' residence there, he was elected to a scholarship of Corpus Christi College, to which he removed in 1620. In November 1622, he was admitted bachelor of arts. He now began to apply himself to the study of the Oriental languages, in which he made extraordinary progress, first under the tuition of Mathew Pasor, and afterwards under that of the Rev. William Bedwell, vicar of Tottenham, one of the first of those who have promoted the study of the Arabic language in Europe.

His first literary work was the preparation for the press of such parts as had not been edited of the Syriac New Testament, from a manuscript in the Bodleian library, to which he added a Latin translation and some notes: the whole was printed at Leyden in 1630, 4to. In 1629 Pocock was ordained priest, and soon after appointed chaplain to the English merchants at Aleppo, where he continued five or six years, making further progress in the Hebrew, Syriac, and Ethiopic languages, besides acquiring a familiar knowledge of the Arabic. On his return to England in 1636, he was admitted to the degree of bachelor of divinity, and soon after nominated first professor of the Arabic lecture founded at Oxford by Archbishop Laud, with whom Pocock had maintained a correspondence during his stay at Aleppo, having been employed by that prelate in collecting coins and manuscripts for the university. He opened his lectures with an elegant Latin oration on the nature and utility of the Arabic tongue, part of which was afterwards published *ad calcem* 'Carmen Tograi,' edit. Oxon., 1661. Pocock however seems not to have delivered more than one course of lectures upon this occasion; for soon after, at the express desire of his patron Laud, he undertook a second voyage to the East, along with John Greaves [GREAVES], and remained some time at Constantinople collecting ancient manuscripts. After a stay of nearly four years in that city, he embarked in 1640, and returned home by way of France and Italy. While at Paris he became acquainted with many of the learned men of the time, and particularly with Gabriel Sionita, a Maronite well known by his Latin translation of Edrisi's 'Geography,' and other works [EDRISI], and with Hugo Grotius, to whom he communicated a design he had of translating his treatise 'De Veritate' into Arabic for the use of the Mohammedans. Grotius having approved of the plan, Pocock began his task, and the Arabic version was afterwards printed at Oxford, in 1660. [GROTIUS.] While at Paris, Pocock heard of the commotions in England, and on his arrival found his patron and benefactor, Bishop Laud, a prisoner in the Tower. He now resumed his lectures and his private studies at Oxford. Having become acquainted with the celebrated Selden, who afterwards published part of the 'Annals' of Eutychius, in Latin and Arabic, under the title of 'Origines Alexandrinae,' Pocock assisted him in collating and extracting passages from the Arabic manuscripts in the Bodleian.

In 1648 Pocock was presented by his college to the rectory of Childrey in Berkshire, where he performed with the greatest zeal his duties of parish priest, visiting Oxford during term time. Immediately after the execution of Laud, the profits of his Arabic professorship were seized as part of that prelate's property, and he was reduced to his country living. In 1646 Pocock married the daughter of Thomas Burdett, Esq., of Hampshire, and in the following year he obtained, through the interest of his friend Selden, the restitution of

his salary. In 1648 he was nominated to the Hebrew professorship at Oxford, to which Charles I. then a prisoner in the Isle of Wight, added a canonry in Christchurch, which was confirmed by parliament; but the canonry thus assigned to him being different from that originally annexed to the professorship, Pocock entered a protest against it, and refused to receive the profits. In the meantime he composed his 'Specimen Historiæ Arabum,' being extracts from the work of Abu-l-faraj, in the original Arabic, together with a Latin translation and copious notes. [ABULFARAGIUS.] This work, which was printed at Oxford, in 1648 and 1650, 4to, was reprinted in 1806, by White, with some additions by Sylvestre de Sacy. In November 1650, about a year after publishing the preceding work, Pocock was ejected from his canonry, and it was intended to deprive him of the Hebrew and Arabic professorships; but upon a petition from the heads of houses, the masters, and scholars at Oxford, Pocock was suffered to enjoy both places. In 1655 he was on the point of being deprived of his living, on the ground of "ignorance and insufficiency;" at least such were the charges preferred against him by Cromwell's committee. Some of his Oxford friends however, particularly Dr. Owen, so warmly represented the disgrace which would follow the rejection, upon such grounds, of so eminent a scholar as Pocock, that the measure was abandoned. Soon after Pocock published his 'Porta Moësis,' being six prefatory discourses of Moses Maimonides's 'Commentary upon the Mishna,' written in Arabic, but with the Hebrew letters. This work, which was the first production of the Hebrew press at Oxford, appeared in 1655, together with a Latin translation and numerous notes. In the following year Pocock appears to have entertained the idea of publishing the 'Expositions of Rabbi Tanchum on the Old Testament,' as he was at that time the only person in Europe who possessed any of the manuscripts of that learned Rabbi; but, probably from want of encouragement, he did not prosecute his design. In 1657 the English Polyglot appeared, in which Pocock had a considerable hand. He collated the Arabic Pentateuch, and also wrote a preface concerning the different Arabic versions of that part of the Bible, and the reason of the various readings to be found in them, the whole of which was inserted in the Appendix to the Polyglot. He also contributed greatly to the success of that literary undertaking by the loan of several valuable manuscripts in his own collection. In 1658 his Latin translation of the 'Annals' of Eutychius was published at Oxford, in 2 vols. 4to, at the request and at the expense of Selden, who died before it appeared. At the Restoration, Pocock was restored (June 1660) to his canonry of Christchurch, as originally annexed to the Hebrew professorship by Charles I. In the same year he was enabled, through the liberality of Mr. Boyle, to print his Arabic translation of Grotius's tract 'De Veritate.' His next publication, in 1661, was the Arabic poem by Abû Ismail Thograî, entitled 'Lâmîyatu-l-'ajem,' with a Latin translation, copious notes, and a learned preface by Dr. Samuel Clarke. But by far the most important as well as the most useful of Pocock's works was his translation of the entire work of Abu-l-faraj, which, along with the text and a few excellent notes, was printed at Oxford, in 1663, 2 vols. 4to. After the publication of this work he seems to have entirely devoted himself to biblical learning. In 1674 he published, at the expense of the University, his Arabic translation of the Church Catechism and the English Liturgy. In 1677 appeared his 'Commentary on the Prophecies of Micha and Malachi;' in 1685, that on Hosea, and in 1691, that of Joel. It was his intention to comment upon others of the lesser prophets. He died, September 10, 1691, after a gradual decay of his constitution, in the eighty-seventh year of his age.

Pocock had by his marriage with Miss Burdett nine children, the eldest of whom, named Edward, was also an oriental scholar, and published in 1671, under his direction the philosophical treatise of Ibn Tofayl, with a Latin translation and notes, under this title—'Philosophus Autodidactus, sive Epistola Abu Jaafar Ebn Tophail de Hai Ebn Yokdham,' the same which Ockley afterwards translated into English. [OCKLEY.] He also translated into Latin the work of Abda-l-latif on Egypt; but it was not printed until the beginning of the present century, when White published it with the original text, 4to, Oxford, 1800. [ABDALLATIF.] Another of Pocock's sons, named Thomas, translated into English the work entitled 'De Termino Vitæ' by Manasses Ben Israel, under this title—'Of the Term of Life,' London, 1699, 12mo. An account of the life and writings of Pocock, the father, was published in 1740, by Leonard Twells, M.A., together with an edition of his Theological works, in 2 vols. folio.

POCOCKE, RICHARD, a distinguished traveller, distantly related to the preceding, though he added an s to his name, was born in 1704, at Southampton, where he was educated until he removed to Corpus Christi College in Oxford. In 1731 he took the degree of Bachelor of Laws, and two years afterwards that of Doctor. After travelling in 1734 and 1736 on the Continent, he sailed for Egypt, in which country he remained until the spring of 1738, when he embarked at Damietta for Palestine, and taking his road through Syria, Mesopotamia, Cyprus, Candia, and Asia Minor, arrived at Constantinople. From Cephalonia he sailed to Messina, whence he proceeded homewards through Italy, Germany, and Flanders. On his return in 1741 he published the result of his researches and observations, under the title of 'Description of the East and of some other Countries,' of which the first volume, entitled 'Observations on Egypt,' dedicated

BIOC. DIV. VOL. IV.

to Henry, Earl of Pembroke and Montgomery, appeared at London in 1743, folio; and the second, entitled 'Observations on Palestine, Syria, Mesopotamia, Cyprus, and Candia,' dedicated to Philip, Earl of Chesterfield, in 1745. In 1745 he was appointed archdeacon of Dublin, and in 1756 bishop of Ossory. He was subsequently transferred to Elphin, and lastly to Meath, where he died, in September 1765.

Besides his 'Eastern Travels,' which are works of merit, Pococke made a tour in Scotland and published a description of the basaltic rock, in the harbour of Dunbar, resembling the Giant's Causeway. ('Phil. Trans.' vol. 32, art. 17.) 'A Description of the Giant's Causeway,' and 'An Account of some Antiquities found in Ireland,' were also published by him in the 11th vol. of the 'Archæologia.' Among the manuscripts in the British Museum (4811, 4827) are several volumes the gift of Bishop Pococke, containing the minutes and registers of the Philosophical Society of Dublin, from 1683 to 1707. A French translation of his travels appeared at Paris, in 1771, in seven volumes, in 12mo.

POE, EDGAR ALLAN, was born at Baltimore, in the United States, in January 1811. He was descended of a good family, but his father and mother, who had become strolling players, having died when he was quite a child, he was adopted by a Mr. John Allan, a wealthy merchant, who had known his father, and having no children of his own, treated him as his son. In 1816 Mr. and Mrs. Allan brought him to England, where he was put to school at Stoke Newington. He returned to America in 1822, was first placed in an academy at Richmond, in Virginia, and thence sent to the university of Charlottesville in the same state. At all these places of instruction his progress was rapid, and he held a high rank as a scholar, but his extravagance was so great, and his conduct so licentious, that he was expelled from the university. He returned home, and on Mr. Allan refusing to honour some of his drafts for gambling debts incurred at the university, he wrote a satirical and abusive letter to his benefactor, left the house, and set off for Greece to help to free that land from the tyranny of the Turks. He never reached Greece, but after wandering about Europe for nearly a year, he arrived at St. Petersburg, fell into the hands of the police for a drunken riot, was rescued by the intervention of the minister of the United States, and by him sent back to America. His old patron welcomed him home, and as he now expressed a desire to adopt the military profession, he procured him the appointment of a cadet in the Military Academy at Westpoint in New York. Here, after a short period of assiduous application, his old habits returned, and within a twelve-month he was cashiered for insubordination and drunkenness. He returned to Mr. Allan at Richmond, who again received him with kindness, but that gentleman having married a second wife, Poe satirised both him and his wife so severely that he was forced to quit that place of refuge, nor would Mr. Allan ever see him again or assist him any further. He had by this time published a small volume of poems, and from the favourable reception they had met with, he thought he might support himself by his pen. He failed, and enlisted as a private soldier. From this situation he was rescued by some military friends he had made at Westpoint, who procured his release. He again had recourse to his pen, and this time with more success. He became connected with various magazines and other periodical works, with some as contributor, and with others as editor, but his irregular habits constantly prevented the engagements being permanent. He followed this course at Baltimore, Virginia, Philadelphia, and New York, where he arrived in 1844. His undoubted talent unflinchingly procured him employment, while his intemperate and immoral habits as necessarily occasioned his dismissal. In 1848 he gave a series of lectures in New York on the universe, which were afterwards embodied in a work entitled 'Eureka, a Prose Poem.' In the autumn of 1848 he joined a temperance society, but this could not save him. He went in 1849 to Virginia to deliver lectures, and on the 4th of October he set out on his return to New York. At Baltimore he met some acquaintances, who invited him to drink; he forgot his pledge, became so utterly intoxicated that he was picked up in the street, carried to a hospital, and died on the following day, October 7th, 1849. His works, as may be supposed from the previous sketch, consist wholly of short pieces. He wanted the steadiness and perseverance to produce anything worthy of his genius; but they exhibit in a remarkable degree the possession of faculties of a high order. In his tales there is magnificence of imagination and description; a remarkable display of analytical power though wasted upon trivial subjects; a love and an acute observation of nature, and an admiration of the beautiful, which it is remarkable in such a man never descends into the sensuous; considerable humour, and a ghastly and mystical sublimity in some of his fictions that is deeply impressive. In his poetry he is tender and melodious, with great command of language; and in conversation he is described as having been highly eloquent, but irritable and sarcastic. There are few more striking instances of perverted talent, and personal advantages thrown away, than that of Edgar Poe. Two small volumes of tales and one of poetry, besides the 'Eureka' already mentioned, are all that remain of him.

POELEMBURG, CORNELIUS, was born at Utrecht in 1586, and studied painting under Abraham Bloemart. Having acquired considerable proficiency under him, he went to Rome, where the works of

3 x

Raffaële inspired him with a resolution to endeavour to imitate the grace of that great master, especially in the naked figure. He however formed for himself a very different and entirely new style, not resembling that of any Italian master, unless it be in his adorning his landscapes with the ruins of ancient buildings, which he represented with great accuracy. He excelled all his contemporaries in the delicacy of his taste and the vividness of his colouring, as well as in the choice of his subject. The skies are clear, light, and transparent, and the magnificent remains of Roman edifices in his backgrounds give harmony to the whole composition. His female figures, which he generally represented naked, are distinguished by beauty and elegance of form. It is an obvious objection however that in some representations of nymphs bathing, he has chosen exposed situations by a roadside.

Poelmburg's works were highly esteemed in Italy, and some of the cardinals used to visit him while he was painting, to observe his manner of working. He left Rome with much regret, and returned to his own country. On the way he received many honours—at Florence from the grand-duke—and had great respect shown him in all the cities through which he passed, as well as in his native city of Utrecht. Soon after his return he was visited by Rubens, who expressed great pleasure in examining his works, of which he purchased several for his own collection, and bespoke others, by which he directed attention to the merit of Poelmburg, and advanced both his fortune and his reputation. Poelmburg was invited by Charles I. to London, where he painted many fine pictures, for which he received large sums. The king wished him to stay in England; but his affection for his own country induced him to return to Utrecht, where he acquired a large fortune and was universally esteemed, and where he died in 1660. Many eminent artists, especially Steenwyck and Kierings, got him to paint the figures in their works. The genuine pictures of Poelmburg are extremely scarce; but his disciple, Jean van der Lis imitated his manner with such success that his paintings are often taken for works of his master. There are some good examples of his pencil in private collections in this country.

POGGIO. [BRACCIOLINI, POGGIO.]

POILLY, FRANÇOIS, a distinguished French engraver, was born at Abbeville in 1622. He was the pupil of P. Daret, and studied some time in Rome. He adopted the somewhat hard style of engraving of Bloemart in direct cross-lines, in which he was completely successful: his drawing also, which is quite correct, adds much to the value of his finely executed engravings. Though Poilly's style is very laborious, there are about 400 prints which bear his name, in which however he was of course assisted by his pupils. His master-piece is the print from Mignard's celebrated picture, now lost, of San Carlo Borromeo administering the Sacrament to the Milanese attacked with the Plague. A catalogue of his prints was published by R. Hecquet in 1752; it comprises several after Raffaële, including the *Vierge au Berceau*, *La Vierge au Linge*, the large Holy Family in the Louvre, and other Holy Families by Raffaële. Poilly died at Paris in 1693. His brother Nicholas and nephew Jean Baptiste Poilly were likewise distinguished engravers.

POISSON, SIMÉON DENIS, was born June 21st 1781, in an humble station, and was admitted in 1798 a pupil of the *École Polytechnique*. M. Fourcy, in his history of this school, records the manner in which the young student, at the age of eighteen, attracted the notice of Lagrange by an improvement in the method of demonstrating the binomial theorem, which the latter read publicly to the class, and announced his intention of abiding by it for the future. Poisson never held any political situation, or took public share in anything but education. In 1828 he was baron, officer of the legion of honour, répétiteur-adjoint and permanent examiner of the Polytechnic School, member of the Council of Public Instruction, and of the Academy of Sciences. He died April 25th 1840.

As far as so few words can go, it may be said that the labours of Poisson were directed to the introduction of the use of definite integrals into all branches of mathematical physics, and the extension of the various branches by their means. There is nothing out of which to make a popular reputation; the successes of Poisson are all purely mathematical, and none but the mathematician can as much as understand the description of them.

The greater part of the writings of Poisson are contained in various periodicals, particularly the *Memoirs of the Institute*, the *Journal of the Polytechnic School*, the *Annales des Mathématiques*, the *Connaissance des Temps*, &c., &c. There is hardly any subject on which they do not treat, and almost always with decided success; electricity, magnetism, heat, gases, capillary attraction, gravitation, the pendulum, &c., &c., are titles each of which suggests to the well-informed mathematician of our time the memory of some ably-written paper by Poisson. His object was to leave no branch of physics unexplored by aid of the new and powerful methods of investigation which a school yet more modern than that of Lagrange and Laplace had added to the pure mathematics. Towards the end of his life he began to collect his scattered memoirs into separate works, with the additions which his subsequent researches had given.

Poisson's separate works are—1, *Traité de Mécanique*, Paris, 1811, 2 vols. 8vo; second edition, Paris, 1833, 2 vols. 8vo. Perhaps this is the best elementary work on a branch of mathematical physics which exists, considered as an introduction to the use of modern analysis.

An English student should read it with some of our own writers, who abound in examples. 2, *Nouvelle Théorie de l'Action Capillaire*, Paris, 1831, 4to. The principal distinction between this theory and that of Laplace, physically speaking, is the consideration of the variation of density which takes place at the end of the capillary column of fluid. 3, *Théorie Mathématique de la Chaleur*, Paris, 1835, 4to. The data from which Poisson starts are derived from the experiments on the nature of heat made subsequently to the time of Fourier, his great predecessor in this branch of the subject. 4, *Recherches sur la Probabilité des Jugemens en Matière Criminelle et en Matière Civile*, Paris, 1837, 4to. This is, in fact, a treatise on the theory of probabilities, with especial reference to its application to matters of evidence, particularly of the judicial kind.

POLE, REGINALD, the celebrated Cardinal, was born in 1500. He was of very illustrious descent on the side of his mother, who was the daughter of George, duke of Clarence, brother to King Edward IV., and cousin-german to Elizabeth, queen of Henry VII. and mother of Henry VIII. He was a younger son, and received an education such as was given to those who were destined to high stations in the church, being placed when a child in the Carthusian monastery at Shene, from whence he was removed to Magdalen College, Oxford, where he had the benefit of the instruction of the celebrated Linacre. As early as 1525, he was made B.A., admitted into deacon's orders, and, when only nineteen, was made dean of Wimborne and dean of Exeter.

About 1520 he went abroad to pursue his studies in an Italian university, visiting Padua for that purpose. He returned to England in 1525, when he was received by the king in a manner befitting his rank and eminent attainments. But the gaieties of the court of Henry VIII. had fewer charms for him than the opportunities for seclusion and study which were afforded by the monastery at Shene, to which he retired. When however the king had resolved on divorcing his queen and acting in defiance of ecclesiastical authority, Pole presented a strenuous opposition, and wrote his famous treatise *'Pro Unitate Ecclesiastica'*. This was a great disappointment to the king, who withdrew his pension, deprived him of his preferments, and procured that he should be attainted in parliament. There is little doubt indeed that Pole would have shared the same fate which befel More and Fisher, had he not withdrawn himself from England and the reach of the king. As it was his elder brother was put to death, and his mother, the old Countess of Salisbury, was executed, both on the poorest and weakest pretences.

During the remainder of that reign, and through the whole reign of Edward VI., Pole lived abroad. In proportion as he was hated by the king, he was cherished by the pope, by whom he was made a cardinal, employed on several important embassies, and was in fact his principal adviser touching all matters which affected the spiritual affairs of the realm of England, and touching the Reformation generally. On the death of Pope Paul III. in 1549, he narrowly missed being elected to the papedom. Failing in this, he retired to a convent near Verona, where he continued till the accession of Mary to the English throne, when an attempt was made to re-unite the English nation to the Romish church.

He re-appeared in his native country at the very beginning of the reign, coming as legate from the Roman see, with full power to absolve the nation, and receive it again into the bosom of the Roman Catholic church. As is well known the re-union was effected. Then began the cruel measures for the extirpation of heresy and heretics, which have made the reign of Mary so infamous in the English annals. How far Cardinal Pole was implicated in the guilt of those unjustifiable severities, is one of the points in his life on which different opinions will be entertained by those who study with attention the history of that period. It is certain that he had great influence in the councils of that reign, and that he accepted the archbishopric of Canterbury when Craumer was put to death. At the same time, the apparent rectitude of his conduct and the general mildness of his disposition would almost forbid us to suppose that he could be a party to the dreadful severities of that period.

Besides the high dignity of primate, he was made chancellor of both the universities, which he visited by his commissioners. If any man could have done it, he would have effected the entire reversal of the measures of the Reformation in England, had the life of the queen been prolonged; but her reign was short; she died in 1558, and, by a singular coincidence, Pole himself died about 16 hours after her, November 18, 1558.

POLEMO (Πολέμων), the name of several Greek writers, of whom the most important are—

1. POLEMO, the philosopher, the son of Philostratus, who succeeded Xenocrates as the head of the Old Academy about B.C. 315. (*Diog. Laërt.*, iv. 16.) He died in B.C. 270, and was succeeded by Crates. Polemo wrote several works (*Diog. Laërt.*, iv. 20), which are referred to by Cicero (*'Acad. Quæst.*, ii. 42), but none of them have come down to us. Cicero says that Polemo did not differ much from Aristotle. (*'De Orat.*, iii. 18.) Zeno and Arcesilas were his disciples. (*Cic.*, *'Acad. Quæst.*, i. 9.)

2. POLEMO, the sophist, was born at Laodicea, and was one of the most celebrated teachers of rhetoric in the beginning of the 2nd century of the Christian era. He was highly esteemed by Hadrian and Antoninus Pius. He taught at Smyrna, and conferred great

benefits upon the town. He died in his fifty-sixth year, and is said to have been buried alive at his own request, because he was unable to endure the pain which he suffered from attacks of the gout. The 'Life of Polemo' has been written at length by Philostratus, who mentions several of his works. These however are all lost, with the exception of two funeral orations, supposed to have been spoken in honour of Cynegirus and Callimachus, who fell in the battle of Marathon. These orations were first published by Stephanus, 1567, and afterwards by Pousines, 1637, Toulouse. The best edition is by Orellius, 8vo, Leipzig, 1819.

3. POLEMO, surnamed PERIEGETES, was a native of Samos or Sicyon (Athen., vi. p. 234, d), and was made a citizen of Athens. (Suidas, 'Polemo.') He lived about B.C. 200. A list of his works, which amount to twenty-six in number, and are principally on geographical and historical subjects, is given by Clinton, in the third volume of his 'Fasti Hellenici,' p. 514. None of these have come down to us entire, but the fragments which are extant have been published under the following title:—'Polemonis Periegetas Fragmenta collegit, digessit, Notis auxit, L. Preller. Acc. de Polemonis Vita et Scriptis et de Historia atque arte Periegetarum Commentationes,' 8vo, Lips., 1838.

POLEMO, the author of a work on physiognomy which is still extant, of whose life no particulars are known. According to some writers he was an Athenian, but Sylburgius (in 'Præfat. ad Aristot.,' vol. vi.) and Fabricius ('Bibl. Gr.,' vol. ii. p. 170) consider his style to be too incorrect for a native of that city. From some expressions used by Polemo (for instance, the word εὐλαβήτος, lib. i., cap. 6, p. 197), it seems probable that he was a Christian. As to his date, it is only known that he must have lived before the time of Origen, who quotes him ('Cont. Cels.,' lib. i. p. 26). His work, which appears to have suffered much from the ignorance of transcribers, is divided into two books. In the first, which contains twenty-three chapters, after proving the utility of physiognomy, he lays down the general principles of the science; he speaks of the shape of the head, of the colour of the hair, of the forehead, the eyes, the ears, the nose, the manner of breathing, the sound of the voice, &c. In the second book, which consists of twenty-seven chapters, he goes on to apply the principles he had before laid down, and describes in a few words the characters of the courageous man, the timid, the impudent, the passionate, the talkative, &c. The greater part of his observations are very ridiculous, but several of them have been borrowed by J. B. Porta and other more recent writers on the subject of physiognomy. His work was first published by Camillus Perucius, with Ælian's 'Varia Historia' and other works, 4to, Græce, Romæ, 1546. A Latin translation by Nicolas Petreius was published with Meletius's 'De Naturâ Hominis' and other works, 4to, Venet., 1552. There is also an edition of the Greek text by Franc. Montecucoli, 4to, Mutin., 1611; and it is inserted by Sylburgius in the sixth volume of his edition of Aristotle's works, 4to, Francof., 1687. The best edition is that by J. F. Franzius, who has inserted it in his 'Scriptores Physiognomii Veteres,' 8vo, Gr. and Lat., Altenb., 1780, and has added a learned preface and notes.

POLEVOY, NIKOLAY ALEXIEVICH, one of the few distinguished authors whom Siberia has yet produced, was born on the 22nd of June (old style) 1796, at Irkutsk. His father, who was descended from an adventurous family of merchants, settled for some generations at Kursk, where the names of Polevoy and Golikov are excessively common, had been left an orphan at the age of thirteen, and sent to Tobolsk in the employ of a relation of the name of Golikov. Most of the elder Polevoy's life was spent in commercial enterprises in Siberia, and at one time he had the prospect of making a fortune by establishing a new company for commerce with Russian America, but the union of the two old companies crushed the plan. In 1805 he set up a manufactory of earthenware at Irkutsk, and "he used," says his son, "to pronounce with enthusiasm the name of Wedgwood." In assisting in the business of this manufactory, and of a brandy distillery with which his father was also connected, the early years of Polevoy were passed. He never apparently received any schooling; he learned to read from an elder sister at six years old; at eight he used to read aloud to his mother novels, and to his father the Bible and the 'Moscow News,' and at ten he assisted his father in the counting-house, and amused himself by composing a manuscript newspaper in imitation of the 'Moscow News' ('Moskovskiya Viedomosti'), which he called the 'Asiatic News' ('Aziyatskiya Viedomosti'). The father was in the habit of boasting of his relation the historian Golikov, who had written a history of Peter the Great in thirty volumes, and the boy formed the singular project of writing additions to a work already so voluminous. He also tried his hand at composing plays, and produced a drama, 'The Marriage of the Tear Alexis Mikhailovich,' and a tragedy entitled 'Blanche of Bourbon.' "At last," says Polevoy in the autobiography prefixed to his 'Ocherki Russkoy Litteratury,' published in 1839, "I became my father's walking dictionary in geography and history, for my memory at that time was such as I have never met with in anybody else. To learn by heart a whole tragedy cost me nothing. In a word, if I must describe my mental progress up to the year 1811, it was this, I had read about a thousand volumes of all kinds and sorts, and remembered all that I read from the verses of Karamzin, and the articles in the

'Courier of Europe' (a Russian Magazine), to the Chronological Tables and the Bible, from which I could repeat whole chapters by heart. I was known in the town of Irkutsk as 'the wonderful boy,' with whom the governor himself used to converse, and the director of the grammar-school to dispute as with a learned man." In 1811 his father resolved to leave Siberia and establish himself in Moscow; the son, who was sent on before him, then on the first occasion of his quitting Irkutsk, passed through all Siberia, saw a play for the first time at the theatre of the great fair of Makariev, and on his arrival at Moscow, spent much of his time at the theatre and the bookshops, wrote tragedies and romances, and was unwillingly recalled to business and the brandy distillery by the arrival of his father. This took place in June 1812, and both business and pleasure were soon at an end in the devoted city, where the conflagration was witnessed by father and son as fugitives from before the army of Napoleon I. For a few years afterwards Polevoy was almost in constant movement from St. Petersburg to Irkutsk, and from Irkutsk to Kursk, and his literary ardour, deadened by the reproaches of his father, who now wished him to become a 'man of business,' appears to have been all but extinguished. It suddenly revived when he was about eighteen, a clerk at Kursk; but the main cause of its renewal according to his own account, was his discontent with his then situation and its limited prospects, and his conviction that in Russia there was no other way to consideration for a person in his position but through learning and literary success. Himself and his younger brother, Xenophon, began to study French and German in secret, devoting many hours of the night to their books, and the knowledge of foreign languages led him into a new world of reading. In 1817, when the Emperor Alexander paid a visit to Kursk, Polevoy sent to the 'Russian Courier' an article describing the event, and had the pleasure of seeing for the first time his name in print. Other contributions followed, the name became known; on a visit to St. Petersburg he was introduced to Zhukovsky, Griboyedov, Grech, and Bulgarin, and in 1825 he commenced at Moscow the publication of a magazine entitled the 'Moscow Telegraph.'

For the twenty-one years that followed, Polevoy was in incessant literary activity. The 'Moscow Telegraph' soon made itself conspicuous by the vigour and spirit of its remarks on the literature of the day; the example was extensively followed, and the Russian literary historians date a new era in criticism from the articles of Polevoy. It was naturally supposed that the editor had little spare time at his disposal, but the public was surprised to hear in 1829 that he had completed a history of the Russian nation, in 12 vols., containing a continuous narrative from the earliest times to the reign of the Emperor Nicolas. The early volumes of this history were assailed without mercy by many who were astonished at the presumption of its author in measuring himself with Karamzin, and of the twelve volumes only six appeared in print, the last in 1833. Possibly its further progress may have been checked by the censorship, as the 'Moscow Telegraph' was thought too liberal in its tendencies, and suppressed by the Russian government. This was in or about 1835. Polevoy removed to St. Petersburg, and his activity, instead of slackening, became greater than ever. "In Moscow," says Nikitenko, in an article on his works in the 'Biblioteka dlya Chteniya' for 1848 (vol. lxxvi.), "Polevoy was a journalist, an historian, a romance-writer. In St. Petersburg he was both an editor and a contributor to several journals; he composed romances, tales, essays, translations from Shakspere, and such a multitude of dramas, tragedies, comedies, vaudevilles, national farces, and so on, that criticism gave up the attempt to follow him. We do not know what to be most astonished at—the number and bulk of his productions, the variety of their character, or the rapidity with which he threw them off." The natural result of this rapidity was, that the name of Polevoy, which at one time promised to be one of the brightest in the Russian literary horizon, lost much of its lustre. For the last ten years of his life his reputation sunk instead of rising. He died at St. Petersburg, on the 22nd of February 1846 (o.s.), after three weeks of nervous fever, and it was declared by his medical attendants that his constitution was completely worn out by his incessant literary labour. He died in poor circumstances, and left a large family.

The most interesting work of Polevoy is perhaps his 'Ocherki Russkoy Litteratury,' or 'Sketches of Russian Literature,' 2 vols. 8vo, St. Petersburg, 1839. It consists of reprints of select critical articles which had appeared in the 'Telegraph' and elsewhere, on Devzhavin, Karamzin, Pushkin, and other of the most prominent names in Russian literature. The collection entitled 'Dramatic Works and Translations of N. A. Polevoy' ('Dramaticheskie Sochineniya i Perevodni'), 4 vols., St. Petersburg, 1842-43, comprises only the more popular of his productions, several of which enjoyed a great success, in particular the 'Grandfather of the Russian Fleet' ('Diedushka Russkogo Flota'), founded on the history of the old boat which bears that name, which Peter the Great took as the model for his ship-building. The author's favourite, as he tells us himself, was 'Parasha Siberiachka' ('Parasha the Siberian Girl'), founded on the same historical anecdote which supplied Madame Cottin with the groundwork of 'Elizabeth, or the Exiles of Siberia.' In another play, 'Soldatskoe Serdtse' ('A Soldier's Heart'), the hero is his still-living friend Bulgarin [BULGARIN], on a real incident in whose life it is

founded. Poleyov's translation of 'Hamlet,' which was produced at Moscow in January 1837, is unusually close to Shakspeare; not even the scene of the gravediggers is omitted, and the dialogue passes from blank verse to prose, in imitation of the original, but the versification seems to be far from successful. His 'Life of Suvorov,' or Suvarrow, is a very popular book in Russia. His 'Life of Peter the Great' (4 vols., 1843), is the best biography of that wonderful man the Russians yet possess, and superior beyond all comparison to the tedious compilation of the author's kinsman Golikov. His 'Life of Napoleon' (5 vols.) was only brought by himself to a point a little beyond the conflagration of Moscow, and was finished after his death by his brother Xenophon. His 'Stolietie Rossi' ('Century of Russia'), or an historical picture of Russia from 1745 to 1845 (2 vols., 1845), is perhaps the least satisfactory of his historical works, but it contains passages of interest to a European reader.

Though the "Moscow Telegraph" was suppressed in Poleyov's hands, and its author is spoken of by Hertzén [HERTZÉN] as having the reputation of a decided liberal, his patriotism as a Russian is one of the qualities which most forcibly strike the attention of a foreigner. "Russia," he exclaims at the conclusion of this work, "is not a shapeless mass like the Roman empire, not violently put together like the dominions of Napoleon, not scattered over the whole world like the British sovereignty, the three examples of vast empires composed of different and various parts, brought together in one mass. . . . Russia like the ocean dashes on the shores that surround it, and what its waves have covered becomes its incontestable dominion—no human force shall tear from it its subject provinces." "Assuming the title of Emperor in place of that of Tzar, moving the capital from Moscow to St. Petersburg, shaving beards and shortening caftans, altering manners, customs, and laws, it was after all from the original elements of the Russian empire, from the Russian mind and the Russian soil that Peter the Great reconstructed Russia. He still remained a Russian sovereign, and his subject, though fraternising with the German, remained a Russian man. With his decided tendencies towards western Europe, it was impossible that something superfluous should not find admission, that traces of it should not remain till even now, but they are perishing and will perish, as the Gallicisms die out of our Russian tongue." . . . "And sixty millions of a nation like this, fastened together by one power and inspired with faith in that power, are directed by a single will, and acknowledge that will as sacred. What will not these sixty millions do? The future belongs to us. Whence otherwise comes the fear with which we inspire Europe and the West, the fear from which it strives to reassure itself by calumnies against us. This fear takes its rise from a consciousness which is not the consciousness of strength, from a feeling different from that of hope in the future, on which we Russians look with such boldness and such faith."

\* POLEYOV, XENOPHONT ALEXIEVICH, a younger brother of Nikolay, was a bookseller at Moscow, and is now at St. Petersburg. He is the author of some works of which the most interesting is 'Michael Vasilievich Lomonosov' (2 vols. Moscow, 1836), a novel founded on the biography of the Russian author whose name it bears. [LOMONOSOV.] The book is reviewed at some length by his brother in the 'Ocherki.'

POLI, JOSEPH XAVIER, was born at Molfetta in the kingdom of Naples in 1746. He was educated at the University of Padua, under the celebrated Facciolati; he was also the pupil and friend of Morgagni, and fellow-student with Scarpa, with whom he studied anatomy and medicine. On the termination of his education he entered the army, and his scientific and literary acquirements becoming known to Ferdinand I., he appointed him in 1776 professor of military geography at Naples. The king also sent him into France, Germany, England, and Holland, to visit the different foreign military academies. During his travels he became acquainted with many eminent scientific men in the countries which he passed through. In England he met with Herschel, Banks, and John Hunter, and he acquired much information from Hunter on comparative anatomy and on the mode of preparing specimens in natural history. While in London he was elected a member of the Royal Society. On his return home he was appointed professor of experimental philosophy at Naples, and he afterwards undertook the office of tutor to the hereditary prince, and became director of the military academy at Naples. He always highly enjoyed the confidence and favour of the royal family, and he accompanied them to Sicily during the French revolutionary war. He died at Naples, April 7, 1825.

Though he successfully cultivated other branches of science and literature, Poli owes his celebrity to his researches in comparative anatomy and natural history: his attention was particularly directed to the study of the testaceous *Mollusca*. While travelling in Italy and abroad he formed a very fine collection of shells, which was purchased of him by the Neapolitan government. He determined however to be something more than a simple conchologist, and diligently investigated the structure and habits of the animals that inhabit the shells, which had hitherto almost escaped attention. The results of his labours were published in a splendid work denominated 'Testacea utriusque Siciliae eorumque Historia et Anatomia,' folio, Parma. Two volumes appeared in 1792-95, illustrated with 89 beautiful plates engraved on steel. These contain the multivalved and bivalved *Testacea*, and cost the author twelve years of research. The third volume, embracing the univalves, was delayed by the political

troubles with which the country was agitated; and though nearly completed, was not published until 1826, after the death of the author: it contains 18 plates, making 57 in all. This sumptuous work is as remarkable for the value of the text as the beauty of the plates. The structure, habits, locality, and mode of capture of the different molluscs inhabiting the southern coasts of Italy are accurately described; as well as the form, colour, and other peculiarities of the shells in which they are contained. Poli discovered many new and interesting anatomical and physiological facts, as well as new genera and species; and his descriptions are mostly very accurate. He fell however into some errors, the principal of which was that of mistaking the nerves of these animals for lymphatics. The first discovery of the nervous system of the *Testacea* is due however to Poli, though he mistook its nature. He also wrote several works on geography, and some Italian poems.

POLIDORO. [CARAVAGGIO, POLIDORO DA.]

POLIGNAC, MELCHIOR, CARDINAL DE, was born at Puy in Languedoc in 1661, of an illustrious family, studied at Paris, and took holy orders in 1689. He accompanied Cardinal de Bouillon to Rome, and was employed as a negotiator to settle some differences between France and the court of Rome. He was sent by Louis XIV. in 1693 as ambassador to Poland, where, after the death of John Sobieski in 1696, he contrived to have François Louis de Bourbon, prince of Conti, proclaimed King of Poland by the majority of the electors. But another party proclaimed Frederic Augustus, elector of Saxony, who was at length acknowledged by the whole nation. [AUGUSTUS II.] Louis XIV., being displeased, recalled the Abbé de Polignac, and banished him to his abbacy at Bonport, where he employed himself in writing his poem in refutation of Lucretius. Being recalled to court after some years, he was appointed by Louis XIV., in 1706, auditor of the rota at Rome. In 1709 he returned to France, and in 1710 he was sent to Holland to negotiate the general peace. He was one of the French plenipotentiaries at the congress of Utrecht. In 1713 he was named cardinal. In 1724 he went to Rome as minister of France. In 1732 he returned, and he died on the 10th of November, 1741. Cardinal Polignac was a member of the French Academy, of the Academy of Sciences, and of that of Inscriptions and Belles Lettres. ('Eloge du Cardinal de Polignac,' Paris, 1742.) His Latin poem, 'Anti-Lucretius, sive de Deo et Natura libri novam,' Paris, 1754, is a refutation of the system of Lucretius, and intended as a demonstration, from evidence afforded by the works of the creation, of the existence of a Supreme Being, the maker and regulator of all things. Some of the descriptions are very fine. The ninth book was left unfinished by the author, and the whole poem was not published till after his death. The 'Anti-Lucretius' has been translated into French and Italian.

POLIZIANO, or POLITIANUS, ANGELO, born at Montapuciano in Tuscany, in 1454, was the son of Benedetto Ambrogini, a doctor of law. In after-life he dropped his paternal name, and assumed that of Poliziano, from his native town Mons Politianus. Lorenzo de Medici took care of his education, placed him under good preceptors, and provided for all his wants. He afterwards entered into clerical orders, took his degree of Doctor of Law, and was made a canon of the cathedral of Florence. He was entrusted by Lorenzo with the education of his children, as well as with the care of his library and collection of antiquities, and he was his guest and companion for the remainder of his life. Poliziano had studied Latin under Cristoforo Landino, Greek under Andronicus of Thessalonica, and philosophy under Ficino and Argyropulus of Constantinople. He was afterwards appointed professor of Latin and Greek at Florence, a chair which he filled with great reputation. He wrote scholia and notes to many ancient authors—Ovid, Catullus, Statius, Suetonius, Pliny the Younger, and the 'Scriptores Historiae Augustae;' he translated into Latin the history of Herodian, the manual of Epictetus, the aphorisms of Hippocrates, some dialogues of Plato, and other works from the Greek. The 'Miscellanea' of Poliziano, published at Florence in 1489, consist chiefly of observations he had made on the ancient authors, which he arranged for the press at the request of Lorenzo. Merula made an attempt to depreciate this work, which led to an angry controversy between the two scholars, in the midst of which Merula died. Politianus had also a violent controversy with Bartolomeo Scala, in which the two disputants abused each other in Latin, according to the custom of scholars in those times.

Poliziano was conceited and vain, and very irritable, and his temper led him into an unbecoming altercation with Madonna Clarice, Lorenzo's wife, because she interfered in the education of her children, a thing which Poliziano seemed to think preposterous in a woman; and at last his behaviour to her was so impertinent that she turned him out of her house in the country, and she wrote to her husband at Florence to inform him of what she had done. Lorenzo, perceiving that a reconciliation between the offended woman and the irascible scholar was impracticable, gave Poliziano apartments in one of his houses at Fiesole, where he wrote his Latin poem 'Rusticus.' During Lorenzo's last illness, Poliziano attended the death-bed of his patron, who gave him tokens of his lasting affection. Poliziano wrote an affecting monody on Lorenzo's death, and not long after died himself, in September 1494, at the age of forty, and was buried in the church of San Marco, agreeably to his request. Jovius and others have told several improbable stories as to the immediate

cause of his death. (Corniani, 'Secoli della Letteratura Italiana'; Roscoe, 'Life of Lorenzo de' Medici'.)

The other works of Poliziano are—1, 'Panepistemon,' in which he describes a category of all the various branches of human knowledge; 2, 'Sylve,' odes, epigrams, and other short Latin poems; 3, his Italian poetry, especially his poem on the Giostra, or tournament of Giuliano de' Medici, which is much admired. He also wrote the 'Orfeo,' which is considered as the earliest specimen of the opera, or Italian musical drama. His Latin works, including twelve books of Letters, were published at Paris, folio, 1512.

POLLAJUOLI, ANTONIO AND PIERO, two distinguished Florentine painters and sculptors of the 15th century; they were the sons of Jacopo del Pollajuolo. PIERO was the pupil of Andrea del Castagno; ANTONIO was the more distinguished; he was the pupil of Lorenzo Ghiberti, and assisted him in the celebrated gates of the baptistry of San Giovanni; he became also a famous goldsmith, and was as such without a superior in Florence; Maso Finiguerra was his contemporary. The two brothers generally executed their paintings together; the best of them, says Vasari, is the 'Martyrdom of St. Sebastian,' painted in 1475, in the church de' Servi at Florence: it is engraved in the 'Etruria Pittrice' of Lastrì. Antonio is said to have been the first artist who studied the dead subject for the purposes of design. Antonio Pollajuolo was invited to Rome in 1484, after the death of Sixtus IV., by Innocent VIII., and he made the monuments of Sixtus IV. and of Innocent VIII.; that of Sixtus, in 1498, is now in the chapel of the Sacrament in St. Peter's; the monument of Innocent is also in St. Peter's. Antonio was also a medalist, and he engraved three or four plates, which are extremely scarce. The brothers both died in 1498: Antonio was born about 1430; Piero five years later.

POLLAJUOLO, SIMONE DEL, or SIMON MASI, a distinguished architect, commonly called IL CRONACA, from his ability in relating stories, was born at Florence in 1454. He was related to Antonio del Pollajuolo, and lived with him some time at Rome. He is chiefly distinguished for the Palazzo Strozzi, one of the most solid and imposing buildings of Florence; it was commenced in 1489 by Benedetto da Maiano, but was completed by Cronaca, and the great cornice or entablature and the court in the interior are from the designs of Cronaca. The iron-work and the beautiful lanterns are by Niccolò Grosse, commonly called Caparra, a nickname which was given to him by Lorenzo de' Medici on account of his always persisting in being paid before he delivered his work; Caparra signifies deposit or advance-money. Grosse was the most celebrated smith of his time. Cronaca built also the great council-hall for the Signoria of Florence, which was afterwards enlarged and embellished by Vasari; the church of San Miniato al Monte, the convent Dei Servi, and the Sacristy of Santo Spirito. He was a follower of Savonarola: he died in 1509.

POLLIO, CAIUS ASIINIUS, was born B.C. 76, and appears to have been descended from a family of no great consequence. (Vell. Pater., ii. 128.) He is called by Catullus a Marrucinian, and was probably a descendant of Herius Asinius, who commanded the Marucini in the Maric war, and was killed in battle. (Livy, 'Epit.', 73.)

We first read of Pollio as the public accuser of C. Cato (B.C. 54), who was acquitted through the influence of Pompey. (Tac., 'Dial. de Orat.', 34; Cic., 'Ad Att.', iv. 15, 16, 17.) On the breaking out of the civil war between Cæsar and Pompey, Pollio took the side of Cæsar, and accompanied him in the passage of the Rubicon. (Plut., 'Cæs.', 32.) He was afterwards sent by Cæsar, under the command of Curio, to Sicily and Africa, and after the defeat of Curio by Juba, he escaped with a few of the forces to the neighbourhood of Utica, and thence passed over to Italy to join Cæsar. (Appian, 'De Bell. Civ.', i. 45, 46.) He was present at the battle of Pharsalia (Plut., 'Pomp.', 72) and two years afterwards (B.C. 46) he accompanied Cæsar into Africa and Spain, and on the return of Cæsar to Italy appears to have been made one of the fourteen prætors who were appointed by Cæsar at that time. (Drummann, 'Geschichte Roms,' vol. ii. p. 6. Pollio probably did not return to Italy with Cæsar, since we find him in the following year (B.C. 45) acting as Cæsar's legatus in Spain, where he carried on the war against Sextus Pompeius. (Dio., xlv. 10; Vell. Pater., ii. 73.) On the death of Cæsar (B.C. 44), he appears, if his letters to Cicero contain his real sentiments ('Ad Fam.', x. 31, 32, 33), to have been inclined to support the senatorial party; but after Octavianus united himself to Antony, Pollio no longer hesitated to support the latter. He soon afterwards received from Antony the government of the province of Gallia Transpadana, and was nominated by the triumvirs as one of the consuls for B.C. 40. During his consulship, Virgil addressed to him the fourth Eclogue. In the following year Pollio was sent by Antony against the Dalmatians, whom he conquered, and obtained the honour of a triumph. He appears to have retired about this time from public affairs. He took no part in the war between Augustus and Antony, and when asked by the former to accompany him to the Actian war, he declined doing so on account of his early friendship with Antony. He died A.D. 4, at his Tusculan villa. (Clinton, 'Fast. Hell.')

Pollio was a great patron of learning and the fine arts, and was also the author of several works which were greatly praised by his contemporaries. He appears to have possessed a fine collection of ancient statues. (Pliny, 'Hist. Nat.', xxxvi. 4, § 6.) He founded the

first public library at Rome, in the Atrium Libertatis on Mount Aventine. (Ibid., 'Orig.', vi. 5; Ovid, 'Trist.', iii. 1, 71; Mart., 'Epiq.', xii. 3, 5.) He lived on intimate terms with Virgil and Horace, the latter of whom has dedicated to him the first ode of his second book. He was a poet, an orator, and an historian, and his poetry, and more especially his tragedies, if we can trust the suspicious testimony of Virgil ('Ecl.', iii. 86; viii. 10) and Horace ('Carm.', ii. 1, 9-12; 'Sat.', i. 10, 42), were far above the common standard. His history of the civil wars, which was comprised in seventeen books, is quoted or referred to by several of the ancient writers. (Plut., 'Cæs.', 46; Suet., 'Cæs.', 30; Appian, ii. 82; Tac., 'Ann.', iv. 34.) His orations are frequently spoken of by Quintilian, but his style is condemned as deficient in clearness and ease. (Quint., 'Inst. Orat.', x. 1; compare Tac., 'Dial. de Orat.', 21; Senec., 'Ep.', 16.) Pollio also appears to have written criticisms on the works of most of his contemporaries, and to have attacked them in a very severe manner. He found great fault with the orations of Cicero (Quint., 'Inst. Orat.', xii. 1), and said that the 'Commentaries' of Cæsar were deficient in historical accuracy. (Suet., 'Cæs.', 56.) He remarked a kind of Patavinity in the style of Livy (Quint., 'Inst. Orat.', viii. 1; i. 5), and appears to have censured Sallust for the use of ancient words and modes of expression. (Suet., 'De Clar. Gram.', c. 10.) All his writings are lost, with the exception of a few letters to Cicero.

POLLIO, TREBELLIIUS. [AUGUSTA HISTORIA.]

POLLOK, ROBERT, was born at Muirhouse, in the parish of Eaglesham, in Renfrewshire, in 1799. He studied at the university of Glasgow, and afterwards followed the course of theological education necessary to fit him for a charge in the United Secession Church, of which he became a licentiate in 1827. Just before he received his licence, he had finished the poem on which his literary reputation rests, 'The Course of Time.' A work so ambitious, from the hands of a country student attached to a small body of dissenters, was not likely to find a patron among publishers. It happened to be shown to Professor Wilson, of Edinburgh, as a curiosity, and he recognising in it great poetic power, it was published on his recommendation by Mr. Blackwood, of Edinburgh, and speedily passed through several editions. It was a novelty in the class of evangelical religious literature to which it belonged, and besides pleasing those who are partial to that class of religious literature, it was a boon to many who are inclined to read religious books, but are repulsed by their general dryness and insipidity, while it was warmly admired by the literary world at large. Mr. Pollok's partial admirers expected for him a place on a level with Milton. After the novelty of such a phenomenon had however passed off, the book became neglected by purely literary readers; and at this day it may be said that it is estimated too highly by the religious, and perhaps too insignificantly by the literary world. It is a work of great power, but meagre fancy. It has a considerable amount of sentiment deeply tinged with religious asceticism. Many sentiments are spun out or repeated, and the interest frequently flags. Pollok's mind was evidently imbued with 'Paradise Lost,' and he follows Milton often to the verge of direct imitation. Before the publication of his poem this interesting young man had undermined his constitution by excessive mental labour, and he scarcely lived to see its success. On the recommendation and through the assistance of his friends he was preparing for a journey to Italy. The disease had however made too great progress to admit of his leaving Britain, and he died near Southampton on the 15th of September, 1827.

Pollok's earliest productions—'Helen of the Glen,' 'Ralph Gemmill,' and 'The Persecuted Family'—were in prose, and were issued anonymously. They have been republished with his name in one volume, entitled 'Tales of the Covenanters,' and have passed through four editions. A very inadequate memoir of Pollok, by his brother, with extracts from his correspondence, has been published by Messrs. Blackwood, who have also just issued (1857) a beautifully-illustrated edition (the twenty-first) of the 'Course of Time.'

POLLUX, JULIUS, whose real name is Polydeuces (Πολυδεύκης), a celebrated grammarian and teacher of rhetoric, was born at Nauoratis in Egypt, about the middle of the 2nd century of the Christian era. He was well educated by his father, and afterwards received instruction from Adrian the sophist. He was a favourite with M. Aurelius and his son Commodus, by the latter of whom he was appointed teacher of rhetoric at Athens. He died at the age of fifty-eight.

Pollux wrote several works, all of which have been lost except his 'Onomasticon.' The 'Onomasticon,' or Dictionary of Greek words, is not arranged in alphabetical order, but is divided according to subjects, and gives the different Greek words which belong to each subject. Thus all the words relating to agriculture are classed by themselves, and in the same way all words belonging to ships, carriages, houses, &c., are treated of separately. The work is not merely a dry list of words, but contains numerous quotations from the different Greek writers, and supplies us with much information relating to antiquity, of which we must otherwise have been ignorant. It is divided into ten books, and was dedicated to Commodus during the life-time of Aurelius. The first edition was published at Venice, in 1502. The best editions are by Hemsterhusius, who has annexed a valuable Commentary, Amst., 1706, 2 vols. folio; Dindorf, Leipzig, 1824, 5 vols. 8vo; and Bekker, Berlin, 1846.

There was also another writer of the name of Julius Pollux, who

lived in the 10th or 11th century of the Christian era, and wrote a 'Chronicle,' or 'Universal History' from the foundation of the world to the time of Valens. This work, which has come down to us, has been edited by Bianconi, Bonn, 1779, folio; and Hardt, Munich and Leipzig, 1792, 8vo.

POLO, MARCO, the son of a Venetian merchant named Niccolo, who set off from Venice with his brother, in 1250, for Constantinople, whence, having purchased valuable jewels and precious stones, he sailed up the Euxine to La Tana at the mouth of the Tanais. From La Tana he proceeded inland to Bulgar on the Volga, the residence of Barga, the khan of the Western Tartars, or of Kaïtchak, who purchased his wares at a very liberal price. From the residence of the khan the two Venetian travellers proceeded round the north side of the Caspian Sea to Bokhara, where they arrived in 1261. They remained three years at Bokhara, during which time they applied themselves to the study of the Mongol language, and in 1264 they met an ambassador sent by Hulaku, grandson of Gengis, the ruler of Persia, to Kublai, the great khan of the Mongols, or Khalkhas, who ruled over Tartary and China, and who resided at Kamenfu in Chinese Tartary. The two Venetians agreed to accompany the ambassador, and arrived at Kamenfu in the following year (1265). Kublai received them well, and wishing to establish a connection with the Western world, of which he had only a confused knowledge, he commissioned the two brothers Polo to proceed as his envoys to the pontiff of the Christians, requesting him, in a letter, to send him a hundred men, learned in the various sciences and arts, to instruct his people. The Polo, furnished with Kublai's credentials, returned towards the West, and arrived at the coast of Syria, whence they sailed for Venice, which they reached in 1269, after an absence of nineteen years. Niccolo found his wife dead, but she had left him a son, Marco, who was born soon after his departure.

Owing to the death of Pope Clement IV. and the long interregnum which followed, the two Polo could not execute Kublai Khan's commission, and they determined on returning to Tartary, and taking young Marco with them. But after they had landed on the coast of Syria they heard of the election of Gregory X., who was then at Ptolemais, whither they repaired, and conferred with the new pope on the subject of their mission. Gregory appointed two Dominican friars to accompany them. They set out for the interior in 1272, but the two friars, being frightened at the war which was then raging in Asia between Sultan Bitars the Mameluke and the king of Armenia, declined prosecuting their journey, and the three Venetians proceeded alone through the regions of Central Asia. They reached the court and camp of Kublai Khan in 1275, where they met with the most favourable reception. Kublai was especially pleased with Marco, and entrusted him with missions to various parts of China and India. Marco Polo was the first European who visited China Proper: he made memoranda of what he saw himself, and eagerly collected all the information that he could obtain about those parts which he did not visit. In reading his narrative therefore a distinction ought to be made between his own observations and those which he derived from the report of others. After a lapse of several years, an ambassador arrived at the court of Kublai Khan from Argon, the ruler of Persia, who asked in marriage a princess of Kublai's family. Kublai chose a princess named Cagatin, and prepared to send her to Persia by sea, with several ambassadors and a large retinue. The three Polo obtained, though not without difficulty, permission to form part of the escort. They set out in 1291, traversed China, embarked on the coast of Fo-kien, which lies opposite to the island of Formosa, and thence they proceeded through the straits of Malacca to the island of Ceylon, and thence to Ormus in the Persian Gulf. On landing they proceeded to Teheran, where they found that Argon was dead, and some time after, hearing also the news of the death of Kublai, the three Venetians thought of returning home, and at last arrived at Venice in 1295. War was then raging between Venice and Genoa. Marco Polo obtained the command of a galley forming part of the squadron commanded by Andrea Dandolo, which was defeated by the Genoese under Lamba Doria, off the island of Curzola in the Adriatic. Marco Polo was carried prisoner to Genoa. In his captivity he used to relate his adventures, and was eagerly listened to. He sent to Venice for his memoranda, which he had taken down during his travels, and having made acquaintance with a fellow-prisoner of the name of Rustichello, a native of Pisa, who had been taken, with thousands of his countrymen, in the battle of Meloria, he dictated to him the narrative of his travels, and lent the manuscript to read to the curious.

After peace was made between Genoa and Venice, Marco Polo returned home. His father Niccolo was still living, but he died in 1316. Marco's will is dated 1323; but of his last years nothing more is known, except that after his return to Venice he applied himself to correct and improve the text of his narrative, of which it appears that a French translation was made under his direction, and given by him to Thibault, lord of Cepoy, who was appointed by Catherine de Courtenay her vicar-general in the possessions which still remained to the Latins in the East. The work is entitled 'Marco Polo, delle Meraviglie del Mondo da lui descritte;' and in other copies, 'Delle Cose dei Tartari e dell' Indie Orientali;' and in others, 'Il Milione di Marco Polo.' It was inserted by Ramusio in his 'Raccolta di Navigazioni e Viaggi,' 3 vols. folio, Venice, 1550-52. But the best edition

of Marco Polo is that by Count Baldelli, 4 vols. 4to, Florence, 1827, entitled 'Il Milione di Messer Marco Polo Veneziano,' with notes and illustrations, and a biography of Polo: it is also accompanied by a history of the intercourse between Europe and Asia in the middle ages, with the following title:—'Storia delle Relazioni Vicendevoli dell' Europa e dell' Asia dalla Decadenza di Roma fino alla Distruzione del Califato.' Baldelli's work is illustrated by a map of Africa, drawn in 1851, and by another map with all the itineraries of the three Polo traced upon it. It is altogether a work of great research and very interesting. For a long time Polo was considered a liar and not worthy of confidence. But more accurate investigations have demonstrated his veracity in relating what he saw himself. Klaproth, in several articles in the French 'Asiatic Journal,' has proved Polo's accuracy with regard to China. Polo's narrative was of great use to the pope's missionaries and the Venetian travellers who followed his track in the eastern parts of Asia; and the Chinese and Arabian maps which he brought home encouraged and assisted the Portuguese navigators in finding a passage to India round the Cape of Good Hope. Marsden has published a translation of Marco Polo's narrative, accompanied by a commentary.

POLYÆNUS was the author of a work called *Στρατηγηματα*, or *Στρατηγηματα* ('Stratagems of War'), in eight books. He lived about the middle of the second century of our era. Respecting the circumstances of his life we know nothing except what he himself tells us in the introduction to his work, which he dedicated to the emperors M. Aurelius Antoninus and L. Verus. He there says that he was a native of Macedonia, and at an advanced age when he wrote his book. It contains an account of the various stratagems of war from the remotest times down to his own, and is a compilation made without any taste or judgment: it is however not confined to real stratagems; it contains sayings, apophthegms, and many other things which are anything but what the title-page promises. But as the author collected his materials from sources which are now lost, we have reason to be grateful for the preservation of many facts which would otherwise be unknown to us, though it is evident in many passages that Polyænus must have misunderstood or misrepresented his authorities. His style is rhetorical, but notwithstanding its numerous solecisms and errors, it is better than that of many other writers of the same age. The first edition of Polyænus was published by Casaubonus at Lyon in 1589. The best edition is that by Coraes, Paris, 1809. Polyænus has been translated into English by R. Shepherd, 4to, London, 1793; and into German by Seybold, in 2 vols., Frankfurt, 1793 and 1794.

POLYBIUS, the son of Lycortas, was born at Megalopolis in Arcadia. The exact year of his birth is not stated by any good authority, and the account of Suidas, who places it in the reign of Ptolemæus Euergetes (who died about B.C. 222), is irreconcilable with what Polybius himself (xxv. 7) relates, that in the reign of Ptolemæus Epiphanes, when he was to have accompanied his father on an embassy to that king, he had not attained the legal age, which, according to Polybius himself, was thirty, previous to which the law did not allow any one to take part in public affairs. According to the statement of Suidas however, Polybius at this time would have been about forty years old. Now the year in which the Achæans intended to send him with his father to Egypt was B.C. 180; and as at that time he had not attained his thirtieth year, we shall not be much mistaken in supposing, with Casaubon, that he was born about B.C. 204, so that at the time of the intended embassy he must have been about twenty-five.

He seems to have acquired the principles of political and military science at an early age, for his father was a distinguished general and one of the heads of the Achæans, and it is expressly mentioned that he enjoyed the practical training of Philopomen, the greatest general of the Achæans. When Philopomen died, Polybius is said to have been one of those who carried the urn containing the ashes of the deceased to the grave. (Plut., 'Philop.' c. 21.) During the war of the Romans against Perseus, king of Macedonia, he advised his countrymen to observe a strict neutrality; but when they determined to lend their assistance to the Romans he was intrusted with the command of the cavalry (B.C. 169), and was sent as ambassador to the consul Q. Marcus to declare that the Achæans were ready to give their assistance as soon as might be required. (Polyb., xxviii. 3, 6.) The year following, when the two Ptolemæi, kings of Egypt, asked the Achæans for support against Antiochus, it was particularly stipulated that Polybius should be appointed commander of the horse, which shows that he had already distinguished himself in a military capacity. After the destruction of the kingdom of Macedonia, the Romans, not satisfied with having taken cruel vengeance on those Achæan states which they suspected of having secretly supported the cause of Perseus, made out a list of 1000 distinguished Achæans, and sent them to Italy to be tried; but instead of being brought to trial, they were distributed among the towns of Italy. Polybius, who was one of the number, was more fortunate than his fellow-prisoners, for his genius and talents attracted the attention of Æmilius Paulus, who made him the instructor of his two sons, Fabius and Scipio. Those young men, who became greatly attached to him, requested and obtained permission for Polybius to remain at Rome. Polybius himself (xxxii. 9, 10) relates a charming anecdote of the tenderness which Scipio, the younger of the two brothers, showed to him; and he adds that Scipio never left him afterwards, but preferred his company to everything else.

During his long stay at Rome, Polybius on several occasions exerted his influence in favour of his countrymen; and at length, in B.C. 150, he succeeded, with the co-operation of Scipio, in obtaining for the Greek prisoners permission to return home; but during the period of seventeen years which had elapsed since their arrival in Italy, their number had been reduced to 300. Polybius seems to have accompanied them on their return, in order to admonish his countrymen not to divide their strength, and to recognise the superiority of the Romans, whose power it would be hopeless to resist; for an inscription mentioned by Pausanias (viii. 37) recorded the regret of the Achæans at not having followed his wise advice, by which they would have escaped the catastrophe of their final political annihilation. Polybius soon returned to Rome, to accompany his friend Scipio on his military expeditions. It must have been before this time that he had conceived the idea of writing his great historical work, and for this purpose he made more profound and extensive studies than any other ancient historian. He not only studied the Roman constitution, and searched the archives which were thrown open to him through his connection with the most distinguished Romans, but he undertook long journeys across the Alps into Gaul, Spain, and to the coasts of the Atlantic. It is not certain whether he made these journeys previous to the year B.C. 150, or after his return from Greece, though it seems probable that he may have availed himself of the opportunity of visiting Spain when Scipio went to that country as military tribune in B.C. 151. Five years later, when Scipio besieged and destroyed Carthage, he was again accompanied by Polybius, who seems to have taken an active part in the Roman army, for in an inscription quoted by Pausanias (viii. 30) he is called the ally of the Romans. Pliny says that during the siege of Carthage, Polybius explored the north coast of Africa, in which undertaking, as on his former journeys, he was provided with everything that could facilitate the accomplishment of his objects. Immediately after the destruction of Carthage (B.C. 146) he hastened to the Peloponnesus, where in the meantime a war with the Romans had broken out. But he arrived too late: Corinth had already fallen, and all he could do for his unhappy country was to endeavour to obtain from the conquerors the mildest possible conditions, and to rescue from their hands the statues of Philopœmen and Aratus, with whose memory the happiest associations of his countrymen were connected. After the Roman commissioners had left Greece in B.C. 145, he was appointed by them to regulate the affairs of the different states. With the most indefatigable zeal he traversed the country, everywhere endeavouring to restore peace and unity, and to introduce salutary regulations. His merit on this as well as former occasions was duly acknowledged and rewarded throughout the Peloponnesus, and statues, with inscriptions recording his exertions on behalf of his country, were erected at Megalopolis, Acacesium, Mantinea, Pallantium, Tegea, and other places. Soon after he had settled the affairs of his country he made a voyage to Egypt, which, according to Strabo, he visited in the reign of Ptolemæus Physcon, who ascended the throne in the same year that Corinth was destroyed. The remaining years of his life he seems to have applied to the revision and completion of his historical works, unless we suppose, with Schweighæuser and others, that in the year B.C. 134 he again accompanied Scipio on his expedition against Numantia, for which however we have no direct authority. Cicero ('Ad Famil.' v. 12) merely mentions a work of Polybius on the war against Numantia. The time of his death is uncertain, for the only information that has come down to us is the statement of Lucian (Macrob., c. 23), who says that Polybius, on returning from the country, fell from his horse, and shortly after died from the fall, at the age of eighty-two. Supposing the statement to be correct, he must have died about the year B.C. 122.

The great historical work of Polybius (*ἡ τῶν καθόλου πραγμάτων σύνταξις*), in forty books, consisted of two distinct parts, the first of which comprised a period of fifty-three years, from the beginning of the second Punic war to the overthrow of the kingdom of Macedonia, including the immediate consequences of this event, that is, the pacification of Rhodes, and the sending of the 1000 Achæan prisoners to Italy. The second part began with the war in Spain against the Celtiberians and Vaccæans, and ended with the destruction of Corinth. It is evident, from various circumstances (Niebuhr, 'Hist. of Rome,' vol. iii., p. 49), and especially from the manner in which Polybius (iii. 1-5) speaks of these two divisions of his work, that they were written and published at different times, and afterwards put together to form one whole. The latter part was written after the fall of Corinth, and the former some years before that event. The first two books are an introduction to the first division of the work, and contain a sketch of the history of Rome, from the taking of the city by the Gauls to the beginning of the second Punic war. The second division of the work, the principal object of which was to describe the fate of Carthage and Greece, and the causes which led to it, was likewise preceded by a kind of introduction, consisting of a brief history of the interval between the overthrow of the Macedonian kingdom and the events which led to the fall of Carthage and Corinth. The great object of the history of Polybius was to show how the Romans, with their admirable constitution and their unity of purpose, within a short period gained the dominion over the greater part of the known world. Thus, although the history of Rome formed, as it were, the nucleus of his work, it was still essentially a universal

history; and every nation, with its history and institutions, as it came in contact with the Romans, was treated with equal attention. But the work was further interspersed with episodes or dissertations on various subjects, such as tactics (vi. 17-46), geography (xxiv.), political institutions, &c., which the author thought necessary to insert, partly to render his narrative more intelligible, partly to refute false opinions current among his countrymen. Whatever we may think of these episodes, looking at the whole work in an artistical point of view, we are indebted to them for the soundest information on many subjects connected with the history of antiquity, especially that of Rome; and it is only to be regretted that many points in his dissertation on Roman tactics are not quite so clear to us as we could wish.

The study and research of Polybius before he began to write his work, together with his almost unparalleled impartiality and love of truth, have given it a character of authenticity such as very few historical works, either of ancient or modern times, can claim. He is a severe critic of his predecessors, with whose writings he was thoroughly acquainted; and although he himself was under the greatest obligations to the Romans for their behaviour to him, still he did not spare them whenever they deserved censure (see especially ix. 10, and xviii. 18.) The love of his country moreover did not make him blind to the folly of its leaders, who endeavoured to draw it into the fatal conflict with Rome. But the distinguishing character of his work is its didactic and practical tendency. He did not write for the sake of amusement, or of filling the memory of his reader with a number of unconnected facts, but he traces events back to their causes, and deduces from them the most useful precepts, much in the same way as the so called 'histoires raisonnées' of modern times, but with infinitely more wisdom and discretion. It is true that he thus wishes to guide his reader, and not to allow him to form his own opinions; but setting aside the consideration that an intelligent reader may and will always judge for himself, who would not willingly listen to the arguments and reasonings of a statesman and a general like Polybius? His work is full of the most profound political and military wisdom; or, as a modern historian expresses it, "a code of the wisest political and military maxims;" and enables the reader not only to understand the past, but to look upon the future with the foreseeing eye of a prophet. As the object of Polybius was not to make his work popular with the multitude, but to instruct and guide men who are entrusted with the care of their country, he abstained from all rhetorical embellishments of style. He looked with contempt upon the refined affectation and hollowness of the rhetoricians of his time, for true public oratory had long ceased among the Greeks. Hence he very seldom introduced his heroes making speeches, though it still was and remained a favourite custom with his countrymen down to the latest period of their literature; but where he thinks it necessary, he gives the substance of their speeches in his own words. It is natural that under these circumstances the rhetoricians of his own as well as of a later age should have been unable to appreciate Polybius. (Niebuhr, 'Hist. of Rome,' vol. i., p. 533.) Dionysius, though in many respects a judicious critic ('De Comp. Verb.' c. 4), says that the history of Polybius is written in such a style that no one can endure to read it through from beginning to end. Another charge which has been brought against Polybius in modern times is that of a want of sympathy with the sufferings of his own country. That this want is merely apparent, and perhaps owing to his philosophical mode of viewing things, is sufficiently evident from his whole conduct towards his country; and the fragments of his work discovered by A. Mai, in which he describes the sufferings of his countrymen, are full of expressions of the deepest sorrow for their calamities.

It may be chiefly owing to his style that the works of Polybius in subsequent ages were less read and copied than others of a greatly inferior character, and that to this cause we have to ascribe the loss of the greater part of them; for of the forty books, only the first five are preserved entire; and of the rest, we possess only fragments and extracts. At the time of the revival of letters, about the middle of the 15th century, and long before any part of the Greek text was printed, an elegant but incorrect Latin translation of the first five books was published by Nicolaus Perotti at Rome. In 1529 the Greek text, with a Latin translation of the dissertation 'De Militia Romana,' by Lascais, appeared at Venice; and it was a year later that the Greek text and the Latin translation of the first five books by Perotti were edited by Orsopœus. As soon as the merits of Polybius began to be acknowledged, and a desire was awakened to possess more of his work, the number of new fragments continued to increase. In 1536 eight chapters of the sixteenth book were discovered and published; and in 1549, extracts from books vii.-xvii., together with a fragment of the nineteenth chapter of book I, which had hitherto been wanting, were added from a manuscript which had been brought over from the island of Corfu. A very important addition to the fragments of Polybius was made in 1582 by Fulvius Urinus, who, for the first time, published the first section of the 'Excerpta,' from various ancient historians, which, in the 10th century, the emperor Constantius Porphyrogenetus had ordered to be made, and which contained a great many extracts from the history of Polybius. Casaubon, in 1609, published a complete edition of all that had till then been discovered of the works of Polybius, and made a new Latin translation of the whole. The second section of the Excerpta of Constantius,

called 'Excerpta de Virtutibus et Vitiis,' which likewise contained a considerable number of extracts from Polybius, together with some other new fragments, were edited and translated into Latin by Henry Valesius (Valois), at Paris, in 1634. Nothing new was added but a fragment containing an account of the siege of Ambracia, by J. Gronovius, until, about 1825, when A. Mai discovered, in the Vatican library, a palimpsest of the third section of the Excerpta of Constantinus, called 'Excerpta de Sententiis,' which among other extracts, contained a considerable number belonging to Polybius. The manuscript however was in such a mutilated state, that a great part of the extracts as published by Mai are scarcely intelligible. A better edition of these Excerpta was published at Leyden, in 1829, by J. Geel, but a new and much more careful collation, with the original, was published by Heysse, Berlin, 1846. The best editions of Polybius are those of Schweighauser, in 8 vols., Leipzig, 1789-95, reprinted at Oxford in 1823, in 5 vols.; and that of Bekker, which contains the fragments discovered by Mai, 2 vols., Berlin, 1844. Among the translations of Polybius we may mention the German, by Seybold, in 4 vols., Lemgo, 1779-83; and the English, by Hampton, in 2 vols. 4to, 1772. There are also the following English translations:—The Histories of the most famous and worthy chronographer Polybius: Englished by Charles Watson, 1568; 'Polybius,' translated into English by Edward Grimestone, 1634; 'Polybius,' translated by Sir Henry Sheares, with a character of Polybius and his writings by Dryden, 3 vols., London, 1698.

The greater part of the history of Polybius is thus lost. After Livy had almost reached the end of the second Punic war, he began to make use of Polybius; and he very often gave a literal translation of the Greek original: thus he has perhaps preserved more than we are aware of, as he seldom mentions his authorities. Much may also be preserved in Cicero's work 'De Republica,' as Cicero, in his historical statements, chiefly followed the authority of Polybius.

Polybius, as mentioned above, is said by Cicero to have written a separate work on the war against Numantia, but nothing is known of it. His memoirs of the life of Philipomen (x. 24) are also lost. It is however not improbable that in the accounts which Plutarch and Pausanias give of Philipomen, we may still possess the substance of those memoirs. Other works of Polybius mentioned by some of the ancients, on tactics and subjects of geography, were probably not separate works, but dissertations which formed parts of his History.

POLYBUS, or POLYBIUS, a pupil and son-in-law of Hippocrates, who lived about the middle of the 5th century B.C., in the island of Coa. He assisted Thessalus and Draco, the sons of Hippocrates, in establishing the ancient school of the Dogmatici, which was also sometimes called the Hippocratic sect, from its professing to follow the principles that Hippocrates laid down. Galen praises him, and says that he never abandoned the opinions and mode of practice of his father-in-law ('Comment. in Hippocr.,' lib. 1; 'De Nat. Hom.,' p. 11, 12, ed. Kühn); but, as Eloy remarks ('Dict. Hist. de la Méd.),' if the works attributed to him are really his, it must be confessed that he does in some instances differ from Hippocrates, particularly respecting the passage of liquids into the trachea and the lungs. The following treatises, which are generally printed among the works of Hippocrates, are supposed to have been written by Polybus:—1, *περι γυνῆς*, 'De Semine;' 2, *περι φύσιος παιδίου*, 'De Natura Pueri;' 3, *περι διαίτης ὑγιεινῆς*, 'De Salubri Victu Ratione;' 4, *περι παθῶν*, 'De Affectuionibus;' and 5, *περι τῶν ἐντὸς παθῶν*, 'De Internis Affectuionibus;' (Choulant, 'Handbuch der Bücherkunde für die Aeltere Medicin, &c.,' Leipzig, 1828, 8vo.) Many persons also attribute to him the treatise *περι φύσιος ἀνδρῶν*, 'De Natura Hominis,' which is found among the works of Hippocrates; but according to Galen (*loco cit.*), incorrectly. He is several times mentioned by Galen ('Opera,' ed. Kühn, tom. vii., p. 960; tom. xv., p. 11, 175; tom. xvi., p. 3): his name occurs also in Celsus ('De Med.,' p. 243, 265, 388, ed. Argent.); Celsus Aurelianus ('De Morb. Acut.,' lib. iii., cap. 9); Pliny ('Hist. Nat.,' lib. xxxi., cap. ult. in fine); and Thessalus (in 'Orat. ad Athen. inter Opera Hippocr.,' tom. iii., p. 843, ed. Kühn). A Latin translation of the work 'De Salubri Victu Ratione' was published by J. Placotomus ('Bretschneider'), Antwerp, 1561, 12mo, and it is inserted in several editions of the 'Regimen Sanitatis Salernitanum.' The whole of his 'Opuscula' were published in a Latin translation, Basil, 1544, 4to, per J. Oporinum; and there is an Italian translation by Pietro Lauro, Venez., 1545, 4to.

POLYCARPUS, one of the fathers of the Christian Church, and one of a small number who were distinguished from the rest by the term Apostolic Fathers, as having been contemporaries of some of the Apostles. The period of his death is well ascertained to have been in A.D. 167, in the reign of Marcus Aurelius; the period of his birth is placed perhaps somewhat too early when it is referred to the reign of Nero. However there seems no reason to doubt that he was contemporary with Saint John, and known to him, the lengthened period of whose life connects so fortunately the men of the 2nd century with those who had been in personal attendance on our Saviour. It is this circumstance which gives its chief importance to the lives of these persons, and thence arises the main value of the few and in other respects unimportant writings which remain of the Apostolic Fathers. The lives form links in the chain of Christian tradition; and the

writings recognise by frequent quotations the writings which remain of the evangelists and apostles.

Of the writings of Polycarp only one small epistle remains. It is addressed to the Philippian church, exhorting them to the practice of their Christian duties and the maintenance of the purity of the faith. But there is another writing of that age of which he is the subject. It is a relation of the manner of his death, written by the church at Smyrna, of which he was the bishop, addressed to the church of Philadelphia. It is a valuable and interesting memorial. There seems to have been a mad and wicked attempt to extirpate Christianity in Asia Minor. The persecution raged with peculiar violence at Smyrna. Many Christians were delivered to the lions. Polycarp, the bishop, was reserved for a more cruel death, being burned at the stake. Both these epistles may be read in an English translation in a volume published by Archbishop Wake containing all the genuine remains of the Apostolic Fathers.

What further is known of him is, that when the controversy began between the Eastern and Western churches respecting the proper time for the observance of Easter—a childish matter of disputation, which however produced much ill feeling for many centuries in the Christian church—Polycarp was sent to Rome to discuss the question with Anicetus, the bishop, and other Christians there; and that while at Rome he strenuously opposed the heresies of Marcion and Valentinus. This fact is stated by Irenæus, bishop of Lyon, who was a pupil of Polycarp.

POLYCLES. There were two sculptors or statuaries of Greece so called. They are noticed by Pliny and Pausanias, but in so undefined a manner that it is not always easy to distinguish which of the two artists is referred to. The first Polycles lived in the 102nd Olympiad, or about B.C. 370, and was therefore contemporary with some of the greatest sculptors of antiquity, as Cephissodotus, Praxiteles, Leochares, and Lysippus.

The second was flourishing in the 155th Olympiad, or about 170 years before our era. He was the son of Timarchides, a statuary of Athens; but his master's name was Stadiæus (Paus., lib. vi., c. 4.) The works of this Polycles and of his brother Dionysius were carried to Rome with other fine monuments of Greek art. Pliny ('Hist. Nat.,' xxxvi. 5) mentions that a statue of Juno, the joint production of these two sculptors, was placed in the temple of that goddess within the portico of Octavia; and near it was a statue of Jupiter, also the work of the two sons of Timarchides. Polycles has been supposed, from a passage in Pliny, to be the author of the original statue of the Hermaphrodite from which the well known existing representations—especially that usually called the Borghese Hermaphrodite, from its having belonged to that collection, though it is now in the Louvre—are copies. Pliny (xxxiv. 8) says "Polycles hermaphroditem nobilem fecit." This Polycles, the pupil or scholar of Stadiæus, according to Pausanias (lib. vi., 4), made a statue of Amyntas, a pancratiast, or conqueror in the games, which was preserved at Olympia. Some statues of the Muses were also executed by Polycles. Polycles left sons who followed their father's profession.

POLYCLETUS, one of the most celebrated statuaries of ancient Greece.

This name has given rise to much discussion from the difficulty that exists in determining how many artists were so called, and what works each produced. Pausanias (lib. v., 6), speaking of a statue of a youth, says it was the work of Polycletus the Argive; but, he adds, "not he who made the statue of Juno." From this it seems clear that there were at least two Polycleti, and that both were natives of or connected with Argos; it may also be assumed that they were living nearly at the same time. Pliny ('Hist. Nat.,' xxxiv. 8) alludes to a Polycletus Sicyonian, attributing to 'him' the works which gained for their author the reputation of one of the greatest artists of antiquity. The above, added to the statement of Pausanias, leads to the conclusion either that there were three sculptors of the name, two Argives and one a Sicyonian, or, as is most probably the case, that there were but two, and that the Sicyonian, the more celebrated, was also called 'Argivus.' The most important of his works, and more especially his 'Juno,' were at Argos, and it has been reasonably surmised that he may have been so far honoured by that people as to have the citizenship of Argos conferred upon him.

Polycletus the Sicyonian was the scholar of Ageladas of Argos; and lived about the 84th Olympiad—an epoch illustrated by the talents of Ageladas, Myron, Phidias, Alcamenes, and the brightest names in the annals of art. There is an extensive list of the various admirable productions of Polycletus. Some of these are unquestionably to be attributed to the so-called Sicyonian; some may be of the second Polycletus, but, for the reasons before stated, it is not easy to appropriate them with any certainty. Among the chief works of Polycletus may be mentioned the colossal statue of Juno seated on her throne, which decorated the temple of that goddess at Argos, and which was considered in many respects to equal the finest productions of his contemporary and rival Phidias. It was chryselephantine; all the naked parts being of ivory, while the drapery and accessories were of gold. The dimensions of this statue were less than those of the Olympian Jupiter which Phidias executed for the people of Elis, and of the Minerva of the Parthenon. This, taking it altogether, was considered the greatest work of Polycletus, but he was hardly less

celebrated for others of a less ambitious character. Amongst these were two statues of young men, one, called 'Diadumenos,' fastening a band round his head, which was treated in a soft or delicate manner, 'molliter,' the other, 'Doryphoros,' of a more manly character, 'viriliter,' carrying a lance. A group of two naked boys called 'Astragalizontes,' playing at a game called Tali (with bones), is also celebrated; also some statues of Canephores (female figures carrying baskets on their heads), an Amazon, as well as several statues of Athletes (conquerors in the public games), and others. The Canephores were so much admired, that Cicero declares ('In Verr.,' iv.) that strangers at Messene crowded to see them; "and the house in which they were preserved was less its master's than the ornament or attraction of the whole city." The estimation in which another of his works, the Diadumenos, was held, may be conceived from the statement of Pliny, that it was "centum talentis nobilitatum," valued at one hundred talents. But of all the productions of this great master none has a greater claim to notice than that which for its excellence was called the Canon, or rule of art. This was a statue so perfect in its proportions that artists referred to it, and were bound by it as by a kind of law. "Lineamenta artis," says Pliny (xxiv. 8), "ex eo petentes, velut à lege quâdam." Some have supposed that this figure was the Doryphorus; and the reason for this belief—and it is not without its force—is derived from a story recorded of the celebrated Lysippus, who, being asked from what master he had learned his art, replied, "the Doryphorus of Polykletus;" but this is rendered doubtful by the passage in which Pliny speaks of the Canon. It may fairly be questioned how far any single or particular work can properly be a canon of art—a rule by which works of different qualities and characters can be successfully executed; and it seems much more probable that the Canon of Polykletus, whether or not it was the Doryphorus, was only a standard of excellence for works of its own particular character. We think this is the interpretation that must be given to it by all practical artists.

It is the highest praise to Polykletus to say he was a worthy competitor and rival of Phidias. On one occasion, when five of the most eminent artists of the day, Phidias being of the number, executed five statues in competition, that of Polykletus was preferred. It is also said that he carried to perfection the Torso art, which Phidias had, as it were, commenced. Polykletus is declared by Pliny to have succeeded only (or perhaps it should be read *best*) in statues of a soft or gentle character. He also says that he first made figures resting on one leg. On the authority of Varro he also acquaints us that he preserved a certain squareness in some of his works, and that they were all made according to one model, or 'exemplar.' With respect to the former part of this charge, that of squareness ('quadrata'), it is likely that the style which characterised art immediately before what has been termed the Phidian period, may still have been partially continued, and, as Polykletus was one of the scholars of the hard and dry school, it is natural that some of his works may have shown evidence of the age of Ageladas, though he had much improved upon the character of the earlier art. Myron and Polykletus were always considered rivals. Pliny says, "æmulatio etiam in materiâ fuit;" for one used the bronze of Ægina and the other always employed that of Delos for their works. The judgment of antiquity has given to Polykletus the reputation of one of the most remarkable artists of his extraordinary age. Our notice of him has necessarily been much compressed, but a fair estimate of the honour in which he was held as a great master of his art may be made not only from the recorded opinions of writers, but from the statement that among his scholars were Pericleus, Canachus (the second), Asopodorus, Alexis, Aristides, Phryno, Dino, Athenodorus, and Demas. (Pliny, 'Hist. Nat.,' xxxiv. 8.) Unfortunately no work known to be the production of Polykletus exists by which the moderns can judge of the merit of this artist.

In addition to his fame as a statuary, Polykletus has that of an able architect. One of the monuments of his skill in this art was a marble building erected at Epidaurus, called the Tholos. Another was a theatre, erected within the precincts of the temple of Æsculapius, also at Epidaurus. It was considered, according to Pausanias, superior, for its symmetry and beauty, to any theatre extant.

The second POLYKLETUS (Argivus) was the brother and scholar of Naucydes. It is thought likely that this artist was the author of two celebrated statues described by Pausanias, namely, the Jupiter Philius, erected at Megalopolis, and the Jupiter Milichius, a marble statue at Argos (Paus., lib. viii. 31, and ii. 20); as well as of some bronze tripods dedicated at Amyclæ. For further particulars respecting Polykletus, and works produced by artists so called, the reader is referred to Pliny ('Hist. Nat.'). Pausanias, Junius, and Sillig ('Catal. Artificum'), Em. David, and other writers on ancient art.

An ancient Greek epigram alludes to POLYKLETUS, a Thasian; but there is no account of him among the artists of antiquity.

POLYCRATES, tyrant of Samos, obtained the government of that island by stratagem, towards the end of the reign of Cyrus. His first care was to protect the commerce of Samos and increase its maritime power. Having by degrees made his fleet the most powerful that had perhaps ever sailed on the Ægean, he extended his sway over the neighbouring states of Lesbos, Miletus, &c. He seems to have designed to make Samos the mistress of the Archipelago, and to have neglected nothing that could enhance her greatness, either by the

BIOG. DIV. VOL. IV.

skilful conduct of wars and foreign policy, or the cultivation of the arts of civilisation. He surrounded himself with every princely luxury; but at the same time by attracting to his court, by ample rewards, the best artists from other parts of Greece, he stimulated the arts for which Samos was renowned; and he sought to confer substantial benefits on the country, by the construction of great and useful public works—among which were an aqueduct, and a mole in the harbour of Samos of which Herodotus speaks as one of the wonders of Greece—and by the importation of superior breeds of cattle from other countries. According to Herodotus, he formed an alliance with Amasis, king of Egypt, but the Egyptian monarch, dreading lest the constant good fortune of his ally should excite the envy of the gods, advised him to cast away the possession he most valued. Polycrates accordingly threw into the sea his signet-ring, the work of Theodorus, but in a few days it was found in the body of a fish, which had been brought to the palace; whereupon Amasis broke off the alliance. This story however, Mr. Grote thinks, with other circumstances related by Herodotus, leads to the conclusion that the alliance was rather broken off by Polycrates himself, with a view to secure the friendship of the Persians. Polycrates having quarrelled with the Corinthians, the latter applied to Sparta for assistance, which was the more readily afforded, as some of the leading Samians whom Polycrates had banished had already been seeking Spartan interposition. The united forces besieged Samos for the space of forty days, but were then compelled to abandon the undertaking in despair. Polycrates was now more powerful than ever, but his career was suddenly brought to an unhappy termination. Oroetes, the satrap of Sardis, as is supposed by the instigation of the Persian king, Cambyses, whose jealousy was provoked by the growing power of Polycrates, contrived to allure him by a treacherous message to visit Sardis, but as soon as Polycrates arrived at Magnesia on the Meander, he was by order of Oroetes seized and hung upon a cross B.C. 522. Herodotus (iii. 125) says of Polycrates, that he perished in a manner unworthy of himself and of his high deserts, and that none of the Greek tyrants, with the exception of those of Syracuse, were to be compared with him in greatness of character.

POLYDORÉ VERGIL. [VERGIL.]

POLYGNOTUS, one of the most celebrated of the ancient painters. He was a native of Thasos: son and pupil of Aglaophon, a painter of that island. Pliny merely says that Polygnotus lived before the 90th Olympiad (xxxv. 9); but from Plutarch's account of his friendship for Cimon and love for Cimon's sister Elpinice (Plut., 'Cim.,' c. iv.), it would seem probable that he flourished at Athens at least as early as the 80th Olympiad (B.C. 460). Thasos was reduced by the Athenians, after a war of three years, in B.C. 463, and it is likely enough that Polygnotus then left his native country, and accompanied its conqueror Cimon on his return to Athens. A story told by Plutarch ('Cim.,' c. xiv.) would represent Elpinice as no longer young in the year 463: if so, it is not probable that she would have retained sufficient beauty, at a later period, to be introduced by the artist into his painting in the Pœcile. Polygnotus obtained the rights of citizenship at Athens: how long he continued to paint we have no means of knowing. Pliny describes him as "the first who painted women with transparent drapery, and covered their heads with variegated caps. He first began to open the mouth, and show the teeth of his figures, and to give them an expression of countenance different from the ancient stiffness." (Pliny, xxxv. 9.) Polygnotus and Micon were the first artists who employed the 'sil,' or yellow colour found in the Attic silver mines. (Plin., xxxiii. 13.) The same painters used a black or blue colour prepared from grape husks ('tryginon'). (Plin., xxxv. 6.) Some of the works of Polygnotus were executed in the encaustic method. (Plin., xxxv. 11.) Cicero ('Brutus,' xviii.) mentions him as one of the masters who used the four old colours. Aristotle ('Polit.,' viii. 5.) calls him ἠθικός, one who conveyed a notion of moral qualities and of character of his works, and in the 'Poetics' (15) he contrasts this ethic character of Polygnotus with the absence of such a quality in Zeuxis; in cap. 4 he says that Polygnotus made his figures superior, Pauson inferior, and Dionysius similar, to nature. It would follow from all this that Polygnotus held an analogous place in the history of ancient art to that occupied by some of the early Florentine masters in modern painting. Perhaps Fra Angelico or Masaccio would be a fair parallel; always bearing in mind that painting among the ancients was essentially statuesque in its character, and therefore, at an equivalent stage of development, the drawing of the figure would be much further advanced than in Italian art.

The principal works of Polygnotus enumerated by the ancients are—1. The pictures in the Lesœe at Delphi, of which Pausanias (x. 25) has left an elaborate description. The subjects were—the Capture of Troy, the Return of the Greeks, and the *vekta*, or Visit of Ulysses to the Shades. It would seem, from the account of Pausanias, that names were attached to most of the figures, as we see them often inscribed on the vases. The variety of age and sex portrayed, and the feelings of some of the personages, imply a discrimination of character and a power of expression, such as we should expect from the reputation of the artist. Thus Hector was represented seated, clasping with his hands his left knee, and with an expression of deep melancholy. Penthesilea appeared to contemplate Paris with contempt and scorn (x. 31). Lucian ('Imag.,' 7) mentions the figure of Cassandra, as

8 N

showing delicacy and beauty of the brow, and the blush of the cheek. A German artist, Rippenhausen, published some designs formed on the description by Pausanias of these works of Polygnotus, and Göthe (vol. xlv. 97) has written an essay on the subject. 2. The Pœcile at Athens. The subject probably was the Destruction of Troy. (Plut., 'Cim.' iv.) 3. A painting in a building near the Propylæ at Athens. (Paus., i. 22, 6.) 4. The Marriage of the Daughter of Leucippus in the temple of the Dioscuri at Athens. (Paus., i. 18, 1.) If this work were extant, a comparison of it with the noble picture of nearly the same subject by Rubens in the Munich gallery would probably afford as striking a contrast between ancient and modern art as can be imagined. 5. It seems likely that Polygnotus painted the temple of Theseus, at least if we adopt the emendation *ἐν τῷ Θησείῳ ἱερῷ*, for *ἐν τῷ Θησαυρῷ* in Harpocration. 6. A picture representing Ulysses after the Slaughter of the Suitors, in the temple of Minerva Area at Plataea. (Paus., ix. 4, 1.) 7. The Walls at Thespis, painted by Polygnotus and restored by Pausias. (Plin. xxxv. 11.)

It is very difficult for us to form any distinct idea of what the effect of the works of Polygnotus must have been. From the expressions used by Aristotle, they probably possessed much calm dignity and an absence of all exaggeration. We must not imagine that they showed the complicated composition, the masses of light and shade, the variety of colour, or the accurate perspective of the best modern masters. An attentive observation of the finest of these vases, which still retain traces of the severer style of the art united with good execution, will convey the best general notion of the works of such an artist. As in sculpture, no accessories probably appeared, except such as were absolutely necessary for understanding the story, and essential to the attitudes of the figures.

(Sillig, *Catalogus Artificum*; Müller, *Handbuch der Archæologie und Kunst*; Müller, *De Vita et Operibus Phidias*; Göthe, vol. xlv. p. 97.)

**POLYHISTOR, ALEXANDER**, a native of Cotysum in Phrygia, according to some, and of Miletus according to others, was a geographer and historian, who lived in the seventh century of Rome, and was taken prisoner by the Romans in the war of Sulla against Mithridates. Being purchased by Cornelius Lentulus, he was entrusted by him with the education of his children, and at last received his freedom. He then assumed the name of Cornelius, after that of his patron. He resided chiefly at Rome, and had a country-house at Laurentum, which having taken fire while he was there, he perished in the flames. He is often mentioned and quoted by Pliny the Elder, Diogenes Laërtius, Clemens Alexandrinus, and Eusebius, as a man of very extensive learning, in consequence of which he was styled Polyhistor. He wrote a work in forty books, each book being the description of a distinct country. Stephanus Byzantinus mentions his account of Bithynia, Caria, Paphlagonia, Syria, Libya, Creta, and other countries. Clemens Alexandrinus quotes his treatise on the Jews, of which Eusebius has inserted fragments in his 'Chronography.' Clemens Alexandrinus mentions another work of Polyhistor, on the 'Symbol of Pythagoras;' and Cyril of Alexandria, in his work against Julian, quotes his authority on the early history of the world. Unfortunately none of Polyhistor's works have come down to us.

**POMBAL, MARQUIS DE. DOM SEBASTIAO JOSÉ DE CARVALHO**, Count d'Oeyras and Marquis de Pombal, the most distinguished statesman of Portugal, was born in 1699, at Soura, a village in the territory of Coimbra, of an old and noble family, though not of the first class. Having completed his early studies in his native village, he was sent to the University of Coimbra for the purpose of studying for the bar. But the quiet pursuits of the law being incompatible with the vivacity or rather the turbulence of his character, he adopted the profession of arms. This profession did not however prove more agreeable to him than that which he had relinquished. He quitted the corps in which he served, and led a private life till 1739, when, through the influence which his uncle Paulo Carvalho had with Cardinal Motta, a person much in favour with John V., he was appointed extraordinary envoy to the court of London; and afterwards to Vienna, as mediator between the empress Maria Theresa and the pope, to settle the disputes which had arisen in consequence of the suppression of the archbishopric of Aquileia.

Whilst in that capital, Carvalho had the good fortune to marry a lady of high rank and influence, the Countess Daun, niece of the general of the same name who figures so prominently in the wars of the empress Maria Theresa with Frederick the Great of Prussia. On his return the queen of John V., who was an Austrian princess, became so much attached to her countrywoman, the lady of Carvalho, that for her sake she prevailed on her son, immediately after the decease of her husband, to raise Carvalho to power, in consequence of which he was entrusted by Joseph I. with the direction of foreign affairs. Elevated to this high station, Carvalho began to display his great administrative talents. His admirers have gone so far as to compare him with Richelieu; but this is of course exaggerated praise. Even had Carvalho been as profound a politician as Richelieu, the political relations and rank of such a kingdom as Portugal could not and did not offer him a sphere in which to display them; but in the internal and economical administration of the kingdom, in discernment, activity, and legislative abilities, he has no superior. After his promotion, which took place in 1750, Portugal may be said to have been regene-

rated. He favoured the establishment of various manufactures, and encouraged the art of printing and agriculture; he introduced into the University of Coimbra a system of studies which substituted, for the mere study of the classics and ancient languages, the cultivation of the physical and mathematical sciences; he furnished the university with a chemical laboratory, a botanic garden, and an observatory; he introduced into Brazil the cultivation of coffee, sugar, cotton, rice, indigo, and cocoa; he created the companies of Pernambuco, Pará, and Maranhão, and established a strict police in the kingdom.

With all his great qualities however he was detested both at home and abroad. Those who hitherto had lived and enriched themselves by the abuses that had crept into the various branches of administration, as well as those who suffered from the severity of his ordinances, were his declared enemies. He checked the obnoxious power of the Inquisition, and banished the Jesuits from the Portuguese dominions. Whatever might be the policy of the latter measure, it was carried into effect with great inhumanity. His interference with the monopoly which foreign merchants had acquired in the commerce of Portugal rendered him an object of detestation to foreigners; still all his measures had for their object the prosperity of the country, which he effectually promoted, so far as to place Portugal on a level with other European states. On the other hand his unremitting persecution of the nobility, and his merciless conduct towards the family of the Tavoras and every individual whom he suspected of having had any part in the attempt made against the life of the king, dimmed the brilliancy of his career. On the death of Joseph I., the queen, who considered that Carvalho had occupied that place in the affections of the king which she alone ought to have filled, and had likewise taken a dislike to him on account of his persecution of the nobility and the Jesuits, ordered him to retire to Pombal, where he died May 2, 1782, aged eighty-two. The finest parts of Lisbon still bear testimony to the value of his administration, for they were built according to his designs after the earthquake. He was created Count d'Oeyras in 1759, as a testimony of the royal regard for the zeal which he displayed when the attempt was made to shoot the king Joseph I.; and on his effecting a reconciliation with the pope at a much later period, his grateful master created him Marquis de Pombal. Although he is accused of enriching himself by means unworthy of his rank, no person who is acquainted with his private habits, with the method which he had adopted to make his property valuable, and with his general system of economy, can doubt of his integrity. When he retired from the ministry he left about forty-eight millions of cruzados in the public treasury, and thirty in the 'caixa de decimos,' a surplus which the government of Portugal had never had before.

**POMFRET, JOHN**, was born in 1667, at Luton in Bedfordshire. He studied at Queen's College, Cambridge, where he was admitted to a Bachelor's degree in 1684, and to a Master's in 1698. Having entered into orders, he obtained the rectory of Maldon in Bedfordshire. In 1703 he came to London with the prospect of obtaining further preferment, but found Bishop Compton strongly prejudiced against him on account of some lines in 'The Choice,' which seemed to imply that a mistress was to be preferred to a wife; and before Pomfret, who was now married, could remove the bishop's objections, he was attacked by the small-pox, which carried him off in 1703, in his thirty-sixth year. He published his poems in 1699, and some additional poems were published after his death by an anonymous friend. His poems had once many readers, especially 'The Choice,' in which he describes how he would live if he had a moderate independence—what would be his choice of a house and garden, of wines, of books, of friends, and of a female friend, for he "would have no wife." Dr. Johnson says that "he has been always a favourite with that class of readers who, without vanity or criticism, seek only their own amusement," but it may be doubted whether any class of readers now exists who would find amusement in reading the poems of Pomfret.

**POMPADOUR, MADAME DE.** [Louis XV.]

**POMPEI, GIROLAMO**, born at Verona in 1731, of a patrician family, applied himself chiefly to the study of the Greek and Latin writers, and became a good Hellenist. His translation of the 'Lives' of Plutarch is by far the best in the Italian language, and has gone through more than ten editions. In 1785 Pompei was offered a chair in the University of Pavia, which he declined, out of attachment to his native town. He was intimate with Maffei, Torelli, Rosa Morando, and other learned men of Verona, and he was preceptor to Ippolito Pindemonte. Pompei died at Verona in 1788. His other works consist of 'Canzoni Pastorali,' which are much esteemed, and other Italian poetry, including some translations from the Greek, and of several dissertations. His biography has been written by his disciple Pindemonte, and by Cardinal Fontana, 'De Vita et Scriptis Hieronymi Pompei.'

**POMPEIUS CNEIUS**, commonly called **POMPEY**, was born on the 30th of September B.C. 106, in the consulship of C. Attilius Serranus and Q. Servilius Cæpio, a few months after the birth of Cæsar. He was six years older than Cæsar. His family was plebeian, and one of his ancestors was said to have been a flute-player. His father, Pompeius Strabo, however joined the aristocratic party, and fought under their banner in the Marius war, but, being a man of extreme selfishness, he was in reality faithful to no party, and at last made himself so notorious for his avarice and cruelty, that, after he had been killed

by a flash of lightning, the people at his funeral tore the body from the bier and dragged it through the streets of Rome. (Plut., 'Pomp.,' i.; Vell. Pat., ii. 21.)

The first time we find the name of Pompey mentioned is in B.C. 89, in the Marsic war, when he accompanied his father to fight against the Italians; he was also in the battle at the gates of Rome between his father and Cinna and Sertorius. Soon after this battle Cinna caused money to be distributed among the soldiers of Pompeius Strabo, and bribed a friend and comrade of Pompey to murder him and his father; but the courage of the young man saved his own and his father's life, and put down an insurrection among the discontented soldiers. His father died soon after this event, and when the Marian party gained the upper hand, and made their entrance into the city, the house of Pompey was plundered. It was not until after the death of Marius, in B.C. 86, that he ventured to appear again in public, when his enemies immediately charged him with being the accomplice of his father in the plunder of Asculum. Having no confidence either in the justice of his cause or the eloquence of his advocates L. Martius Philippus and Q. Hortensius, he secretly betrothed himself to the daughter of P. Antistius, who was to preside at the trial, by which means, together with the protection of Carbo, he was acquitted.

When Sulla was returning from his expedition against Mithridates, Pompey, who had fled from the camp of Cinna just before he was murdered, was in Picenum, where he set about raising at his own expense an army, with which he hoped to overcome the Marian party before the arrival of Sulla. Without the authority or sanction of the Roman senate he organised three legions, consisting chiefly of the veterans of his father. Three generals of the Marian party surrounded him in three different camps. He directed his main force against one of them, M. Brutus, and defeated him; upon which the two other generals retreated. Pompey was received in all the towns of Picenum as their deliverer. (Plut., 'Pomp.,' 7.) The senate was indignant at his arbitrary proceedings, but his army remained faithful to him. At the interview which he afterwards had with Sulla he displayed enough of his vain and ambitious character for Sulla to discover that Pompey wished to be looked upon as a man of no less importance than himself. When therefore Pompey, with apparent humility, saluted him as emperor, Sulla returned the compliment.

Sulla was made dictator, and the civil war was carried on in Italy with unremitting vigour. While the consul C. Marius the Younger was besieged in Preneste (B.C. 82), his colleague Cn. Carbo fought an indecisive battle against Sulla at Clausium, but his legates Marcius and Carrinas were defeated by Pompey. Carbo then retreated to Ariminum, and sent Marcius to the relief of Preneste, but Pompey repelled him in the Apennines with great loss. Carbo himself in despair sailed to Africa, but his troops, which remained in Etruria, were closely watched and afterwards dispersed by Pompey, whereby the fall of Preneste was prepared. Sulla, partly to reward the young champion of his party, partly to make himself sure of his attachment, presented him with the hand of his step-daughter Æmilia, who was pregnant by Manius Glabrio, from whom she was obliged to separate. (Plut., 'Sulla,' 33; 'Pomp.,' 9.) Pompey abandoned Antistia, to whom he was married, but Æmilia soon after died in childbirth. Pompey was thus a declared champion of the party of Sulla, and after the war in Italy was brought to a conclusion, he undertook to punish the remaining enemies of the aristocracy in Sicily, Africa, and Spain. Carbo attempted to escape to Egypt, but was overtaken and brought in chains before Pompey, at Lilybæum; his companions were put to death without even the form of a trial; Carbo, though he had once shown himself a friend to Pompey, was solemnly condemned to death, and Pompey sent his head to Sulla. All Sicily submitted to him without further resistance. Leaving the administration of Sicily in the hands of Memmius, his brother-in-law, he set out for Africa with an immense fleet to oppose Domitius Ahenobarbus, under whom some remnants of the Marian party had assembled, and also to support Hiempsal, a friend of Sulla, against Hiarbas, king of Numidia. A battle issued, in which Pompey, though with great loss, gained a victory. Domitius fell, Hiarbas was put to death, and Hiempsal restored to his throne. The whole object of this campaign was attained in the course of a few months, and Pompey gained general admiration for his disinterestedness. He returned to Rome, where thousands came out to meet and to gaze at the young hero. Sulla himself complimented him with the appellation of Magnus (the great), which henceforth became hereditary to his family. The time at which he received this surname is differently stated by different authors, but from the examination of the various accounts in Drumann's 'Hist. of Rome' (vol. iv. p. 335, &c.), it cannot be doubted that he obtained it after his African expedition. But Pompey, although he had not yet held any public office, and was only a knight (eques), was bent upon entering Rome in triumph. Several discussions took place in the senate, where great efforts were made to prevent such an unprecedented occurrence, but Sulla at length yielded and Pompey entered Rome in triumph. After this display of childish vanity Sulla treated him with a coldness which did not fall much short of contempt. (Plut., 'Pomp.,' 15.)

This feature of vanity in his character explains the otherwise unaccountable fact that, in opposition to Sulla, he exerted all his influence to secure the consulship for Æmilius Lepidus. Sulla, foreseeing the

consequences, said to Pompey, on this occasion, "Thou hast given the sword into the hands of thy own enemy." Sulla soon after died (B.C. 78), and Lepidus openly made the impotent attempt to rescind all the laws of the late dictator, in which he hoped to be supported by Pompey; but Pompey, remaining faithful to his party, saved the aristocracy. It was only owing to the great precautions taken by the senate that peace and order were maintained during the consulship of Lepidus and Q. Catulus; but after the expiration of the year, when Lepidus had gone to his province of Gaul, the war broke out. Lepidus was defeated by the united forces of his late colleague Catulus and Pompey, and the latter was now commanded by the senate to take the field against M. Junius Brutus, the father of the celebrated Brutus, who was still at the head of a division of the army of Lepidus in Cisalpine Gaul. Brutus defended himself bravely in Mutina, but was at length compelled to surrender: he obtained the promise of safe passage, but was put to death the next day by Geminus, at the command of Pompey. (Plut., 'Pomp.,' 16, 64; 'Brut.,' 4.) Scipio Æmilianus, the son of Lepidus, was made prisoner in Liguria, and likewise put to death at the command of Pompey. Lepidus was next attacked by Catulus and Pompey, in the neighbourhood of Cosa, and being again defeated, he resolved, with the remnant of his army, to seek refuge in Sardinia, but he was repelled from the island by the Roman governor, and soon after died. The surviving followers were treated with great clemency, partly that they might not be induced to join the army of Sertorius in Spain, and partly because the victorious party themselves wished for peace in order to enjoy the fruits of their victory. Pompey also received orders to lay down his arms and return to Rome. He disobeyed the command under various pretexts; but the truth was, he was anxious to obtain the command against Sertorius. And when indeed the power of Sertorius assumed a more threatening character, when Perperna had joined his army, and the senate saw no one else that could be entrusted with the command against so formidable an enemy, it was at length reluctantly decreed that Pompey should be sent to Spain with the power of a proconsul, and in 40 days he was ready for departure, with an army of 30,000 foot and 1000 horse. He left Italy in B.C. 76, when he was thirty years of age. He crossed the Alps, according to Appian ('Civil.,' l. 109), between the rivers Rhône and Po, and directed his course towards the southern coast of Spain. Several Spanish tribes, and even Lauron, when besieged by his adversaries, declared for him. In the ensuing campaign Metellus defeated Perperna, and took his camp, but Sertorius wounded Pompey with his own spear, and compelled him to retreat. Not long after, a great battle was fought near Seguntia, in which Pompey was again defeated, and 6000 of his men were slain. In this way the war was carried on with various success for nearly four years; and had not Sertorius been betrayed by the Spaniards, and at last assassinated by conspirators headed by Perperna (B.C. 74), he would probably have driven the Romans from Spain, although Pompey conducted the war with great skill. He now also received reinforcements from Italy, where his demands were readily granted by the senate, and strongly supported by the consul Lucullus, who feared lest Pompey might return, as he had threatened to do, and obtain the command against Mithridates. Pompey advanced in Spain as far west as Cale (Porto).

Perperna, now at the head of the armies of Sertorius, was attacked by the whole of Pompey's forces, and took to flight. He was found in a wood; and, in order to save his life, offered to deliver up to Pompey letters of Roman nobles, in which they had invited Sertorius to Italy, and expressed their aversion to the constitution of Sulla. Pompey refused to see him, and ordered him to be put to death, and the papers to be burned without being read. The army of Perperna dispersed; but those who could not expect a pardon sought refuge in those towns which were determined to defend their liberty to the last. Some of these towns were razed to the ground by Pompey, while some distinguished Spaniards, who had supported the enemy of their own country, were individually rewarded with the Roman franchise. (Cic., 'Pro C. Balbo,' 8.) As Metellus left Spain before Pompey, the latter availed himself of this opportunity to make it appear that he alone had accomplished the pacification of Spain, and, with the assistance of commissioners sent by the senate, he proceeded to organise the administration of the province of Spain. Another great object was now to be accomplished. Almost the whole of southern Italy was in the hands of the revolted slaves under Spartacus. On his return, Pompey erected in the Pyrenees, on the road to Gaul, a pillar, with an inscription recording his victories. (Strabo, iii. 4, p. 257, and iv. 5, p. 287, Tauchnitz.) In Gaul he settled some of the bands which had served under Sertorius in Gallia Aquitania, in a place which hence received the name of Lugdunum Convenarum (St. Bertrand). (Hieronym., 'Adv. Vigilant,' tom. iv. p. 282, ed. Monach. Benedict., Paris.) On his arrival in Italy, he did not, as the laws required, dismiss his troops, for he knew that with them he might obtain anything from the senate. Crassus, a friend of the aristocratic party, had been conducting the war against the slaves; and on hearing of the return of Pompey, he had hastened to bring it to a conclusion, in order that Pompey might not snatch the laurels from him. The war was indeed at an end on the return of Pompey, but he found an opportunity of cutting to pieces a body of 5000 slaves, who were on their march to seek refuge beyond the Alps, and he wrote to the

senate that Crassus had indeed gained the victory, but that he had root'd out the war. Crassus felt this arrogance the more keenly, as he wished to obtain the consulship with Pompey, and was obliged to make use of the influence which Pompey had gained at his cost. Pompey, though absent from Rome, was a candidate for the consulship, and was prudent enough to recommend Crassus as his colleague. As Pompey had not yet held any of the minor civil offices, he could not legally be a candidate for the consulship. But the senate, not wishing to have the two most powerful men in the state their enemies, was obliged to suspend the laws in favour of Pompey, and he and Crassus were elected consuls for the year B.C. 70.

Pompey had now little difficulty in obtaining a second triumph, especially as he had become a great favourite with the people, and had declared that he would restore the tribunician power which was abolished by Sulla, and would do all he could to stop the abuse which the aristocratic party made of their judicial power. The two consuls elect and Metellus stood with their armies before Rome, and on the 31st of December B.C. 71 Crassus entered the city in an ovation, and Pompey and Metellus in triumph. Both consuls now did their utmost to gain the favour of the people, and Pompey began to fulfil his promises. The question concerning the restoration of the tribunician power had been agitated for many years, but without success; the people were now in a state of great excitement, for the abuse of their power by the senatorial party had become intolerable. When Pompey brought his rogation before the senate, the opposition was not so strong as might have been expected. Supported by his troops, which were still in the neighbourhood of Rome, by Crassus, and the exasperation of the people, Pompey carried his bill. This measure, which at the time gained him general popularity, was soon followed by another proposed by the tribune Aurelius Cotta, which deprived the senators of their exclusive possession of the *judicia publica*, and divided the judicial power equally among the senators, the knights, and the people, the last being represented by the tribuni *Aerarii*. This measure was productive of little improvement, for moral corruption was not peculiar to any one class, but pervaded the whole nation.

After the expiration of his consulship Pompey refused to go into a province, but he dismissed his army, and remained at Rome for two years without holding any office. During this time he seldom appeared in public, and never without a numerous train, which was well calculated to impress the people with his importance. He foresaw that the time was not far distant when his powerful arm would again be required to save Rome from destruction. The Mediterranean was about this time almost covered with pirates. They landed on all parts of the coast, and even in the immediate neighbourhood of Rome. The high-roads of Italy were not safe. Rome itself was suffering from scarcity of provisions, for almost all convoys bound for the city were intercepted by the pirates. The tribune A. Gabinius, a man whose fortune was completely ruined, brought forward a rogation that a consular man should be invested with unlimited powers for three years over the whole Mediterranean and its coasts to a distance of fifty miles from the sea, and that all the resources of the state should be at his disposal. No individual was mentioned, but the eyes of the people were directed to Pompey as the only man capable of saving the republic. He himself kept in the background. In the senate the rogation met with a fierce opposition, but Cæsar supported it, and thereby alienated Pompey still more from his former party. When the day came for the measure to be decided by the votes of the people, Pompey appeared in the market-place entreating the people not to draw him again into the field of action, and to appoint a more deserving general. This piece of acting had the desired effect, and the rogation was carried on the second day, notwithstanding the most violent opposition. The price of provisions immediately fell with the prospect of a speedy delivery from the pirates. However contemptible the means by which Pompey obtained the command, the manner in which he fulfilled his commission was deserving of the highest praise. The preparations for war were completed during the winter, and in the spring of the year B.C. 67 he began his operations in the Mediterranean. His legates were stationed in various quarters of the sea to draw forth the pirates, and to prevent them from uniting their forces; he himself, with the main armament, swept the sea and drove the pirates eastward. Within forty days the sea between Africa, Spain, and Italy was cleared, and Rome already felt the benefit of his exploits. He then landed at Athens, where he was received with divine honours, and after a short stay he proceeded on his expedition. The pirates who had not yet surrendered were at last surrounded and blockaded near the coast of Cilicia. Here the first and decisive battle was fought at Coracesium. The pirates were defeated and took refuge in the town, which they surrendered after some resistance, together with all their ships and arms. Numbers of the pirates had deserted previous to the decisive battle, and the humanity with which they had been treated by Pompey contributed not a little to induce the rest to surrender. All the towns and former strongholds of the pirates opened their gates to Pompey; most of their fortresses, and everything which might enable the pirates to recover their strength, were destroyed; and they themselves were transplanted to Soloeis (henceforward called Pompeiopolis) and other deserted towns of Cilicia and Greece, where it was impossible for them again to resume their former mode of life. The whole war did not last above three months. One hundred and twenty towns and castles were

occupied by the Romans, and partly destroyed; 1300 ships were burned, 72 were taken, and 306 others surrendered.

Pompey remained in Asia, his object now being to be invested with the command against Mithridates. The war against this king had long been carried on with varying success, but no decisive advantage had yet been gained. The people at Rome had now the most unbounded confidence in Pompey, and when C. Manilius produced a bill (Cicero, 'Pro Lege Manilia') for giving to Pompey the conduct of the war against Mithridates, with unlimited power over the fleet and the army in the east, and with the rights of a proconsul in all parts of Asia, it was carried notwithstanding the opposition of Catulus and Hortensius. The intelligence of this decree was received by Pompey in his usual manner, with apparent dissatisfaction with those who, as he said, would allow him no peace, and would expose him to the greatest dangers in order to get rid of him. (Dion Cass., xxxvi. 23; Plut., 'Pomp.,' 30.) Notwithstanding this, he immediately set out (B.C. 66) to take the place of Lucullus, whom he treated with arrogance and the neglect of all common civility.

The power of Mithridates had been to a great extent broken before Pompey undertook the command, but it is nevertheless certain that he acted with great energy and prudence, so that the expectations of the people at Rome were fully justified. He sent his fleet round the coast from Syria to the Thracian Bosphorus (Plut., 'Pomp.,' 31, 32), and hastened from Crete to Galatia, where he assembled his land-troops. Proposals which he made to the king were rejected. Pompey allowed Phraates, king of Parthia, to make an attack on Armenia, and thereby made him his friend and ally. Mithridates, seeing himself thus deprived of his hope of receiving succours from Parthia (Appian, 'Mithrid.,' 87; Dion Cass., xxxvi., p. 24), sued for peace; but the negotiation failed. Pompey then marched through Lesser Armenia across the Euphrates to Acilisene, in order to separate Mithridates from Tigranes. The king took the same direction. The hostile armies met, and after some skirmishes Mithridates retreated to save his men; but he was attacked by the Romans at night in a narrow pass, where 10,000 of his army were slain and an equal number made prisoners, while Pompey only lost a small number. The king himself escaped with some horsemen to the Tauric Chersonese (Crimes). Pompey, being unable to overtake him, took up his winter-quarters in Colchis, and founded the town of Nicopolis on the field of battle in Armenia. He then advanced against Artaxata, the capital of Tigranes, who, being abandoned by his son, and discouraged at the approach of the enemy, appeared as a suppliant before Pompey, who, pleased with his submission, called him the friend of the Romans, left him in the possession of his kingdom of Armenia, and only required a contribution of 6000 talents, and his son as a hostage. A part of the Roman army remained under L. Afranius in the country between the Euphrates and Araxes, while Pompey with the rest marched towards the north and took up his quarters on the river Cyrus (Kur), as the season was too far advanced to approach nearer the Caucasus. Here the Romans were attacked by Orontes, king of Albania (Shirvan and Daghiatan), with a numerous army, but Pompey defeated him; and when the king sued for peace, it was granted him on condition that he should allow the Romans a free passage through his territory.

In the year B.C. 65 the Romans had again to sustain an attack from a king of the Iberians, between Albania and Colchis; but the barbarians were routed and put to flight, and the king sent both money and his sons as hostages to the Roman general. Pompey now proceeded to the mouth of the river Phasis (Fax, or Rion), where he was joined by his legate Servilius, who had the command of the fleet in the Euxine. From him he learned that it would be useless to force his way through the Caucasian regions to the Crimea, where his army might easily be destroyed; and therefore, on receiving information of an insurrection of the Albanians, he returned to the river Cyrus. The barbarians were easily routed, and Pompey again granted peace to their king: he determined at the same time to abandon Mithridates to his own fate, and to seek richer laurels, and which were more easily to be gained, in Syria. He received ambassadors from several eastern princes, who saw, or thought they saw, that their fate was in his hands; and even the nearest relations of Mithridates joined the Romans, and threw open to them their fortresses. Pompey, thus assured of his own good fortune, gave to Pontus the constitution of a Roman province: his fleet however was ordered to cruise in the Euxine, and to prevent provisions being conveyed to the king in the Crimea.

On his march southward he passed the hills of Zela, where, three years before, a legate of Lucullus had been defeated by Mithridates. Pompey ordered the bones of the slain, which still lay scattered over the field, to be solemnly buried. On his arrival in Syria he dethroned Antiochus XI., and made his country, together with Phœnicia, a Roman province. In Palestine he found a more resolute opposition. Jerusalem was distracted by a civil war between the two brothers Hyrcanus and Aristobulus: Pompey declared himself in favour of Hyrcanus, and besieged Jerusalem. The town soon capitulated, but the Temple held out rather more than three months. Pompey entered the sanctuary, but did not allow his soldiers to destroy anything. Aristobulus was sent to Rome as prisoner, and Judæa recognised the supremacy of Rome by an annual tribute. In Syria, Pompey was again complimented by ambassadors from various Eastern princes: Mithridates also sent envoys, and made a last attempt at negotiation;

but Pompey would hear of nothing but absolute submission, and the negotiations were broken off. Soon after, when Pompey was proceeding southward to add Arabia to his conquests, he received intelligence of the death of Mithridates; and having secured the submission of some Arabian chiefs, he hastened through Syria and Cilicia back to Pontus. Immense treasures were here surrendered to him; and Pharnaces, son of Mithridates, sent the body of his father to Pompey; but he refused to see it, and ordered it to be buried with royal honours at Sinope. Pompey now gave to Pharnaces the kingdom of Bosphorus; Deiotarus, tetrarch of Galatia, was rewarded with Lesser Armenia; Bithynia, Paphlagonia, and Pontus were made a Roman province under the name of Bithynia; Cilicia and Pamphylia under the name of Cilicia and Syria. Ariobarzanes received Cappadocia, and Tigranes was allowed to remain king of Great Armenia.

Having thus settled the affairs of Asia, Pompey proposed to return to Rome, where the anticipation of his arrival called forth the activity of the several parties. In January B.C. 61, Pompey landed at Brundisium and dismissed his armies; but he did not continue his journey towards Rome until party rage had subsided. He was everywhere received with enthusiasm, and the greater part of the population of Rome left the city to meet him before the gates, where he was solemnly received by the senate. After an interval of some months, he celebrated his triumph over the pirates and Mithridates, the most magnificent that Rome had ever beheld. Large tables were carried before him, containing an account of the countries and princes that he had subdued; and of the ships, treasures, and prisoners he had gained for the republic; an immense train of waggons followed, loaded with the spoils of the East. On the second day the emperor himself entered the city, and before his chariot walked the most distinguished of his prisoners, 324 in number, and behind him followed his legates and military tribunes. His army took no part in the triumph. (Appian; Dion Cass., xxxvii. 24.) After the triumph was over, Pompey dismissed his prisoners to their native countries, with the exception of young Tigranes and Aristobulus; and with his spoils he built a temple to Minerva, with inscriptions to commemorate his victories.

After his triumph, he naturally expected that all his measures in Asia and the distribution of lands which he had promised to his soldiers would be sanctioned by the senate, especially as he thought he was secure of the support of L. Afranius, whom he had promoted to the consulship. But he found himself not only opposed by Cato and the heads of the senatorial party, but abandoned by Afranius. This blow was too severe for a man like Pompey to bear, and he now openly joined the popular party, a step which he could not safely retract, and which involved him in those difficulties in which he at last perished. Cæsar supported Pompey, and thus at once weakened the power of the aristocracy, and gained over Pompey to his own interests. Crassus, the wealthiest of the Romans and the friend of the senate, was also easily gained over, and these three men now formed what is generally called the first triumvirate. During his consulship, Cæsar (B.C., 59), by his Agrarian law, enabled Pompey to fulfil the promises which he had made to his veterans: large districts of public land in Campania were assigned to them. Cæsar at length also obtained for him the sanction of the arrangements he had made in Asia before he left it. Pompey in his turn supported Cæsar, his apparent friend, in all his designs, and thus rendered himself more and more obnoxious to the aristocratic party; while on the other hand he was neither himself sincerely devoted to the people, nor perhaps regarded by them with any other feeling than astonishment for his military success. As Pompey had divorced Mucia (Cic., 'ad Att.', i. 12) the mother of his two sons, Cæsar, to secure him still more, gave him his daughter Julia in marriage, with whom Pompey spent most of his time during this period in his villa of Albanum near Rome, unconcerned about the sufferings of his great eulogist Cicero, who was driven into exile by the tribune Clodius; and it was not until Clodius had made an attempt to assassinate Pompey that he promoted the recall of Cicero. Gratitude induced Cicero to endeavour to re-establish Pompey in the popular favour, by procuring for him the *præfectura annona* for five years, and the proconsular power over all provinces, with fifteen legions at his command. (Cic., 'Ad Att.', iv. 1; Dion Cass., xxxix. 9.) In this capacity he went to Sicily, whence he sent provisions to Rome, and the favour of the people was easily gained, as the price of corn immediately began to fall. At the commencement of the year B.C. 56, Pompey returned to Rome, where he exerted his influence for the restoration of Ptolemæus Auletes, king of Egypt, who had been expelled from his kingdom. Clodius, who had become *curule ædile*, accused Milo; and when Pompey defended him, he was loaded with abuse by Clodius. This affair also involved him in a contest with the tribune Cato, who attacked him in the senate, and accused him of faithlessness to Cicero. The silence of the audience inflamed Pompey's anger, and he openly spoke of secret conspiracies against himself, pointing out his colleague Crassus as their author. He was now conscious of having lost the favour of all parties, and saw nothing left but to repair to Cæsar, who had taken up his winter-quarters at Luca, and to whom Crassus had already gone. Cæsar reconciled the two men, and, about the middle of April, B.C. 56, concluded a secret treaty with them, according to which his own

governorship of Gaul was to be prolonged for five years, and Pompey and Crassus to be made consuls for the following year, with the provinces of Spain and Africa for Pompey, and Syria for Crassus. He moreover promised to exert all his influence with the people in their favour.

Pompey now returned to Rome with renewed courage and arrogance, and with Crassus was a candidate for the consulship. The opposition, headed by the inflexible Cato, who saw through the plans of the triumvirs, was fierce, though useless; but when the day of election came, it was only after the forum had been occupied by armed forces that Pompey and Crassus attained their object. The tribune Tribonius was bribed to assign to the new consuls the provinces on which they themselves had already determined. Pompey, now again at the head of the Roman world, indulged in vain dreams of a final victory over his rivals. Pompey built a magnificent theatre, and amused the multitude for several days with the most gorgeous spectacles. But the result did not entirely answer his expectations, and when he shortly after raised troops in Italy and Cisalpine Gaul, and sent them to Spain under his legates Afranius and Petreius, the people loudly expressed their discontent. At the end of the year Crassus went to Syria, but Pompey governed his province by his legates, and remained with his army in the neighbourhood of Rome, ostensibly to provide the city with provisions, but really in the hope to obtain dictatorial power, and to disarm Cæsar through the senate and the people without striking a blow. He interfered with the administration of justice, prevented the election of new consuls, and secretly kept up hostilities between the two parties at Rome. In September of the year B.C. 54, his wife Julia died, and when proposals were made for a new alliance with the family of Cæsar, he rejected them. Crassus in the meanwhile perished in Asia, and the triumvirate was changed into a duumvirate. Pompey had long wished for the dictatorship, and when the tribunes Luceius Hirrus and Cælius Vinicianus prevented the elections, and at last proposed to make Pompey dictator, he was obliged to come forward, but perceiving the vehement opposition of the senate and Cato, he withdrew, and Domitius Calvinus and Valerius Messala were elected consuls for the remainder of the year. At the end of their consulship, the elections were again disturbed, and Pompey conceived fresh hopes. In the ensuing quarrels between Milo and Clodius (CICERO), the senate, unable to maintain peace and order in the city, empowered Pompey to collect troops, and to put an end to the disturbances. Pompey was now again in his proper sphere: his first object was, with the assistance of his soldiers, to thwart the plans of Milo, and to get rid of him he not only introduced new forms of procedure, but also surrounded the court with soldiers during the trial of Milo. Milo was exiled, while others who were equally guilty were acquitted, as Pompey had no ground for fearing them.

On the 25th of February Pompey was made sole consul, but on the 1st of August he made Metellus Scipio, whose daughter Cornelia he had married, his colleague, and with him held the *comitia* to elect the consuls for the year following. At the same time an old law, that in many instances had been neglected, was renewed, which required that every candidate for a public office should be a candidate in person at Rome. This was aimed at Cæsar, who thereby would be compelled to give up the command of his armies and to appear in Rome, if he wished to be a candidate for the consulship. For himself, Pompey obtained a prolongation of his proconsulship over Spain for five years. While Pompey—during whose illness at Naples all Italy prayed for his recovery—was more and more confirmed in his conviction that he was the first man of the republic, Cæsar had by the distribution of large sums of money increased his party at Rome, and gained over to his interest several tribunes, among whom was the bold and eloquent Curio. Cæsar, though absent from Rome, claimed to be elected consul for the following year; and when Pompey and the senate required him to dismiss his army and present himself at Rome as a candidate, Curio insisted that Pompey should likewise dismiss his army. [CÆSAR.] After long discussions, the party of Pompey gained the day, and a decree was made declaring Cæsar a public enemy unless he resigned his command and came to Rome as a private man. The public authorities at the same time received orders to guard the republic against any danger, and Pompey was allowed to make use of the public treasury for the purpose of raising an army in Italy. Pompey had declared that he only needed to stamp with his foot upon the earth to call forth new legions; but when he found that he had miscalculated, he and the whole senatorial party were thrown into the greatest confusion by the intelligence that Cæsar was advancing towards Rome. On this occasion Cicero exclaimed, "Pompey, thou hast betrayed us!" Cato however thought it advisable to declare Pompey general of the republic. Pompey with his few troops could do nothing; he left the city, accompanied by the consuls, most of the senators, Cato, Cicero, and others of the aristocratic party; they hastened to Capua, and thence to Brundisium. From Brundisium Pompey fled to Dyrrhachium in Epirus, which he strongly garrisoned and fortified, while Cæsar established his power in the west. The position of Pompey was more advantageous to him than any other he could have chosen, for the fleet was at his command, and he could raise new troops without great difficulties; but he had to struggle with his own party, some blaming him for not offering battle to Cæsar, and others for not accepting the proposals of

peace which Cæsar repeatedly made to him. His own plan was to waken his enemy without fighting a battle; but Cæsar received reinforcements from Italy, and Pompey was cut off from Dyrrhachium. In a battle which ensued Cæsar was defeated, and directed his march into Thessaly.

After this success the senatorial party imagined that all the work was done, and that they might without any danger return to Italy; and when Pompey declared that Greece must first be cleared of the enemy, they urged the immediate necessity of battle. Cæsar, knowing this disposition of his adversaries, compelled them, on the 9th of August B.C. 48, to give battle in the plains of Pharsalus. Pompey was defeated, and though he had still considerable forces at his command, he was disheartened. He fled to the mouth of the river Peneus, and thence sailed to Lesbos, whither he had sent his wife Cornelia and his younger son. By the advice of one of his friends he determined to seek refuge in Egypt, whose king was indebted to him for the restoration of his father. He landed there on the 28th of September, but was treacherously murdered in the presence of the king and his army by the tribune Septimius, at the instigation of Achilles and Theodotus, who feared the anger of Cæsar. The wife and child of Pompey, who were still on board the ship, and saw the murder, hastened away. The murderers cut off the head of Pompey and left the body on the beach, where it was buried by a freedman and a veteran. Cæsar, who arrived in Egypt three days later, shed tears at the sight of the head of Pompey, and put his murderers to death.

Pompey was fifty-eight years old at the time of his death. It is difficult to form a correct judgment of his character, for he was not, like Marius, Sulla, and Cæsar, a man of singleness of principle and purpose, but he changed his position according to the circumstances in which he was placed, and which he was unable to control. Though by birth not belonging to the senatorial party, he was by his immense fortune placed on a level with them, and made himself their champion, though they could never sympathise with him; and when he joined the popular party it was to satisfy his own ambitious views. He was thus in reality throughout his life floating between two parties, and was neither in his private nor public life a faithful friend. His object was to be looked upon as the first man of the state, and he objected to no means of accomplishing this end, even though they tended to subvert the constitution. In his civil administration of the state, and during the whole period from his great triumph to the war with Cæsar, the little that he did was not calculated materially to improve the condition of his country. His real fame must rest on his conduct as a general, though he was inferior in this respect to other great generals of his age. In his private life however he formed a contrast to most of his contemporaries, for though immensely rich, he lived simply, and abstained from all debauchery and excesses. It is also generally acknowledged that he did not enrich himself by extortion in his provinces, though no man had ever had more opportunities, and that he was conscientious in the application of the public money. As regards his intellectual powers, he was not above mediocrity, although he sometimes affected to be the patron of science and literature. Cicero judged of him differently at different times, according as he was governed by momentary impulse or by what he considered the good of the state. (See the articles CICERO, CÆSAR, SEPTORIUS, MITHRIDATES, and especially Pompey's Life in Drumann's 'Geschichte Roms,' &c., vol. iv., p. 324-556.)

British Museum. Actual size.

(This coin was not struck by Pompey himself, but by his son Sextus. It must have been struck at the time when Sextus had taken possession of Sicily and assumed the title of 'Imperator' for the second time. The single head on one side is believed to be that of Pompey the Triumvir; the two smaller heads are those of his two sons.)

POMPEIUS, CNEIUS MAGNUS, the elder of the two sons of the triumvir Pompey and of Mucia, was born about B.C. 77. According to Appian, he and his brother Sextus accompanied their father on his expedition against the pirates. When the war with Cæsar broke out he was sent to Egypt to collect troops, and when he returned to his father's fleet in the Adriatic with 500 horsemen and 50 ships, and found that Cæsar had been allowed to cross the Adriatic, he burnt several of the hostile ships. After the defeat of his father, he sent his squadron back to Alexandria, and remained with the main armament near Coryra, justly observing that with such a fleet there could be no reason for despair. In the spring of B.C. 47, when sailing with the fleet to Africa, he was informed by his brother of the murder of his father. He now proceeded towards the Spanish coast, and, after having taken possession of several small islands, landed in Spain (B.C. 46). Cneius soon collected an army of 13 legions, but Cæsar did not at first think him an adversary of any consequence, and sent only

his legate C. Didius against him. At the end of the year however he found it necessary to follow himself. On the 17th of March B.C. 45, Cneius was defeated in the bloody battle of Munda (Monda in Granada), and flying to Carteia, attempted to escape across the sea. Being thwarted in this attempt, he directed his steps towards the interior of Spain. His enemies followed, and overtook him in the neighbourhood of Lauron, where he was killed. Being naturally of a passionate disposition, the fate of his father had filled him with an insatiable desire of revenge, and changed his natural boldness into a kind of savage audacity. (See the article CÆSAR, and the detailed account of the war in Spain in the book 'De Bello Hispaniensi'.)

POMPEIUS, SEXTUS MAGNUS, the younger son of the triumvir and of Mucia, was born in B.C. 75. At the time of the war with the pirates he was a boy of eight years of age, and when his father fought the battle of Pharsalus he was with his step-mother Cornelia in Lesbos. After witnessing the murder of his father in Egypt, he fled with Cornelia to Cyprus, and soon after joined his brother Cneius, who was sailing with the fleet to Africa. When the senatorial party was defeated at Thapsus he went with Labienus and others to Spain to rejoin his brother, but stopped at Corduba. After learning the unhappy issue of the battle of Munda he left Corduba for the country of the Laetani. A number of malcontents and fragments of the army of his brother soon assembled around him, and with them he began to carry on a kind of guerilla warfare. Supported by the natives (Dion Cassius, xlv. 10), he took several towns, and neither C. Carrinas nor Asinius Pollio was able to cope with him. He soon made himself master of all Bætica and a part of Hispania Tarracensis, and assumed the title of imperator. The only object of Sextus, as he himself afterwards declared, was to be restored to his country and to recover the confiscated estates of his father. (Cic., 'Ad Att.', xvi. 4.) It was proposed in the senate to recall him and to give him from the public treasury a sum of money equivalent to the property of his father. The proposal was supported by Antony; but Sextus, mistrusting the optimates as well as the veterans of Cæsar, advanced with his forces as far as Massilia to watch the course of events in Italy. The senate made him chief admiral of the fleet, but when Octavian, Antony, and Lepidus formed a new triumvirate, Sextus was declared an outlaw. Being however supported by his fleet, he cruised as a pirate in the Mediterranean, and at last succeeded in taking possession of Sicily. The number of proscribed or ruined individuals and of slaves who flocked to his standard increased daily, as he promised them higher rewards than his enemies offered for his head. He also received reinforcements from A. Cornificius, governor of the province of Africa. (Dion Cass., xlviii. 17.) Rome at this time suffered from scarcity, and Octavian sent out Q. Salvidienus Rufus (B.C. 42) with a squadron, who however only succeeded in protecting the coasts of Italy. During the campaign of Philippi, Sextus remained inactive, confining himself to the defence of Sicily, and only harassing the coasts of Italy, whereby he increased the scarcity of provisions at Rome.

When, in the spring of the year B.C. 40, Antony on his return from Egypt found the gates of Brundisium closed upon him by Octavian, he requested Sextus Pompey to assist him against Octavian. Pompey without hesitation sent a division of cavalry and a squadron to southern Italy. But the triumvirs soon became reconciled, and after concluding a fresh treaty among themselves (foedus Brundisianum), they determined to make war upon Pompey, who now recommenced cutting off all supplies from Rome. The city was thus thrown into such a state of suffering and discontent, that at last the people in open rebellion compelled the triumvirs to a reconciliation with Pompey. In B.C. 39 a treaty was concluded with him, in which he obtained the proconsulship of Sicily, Sardinia, Corsica, and Achaia, and promised to supply Italy with provisions. But this reconciliation proved to be little more than a farce, for when Sextus returned to Sicily, Antony refused to give up Achaia, and Octavian complained that Pompey allowed piracy to be carried on in the Mediterranean. A rupture between Pompey and Octavian ensued, and Menodorus, the admiral of the former, went over to Octavian, and treacherously surrendered to him Sardinia and Corsica. Octavian was now bent upon destroying the Pompeian party, but his fleet was twice defeated by the admirals of Pompey, first near Cuma and then near Messina. Pompey however, as usual, did not avail himself of his victories, and allowed Octavian to repair his losses. The faithless Menodorus now returned with seven ships to his former master. M. Vipsanius Agrippa was appointed by Octavian as chief admiral of his fleet, and a landing was to be made on three parts of the island of Sicily at once; but the fleet was dispersed by a storm, and Lepidus alone reached Lilybæum. Pompey even now remained inactive, and offered sacrifices to Neptune, whose son he called himself. (Dion Cass., xlviii. 19; Horat., 'Epod.', 9.) Menodorus again deserted Pompey, and in a sea-fight off Mylae against Agrippa, Pompey lost thirty ships and was unable to prevent Octavian from landing at Tauromenium. After several skirmishes Agrippa at length (B.C. 36) in a great sea-fight near Naulochus decided the fate of Pompey, who, when he heard of the desertion of his land-troops, fled with his daughter and seventeen ships from Messina to Asia. He was not followed by Octavian, and found an hospitable reception with C. Furnius, the legate of Antony. But he soon lost the confidence of his host by sending secret envoys to the Parthians and

taking possession of Lampsacus. An open war broke out between him and Furnius, and when Antony, who was at the time in Alexandria, heard of it, he sent Titius with a fleet of 120 ships against the dangerous guest. Pompey fled to Armenia, but being overtaken by his enemies and deserted by his troops, he surrendered, and was put to death at Miletus (A.C. 35), either at the command of Antony himself or of Titius, who wished to remove a man who might easily be the cause of a rupture between the triumvirs. Sextus Pompey was forty years old at the time of his death. He had assumed the name of Pius, because he endeavoured to avenge the death of his father and his brother: this surname appears on many of his coins.

POMPEIUS, TROGUS. [TROGUS.]

POMPONIUS MELA. [MELA.]

POMPONIUS SEXTUS, a distinguished Roman jurist. His age may be approximated to from several circumstances. He is supposed to be the Sextus mentioned by Gaius in connection with Julianus (ii. 218.) In the extract from the 'Liber Singularis' of the 'Encheiridion' of Pomponius ('Dig., l. tit. 2, a. 2), we have a list of the various Roman jurists, ending with Salvanus Julianus, from which circumstance it may be concluded that he was at least younger than Julianus. A difficulty however arises from the fact of a Pomponius being often cited by Julianus ('Dig., iii. tit. 5, a. 6), and from there being cited in the 'Digest' both a Sextus Pomponius and a Sextus and a Pomponius. ('Dig., xxx. tit. 1, a. 32.) Sextus Pomponius is cited by Pomponius. ('Dig., xviii. tit. 5, a. 41.) On the whole it seems likely that there was a Pomponius and a Sextus Pomponius who was sometimes simply called Sextus. But if there were two, it is difficult to say when they respectively lived or what they respectively wrote. Pomponius survived the emperor Antoninus Pius. ('Dig., l. tit. 12, a. 14.) In one passage he calls Gaius ('Dig., xlv. tit. 3, a. 39) 'Gaius nooster.' From all these circumstances it may be concluded that a Pomponius lived under Antoninus Pius and survived him. If there was a Sextus Pomponius, he was older than Pomponius. The works of Pomponius, as cited in the Florentine Index, are thirty books 'Ad Q. Mucium Lectionum,' thirty-five to Sabinus, twenty books of Epistols, fifteen books of Varie Lectiones, seven books to Plantius, five books of Fidei-commissa, five books of Senatus Consulta, five books of Regule, and two books of the Encheiridion.

The 'Encheiridion,' as extracted in the 'Digest,' is called 'Liber Singularis.' It contains an historical sketch of the origin and progress of the Roman law, and a list of the law writers to the time of Pomponius, in which it is also mentioned what writers respectively belonged to the schools of Ateius Capito and Labeo, who lived in the time of Augustus, and were the founders or heads of two separate schools (scholæ).

PONCE, PEDRO, a Spanish Benedictine monk, in the convent of Oña in Old Castile, was born about 1530. He is considered the inventor of the art of teaching the dumb to speak, which he carried to considerable perfection. According to Ambrosio Morales ('Antigüedades de España,' fol. 38, Alcalá, 1675), Ponce had to instruct two brothers and one sister of the Constable of Castile, and a son of the Gran Justicia of Aragon, all of whom were born deaf and dumb. These pupils made such progress that, after some time, they not only were able to write correctly, but also to answer any questions put to them. One of them, Don Pedro de Velasco, who lived to be only twenty years of age, spoke and wrote Latin as well as his mother tongue, and was at the time of his death making considerable progress in the Greek language. Another of Ponce's pupils became a Benedictine monk, and was able to make confession and explain his creed by word of mouth. These facts were attested by the best Spanish writers of the time, as well as by our countryman Sir Kenelm Digby, who, in his 'Two Treatises concerning the Body and Soul of Man' (Paris, 1644, cap. 28, n. 8), says, "This priest brought the young lord to speak as distinctly as any man whatsoever; and I have often discoursed with him while I wayted upon the Prince of Wales in Spain." According to the same author (p. 264), and to Juan de Castañiza ('Vida de San Benito'), Ponce wrote a treatise in Spanish, in which he explained his method, and laid down certain rules as the result of his observations; but this interesting work has been lost, though it is generally believed that Juan Pablo Bonet, who in 1620 published his 'Reduccion de las Letras, y Arte para enseñar á hablar los Mudos,' 4to, 1620, saw and consulted it. Ponce died in 1584, and was buried in the convent of his order.

PONCE DE LEON, JUAN, one of the early Spanish discoverers in America, was born about 1460 at Leon, and when a boy was page to Pedro Nuñez de Gusman, Señor of Toral. From an early age he had been schooled to war, and served in the various campaigns against the Moors of Granada. He accompanied Columbus in his second voyage in 1493, and having subsequently distinguished himself in the campaign against the Indians of Higüey, he was appointed to the command of the conquered territory, as lieutenant of the governor of Hispaniola. In 1508, having received intelligence from the natives that the mountains of the neighbouring island of Boriquen, or Puerto Rico, abounded with gold, he obtained permission from the governor Ovando to make an expedition to the island; and sailed thither in a caravel with a few Spaniards, and several Indians to act as interpreters or guides. Ponce landed near the residence of the principal cacique, Agueybaná, who treated him and his suite with great kindness, and

gave them a large quantity of gold. With these good tidings Ponce returned to Hispaniola, and obtained from the governor permission, as well as the necessary supplies, to undertake the subjugation of the island. Before the supplies were completed however his patron Ovando was recalled, and succeeded by Don Diego Columbus, who deprived Ponce of his command, and appointed another governor over the island. In the meanwhile Ovando, who had now returned to Spain, having made a favourable representation of his merits, Ponce was re-appointed in 1509, and intrusted with the conquest of the island. After many hard-fought battles with the natives, who proved to be far more warlike than those of Hispaniola, and the death of their cacique Agueybaná, who fell in a skirmish, Ponce completed the subjugation of the island; notwithstanding which he was again deprived of the command, and replaced by Juan Ceron.

Incapable of quiet life, Ponce soon turned his eyes to some other scene of conquest. He appears to have conceived the singular idea that there was yet a third world to be discovered, and he hoped to be the first to reach it; but as he was then fast advancing in life, and his constitution had been very much impaired by the fatigues and privations of former voyages, he decided to sail first to a certain island of the Bahama group, called Bimini, where, according to a tradition current among the natives of Puerto Rico, was a fountain possessing the power of restoring youth. In search of this marvellous fountain Ponce sailed, on the 3rd of March 1512, from the port of St. Germain in the island of Puerto Rico. Having arrived at the Bahamas he visited all the islands one after another, and drank of every fountain, river, or lake that he found; but his inquiries for the island of Bimini were all in vain. Ponce however was not discouraged; and after repairing his ships he again put to sea, and shaped his course to the north-west. In this way, on Sunday the 27th of March, he came in sight of what he supposed to be an island, which, from the circumstance of its being discovered on a Palm Sunday, and the ground being covered with flowers, was called 'Pascua Florida.' Ponce took possession of the country in the name of Ferdinand and Isabella, and again started in search of the desired island; but after some months of unsuccessful cruise he returned to Puerto Rico, and thence to Spain, where he arrived in 1513. Having made a report of his voyage to the king, he was appointed Adelantado de la Florida, and in 1514 he was intrusted with the command of an expedition fitting out at Seville against the Carribees. This however proving unsuccessful, Ponce retired to Puerto Rico, where he resided until 1521, when, being roused by the fame of the recent exploits of Cortés, he again fitted out two ships, and, having embarked almost the whole of his property, put to sea. In this manner he came upon the western coast of Florida, where he made a descent; but the Indians sallying forth to defend their shores, several of his men were slain, and himself wounded by an arrow in the thigh, of which he died soon after at Cuba in 1521.

(Herrera, *Historia de las Indias*, dec. 4, lib. ix, cap. viii, ix; Navarrete, *Coleccion de Viajes y Descubrimientos*, &c., vol. iii.)

PONCE DE LEON, RODRIGO, born in 1448, was an illegitimate and younger son of John Ponce de Leon, Count of Arcos, a Castilian nobleman, and Doña Leonora Nuñez de Prado, a lady of rank. The brilliant qualities of the youth so far gained him the affection of his father, that he asked and obtained the royal sanction to bequeath him his title and estates, to the prejudice of legitimate heirs. Rodrigo served his apprenticeship to the art of war in the various campaigns against the Moors, displaying on every occasion the greatest ability and personal courage. When scarcely seventeen years old, he obtained at Madroño a victory over the Moors, accompanied with a signal display of personal prowess, for which the king gave the title of the youthful David. At the death of his father, in 1469, Rodrigo succeeded him in his title, and soon after married the daughter of the Marquis of Villena, the minister of Henry IV., through whose influence he was raised to the dignity of Marquis of Cadiz. This alliance attached him to the fortunes of Henry, in his disputes with his brother Alfonso, and subsequently with Isabella, on the accession of the latter to the throne of Castile. Rodrigo did not engage in any open act of resistance; but retired to his estates, and occupied himself entirely in prosecuting an hereditary feud with the house of Gusman, a family which from ancient times divided with his own the interests of Andalusia. In the wars which put an end to the Mohammedan power in the Peninsula, the marquis took a very active part. Having early in 1482 received intelligence that the important fortress of Alhama was but slightly garrisoned, he succeeded in scaling the walls and surprising the garrison. In 1483, he accompanied a marauding expedition against Malaga, headed by the grand-master of Santiago, Don Alonso de Cardenas, who entrusted to him the command of the centre; but being suddenly attacked and surrounded by considerable forces of the enemy, whilst in the intricate passes of the Axarquia, the Christian army was completely routed, and Rodrigo with a very few knights escaped alive. During the siege of Veles (April 1487) he saved the life of Ferdinand, who, having been surrounded by a party of the enemy, must have perished without his timely aid. He also greatly distinguished himself during the siege of Malaga (May, August, 1487) by repulsing a sally made by the garrison, and he was present at the surrender of Baza (1488) and Granada (January, 1492). He survived only a few months the close of the Moorish war, to which he had so efficiently co-operated, dying in his palace at Seville, on the 28th of

August 1492, from the effects of a disorder brought on by the fatigues of his military life. At his death, Ferdinand and Isabella, with all their court, went for several days into deep mourning.

(Bernaldez, *Cronica de los Reyes Católicos, Genealogia de los Ponce de Leon*; Prescott, *Ferdinand and Isabella*.)

POND, JOHN, was born about 1767, and was successively at Maidstone grammar-school, under the tuition of Wales, known as astronomer to Captain Cook's expedition, and at Trinity College, Cambridge. Having been obliged, from the ill-health which attended him almost through life, to spend several years abroad, he established himself, on his return, at Westbury near Bristol, where he resided till his marriage in 1807. He then settled in London; and in 1811 was appointed to succeed Dr. Maskelyne as astronomer royal. He retired from this office upon a pension in 1835, and died September 7, 1836, at Blackheath. He was buried at Lee near Blackheath, in the same tomb with his predecessor Halley.

Mr. Pond's attention was directed to astronomy by Wales, to whom it is stated that, when a boy, he pointed out some apparent imperfection of the Greenwich instruments, as shown in their published results. He did not continue this study at Cambridge, and missed the opportunity of acquiring that depth of mathematical knowledge which is necessary for the comprehension of the highest branches of the theory of gravitation. The branch of astronomy to which he devoted his subsequent life was the determination of the places of the fixed stars; and in knowledge of the instruments and methods necessary to be used, and sagacity in detecting and avoiding error, the opinion of those who are best able to judge places him second to none of this day. As a mere handler of instruments, his friend Troughton, one of the best of critics in such a matter, used to say that "Mr. Pond had, within his knowledge, no equal or rival except Captain Kater."

The circumstance which brought Mr. Pond into notice as an astronomer was the following:—when at Westbury, he became possessed of an altitude and azimuth circle by Troughton, and undertook a series of observations, from which he deduced (*Phil. Trans.*, 1806) that the quadrant then still in use at Greenwich for the determination of declinations had changed its form since the time of Bradley: a result which Troughton verified by actual measurement of the instrument. A mural circle (called Troughton's, from its maker) was accordingly ordered, in place of the quadrant; but it was not erected till 1812, when Mr. Pond, who had pointed out (or at least had proved, for it had been suspected before) the error of the old instrument, was settled in his place at Greenwich. The memoir above cited says, "Mr. Pond saw, almost intuitively, the vast superiority of this over every other form of the declination instrument, and for some years he and the artist who constructed it were perhaps the only persons who did clearly see and broadly assert that the operation of a circle did not depend upon having a bearing on each side, or a complete axis." In 1825 the mural circle made by Mr. Jones, and intended for the Cape of Good Hope, was sent to Greenwich for examination. During this process Mr. Pond first used the two instruments for direct and reflected observations of the same star, a method which is thought to have been suggested by Troughton; and, at his request, the circle intended for the Cape was retained at Greenwich. Mr. Pond is also the inventor of the method of observing in groups; and it is also to be noted that he was the first astronomer who advocated what is now the universal practice, of depending upon masses of observations for all fundamental data.

In 1833 Mr. Pond had finished his standard catalogue of 1113 stars, which was then the largest of those which had any pretension to the same degree of accuracy. The controversy between Pond and Brinkley on the parallax of the fixed stars is a matter of history, on which it only concerns us here to say that the general opinion now is, that the former was right in his assertion that the latter did not prove the existence of a sensible amount of parallax.

The works of Mr. Pond are: 1, the volumes of Greenwich Observations, published during his astronomer-ship; 2, various Papers in the Transactions of the Royal and Royal Astronomical Societies; 3, a Translation of the 'Système du Monde' of Laplace. His astronomical writings are condensed, and not addressed to any but those who have a thorough acquaintance with the subject. There is nothing of a popular nature in the usual work of an observatory; so that while few except astronomers knew more of the subject of this article than that one John Pond, Esquire, was noted in the almanacs and directories as astronomer royal, the following is the testimony of the Astronomical Society:—"It is not too much to say that meridian sidereal observation (which excludes the Herschel branch of astronomy) owes more to him than to all his countrymen put together since the time of Bradley."

PONIATOWSKI, JOSEPH, PRINCE, born at Warsaw, in 1763, was the son of Andreas Poniatowski, lieutenant-general of artillery in the Austrian service, and nephew to Stanislaus Augustus, the last king of Poland. He entered the Austrian service, and became colonel of dragoons and aide-de-camp of the Emperor Joseph II., with whom he made a campaign against the Turks in 1787. In 1789 he returned to Poland, where he showed himself a warm supporter of the independence of his country. He fought against the Russians in 1792, but was obliged to resign his command in consequence of the king's weakness and partiality for Russia. In 1794, when the Poles again

rose against the Russians, Joseph Poniatowski served under Kosciusko, but Kosciusko being defeated, he was obliged to emigrate, and he retired to Vienna.

In 1798 he returned to Warsaw, which was then under the dominion of Prussia, and the Prussian government restored to him part of his estates, where he spent several years. After the battle of Jena, in 1806, and the invasion of Prussia by Napoleon, the French armies advanced towards the Vistula. In this crisis he was appointed by the king of Prussia military commander of Warsaw, where he formed a national guard for the security of the city. In this capacity he received the French general Murat, who took possession of Warsaw, in November 1806. At first he would not accept any service under the French, until Napoleon, having arrived at Warsaw, cajoled the Poles with fine though vague promises, talking, in his oracular style of "the destinies of Poland being on the eve of being fulfilled," &c. The Poles trusted to him, and a national army was formed, of which Poniatowski took the command, and which rendered great services to the French during the campaign of 1807 against the Russians. By the peace of Tilsit, Russia and Austria retained the greater part of Poland, and the duchy of Warsaw was given to the king of Saxony. Poniatowski remained minister at war for the duchy, but the Polish army was scattered among the French garrisons in Germany, and some regiments were drafted for service in Spain. When a new war broke out between Austria and Napoleon in 1809, Poniatowski, who had only a small force left with him, after fighting against the Austrians, was obliged to evacuate Warsaw, but he soon after invaded Galicia, and called the inhabitants to arms.

By the peace of Vienna (October 1809), Galicia was taken away from Austria and united to the grand-duchy of Warsaw. When the war broke out between France and Russia in 1812, Poniatowski, who had in the meantime increased and disciplined the Polish army, obtained the command of the fifth corps of the 'grand army,' which was composed entirely of Poles. He fought bravely in several battles against the Russians, and entered Moscow with Napoleon. At the same time he maintained the strictest discipline in his corps, which did not share in the excesses committed by other portions of the invading army. In the disastrous retreat from Moscow the same corps distinguished itself by its orderly behaviour. Being obliged to evacuate Warsaw, Poniatowski withdrew into Saxony, and in the following campaign of 1813 Napoleon gave him the command of a mixed corps of French and Poles. He fought with his usual bravery in various battles, and was made a marshal of France by Napoleon just before the battle of Leipzig. A few days after, on the 18th of October, while protecting with a handful of men the retreat of the French, he was twice wounded, and being pressed by the enemy upon the banks of the river Elster, which was swelled by the rains, he spurred his horse into the river and disappeared in the water.

PONIATOWSKI, STANISLAUS, COUNT, a Polish nobleman, was born in 1678. He took the part of Stanislaus Leckzinski and of his protector Charles XII. of Sweden against King Augustus and the Russian party, as it was called, in Poland. [Augustus II. of Poland; CHARLES XII. of Sweden.] He followed Charles in his adventurous expedition into Russia, with the rank of major-general in the Swedish army, and after the defeat of Pultawa materially helped the king to effect his escape with a handful of men into the Turkish territory. Having seen his master safely lodged at Bender, Poniatowski repaired to Constantinople as his agent, to forward his interests with the Sultan. He displayed in that difficult and dangerous mission all the resources of a most experienced diplomatist. Alone, without connections, the representative of a fugitive king, who was himself a kind of prisoner in the hands of the Turks, he contrived to engage the Porte to espouse the cause of Charles and to attack Russia, and he acquired influence enough to obtain the dismissal of several viziers in succession for having thwarted his views. The curious particulars of his negotiations at the Porte are related in a lively manner by Voltaire in his 'History of Charles XII.' At last, when Charles resolved to quit Bender, Poniatowski followed his master into Germany, where he remained with Stanislaus Leckzinski, the protégé of Charles, who had been driven out of Poland by the Russian party. Poniatowski remained with Stanislaus till the death of Charles, when all hopes of seeing him restored to the crown of Poland having vanished, Poniatowski made his submission to King Augustus, who not only restored to him his property, but made him treasurer of Lithuania, general of the guards, and lastly, palatine of Masovia. After the death of Augustus he endeavoured to effect the restoration of Stanislaus Leckzinski, but did not succeed, and the Elector of Saxony was elected king. Poniatowski made his submission to the new king, who took him into favour, and made him, in 1752, Castellan of Cracow, which was one of the highest dignities in the kingdom. Some time after he retired to his estates, where he died in 1762. He married a Princess Czartoriska, by whom he had two sons, one of whom became afterwards king of Poland [STANISLAUS AUGUSTUS], and the other entered the Austrian service and became lieutenant general of artillery.

PONTIUS, PAUL, a celebrated engraver, was born at Antwerp in 1596, according to some accounts, according to others in 1603. The date of his death appears not to be known: the 'Slaughter of the Innocents,' after Rubens, one of his principal works, is dated 1658.

Pontius was the pupil of Vosterman, and he is chiefly distinguished for his excellent prints after Rubens, which he executed under that great painter's inspection. He engraved also a celebrated set of portraits after Vandyck, including those of many of the most distinguished Flemish painters.

PONTIUS PILATE. [PILATE, PONTIUS.]

PONTO'PPIDAN, ERIC, born 1698, at Aarhus in Jutland, and was the son of Louis Pontoppidan, a clergyman who wrote several ascetic works, besides a 'Theatrum Nobilitatis Danicæ,' 2 vols. fol. Eric studied at Fredericia, and afterwards at Copenhagen, where he took his degree in divinity. He then became preceptor to several young noblemen, with whom he travelled. Subsequently he was appointed minister of a country parish in Holstein, and in 1735 he was numbered among the king's chaplains. In 1738 he was appointed to a chair of theology in the University of Copenhagen; and in 1747 he was made bishop of Bergen in Norway. He was the author of numerous works, both in Danish and Latin, upon historical, religious, and antiquarian subjects. The principal are:—1, 'Theatrum Danicæ veteris et modernæ,' 4to, 1730, being a description of the geography, natural history, antiquities, &c. of the kingdom of Denmark. The author afterwards treated the same subject at much greater length in a work written in the Danish language. 2, 'Den Danske Atlas,' in 7 thick vols. 4to, most of which were published after his death, and which give a complete and elaborate topographical description of Denmark, accompanied by maps, views, and plans of the various towns, engravings of curious coins, inscriptions, monuments, costumes, and other remarkable objects, with an introduction to the history of the country, the genealogy of its kings, and other particulars relative to its history. 3, 'Gesta et Vestigia Danorum extra Daniam,' 2 vols. 8vo, 1740. In this work Pontoppidan gives the history of the old Danish race; its migrations to Britain, France, and other countries; the exploits of its warriors, &c. In his narrative the author is considered as having allowed himself to be carried by national feelings beyond the bounds of critical discrimination. 4, 'Annales Ecclesiæ Danicæ,' 4 vols. 4to, a good history of the church of Denmark. 5, 'Marmora Danica selectiora,' in fol., in which the author copies a number of inscriptions of various ages, which elucidate the history of his country. 6, 'Det første forsøg paa Norges naturlige historie,' 4to, 1752, being an essay on the natural history of Norway, translated into English in 1755; a curious work, but exhibiting marks of considerable credulity, especially concerning the enormous sea-serpents, the kraaken, and other fabulous monsters. 7, 'Memoriæ Hafniæ,' a good description of the city of Copenhagen. 8, 'Origines Havnenses,' a history of the same city. 9, 'Glossarium Norvegiæ,' or collection of obsolete words in that language, Bergen, 1749. 10, 'A Manual of Religion, in Danish, or Explanation of Luther's Catechism,' a work which was translated into German and Icelandic, and used in schools throughout all the Danish monarchy. Pontoppidan died at Bergen, in 1764. His relative, Christian Joachim Pontoppidan, published two good maps of Norway in 1735 and 1795.

PONTORMO, JA'COPO DA, or JACOPO CARBUCCI, a distinguished Florentine painter, was born at Pontorno in 1494, and died at Florence in 1556. He was a short time the pupil of Leonardo da Vinci, and he studied under Albertinelli, Piero di Cosimo, and Andrea del Sarto. He painted for some time in a similar style to Andrea, and was that painter's rival; but he frequently changed his manner, and three distinct styles are ascribed to him, the last imitated from the works of Albert Dürer. Towards the close of his life he spent eleven years in painting some frescoes of the 'Deluge' and the 'Last Judgment' in the church of San Lorenzo, in the manner of the imitators of Michel Angelo, but they have long since been whitewashed over.

PONZ, ANTONIO, a highly meritorious Spanish topographer and writer on the fine arts, was born in 1725, at Bexis, in the district of Segorbe in Valencia. His parents, who were persons of great respectability and considerable property, intended to bring him up for the church, and he was sent to pursue his studies accordingly, first at Segorbe, and afterwards at the University of Valencia, at both which places he gave proofs of more than ordinary ability and application. Yet, though he made sufficient progress in theology to be able to take the degree of doctor, he had very little relish for it, while he had a decided inclination for the belles-lettres, for the study of foreign languages, and for the fine arts. His taste for the latter induced him to take lessons from his friend Antonio Richart, an artist of some repute at Valencia. Renouncing all idea of entering the Church he repaired to Madrid, where he enrolled himself among the first pupils of the Academy of the Fine Arts. The course of instruction there given was far too methodical to suit his eager impatience, and he determined to set out at once for Rome in the company of some Jesuits who were going thither. He proceeded to Italy in 1751, and, after visiting some other places, fixed himself at Rome, where he continued between nine and ten years, diligently examining all the chief antiquities and works of art, and also acquired considerable skill in the practice of painting, so as to be able not only to support himself, but to collect a number of the most valuable publications on art and antiquity.

From Rome he was attracted, in 1759, to Naples, by the discoveries made at Herculaneum and Pompeii, and the treasures of art he there met with so excited his enthusiasm, that he determined to visit Greece, Syria, and Egypt, and was deterred from that project only by the advice of Arostegui, the Spanish minister at Naples.

MOG. DIV. VOL. IV.

Ponz accordingly returned to Madrid; nor was it long before he obtained a commission that engaged him for a very considerable time. The king (Charles III.) was desirous of adorning the library of the Escorial with a series of portraits of eminent literary characters, and Ponz was selected to paint them. He passed between five and six years within the walls of the Escorial, where, when not occupied with his pencil, he found ample employment and recreation in the stores of literature and art there treasured. He there copied Raffaele's celebrated *Virgen del Pez*, Guido's *Virgen della Silla*, and one or two other master-pieces.

Almost immediately after he had completed his series of portraits in the Escorial library, he was appointed to visit the colleges, &c. of the Jesuits, then recently suppressed in Spain, for the purpose of taking an account of the paintings, &c. contained in them. It is to the circumstance of his being so employed that we are indebted for his '*Viage de España*,' in 18 vols., a work of very great interest and value in itself as a contribution to the history of art, and not the less so because it affords a fund of information scarcely to be obtained from other sources: it is further interesting on account of the original remarks and criticisms with which it is interspersed, and which attest the author's taste and learning. This publication and the different tours he made (chiefly through the southern provinces of the kingdom) occupied him from about 1771 to 1790, when his declining health prevented him from completing his plan. He died at Madrid, December 4, 1792.

Ponz was secretary to the Academy of the Fine Arts, to which office he was appointed in 1776, a corresponding member of the Royal Academy of History, and also member of the Society of Antiquaries, London, and of several other learned bodies. Besides his principal work he published another in two volumes, entitled '*Viage fuera de España*,' in which we meet with observations on some of the buildings in London.

POOLE, MATTHEW, a learned non-conforming divine of the English Church, author of the well-known and useful book '*Synopsis Criticorum Bibliorum*.' He was born at York about the year 1624, and inherited from his family a good estate in that county. He was educated in Emmanuel College, Cambridge; but we have been unable to trace the circumstances of his history, till we find him, in 1662, in possession of the church of St. Michael le Querne in London, which he resigned, being unable to comply with the terms of ministerial conformity imposed by the Act of Uniformity passed in that year. Previously however he had exerted himself successfully in a scheme for the education of persons intended for the ministry, which was liberally patronised, of which, in 1658, he printed an account, in a book entitled '*A Model for the maintaining of Students of Choice Abilities in the University, and principally in order to the Ministry*.'

Being ejected from his cure, and prohibited from the exercise of his ministry, he had leisure to devote himself to the completion of the great work which has made his name so extensively known. The design was nothing less than to bring into one view whatever had been written by critics of all ages and nations on the books of Holy Scripture. This, after ten years' labour, he completed, and the first two volumes appeared in 1669. These were followed by three other volumes, forming together five large folios, of which an extensive edition was printed. The work was perhaps as good as a work of the kind can be, and few will deny that it is a very valuable and useful abridgement; but synopses and abridgements are rather for the multitude than for scholars, who are rarely satisfied with the opinions of any author which are thus presented to them at second-hand and without that fulness of illustration which the author himself had given; yet, being written in the Latin language, it is manifest that the compiler contemplated a work adapted to the necessities and tastes of Biblical scholars. Its chief use may perhaps be said to be as a convenient body of exegetic criticism for Biblical students who are placed in situations which cut them off from convenient access to large libraries, and for them it has been to a great extent rendered obsolete by the important results of recent research.

Besides this, there is an English work by the same author, '*Annotations on Scripture*,' which was left by him unfinished, but completed by several of his non-conforming brethren. This work appeared in 2 vols. fol., 1635. He was also engaged in most of the controversies of his time: he attacked Bidle on the Socinian question; he published a defence of the non-conforming clergy in 1662; he wrote against the intrusion of laymen into the ministerial office; and he was the author of '*The Nullity of the Romish Faith*,' 1666, and of other treatises in the controversy with the Papists. He retired to Holland to find the toleration which was denied him at home, and died at Amsterdam in 1679.

\*POOLE, PAUL FALCONER, R.A., was born at Bristol in 1810. In our notices of eminent English historical painters we have generally had to speak of them as having learned their art in the schools of the Royal Academy: Mr. Poole, on the contrary, was self-taught. In his earlier works especially, the absence of academic training might be readily detected in certain deficiencies of drawing, and a somewhat too palpable neglect of recognised principles; yet it might well be doubted whether these shortcomings were not compensated by the brave neglect of petty conventionalisms and the free play given to original thought unrestrained by academic rules and prece-

dents. At first Mr. Poole seemed to be adopting a line of subjects in which Welsh peasants, fishermen, and the like, were represented engaged in out-of-door avocations, or in some occupation suggestive of a pathetic or sentimental occurrence. Such were his 'Fisherman's Wife looking out over a Stormy Sea,' 'The Mountaineer,' the 'Welsh Stile,' 'Mountain Rivalry,' 'Market Girl,' and 'Emigrant's Departure.' The last was an approach to the larger and more ambitious style of his later works. In these Mr. Poole selects a theme demanding for its successful treatment considerable imagination, invention, poetic feeling, and technical skill, and in none of these respects has he proved wanting. His great works—those on which he would probably be most desirous of staking his reputation—are his 'Solomon Eagle exhorting the People to Repentance during the Plague of London' (1848), 'The Beleaguered City' (1844), 'Suppression of Syon Monastery' (1846), 'The Goths in Italy' (1851), 'The Messenger announcing to Job the Slaughter of his Servants,' &c. (1850), and 'The Song of the Troubadour—Bertrand de Born' (1854). In these works Mr. Poole has justified his claim to a foremost place among English painters. As will have been seen, while the subjects are such as to admit of very forcible treatment, they are, in many instances, of a painful rather than alluring character; and he has not sought by gay or florid colouring to soften or conceal the sterner features, but rather by strongly-contrasted forms and actions, broad masses of shadow, and decided though sombre colour, to bring out most strikingly the circumstances of horror, of suffering, or of violence inherent in the theme. Yet Mr. Poole often shows that he is not only as fully alive to the beautiful in nature and art as the painters who are most frequently engaged in depicting it, but that he is as capable of rendering it upon canvas. It is hardly to be denied that in many of Mr. Poole's pictures there is a something wanting to fit them to rank among the highest examples of historic art, but at the same time it is certain that his works are never common-place, nor made up of reminiscences or adaptations from the works of 'the great masters,' but are for the most part original in conception as well as treatment, and that whilst they take a very high rank on account of their technical merits, their first claim to admiration arises from the higher and rarer merit of mental excellence.

Mr. Poole has also contributed the following works to the Royal Academy exhibitions, some of them being scarcely inferior in importance or excellence to those above named:—'Herman and Dorothea,' 1840; 'By the Waters of Babylon we sat down and wept,' 1841; 'Margaret alone at the Spinning-Wheel,' and 'Tired Pilgrims,' 1842; 'Arlète discovered by Duke Robert le Diable,' 1848; 'Three Scenes from the Tempest,' and 'The Blackberry Gatherers,' 1849; 'The May Queen,' and 'Mariana singing to her Father Pericles,' 1852; 'The Seventh Day of the Decameron,' 'The Conspirators—the Midnight Meeting,' 1856. In 1847 Mr. Poole obtained one of the premiums of £000 awarded by the Royal Commissioners of Fine Arts for his painting of 'Edward's Generosity to the People of Calais,' exhibited that year in Westminster Hall. He was elected R.A. in 1861.

POPE, ALEXANDER, was born in London, May 22, 1688. His parents were Roman Catholics, and his father, who according to Pope's own account was of a noble family, kept a linendraper's shop in the Strand. In his early years his father retired to Binfield in Windsor Forest, and here Pope formed his first plans of study, and while yet a child determined to be a poet. The 'Pastorals' were composed when he was sixteen, but not published till he was twenty-one (1709), in Tonson's 'Miscellany.' He next produced the 'Essay on Criticism,' and not long after appeared the 'Rape of the Lock,' and the 'Temple of Fame,' a partial imitation of Chaucer. In 1713 he published 'Windsor Forest,' and soon after this date the proposals for a subscription to a version of the 'Iliad.' The whole work was completed between his twenty-fifth and thirtieth year. In the translation of the 'Odyssey,' Pope was helped by Broome and Fenton. Pope translated twelve books, Broome eight, and Fenton four.

In 1728 he published the 'Dunciad,' and in 1738 the 'Essay on Man,' which however was not avowed till the next year, when he wrote his 'Characters of Men, or Moral Essays.' These were preceded and followed by 'Imitations of Horace,' and in 1742 the list of his poems concludes with an additional book of the 'Dunciad,' in which Cibber takes the place of Theobald, the original hero. About this time his health declined, and on the 30th of May 1744 he died of asthma and decay of nature.

To enumerate the friends of Pope would be to give a list of the great men of the time. One of his failings was to desire the acquaintance of men of fashion, and his literary supremacy gave him that of men of learning, so that he commanded a very large circle. Among them were Addison, with whom he quarrelled; Swift, to whom he addressed the 'Dunciad'; Atterbury, on whose trial he appeared as a witness for the defence; Bolingbroke, to whom he is said to have owed the maxims of the 'Essay on Man'; and Voltaire.

Pope was short and deformed. It is surprising that he should have lived so long as he did, having both physical infirmity and hard study to contend against, with the addition of an irritable temper, over which he had so little control that he could not avoid showing anger by the very contortions of his countenance. Perhaps there is nothing in the history of literature more remarkable than the popularity acquired by Pope. To attain, in the estimation of a great nation, to the first rank

among her poets, themselves the greatest which any nation has to boast, is no mean distinction; but that it should have been acquired on the strength of such poems as Pope has left, is not less wonderful. An enumeration of his principal works will show that, with one or two trivial exceptions, his very subjects were borrowed from some other writer. His 'Pastorals' are a mixture of Virgil and Theocritus, and have little to recommend them except what is common to all the verses of his school—a beautiful flow of words, and an epigrammatic turn of expression. This by convention has received the name of poetry; but if by poetry we mean anything more than ingenious thoughts put into ornamental language, if poetry is indeed to be what the Greeks understood by it, a creation, we shall find little of it here. Even the 'Messiah,' beautiful as it undoubtedly is, has thus estimated little claim to the title of a poem. Indeed, it professes nothing more than to be an imitation.

The 'Essay on Criticism' is worth notice, as, combined with Pope's preface to his works, it shows very clearly what influence was most predominant in forming the prevailing style of versification in his time. That a man possessed of any measure of poetic spirit should be so tremblingly alive to what others said of him, as in his second work to employ himself in canvassing the merits of critics and the rules of criticism, is certainly not what we might expect. He who has given birth to a high production of the imagination, must feel that its merit rests upon other grounds than the decisions of any man or party of men. At the time when Pope wrote however authorship was reduced to a kind of system. The end in view was to please the readers; the readers themselves were almost entirely of one and that a limited class; the class who read were members of the fashionable world, and frequented coffee-houses, the clubs of those days. At these coffee-houses some one presided; and hence, by getting the ear of this president, or, what was better, by taking his place, an author became in great measure the judge of his own work. Dryden's literary supremacy could never recur among us, for it requires a confined class, and a very peculiar state of society, to secure so general a reputation. However Dryden obtained it, and, by doing so, set the fashion. The booksellers favoured it, for nothing could be so convenient to them as to have under their influence the rulers of literature; and the effect of all this was to make Pope an imitator of Dryden, and all the other poets of the day imitators of Pope, as the person whose style was the most approved by those whom Addison and Pope and their contemporaries call "the town," the only literary tribunal then in being.

The preface which Pope prefixed to his works is quite as remarkable as the 'Essay on Criticism,' in assuming, as it does from beginning to end, that the proper object of a writer is to please. It is curious also, as a memorial of that fashion which poets then followed in dedicating their work to some great man, and in rehearsing patron's names and titles; all which follies Pope ridicules, though at the same time he is governed by the spirit which dictated them, and boasts that he had been "encouraged by the great, commanded by the eminent, and favoured by the public in general."

Translations and imitations are an important part of Pope's works. Of these the most remarkable are the versions of the 'Iliad' and 'Odyssey,' perhaps the most generally read of all his writings. It is of course pretty well known at present that Pope's claims to the name of a translator are very small. He has contrived to throw an air of Virgilian elegance and courtliness over the simple verses which formed his subject, but it would be hard to show a more thorough disguise than that which the 'Iliad' puts on in Pope's English, and this in spite of his very frequent use of Chapman's version. All scholars will admit that Pope has Latinised the 'Iliad,' a very prevalent fault in his day, when Latin held a place so much more important than Greek in the estimation of literary men. For his imitations of some parts of Chaucer this apology may be made, that they were written very early. A comparison of their style with that of Mr. Wordsworth's 'Priores's Tale,' shows what might have been done, but between Pope and Chaucer there is about the same difference as between a conservatory and a bank of wild flowers in a forest.

In Pope's days it was the fashion to be a philosopher, whence it was necessary for Pope to compose a philosophic poem. It might perhaps have been well to weigh a little the consequences which theories like those of 'The Essay on Man' would have in practice, before making them the foundation of a system; but this was no part of Pope's scheme, and out of his materials, supplied, as is thought, by Bolingbroke (see the poem itself, iv. 383), he has written a poem, many lines of which are immortal, while the sentiments are frequently mischievous, and the facts not seldom fictions.

In his imitations of Horace, Pope has been most happy; indeed, where the parties have so much in common, it was to be expected that the imitator would be successful. Dazzling point and harmonious verse are combined in these delightful compositions, which are worthy of all praise. Indeed these are the characteristics which have given Pope his popularity. But they do not constitute poetry of a high order. To Pope they were doubtless temptations too strong to be resisted. He who could write so well in the fashion was not likely to sacrifice fame by writing better against the fashion.

One important poem remains unnoticed, 'The Dunciad,' in which we may trace Pope's chief excellences, and the subject being one to which his manner is peculiarly adapted, the poem on the whole appears

to be the most perfect of his compositions. In 'The Duncald' too we may discover Pope's true merit—that of having been the first to wage successful war against that crowd of verbal critics and worthless rhymesters which overran literature. The manner in which he holds up to ridicule the poets, booksellers, and critics of the time is admirable, and the number of lines of 'The Duncald' which are in constant use as quotations, are the best proof how stinging the satire must be. Theobald was the first hero of 'The Duncald,' and owed his exaltation to having attacked with success the mistakes in Pope's edition of Shakspeare. He was succeeded in a subsequent issue by Colley Cibber, who stands as such in the present poem.

An excellent parallel has been drawn by Dr. Johnson between Dryden and Pope. It is perhaps too favourable to the latter, but shows a clear insight into the merits and faults of both. We cannot speak so favourably of the defence of Pope's 'Iliad.' To imply, as Dr. Johnson does, that the advance of civilisation required the addition of Ovidian graces in a translation, shows an ignorance of the true principles of the art. Indeed it is hard to point out a good work of the kind from the time of Dryden downwards, with the exception of Dryden's Virgil, until we come to Coleridge, Cary, and the other successful translators of our own day, Dr. Johnson's own translations of Juvenal and Pope's of Horace only excepted. It thus appears that the Latin was the only tongue which met with successful translators from Dryden to Coleridge; Dryden's own style, and the character of the times, having joined to give all verse a Virgilian or Ovidian character.

It only remains to state that as a prose writer Pope attained considerable merit. His style is elegant and cautious, much more correct and much less attractive than Dryden's. Pope's Works, with his last corrections, and notes and a commentary by Warburton, were published in 1751 and 1760, London, 9 vols. 8vo. There are more modern editions, with memoirs, by Bowles in 1807, and by Roscoe, somewhat later, both in 10 vols. 8vo. The publication of the edition of Mr. Bowles led to a spirited controversy, in which Byron, Campbell, and others took part, on the character of Pope both as a poet and a man. Of this controversy some account is given under BOWLES, Rev. W. L. (vol. i., col. 874). Several less important lives and biographical sketches of Pope have been since published, with reprints of his collected or separate poems—the last and worst being that by the Rev. G. Gillfillan, 2 vols. 8vo, 1856. The reader interested in Pope's works and biography must not overlook a great body of disconnected but curious and important matter which has been collected during the last three or four years in the pages of the 'Athenæum' and 'Notes and Queries' (under 'Popiana'). A new life of Pope and an annotated edition of his works by Mr. J. W. Croker and Mr. P. Cunningham, has been announced as in preparation for a considerable time past.

**POPES, THE.** The more remarkable of the heads of the Roman Catholic Church, whether regarded as spiritual or temporal rulers, are noticed under their respective names, such as ADRIAN, LEO, and others. We here give a general list of popes, which will be useful for historical reference.

The chronology of the earlier popes is often obscure, and the dates are uncertain. The following list is chiefly founded on Petau's 'Rationarium Temporum.' According to the chronology of the Roman Church, the apostle St. Peter was the first bishop of Rome, and suffered martyrdom A.D. 57. He is said to have entrusted in his lifetime the see of Rome to Linus, a native of Etruria, who died in the year 68. Linus was succeeded by Clement Romanus, who died about A.D. 100. Some chronologists place Anacletus or Cletus between Linus and Clement, whilst others place him after Clement. [CLEMENT I.] Evaristus, a native of Palestine, is recorded as bishop of Rome about the year 100, and was succeeded by Alexander I. about 109. Alexander I. was succeeded by Sixtus I., a Roman, in 119. Sixtus was succeeded in 127 by Telesphorus, a Greek, who is said by Irenæus to have suffered martyrdom about the year 138. Hyginus, a native of Athens, succeeded Telesphorus, and was succeeded in 142 by Pius I., a native of Aquileia. Pius was succeeded in 161 by Anicetus, a native of Syria. Anicetus was succeeded in 161 by Soterus, who was succeeded in 170 by Eleutherus, in whose time Irenæus visited Rome. Eleutherus was succeeded in 185 by Victor I., a native of Africa. To Victor succeeded Zephyrinus in 197. Zephyrinus was succeeded in 217 by Callistus or Calixtus I., who governed the see of Rome through a period of comparative tranquillity under the tolerant reign of Alexander Severus. Calixtus was succeeded in 222 by Urban I. Pontianus succeeded Urban in 230, and died in exile. He was succeeded in 235 by Antherus, who a few months after his election suffered martyrdom during the persecution of the Christians by Maximinus. He was succeeded by Fabianus in 236. Fabianus was succeeded in 252 by Cornelius, whose election was contested by Novatianus, a Roman presbyter, who is the first antipope recorded in history. Cornelius was succeeded in 253 by Lucius I. To Lucius succeeded Stephen I. in the same year. Stephen had a warm controversy with Cyprian, bishop of Carthage: he was succeeded by Sixtus II. in 257. Sixtus was succeeded by Dionysius in 259. It was under Dionysius that the heresy of Paul of Samosata broke out. Dionysius was succeeded by Felix I. in 270. Eutychianus succeeded Felix in 275, and was succeeded in 283 by Caius, who is said to have been a relative of the Emperor Diocletianus. Caius was succeeded in 296 by Marcellinus. Marcellinus died in 305, and after a vacancy of three years Marcellus was elected in 308. Euse-

bis succeeded Marcellus in 310, who was succeeded in the same year by Melchisedes, in whose time Constantine defeated Maxentius and took possession of Rome. Melchisedes was succeeded in 314 by Sylvester I., during whose pontificate Constantine convoked the great council of Nicæa, to which Sylvester sent two priests as his legates. In that council it was decreed that the bishop of Rome should be primate over the churches of those provinces which in civil matters were subject to the jurisdiction of the 'Vicarius Urbis,' or imperial vicar of Rome.—After this period the popes with the dates of their election are as follows:—

A.D.

336. Marcellus, a native of Rome, succeeded Sylvester I.  
 337. Julius I., a native of Rome.  
 352. Liberius, a Roman, banished by Constantius.  
 Felix, substituted by Constantius, is considered by most as an intruder.  
 366. Damasus I., a Spaniard, elected after the death of Liberius.  
 Ursicinus, antipope against Damasus.  
 384. Siricius, a Roman, succeeded Damasus.  
 398. Anastasius I., a Roman.  
 401. Innocent I., a native of Albano.  
 417. Zosimus, a Greek.  
 418. Boniface I., a Roman.  
 422. Celestinus I., a Roman.  
 432. Sixtus III., a Roman.  
 440. Leo I. of Rome, called 'the Great.'  
 461. Hilarius, a native of Sardinia.  
 467. Simplicius, a native of Tibur.  
 483. Felix III. of Rome.  
 492. Gelasius I. of Rome.  
 496. Anastasius II. of Rome.  
 498. Symmachus, a native of Sardinia.  
 514. Hormisdas, a native of Frusino.  
 523. John I., a Tuscan.  
 526. Felix IV., a native of Beneventum.  
 530. Boniface II. of Rome.  
 532. John II. of Rome.  
 535. Agapetus I. of Rome.  
 536. Silverius, a native of Campania.  
 540. Vigilius, a Roman.  
 555. Pelagius I., a Roman.  
 560. John III. of Rome.  
 574. Benedict I. of Rome.  
 578. Pelagius II. of Rome.  
 590. Gregory I. of Rome, styled 'the Great.'  
 604. Sabinianus, a native of Tuscany.  
 607. Boniface III. of Rome.  
 608. Boniface IV., a native of Abruzzo.  
 615. Deusedit or Deodatus I. of Rome.  
 619. Boniface V., a Neapolitan.  
 625. Honorius I., a native of Capua.  
 638. Severinus of Rome.  
 640. John IV., a native of Dalmatia.  
 641. Theodorus, a Greek.  
 649. Martin I. of Tuderum.  
 654. Eugenius I. of Rome.  
 657. Vitalianus, a native of Signia.  
 672. Deusedit II. of Rome.  
 676. Domnus I. of Rome.  
 678. Agathon, a Sicilian.  
 682. Leo II., a Sicilian.  
 684. Benedict II. of Rome.  
 685. John V., a native of Syria.  
 686. Conon, a native of Thrace.  
 687. Sergius I., a native of Palermo.  
 701. John VI., a native of Greece.  
 705. John VII., a native of Greece.  
 708. Sisinius, a native of Syria, died a month after.  
 708. Constantine, a Syrian.  
 715. Gregory II. of Rome.  
 731. Gregory III., a Syrian.  
 741. Zacharias, a Greek, crowned Pepin, king of France.  
 753. Stephen II., survived his election only a few days.  
 753. Stephen III. of Rome.  
 757. Paul I., a Roman.  
 763. Stephen IV., a Sicilian.  
 772. Adrian I., a Roman.  
 795. Leo III., a Roman, crowned Charlemagne emperor, A.D. 800.  
 816. Stephen V., a Roman.  
 817. Paschal I., a Roman.  
 824. Eugenius II., a Roman.  
 827. Valentinus, a Roman, died in less than two months after.  
 827. Gregory IV., a Roman.  
 843. Sergius II., a Roman.  
 847. Leo IV., a Roman.  
 Between Leo and his successor some chroniclers place JOAN.  
 855. Benedict III., a Roman.  
 858. Nicholas I., a Roman. Schism of PHOTIUS began.

- A.D.  
 867. Adrian II., a Roman.  
 872. John VIII., a Roman.  
 882. Martin II., called by some Marinus I.  
 884. Adrian III., a Roman.  
 885. Stephen VI., a Roman.  
 891. Formosus, bishop of Porto. Sergius, antipope, and after him Boniface, styled by some Boniface VI.  
 896. Stephen VII., a Roman.  
 897. Romanus, a Tuscan, died after four months.  
 897. Theodorus II., a Roman, died in less than a month.  
 897. John IX. of Tibur.  
 900. Benedict IV., a Roman.  
 903. Leo V., a native of Ardea. Christopher, antipope.  
 904. Sergius III., the favourite of Marozia and the Tuscan faction.  
 911. Anastasius III., a Roman.  
 913. Lando, a native of Sabina.  
 914. John X., a Roman, died in prison by the Tuscan faction.  
 928. Leo VI., a Roman.  
 929. Stephen VIII., a Roman.  
 931. John XI., son of Sergius III. and of Marozia.  
 936. Leo VII., a Roman.  
 939. Stephen IX., a Roman.  
 943. Martin III., called by some Marinus II.  
 946. Agapetus II.  
 956. John XII., Ottaviano Conti, nephew of John XI. He was the first who changed his name on his assumption.  
 963. Leo VIII., styled antipope by some.  
 964. Benedict V., a Roman.  
 965. John XIII., a Roman.  
 972. Benedict VI., was killed in the tumult of Crescentius.  
 973. Domnus II., a Roman.  
 974. Benedict VII., of the Conti family.  
 983. John XIV., put to death by Cardinal Franco. Franco, antipope, by the name of Boniface VII.  
 985. John XV., a Roman, died in a few months.  
 986. John XVI., a Roman.  
 996. Gregory V., a German: Crescentius put to death by Otho III.  
 999. Sylvester II., Gerbert, a native of Auvergne.  
 1003. John XVIII., a Roman.  
 1009. Sergius IV., a Roman.  
 1012. Benedict VIII. of Tusculum, of the Conti family.  
 1024. John XIX. of Rome, brother of the preceding.  
 1038. Benedict IX., nephew of the preceding, deposed. Sylvester, antipope, bishop of Sabina.  
 1044. Gregory VI. of Rome, abdicated.  
 1047. Clement II. of Saxony (bishop of Bamberg).  
 1048. Damasus II. (Poppo, bishop of Brixen).  
 1049. Leo IX. (bishop of Toul). Final separation of the Greek Church.  
 1055. Victor II. (bishop of Eichstadt).  
 1057. Stephen IX. (Frederick, abbot of Monte Casino).  
 1058. Benedict X., by some styled antipope, abdicated.  
 1059. Nicholas II. of Burgundy.  
 1061. Alexander II. of Milan.  
 1073. Gregory VII. (Hildebrand, a monk of Soana in Tuscany). Guibert, antipope, assumed the name of Clement III.  
 1086. Victor III., a native of Beneventum.  
 1088. Urban II., a native of France.  
 1099. Paschal II., a native of Tuscany. Antipopes—Albert and Theodoric.  
 1118. Gelasius II., a native of Caieta.  
 1119. Calixtus II., a native of Burgundy.  
 1124. Honorius II. (Cardinal Lambert, bishop of Ostia).  
 1130. Innocent II., a Roman. Anacletus, antipope.  
 1143. Celestinus II., a Tuscan.  
 1144. Lucius II. of Bologna.  
 1145. Eugenius III. of Pisa.  
 1153. Anastasius IV., a Roman.  
 1154. Adrian IV. (Nicholas Breakspere), an Englishman.  
 1159. Alexander III. (Cardinal Orlando Bandinelli of Siena). Cardinal Octavian, antipope, by the name of Victor. Cardinal Guido, antipope, by the name of Paschal. Calixtus, antipope.  
 1181. Lucius II. (Cardinal Ubaldo of Lucca).  
 1185. Urban III. (Uberto Crivelli, archbishop of Milan).  
 1187. Gregory VIII. of Beneventum, died in two months.  
 1188. Clement III. (Paul, bishop of Frascaste).  
 1191. Celestinus III. (Cardinal Hyacinthus), a Roman.  
 1198. Innocent III. (Cardinal Lotharius of Signia).  
 1216. Honorius III. (Cardinal Savelli of Rome).  
 1227. Gregory IX. (Cardinal Hugo of Anagni).  
 1241. Celestinus IV. of Milan, died in a few days.  
 1242. Innocent IV. (Cardinal Sinibaldo Fieschi of Genoa).  
 1254. Alexander IV. (Cardinal Rinaldo Conti of Anagni).  
 1261. Urban IV. (James, patriarch of Jerusalem), a Frenchman.

- A.D.  
 1265. Clement IV. (Guy of St. Gilles in Languedoc).  
 1272. Gregory X. (Tebaldo Visconti of Piacenza).  
 1276. Innocent V. (Cardinal Peter), a native of Tarantaise.  
 1276. Adrian V. (Ottobono Fieschi of Genoa), died in a month.  
 1276. John XXI. of Lisbon.  
 1277. Nicholas III. (Cardinal Orsini of Rome).  
 1281. Martin IV. (Cardinal Simon de Brie), a Frenchman.  
 1285. Honorius IV. (Cardinal James Savelli of Rome).  
 1288. Nicholas IV. (Cardinal Jerome of Ascoli).  
 1294. Celestinus V. (Pietro da Morrone of Abruzzo), abdicated.  
 1295. Boniface VIII. (Cardinal Benedetto Gattani of Anagni).  
 1303. Benedict XI. (Cardinal Nicholas of Treviso).  
 1305. Clement V. (Bertrand of Bordeaux), removed the Papal See to Avignon.  
 1316. John XXII. (James of Cahors in France). Nicholas, antipope in Italy.  
 1334. Benedict XII. (James Fournier), a Frenchman.  
 1342. Clement VI. (Peter Rogers of Limoges in France).  
 1352. Innocent VI. (Stephen Aubert of Limoges).  
 1362. Urban V. (William Grimoard), a Frenchman.  
 1370. Gregory XI. (Peter Roger), a Frenchman, restored the Papal See to Rome.  
 1378. Urban VI. (Bartolomeo Prignano), a Neapolitan. Antipope, Clement, at Avignon.  
 1389. Boniface IX. (Peter Tomacelli of Naples). Antipope, Pedro de Luna, a Spaniard. [BENEDICT, ANTIPOPE.]  
 1404. Innocent VII. (Cosmo Migliorati of Sulmona).  
 1406. Gregory XII. (Angelo Corradi of Venice), abdicated at Constance.  
 1409. Alexander V. (Peter Philargius of Candia).  
 1410. John XXIII. (Cardinal Cosca), deposed by the Council of Constance.  
 1417. Martin V. (Otho Colonna), a Roman.  
 1431. Eugenius IV. (Gabriel Condulmero), a Venetian. Schism between the Pope and the Council of Basel. Felix, antipope. [AMADEUS VIII.]  
 1447. Nicholas V. (Cardinal Thomas of Sarzana).  
 1455. Calixtus III. (Alfonso Borgia), a Spaniard.  
 1458. Pius II. (Æneas Sylvius Piccolomini of Siena).  
 1464. Paul II. (Peter Barbo of Venice).  
 1471. Sixtus IV. (Francis della Rovere), a Genoese.  
 1485. Innocent VIII. (Gian Battista Cibo), a Genoese.  
 1492. Alexander VI. (Rodrigo Lenzoli Borgia), a Spaniard.  
 1503. Pius III. (Francis Todeschini Piccolomini), died in a month.  
 1503. Julius II. (Julian della Rovere), a Genoese.  
 1513. Leo X. (Giovanni de' Medici, son of Lorenzo the Magnificent).  
 1522. Adrian VI. of Utrecht, preceptor of Charles V.  
 1523. Clement VII. (Giulio de' Medici, nephew of Lorenzo).  
 1534. Paul III. (Alessandro Farnese of Rome), convoked the Council of Trent.  
 1550. Julius III. (Giovanni Maria Giocci of Rome).  
 1555. Marcellus II. (Cardinal Cervini of Montepulciano), died in a month.  
 1555. Paul IV. (Gianpietro Caraffa), a Neapolitan.  
 1559. Pius IV. (Giovanni Angelo Medici of Milan), closed the Council of Trent.  
 1566. Pius V. (Michele Ghislieri of Alessandria in Piedmont).  
 1572. Gregory XIII. (Hugo Buoncompagni of Bologna).  
 1585. Sixtus V. (Felice Peretti of Montalto in the March of Ancona).  
 1590. Urban VII. (Gian Battista Castagna), a Genoese, died in a few days.  
 1590. Gregory XIV. (Nicola Sfondati of Milan).  
 1591. Innocent IX. (Gian Antonio Facchinetti of Bologna).  
 1592. Clement VIII. (Ippolito Aldobrandini), a native of Fano.  
 1605. Leo XI. (Alessandro de' Medici of Florence), died in a month.  
 1605. Paul V. (Camillo Borghese of Rome).  
 1621. Gregory XV. (Alessandro Ludovici of Bologna).  
 1623. Urban VIII. (Maffeo Barberini), a Florentine.  
 1644. Innocent X. (Gian Battista Pamfili of Rome).  
 1655. Alexander VII. (Fabio Chigi of Siena).  
 1667. Clement IX. (Giulio Rospigliosi of Pistoia).  
 1670. Clement X. (Emilio Altieri of Rome).  
 1676. Clement XI. (Benedetto Odescalchi of Como).  
 1689. Alexander VIII. (Pietro Ottoboni of Venice).  
 1691. Innocent XII. (Antonio Pignatelli of Naples).  
 1700. Clement XI. (Gian Francesco Albani of Urbino).  
 1721. Innocent XIII. (Michel Angelo Conti of Rome).  
 1724. Benedict XIII. (Vincenzo Maria Orsini of Rome).  
 1730. Clement XII. (Lorenzo Corsini of Florence).  
 1740. Benedict XIV. (Prospero Lambertini of Bologna).  
 1758. Clement XIII. (Carlo Rezzonico of Venice).  
 1769. Clement XIV. (Gian Vincenzo Ganganelli), born near Rimini.  
 1775. Pius VI. (Angelo Braschi of Cesena).  
 1800. Pius VII. (Gregorio Barnaba Chiaramonti of Cesena).  
 1823. Leo XII. (Annibale della Genga), a native of Romagna.  
 1829. Pius VIII. (Cardinal Castiglioni of Cingoli).  
 1831. Gregory XVI. (Mauro Capellari), born at Belluno.  
 1846. Pius IX. (Giovanni Maria Mastai-Ferretti), born at Sinigaglia.

## PO'RCIA. [BRUTUS.]

PORDENO'NE. GIOVANNI ANTONIO LICINIO, or LICINO, called 'Il Pordenone,' was born at Pordenone in Friuli, in 1483. From the vigour of conception, the elevation of mind, and the style of execution which distinguish his works, it has been presumed, though it is not certain, that he frequented the school of Giorgione. Though on the whole inferior to Titian, he was his rival, and not always without success. He was an able colourist in oil, but chiefly excelled in fresco. As he principally painted frescoes in North or Upper Italy, he was known in Lower Italy only by his fine oil paintings. His most splendid work in oil is the altar-piece of Santa Maria dell' Orto, at Venice, representing a San Lorenzo Giustiniani, surrounded by other saints, among whom are St. John the Baptist and St. Augustin. The frescoes of Pordenone are spread over the towns and castles of Friuli; some are at Genoa, Mantua, and Venice, but the best preserved are at Piacenza and Cremona. He was highly esteemed by the Emperor Charles V., who ennobled him. Hercules II., duke of Mantua, called him to Mantua to paint cartoons for tapestry to be made in Flanders, but he soon afterwards died (in 1539), as it was suspected, of poison. It must be observed that he adopted the name of 'Regillo.'

Several of Pordenone's pictures are in England. In the National Gallery is a colossal figure of 'An Apostle;' at Hampton Court, a large rich picture of himself and family, and two other pictures; and several others are in private collections.

PO'RPHYRY was born A.D. 233, either at Tyre, whence he is called Tyrius, or at Batanea (Basan), a town of Syria, whence he is called Bataneotes. His original name was Melech, the Hebrew and Syriac for king, a circumstance which occasioned Suidas to say that his real name was Basileus. His preceptor Lohginus changed his Syriac name into Porphyrius (a man 'in purple,' the adornment of a king.) While he was yet a boy, he repaired to Origen, who was then probably living at Caesarea in Palestine, certainly not at his native city, Alexandria, as Holstenius represents, following Vincent of Lerins. Whether Porphyry became the pupil of Origen, or how long he continued with him is uncertain. He afterwards went to Athens, where for some time he studied under Longinus, the celebrated philosopher and critic. We find him next at Rome, where in the thirtieth year of his age he was a scholar of Plotinus, whose Life he has written, and in it he has stated some particulars concerning himself. After a few years he went to Lilybæum in Sicily, and dwelt there till after the death of Plotinus in 270, whence he is sometimes called Siculus. Here, according to Eusebius and Jerome, he composed his fifteen books against the Christians; which books, with more zeal than wisdom, were about a century afterwards ordered to be publicly burnt by the Emperor Theodosius the Elder. Porphyry died at Rome, towards the end of Diocletian's reign, about 304.

Porphyry has been usually called 'the philosopher.' He distinguished himself as an acute and learned man, and wrote in the Greek language upon a great variety of subjects, in a simple and graceful style. It is to be lamented that he employed his talents in opposing Christianity; but it was mistaken policy to destroy any of his writings. Christians of modern times would have been able to turn the arguments of Porphyry to good account in further establishing the truth of their religion. Fabricius has given a list of Porphyry's works amounting to sixty-one, divided into three classes, published, unpublished, and lost; the last class consists of forty-three distinct performances. A neat edition of his 'Life of Pythagoras' and three other works was published at Cambridge in 1655, with the Dissertation of Holstenius on the life and writings of Porphyry subjoined. Others of his works have been printed at different times; but no complete edition of all that are extant has appeared. The four books 'On Abstinence from Animal Food' are one of Porphyry's best works, and contain a great deal of curious matter applicable to illustrate the history of philosophy. His 'Introduction to the Categories of Aristotle,' which is a useful little treatise, is prefixed to the editions of the 'Organon.' He wrote also a 'Commentary on the Categories of Aristotle' in question and answer, which was edited by Bogard, 1543, 4to. The Commentary of Porphyry on the 'Harmonica' of Ptolemy, is printed in the collection of Wallis: unfortunately, only the first book and the first seven chapters of the second are extant.

One of the works of Porphyry, and a fragment of another enumerated among the lost, were discovered by Mai, in the Ambrosian Library at Milan, and published by him in 1816. The former is styled 'Ad Marcellam.' It seems that Porphyry had married Marcella, the widow of a friend who was a Christian, and that at the end of ten months, upon taking a journey, he addressed this little work to her. The fragment, which is in verse, belongs to a work in ten books, known by the name of 'De Philosophia ex Oraculis Libri.'

(Suidas, *Lexicon*; Lardner, *Credibility*; Holstenius, *De Vita et Scriptis Porphyrii Dissertatio*; Fabricius, *Bibl. Græca*; Ritter, *Geschichte der Philosophie*.)

PORSE'NA or PORSE'NNA, a Lar (or mighty lord) of the Etruscan town of Clusium, with whom we are made acquainted in the early history of Rome. When the Tarquins, in the second year after their expulsion (B.C. 508), had been defeated near the forest of Arcia, they sought, as we are told, the assistance of Lar Porsena (Liv., ii. 9.) According to Livy, the Etruscan prince immediately marched with his

army against Rome, which was thrown into the greatest consternation. The Tarquins themselves however are entirely lost sight of in the narrative of the events which ensued. Porsena appeared with his overwhelming forces before the Janiculum, and the Romans, who had fortified themselves here, fled back to the Tiber. The defence of the bridge (Pons Sublicius) was intrusted to Horatius Coclès, who bade his companions retreat across the bridge and break down the part behind him, while he resisted the hosts of the Etrurians at the western end. His request was obeyed, and when the bridge was broken down, Horatius, after having prayed to Father Tiberinus, threw himself into the water, and swam across amidst the darts of the enemy. Porsena, having thus failed in his attack, laid siege to the city, garrisoned the Janiculum, and pitched his camp on the banks of the river. The Romans at first kept within the city, and drove all their cattle within the walls; but the consuls P. Valerius and T. Lucretius devised a stratagem by which the Etruscans were drawn into a snare and suffered great loss. The siege however continued, and Rome suffered from famine. A Roman youth of noble birth, C. Mucius, who was indignant at the sufferings of his countrymen, went, with the approbation of the senate, across the Tiber with the intention of killing the invading king. Disguised and armed with a dagger, he found his way into the tent of Porsena; but mistaking the secretary of the king for the king himself, he killed him. Being seized by the king's attendants, he frankly declared his intentions; and added, that he was not the only Roman youth that aimed at the king's life. Upon this the king threatened to burn him alive, unless he revealed his associates; but Mucius, to show to the king that he did not fear bodily suffering, thrust his right hand into a fire which happened to be burning upon an altar. The king, admiring the intrepidity of the young man, ordered him to be removed from the altar, and gave him his liberty. Mucius then told the king that there were three hundred noble Romans who had bound themselves by an oath to kill him, and that it had been his lot to make the first attempt. Upon this Porsena offered peace to the Romans on condition that they should give back to the Veientes their territory; the Janiculum was also evacuated upon the delivery of hostages. Porsena returned to Clusium, leaving to the famished Romans his well-stored camp.

The inconsistencies and incongruities of this story have been pointed out by Beaufort and Niebuhr. We have however several statements from which we may gather some glimpses of the real course of events so much disfigured in the narrative of Livy. Tacitus ('Hist.' iii. 72) says that the city was taken by Porsena, a fact which at once throws light upon the whole transaction. From Pliny ('Hist. Nat.' xxxiv. 39) we learn that the Romans were prohibited by Porsena from using iron for any other purpose than agriculture; and another proof of the entire submission of Rome to the foreign conqueror is implied in the story (Dionys. Hal., v. 36) that the senate sent to him an ivory throne and other insignia of royalty. These circumstances place it beyond doubt that for a time the Etruscan king was master of Rome. In the Roman tradition the truth is entirely distorted, and the whole affair between the Romans and Porsena is represented as a series of generous and magnanimous actions on both sides.

After Porsena had left Rome with his hostages, consisting of a number of maidens and youths, Cloelia, one of the maidens, effected her escape at the head of her female companions. The Romans, faithful to their treaty, sent her back, but the king, no less generous than the Romans, not only gave her liberty, but allowed her to select from the young male prisoners all those whom she might wish to restore to freedom. The accounts in Dionysius (v. 33), Plutarch ('Publ.' 19), and Pliny ('Hist. Nat.' xxxiv. 13), are somewhat inconsistent with one another. After his return to Clusium, continues the legend, Porsena sent his son Aruns with an army against Arcia, then the principal town of Latium, that it might not appear as if his former campaign had been entirely useless. The fact however seems to be, that being in possession of Rome, he wished to make himself master of all Latium. The Aricines were at first dismayed, but they asked and obtained aid from other Latin towns, and from Cuma in Campania, and thus gaining fresh confidence, they ventured on a battle. But the first attack of the Etruscans was so violent that the Aricines themselves were put to flight; the Cumans however attacked the enemy from behind and defeated him. Aruns fell, and with him the greater part of his army. Those who escaped sought a refuge at Rome, where they were kindly received, and a district (Vicus Tusus) was assigned to those who wished to settle there. It was not until this event that Porsena, according to the legend, sent envoys to Rome for the purpose of restoring the Tarquins to their country. But receiving for answer that the liberty which Rome had once gained could only cease with the existence of the city, and that she would throw open her gates rather to an enemy than to Tarquin, he did not urge his demand, sent back those hostages who were still in his possession, and restored to the Romans the district of the Veientes, which had been taken from them by the treaty of the Janiculum. The peace between Porsena and the Romans was never interrupted, and from this moment we lose sight of the Etruscan king in the history of Rome. It is highly probable that he retained the sovereignty of Rome till the defeat at Arcia, when the Romans seem to have regained their independence. It must therefore have been after this event that the property of the king which was found in the city was publicly sold. This sale gave rise to the

symbolical custom of selling the goods of King Porseus, which continued down to the time of Livy (ii. 14).

Porseus was probably a fabulous hero of the Etruscans, belonging to an age much anterior to any of which we have historical records. The Roman legends however have interwoven his name with the war against the Etruscans, which the Tarquins are said to have caused soon after their expulsion. How little Porseus belongs to real history may be concluded from the fabulous account of his monument, a building as inconceivable as any described in the 'Arabian Nights.'

(Niebuhr, *Hist. of Rome*, i. note 495, compared with p. 551.)

PORSON, RICHARD, an eminent Greek scholar and critic, was born on Christmas-day 1759, and died on the 25th of September 1808. His parents were people in humble life at East Ruston in Norfolk, where his father was parish clerk. The father was a man of excellent sense and average attainments; he not only taught his children to read and write, but he early taught them those habits of industry, frugality, and order which they retained through life. But the great mental powers which showed themselves in two of the sons, Richard and Thomas, they derived from their mother: such at least was the opinion of the Rev. Mr. Hewitt. From childhood, whatever Richard did was done in a superior manner. Before he was sent to school his mother employed him in spinning, and from the same quantity of wool he always produced more yarn and of a better quality than either his sister or brothers. Whilst he was spinning he constantly had a book lying open before him, in which he read most attentively; and before he could write he had taught himself from an old book as far as the cube root in arithmetic. At nine years of age Richard Porson was sent to a day-school at Happesburgh, kept by a Mr. Summers, a good arithmetician and excellent writing-master; and to him he was indebted for the beautiful handwriting which in after years enriched both his own books and those of his friends with characteristic annotations, which added to the value of every book which passed through his hands. From Mr. Summers, Porson also learned the rudiments of Latin, and during the three years that he was his pupil, he had every evening on his return home to repeat to his father his lessons of the day, and this in the most exact manner. When Richard was twelve years of age the Rev. Charles Hewitt, vicar of East Ruston and Bacton, generously offered to teach him gratuitously with his own sons. Mr. Hewitt lived at Bacton, and the Porsons at Ruston, four miles off; so every Monday morning, Richard, carrying with him his humble provision for the week, trudged off to Mr. Hewitt's to read, and returned home on the Saturday afternoon. Some years after, his brothers Henry and Thomas, the latter eleven years younger than Richard, received the same gratuitous instruction from Mr. Hewitt; and here it may be recorded that in the opinion of the late Dr. Davy, master of Caius, who was intimately acquainted with both the brothers, Thomas Porson was fully equal to Richard in ability; he kept a classical school at Fakenham, but died at the age of twenty-four.

By Mr. Hewitt, Richard was introduced to Mr. Norris of Witton, a neighbouring country gentleman, who was so much struck with the lad's superior mind and attainments that he induced his friends to join him in a subscription for the purpose of sending him to Eton, where in 1774 he was placed on the foundation. The death of his patron, Mr. Norris, which occurred whilst Porson was at Eton, did not affect his prospects; for by the kindness of Sir George Baker, an eminent physician, and some other friends of his late benefactor, he was enabled to remain at Eton, and was afterwards sent to Cambridge. Towards the end of 1777 he was admitted under-graduate of Trinity College. In 1781 he was elected to a university scholarship on Lord Craven's foundation, and on his taking his degree the following year he was third senior optime and senior medalist. In October 1782 he was elected a Fellow of his college, being one of the first who ever obtained that distinction in the year of his B.A. degree. In 1785 he took the degree of M.A.; and in 1790 he was made Regius Professor of Greek in the University of Cambridge by the unanimous votes of the electors. The salary to this office was only 40*l.* a year, but the appointment was gratifying to him, and it was his wish to make it something better than a sinecure, by giving an annual course of lectures in the college, if rooms had been assigned to him for the purpose; but in this he was thwarted. Some scruples that he felt with regard to subscribing to the Thirty-nine Articles deterred him from taking orders; and, according to the rules of the college, he vacated his fellowship in 1791, the master and fellows refusing to give him a lay-fellowship.

Porson struggled with poverty repeatedly during his life, and endured great privations, especially after being made Greek professor. He was a man of great bodily strength and has often been known to walk from Cambridge to London, 52 miles, in one day, to attend his club in the evening, as he could not afford to pay the coach fare, having only his professorship of 40*l.* a year to live on. He told the writer of this memoir that during these days of forced economy he had lived in London one calendar month for a guinea, taking only two meals a day, and those of the most frugal kind.

Porson had for several years been an occasional contributor to 'Maty's Review,' the 'Monthly Review,' and the 'Gentleman's Magazine,' but he had not come before the public in his own name as an author till some letters upon the contested verse, 1 John chap. v.,

verse 7, called forth the admirable 'Letters to Afrodemon Travia' in 1790. In that work it is difficult to say whether argument or wit, vivacity of manner, or patience of research, be most conspicuous; and when the high importance of the subject is considered, recommended as it is not only by the qualities above mentioned, but by an exquisite specimen of English composition, the comparative neglect which it has met with from the author's countrymen is not a little surprising.

In 1792 a number of Porson's friends and admirers, amongst whom were Mr. Coke of Holkham, Dr. Parr, Dr. L. and Dr. M. Raine, the Rev. Mr. Cracherode, and several other persons of high character, subscribed a sum of about 2000*l.* which was vested for his benefit in the funds. After Porson's death the surviving trustees transferred to the university 400*l.* of this money, upon trust, the interest of which is applied to the purpose of giving an annual prize, called the Porson Prize. Let the undergraduate who gains that prize, duly estimate the encouragement given to learning in the case of the conscientious Porson!

In November 1795 Porson married Mrs. Lunan, the sister of Mr. Perry, editor of the *Morning Chronicle*. This lady died in less than six months after her marriage.

On the establishment of the London Institution Porson was appointed head librarian with a salary of 200*l.* a year, and he was thus placed for the first time in his life in comfortable circumstances. His character has been traduced as being an habitual drunkard, but he was not so—that at times he drank even to intoxication cannot however be denied. Like Johnson, he could practise abstinence more easily than temperance. He lived in days when the leading statesmen and politicians were not ashamed of being seen under the influence of wine; but they were orthodox men; and though Porson has been vilified for his occasional intemperance, it may without much hesitation be affirmed that it was his reforming principles in Church and State that brought much of the obloquy upon him.

For many years before his death Porson suffered so severely from spasmodic asthma as to interrupt him in every study to which he applied himself; yet, notwithstanding this, few men accustomed themselves to such patient and continued toil. He had undertaken to make out, and copy the almost obliterated manuscript of the *Lexicon of Photius*, and this he had just completed, when the copy which had cost him ten months' labour was burnt in Mr. Perry's house at Merton. The original being a *swig*, and intrusted to him by his college, he carried with him wherever he went, and fortunately he was absent from Merton when the fire took place. Unruffled by the loss, he sat down without a murmur and made a second copy as beautiful as the first.

On the 19th of September 1808 Porson was seized with an apoplectic fit while walking in the Strand; he recovered sufficiently to be removed to his rooms in the Old Jewry the next morning, but in the course of the day another fit deprived him of consciousness, and after lingering till Sunday the 25th he expired. His remains were conveyed to Cambridge, and interred in the ante-chapel of Trinity College, where a monument to his memory is erected. The bust by Chantrey has no resemblance to Porson, but a cast of his head and face taken after his death by Ganganelli is most accurate, and from this many busts have been made.

Richard Porson was one of the profoundest Greek scholars and the greatest verbal critic that any age or country has produced. He possessed every quality which is necessary to the formation of a scholar—a stupendous memory, unwearied application, great acuteness, strong sound sense, and a lively perception both of the beautiful and the ludicrous. Besides these qualifications he enjoyed the rare faculty of conjecturing from the imperfect data of corrupt readings the very words of the author whose text he sought to restore; in this last particular we know of no one, with the single exception of Bentley, who can be named in comparison with him, and in some points we should not hesitate to place Porson before that great Aristarchus of criticism.

It is a great mistake to suppose that Porson's reading was confined to the Greek poets; we doubt if there were any classical author whom he had not read, and we are confident that he was familiar with the whole mass of Greek literature. We have looked through the editions of Greek books that belonged to him, which are now in the hands of different individuals or in public libraries, and there is not one which does not bear some traces of his careful and critical perusal. He was besides an excellent French scholar, and was thoroughly acquainted with the French literature of the middle ages. His knowledge of English literature was immense; and so extraordinary was his memory that he could repeat whole pages, not only of poetry but of prose, in the most accurate and beautiful manner. He was fond of the society of young people, to whom he talked freely, mixing instruction with wit and humour; but he had no liking for mere learned pedants, and could not be made to talk before them. Porson published very little, but that little was of surpassing excellence: for a correct account of his literary labours the reader is referred to 'Tracts and Miscellaneous Criticisms of the late Richard Porson,' by the Rev. Thomas Kidd, London, 1815. Porson's edition of the *Lexicon of Photius*, and his 'Adversaria,' were published after his death. The greatest complaint that can be made against Porson is, that with such vast capabilities he did so little. A very large sum was offered him for an edition of

Aristophanes, but he would not undertake the work, which in Dr. Raine's opinion would not have occupied him more than six months. The money was no temptation to him, and he was over-scrupulous in his notions of the duties of an editor, never fully satisfying himself, and conceiving that something was still wanting, where no one but himself could discover any deficiency.

Those who knew Porson best esteemed him most. He cared not for money; he was economical in his habits, but, with his small means, most generous to the three orphan children of his brother Henry. We cannot conclude this notice better than by quoting the words of the Rev. Thomas Turton, Regius Professor of Divinity, Cambridge:—"There is one quality of the mind in which it may be confidently maintained that Mr. Porson had no superior—I mean, the most pure and inflexible love of truth. Under the influence of this principle, he was cautious, and patient, and persevering in his researches; and scrupulously accurate in stating facts as he found them. All who were intimate with him bear witness to this noble part of his character, and his works confirm the testimony of his friends." ('A Vindication of the Literary Character of the late Professor Porson,' by Crito Cantabrigiensis.)

**PORT-ROYALISTS.** The Port-Royal-des-Champs was a celebrated convent of nuns, situated not far from Versailles, on the left of the high road leading from Rambouillet to Chartres. The site of the convent is a deep vale, enclosed by hills. The monastery was founded about 1204, with a donation made by Matthieu de Marli, of the family of Montmorency, when he was going to set out for the Holy Land. The nuns were of the order of St. Bernard, and, by a papal bull, had the right of choosing their abbess. In 1228 the pope conferred on the convent the right of affording an asylum to such lay personages as, being disgusted with the world, and being their own masters, should wish to live in monastic seclusion without binding themselves by permanent vows.

The important period of the history of Port-Royal begins with the appointment of the elder Angélique Arnauld, sister of the famous controversialist Antoine Arnauld. [ARNAULD, ANTOINE.] Angélique was a mere child when she was appointed, through family interest, to be coadjutrix of the abbess Jeanne de Boulehard, about the year 1600. In 1602 Boulehard died, and Angélique, then not quite eleven years old, was consecrated abbess. She was of course assisted in the exercise of her office by the elder nuns. As she grew to womanhood, she conceived the plan of a reform in the discipline of the convent, which had grown rather loose, and she carried it into execution. The leading features of this reform were a community of goods, absolute silence, abstinence from meat, rigid seclusion, ascetic exercises, and the infliction of penitential mortification. In 1626 Angélique removed with her nuns to a house in the Faubourg St. Jacques at Paris, on account of an epidemic which raged at Port-Royal-des-Champs, and which was attributed to the dampness and unhealthiness of that district. In 1633 a new and more spacious house was purchased for the monastic establishment at Paris, in the Rue de Boulai near the Rue-Coquillière, and the church was consecrated by the archbishop of Paris with great solemnity. The new convent was called Port-Royal-de-Paris. The building of Port-Royal-des-Champs, which continued to belong to the same monastic institution, was occupied afterwards by several pious and learned men who wished to live a secluded life according to the spirit of the papal bull of 1223, and who were styled 'Les Solitaires de Port-Royal.'

This was the origin of the famous school of Port-Royal. One of the first of these recluses was Claude Lancelot, the grammarian. He was joined by Antoine le Maître, a distinguished advocate, and his brother Louis Isaac le Maître de Sacy, by Antoine Arnauld, brother of the Abbess Angélique, by Pierre Nicole, Nicolas Fontaine, Thomas du Fossé, and others. [ARNAULD, ANTOINE.] They were most of them friends and disciples of Du Verger d'Hauranne, abbot of St. Cyran, well known for his controversies with the Jesuits, and his connection with Jansenius, who had been his school-fellow at Louvain. Le Maître de Sacy was for a time spiritual director of the nuns of Port-Royal-de-Paris. Lancelot and his friends established a school at Port-Royal-des-Champs for the better religious, moral, and scholastic instruction of a limited number of pupils. They objected above all to the lax morality of the Jesuits, and to their method of education, which admitted no improvement. The school of Port-Royal consisted of five classes of five pupils each. Lancelot, Arnauld, De Sacy, Nicole, Fontaine, and others were the teachers, and they published in concert a number of school-books which have ever since maintained a reputation. The school of Port-Royal flourished from 1646 to 1660. It formed many distinguished pupils: Racine and Tillemont were of the number. Among the school-books that were published for the use of that institution the following deserve especial mention: 1, 'Nouvelle Méthode pour apprendre la Langue Latine;' 2, 'Nouvelle Méthode pour apprendre la Langue Grecque;' 3, 'Jardin des Racines Grecques;' 4, 'Grammaire Générale;' 5, 'Eléments de Géométrie.' All these works were written conjointly by Lancelot, Arnauld, and Sacy.

In the meantime the number of nuns and novices of Port-Royal-de-Paris having greatly increased, the abbess Angélique Arnauld determined upon transferring part of them to Port-Royal-des-Champs. Upon this the school of Port-Royal was removed from the latter place to Paris, Rue St. Dominique, Faubourg St. Jacques, but after three

years the teachers were restored to Port-Royal-des-Champs, where they no longer occupied the monastic building, but a farm-house, called Les Granges, on the neighbouring hill.

In 1653, Pope Innocent I. having condemned five propositions in the book of Jansenius, Arnauld wrote to prove that these propositions did not exist in the book of Jansenius, at least not in the sense attributed to them. Upon this Arnauld was accused of Jansenism, and the nuns of Port-Royal, with their abbess Angélique, refused to sign the formula acknowledging that the five alleged heretical propositions were contained in the work of Jansenius. At last an order came from the king, in 1660, to suppress the school and drive away the boarders from Port-Royal-des-Champs. The nuns continuing refractory, Péréfix, archbishop of Paris, sent a party of police-officers in 1664, who arrested the abbess, her niece Angélique Arnauld the younger, or Angélique de St. Jean, the mistress of the novices, and other nuns, and distributed them among several monasteries, where they were kept in a state of confinement. [ARNAULD, ANGÉLIQUE.] Meantime some of the nuns who had remained at Port-Royal-de-Paris intrigued with the government in order to become independent of Port-Royal-des-Champs, and Louis XIV. appointed a separate abbess to Port-Royal-de-Paris. In 1669 a compromise was made between the pope and the defenders of Jansenius, which was called "the peace of Clement IX." The nuns of Port-Royal-des-Champs with their own abbess were then restored to their convent, but Port-Royal-de-Paris was not restored to them; a division of property was effected between the two communities, by order of the king, which was confirmed by a bull of Clement X. dated 1671. Each convent retained its own abbess. Several disputes took place between the two communities, in which the archbishop of Paris and the Jesuits took an active part.

At last, in March 1708, a bull of Pope Clement XI. suppressed the convent of Port-Royal-des-Champs and gave the property to Port-Royal-de-Paris. In 1709 D'Argenson, the lieutenant-de-police of Paris, was sent with a body of men to Port-Royal-des-Champs, and he removed from thence the nuns, who were distributed among several convents. The convent and church of Port-Royal-des-Champs were stripped of all their valuables, which were transferred to Port-Royal-de-Paris, and the former building was levelled with the ground, by order of Louis XIV., as a nest of Jansenists and heretics. Besoigne, Racine, Clémencet, Du Fossé and others have written Histories of Port-Royal. Dr. Reuchlin has lately published an elaborate 'Geschichte von Port-Royal,' Hamburg, 1839.

The most distinguished men of learning connected with Port-Royal are—1, Claude Lancelot, born at Paris in 1615. He was a disciple of Du Verger d'Hauranne, came to Port-Royal in 1638, and was one of the founders and promoters of the school. After its dispersion, Lancelot acted as preceptor to several young noblemen in succession; he afterwards retired to the convent of St. Cyran, which being suppressed in 1678, on suspicion of Jansenism, Lancelot was sent into exile at Quimperlé, where he died in 1695. Goujet, in his edition of the 'Mémoires de St. Cyran, par Lancelot,' gives a biographical notice of the latter, and a list of his works. 2, Louis Isaac le Maître de Sacy was also a disciple of Du Verger d'Hauranne, took priest's orders, and withdrew to Port-Royal, where he became spiritual director to the nuns, and gave up his property to the monastery. In 1661 he retired to Paris with his friends Nicolas Fontaine and Thomas du Fossé. In 1666 they were all three arrested, and confined to the Bastille, where Le Maître remained three years. During his confinement he began his translation of the Bible; 'La Sainte Bible,' in Latin and French, with explanations, which was completed after his death by Du Fossé. He also translated Terence and Phædrus into French, and wrote other works in French, both in prose and verse. He returned to Port-Royal in 1675, but was ordered by the government to quit it in 1679, when he went to live at the house of his cousin the marquis of Pomponne, where he died in 1684. His brother Antoine le Maître had died before him at Port-Royal-des-Champs. He wrote several controversial works. 3, Pierre Nicole, born at Chartres in 1625, studied at Paris, and afterwards became one of the professors in the school of Port-Royal. In 1655 he returned to Paris, where he contributed to Pascal's work, 'Les Lettres Provinciales.' [PASCAL.] Persecuted on the score of Jansenism, he took refuge in Belgium, but afterwards returned to Paris, where he published his 'Essais de Morale,' which established his reputation as a writer and as a moralist. He also published—1, 'Epigrammatum Delectus ex omnibus tum veteribus tum recentioribus Poetis,' Paris, 1659; 2, 'La Perpétuité de la Foi de l'Eglise Catholique touchant l'Eucharistie,' 1664, against Claude, the Calvinist divine; 3, 'De l'Unité de l'Eglise,' being a refutation of Jurieu, another Calvinist divine; 4, 'Etudes de Morale et Instructions Théologiques,' and other religious works.

(*Mémoires pour servir à l'Histoire de Port-Royal.*)

PORTA, GIAMBATISTA, was born of an ancient and noble family at Naples, about the year 1550. He applied himself very early to the study of nature, and was deeply read in Aristotle, Pliny, and all the ancients who in any way treat of nature or describe the earth. It is said that at the age of fifteen he composed the first books of his 'Natural Magic;' but as he derived his opinions from such authors as Arnold de Villanova and Cardan, he mixed up numerous fantastic and delusory notions with the deductions of real science. It appears

from his writings that he travelled through Italy, France, and Spain, visiting all the libraries and learned men, and conversing with artists on matters relating to their several professions. His publications widely extended his fame. A suspicion of his being addicted to unlawful superstitions, countenanced by some of his works, was however the cause of his falling under the censure of the court of Rome, which obliged him to appear there in person to justify his conduct and opinions. The result of the examination was the prohibition of the meeting of any more of the literary assemblies held at his house, on account of their being accused of having occasionally discussed the secrets of magic. This society was called 'I Secreti,' and was accessible only to such as had made some new discoveries in physical science: even after its dissolution his house still continued to be the resort of literary men, both foreign and Neapolitans. He not only established private schools for particular sciences, but to the utmost of his power promoted public academies, and had no small share in establishing that of 'Gli Oziosi' at Naples. In his old age he composed dramas, both tragic and comic, which had some success at the time, but are now quite forgotten. He died, unmarried, at Naples, on the 4th of February 1615, and was buried in a white marble chapel that he had built in the church of St. Laurence.

In spite of the strange and childish absurdities that abound in Porta's works, it cannot be denied that he was of greater service to physical science than perhaps any of his contemporaries. It is to him that we owe the invention of the camera obscura, and also of a great number of curious optical experiments. He has written much on the subject of plane, concave, and convex mirrors, and particularly on the burning-glass, which he flattered himself he could construct in such a manner as to be able to burn at any distance. The most important invention that has been attributed to him is that of the telescope, of which he has by some persons been supposed to be the author, on account of a passage in the tenth chapter of the seventeenth book of his 'Natural Magic;' but by the best judges this honour is still considered to be due to Galileo. [GALILEO.]

The following is a list of his extant works:—1. 'Perspectiva,' 8vo, Rome, 1555. 2. 'Magis Naturalis, sive de Miraculis Rerum Naturalium, Libri Viginti,' of which the first complete edition was published at Naples, fol., 1589. The Naples edition of 1558, fol., is very rare, and contains only three books; that of Antwerp, 8vo, 1561, contains four. It has been often reprinted, and translated into several modern languages; into English, for instance, so late as 1658. This work contains a great number of curious facts that were not generally known at that time concerning the properties of plants, metals, animals, &c., and also the most remarkable human inventions. It is a vast compilation of passages extracted from authors both ancient and modern, and put together without taste or judgment; but it contains a great number of interesting observations on light, mirrors, fireworks, statics, mechanics, &c. 3. 'De Furtivis Literarum Notis, vulgo de Zifaria,' 4to, Naples, 1563, several times reprinted, with the addition of a fifth book. This is a sort of stenography, or rather a treatise on different modes of secret writing, of which one hundred and eighty are explained, and a method proposed by which they can be multiplied ad infinitum. 4. 'Phytognomonica Octo Libris Contenta, in quibus nova facillimaque affertur Methodus quâ Plantarum, Animalium, Metallorum, Rerum denique omnium ex primâ extimæ Faciæ Inspectione quivis abditas Vires assequatur. Accedunt ad hæc confirmanda, Infinita propemodum Selectiora Secreta, summo Labore, Temporis Dispendio, et Impensarum Jacturâ, vestigata explorataque,' Naples, fol., 1583, and several times reprinted. His object in this work is to point out the means of discovering the properties of plants by their analogy with the different parts of the body of animals: it is, as might be anticipated, full of absurdities. 5. 'De Humana Physiognomia,' Sorrento, fol., 1586; and in Italian, Naples, fol., 1598, very frequently reprinted, and translated into different modern languages. This is the work by which he is best known, and which gives him a right to be considered as the true founder of physiognomy. After establishing the influence that the mental affections exercise upon the body, he treats of the differences of each part of the human frame, and declares the signs which disclose the character of the individual. He has made great use of the observations of Aristotle, Polemo, and Adamantius; but he has also added a great many curious remarks of his own. He considers that the human face should be compared with that of animals; that as there exists in the human race as many modifications as there are individuals, and as also the different degrees of his organisation recall those at which nature stops permanently in some of the inferior vertebrated animals, the general configuration of the head of man must express a character akin to that which is found in these same animals, according as the intellectual dispositions of the individual agree with those that characterise them. Accordingly, in the plates inserted in his work, he has compared the head of Vitellius with that of an owl, Plato's with that of a greyhound, &c. 6. 'Vilæ Libri Duodecim: i., Domus; ii., Sylva Cædua; iii., Sylva Glandaria; iv., Cultus et Inaitio; v., Pomarium; vi., Olivetum; vii., Vineæ; viii., Arbustum; ix., Hortus Coronarius; x., Hortus Olivarius; xi., Seges; xii., Pratium: in quibus majori ex parte cum veris Plantarum Cultus, certaque Inaitiosis Ars et prioribus Sæculis non visos producendi Fructus Via monstratur, tum at Frugum, Vini, ac Fructuum Multiplicationem Experimenta

propemodum infinita exhibentur,' Francof., 4to, 1592. A learned and agreeable work, the contents of which are sufficiently expressed by the title-page. 7. 'De Refractione, Optices Parte, Libri Novem,' Naples, 4to, 1598. Among many things that are vague and inexact, are found now and then some just observations on a great number of objects relating to optics, such as refraction and the anatomy of the different parts of the eye. The seventeenth book of his 'Natural Magic' contains a portion of this treatise. 8. 'Pneumaticorum Libri Tres; cum Duobus Libris Curvilinearum Elementorum,' Naples, 4to, 1602, and in Italian, *ibid.*, 4to, 1606. In this work he treats of hydraulic machines and their construction, and enters into a great detail. A new edition of his 'Curvilinear Geometry' was published at Rome, 4to, 1610, with the addition of a third book, treating of the quadrature of the circle, the solution of which famous problem he flattered himself that he had rendered more easy. 9. 'De Cælesti Physiognomiâ Libri Sex,' Naples, 4to, 1601, and frequently reprinted. In this work, though he rejects judicial astrology, he attributes nevertheless great influence to the heavenly bodies. 10. 'Ars Reminiscendi,' Naples, 4to, 1602. A collection of all the means of assisting and strengthening the memory that were practised by the ancients. 11. 'De Distillationibus Libri Novem, quibus certâ Methodo, multiplicique Artificio penitioribus Naturæ Arcanis detectis, cujuslibet Misti in propria Elementa Resolutio perfectè docetur,' Rome, 4to, 1608, and Strasbourg, 4to, 1609. A curious work, from giving an idea of the state of chemistry in the beginning of the seventeenth century. 12. 'De Munitione Libri Tres,' Naples, 4to, 1608. A treatise on fortifications. 13. 'De Aëris Transmutationibus Libri Quatuor,' Naples, 4to, 1609. This is said by M. Musset Pathay ('Bibliog. Agronomique,' p. 51) to be the first work on meteorology in which any sound ideas are to be found. 14. His dramatic works consist of fourteen comedies, two tragedies, and one tragi-comedy. The comedies were collected into four volumes, 12mo, and published at Naples, 1726. All these works are analysed by H. Gab. Duchesne, at the end of his 'Notice Historique sur I. B. Porta,' Paris, 8vo, 1801.

PORTER, ANNA MARIA, born at Durham about 1781, was the youngest child of a family all of whom attained considerable celebrity. Her eldest brother was an eminent physician at Bristol; another brother was Sir R. K. Porter; and her elder sister was Jane, the subject of the following notice. When only a few months old her father died, and the mother, for the sake of educating her children economically, removed to Edinburgh. Anna Maria was the most precocious; and as a lively and intelligent child attracted the notice of Sir Walter Scott, then a youth, who delighted in relating tales to her, and this probably led to her own early attempts in the same line. While still almost a child she had written 'Artless Tales' in two volumes, which were issued in 1793 and 1795, of which she afterwards regretted the publication. Her mother had before this time removed with her family to London, and subsequently, with her sister Jane, they settled first at Thames Ditton, and finally at Esher. After the death of her mother in 1831, while travelling in hopes of restoring her delicate health, she was attacked by typhus fever, and died on June 21, 1832, at the seat of Mrs. Colonel Booth, Montpelier, near Bristol. Besides many contributions to periodical works, she had published numerous novels, among which 'The Hungarian Brothers,' 'Don Sebastian,' 'The Recluse of Norway,' 'The Village of Mariendorp,' 'The Fast of St. Magdalen,' and 'The Knight of St. John,' enjoyed and retain considerable popularity. They belong, more or less, to the class of historical novels, and show skill in the management of the story, and some discrimination of character; but her heroes and heroines too often possess a superhuman excellence that becomes palling. 'Tales of Pity' were published anonymously, and are intended to inculcate kindness to animals. In 'The Barony' she has developed her religious feelings. She also published a volume of poetry, 'Ballad Romances and other Poems,' in 1811, of no great value.

PORTER, JANE, the elder sister of the preceding, was born in 1776. Her life followed that of her sister, with whom and her mother she constantly resided till their deaths. She then, as she described herself, "became a wanderer," living with one or other of her friends till, in 1842, she went with her brother to St. Petersburg. On his death she returned to England, and resided with her eldest brother, the physician at Bristol, where she died May 24, 1850. Miss Jane Porter did not adventure into the field of literature so early as her sister, and in some respects came better prepared, but she has the same fault in the unmitigated excellence or depravity of her characters. Still, in many of her characters there is a firmer delineation, and perhaps somewhat greater knowledge, though not very rigidly adhered to, of the manners of the times of which she treats. Her first work was 'Thaddeus of Warsaw,' published in 1803, which was extremely popular, and procured for her the admission as a canoness into the Teutonic order of St. Joachim, and a complimentary letter from Kosciusko. In 1809 she published the 'Scottish Chiefs,' a romance of Wallace and Bruce, in which there is considerable vigour of description, some character, but a total misconception of the condition of the time. Wallace and Bruce are depicted as little less than demigods. To these followed 'The Pastor's Fireside' and 'Duke Christian of Lunenburg,' the latter said to have been suggested by George the Fourth. She next joined with her sister in 'Tales round a Winter's Hearth,' and these were succeeded by 'The Field of Forty Footsteps,' founded on a London

tradition connected with the spot where now stands University College and Hospital, and which was almost immediately dramatised. After a considerable interval, during which she contributed largely to periodical works, among other things a biography of Colonel Denham, the African traveller, in the 'Naval and Military Journal,' she published anonymously in 1831 'Sir Edward Seaward's Diary,' in which she so successfully imitated the style and adhered so closely to the manners and history of the period, that it was for a considerable time doubted whether or not it was a fiction. This was her last work.

PORTER, SIR ROBERT KER, K.C.H., was born at Durham about 1778, but his early boyhood was passed in Edinburgh, whither his mother removed upon the death of her husband, who was an officer in the English army. He was the brother of Anna Maria Porter and Jane Porter. His strong natural disposition for the arts was first called into activity by the celebrated Flora Macdonald. Robert, then a boy of only nine or ten years of age, was spending the evening with his family in the house of that extraordinary lady, who, perceiving his fixed attention to a certain battle-piece, explained to him that it was one of the battles of '45; and she proceeded to describe the battle in all its details in such glowing terms that the boy's blood kindled, and from that time he was incessantly sketching battles. His mother was induced by his evidence of talent to take him to London, about 1790, to West, the president of the Royal Academy, who is said to have been so much struck with the spirit of the boy's sketches that he procured his admission as a student into the Royal Academy. In 1792 he had already evinced such progress, or been so recommended to the parish authorities, as to receive a commission to paint 'Moses' and 'Aaron' for Shoreditch church. In 1794 he presented an altar-piece of 'Christ allaying the Storm' to the Roman Catholic chapel at Portsea; and in 1798 another, of 'St. John preaching in the Wilderness,' to St. John's College, Cambridge. His most extraordinary productions however were his great battles. In the year 1800 he exhibited an immense picture, 120 feet long, in the Lyceum Great Room, representing the storming of Seringapatam. He is said to have been only six weeks in painting the picture, and yet the execution was in no part neglected. This picture was burnt in the fire which consumed a friend's warehouse where the painter deposited it before he left England to go to Russia; but the sketches exist, and were sold at the sale of Sir Robert's effects in 1848. Another great battle was the 'Siege of Acre,' exhibited also in the Lyceum Room: he published at the same time a book entitled 'The Siege of Acre, chiefly intended as a Companion to the great Historical Picture painted by Robert Ker Porter, now exhibiting at the Lyceum; 1801;' it contains spirited etchings of the picture. These were followed by a third great battle-piece, 'Agincourt,' which he presented to the city of London: it was hung up in the Guildhall a few years ago. He painted also pictures of the 'Battle of Alexandria' and the 'Death of Sir Ralph Abercromby.' In 1804 he went to Russia, and was appointed historical painter to the emperor. While he was in St. Petersburg he gained the affections of the Princess Mary, the daughter of the Prince Theodore de Sherbatoff of Russia, and the marriage was arranged; but some ministerial differences caused him to leave Russia: in the year 1811 however the marriage took place, and the princess survived him. He painted at St. Petersburg, on the walls of the Admiralty, 'Peter the Great planning the Port of Cronstadt and St. Petersburg.' After his return to England, about 1806, he published 'Travelling Sketches in Russia and Sweden.' In 1808 he accompanied Sir John Moore's expedition to the Peninsula, and attended the campaign throughout, up to the closing catastrophe of the battle of Corunna. On his return to England he published some anonymous letters from Spain and Portugal.

After his return from a second visit to Russia, after his marriage, he published in 1813 'An Account of the Russian Campaign,' and he was knighted by the Prince Regent in the same year. He executed many sketches of the campaign in Portugal, and some Cossack affairs. From 1817 to 1820 he was occupied in his extensive travels in Asia, of which he published a detailed account in 1821-22, 'Travels in Georgia, Persia, Armenia, Ancient Babylonia, &c., during the years 1817-18-19-20, with numerous engravings of Portraits, Costumes, Antiquities, &c.,' 2 vols. 4to. In this work are many excellent designs in outline from the fine characteristic ancient sculptures of Nakahi Roustam, Nakahi Rajab, Shiras, and Persepolis.

In 1832 Sir Robert Ker Porter was created Knight Commander of the Order of Hanover by William IV.; he was appointed a few years before British consul at Venezuela, where he resided at Caracas until 1841, and he painted while there three sacred pictures, which were his last principal works; he also made numerous sketches of scenery in the meanwhile. The first of these three pictures was 'Christ at the Last Supper blessing the Cup,' painted as an altar-piece for the chapel of the Protestant burying-ground, of which he had procured the establishment; but he removed it afterwards on account of the heat of the sun, and put up in its stead a tablet with the ten commandments in the native language. The second was 'Our Saviour blessing the Little Child,' and the third and last an 'Ecce Homo.' He painted also a portrait of General Bolivar. In 1841 he paid his last visit to St. Petersburg, and the cold winter appears to have been too much for his constitution, then inured to the warm climate of Venezuela. On the 3rd of May, on his return from court, where he had been to pay his respects to the emperor, previous to his return to England, he

BIOG. DIV. VOL. IV.

was struck with apoplexy, and he expired on the following morning, May 4, 1842.

PORTER, GEORGE RICHARDSON, was born in London in 1792. He was educated at Merchant Taylors' school, where he became intimate with the Ricardo family, and subsequently married the sister of David Ricardo. His father, a merchant in London, designed him for his own profession, and he became a sugar-broker. He was unsuccessful in trade; but his commercial knowledge was made available for literary objects. In 1830 he published a work, 'On the Cultivation of the Sugar-Cane.' A paper on 'Life Assurance' was published in the 'Companion to the Almanac for 1831.' In the same year 'A Treatise on the Origin, Progressive Improvement, and Present State of the Silk Manufacture,' was issued as a volume of Lardner's 'Cabinet Cyclopaedia,' for which series, in 1842, he wrote a similar treatise, 'On the Manufacture of Porcelain and Glass.' His paper in the 'Companion to the Almanac,' of which Mr. Charles Knight was the projector and editor, led to Mr. Porter's official appointment in the Board of Trade. In an article in the 'Gentleman's Magazine,' for October 1852, the circumstance is thus correctly stated:—"Mr. Knight was written to by the late Lord Auckland, then president of the Board of Trade, requesting that he would wait on that minister at his office at his earliest convenience, and was asked at the interview, whether he would undertake the task of arranging and digesting for the board the mass of information contained in blue books and parliamentary returns; in short, if he would do for the Board of Trade what Mr. Porter has since done so well, and what Mr. Fonblanque continues to do for the same office, with the same accuracy and success. Mr. Knight hesitated. The engagement, should he accept it, must necessarily interfere in a great measure with his business as a publisher. In this dilemma, he consulted a distinguished friend, and by that friend was advised to wait on Lord Auckland, and decline the office. This he did; and at Lord Auckland's request, he named Mr. Porter, to whom the office was given."

The first appointment of Mr. Porter at the Board of Trade took place in 1832. It was an experimental appointment at a small salary. When the statistical department of the Board of Trade was fully organised, Mr. Porter was placed at its head. In 1840 he was appointed in addition, senior member of the railway department of the board, then newly constituted to meet the growing increase of projects in that direction. His able reports, which were laid before parliament, were of the utmost value, and were properly appreciated by official men and by the public. For his labours in this department he had an additional salary of 2000*l.* a year. On the retirement of Mr. McGregor, as one of the secretaries of the Board of Trade, in 1841, Mr. Porter was appointed to succeed him, at the salary of 1500*l.* a year. His labours in all these positions were increasing and successful. He had a genius for tabulating the most incongruous materials, and he formed the model, which he was always improving, of the returns which are now periodically issued from the Board of Trade with so much advantage to the commerce of the country. But his active mind was not confined to his official duties. In 1833 he published 'The Tropical Agriculturist.' In 1834 he exerted himself in the founding of the Statistical Society, of which he was for a considerable time one of the vice-presidents, and on the resignation of Mr. Hallam in 1841 he was chosen treasurer. To the 'Journal' of the Society he was a frequent contributor. In 1836 he published 'The Progress of the Nation, in its social and commercial relations, from the beginning of the Nineteenth Century to the Present Time. Sections I. and II., Population and Production.' Sections III. and IV., 'Interchange, and Revenue and Expenditure,' followed in 1838; and the work was completed in 3 vols. 12mo, by Sections V. to VIII., including 'Consumption, Accumulation, Moral Progress, Colonial and Foreign Dependencies.' This valuable work necessarily admits of constant correction and new matter, and other editions were issued each in a large 8vo volume, in 1847 and 1851. The mass of information clearly set forth in this work presents the best and most complete picture of the progress and state of the country for the period of which it treats. On the establishment of the British Association for the Advancement of Science, he became one of its most active members, always attended its annual meetings, and usually read a paper to the statistical section. Mr. Porter had been ever a firm and unwavering advocate of the doctrines of free-trade, and in 1849 he published a translation, with notes, of F. Bastiat's 'Popular Fallacies regarding General Interests,' in 16mo. In the same year he wrote the Fifteenth Section of the 'Admiralty Manual of Scientific Inquiry,' edited by Sir J. F. Herschel, which was subsequently published alone in 1851. In 1850, in conjunction with Mr. George Long, he wrote the 'Geography of Great Britain. Part I., England and Wales,' published by the Society for the Diffusion of Useful Knowledge. This was his last unofficial labour. Sedentary pursuits had induced a bad habit of body, and the sting of a gnat produced inflammation of the leg, from the consequences of which he died on September 3, 1855, at Tonbridge Wells, whither he had gone in hopes of relief.

SARAH PORTER, his wife, has been also a writer. The work by which she is best known is 'Conversations on Arithmetic,' published in 12mo in 1835. This was re-issued in a modified form in 1852, under the title of 'Rational Arithmetic.' Mrs. Porter is also the authoress of a prize essay, published in 1839, 'On the Expediency and Means of elevating the Profession of the Educator in Society.'

PORTEUS, BEILBY, an eminent English prelate, was born at York in 1731. He passed several years at a small school in his native city, and at the age of thirteen he was removed to a school at Ripon. From this place he went at an earlier age than usual to Cambridge, where he was admitted a sizar of Christ's College. His personal worth, united with his superior attainments, both classical and mathematical, soon procured him a fellowship in his college, and by the exertions of his friends he was made esquire-beadle of the university. This office he did not long retain, but chose rather to give his undivided attention to private pupils. In 1757, at the age of twenty-six, he was ordained deacon, and soon after priest.

He first became known as a writer by obtaining Seaton's prize for the best English poem on a sacred subject. On this occasion the subject was 'Death,' and the production of Mr. Porteus was universally deemed one of great merit. In 1762 he was made chaplain to Archbishop Secker. His first preferments were two small livings in Kent, which he soon resigned, and took the rectory of Hunton in the same county. He was next appointed prebendary of Peterborough, and not long afterwards, in 1767, he became rector of Lambeth. In the same year he took the degree of D.D. at Cambridge, and in 1769 was made chaplain to King George III., and master of the hospital of St. Cross, near Winchester. In 1773 Dr. Porteus, with a few other clergymen, joined in an unavailing application to the bishops, requesting that they would review the Liturgy and Articles for the purpose of making some slight alterations. In 1776 Dr. Porteus, without any solicitation on his part, was made bishop of Chester; and in 1787, on the death of Bishop Lowth, he was promoted to the diocese of London, over which he presided till his death. In 1798 he began a course of lectures on St. Matthew's Gospel, which he delivered at St. James's church on the Fridays in Lent, and which he afterwards published. These lectures have been perhaps the most popular of all his works. He died on the 14th of May 1808, in the 78th year of his age. Though Bishop Porteus cannot be called a profound scholar or divine, he was a man of considerable learning and ability; and he pursued through life a steady course of pious exertion for the benefit of his fellow-creatures, which procured him a high reputation among men of all parties. His works, consisting of sermons and tracts, with a 'Life of Archbishop Secker,' and the poem and lectures already mentioned, were collected and published in 1811, in 5 vols. 8vo, with his 'Life,' making another volume, by his nephew, the Rev. Robert Hodgson, afterwards dean of Carlisle.

PORTLOCK, JOSEPH ELLISON, Lieutenant-Colonel of Royal Engineers, F.R.S., President of the Geological Society. The subject of this notice is one of the many distinguished men who have been supplied to the service of science, and not unfrequently to that of administrative government, by the corps of Royal Engineers, and of whom some eminent examples have already been commemorated in this work. Several of these, like Colonel Portlock, have been officers of the Ordnance Survey; but the character of being equally accomplished in geodesy and geology is almost peculiar to him. The Trigonometrical Survey of Ireland having been determined upon by the government in the year 1824, Lieutenant Portlock was immediately attached to that great work: he enjoyed during the early periods of the survey the privilege of a most close and confidential intimacy with the superintendent, the late Major-General (then Colonel) Colby [COLBY, THOMAS], and performed the same functions as regarded the Irish as were performed by the late Colonel R. Z. Mudge in respect to the English survey. In this commencement of the Irish survey, the staff of officers of the Royal Engineers attached to the superintendent comprised Lieuts. Portlock, Drummond [DRUMMOND, THOMAS], and Murphy. The actual survey was begun in 1825, and, among other preparatory measures, Lieutenant Portlock was sent in that year into the Isle of Man, and in the following year into Wales and Anglesea, to recover the sites of the old stations, and re-establish upon them the means of recognition when they should be again observed in connecting the former triangulation of Great Britain with that about to be commenced in Ireland. When this had been accomplished, he joined Lieutenant (now Colonel) Larcom at Slieve Donard, in the county of Down, the station for that year; and after his chief's arrival and departure, completed the observations of the station, Lieut. Larcom reflecting to him with a heliostat from Anglesea. From this time the personal superintendence of the great triangulation of Ireland (with the exception of the stations connected with and in the immediate vicinity of the Lough Foyle base) was confided to Lieutenant Portlock, who also eventually received the charge of the secondary and minor triangulation, and of the computations for the supply of distances and altitudes, Colonel Colby continuing however to visit the stations occasionally. The privations and the consequences of exposure to the rugged influences of nature which were endured by the officers both on the Scotch and the Irish surveys have been related in articles already referred to: Lieutenant Portlock fully participated in them. On the station of Cnocanfrion, in the county of Waterford, the observatory was placed on a stage erected against the face of a rock, the actual peak of which was the station, and stood on the very brink of a precipice. At the station of Culcagh, a lofty mountain near Swadlinbar, on the borders of the counties of Cavan and Fermanagh, Portlock had subsequently to explain the system pursued in the great triangulation to the late Sir James Carmichael Smith and Lieut-Col.

Hoste, R.E., acting as commissioners of inquiry into the management of the Irish survey, who were accompanied to the station by Colonel Colby; and, in answer to their questions, to vindicate its merits. One of the most noticeable features here was an alteration in the construction of the portable observatory of the survey, which had been devised by him, the new observatory being first pitched on this mountain. For the old canvas sides, with the exception of a rim at the top of about nine inches deep, were substituted framed wooden panels, tied together with iron clamps; and secured in a similar manner to the posts or pillars which supported the roof. This simple alteration imparted to the observatory "a degree of stability and security which banished from the observer's mind those terrors which had before haunted and harassed him in stormy weather," and by this effect had an important influence in the subsequent conduct of the operations. A miniature observatory, exactly similar in construction, contained the various meteorological instruments. The commissioners expressed the highest admiration of what they saw and of what had been explained to them; though, to the great regret of Colonel Portlock, "whilst they praised the executive officer [himself], they overlooked or failed to appreciate the merit" of his friend and chief Colonel Colby.

On making preparations for beginning the survey, Colonel Colby had expressed his conviction "that the Topographical Survey should be considered a foundation for Statistical, Antiquarian, and Geological Surveys." The government having concurred in this view, Portlock was appointed to the charge of the last-mentioned portion of the work as soon as the exigencies of the trigonometrical survey itself permitted these subordinate objects to receive attention. The original project having been resumed about the year 1832, and Portlock having, about the same time, commenced the formation of a geological department, he was requested, in 1834, to contribute to the projected memoir of Londonderry, in addition to the geology, the two sections, natural history and productive economy. He engaged a botanist, and additional collectors for geology were employed, as well as collectors for zoology, both land and marine; and a department was formed for collecting and recording statistical information also. In 1837 Portlock was enabled, from the advanced state of the works he had been previously conducting, to direct his attention more exclusively to the geological department, then comprising also the two sections just mentioned. For this purpose, by Colonel Colby's desire, he formed at Belfast a geological and statistical office, a museum for geological and zoological specimens, and a laboratory for the examination of soils. But only three years afterwards, "when every section of the department was moving forward with a prospect of success, the design of continuing the Londonderry Memoir was abandoned, and the office, museum, and laboratory at Belfast, were in consequence broken up, and everything connected with the department removed to Dublin."

Soon after his own removal to the Irish metropolis, Captain Portlock was directed to prepare for publication all the geological data which had been collected for the county of Derry and barony of Dungannon in Tyrone (a district "comprising a silurian deposit rich in fossils, the old red sandstone, a portion of the carboniferous strata, the new red sandstone including the trias, the chalk, and tertiary deposits"), but he found it indispensable to extend his researches further into Tyrone and also into Fermanagh. "In selecting the silurian fossils for more especial illustration, I have been influenced," says Captain Portlock, in the preface to the elaborate Report on his labours, "by the principle of fixing the base of the Irish fossiliferous strata, and by a desire to make known a formation previously almost new to Irish geology, and, though limited in space, rich in the most characteristic fossils of American, European, and British localities. In like manner I have placed before the public the Irish triassic fossils before unknown." The elaborate work thus produced is entitled "Report on the Geology of the County of Londonderry, and of parts of Tyrone and Fermanagh. Examined and described under the authority of the Master-General and Board of Ordnance," Dublin and London, 1843, 8vo, pp. xxxi, and 784. It is illustrated by 38 lithographic plates of organic remains, 9 lithographic geological sections and views, including a plan; also by a large "Index [Map] to the Ordnance Geological Maps of the County of Londonderry and portions of Tyrone, Fermanagh, Donegal and Armagh." In the actual field-work as well as in the composition of the Report, Captain Portlock's chief-assistant was Mr. Thomas Oldham, afterwards president of the Geological Society of Dublin, and Professor of Geology in Dublin University, and now (1857) engaged in the geological survey of India for the East India Company. The work itself is one of the most remarkable contributions extant to the local geology of the British Islands.

An interruption now took place in Captain Portlock's career as a geologist. Notwithstanding the eminence he was attaining as the conductor of the geological department of the Ordnance Survey of Ireland, he was ordered to the Ionian Islands, in discharge of the ordinary duties of an officer of engineers. But having been stationed at Corfu, he recommenced his scientific labours, both as a geologist and a military engineer. Under the date of 'Corfu, October 4, 1844,' in vol. viii (London 1845) of 'Papers on subjects connected with the duties of the Corps of Royal Engineers,' appears an important communication by him, entitled 'Notes on Platforms.' This contains both a theoretical and an experimental investigation of the requisite

dimensions of platforms for guns and mortars. The same volume contains another professional paper by him, entitled 'Notes on the Superior Slopes of Parapets.' Having served at Corfu for the time prescribed by the regulations, he returned to England, and subsequently communicated to the Geological Society, a paper on the geology of that island and of Vido. After the decease of General Colby, in 1852, he produced a separate memoir of that eminent officer, 'with a sketch of the British Trigonometrical Survey,' which has already been cited in this article. In the 'Aide-Memoire to the Military Sciences,' a valuable work, edited and indeed almost wholly produced by officers of the Royal Engineers, appeared a short article on Galvanism by Colonel Portlock; also an article on 'Geognosy and Geology,' and one on 'Palaeontology,' both illustrated by plates. These have been universally regarded as most valuable contributions to the didactic literature of the sciences to the knowledge of which they are intended to be introductory. The judgment of Colonel Portlock in devoting himself to the palaeontology as well as to the stratigraphical department of the original Irish geological survey, has been fully vindicated by the reputation which has been his reward. While engaged in the survey, he became a Fellow of the Royal Society, on the 8th of June 1837. He had joined the Geological Society many years before, and having, subsequently to his return from the Ionian Islands, frequently served as Vice-President of that body, on the lamented decease of Mr. Daniel Sharpe, in 1856, he was unanimously elected to the biennial presidency. At the anniversary meeting of February 20th, 1857, he delivered his first address to the Society, containing the usual notices of deceased Fellows, together with a view of the recent progress of the sciences, in which he entered into a critical examination of certain hypotheses, evincing the advantage of a previous training in mathematical physics to the geological philosopher. This will shortly be published in the Society's Quarterly Journal. [See SUPPLEMENT.]

PORTUS, FRANCIS, a celebrated philologist, born in 1511, in the island of Crete. He lost both his parents at an early age, and was sent by a friend to Padua, where for six years he studied classical literature and philosophy. After the death of his friend and benefactor he repaired to Venice, where his talents procured him the directorship of the school for young Greeks. But owing to his inconsiderate expressions on matters of religion, he soon lost his place. He now went to Modena, where in 1536 he was made professor of Greek literature, after having signed some articles of faith, to which at first he strongly objected. He held this office for six years, at the end of which he exchanged Modena for Ferrara, to undertake the education of the sons of the Duchess Renée of France. In this capacity he also carried on her correspondence with Calvin, whose doctrines this lady had secretly adopted. During his stay at Ferrara, Portus was made a member of the Academy of the Filareti. After the death of her husband the duchess returned to France, and Portus, from fear of persecution for his religious opinions, went to Geneva, where he obtained the rights of a citizen and a professorship in the university (1562). Here he spent the remaining years of his life, partly in fulfilling the duties of his office, and partly in writing those works by which he established his reputation as a scholar and a critic. He died on the 5th of June 1581.

Portus has written explanatory and critical commentaries on various ancient authors, such as Aristotle ('Rhetoric'), Aphthonius, Hermogenes, Longinus, Pindar, on the 'Greek Anthology,' some works of Xenophon, on Thucydides, and others. He translated into Latin the treatise of Apollonius of Alexandria, 'De Syntaxi, seu Correctione Oratorum,' the 'Psalms,' the hymns and letters of Synesius, and the odes of Gregorius Nazianzenus. His son Æmiliius Portus published, in 1584, six dissertations and some other works of his father. It is said that there are still some manuscripts of Francis Portus in the library of Este, containing commentaries on the several orations of Demosthenes and on Sophocles, which have never been printed.

PORTUS, ÆMILIIUS, the son of Francis Portus, was born about 1550 at Ferrara. In his youth he was instructed by his father in the ancient languages and literature. After the death of his father he left Geneva, and in the same year (1581) he was made professor of Greek at Lausanne, where he remained for ten years, devoting his leisure hours to preparing new editions of ancient authors. In 1592 he was invited to the chair of Greek literature in the University of Heidelberg, of which he afterwards became one of the greatest ornaments. He died in 1610, or, according to another account, after 1612.

The numerous works of Æmiliius Portus consist of commentaries, translations, and original works. Among the first we may mention his Commentary on Pindar (1598), his edition of Euripides, with notes of Canter, Brodeus, Stiblinus, and some of his own, Geneva, 1602; Aristophanes, Geneva, 1607; Aristotle's 'Rhetoric' (the translation was made by Æmiliius, the Commentary by his father); Spire, 1598; Homer's 'Iliad,' Xenophon, and Thucydides. He translated into Latin the work of Proclus, 'De Theologia Platonia,' published at Hamburg in 1618; the Lexicon of Suidas, Colonia Allobrogum, 1619; a reprint appeared at Geneva in 1630. He also translated Thucydides and the 'Roman Antiquities' of Dionysius of Halicarnassus. The following are the original works of Æmiliius Portus:—'Oratio de variarum Linguarum usu, necessitate, præstantiâque,' Cassel, 1611, 4to; 'Dictionarium Ionicum Græco-Latinum, quod indicem in omnes Herodoti libros continet,' Frankfurt, 1603, 8vo; a reprint of it appeared at

Oxford in 1809; 'Dictionarium Doricum Græco-Latinum, quod Theophrasti, Moschi, Bionis, et Siamisæ variorum opusculorum interpretationem continet,' Frankfurt, 1604; 'Pindaricum Lexicon, in quo non solum Dorismi Pindari peculiaris, sed etiam verba phrasæque non vulgares et in aliis lexicis omisæ declarantur,' Hanko, 1604; 'De prisca Græcorum Computatione,' Heidelberg, 1604; 'De Nihilii Antiquitate et multiplici Potestate,' Cassel, 1609.

PORUS (Πάρος), the name given by Greek writers to several Indian kings. From its frequent occurrence it appears to have been the name of a family or tribe, rather than the proper name of an individual. Some modern writers suppose it to be the same word as the Sanskrit 'parva,' a 'citizen;' but Lassen ('Pentapotamia Indica,' pp. 17, 18) with more probability connects it with 'Parava,' or descendants of 'Paru,' which we know, from the ancient writings of the Hindus, to have been the name of several Indian dynasties.

Alexander, in his invasion of India, met with two different kings of this name, one of whom ruled over the country between the Hydaspes and Acesines, and the other over the country between the Acesines and Hydrates (Ravee). The former made a formidable resistance to Alexander, but was conquered. Alexander however treated him with respect, and restored to him his kingdom, with enlarged limits. The other Porus did not wait the arrival of Alexander, but fled to the kingdom of the Prasii. His dominions were given to the Porus whom Alexander conquered. (Arrian, 'Anab.' v. 20, 21, 29.) Porus however did not long survive Alexander. He was treacherously killed by Eudamus, B.C. 317. (Diod. Sic., xix. 14.)

Strabo mentions (xv. p. 686) that an Indian king of the name of Porus sent an embassy to Augustus.

POSIDONIUS, a Greek philosopher, was a native of Apameia in Syria, but a citizen of Rhodes, where he resided the greater part of his life. (Strabo, xiv. p. 656; Athen., vi. p. 252, c.) The dates of his birth and death are unknown; but he must have been born during the latter half of the 2nd century before the Christian era, as he was a disciple of Panætius, who probably died about B.C. 100, and whom he succeeded as the head of the Stoic school. He returned to Rome in the consulship of Marcus Marcellus (Suidas, 'Posidon.'). B.C. 61, and probably died soon after. He lived, according to Lucian ('Macrob.,' c. 20), to the age of eighty-four.

Posidonius was one of the most celebrated philosophers of his day. Cicero, who had received instruction from him (Cic., 'De Fato,' c. 3; 'De Nat. Deor.,' l. 3; 'De Fin.,' l. 2), frequently speaks of him in the highest terms. Pompey also appears to have had a very high opinion of him, as we read of his visiting him at Rhodes shortly before the war against the pirates, B.C. 67 (Strabo, xi. p. 492), and again in B.C. 62, after the termination of the Mithridatic war. (Plut., 'Pomp.,' c. 42; Plin., 'Hist. Nat.,' vii. 30.)

Posidonius appears to have been a man of very extensive information. Besides his philosophical treatises he wrote works on geography, history, and astronomy; but none of them have come down to us, with the exception of their titles, and a few sentences quoted by Cicero, Diogenes, Laertius, Strabo, and others. He seems to have travelled in different parts of the world for the purpose of collecting information. We learn incidentally from Strabo (xiii. p. 614; lli. p. 165; iv. p. 197), that he had been in Spain, Liguria, and Gaul. Plutarch was also indebted to Posidonius, among others, for the materials of several of his lives. This is the case in the Lives of Marcellus, Paulus Æmilius, the Græchi, and others; but particularly in the Life of Marius, with whom Posidonius had been personally acquainted. (Plut., 'Marius,' c. 45.) Posidonius wrote 'Meteorologica.' Cicero mentions ('Nat. Deor.,' li. 34) his artificial sphere, which represented the motions of the heavens.

Posidonius was a much stricter Stoic than his master Panætius. [PANÆTIUS.] He maintained that pain was not an evil, as we learn from an anecdote which Pompey frequently related respecting his visit to the philosopher at Rhodes. (Cic., 'Tusc. Disp.,' li. 25.) His works on Divination and the Nature of the Gods are referred to by Cicero, who probably made use of them in his works on the same subject. (Cic., 'De Div.,' l. 3, 30, 64; 'De Nat. Deor.,' l. 44.)

Strabo says (xi. 492) that Posidonius wrote an account of the wars of Pompey, but did not pay much attention to accuracy. This account was however probably contained in his historical work, of which Athenæus quotes (iv. p. 168, d) the 49th book. (Compare Athen., iv. p. 151, a.) For further information respecting the opinions and writings of Posidonius, see 'Posidonii Reliquiæ Doctrinæ.' Collegit atque illustravit Janus Baka. Accessit D. Wytenbachii Annotatiô. Lugduni Bat., 1810, 8vo.

There was another Posidonius of Alexandria, who was a pupil of Zeno, and consequently was prior to Polybius. Suidas however, by mistake, ascribes to this Posidonius a continuation of Polybius, in fifty-two books, which is evidently the work of the younger Posidonius.

POSTLETHWAYT, MALACHI, an eminent writer on commerce, is supposed to have been born about the year 1707; but no particulars relative to his origin or education, and very few relative to his after-life, appear to exist. In the introductory discourse to his work, entitled 'Great Britain's True System,' he says (pp. 62, 63):—"Nature having given me but a very tender and weak constitution, I have studiously declined and avoided, as much as I well could, every degree

of the public life, as being inconsistent with and indeed destructive of that small share of health which I have several years enjoyed; and it will easily be believed that the studies I have been engaged in have not mended it. I therefore considered in what capacity I might prove useful to society; and accordingly betook myself to the studious life, experiencing that to be more consonant to my preservation than that of the active and public one." In the previous paragraph he complains of the neglect with which his labours had been rewarded, and "he humbly hopes that some people will be candid and ingenuous enough to think that he has a right to be treated upon a footing something different from that of an upstart idle schemist or projector, who has never given proof of any talents that might deserve the public regard and attention." This was published in 1757. The appeal does not appear to have been responded to either by the government or the public. He died September 13, 1767, suddenly, as he had often wished, and was buried in Old-street churchyard.

His other works are:—1, 'Considerations on the Revival of the Royal British Assiento between His Catholic Majesty and the Hon. the S. Sea Company,' 8vo, Lond., 1749; 2, 'The Merchants' Public Counting-House,' 4to, Lond., 1750; 3, 'The Universal Dictionary of Trade and Commerce, translated from the French of Savory, with additions,' &c., 2 vols. fol., Lond., 1751-56, last edition 1774; 4, 'A Short State of the Progress of the French Trade and Navigation,' 8vo, Lond., 1756; 5, 'Britain's Commercial Interest explained and improved,' 3 vols. 8vo, Lond., 1757; 6, 'The Importance of the African Expedition considered,' 8vo, Lond., 1758; 7, 'The History of the Public Revenue, from the Revolution in 1688 to Christmas 1753,' fol., Lond., 1759. This last is by James Postlethwayt, probably the brother of Malachi, though it is attributed to the latter by Watt in his 'Bibliotheca Britannica.'

POSTUMUS, a native of Gaul, distinguished himself in the Roman service, and was appointed by Valerianus governor of the Gauls. Under the weak reign of Gallienus he was saluted emperor by the troops in that part of the empire. Postumus ruled Gaul for ten years with great ability and moderation, says Eutropius: he repulsed the Germans, who had invaded the country, and restored peace; but he was at last killed in a mutiny of the soldiers headed by one Lollianus, because he would not allow them to plunder Moguntiacum (Mainz), which had revolted against him. He was succeeded in the command of Gaul by Victorinus, who was killed also two years after.

Coin of Postumus.  
British Museum. Actual size.

POTEMKIN, GREGORY ALEXANDROVICH, PRINCE, born near Smolenak of a noble though poor family, entered the army at the age of eighteen, and obtained a cornetcy in the Russian guards. When the revolution took place at St. Petersburg in 1762, by which Peter III. was dethroned and his wife Catharina proclaimed empress, Potemkin took the part of Catharina, and was very active in bringing his regiment over to her cause. He was duly noticed by Catharina, and after some time he became her favourite. But he had better claims to favour than mere personal attractions, for he had great natural abilities, little principle, and great presence of mind: the empress conceived an esteem for him, which survived the loss of her affection. Unlike her other favourites, Potemkin, when no longer her personal favourite, continued to be the confidential minister of his sovereign, and was for many years the most influential man in Russia. His views were turned towards the south, and he encouraged Catharina to extend her dominions in the direction of Turkey. He was a main promoter of the war against the Porte in 1771-72, in which the Crimea and Kuban were dismembered from the Ottoman empire, and by which Russia acquired a footing on the coast of the Euxine. He was afterwards the means of inducing Heraclius, czar or prince of Georgia, to do homage to the empress, and receive a Russian garrison at Tiflis. He also induced Solomon, the sultan of Imiretia, to do the same. Lastly, he took advantage of a dispute with the khan of the Crimea, who had been acknowledged as an independent sovereign, to reduce that fine province under the subjection of Russia in the years 1784-86. The countries dismembered from the Ottoman empire were formed into a Russian government, which received the classical name of Tauris, or Taurida; and Catharina bestowed upon Potemkin for his services, both military and diplomatic, the surname of Taurishecky. Conformably to this name, the magnificent palace which Catharina had built for him at St. Petersburg was styled the Taurian or Taurida palace.

In 1787, war having broken out again between the Porte and Russia, Potemkin was made commander-in-chief of the Russian armies, with several experienced generals under his orders, among whom was Suwarrow. In 1788 Oczakow was taken by the Russians, and Ismail in the following year. The Russians occupied Moldavia, Bessarabia

Wallachia, and part of Bulgaria. In 1791 Potemkin left the army, and returned to St. Petersburg to enjoy his triumphs. He gave a magnificent entertainment to the empress and her court in the Taurida palace, which is well described by Tooke and the other historians of Catharina. Shortly after, Potemkin quitted St. Petersburg to return to the army. He attended the congress of Jassy in 1792, but the negotiations had already begun, and were carried on between Prince Reppin and the grand-vizir. Potemkin fell ill at Jassy of an epidemic which was raging at that time. When Catharina heard of it she sent two of her first physicians to attend on him; but he would pay no attention to their advice, and indulged even more than usual in his intemperate manner of living. His disease gaining ground, he thought of removing from Jassy to Nicolaieff, a town which he had built at the confluence of the Yekol with the Bog; but he had scarcely travelled ten miles when he felt himself dying. He was taken out of his carriage, and laid down on the grass by the road-side under a tree, where he expired in the arms of his niece, the Princess Branicka, in October 1792, at fifty-two years of age. His remains were moved to Kherson, where a mausoleum was raised to him by order of Catharina. At the time of his death Potemkin was field-marshal of Russia, chief general of the cavalry, great-admiral of the Euxine and Caspian seas, governor-general of Taurida and Ekatarinofel, master of the ordnance, inspector-general of the army, grand-hetman of the Cossaks, adjutant-general and chamberlain to the empress, colonel of several regiments, and knight of many orders.

POTHIER, ROBERT JOSEPH, was born at Orleans in 1699. Having studied in his native town, and adopted the profession of the law, he was made conseiller au chatelet (court) of Orleans, and was afterwards appointed professor of French law in the university of that city. He was an intimate friend of the chancellor D'Aguesseau, and he is considered one of the most distinguished civilians that France has produced. Pothier wrote many professional works, but he chiefly devoted his labours to extend the study of the Roman law. With this view he published his edition of the 'Digesta,' which is entitled 'Pandectæ Justinianæ in Novum Ordinem Digestæ; cum Legibus Codicis et Novellis quæ Jus Pandectarum confirmant, explicant, aut abrogant,' 3 vols., fol., Paris, 1748-52. The work contains an introduction on the history of the Roman law, a Commentary on the laws of the Twelve Tables and on Hadrian's perpetual Edict, and is accompanied by notes and tables of contents. After Pothier's death, his friend Guyot published a new edition of his 'Pandectæ,' in which he inserted many corrections and additions that Pothier had made in manuscript on a copy of the former edition, and also a biographical notice of Pothier, 3 vols., fol., Lyon, 1782. Other editions of Pothier's 'Pandectæ' have since appeared; among which there is one with a French translation by Bréard Neuville and Moreau de Montain, Paris, 1810.

Pothier was the author of numerous treatises on various branches of law: 'Traité du Contrat de Mariage;' 'Traité des Contrats Aléatoires;' 'Du Contrat de Vente;' 'Du Contrat de Change et Billets de Commerce;' 'Du Contrat de Louage;' 'Du Contrat de Louage Maritime et du Contrat de Société;' 'Traité des Obligations,' which has been translated into English, with the following title, 'A Treatise on the Law of Obligations or Contracts, translated from the French by W. D. Evans,' 2 vols. 8vo, London, 1806; 'Traité du Domaine de Propriété, de la Possession, et de la Prescription.' These and other treatises of Pothier have been collected in one work under the title 'Traité sur Différentes Matières de Droit Civil appliquées à l'Usage du Barreau et de la Jurisprudence Française,' 4 vols. 4to, Orléans, 1781.

The compilers of the New French Civil Code under Napoleon I. made great use of Pothier's treatises, as is shown in a useful work by M. Ledru, a French civilian, entitled 'Les Pothier des Notaires, ou Abrégé de ses divers Traités, avec l'Indication de ceux des Articles du Code Civil dont on y retrouve les Dispositions,' 4 vols. 8vo, Paris, 1828. On this subject Savigny remarks, "It is generally known that Pothier is the polar star of Roman law to modern French jurists, and that his writings had a most immediate influence on the code. I am very far from depreciating Pothier: on the contrary, the jurisprudence of a nation, in which he was one of many, would be very well directed. But a juristical literature, in which he stands alone, and is honoured and studied almost as an original authority, is an object of pity." ('Vom Beruf,' &c., p. 60.) The treatise on Contracts, which is perhaps the best known of Pothier's works to English lawyers, may be comprehended within the same judgment. It is a respectable and useful work, but it should not be studied as an authority. Among the other works of Pothier is the 'Coutume d'Orléans,' 1760, which is one of the most complete treatises on the old French law.

Pothier died at Orleans in 1772. He left many works in manuscript, which were published by his friend Guyot: 'Œuvres Posthumes de R. J. Pothier,' 3 vols. 4to, Paris, 1777, containing, among others, treatises 'Des Successions,' 'Des Donations Testamentaires,' 'Des Donations entre Vifs,' 'Des Cens,' 'Des Fiefs,' 'De la Procédure Civile et de la Procédure Criminelle.'

POTT, PERCIVALL, was born in London in 1713. He was intended for the Church, in which, under the patronage of his relation the bishop of Rochester, he had good prospects of preferment; but nothing could induce him to give up his inclination for surgery. He was accordingly, in 1729, apprenticed to Mr. Nourse, one of the

surgeons of St. Bartholomew's Hospital, and one of the few by whom anatomical lectures were at that time delivered. In 1736 he commenced private practice; in 1745 he was elected assistant surgeon, and in 1749 full surgeon to St. Bartholomew's Hospital. In 1756 he received a severe compound fracture of his leg, and during the confinement which the accident rendered necessary, he commenced writing the surgical works for which he has since been justly celebrated. His first publication was a 'Treatise on Ruptures;' in 1757 he wrote on *Hernia Congenita*, in 1758 on *Fistula Lacrymalis*, in 1760 on *Injuries of the Head*, in 1762 on *Hydrocele*, in 1765 on *Fistula in Ano*. At subsequent periods he published observations on fractures and dislocations, cataract, polypus of the nose, chimney-sweeper's cancer, mortification of the toes, and on paralysis from disease of the spine. In 1787, his time being fully occupied in private practice, he resigned his hospital-surgeoncy, having served the institution for nearly half a century. He died in December, 1788.

Mr. Pott's writings are essentially practical, and full of common sense; and the clearness and purity of their style contributed in no slight degree to make them everywhere acceptable. Probably no person of his time had more influence in the improvement of surgery, not indeed by such scientific principles as were established by his early pupil John Hunter, but by the introduction of judicious and simple rules of practice in every subject to which he directed his attention. Many of these rules are still strictly followed both in this country and on the Continent, and some of the diseases which were first described by him still bear his name, as Pott's gangrene, Pott's fracture of the leg, &c.

His works were published collectively in several forms after his death; the best edition is that edited by his relation and successor Mr. (afterwards Sir James) Earle, in 3 volumes, 8vo, London, 1790, and in subsequent years.

\*POTTER, CIPRIANI, an eminent English musician, was born in London in 1792. He is descended from a very musical family. His father was distinguished in that profession; his paternal grandfather invented the additional-keyed flute, and thus laid the foundation of all the improvements since made upon that instrument; and his maternal grandfather was Baumgarten, a German performer on the Bassoon, very celebrated in his day. Cipriani Potter studied the pianoforte under his father; and harmony, counterpoint, and the art of composition under Attwood, Dr. Calcott, and Dr. Crotch: and, on the arrival of Woelfl in this country, he profited by the instructions of that great master. In 1807 he went abroad, and travelled for several years in various parts of the Continent, constantly pursuing the study of his art. At Vienna he had the advantage of the acquaintance of Beethoven, and the privilege of his criticism and advice in composition, while at the same time he received the regular instructions of the eminent contrapuntist Förster. He afterwards visited Italy, where he remained for a considerable time, employed in making himself acquainted with the Italian school of music. On his return to England he betook himself to the active exercise of his profession, as a composer, a performer on the pianoforte, and a teacher of that instrument; and, in all these branches of his art he has for many years been one of the most distinguished men of the day. On the formation of the Royal Academy of Music in London, he was appointed one of the leading professors; and, on the death of Dr. Crotch, he became principal of that institution, and now holds that important office. He is a member of the London Philharmonic Society, and has for many years taken an active share in its direction. In his compositions and in his public performances, he has been a firm adherent of the pure classical school; and, along with Cramer, Moecheles, Bennett, and a few others, he has done much to stem the tide of fashionable frivolity, which happily has now ebbed. His published works are numerous, but we need only specify some of the most remarkable. The following were published in Germany: Three Trios for the piano, violin, and violoncello; a Septet for the piano and other instruments; Two Sonatas for the piano; 'Pezzi di Bravura,' in three books; Sonata Concertante for piano and horn; another for piano and violin; Three Toccatas for the piano; a Duet for two pianos; and another for two performers on one piano. He published in London: Two Symphonies arranged as pianoforte Duets; Overture to 'Antony and Cleopatra' as a Duet; and two books of Studies for the pianoforte. Mr. Potter is also the author of several literary essays on musical subjects; among which is a series of articles on the powers of instruments, and orchestral composition, which were published in the 'Musical World.'

POTTER, JOHN, D.D., an eminent prelate of the English Church, was born in 1674, at Wakefield in Yorkshire, where his father, Mr. Thomas Potter, was a linen-draper. From the grammar-school of Wakefield he proceeded at the age of fourteen as servitor to University College, Oxford; took the degree of B.A. in 1692, and in 1694 became Fellow of Lincoln College. He had by this time made great attainments in classical learning, and though so very young, was encouraged by Dr. Charlett, the master of University College, to publish in 1694 a collection which he had made of various readings and notes on the treatise of Plutarch 'De audiendis Poetis.' It was soon followed by various readings and notes on an oration of Basil. His greater works appeared soon after; his edition of Lycophron, and his 'Archæologia Græca,' or 'Antiquities of Greece,' being both published in 1697, when

scarcely past his twenty-third year. His Lycophron was reprinted in 1702, at which time he had gained a Continental reputation, as appears by his dedication of it to Grævius. His 'Græcian Antiquities' soon became a popular book, and has been often reprinted down to the present time; but it is now far behind the present state of philological knowledge. It contains abundant proofs of the author's learning, but it also shows that he possessed little critical discrimination. It was published in Latin in the 'Thesaurus' of Gronovius. In 1698 he entered into holy orders, and from that time his studies appear to have been almost exclusively professional, and he passed from one preferment in the Church to another till at last he reached the highest dignity. Archbishop Tenison made him his chaplain, and gave him the living of Great Mongeham in Kent, and subsequently other preferment in Buckinghamshire and Oxfordshire. He became chaplain to Queen Anne, and Regius Professor of Divinity in the University of Oxford. In the same year he published an excellent edition of the works of Clemens Alexandrinus, in 2 vols. fol. His other publications were sermons and charges, and a discourse on Church government. In 1737 he was made archbishop of Canterbury, which high station he supported with dignity till his death, Oct. 10, 1747. His theological works were published at Oxford, in 3 vols. 8vo, 1738.

POTTER, PAUL, an admirable painter of animals, the son of Peter Potter, an artist of moderate ability, was born at Enkhuyzen, in the year 1625. He received the rudiments of his art from his father; and such was his progress, that at fifteen years of age he is said to have been considered one of the most promising artists of his time. He established himself at the Hague, where he was greatly patronised by Maurice, Prince of Orange, for whom he painted some of his finest pictures. Here he married, in 1650, the daughter of an architect named Balkanende, in whose house he resided, and afterwards removed to Amsterdam. He was naturally of a delicate constitution, which by his unremitting attention to his art he greatly impaired, and died on the 15th of January, 1654, in the twenty-ninth year of his age.

The chief excellence of Paul Potter consisted in his painting of cows, sheep, goats, and other animals, in which he makes his landscape a subordinate part, but the animals are executed with remarkable correctness of drawing and delicacy. His pictures usually exhibit a brilliant effect of sunshine, in which the skies, trees, and distances evince great freedom of hand, whilst the principal parts are finished with the utmost minuteness. He sometimes painted as large as life, but succeeded best in cabinet-sized works. One of the finest of the latter is in the collection of the Marquis of Westminster, at Grosvenor-house. It is a landscape with cattle and figures, and was painted for Van Slinglandt, in whose possession it remained till 1750, when it was bought by a collector and taken to Paris, and was afterwards sold by auction to Mr. Crawford of Rotterdam for 1350*l*. The size is 1 foot 6 inches, by 1 foot 8 inches wide. Though the preference is given to his smaller pictures, there is one of great celebrity, a herdsman and cattle, the size of life, which formerly belonged to the Prince of Orange, and is now in the gallery of the Louvre; it gained for the painter the title of the Raffælle of animals. Paul Potter designed every object directly from nature. There are many admirable etchings by him executed in a masterly style: some are marked 'Paulus Potter f.' and others 'in. et f.' and a great number of his designs have been spiritedly etched by Mark de Bye.

POTTER, ROBERT, was born in 1721. He was educated at Emmanuel College, Cambridge, and took his degree of B.A. in 1741. He was successively appointed vicar of Scarning in Norfolk, prebendary of Norwich, and vicar of Lowestoft and Kessingland, in the diocese of Norwich. He died on the 9th of August 1804, in his eighty-fourth year.

Potter published a volume of poems in 1774, and translations of Æschylus in 1777, of Euripides in 1781-82, and of Sophocles in 1788. Of these translations that of Æschylus is the best, and perhaps gives to an English reader as good an idea of the original as a translation can supply. Potter also published 'An Enquiry into some Passages of Dr. Johnson's Lives of the Poets,' 1783; a translation of 'The Oracle concerning Babylon,' and the 'Song of Exultation,' from Isaiah, c. xii, xiv., 1785; and 'A Sermon on the Thanksgiving for the Peace,' 1802.

POTTINGER, RIGHT HON. SIR HENRY, BART., G.C.B., was born in 1789, of an English family which had been long settled in Ireland. He was the fifth son of the late Edward Curwen Pottinger, Esq., of Mount Pottinger, county Down, by Anne, daughter of Robert Gordon, Esq., of Florida Manor, in the same county. He went to India as a cadet in 1804. At an early age he attracted the attention of the civil and military authorities of that country by his energy and administrative capacity, as well as his ready store of information bearing on his profession. Rising by gradual steps, he became successively judge and collector at Ahmednugger in the Deccan, political resident at Cutch, and president of the regency of Scinde. For his services in these capacities he was raised to a baronetcy, when General Keane was rewarded with a peerage after the Afghanistan campaign in 1839. He had scarcely returned to England when war broke out between England and China on account of differences relating to the opium trade. In this emergency he was sent out to China as ambassador extraordinary and minister plenipotentiary, and superintendent of the

ning of January 1814, he proceeded to London, charged with a request from the allied sovereigns that Lord Castlereagh might be sent over to join their deliberations. He soon returned to the Continent accompanied by the English minister, with whom he proceeded to Baden, where the allied sovereigns were then assembled. He continued in close attendance upon the Emperor Alexander at the Congress of Châtillon, where he strenuously opposed the reception of the offers made by Bonaparte, and throughout the rest of the campaign of the first months of 1814, till they had the satisfaction of entering Paris together on the memorable 31st of March. Pozzo, to whom is attributed great influence in keeping Alexander steady and in determining him in favour of the restoration of the Bourbons, was now nominated Russian commissioner to the provisional government, and was soon after despatched to England to bring over Louis XVIII., with whom he returned to Paris on the 3rd of May. He remained in the French capital till the meeting of the Congress of Vienna in the beginning of November.

At the conferences there he advised that the dethroned emperor should be sent out of Europe; and he is said to have produced some coldness towards him for a time on the part of Alexander by the opposition he made to the project then entertained by the Tsar of restoring the old kingdom of Poland. The changed aspect of things however that followed the escape of Bonaparte from Elba (March 1st, 1815), at once chilled Alexander's liberalism and restored Pozzo to favour. Pozzo immediately proceeded to Louis XVIII. at Ghent, and having then joined the allied army as Russian commissioner, he was present in that character at the battle of Waterloo, where he received a wound. He now returned to Paris, and, declining Talleyrand's invitation to take office in the French ministry, resumed his former functions of Russian ambassador, and in that capacity he signed the Treaty of Paris of the 20th of November. Soon after the Duke de Richelieu, then head of the ministry, conferred upon him the rank of a count and peer of France. He does not appear to have again left Paris till he was sent, after the Spanish campaign of the Duke of Angoulême in 1823, on a mission to Madrid, from which however he soon returned to the French capital. The death of the Emperor Alexander and the accession of Nicolas (March 31st, 1825) did not alter his position; and he received new letters of credence to King Louis-Philippe after the Revolution of 1830; but he at last revisited St. Petersburg in 1834. Passing on his journey thither through Vienna and Berlin, he had the Order of the Red Eagle conferred upon him by the former court, and that of St. Stephen by the latter. On the breaking out of the war of the East in 1855 he was sent on a mission to London. After a stay of only a few months he returned to his former post at Paris; but he was soon sent back to this country as ambassador-extraordinary to the King of Great Britain. He returned to Paris however before long, and remained there till his death on the 15th of February 1842.

PRADIER, JAMES, was born at Geneva in May 1792. While quite young he was sent to Paris, and placed in the studio of the popular sculptor Lemot. His first public success was gained in 1812, when through a technical informality his model being pronounced unqualified to compete for the first prize of the Academy, an extra gold medal was awarded to him for its unusual excellence. The next year he obtained for his group of *Philoctetes* the first prize, and with it the privilege of proceeding as Academy Student to Rome. In that city he remained five years, and produced during that time several original works. Although he is said to have there diligently studied the antique and formed his own style upon it, there can be little doubt that the influence of Canova was much more powerful, and that the softness, finish, and elegance, for which that eminent sculptor was so celebrated, were what Pradier most anxiously endeavoured to realise; but whilst in these qualities he at the least rivalled Canova, he went far beyond him in that tendency to the sensuous and the voluptuous which was no less decidedly characteristic of the great Italian. The countrymen of Pradier are enthusiastic in their admiration of his nude forms so "delicately voluptuous;" but to a colder English critic the delicacy often seems wanting, and while he cannot but admire the exquisite modelling of the form, he is constrained to turn with regret from what seems the perverse meretriciousness of the sentiment.

From his return to France in 1819 down to his death, M. Pradier enjoyed a career of unbroken Parisian popularity; and during his later years, while all admitted him to be one of the most accomplished, by many he was regarded as the greatest of living French sculptors. Of the works by which he achieved and maintained his high position the following are some of the more celebrated—the dates are those of the years in which they appeared at the Exposition:—'Bacchante and Centaur,' 1819, now in the Museum at Rouen; 'The Children of Niobe,' 1822; 'Psyche,' 1824; 'The Three Graces,' 1831, now at Versailles; 'Venus and Love,' 1836; 'An Odalesque,' 1841; 'Cassandra,' 1843; 'Phryne,' 1845, well known in this country from having been placed in the Great Exhibition of 1851; 'Sappho,' 1848, a favourite subject with him—there was a statue of Sappho in the Exposition the year of his death; 'Spring,' 1849; Hebes, Amazons, Pandoras (one of these is in the possession of Queen Victoria), Satyrs and Bacchantes, Venuses and the like, make up the list of that class of subjects in which he chiefly excelled, and which was most characteristic of his chisel. He also produced a large number of religious pieces, and many of them of considerable size, but out of France they have found few

admirers. Among these are a colossal figure of 'Christ on the Cross, executed for Prince Demidoff; a 'Pieta,' executed in 1847, and now at Toulon; a 'Marriage of the Virgin' for the Madelains, four 'Apostles,' a 'Virgin' for the cathedral of Avignon, &c. Of portrait-statues he sculptured Gaston de Foix, Marshal Soult, General Damremont, Vendôme, Rousseau (for Geneva), Jouffroy (for Besançon), the Duc d'Orleans, &c. He also executed busts of Louis XVIII., Charles X., and other persons distinguished by their rank or social celebrity. Among his other works may be mentioned the Tomb of Napoleon I., some fountains, vases, &c. He likewise modelled numerous small statues of a very meretricious character.

Pradier was made a Chevalier of the Legion of Honour in 1822. In 1827 he was elected Member of the Institute on the death of Lemot. He died somewhat suddenly on the 5th of June 1852. There are two or three casts after Pradier among the modern sculptures in the Crystal Palace at Sydenham.

PRAED, WINTHROP MACKWORTH, son of Mr. Sergeant Praed, was born in 1802. In 1820 a monthly magazine appeared, entitled 'The Etonian.' George Canning, while at Eton, wrote some clever essays in 'The Microcosm.' Rennell and the nephew of Canning (the present Lord Stratford de Redcliffe) subsequently produced 'The Miniature.' These publications were regarded as exhibitions of youthful talent, were admired in a small circle, and forgotten. But 'The Etonian' aimed at something higher than school-boy essays; it paid slight regard to the 'microcosm' of Eton, and presented no 'miniature' of its scholastic life; it gave vivid pictures of general society; it was bright with wit and poetry, with fun and satire. There was little of the boyish about it but the freshness of boyhood. The principal writer in 'The Etonian' was Winthrop Mackworth Praed. From Eton he went to Trinity College, Cambridge. His career at the university corresponded with the expectations that had been formed of his brilliant talents. In 1822 he was a Browne's Medallist both for Greek ode and epigrams; in 1823, for Greek ode; in 1824, for epigrams. In 1823 he obtained the Chancellor's prize for an English poem, 'Australia;' and in 1824 the same prize for 'Athens.' He was one of the chief speakers in the Union—the famous Cambridge Debating Society, his most formidable rival being Thomas Babington Macaulay. 'The Etonian' was printed at the office of Mr. Knight, then editor of the 'Windsor Newspaper,' and the intimacy that consequently arose led to the publication of 'Knight's Quarterly Magazine' in 1823, to which Mr. Praed was one of the chief contributors, both in prose and verse. His poems are amongst the most original in our language; their wit and pathos are as remarkable as their finished elegance. A collection of some of these poems was published at New York in 1844, but it is far from complete; and those who desire that justice should be done to the memory of one of the most remarkable writers of his time, regret that these works, so often announced, should be so unaccountably delayed.

Mr. Praed took his degree of B.A. in 1825. In 1829 he was called to the Bar; and in 1830 and 1831 was returned to Parliament for St. Germans. In the earnest and protracted conflicts that preceded the passing of the Reform Bill, he took a decided part in opposition to the Reformers. His speeches, as reported, exhibit a readiness of debating power rather than the flashes of wit which were expected from him. He was a most ardent opposer of the Whig administration, though we can trace in him a generosity of feeling and a hatred of mere party calumny, which was to be expected from the nobility of his nature. In the election of 1832 he unsuccessfully contested St. Ives; but in 1835 he was returned to Parliament for Great Yarmouth. In that year he married. During a short time he was Secretary to the Board of Control. He was subsequently member for Aylesbury, was Recorder of Barnstaple, and Deputy High-Steward for the University of Cambridge. Had Mr. Praed's life been longer spared, there can be little doubt that some of the most important offices of the state would have been within his reach; and his contributions to literature, like those of his friend Macaulay, might have carried forward the promise of his youth into new fields of excellence. He died on the 15th of July 1839, in his thirty-seventh year.

PRAM, CHRISTIAN HENRIKSEN, who has left a name of some eminence in Danish literature and poetry, was born September 4th, 1756, in Guldbrandsdalen. After having been educated by his father, who was a clergyman, and next passing a short time at the school at Fredericksborg, he was sent to the university of Copenhagen, where he applied himself to the study of law and political economy. He did not however adopt the law as a profession, and though he afterwards continued to give his attention to the other, poetry and literature became his chief pursuits. His continuing to apply himself to political economy, is accounted for by his being appointed, in 1781, to a high situation in the Chamber of Commerce. Shortly afterwards he married, and, in order to increase his income, set up the 'Handelstidende,' or 'Commercial Journal,' which he first carried on in conjunction with Cramer and Ehrhart, and afterwards by himself, but gave it up at the end of five years, though the publication itself was continued.

From that time he devoted himself, as far as his official duties would permit, to literature. Indeed he had already signalled himself in it by his 'Størkodder,' which appeared in 1785. This poem was then altogether a novelty in Danish literature, and though it does not

answer to the character of an epic, it is something very superior to a *Riimkronik*, or mere chronicle in verse, as its author modestly styles it, being a romantic narrative founded upon the traditions of northern legend and mythology, and recording the hero *Storkodder's* adventures in search of *Skirner's* mystic sword and other talismans. Thus considered, this production of *Pram's* (in fifteen cantos) is a classic one of its kind, and is one that places its author by the side of *Ariosto* and *Wieland*.

Shortly afterwards he commenced, with the assistance of *Rahbek*, the '*Minerva*,' one of the best literary periodicals of its time in Denmark, and one which also discussed many important political and statistical questions. Few could have been better qualified than *Pram* for conducting such a miscellany, he being equally at home in both departments of it; and to the literary part he contributed a number of his minor pieces both in prose and verse. Among his other services to literature may be reckoned that of having, together with *Thaarup*, *Baggeen*, and *Höst*, established the Scandinavian Literary Society in 1796; of which institution he was president from 1811 to 1818. He may also be ranked among the Danish dramatists, having, besides his '*Damon and Pythias*,' and '*Fingal and Frode*,' produced several comedies and some minor pieces for the stage.

On the Chamber of Commerce being united, in 1816, with the Board of West India Affairs, *Pram* retired from his situation in the former; but though his various emoluments had been very considerable for a series of years, and though he was allowed a pension of 1800 dollars, he was in such straitened if not embarrassed circumstances, that after the death of his wife, in 1819, he resolved to accept an official appointment in the island of *St. Thomas*. He accordingly proceeded thither in the following spring, departing without the hope of ever revisiting his native land, being then in his sixty-third year. He died at *St. Thomas's*, November 25th, 1821.

A collection of his miscellaneous poems and prose works was edited by *Rahbek*, in 4 vols., 1824-26. *Oehlenschläger*, who has drawn his character, describes him as a man of powerful mind and excellent disposition, though subject to occasional violence of temper, and of great and varied talents and attainments. Of his '*Storkodder*,' he says that it possesses many detached parts of very great beauty; but among all *Pram's* productions he gives the preference to the poem entitled '*Emilias Kilde*.'

PRATT, CHARLES. [CAMDEN, EARL OF.]

PRAXA'GORAS, a celebrated physician of *Cos*, belonging to the family of the *Asclepiads*. His father's name was *Nearchus*, and he was one of the last of his family who acquired any reputation as a physician. His most celebrated pupil was *Herophilus* (*Galen*, '*De Different. Puls.*' lib. iv., cap. 3), and he himself was particularly famous for his skill in anatomy and physiology. The titles of several of his works are preserved, but only a few fragments of them remain, together with some of his opinions on medical subjects recorded by *Galen* and others. He was the first person who pointed out the distinction between the veins and arteries, and affirmed that it is only in the latter that any pulsation is felt, though he believed them to be filled with air (*Galen*, '*De Dignosa. Puls.*' lib. iv., cap. 2), and he accounted for the hemorrhage that occurs when they are wounded by attributing it to an unnatural state, in which the wounded arteries attract to themselves the blood from all the neighbouring parts. He supposed that the heart gave birth to all the ligaments, and that the arteries are ultimately converted into nerves (or ligaments) as they contract in diameter. (*Galen*, '*De Hippocr. et Plat. Decret.*' lib. i. cap. 6.) The brain he supposed to be of no particular use, but merely an expansion of the spinal marrow. His anatomical skill and observations made him introduce several improvements into the theory and practice of medicine; for example he declared that the pulse indicates the variations of the strength of the disease, a discovery which threw great light on the knowledge of diseases. He imagined the humours of the body to be the cause of all sorts of diseases, and that the *vena cava* is the seat of an intermittent fever. (*Ruf. Ephea*.) The greater part of the remedies that he employed were taken from the vegetable kingdom, and we are told by *Cælius Aurelianus* that he was very fond of emetics. ('*De Morb. Acut.*' lib. iii., cap. 17.) In cases of *ilias* passion he recommended emetics, as several modern practitioners have also done; and when attended with *intro-auseption*, he ventured to open the abdomen in order to replace the intestine (*Cæli. Aurel.*, loco cit.), an operation that has been proposed and executed in modern times. Notwithstanding the extravagance of some of his opinions, he must have been a very remarkable man, and we may well regret that we know so little of his practice. He lived about B.C. 300 (OL 120.)

PRAXI'TELES, a sculptor of Greece. Neither the exact time nor the place of his birth is known. It is also remarkable that there is no mention of the master under whom he acquired the rudiments of the art, in which he made such important changes with regard to style, that he is justly considered the founder of a school. The period at which he flourished is however pretty clearly established on the authority of ancient writers, as well as by the testimony of some of his works and by the received dates of artists who are classed as his contemporaries. *Pliny* ('*Hist. Nat.*' xxxiv. 8) says *Praxiteles* flourished in the 104th Olympiad, at the same time with *Euphranor*, who was a celebrated statuary and painter. *Pausanias* (viii. 9) says *Praxiteles* lived three generations after *Alcámenes*. He must therefore,

BIOC. DIV. VOL. IV.

according to these statements, be placed at about B.C. 360; or if, as some antiquaries have contended, he executed a work so late as the 123rd Olympiad, or B.C. 284, he may have begun his career as an artist rather later than the time mentioned. It is however possible, supposing he lived to an extreme old age, that *Praxiteles* was practising as a sculptor at the periods recorded, although they include a range of seventy-six years.

*Praxiteles* was eminent for his works both in bronze and marble, but he seems to have had the highest reputation for his skill in the latter. "*Praxiteles marmore felicior et clarior fuit*," and again, "*Praxitelis statem inter statuarios diximus qui marmoris gloria superavit etiam semet*." (*Plin.*, '*Hist. Nat.*' xxxiv. 3, and xxxvi. 5.) *Pliny* and *Pausanias* enumerate a long list of the productions of *Praxiteles*. Amongst those in bronze, which appear by the concurrent testimony of ancient writers to have been held in the highest estimation, were a statue of *Bacchus* and another of a satyr, so excellent that it was called by way of distinction *Peribostes* (the celebrated). He also made a statue of *Venus*, which was afterwards destroyed by fire; likewise a statue of a youthful *Apollo*, called *Sauroctonos*, or the lizard-killer, as he is represented in the act of killing a lizard. Two statues of women are also recorded by *Pliny*; one of them represented a matron weeping, the other a courtesan laughing. The latter was much admired for its expression: it was believed to be a portrait of the celebrated Thespian courtesan *Phryne*. Of these works and several others in the same material, the only record that remains is an undoubtedly ancient copy, in marble, of the *Apollo Sauroctonos*. It is too well known to require a particular description in this place. Though defective in some trifling respects of detail, it is not difficult to judge from it of the purity of style, and grace and beauty of form, which must have characterised the original. It is justly considered one of the greatest treasures of the Vatican. Among the works in marble by *Praxiteles*, the famous *Venus of Cnidus* must undoubtedly be placed in the first rank. We are told that two statues of the goddess were made; one draped, the other entirely naked. The people of *Cos* preferred the first; the *Cnidians* immediately purchased the latter. The fame of this statue was so great that travellers visited *Cnidus* solely for the purpose of seeing it; and *Nicomedes*, the king of *Bithynia*, was so desirous to possess it, that he offered to pay off a heavy debt for them if the *Cnidians* would consent to give up this celebrated work. The tempting offer was however declined. *Praxiteles*, observes *Pliny*, "*illo enim siquo nobilitavit Cnidum*." There were doubtless many copies of so celebrated a work, and the representation of a figure of *Venus* on the coins of *Cnidus* affords unquestionable authority at least for the action and general composition of the famous statue. The *Venus of Cnidus* is mentioned by *Lucian* as the finest of the works of *Praxiteles* (*Eikônes*, c. 4), and from the description in another passage ('*Epores*, c. 13, &c.) we may form some notion of the style of this celebrated work. It is also the subject of numerous epigrams in the Greek Anthology. The original work fell a prey to the flames, at *Constantinople*, in the 5th century, in the dreadful fire which destroyed so many other fine monuments of art collected in that city. The loss of the *Venus of Cnidus* may justly be considered among the greatest which art has sustained; for no production in ancient sculpture, with the single exception of the Olympian *Jupiter* of *Phidias*, has received such universal and such unqualified admiration. Two statues of *Cupids* are also mentioned among the most esteemed works of this master. One of these was so beautiful that it is placed by *Pliny* quite on an equality with the famous *Venus of Cnidus*. It was made of marble of *Paros*. It is thought that a copy of it exists in the collection of sculpture in the Vatican. Among other works that have been thought worthy to be recorded were two statues of *Phryne*: one was of marble, and was placed in the temple of *Venus* at *Thespis*, the native place of the courtesan; the other was of bronze gilt, and was dedicated by her at *Delphi*, where it had the honour of a distinguished place. *Praxiteles* appears also to have executed works of a more extensive character and composition. The chief of these were some sculptures that decorated the pediments of the temple of *Hercules* at *Thebes*. (*Paus.*, ix. 11.) They represented part of the labours of *Hercules*.

The style of the school of which *Praxiteles* may be considered the founder was softness, delicacy, and high finish. We read of few of his productions of a sublime or severe character, such as distinguished the art which immediately preceded his era under *Myron*, *Phidias*, and *Polycletus*; whose genius led them to represent the more exalted and majestic personages of the ancient mythology, as *Jupiter*, *Juno*, and *Minerva*, or the classic forms of heroes, warriors, and athletes. *Praxiteles*, on the other hand, seems to have been attracted by, and to have devoted himself to, the lovely, the tender, and the expressive. Beyond this he appears to have acquired great skill in execution, and to have had some peculiarities in the mode of finishing his marble. He is said to have declared that he considered those to be his best works which had undergone the process of '*circumlitio*' by *Nicias*. From the circumstance of *Nicias* being a painter, it seems reasonable to conclude that this cannot simply mean polishing and rubbing, but that some varnish or encaustic was laid over the surface of the marble after it had left the sculptor's hands, in order to give it a rich softness, similar to what the *Italians*, in speaking of the flesh surface of marble, call the '*morbidezza di carne*.' Modern ingenuity has vainly endeavoured

to discover the process alluded to. It was in all probability a wash of some sort; but whether a simple application of water-colour, of wax, or of varnish (if the latter, either the preparation or the statue being warmed to a certain temperature), there are now no certain means of judging.

Praxiteles had two sons, Timarchus and Cephisodorus, or Cephisodorus, both of whom were artists. Pliny says of the latter, "Praxitelis filius Cephisodorus rei et artis heres fuit."

There was another artist called Praxiteles living at a later period. He was a modeller and chaser. There was also a painter of the same name, mentioned by Pliny ('Hist. Nat.,' xxxv. 11).

PRESCOTT, WILLIAM HICKLING, was born on the 4th of May, 1796, at Salem, Massachusetts, U. S., and is descended from an old Massachusetts family. His father was an eminent lawyer and judge at Boston; his grandfather commanded the American militia at the so-called Battle of Bunker's Hill. His father having removed to Boston young Prescott was there placed with the Rev. Dr. Gardiner, a pupil of Dr. Samuel Parr, and an excellent classic; and under his tuition the youth made great progress. In 1811 he entered Harvard University, where he pursued his classical studies with considerable success until compelled by failing health and temporary loss of sight to lay them aside. It had been intended that he should follow his father's profession, but after a short trial he found it necessary to relinquish his legal, and indeed all serious, studies for a while. Being advised to travel he proceeded to Europe and spent a couple of years in England, France, and Italy, when he returned to Boston restored in health, but with his sight permanently impaired.

Happily his father was possessed of ample means, and it was determined that he should abandon his purpose of a professional life. As he was able he devoted time and thought to the literature of modern Europe, but it was long before he turned his attention seriously to authorship. His earliest contributions were to the pages of the 'North American Review' in essays on Italian, Spanish, English, and American literature; he also wrote a Memoir of Brockden Brown, the novelist, in Sparks's 'American Biography,' and occasional articles elsewhere; a selection from these was published under the title of 'Biographical and Miscellaneous Essays,' 8vo, 1843, and has been more than once reprinted.

But Mr. Prescott had from the time of abandoning his legal studies cherished the hope of being able to write a history; and as he prosecuted more deeply his researches into the literature and history of Spain his design assumed form and consistency. Having fixed on the reign of Ferdinand the Catholic, he was able through the friendly offices of Mr. Everett, the United States minister at Madrid, to obtain for his projected work a singularly rich and extensive body of materials, consisting of rare books, manuscripts, and transcripts of official documents. But they reached him under circumstances which would have crushed the purpose of most men. An extract from the preface to his 'History of Peru,' dated April 1847, will best explain what these were, and most authentically describe that peculiarity of his literary history which is so remarkable in itself and so valuable and encouraging to others who may suffer under any physical infirmity. He says,—“While at the university I received an injury in one of my eyes, which deprived me of the sight of it. The other, soon after was attacked by inflammation so severely that for some time I lost the sight of that also; and though it was subsequently restored, the organ was so much disordered as to remain permanently debilitated; while twice in my life since, I have been deprived of the use of it for all purposes of reading or writing for several years together. It was during one of these periods that I received from Madrid the materials for my history of 'Ferdinand and Isabella;' and in my disabled condition, with my transatlantic treasures lying around me, I was like one pining from hunger in the midst of abundance. In this state I resolved to make the ear if possible do the work of the eye. I procured the services of a secretary, who read to me the various authorities; and in time I became so far familiar with the sounds of the different foreign languages (to some of which, indeed, I had been previously accustomed by a residence abroad), that I could comprehend his reading without much difficulty. As the reader proceeded, I dictated copious notes; and, when these had swelled to a considerable amount, they were read to me repeatedly, till I had mastered their contents sufficiently for the purpose of composition.”

There were still to be overcome the difficulties attending the actual process of composition. Mr. Prescott attempted dictation, but after many trials was forced to relinquish it, from finding that he could not thus attain to the requisite freedom and force of diction. He then procured from London a writing-case for the blind, in which the stylus of the writer was guided by means of wires over a sheet of carbonised paper, the writing being made without ink upon ordinary paper placed underneath. “With this instrument,” says Mr. Prescott in a letter to the editor of 'Homes of American Authors' (dated July 1852), “I have written every word of my *historicals*. This *modus operandi* exposes one to some embarrassments; for, as one cannot see what he is doing on the other side of the paper, any more than a performer on the treadmill sees what he is grinding on the other side of the wall, it becomes very difficult to make corrections. This requires the subject to be pretty thoroughly canvassed in the mind, and all the blots and erasures to be made there before taking

up the stylus. This compels me to go over my composition to the extent of a whole chapter, however long it may be, several times in my mind before sitting down to my desk. When there the work becomes one of memory rather than of creation, and the writing is apt to run off glibly enough.”

The first of the works prepared under these difficulties—'The History of Ferdinand and Isabella the Catholic of Spain'—appeared in the early part of 1838. By the author's own countrymen it was received with a hearty welcome, and in England it met with almost unqualified praise from the literary organs of all parties; while in the country whose favourite monarchs it celebrates it was greeted with enthusiasm, and the author was elected a member of the Royal Academy of Madrid. Nor has its popularity been evanescent; a seventh and revised edition of it was published in America and London in 1854, and more than one cheap reprint has since appeared: translations of it have also been made into the Spanish, Italian, and German languages. Its popularity was well-merited. For the first time the period of history when Spain rose to a leading position among the nations of Europe was fully, clearly, and vividly placed before the English reader from original and official sources; and the narrative was conducted, and events and characters were estimated, with a fairness and conscientiousness which showed itself in every page and led the reader to rest implicitly on the good faith of the historian. The archives of the Spanish court, of the Academy of Madrid, and of private families of historic fame, were now placed freely at Mr. Prescott's disposal, and he turned with ardour to the picturesque story of the Spanish invasions of Mexico and Peru. The first of these narratives, 'The History of the Conquest of Mexico,' was published in three volumes in 1843. The popularity of its predecessor had prepared for it a wide and eager circle of readers; and its success was even more sudden and striking than that of the 'History of Ferdinand and Isabella.' It was speedily translated into Spanish, both in Spain and Mexico, and also into German, French, and Italian; and it procured for its author the rare honour of admission into the Institute of France. The companion history 'The Conquest of Peru,' did not appear until 1847. It has fully sustained the high character of its author, and has passed through nearly as many editions as the previous histories, but as it could hardly possess the romantic interest of the 'History of the Conquest of Mexico' it will probably not rival that work in general estimation although fully equal to it in historical value.

In these three great works Mr. Prescott had with the felicity of genius hit upon themes remarkably rich in themselves and admirably adapted to his peculiar powers. For his crowning work he chose the history of the reign of Philip II., a theme in many respects very different from the others, but one calling for a larger and more comprehensive treatment, embracing as it did historical characters and events which spread over the greater part of Europe and the New World during the latter half of the 16th century, a period almost unrivalled in the magnitude and splendour of its historical events. For this important undertaking Mr. Prescott made his preparations with characteristic care, deliberation, and comprehensiveness, collecting for it authentic materials from the public archives of almost all the great European capitals, as well as from many private collections. Towards the end of 1855 nearly seven years after the publication of his previous history, Mr. Prescott was able to lay before the public the first two volumes of his 'History of Philip the Second, King of Spain,' and again to achieve a great and unquestionable success. Of the importance of the addition which this work has made to English historical literature there is but one opinion. The excellences of the author's previous works are all here—the picturesque narrative, the lucid style, the generous yet judicial spirit, the thorough digestion and scrupulous sifting of the materials,—often not only contradictory in themselves, but embarrassing in their richness,—and above and pervading all, the thorough integrity of purpose, the earnest and untiring pursuit and ever-present love of truth, which, amid his many admirable qualities, is that which is perhaps his prime characteristic as a historian.

It only remains to add that in 1856 Mr. Prescott published an edition of Robertson's 'History of the Reign of Charles the Fifth,' with notes and a valuable supplement containing an 'Account of the Emperor's Life after his Abdication.' [See SUPPLEMENT.]

PRESTER JOÃO, 'the Priest John,' was the name given in the middle ages to a supposed Christian sovereign who was said to live somewhere in the interior of Asia. This report appears to have originated with the Nestorians of Mesopotamia, whose missionaries penetrated into Persia, India, and Tartary, and were protected by some of the sovereigns of those regions. Oungh, a powerful khan of the Keraites, or Krii Tartars, in the 11th century ruled over a great part of Eastern Tartary, north of the Chinese wall and near the banks of the river Amour. His residence was at a place called Karkorum. Some of the Mogul khans, and among the rest Temusin, afterwards called Gengis Khan, paid allegiance to Oungh Khan. [GENGIS KHAN.] A war broke out however between Gengis Khan and Oungh, in which the latter was defeated, with the loss of his life in 1202. Oungh Khan was reported in Europe to be a Christian, and to have taken priest's orders, and some Nestorian missionaries fabricated and published letters said to have been addressed by him to the pope, Louis VII. of

France, the emperor of Constantinople, and to the king of Portugal, in which he is made to style himself John the High-Priest. (Petis de la Croix, 'Histoire de Gengis Khan.')

The first European traveller who mentions Prester John was a Franciscan friar, called John Carpini, who was sent, in 1246, nearly half a century after the death of Oungh Khan, by Pope Innocent IV., on a mission to Batou Khan, the son of Gengis, to induce him to restrain the Mongols from their predatory incursions into Russia, Poland, Hungary, and other Christian countries. Carpini did not meet with the Prester John, but appears to have supposed that he lived somewhere farther to the eastward. Several years after Carpini's journey, another Franciscan monk, called Rubruquis, was sent by Louis IX. of France, who was then in Palestine, A.D. 1263-54, as a missionary to Tartary. The story of Prester John was the cause of the mission. Rubruquis, after great difficulties and privations, reached the camp of Batou Khan in Central Tartary, who forwarded him across the deserts to the court of Mangou, the great khan of Kara-korum, where Rubruquis found no Prester John, but he found some Nestorian priests, as well as some Mohammedan imams, with whom he had several interviews, which however he acknowledges were to little purpose, as the parties could not understand each other.

Rubruquis says that the Nestorians had greatly exaggerated their own influence in Tartary, as well as the power of the late Oungh Khan, who appears however to have tolerated and even encouraged Christian missionaries in his dominions.

Mangou gave Rubruquis a letter for the king of France, and ordered him to be supplied with all necessaries for his return home. On his arrival in Palestine, Rubruquis wrote from his convent at Acre an account in Latin of his adventurous journey, which he addressed to Louis, who had returned to France. This curious narrative is written with much simplicity and greater veracity than that of his predecessor Carpini. It is printed in Purchas's collection of travels, and in Bergeron's 'Voyages faits en Asie, par Benjamin de Tudela, Carpin, Rubruquis,' &c.

The existence of a Christian sovereign in Asia called Prester John, continued to be believed in Europe till the end of the 15th century, when the Portuguese, having reached India by the way of the Cape of Good Hope, set about looking for Prester John in that country, but without success, though they found a community of Nestorian Christians on the Comorandel coast. At last Pedro Covilham happened to hear that there was a Christian prince in the country of the Abesines, not far from the Red Sea, and he concluded that this must be the true Prester John. He accordingly went thither and penetrated to the court of the king of Habbeah, who was then in Shoa. It must be remarked however that the 'negus' or king of Habbeah had never assumed the name of Prester John.

(Ludolf, *History of Ethiopia*, b. xi; Tellez, *Historia Geral de Ethiopia*, b. xi.)

PRESTON, THOMAS, was a master of arts of Cambridge and a fellow of King's College; and he was afterwards created a doctor of law and master of Trinity Hall. In 1564 he acted with great applause before Queen Elizabeth, in Rightwile's Latin play of Dido. About the same time, or a little earlier, he wrote 'A Lamentable Tragedy, mixed full of pleasant mirth, containing the life of Cambises king of Persia, &c., and last of all his odious death by God's justice appointed: done in such order as followeth.' This rude and imperfect old piece is curious from its early place in the history of the English drama; but its tumidity made it a fair mark for Falstaff in proposing to be tragical "in King Cambyse's vein." The play is printed, from the undated black letter edition, in Hawkins's 'Origin of the English Drama,' 1773. He was born about 1537, and died June 1, 1598.

PRICE, RICHARD, was born at Tynton in Glamorganshire, February 23, 1723. His father Rice Price, of whose second marriage Richard was the sole offspring, was a rigid Calvinistic minister, remarkable for his intolerance, who spared no pains to imbue his son with sound Calvinistic doctrine. Richard however began early to claim the privilege of free opinion, and by his scruples often incurred the anger of his parent. The latter died in 1739, and by his will the bulk of the property, which appears to have been considerable, came into the possession of one son, the widow and six other children being left in straitened circumstances to provide for their own maintenance. The widow and the eldest son survived this event only a few months, and shortly after Richard, then in his eighteenth year, resolved on proceeding to London in the hope of qualifying himself for the clerical profession. The heir of his father's fortune provided him with both horse and servant as far as Cardiff, but left him without the means of performing the rest of the journey except on foot or in a waggon. His education during his father's lifetime had been superintended by several dissenting ministers, and on reaching the metropolis, he obtained, through the interest of a paternal uncle, admission to a dissenting academy, where he pursued his studies in mathematics, philosophy, and theology. In 1748 he engaged himself as chaplain and companion to the family of Mr. Streathfield of Stoke Newington. Here he continued to reside during the ensuing thirteen years, at the end of which the engagement terminated by the death of Mr. Streathfield, who left him some small property. About the same time his circumstances were further improved by the death of his uncle, and by his receiving the appointment of morning preacher at Newington

Green Chapel. He married in 1757. The year following he published his 'Review of the principal Questions and Difficulties in Morals,' 8vo, Lond., 1758 and 1787, a work which, though designated by Brown as "very elaborate, very tedious, but not very clear," seems to have established his reputation as a metaphysician and moralist. In 1767 he was applied to by a committee of gentlemen connected with the legal profession for his opinion of a plan which they contemplated adopting in order to secure an annuity to their surviving widows. This drew his attention to the defective character of the principles upon which many similar societies had been already instituted, and induced him to write his 'Treatise on Reversionary Payments,' 8vo, Lond., 1769, the publication of which was the almost immediate cause of the dissolution of several of those societies, and the beneficial modification of others. It has since passed through five editions; the last is that edited by Mr. Wm. Morgan, in 2 vols., 8vo, Lond., 1803.

In 1776 appeared his 'Observations on Civil Liberty and the Justice and Policy of the War with America.' So highly was this work appreciated by the advocates of American independence, that an application was made to the author to permit the publication of a cheap edition, which he readily conceded. In a few months nearly 60,000 copies are said to have been disposed of, and among the many congratulatory addresses which he received on the occasion, the corporation of London testified their "approbation of his principles and the high sense they entertained of the excellence of his observations on the justice and policy of the war with America," by presenting him with a gold box inclosing the freedom of the city. Two years later (1778) the American Congress, through their commissioners, Dr. Franklin and others, communicated to him their desire to consider him a citizen of the United States, and to receive his assistance in regulating their finances, assuring him that, in the event of his deeming it expedient to remove with his family to America for that purpose, a liberal provision should be made for requiting his services. This invitation was declined, on the ground of his being ill-qualified to render the assistance sought, his connections with this country, and his fast advancement into the evening of life; adding, that he looked to the United States as being then the hope and likely soon to become the refuge of mankind.

Dr. Price died in London in 1791, surviving but few years his wife and several of his most eminent and intimate friends, among whom were Dr. Adams, master of Pembroke College, Oxford; Mr. Howard, the philanthropist, and Dr. Franklin. During the latter part of his life he suffered severely from an affection of the bladder. The honorary degree of Doctor of Divinity was conferred upon him in 1769 by the University of Glasgow, through the instrumentality of his friends, and apparently without their intentions having been previously made known to him. He was a firm believer in the immateriality of the soul, and considered that the Scriptures authorized the opinion that there is no state of action or perception between death and the eternal judgment. Drs. Priestley and Price, notwithstanding their frequent controversies, were always on terms of the closest friendship, and Dr. Priestley preached a highly eulogistic funeral sermon on his death. For further information the reader is referred to the 'Memoirs of the Life of Richard Price, D.D., by William Morgan, F.R.S.,' London, 1815, 8vo., from which this notice has been principally drawn.

The works of Dr. Price not already referred to are—1, 'Four Dissertations on Providence, Prayer, the State of Virtuous Men after Death, and Christianity,' 8vo, 1766-68; 2, 'The Nature and Dignity of the Human Soul,' 8vo, 1766; 3, 'An Appeal to the Public on the subject of the National Debt,' 8vo, 1772-74; 4, 'An Essay on the Present State of the Population in England and Wales, with Morgan on Annuities,' 8vo, 1779; 5, 'The Vanity, Misery, and Infamy of Knowledge without suitable Practice,' 8vo, 1779; 6, 'An Essay on the Population of England from the Revolution to the present time,' 8vo, 1780; 7, 'The State of the Public Debts and Finances at signing the Preliminary Articles of Peace in January 1783,' 8vo, 1783; 8, 'Postscript to same,' 8vo, 1784; 9, 'Observations on the Importance of the American Revolution and the Means of making it Useful to the World,' 8vo, 1784; 10, 'A Discourse on the Love of our Country,' 8vo, 1789-90; 11, 'Britain's Happiness and its full Possession of Civil and Religious Liberty briefly stated and proved,' 8vo, 1791; 12, 'Sermons, namely, 'Fast Sermons,' 1759-79-81, &c.; 'Sermons on Various Subjects,' 8vo, 1786, 1816; 'Sermons on the Christian Doctrine,' 8vo, 1787; 13, 'On the Expectations of Lives, the Increase of Mankind, the influence of great towns on Population, and particularly of the state of London, with respect to healthfulness and number of inhabitants,' Phil. Trans., 1769; 14, 'On the Insalubrity of Marshy Situations,' Ib., 1774; 15, 'On the Difference between the Duration of Human Life in Town and in Country Parishes and Villages,' Ib., 1775; 16, 'Short and Easy Theorems for finding in all cases the difference between the values of Annuities payable yearly, half-yearly, quarterly, and monthly,' Ib., 1776; 17, 'On the Proper Method of calculating the Value of Reversions depending on Survivorship,' Ib., 1790; 18, 'On the Effect of the Aberration of Light on the Time of the Transit of Venus over the Sun's Disk,' Ib., 1790. The 'Transactions' of the year 1763 contain an essay on the solution of a problem in the theory of probabilities, which, though not entirely the work of Dr. Price

requires to be noticed under the present article. The problem was—'Given the number of times an unknown event has happened and failed; required the chance that the probability of its happening in a single trial lies somewhere between any two degrees of probability that can be named,' and belongs to that division of the theory termed 'inverse probabilities,' the more important of the two, and which may be said to have originated with this problem, since it was the first of the kind that was answered, and, notwithstanding its practical utility, no successful attempt had been previously made to answer it. Dr. Price found a solution in an unfinished state among the manuscripts of the then late Rev. Mr. Bayes, F.R.S., and his chief merit consisted in immediately appreciating its importance, and directing his mind to its improvement and extension. A supplement to the solution was inserted by Dr. Price in the 'Transactions' of the following year, shortly after which he was elected a member of the society. It was in the above paper that the important theorem was first announced, namely, that the probability in favour of an hypothesis is proportional to the probability which that hypothesis gives to observed events (Lacroix, 'Traité des Prob.,' p. 149, third edition); but as Mr. Lubbock, in his 'Essay on Probability,' published in the 'Library of Useful Knowledge,' observes, either Bayes or Price appears to have confounded the chance of the probability of the events happening being comprised within the proposed limits, with the probability itself.

PRICE, THOMAS, THE REV., one of the most distinguished Welsh scholars of his age, was born on the second of October 1787 at Pencaevelin, in the parish of Llanafan Fawr, near Builth, in Brecknockshire. His father, the Rev. Rice Price, had originally been a stonemason, but having at the age of seventeen formed an attachment to Mary Bower, the descendant of a long line of clergymen, had acquired by incessant diligence and frugality the means of attending the college-school at Brecknock, and finally obtained ordination from the Bishop of St. David's, and in 1784 the hand he sought, after a courtship of twenty years. He was so fortunate as afterwards to be presented to three livings, but his income, like that of some other Welsh pluralists, was never believed to exceed fifty pounds a year. He had two sons, both of whom were brought up to the church; the elder taking his degree at Oxford, while the second, Thomas, was obliged to finish his studies at the college of Brecknock. Welsh was the language the two boys heard constantly in the family, English they acquired at their second school, the elements of Latin and Greek were learned subsequently, and from some French officers, who were prisoners of war at Brecknock, Thomas acquired an excellent knowledge of French. In 1812 he received holy orders, and in 1825 after performing for thirteen years the duties of various curacies near Crickhowel, he was appointed to the vicarage of Cwmdru. This was his last preferment. The rest of his life was passed in his professional labours, and in a great variety of voluntary pursuits. Mr. Price carved in wood, modelled in wax and cork, etched with some skill, could play on the Welsh harp by ear, and had the honour of presenting a harp from his own design to the Queen at Buckingham Palace in 1843. He made a great number of drawings, some of which were engraved as early as 1809, in his friend Theophilus Jones's 'History of Brecknockshire.' He was a great promoter of the Eisteddfods, or meetings for the cultivation of Welsh poetry, literature, and music, and frequently bore off the prizes. He was looked up to by most of his countrymen with enthusiastic admiration as an accomplished champion of his country's language and literature. His health began to fail somewhat early, and he died at Cwmdru on the 7th of November 1848.

The best of his English works are collected in the 'Literary Remains of the Rev. Thomas Price, with a Memoir of his Life by Jane Williams, Ysgafell, 2 vols. 8vo, Llandovery, 1854-55. The first volume contains an account of a 'Tour through Brittany,' made in the summer of 1829, written in a lively and agreeable style, and peculiarly interesting as containing the observations of one familiar with the language and literature of Wales on the kindred language and literature of Brittany. 'An Essay on the Comparative Merits of the Remains of Ancient Literature in the Welsh, Irish, and Gaelic Languages;' 'An Essay on the Influence which the Welsh Traditions have had on the Literature of Europe;' 'A Critical Essay on the Language and Literature of Wales from the time of Gruffydd ap Cynan and Meilyr (in the eleventh century) to that of Sir Gruffydd Llwyd and Gwilym Ddu' (in the fourteenth), make up the remainder of the first volume. The second is entirely occupied with Miss Williams's memoir, which is enlivened with some interesting correspondence, and presents the fullest picture that has yet been drawn of a Welsh literary life. By far the greater part of Mr. Price's literary labours were in his native language: he was a contributor to fifteen Welsh periodicals, for one or the other of which he made it a rule to write an article once a month, and under such a variety of signatures, that it would now be impracticable to form a collection of the whole. His favourite signature however was 'Carnhuanawo' ('Man of the Sunny Mound'), which was familiarly known to every magazine-reader in Wales. His great work in Welsh was the 'Hanes Cymru a chenedl y Cymry ór Cynoesoedd hyd at Farwolaeth Llewelyn ap Gruffydd' ('History of Wales and the Welsh Nation from the Early Ages to the Death of Llewelyn ap Gruffydd'), when the country was united with England. It was published in numbers, sometimes with long intervals, the first of the fourteen of

which it consisted appearing in 1836 and the last in 1842, the whole forming a volume of about 800 pages. It has been pronounced by competent judges the best history of Wales extant in any language, and it is somewhat singular that no translation has yet appeared in English. The omission may serve in some degree to justify the complaint which Mr. Price was accustomed to make "of the extraordinary neglect of Welsh literature and total ignorance of British history prevailing in England, and the consequent contempt evinced by the English for everything relating to Wales, in contradistinction to the high appreciation of Welsh literature shown on the Continent, especially in Germany, and the superior knowledge and desire for information on all subjects connected with the principality by German scholars."

On the subject of his native language Mr. Price was so enthusiastic that his feelings sometimes outran his judgment. At the Eisteddfod at Welshpool, in 1824, he exclaims, in an oration in the Welsh language, "We are told our language cannot last; but let them inform us what language will last, and we will instantly adopt it. When we are chafed and goaded to it—when we are taunted with the extinction of our native tongue—shall we not reply! shall we not say that we likewise perceive the seeds of decay in the English? Who can tell but that when the present English sleeps with the Latin, the Saxon, and the Norman-French, the accents of our mountain tongue may yet rouse some remains of the Britons to patriotism and glory." Most Englishmen, we believe, who have urged the adoption of the English language in Wales, have supported the measure not on the ground of its supposed superior duration in the future, but of its evident superior usefulness in the present.

A notion of Mr. Price's, to which he appears to have attached considerable importance, was, after communicating it to the 'Athenæum' and the 'Allgemeine Zeitung,' made the subject of a separate publication, 'The Geographical Progress of Empire and Civilisation' (Llandovery, 1847-48). Every one is familiar with the idea of the 'westward progress of empire,' which the Americans are so fond of quoting from Bishop Berkeley's fine stanzas; but Mr. Price fancied he had made a discovery, "that the average rate of progress corresponds with that of the retrogradation of the equinoctial points, which is 50 seconds and a fraction in a year, or a degree in 72 years, something short of a British mile, subject to periodical retardations and accelerations." "The focus, or pole, was in 1847," according to his speculations, "located in the northern portion of this island, near the Frith of Forth in Scotland, moving in the direction of the Solway Frith at the rate of four miles a year." On the whole, Mr. Price's works are more remarkable for vigour, animation, and learning, than for sound judgment.

PRICE, SIR UVEDALE, was born in 1747, of an ancient Welsh family, which had settled at Foxley in Herefordshire some years previously. In 1761 his father died, and he succeeded to his estates. He had been educated at Oxford, and in 1780 he published a translation from the Greek of Pausanias of 'An Account of the Statues, Pictures, and Temples in Greece.' His next work, and the one on which his reputation chiefly rests, was 'An Essay on the Picturesque, as compared with the Sublime and the Beautiful; and on the Use of Studying Pictures for the Purpose of Improving Real Landscapes,' first published in 1794. A second edition was issued in 1796, and a third, considerably enlarged, in 2 vols. in 1797 and 1798. It was principally confined to the department of landscape gardening, and developed a purer and more cultivated taste than that introduced by the practice of Brown and Repton, who were then in fashion as layers-out of grounds. The publication involved him in a controversy with Mr. Repton, to whose letter he replied at some length in 'A Letter to H. Repton, Esq., on the Application of the Practice as well as the Principles of Landscape Painting to Landscape Gardening,' issued in 1795. He also published in 1801 'A Dialogue on the Distinct Character of the Picturesque and Beautiful, in Answer to the Objections of Mr. [Payne] Knight, prefaced by an Introductory Essay on Beauty; with Remarks on the Ideas of Sir Joshua Reynolds and Mr. Burke upon that subject.' A new edition of these works, collected in one volume, was published by Sir T. D. Lauder in 1842. In 1797 Mr. Price published a pamphlet entitled 'Thoughts on the Defence of Property;' and in 1798 'Two Appendices to an Essay on Designs in Gardening, by George Mason.' In 1827 'An Essay on the Modern Pronunciation of the Greek and Latin Languages' was published by him at Oxford, in which he endeavours to show that the pronunciation taught in our educational establishments is altogether erroneous. In this work he says he had the assistance of Mr. Knight and of Dr. Parr. In 1823 he was created a baronet, and on September 11, 1829, he died at his residence at Foxley.

PRICHARD, JAMES COWLES, an eminent ethnologist, was born at Ross in Herefordshire in the year 1785. He was educated for the medical profession, and took his degree of M.D. at Edinburgh. He chose for the subject of his inaugural thesis the physical history of mankind. This seems to have determined the current of his thoughts throughout life, for he subsequently became distinguished as one of the most laborious ethnologists of his day. He commenced the practice of his profession at Bristol, and in 1810 was appointed physician to the Clifton Dispensary and St. Peter's Hospital. He also had a private dispensary, to which he devoted considerable attention. Although much engaged with his professional duties, he still kept the subject of his inaugural thesis before his mind, and in 1818 he published his

'Researches into the Physical History of Mankind.' This work, which was originally published in one volume, reached a second edition in two volumes in 1826, and a third edition was finished in 1849, extending to five volumes. From the period of the first publication of this work it took the first rank amongst ethnological works, and the last edition is undoubtedly the most important systematic work that has hitherto appeared upon the physical history of man. Dr. Prichard, whilst an anatomist and physiologist, was one of the first to avail himself of the study of philology as a means of arriving at the history of the various races of men. His contributions to ethnology took a variety of forms. In 1832 he read an elaborate paper to the British Association, then assembled in Bristol, 'On the Application of Philological and Physical Researches to the History of the Human Species.' In 1843 he published a more popular resumé of his labours on the physical history of man under the title of 'The Natural History of Man.' A second edition of this work appeared in 1845, and it has been translated into the French and German languages. He has likewise written many papers and minor works on the same subject. In the twelfth volume of the proceedings of the Zoological Society is a paper 'On the Crania of the Laplanders and Finlanders.' He also published a work 'On the Eastern Origin of the Celtic Language,' in which he pointed out the relations between the Celtic language and the great group of Indo-Germanic languages derived from the east. Another work also arose out of his ethnological researches, which was entitled an 'Analysis of Egyptian Mythology.'

Although thus occupied with a great and important department of science, Dr. Prichard was not inattentive to professional studies. His ethnological and philological reading naturally led him to contemplate man psychologically, and we find him addressing himself successfully to the study of the nervous system, and the results of its deranged condition on the mind of man. In 1822 he published a work on 'The Diseases of the Nervous System.' This was followed by a 'Treatise on Insanity.' In this work he displayed great power in analysing mental phenomena, and speedily became recognized as one of the first authorities on the subject of mental derangement. He was appointed visiting physician to the Gloucestershire Lunatic Asylum. He subsequently published a work 'On the Different Forms of Insanity in Relation to Jurisprudence.' His labours connected with insanity led to his appointment as one of the Commissioners of Lunacy in 1845. On this occasion he removed from Bristol to London, where he continued to reside till his death. Besides the works already mentioned, Dr. Prichard enlarged an essay which he read before the Philosophical Society of Bristol into a work entitled 'A Review of the Doctrine of a Vital Principle.' He was also an extensive contributor to the 'Cyclopædia of Practical Medicine.' He was made M.D. of Oxford on the occasion of the installation of the Duke of Wellington as chancellor of that university. He was president during one session of the Provincial Medical and Surgical Association, now the Bristol Medical Association. He was president of the Ethnological Society, and published an anniversary address delivered before that society. He was a Fellow of the Royal Society of London, and of many other scientific societies in this country and on the Continent. He died in London, December 22, 1848, of an attack of rheumatism complicated with pericarditis.

PRIDEAUX, HUMPHREY, was born at Padstow in Cornwall, May, 3, 1648, of an ancient and honourable family well known in that county. He was sent to school first to Liskeard, then to Bodmin, and was removed thence to Westminster, to be placed under Dr. Busby. Here he was soon chosen king's scholar, and after three years he was elected to Christ Church, Oxford, where he became a student in 1668. He commenced B.A. in 1672, and shortly after, under the direction of Dr. Fell, he published an edition of the historian Lucius Florus. He took his degree of M.A. in 1676, and in the same year he published, by appointment of the university, the inscriptions of the Arundel Marbles with a comment, in one vol. folio, under the title of 'Marmora Oxoniensia ex Arundellianis, Seldenianis, aliisque conflata, cum perpetuo Commentario,' of which a corrected edition was published in 1732 by Michael Maittaire. In 1679 Prideaux was presented by lord-chancellor Finch to the rectory of St. Clement's, Oxford, and in the same year, being appointed Dr. Busby's Hebrew lecturer at Christ Church, he published two tracts of Maimonides with a Latin translation and notes. In 1681 he was installed prebendary of Norwich, and in the following year was made B.D., and shortly afterwards was instituted to the rectory of Bladen with Woodstock, in Oxfordshire. He proceeded D.D. in 1686, and having exchanged his living of Bladen for that of Saham in Norfolk, he went to settle upon his prebend in Norwich. Here he became engaged in some severe contests with the Roman Catholics, the result of which was the publication of his work 'The Validity of the Orders of the Church of England made out.' He also took an active part in resisting the arbitrary proceedings of James II. which affected the interests of the Established Church. In 1688 he was collated to the archdeaconry of Suffolk, and, not without due consideration, he took the oaths of allegiance to William and Mary, and acted up to them faithfully, but he always looked upon the non-jurors as honest men, and treated them with kindness and respect. The next four or five years he spent at the parsonage of Saham, and exerted himself to the utmost in discharging his parochial and archidiaconal duties. While the sees of the non-juring bishops were filling

up, without the knowledge or desire of Dr. Prideaux the bishops of London and St. Asaph earnestly recommended him for the diocese of Norwich, but the recommendation did not succeed, and Dr. Moor was appointed. Upon the death of Dr. Pocock in 1691, the professorship of Hebrew at Oxford was offered to Dr. Prideaux, who declined it. In 1694 he resigned his living at Saham, and in 1696 he was instituted to the vicarage of Trowse near Norwich. He published in 1697 his 'Life of Mahomet,' of which three editions were sold off the first year. In 1702 Dr. Prideaux was made dean of Norwich in the room of Dr. Henry Fairfax. On the translation of Dr. Moor from Norwich to Ely, in 1707, Prideaux was advised and encouraged to apply for the vacant see, but he was not at all disposed to seek for such advancement. This year he published 'Directions to Churchwardens,' a work which has often been reprinted. The best edition is that corrected and improved by Mr. Tyrwhitt, London, 1833. In 1710 appeared Dr. Prideaux's work upon 'Tythes,' 1 vol. 8vo, which he had projected in 4 vols., but his plan was defeated by "the calamitous distemper of the stone," to use his own language; and this year he resigned the vicarage of Trowse. His disease was the occasion of much suffering and it entirely disabled him from public duties. But he still pursued his private studies, and at length, in 1715, he brought out the first part of his principal work, the 'Connection of the History of the Old and New Testament,' and the second part in 1717, folio. This has been one of the most widely circulated books in the English language, and it has still a peculiar value among several more recent works of a similar design. It was the last work that he published. His strength had been long declining, and he died November 1, 1724, in his seventy-seventh year, and was buried in Norwich cathedral. About three years before his death he presented his collection of Oriental books, more than 300 in number, to the library of Clare Hall, Cambridge. Several posthumous tracts and letters, with a 'Life of Dr. Prideaux,' the author of which is not named, were published in 1748, 8vo. Dr. Prideaux was a man of varied and solid learning, and of great moral worth and ardent piety.

PRIDEAUX, JOHN, an English bishop, was born at Stowford, near Ivybridge in Devonshire, September 17th, 1578. His father, being in humble circumstances, and having a large family, could give him only a common education. While yet in his boyhood he was a candidate for the office of parish-clerk at Ugborow, a neighbouring village, but he did not succeed, and to his failure he used to attribute his elevated position in after-life. He was then noticed by a lady of the parish, who maintained him at school till he had acquired a knowledge of Latin, and he then went to Oxford, and was admitted a poor scholar at Exeter College, in 1596: he was elected probationer fellow of his college in 1602, being then B.A. In the following year he received holy orders, and having become noted for his profound knowledge of divinity, as well as his great learning in general, he was elected rector of his college upon the death of Dr. Thomas Holland in 1612. In 1615 he succeeded Dr. Robert Abbot, then promoted to the see of Salisbury, as Regius Professor of Divinity, canon of Christ Church, and rector of Ewelme. He afterwards held the office of vice-chancellor for several years. "In the rectorship of his college," says Wood, "he carried himself so winning and pleasing by his gentle government and fatherly instruction, that it flourished more than any house in the university with scholars, as well of great as of mean birth; as also with many foreigners that came purposely to sit at his feet to gain instruction." He no less distinguished himself in the divinity chair, which he occupied twenty-six years. In 1611, he was consecrated bishop of Worcester, but on account of his adherence to the king he found his dignity neither pleasant nor profitable. He became so impoverished as to be compelled to sell his books, and so was, as Dr. Gauden says, 'Verus librorum helleo.' "Having," continues Wood, "first by indefatigable studies digested his excellent library into his mind, he was after forced again to devour all his books with his teeth, turning them by a miraculous faith and patience into bread for himself and his children, to whom he left no legacy but pious poverty, God's blessing, and a father's prayer." He died of a fever, at Bredon in Worcester, July 29, 1650.

The works of Bishop Prideaux were numerous, and mostly written in Latin, upon grammar, logic, theology, and other subjects. Wood describes him as "a plentiful fountain of all sort of learning, an excellent linguist, a person of a prodigious memory, and so profound a divine, that he was called 'Columna fidei orthodoxæ, ingens scholæ et academice oraculum,'" &c. Though he died before the publication of the London Polyglott, he was well known to the editor Brian Walton, who appeals to his authority on the nicer points of Hebrew criticism, in vindicating the Polyglott from certain cavils that had been raised against it.

Bishop Prideaux had a son named Matthias, who was born in 1622, and died of the small-pox in 1646. He was a fellow of Exeter College. After his death, in 1648, was published, in small 4to, a work of his entitled 'An essay and compendious Introduction for reading all sorts of Histories,' with a 'Synopsis of Councils,' added by his father. This book was several times reprinted, but it would now probably be thought more curious than useful, though it might furnish some valuable hints to persons engaged in teaching.

PRIESSNITZ, VINCENZ, the founder of Hydropony, or Water-Cure (Wasserheilkunde), was born on the 4th of October 1799, at

Gräfenberg, in Austrian Silesia, where his father was a farmer. He received only a small amount of ordinary education at the town-school of Freiwaldau; for his elder brother having died, and his father become blind, he was obliged at an early age to assist his mother in managing and working the farm. He continued in this employment several years; but one day, when he was taking some sacks of barley to the fields for sowing, the horse became restive, seized Priessnitz with its teeth, threw him down, and dragging the loaded cart over him, broke two of his ribs. A medical man, after examining him, expressed an opinion that the injuries sustained were so great that, even if he recovered, he would be a cripple for life. Priessnitz however, by placing his body in a certain position, which allowed him to expand his chest to the utmost extent, replaced his ribs, and by the free use of cold water kept down inflammation; so that in a short time he was enabled to return to his work. The process of cure by cold water, which had been so beneficial in his own case, was successfully used in other cases of inflammatory disorder. His reputation gradually extended; he studied medical books, formed a sort of system of medical treatment, established cold-water baths at Gräfenberg, and about the year 1826 patients began to resort to him from distant parts of Germany. In 1829 his system may be said to have been in full operation, and from the 1st of January of that year till the 1st of January 1844 the number of his patients had amounted to 8678. The total number of his patients in 1843 was 1050, and the number of both sexes and all ages generally present at Gräfenberg was about 860. No particle of medicine, vegetable or mineral, no tonic, no stimulant, no emetic, no purgative, was ever administered in any form whatever. No bleeding, blistering, or leeching was employed. Water variously applied, externally as well as internally, the process of sweating, fresh air, out-door exercise, plain diet, regulated clothing, early hours, and cheerful society, constituted the only remedies. This system continued in successful operation till the death of Priessnitz, which occurred on the 28th of November 1851, at Gräfenberg. The disease of which he died is stated to have been dropsy on the chest. Hydropathic establishments are now in operation in various places on the continent of Europe, in the United Kingdom of Great Britain and Ireland, and on the continent of America.

Priessnitz did not write any medical work himself, but accounts of his system have been published in German and English. Captain R. T. Claridge in 1849 published 'The Water-Cure, or Hydropathy, as practised by Vincent Priessnitz, at Gräfenberg, Silesia, Austria,' 8vo, London; and 'Every Man his own Doctor: the Cold Water, Tepid Water, and Friction Cures, as applicable to every Disease to which the Human Frame is subject, and also to the Cure of Diseases in Horses and Cattle,' 8vo, London.

(*Vincenz Priessnitz, eine Lebensbeschreibung*, von Dr. J. E. M. Selinger, 12mo, Vienna, 1852.)

PRIESTLEY, JOSEPH, the son of Jones Priestley, a cloth-dresser at Birstal-Fieldhead, near Leeds, was born at Fieldhead, on the 13th of March 1733, old style. His mother dying when he was six years of age, he was adopted by a paternal aunt, Mrs. Keighley, by whom he was sent to a free grammar-school in the neighbourhood, where he was taught the Latin language and the elements of the Greek. His vacations were devoted to the study of Hebrew under a dissenting minister; and when he had acquired some proficiency in this language he commenced and made considerable progress in the Chaldee, Syriac, and Arabic. In the mathematics he received some instruction from Mr. Haggerstone, who had been educated under Maclaurin. From his habits of application and attachment to theological inquiries, his aunt early entertained hopes of his becoming a minister. Ill health however led him to abandon for awhile his classical studies and apply himself to mercantile pursuits. We learn from his own statement that his constitution, always far from robust, had been injured by a "consumptive tendency, or rather an ulcer in the lungs, the consequence of improper conduct when at school, being often violently heated with exercise, and as often imprudently chilled by bathing, &c." Without the aid of a master, he acquired some knowledge of the French, Italian, and German. With the return of health his earlier occupations were resumed, and at the age of nineteen (1752) he entered the dissenting academy at Daventry (afterwards Coward College, and now incorporated with New College, London), conducted by Mr. (afterwards Dr.) Ashworth, the successor of Dr. Doddridge. His parents were both of the Calvinistic persuasion, as also was his aunt, who had omitted no opportunity of inculcating the importance of the Calvinistic doctrine. As however differences of opinion on doctrinal points were not with her sufficient ground for rejecting the society of those whom she believed to be virtuous and enlightened, her house became the resort of many ministers and clergymen whose views were more or less opposed to those of Calvin. In their discussions young Priestley took considerable interest, and they may be supposed to have had considerable influence in leading him to a systematic examination of the grounds upon which he had reared his own belief. Before the age of nineteen he styles himself rather a believer in the doctrines of Arminius, though he adds, "I had by no means rejected the doctrine of the Trinity or that of the Atonement." Before leaving home he expressed a desire to be admitted a communicant in the Calvinistic congregation which he had been in the habit of attending with his aunt; but the minister having elicited

from his replies that he entertained doubts relative to the doctrines of original sin and the eternity of punishment, his admission was refused.

On reaching the academy he found the professors and students about equally divided upon most questions which were deemed of much importance, such as liberty and necessity, the sleep of the soul, &c., and all the articles of theological orthodoxy and heresy, which thus became topics of animated and frequent discussion. The spirit of controversy thus excited was in some measure fostered by the plan for regulating their studies, drawn up by Dr. Doddridge, which specified certain works on both sides of every question which the students were required to peruse and form an abridgement of for their future use. Before the lapse of many months he conceived himself called upon to renounce the greater number of the theological and metaphysical opinions which he had imbibed in early youth, and thus, he himself observes, "I came to embrace what is generally called the heterodox side of the question: . . . . but notwithstanding the great freedom of our debates, the extreme of heresy among us was Arrianism, and all of us, I believe, left the academy with a belief, more or less qualified, of the doctrine of the Atonement." During his residence at the academy he composed the first part of his 'Institutes of Natural and Revealed Religion,' published in 1772; the remaining three parts appeared in 1773-74.

On quitting the academy in 1755 he became minister to a small congregation at Needham-Market in Suffolk, at an average salary of 30*l.* per annum. To increase his income, he circulated proposals for teaching the classics, mathematics, &c., for half-a-guinea a quarter, and to board his pupils for 12 guineas a year. Finding these produced no effect, and that his congregation, on becoming acquainted with his opinions, were gradually forsaking him, which however may be in some measure ascribed to an increasing impediment in his speech, he quitted Needham in 1758, for a similar but temporary engagement at Nantwich in Cheshire. Here he was more successful as a schoolmaster, and by means of the strictest economy was able to purchase some philosophical apparatus, including an air-pump and electrical-machine, and also to keep out of debt, which through life he always made a point of doing. While at Needham he informs us that a careful examination of the Old and New Testaments convinced him that "the doctrine of the Atonement, even in its most qualified sense, had no countenance either from Scripture or reason," and induced him to compose his work entitled 'The Scripture Doctrine of Remission, which shows that the Death of Christ is no proper Sacrifice nor Satisfaction for Sin; but that Pardon is dispensed solely on account of a Personal Repentance of the Sinner,' which was published in 1761, the year in which he removed from Nantwich, to succeed Mr. (afterwards Dr.) Aikin, as tutor in the languages and belles-lettres at Warrington Academy. Here he married the daughter of Mr. Wilkinson, an ironmaster of Wales, a lady of great amiability and strength of mind, by whom he had several children. Here also he composed several works, among which are his lectures on 'The Theory of Language and Universal Grammar,' 1762; on 'Oratory and Criticism,' 1777; on 'History and General Policy,' 1788; on 'The Laws and Constitution of England,' 1772; an 'Essay on a Course of Liberal Education for Civil and Active Life,' 1765; 'Chart of Biography,' 1765; 'Chart of History,' 1769, &c. A visit to the metropolis was the occasion of his introduction to Dr. Franklin, Dr. Price, and others. To the first of these he communicated his idea of writing a historical account of electrical discoveries, if provided with the requisite books. These Dr. Franklin undertook to procure, and before the end of the year in which Priestley submitted to him the plan of the work he sent him a copy of it in print, though five hours of every day had been occupied in public or private teaching, besides which he had kept up an active philosophical correspondence. The title of this work is 'The History and Present State of Electricity, with Original Experiments,' 1767 (third edition, 1776). His 'Original Experiments,' though numerous and interesting, did not give rise to any discovery of importance, and the entire work is described by Dr. Thomson as "carelessly written," which may readily be attributed to the rapidity with which it was executed. Shortly before (1766) its publication he was elected a member of the Royal Society, and about the same time the honorary title of Doctor of Laws was conferred upon him by the University of Edinburgh. The approbation bestowed on his 'History of Electricity' induced him some time after to compose his 'History and Present State of Discoveries relating to Vision, Light, and Colours,' 2 vols. 4to, which he intended should be succeeded by a similar account of the other branches of experimental science; but the sale of this work not answering his expectations, the design was abandoned, and, we believe, the work itself did not evince any very intimate knowledge of the subject.

A disagreement between the trustees and professors of the academy led to his relinquishing his appointment at Warrington in 1767. His next engagement was at Mill-Hill chapel, Leeds, where his theological inquiries were resumed, and several works of the kind composed, chiefly of a controversial character. The vicinity of his dwelling to a public brewery was the occasion of his attention being directed to pneumatic chemistry, the consideration of which he commenced in 1768, and subsequently prosecuted with great success. His first publication on this subject was a pamphlet on 'Impregnating Water with

Fixed Air' (1772); the same year he communicated to the Royal Society his 'Observations on Different Kinds of Air,' to which the Copley medal was awarded in 1773.

"No one," observes Dr. Thomson, "ever entered upon the study of chemistry with more disadvantages than Dr. Priestley, and yet few have occupied a more dignified station in it, or contributed a greater number of new and important facts. The career which he selected was new, and he entered upon it free from those prejudices which warped the judgment and limited the views of those who had been regularly bred to the science. He possessed a sagacity capable of overcoming every obstacle, and a turn for observation which enabled him to profit by every phenomenon which presented itself to his view. His habits of regularity were such that everything was registered as soon as observed. He was perfectly sincere and unaffected, and the discovery of truth seems to have been in every case his real and undisguised object." He discovered oxygen gas, nitrous gas, nitrous oxide gas, nitrous vapour, carbonic oxide gas, sulphurous oxide gas, fluoric acid gas, muriatic gas, and ammoniacal gas. The first of these, which he named dephlogisticated air, he discovered in 1774, having obtained it by concentrating the sun's rays upon red precipitate of mercury. He showed that the red colour of arterial blood resulted from its combination with the oxygen of the atmosphere; that the change produced in atmospheric air during the process of combustion and putrefaction arose from a similar abstraction of oxygen; and recognised the property possessed by vegetables of restoring the constituent thus abstracted. Moreover the pneumatic apparatus now used by chemists was principally invented by him. "But though," observes Dr. Thomson, "his chemical experiments were for the most part accurate, they did not exhibit that precise chemical knowledge which distinguished the experiments of some of his contemporaries. He never attempted to determine the constituents of his gases, nor their specific gravity, nor any other numerical result." Of this he himself was doubtless aware; for in a letter written many years after (1795), he observes, "As to chemical lectureship, I am now convinced I could not have acquitted myself in it to proper advantage. . . . Though I have made many discoveries in some branches of chemistry, I never gave much attention to the common routine of it, and know but little of the common processes."

The theory promulgated by Lavoisier, though founded on the discoveries of Cavendish and Priestley, was never adopted by the latter, who continued to adhere to the phlogistic theory notwithstanding the many facts and arguments adduced against it.

While at Leeds very advantageous proposals were made to him to accompany Captain Cook in his second voyage to the South Seas; but when about to prepare for his departure, it was intimated to him by Mr. (afterwards Sir Joseph) Banks, that objections to his religious principles had been successfully urged by some of the ecclesiastical members of the Board of Longitude.

In 1773, through the recommendation of Dr. Price, he received the appointment of librarian and literary companion to the Earl of Shelburne, with a salary of 250*l.* a year, a separate residence, and a certainty for life in the event of his lordship's death or their previous separation. In the second year of this engagement he accompanied his patron through France, Flanders, Holland, and Germany. At Paris his philosophical publications procured for him an easy introduction to several of the leading chemists and mathematicians, whom he describes as professed atheists; and by whom he was told that he was the only individual they had ever met with, and of whose understanding they had any opinion, who was a believer in Christianity. To combat their and similar prejudices, he wrote his 'Letters to a Philosophical Unbeliever, containing an examination of the principal objections to the doctrines of natural religion, and especially those contained in the writings of Mr. Hume' (1780); to which he afterwards added the 'State of the Evidence of Revealed Religion, with animadversions on the two last chapters of the first volume of Mr. Gibbons's History of the Decline and Fall of the Roman Empire' (1787). While resident with Lord Shelburne, who allowed him 40*l.* a year towards defraying the expenses of his chemical experiments, he printed the first four volumes of his 'Experiments and Observations on Air,' 1774-79; a fifth appeared in 1780. He also wrote his 'Miscellaneous Observations on Education' (1778), and an 'Introductory Dissertation' to Hartley's 'Observations on Man.' In this dissertation, having expressed his doubts concerning the immateriality of the sentient principle in man, he was denounced in most of the periodicals as an unbeliever in revelation and an atheist. This led to the publication of his 'Disquisitions relating to Matter and Spirit' (1777), wherein his object is to show that "man is wholly material, and that our only prospect of immortality is from the Christian doctrine of a Resurrection." In the same year appeared his work on the 'Doctrine of Necessity.'

The cause of the separation between Priestley and Lord Shelburne (1780) has never transpired, and does not appear to have been known to Priestley himself. Some have attributed it to the odium to which the works last mentioned subjected their author, and to the invidious attacks which issued in almost all quarters from the press; but whatever may have been their true motives, the conduct of both appears to have been strictly honourable. Priestley retired with an annuity of 150*l.* a year, and in 1787 Lord Shelburne made overtures for renewing

the original engagement, which however Priestley thought proper to decline.

Among the many points of church doctrine which, as we have seen, were successively repudiated by Dr. Priestley, it is remarkable that the doctrine of the Trinity should not have been hitherto included, at least not in the same unqualified manner. In a letter to Mr. Henderson, dated August 1774, he has left a confession of his faith at that time. "I believe," he writes, "the prophecies in our Bible were given by God; that the gospels are true; that the doctrine of original sin is absurd; that the spirit of God only assists our apprehension; that the foreknowledge of God, held by the Arminians, is equal to the decree of God held by the Calvinists; that they are both wrong; and the truth is, the pains of hell are purgatory. Many things I yet doubt of; among these are the Trinity and the mediation of Christ."

On leaving Lord Shelburne he became minister to the principal dissenting congregation at Birmingham, and a subscription was entered into by his friends for defraying his philosophical experiments and promoting his theological inquiries. His receipts from these sources must, by his own account, have been very considerable. Offers were also made to procure him a pension from government, but this he declined. In 1782 he published his 'History of the Corruptions of Christianity,' 2 vols. 8vo. A refutation of the arguments contained in this work was proposed for one of the Hague prize essays; and in 1785 the work itself was burnt by the common hangman in the city of Dordrecht. It was succeeded by his 'History of Early Opinions concerning Jesus Christ,' 1786, 4 vols. 8vo.

A literary warfare now ensued between Priestley and Dr. Horsley, by both of whom it was carried on with much warmth. In a letter to Dr. Price, dated Birmingham, January 27, 1791, he says, "With respect to the church with which you have meddled but little, I have long since drawn the sword and thrown away the scabbard, and am very easy about the consequences." But he did not confine himself to dealing with churchmen: his object was to obtain for the dissenters what he considered to be their rights, and in the pursuit of which he published about twenty volumes. He attacked certain positions relating to the dissenters in Blackstone's 'Commentaries' with a vigour and acrimony which seems to have surprised his more courteous and feeble adversary.

His 'Familiar Letters to the Inhabitants of Birmingham,' from the ironical style in which they were written, exasperated even the populace, urged on by strong party feeling and bigotry. His 'Reply to Burke's Reflections on the French Revolution,' an event to which the lower orders of Birmingham were at that time unfavourably disposed, led to his being nominated a citizen of the French republic; and the occasion of a public dinner given, to say the least, with little judgment or taste—the state of the public feeling being taken into account—by some of his friends, July 14, 1791, in celebration of the anniversary of the destruction of the Bastille, at which however Priestley himself was not present, afforded to an excited mob the opportunity of gratifying the malignity which they conceived they had grounds to entertain towards him. After demolishing the place where the dinner had been given, they broke into his house, destroyed his philosophical apparatus, a valuable collection of books, and a large number of manuscripts, the result of many years' labour, after which they made an unsuccessful attempt to burn the dwelling and what was left in it. An eye-witness of the "riots" asserts that the high road, for full half a mile of the house, was strewed with books, and that on entering the library there was not a dozen volumes on the shelves, while the floor was covered several inches deep with the torn manuscripts. In the meantime, he and his family sought safety in flight. The first two nights he passed in a post-chaise, the two succeeding on horseback, but owing less to his own apprehensions of danger than to those of others. The sum awarded to him at the assizes as compensation for the damage is not stated, but he tells us that it fell short of his loss by 2000*l.* Individual generosity made ample amends. Among other instances of this kind, his brother-in-law made over to him the sum of 10,000*l.* invested in the French funds, besides an annuity of 200*l.* a year.

After this he removed to Hackney as the successor of his deceased friend Dr. Price; but finding his society shunned by many of his former philosophical associates, among whom were the members of the Royal Society, from whom he formally withdrew himself, and seeing no prospect of enjoying permanent tranquillity in England, he determined on quitting it. Accordingly, April 7, 1794, he embarked with his family for America, and took up his abode at Northumberland in Pennsylvania. A few days before his embarkation he was presented with a silver inkstand bearing the inscription, "To Joseph Priestley, LL.D., &c., on his departure into exile, from a few members of the University of Cambridge, who regret that this expression of their esteem is occasioned by the ingratitude in their country." He had contemplated no difficulty in forming a Unitarian congregation in America; but in this he was greatly disappointed. He found that the majority disregarded religion; and those who paid any attention to it were more afraid of his doctrines than desirous of hearing them. By the American government, the former democratic spirit of which had subsided, he was looked upon as a spy in the interest of France. "The change," he writes in a letter dated September 6, 1798, "that has taken place is indeed hardly credible, as I have done nothing to

provoke resentment; but, being a citizen of France, and a friend to that Revolution, is sufficient."

His wife died in 1796. His youngest son had died a few months previous. He himself, in 1801, became subject to constant indigestion and difficulty of swallowing any kind of solid food. This continued to increase till 1803, when, perceiving his end approaching, he told his physician that if he could prolong his life for six months, he should be satisfied, as in that time he hoped to complete the works upon which he was then engaged. These were his 'General History of the Christian Church from the Fall of the Western Empire to the Present Time,' 4 vols., 1802-3 (which had been preceded by his 'General History of the Christian Church to the Fall of the Western Empire,' 2 vols., 1790), and 'The Doctrines of Heathen Philosophy compared with those of Revelation' (posthumous). He died February 6, 1804, expressing the satisfaction he derived from the consciousness of having led a useful life and the confidence he felt in a future state in a happy immortality. On his death becoming known at Paris, his éloge was read by Cuvier before the National Institute. There is a statement in more than one work that Priestley's death was occasioned by poison, but it does not appear to be supported by any authority.

The autobiography of Dr. Priestley, originally written, as he informs us, during one of his summer excursions, concludes with the date "Northumberland, March 24, 1795." It was published in America after his decease, with a continuation by his son Joseph Priestley, and observations on his writings by Thomas Cooper (president judge of the fourth district of Pennsylvania) and the Rev. William Christie. Priestley's Correspondence has been collected and incorporated with the above memoir by Mr. John Towill Rutt, forming the first two volumes of his collected edition of Priestley's 'Theological and Miscellaneous Works,' in 25 vols., 8vo, Hackney, 1817, &c. At pp. 537-44 of the second volume of this edition will be found, chronologically arranged, a complete list of Priestley's works; an imperfect list is given in Watt's 'Bibliotheca Britannica.'

(Thomson's *Annals of Philosophy*, 8vo, vol. i., 1813; Thomson's *History of the Royal Society*, 4to, 1812; Cuvier's 'Notice of the Life of Priestley,' in the *Biographie Universelle*; the articles 'Electricity' and 'Chemistry' in the *Encyclopædia Metropolitana*, by the Rev. Francis Lunn; Rutt's *Memoirs and Correspondence of Priestley*, above mentioned, &c.)

PRIMATICCIO, FRANCESCO, was born at Bologna, in 1504. He was of a noble family, and his parents intended to have him brought up to the mercantile profession; but his natural genius led him to the arts. He learned design and colouring from Innocenzio da Imola and Bagnacavallo, and having manifested extraordinary talent, he went to Mantua to study under Julio Romano, who was engaged on some great works in the palace Del Té at Mantua, many of which Primaticcio and others of his disciples executed after his design. Frederic, duke of Mantua, recommended him in 1531 to Francis, king of France, who intrusted him with many works. A great jealousy arising between him and Rosso, who was likewise in high favour with Francis, the king sent Primaticcio to Rome to purchase antiques, a commission in which he was extremely successful. He was recalled from Rome to complete a large gallery left unfinished by the death of Rosso. The number of works which he executed in France is astonishing, especially in the palace of Fontainebleau, where, assisted by his pupil Nicolo Abate, he painted, besides other works, in the great gallery, which was 456 feet long and 18 feet wide, fifty-eight pictures, each 6½ feet high and 8 feet wide, representing the principal scenes of the *Odyssey*; the roof, which was richly adorned with gilding and stucco, was decorated with fifteen large and sixty small pictures, chiefly subjects of heathen mythology. This great work was totally destroyed in 1738, when the great gallery was pulled down to erect apartments for some persons attached to the court. Francis II. gave him the abbey of St. Martin de Troyes, with a revenue of 8000 crowns, which he enjoyed till his death in 1570. Primaticcio's talents however were chiefly called into exercise under Henri II., most of the frescoes with which Francis intended to adorn Fontainebleau not being executed till after his death. The oil-paintings of Primaticcio are excessively rare in Italy. Fuseli mentions a Concert of three female figures in the Zambeccari gallery as an enchanting performance; and Dr. Waagen says that a picture at Castle Howard representing Penelope relating to Ulysses what has passed in his absence, is the finest work of this master that he had yet seen. (Gaye, *Carteggio*, iii. 552, for year of birth.)

PRINGLE, JOHN, the youngest son of Sir John Pringle, Bart., and Magdalen Elliott, the sister of Sir Gilbert Elliott, Bart., was born at Stichell-House in Roxburghshire, April 10, 1707. Having received at home, under a private tutor, the elements of a classical education, he entered the University of St. Andrews, where a relative of his father, Mr. Francis Pringle, was at that time professor of Greek. After keeping the ordinary number of terms, he removed to Edinburgh, in October 1727, in order to qualify himself for the medical profession; but in the year following he proceeded to the University of Leyden. It is stated by Dr. Kippis, on the authority of Mr. James Boswell, that Pringle was at one time intended to follow a mercantile life, and that on leaving Edinburgh he went to Amsterdam for that purpose, but that his attention was accidentally drawn to the study of medicine by attending a lecture of Boerhaave in the University of Leyden. He entered this University in 1728, and took the degree of Doctor of

Physic, 20th of July 1730, his diploma bearing the signatures of Boerhaave, Albinus, Gravesande, and other eminent individuals. His inaugural dissertation was entitled 'De Marcere Senili.' On quitting Leyden, he proceeded to Paris, where he completed his medical studies, after which he settled as a physician at Edinburgh. He had not however given his attention exclusively to medicine. In 1734 he was appointed by the magistrates and council of Edinburgh to the professorship of moral philosophy in the University of Edinburgh, jointly with Mr. Scott, during the life of the latter, and solely after his decease. Dr. Kippis says he was appointed to the chair of pneumatics and moral philosophy, but no mention of the former of these sciences is to be found in any other notice of Pringle's life to which we have referred. He continued to practise at Edinburgh as a physician till 1742, when he was nominated physician to the Earl of Stair, who then commanded the allied armies of England and Austria, and through whose recommendation he received the same year the further appointment of physician to the military hospital in Flanders, at a salary of 20s. a day, and half-pay for life. He was present at the battle of Dettingen (20th of June 1743), shortly after which he was promoted by the Duke of Cumberland, second son of George II., to be physician-general to his majesty's forces in the Low Countries, whereupon he resigned his professorship. The benevolence of his disposition and the exemplary zeal and ability with which he discharged his official duties while connected with the army, are attested by all who knew him. Impressed with the suffering frequently attendant on the sudden movement of an army, which necessitated as sudden a removal of the hospitals or the abandonment of the men to the doubtful generosity of an enemy, he applied himself earnestly to the consideration of the means whereby it might be mitigated or removed. Prior to this it had been the custom to place the sick and wounded at a distance from the army, but even then it often happened that a position of salubrity was incompatible with one of safety. Through his exertions a convention was entered into, in the early part of the campaign of 1743, between Lord Stair and Marshal Noailles, for the mutual protection of the hospitals of both armies. This convention was faithfully adhered to by both the French and English generals. Pringle's situation afforded ample opportunity of observing the influence of climate, diet, confined and humid quarters, habits of intemperance and uncleanness, &c. These, with the characteristics of the epidemics peculiar to armies, he carefully recorded and digested, applying himself indefatigably to the investigation of the proper modes of treatment under different circumstances. His treatise 'On the Diseases of the Army,' which appeared in 1752, and which passed through seven editions, besides being translated into the French, German, and Italian languages, was not a work from which the medical practitioner alone was capable of deriving instruction. Among other instances corroborative of its general utility, General Melville, who, while governor of the Friendly Islands, was instrumental in saving the lives of near seven hundred of his soldiers, attributed his success to the plainness of the language employed in this work and the soundness of the information which it conveyed.

Dr. Pringle was recalled from Flanders in 1745 in order to attend the army employed under the Duke of Cumberland in suppressing the Scotch rebellion. He remained with the forces till after the battle of Culloden (16th of April 1746). The year following he again accompanied the army abroad, but on the conclusion of the peace of Aix-la-Chapelle (30th of April 1748), he returned to England, after which he resided principally at London, as physician in ordinary to the Duke of Cumberland. He had been elected in 1745 a member of the Royal Society, and his communication to their published 'Transactions' of a paper entitled 'Experiments on Septic and Anti-septic Substances, with remarks relating to their use in the theory of medicine (1750), to which the Copley medal was awarded, added to his reputation. Empiricism indeed appears in some measure to have been looked upon by him as not only the beginning, but the end of all useful inquiry, and he not merely entertained a strong aversion to all hypothesis, but attached comparatively little value to theory even when based on experiment. Upon one of the members of the Royal Society remarking to him that it was at least necessary to reason on the results of observation and experiment, he is said to have replied, "The less the better; it is by reasoning that you spoil everything."

In 1753 he was elected one of the council of the Royal Society. In 1758, on relinquishing his appointment in the army, he was admitted a licentiate of the College of Physicians. In 1761, soon after the accession of George III., he was appointed physician to the queen's household, and in 1763 physician extraordinary to her majesty. The same year he was chosen a member of the Academy of Sciences at Haarlem, and Fellow of the College of Physicians, London. In 1766 he was elected a member of the Royal Society of Sciences at Göttingen, and the same year the dignity of baronet was conferred upon him by George III. In 1772 he was elected president of the Royal Society. In 1774 he was appointed physician extraordinary to his majesty. In 1776 he became a member of the Academy of Sciences at Madrid, the Society for the Promotion of Agriculture at Amsterdam, the Academy of Medical Correspondence at Paris, and the Imperial Academy of Sciences at St. Petersburg. In 1778 he succeeded Linnæus as foreign member of the Academy of Sciences at Paris, an honour which that body has hitherto restricted to eight individuals. The same year he

became foreign member of the Academy of Sciences and Belles-Lettres at Naples, and in 1781, a Fellow of the then recently instituted Society of Antiquaries at Edinburgh.

As president of the Royal Society the annual presentation of the Copley medal devolved upon him, and on each of these occasions he read before the members a discourse on the history and present state of the particular science the extension of which it was the object of the medal of that year to reward. These discourses, six in number, were published the year after his death, by his friend Dr. Kippis, in 1 vol. 8vo.

About the year 1778 a dispute arose among the members of the Royal Society relative to the form which should be given to electrical conductors so as to render them most efficacious in protecting buildings from the destructive effects of lightning. Franklin had previously recommended the use of points, and the propriety of this recommendation had been acknowledged and sanctioned by the society at large. But after the breaking out of the American revolution Franklin was no longer regarded by many of the members in any other light than an enemy of England, and as such it appears to have been repugnant to their feelings to act otherwise than in disparagement of his scientific discoveries. Among this number was their patron George III., who, according to a story current at the time, and of the substantial truth of which there is no doubt, on its being proposed to substitute knobs instead of points, requested that Sir John Pringle would likewise advocate their introduction. The latter hinted that the laws of nature were unalterable at royal pleasure; whereupon it was intimated to him that a president of the Royal Society entertaining such an opinion ought to resign, and he resigned accordingly.

In 1781 Sir John Pringle disposed of his house in Pall Mall and the greater part of his library, and removed to Edinburgh, where he purposed residing permanently; but the rigour of the climate, the state of his health, and a restlessness of spirits, induced him to return to the metropolis the same year. On quitting Edinburgh he presented the College of Medicine in that city with three manuscript volumes in folio, on the condition that they should neither be suffered to leave the college nor to be printed. He died January 18, 1782. His remains were interred in St. James's church with great funeral solemnity, and a monument by Nollekens, at his nephew's expense, was some time after erected to his memory in Westminster Abbey. A list of his published works is given in Watt's 'Bibliotheca Britannica.' They are not numerous, and, with the exception of those already mentioned, they no longer possess much interest. The circle of his correspondents included the most eminent men of science in Europe, more particularly those of France, Germany, and Holland, with whom he kept up an active intercourse both by letter and by the attention and hospitality he showed them during their visits to the metropolis; but the extent and interest of his epistolary correspondence can be but imperfectly judged of, owing to the circumstance of his having ordered the whole of his letters to be destroyed a short time before his decease.

(*Life of Sir John Pringle*, by Andrew Kippis, D.D., prefixed to Sir John Pringle's Six Discourses above referred to; *Eloge de M. Pringle*, by Condorcet, *Œuvres Complètes*, tom. ii., pp. 226-247.)

PRINGLE, THOMAS, was born January 5, 1789, at Blaiklaw, in Tiviotdale, Scotland. His father was a respectable farmer in Roxburghshire. Pringle's right limb, when he was very young, was dislocated at the hip-joint by an accident, which the nurse imprudently concealed till reduction was no longer practicable, and he was thus obliged to use crutches for life. In his fourteenth year he was sent to the grammar-school at Kelso, and three years afterwards went to Edinburgh to complete his studies at the university; after which he became a clerk to the Commissioners on the Public Records of Scotland. His employment was merely that of copying old records, and his salary was barely sufficient for his humble wants.

In 1811 Pringle and a friend published a poem called 'The Institute,' which seems to have been satirical, and obtained them some praise but no profit. In 1816 he was a contributor to 'Albyn's Anthology,' and the author of a poem in the 'Poetic Mirror' called 'The Autumnal Excursion,' which was praised by Scott, and was the origin of Pringle's acquaintance with him. About the same time he was busy with the project of establishing a magazine as a rival to the 'Scots Magazine,' and when his plan was pretty well advanced he resigned his situation in the Register Office, which he could resume if his project proved unsuccessful. Among his coadjutors were Lockhart, Wilson, Cleghorn, Dr. Brewster, and Hogg. Early in 1817 the 'Edinburgh Monthly Magazine' appeared, of which Pringle was the editor. His most important contribution to the first number was an article on the 'Gipsies,' the chief materials for which were furnished by Scott, unasked for and gratuitously, and which Scott had himself intended to work up into an article for the 'Quarterly Review.' About the same time Pringle became editor of the 'Edinburgh Star' newspaper. The magazine soon fell into the hands of other proprietors, and changed its title to that of 'Blackwood's Magazine,' Pringle still continuing to be the editor, at the same time that he became joint editor of 'Constable's Magazine;' but disputes between Pringle and Blackwood led in a short time to a separation. Before this untoward event took place he had married. Soon afterwards he published 'The Excursion and other Poems,' with little or no profit. The editorship of 'The Star' newspaper was unprofitable, and he resigned it; and he probably

BIOG. DIV. VOL. IV.

derived little emolument from 'Constable's Magazine,' for in January 1819 he was again on his former seat in the Register Office, performing the laborious drudgery of a copying clerk to the Record Commission.

Meanwhile Pringle's four brothers, all of whom were farmers, had become more or less unprosperous, and he proposed that they should avail themselves of the government scheme of colonising the unoccupied territory at the Cape of Good Hope. One brother had previously emigrated to the United States of North America. The other brothers agreed to his proposal, though the eldest brother could not get his affairs arranged in time to accompany them; but he promised to follow them, and Pringle undertook the management of his farm till his arrival. The party of twenty-four persons, consisting of twelve men, six women, and six children, having set sail, arrived at the Cape of Good Hope in April 1820. On the 21st of June they reached Roodewal on the Great Fish River, and after a toilsome march of some days arrived at their place of settlement in the upper part of the valley of the Baavians' River, or River of Baboons, one of the smaller tributaries of the Great Fish River.

The small colony, having surmounted the first difficulties, became tolerably prosperous, and Pringle's brother having arrived in July 1822, he resigned his farm, and went to seek employment at Cape Town, as had been his original intention. Scott, Sir John Macpherson, and others, had exerted their influence with the colonial secretary, and Pringle was offered and accepted the situation of librarian to the government library. The salary was only 75*l.* a year, but afforded a fair groundwork of income to a working literary man. He at first received pupils for private instruction, and then, in conjunction with the Rev. Mr. Faura, a Dutch clergyman of the town, made arrangements for the publication of a periodical in English and Dutch. Lord Charles Somerset however, who was then governor, on being applied to in February 1823, would not permit any journal to be published except the government 'Gazette.' Pringle was obliged to submit, and wait the arrival of commissioners, who had been sent out by the British government to examine into the state of the colony. The commissioners when they arrived approved of his plan, but their powers did not extend beyond that of making a report to the home government.

Meantime Pringle, in conjunction with his friend Mr. Fairbairn, who had followed him from Scotland, organised a private academy on an extensive scale, which was prosperous beyond their expectations. While occupied with this new business he was surprised to receive a communication from the governor, authorising him to commence his periodical, the plan of which it seems had met with the approbation of Lord Bathurst, who was then colonial secretary.

The 'South African Journal' forthwith appeared, one edition in English and one in Dutch. Soon afterwards, Mr. Greig, a printer, commenced the 'South African Commercial Advertiser,' a weekly newspaper, of which Pringle became editor, as well as of the 'Journal.' The two works were prosperous, the pupils of the academy increased, and Pringle fancied himself about to make a rapid fortune.

A man of the name of Edwards was tried for a libel on the governor, and the trial, like others, was expected to be reported. On this occasion however the Fiscal was ordered to proceed to the printing-office, and assume the office of censor of the press. Pringle states that everything likely to be personally offensive to the governor had been carefully expunged; but he refused to submit to this assumption of arbitrary power, and having no legal means of resistance, threw up the editorship. Greig discontinued the publication of the newspaper, announcing to his readers his intention of appealing to the British government. Greig's press was immediately ordered to be sealed up, and himself commanded by warrant to leave the colony within a month. The Fiscal at the same time assumed the censorship of the magazine also, stating that if he had been aware of certain paragraphs in the second number he would have expunged them or suppressed the numbers. Pringle disclaimed his right of censorship, and on the 15th of May 1824 announced the discontinuance of the work in the 'Gazette.' A petition to the king in council was got up by the respectable inhabitants, and the governor became alarmed. He summoned Pringle to appear before himself and Sir John Truter, the chief-justice. He at first attempted to frighten Pringle into submission, and, failing in that, tried to cajole him, and bring him over by flattery; Pringle however resolutely refused to recommence the magazine unless he received a promise that the press should not be interfered with except by legal process. To this the governor would not agree, and Pringle retired, and immediately resigned his appointment as librarian. The result was that the governor's resentment pursued him till, finding himself ruined in circumstances and prospects, he deemed it prudent to leave the Cape, and in July 1826 arrived in London. He applied to the government for compensation for his losses, which he estimated at 1000*l.*, but in vain. Meantime he was engaged as secretary to the Anti-Slavery Society, a situation which he held till slavery was abolished. He became the editor of 'Friendship's Offering,' wrote and published a 'Narrative of a Residence in South Africa,' and contributed to the chief periodical works of the day.

In June 1834 Pringle wrote to his doctor to say that in taking supper a crumb of bread passed down the windpipe, and brought on a violent fit of coughing; that a little blood flowed, which however soon ceased; but that in the morning he felt a sensation as if there had been some

8 R

slight abrasion of the part. This slight abrasion seems to have produced consumption, and his medical advisers informed him that removal to a warmer climate afforded the only chance of saving his life. He was preparing to return to the Cape, and had actually engaged a passage for himself, his wife, and her sister, when an attack of diarrhoea, operating upon his weak state of body, occasioned his death, December 5, 1834.

The greater part of Pringle's works probably consist of fugitive pieces written during the time when he was secretary to the Anti-Slavery Society; but his reputation as an author depends mainly on his 'Narrative' and his 'Poema.' His 'Narrative' is very entertaining; somewhat diffuse perhaps, but simple, distinct, and effective, interspersed with passages of picturesque power and beauty, and characterised throughout by the appearance of undeviating truth. He published also an 'Account of English Settlers in Albany, South Africa,' 12mo. His poetry has great merit. It is distinguished by elegance rather than strength, but he has many forcible passages. The versification is sweet, the style simple and free from all superfluous epithets, and the descriptions are the result of his own observations. His 'African Sketches,' which consist of poetical exhibitions of the scenery, the characteristic habits of animals, and the modes of native life in South Africa, are alone sufficient to entitle him to no mean rank as a poet.

(The *Poetical Works of Thomas Pringle, with a Sketch of his Life*, by Leitch Ritchie.)

PRINSEP, JAMES, was descended from a family of Swiss extraction which had been some time settled in England. He was born in the year 1800, and went out to the East Indies at an early age in the service of the East India Company in the Mint department. On his arrival in India he was appointed assay-master at Benares, where he remained about ten years. Here he collected the materials of his 'Sketches of Benares,' which perhaps give some of the best representations of Indian life yet published. He planned and constructed many works of public utility, and engaged in a valuable series of statistical inquiries connected with Benares. At this time he wrote an elaborate memoir on the mode of determining accurately the point at which the precious metals fuse, which was published in the 'Philosophical Transactions.' Subsequently he was elected a Fellow of the Royal Society.

When the Benares mint was abolished, Prinsep was transferred to that at Calcutta. He had previously contributed to the 'Gleanings of Science,' conducted by Captain Herbert, and on the departure of that gentleman from Calcutta he became the secretary to the physical class of the Asiatic Society, and editor of the 'Gleanings,' which he remodelled in 1832 under the title of the 'Journal of the Asiatic Society,' a work which has contributed in an eminent degree to the extension of every species of information in India. His attention having been directed to the subject of Bactrian coins, he made numerous discoveries which enabled him to fill up the blank left in the history of the successors of Alexander the Great in Bactria, and constructed a nearly unbroken series of numismatic records, which extended from the Macedonian king to modern times.

On the departure of H. H. Wilson for England in 1832, Prinsep became secretary to the Asiatic Society, and he now began to follow up the steps of Jones, Colebrooke, and Wilson in the field of Indian antiquities. Meantime his labours as editor of the 'Journal' were unabated; he was in a great measure the engraver and lithographer for it; and he carried on an extensive correspondence in India and with Europe, besides contributing a number of valuable articles on a great variety of subjects, especially chemistry, mineralogy, Indian numismatics, and Indian antiquities. The most interesting of his discoveries is the decyphering of inscriptions which had remained a sealed book to all previous Orientalists, and which are important as connecting the history of India with that of Europe: the name of Antiochus the Great and the mention of his generals as commanding in the north of India, occur in two edicts of Asoka, or Piyadasi, king of India.

Under the weight of these and other labours his health began to break down. It was hoped that a voyage to England would restore him; but after an illness of eighteen months he died on the 22nd of April 1840, in the fortieth year of his age. His case is said to have borne a considerable resemblance to that of Sir Walter Scott. His death left a blank in the progress of knowledge and civilisation in India which will not perhaps be readily filled up.

(*Delhi Gazette*, July 8, 1840; *Proc. Roy. As. Soc.*, 1840.)

PRIOR, MATTHEW, was born on the 21st of July 1664, it is uncertain whether at Wimborne in Dorsetshire, or in London, in which city his father is said to have been a joiner. His uncle, Samuel Prior, kept the Rummier Tavern near Charing-Cross. Matthew, on the death of his father, was taken charge of by his uncle, who sent him to Westminster School, then under Dr. Busby. When he was well advanced in the school, his uncle took him home with the intention of employing him in his business; but he had the good fortune to attract the notice of the Earl of Dorset, who formed so favourable an opinion of his talents, that he sent him in 1682 to St. John's College, Cambridge, where he was admitted to his bachelor's degree in 1686, and obtained a fellowship. Dryden's 'Hind and Panther' was published in 1686, and Prior, in conjunction with the Hon. Charles Montague, afterwards earl of Halifax, wrote, in ridicule of Dryden's

poem, 'The City Mouse and Country Mouse,' which was published in 1687.

After the revolution of 1688, Prior came to London, and was introduced at court by the Earl of Dorset, by whose influence he was appointed secretary to the embassy which was sent to the congress at the Hague in 1690, and his conduct gave so much satisfaction to King William, that he made him one of the gentlemen of his bed-chamber. On the death of Queen Mary in 1695, Prior wrote an ode, which was presented to the king on his arrival in Holland after her death. In 1697 he was appointed secretary to the embassy which concluded the peace of Ryswick, and the next year filled the same office at the court of France, where he was treated with marked distinction. In 1699 he was at Loo in Holland with King William, by whom he was charged with despatches to England, and on his arrival was made under secretary of state, but losing his place soon after, on the removal of the Earl of Jersey from the office of secretary of state, he was made, in 1700, one of the commissioners of trade. This year he published a long and elaborate poem, the 'Carmen Seculare,' in which he celebrates the virtues and heroic actions of King William.

In the parliament that met in 1701 Prior sat as member for East Grinstead. Soon after this he joined the Tory party. In 1706 he celebrated the battle of Ramillies in a long ode, which he inscribed to Queen Anna. In July 1711, the Tories being now in power, Prior was sent privately to Paris with proposals of peace. In about a month he returned, bringing with him the Abbé Gualtier and M. Mesnager, one of the French ministers, who was invested with full powers. The queen's ministers met Mesnager privately at Prior's house on the 20th of September 1711. This private meeting was made the ground of the charge of treason which the Whigs afterwards brought against Prior. The conference began at Utrecht on the 1st of January 1712, but the business advanced so slowly that Bolingbroke was sent as ambassador to Louis XIV. at Paris to forward it, and Prior either accompanied or followed him. After Bolingbroke's return Prior acted as ambassador, though he was not officially appointed till August 1713; his public dignity however was of short duration, for on the 1st of August 1714 the Tories lost office, and Prior was recalled by the Whigs, by whom he was committed on a charge of high treason, and remained in custody two years. During his confinement he wrote his poem of 'Alma.' He was now without the means of subsistence, except from his fellowship, which he still retained; but the publication of his poems by subscription, which amounted to 4000 guineas, and an equal sum added by Lord Harley, son of the Earl of Oxford, for the purchase of Down-hall in Essex, which was settled upon Prior for his life, restored him to easy circumstances. He died at Wimpole, a seat of the Earl of Oxford, in Cambridgeshire, September 18, 1721, at the age of fifty-seven. A monument was erected to him in Westminster Abbey; and for this and the Latin inscription upon it, which he directed in his will to be written by Dr. Robert Friend, he left 500l.

Prior seems to have been well fitted for the public situations which he filled. It is evident that he was skilled in the art of pleasing, an important requisite in a diplomatist. He secured the approbation of the English sovereigns and ministers who employed him, and his influence at the French court was undoubted. When he joined the Tories he became, as is usual in such cases, a violent partisan; and the charge of high treason and two years' imprisonment were the result of a malignant persecution to which he had exposed himself by his desertion of the Whigs. In his private habits he appears to have been negligent and sensual. It is stated, on the somewhat doubtful authority of Spence, that the woman with whom he lived was "a despicable drab of the lowest species." It is evident however that he secured the esteem and affection of a large circle of associates; he became indeed almost a member of the family of the Earl of Oxford.

Prior, as a poet, was once popular, but is little read now. His lighter pieces are the most attractive. His 'Tales,' though borrowed and mostly indecent, are told with ease and sprightliness, and his 'Epigrams' are often neatly pointed. His 'Alma, or the Progress of the Soul,' the style of which is professedly an imitation of that of 'Hudibras,' has not much either of philosophy or wit in it, but is written in a very lively manner. 'Solomon' is one of the best of his poems. It is a sort of epic, formed out of the Proverbs and Ecclesiastes. The reflections are elaborately expressed, and often with great felicity of diction, but being without character or incident, it is rather heavy reading. 'Henry and Emma' is displeasing from the improbability both of the circumstances and sentiments; yet it was once a favourite with the public. Johnson very truly calls it a "dull and tedious dialogue." His smaller occasional poems are deformed by the continual introduction of the deities of the Grecian and Roman mythology. Venus and Cupid and Mars and Mercury and Jupiter meet us at every turn. Prior is fortunately one of the last of that race of poets who sought for ornament in these school-boy allusions. On the whole, it may be said of Prior that he had none of the higher qualities of a poet—no invention, little power of imagination, and consequently no vividness of description. He has diligence and judgment, and he may be regarded as one of the most correct of English poets. A 'History of the Transactions of his own Times,' for which he had been collecting materials, was published after his death, in 2 vols, 8vo, but it has little in it of Prior's, and is of small value.

PRISCIANUS was a celebrated Roman grammarian, who is said to have been born at Caesarea; but we have hardly any particulars respecting his life. It appears that he was appointed professor of grammar at Constantinople in the reign of Justinian, about 525. (Fabricii, 'Bibliotheca Latina,' vol. iii. p. 398, ed. Ernesti); and we may infer from this circumstance, as well as from several passages in his works, that he was a Christian. He received instruction himself from Theodotus, whom he frequently mentions with great praise.

Priscian's work 'De Arte Grammatica' is comprised in eighteen books, and is dedicated to Julian, whom some modern writers have erroneously supposed to be the emperor of that name. This work, which is the most complete treatise on the Latin language that has come down to us from antiquity, supplied the materials for most of the Latin grammars published at the revival of learning; and the estimation in which it was held at that time is shown by the fact that five editions of it were published between the years 1470 and 1495. Modern scholars may still consult it with profit; it is particularly valuable for the number of quotations which it contains from writers whose works have not come down to us. Besides this work the following treatises of Priscian are extant:—'De XII. Versibus Aeneidos principalibus ad Pueros,' 'De Accentibus,' 'De Declinatione Nominum,' 'De Versibus Comicis,' 'De Praeexercitamentis Rhetoricis,' 'De Figuris et Nominibus Numerorum et de Numis ac Ponderibus.' The best editions of Priscian are by Putschius, in his 'Grammaticae Latinae Auctores antiqui,' 4to, Hanov., 1605, and by Krehl, 8vo, Lips., 1819-20. The 'Opera Minora' were also edited by Lindemann, 8vo, Lugd. Bat., 1818. His treatise on Comic Metres is included in Gaisford's 'Scriptores Latini Rei Metricae,' 8vo, Oxon., 1834. Priscian also wrote a short poem entitled 'De Laude Imperatoris Anastasii,' which was published for the first time by Endlicher, 8vo, Vindob., 1828.

PROBUS, MARCUS AURELIUS, born 232 at Sirmium, served early in the Roman army, and distinguished himself so much that he was made tribune, whilst yet beardless, by the emperor Valerianus, who had great esteem for him, and who recommended him in his letters to his son Gallienus as a young man of great promise. Probus continued to serve with distinction under Gallienus, Claudius II., Aurelianus, and Tacitus. Several letters of these emperors, containing encomiums of Probus, are quoted by Vopiscus. Tacitus, immediately after his exaltation, wrote to Probus, saying that he considered him as the main prop of the state, and at the same time he gave him the command of all the legions in the East, with a large increase of emolument. Probus was beloved by his soldiers for the care which he took of them, and the equal justice which he administered. He served in almost every part of the Roman world—beyond the Danube against the Quadi and the Sarmatians, in Libya, in Egypt, where he erected buildings, excavated canals, and made other improvements; he fought against the Palmyrenians under Aurelian, and afterwards served in Gaul. When Tacitus died, six months after his assumption of the empire, his brother Florianus was proclaimed emperor in the West, whilst Probus was proclaimed in the East; but in less than three months Florianus was put to death by the soldiers, and Probus was acknowledged universal emperor. He was then forty years of age. He defeated several pretenders to the empire, Saturninus in the East, and Proculus and Bonosus in Gaul. He encouraged the cultivation of the vine in Gaul and in Pannonia, as well as in Moesia near Sirmium. He is said to have incurred the displeasure of the soldiers by having said that he hoped shortly that universal peace being established over the empire, their services would no longer be required. An insurrection having broken out in his camp near Sirmium, he took refuge in an iron tower which he had constructed as a watch-tower, but being followed by the mutineers, he was killed, A.D. 282. He is compared by Eutropius with Aurelian for his military abilities, though he was superior to him in refinement and humanity. Vopiscus ('Historia Augusta') has left a high eulogium of Probus. He reigned six years and four months, and was succeeded by Carus.

Coin of Probus.  
British Museum. Actual size.

PROCACCINI, ERCOLE, the Elder, was the head of the celebrated family of artists of that name. He was born in 1520, at Bologna, where the greater number of his works still exist. Authors are divided in opinion respecting his merit; Baldinucci and Malvasia call him a painter of moderate talent, while Lonazzo esteems him to be a happy imitator of the colouring and grace of Correggio. His design is too minute, and his colouring too languid, but he possessed far more taste than most of his contemporaries, and precision free from mannerism, which eminently qualified him for an instructor of youth. Several eminent artists, among whom were Sammacchini, Sabbatini, Bertoja,

and his own three sons, were his disciples. The time of his death is uncertain, but he was living in 1591.

PROCACCINI, CAMILLO, son of Ercole Procaccini, was born in 1546. He received his first instruction in the school of his father, and afterwards visited Rome, where some biographers say that he studied the works of Michel Angelo and Raffaello. His works evidently show that he had been charmed by Parmegiano. He combined a simplicity and spirit by which his works always charm the eye, though they are too often deficient in the higher power of impressing the mind and moving the affections; which indeed we can hardly expect when we consider the prodigious number of his works in Bologna, Ferrara, Ravenna, Reggio, Piacenza, Parma, and Genoa. Sometimes he allowed himself more time, and then his works have less of the mannerist. His St. Rocco at Reggio deterred Annibale Caracci from painting a companion to it. At Piacenza he had less success in painting against Ludovico; yet his picture occupies the principal place. He died in 1626.

PROCACCINI, GIULIO CESARE, the best artist of the family, was born in 1548. He renounced sculpture, in which he had made considerable progress, for painting, which he studied in the school of the Caracci. The works of Correggio were the principal object of his studies, and many judges are of opinion that no painter ever approached nearer to the style of that great artist. In some of his easel pictures and works of confined composition, he has been mistaken for Correggio. A Madonna of his, at San Luigi de Franzesi, has been engraved as the work of that master; and some paintings still more closely approximating to this style are in the palace of Sanvitali at Rome and in that of Carrega at Genoa. Of his altar-pieces, that at Santa Afra in Breecia is perhaps most like the style of Correggio; it represents the Virgin and Child amidst a smiling group of saints and angels, in which dignity seems as much sacrificed to grace as in the mutual smile of the Virgin and the Angel in the Nunziata at San Antonio of Milan. He is sometimes blameable for extravagance of attitude, as in the Executioner of San Nazario, which is otherwise a picture full of beauties. Notwithstanding the number and extent of his works, his design is correct, his forms and draperies select, his invention varied, and the whole together has a certain grandeur and breadth, which he either acquired from the Caracci, or, like them, derived from Correggio. He died in 1626, aged seventy-eight.

PROCACCINI, CARLO ANTONIO, brother of Camillo and Giulio, was born at Bologna, and learned the art from his father. Not having, like his brother, sufficient genius and invention to attain eminence in historical composition, he devoted himself to landscape, in which he acquired considerable reputation, as well as by fruit and flowers, which he designed after nature. The exact time of his birth and death is unknown: his best pictures in the Milan gallery were painted about 1605.

PROCACCINI, ERCOLE, called the Younger, was born in 1596, at Milan. He was the son of Carlo Antonio, and studied under his uncle Giulio Cesara. He frequently painted history and landscapes, but his chief excellence appeared in his flower-pieces, which he painted with great taste and perfection. He died in 1676, at the age of eighty.

PROCI'IDA, GIOVANNI DI. [ANJOU, DUKES AND COUNTS OF, vol. i. col. 222.]

PROCLUS, a celebrated Neo-Platonist, was born at Constantinople, on the 8th of February, A.D. 412. His parents, who were people of wealth and consideration, resolved to give him the best possible education, and with this view sent him to Xanthus in Lycia, where he was taught reading, writing, and grammar; thence to Alexandria, where he attended the lectures of all the most eminent teachers of philosophy and mathematics; and finally to Athens, where he became a disciple of Plutarchus and Syrianus, two distinguished philosophers of that school. Proclus was the last rector of the Neo-Platonic school at Athens, and died there, on the 17th of April 485, i.e. as his successor and biographer Marinus defines it, 124 years after the reign of Julian. (Marinus, 'Vita Procli,' c. 36.) As the successor of Syrianus, he is sometimes called Diadochus.

The works of Proclus, which are very numerous, consist principally of commentaries on older writers; of these the best known are his commentaries on the 'Timæus' and 'Parmenides' of Plato, the latter of which has been printed as an appendix to Stallbaum's bulky edition of the dialogues. He wrote also commentaries on Hesiod's 'Works and Days;' on Ptolemy's 'Astrology;' and on the first book of Euclid's Elements, in two books. His original works, besides a few hymns of doubtful merit, are a treatise 'On the Sphere,' published by Bainbridge, London, 1520 (which however is mostly taken from Geminus), and 'Eighteen Arguments against the Christians,' in which he endeavours to prove that the world is eternal.

In this style Proclus is much more perspicuous and intelligible than his predecessor Plotinus; indeed he is on the whole a good writer, and occasionally is almost eloquent. But the matter of his works has not much to recommend it: his propensity to allegorise everything, even the plainest and simplest expressions in the authors on whom he comments, must deduct largely from his merits as an expounder of other men's thoughts; and but for the interest which attaches to him as the last of a school of philosophy, it is not much to be regretted that his works have slumbered so long in the dust of libraries, and

have been either wholly neglected or imperfectly edited. "His life," says Gibbon, "with that of his scholar Isidore, composed by two of their most learned disciples, exhibits a deplorable picture of the second childhood of human reason."

The commentaries on Euclid's first book are valuable for the large number of scattered pieces of information which they give on the history of geometry; but as commentaries they are only useful as showing what kind of discussion took place on geometrical questions at the time when they were written. These commentaries were translated by the late Mr. Thomas Taylor, whose attempts to revive all kinds of Platonism are well known. The original Greek was published by Hervagius at Basel, but from so bad a manuscript, that the Latin of Barocius (Patauii, 1560), taken from more and better manuscripts, is a better authority when it differs from the Greek of the Basel edition.

The reader who has any curiosity to know more of this author may refer to the following books 'Procli Opera,' ed. Victor Cousin, Paris, 6 vols. 8vo, 1820-27; 'Initia Philosophiæ ac Theologiæ ex Platoniciis fontibus ducta, sive Procli Diadochi et Olympiodori in Platonis Alcibiadem Commentarii,' ed. Fr. Creuzer, Francof. ad Mœn., 4 vols. 8vo, 1820-25; 'Ex Procli Scholiis in Cratylum Platonis,' ed. J. F. Boissonade, Lips., 1820; 'Translation of the Six Books of Proclus on the Theology of Plato,' &c., by Th. Taylor, Lond., 2 vols. 4to, 1815; 'The Commentaries of Proclus on the Timæus of Plato,' in 5 books, by Th. Taylor, Lond., 2 vols. 4to, 1820; Brucker, 'Historia Critica Philosophiæ,' vol. ii.; Ritter, 'Geschichte der Philosophie,' vol. iv.; and Tenneman, 'Geschichte der Philosophie,' vol. vi.

PROCOPIUS, ANTHEMIUS, by which latter name he is best known in history, a grandson of Anthemius, who was minister of Arcadius and of Theodosius II., was proclaimed emperor of the West by the nomination of Leo I., emperor of the East, and with the consent of Ricimer, a chief of Suesian and other barbarian mercenaries in the service of the empire, who had assumed the supreme military authority over Italy after the death of Severus. As a condition of his consent, Ricimer obtained the hand of the daughter of Anthemius. After a few years Ricimer quarrelled with his father-in-law, and marched against him. The Emperor Leo despatched the patrician Olybrius to Italy to mediate a peace, but Olybrius, being offered the crown by Ricimer, was tempted by the offer and accepted it. Anthemius, though forsaken by most of his followers, made a stout resistance outside of Rome, but he was defeated and killed, A.D. 472, after five years' reign.

Coin of Procopius.  
British Museum. Actual size.

PROCOPIUS, the historian, was born at Caesarea in Palestine, about the end of the 5th or beginning of the 6th century. After studying rhetoric in his native country, he went to Constantinople, where he gave lessons in rhetoric, and appears to have practised also as a lawyer, for such he is styled in the title of some of his works. His reputation for learning and ability reached the court; and the Emperor Justin the Elder, in the last year of his reign, appointed him assessor (*συγκριτής*) to Belisarius, who was about that time sent as governor to Dara on the frontiers of Armenia. Procopius afterwards accompanied that commander in his first war against the Persians (530), afterwards in that against the Vandals in Africa (533-5), and lastly against the Goths in Italy (536-9). During these campaigns he appears to have rendered himself very useful through his abilities and activity, and to have been entrusted by Belisarius with important commissions connected with the service of the army. In his capacity of assessor, he was the general's legal adviser, and he was also his private secretary. In 538 he assisted Antonina, the wife of Belisarius, in raising troops in Campania, and in sending some by sea to Rome, which was then besieged. On his return to Constantinople, about 540, the Emperor Justinian made him a senator, as a reward for his services. In 562, he was made prefect of Constantinople, unless perhaps it was another of the name who obtained this dignity in that year. He died in that city at an advanced age, but the precise year of his death is not ascertained.

Procopius wrote the 'History of his own Times,' in eight books, which has been translated into Latin by Claude Mattret, a jesuit. 'Procopii Cæsariensis Historiarum sui Temporis Libri Octo,' fol., Paris, 1662, with the Greek text. The work has also been translated into Italian, German, and other modern languages. There is a German translation, with notes, by Kanngieser, Greifswald, 3 vols. 8vo, 1827-29. The 'History' of Procopius is an important work, which forms the connecting link between ancient and modern history, between Ammianus Marcellinus and the Byzantine historians. Procopius was well informed and unprejudiced; he was a spectator of, or an actor in, most of the events which he narrates; he was well acquainted with the court of Justinian; and he is generally trustworthy, except

perhaps where he stoops to the customary flatteries towards the emperor, the Empress Theodora, and his patron Belisarius, for which flattery however he has made ample amends in his secret history of the same personages. His descriptions of the manners of the various barbarous nations which invaded the Roman empire are vivid and interesting. The first two books of his history concern the Persian wars. He begins his narrative with the death of Arcadius, and briefly relates the wars between the Romans and Persians under Theodosius the Younger, Anastasius, and Justinus, and lastly Justinian. As he comes down to contemporary times, his history is more diffuse. He brings his narrative down to the 23rd year of Justinian's reign, A.D. 550. Books 3 and 4 treat of the wars of the Vandals in Africa, and the reconquest of that province by Belisarius. The 5th, 6th and 7th books are concerned with the history of the Gothic kingdom in Italy founded by Theodoric, and the expedition of Belisarius against Totilas. The 8th book is of a mixed character; it resumes the account of the Persian wars, then speaks of the affairs of the Roman empire in other quarters, in Africa, on the Rhine, and in Thrace, and at last it resumes the narrative of the Gothic war in Italy, the expedition of Narses, the defeat and death of Teia, and the final overthrow of the Gothic kingdom.

A second volume, published likewise at Paris, in 1563, contains two other works of Procopius, in the Greek text, with a Latin translation. One contains an account of the public buildings erected or restored by Justinian throughout the empire, 'De Ædificiis Domini Justiniani Libri VI.' It is written in a laudatory style, but contains much valuable topographical information.

The other work of Procopius is entitled 'Anecdota, or Secret History,' in thirty chapters. The character of this book has been noticed under JUSTINIANUS. Justinian and Theodora are here painted in the darkest colours. Procopius says that he wrote it to complete his 'History,' in which he could not, through fear of torture and death, speak of living persons as they deserved. Some grossly obscene passages concerning Theodora, who was evidently a very bad woman, have been expunged in most editions. There seems little doubt that Procopius is the author of the work. The Paris edition of Procopius, already quoted, is enriched with copious historical notes, prefaces, and an index. The works of Procopius, with valuable notes, are included in the Bonn edition of the Byzantine Historians, 3 vols. 8vo, 1833-38.

\* PROCTER, BRYAN WALLER, known as an English poet by his pseudonym of BARRY CORNWALL, was born about or soon after the year 1790, and was at Harrow School at the same time as Lord Byron. Destined for the legal profession, he was for some time in the office of a solicitor in Wiltshire; but afterwards he studied law in London, where he was called to the bar as a member of Gray's Inn in 1831. For many years he has held a valuable appointment in the court of Chancery as one of the Commissioners of Lunacy. His first distinct appearance as an author was in 1819, when he published a volume entitled 'Dramatic Scenes and other Poems.' This volume being written with great care and in a direct and natural style, gave him a place among the poets of the day. The following is a list of his subsequent productions:—'Marcian Colonna, an Italian tale; with three Dramatic Scenes and other Poems,' 1820; 'A Sicilian Story, with Diego de Mantilla and other Poems,' 1820; 'Mirandola, a Tragedy,' 1821; 'The Flood of Thessaly, and other Poems;' his 'Poetical Works,' printed in a collected form in three volumes in 1822, and again in 1853; 'Effigies Poeticæ, or the Portraits of the British Poets illustrated by Notes, Biographical, Critical, and Poetical,' 1824; 'English Songs and other Small Poems,' 1832, re-issued lately with additions; and 'Essays and Tales in Prose,' 1851, republished in America in 1853. Mr. Procter is also the author of a Memoir and Essay prefixed to an edition of Shakspeare. All these works were published under the assumed name of Barry Cornwall, under which name, better than under his real one, the author has long been known to readers of poetical taste both in Britain and in America. He is one of those poets who have by their own writings helped to bring in the taste, now general, for the older English poets. By many his dramatic poems are preferred; and one of them—the tragedy of 'Mirandola'—had considerable success when produced at Covent Garden Theatre. His 'Songs' have likewise been great favourites; and it has been thought that few recent writers of English songs have had equal success in this proverbially difficult species of poetry—a species in which English literature is not abundant.

PROCULUS, one of the tyrants or pretenders to the Roman empire who rose after the death of Tacitus. He was a native of Liguria, and originally a chief of robbers, but afterwards served in the army with distinction under Aurelian, and showed himself a brave though rude soldier. He was proclaimed emperor in Gaul, and fought against the Germans, but being attacked by Probus, who was acknowledged emperor by the senate, was defeated and killed, A.D. 276.

PROCULUS, a distinguished Roman jurist, the successor of Nerva the father. He belonged to the school of Labeo, and the followers of that school derived their name (Proculliani) from him. [LABEO, ANTIUSTIUS.] It is generally stated that his name was Sempronius Proculus; but Pomponius ('Dig.' 1, tit. 2, s. 2, § 47) calls him simply Proculus. The passage of the 'Digest' (31, tit. 1, s. 47) which is cited to prove that his name was Sempronius does not prove that it

was. In this passage Sempronius Proculus sends greeting to his grandson, and asks him his opinion about a legacy. "Proculus respondit," Proculus gave his opinion, and therefore the grandson and Proculus are the same person; and, as Zimmern remarks, Proculus the jurist might be the son of the daughter of Sempronius Proculus the grandfather, in which case his name would not be Sempronius. It has been conjectured that Proculus the jurist is the Licinius Proculus whom Otho made Præfectus prætorio (Tacitus, 'Hist.,' i. 46, 82, 87; ii. 39, 40, 44, 60). Proculus is often cited in the 'Digest,' and he is specially mentioned in a Rescript of the Divi Fratres as an eminent authority ('Dig.,' 37, tit. 14, s. 17). There are thirty-seven excerpts in the 'Digest' from a work of Proculus, entitled 'Epistola,' of which there were at least eleven books ('Dig.,' 18, tit. 1, s. 69), though the Florentine Index mentions only eight. One of the excerpts ('Dig.,' 33, tit. 6, s. 16) has the title 'Proculus, libro iii. ex Posterioribus Labœonia,' which appears to be a separate work or commentary on the 'Posteriora' of Labœo. But as Javolenus wrote on the 'Posteriora' of Labœo ('Dig.,' 33, tit. 7, s. 4), it is conjectured that the title of s. 16 ('Dig.,' 33, tit. 6) should be 'Javolenus.'

PRO'DICUS, a native of Coa, or, as some think, of Chios, flourished B.C. 435. He was a disciple of Protagoras, became a celebrated Sophist, and had among his followers Socrates, Euripides, Isocrates, and Xenophon. Prodicus travelled through Greece from town to town, to deliver his lectures, for which he demanded payment of his hearers, sometimes to an extravagant amount. Several ancient writers refer to these lectures, or harangues, as worthy of a philosopher. Prodicus however is reported to have been put to death by the Athenians, because they thought that he corrupted the youth by his teaching; and it is further remarkable that he is numbered among the atheists by Cicero. ('De Nat. Deorum,' i. 42.) None of the writings of Prodicus are extant except a beautiful episode preserved by Xenophon ('Mem.,' ii. 1), usually called 'The Choice of Hercules.' This has been paraphrased in English verse by Shenstone and by Bishop Lowth, and there is a prose translation in the 'Tattler.' Three others of this name are noticed by Fabricius, but very little concerning them is known. (Fabricius, *Bibliotheca Græca*.)

PROKOPHIEV, IVAN PROKOPHIEVITCH, an eminent Russian artist, was born at St. Petersburg, on the 25th of January 1758. At the age of twelve he began to study sculpture under Gilet, one of the professors at the Academy of Fine Arts, and during the eight following years obtained medals and prizes for various bas-reliefs, to which branch of the art he afterwards more especially applied himself. Having gone through the course of studies at the academy, he was sent, at its expense, in September 1779, to perfect himself under Julien at Paris, where, in the following year, he executed a bust in marble of Prince Gagarin, and a relief in terra-cotta representing Moses, which last, and a similar one of Morpheus, are in the Academy at St. Petersburg. Having passed a few months at Berlin and Stettin, on his way home, he returned to St. Petersburg in the summer of 1784; and from that time till within a few years preceding his death he continued to practise his art most industriously. His productions are so numerous that even a mere list of them would extend to a considerable length; but the majority were certainly not of the kind to excite much public attention, as they consisted chiefly of bas-reliefs, medallions, and works of that class, on a comparatively small scale, and executed for private individuals. Many of them besides were only in terra-cotta. Taken generally however they are allowed to display considerable powers of invention and ability in composition. In the Imperial Library at St. Petersburg there are sixteen small caryatides and twenty-eight bas-reliefs by him. His last work was a bust of the Polish poet Trembecki; soon after the completion of it he was attacked by a complaint that deprived him of the use of his right hand, at least rendered him incapable of employing it either in modelling or designing. He died at St. Petersburg, on the 10th of February 1828, in his seventy-first year.

The earlier productions of this artist have, with much beauty, somewhat also of the French mannerism of that day in sculpture, caught, no doubt, from his instructor Julien; but he afterwards completely corrected that fault, and his later works display a more classical style.

PROMOTUS, ÆLIUS, an Alexandrian physician, whose date is not exactly known. Villoison ('Anecd. Gr.,' tom. ii., p. 179, not. 1) says that he lived after the time of Pompey the Great; but Passevini ('Bibl. Select.,' p. 17), and Ant. Bongiovanni, in his letter to Giov. della Bona (Io. à Bona, 'Tract. de Scorbuto,' 4to, Verona, 1781), consider him to be much more ancient. He is probably the person mentioned by Galen ('De Compos. Medicam. sec. Loca,' lib. iv., cap. 6), and he is the author of several Greek medical works, which are still in manuscript in different European libraries. The prologue to one of these, entitled *δυναμικόν*, i.e., 'Congeries Medicaminum secundum Loca,' together with some extracts from it, is to be found in Bona's treatise quoted above, and is reprinted by Kühn, in his 'Additum. ad Elench. Medicor. Vet. à Io. A. Fabricio exhibit,' 4to, Lipsæ, 1826. The extracts consist of recipes for different diseases. The work exists in manuscript in St. Mark's Library at Venice, No. cccxv., 4to. (Morell, 'Bibl. Inst. cum Græc. tum Latin.,' i. 170.) Fabricius mentions another of his works, entitled *ιατρικά, φυσικά, καὶ ἀντιπαθητικά*, which exists in manuscript at Leyden among the books belonging to Voss.

Schneider says ('Præfat. in Nicand. Alexipharm.,' p. 19) that, judging from an extract sent him by Ruhnken, the work is so full of absurdities as not to deserve to be published. Another of his works, entitled *περὶ ἰσθμῶν καὶ δηλητηρίων φαρμάκων*, is to be found in the libraries at Rome and at Paris. Mercuriali has inserted a few fragments in his 'Variae Lectiones' (lib. iii., cap. 4), and several times quotes it in his work 'De Venenis, et Morbis Venenosis,' lib. i., cap. 16; lib. ii., cap. 2), from which it appears (lib. iii., cap. 4) that he agreed with Ælian ('De Nat. Anim.,' lib. vi., cap. 20), Apollodorus (ap. Plin., 'Hist. Nat.,' lib. xi., cap. 30), and Nicander ('Ther.,' v. 769, &c.), in dividing scorpions into nine species.

PRONY, GASPARD-CLAIR-FRANÇOIS-MARIE-RICHE DE, was born at Chamelet, in the department of the Rhône, July 22, 1755. His father was a member of the 'parliament,' or chief civil court of the ancient principality of Dombes; and at the College of Thoissey in that principality Prony received his education until 1776, when he entered the 'École des Ponts et Chaussées.' Here his assiduity was such as to lead Perronnet to foretel that he would one day occupy his own position, that of head of the establishment. He first became known as an author by an essay on the 'Thrust of Arches,' published in 1783, about which time he began to be employed under Perronnet upon several public works, among which may be mentioned the restoration of the port of Dunkirk (1783), and the erection of the bridge of Louis XVI. (1787-90), of which last the engineering plan is said to have been drawn up and its execution superintended by Prony.

In 1790 he published the first volume of his 'Hydraulic Architecture.' The second appeared in 1796. Prior to this, the only work of the kind accessible to the engineer was the standard work bearing the same title, by Belidor, published in 1737-53; so that, as Delambre observes, the progress which the theory of mechanics had made in the hands of Euler, D'Alembert, Lagrange, and Laplace, had lain without real application to the arts of construction. Prony's work is perhaps the first of an elementary character in which the directions of forces, and the systems on which they act, are referred to rectangular co-ordinate axes. It contains a clear exposition of the steam-engine, at a time when the steam-engine was scarcely known on that side of the channel; but his empirical formulæ for determining the elasticity of steam, the investigation of which occupies a considerable portion of the second volume, have been entirely superseded by more recent researches. His method of determining the diameter of a steam-cylinder Tredgold designates as "little better than telling the artist to guess at it, and correct his guess by an intricate formula." The same author remarks that the labours of Prony in this department "afford the strongest evidence that mere mathematical talent is not sufficient for the promotion of mechanical science, otherwise the principle of the steam-engine would not have remained to be investigated." (Tredgold 'On the Steam-Engine,' 4to, i., p. 33, Lond., 1838.)

Among other scientific projects of the French revolutionary government at this period was that, suggested by Carnot and others, of computing a set of mathematical tables, by which it was supposed two objects would be attained—the application of the decimal division of moneys, weights, and measures, then recently introduced, would be facilitated; and the world astonished by the "most vast and imposing monument of calculation which had ever been executed or even conceived." The direction of this laborious undertaking was confided to Prony in 1792 (year ii.), and with him were associated three or four of the principal mathematicians of Paris, including Legendre. It was however easy to foresee that their joint efforts, and the exclusive devotion of the rest of their lives, would alone be inadequate to the completion of the task they had undertaken. Occupied with this discouraging reflection, Prony opened by accident a volume of Adam Smith's 'Wealth of Nations,' at a part where the author is instancing the manufacture of needles in illustration of the principle of the division of labour. "Why," thought Prony, "should not the same principle be applicable, and with equal advantage, in the manufacture of logarithms?" Pondering on the practicability of this, he retired into the country, and in a few days returned with his plan of operations fully digested. He divided his assistants into three sections; the first, of which Legendre was the president, was occupied in selecting from "amongst the various analytical expressions which could be found for the same function, that which was most readily adapted to simple numerical calculation, by many individuals employed at the same time." (Babbage, 'Economy of Manufactures,' p. 191.) These expressions included several very elegant formulæ investigated by Legendre, for determining directly the successive differences of the sines. The second section "consisted of seven or eight persons of considerable acquaintance with mathematics; and their duty was to convert into numbers the formulæ put into their hands by the first section, an operation of great labour; and then to deliver out these formulæ to the members of the third section, and receive from them the finished calculations. . . . The third section, which consisted of from sixty to eighty members, received certain numbers from the second section, and using nothing more than simple addition and subtraction, they returned to that section the tables in a finished state." (Babbage, pp. 191, 192.) The whole of the calculations, which to secure greater accuracy were performed in duplicate, and the two manuscripts subsequently collated with care, were completed in the short space of two years. They occupy seventeen "enormous" folios, and consist of—

1, an introduction, containing the analytical formulæ and the mode of using the tables; 2, 10,000 natural sines to 25 places of decimals, with seven and eight columns of differences; 3, the logarithms of 100,000 sines to 14 places of decimals and 5 columns of differences; 4, the logarithms of the ratios of the first 5000 sines to their corresponding arcs to 14 decimal places; 5, a similar table of the ratios of the tangents to their arcs; 6, the logarithms of 100,000 tangents; 7, the logarithms of numbers from 1 to 100,000 to 19 decimal places, and from 100 to 200,000 to 14 decimal places, with 5 columns of differences. In 1820 a distinguished member of the Board of Longitude, London, was instructed by our government to propose to the Board of Longitude of Paris to print an abridgment of these tables at the joint expense of the two countries: 5000*l.* was named as the sum which our government was willing to advance for this purpose; but the proposal was declined, and the great 'Tables du Cadastre' are still confined in manuscript to the library of the Paris Observatory.

Prony was appointed professor of mechanics to the École Polytechnique in 1794, the year of its institution, and the same year he became Directeur-Général des Ponts et Chaussées. As professor to the École Polytechnique he was indefatigable in endeavouring to bring the researches of modern mathematicians within the comprehension of his pupils. This was the object of his 'Mécanique Philosophique,' 4to, Par., 1800. It is an analytical synopsis of mechanics, hydrostatics, and hydraulics. The right-hand pages are each divided into four columns, headed notation, definition, theorems, problems; while those to the left are occupied with so much of investigation and reasoning as is just sufficient to connect the several results in the mind of the student.

In 1798 Napoleon invited him to become a member of the Institute of Egypt, which however he declined, and his refusal was never entirely forgotten or pardoned. Nevertheless, after Napoleon's coronation as king of Italy (1805), Prony was charged with the engineering operations for protecting the province of Ferrara from the further inundations of the Po; and about the same time, or earlier, he was employed in superintending the works then carried on by the French government in the ports of Genoa, Ancona, Pola, and in the Gulf of Spezia, including some very intricate investigations connected with the tides, currents, and deposits of the Adriatic and canals within the Venetian territory. Napoleon's animosity towards Prony appears to have been counteracted only by a regard for his abilities. We are told by Arago that Prony's researches relative to the thrust of embankments ('poussée des terres'), and on the proper dimensions of lining-walls ('murs de revêtement'), 4to, Paris, 1802, with the obvious practical utility of the results to which they led, were the means of securing Napoleon's suffrage. On a later occasion, when the emperor was distributing the new dignities which he had created, a secretary of state reminded him of Prony, to which he merely replied, "Il ne faut pas mettre son rabot en dentelles; on ne pourrait plus s'en servir pour raboter."

In 1810 he was appointed (in conjunction with Count Fossombrone of Florence) chief of the Commissione de l'Agro Romano, which had for its object the more effectual drainage and improvement of the Pontine Marshes. "The results of his labours in this very important task, which he prosecuted with extraordinary zeal and success, were embodied in his 'Description Historique et Hydrographique des Marais Pontins,' which appeared in 1823, and which contains a very detailed account of the past, present, and prospective condition of those pestilential regions, and a very elaborate and scientific description of the principles which should guide us in all similar cases in order to effect their permanent restoration to healthiness and fertility." ('Edinburgh Journal of Science,' xv., p. 527.)

After the restoration he continued to be employed in various important works, among which was the formation of extensive embankments near the mouth of the Rhône. In 1817 he became a member of the Bureau de Longitude; the following year he was elected one of the fifty foreign members of the Royal Society, London; in 1823 he was created a baron by Charles X., and in 1835 a peer of France. He died at Aonières, near Paris, the latter end of July 1839.

In his professional character Prony was the reverse of imperious. He gave his opinion on all occasions with exemplary frankness. Those who were associated with him in any of his undertakings continued ever after his friends, and there is no instance of a pupil claiming his support without its being cordially granted. That he was mindful of his obligations to others is shown by his calling on Arago in 1837, and desiring him not to omit in his 'Eloge of Carnot,' when about to be published for the first time, that the latter had saved his (Prony's) life in 1793. As a mathematician and philosopher, though inferior to some of the great men of his day, he was certainly one "of whom his country may justly be proud, whether we consider the extent and character of his scientific attainments, or the variety of important, practical, and useful labours in which his life was spent."

The following works, with those already mentioned, will, we believe, nearly complete the list of Prony's literary labours:—1, 'Experimental and Analytical Essay on the Laws of Expansion observed by Elastic Fluids, and on the Expansive Force of the Vapours of Water and Alcohol at different Temperatures,' Par. 4to, 1794 (also printed in the first volume of the 'Journal de l'École Polytechnique'); 2, 'Plan of Instruction for the Students of the National School des Ponts et Chaussées, for the year vii.,' Par. 1795;

3, 'Analysis of the 'Exposition du Système du Monde' of Laplace, Par. 8vo, 1801; 4, 'Plan of Instruction for the Polytechnic School so far as regards the Equilibrium of Bodies,' Par. 4to, 1801; 5, 'Report made to the Mathematical and Physical Class of the National Institute, upon divers inventions of Jean Pierre Droz, relative to the Art of Coining,' Par., 4to, 1801; 6, 'Report on the Memoir of Darcos relative to the supply of Water requisite for Canals,' Par. 8vo, 1801; 7, 'Results of Experiments for determining the Relation between the French Mètre and the English Foot,' Par. 1802; 8, 'On the Supply of Water requisite for the Canal Saint Quentin' ('Sur le Jaugeage des Eaux Courantes qui doivent alimenter le bassin du passage du Canal Saint Quentin') Par. 4to, 1802; 9, 'Physico-Mathematical Researches in the Theory of Flowing Waters,' Par. 4to, 1804; 10, 'On the Computation of Latitudes and Longitudes,' Par. 4to, 1806; 11, 'On the Variations in the Inclination of the Seine, and its Amount for each day of the years 1788-90, together with the Report made to the Academy of Sciences, January 29, 1791, by Lavoisier, Laplace, and Coulomb,' Par. 4to, 1806; 12, 'Summary of Lessons on the Motion of Solids and on the Equilibrium and Motion of Fluids,' Par. 4to, 1809; 13, 'Lessons in Analytical Mechanics delivered to the Royal Polytechnic School,' Par. 4to, 1815; 14, 'On Bréguet's Metallic Thermometers,' Par. 4to, 1821; 15, 'On the work of M. Sept-Fontaines relative to the Cubature of Timber,' 4to, no date; 16, 'On Swing-Bridges' ('Ponts à Bascules') 4to, no date; 17, 'New System of Trigonometrical Levelling,' Par. 8vo, 1823; 18, 'On the large Logarithmic and Trigonometrical Tables adapted to the New Decimal System of Weights and Measures,' Par. 4to, 1824; 19, 'On the recently instituted Professorship of the Harp in the Royal School of Music,' Par. 4to, 1825, 12 pages; 20, 'Synopsis (Résumé) of the Theory and Formulæ relative to the Motion of Water in Tubes and Canals,' Par. 1825; 21, 'Report on the Old and New Steam-Engines erected at Paris, au Gros-Cailou,' Par. 8vo, 1826; 22, 'Fragments of an unedited Memoir,' Lyon, 8vo, 1827 (16 pages); 23, 'Elementary Instructions on the Calculation of Musical Intervals by assuming either the Octave or the Twelfth Octave as the Unit of Comparison,' 'Analytical Formulæ for calculating the Acoustic Logarithm of any proposed Number, &c., with applications to Musical Instruments,' Par. 4to, 1832; 24, 'Examination of the proposals for levying a Toll ('Projets de Barrage') on the Seine near Havre,' Par. 8vo, 1831, (also in the 'Annales des Ponts et Chaussées'); 25, 'On the Inflexions which, after the lapse of twenty years, had taken place in certain straight lines drawn upon the bridge Louis XVI, prior to the removal of the centering, with Formulæ and Tables for calculating the change which settlement ('le tassement') produces in a circular arch,' Par. 1832, 20 pages; 26, 'Formules pour calculer les Hauteurs des Remons occasionés, soit par des Rétrécissements, soit par des Barrages (avec écoulements de fonds) pratiqués dans les Lits des Eaux Courantes,' Par. 8vo, 1835 (also in the 'Annales des P. et C.');

27, 'On the Measurement of the Dynamical Effects of Rotatory Machines,' Par. 4to, no date; 28, 'On Regulating the Duration of the Oscillations of the Pendulum,' Par. 4to, no date. To the 'Recueils de l'Institut' he contributed—1, 'Notice of the Life and Works of Pigné,' tom. i., 1798; 2, 'On the Conversion of Circular Movement into Rectilinear,' ii., 1799. To the 'Journal de l'École Polytechnique'—1, 'On a Course of Elementary Analysis, by Lagrange,' tom. i., 1794; 2, 'Course of Mechanics for the Year V.,' ii., 1795; 3, 'Éloge de Lamblardie,' ib.; 4, 'On the Principle of Virtual Velocities and the Decomposition of Circular Motions,' ib.; 5, 'Introduction to Pure Analysis and of Analysis as applied to Mechanics,' ib.; 6, 'Theory of Rotation about a Free Axis,' ib.; 7, 'On the Particular Solutions of Differential Equations and their Application to Engineering,' ib. 1810; 8, 'On the Hydraulic System of Italy,' ib.; 9, 'Detailed Analysis of the Questions relative to the Motion of a Body acted upon by any Powers whatever,' ib.; 10, 'On the New Sluice of M. de Baucourt,' viii., 1809. See also the 'Bulletin de la Société Philomathique,' 'Annales des Mines,' 'Encyclopédie Méthodique' ('Forêts et Bois'); 'Connaissance des Temps,' after 1800.

(Discours prononcé par M. Arago, le 3 Août 1839, sur la tombe de M. de Prony; 'Biographie des Contemporains,' Edinburgh Journal of Science, vol. xv.; Note sur la Publication proposée par le Gouvernement Anglais, des grandes Tables Logarithmiques et Trigonometriques, de M. de Prony, Paris, 1820, quoted by Babbage in his 'Economy of Machinery and Manufactures,' London, 1832; 'Parliamentary Papers,' 1823, xv., p. 9, &c.; 'Querard's Dictionnaire Bibliographique; The Works of Prony, &c.)

PROPERTIUS, SEXTUS AURELIUS, a native of Hispellum, or, according to others, of Mevania in Umbria. The year of his birth is not stated by any ancient authority, but he himself (iv. 1, 127, &c.) says that he took the toga libera (which was generally taken at the age of fifteen) at the festival of the Liberalia, soon after the battle of Philippi, which was fought in B.C. 42, so that he was most probably born about the year B.C. 56. Clinton fixes his birth however at B.C. 51, and Lachmann and Hertsberg as late as B.C. 48 or 47. His family was of equestrian rank (iv. 1, comp. with Plin., 'Epist.' vi. 15, and ix. 22), and when, after the campaign of Philippi, Augustus rewarded his veterans with assignments of lands, the family of Propertius was, like many others who had supported the cause of Antony, deprived of their estates. About this time or soon afterwards, young Propertius went to Rome, where he devoted himself entirely to poetry (iv. 1,

134). In Rome he soon attracted the attention and gained the friendship of contemporary poets, such as Ovid, who always speaks of him with fondness ('Trist.', ii. 465; iv. 10, 53; v. 1, 17; 'Ars Amat.' iii. 334; and in other places). He also enjoyed the patronage of Mæcenas, and lived on the Esquiline, perhaps in the gardens of his patron himself. His property seems to have been very small, for no estate or villa of his is mentioned. Mæcenas tried to induce him to write an epic poem, in which he was to celebrate the achievements of Augustus (ii. 1), but Propertius refused to comply with the wish of his patron, at least partly; and seems purposely to have described himself as a man given to sensual enjoyments, in order that no such lofty claims might be made upon him. The fourth book of his 'Elegies' however contains a series of poems on Roman legends, especially those of a religious nature. Now, as Augustus restored many old religious forms, it does not seem improbable that the poet here at least partially intended to fulfil the wish of Mæcenas. It has been supposed that Propertius died at a very early age, but Nobbe ('Observationes in Propertii Carmina,' 1817) has shown that the first book of his 'Elegies' was not written before the year B.C. 33; the second not before B.C. 24; the third not before B.C. 21; and the fourth not before B.C. 16; and according to these dates he must at least have lived until the year B.C. 16, to the age of forty. An accurate Life of Propertius is still a desideratum in the history of Roman literature. His connections of friendship, to which allusions are made in his poems, as well as those of his contemporaries, might furnish some materials towards it.

Propertius, in his poetry, took Callimachus and Philetas as his models, and his ambition was to be considered the Roman Callimachus to which a sneering allusion is made by Horace ('Epist.', ii. 2, 100.) We possess four books of Elegies of Propertius; whether he wrote more is uncertain. In the first three books he sings of his beloved Cynthia, whose real name is said to have been Hostia; the fourth, which by some editors has been subdivided into two, is chiefly occupied with heroic and religious legends, in which the poet seems to have possessed considerable learning; and he delights in showing it, though he thereby weakens the effect of his poetry. The Elegies addressed to Cynthia, who herself was a woman of eminent talents, form a kind of romance, and, considering the character of the age, evince an almost unparalleled faithfulness and constancy between the lovers. But Propertius has nothing of the effeminate sentimentality of Tibullus, and, notwithstanding his passionate love, he always retains his manly character, and shows great energy and independence of mind. The agreeable effect which this kind of poetry might produce is impaired by the artificial character of his style, in which he followed the Greek poets of the Alexandrian period. The ancients however looked upon him as a great poet. (Plin., 'Epist.', ix. 22; Quintil., x. 1.)

Propertius used formerly to be edited together with Catullus and Tibullus, as in the editio princeps, Rome, 1472, and in that of Scaliger, Paris, 1577, reprinted in 1582 and 1600. A separate edition of Propertius appeared in 1702, 4to, at Amsterdam, with a commentary by Broukhusius. A very complete edition is that of P. Burmann, which was published after his death, in 1780, by Santen. For the establishment of a correct text much has been done in the editions of Lachmann, Leipzig, 1816, Paldamus, Halle, 1827, Jacob, Leipzig, 1827, and Hertzberg, Halle, 1844-45.

Propertius was translated into French prose, in 1655, by De Merolles; and in 1821 appeared the second edition of a translation into French verse, by Mollevant. Among the numerous German translations, it is sufficient to mention that of J. H. Voss (Braunschweig, 1830), and another by Gruppe (Leipzig, 1838), with critical notes on the Roman Elegy. Some of the Elegies of Propertius were translated into English in the 'Miscellaneous Poems by Oxford Hands,' London, 1685; in 1782 was published, in London, 'The Book of the Elegies of Propertius, entitled Cynthia, translated into English verse, with classical notes,' &c.

PROTAGORAS was born at Abdera in Thrace, and is said to have been originally a porter, and to have received instruction from Democritus, who was so pleased with the skilful manner in which Protagoras arranged his load, that he afforded him the means of prosecuting the study of philosophy. Some modern writers have disbelieved the whole account, but it seems certain, from the unanimous testimony of the ancients, that Protagoras was of an inferior condition in life, and owed his education to Democritus. (Aul. Gell., v. 3; Diog. Laert., ix. 50, 53; Athenæus, viii. 534, c.; Suidas, &c.) The principal circumstance which has led some writers to doubt whether Protagoras ever received instruction from Democritus arises from the fact that the former was in all probability older than the latter. Democritus was born B.C. 460. [DEMOCRITUS.] Plato represents Socrates in the 'Meno' (c. 29, p. 91) speaking of Protagoras as already dead, and also states that he lived nearly seventy years. Now as Socrates died B.C. 399, Protagoras, according to this account, must have been born at least as early as B.C. 470, though the carelessness of Plato on such subjects renders this by no means certain. Philochorus however, according to Diogenes Laertius (ix. 55), said that the death of Protagoras was alluded to in the 'Ixon' of Euripides, which must consequently have happened before that of Euripides, that is, before the end of B.C. 406. If however both these statements can be depended upon, there is still no reason for disbelieving that Protagoras received instruction from

Democritus; for, as Mr. Clinton has remarked, Democritus, who belonged to one of the most eminent families at Abdera in rank and station, might discern the merit and encourage the genius of Protagoras, although younger himself than Protagoras.

None of the writings of Protagoras have come down to us; but it is evident that he was a man of great powers of mind. Some of his doctrines are discussed in the 'Theætetus' of Plato. [PLATO.] He travelled through Greece for the purpose of giving instruction in philosophy and eloquence, and is said to have been the first person who adopted the name of Sophist, to distinguish more decidedly one who made others wise, especially one who taught eloquence and the political art. He is also said to have been the first among the Greek philosophers who received money for the instruction which he gave. Wherever he went he was sure to obtain numbers of pupils; and Plato, in the dialogue entitled 'Protagoras,' has given an amusing account of the enthusiasm with which he was received by the young men at Athens on his visit to that city. Diogenes Laertius says (ix. 52) that his instruction was so much in demand that he sometimes received a hundred minæ; and Plato informs us ('Meno,' c. 29, p. 91) that during the forty years in which Protagoras taught he made more money than Phidias and ten other sculptors.

Protagoras visited Athens at least twice. Two of his visits are spoken of by Athenæus and Plato (Athen., v. p. 218, b.; xi. p. 506, a.; 'Protag.', c. 5), and the date of his second visit is determined by the former writer, who says (v. p. 218, c) that it took place after the κόρυς of Ameipsias and before the Κόλακες of Eupolia, that is, between B.C. 423 and 421. During one of his visits to Athens, probably subsequent to those which have been mentioned, he was banished from the state, and his books burned in the market-place, because he had stated at the beginning of one of his works that he did not know whether the gods existed or not. (Diog. Laert., ix. 51, 52; Cic., 'De Nat. Deor.', i. 23.) According to some accounts, he was drowned in his passage to Sicily, and according to others, died on the voyage. (Diog. Laert., ix. 55.)

Protagoras appears to have been the first who taught oratory as an art. He possessed, if we may judge from the specimen given by Plato in the 'Protagoras,' a lively imagination and great copiousness of words. He was well acquainted with the literature of his own country, especially the works of the ancient poets, whom he frequently quoted in his speeches, which appear to have been very popular. He is said to have taught Isocrates, and his oratorical exercises are referred to by Cicero, who says that they were called in his time 'communes loci' ('Brut.', c. 12). Protagoras was the first who introduced artificial divisions into discourses. (Diog. Laert., ix. 53, 54.) He also appears to have written works on language and oratory; his 'Ὀρθότροπος,' which is referred to by Plato ('Phædr.', c. 114, p. 267), is supposed by Spengel (*Συναγωγή τεχνῶν*, p. 40, Stuttgart, 1828) to have been a work of this description. A list of the writings of Protagoras is given by Diogenes Laertius (ix. 55) and Fabricius ('Bibl. Græc.', vol. ii., p. 663, ed. Harles). Cicero refers to his work 'On the Nature of Things' ('De Orat.', iii. 32).

For further information on the life of Protagoras, the reader is referred to Herbst, 'Des Protagoras Leben und Sophistik aus den Quellen zusammengestellt,' in Petersen's 'Phil.-Histor. Studien auf dem Akad. Gymnasium in Hamburg,' Hamburg, 1832, heft 1, p. 88.

PROTOGENES, one of the most celebrated of the Greek painters, was born at Caunus in Caria, a town subject to the Rhodians. Suidas says that Protagenes was a native of Xanthus in Lycia; but this appears to be a mistake, since he is called a Caunian by Pausanias (i. 3, § 4), and is expressly said by Pliny ('Hist. Nat.', xxxv. 36, § 20) to have been born at Caunus. He was a contemporary of Apelles, and was at the height of his reputation in the 112th Olympiad, that is, about B.C. 332. (Pliny, 'Hist. Nat.', xxxv. 36, § 10.) He lived at Rhodes during the greater part of his life.

Pliny says that Protagenes was originally in very poor circumstances, and that it was not known from whom he received instruction. He did not produce many paintings, in consequence of the long time and great labour which he devoted to each. Quintilian ('Inst. Orat.', xii. 10, p. 369, Bipont) says that 'cura' was the distinguishing characteristic of his paintings; and Apelles is said to have remarked that Protagenes did not know when to take his hand from his pictures. (Pliny, 'Hist. Nat.', xxxv. 36, § 10.) Of all the paintings of Protagenes the most celebrated was the one called Ialysus, upon which he is said to have been engaged seven years. (Ælian, 'Var. Hist.', xii. 41.) Pliny says that he lived, during the time he was painting it, upon moistened lupines, and also informs us that each colour was laid on four times. A dog in this painting, which was represented panting and foaming at the mouth, was greatly admired. It is related that Protagenes was for a long time unable to represent the foam in the manner which he wished, till at length, disheartened by repeated failures, he threw his sponge at the mouth of the dog, which accidentally produced the effect he had been endeavouring to obtain. The fame of this painting was so great, that Demetrius Poliorcetes, when besieging Rhodes, did not set fire to that part of the city where Protagenes lived, lest he should destroy the picture. (Pliny, 'Hist. Nat.', vii. 39; xxxv. 36, § 20.) Aulus Gellius, in relating the same circumstance, says (xv. 31) that Protagenes was dead, and that the painting was preserved in a public library outside the walls of the town. In the time of Pliny it was preserved in the temple of Peace at Rome. Among the other

paintings of Protogenes mentioned by Pliny was a portrait of the mother of Aristotle, who advised him to paint some of the exploits of Alexander the Great. Paintings of Alexander and of Pan were among the last of his works. Pausanias (i. 3, § 4) also mentions a painting of the Thesmophetæ by Protogenes, which was preserved at Athens in the senate-house of the Five Hundred.

Protogenes is always mentioned by the ancient writers in terms of the highest admiration. (Petron., 'Sat.,' c. 83; Cic., 'Brut.,' 18; 'Ad Att.,' ii. 21; Varro, 'De Ling. Lat.,' ix. 12, ed. Müller; Columella, 'De Re Rust.,' Præf. in lib. i., p. 21, Bipont.) He is said by Pliny to have also executed works in bronze.

Suidas says that Protogenes wrote two books on the art of painting and on figures.

PROUT, SAMUEL, was born on the 17th of September 1783 in Plymouth—the birthplace of so many English painters. From earliest childhood he was noted for an irrepressible fondness for drawing the various objects around him, and the passion increased with his years. His associate in his early artistic studies was Benjamin Haydon, but instead of yielding to the eager impulses after an unattainable grandeur of his enthusiastic friend, young Prout contented himself with unceasingly sketching from nature "the ivy-mantled bridges, mossy water-mills, and rock-built cottages, which characterise the valley scenery of Devon." Whilst uncertain as to his future course, he had the good fortune to be introduced to Mr. John Britton, the antiquary, then at Plymouth on his way to collect materials for an account of Cornwall which he was preparing for the 'Beauties of England.' [BRITTON, JOHN.] Mr. Britton, pleased with his sketches, proposed that he should accompany him into Cornwall to make some drawings, and Prout gladly accepted the offer. The portfolio of Cornish drawings which he afterwards transmitted to Mr. Britton excited by their boldness of style considerable notice, and the young artist was easily persuaded to remove to London.

He arrived in the metropolis in 1805, and found an adviser and patron in Palseer the printseller, then residing in the Westminster-road and afterwards in Fleet-street, who used readily to purchase his water-colour drawings, and dispose of them among his customers. Palseer gave but low prices for these works, but Prout had the good sense, on comparing his pictures with those of the established artists, to recognise his own deficiencies; and he was well pleased to be thus enabled, by means of unambitious drawings, to support himself whilst making a resolute effort to extend his artistic knowledge and executive skill. During these years he painted marine views, especially coast-scenes with fishing craft, more than architecture, for which a very decided inclination had not yet developed itself. He also devoted a good deal of time to teaching, and he etched some lessons and studies for the use of teachers and pupils; but perceiving the capabilities of the newly-introduced art of lithography for yielding fac-similes of the painter's pencil-sketches, he began early to draw on stone, which, from his singular skill in the use of the lead-pencil, he did with great facility. He published in 1816 a series of 'Studies' which met with great success, and was followed by 'Views in the North and West of England,' 'Progressive Lessons,' 'Rudiments of Landscape,' and other drawing-books, which by their vigour of drawing and brilliancy of effect raised that class of publication far above the estimation in which it had been previously held, and did much to extend the reputation of the artist.

Mr. Prout had already secured a high position when he was led in 1818—partly in the hope of restoring his health, which had become much enfeebled, but also with a view to turning to professional account the taste for foreign scenery engendered by the facilities for continental travel opened by the return of peace—to make a tour in France. The quaint street-architecture of Rouen, and the civic and ecclesiastical structures of other Norman towns, seemed to reveal in him an entirely new sense. From this time he gave himself, with undivided zeal and unapproached success, to the delineation of the weathervorn and mouldering remains of mediæval architecture. Year after year he continued to journey through the fairest parts of France and Switzerland, of Germany and Italy; but still it was the old southern or northern gothic buildings that attracted his pencil, or those tumble-down heavy-gabled domestic houses which, though hardly ranking among any of the architectural divisions, had in his eyes an equal attraction in their antique picturesqueness. The remarkable popularity of his pictures induced him to publish a handsome folio of lithographic 'Fac-Similes of Sketches made in Flanders and Germany.' This was the first of the numerous series of lithographic copies of painters' finished sketches which have added so greatly to the enjoyment of all lovers of art, and done so much towards the extension of a sounder taste; and notwithstanding the many beautiful volumes which have since appeared it remains in many respects the best—the most marked by a vigorous sketch-like simplicity of means and fidelity, and a happy boldness and playfulness of execution, combined with striking originality and brilliancy of effect. Mr. Prout subsequently published a series of 'Sketches in France, Switzerland, and Italy,' fol., 1839, more finished in style, but scarcely so brilliant or interesting as the former series. Besides these he published various works intended to facilitate the progress of the student in art. Of these the first was entitled 'Hints on Light and Shade, Composition, &c., as applicable to Landscape Painting,' fol., 1838, in which he explains very clearly, by precept

and example, the principles which regulated his own practice: another and extended edition was published several years later. He also published 'Microcosm: the Artist's Sketch-Book of Groups of Figures, Shipping, and other Picturesque Objects,' fol., 1841; 'Hints for Beginners,' &c.; besides making the drawings for several volumes of the 'Landscape Annual,' and for some other works.

During all this time, and to his death, Mr. Prout continued to be one of the most prolific contributors to the annual exhibitions of the Society of Painters in Water-Colours, where his pictures never failed to form a prime attraction. Yet, many and beautiful as were his works, they were produced amid much suffering. When a child of four or five years old, having wandered into the fields alone, he was found lying under a hedge insensible from the effects of a sun-stroke, and from that day forward he was subject to the frequent recurrence of sudden attacks of pain in the head; to this was added injuries received from protracted exposure to damp and cold in his earlier sketching excursions; so that, till towards the close of his life, as is mentioned in a memoir of him by Mr. Ruskin, from materials furnished by Prout himself ('Art-Journal' for 1849, p. 76), "not a week passed without one or two days of absolute confinement to his room or to his bed." He died on the 10th of February 1852.

Samuel Prout was undoubtedly one of the greatest and most original of our old school of painters in water-colours. His style was entirely self-formed, and singularly effective. To a great extent it was conventional; but it was the result of prolonged working from the actual object, and it therefore forcibly conveyed the artist's own idea. His drawing was very uncertain and confined: to the last he remained utterly incapable of drawing a tree, or representing foliage with the least approach to natural truth. His colouring was unequal, but often very beautiful and harmonious. He painted, with rare exceptions, wholly by washes of transparent colours, the outlines and details being made out by the skilful use of the reed-pen, with a few dexterous touches of which he produced effects never equalled by any other manipulator. His chiaroscuro was broad, simple, and so nicely adapted as always to have a true and natural appearance, which was greatly aided by the singularly clever introduction and arrangement of his figures, ill-drawn as these often were. In a word, Prout may fairly be regarded as the founder of a new school of architectural painting. He first showed what a world of picturesque capability lay in the quaint streets and market-places of Normandy, Flanders, and Germany, and the grander palaces of Venice; and no less did he show how to render the broad features and deep sentiment of the old ecclesiastical gothic, without being lost in a multitude of petty details.

PROUT, WILLIAM, distinguished as a chemist and physician. He was brought up to the medical profession, and took his degree of Doctor of Medicine at the University of Edinburgh. On establishing himself in London he connected himself with the Royal College of Physicians, of which body he ultimately became a Fellow. He early directed his attention to chemistry, and was amongst the first in this country to attempt to apply this science to the explanation of the phenomena of life, and he published many papers in reference thereto in the 'Philosophical Transactions.' All his researches and discoveries on this subject were combined in a great work entitled 'On the nature and treatment of Stomach and Renal Diseases, being an inquiry into the connection of Diabetes, Calculus, and other affections of the Kidneys and Bladder with Indigestion.' However brilliant the discoveries which have been made subsequently to the publication of this work, there can be no doubt that Dr. Prout had correctly appreciated the importance of chemistry in explaining the functions of living beings, and that he was the first physician who sought to apply the doctrines of modern chemistry to the explanation of the phenomena of disease. He was an exceedingly careful and accurate experimenter, and with regard to some of his conclusions which were at one time brought into doubt, a more careful investigation has confirmed the truth of his views.

Dr. Prout was one of the gentlemen chosen to write the 'Bridgewater Treatises.' The subject of his essay was 'Chemistry, Meteorology, and the Function of Digestion considered with reference to Natural Theology.' This work abounds with evidence of his profound knowledge of the laws of chemistry. Although principally occupied with chemistry in relation to his profession, he took an interest in all sciences which the discoveries in his favourite science affected. He was one of the first to analyse the so-called Coprolites, and to discover the large quantity of phosphate of lime they contained. This he did in a paper published in the third volume of the 'Transactions' of the Geological Society. The paper was entitled 'On the Analysis of the Fossil feces of Ichthyosaurus and other Animals.' Dr. Prout was a Fellow of the Royal Society, and many other learned societies. He died at his house in Sackville-street, London, on the 9th of April 1850, in the sixty-fourth year of his age. He was a man of exceedingly retiring habits, and greatly respected by those who knew him intimately.

PRUDENTIUS, AURELIUS, was born in Spain, A.D. 348. He followed the profession of the law, and was employed in some official situation in his native country under the reign of Honorius. About the year 407 he repaired to Rome, partly on business, and partly, it seems, from religious motives. He afterwards returned to Spain, where he spent the rest of his life in pious practices and studious

pursuits. The precise time of his death is not known. Prudentius wrote several works in Latin verse. Two books are entitled 'Orations' against Symmachus, prefect of Rome, who had addressed a petition to the emperor in the name of the senate of Rome for the re-establishment of the temples and rites of the old religion. [ORONIA.] Prudentius exposes the absurdity and abominations of the heathen mythology, and the corruption resulting from the want of a moral check, in which the old heathen religion was deficient. Towards the end of the second, he eloquently descants against the cruel practice of gladiators' combats for the amusement of the people; and in order to show their brutalising influence, he instances a vestal attending in the amphitheatres, and witnessing the struggles and agonies of the fallen gladiators in the arena, exclaiming with joy that such sights were her delight, and giving without compunction the signal to dispatch the fallen. Arnobius (b. iv.) towards the end casts a similar reproach upon the vestals.

Prudentius wrote also: a series of sacred hymns, which have considerable poetical merit, and some of which have been inserted in the Liturgy of the Roman Catholic church; 'Psychomachia,' which is a description of the struggles between passion and duty in the human soul; and several books against the Marcionites and other heretics. One of the best editions of the works of Prudentius is that of Parma, 2 vols. 4to, 1788.

PRYNNE, WILLIAM, an eminent compiler of records, and a distinguished political character in the reign of Charles I. and during the Commonwealth, was born in 1600, at Swainswick near Bath, and received his early education in the grammar-school of that city. He became a commoner of Oriel in 1616, and took his Bachelor's degree at Oxford in 1620. Soon after taking his degree, he removed to Lincoln's Inn, in which Society he was called to the bar, and subsequently became bencher and reader. His name scarcely appears in the Law Reports of his time, and he never practised at the bar to any considerable extent. He applied himself much to the study of controversial divinity, and became a devoted follower of the well known Puritan divine Dr. John Preston, who was at that time lecturer at Lincoln's Inn. In accordance with the doctrines of the Puritans respecting church government, he published, soon after he came to Lincoln's Inn, several tracts against Arminianism and prelatical jurisdiction, by which, as well as by promoting and encouraging motions in the superior courts for prohibitions to the High Commission Court, he greatly exasperated Archbishop Laud and the clergy against him.

In the year 1632 he published a virulent pamphlet called 'Histriomastrix, or a Souurge for Stage-Players,' in which he denounced in coarse and scurrilous language the prevailing fashion of the day for masques, interludes, and other similar entertainments. Amusements of this kind being the favourite recreation of the court (the queen herself having performed in a Pastoral at Somerset-house), Prynne's book gave great offence, and the attorney-general prosecuted him for it in the Star-Chamber. The court fined him 8000*l.*, ordered him to be expelled from the University of Oxford and the Society of Lincoln's Inn, and degraded from the bar, to be set twice on the pillory, and to lose both his ears; to have his book burned by the common hangman, and to be imprisoned for life. In conformity with this atrocious sentence, he was formally degraded in the University of Oxford, in April 1634, and his name erased from the lists. Three years afterwards, while imprisoned in the Tower under the above sentence, he published another pamphlet, entitled 'News from Ipswich,' reflecting severely upon the hierarchy generally, and upon Laud and several of the bishops in particular. For this publication he was again prosecuted in the Star-Chamber, and sentenced to pay a fine of 5000*l.*, to be set on the pillory, to be branded on both cheeks with the letters S. and L. (Seditious Libeller), to lose the remainder of his ears, and to be closely imprisoned for life in Caernarvon Castle. These outrageous sentences were rigidly executed; and the usual consequence of undue severity appeared in the popular sympathy and party spirit which it excited. The Puritan friends of Prynne flocked to Caernarvon Castle in such numbers, that it was thought necessary to change the scene of his confinement; and after he had been at Caernarvon about ten weeks, he was illegally removed by a warrant from the lords of the council to the castle of Mont Orgueil in the island of Jersey. Here he remained until the beginning of the Long Parliament in 1641, when, upon his petition to the House of Commons, he was released by a warrant from the Speaker, and resolutions were passed declaring very truly both the sentences against him in the Star-Chamber to be contrary to law. Clarendon and Anthony Wood describe the extraordinary demonstrations of popular feeling in his favour on his landing at Southampton and on his journey to London. ('History of the Rebellion,' vol. i., p. 199; 'Athens Oxonienses,' vol. iii., p. 848.)

Soon afterwards he was returned as a member of parliament for Newport in Cornwall, and about the same time was made a bencher at Lincoln's Inn. In 1648 he was employed with Clement Walker by the parliament to conduct the prosecution of Colonel Fiennes for cowardice in surrendering the city of Bristol, and seems to have been busily and cordially engaged in the proceedings of the Commons at that eventful time. Serjeant Hyde having been dismissed from his office of recorder of Bath, in consequence of the ordinances of parliament passed in September and October 1647, Prynne was elected recorder by a considerable majority of the corporation. He took no part in the violent proceedings of the later years of the Long Parli-

BIOG. DIV. VOL. IV.

ment; and immediately before the king's trial he was ordered into the custody of the serjeant-at-arms for "denying the supremacy of parliament" in a pamphlet entitled 'The Memento.' (Rushworth's 'Collections,' vol. ii., p. 1339.) On the 6th of December he was arrested by the army, and, together with many of his party, ejected from the House of Commons. From this time he became a bitter enemy of Cromwell and the army party; and, in consequence of his writings against them, was again imprisoned for several years at Dunster Castle in Somersetshire and Pendennis Castle in Cornwall. Being expressly disabled by parliament "to officiate or be in any office concerning the administration of justice within the Commonwealth," he was, in September 1652, discharged from his office of recorder of Bath, to which however he was again elected shortly after the Restoration. ('Council Book of the Corporation of Bath.') In the early part of the year 1660, having returned to his seat in the House of Commons as an excluded member, he is said, in a letter to General Monk (Wimwood's 'Memorials,' vol. iii.), to have "exceedingly asserted the king's right," but with so much of his characteristic bitterness and imprudence that Monk sent for him and admonished him to be quiet. Upon the dissolution of the parliament in March 1660, he was elected to serve in the new parliament for the city of Bath.

Soon after the Restoration he was appointed Keeper of the Records in the Tower, an office for which his habits of study peculiarly fitted him, and which furnished him with the opportunity of compiling his laborious and useful collections respecting constitutional and parliamentary history. After this period his pragmatical disposition again brought him into difficulty by the publication of a pamphlet against the proposed bill for regulating corporations. This paper, being considered by the House of Commons to be a seditious libel, he was reprimanded by the Speaker, and threatened with expulsion and prosecution; but upon his making a full confession and recantation no proceedings were taken against him. He died in Lincoln's Inn, in October 1669.

Prynne was a most laborious and voluminous writer. A catalogue of his works (which consist of nearly 200 volumes) is given, after an account of his life, in Wood's 'Athens,' vol. iii. p. 844, edit. Bias. They are justly characterised by Wood as displaying "great industry, but little judgment." The most useful among them are his 'Calendar of Parliamentary Writs,' and his 'Records.' The latter work, consisting of 3 vols. folio, professed to illustrate and prove the supremacy of the kings of England in all ecclesiastical affairs within the realm, by records taken from the earliest periods of English history to the reign of Elisabeth, but the author did not live to carry his design farther than the reign of Henry III.

PSALMANAZAR, GEORGE, was born about 1679. All that we know of his early history is from his own memoirs, which were published after his death; but they do not tell us his true name nor that of his native country, though it is generally believed that he was a native of the south of France. ('Memoirs of . . . . . , commonly known by the name of George Psalmanazar, a reputed native of Formosa, written by himself,' London, 1765.) He was in his youth a wandering adventurer. Sometimes he gave himself out for a Japanese, and at others for a native of the island of Formosa; at one time professing to be a convert to Christianity, and at others to be still a heathen. He travelled over several parts of Europe, France, Germany, and the Netherlands; was a soldier, a beggar, a menial, a preceptor, a man of all trades, and was at last brought to England by one Innes, a chaplain in a Scotch regiment stationed at Sluys. Innes gave out that he had converted the youth, and obtained some promotion in consequence. Psalmanazar remained in England, where he continued for several years to act the part of an impostor, and published a fabulous account of the island of Formosa, which imposed upon the credulity of the public. His natural abilities and a certain degree of information gained him several influential friends. At last, when about thirty-two years of age, a moral change took place in him; he grew ashamed of his dishonourable courses, became open to religious conviction, and determined to reform. He applied himself intensely to study, and after a time became engaged in literary pursuits, by which he earned an honest subsistence and considerable reputation during the rest of his life. He died in London, in 1763. He wrote, for the large work styled the 'Universal History,' most of the parts concerning ancient history, except that of Rome, and his writings met with great success. He also wrote a volume of essays on several scriptural subjects, a version of the Psalms, besides his own memoirs already mentioned. He also wrote, for the 'Complete System of Geography,' 1747, an article on the island of Formosa, founded upon authentic information, as a reparation for the stories which he had palmed upon the public in his former account. He published also several works anonymously, one of which, entitled an 'Essay on Miracles, by a Layman,' 8vo, 1793, enjoyed a considerable reputation in its day. Psalmanazar is the name that he assumed when he began his wandering life and which he retained till his death.

PSYCHRISTUS, JACOBUS (or PSYCHOCRISTUS), a celebrated physician of the 5th century. "He was very eminent," says Freind ('Hist. of Physic'), "for his great insight into philosophy and physic, which he learned from his father Hecychius (who was also a physician), and who had travelled into a great many countries in the pursuit of

knowledge. He was made count and archiater to Leo the Great, or the Thracian (who reigned from A.D. 457 to 474), and was so much beloved by this emperor and the people that the senate set up a statue for him in the baths of Zeuxippus, built by Severus. (Malela, 'In Vita Leonia.') Isidore of Gaza, called by others the Pelusiote, who flourished in the time of Justinian, saw another erected to him at Athens (Photius, § 559); and this author gives a further account of him, that he was an Alexandrian, though his family was originally derived from Damascus; that he had a great experience in physic, and did many wonderful cures; that in his practice he frequently ordered clysters and suppositories; that in surgery he seldom made use of fire or the knife, and was no friend to bleeding. He was preferred to all the modern physicians by his scholar Asclepiodotus, who grew famous for reviving the use of white hellebore, which in that time had grown quite out of vogue, and was not so much as known to Jacobus himself. Scidas is still larger in his praise of this Jacobus, and says he attained to a perfect knowledge in physic, both in theory and practice; that he excelled all his contemporaries, that he might be compared to the ancients, and was superior to many of them; that he was beloved and adored by his patients, who thought him inspired by heaven; that they had an implicit faith in him, because they never found his prognostic fail. Such an eagerness had he for improving his own art, that they thought the soul of Æsculapius was transfused into him." To this account by Freind, it should be added that (apparently to increase his influence over his patients) he pretended to be able to divine their thoughts as well as to distinguish their diseases. Some of his medical preparations are preserved by Alexander Trallianus (pp. 645, 649), but he does not appear to have left any works behind him. (See also Kühn, 'Additam. ad Elench. Medicor. Veterum à J. A. Fabricio in Bibl. Gr. Exhibitem,' 4to, Lips., 1838, Fascia. xvii.)

I. PTOLEMÆUS (Πτολεμαῖος), surnamed SOTER, or 'preserver,' the founder of the dynasty of Greek kings in Egypt, frequently called the Lagide, was one of the ablest of the generals of Alexander the Great. He is commonly called the son of Lagos, but, according to the Macedonians, he was the son of Philip and grandson of Amyntas, but was called the son of Lagos, because his mother was given for wife to Lagos by Philip, though she was then with child. (Paus., i. 6, § 2.)

In the division of the provinces on the death of Alexander (B.C. 323), Egypt was assigned to Ptolemy, who soon took measures to erect it into an independent kingdom. He put to death Cleomenes, who had been appointed satrap of Egypt by Alexander, chiefly because he was well disposed to Perdicas (Paus., i. 6, § 3), and obtained by his death an immense sum of money, which Cleomenes had collected during his administration. With this money, which amounted, according to Diodorus (xviii. 14), to 8000 talents, he collected a large army. In the first or second year of his rule he took the city of Cyrene and added the Cyrenaica to his dominions. He also obtained possession of the dead body of Alexander, which it had been resolved in the council at Babylon to transport to Egæ in Macedonia. It was first carried to Memphis, and afterwards to Alexandria.

In the year B.C. 321 Perdicas invaded Egypt, but he lost 2000 men in attempting to cross the Nile, and was subsequently murdered in his tent by his own troops. [PERDICAS.] A few years afterwards Ptolemy had to encounter a more formidable rival in Antigonus, who was rapidly increasing in power; and in B.C. 316 he entered into an alliance with Seleucus, Cassander, and Lysimachus, to resist the ambitious projects of Antigonus. In the long war which followed, and of which an account is given in the article ANTIGONUS, Ptolemy took an active part. It was continued till B.C. 312, when a general treaty was made, by which Ptolemy obtained possession of Egypt and the adjacent districts. Ptolemy however was the first to break this treaty in the following year; and the war was again renewed, and carried on with various success, till the defeat and death of Antigonus, at the battle of Ipsus (B.C. 301), secured to Ptolemy the undisturbed possession of Egypt.

From this time to his death Ptolemy devoted all his energies to develop the resources and promote the prosperity of his kingdom. Under his wise government and that of his successor, Alexandria became, as its great founder had anticipated, the first commercial city in the world, and the place from which Europe was supplied with the rich merchandise of the East. As his subjects consisted of two distinct nations—the Egyptians and Greeks—it was the policy of Ptolemy and his successors to amalgamate these races as much as possible. Ptolemy, being a Greek, introduced Greek habits and customs and also the Greek religion into Egypt; but, like his great master Alexander, he carefully avoided offending the prejudices of his new subjects, and adopted to a certain extent the Egyptian forms of worship. He and his successors conciliated the favour of their subjects by the respect which they paid to the ancient Egyptian priesthood, and also by contributing largely to the restoration of the ancient monuments of the country. He also introduced the most complete religious toleration among all his subjects. The troubled state of Palestine and the growing commerce of Alexandria induced many Jews to settle in his dominions; and the same toleration was granted to the Jewish synagogues as to the temples of Isis and Jupiter. Ptolemy seems to have been desirous of uniting as much as possible the Egyptian and Greek religions; and his removal of the statue of Serapis from Pontus to

Alexandria, which is mentioned by several ancient writers (Tacitus, 'Hist.' iv. 84, and commentators), and which was accompanied with great solemnity, seems to have been accomplished in order to establish the worship of a deity which might prove acceptable to both nations.

Ptolemy gave great encouragement to learning and science. He wrote himself a history of the wars of Alexander, which appears to have been a work of considerable merit, and which supplied Arrian, in conjunction with the narrative of Aristobolus, with the materials for his history. He invited many scholars and philosophers from Greece, of whom the most celebrated was Demetrius Phalereus [DEMETRIUS], who was received by him with the greatest distinction. He also invited Theophrastus (Diog. Laert. ii. 37), and received Stilpo (Diog. Laert. ii. 115), who had been banished from Athens for his religious opinions. In fact, Ptolemy extended his patronage to all persons of learning, independent of their religious and philosophical opinions. He laid the foundations of that school of learning for which Alexandria became afterwards so celebrated; and he probably commenced making collections for the public library which was regularly established by his son.

Ptolemy Soter was first married to Eurydice, the daughter of Antipater, by whom he had children; but he left his dominions to a younger son, Ptolemy Philadelphus, whom he had by Berenice (Paus., i. 6, § 8; Justin, xvi. 2; Plin., 'Hist. Nat.' xxxvii. 32). [BERENICE.] His eldest son, Ptolemy Ceraunus, murdered Seleucus, B.C. 280, and obtained possession of the kingdom of Macedonia. He only reigned however for about a year, and fell in battle with the Gauls. (Paus., i. 16, § 2; x. 19, § 4; Strabo, xiii. p. 623; Justin, xxiv. 5.)

Ptolemy Soter assumed the title of king, B.C. 306 (Diod., xx. 53; Plutarch, 'Demetr.' c. 18); and died at the age of 84 (Lucian, 'Macrob.' c. 12), B.C. 283, forty years after the death of Alexander. All the ancient writers agree in representing Ptolemy as a prince of the greatest wisdom, prudence, and generosity; and there is a saying of his reported by Ælian ('Var. Hist.' xiii. 12), worthy of Alexander, "that it was better to make rich than to be rich."

Coin of Ptolemy and Berenice.  
British Museum. Actual size. Gold.

The two heads to the right are Ptolemy Soter and his wife Berenice. The two heads to the left are Ptolemy Philadelphus and his sister and wife Arsinoë.

II. PTOLEMÆUS, surnamed PHILADELPHUS, or the 'brother-loving,' succeeded his father, B.C. 283, but was associated with him in the government two years previously. He followed the example of his father in the encouragement of learning; and he maintained with great liberality many distinguished philosophers and poets, of whom the most celebrated were Theocritus, Lycophron, and Callimachus. He established the public library, which was probably commenced by his father, and also founded a museum for the promotion of learning and the support of learned men. Some modern writers attribute the foundation of this museum to Ptolemy Soter, but Athenæus (v. p. 203) distinctly ascribes it to Philadelphus. (Clinton, 'Fasti Hell.' ii. p. 380.) We learn from Strabo (xvii. p. 794) that the museum formed part of the palace, and that it contained cloisters or porticoes, a public theatre or lecture-room, and a large hall, where the learned men who belonged to it dined together. The museum was supported by a common fund, supplied apparently from the public treasury; and the whole institution was under the superintendence of a priest, who was appointed by the king, and, after Egypt formed a province of the Roman empire, by the Cæsar. Attached to the museum there were botanical and zoological gardens. (Philostr., 'Apollon,' vi. 24; Athen., xiv. p. 654.) The institution was enlarged by the Emperor Claudius. (Suet., 'Claud.' c. 42, with Casaubon's 'Nota'.)

Ptolemy Philadelphus showed the same favour to the Jews as his father had done; and it was under his auspices that the Hebrew Bible was translated into Greek. Josephus ('Antiq.' xii. 2, § 12) has given us an account of the entertainment at which Ptolemy received the translators; and which is interesting, as it affords us some idea of the literary parties which the king appears to have frequently given. The king sat at the head of the table, and the guests on each side. The usual priests, heralds, &c. were sent away, and grace was said by one of the translators at the command of the king. This grace or prayer was received with loud applause by the whole company. After supper the king began to philosophise, and asked every one of his guests a philosophical question.

The treasures and resources of Philadelphus were very great. Much of the wealth which he possessed was, without doubt, owing to his possessing the trade with India and other parts of Eastern Asia. He also used every effort to extend the trade of Alexandria; he obtained

possession of the maritime parts of Arabia and of the eastern coast of Africa, and his admiral Timosthenes appears to have gone as far south as Madagascar. (Vincent's 'Commerce and Navigation of the Ancients, &c.,' vol. i. p. 42.) Theocritus ('Adoniazusæ') describes in glowing colours the wealth and power of his patron; and his account is confirmed by the less suspicious testimony of Appian, who was himself a native of Alexandria. The latter writer informs us ('Præfatio Histor.,' c. 10) that under the Ptolemies the army consisted of 200,000 foot soldiers, 40,000 horse, 300 elephants, and 2000 war-chariots, and the fleet of 2000 smaller vessels, 1500 triremes, and 800 ships magnificently adorned and equipped for royal use. The money in the treasury amounted to 740,000 Egyptian talents at the death of Ptolemy Philadelphus, who, according to Appian, amassed greater treasure and expended more upon public works than any of his successors. Athenæus also bears testimony (ii. p. 203) to the great power of Philadelphus, and states among other things that he surpassed all other kings in the number of his ships. The power and influence of the Egyptian kingdom under the three first Ptolemies is also attested by Polybius (v. 34), who says that they were masters of Coele-Syria and Cyprus, and extended their influence over the neighbouring countries as far as Thrace and Macedonia. (Clinton's 'Fast. Hellen.,' iii. p. 383.)

The political events of the reign of Ptolemy Philadelphus may be comprised in a few words. He put to death, at the commencement of his reign, two of his brothers, one of whom had endeavoured to excite the Cyprians to revolt. He was also engaged in war with Magas, the son of Berenice by a former husband, who had been appointed governor of Cyrene. Magas, who was married to Apama, the daughter of Antiochus and grand-daughter of Seleucus, prevailed upon his father-in-law to break the treaty which had been made between Seleucus and Ptolemy. Ptolemy however, by assuming the defensive, prevented Antiochus from invading his dominions (Paus., i. 7, § 3), and finally concluded a peace with his successor Antiochus II., by which the latter agreed to repudiate his wife Laodice, and to marry Berenice, the daughter of Ptolemy. [ANTIOCHUS II.]

In B.C. 274 Ptolemy sent an embassy to Rome and formed an alliance with the republic. (Liv., 'Epit.,' 14; Eutrop., ii. 15.) We also read of a Roman embassy to Egypt. (Justin, xvii. 2.) Ptolemy sent a naval force to the assistance of the Athenians against Antigonus and the Macedonians (Paus., i. 7, § 3); and the Athenians in compliment to him called one of their tribes Ptolemæis. (Paus., i. 6, § 8; i. 5, § 5.) Ptolemy also founded a gymnasium at Athens, not far from the market-place, which was called after his name, and which contained a bronze statue of him. (Paus., i. 17, § 2.)

Ptolemy Philadelphus died, B.C. 247, after reigning two years with his father and thirty-six alone. He was married twice; to Arsinoë, the daughter of Lysimachus, and also to Arsinoë, his own sister. [ARSINOË.] Pausanias remarks (i. 7, § 1) upon his marriage with the latter, that in doing so he violated the laws of the Macedonians, but not of the Egyptians. By his sister he had no children, but by the daughter of Lysimachus he had three, Berenice, Ptolemy surnamed Euergetes, and Lysimachus. (Schol. Theoc., xvii. 128, quoted by Clinton.)

III. PTOLEMÆUS, surnamed EUERGETES, or the 'benefactor,' succeeded his father B.C. 247. He was engaged in war at the commencement of his reign with Seleucus Callinicus, to revenge the death of his sister Berenice. [BERENICE II.] Great success attended his arms; he obtained possession of many of the provinces belonging to the Seleucids, and would probably have overthrown their empire, if he had not been obliged to return to Egypt in consequence of some civil commotions. (Justin, xxvii. 1.) Seleucus tried to strengthen his power by entering into an alliance with his brother Antigonus Gonatas; but they quickly became jealous of each other, and Ptolemy availed himself of their dissensions to extend his kingdom.

We possess hardly any particulars respecting the life and character of Ptolemy Euergetes. If inferior to his predecessors, he was superior to those that reigned after him; Strabo says (p. 796) that the kings of Egypt after the third Ptolemy governed worse than their predecessors. He followed his father's example in giving every encouragement to trade and commerce. It appears from an inscription, which was found at Adule by Cosmas, that Ptolemy had conquered Abyssinia, and that he maintained a powerful fleet in the Red Sea. A translation of this inscription, with many valuable remarks, is given in Dr. Vincent's 'Commerce and Navigation of the Ancients in the Indian Ocean,' vol. ii. p. 533, &c. If we can trust to this inscription, Ptolemy Euergetes must in his wars with Seleucus have subdued the greater part of Asia. It states that he had received from his father the kingdom of Egypt, Africa, Syria, Phœnicia, Cyprus, Lycia, Caria, and the Cyclades, and that he invaded Asia with his land and sea forces, and with elephants from the country of the Troglodytes and Ethiopians. The inscription then states that with these forces he reduced all the country on this side the Euphrates, as well as Cilicia, the Hellespont, Thrace, and all the forces in these provinces; and that he afterwards crossed the Euphrates, and entered Mesopotamia, Babylonia, Susiana, Persia, Media, and the whole country as far as Bactria, and brought the whole under his dominion.

During the reign of Euergetes, Cleomenes, king of Sparta, took refuge in Egypt, and was received by him with great distinction.

(Plutarch, 'Cleom.,' c. 32; Paus. ii. 9, § 3; Justin, xxviii. 4.) Ptolemy Euergetes married Berenice, the daughter of Magas, king of Cyrene. [BERENICE III.] By her he had three children, Magas, Ptolemy Philopator, and Arsinoë. He was murdered by his own son Philopator, B.C. 222.

Coin of Ptolemæus Euergetes.

British Museum. Actual size. Silver.

IV. PTOLEMÆUS, surnamed PHILOPATOR, or 'father-loving,' succeeded Euergetes, B.C. 222. He was distinguished by his profligacy and cruelty, and is said to have been ironically called Philopator on account of having murdered his father. (Justin, xxix. 1.) His chief minister was Sosibius, at whose instigation he put to death his mother Berenice, his uncle Lysimachus, his brother Magas, his wife and sister Arsinoë, who is called Eurydice by Justin (xxx. 1), and Cleomenes the Spartan king. (Polyb., v. 34, 35; xv. 25; Plutarch, 'Cleom.,' 33, 34, &c.) Philopator however appears to have been an able general. In B.C. 219 the province of Coele-Syria, which had been conquered by his father, was attacked by Antiochus the Great, who at first obtained possession of the greater part of it through the treachery of Theodotus, the Egyptian governor. In the following year however the forces of Ptolemy were more successful. Antiochus was defeated in a great battle fought at Raphia, near Gaza, B.C. 217; and Coele-Syria and Palestine were ceded to Ptolemy by a treaty made in the same year. (Polyb., iv. 37; v. 79-87. [ANTIOCHUS III.] Philopator died B.C. 205, after a reign of seventeen years. (Clinton.)

Coin of Ptolemæus Philopator.

British Museum. Actual size. Silver.

V. PTOLEMÆUS, surnamed EPIPHANES, or 'illustrious,' the son of P. Philopator and Arsinoë, was only five years old at the death of his father. (Justin, xxx. 2.) Antiochus the Great thought it a favourable opportunity not only to recover Coele-Syria, but also to obtain the sovereignty of Egypt, and accordingly united with Philip, king of Macedonia, to divide the Egyptian dominions between them. (Polyb., iii. 2; Liv., xxxi. 14.) The guardians of the young king took the precaution of placing him under the protection of the Romans, which the latter willingly undertook, as they were anxious to obtain a pretext for attacking Philip and Antiochus. (Justin, xxx. 2, 3.) Livy also mentions (xxxii. 9) an Egyptian embassy to Rome in B.C. 206. When the Romans were engaged in their war with Philip, Antiochus attacked the dominions of Ptolemy, and reduced, in B.C. 198, all the cities in Coele-Syria. He also conquered Scopas, who had in the preceding year brought 6000 auxiliaries to Ptolemy. (Liv. xxxiii. 19.) But as Antiochus was anxious to prosecute his conquest in Asia Minor, he proposed a treaty of marriage between his daughter and Ptolemy, to be consummated when both came of age, by which Coele-Syria and Palestine were to be given with the princess as a dowry. (Polyb., xxviii. 17; Joseph., 'Ant.,' xii. 4, § 1.) This marriage was afterwards celebrated in the year B.C. 192 or 193, when Ptolemy was about seventeen years of age. Ptolemy died B.C. 181, and is said to have been poisoned. (Hieron., 'Ad Dan.,' c. 11.) He left three children, P. Philometor, P. Physcon, and Cleopatra, who was successively married to her two brothers. (Joseph., 'Antiq.,' xii. 4, § 11; Justin, xxxviii. 8.)

Coin of Ptolemæus Epiphanes.

British Museum. Actual size. Gold.

VI. PTOLEMÆUS, surnamed PHILOMETOR, or 'mother-loving,' was a child when his father died; but the government was conducted by his mother Cleopatra. During the life-time of Cleopatra the kingdom of Egypt enjoyed repose; but on her death her brother Antiochus Epiphanes claimed Coele-Syria and Palestine, which had been given to Ptolemy Epiphanes as his wife's dower. In B.C. 171 Antiochus invaded Egypt and defeated the army of Philometor at Pelusium; and in the following year he took most of the principal towns in Egypt, with the exception of Alexandria, and obtained possession of the person of Philometor. After the capture of Philometor, the Alexandrines raised his brother to the throne, who took the name of Euergetes II., but is more commonly known by that of Physcon.

In B.C. 169 Antiochus invaded Egypt for the third time, under pretence of restoring the kingdom to Philometor. He laid siege to Alexandria, and would probably have obtained possession of the city, had not ambassadors come from Rome, who commanded him to abandon the attempt. Afraid of provoking a war with the Romans, he retired from Egypt, leaving Philometor nominal king of the whole country with the exception of Alexandria. He appears to have hoped that the quarrels of the brothers would have still further weakened the country and rendered it an easier conquest to him; but they, seeing through his ambitious designs, agreed to divide the royal power between them, and turn their forces against him. Disappointed in his object, Antiochus again invaded Egypt in the following year (B.C. 168), and declared that he would not withdraw his forces unless Cyprus, and the strong city of Pelusium, with the surrounding country, were ceded to him. As the possession of the city of Pelusium would have enabled him at any time to overrun Egypt, his proposals were refused; and he accordingly marched towards Alexandria, but was again met within four miles of the city by the Roman ambassadors, who compelled him to depart from Egypt. (Liv., xlv. 11, 12.)

The two brothers however did not agree; and in the seventh year of their joint reign Philometor was driven from Egypt by Physcon, and obliged to take refuge in Rome. He was treated with great distinction by the senate, who restored him to his kingdom, and limited the dominions of Physcon to Cyrene. (Liv., 'Epit.,' 46, 47; Valerius Max., v. 1, § 1.) In the following year Physcon went to Rome to complain of the unequal division of the Egyptian kingdom, and to beg that Cyprus might be given to him. The senate complied with his request, and commanded Philometor to surrender that island to his brother. Philometor however refused to do so; and the Romans accordingly declared war against him, B.C. 159 (Diod. Sic., vol. ii. p. 626, ed. Wesseling), but did not prosecute it with much activity. They did not send any force to the assistance of Physcon, but gave permission to their allies in Greece and Asia to enlist under his standard. (Polyb., xxxiii. 5.) In the war which followed between the brothers the Romans took no part. Physcon was defeated in Cyprus, and fell into the hands of Philometor, who however forgave him, and allowed him to retain the sovereignty of Cyrene. (Polyb., xl. 12; Diod. Sic., vol. ii. p. 588.)

About the year B.C. 151, Ptolemy Philometor marched into Syria to support Alexander Balas (Justin, xxxv. 1), who had been acknowledged king of Syria by the Romans, in opposition to Demetrius the rightful heir. [ALEXANDER BALAS, vol. i. col. 119.] By the assistance of Philometor and the kings of Pergamus and Cappadocia, Alexander obtained possession of the throne, and married, in B.C. 150, Cleopatra, the daughter of Philometor. (1 Macc., x. 57, 58; Joseph., 'Antiq.,' xiii. 4, § 1.) Shortly afterwards however Philometor, accusing Alexander of an intention to murder him, took away his daughter, and gave her in marriage to Demetrius II. He then marched into Syria, and was crowned at Antioch as king of Asia and Egypt; but afraid of exciting the jealousy of the Romans, he relinquished Syria to his new son-in-law. During these transactions Alexander was in Cilicia; and as soon as he heard of what had taken place, he marched towards Antioch, near which he was defeated by Ptolemy and Demetrius, B.C. 146. Philometor however died a few days afterwards of the wounds which he had received in battle. (1 Macc., xi. 1-18; Joseph., 'Antiq.,' xiii. 4, § 6-8; Justin, xxxix. 2.) He left a son, who was only a child at his death, and two daughters of the name of Cleopatra, of whom one married successively Alexander Balas and Demetrius, as already stated, and the other afterwards reigned in Egypt jointly with her sons.

VII. PTOLEMÆUS, surnamed EUERGETES II., or PHYSCON 'Big-Belly,' succeeded his brother B.C. 146, and commenced his reign by putting to death his brother's son. (Justin, xxxviii. 8.) Physcon is represented by the ancient writers as a cruel and sensual tyrant. He derived his name of Physcon, or Big-Belly, from his unwieldy form; for he was, according to Justin (xxxviii. 8) and Diodorus (vol. ii. p. 597), ugly in face, short in stature, big-bellied, and more like a beast than a man. The portrait which Rosellini gives of Physcon, from the ancient monuments of Egypt, is also that of a fat and sensual man. Posidonius the Stoic also described him (Athen., xii. p. 549) as a fat unwieldy man, who never went out without a stick.

He married Cleopatra, his own sister and his brother's widow, who bore him a son in the second year of his reign, while he was at Memphis for the purpose of being crowned. (Diod., vol. ii. p. 595.) He soon afterwards put away his sister, and married her younger daughter, his own niece, Cleopatra. He practised all kinds of cruelties upon

his subjects, till at length Alexandria became almost deserted, and Physcon was obliged to solicit strangers to settle there. (Justin, xxxviii. 8.) He possessed an able minister in Hierax (Diod., vol. ii. p. 597), who compensated in some degree for the misconduct of the king, and restrained for a time the discontents of his subjects; but at length the people could bear his cruelty no longer, and in the sixteenth year of his reign compelled him to fly to Cyprus. The government was committed by the people to Cleopatra, his sister and divorced wife. Her son was with his father at Cyprus; and Physcon, fearing lest she might make use of her son's name to strengthen her on the throne, put him to death, and sent his hands, feet, and head to Cleopatra, with directions that they should be given her in the midst of an entertainment. (Diod., vol. ii. p. 602, 603; Justin, xxxviii. 8; Liv., 'Epit.,' 59; Valer. Max., ix. 2, § 5.) In the war which followed, Physcon again obtained possession of the throne, which he held till his death, B.C. 117.

In the year B.C. 148, Scipio Africanus was sent at the head of a Roman embassy to Egypt, and was received with great pomp and respect by Physcon, who conducted him as far as Memphis. (Diod. Sic., vol. ii. p. 629, 630; Justin, xxxviii. 8.)

Physcon, though a sensualist and a tyrant, was a patron of learning and the fine arts. He was a disciple of Aristarchus, and wrote himself an historical work, which is frequently referred to by Athenæus (ii. p. 71; xiv. p. 654, &c.). Physcon had by his niece Cleopatra five children; two sons, Ptolemy Soter and Alexander, and three daughters, Tryphæa, Cleopatra, and Selene. He also left an illegitimate son, Ptolemy Apion, who reigned at Cyrene, and bequeathed his kingdom to the Romans at his death in B.C. 96. (Clinton, vol. iii. p. 389.)

VIII. PTOLEMÆUS, surnamed SOTER II., but more frequently called LATHYRUS (Strab., p. 795), succeeded his father Euergetes II., B.C. 117. He reigned together with his mother Cleopatra, who wished to have her younger son Alexander for her partner on the throne, but she was obliged by the people to select the elder. (Justin, xxxix. 3.) She always showed the greatest hostility to her eldest son, who is sometimes in consequence called ironically Philometor. (Paus., i. ix. § 1.) During the lifetime of Physcon, Lathyrus was sent to Cyprus; and though compelled to make him king, she did everything in her power to weaken his authority. At the commencement of his reign she compelled him to put away his sister Cleopatra, to whom he was married, and marry his youngest sister Selene. (Justin, xxxix. 3.) She gave the island of Cyprus to her younger son, and after reigning ten years in conjunction with Lathyrus, at length raised an insurrection in Alexandria against him, which compelled him to leave Egypt. She permitted him however to retire to Cyprus, after taking away from him his wife Selene; and she recalled her younger son Alexander to Egypt, and associated him with her in the government, B.C. 107. (Justin, xxxix. 4; Paus., i. 9, § 2.)

Lathyrus subsequently took an active part in the affairs of Palestine. Gaza and some other cities of Palestine requested his assistance against Alexander Jannæus, and he accordingly landed in Palestine with an army of 30,000 men. (Joseph., 'Antiq.,' xiii. 12.) He at first met with considerable success, but Cleopatra, fearing lest her son, after the conquest of Palestine, should march upon Egypt, sent an army to the assistance of Alexander, which compelled Lathyrus to give up the war and retire to Cyprus.

In the year B.C. 89, Cleopatra was put to death, after a reign of twenty-eight years, by her favourite son Alexander, who wished to obtain the sole possession of the crown. The people however rose against him a few months after, and compelled him to flee from Egypt. His brother Lathyrus was then restored. (Paus., i. 9, § 2, 3; Justin, xxxix. 5.) The city of Thebes however refused to submit to his authority; but it was taken and plundered after a siege of three years. (Paus., i. 9, § 3.) He died B.C. 81, leaving a daughter, Berenice or Cleopatra, and two illegitimate sons, Ptolemy Auletes and Ptolemy who reigned in Cyprus. The latter is mentioned in several of Cicero's orations ('Pro Sextio,' 26; 'Pro Domo,' 8, 20; 'Pro Flacco,' 18).

There is some difficulty respecting the immediate successor of Lathyrus. It appears that there were two kings of the name of Alexander, who successively reigned between the death of Lathyrus and the accession of Auletes; but as Clemens of Alexandria ('Strom.,' i. p. 381) and Strabo (xvii., p. 796) both mention Auletes as the immediate successor of Lathyrus, the authority of the two Alexanders was probably not acknowledged in all parts of Egypt, or they must at least have reigned for a very short time. The subject is fully discussed by Mr. Clinton (vol. iii., pp. 391-92).

IX. PTOLEMÆUS, surnamed NEOS DIONYSIUS, 'the young Dionysus,' but more commonly AULETES, 'the piper,' was an illegitimate son of Lathyrus, and succeeded to the throne, B.C. 81. His vices and low habits made him contemptible to his people (Strabo, xvii., p. 796; compare Cic., 'De Leg. Agrar.,' ii. 16), who expelled him from Alexandria in B.C. 58. He came to Rome in the same year, and on his way thither met Cato at Rhodæ. (Plut., 'Cat. Min.,' c. 35.) The Alexandrians placed upon the throne Berenice, the daughter of Auletes, and sent ambassadors to Rome to plead their cause against the king. Auletes however found means to gain over a large party in the senate. Cicero made a speech in his favour, which was afterwards published, but of which only a few fragments have come down to us; and the creditors of Auletes, who were very numerous, used every

exertion to obtain his restoration to his kingdom. In the following year, B.C. 57, the senate passed a decree for his restoration; but in A.C. 56 there was much dispute respecting the manner in which and the persons by whom he should be restored. In consequence of the opposition which was made against him, nothing was done in that year; and we find that he retired in despair to Ephesus. (Dio., xxxix. 12-16; Cic., 'Ep. ad Qu. Fr.', ii. 2; 'Ad Fam.', l. 1, 2.) Auletes however possessed a powerful friend in Pompey, and in consequence of his support he prevailed upon Gabinus, in A.C. 55, to undertake his restoration. (Dio., xxxix. 55; Strabo, xvii., p. 796; Liv., 'Epit.', 105; Cic., 'in Pison.', 21.)

Berenice, whom the Alexandrians placed upon the throne, first married Seleucus, called Cybiosactes by Strabo, the pretended son of Antiochus Eusebes, and afterwards Archelaus, the son of the Archelaus who had carried on war against Sulla. Auletes, on his restoration in A.C. 55, put to death both Archelaus and his daughter. (Strabo, xvii., p. 796.) Auletes survived his restoration about three years and a half, and died in the beginning of May, A.C. 51. (Clinton, vol. iii., p. 395.) He left two sons, called Ptolemy, and two daughters, Cleopatra and Arsinoë. The history of his two sons is given under CLEOPATRA.

PTOLEMÆUS, CLAUDIUS, a native of Egypt, but the place of his birth is not ascertained: the surname of Pelusiotæ, which is given to him in some editions of his works, appears to be a mistake of the copyists or translators. He lived at Alexandria in the first half of the 2nd century of our era, under the reigns of Hadrian and Antoninus Pius. Nothing more is known of his life, except his works. He was an astronomer, chronologist, and geographer. Ptolemy's Geography was for many centuries the text-book in that science for all the schools, and was superseded only in the 15th century, in consequence of new information derived from the discoveries of the Venetian, Portuguese, and other travellers and navigators.

Ptolemy and Strabo followed a different method in their respective works. Strabo's work is a descriptive geography; Ptolemy's is a mathematical geography. Strabo wrote mainly for the instruction of persons engaged in administration: he describes the physical character of each country, its extent and its political divisions; he gives some historical account of the various peoples that had inhabited it; and he then proceeds to notice the subdivisions, the mountains, valleys, rivers, and towns, with their respective distances from each other, and the objects worthy of remark in them. He makes us acquainted with each place in a manner resembling that of modern books of travels, or guide-books. Ptolemy on the other hand applies himself to fix the astronomical position of each place; he gives a bare list of names of mountains, rivers, and towns, with their respective longitude and latitude, without any description, or at least only a few words. Strabo endeavours to ascertain the forms of the large masses of land and of the seas by a combination of itinerary distances between various points, referring only to a few positions which had been ascertained by actual observation; Ptolemy fixes the position of each place as if it were ascertained by astronomical observation. Ptolemy availed himself of the labours of Eratosthenes, Hipparchus, and the other mathematicians of the Alexandrian school [HIPPARCHUS]; but by adopting the method of Hipparchus in the projection of the map, in order to assimilate it to the spheroidal form of the earth, he committed a material error in his longitudes, all of which he places too far to the east. Beginning from Calpe, he places it 5° east of the Sacrum Promontorium of Iberia or Spain, an error of 1° 50', and goes on increasing the excess of longitude as he advances to the eastward, making the length of the Mediterranean twenty degrees more than it is. He proceeds through Asia in the same way, till he places the mouths of the Ganges above forty-six degrees more to the eastward than the true position. Gosselin, at the end of his 'Géographie des Grecs analysée,' gives tables which show the difference between Ptolemy's positions and the true ones. Gosselin supposes that Ptolemy was led into this material error by estimating the degree of longitude at 500 stadia at the equator, and at 400 stadia in the parallel of Rhodes; while Eratosthenes had reckoned the first at 700 stadia and the second at 555. But Ptolemy retained Eratosthenes's measure of 700 stadia for a degree of latitude, because he found that if he were to reckon the degree of latitude at 500, all his latitudes, several of which had been fixed by observation, would be too high; and that Alexandria, for instance, instead of being in 31°, would be in 43°, and Marseille in 60°. The different value given to the stadium by different geographers was a cause of much confusion. "Eratosthenes," says Gosselin, "had fixed the distance between the Sacrum Promontorium of Spain and the eastern mouth of the Ganges at 70,000 stadia. These 70,000 stadia being reduced into degrees of 700 stadia each, give 100 degrees for the whole longitudinal distance, which is not far from the truth. But Ptolemy, by taking his degree of longitude too small, made 146 degrees between the two points. But again, if we reduce these 146 degrees at the rate of 500 stadia each, we shall have about 73,000 stadia." See also on this subject both Mannert and Ukert, in their respective works, both entitled 'Geographie der Griechen und Römer.'

Dr. Brehmer, in his 'Entdeckungen im Alterthum,' 1822, pretends that Ptolemy consulted some Phœnician charts, and he lays great stress upon the geographical knowledge of the ancient Phœnicians.

Gosselin however, as well as Heeren ('Commentatio de Fontibus Geographicorum Ptolemæi, Tabularumque iis annexarum,' Göttingen, 1827), reject Brehmer's hypothesis: they reduce within very moderate dimensions the supposed geographical and astronomical knowledge of the Phœnicians, and trace the sources of Ptolemy's peculiar information to other quarters, and especially to the discoveries and conquests made by Roman commanders between the time of Augustus and the age of the Antonines, to the long peace which subsisted between the Romans and the Parthians under Hadrian and Antoninus Pius, and the flourishing commerce which was carried on during that period between the Roman empire and the remotest parts of India. Marinus of Tyre, who lived about the year 100 of our era, had written a geography and constructed maps of which Ptolemy availed himself.

Ptolemy begins by stating in his first book the object of his work, and explains the elements of mathematical geography. He then, after mentioning with praise his predecessor Marinus of Tyre, notices, in chapters vi. to xviii., the errors into which that geographer had fallen, and corrects them. Marinus had read the geographical works and itineraries of most of those who had preceded him, and had constructed maps which he repeatedly corrected in successive editions; but Ptolemy, as he says, still found much to correct in the work of Marinus. Ptolemy mentions several travellers from whose itineraries Marinus had derived much of his information; but he adds (chap. 17) that some of the information collected by Marinus had been superseded by the testimony of more recent travellers and navigators, whom he, Ptolemy, had consulted, especially with regard to the remote regions of India. In the last three chapters of the first book Ptolemy describes the method of drawing maps adapted to represent the spherical form of the globe.

With book ii. begins the description of the known world, which in the time of Ptolemy extended, from west to east, from the Fortunate or Canary Islands, where Ptolemy places his first meridian, to the vaguely defined regions of Serica and Sina, near the western and south-western borders of China, somewhere between 100° and 105° east of London, embracing altogether about 120° of longitude, or one-third of the actual circumference of the globe, which extent however, through Ptolemy's error already noticed, was magnified by him to 180°, or a full hemisphere. To the northward Ptolemy's known world extended to the sixty-third parallel of north latitude, in which he places the island of Thule north of Caledonia, near the site of the Shetland Islands. Some think that the Thule of Ptolemy was Norway. To the south, Ptolemy's known world extends nearly to the equator, but he places his latitudes about ten degrees too far south. He places the sources of the true Nile, or Abiad, in about 7° S. lat., and the emporium of Rhapta, on the eastern coast of Africa, and that of Cattigara, on the coast of the Sina, in about 8°. By comparing Ptolemy's world with that of Strabo, it may be seen how much the limits of the known world were extended during the century and a quarter which elapsed from the time of Augustus and Tiberius to that of the Antonines. Strabo's information did not extend northwards beyond the Elbe; of Britain he knew little, and of Hibernia nothing; to the eastward it only extended as far as Taprobana (Ceylon) and the mouth of the Ganges. Ptolemy added information, though it was vague, of India beyond the Ganges, the Chersonesus Aurea, and the countries of Serica and Sina east of the Chersonesus Aurea. Strabo had made the Hyrcanian or Caspian Sea a gulf of the Northern Ocean, though Herodotus (l. c. 203) had described it as a lake. Ptolemy also describes it as a lake, retaining however the error of his predecessor as to making its length from east to west, instead of from north to south. This mistake originated probably in some confused notion of the existence of the Aral Lake east of the Caspian. In one respect however Ptolemy's information was more remote from truth than that of Strabo, for he made the Indian Sea a gulf, without any communication with the Atlantic, and he supposed that the south-eastern coast of Africa turned to the east and joined that of Asia. This authority perpetuated for a long time the error of supposing that Africa could not be circumnavigated by the south. This error is the more curious, as there was an old tradition, preserved by Herodotus, of the circumnavigation of Africa. With regard to the interior of Africa, Ptolemy's information extended considerably further than that of his predecessors.

Ptolemy proceeds in his description of the world from west to east. He begins with Hibernia, and Albion or Britain, stating the bearing of the great lines of coast, noticing the gulfs, estuaries of rivers and capes, with the longitude and latitude of each; and he mentions the names of the various tribes and towns in succession, first those along the coasts, and afterwards those in the interior. His latitudes in Britain and Ireland are all too high by several degrees. He next describes Iberia, or Spain, with its divisions into provinces, stating the boundaries of each; and then, following the coast, he names the various towns, rivers, gulfs, and capes, fixing their respective positions. Few other particulars are given. He afterwards describes Celto-Galatia, or Gaul, and then Germany. Ptolemy notices the Chersonesus Cimbrica and the southern part of the Baltic as far eastward as the river Chesinus, the modern Duna. But he does not seem to have known that the Baltic was an inland sea. East of the Chersonesus Cimbrica he places four islands, under the name of Scandavia Islands. Scandinavia in his time was supposed to be an island. After Germany

he describes Rhætia, Vindelicis, Noricum, Pannonia Upper and Lower, and Illyria, or Liburnia.

Book iii. contains a description of the eastern part of Europe, including Italy, with Sicily, Cyraus or Corsica, Sardinia, European Sarmatia, Chersonesus Taurica, the country of the Iazyges Metanastæ, Dacia, Mæsia Upper and Lower, Thracia, with the Chersonesus, Macedonia, Epirus, Achaia, the Peloponnesus, Eubœa, and Creta.

Book iv. contains the description of Libya (Africa), namely, the two Mauritanis, Numidia, Africa Proper, Cyrenaica, Marmarica, Egypt, Libya, Æthiopia south of Egypt, the island of Meroe, and Interior Æthiopia.

Book v. relates to Western or Lesser Asia, with the Greater Armenia, Colchis, Iberia, Albania, Arabia (Petraea and Deserta), Syria and Palestine, Mesopotamia, Babylonia, and the island of Cyprus.

Book vi. treats of Asia Major, including Assyria, Susiana, Media, Persis, Parthia, Hyrcania, Carmania, Arabia Felix, Margiana, Bactriana, Sogdiana, Aria, Paropamisus, Drangiana, Arachosia, Gedrosia, the country of the Sacæ, Scythia within and without Mount Imaus, and Serica, the metropolis of which is placed by Ptolemy in  $38\frac{1}{2}^{\circ}$  N. lat., and  $177\frac{1}{2}^{\circ}$  E. long., but which seems to have been somewhere near the actual western borders of China, or the eastern part of Tibet.

Book vii. contains India within the Ganges, Taprobana, India without the Ganges, with the Chersonesus Aurea, and farther still the country of the Sinæ, which Ptolemy describes as bounded on the north by Serica and on the east and south by "unknown lands," and on the west partly by India beyond the Ganges, and partly by a great gulf of the sea, which separates it from the Chersonesus Aurea, which forms the southern extremity of India beyond the Ganges. This position seems to indicate the countries of Siam and Cambodia, and the great gulf as the Gulf of Siam. Ptolemy then mentions another gulf farther to the east as the Gulf of Sinæ, perhaps from a confused notion of the sea of Cochin-China and Tonkin. Cattigara, a mercantile station on the coast of Sinæ, which he places in  $8\frac{1}{2}^{\circ}$  S. lat., has been looked for by some on the coast of Borneo. Gosselin however thinks that the great gulf is the Gulf of Martaban, that Cattigara is Mergui, and Thine the capital of the Sinæ, Tenasserim, and that the Sinæ of Ptolemy is the country of Siam, and that Ptolemy's information did not extend so far as the eastern coast of the peninsula of Malacca. The length of that peninsula, and its apparent continuation by the coast of Sumatra, gave rise to the notion of a continuous land inclosing the Indian Ocean on the east and south, and joining this eastern coast of Africa. The enormous size given to Taprobana (Ceylon) by Ptolemy and other ancient geographers probably originated in their mistaking the peninsula of India for an island.

A good view of Ptolemy's world, reduced to its real extent and position, is given by Gosselin in a map at the end of the fourth volume of his *Recherches sur la Géographie systématique et positive des Anciens, pour servir de Base à l'Histoire de la Géographie ancienne*, 4 vols. 4to, Paris, 1813. The map is inscribed 'Orbis Veteribus noti veris Limitibus circumscripti Specimen Geographicum.'

The latter part of book vii. and book viii. are a recapitulation of his system, with a description of the maps, twenty-six in number, which accompanied the work, namely, ten for Europe, four for Africa, and twelve for Asia. [ΑΓΑΘΟΘΕΜΟΝ.]

Several editions of Ptolemy's 'Geography,' translated into Latin, appeared in the 15th century. Among the best are those of Rome, 1478 and 1490. The Greek text was first printed at Basel in 1535, under the care of Erasmus. Servetus published a Latin edition at Lyon in 1541. Petrus Bertius published the work in Greek and Latin, Amsterdam, 1619. A convenient edition of the Greek text is that in the *Tauchenitz Classics*, 32mo, Lips., 1843. The Abbé Halma published at Paris, 1828, the first book of Ptolemy in the Greek text with a French translation, accompanied by a memoir 'On the Measures of the Ancients.' Sickler published in 1833, at Hesse Cassel, Ptolemy's description of Germany, from an old Greek manuscript in the king's library at Paris, as a specimen of an intended correct edition of the whole work, which he proposed to publish by subscription: 'Claudii Ptolemæi Germania à Codice MSpto. Græco antiquissimo nondum collato, qui Lutetiæ Parisiorum in Bibliotheca Manuscriptorum Regia sub titulo Cod. Req. Fontablandensis, No. 1401, asservantur, accurate descripta; edidit Dr. F. C. L. Sickler of Hildburghausen.' There are in the royal library at Paris ten manuscripts of Ptolemy. It is well known that all the old editions of Ptolemy, both Greek and Latin, are incorrect, and that numerous errors were introduced into the text by ignorant transcribers and translators, especially during the 14th century. It appears also that as new discoveries took place people took upon themselves to interpolate and correct Ptolemy's text without much discrimination. ('*Commentatio critico-litteraria de Claudii Ptolemæi Geographia, ejusque codicibus, tam manuscriptis quam typis expressis, conscripta*,' à G. M. Ravidio, Norimbergæ, 1787.)

There is in the Imperial Library at Vienna a fine manuscript copy on parchment of Ptolemy's 'Geography' in Greek, with 27 maps, which are stated at the end to have been constructed by Agathodæmon of Alexandria. This statement is found also in another manuscript in the library of St. Mark at Venice, as well as in others; and Ravidio read the same assertion in a fragment of an old manuscript of the

11th century. The maps which accompany the edition of Rome, 1478, and that of Ulm, 1482, appear to have been copied from the manuscript maps. (Heeren, 'De Fontibus,' &c.)

PUBLICOLA, PUBLIUS VALERIUS. His original name was Publius Valerius, and the surname Publicola was given to him as a distinction for his republican virtues. He was of Sabine origin, and the son of Volesus. During the tyrannical government of Tarquinius Superbus, he is said to have been distinguished for his riches, wisdom, and affability. The first time that we find him taking an active part in the affairs of Rome was shortly before the expulsion of the Tarquins, when, with Sp. Lucretius, he went from Rome to Collatia to avenge the violence done to Lucretia. He strenuously assisted Brutus in effecting the banishment of the Tarquins (Plut., 'Publ. 1; Liv., ii. 2); and when, after the establishment of the consulate, Tarquinius Collatinus had resigned his office, P. Valerius was appointed consul in his stead. In the ensuing war of the Tarquins, who were aided by the Veientes and Tarquinians, Valerius commanded the Roman infantry, and gained a great victory near the forest of Arsa (B.C. 509): Brutus, his colleague, fell in the battle. Valerius, with the spoils of the enemy, returned to Rome in triumph (Liv., ii. 7; Plut., 'Publ. 9), where on the next day he solemnised the obsequies of his colleague. Valerius now had no colleague appointed in the place of Brutus, and he wished to remain sole consul, that he might not be thwarted in his plan of confining the consular power within proper limits. The election was thus delayed, and when, in addition to this, he built a stone house on the top of the hill Velia, which looked down upon the Forum, near S. Francesca Romana, he excited among his fellow citizens a suspicion that he aimed at the kingly power. He himself in his innocence was unconscious of the feelings which he was exciting, and as soon as he was made aware of the rising suspicion, he appeared before the assembly of the people (populus), and, as a sign of respect, lowered before them his fasces, from which the rods had been previously taken out. He then addressed the people, and, to convince them of his innocence, he stopped the building, and ordered the part which was already finished to be pulled down. The people, thus ashamed of their unfounded suspicions, granted him a piece of ground at the foot of the Velia, where he might build his house, and at the same time the privilege of having the doors to open out into the street, while the doors of all other Roman houses, like our modern doors, opened into the house. The respect which he had shown to the populus, whom he had clearly acknowledged as the source of his power, procured him the name of 'Publicola.' He still remained sole consul, and now began to carry out his plan. He first filled up the vacancies in the senate which had occurred during the late revolution by adding 164 senators (Niebuhr, 'History of Rome,' i. 525, &c.), and then carried several laws to prevent the restoration of the kingly government; he also secured to the plebeians the right of appeal to a tribunal of their own order from a sentence pronounced by the consul which inflicted bodily punishment (Plut., 'Publ. 11; Liv., ii. 8; iii. 55; x. 9). He is also said to have established a public treasury in the temple of Saturn, for the management of which two quæstors (treasurers) were appointed. (Comp. Niebuhr, 'loc. cit.') After he had introduced these beneficial and popular measures, he held the comitia for electing a successor to Brutus. The curies appointed Sp. Lucretius, who, being at a very advanced age, died a few days after, and in his place was elected M. Horatius Pulvillus, who at the close of the year was re-elected to the consulship along with P. Valerius (B.C. 508). Respecting the difficulties connected with the first consulship of Valerius and his several colleagues, see Niebuhr, 'Hist. of Rome,' i. 535, &c. In the war with the Etruscans [Porsena] which broke out in this year, Publicola and his colleague were wounded, and the Romans retreated across the Tiber, within the city. But Publicola subsequently made great havoc among the Etruscans by a stratagem. The celebrated census of Publicola (Dionys. 'Hal.' v. 293, ed. Sylburg), at which 130,000 adult Romans were registered, is said to have taken place in the second consulship of Publicola. During the siege of Rome by Porsena (Plut., 'Publ. 17), or according to Livy, after the battle of Aricia, Publicola was made consul a third time, with P. Lucretius (B.C. 507). It was in this year, according to the tradition followed by Plutarch, that Porsena attempted to negotiate for the restoration of the Tarquins, to which Publicola offered the most determined opposition. Among the hostages given to the Etruscan king was Valeria, the daughter of Publicola, and it was he who sent the maidens back, when, headed by Cloelia, they had made their escape.

Towards the end of this year the Sabines invaded the Roman territory, upon which M. Valerius, brother of Publicola, and P. Postumius, were appointed consuls. Marcus, aided by the advice and the presence of his brother, gained two victories, and in the last battle he slew 10,000 of the enemy without any loss on the Roman side. For this Marcus received great rewards, and was honoured with the same privilege as his brother, of having the doors of his house open into the street. (Plut., 'Publ. 20.) But when the Sabines after their defeat, united their forces with those of the Latins, and the danger thus became more threatening, Publicola was made consul a fourth time, together with T. Lucretius. The consuls set out against the enemy, who were already weakened by the desertion of some of their leaders, and, after ravaging the country, they gained a battle, in which the enemy was so much reduced that he ceased to be formidable

and the consuls, with rich spoils and numerous captives, returned to Rome in triumph. After this triumph, the new consuls for the following year were elected, and Publicola soon afterwards died, or according to Plutarch put an end to his own life. Niebuhr thinks that, according to the original legend, Publicola died in the battle of Regillus, B.C. 496. He was buried at the public expense, which must be considered as an honourable distinction, and not, as Livy thinks, as a proof of his poverty, and the Roman matrons mourned for him a whole year, as they had done for Brutus. The citizens decreed that the body should be interred within the city near the Velia, and that the whole house of the Valerii should enjoy this same privilege, for which however, in subsequent times, a symbolical ceremony was substituted.

The real history of Publicola is entirely disfigured, and has come down to us in the garb and with all the embellishments of poetry. The fact that Publicola is represented consul for three successive years, together with the fact that he pulled down his house on the hill Velia, and the extraordinary distinction granted to him and other members of his house, have led Niebuhr to suppose that, after the banishment of the Tarquins, the Valerian house for a time possessed the right of exercising the kingly power, for and on behalf of the Titia, by one of its members; and he looks upon Publicola's taking up his residence at the foot of the Velia as a pledge of his intention to exercise his royal authority as befitting a citizen. (Niebuhr, 'Hist. of Rome,' i. p. 538.)

PUBLIUS, SYRUS, a native of Syria, was brought when a boy to Rome as a slave, but he met with a kind master who took care of his education, and eventually gave him his freedom. He excelled in writing mimi, which were in great vogue at Rome in the latter times of the republic. Publius lived in the time of Julius Cæsar, who on a public occasion gave him the preference over Laberius and other contemporary mimographers. (Aulus Gellius, xvii. 14.) Publius appears to have been more correct and moral in his writings than authors of mimi generally were. St. Jerome ('Epistola ad Lætam') says that the Romans used to read his works in their public schools. His works are lost, but several of his moral apophthegms, which have been preserved by Seneca, Gellius, and other ancient writers, are remarkable for their laconic precision and justness of sense. They have been collected and printed at the end of several editions of Phædrus.

PUFFENDORF, SAMUEL, was born in 1682 at the small town of Chemnitz in Saxony, in the neighbourhood of which place his father was settled as a Lutheran clergyman. He received the earliest rudiments of his education at Grimma, one of the three schools called Prince's Schools, founded by the Elector of Saxony in 1550. Being designed by his father for the Protestant ministry, he was removed from Grimma to the University of Leipzig, where he studied theology for several years. Accident and the tendency of his mind led him while at Leipzig to change his course of study, and about 1686 he went to the University of Jena, where he devoted himself to the study of mathematics under the tuition of Erhard Weigel, whose improvements in the method of teaching natural philosophy had at that time excited great attention in Germany. About the same time Puffendorf appears to have first applied himself to the law of nature.

About the time that he quitted Jena, his brother, who had been employed by the Chancellor Oxenstiern in lucrative and confidential offices under the Swedish government, advised him to seek his fortune in foreign diplomacy, and with a view to this ultimate object he obtained a situation as tutor to the son of the Swedish ambassador at Copenhagen. He had scarcely joined the legation when a rupture ensued between Denmark and Sweden, and the whole family and attendants of the ambassador were detained as prisoners during eight months at the Danish capital. Puffendorf employed the leisure which this captivity afforded him in investigating and arranging the principles of general law contained in the works of Grotius, Hobbes, and some other political writers. These he reduced to writing, adding to them such reflections and arguments as had occurred to his own mind. At the time of its composition this work was not intended for publication, but on visiting Holland shortly after his enlargement he was induced by the advice of a friend to publish it, and it accordingly appeared at the Hague in 1680 under the title of 'Elementa Jurisprudentiæ Universalis.' This work, though crabbed in style and greatly inferior in general merit to the treatise 'De Jure Naturæ et Gentium,' exhibited much closeness of thought, and contained some enlarged and original views upon the subject of jurisprudence; and the circumstance of its dedication to the Elector-Palatine Charles Louis, perhaps more than its substantial merits, made it the foundation of the subsequent fortunes of the author. The elector-palatine was desirous of attracting attention to the University of Heidelberg, which had fallen into decay; and as one of the means to this object he founded a professorship of the law of nature and nations, and placed Puffendorf in the chair, intrusting him also in particular with the education of his son, the electoral prince. Puffendorf commenced his occupation as professor at Heidelberg in 1681, and the numerous auditory attracted by his lectures supplied him with pecuniary independence as well as encouragement to persevere in his juridical studies.

Soon after his establishment at Heidelberg he directed his attention to the constitution of the body termed the Germanic empire; and

struck with the absurdities and incongruities of this strange compound of princes, small republics, prelates, and knights, each of whom exercised within his respective territory a degree of sovereign authority, he composed a treatise exhibiting in rather strong colours the usurpations and defects of the system, and pointing out practical remedies for the grievous abuses which it had occasioned. As the existing order of things in Germany was criticised in this work with considerable freedom and severity, Puffendorf did not venture to publish it in his native country, or with his own name; but sent it to his brother Isaiah Puffendorf, who was at that time the Swedish ambassador in France, who, after showing it to Mezeray, directed it to be published at Geneva under the title of 'Severini de Mosambano, De Statu Imperii Germanici.' This work excited very general attention in Europe, being translated into German, English, and French, and not only involved Puffendorf for several years in an active controversy with German civilians, but exposed him to the indignation of some of the more powerful constituents of the Germanic body, and especially of the Austrian government. To avoid the possible consequences of the commotion his work had occasioned, he gladly accepted in 1670 an invitation from Charles XI. of Sweden to become professor of the law of nations at the University of Lund, then recently founded. About two years after his removal to Lund he published the great work upon which his reputation at the present day is principally founded, entitled 'De Jure Naturæ et Gentium.' It is a very careful and accurate digest of the law of nature, and being arranged on a much more scientific principle than the work of Grotius, 'De Jure Belli et Pacis,' is more useful to the student. Grotius has inverted the natural order of treating the subject by considering at once the artificial states of peace and war and the law of nations, without first tracing the original principles of the science as they are found in human nature. Puffendorf, on the other hand, commences with the law of nature, then considers the subject as applied to the conduct of individuals, and lastly investigates the difficult and complicated questions which arise in the intercourse of nations.

In consequence of some of the new views contained in this work it was virulently assailed by contemporaries, and involved the author a second time in angry controversy; but at the same time it raised the reputation of Puffendorf to a great height throughout Europe, and a few years after its appearance the king of Sweden removed him to Stockholm, making him his historiographer, and giving him the title of counsellor of state. In his official character he composed and published in Latin a 'History of Sweden, from the Expedition of Gustavus Adolphus into Germany until the death of Queen Christine;' but although a promising theme for an historian, Puffendorf has not availed himself of the rich materials which were placed at his disposal in the archives of the Swedish government in such a manner as to render his narrative attractive or complete. In 1688 the Elector of Brandenburg, Frederick William, invited him to Berlin, with the consent of the King of Sweden, and employed him in writing the history of his life and reign. The elector also bestowed upon him the title of counsellor of state, with an annual pension of 2000 crowns. In obedience to this engagement he wrote and published, in nineteen books, 'Commentarii de Rebus Gestis Frederici Willielmi Magni, Electoris Brandenburgici,' a work which neither experienced nor deserved greater success than his previous historical performances. His employment in Berlin was considered to be merely temporary, and he intended to return to Stockholm as soon as he had completed his engagement with the Elector of Brandenburg; indeed the King of Sweden always continued his esteem for him, and a few years only before his death, and during his residence at Berlin, raised him to the dignity of a baron. He died however in Berlin October 26, 1694. A complete catalogue of the voluminous writings of Puffendorf, and an account of the various editions of each, will be found in a note to the article under his name in the 'General Dictionary,' and also in the 'Biographie Universelle.'

PUGET, PIERRE, who has been called the Michel Angelo of France, from his ability in painting and architecture, as well as in sculpture, and perhaps also on account of a kindred enthusiasm and decision of character, was born in 1622 at Marseille, where his father practised as an architect and sculptor. It was from him that he received his first instructions in art, after which he was placed under a shipwright, or builder of galleys, to learn to carve the ornaments used in such vessels. Disgusted with the drudgery of such workmanship, he set out for Italy, and passed a considerable time at Florence, where he pursued his studies as a sculptor with great success. He next repaired to Rome, whither he was attracted by the fame of Pietro de Cortona; and not only did he become the pupil of that artist, but made such progress under him that he accompanied him to Florence as his assistant in painting the ceilings of the Pitti palace. Instead however of remaining there, he suddenly resolved upon returning to France, and he was then only twenty-one. On his arrival at Marseille he was very well received, and was shortly afterwards commissioned to design a vessel of extraordinary magnificence, named La Reine, in honour of Anne of Austria. That princess being desirous of obtaining accurate drawings of all the ancient monuments at Rome, the person commissioned by her to procure them thought that he could not do better than take Puget with him for the purpose of executing them. Puget accordingly proceeded a second time to Rome, and there spent

between five and six years; but what afterwards became of that valuable collection of drawings is not known.

On his second return from Italy he executed several works in painting; but his excessive application to that art so seriously affected his health, that he renounced the practice of it, and confined himself thenceforth to architecture and sculpture. His talents met with employment at Toulon and Marseille, for which latter city he projected many embellishments, which established his reputation as an architect; and he further gave proof of his skill in engineering by different ingenious machines and inventions which he introduced into the marine at Toulon.

He was sent by Fouquet to Genoa for the purpose of selecting marble for some of the works proposed to be executed at Marseille; but that minister being shortly afterwards disgraced, instead of returning home, Puget preferred remaining at Genoa, where he produced some of his most noted pieces of sculpture, the two statues of St. Sebastian and St. Ambrosius, and the grand bas-relief of the Assumption, in the chapel of the Albergo de' Poveri, besides various architectural ornaments. At length he was recalled by Colbert, who obtained for him a pension of twelve hundred crowns, in consequence, it is said, of the earnest recommendation of Bernini. That the patronage of the one and the recommendation of the other were not discredited, is proved by his two celebrated performances at Versailles, the Milo of Crotona, and the group of Perseus and Andromeda, the former of which is generally reckoned the chef-d'œuvre of his chisel, and a work that will bear comparison with the antique. He afterwards retired to Marseille, where he built himself a small residence, which he occupied until his death, December 2nd, 1694, at the age of seventy-two.

PUGHE, WILLIAM OWEN, originally known as William Owen only, the name of Pughe not having been assumed by him till advanced in life, was born at Tyn y Bryn, in the parish of Llanfihangel y Pennant in Merionethshire, on the 7th of August 1759. Soon after his birth his family removed to Egryn in Arduwy, a district where old customs were more prevalent than in any other part of Wales. He first heard English when sent to school at seven years old, and "in trying to attain to a little smattering of this language," he tells us, "I soon was enabled to read my own." The family was numerous, and at the age of seventeen he was sent to London to earn his living. "Here, though everything seemed new, even the language," he observes, "yet so powerful were the effects of early habits, that Welsh books still continued among the leading objects of my pursuits, but I continued in this great city till about the year 1782 without knowing that any other person in it besides myself ever thought of the Welsh language or of its literature." Chance threw him into the way of Robert Hughes, a Welsh poet and critic, who introduced him to Owen Jones, a tradesman in Thames-street, of whom, as Pughe remarked, "it may be truly said, that he extended greater patronage towards preserving the literary remains of Wales than any other person, either in ancient or modern times." With his support and encouragement, Owen Pughe entered on a course of laborious and long-continued exertion for preserving and elucidating the ancient literature of Wales, which entitled him to the thanks of every European scholar, though unfortunately his judgment and talents were not on a par with his zeal and diligence. In 1789 he edited in conjunction with Owen Jones the poems of Dafydd ap Gwilym, a bard of the 14th century, spoken of in terms of the warmest enthusiasm by Borrow, in his 'Lavengro.' These, which were printed in Welsh only, were followed in 1792 by an edition of the poems of Llywarch Hen, supposed to date from A.D. 560 to 640, with an English translation. These pieces are of a very striking character, in particular the dreadful 'Lament of Old Age,' in which every stanza concludes with "Curse on the young, curse on the happy." As early as 1785 Owen began the compilation of a Welsh and English dictionary on a very extended scale, the publication of which was commenced in 1793, and brought to a close in 1808. Though indispensable in every Welsh library, it is often complained of by those who consult it, on account of the number of words it contains which appear to be of the lexicographer's own manufacture, of the vagueness of many of the English explanations, and of the perplexity occasioned by the spelling, which is on a system of Owen's own, differing from that made use of in ordinary books. A second edition, which was issued at Denbigh in 1832, is in more request than the first, as the author permitted the printer to make use of the usual spelling. In the year 1801 two volumes were issued of the 'Myvyrian Archaeology of Wales,' and in 1807 a third, under the superintendance of Owen Jones, Edward Williams, known by his bardic name of Iolo Morganwg, and William Owen. This is by far the most important publication in the whole compass of Welsh literature, being a collection of all the remains of its poetry, triads, and chronicles, from the earliest periods to about the year 1400, extending, if all be genuine, over the space of about nine hundred years. Jones, at whose expense it was principally done, had made large collections of transcripts for its continuation, which are now deposited in the manuscript library of the British Museum, to which they were presented by the Welsh School in 1844. The continuation of the work seems to have been prevented by disagreements among the editors. Southey, who took much interest in Welsh literature, and was personally acquainted with both Williams and Owen, had a high opinion of Wil-

liams, but said of Owen in a letter to Wynne in 1823, "full of Welsh information certainly he was, but a muddier-minded man I never met with." Williams, in a letter dated 1813, which is given in his Life by Waring, says, "I am determined never to write in conjunction with any man whatever, and least of all with William Owen, who has with his *hobby-horisms* absolutely ruined everything he ever took in hand. In his Dictionary and Grammar he has introduced into a most horrid cacophony of pronunciation a most barbarous orthography. In the Welsh Archaeology he has altered the orthography into that of his Dictionary and Grammar, thus forging fictitious authorities for what he has done. His Welsh writings may be said to be English written in Welsh words, or Welsh words construed on the principles and according to the rules of the English grammar." Williams also says that in Owen's 'Cambrian Biography,' "more than half the articles are erroneous." The 'Cambrian Biography,' which was published in 1803, has the merit of being the first work of the kind, and of containing a great number of names, but the articles are unusually dry, and if they have not the merit of accuracy can have no other. The 'Cambrian Register,' a miscellany of which Owen seems to have edited three volumes (the first in 1796, the last in 1818), is of a superior kind, and contains an unusual quantity of new and entertaining information. A Welsh magazine which he edited, called 'Y Greal,' bears also a high reputation. In the year 1806 he succeeded to the estate of Troe-y-Parc, near Denbigh, and finally took up his residence there, assuming in connection with his inheritance the name of Pughe. It was probably during some visits to London which he made about this time, that he became what Southey tells us he was, "one of Joanna Southcott's four-and-twenty elders," a distinction which was united in his person with that of a Fellow of the Society of Antiquaries, and an honorary Doctor of the University of Oxford. A translation of 'Paradise Lost' into Welsh, under the title of 'Coll Gwynfa,' appeared from his pen in 1819, and he rendered into the same language Heber's 'Palestine,' and many of Mrs. Hemans's poetical pieces. He died on the 4th of June 1835, at Dolyddy Cae, a house at the foot of Cader Idris, ending his life not far from the spot where it had begun, near the mountain from which in his writings he often assumed the name of Idrison. He was married in 1790, and left two daughters and one son: the latter, who bore the name of Aneurin Owen without the addition of Pughe, was born in 1792, and died in 1851, at his residence of Troe-y-Parc. He edited the 'Ancient Laws and Institutes of Wales,' published in 1841 by the Record Commission.

PUGIN, AUGUSTUS, an eminent architectural draftsman was born in France, 1762, but settled in London at an early age. He was engaged as a draftsman and assistant by Nash, with whom he remained many years. He then found employment among publishers in the preparation of architectural drawings for engraving; one of the most important of his earlier works being the buildings in Ackerman's 'Microcosm of London,' 1808-11. He also made the drawings for a 'Series of Views in Islington and Pentonville, with descriptions by E. W. Brayley.' Subsequently he directed his attention more particularly to the architecture of the middle ages; and in 1821 he began the publication of his 'Specimens of Gothic Architecture, selected from various Ancient Edifices in England, consisting of Plans, Elevations, Sections, and parts at large; calculated to exemplify the various styles, and the practical construction of this class of admired Architecture;' it was completed in 1823, and forms 2 vols. folio and 4to, containing 114 plates, with descriptions, chiefly by Mr. E. J. Wilson. In 1824 he commenced, in conjunction with Mr. John Britton, 'Architectural Illustrations of the Buildings of London,' also completed in 2 vols. 4to; and with the same gentleman he published, in folio and quarto, 1825-28, 'Specimens of the Architectural Antiquities of Normandy, measured and drawn by A. Pugin, and engraved by John and Henry Le Keux.' This is his best and most important work, and did much to enlarge our knowledge of mediæval architecture; he was assisted in this work by his son, the subject of the succeeding notice. In 1829 Mr. Pugin made the drawings for a work entitled 'Paris and its Environs displayed;' and in 1831 he prepared, with the assistance of his son, 'Gothic Ornaments, selected from various buildings in England and France.' He died December 19th, 1832.

PUGIN, AUGUSTIN WELBY NORTHMORE, son of the preceding, was born in 1812. Instructed by his father in the principles of architecture, he early acquired under him remarkable facility in drawing, and travelled with him as his assistant, collecting materials in Normandy and England for his works on Gothic architecture. [PUGIN, A.] His first distinct employment was as assistant to Messrs. Grieve, in painting the architectural scenery in her Majesty's and Covent Garden theatres. He afterwards made drawings for the furniture in Windsor Castle, and designs for plate in the mediæval style for Messrs. Rundell and Bridge. In 1835 he removed to Salisbury, and commenced preparing for publication a series of works illustrative of the furniture and ornamental work of the middle ages. In 1835 appeared his 'Designs for Gothic Furniture, in the style of the Fifteenth Century,' and 'Designs for Iron and Brass-Work, in the style of the XVth and XVIth centuries.' These were followed in 1836 by 'Designs for Gold and Silver-smiths' Work,' and 'Ancient Timber Houses,' all of which met with a ready sale, and tended not a little to stimulate the growing taste for gothic forms. His next work was one that, by its caustic and irritating way of setting forth

some home-truths, aroused not a little professional feeling—'Contrasts; or a parallel between the Noble Edifices of the 14th and 15th centuries, and similar buildings of the present decay of Taste;' a second and improved edition of it was published in 1841.

Mr. Pugin had by this time joined the Roman Catholic Church, to the service of which he henceforth devoted his best energies. Having received a handsome bequest from an aunt, Mrs. Welby, he built himself a fanciful residence in the neighbourhood of Salisbury, and removed there, resolved to study and evolve the principles of the ecclesiastical architecture of the middle ages. Having found in the Earl of Shrewsbury a warm patron, Mr. Pugin soon obtained opportunities of exerting his ability; and during the few years that he lived to practise his profession he was called upon to erect a larger number of Roman Catholic churches, chapels, convents, and schools, than has probably fallen to the lot of any Englishman since the Reformation. The following list, we believe, includes his chief works—(we are indebted for it, and many of the other facts contained in this notice, to a memoir of Pugin by his friend Mr. Talbot Bury, which appeared in the 'Builder' shortly after Pugin's death):—The cathedral church of St. Marie at Derby, one of his earlier and more pleasing works; St. Chad's, Birmingham; three churches at Liverpool; St. Wilfred's, Manchester; church and convent at Edge Hill; churches at Oxford, Cambridge, Reading, Kenilworth, Stockton-on-Tees, Newcastle-upon-Tyne, Preston, Keightley, Rugby, Northampton, Stoke-upon-Trent, Brewood, Woolwich, Hammer-smith, Fulham, Pontefract, St. Edward's near Ware, Buckingham, and St. Wilfred near Alton; a church, and a convent and chapel, at Nottingham; convents of the Sisters of Mercy at London, Birmingham, and Liverpool; a priory at Downside near Bath; colleges at Radcliffe and Rugby; improvements at Maynooth; and cathedrals, with schools and priests' houses attached, at St. George's (Southwark), Killarney, and Ennis-corthy. To these must be added the extensive and costly works executed for his great patron the Earl of Shrewsbury, consisting, besides the alterations made in the mansion, of a church, school-house, and monastery at Alton Towers; and a church at Cheadle, which has the most splendid interior of any of his churches. The very pretty gateway to Magdalen College, Oxford, is one of the very few works executed by him for any Protestant body. Mr. Ferrey ('Recollections of A. Welby-Pugin, 1861, p. 185) says, that he built in all forty-two churches. The list of works given above would in truth seem to have been more than sufficient to exhaust the time and energies of a man who ceased working at the age of forty; yet he was chiefly employed during his last years in designing and superintending the ornamentation of the New Palace of Westminster, which probably owes its somewhat extravagantly mediæval and ecclesiastical character to Pugin's idiosyncrasies. But, besides the practice of his profession, he found time to add to his literature a second and revised edition of his 'Contrasts;' a treatise on the 'True Principles of Pointed or Christian Architecture,' 1841; 'An Apology for the Revival of Christian Architecture,' 1843; a 'Glossary of Ecclesiastical Ornament,' 1844; a treatise on 'Floriated Ornaments,' 1849; and 'A Treatise on Chancel Screens,' 1851. We ought also to add that he was connected commercially with the house of Messrs. Hardman of Birmingham, who manufactured ecclesiastical brass-work from his designs; and he is said to have filled up his leisure hours with landscape-painting.

Mr. Pugin had always been fond of the sea—(indeed it is stated in one of the biographical notices of him that he once owned "and for a time commanded a merchant smack trading to Holland," though it is difficult to see when that time could have been)—and having realised by his profession a handsome sum, he purchased an estate at Ramsgate, in order at once to enjoy his favourite element and carry out unfettered his notions of architectural propriety. Here he expended all his property in erecting for himself a house, a church, schools, &c., the whole being dedicated to St. Augustine. As he advanced in life his religious feelings took more and more entire possession of him. He now (1850) wrote and published 'An Address to the Inhabitants of Ramsgate,' 'An Earnest Appeal for the Revival of the Ancient Plain Song,' 'The Present State of Public Worship among the Roman Catholics,' and other pamphlets of a religious character. At length, overtaken with all this excessive labour and excitement, his intellect began to give way, and in his fortieth year it was deemed necessary to remove him to a lunatic asylum. For a brief space his mental powers were so far restored that it became practicable for him to return to his home at Ramsgate; but his life was ebbing, and he expired there on the 14th of September 1852, three days after his return. He was buried in a vault of his own church of St. Augustine. He had been three times married, and shortly after his death a pension of 100*l.* a year was granted to his widow from the Civil List.

As will have been seen, Mr. Pugin was a man of extraordinary industry and energy, and he possessed a very unusual amount of knowledge and great ability. He attempted too many things, and he worked too much and too fast to produce many great works, even had he been a man of original power; but in truth his was not a creative mind, and he lacked comprehensive thought. His great principle was, that, except as to size, the architect should aim at a faithful reproduction of an ecclesiastical edifice of the mediæval period; or, as he stated it in his 'True Principles of Pointed or Gothic Architecture,' "We may indeed improve in mechanical contrivances to

expedite its construction—we may even increase its scale or grandeur; but we can never successfully deviate one tittle from the spirit and principles of gothic architecture. We must rest content to follow, not to lead. We may indeed widen the road which our Catholic fathers formed, but we can never depart from their track without a certainty of failure being the result of our presumption." Following such a dogma, it is evident that the highest success must be a respectable imitation. But even on his own principles, few of his works are entirely satisfactory as a whole; in particular parts and in details he is generally very happy, and some of his interiors have a rich and pleasing effect. His writings have had a powerful influence on the taste and practice of professed architects, and still more on the taste of ecclesiastical amateurs, and the influence has not been entirely a happy one. More than any single man perhaps has been the cause of that perverse fashion which has predominated during the last fifteen or twenty years, of building modern churches in all their parts on the precise model of the churches of the middle ages, although—at least in Protestant churches—the forms of worship and the requirements of the congregations are so changed. In Pugin it was consistent: in his disciples it is absurd.

PULCI, LUIGI, born at Florence in 1481, of a respectable though poor family, became early in life acquainted with the wealthy family of Medici, through which he seems to have obtained an inferior office under the Florentine republic. He travelled about Italy, and even beyond its limits, according to his own statement. Few particulars of his life are known. He married Lucrezia Albizzi, by whom he had two sons, who survived him. He was a welcome guest at the table of Lorenzo de' Medici, who relished his wit and his extempore poetical effusions. Lucrezia Tornabuoni, Lorenzo's mother, urged Pulci to write an epic poem. Pulci undertook the task, and he looked for his theme among the traditional legends of Charlemagne and his Paladins, as recorded by Turpin, which had already become familiar in Italy through the Italian romance 'I Reali di Francia,' written in the 13th century, and was a popular theme for the extempore effusion of strolling story-tellers. Pulci took for the subject of his poem the treachery of Gano of Maganza, one of Charlemagne's vassals, who is reported in the old legends to have conspired with the Saracens of Spain, against his master, and to have brought about the fatal defeat of the French at Roncesvalles in the Pyrenees. Pulci was well acquainted not only with Turpin's 'Chronicle,' but with the old French and Provençal romances which related to the fabulous history of Charlemagne's Spanish wars. Pulci moulded these rude materials into a living form, and breathed into it his own poetical inspiration. His predecessors had dealt out the old traditional fables in a serious strain. Pulci was the first to seize the ludicrous side of the stories, and to derive from it a fresh subject for poetry and a source of amusement for his readers. Still his poem is not, as it has been by many supposed to be, a burlesque poem, but a combination of the serious with the facetious; it is a romance accompanied by its own parody. The poet is often evidently in earnest, being carried along by the lofty or pathetic events which he describes; but he now and then relaxes to enjoy a laugh with his hearers at the expense of his heroes, and of the popular story-tellers, who formed a numerous tribe in his age, and who, by their pompous diction and their exaggerations and anachronisms, enhanced the absurdity of their wondrous tales. One character however, that of Orlando, the French and Spanish Roland, Pulci preserved in its original simple grandeur, as handed down by old tradition. Pulci brought also on the scene another worthy competitor for fame, Rinaldo di Montalbano, the Reynault of the French romances, whose character and adventures he took chiefly from 'Les Quatres Fils d'Aymon,' of Adenès, an old romance writer of the 13th century.

The title of 'Morgante Maggiore,' which Pulci chose to give to his poem, is a capricious one, for the giant whom he introduces by the name of Morgante is only a subordinate character, and acts as squire to Orlando, who is the real hero of the poem. Gano however may be considered as the principal actor; like Satan in Milton, he is the author of all mischief, and his punishment is properly the end of the action. Another giant, called Margutte, is the Thersites of the poem. He is an open scoffer at religion, and he has been adduced by Voltaire and others as a proof of Pulci's unbelief. But the poet, from the beginning, proclaims Margutte to be what he is, a profligate despicable fellow, and by so doing shows no intention of recommending his opinions or example. Perhaps the finest passage of the poem is that where Roland's last fight and dying scene at Roncesvalles are so beautifully described by the poet. The farewell of Roland to his faithful steed, his trusty companion in many a battle, his confession and last prayer, and the angelic melody which is heard above, as he expired—all this part is equal in pathos and loftiness to any passage in either Dante or Tasso. The poet felt evidently interested in his subject and wrote in earnest. But even here he occasionally breaks out, in the midst of his most serious narrative, into a fit of comic humour, as if by way of relaxation. While the fearful conflict is raging in the glen of Roncesvalles, the poet describes two demons keeping watch in a deserted chapel on the outskirts of the defile, intent upon seizing and securing the souls of the Saracens who fell in the battle, as their lawful prey. The eagerness of these satanic sentries is described with much drollery.

It is a curious fact that the first edition of the poem of Pulci,

with all its freedom of thought and expression, came out in 1481, from the press of the convent of Ripoli at Florence, and that some of the nuns, and one Marietta among them, acted as compositors, and were paid accordingly. ('Notizie Istoriche sopra la Stamperia di Ripoli,' by Father Vincenzo Fineschi, Domenicano, Florence, 1781.) There was a much greater degree of freedom in speaking and writing in Italy during the 14th and 15th centuries than there has been at any time since; the change took place about the middle of the 16th century, when the alarm about the spreading of the doctrines of the Reformation induced Pope Paul III. to establish permanently, with the consent of Charles V., the court of the Inquisition, which effectually silenced both tongues and pens.

The 'Morgante Maggiore' is less read and noticed now even in Italy than it deserves; the poem has many beauties; and great fluency and vivacity of diction, owing to the author being a Florentine and writing in his own vernacular language. Pulci may be considered both as the last of the old romancers and as the first of the Italian epic writers. His poem retains much of the simplicity and antique cast of the traditions of the dark ages, enriched with the information of a more enlightened period. By reading the 'Morgante' attentively, one is less surprised at some old Florentine critics giving it the preference over Ariosto's splendid and elaborate poem. But the two works are the representatives of two different ages, and there is the same difference between them as there was between Pulci's jovial and free-spoken friend, Lorenzo de' Medici, and the princes of the house of Este, the courtly patrons of Ariosto. The edition of the 'Morgante,' Naples, 1782, contains a good biography of the author.

Pulci wrote also a number of satirical and some licentious sonnets, and other light poetry, including his 'Confession,' the copies of which are rather scarce. Pulci died at Florence in 1487.

PULGAR, HERNANDO DEL, a celebrated Spanish historian, was probably born at Pulgar, a village close to Toledo, about 1486. When still young he entered the household of John II., king of Castile, and was educated as one of his pages. After the death of that monarch, Pulgar was appointed secretary to Henry IV., his son and successor, by whom he was entrusted with various confidential affairs. He retained his place on the accession of Isabella, who, in 1482, named him to the vacant office of national historiographer. From this period Pulgar remained near the royal person, accompanying the queen in her various progresses through the kingdom, as well as in her military expeditions into the Moorish territory. He was consequently an eyewitness of many of the warlike scenes which he describes, and from his situation at the court must have had access to the most ample and accredited sources of information. That portion of his Chronicle containing a retrospective survey of events previous to 1482, may be charged with gross inaccuracy: but this cannot be said of the remaining part, which may be received as perfectly authentic, and has all the character of impartiality. Pulgar's style of narration, though rather prolix, is sufficiently perspicuous, and may be favourably contrasted with that of contemporary writers. His Chronicle was first printed at Valladolid, in 1565, when it appeared under the name of Antonio de Lebrixa, among whose papers it was found by his grandson the editor. Two years later (1567), another edition was published at Saragoosa, with the real name of the author. The most elegant edition of Pulgar's Chronicle was printed at Valencia, in 1780, by Benito Montfort, in large folio.

Pulgar left some other works, of which his Commentary on the 'Coplas de Mingo Revulgo,' an ancient satire, in the form of a dialogue between two shepherds, describing the court of John II., his 'Letters,' and his 'Claros Varones,' or sketches of illustrious men, have alone been published. The last contains forty-six biographical articles of the most distinguished individuals of the court of Henry IV., which although too indiscriminately encomiastic, contain much valuable information on the principal actors of that period. Fourteen of the Letters were first printed at Seville, towards the close of the 15th century; the whole number—thirty-two—were afterwards printed at the same city, together with the 'Claros Varones,' 1500, 4to. Several editions of the same two works were subsequently published, Alcalá, 1524 and 1528; Zamora, 1543; Valladolid, 1545; Antwerp, 1632; all in 4to. The Letters only were afterwards translated into Latin by Julian Magon, and published with the Spanish text, at the end of Peter Martyr's 'Epistles,' Amstelodami, apud Elz., 1670. Of more modern editions, those of Madrid, 4to, 1775 and 1789, are valuable on account of some excellent notes and their having a biographical account of Pulgar prefixed to them.

Nicolas Antonio ('Bib. Nov.,' vol. ii., p. 888), attributes to him a Chronicle of Henry IV., and a history of the Moorish kings of Granada. Other bibliographers have confounded this Pulgar with Hernan Perez del Pulgar, a distinguished officer, who gained great renown in the war of Granada, and who is supposed to be the author of a Chronicle of Gonzalo de Cordova, Alcalá, 1584, fol., as well as of a translation of a French historical work, entitled 'La Mer des Histories,' which appeared at Valladolid, in 1512, fol., under the title of 'Mar de Historias.'

The year of Pulgar's death has not been ascertained: it is probable that he did not survive the capture of Granada by Ferdinand and Isabella, as his history falls somewhat short of that event. Besides, from some remarks in his Letters, all of which were written after 1482, it

would appear that he was already at that time much advanced in years. It is however quite clear that Pulgar was still living some years after 1486, the epoch which the 'Biographie Universelle' has erroneously assigned for his death.

\* PULSZKY, FERENCZ AUREL, a conspicuous political character in the Hungarian revolution, and a successful author in the German, Hungarian, and English languages, was born on the 17th of September 1814, at Eperies, in the county of Sáros. He is descended from a Polish family which emigrated to Hungary in the 17th century, and the *s* in his name is inserted in conformity with the rules of Hungarian orthography, according to which, the sound which by the Poles and English is represented by the letter *s* is denoted by the compound *sz*, the letter *s* when it stands by itself in Hungarian assuming the sound which in English is represented by *sh*, and in Polish by *sz*. Pulzsky studied at Miskolcz and Eperies, and in 1833 passed his examination as an advocate. His uncle Fejerváry, a celebrated antiquarian and collector of antiquities, afterwards took him on a tour to Germany and Italy, and subsequently to England, Scotland, and Ireland, in which he passed some portion of 1836. In the next year he first appeared as an author in a German volume published at Pesth, 'Aus dem Tagebuche einer in Grossbritannien reisenden Ungarn' ('Extracts from the Diary of an Hungarian travelling in Great Britain'). The book is written with some spirit, but full of hasty and incorrect remarks, such as that the fashions of dress in England are not subject to change, an observation which it shows some want of judgment in a hasty traveller to hazard. The last essay in the volume is a comparison between England and Hungary, which concludes with the remark, "Hungary has hitherto advanced slowly in the path of improvement, resembling England in this, although unacquainted with that country, and there is still every reason to inspire us with confidence, that it will never abandon this safe and legal path even for a moment." In Eötvös's 'Budapesti Arviz-könyv' [Eötvös], published in 1839, Pulzsky communicated some further observations on England, and some on Germany, in a series of 'Úti Vázolatok,' or 'Travelling Sketches.' He was chosen by the county of Sáros its representative at the diet of 1840, and distinguished himself in the ranks of the opposition, being named as secretary of a commission to draw up a code for Hungary. At subsequent elections however he failed to obtain a seat, and was obliged to confine his political activity to articles in the newspapers, enjoying as the Hungarian correspondent of the 'Allgemeine Zeitung,' or 'Augsburg Gazette,' a good opportunity of diffusing his views in Europe. He was then one of the principal supporters of the Hungarian Union against the purchase of foreign manufactures, and it was in this character, as we learn from the 'Memoirs of a Hungarian Lady, Theresa Pulzsky,' his wife, that he first attracted in the circles of Vienna the attention of his future bride, the daughter of a Viennese merchant named Walter. After his marriage he established his residence on an estate about sixty English miles from Pesth, at a manor house called Castle Szécseny, where he had under his management twelve thousand acres of land and six thousand sheep. The news of the February revolution of 1848 roused him from his rural repose. On being told the intelligence by his wife he replied, "Next autumn our fields will no more be tilled by scutage, feudal institutions will disappear in Europe." He hastened to Pesth, was soon after named a member in the Batthyáni ministry, and in the month of May was appointed under-secretary of state for Hungary at Vienna, his chief being Prince Paul Esterházy. He made himself conspicuous by his activity in the office, and on the 5th of October, when the clash between Austria and Hungary was imminent, he received an autograph letter from the emperor to inform him that his "resignation was accepted," though no resignation had been offered. In the events which followed at Vienna, including the murder of Latour, the Austrians asserted that they could trace the hand of Pulzsky, and when Windischgrätz became master of the city, there was no one whom he was more anxious to secure. Pulzsky, who has always denied any connection with the death of Latour, succeeded in escaping to Pesth. He was entrusted by Kossuth with a mission to London, to endeavour to prevail on Lord Palmerston to give some support to the Hungarian insurrection, and was thus away from Hungary at the time of the final ruin of the cause. He afterwards urged the English government to support the Sultan in his refusal to surrender the Hungarian exiles, but, as may be supposed, little prompting was required to ensure such a determination. Since Kossuth's arrival in England, Pulzsky has been understood to be his most confidential friend and adviser, and he accompanied the ex-governor on his memorable progress through America. This tour he has described in three volumes of travels in America, under the title of 'Red, White, and Black' (London, 1852)—a work rich in entertainment and information, and in which the observations on American society by Madame Pulzsky are particularly worthy of note. The husband and wife had previously appeared in conjunction as English authors in 'Tales and Traditions of Hungary' (3 vols., London, 1851), the last two volumes of which are occupied by a long and somewhat tedious story, entitled 'The Jacobins in Hungary,' which is hardly anything beyond a narrative of the conspiracy of Martinovics. Pulzsky is also the author of a 'Catalogue of the Fejerváry Ivories, formerly in the collection of the late Gabriel Fejerváry de Komlos-Keresztes, and now in the museum of Joseph Mayer, Esq., F.S.A., Liverpool, 1856.

\* **PULASKY, THERESA**, born in 1815 at Vienna, married in 1845 to Ferenc Pulasky, is the authoress of 'Memoirs of a Hungarian Lady' (2 vols., 1851), and of some other works in conjunction with her husband. The Memoirs are written entirely in an Hungarian spirit.

**PULTENEY, WILLIAM, EARL OF BATH**, was born in 1682. He was the eldest son of a father of the same name, whose father, Sir William, had represented the city of Westminster in parliament with some distinction. The surname is supposed to have been taken from Pulteney in Leicestershire, where the family had been anciently established.

Young Pulteney, having been sent first to Westminster school and then to Christchurch, Oxford, afterwards travelled on the Continent, and on his return home in 1705 was brought into parliament for the borough of Hedon in Yorkshire. He was indebted for his seat to his guardian, Henry Guy, Esq., formerly secretary to the treasury, who afterwards left him a legacy of 40,000*l.*, and landed property to the value of 500*l.* a year. Pulteney besides derived a considerable estate from his father, and he also received a large portion with his wife, Anna Maria, daughter of John Gumley, Esq., of Isleworth. All this wealth he increased by the practice throughout his life of a very rigid economy, "which," says Coxe, in his 'Memoirs of Walpole,' "his enemies called avarice, but which did not prevent him from performing many acts of charity and beneficence."

From his entry into the House of Commons, Pulteney attached himself to the Whig party, which was that of his family. He continued to sit for Hedon throughout the reign of Anne, but his name does not appear in the reported parliamentary debates during that reign. Coxe however states that he spoke for the first time on the 'Place Bill,' which he warmly supported. 'Place Bills,' or proposals for excluding placemen from parliament, were brought forward in the House of Commons almost every session in this reign. He appears also to have distinguished himself on the question of the prosecution of Sacheverell; and he is said to have made himself so obnoxious to the Tories that, when they came into power in 1710, they revenged themselves upon the young orator by removing his uncle, John Pulteney, Esq., from the board of trade. During the last four years of Queen Anne he not only took a principal share in the debates, but was admitted to the most important secrets of his party; and on the prosecution of Walpole in 1712, Pulteney defended his friend in a very elegant speech.

On the accession of George I. Pulteney was appointed secretary-at-war, but when Walpole resigned in 1717 Pulteney also gave up his office. Soon after this however a coolness took place between the two friends, which was not removed by the appointment of Pulteney to the valuable sinecure of cofferer of the household on Walpole's resumption of office in 1720; but it was not till 1725 that Pulteney openly threw himself into the ranks of opposition, was dismissed from his place of cofferer, and began that course of bitter and incessant attack upon the minister which did not cease till Walpole was driven from power in 1742. Nor did he confine his exertions to his place in parliament; out of doors he entered into a close union with the party of which Bolingbroke was the head, and became the principal assistant of that writer in his paper called the 'Craftsman.' He also wrote several pamphlets, attacking the minister and his friends with extreme virulence. A passage in one of these led to a duel between Pulteney and Lord Hervey (January 1731), in which both were slightly wounded. By his shining powers as a debater also, and the flaming patriotism with which he filled his harangues as leader of the opposition, he raised himself to the height of public favour, and was for some years the most popular man in the kingdom. When the administration of Walpole was at last overthrown (February 1742), all the authority of the state seemed for a moment to lie at the feet of Pulteney; and he actually named the new ministry, taking to himself a seat in the cabinet without any office, and stipulating for a peerage. But the arrangements that were made had in fact been all, it may be said, dictated by Walpole, who still retained his influence with the king, and secretly arranged with his majesty the course into which Pulteney was to be seduced with the view of destroying the popularity which was his chief strength. The composition of the new cabinet disappointed the expectations both of partisans and of the public; everything wore the appearance of its apparent maker having in fact made a compact and a compromise with Walpole; one considerable section of his late supporters (that headed by the Pitts and the Grenvilles) was wholly overlooked in the distribution of places; and the suspicion and sense of injury awakened by all this burst into a universal storm of indignation when, after the lapse of a few months, Pulteney walked into the House of Lords as Earl of Bath. From this moment the late popular idol, as Chesterfield wrote, "shrank into insignificance and an earldom." On the death (July 1743) of Lord Wilmington, whom he had named head of the ministry, he made an unsuccessful effort to succeed him as first lord of the treasury; but on the resignation of the Pelham ministry (February 1746), he actually obtained the coveted premiership. He had however now so entirely lost his influence that he could not induce any persons of weight to join him, and his short-lived ministry was at an end within two days. However he lived till 1764, chiefly occupied in nursing his private fortune, but still sometimes taking part in the debates and in public affairs. In the year 1760 he published 'A Letter to Two Great Men' (Mr. Pitt and the Duke of Newcastle),

in which Horace Walpole, perhaps from no better authority than his own suspicion and spite, says he was assisted by his chaplain Douglas (the same who afterwards became successively bishop of Carlisle and of Salisbury). Walpole adds, "It contained a plan of the terms which his lordship thought we ought to demand if we concluded a peace: it was as little regarded by the persons it addressed as a work of Mr. Pitt's would have been, if, outliving his patriotism, power, and character, he should twenty years after have emerged in a pamphlet." ('Mems. of George II.,' ii. 412.) However the caustic annalist allows that "it pleased in coffee-houses more than it deserved."

Pulteney left no family, and his peerage became extinct on his death; but the title of Baroness Bath was conferred in 1792, and afterwards that of Countess of Bath in 1808, on Henrietta Laura Pulteney, daughter of Frances Pulteney, and Sir William Johnson, Bart. (who took the name of Pulteney), and great-grand-daughter through her mother of a younger brother of the first earl's father. This lady, who inherited the earl's fortune, died also without issue in 1808, and the title again became extinct.

**PUPIENUS. CLODIUS PUPIENUS MAXIMUS**, an officer of rank in the Roman army, was elected emperor by the senate conjointly with Balbinus, after the death of the two Gordians, in opposition to the usurper Maximinus, A.D. 240. After a reign of about a twelvemonth he was killed, together with his colleague, in an insurrection of the Prætorians at Rome. Further details concerning these events are given under **BALBINUS**.

Coin of Papienus.  
British Museum. Actual size.

**PURBACH, GEORGE**, so called from the name of his birthplace, Peurbach, a village on the confines of Bavaria and Austria, and about 24 miles west from Linz, was born in 1423. His family name appears to be unknown. Montucla informs us that he became a pupil of Gmunden, who taught astronomy in the University of Vienna; that he afterwards visited the principal seats of learning in Europe, in order to acquaint himself with those who cultivated astronomy; and that on his return he succeeded his master Gmunden, notwithstanding very strong solicitations to fix his residence at Bologna and Padua. He constructed many astronomical instruments, among which is an application of the plumb-line to a graduated circle; and he computed several trigonometrical tables, including a table of sines for every ten minutes of the quadrant, which his pupil Müller afterwards extended to each minute. But he is now chiefly remembered on account of the part he took in the translation and elucidation of the 'Almagest' of Ptolemaeus.

Printing, observes Delambre, had not then been applied to the diffusion of mathematical knowledge. The Greek manuscript of Ptolemaeus was then unknown in Europe, and the only works whence a knowledge of astronomy could be derived were two Latin versions of the 'Almagest' (translated from the Arabic), both of which were in many places incorrect, and more frequently altogether unintelligible; an imperfect Latin version of Albatagnius; one of Alfragan; and a treatise on the sphere, by Sacrobosco, which last contained a few elementary notions relating to the phenomena of the diurnal motion and eclipses. Manuscripts were scarce, and those who could procure them were for the most part soon discouraged by the difficulties they encountered in their perusal of Ptolemaeus, and still more by the prolixity of his interminable calculations. It cannot therefore be a matter of surprise that those whose perseverance had in some measure surmounted these obstacles should enjoy a high reputation, and that their assistance should be eagerly sought after by others. Such was the case with Purbach. His ignorance of the Greek language would have precluded his reading the 'Almagest' in the original, had it been in his possession; but he had read the Latin translations of it, and, after relieving them of their geometrical reasoning and tedious calculations, he endeavoured to explain the Ptolemaic system, not to those who wished to become astronomers, but to those who would be contented with a general notion of the mechanism of the phenomena and the arrangement of the heavenly bodies. The most difficult part was the theory of the planets, concerning which Sacrobosco was silent. Purbach made it the subject of a book, which was not published till 1488, twenty-seven years after his death, when it appeared at Venice appended to a quarto edition of Sacrobosco's treatise on the sphere, under the title of 'Theoria Nova Planetarum.' This work, which may be looked upon as an introduction to Ptolemaeus, passed through many editions, accompanied by as many different com-

mentaries, from which we may infer, says Delambre, that the work itself was not what it ought to have been, but that it served as the text-book to most of the professors of the day.

A faithful translation of the 'Almagest' was still a desideratum among astronomers. Bessaron, who first introduced into Europe the text of Ptolemaeus and that of his commentator Theon, had himself commenced a new version, but unable to proceed with it, in consequence of his numerous political missions, he addressed himself to Purbach, whom he persuaded to undertake the task. Our authority (Delambre), who does not say how Purbach qualified himself to translate from the Greek, adds, that when he had completed the earlier books, he died, confiding the revision and further prosecution of the work to his friend and pupil Müller. According to Montucla, Purbach was advised by Bessaron to acquaint himself with the language of Greece by revisiting Italy, where the literature of Greece was at that time much cultivated, and that his death took place suddenly when on the point of taking his departure from Vienna for that purpose. This work, which after all was but an abridgment of the original, was completed by Müller, under the title of 'Johannis de Monteregio et Georgii Purbachii Epitome in Cl. Ptolemaei Magnam Constructionem,' &c., and published by him at Basel in 1543: an analysis of its contents will be found in the 'Histoire de l'Astronomie du Moyen Age,' pp. 262-292; but any further notice of it belongs to the article REGIOMONTANUS.

Purbach died at Vienna, on the 8th of April 1461, in the thirty-eighth year of his age. His remains were interred in the cathedral of that city, where a Latin epitaph indicates his tomb. His published works not already mentioned are—1, 'Tabulæ Eclipsium,' fol., Vien., 1514, in which is given a list of his unedited manuscripts; 2, 'Elementa Arithmetica,' 4to, Viteb., 1536; 3, 'De Sinibus,' Nürnberg, 1541; 4, 'De Quadrato Geometrico,' Nürnberg, 1544.

(*Georgii Purbachii et Joannis Mülleris Regiomontani Vita; Authore Petro Gasendo*, 4to, Hagæ, 1655; Montucla, *Hist. des Math.*; *Biog. Univers.*, article *Purbach*, by Delambre; Hutton, *Dictionary*, &c.)

PURCELL, HENRY, was born in the year 1658, in the city of Westminster, as is generally supposed. His father Henry, and also his uncle Thomas Purcell, were appointed gentlemen of the chapel-royal at the Restoration, and are named, in the archives of the heralds' college, among the persons who officiated at the coronation of Charles II. The young Henry lost his father when but six years of age, about which time he appears to have entered as one of the children of the chapel under Captain Cook, then master, to whom therefore it is rather more than probable he was indebted not only for his initiation in the principles of music, but for much of his knowledge of its practice, and of its theory as applicable to composition. It is true that on Dr. Blow's monumental tablet in Westminster Abbey, it is triumphantly recorded that he was "master to the famous Mr. Henry Purcell;" and no doubt the youthful musician, when he quitted the chapel on his voice changing, received some instructions from Blow, a master then in high repute, and from whom a few lessons were enough to recommend to public notice a young man on his entrance into the world; but to Cook the credit is due for the right guidance of Purcell's inborn genius, and for its early cultivation.

Purcell was remarkable for precocity of talent, and seconded the liberality of nature by his zeal and diligence. While yet a boy-chorister he composed more than one anthem; and in 1676, though only eighteen years of age, was chosen to succeed Dr. Christopher Gibbons as organist of Westminster Abbey, an appointment of high professional rank. Six years after, in 1682, he became one of the organists of the royal chapel, and there, as well as at the Abbey, produced his numerous anthems, many of which appear in different collections, and nearly all of them have recently been published in one complete work. These were eagerly sought, almost as soon as written, for the use of the various cathedrals, and thus his fame quickly travelled to the remotest parts of England and Ireland. Had Purcell confined himself to church music only, he would have stood on very lofty ground as compared with either his predecessors or contemporaries, and his works would have been transmitted with honour to after-ages; but the greatness of his genius is most conspicuous in his compositions for the chamber and the stage. In these the vividness of his imagination and the fertility of his invention appear in all their effluence, because unrestrained by the character of the poetry to which he gave musical expression, and unincumbered by what is termed musical erudition, a kind of learning which time (even a century and a half ago) and a laudable feeling of veneration had rendered an almost necessary attribute of cathedral harmony.

Purcell's first essay in dramatic music, when only nineteen years of age, was his setting the songs, &c. in Nahum Tate's 'Dido and Æneas,' an operetta written for a boarding school of celebrity. In this is the simple and beautiful duet, 'Fear no danger,' once sung everywhere and by everybody, but now almost forgotten. The music in Nat. Lee's 'Theodosius, or the Force of Love,' performed at the Duke's theatre, in 1690, was his first work for the public stage. In the same year he set new music to 'The Tempest,' as altered by Dryden, which is still heard with delight, and also the 'Prophetess, or Diocletian,' altered by Dryden and Betterton from Beaumont and Fletcher. In 1691 he composed the songs, &c. in Dryden's 'King Arthur,' among which are the inimitable frost-scene, the very original and lovely air,

'Fairest Isle,' and the charming duet, 'Two daughters of this aged stream are we.' In 1692 appeared Sir R. Howard's and Dryden's 'Indian Queen,' with Purcell's music. The fine incantation scene in this, 'Ye twice ten hundred deities,' is yet often heard in good concerts. The duet and chorus, 'To arms,' and the air, 'Britons, strike home!' in Dryden's alteration of 'Bonduca,' are national property—are our war-songs, always received with acclamations when we are engaged in or menaced by hostilities, and frequently performed during peace on account of their beauty, musically considered. These alone will suffice to carry Purcell's name to distant ages. His music in D'Urfey's 'Don Quixote' is remarkably appropriate and clever: the song, 'Genius of England,' has few rivals, and the cantata, 'Let the dreadful engines of eternal will,' sung in the character of the love-distracted Cardenio, is, with the exception of the latter part (now very wisely omitted in the performance), one of the composer's finest creations. He also wrote airs, overtures, and act-tunes for many dramas, among which may be mentioned Dryden and Lee's 'Œdipus,' 'Timon of Athens,' 'The Fairy Queen,' altered from 'A Midsummer-night's Dream,' and Dryden's 'Tyrranic Love, or the Royal Martyr.'

The three detached cantatas by Purcell are undeniable proofs of his fancy, energy, and deep feeling. It is sufficient to name 'Mad Bess,' 'Old Tom of Bedlam,' or 'Mad Tom' (the words by Mr. William Basse, Walton tells us, in his 'Angler'), and 'From rose bowers, written by Tom D'Urfey, all well known and highly valued by true connoisseurs and lovers of music. Our limits will not allow us to enter into any account of, or even to name, his many single songs and duets. After the composer's death they were collected by his widow, and published in two folio volumes, under the title of 'Orpheus Britannicus,' the second and best edition of which is now very rare. His odes, glees, catches, and rounds are numerous, and several of them familiar to the admirers of vocal harmony. In 1688 he published twelve sonatas for two violins and a bass. In the preface he says that "he has faithfully endeavoured a just imitation of the most famed Italian masters, principally to bring the seriousness and gravity of that sort of music into vogue and reputation among our countrymen, whose humour 'tis time now should begin to loathe the levity and balladry of our neighbours." Purcell's esteem for the Italian masters had been before confessed in the dedication of his 'Diocletian' to the Duke of Somerset, wherein he modestly remarks, "Poetry and painting have arrived to their perfection in our country: music is yet but in its nonage, a forward child, which gives hope of what it may be hereafter in England, when the masters of it shall find more encouragement. 'Tis now learning Italian, which is its best master, and studying a little of the French air to give it somewhat more of gayety and fashion. Thus being farther from the sun, we are of later growth than our neighbouring countries, and must be content to shake off our barbarity by degrees." Here he does justice to the French school, by which he had certainly profited, though in a perfectly fair manner.

Two years after his decease his widow printed the overtures, act-tunes, &c., before mentioned, under the title of 'A Collection of Ayrea composed for the Theatre, and on other occasions,' &c. They are in four parts, and continued in use in Dr. Burney's time, till superseded by Handel's concertos and other newer compositions.

We have above alluded to Purcell's compositions for the church, and as regards these must add a few remarks. His published anthems amount in number to upwards of fifty; and to these are to be added a 'Te Deum' and 'Jubilate' with orchestral accompaniments,—a complete Service, several hymns, motets, and sacred songs. Some of his anthems, especially those in Dr. Boyce's Collection, are still in use in our cathedrals and other choirs, and never can be allowed to fall into neglect while the influential persons in those venerable establishments possess any musical discernment. His 'Te Deum' and 'Jubilate,' to which the epithet 'grand' is the usual prefix, is a work that has seldom if ever been spoken of but in terms of unqualified panegyric. That it evinces many traits of originality—that it displays a vast deal of scientific skill—that an easy, pleasing melody runs through portions of it—and that it has also the merit of being the first of the kind ever produced in this country, cannot be denied: but, on the other hand, there is in its general structure a want of suitable grandeur,—mainly arising from the frequent occurrence of mean passages of pointed, jerking notes in the vocal parts, that take from it much of the solemnity which the subject demands; and these, together with certain divisions that disconnect the words and obscure the sense, produce an effect not only undignified, but nearly bordering on the ridiculous. Besides these greater defects, there are in the work some others of less importance, such as a few conceits, some harsh notes, and occasional errors in accentuation and emphasis. The best excuse for the composer is, that most of the errors we have ventured to point out were common at the time they were committed. Still they are errors, and of magnitude, and should have kept within moderate bounds that warmth of feeling which has led to such unreserved encomiums on what, in our opinion, is by no means to be reckoned among the best of the composer's works.

Purcell died November 21, 1695, of consumption. The remains of this great musician lie in the north transept of Westminster Abbey: on a pillar near the spot is a tablet, placed there by the Lady Elizabeth Howard, on which is an inscription, commonly attributed to Dryden.

We shall conclude this notice by repeating the substance of some

remarks made by us elsewhere some years ago. Purcell, take him for all in all, is the greatest musical genius this country ever produced; and our deliberate opinion is, that, from the earliest period in the history of the art, down to the time of his death, Europe would in vain be searched to find his equal as a composer of secular music. That he was to some extent indebted to Lulli will hardly be denied; but that he far surpassed what, perhaps in compliment to our second Charles, and to the taste of the time, he occasionally took as his model, every impartial critic must admit. If too his cantatas be compared with compositions in a degree similar, by Alessandro Scarlatti, which have been so highly praised, and so long were vaunted, the vast superiority of the English musician, whether as relates to air, to harmony, to variety of expression, or to beauty of effect, will never be disputed by unbiassed judges. He certainly was not wholly guiltless of the faults of the age in which he lived; or, perhaps, was obliged sometimes to yield his better judgment to the tyrannical demands of custom or of fashion; yet some of his ecclesiastical and most of his secular music, written under the influence of his own feeling, and uncontrolled by the necessity of submitting to the taste of the great and small vulgar, is so rich in melody, so expressive of the depth and energy of true passion, that all who understand the English tongue, who have acquired some knowledge of the language of music, and have no governing predilection for any particular school, confess his power, and admit the originality and vigour of his genius.

PURCHAS, SAMUEL, was born at Thaxted in Essex, in 1577. He was educated at Cambridge, and though Wood says that he could not ascertain at what college or hall, it appears from his own testimony that he was a member of St. John's College; for in speaking of this college he says—"Where also the author first conceived with this travelling genius, whereof without travelling he hath travelled ever since." ('Pilgrimages,' part iii, 'Dedication to Lord Keeper Williams'.)

In 1604 Purchas was instituted to the vicarage of Eastwood in Essex, but he soon left this cure to a brother, and went to live in London for the sake of greater advantages in preparing and printing the collection of travels which he had begun to make. In July 1615 he was incorporated Bachelor of Divinity at Oxford, as he stood at Cambridge, having previously been collated by the favour of Dr. John King, bishop of London, to the rectory of St. Martin's Ludgate, in London. He also became chaplain to Archbishop Abbot, but he never obtained higher preferment. By the publication of his books he brought himself into debt, and it was reported that he died in prison; but Wood affirms that he died in his own house a little while after the king (Charles I.) had promised him a deanery, about 1628, aged fifty-one.

The works of this author are the following:—1, 'Purchas his Pilgrimage, or Relations of the World, and the Religions observed in all Ages, and Places discovered, from the Creation unto this present,' 1 vol. folio, 1613, 1614, 1617, 1626. The materials of this work he borrowed, as he says, of above thirteen hundred authors of one or other kind, in he knew not how many hundredths of their epistles, treatises, and relations. ('Dedication to Archbishop Abbot,' prefixed to fourth edition.) 2, 'Purchas his Pilgrimages,' in four parts or vols., folio, 1625, each volume containing five books. The difference between these volumes and the former publication may be best shown in his own words:—"These brethren holding much resemblance in name, nature, and feature, yet differ in both the object and the subject. This (the 'Pilgrimage') being mine own in matter, though borrowed, and in form of words and method; whereas my Pilgrims are the authors themselves, acting their own parts in their own words, only furnished by me with such necessaries as that stage further required, and ordered according to my rules." ('Dedication,' as above.) 3, 'Microcosmus, or the History of Man,' 8vo, 1619; 4, 'The King's Tower, and triumphant Arch of London,' 8vo, 1623; 5, 'A Funeral Sermon on Psalm xxxix,' 8vo, 1619.

Of these five publications the first two are best known, though they are now very scarce. They are curious, and in some respects valuable, and are probably the first works of the kind in our language. The dedications and prefaces particularly show that Purchas was an honest, a benevolent, and a pious man, and that he was of unwearied industry in performing his clerical duties, as well as in preparing his books for publication. He is well described by a foreign writer, quoted by Wood, as "an Englishman admirably skilled in languages, and human and divine arts, a very great philosopher, historian, and theologian, a faithful priest of his own church, very widely known for his many excellent writings, and especially for his large volumes pertaining to the East and West Indies."

\* PUSEY, EDWARD BOUVERIE, D.D., is the second son of the late Honourable Philip Bouverie (who assumed the name of Pusey) younger brother of the first Earl of Radnor, by a daughter of the fourth Earl of Harborough. He was born in 1800, and received his early education at Eton, and Christchurch, Oxford, where he graduated as a first-class in classics in 1822; soon afterwards he was elected to a fellowship in Oriol College. In 1828 he succeeded the late Rev. Dr. Nicoll, as canon of Christchurch cathedral, and Regius Professor of Hebrew in the university. His first publication, which related to the state of religion in Germany, did not attract much attention, but on the commencement of what was termed the Anglo-Catholic movement in 1833, he joined Mr. Newman [NEWMAN, J. H.] in bringing out the

celebrated Oxford 'Tracts for the Times,' many of which he wrote himself, including an elaborate treatise on baptism. In 1843 he preached before the University a sermon on the Holy Eucharist, for certain statements in which, as savouring of the Roman Catholic doctrine of transubstantiation, he was suspended from preaching for three years. He had previously published long and elaborate 'Letters' to the Archbishop of Canterbury and the Bishop of Oxford in defence of his opinions, which he followed up somewhat later by another to the Bishop of London, justifying his encouragement of the practice of auricular confession, on the ground that the latter, if not taught, is at all events tolerated, by the Church of England. The use of the confessional by some strong partisans in the Established Church, has been mainly the result of his teaching and preaching, and he has several times incurred the displeasure of his ecclesiastical superiors by the zeal with which he has advocated and exercised as a priest this portion of his functions. Dr. Pusey also has been mainly instrumental, in conjunction with Miss Sellon, in fostering the growth of conventual institutions in the Established Church, several of which are in existence as voluntary penitentiaries for women. Dr. Pusey is also the author of several well-known sermons on important occasions, and of two treatises on the 'Royal Supremacy in Spiritual Matters,' and on the 'Ancient Doctrine of the Real Presence, gathered from the Fathers.' He has translated and adapted to the use of the English Church several Roman Catholic devotional works. He is also one of the editors of the 'Anglo-Catholic Library,' and of the 'Library of Translations from the Fathers,' who flourished previous to the separation of the Oriental from the Western Church.

PUSEY, PHILIP, elder brother of the preceding, was born in 1799. Having succeeded in 1828 to the Pusey estates in Berkshire (held originally by the tenure of a horn, which has been in possession of the family upwards of 800 years), he became member for the borough of Chippenham in 1830, and in the following year for that of Cahel. In Dec. 1834 he was elected for Berkshire, for which he had been an unsuccessful candidate two years previously; and he continued to represent that county until the dissolution in 1852. A conservative in politics, and a decided supporter of the Corn Laws, on finding that agricultural protection, however desirable he might deem it, was practically unattainable after the passing of the Corn Law measures by Sir Robert Peel in 1846, he, instead of continuing with the bulk of the Protectionist party to agitate for a repeal of the free trade measures, urged the agriculturists to make the best of their position, and to adopt without delay every improvement which scientific investigation and practical experiment had shown to be beneficial, in order to enable them to compete advantageously with the foreign producer. Already well known as a practical agriculturist, and as one who had given his attention to, and carefully watched and tested, every scientific improvement which had been introduced from time to time into the system of draining, ploughing, and reaping, his advice was listened to with respect and his various practical papers in the 'Agricultural Journal' were received as authoritative, and probably to the influence of his high character and sober judgment may be attributed in no small measure the great advance which has been made within the last few years in every department of English agriculture. Mr. Pusey was president of the Royal Agricultural Society of England in 1854, and one of the chief contributors to the Journal of that society, which he also edited for several years. He died July 6, 1855.

PUSHKIN, ALEXANDER SERGEIVITCH, called by some the Russian Byron, and certainly the most distinguished poet of Russia in the present century, was born at St. Petersburg, May 26th (June 7th) 1799, and was educated in the Imperial Lyceum at Tzorskoe-Selo, which he quitted in 1817. While at that seminary, though he made very little progress in his studies, he began to write poetry. On quitting the Lyceum he began to exercise his pen with more of enthusiasm than of discretion in favour of liberalism; and although his first productions of the kind were circulated only in manuscript his opinions became known, and he was sent into a kind of nominal banishment by the Emperor Alexander in 1820; being compelled to accept some subordinate situation under the governor-general of Odessa. Perhaps Siberia would have been the place of his destination, had not his legendary poem, 'Ruslan and Liudmila,' relating to the half-fabulous time of Vladimir, the Russian Charlemagne, just then appeared, and been warmly received by the public.

The success of this, his first production of any length, did not however induce Pushkin to cultivate this kind of epic, if we may so term it, for he adopted in his subsequent poetical narratives a looser and more lyrical form, in which, taking for his subject some single incident or brief and detached historical episode, he renders it a vehicle for the delineation of character, the expression of impassioned sentiment and feelings, and the portraiture of local manners and scenery. His earliest production of this class, his 'Plennik Kavkaskoi, or Prisoner of the Caucasus' (1822), is a mere sketch, most meagre indeed in its outline, relating no more than the escape of a young Russian captive from a horde of wild Tcherkassians, through the assistance of a Tcherkassian maiden; but it is vigorously touched, the images are as poetical as they are distinct, and the style is eminently graphic, though perfectly simple. This poem was translated into German almost immediately after its appearance.

To the 'Plennik' succeeded his 'Fountain of Bakhtchisarai' (1824),

a production of much superior interest, in which the characters of Zarema and Maria, the former of whom has not a few traits in common with Byron's 'Gulnare,' are strikingly contrasted. For the manuscript of this poem, which consists of only 600 lines, the author obtained 3000 rubles—a degree of remuneration then almost unprecedented. His reputation was now fixed, but he allowed an interval of nearly three years to elapse (1824-27) between writing his 'Tzigani' ('The Gypsies') and its being printed; add of his 'Evgenii, or Eugenius Onegin,' though the first chapter or canto appeared in 1825, the sixth was not printed till 1828. The 'Tzigani' had indeed been extensively circulated in manuscript previously to its issuing from the press, and in that form had acquired a celebrity that was no doubt enhanced by the kind of mystery attending it. It is a half-narrative, half-dramatic composition, constructed out of exceedingly slight materials, and gives a picture of the life of the gipsy tribes in Bessarabia, one evidently coloured after nature, but not calculated to render any one enamoured with the simplicity of that nomadic race. The 'Onegin,' avowedly a production akin to Byron's 'Beppo,' is a sort of novel in verse, descriptive of Russian life and manners in the capital and the provinces, and it is generally understood that the hero of it, whose name it bears, was intended by Pushkin for a poetical portrait of himself.

In 1829 appeared almost the last and also the best of his narrative poems, namely, that entitled 'Pultava,' the hero of which is the same person as Byron's 'Mazeppa,' but here exhibited under a very different aspect—not as the blooming page, but as the Hetman of the Kossaks, who, notwithstanding his well-matured years, inspires a maiden, whom he has carried off from her parents, with an ardent attachment. An analysis of this poem, together with spirited translations of one or two scenes from it, will be found in the ninth volume of the 'Foreign Quarterly;' and the same article also contains some account of the 'Fountain of Bakhtiesarai' and the 'Tzigani.'

Pushkin's dramatic poem of 'Boris Godunov,' produced about this period, is one of the most interesting of all his productions, since, besides its historical accuracy and literary merit, it possesses no small attraction as a masterly picture of national manners and feelings, replete with force and truth. After this he nearly abandoned poetry altogether, and applied himself to prose composition, having been not only recalled from exile, but taken into favour by the Emperor Nicolas, who appointed him historiographer, with a pension of 6000 rubles. This change in his fortunes was—if it did not occasion—accompanied by no less striking a change in his opinions, which, after being on the side of liberalism, settled into the contrary extreme. During the last seven or eight years of his life his pen was almost inactive, the chief thing he produced in that time being a history—not of Peter the Great, as was expected—but of the rebel Pugachev. His other productions during that interval amount to no more than a few tales and essays, and his articles in the 'Sovremennik, or Contemporary,' a literary quarterly miscellany, projected by him in 1836, and afterwards continued for the benefit of his family. Several of his posthumous papers, including the 'History of the Iron Mask,' 'Memoirs of Moreau de Brasse,' and fragments of various unfinished tales, romances, &c., appeared after his death in that publication, which also contains a circumstantial narrative of his last moments by one of his friends. His death was in consequence of a wound received in a duel with an officer; and after lingering two days, at times in excessive agony, he expired at St. Petersburg, January 29th (February 10th), 1837, in his thirty-eighth year. Besides paying his debts and bestowing a pension of several thousand rubles upon the poet's widow and family, the emperor commanded a splendid edition of all his works to be published at his own expense.

PUTSCHIUS, ELIAS, was born at Antwerp in 1580. He became early distinguished as a scholar, and at the age of twenty-one he published an edition of Sallust with fragments and notes. Four years afterwards he published the work by which he is chiefly known, 'Ancient Authors of Latin Grammar,' small folio, Hanau, 1605. These authors are thirty-three in number, of whom several were never before printed, and the rest were so much corrected that they might seem, as he says in the title-page, to be then published for the first time. This collection of ancient grammarians is of great value to all who are desirous of gaining a critical knowledge of the Latin language, and it also conveys indirectly many aids to the student of the Greek. Putschius died at Stade, March 9, 1606, in his twenty-sixth year. (Fabricius, *Bibliotheca Latina* contains an ample account of the treatises collected by Putschius.)

PYE, HENRY JAMES, was the son of a Berkshire gentleman, and was born in that county in 1745. He took the degree of M.A. at Oxford in 1766. Several small volumes of poems, and a translation of Aristotle's poetry, with a commentary, were held to give him, on Thomas Warton's death in 1790, a claim to the office of poet-laureate, to the fame of which however he added nothing either before or after his appointment. He was for a good many years member of parliament for his native county, and on the changes which took place in the magistracy of Westminster he was appointed one of the commissioners of police. He died in 1813, and was succeeded in the laureateship by Southey.

\*PYE, JOHN, an eminent landscape engraver, was born in Birmingham in 1782. In his twentieth year he entered the studio of James Heath, the celebrated historical engraver, and there completed

his professional education. Having adopted landscape as his special line, he gradually worked his way into notice. One of the first of his plates which attracted much attention was that of 'Pope's Villa,' by Turner, which he engraved in 1809, and it was by his admirable renderings of Turner's earlier manner that Mr. Pye gained his high professional rank. The largest and most celebrated of his Turner plates was that of 'The Temple of Jupiter,' and it remains one of the very finest line-engravings which has up to the present time been executed of this class of Turner's pictures. Mr. Pye has also of course engraved numerous small engravings and book-illustrations, but his burin always works more successfully on copper than on steel. He has likewise appeared before the public as an author, having written a volume entitled 'Patronage of British Art,' 8vo, 1845, and two or three pamphlets on the inferior position of engravers in the Royal Academy—a position which has been amended by recent resolutions passed by the Academicians. Mr. Pye was one of the founders, and has continued one of the most active supporters of that excellent institution, 'The Artists' Fund,' of the history of which he has given a pretty full account in his 'Patronage of British Art.'

PYM, JOHN, was descended from a good family in Somersetshire, where he was born in the year 1584. It appears from the abstract of title to certain estates that John Pym was the lord of the manors of Woolavington Pym and Woolavington Throckmorton, near Bridgewater, in the county of Somerset. His son Sir Charles Pym, Bart., afterwards possessed these manors, which at his death descended on coheiresses, and ultimately by marriage passed into the family of Hales (of Kent), who became the representatives of the Pym.

In the beginning of 1599 Pym became a gentleman-commoner of Broadgate Hall, now Pembroke College, Oxford; but he left the university without taking a degree, and went, as Wood supposes, to one of the inns of court. Pym was early distinguished for his eloquence and knowledge in the common law. He served in several parliaments towards the end of the reign of James I., and in all those held in the reign of Charles I., as member for Tavistock in Devonshire. He soon distinguished himself in the House by his abilities and zeal in opposing the measures of the court.

In 1626 he was one of the managers of the articles of impeachment against the Duke of Buckingham; and in the Short Parliament, which met on the 13th of April 1640, he was one of the most active members. When, after a long intermission of parliaments, the Long Parliament met (3rd of November 1640), the value of Pym's knowledge and experience in the usages of the House, as well as of his talents as a speaker, was strongly felt. On the 7th of November, the first day in which the House entered upon business, Pym made a long speech respecting grievances. He classed them under three heads, namely—1, privilege of parliament; 2, religion; 3, liberty of the subject. Each of these divisions, as was usual in that age, he again divided into a great number of subdivisions. The style of Pym's oratory, as far as we can judge of it from those speeches of his which were printed at the time, and have come down to us among the innumerable small quartos of that age which are preserved in the British Museum, is nervous, terse, and polished.

Upon the 11th of November a motion was suddenly made by Mr. Pym, who declared that he had something of importance to make known to the House, and desired that the outward room should be cleared of strangers, and the outer doors upon the stairs locked. This being done, Pym began: he alluded by way of exordium to the grievances under which the nation laboured; he inferred from these that a deliberate plan had been formed of entirely changing the frame of government; and then, after an artfully couched preface, in which he asserted that though there were doubtless many persons who had so far insinuated themselves into the "royal affections as to be able to pervert his excellent judgment, to abuse his name, and wickedly apply his authority to countenance and support their own corrupt designs," there was one pre-eminent offender, who, from "an earnest vindicator of the laws, and a most zealous asserter and champion of the liberties of the people, had long since turned apostate from those good affections, and, according to the custom and nature of apostates, was become the greatest enemy to the liberties of his country, and the greatest promoter of tyranny that any age had produced." He then named "the Earl of Strafford, lord-lieutenant of Ireland, and lord president of the council of York, who, he said, had in both places, and in all other provinces wherein his services had been used by the king, raised ample monuments of his tyrannical nature; and that he believed if they took a short survey of his actions and behaviour they would find him the principal author and promoter of all those counsels which had exposed the kingdom to so much ruin." (Clarendon, vol. i., 800, edit. Oxf., 1826.) He then instanced some impetuous actions done by him in England and Ireland, some proud and over-confident expressions in discourse, and certain passionate advices he had given in the most secret councils of state; adding, says Clarendon, some lighter passages of his vanity and amours; and so concluded, "that they would well consider how to provide a remedy proportionable to the disease, and to prevent the further mischiefs they were to expect from the continuance of this great man's power and credit with the king, and his influence upon his counsels."

It is unnecessary to detail here the impeachment of Strafford, which followed, and in which Pym bore so prominent a part. On the 25th

of November (1640), at a conference between the two houses in reference to the subject of this impeachment, Mr. Pym made a speech, in which he attempted with considerable though unsuccessful ingenuity to prove that the Earl of Strafford was guilty of treason, on the ground that "other treasons are against the rule of the law; but this is against the being of the law." The laws against treason in England having been made to protect the king, not the subject, it would be in vain to look in the Statute of Treasons, the 25th Edw. III., st. 5, c. 2, which at that time constituted the English law of treason (the statutes of Henry VIII., making so many new treasons, having been repealed by 1 Mary, c. 1), for any definition or description, or even any mention of that of which Strafford was accused, viz. an attempt to increase the power of the king, and to depress that of the subject. Pym was aware of this, and he endeavoured to meet it by saying that this treason of which he speaks "is enlarged beyond the limits of any description or definition." On the 26th of February 1640, when the articles against Laud had been read, Pym made a powerful speech against him.

We are furnished by Clarendon with some interesting information respecting the manner of life about this time of Pym and one or two of his illustrious friends. "When Mr. Hyde sat in the chair," says Clarendon, "in the grand committee of the house for the extirpation of episcopacy, all that party made great court to him (Clarendon); the house keeping those disorderly hours, and seldom rising till after four of the clock in the afternoon; they frequently importuned him to dine with them at Mr. Pym's lodging, which was at Sir Richard Maule's house, in a little court behind Westminster Hall, where he and Mr. Hambden, Sir Arthur Hazelrig, and two or three more, upon a stock kept a table, where they transacted much business; and invited thither those of whose conversion they had any hope." Clarendon also mentions that they sometimes went out after dinner to ride in the fields between Westminster and Chelsea.

At the conference held between the two houses on the 25th of January 1641, on presenting to the lords certain petitions which the Commons had received from various parts of the kingdom, London, Essex, &c., Mr. Pym made a speech, in which he earnestly urged upon them that "the Commons will be glad to have your help and concurrence in the saving of the kingdom;" but at the same time warned them that "if they should fail of it, it should not discourage them in doing their duty." And he concluded, "My lords, consider what the present necessities and dangers of the commonwealth require; what the Commons have reason to expect; to what endeavours and counsels the concurrent desires of all the people do invite you: so that applying yourselves to the preservation of the king and kingdom, I may be bold to assure you, in the name of all the commons of England, that you shall be bravely seconded." So well was the House of Commons satisfied with the boldness of their speaker, that they voted him the thanks of the House, and "further ordered, that Mr. Pym be desired to put the speech he made at this conference into writing, and to deliver it into the House, to the end it may be printed."

It will convey some idea of the effect of Pym's eloquence to state that when he made his celebrated speech at Guildhall, the acclamations were so loud at the end of every period, that he was frequently compelled to remain silent for some minutes. So great indeed were his power and popularity, that he received the appellation of King Pym.

The influence of Pym on the counsels of parliament having exposed him to the chief odium of the opposite party, he some time before his death, in 1643, published a vindication of his conduct, in answer to the reproaches of having been the promoter of all the innovations which had been introduced into the Church of England, and the person who had produced all the evils which then afflicted the kingdom. In this paper he declared that he was and ever had been and would die a faithful son of the Protestant religion, without having the least tincture of anabaptism, Brownism, and the like errors; and he justified his consenting to the abolishment of episcopacy. With regard to the reports of his being the author of the differences then subsisting between the king and his parliament, he affirmed that he never had a single thought tending to the least disobedience or disloyalty to his majesty, whom he acknowledged for his lawful sovereign, and would spend his blood as soon in his service as any other subject in the kingdom. That it was true, when he perceived his life aimed at, and heard himself proscribed as a traitor, he had fled for protection to the parliament, who justly acquitted him and the other gentlemen accused with him of the guilt of high treason. If this therefore had been the occasion of his majesty's withdrawing from the parliament, the fault could not in any measure be imputed to him, or to any proceeding of his, which had never gone further, either since his majesty's departure or before, than was warranted by the known laws of the kingdom and the indisputable power of the parliament. (Rushworth's 'Collections,' part iii., vol. ii., p. 376, ed. 1721.)

In November 1643 Pym was appointed lieutenant of the ordnance. He died at Derby House, on the 8th of December of the same year, and on the 13th of that month he was buried in Westminster Abbey, his body being carried to the grave by six members of the House of Commons. He left several children by his wife, a woman of singular accomplishments, who died about the year 1620.

A report was put in circulation by his enemies that Pym died of the loathsome disease called 'morbus pediculosus' However there exists

a document, attested by seven physicians, two surgeons, and one apothecary, which states that the disease of which he died was an imposthume in the bowels. And Ludlow mentions that Pym's body was for several days exposed to public view in Derby House, before it was interred, in confutation of those who reported it to be eaten with lice. (Ludlow's 'Memoirs,' p. 31, fol. edit., London, 1751.)

PYNAKER, ADAM, a celebrated landscape painter of the Dutch school, was born in 1621, at the village of Pynaker, between Schiedam and Delft, and always retained the name of the place of his birth. It does not appear under what master he studied; he went however to Rome for improvement, and remained three years in that city, where he made such good use of his time, that he returned to his own country with the reputation of an excellent painter. He in general preferred a strong morning light, which allowed him to give his trees a more lively verdure. His landscapes are enriched with picturesque ruins or fine buildings, and his figures are spirited and suitable to his subjects. He is much esteemed for the skill with which he gives the effect of distance gradually receding from the view as far as the eye can reach. His larger pictures are by no means equal to his smaller ones, which are highly esteemed. Pynaker died in 1678, at the age of fifty-two.

\* PYNE, JAMES B., was born at Bristol, on the 5th of December 1800. He was articled to a solicitor in that city, but as soon as his apprenticeship had expired he gave up his legal studies and devoted his attention to art, maintaining himself by teaching drawing, painting, cleaning old pictures, &c. In 1835 he removed to London, and he appears, from the statements he supplied to the 'Art Journal' (July 1849), to have been for a considerable time after his arrival in the metropolis chiefly indebted to the good offices of the picture-dealers. Gradually the bold and characteristic style of Mr. Pyne's landscapes secured more attention. In 1846 he visited Italy, Switzerland, and Bavaria; and his style and colour gained in freshness and variety by his tour. He next spent two or three sketching seasons among the lakes and mountains of Westmoreland and Cumberland, and the results of his labours there were published in 1853 in a folio volume (published by Mr. Agnew of Manchester) entitled 'The English Lake District, painted by J. B. Pyne, and lithographed by W. Gauci.' This work is noteworthy not only as by far the most characteristic and beautiful series of illustrations of the English lakes, but as the most costly and splendid work of the kind yet issued by a provincial publisher. Mr. Pyne had previously published a series of views of 'Windsor and its surrounding Scenery.' In 1851 he revisited Italy, and remained there till 1854, when he returned to England with a rich portfolio of sketches. Like most other English artists, Mr. Pyne's early ambition was to obtain the distinction of Royal Academician, and he was therefore for some years a pretty regular contributor to the Academy exhibitions; but at length (about 1842) he joined the Society of British Artists, and to the gallery in Suffolk-street he has since for the most part sent his more important pictures. In that society he has risen to high office and won his chief triumphs, and with it he may now be regarded as identified. Mr. Pyne's style is somewhat mannered and conventional, and his colour peculiar; but he is original, vigorous, and brilliant, and is undoubtedly one of the ablest of living landscape-painters. It ought to be added, that as a teacher Mr. Pyne has been very successful: among the painters who have been his pupils may be named his fellow-townsmen Müller. [MÜLLER, WILLIAM JOHN.] Mr. Pyne has contributed letters and papers to the 'Art-Journal' on drawing, composition, and colour in landscape-painting.

PYNE, WILLIAM HENRY, was the son of a tradesman in Holborn, London, where he was born in 1770. As an artist he possessed considerable facility and tact, without any very marked originality or power. He was one of the original members of the Society of Painters in Water Colours at its foundation in 1805, and practised landscape, figure, and portrait-painting. But he is better known by his publications than by his pictures. Of those his first and most elaborate was entitled 'Microcosm, or a Picturesque Delineation of the Arts, Agriculture, Manufactures, &c. of Great Britain,' oblong folio, 1803. This is a perfect treasure-house of the costume, implements, &c. of the peasantry and labouring classes of this country half a century back. Another work of an expensive character was his 'History of the Royal Residences,' 3 vols. 4to, 1819, containing a large number of plates engraved in aquatint, and coloured in imitation of water-colour drawings: in this work the drawings were executed by Messrs. Wild, Stephanoff, &c. as well as by Mr. Pyne. He also published some separate prints, as 'The Funeral of the Princess Charlotte,' &c.: in most of these publications he was associated with the elder Ackerman. Being of a social turn, and a great collector and repeater of anecdotes, his society was a good deal sought, and his social success led him to turn author. His first work of this kind was a lively series of papers contributed to the 'Literary Gazette,' which was collected and published in three volumes under the title of 'Wine and Walnuts.' The popularity of this work induced him to start a weekly periodical called 'The Somerset House Gazette,' but it lasted only a year. Later in life he wrote some gossiping papers in Frazer's Magazine. He died May 29, 1843, in his seventy-fourth year.

PYREICUS, a Grecian painter of uncertain age and country, but he most probably lived shortly after the time of Alexander. He was

the head of the ancient 'genre' painters, or of those who practised in the lower classes of art, and which the Greeks termed 'Rhyparography.' He painted barbers' shops and cobblers' stalls, shell-fish and eatables of all sorts, and the like: on this account he was called by the Greeks 'Rhyparographos,' that is, literally, 'Dirt-Painter.' According to Pliny (xxxv. 10-37), Pyreicus stood without a rival in this line of art, and, though in an humble style, he attained the greatest fame.

PYRGO TELES, the most eminent engraver of gems of his age, was a native of Greece, but the place of his birth is not recorded. He was contemporary with the most distinguished artists who were living in the last period of fine art in Greece, and after whom that which is termed the 'high' style deteriorated. The leading sculptors of the time were Lysippus, Scopas, and their followers; Apelles and Protogenes were the chief painters; and Pyrgoteles ranked in his own art equally with those celebrated names. Alexander the Great conferred the same honour upon Pyrgoteles that was extended to Lysippus and Apelles, who had the exclusive privilege of representing him in their respective arts. In like manner he forbade any artist to engrave gems of him but Pyrgoteles. (Pliny, 'Hist. Nat.,' vii. 37 and xxxvii. 1.) No well-authenticated work of Pyrgoteles has reached our times. Some writers have supposed that two gems might be attributed to him (Bracci, 'Memor.,' tab. 98, 99), but this opinion has been successfully disputed, and is no longer entertained by antiquaries.

PYRRHO, a Greek philosopher, and founder of the Pyrrhonian or first Sceptic school, was the son of Pleistarchus, or Pleistocrates, and a native of Elis, a town of Peloponnesus. He lived about the time of Philip and Alexander of Macedonia, and was originally a poor painter; but after having learned the elements of science from Dryson he followed Alexander the Great in his eastern expedition, and thus became acquainted with the doctrines of the Indian gymnosophists and the Persian magi. (Diog. Laert., ix. 11, 2.) He was also an ardent admirer of Democritus. During the greater part of his life he lived in quiet retirement, abstaining from pronouncing any decided opinion upon anything, and endeavouring to preserve the greatest calmness and composure in whatever circumstances he was placed. Notwithstanding this apparently inactive and indolent mode of life he was highly honoured by his countrymen, who not only made him their high-priest, but, for his sake, decreed that all philosophers should be exempt from the payment of taxes. (Diog. Laert., ix. 11, 5.) Pausanias (vi. 24, 4) saw his statue in a portico at Elis, and a monument erected in honour of him at a little distance from the town. The Athenians honoured him with the franchise of their city. He died at the advanced age of ninety.

An undisturbed peace of mind (*ἀραιία*) appeared to him the highest object of philosophy; and thinking that this peace of mind was disturbed by the dogmatic systems and the disputes of all other philosophic schools, he was led to scepticism, which he carried to such a degree that he considered a real knowledge of things to be altogether impossible, and virtue to be the only thing worth striving after. (Cic., 'De Fin.,' iv. 16.) On all occasions therefore he answered his opponents, "What you say may be true, but I cannot decide." This and other similar expressions drew upon him the ridicule of his adversaries; and most of the absurd anecdotes respecting his conduct in the common occurrences of life, which Diogenes repeats with all the credulity of a gossip, are probably the fabrications of his opponents, made for the purpose of ridiculing Pyrrho. He had many distinguished followers and disciples, who are called Pyrrhonii, or simply Sceptics: some of them are mentioned and characterised by Diogenes Laertius (ix. c. 7, &c., and c. 12; comp. 'Gallius,' xi. 5; and Cic., 'De Orat.,' iii. 17). Their doctrines and mode of reasoning are seen clearest in the works of Sextus Empiricus: their object was rather to overthrow all other systems than to establish a new one; hence we can scarcely speak of a school of Pyrrhonists, inasmuch as they opposed every school. The whole philosophy of Pyrrho and his followers is called Pyrrhonism, a name which in subsequent times has been applied to any kind of scepticism, though the Pyrrhonian philosophy in reality is only one particular and an elementary form of scepticism. Cicero, in several passages, speaks of the philosophy of Pyrrho as long exploded and extinct. Pyrrho himself is said by some ancient authors to have left no works behind him; the tropes, or epochs, or fundamental principles of his philosophy, being justly ascribed to one or more of his followers. But Sextus Empiricus ('Adv. Math.,' i. 282) says that he wrote a poem addressed to Alexander the Great, for which he was richly rewarded; and Athenæus (x., p. 419) quotes a passage from a work of Pyrrho, the character of which is entirely unknown. The first writer on the scepticism of Pyrrho is said to have been Timon, his friend and disciple, whose life is written by Diogenes Laertius.

PYRRHUS, king of Epirus, born about B.C. 318, was the son of Aecides and Phthia, daughter of Meno the Thessalian, who distinguished himself in the Lamian war. The fabulous genealogies of his family traced his origin back to Neoptolemus, whose father Achilles is said to have been honoured as a god by the Epirotes under the name of Aspetus. Aecides, who had come to the throne after the death of Alexander the Molossian, excited discontent among his subjects by his constant wars against the Macedonians, and was in the end driven out of his kingdom. (Justin, xvii. 3.) His only son, Pyrrhus, then two years old, would have been put to death but for the

care of a few friends, who, with the greatest difficulty, saved the child's life. Pyrrhus was carried to Glaucias, king of the Illyrians, whose wife belonged to the family of the Aecides, and who received the infant prince, and had him educated with his own children. Great offers were made to Glaucias to induce him to surrender the child, but in vain. In his house Pyrrhus remained until his twelfth year. Aecides, who had in the meanwhile returned to his country, fell in a battle against Cassander; and Glaucias now, with an armed force, led Pyrrhus back to Epirus, and the Epirotes gladly received the young prince as their king. (Plut., 'Pyrrh.,' 3; Justin, xvii. 3.) A regency was appointed, who governed the kingdom in his name. When Demetrius, the chief adversary of Cassander, was obliged to withdraw his forces from Europe to Asia, Cassander contrived to induce the Molossians to expel their king again. Pyrrhus, now seventeen years of age, joined Demetrius, who had married his sister Deidamia. In the battle of Ipsus (B.C. 301), which terminated so unhappily for Demetrius and his father, Pyrrhus gave the first proofs of his impetuous courage.

After the battle Pyrrhus went over from Asia to Greece, and exerted himself to save the remains of the forces of Demetrius; and when Ptolemæus, king of Egypt, made peace with him, Pyrrhus went as a hostage to Alexandria. Here he soon won the esteem of Berenice, the king's favourite wife, who gave him her daughter Antigone, by her first husband, Philip, in marriage, and seems to have prevailed upon Ptolemæus to provide her new son-in-law with a fleet and money, and to send him back to his kingdom. Pyrrhus, on his arrival, reconciled himself with Neoptolemus, whom the Molossians, during his absence, had raised to the throne, and agreed to share the government with him. Neoptolemus was of a savage and cruel temper; and he soon conceived such a jealousy and hatred of his colleague, that he attempted the life of Pyrrhus, who, to secure himself, put Neoptolemus to death, B.C. 295. (Plut., 'Pyrrh.,' 5.) From this time Velleius Paterculus (i. 14) dates the commencement of the reign of Pyrrhus. Soon after this event Alexander, the younger son of Cassander, who had been expelled from Macedonia by his brother Antipater, sought the aid of Pyrrhus, which was granted on condition that Alexander should give up Tymphaea and Parauæa, together with Ambracia, Acarnania, and Amphilochia. Pyrrhus at the same time formed an alliance with the Ætolians, and was thus enabled to resist Demetrius, who, after having murdered Alexander, had become king of Macedonia (B.C. 294). After the death of Deidamia, Demetrius carried off Lanassa, the second wife of Pyrrhus, who brought to her new husband the island of Corcyra, which her father, Agathocles of Syracuse, had conquered. Upon this open war broke out between the two kings. Demetrius invaded Ætolia, where he made some conquests: but leaving Pantauchus behind with a considerable force, he directed his march against Pyrrhus, who at the same time was setting out to protect his allies. The two kings, having taken different roads, passed each other without being aware of it; and Pyrrhus entered Ætolia, while Demetrius ravaged Epirus. Pyrrhus met Pantauchus, and a great battle ensued. Pantauchus who was by far the ablest general of Demetrius, challenged Pyrrhus to single combat, in which the Macedonian, after receiving two severe wounds, was conquered, but not killed, being snatched away by his friends. The Epirotes, encouraged by the news of the victory which their heroic king had gained, slaughtered many of the Macedonians, made five thousand prisoners, and chased the rest out of their country.

Pyrrhus now invaded Macedonia, where he penetrated as far as Edessa, and was joyfully received by many Macedonians, who joined his army. Lysimachus at the same time made an attack on Macedonia from Thracia. The mild conduct of Pyrrhus during this expedition induced nearly the whole of the Macedonian army to desert Demetrius, and to salute Pyrrhus as king of Macedonia (B.C. 297). Demetrius fled into Asia, where he was defeated by the son of Lysimachus, and surrendered himself prisoner to Seleucus. Lysimachus now claimed to share the conquest; and Pyrrhus, who did not think it safe to enter into a new contest with the aged general of Alexander, consented to divide Macedonia between himself and Lysimachus. But this division only gave rise to fresh disputes. Lysimachus soon began to feel that Pyrrhus was an obstacle to his ambition, and eventually attacked him, and drove him out (Plut., 'Pyrrh.,' 12.) of Macedonia about B.C. 283.

Pyrrhus now enjoyed a few years of peace and happiness; but in B.C. 281 he was requested by the Tarentines to give them his assistance against the Romans. The Tarentines declared that they merely wanted a skilful general, that a sufficient number of soldiers would be raised in Italian Greece, as the Lucanians, Messapians, the Samnites, and they themselves, would furnish an army of 20,000 horse and 350,000 foot. These promises, and the hope of adding Italy and Sicily to his dominions, excited among the Epirotes, no less than in Pyrrhus himself, so great a desire to enter this new field of action, that neither the wise remarks of the eloquent Cineas, nor the unfavourable season of the year, could prevent him from immediately setting out. Cineas was sent first with 3000 soldiers, and the king followed in Tarentine vessels of transport with an army of 3000 horse, 2000 foot, 2000 bowmen, 500 alingers, and 20 elephants. (Plut., 'Pyrrh.,' 15.) His son Ptolemæus, by Antigone, then fifteen years of age, was left behind as guardian of the kingdom. (Justin., xviii. 1.) When the transports had reached the open sea, a tremendous storm

arose. The king himself reached the Italian coast; but many of the ships were wrecked, and others effected their landing with great difficulty. Only a few horsemen escaped, and 2000 foot and two elephants were lost. With the remnant of his army Pyrrhus entered Tarentum. He soon discovered that the objects of these frivolous Greeks could not be attained, unless he assumed dictatorial power. He therefore shut up all their places of amusement, compelled all the men capable of bearing arms to serve as soldiers, and the younger to submit to regular military training in the gymnasium. The effeminate Greeks, who had not expected this, left their city in great numbers. The troops which had been promised by their allies did not arrive; the Lucanians and Samnites were prevented from joining Pyrrhus by the Roman consuls. When the consul Lævinus entered Lucania with a numerous army, Pyrrhus provided for the security of Tarentum, and went out to meet the enemy. As he however wished to defer a decisive battle until the arrival of his Greek allies, he offered to act as mediator between the Greeks and Romans; but the haughty answer of Lævinus put a stop to all negotiation, and Pyrrhus pitched his camp on the north bank of the small river Siris, in the plain between Pandosia and Heraclea. The Romans, who were encamped on the south bank, were anxious to offer battle. The consul sent his horse across the river to attack the enemy's rear; but Pyrrhus discovered the movement, and leading his own cavalry against them, the battle commenced. The king displayed the greatest activity, and was always in the midst of danger. His brilliant armour rendering him too conspicuous, he exchanged it for that of his friend Megacles, who, being taken for the king, was slain by a Roman. His armour was carried to Lævinus, who thought that the king himself had fallen. The battle lasted the whole day, when the Romans who had advanced and retreated seven times, were driven across the river in disorder. The remnant of the Roman army escaped in the darkness of the night, and the victors took possession of their camp. Pyrrhus, on the next day, visited the field of battle, buried the bodies of the slain enemies, amounting to 7000, as well as those of his own soldiers, and proposed to the Roman captives to serve in his army. They all refused; and Pyrrhus honoured their fidelity by sending 200 of them back to Rome. Niebuhr, 'Hist. of Rome,' iii., p. 559; Justin, xviii. 1.)

originally gilt, are each a little more than seven English inches in length. On each of them is represented in very high relief a hero fighting with an Amazon. They are now in the British Museum, and may at first sight be recognised as fragments of a magnificent cuirass. The character and the beautiful style of the work render it certain that they belonged to the school, or at least to the period, of Lysippus. They were in all probability brought over to the spot where they were found, by some one in the army of Pyrrhus, and may perhaps have formed part of the armour of the king himself or of one of his generals, though there is no evidence to prove this supposition, (Brøndsted, 'The Bronzes of Siris,' an archaeological essay, London, 1836.)

After the battle on the Siris, Pyrrhus advanced to within 300 stadia of Rome, and was joined by the Lucanians and Samnites. The Romans, undaunted by their defeat, and the desertion of many of their allies, raised new troops and determined to try their strength again. It was not the intention of Pyrrhus to conquer or destroy Rome, but to conclude an honourable peace, and accordingly he sent his friend Cineas to Rome to negotiate while he assembled his Italian allies. The conditions which he proposed were, according to the most probable account of Appian (iii. 10, 1), that peace should be concluded with himself and the Tarentines, that all Italian Greeks should be free, and that all conquests which the Romans had made in Lucania, Samnium, Daunia, and Bruttium, should be given up. At the same time he offered to deliver all the Roman captives without ransom. The senate of Rome hesitated, until Appius Claudius, the blind, threw all his influence into the scale, and persuaded his fellow-citizens to send Cineas out of the city and to break off all negotiations. Pyrrhus, seeing that there was no hope of peace with the Romans, advanced with his army as far as Anagnia, and seems even to have taken possession of Præneste. (Flor., i. 18, 24; Eutrop., ii. 7.) He had ravaged all the country through which he had passed, and his soldiers, laden with booty, began to show great want of discipline. He determined therefore as the season of the year was too advanced to begin a new campaign, to lead his troops back to Campania, where he found Lævinus with a numerous army. But neither of the two parties was anxious for battle, and Pyrrhus took up his winter-quarters at

The Bronzes of Siris, drawn from the originals in the British Museum.

The field of battle on the river Siris has latterly become a subject of great interest. In the year 1820 two bronzes of the most exquisite workmanship were found not far from the river, and near the site of the old town of Grumentum (now Saponara in the province of Basilicata), and within the enclosure of a ruin which has perhaps been a small temple. These bronzes, called the Bronzes of Siris, which were

BIOG. DIV. VOL. 17.

Tarentum. During the winter the Romans sent an embassy headed by C. Fabricius to negotiate for an exchange of prisoners. Pyrrhus refused the proposal, unless peace was concluded on the terms proposed by Cineas; but in order to show his esteem for the enemy, he allowed the prisoners to go to Rome for the purpose of celebrating the Saturnalia, on condition that if their fellow-citizens should not be

8 U

willing to conclude peace, that they should return after the festival. The senate would not bear of peace, and, after the festival was over, they sent the captives back to Pyrrhus.

In B.C. 279, Pyrrhus began his new campaign, and in the neighbourhood of Asculum in Apulia he met the Roman consuls P. Sulpicius and P. Decius. The king compelled the Romans to come forward into the open field by sending his elephants with a division of light-armed troops to attack their flank. The Romans endeavoured in vain to break through the phalanx; Pyrrhus was irresistible, and the elephants dispersed and routed the Roman horse. The Romans, after having lost 6000 men, took refuge in their camp; Pyrrhus lost 3500 of his soldiers, and among them the flower of his army (Plut., 'Pyrrh.' 21; comp. Niebuhr's 'Hist. of Rome,' iii., p. 589, &c.), and although he had gained the day, he retreated to Tarentum. He is said to have exclaimed, "One more such victory, and we are lost." He had discovered how little he could rely on the discipline of his Italian allies; to draw reinforcements from Epirus was impracticable, as an insurrection had broken out among the Molossians (Appian, iii. 11, 1), while the northern part of Epirus was threatened with an invasion of the Gauls. The Romans, on the other hand, who seemed to gain new strength after every defeat, had formed a close defensive alliance with Carthage (Polyb., iii. 25), which immediately sent out a fleet to co-operate with the Romans against Pyrrhus. The Romans however declined this aid, and Mago, the Carthaginian admiral, sailed to Pyrrhus, who had already directed his attention to Sicily, to sound his intentions. In the meantime however an occurrence is said to have taken place which afforded to the Romans as well as to Pyrrhus a favourable opportunity to put a stop to hostilities. In B.C. 278, when the consuls C. Fabricius and Q. Papus had taken the field against Pyrrhus, a traitor belonging to the retinue of the king proposed to the consuls to destroy his master by poison. The Romans are said to have apprised the king of his danger (Niebuhr, 'Hist. of Rome,' iii., p. 594, &c.), who, as a reward for their honesty, ordered Cineas to lead all the Roman prisoners back, without ransom, and laden with rich presents. Cineas was also authorised to make peace. The generosity of the king rendered the Roman senate more flexible than before, and although peace was refused unless the king would consent to quit Italy, yet the Tarentine prisoners and other allies of Pyrrhus were sent back, and a truce was concluded (Appian, iii. 12, 1), which enabled the king to cross over to Sicily with his army. The garrison in Tarentum and other places remained, and Alexander, son of Pyrrhus by Lanassa, was entrusted with the command at Locri. (Justin, xviii. 2.) Pyrrhus had been invited by the inhabitants of Agrigentum, Syracuse, and Leontini to lend his aid against some Sicilian tyrants and the Carthaginians, who had already taken possession of many towns in the island and were besieging Syracuse by land and by sea. Pyrrhus willingly complied with their wish, hoping that it would not be difficult to make himself master of the island, and thus more effectually to support his Italian allies.

After having spent two years and four months in Italy (Diodor., 'Fragm.,' lib. xxii. 11), Pyrrhus landed with his army in Sicily. The Carthaginians withdrew their forces from Syracuse. Almost all the towns of Sicily threw open their gates to him; Eryx was besieged and soon reduced. The Mamertines, who held several towns in subjugation and exacted heavy tributes, were likewise subdued. The Carthaginians were at last driven from Sicily, with the exception of Lilybæum, where they fortified themselves, and were besieged by Pyrrhus. They were willing to give up the whole island, with the exception of this last stronghold, and even offered money if Pyrrhus would conclude peace on these terms. But Pyrrhus, urged by the chief Sicilians, whom nothing short of an entire evacuation of their island by the Carthaginians would satisfy, declared that he could enter into no negotiation unless they would withdraw all their forces from Sicily. (Diodor., 'Fragm.,' lib. xxii. 14.) After a long and useless siege of Lilybæum, the king determined to man his fleet and make a landing on the coast of Africa. But his severity in compelling the Sicilian Greeks to man his vessels, and his mistrust of them, roused their discontent. The two leading men among them, Thynion and Sosistratus, incurred his suspicions, and one of them was put to death. This act suddenly called forth the hatred of the Sicilians, and some of them threw themselves again under the protection of the Carthaginians, while others called the Mamertines to their assistance. While this dangerous spirit was spreading in Sicily, Pyrrhus received information that the Tarentines and Samnites were no longer able to hold out against the Romans, and he gladly seized the opportunity of quitting the island, and hastened to Italy.

In his passage through the straits he was attacked by the Carthaginian fleet, and lost seventy of his ships, and he reached the coast of Italy with only twelve which were in sailing condition (B.C. 276). On arriving at Locri, he found himself in great difficulties, not being able to pay his soldiers. To satisfy their wants, he took the sacred treasures from the temple of Proserpine. When the treasures were embarked, a storm arose, in which some of the ships were lost; the others, laden with the treasures, were cast back on the coast of Locri. Pyrrhus fancying that he had incurred the anger of the goddess, not only restored all the treasures to the temple, but endeavoured to atone for his crime by offering rich sacrifices; and as the signs appeared to be inauspicious, he put to death all those who had advised or consented

to the sacrilegious act. (Appian, iii. 12.) On his march towards Tarentum, his army was attacked and harassed from the mountainous districts by numbers of Mamertines, who had come over from Sicily before him. Pyrrhus here again evinced his usual courage. A huge barbarian challenged the king to single combat, and Pyrrhus, though already wounded, hurried forward, and cut the man in two with his sword. This proof of his undaunted spirit put an end to the attacks of the barbarians, and he reached Tarentum in safety.

Having here reinforced himself, he set out against the Romans, and pitched his camp in Samnium. The Romans sent out two consular armies under Manius Curius, who marched into Samnium to meet Pyrrhus, and L. Cornelius Lentulus, who took up his position in Lucania (B.C. 275). The Samnites sent a contingent to his army, but it was small, as they bore some ill-will towards him. Pyrrhus sent a part of his army to Lucania, to prevent Lentulus joining his colleague. Curius had taken his position, and fortified himself on the hills near Beneventum, wishing to avoid battle until the arrival of Lentulus. It was the intention of Pyrrhus to attack the Roman camp by surprise before daybreak, but in order to reach the summit of the hill above the Roman camp, he had to lead his army a long and fatiguing way through the forests, and when he descended upon the Roman camp it was broad daylight. Curius turned round to attack the enemy, who after some resistance took to flight. This success emboldened Curius to direct his attack against the main army of the king in the plain. The elephants, frightened and infuriated by burning arrows, which the Romans showered on them, put the king's army into disorder, and were thus the cause of a complete defeat. The king's camp fell into the hands of the Romans. Two elephants were killed and eight taken; Pyrrhus himself, with only a few horsemen, escaped to Tarentum. He nevertheless did not despair, but sent letters to several kings, requesting them to supply him with men and money. (Paus., i. 13.) Antiochus promised to comply with his wish, but Antigonus refused. A report of advancing auxiliaries for the king kept the Romans at a distance, and enabled Pyrrhus to set sail for Epirus with the greater part of his troops. Milo however was left behind, with the command of the garrison at Tarentum, and his son Helenus.

On arriving in his kingdom, Pyrrhus found himself unable to provide for the wants of his small band, and after some Galatians had joined him he invaded Macedonia in order to gain by plunder the means of maintaining his troops. Fortune once more favoured him, and he soon made himself master of nearly the whole of Macedonia. Thinking that a more glorious field was now opening to him, he gave up all intention of returning to Italy, and recalled Milo and his son Helenus. Antigonus, who had assembled an army of Galatian mercenaries, was defeated by a son of Pyrrhus, and fled from his kingdom.

Before Pyrrhus had firmly established himself in Macedonia, he was invited by Cleonymus, a worthless Spartan, to assist him against the king Areus. Pyrrhus advanced to Sparta with a numerous army, ravaging and plundering the neighbourhood. He succeeded in forcing his way into the city, but the united exertions of the Spartan men and women drove him from it. At the same time King Areus arrived from Crete, and auxiliaries from Corinth were on their march to Sparta, and Pyrrhus therefore gave up the contest, and contented himself with ravaging the country. Another opportunity for action now offered itself. Argos was distracted by two factions; one was headed by Aristæas, who called Pyrrhus to his assistance, while Aristippus, his adversary, sought the protection of Antigonus. The king immediately marched towards Argos. On his road he was attacked by Areus, who lay in ambush and cut off the rear of his army. Pyrrhus left Ptolemaeus behind to oppose Areus, and proceeded on his road. His son fell in fierce battle, and Pyrrhus, turning back to avenge his death, slew with his own hand Eualcus, who had killed his son.

In the meantime Antigonus had occupied the hills near Nauplia, and Pyrrhus pitched his camp in the plain. The Argives, dreading the issue of a battle, promised that their city should not be hostile to either party if they would not attack it. Antigonus consented, and gave his son as a hostage. Pyrrhus likewise promised to keep peace, but gave no pledge of his intentions. In the ensuing night Aristæas opened one of the gates to him, through which Pyrrhus with his Galatians entered, and took possession of the market-place. The Argives, roused from their sleep by the noise, sent to Antigonus, who immediately advanced with his forces. Areus at the same time arrived with a select body of Cretans and Spartans. The darkness of the night and the narrowness of the streets produced the greatest confusion among the combatants. At daybreak, Pyrrhus, discovering that all the fortified parts of the city were occupied by armed troops, wished to get out of Argos. While he was making this attempt, assisted by one of his sons, he was killed by an old woman, who, seeing her son fighting with the king, threw a tile upon his head from the roof of her house.

Pyrrhus died in the year B.C. 273. (Niebuhr, 'Hist. of Rome,' iii., note 928.) All the ancients agree that he was one of the greatest generals; and Hannibal himself declared him to be the first. But great as he was in battle, he did not know how to make the best use of a victory. His ambition was rather to acquire than to preserve, and he generally soon lost the advantages which he had gained. He was grateful towards his subjects, and owned that he was indebted to them for all that he possessed. As a man he stands pre-eminent

among the kings of his time; for while they were surrounded by worthless flatterers, Pyrrhus had friends such as few kings possessed. In his family he was an affectionate father and husband. A change seems to have taken place in his character from the time when he embarked for Sicily, and no blame can be attached to his conduct previous to that event. The death of Neoptolemus was a mere act of self-defence, but his conduct towards Sparta has left a stain upon his character. Pyrrhus also attempted to distinguish himself as an author (Cic., 'Ad. Fam.,' ix. 25; Plut., 'Pyrr.,' 21); but we have no means of judging of his merits in this respect, as no part of his work remains. The 'Life of Pyrrhus' by Plutarch is one of the most exquisite specimens of biography.

Coin of Pyrrhus.

British Museum. Actual size. Silver. The head is probably that of Jupiter.

PYTHAGORAS, the son of Mnesarchus, was born about B.C. 570, in the island of Samos. By his mother's side he was connected with the most distinguished families of the island: his father, according to most accounts, was not of pure Greek blood, but either a Phoenician or a Tyrrhenian of Lemnos or Imbros. The history of Pythagoras is obscured and disfigured by a cloud of fables, through which we are unable to discover anything beyond the most general outline of the chief events of his life and his character. He is said to have been a disciple of Pherecydes of Syros; and if we could give credit to the various other traditions respecting his masters, he would appear to have been connected with almost all the philosophers of the age, from Thales and Anaximander down to the obscure Crophilus and Hermodamas. (Porphyr., 'De Vit. Pythag.', 2; Diog. Laert., viii. 2.) But the information which he derived from his countrymen did not satisfy his inquisitive mind, and, like many other illustrious Greeks, he travelled into various countries. He first visited Egypt, where he was introduced to King Amasis by letters from Polycrates. From Egypt he went to Asia, where he is said to have made himself acquainted with the science of the Chaldeans and the Magi: some traditions even state that he visited India and the Gymnosophists. But though these traditions may have some historical foundation, thus much is certain, that his philosophical system was not derived from any foreign source, or even materially influenced by anything that he saw and learned in the countries which he visited.

On his return from his travels he seems to have conceived the plan which he afterwards endeavoured to realise; but finding that the tyranny which Polycrates had established in his native island would be an insurmountable obstacle to his views, he set out in search of a new home. After having travelled through several parts of Greece, partly to strengthen himself in his opinions, for which purpose he perhaps visited Crete and Sparta; partly to form useful connections, as at Olympia and Delphi; partly also to sound the minds of the people, and to discover how far they might be disposed to carry his designs into effect, he finally settled at Croton in Southern Italy. The fame of his wisdom and of his travels had probably gone before him to the Italian Greeks. The aristocratical party at Croton, who were in possession of all the political power, had excited discontent among the people; and though still strong enough to maintain their position against the commonalty, they must have hailed the arrival of a stranger, who, being supposed to be endowed with supernatural powers, commanded the veneration of the multitude, and was willing to serve the oligarchs on condition that they would allow him some degree of influence in their political measures.

From the moment of his favourable reception by the senate of Croton, whose object seems to have been to use him as an instrument for their own ends, a new era in the life of Pythagoras commences; but before we proceed to consider the manner in which he endeavoured to put his theory into practice, we shall attempt to give a brief outline of his philosophical principles, which will serve to throw some light upon his institution, which we shall describe hereafter. The philosophic school of which Pythagoras was the founder, is sometimes called the Italian or the Doric school. The latter name seems to have been given to it, not so much because it was peculiar to the Doric race, or because its object was to establish the ideal of a Dorian state (Müller, 'Dor.,' iii. 9, § 15), but because it was neither connected with the Ionian nor the Attic school. It is the more difficult to give a clear idea of the philosophy of Pythagoras, as it is almost certain that he himself never committed it to writing, and that it has been disfigured by the fantastic dreams and chimeras of later Pythagoreans. In modern times great light has been thrown

upon the subject by the careful examination and analysis of the fragments of Philolaus by Boeckh. ('Philolaus des Pythagoreers Lehren nebst den Bruchstücken seines Werkes,' Berlin, 1819.) Philolaus of Tarentum, a disciple of Pythagoras himself, was in all probability the first Pythagorean who wrote an exposition of the system of his master, and his fragments must therefore be considered as the most genuine source of information. The results at which Boeckh arrived, are on the whole the same as those which Ritter, in his 'Geschichte der Pythagorischen Philosophie' (Hamb., 1826) subsequently reached, though by a different mode of inquiry. Pythagoras considered numbers as the essence and the principle of all things, and attributed to them a real and distinct existence, so that in his view they were the elements out of which the universe was constructed. How he conceived this process, has never yet been satisfactorily explained; but he was probably led to the supposition by observing that the periodical occurrences in nature, and almost all institutions and religious regulations and observances in Greece, were founded on numerical relations. But he ascended still further to the principles of numbers themselves; these principles he conceived in the form of contrasting pairs, such as straight and curve, limited and unlimited, one and many, odd and even, and others. (Aristot., 'Metaph.,' i. 5.) Further, he traced these contrasts to one first principle and element, the unit (*μὴν*), which included both the even and the odd. This unit he considered as the formal as well as material basis of all things, and as identical with the one supreme being, or God. The decads and tetractys, or the quadrade, are likewise described as perfect numbers and first principles; the triad was called the number of the whole, because it had a beginning, middle, and end. Pythagoras conceived the vital process of the world as a process of breathing, and the first principle was therefore likewise a breathing being, which inhaled the infinite atmosphere of the world (*ἄπειρον πνεῦμα*), and thus partook of its infinity and became capable of developing itself into a multiplicity of numbers or things. The perfect development of the original unit is represented in our actual world, which consists of small and large wholes in the greatest variety. The special principle of every single whole or organisation is again a unit, or a point separating itself from the rest; and as it is a living germ, it develops itself by breathing the *ἄπειρον πνεῦμα* into a distinct body of peculiar form and properties. Every abstract idea was thus in reality a number, and physical objects were symbolical representations of numbers. In the world which had thus arisen out of a union between the even and odd, &c., the Pythagoreans distinguished five elements,—fire, air, water, earth, and the so-called fifth element (*τὸ πέμπτον στοιχεῖον*), which was probably the ether. In the centre of the universe they placed the central fire (*ἑστία τοῦ παντός*, as it were, the altar of the universe), the principle of life in the world. The central fire is surrounded by the earth, the moon, the sun, the five planets, and the firmament, all of which were either gods themselves or inhabited by gods inferior to the supreme God who ruled the whole. The universe was divided, according to Philolaus, into three regions. The first was the sublunary region, between the earth and the moon, the scene of change and passing events, where beings come into existence and perish again; it was called the heaven (*οὐρανός*). The second region was the region from the moon upwards to the firmament, and bore the name of *kosmos* (*κόσμος*). The third, or the firmament itself, called Olympus, was probably, in accordance with the national and traditional belief of the Greeks, considered as the abode of the gods. The heavenly bodies, together with the gods themselves, were conceived as performing a choral dance round the central fire, whence the music or the harmony of the spheres.

Advancing from the consideration of the universe to man, the Pythagoreans represented the souls of men as light particles of the universal soul diffused through the whole world (Cic., 'De Nat. Deor.,' i. 11); the souls of the gods were considered as proceeding directly from the central fire, which was on this account designated 'mother of the gods,' while the souls of men proceeded from the sun, which was a mere reflex of the central fire. The soul of man was divided into three parts, *νοῦς*, *φρένες*, and *θυμὸς*: the two former were considered as the rational half of the soul, and had their seat in the brain; the last, or *θυμὸς* was the animal half, and its seat was in the heart. (Diog. Laert., viii. 19, 30; Plut., 'De Plac. Phil.,' iv. 5.)

The doctrine of the transmigration of souls does not seem to have originated among the ancient Greeks, for they describe the souls of the departed as dwelling in the lower world, from which there was generally no return. Pythagoras may have derived it from some of the mysteries, for he is said to have been initiated in all the existing mysteries both of Greece and other countries. He and his followers considered the transmigration of souls as a kind of purifying process. The souls, previous to their entering into human bodies, floated in the air, from whence they were inhaled by the process of breathing at the moment of birth. At the moment of death, they descended into the lower world, where they were probably supposed to dwell a certain number of years, after which they again rose into the upper world, and floated in the air, until they entered into new bodies. When by this process their purification had become complete, the souls were raised to higher regions, where they continued to exist, and to enjoy the presence and company of the gods.

The Pythagoreans, according to Aristotle ('Eth. Magn.,' i. 1), were the first who determined anything in moral philosophy. Their ethics

are of the loftiest and most spiritual description. Virtue was with them a harmony, unity, and an endeavour to resemble the deity. The whole life of man should be an attempt to represent on earth the beauty and harmony displayed in the order of the universe. The mind should have the body and the passions under perfect control; the gods should be worshipped by simple purifications, offerings, and, above all, by sincerity and purity of the heart. Besides the works of Ritter and Boeckh referred to above, compare Ritter's 'History of Ancient Philosophy,' i. p. 327, 420, Engl. transl.

After this brief sketch of the philosophy of Pythagoras, we shall proceed to consider the manner in which he endeavoured to apply it, or at least its ethical part, to the affairs of ordinary life, which will at the same time show the one-sidedness of a view which might be derived from a statement of Cicero and Diogenes Laertius. Both of these authors say that Pythagoras was the first Greek who assumed the title of philosopher, and that he compared his vocation to that of a spectator at the public games. The definition implied in this comparison is only applicable to a small portion of the philosophy of Pythagoras, for he manifestly did not consider mere contemplation as the sole and highest object of man, but it was his doctrine that by action as well as by thought the individual as well as the state should represent in themselves an image of the order and harmony by which the world was sustained and regulated.

The precise objects of his institutions at Croton are not quite clear, though we cannot suppose that they were either exclusively philosophical, religious, or political. The perfect state of society, such as he conceived it, depended as much on sound religious and philosophical, as on political principles. It was not his intention to bring about his reforms at once by force or by the introduction of a new code of laws, but by gradually diffusing his enlightened ideas. He seems never to have filled any public office at Croton, and perhaps he may have declined such places in order that he might not be checked in his designs by any of the existing institutions, which he could only have overthrown by force. Pythagoras established at Croton a society or an order, of which he himself was the head, and which was to be the centre from whence his reforms were to emanate. It consisted of three hundred young men, selected from the most distinguished families of Croton and other Italian cities. The society was, as a modern historian expresses it, "at once a philosophical school, a religious brotherhood, and a political association." The earnestness and honesty with which Pythagoras went to work are apparent from the fact that he admitted none but the ablest men into his society, and that he bestowed the most anxious care on the cultivation of their minds and hearts, in order to render them alive to the highest objects that can engage the human mind, and to make them clearly understand the place which they occupied in the world. The proceedings of the society were transacted in the greatest secrecy, but perhaps more on account of the religious doctrines there inculcated than on account of either philosophical or political principles. Religion indeed seems to have been the foundation of the society, and that his religious principles greatly differed from those generally received is clear from the tenor of his system, and it is expressly stated that he censured Homer and Hesiod for their profane descriptions of the gods. (Diog. Laert., viii. 19.) Outwardly however he showed great respect for the objects of the popular worship—a prudence which, together with his dignified and priestly appearance, was well calculated to win the affections and the admiration of the people, while the purer doctrines which he imparted to his disciples secured their most perfect submission. He instituted among his disciples a secret worship, or mysteries, which are sometimes called Pythagorean orgies, and the science of numbers, geometry, and music; and even medicine and gymnastics, including dancing, were closely connected with the sacred rites. Women seem also to have been admitted, if not into the society, at least to some of the lessons of the philosopher. (Diog. Laert., viii. 21.)

As to the political character of the institution, from which we must derive our conclusions respecting his political views in general, it is expressly stated that it was aristocratical, but in the original sense of the term, in which it means the government of the wisest and the best. His object was to establish a rational supremacy of minds enlightened by philosophy and purified by religion. That an aristocracy appeared to him preferable, is apparent from the fact that he is said to have thrown his influence into the scale in order to restore this form of government in some Italian cities, where it had given way to tyranny or democracy. The three hundred members of the society were the model of an aristocratical senate, such as he would perhaps have wished to establish in every republic. We have no ground for believing that they possessed any legal authority at Croton, or superseded the old senate of the Thousand, as Niebuhr seems to think ('Hist. of Rome,' i. p. 160), for the Three Hundred included many who were not even citizens of Croton.

Those who wished to become members of the society underwent an examination by Pythagoras himself, who is said to have been skilful in judging of persons by their physiognomy. (Gellius, i. 9.) Those whom he thought fit to be received were then submitted to a period of regular probation and discipline. For a time, at least for two years, they were forbidden to speak. During this first stage of their novitiate they bore the name of Acoustici (hearers). During the second period they were allowed to ask questions, and to make objections to

what they heard, as well as to write about what they had learnt during the first period. They were now called Mathematici, or scholars, for their instruction was not confined to what we call mathematics, but included music and gymnastics. In the third stage, when they received the name Physici, they were admitted to the last secrets in religion as well as in philosophy and politics. Another division of his disciples which is frequently mentioned, was that of Esoteric and Exoteric, and it can scarcely be doubted that the former of these names had reference to the three hundred, from whom no kind of knowledge which their master could impart was kept secret, while the name Exoteric was either applied to those who were passing through the first stages of their novitiate, or, what is more probable, to a much greater number of persons, who were not initiated into all the secrets which the master had to unfold, and perhaps received no instruction of a purely religious nature. The real character of some other divisions mentioned by the ancients—for instance, Pythagorici, Pythagorei, and Pythagoristæ, or Sebastici, Politici, and Mathematici—is matter of great difficulty, though it is not improbable that they may have been expressive of gradations similar to those described above. All candidates on entering upon their novitiate had to exchange their former mode of life for one which was regulated even to the most minute details by Pythagoras himself. Their diet seems to have been a subject of his especial attention, though the extant accounts of the restrictions under which he is said to have placed them are contradictory and incredible. The doctrine of the transmigration of souls may however have led him to enjoin abstinence from animal food. Many of these regulations respecting the diet and the whole mode of life of his disciples had probably a symbolical meaning, and were intended to impress upon their minds certain philosophical or religious principles. In its external arrangements the society of Pythagoras presents some analogy to the institutions which he had seen in Crete and Sparta. The members lived and took their meals together, and the union and attachment among them are said to have been so strong as to excite the jealousy of their relations. Conscientiousness and uprightness in all the affairs of life were points on which the philosopher laid great stress. (Iambli., 'De Vit. Pyth.,' 144.)

The overwhelming influence which Pythagoras and his order had gradually acquired in Croton and other Italian towns where branch institutions of that at Croton seem to have been established, at first induced the aristocratical party of Croton to avail themselves of his services (Valer. Max., viii. 15, Ext. 1), but could not fail in the end to excite their jealousy. If on the other hand we consider that his interference in the affairs of the government must at all times have been viewed with dissatisfaction by the popular party, we see at once the weak basis on which his institution rested, and one great shock was sufficient to overthrow it. This shock arose out of a contest between the popular and aristocratical parties in the neighbouring town of Sybaris. Several exiles belonging to the aristocratic party had taken refuge at Croton, and when the Sybarites required them to be surrendered, Pythagoras and his associates prevailed on the senate to reject the demand. A war broke out, which ended in the total destruction of Sybaris, B.C. 510. The senate of Croton and the Pythagoreans seem to have been elated by this victory, and refused to share the spoil and the conquered land with the people (Iambli., 'De Vit. Pyth.,' 255), and it may have been about this time that the Pythagoreans, with overweening confidence in their own strength and that of the aristocracy, made the attempt to abolish the popular assembly. Such proceedings however, instead of intimidating the people, roused their indignation. A tumult broke out, in which the house of Milo, where the Pythagoreans were assembled, was burnt; many of them perished in the flames, and the rest saved their lives only by going into exile. Pythagoras himself seems to have been absent from Croton during this insurrection, and is supposed to have died a short time after at Metapontum (about B.C. 504). Similar insurrections soon followed in several other towns of Italy, where branches of the Pythagorean society had been established. Some Pythagoreans, such as Philolaus, fled to Greece, where they taught their doctrines and had considerable influence on the philosophy of Plato. The Pythagorean system was revived at a later period, and in the 2nd century of our era it appeared mixed up with the doctrines of the New Platonists. (Krische, 'De Societatis à Pythagora in urbe Crotoniatarum conditæ Scopo Politico,' Göttingen, 1831.)

Various discoveries in mathematics, music, and astronomy are ascribed to Pythagoras, but it would be difficult to establish the truth of these traditions by historical evidence. We have not thought it worth while to repeat the monstrous mass of fables and miracles which are interwoven in the biographies of Diogenes Laertius, Porphyrius, and Iamblichus. He himself may, by his own priestly appearance and conduct, and by the secret proceedings of his society, have given rise to these myths, and may even have encouraged the general opinion that he was endowed with supernatural powers; but on the whole they may be regarded as symptoms of the mighty impression which he made on his contemporaries, as well as on subsequent ages, for such an impression is the most fruitful source of marvellous stories of every description.

PYTHEAS, a celebrated navigator, was a native of the Greek colony of Massilia. He flourished, according to some authors, before

Aristotle; but according to others, in the reign of Ptolemaeus Philadelphus. Respecting the circumstances of his life nothing is known. Polybius, who disbelieved the accounts of his voyages, calls him a poor man, who could not possibly have undertaken such long journeys by land and voyages by sea. (Polyb., 'Reliq.,' lib. xxxiv., 5.) From the same source we learn that he is said to have made two voyages. In the first he sailed round the western coast of Europe and through the English Channel as far as Thule, which is generally supposed to be Iceland. This voyage he described in a work called a 'Description of the Ocean,' where, among other things, he stated that he landed in Britain and travelled through it, as far as it was accessible, and that its circumference amounted to upwards of 40,000 stadia. Respecting the land of Thule, he said that there was neither land, nor sea, nor air, but something composed of all of them, and in substance like that of the *Mollusca*, in which the earth, the sea, and the whole universe were suspended. This substance, which he had seen himself, was, as he had been told, a connecting link of the universe, and it was impossible to penetrate into it either by land or by sea. (Strabo, ii. 5, p. 181, ed. Tauchnitz.) This fabulous account of Thule may be easily explained; and that he advanced at least as far as Iceland seems to be clear from his statement that during the summer solstice in Thule the sun never disappeared from the horizon. (Plin., 'Hist. Nat.,' ii. 75.) He places Thule six days' sail from Britain. Some time after his return, he set out on a second voyage, in which he sailed along the whole western coast of Europe, from Cadiz into the Baltic as far as a river which he called Tanais, on the banks of which amber was found. (Plin., 'Hist. Nat.,' xxxvii. 2.) What river the Tanais may have been is uncertain. D'Anville and Gosselin denied the second voyage of Pytheas altogether, though the words of Polybius admit of no doubt that there was in his

time a report of such a voyage, probably founded on the assertion of Pytheas himself. It is said to have been described in a work called *Periodus* or *Periplus*.

The motives for his undertaking such long voyages are entirely unknown, but it is generally supposed that the Massilians, a flourishing commercial republic, wishing to extend their mercantile connections, sent him out to explore the unknown regions of the north. Pytheas also distinguished himself as a mathematician and an astronomer, and among other discoveries ascribed to him, he is said to have been the first who determined the meridian altitude of the sun at the summer solstice at Massilia, by means of a gnomon. (Hipparchus ap. Strab., ii. 5, p. 182, ed. Tauchnitz.)

His merits have been differently judged of by the ancients, for while Eratosthenes and others adopted his statements in preference to those of others, Polybius ('Reliq.,' lib. xxxiv., 10), and especially Strabo (in many passages of lib. i. and ii.), treat him with the utmost contempt, though the latter does not despise his accounts of the manners and productions of the countries which he visited. Modern geographers however have discovered reasons for judging more favourably of Pytheas, and have ascertained that he is right in several points for which he is censured by Strabo.

The few fragments of his works were collected and edited in 1824, by Andr. Arw. Arwedson, Upsala. Compare Brückner, 'Historia Reipublice Massiliensium,' Göttingen, 1826, p. 64, &c.; 'Pytheas de Marseille et la Géographie de son Temps; ouvrage publié par Jos. Straszewicz, orné de trois Cartes géographiques,' Paris, 1836 (this work has been translated into German by S. F. W. Hoffmann, Leipzig, 1838). See also Ukert, 'Bemerkungen über Pytheas, Geographie der Griechen und Römer.'

## Q

QUADRIO, FRANCESCO SAVERIO, a learned Jesuit, was born in 1695. A native of Valtellina, he wrote an historical and descriptive work on his own country, which he dedicated to Pope Benedict XIV.—'Dissertazioni Critico-Storiche intorno alla Resia di quà dalle Alpi oggi detta Valtellina,' 3 vols. 4to, Milan, 1755. It is the best account which we have of that secluded region. But the principal work of Quadrio is his general history of poetry in all ages and countries: 'Storia e Ragione d'ogni Poesia,' 7 vols. 4to, Bologna and Milan, 1741-52, a laborious work containing a vast deal of information not found collected in any other compilation. The author treats at length of every branch of poetry, ancient and modern. He divides poetry into melic or lyric, scenic or dramatic, and epic and didactic, each subdivided into numerous departments. Under the head of scenic poetry, besides the various sorts of tragedy and comedy, he treats of the numerous class of mimi and pantomimi, of the satirical drama, the Atellanæ, the rustic pastoral, maritime, piscatorial, sylvestres, and other fables, and lastly of the musical drama or opera. He also treats at length of the rhapsody, the parody, the burlesque poetry of various kinds with which Italian literature abounds, of dialect, macaronic, and pedantic poetry: he quotes an immense number of writers, many of whom are little known; and he gives extracts from them. Quadrio's work, notwithstanding several mistakes and imperfections, is a very useful library book, and the composition of it occupied the author a considerable part of his life. Quadrio was of an infirm and susceptible temper, which involved him in sundry broils and disappointments, in consequence of which he sought and obtained leave to quit the order of the Jesuits, and assume the garb of a secular priest or abbé. He died at Milan November 21, 1756.

QUAGLIO, DOMENICO, who has been called the German Canaletto, was of a family that has produced several generations of artists, and whose place of origin was Luino or Luvino, near the Lake of Como. Their ancestor, Julio Quaglio, was a fresco-painter of some note, who followed the school of Tintoretto, in which his father is said to have been educated, and who executed many altar-pieces and other works at Vienna, Salzburg, and Laybach. Lorenzo Quaglio, who was born at Luino, July 25, 1730, accompanied his father, Giovanni Maria, to Vienna, where the latter was engaged as engineer and architect in the imperial service, and where Lorenzo himself was brought up to the latter profession. He erected the theatre at Mannheim, and that at Frankfurt, besides many other buildings, which are esteemed for their superior taste: he died at Munich, May 7, 1804. This Lorenzo left a son, named Giovanni Maria (born 1772), who was a distinguished architectural and scene painter. Domenico, the brother of Lorenzo, who was himself an historical painter, had two sons, Julius, an admirable scene-painter at Munich (died January 28, 1800), and an elder son, Joseph (born 1747, died at Munich, January 23, 1828), who was even more eminent than his brother, both as a scene-painter and in decoration generally. Joseph had four sons, Angelo, Domenico (the subject of this article), Lorenzo (born December 19, 1793), and Simon (born October 23, 1795). Angelo, who died April 2, 1815, at the age of thirty-seven, was also a scene-painter of very superior ability.

Domenico Quaglio was born at Munich, January 1, 1786, and began at a very early age to manifest a fondness for architectural painting.

With his father for his instructor, and with his own instinctive feeling to urge him on, he not only made rapid proficiency, but devoted his leisure to drawing from the life, to landscape painting, and to etching and engraving. By the advice of his brother Angelo however he determined to devote himself more especially to the architecture of the middle ages. With this view he made an architectural tour to Freising and other places, studying their interesting monuments of Gothic architecture. On his return he painted a picture of Regensburg cathedral, which was purchased by Maximilian, king of Bavaria, who exhorted the artist to confine himself to the new branch which he had so successfully commenced. Following this advice, which was seconded by that of many other able judges, Quaglio resigned, in 1819, his situation as scene-painter at the Munich theatre, and thenceforth applied himself solely to architectural painting, in which branch of art he gradually established a reputation throughout Europe, and at the same time was not a little instrumental in promoting by his works that taste for the architecture of the middle ages which has of late years taken root in Germany. Independently of their value as portraits of some of the finest productions of German-Gothic architecture, his works are marked by striking picturesque effect. Besides his pictures, which are very numerous, he executed many etchings and lithographic views, and among the latter a series of thirty subjects, entitled 'Denkwürdige Gebäude des Deutschen Mittelalters.' In 1829 he accompanied Mr. Gally Knight in a tour to Italy as his architectural draughtsman. He died at Hohen-schwangau (where he was employed in restoring and improving the castle), of an apoplectic attack, April 9, 1837.

\* QUAIN, the name of a family, three of whom are distinguished members of the medical profession. They are all from Mallow, in Ireland.

\* JONES QUAIN, M.D., a distinguished anatomist, was brought up for the medical profession and studied anatomy in Paris. He commenced teaching anatomy in London at the Aldersgate-street school of medicine. He was afterwards appointed professor of anatomy and physiology in the London University, now University College, London. His success as a teacher was very great and much of the early success of the college, as a medical school, depended on the admirable character of his teaching. He suddenly retired from this prominent and useful position in the year 1836, and has not since undertaken any public appointment. Whilst demonstrator at the Aldersgate-street school of Medicine he brought out his 'Elements of Anatomy,' a work which was decidedly superior to any that had hitherto been published on the subject of systematic anatomy in the English language. It has been, since its publication, the text-book of English anatomists, and each successive edition has been improved by the labours of distinguished editors. The sixth edition was published in 1856, edited by Professors Sharpey and Ellis, and containing additions by Messrs. Richard Quain (the brother of the author), Potter, and Marshall. Dr. Quain translated into English the "Manual of Pathology" of Dr. Martinet. This translation went through several editions, and was enriched with valuable notes and additions by the translator. In conjunction also with Mr. Erasmus Wilson Dr. Quain published a series of 'Anatomical Plates,' illustrative of the Anatomy of the Human Body. Although

the labours of Dr. Quain, as an anatomist, extended over so few years he has produced a lasting impression upon the teaching and cultivation of anatomy in this country.

\* RICHARD QUAIN, younger brother of the preceding, and eminent as an anatomist and surgeon. He was educated under the direction of his brother, and on the appointment of the latter as professor of anatomy and physiology at the University College, he was made demonstrator. On the retirement of Dr. Jones Quain from the chair of anatomy and physiology, Dr. Sharpey was appointed professor of physiology and Mr. Richard Quain professor of anatomy. This appointment he held for many years. During this period he published one of the most valuable contributions that the science of anatomy has made to surgery during the present century. This work, which was entitled the anatomy of the 'Arteries of the Human Body,' gave the result of the measurement and anatomical examination of upwards of a thousand dissected bodies, and contains an accurate account and representation of the relative anatomy of every artery in the human body. Such a labour had been attempted by Scarpa, Haller, and Tiedemann, but in point of minuteness, accuracy, and beauty of illustration Mr. Quain's work is superior to all that had gone before it. The drawings for this work were executed by Mr. Joseph Maclise. Mr. Quain has published many papers on surgical subjects in the 'Transactions of the Medico-Chirurgical Society' and in the medical periodicals. He is a Fellow of the Royal Society and a Fellow of the Royal College of Surgeons of England. On resigning the chair of anatomy to Mr. Ellis he was made professor of Clinical Surgery at the University College Hospital, of which institution he is one of the surgeons.

\* RICHARD QUAIN, M.D., cousin of the preceding, was educated at the University College and graduated at the London University with honours. He was for many years house physician at the University College Hospital, and is now one of the physicians to the Consumption Hospital at Brompton. He has invented a useful instrument for measuring the movements of the chest in respiration, called the Stethometer, and is the author of a valuable paper on 'Fatty Diseases of the Heart,' published in the 'Transactions' of the Medico-Chirurgical Society.

QUAINI, FRANCESCO, was born in 1611 at Bologna, and under Agostino Mitelli acquired great skill in painting architectural views. The public edifices at Bologna contain several of his works, the most admired of which are the representations of ornamental architecture in the Sala Farnese in the Palazzo Publico. He died in 1680.

QUAINI, LODOVICO, the son of Francesco, was born at Bologna in 1643. After having acquired the rudiments of the art and a knowledge of perspective from his father, he became a disciple first of Guercino, and afterwards of his relation Carlo Cignani, in whose school he was contemporary with Marco Antonio Franceschini. His improvement was so great that in a few years he was employed, as well as Franceschini, to assist Cignani in the execution of some of his great works. Their method of handling and colouring was so similar, that it was difficult to determine what part of any work was executed by either of them. In Cignani's principal works however it seems that Quaini painted the landscape, the architecture, and other ornaments, and Franceschini the figures. After Cignani's death the two artists continued to work together. They were employed at Bologna, Modena, Piacenza, Genoa, and Rome, where they painted the cartoons for a cupola in St. Peter's, which has since been executed in mosaic.

Quaini also painted many historical subjects from his own compositions, which were entirely finished by himself. In the church of St. Joseph at Bologna there is a picture of the 'Visitation'; in La Carità, the dead Christ supported by the Virgin; and in the church of St. Nicholas the principal altar-piece is by Quaini—it represents that saint in prison visited by the Virgin and an angel, and is favourably spoken of by Lanzi. He died in 1717, aged seventy-four.

QUARENGLI, IL CAV. GIACOMO, was born at Bergamo, September 20, 1744. He received a liberal education, and both his father and grandfather being painters, he was destined for the same profession. When sufficiently advanced he was sent to pursue his studies at Rome, where he became a pupil of Mengs, and afterwards of Stefano Poasi; but he subsequently abandoned painting for architecture, for his attainments in which he appears to have been mainly indebted to his own application and love of the study. According to the biographical memoir by his son Giulio, prefixed to the folio volume of his designs (entitled 'Fabbriche e Disegni,' &c., Milano, 1821), he soon became known in his profession, and obtained many commissions while he continued at Rome, but none of them are further specified; neither is the precise time stated when he left Italy for St. Petersburg, whither he had been expressly invited by the Empress Catharine II. Though Quarenghi obtained a very high reputation in Russia, his published designs afford little evidence of superior taste or ability, or even of novelty in invention. Judged from them, he appears to have been a great mannerist, and to have bestowed very little study on his details, which are meagre, poor, and monotonous. In comparison with many of his countrymen he may be said to have been pure in his style of composition, but his merits are little more than negative: if there is nothing glaringly offensive in his productions, neither are they stamped by any particular beauties and merits. The grandeur of his buildings consists chiefly in their size, and in their being kept in bold masses;

but if not broken up, neither are they finished. They have insulated columns and ample porticoes, porticoes Ionic or Corinthian, but frequently attached to buildings which are in other respects mere bare walls with holes in them for windows. Among his principal works are the Theatre of the Hermitage; the manège, or riding-house, of the imperial guards in the Isaac's Place at St. Petersburg; the convent of Demoiselles Nobles; Prince Gagarin's palace; and the triumphal arch in honour of the Emperor Alexander, designed by Quarenghi, but not executed in stone till after his death. The time of his return to Italy is not stated: he died in 1817.

QUARLES, FRANCIS, was born in 1592 of a good family in Essex, and educated at Christ College, Cambridge, and Lincoln's Inn. Before the Irish rebellion in 1641 he was Usher's secretary, but at that time he was forced to fly to England, where he met with persecution from the parliamentary party for his attachment to King Charles. Among other things they plundered him of his books, which is reported to have hastened his death, which occurred on September 8, 1644. Quarles had eighteen children, of whom one inherited somewhat of his father's poetical genius, shared the royal fortunes, and died of the plague in 1665.

The works of Quarles are now neglected, with one exception, that of his 'Emblems,' which have been many times reprinted, and are sought after by some for their quaintness, by others for their piety. His other works are fifteen at least in number, many of them on scriptural subjects.

The quaint conceits of the divines who lived after the Reformation found in Quarles's writings their poetical vehicle. There is much fine feeling, sincerity, and humility shown in many of his compositions; but these qualities do not make up poetry unless accompanied by a creative power, which is not very traceable in Quarles.

QUATREMÈRE DE QUINCY, ANTOINE CHRYSOSTOME, a celebrated French archaeologist, was born at Paris, October 28, 1755. Before the outbreak of the first revolution he had made himself known by his researches on ancient art; a memoir on Egyptian architecture was crowned by the Academy in 1785, and in 1786 he commenced his 'Dictionnaire d'Architecture,' which he did not complete till more than forty years later (1828). In 1790 he published 'Considérations sur l'Art du Dessin en France.' But his political opinions having led to his election as a member of the Legislative Assembly in 1790, he at once took his place among the party known as constitutional monarchists. He in consequence became obnoxious to the revolutionists, and during the Reign of Terror was thrown into prison, where he remained thirteen months. On his release he appears to have continued to act with those who were opposed to the new order of things. In the affair of the 13th Vendémiaire (October 5, 1795) he took part against the Convention, and was in consequence tried "par contumace" and condemned to death; but he managed to secrete himself. When power had fallen into new hands he again emerged, and was in 1797 elected to the council of the Five Hundred for the department of the Seine. But true to his royalist principles, he set himself in opposition to the Directory, and in consequence was one of the first on the list of the 19th Fructidor (5th September 1797) of those condemned, without trial, to deportation to Cayenne; but he was again fortunate enough to make his escape. After Bonaparte had secured his position, M. Quatremère de Quincy was permitted to return to Paris, and even we believe obtained some official appointment; but he appears to have thought it most prudent to quietly prosecute his literary and artistic studies. On the Bourbon restoration his sufferings for monarchy were amply recompensed. He was named in 1815 by Louis XVIII., intendant-général des Arts et des Monuments Publics, censeur royal, and Membre du Conseil d'Instruction. In the following year he became a Member of the Institute, and was appointed perpetual secretary of the Académie des Beaux Arts. At one time he seemed disposed to renew his political life, procuring himself in 1820 to be elected member for the department of the Seine, but he retired to his literary pursuits at the close of the session of 1822. He survived till December 28th, 1849, but he had for some years outlived his faculties.

From the restoration, partly on account of his position as director-general of public monuments and secretary of the Academy, and partly from his great literary activity, M. Quatremère de Quincy occupied a prominent and influential place among the French writers on the history and theory of art. He outlived however his reputation as an archaeologist, for his learning was but shallow as compared with later scholars, especially those of Germany; and as a writer on the principles of art, he was specious rather than profound. Yet his works contain much valuable matter, and his speculations are mostly interesting, however unsatisfactory. The following, in addition to those already named, are his principal works:—'Lettres Adressées à M. Canova sur les Marbres d'Elgin,' 8vo, Rome, 1818; 'De la Nature, du But, et des Moyens de l'Imitation dans les Beaux Arts,' 8vo, 1823—the most original and the most satisfactory of his speculative works; 'Lives of Raffaele (1824), of the Most Celebrated Architects (1830), of Canova (1834), and of Michel Angelo (1835); 'Monumens et Ouvrages d'Art Antiques restitués d'après les Descriptions des Ecrivains Grecs et Latins,' 2 tom. 4to, Paris, 1826-29; 'Sur la Statue antique de Venus découverte dans l'Isle de Milo en 1820;' and 'Essai sur l'Idéal,' 1837. He also wrote several pamphlets, discourses,

and papers, as well as a great many dissertations, in the 'Magasin Encyclopédique' of Millin, and various lives in the 'Biographie Universelle,' besides numerous 'éloges' read by him at the Academy: of these last he published a selection, of little value or interest, in two bulky volumes, entitled 'Recueil de Notices Historiques lues dans les Séances Publiques de l'Académie Royale des Beaux-Arts à l'Institut,' 8vo, Paris, 1824-37. Two of his works have been translated into English—'The Destruction of the Works of Art, and the Use to which they are applied, considered with regard to their Influence on the Genius and Taste of Artists, and the Sentiments of Amateurs,' by Henry Thomson, 12mo, 1821; and the 'Essay on Imitation in the Fine Arts,' by J. C. Kent, 8vo, 1837.

Two other writers of the same name have attained some distinction. DENIS BERNARD QUATREMERRE DISJONVAL (born 1759), as a naturalist; and ETIENNE MARC QUATREMERRE DE QUINCY (born 1782 died 1857), as a writer on the history, language, and literature of Egypt.

QUERINI, ANGELO MARIA, CARDINAL, was born at Venice, of an illustrious patrician family, in 1680. He studied first at Brescia under the Jesuits, and at the age of seventeen entered the Benedictine order. Having become well acquainted with the Greek, Hebrew, and biblical learning, he was made instructor of the novices, for whom he wrote a dissertation, 'De Mosaicæ Historiæ Præstantiâ.' He afterwards travelled during four years in France, England, Holland, and Germany, and enjoyed the society of some of the most distinguished men of those countries. In his 'Commentarii de Rebus ad se pertinentibus,' he gives some account of what he saw, and the conversations he had with many learned men. On his return to Italy he published several works on liturgic antiquities:—1, 'Vetus Officium Quadragesimale Græcis Orthodoxæ;' 2, 'Distributæ ad priorem partem veteris Officii;' 3, 'De Ecclesiasticorum Officiorum apud Græcos Antiquitate;' 4, 'De Hymnis Quadragesimalibus Græcorum;' 5, 'De Aliis Cantibus Quadragesimalibus.' In the year 1721 Querini was made Archbishop of Corfu; and he illustrated the antiquities and history of that island in his 'Primordia Corcyræ' and other works. In 1728 he was transferred to the see of Brescia, and soon after he was made a cardinal, and librarian of the Vatican. It was after his promotion to the see of Brescia that he wrote his literary history of Brescia, 'Specimen Brixianæ Litteraturæ quæ post Typographiæ Inconsubula florebat,' 1739. He also published the Lives of Paul II. and Paul III., in the former of which he endeavoured to clear the memory of that pope from the charges of Platina and other historians [PAUL II., Pope]; and he edited a collection of the epistles of Cardinal Reginald Pole. His other works consist of dissertations upon literary subjects, both sacred and profane, and of numerous epistles, chiefly in Latin. Cardinal Querini was in every respect one of the most distinguished prelates of the Roman Church in the 18th century. Spotless in his morals, modest and simple in his habits, generous, meek, and charitable, he conciliated the esteem of men of all countries and opinions. Frederic the Great wrote to him in the most flattering terms. Voltaire dedicated to him his tragedy of 'Semiramis' and other works. Querini laboured particularly to improve the town of Brescia, of which he was bishop: he completed the structure of its handsome cathedral, founded a clerical college, a house for female instruction in the Val Camonica, and, lastly, he established the public library of Brescia. He died on January 6, 1755.

QUEVEDO Y VILLEGAS, FRANCISCO GOMEZ DE, an eminent Spanish satirist, was born at Madrid in September 1580. His father, Pedro Gomez de Quevedo, had been secretary to the Empress Mary, and afterwards filled the same situation to Queen Anne, wife of Philip II. His mother, Doña Maria de Santibañez, was lady of the bed-chamber to the queen. Both were of noble family, and descended from ancient landed proprietors in the Valle de Toranzo. His father having died when he was a child, Quevedo was brought up in the royal palace by his mother. He was sent early to the University of Alcalá, where he made such progress in his studies that he took his degree of Doctor in Theology at the age of fifteen. Grown weary of theology, Quevedo applied himself with ardour to the study of civil and canon law, medicine, and natural history; the learned languages, and the various systems of philosophy were also in the number of his acquirements. He appears to have injured his sight by constant reading, and he was ever after incapable of distinguishing any object at the distance of three paces without the aid of glasses. But neither this deformity nor the crooked legs which he received from nature deterred him from mixing in fashionable society, and being considered a very accomplished cavalier. He is said to have been very gallant towards the fair sex, but exceedingly jealous of his honour and that of his friends; he could wield all weapons of defence with singular dexterity; and as he was endowed with much strength and courage, he remained victorious in several encounters. In one instance however his antagonist, who was a man of quality, having been severely wounded, Quevedo was compelled to quit the court and repair to Naples, where he was kindly received by the Spanish envoy Don Pedro Giron, duke of Osuna, who not only retained him in his service, but procured his pardon at Madrid. Whilst at Naples, Quevedo executed some very important commissions with which he was entrusted by the viceroy. He crossed the sea seven times to Madrid, and went also to Rome on a secret mission. It is even said that he was concerned in the celebrated Bedmar conspiracy at Venice, which city he entered

disguised as a beggar. On the fall of his patron, who was recalled to Madrid, and cast into a dungeon, where he ended his days, Quevedo returned to court; but scarcely had he arrived there when he was himself arrested, and confined to his country-seat, la Torre de Juan Abad, upon the charge of being the author of certain libels on the government. After three years of close confinement, Quevedo's papers having been examined, and his innocence proved, he was allowed to revisit the court; but, tutored by experience, he refused many important offices that were offered to him, and continued to lead a country life wholly devoted to literary pursuits. It is probable that at this period he wrote the poems which appeared afterwards under the feigned name of El Bachiller la Torre. He soon after wrote his 'Politica de Dios y Gobierno de Christo,' which he dedicated to his patron the Duke of Osuna, and which was printed for the first time at Barcelona in 1629, 8vo. Quevedo was upwards of fifty years of age when he married; but his wife, to whom he was tenderly attached, did not live long. This induced him to revisit Madrid, where in 1641 he was again arrested on the charge of libel, and cast into prison, where he remained for nearly two years. At last Quevedo having appealed for justice to the Conde Duque de Olivares, the all-powerful minister and favourite of Philip IV., his case was for the first time investigated, when it was ascertained that the libellous publication attributed to him was the production of an obscure monk. He was consequently released, and allowed to retire to his country-seat; but the loss of a considerable portion of his fortune, which had been sequestered during his confinement, and a chronic disease contracted in his prison, shortened his days, and he died some time after, in the neighbouring town of Villanueva de los Infantes, on the 8th of Sept. 1645, at the age of sixty-five.

Quevedo was undoubtedly one of the best writers of his age; and, with the exception of Cervantes, no Spanish author has ever displayed more originality in his writings. He excelled equally in verse and prose. "His heroic pieces," says Nicolas Antonio ('Bib. Nov.,' vol. i. p. 460), "have great force and sublimity; his lyrics, great beauty and sweetness; and his humorous pieces, a certain easy air, pleasantry, and ingenuity of turn which is really delightful to the reader." He appears as the rival of Gongora in numerous comic 'letrillas' and romances in the old national style. But it is as a prose writer that Quevedo has acquired fame out of his own country. His prose writings are of two sorts, serious and comic: the first consist of pieces written upon moral and religious subjects; the latter are satirical and full of wit and humour; the style however in which they are written is at times so quaint as to be almost unintelligible to strangers. They were nevertheless translated into almost every language of Europe. His 'Sueños,' or 'Visions,' enjoyed the greatest celebrity. They consist of various visions of the other world, in which the author sees the end of earthly vanities, and the punishment that awaits crime. Great knowledge of human nature is displayed in them; and surprising wit and humour. Shortly after their first appearance (Madrid 1649) they were translated into German by Moscherosch. They were subsequently put into English by Sir Roger l'Estrange (8vo, Lond., 1668), and were so well received by the public, that in 1715 there appeared an eleventh edition of them. A new translation of them was published by Pineda (8vo, Lond., 1784). Lastly an edition in three volumes small 8vo was published at Edinburgh in 1793, containing the following works by Quevedo, besides his 'Visions':—'The curious History of the Night Adventure;' 'The Life of Paul the Spanish Sharper;' 'Fortune in her Wits;' 'Proclamations by All-Father Time, a treatise of all things whatsoever, past, present, and to come;' Letters on several occasions, &c. The first edition of the collected works of Quevedo appeared at Madrid in 2 vols. 4to, 1649-64. They have since been repeatedly reprinted both in and out of Spain. A princely edition, with many important additions, was published at Madrid by Harra, in 6 vols., large quarto, 1772; but the best is undoubtedly that of Sancho, in 11 vols. 8vo (Mad., 1790-94), as it contains much that is not to be found in any of the preceding ones. Several detached pieces by Quevedo, till then unedited, were published about the close of the last century, in the first, third, sixth, and fifteenth volumes of the collection entitled 'Semanario Erudito;' a few also of his fugitive poems may be found in the 'Parnasso Español.' Quevedo wrote several dramas and some historical works, but these have been lost to literature. Indeed there is every reason to believe that we possess in print but a small portion of Quevedo's writings, since his friend Antonio de Tarsia, who wrote his life (Mad., 1663), informs us that "not a twentieth part of Quevedo's writings had then escaped destruction."

QUIETUS was the son of Macrianus, an officer of distinction in the service of Valerianus. When that emperor was defeated and taken prisoner by the Persians (A.D. 260), the soldiers offered the empire to Macrianus the elder, who refused it on account of his age, but accepted it for his two sons, Macrianus the younger and Quietus. In the meantime Gallienus, the son of Valerianus, had been proclaimed Augustus at Rome; but his authority was not acknowledged beyond the limits of Italy, and numerous usurpers arose in the various provinces of the empire, who have been styled "the thirty tyrants." Aureolus, one of these, attacked the two Macriani, father and son, on their march through Thrace, defeated them, and put them to death. Quietus, who was a mere youth, appears to have remained behind at

Asia. Being seized by Odenatus, prince of Palmyra, who assumed the command of the Roman armies in the East, he was put to death. (Trebellius Pollio, *Triginta Tyranni*, in *Historia Augusta*.)

Coin of Quietus.  
British Museum. Actual size.

QUIN, JAMES, was born in King-street, Covent Garden, on the 24th of February 1693. His ancestors were of an ancient English family, but his father had been settled in Dublin, and his grandfather, Mark Quin, was lord-mayor of Dublin in 1676. There is no account of his mother in any of his biographies; and in 1710, when his father died, James Quin was unable to prove his legitimacy. He was intended for the bar, and was educated in Dublin by Dr. Jones of that city. At the age of twenty he came to England, and took chambers in the Temple, but finding his means after his father's death inadequate to his support, he turned his thoughts to the stage, for which profession he possessed many important qualifications, an expressive countenance, a majestic figure, a powerful eye, and a clear, full, and melodious voice. He was introduced by Ryan, the actor, to the managers of Drury-Lane theatre, and engaged, in 1717, to appear in the course of the ensuing winter. A tavern brawl, connected with an intrigue, involved him in law proceedings, and he was compelled for a short time to retire to Ireland. On his return to London he made some sensation in the part of Bajazet, at Covent-Garden; and in 1720 made his first great hit in the character of Falstaff. He was considered at the head of his profession till Garrick made his appearance, of whom he at first spoke contemptuously.

In 1746 these two great rivals performed together in the 'Fair Penitent,' and in 1748 Quin retired from the stage, but annually performed Falstaff for the benefit of his old friend Ryan, till the year 1764, when, having lost two of his front teeth, he declined appearing, declaring that he "would whistle Falstaff for no man." Quin died at Bath, on the 21st of January 1766. He was a master of elocution, and was engaged in that capacity by Frederick, Prince of Wales, to instruct his son Prince George, afterwards George III. Quin's exclamation of "I taught the boy to speak," on hearing his majesty deliver his first speech from the throne, has been quoted more frequently than any of his jokes, although both for number and humour they would of themselves form a capital jest-book. He was a great epicure, and his manners were sometimes coarse and overbearing; but it should never be forgotten that he released Thomson, the author of the 'Seasons,' from a spunging-house by paying the debt and costs for which the poet was incarcerated, without having had any personal acquaintance with him.

QUINAULT, PHILIPPE, was born at Paris in 1635. He studied the law, and afterwards followed it as a profession for a time, but owing to his inclination to poetry, he neglected it, and began to write for the stage. He wrote several tragedies and comedies for the Théâtre Français, which are now forgotten. About 1673 he began writing plays for the Grand Opera, which his friend Lulli set to music [LULLI]; and it is on this kind of composition, which partakes strongly of the lyric, that Quinault's reputation as a poet was established. He is considered the first writer of French operas; the attempts made before his time by Perrin were below mediocrity. A. W. Schlegel observes that Quinault's lyric tragedies are in manner and style of composition, light, animated, and fantastic, preferable to that of the great Italian melodramatist Metastasio. The opera of 'Armide' is considered Quinault's master-piece. Louis XIV. bestowed on Quinault the order of St. Michael, with a pension of 2000 livres, and the French Academy and the Academy of Inscriptions and Belles-Lettres numbered him among their members. At Lulli's death, in 1687, Quinault ceased to write for the stage, and he died November 26, 1688, leaving a considerable fortune among his daughters. All his dramas have been collected and published: 'Le Théâtre de M. Quinault, contenant ses Tragédies, Comédies, et Opéra, édition augmentée de sa Vie, et d'une dissertation sur ses Ouvrages et sur l'Origine de l'Opéra,' 5 vols. 12mo, Paris, 1715.

QUINTILIANUS, MARCUS FABIVS, is said by Jerome ('Chron. Euseb.') to have been a native of Calagurris (Calahorra), a town in the northern part of Spain, and to have been brought to Rome by Galba, on the death of Nero, A.D. 68. There is however sufficient evidence in the works of Quintilian to prove that he was educated if not born at Rome; and it is certain that he must have lived at Rome at least as early as A.D. 59. He describes himself as an adolescentulus ('Orat. Inst., v. 7, p. 271, ed. Bipont) and juvenis ('Id., x. 1, p. 212) when he heard Domitius Afer, who died, according to Tacitus ('Ann., xiv. 59), in that year. Dodwell, in his 'Annale Quintilianei,' maintains that Quintilian was born at Rome in the beginning of the reign of Claudius, about A.D. 42, and accounts for the

statement of Jerome by supposing that Quintilian accompanied Galba to Spain, and returned with him to Rome on the death of Nero. That Quintilian was not born in Spain is confirmed by the fact that Martial, who was himself a native of Spain, and speaks of most of his fellow-countrymen who were in any way eminent, never mentions Quintilian as such; in addition to which, Quintilian himself speaks of his father as if he had been an orator at Rome ('Inst. Orat., ix. 3, p. 169). It is thought by some writers that M. Seneca alludes either to the father or grandfather of Quintilian, in the fifth book of his 'Controversias' ('Præf., p. 327, ed. Bipont).

Jerome says (loc. cit.) that Quintilian was the first rhetorician who received a salary from the *fiscus*, which must have been first given him in the time of Vespasian. (Suet., 'Vesp.,' 18.) He practised as an advocate with great reputation ('Orat. Inst., ll. 12, p. 114), and also taught rhetoric for twenty years ('Id.,' Præf. in lib. i.), to both of which occupations Martial alludes in an epigram (ll. 90) addressed to him. After retiring from his profession, he was entrusted by Domitian with the education of the nepotes of his sister ('Inst. Orat.,' Præf. in lib. iv., p. 210), and about the same time wrote his great work on the education of an orator. We are ignorant of the time of his death; Dodwell supposes that he lived till the beginning of the reign of Hadrian, and that this emperor bestowed upon him the consular ornaments, which we know were granted to him at some period of his life. (Ausonius, 'Grat. Actio,' p. 290, ed. Bipont.) Juvenal (vii. 192) also speaks of his being a senator.

In the preface to the sixth book of his work on the instruction of an orator, Quintilian bitterly laments the death of his wife and two sons, and complains that there was no providence in the government of human affairs. His wife died in her nineteenth year, and his younger son in his fifth, soon after the death of his mother. The elder lived to the age of ten, and died while Quintilian was engaged in his great work. It appears however that he married again, or that he had a daughter, whom he has omitted to mention; since Pliny the Younger, in a letter to Quintilian ('Ep.,' vi. 32), speaks of a daughter of his, who was to be married to Nonius Celer.

Quintilian was the most celebrated teacher of rhetoric in his time. The younger Pliny was one of his pupils ('Ep.,' vi. 6), as well as many other eminent men. Quintilian complains that many works had been published under his name without his consent. He particularly mentions two books on the art of rhetoric, which had been taken down by his pupils and afterwards published from their notes ('Inst. Orat., Præf. in lib. i.); and he also says that several of his speeches were published in the same way from the notes of the shorthand writers (vii. 2, p. 21). According to Juvenal (vii. 186, &c.), Quintilian acquired great wealth by his profession, but Pliny ('Ep.,' vi. 32) speaks of him as in moderate circumstances. Juvenal however appears to speak of his wealth in comparison with other rhetoricians, while Pliny perhaps compared it with his own fortune.

Quintilian's work on the education of an orator ('Institutio Oratoria') was written, as already stated, in the reign of Domitian, upon whom he bestows the most extravagant flattery in the preface to his fourth book, and invokes his assistance as a god in the composition of the work. It is dedicated to Marcellus Victorius, whose son he had educated, and it was undertaken chiefly for the instruction of his own son, who died before it was finished. ('Præf.' in lib. vi., p. 342.) It is divided into twelve books, and its object is not merely to give the chief rules of the art of rhetoric, but also to point out the course of education which an orator should pursue. He gives an outline of the whole work in the preface. The first book, he says, treats of those subjects which must be studied before rhetoric. In the second, the elements of rhetoric are discussed; and in the five following *inventio*, in which *dispositio* is included. Elocutio, memory, and pronunciation form the subject of the four next; and the last is devoted to a discussion of the qualifications necessary for an orator, and of the manner in which causes should be pleaded.

The first book is perhaps the most interesting to us, as it gives us some knowledge of the manner in which a respectable Roman youth was educated. Quintilian commences by saying that the education of the orator should begin from his infancy, and recommends that the nurses and all persons about the child should have a correct pronunciation. He says that it is better to learn Greek before Latin, as the latter will be easily acquired from its being the language of the country; but he disapproved of the plan adopted by many of only allowing Greek to be spoken for a long time, since thereby the child acquired the Greek accent and Greek idioms in speaking his own language. He recommends a public school in preference to home education, as the emulation of public schools is sufficient to counterbalance any disadvantage arising from the number of the boys and the consequent inability of the master to give them his undivided attention, as in the case of a single pupil; and he replies at some length to the objection that public schools are injurious to morals, and maintains that a boy incurs as much danger of having his morals injured at home as at school. He recommends the master however to study well the disposition of each boy, and he strongly disapproves of corporal punishment. At the grammar-school, the pupil is to learn the art of speaking correctly, and also to study the ancient authors, beginning first with the poets, and afterwards proceeding to the historians. Before going to the school of the rhetorician, the pupil must acquire a

knowledge of music and geometry; and he also recommends him to receive some instruction in pronunciation from the comic actors, and in gesture and attitude from the masters in the Palæstra.

After passing through this course of education Quintilian considers the pupil competent to enter the school of the rhetorician, and accordingly, in his second book, he gives the first elements of the art of rhetoric. He thinks that the pupil should not attempt to speak extempore at first, but should confine himself to written exercises, which should first consist of narrations of real facts, and afterwards of panegyrics of illustrious men and dispraises of the wicked. After recommending some other subjects for written compositions, he points out the advantages attending a careful study of the best historians and orators under a master who would point out their principal beauties and defects. In choosing subjects for declamation, he condemns the practice, which was common in his time, of taking them from the works of the poets, the answers of oracles, &c., and maintains that they should be confined as much as possible to such matters as the orator would afterwards be engaged upon in the courts. At the conclusion of the book he defines rhetoric to be the art of speaking well, and proves that it ought to be regarded as an art and a virtue (*virtus*), and that it comprehends all subjects which can be discussed.

The first two books are only introductory; in the third Quintilian commences the principal subject of his work, namely, the art of rhetoric. He says that it consists of five parts, *Inventio*, *Dispositio*, *Elocutio*, *Memoria*, *Pronuntiatio*, or *Actio*. He divides all causes into three kinds, the *Demonstrative* or *Panegyric*, the *Deliberative*, and the *Judicial*. The demonstrative or panegyric treats of subjects requiring praise (*laus*) or blame (*vituperatio*), and is frequently employed by the orator, as in funeral orations, recommending or attacking witnesses, &c. The deliberative consists of persuasion (*suadenda*) and dissuasion (*dissuadenda*), and is confined by Greek writers to speeches made in the assemblies of the people; but, according to Quintilian, may be employed in many other speeches. The judicial consists in accusation (*intentio*) and defence (*depulsió*), and is divided by Quintilian into the *proœmium*, *narratio*, *probatio*, *refutatio*, and *peroratio*. All suits, Quintilian says, are respecting one thing or more than one. The former are called *simplices*, as in the case of theft, adultery, &c.; and the latter *conjunctæ*, as in the case of extortion (*pecuniæ repetundæ*), or when a person is accused of more than one crime at the same time. He also says that there is another species of law-suits, called the *comparative*, as for instance when the matter in dispute in the court of the *Centumviri* is, which claimant is more worthy of the inheritance; or when, in the case of a divination, it has to be decided who is to be the real or chief accuser; or when two informers both claim the reward.

In the fourth and fifth books Quintilian treats of the *proœmium*, *narratio*, *probatio*, and *refutatio*, in judicial causes; and remarks, that the *probatio* is the most important. He divides proofs into *inartificial* and *artificial*: under the former he includes previous judgments (*præjudicia*), common report (*rumores*), torture of slaves (*tormenta*), legal instruments (*tabulæ*), oaths (*jurjurandum*), and witnesses (*testes*); by artificial proofs he means those which the orator brings forward from the subject, and to a certain extent invents himself. *Præjudicia*, says Quintilian, consist of three kinds: 1, *exempla*, or precedents, that is, similar cases, which have been already decided; 2, *judicia* which have been passed on matters relating to the cause; and 3, *judicia* which have been already given on a previous trial of the cause. Witnesses, Quintilian says, give their testimony in writing (*per tabulæ*), or by word of mouth in open court; and he discusses at considerable length the best modes of examining and cross-examining witnesses.

In the sixth book Quintilian treats of the *peroratio* in judicial causes; and in the seventh, of the *dispositio*, the second of the five parts into which he divided the art of rhetoric. He defines *dispositio* to be a proper distribution of the different materials and parts of a speech into their proper places.

In the eighth book he treats of what he calls *elocutio*, which, he says, all orators consider to be the most difficult part of their art. He recommends the orator to pay more attention to the argument of his speech than to the mere words which he should use; and maintains that those words are the best which best express our meaning, and produce in the minds of the judges the effect that we desire. He then proceeds, in the remainder of this book and in the three following, to explain all the different subjects comprehended in *elocutio*, as perspicuity, ornament, amplification, metaphors, &c., and gives directions for acquiring the art of extempore speaking. In the latter part of the eleventh book he briefly discusses the fourth and fifth branches of rhetoric, namely, memory and pronunciation.

In the twelfth book he treats of the qualifications necessary for an orator, and maintains that no one who is not virtuous can be a perfect orator; and that a knowledge of philosophy, civil law, and history is necessary to the orator. He also gives some general directions respecting the manner in which causes should be studied and pleaded in court, and points out the kind of eloquence which the advocate should use.

The first complete manuscript of the 'Institutes' of Quintilian was discovered in the year 1417 by Poggio [BRACCIOLOMINI] in the monastery of St. Gall, which is about twenty miles from Constance.

BIOG. DIV. VOL. IV.

Poggio has given an interesting account of the discovery of this manuscript in a letter to Guarinus, which is reprinted in Fabricius's 'Bibliotheca Latini,' edited by Ernesti (vol. ii., p. 259). On the revival of learning the 'Institutes' of Quintilian were studied almost more than any other Latin author, and lectures on rhetoric were at that time confined to an interpretation of Quintilian's work, which accounts for the number of editions which were published in the 15th and 16th centuries. The professor in the University of Leipzig, who is now called 'professor eloquentiæ,' formerly had the title of 'Quintilianian professor.'

Besides the 'Institutes,' there are certain 'Declamationes' which are usually published under the name of Quintilian. Of these there are 19 of considerable length, and 154 much shorter, which are said to have originally consisted of 388. The latter were probably written by a different person from the author of the former, and neither of them by Quintilian himself. Quintilian tells us that he only published one oration himself. ('Orat. Inst.,' vii. 2, p. 21.) Some modern writers suppose that the shorter declamationes were published by Quintilian's father, who is spoken of by his son as an orator (ix. 3, p. 169), or by the Quintilian mentioned by Seneca ('Controv.,' Præf. in lib. v.); but there are no sufficient reasons for either opinion.

Quintilian also wrote a work on the causes of the corruption of eloquence ('De Causis Corruptæ Eloquentiæ: Orat. Inst.,' Præf. in lib. vi., p. 343), which some critics imagine to be the work entitled 'De Oratoribus, sive de causis corruptæ eloquentiæ dialogus,' which is usually printed with the editions of Tacitus. The latter work however could not have been written by Quintilian, as we find him saying, at the end of the eighth book of his 'Institutes,' that he had treated fully the subject of hyperbole in his work 'De Causis Corruptæ Eloquentiæ,' whereas the subject is not mentioned in the 'Dialogus de Oratoribus.' Respecting the author of this work see TAORRUS.

The best critical edition of Quintilian's 'Institutes' is by Spalding, 4 vols. 8vo, Leipzig, 1793-1816, to which an additional volume of notes was added by Zumpt, 8vo, Leipzig, 1829; and a 'Lexicon Quintilianæum,' by Bonellus, 8vo, Leipzig, 1834. The editions of the 'Institutes' by Lünemann, 2 vols. 8vo, Hannov., 1826, and Zumpt, 8vo, Leipzig, 1831, may also be recommended. The best editions of the 'Institutes' and 'Declamationes' together are by Burmann, 2 vols. 4to, Leyden, 1720; and the Bipont, 4 vols. 8vo, 1782. There is also an edition of the 'Institutes' and 'Declamationes' by Dussault, 7 vols. 8vo, Paris.

The 'Institutes' have been translated into English by Guthrie, 2 vols. 8vo, Lond., 1756, and Pataall, 2 vols. 8vo, Lond., 1774; into French by Mich. de Pures, 4to, Paris, 1663, and Nic. Gedoyn, 4to, Paris, 1718; and into German by Henke, 3 vols. 8vo, Helmst., 1775-1777, of which a new edition was published by Billerbeck, 3 vols. 8vo, Helms, 1825.

For further information respecting the life of Quintilian the reader is referred to Dodwell's 'Annales Velleiani, Quintilianii, Statiani, s. vitæ C. Velleii Patefouli, M. Fabii Quintilianii, P. Papinii Statii, pro temporum ordine dispositæ,' 8vo, Oxon., 1698.

QUINCY DE QUATREMÈRE. [QUATREMÈRE DE QUINCY.]

QUINTANA, MANUEL JOSÉ, a very eminent Spanish poet and patriot, remarkable for the depth of his feeling in both characters, and remarkable also for the strange vicissitudes of his long career, was descended from an Estremaduran family, but was a native of Madrid, where he was born on the 11th of April 1772. He studied and took his degrees in canon and civil law at the University of Salamanca, where he became intimate with the poets Cienfuegos and Melendez [MELENDEZ], who introduced him to the friendship of Jovellanos [JOVELLANOS], at that time the leading representative of liberal ideas in Spain. Quintana was from the first distinguished for his spirit of manliness and independence, and when he commenced his career as an advocate at Madrid, his house, at which a party of literary friends assembled every evening, became the ordinary resort of those who were opposed to the degrading policy of Godoy, the all-powerful favourite of the day; while the house of Moratin, the dramatic poet [MORATIN], the other literary focus, was the resort of those who paid homage to the minister.

From about 1795 Quintana became known as a poet only second to his friend Melendez, and in almost every case the themes he selected were of a large and lofty character, and treated in a corresponding strain. One of the finest odes in the Spanish language is his, 'Ode to the Sea.' He had lived to his twenty-sixth year without ever beholding the ocean, and in 1798 he was seized with so irrepresible a longing to fill up the deficiency that he made a journey from Madrid to Cadix for that express purpose, wrote this ode, which is worthy of the occasion, and returned. Such an incident would have been noticeable in any country, but it was particularly so in that country and age, for, as Alcalá Galiano remarks, in his excellent history of Spanish literature, travelling, except on unavoidable business, then had no part in the habits of Spanish life. Many of Quintana's other odes are scarcely less admirable than this, and they constitute by far his best title to poetical fame. It may be remarked that the patriotism, which is the animating principle of almost every one of them, is a very intense, but at the same time a narrow feeling. Two of these odes, which will be found translated into English in Kennedy's 'Modern Poets and Poetry of Spain' (London, 1852), are on the introduction of vaccination
