NORTH-WESTERN RAILWAY COMPANY.

SPECIAL REPORT of the Directors of the North-Western Railway Company to the Shareholders.

Western Railway Company to the Shareholders.

Four months having elapsed since the last General Meeting of this Company, and events having in the meantime occurred which have caused great confusion in the commercial world, and occasioned the abandonment of many important undertakings and the unavoidable suspension of others; the Directors, anxious at all times to keep the Shareholders well informed upon all matters which affect their interests, consider that they are called upon at the present juncture to report to them officially the present position and prospects of the Company.

They are happy, in the first place, in being able to state that, owing to the manner in which the last and all previous calls have been responded to, not only have they been enabled to carry on the Company's works without suspension up to the present time, but they are in a position to continue to carry on the principal works on the main line between Skipton and Clapham without any abatement of vigour, and without further demands on the Shareholders until the month of March next.

In regard to the future conduct of the works, the Directors, with a view to render the future calls as little onerous

vigour, and without interfer demands on the Sanachonters until the month of March next.

In regard to the future conduct of the works, the Directors, with a view to render the future calls as little onerous as possible, propose to devote the whole of the available resources of the Company to the construction of the works on the main line, from Skipton upwards, in such a manner as to bring successive portions of the main line, in extension of the Leeds and Bradford Railway, into profitable operation at the earliest possible period—a course which a proposed arrangement with the Midland Company, superseding the necessity of a large outlay for working plant, renders still more desirable; and they are of opinion that, without inconveniently pressing on the Shareholders, portions of the main line may be thus successively opened as far as Ingleton before the summer of 1849, and as far as Kirkhy Lonsdale before the following autumn: thus bringing the North-Western line within 9 miles of the Lancaster and Carlisle Railway at Milathorpe; and placing the West Riding of Yorkshire, and the Eastern and Mildland Counties, with the exception of that interval, in direct Railway communication with the Lake district, Carlisle and Glasgow.

The Directors, having personally visited the whole of the works in progress, have satisfied themselves of the forward state of large portions of the line and of the excellent and inexpensive character of the works. There are no engineering difficulties of any kind; and, with the exception of the Ingleton and Dillicar viaducts, no works that are not of the most ordinary character.

From the contracts which have been already entered into, the Directors are in a position to state positively that the whole line will be constructed considerably within the Parliamentary estimates. The average cost of the works at present under contract and executed amounting to 9,0000, per mile exclusive of land, rails, parliamentary and current expenses; and to 16,0000, per mile, including every possible contingent

expenses; and to 16,000% per mile, including every possible contingent expense.

The Directors have already, more than once, stated their opinion, founded on particular local inquiry, that the registered shares are in the hands of a most respectable, wealthy and influential body of Shareholders; they are fully confirmed in this conclusion; and they think it right to add to their former expressions of opinion in respect to the Register, the important fact, that the average hold of each Shareholder in the Company does not exceed thirty shares.

The Directors consider it at present premature to fix the number of Calls to be made during the ensuing year, or their amount, but will be prepared to enter into this matter at the Half-yearly Meeting in February.

The Directors propose to continue to allow interest after the rate of 4 per cent. per annum on paid-up Calls. The account of any Shareholder who may happen to be in arrear will be debited with interest at the rate of 5 per cent. per annum, from the date at which the payment shall have become due, and credited with 4 per cent, from the time only when the payment shall be made.

(Signed)

PUDSEY DAWSON, Chairman. Leicester, Dec. 16, 1847.

NORTH AND SOUTH-WESTERN RAILWAY.

At a MEETING of the Inhabitants of BRENTFORD and its neighbourhood, held at the Castle Tavern. Brentford, on Wednesday, the 29th of December 1847, which was very numerously attended by gentlemen of influence in the district, the following Resolutions were carried unanimously,—

HENRY POWNALL, Esq. in the chair,-

Moved by GEORGE COOPER, Esq.; seconded by Dr. DAY,-

Moved by George Cooper, Esq.; seconded by Dr. Day,—
That this Meeting, having heard with considerable interest
the exposition of the Committee of the North and SouthWestern Railway, as to the advantages that would be
obtained by the public in general, and more especially the
local prosperity held out to the town of Brentford and its
neighbourhood, by the construction of the said Railway,
hereby express their concurrence and approval of the undertaking, and, as landowners and inhabitants, do urge upon
the Committee that they will use every diligence and exertion to obtain the sanction of Parliament to the sauce, with
as little delay as possible; and this Meeting pledge themselves to render every assistance, and afford every facility
to the Committee in obtaining this desirable end, either by
a petition to both Houses of Parliament, obtaining consents
from landlords and tenants on the line, or in any way that
may be calculated to crown the exertions of the Committee
with success, feeling assured by so doing they are securing
the prosperity of the neighbourhood and advancing the

interests of its inhabitants, as well as the community at

Moved by JAMES MONTGOMERY, Esq.; seconded by JOHN BONTEMS, Esq.,

BOSTENS, Esq.,—
That the best thanks of this Meeting are due to Wm. Chadwick, Esq., not only for the untiring perseverance and indefatigable exertion which made him specially instrumental in obtaining the sanction of Parliament, to the loop line through Brentford, of the Windsor, Staines and South-Western Railway, during the last session, but also for the consideration he continues to exhibit, for advancing the interests of this town and neighbourhood in promoting the North and South-Western Junction Railway, which will unite all the narrow-gauge lines of railway in the kingdom, and that the best thanks of this Meeting be given to him as Chairman, and to the other members of the Provisional Committee forming the deputation, for the courteous attendance and for the full and satisfactory explanations afforded by them to this Meeting, on the importance of the Harrow and Brentford Railway.

Mr. Chadwick having returned thanks, a vote of thanks was passed by acclamation to the Chairman, and the Meeting separated.

separated.

EDINBURGH AND NORTHERN RAIL-

WAY COMPANY.
RESOLUTION passed at the Special Meeting of Shareholders held at Edinburgh on the 29th December 1847.

JOHN BALFOUR, Esq., of Balbirnie, in the Chair.

JOHN BALFOUR, Esq., of Balbirnie, in the Chair.

The advertisement calling the Meeting and the Report of the Directors having been read, the Meeting resolved that the said Report be approved and adopted, and that the Directors be authorized and empowered to enter into the submission with the Edinburgh, Leith and Granton Railway Company, or the Directors thereof, on the terms set forth generally in the proposed Draft Minute of Reference submitted to the Meeting; and further, that the Directors be authorized and empowered to apply to Parliament for powers to give effect to the awards to be pronounced in the submission, if such powers shall be deemed necessary.

On the motion of JAMES ATTOUN, Esq., the thanks of the Meeting were voted to Mr. Balfour for his conduct in the chair.

JOHN BALFOUR, Chairman.

Edinburgh, Dec. 28, 1847.

WALE OF NEATH RAILWAY. TO CONTRACTORS.

The Directors of this Company are ready to receive TENDERS for the following Wolks: For sinking the shafts and driving the headings at the Merthyr Tunnel; also for the cuttings and carthwork at the North and South ends of the above Tunnel, including the Formation of the line of Railway, with the Massonry thereon, extending from such cuttings for a length of about 40 chains at each end of the Tunnel.

The above Works will be divided into Four separate Contracts, Plans, Sections and Specifications may be seen, and forms of render obtained, on and after Monday, the 18th inst, at the Company's Office, Neath.

Tenders must be delivered, addressed to the Secretary, at 449 West Strand, London, not later than 12 oclock on Wednesday, the 22th of January 1848. The Directors do not pledge themselves to accept the lowest tender.

FRED. G. SAUNDERS, Secretary.

Neath, Dec. 2, 1847.

South-Eastern Railway Office, London Terminus, Dec. 23, 1847.

GREAT LUXEMBOURG COMPANY.

NOTICE IS HEREBY GIVEN. that the Directors of the Great Luxembourg Company have this day made a CALL of it. per Share upon all the shares uc, paid in the said Company making 7t, per share called up), and have appointed such Call to be paid on or before Wednesday, the 28th of January 1848, as follows, viz.

1008, 142.:—
In London, to Messrs, Masterman, Peters, Mildred & Co.
Liverpool, to Messrs, Moss & Co.
Brussels, to Messrs, Matthieu & Fils,—
the respective Bankers of the Company.

Interest at the rate of 5 per cent, per annum will be charged on any sums in arrear after the 20th of January 1848.

By order of the Board.

THOMAS COMHEAD, Secretary.

1, Royal Exchange-buildings, London, Dec. 14, 1847.

OURNAY TO JURBISE A LANDEN TO HASSELT RAILWAY COMPANY. OURNAY

LANDEN TO HASSELT RAILWAY COMPANY.

NOTICE IS HEREBY GIVEN, that the INTEREST due the slist uit, on the Shares of the above Company, amounting to \$5.4d, per Share, will be payable on and after the 3rd of January next, at the Office of the Company. All applications for the same must be made between the 3rd and both inst, and the Share Certificates must at the same time be left for endorsement. The Directors have to inform the Shareholders that in consequence of the subsidence of one of the bridges at Herek St. Lambert, the line from Landen to Hasselt was not opened throughout until the 8th uit. Since that period the traffic has developed itself with great activity, and the receipts have been of a highly satisfactory character.

The opening of the complete line from Jurbise to Tournay has been delayed by the difficulties that have arisen as to the mode of crossing the Fortifications at Ath. These difficulties have low been entirely overcome, the works are in a state that the deferred set of the line with as single line of rails will not be deferred beyond June next.

By order, WESTWOOD, Secretary.

Dated this 1st day of January 1848,

SATURDAY, JANUARY 1.

OUR NEW YEAR'S ADDRESS FOR 1848.

On the commencement of a new year it has been our custom to give a brief review of the principal features of the past, and to notice the apparent prospects for the coming one. The task on this occasion would be less satisfactory than usual in either way. The general progress in the affairs of railways throughout 1847 has not been towards a more secure and prosperous issue than had been reached at the close of the preceding year; and the value of property invested in them, which had begun to decline considerably in 1846, has since undergone a more serious diminution. The natural consequence of this process has been to create a feeling of despondency and disappointment, stronger than we have witnessed at any previous time since the beginning of our career; and, viewing the past transactions and present state of the railway system at large, we cannot say that the impression is either unfounded in itself or wholly owing to temporary causes, independent of its internal condition and manage-

That we have suffered deeply from the pressure which has been straining the life out of every kind of business during the last half-year, and that the general disasters of the time have aggravated our special difficulties, is visible enough. But neither is their origin to be sought in the financial circumstances of the country, nor would these have fallen upon the railway interest with their present severity, had due regard been paid to the policy which might have been pursued under these circumstances-which have come neither suddenly nor unexpectedly. The error of the body at large-and a grave error it has been-consisted in taking too little account of external influences, when efforts were being continued and enterprizes planned that, in any state of things, might have been open to question. as to the rate at which they were proceeding. The main cause of this over-exertion is evident enough. It lay in the unfortunate rivalries which have divided the railway body, and which have caused a scramble on all sides for the occupation of every blank space in the map. Each company has proceeded on the principle of securing at all hazards as much of this ground as could be laid hold of; and the fear of seeing a rival take possession has been the continual spur to new undertakings, which prudence would have wished to postpone, had not the dread of being too late prevailed.

The consequences of this system may now be

viewed on a pretty large scale; and useful conclusions might still be drawn from the facts they present. In general the contending parties are relatively in the same attitude as before the contest began; all, in the progress of the contest, having burdened themselves with an extra load of engagements and expenditure, which must press heavily both on present means and on future profits. It would be hard to say who has gained or lost in respect of the struggle with competitors; it is easy to see that all have suffered by the manner in which that struggle has been carried on.

By many of the rulers of the great railway interests, the contest, we know, has been regarded as a mere act of self-defence; a painful, but still an absolute necessity. The justice of this view of a policy, the practical outcome of which is to weaken the vital resources of the interest to be defended, we have never yet been able to discover. It is long since we endeavoured to point out that, in a game which doubled stakes is but a precarious method of programme of public business to be laid before exaping from loss. The only defence which the new Parliament, the railway question is one large one.

competition, lies in husbanding rather than in expending strength. We are now arrived at a time in which it will be easier than it may formerly have been to many minds to discover the meaning of this principle. Let any one now say which of the two following conditions would be the more desirable, whether for present advantage or for future security:-that of a company, compact within itself, however surrounded by the branches and extensions of more dashing concerns: with a small capital in proportion to its mileage; clear of debt, and free from any profitless works or need of frequent calls; enabled by its moderate capital to make a handsome profit on the lowest scale of fares; and thereby so strong in credit as to be able to purchase on its own terms, in a time of general embarrassment, whatever additional works it could desire to possess, without the charge of fighting for or making them?-or that of one spread out in all directions, and thereby only exposed to rivalry at a greater number of points; laden with a heavy share capital; engaged in numerous works, demanding incessant calls, for which money cannot be easily procured; and, in consequence of the expensive way in which the whole concern has swelled to its present size, unable to count upon much profit at the rates which competition will inevitably compel it to work at, in spite of all the costly efforts made to master it? There are few who will not be disposed to allow that the railway concern first described would, after all, have been the most effectually defended by its moderation and economy; although such a policy may have had none of the large and imposing character that has been the favourite ideal of all our great incorporated companies.

These remarks, we need hardly observe, are not meant to discredit sound enterprize: they apply to that class of it only which is promoted under circumstances otherwise unfavourable, by the fear of losing an instant advantage in competition. Of such a great part of last year's undertakings will be found to consist; and the result is, that all the principal concerns are now labouring under the weight of past engagements, while soliciting Parliament for leave to incur fresh ones; at a time, moreover, when in all of them the proprietors are weary of calls, and cannot escape from them by selling out, except at a ruinous loss. The effect of such a state of things will surely lead, at last, to some re-consideration of the principles by which it has been produced-it has already in certain quarters bound over some inveterate combatants to keep the peace; and should the crisis we are now passing through, and from which we cannot expect to be relieved for some time to come, enforce a more safe and moderate course of policy hereafter, the experience, severe though it be, may prove useful in the end to the railway system.

The special influences directly acting on the body from without, have not been of much weight in the past year. The attempts of the new Commissioners to encroach on railway management have so far entirely failed; the clamour of late months for forcible restriction has ended in smoke; and the strength in the new Parliament of representatives conversant with our interests, will be a pretty effectual defence against any rash attempts, should Government desire to renew them in the coming year. There are reasons for believing that on this head the Administration is becoming a little more enlightened than formerly. In an article in the Edinburgh Review for this two can play at, the continued laying down of month, which contains a kind of general official

we could ever perceive to be effectual against | mentioned in a tone of reserve and moderation quite new in such Whig manifestos. To this subject we shall return hereafter; in the meanwhile, it may be generally remarked, that now more than ever the fate of the railway interest lies in the degree of wisdom which may be applied to its internal management; from without, if it be well guided within, there is not much to be feared.

The two main points in which a wise care is needful to secure the large and weighty interests now embarked in railways, are plainly, caution in outward relations, and economy within doors. For both of these there is a wide field opened by the embarrassments which it must be the business of all concerned to master in the present year. We sincerely trust that what is principally wanted may be distinctly perceived; once seen, there will be little reason for doubt of its being successfully accomplished.

PRACTICAL SUGGESTIONS FOR INCREASING THE PARCEL TRAFFIC ON RAILWAYS, WITH PROFIT TO THE COMPANIES AND CONVENIENCE TO THE PUBLIC.

To the Editor of the Railway Chronicle.

Sir,-The object of the present and the following papers is to call attention to the existing relations between the Post-office and the Railways, and to offer some suggestions to the consideration of railway directors, which are calculated, I believe, if carried into effect, to increase the traffic and profits of railways, in affording the public better arrangements in the transmission of small parcels. The successful result of my suggestion for adopting quadruple rails on the London and North-Western Railway, which you printed (Rail. Chron. 1846, p. 1119), emboldens me to ask you to give circulation to the present papers, although they extend to some length. Consistent advocate as you are for maintaining the best interests of the railways, it is proper I should ask this service of you, intended as it is for the benefit of railways; for I would beg leave to state, most emphatically, that it is not my intention, in the present case, to ask the companies to make any sacrifice whatever; and unless it is clear that my suggestions involve no risk of the present earnings of railways, I certainly do not urge the adoption of them. H C

1. Next in importance to the conveyance of letters is the conveyance of small parcels. Letters now go through the Post-office as cheaply as can be desired at a uniform rate assessed on the weight; and many "letters," so called, are really parcels. But small parcels transmitted by railways are subjected to charges regulated by little if any principle at all, and to charges almost as variable as those for letters used to be before the advent of the penny post. Almost every metropolitan railway has a different scale.

2. Circumstances of late years have caused me to watch with interest the progress of the Post-office and of the railway system, and I think it may be shown that the time has now arrived when the question will soon be practically settled whether the Government, through the agency of the Post-office, or the railways themselves, will assume the conveyance and systematic delivery of small parcels generally throughout the kingdom. At the present time, the traffic of small parcels is managed by three great independent agencies, antagonistic in interest to each other-the Post-office, independent carriers, and the railways: not to mention that amount of traffic which is carried on illicitly in one sense by inclosing many small parcels in

Digitized by Google

- 3. Already the Post-office has attracted to itself the carriage of all small parcels which are sufficiently valuable to bear the rates of postage. The Post-office undoubtedly obtains all legal documents. Besides, all those parcels on which the Post-office charge is cheaper than that of the railways, fall into the hands of the Postoffice, as in the case of parcels sent long distances: thus, for a parcel of the weight of a quarter of a pound sent from Cornwall to Inverness, the postage would be 8d., whilst the railway carriage would be at least 4s. Many other parcels go through the Post because the opportunities for receipt and delivery by the Postoffice agencies are more fecile and certain. And it may safely be assumed that the Post-office attracts to itself almost all parcels whatever the postage of which is under 6d., that amount being the lowest sum for which any parcel can be dispatched by the metropolitan railways.
- 4. The carriage of parcels by the Post-office was a novelty introduced by the plan of penny postage. Before the year 1840, the Post-office was accustomed to take no parcels but of stamps and of documents for the public departments. But the cheapness of the rate, and the adoption of a system of charging by WEIGHT by the Postoffice, have created for that department a large and daily increasing parcel business. It must not be forgotten that a parcel post is entirely a novelty of our own times. So great a novelty, indeed, did it seem to be, that it was denounced by certain Post-office authorities themselves at the outset of the penny post as "illegitimate" correspondence.
- 5. When this change came about, railways were developed in a very moderate degree. The immediate result of the new postage system was to create for the Post-office a small-parcel business, in which the Post-office was able successfully to compete with the old stage-coaches and mails, by offering greater economy, safety, and, in many cases, greater expedition. Seven years ago it was a marvellous boon to the public to enable them to frank a parcel of a pound in weight for 2s. 8d. from Land's End to Inverness, or from Dover to the West of Ireland; and the consequence was, an instant transfer of the small-parcel trade from the then accustomed channels into the hands of the Government.
- 6. Circumstances were peculiarly favourable to the change at that period, for the traffic of the country was vibrating, as it were, between railways, canals, and coaches; so that, all these interests being in a state of transition and hostility to each other, the small-parcel trade was quietly taken possession of by the Government. without an audible murmur of opposition from any of the interests most affected by the change.

7. The experiment of adopting a uniform rate of charge by weight has proved to be most successful. It would be an idle dream to believe in its recall; and it is quite clear that circumstances will force a very great extension of the principle of a parcel post at no distant day.

8. The parcel post is decidedly the most profitable part of the Post-office business. It is also conducive to public convenience in the highest degree. In due course, these circumstances alone would effect the extension of the system. But the railway interest should be reminded that there exists a distinct pledge from the energetic and talented Post-office reformer, Mr. Rowland Hill, more than once officially repeated, that the carriage of parcels without limit as to weight, and at LOWER RATE even than a penny per halfounce, is a feature of his Postage plan.

. 9. In Mr. Hill's correspondence with the Treasury in 1843 (p. 25), among "the measures for affording increased facilities for Post-office distribution", remaining to be carried out are enu-

.Š. /

weight, say 2 oz. for a penny in all district This is repeated at p. 5 of 'Requisites for the completion of Mr. Rowland Hill's Plan of Post-office Improvement,' published by C. Knight, 1843. In the same correspondence, at p. 26, we find Mr. Hill insisting on "the relaxations of the present restrictions as to weight. The establishment of a PARCEL POST, AT REDUCED RATES, SIMILAR IN SOME RESPECTS TO THE BANGHY-POST IN THE EAST INDIES."—At "reduced rates"! The restriction to the pound weight is to be relaxed, and not only is this to take place, but the "rates are to be reduced." Nothing can be clearer in intention than this. And Mr. Rowland Hill is not the man to abandon a good intention when he has once promulgated it. The carrying of the Penny Post is a sufficient token of this. His patience and perseverance are as great in their way, as those of a North American Indian abiding the advent of his foe. It should also be remembered, that Mr. Rowland Hill, from his official capacity in the Post-office, is now in a position to effect his own proposals; and we may assume with perfect confidence that most assuredly he will do so. Do not forget, also, that when once the public mind is sufficiently alive to Mr. Hill's intention, as it will be in due time, the public will assuredly support Mr. Hill, and demand the extension of the parcel system through the Postoffice. Your own columns have already recorded the fact that an Act of Parliament has altogether removed all former restrictions as to weight, formerly limited to 16 oz.; and the same Act provides, that in all cases in which "the British postage chargeable on any letters sent by the Post shall exceed the sum of one penny, Treasury "may REDUCE SUCH POSTAGE to ANY OTHER RATE they may from time to time think So that parcels might henceforth be taken by the Post-office at 1d. per pound. Let not railway directors supinely imagine that this Act is going to remain a dead letter with Mr. Hill. acting as secretary to the Postmaster-General. It is not for Mr. Hudson to indulge in any such daydreams.

10. Not only has Mr. Hill a very positive intention of relaxing the restrictions on weight, and reducing the rate of charge, but he has also very decidedly manifested intentions of establishing more frequent mails on railways. When chairman of the Brighton Railway, he persuaded his company to take four mails daily to Brighton without charge to the Government, Moreover, coupled with Mr. Hill's intention of getting more work out of railways, we have evident signs that Government purpose to pay their own price, i. e., to pay LESS FOR IT. Railway interests hardly need to be reminded, that Mr. Strutt actually proposed to make a Government Board resolve absolutely and definitively what Government should pay to the railways for the carriage of the mails!

11. The obvious tendency, then, of present circumstances is to compel the railways to perform the mail service for next to nothing. And when this is accomplished the Post-office will successfully compete and carry off all the smallparcel trade, whilst the public, not too tenderly disposed to railways, will look on and applaud lustily!

12. The Post-office certainly will carry out this scheme for the public to the injury of railways. But cannot the railways plan another, and as good or perhaps a better one for the

public, and for their own great profit and popularity beside? I think they can.

13. What then should the railways do? Ought the railways to remain passive and submit to the total abstraction of their small parcel trade, or ought they to compete with the Post-office, merated :- "An increase in the allowance of and show that they can conduct it as cheaply law for the construction and management of railways

or even more cheaply-that they will not only keep what they have, but actually regain what they have lost, and generate besides a new and illimitable species of traffic? The carriage of small parcels may be said to be by far the most profitable part of railway receipts. It will be sufficient to examine the receipts of any one established working railway, which may be assumed to be a fair average of all, to prove this. All parties will agree that no better illustration can be taken than the London and North-Western Railway.

14. Without pledging myself to the positive accuracy of the following accounts, I believe that an analysis of the accounts of the London and Birmingham Railway for six months, ending the 31st of December 1845, will be found to show that the profits on small parcels were at the rate of as much as 801 per cent., being the very highest rate of profit on all kinds of traffic, as appears by the following table:-

	Per centage of Charges to Receipts.	of Profits	Proportions of Profit taking the whole at 100.
Ist class passenger	33.32	66.68	31.60
2nd ditto	29-91	70.09	28.96
3rd ditto	29.16	70.84	9.35
Horses	61.21	38.79	0.97
Carriages	81.55	1878	0.29
Parcels and dogs	19.63	80.37	7.33
Post-office		63.79	1.46
Goods and coals		64.80	17.16
Stores			1.00
Oxen	4376	56.24	1.53
Sheep	26.16	73.84	1.30
Pigs	39-93	60.07	0.36

15. The receipts and charges of the London and Birmingham for six months, ending 31st of December 1845, per mile, apportioned to respective items of traffic, are shown to have been as

	Receipts.	Charges.	Nett Receipts, per passenger, &c.
1st class 2nd class 3rd class Horses Carriages each Oxen Sheep Pigs	d. 2:495 1:628 1:000 4:559 4:882 0:849 0:158	d. 0.831 0.487 0.292 2.815 3.965 0.371 0.040 0.003	d. 1-664 1-141 0-708 1-784 0-917 0-478 0-118 0-091

Profits from goods, parcels and Post-office per ton nett per mile.

	Receipts.	Charges.	Nett Receipts, per ton, &c.
Goods	d. 1726 18:166	d. 0.608 3.566	d. 1·118 14·600
Post-office	9.995	3.619	6.376

16. The first table also shows that the proportionate profit on parcels is as much as 71 per cent. of the whole profits of that line. Considering the length of this line (112 miles), the time it had been worked in 1845, and its excellent management, its profits of parcel-carrying may be taken as a fair average either of what railway parcel business is, or is likely to be. Surely railways cannot be prepared to surrender this 71 per cent. of profit, or even so much of it as may be supposed to belong to the carriage of the smaller parcels, to the Post-office, without some effort to keep it.

(To be continued.)

Official Bapers.

AUDIT OF RAILWAY ACCOUNTS.

We append the exact phrases of the bill lately introduced in the House of Lords by Lord Monteagle:-

1. Whereas it is expedient to afford to the shareholders of public companies which now are or which hereafter may be duly formed and constituted by

additional facilities for the due and effectual audit of their accounts: now be it enacted, by the Queen's most excellent Majesty, by and with the advice and consent of the Lords spiritual and temporal, and Commons, in this Parliament assembled, and by the authority of the same, that at any ordinary general meeting which after the commencement of this Act shall be holden by the shareholders of any such rail-way company, it shall and may be lawful to and for any company, it shan and may be lawful to and for any or greater number of shareholders of any such company, holding in the aggregate not less than of the capital of such company, by writing under their hands, to call on and to require the directors of any such company to submit the balance-sheet of the said company, and all accounts and vouchers thereunto relating, for the examination and report of an auditor to be appointed as hereinafter provided: provided nevertheless, that it shall not be competent to any shareholder to sign any requisition for the appointment of a special auditor under this Act unless he shall have acquired his shares or stock in right of bequest, inheritance or marriage settlement, or shall have purchased, or otherwise acquired the same, six calendar months at the least before the date of such requisition, nor unless all calls due in respect of such shares shall have been first

duly paid in full.

2. And be it enacted, that whenever any such requisition in writing, duly subscribed as aforesaid, shall be presented to such ordinary general meeting, the directors of such company shall be required, within days of the receipt thereof, to transmit a copy of the same, signed by the chairman, deputy chairman, or secretary, to Her Majesty's Commissioners for Railways, who shall thereupon proceed without delay to select, nominate and appoint, by writing under their hands and seals, one fit and competent person to examine, audit and report upon the balance-sheet and accounts of such company as aforesaid; and every such auditor so appointed shall forthwith proceed in the execution of his duties

j.

ij.

15

under this Act.

3. And be it enacted, that the said auditor so appointed shall have full power and authority, and shall be and is hereby required, to inspect and amine the accounts kept by such company of all the sums received or expended on account of the company by the directors and all persons employed by or under them, and of the matters and things for which such sums of money shall have been received or disbursed and paid, and to call for and require the production of all vouchers and other evidences to establish such receipts and payments, and also to examine, as touching the balance-sheet of such company, into the capital stock, credits and property of every description belonging to the company, and the debts due by the company at the date of making such balance-sheet, and to report his view of the profit or loss which shall have arisen on the transactions of the company in the course of the year, half-year or other period to which such balance sheet relates.

4. And be it enacted, that every such auditor so appointed shall prepare his report in duplicate, one copy to be forthwith lodged with the directors of the railway the accounts and balance-sheet of which he

Has examined, and another copy to be transmitted to Her Majesty's Railway Commissioners.

5. And be it enacted, that such Report of the special auditor appointed under this Act shall be laid before the next ordinary meeting of the shareholders of such railway company, and shall be open for the inspection of the shareholders in the manner prescribed to public companies under the provisions of an Act passed in the eighth year of her present Majesty's reign, intituled, 'An Act for consolidating in one Act certain provisions usually inserted in Acts with respect to the constitution of companies incorporated for carrying on undertakings of a public

6. And be it further enacted, that this Act shall commence and take effect from and after the next after the passing thereof.

COPY OF AGREEMENT BETWEEN THE EDINBURGH
AND NORTHERN AND EDINBURGH, LEITH
AND GRANTON.

It is contracted, agreed and ended between the
parties following, viz., the Edinburgh and Northern,
incorporated by Act of Parliament 1845, of the first
part, and the Edinburgh, Leith and Granton, incorpart, and the Parliament 1836, and amended porated by Act of Parliament 1836, and amended by subsequent Act of Parliament 1844, of the second part, in manner following; that is to say, considering that, by minute of agreement dated the 11th and 13th days of March 1846, the directors of the said companies respectively agreed, on the terms therein and hereinafter mentioned, to amalgamate the stock

whereas the said agreement and amalgamation was approved and confirmed by general meetings of the said two companies; therefore the said parties, of the first and second parts, have, in furtherance of the foresaid agreement, agreed, and do hereby agree, to unite and amalgamate the said Edinburgh, Leith and Granton whole capital stock thereof, preference and postponed, and whole works, property and appurtenances, exclusive of the extra property herein-after mentioned, with and as part of the stock of the said Edinburgh and Northern, whole works, property and appurtenances thereof; and for completing the said amalgamation, and for forming one corporation or company out of the said two companies, the parties hereto hereby agree, and bind and oblige them-selves to adopt the steps necessary, by the Standing Orders of Parliament or otherwise, for procuring an Act in the ensuing session, 1847, and for carrying out and obtaining such Act of Parliament,—declaring always, as it is hereby expressly provided and declared, that the said amalgamation has been, and is hereby agreed to, with and under the conditions and provisions following;—1st. It is agreed that the stock of the Edinburgh, Leith and Granton shall be limited to the capital sum of 310,000l., and the same shall be amalgamated at par with the stock of the Edinburgh and Northern, the preference stock of the Edinburgh, Leith and Granton still to be entitled to 5 per cent., of which the amalgamated companies shall guarantee 4 per cent., and the postponed stock of the Edinburgh, Leith and Granton shall guarantee the difference. 2nd. That after the works are completed, and before they are handed over to the Edinburgh and Northern, an auditor shall investigate and report to them, and in the meantime shall inventory the plant and effects of the Edinburgh, Leith and Granton, exclusive of their extra property, an inventory of which shall also be furnished in the meantime by the Edinburgh, Leith and Granton; that the auditor shall be Mr. H.G. Watson, accountant in Edinburgh, and his instructions shall be to report an abstract of the whole expenditure on the undertaking from the books of the Edinburgh, Leith and Granton. 3rd. That a full report shall be obtained from the engineer on the state of the works, the extent of the work done, and remaining to be done, to complete the line in the manner in which it is to be handed over to the Edinburgh and Northern; that the rough estimates of the remaining works furnished by the engineer to the directors of the Edinburgh, Leith and Granton, and referred to by them in their negotiations with the directors of the Edinburgh and Northern, shall be put in the possession of the latter. 4th. That the engineer for the time being of the Edinburgh and Northern shall be the engineer of the Edinburgh, Leith and Granton. 5th That the stock of the Edin-burgh, Leith and Granton shall remain under its present name until the amalgamation shall be sanctioned by Act of Parliament. 6th. That until the line of the Edinburgh and Northern shall be opened for traffic, the revenue to arise from the working of Edinburgh, Leith and Granton shall be applied as if no amagamation had taken place with the Edinburgh and Northern, and no interest other than the revenue shall be payable to the shareholders. 7th. That an Act of Parliament, authorizing the amalgamation, shall be applied for in session 1847. 8th. That the affairs of the Edinburgh, Leith and Granton shall be managed and directed by that company's Board, until the works are completed and the line handed over to the Edinburgh and Northern. 9th. That a joint committee shall be formed, consisting of seven members, four of them to be directors of the Edinburgh and Northern, and three to be directors of the Edinburgh, Leith and Granton. 10th. That the joint committee shall meet from time to time, and as often as the chairman of the committee shall think fit; and its duty shall be to decide upon, and give instructions as to all matters of a general kind, affecting the joint interests of the two companies, in the Edinburgh, Leith and Granton, and to advise as to the nature and extent of the works. 11th. That the Edinburgh and Northern shall take the line and works off the hands of the directors of the Edinburgh, Leith and Granton, at the time and in the manner to be fixed by the joint committee; and should there be any difference of opinion respecting their state or completeness, or should other questions arise having reference to the works, the same shall be referred to Mr. W. Cubitt, engineer, or failing him, any other engineer to be mutually agreed upon; and all other questions arising under the agreement, and the number of the directors of the Edinburgh, Leith and Granton, who are to be admitted to the amalgamated Board on the amalgamation, shall be referred to Mr. Porter, of the Board of Trade, or failing him, to Mr. S. Laing, late of the Board of Trade. of the said Edinburgh, Leith and Granton with the said parties consent to the registration therestock of the said Edinburgh and Northern; and of, and of any decree or decrees arbitral, interim or by a gradient of 1 in 100, and for a further distance

final, to be pronounced by the said arbiter or arbiters. in the books of Council of Session, or others compe tent, therein to remain for preservation, and that letters of Horning on six days' charge, and all other execution necessary, may pass on a decree to be in-terponed hereto in common form, and thereto they constitute their procurators, &c.—In witness whereof, &c.—Signed and sealed, 7th and 8th October 1846.

Draft Minute of Reference agreed to be recommended to the Shareholders.

We , directors of the Edinburgh, Leith and Granton, for behoof of the shareholders of the said company, on the one part, and we directors of the Edinburgh and Northern, for behoof of the shareholders of said company, on the other part, hereby refer to the amicable decision of the Right Hon. J.A. Stuart Wortley, whom failing, Sir F. Thesiger, generally all questions arising out of the agreements between the two companies, dated March and October 1846, and the Act of Amalgamation, 10 & 11 Vict. c. 239, with this consent on the part of the Edinburgh and Northern, that the sum to be applied to the proper works of the Granton Company, according to the said agreements and relative estimate, is to be reckoned as fixed at 340,000l. And it is further agreed that the certificate of amalgamation shall be applied for as soon as, but not until, it shall be shown to the satisfaction of the referee, that the consents of the Bank Creditors of the Edinburgh, Leith and Granton have been obtained, and sufficient security given, in the opinion of the referee, as to the other debts or loans of that company that the same shall not be enforced against the amalgamated companies for the space of fifteen months from the application for the ertificate, provided always that such postponement shall not extend over a longer period than sixteen months from the signing of the reference, it being understood that the calls on the Granton or 201. shares shall be applicable in the meantime to the liquidations of the foresaid obligations. A formal deed of submission, with the usual clauses embodying the foregoing terms, to be prepared and executed.

(Signed) JOHN BALFOUR, Chairman Edin. (Signed)

and Northern Railway. E. D. SANDFORD, Chairman of Edin. Leith and Granton.

Progress of Works.

EAST ANGLIAN.—Dec. 20.—The sinking of the dams for the Wisbeach branch was successfully com-menced, when the first stone of the eastern dam, weighing six tons, was lowered and fixed by Mr. W.

Houselander, resident engineer.

GARNKIRK EXTENSION.—The works of the extension, from the terminus at the Townhead, by means of lofty arches, to the head of Buchannan-street terminus, after the amalgamation of the Caledonian and Garnkirk, were considered to be inconvenient, and were consequently abandoned. Meanwhile, the Caledonian, under their new powers of extension, speedily levelled the immense pile of arching. The Glasgow Chronicle thus minutely remarks on the extensive operations going on, under the provisions of the company's extension Act, which we have before generally noticed (p. 1141, ii. 1847):—The Garnkirk crossed the Kirkintilloch road upon the level, at its entrance to the present terminus, but in consequence of the amalgamation, by which a great amount of additional traffic will pass along the line, in connexion with the Scottish Central and Wishaw and Coltness, it was found expedient to lower the Kirkintilloch road, at the point mentioned, to the depth of several feet, and a bridge has already been thrown across at the entrance to the terminus, thus affording greater security to the public against accidents, as well as convenience to the company. The present terminus is to be retained as a mineral terminus. Passing through the lands of Milton, the line crosses under the Kirkintilloch road, at about 400 yards north-west of its present crossing, into Pinkstone bog, in the valley between St. Rollox and Sighthill Ceme tery. After passing through this bog, in the direction of the Monkland Canal, a very formidable eminence, on the lands of Broomhill, presents itself, rendering necessary the formation of a tunnel of 400 yards in length. A considerable number of workmen are employed upon this hill, and the tough soil is raised to the surface by means of gins and engines, at four separate eyes. The tunnel, as we have before stated, passes under the Monkland Canal, immediately over the present tunnel of the Edinburgh and Glasgow, at the same point, down to the terminus at Port Dundasroad. The gradients are as follows:—Starting from the level of the present line, at the point before men-

Digitized by GOOGLE

of a mile and three furlongs the gradient is 1 in 80—terminating by about two furlongs on the level. The whole works are contracted for by Messrs. Stephenson & Co., and are being executed under the superintendence of Mr. Dodds.

NEWMARRET AND CHESTERFORD.—The line definitely, says the Bury Herald, will open for passenger traffic on Monday next, Jan. 3. Arrangements are already completed to horse fast coaches from the town to meet two or three trains in the day. The proposed time to be occupied from Bury to Newmarket is 1h. 10 m., and from Newmarket to London 1 h. 45 m. One hour's time will thus be saved between this town and London; but as a set-off to this must be taken into consideration the inconvenience of changing luggage and carriages, and (to second and third-class passengers especially) the anything but agreeable prospect of an outside ride on a stage-coach in cold and wet weather.—(Extension to Thetford).—The negotiations for some time pending with the Norfolk were to be closed on the 30th ult. The portion from Newmarket to Thetford, though it will be constructed and worked by the Newmarket and Chesterford, will really be a part of the Norfolk Company's line—that directory having consented to lease it on very satisactory terms to both parties.

FOREIGN.

BOULOGNE AND AMENS.—The directors last week inspected the line from Boulogne to Nesle. They commenced their examination at the station at Capecure, and went along the whole of the line to the tunnel, which they minutely inspected. Mr. Cubitt, in his Report, expressed the most perfect satisfaction with the manner in which the works had been executed, and that it gave every guarantee of durability and safety. He also complimented the contractors for the ability displayed by them in meeting the difficulties they had encountered, so great and so various as to be rarely met with. Unless some unforeseen accident happens, the whole line will be opened on

the 1st of May next. NAMUR AND LIEGE. - Dec. 17 .- Since the inspection by the Government officers, a special train has conveyed the directors and the principal officers of the tablishment over the first section of the Mons and Manage, viz., from Manage to Bracquegnies, and from La Louvière to Bascoup, the latter being a branch from the principal line running from Manage to Mons. The distance from Manage to La Louvière was per-formed in 15 minutes, the line passing through a highly cultivated country, densely populated and abounding in manufactories. The station at La Louvière is in the vicinity of extensive porcelain and glass-works, as well as many steam mills. Having inspected the station and the swing-bridge over the canal, the train proceeded to Bracquegnies, passing the vast collieries of La Louvière, La Paix, St. Hubert, St. Barbe, St. Patrie, and Bois du Luc, with the villages of Houdeng-Gorguies and Hudeng Animries. The station here was inspected, and the party proceeded on foot over a portion of the remaining section towards Mons. In this neighbourhood are many large iron-works actively employed, and three coalshafts, which are connected with the main line by branch lines. The train then returned along the line to La Louvière, and theuce along the branch line to Bascoup. Here the line passes through the collieries of Sarslongchamps, Houssu, Haine, St. Paul and St. Pierre, and Mariémont, close to the glass and iron works of Jolliment, and passing by the stations of Baume and Mariémont, arrives at l'Olive, the station at the foot of the juclined plane which terminates the line. Having highly approved all the arrangements at this station, the party returned to Manage, passing over their journey at an average speed of 25 miles per hour. The whole distance is 12½ miles, and will shortly be opened for public traffic. All the bridges and buildings at the stations are completed; the cuttings and embankments neatly dressed and finished, and in a perfect state of solidity; the permanent way well laid down, and all the arrangements in perfect order. At the several collieries every facility seems to have been provided for carrying on the traffic with spirit, and from the returns made at the various mines it is found that there are upwards of 400,000 tons of coals and coke annually exported, and that, in tons of coals and coke annually exported, and that, in addition to fifty coal shafts, there are vast numbers of iron works, potteries, glass works, &c. Moreover, when the line is completed to Mons, the journey between France and Germany will be shortened several miles. After a déjeuner at Fayt, the party returned to Brussels by the Government line well satisfied with the result of their trip.

Accidents.

LANGASTER AND CARLISLE.—The fireman of the mid-day up-train, named Turner, had been intrusted with a letter connected with the business of the line.

and on nearing Carnforth this letter was blown away. It was whirled into the air, and the poor man had some idea that it had fallen on the top of one of the carriages. He accordingly proceeded to search for it, and was upon the van just as the train reached the bridge on this side the Carnforth station. Having his face towards the rear of the train, the man was not aware of his danger, and in a moment the back of his head came in contact with the arch. The man would have fallen off, but that the guard seized him. He was taken, insensible, to the Lancaster infirmary. The letter was found upon the rail.

North British.—Dec. 21.—An engine, in charge of a stoker, was proceeding from Meadowbank to Edinburgh, when it was overtaken by a luggage-train upon the same line. The concussion was considerable, but not such as to damage materially either of the engines. The stoker, it is believed, fell from the engine, and, not being reversed, the engine ran into the station at the North Bridge, where it came in contact with four waggons: these it dashed in pieces, and drove violently against the stone supports of the Edinburgh and Glasgow station, where it was brought to a stand-still. In addition to the demolition of the trucks, a cast-iron pillar in the station was driven down. The stoker is injured by the fall, but not severely.

SHREWSBURY AND BIRMINGHAM.—Dec. 28.—A timber bridge, owing to the overflowing of the Severn at Preston Boats, two miles below Shrewsbury, fell: two men and a horse were drowned.

Law Entelligence.

SURVEYOR'S AGREEMENT .- Dec. 23 .- In the Vice-CHANCELLOR'S COURT, in re Pilkington v. Foakes. In 1845 the plaintiff, employed by the Central of Spain to survey and level a proposed line from Madrid to Badajoz, entered into a written agreement with an agent of the defendant, whereby the latter undertook certain parts of the work at 7l. per mile. In October 1846 the defendant commenced an action of assumpsit against the plaintiff for the amount of his charges, and on Dec. 16 the plaintiff's attorney took out a summons in the action to show cause why the defendant should not produce the agreement for the plain-tiff's inspection, but upon the production of an affidavit of the defendant, denying that he had ever signed such an agreement as he was required to produce, the summons was dismissed. Upon the trial of the action, when a witness of the plaintiff was under examination as to the terms of the agreement, the defendant's counsel asked the witness whether the agreement was in writing, and on his answering in the affirmative, the Court declined hearing parol evidence of its contents, in consequence whereof the defendant recovered 264l. 14s, damages in the action. which was alleged to be considerably more than the sum to which he was entitled under the agreement. The plaintiff then filed the present bill to restrain execution in the action at law, on the ground that the defendant had obtained an undue advantage in the action by the course taken with respect to the written agreement. The defendant, by his answer, however, stated that a correspondence, containing all the terms of the agreement, had, without objection, been submitted to the jury, who had thus all the facts before them. An injunction was now sought.— The Vice-Chancellor said that he must take it to be true as it appeared upon the answer, that the counsel for the defendant in the action at law allowed documents to be read disclosing the actual terms of the agreement, and upon that ground alone, without adverting to other difficulties, on which it was not necessary to give an opinion, the motion must be refused, but without costs.

Dec. 24.—In the same Court, in re the Southampton Estuary, ex parte the Southampton and Dorchester, a case on a petition. The Southampton and Dorchester, a case on a petition. The Southampton and Dorchester, requiring a portion of the sea-shore of the Southampton Water, extending from a place called Redbridge, along the shore, abutting upon the manor of Milbrook, and a claim being put in by the Crown, paid the purchase-money, amounting to 1,424L, into the Bank, in the names of Commissioners of Land Revenues, under the Act, and a petition was now presented by Sir J. B. Mill, as tenant for life, and lord of the manor of Milbrook, that such purchase-money should be paid out to him.—The Vice-Chancellor suggested that an issue should be directed to a court of law.—Counsel on both sides agreeing, an issue was taken, to try the question whether the Crown was entitled to the Estuary—the issue directed to the the Court of Queen's Bench.

CARRIAGE OF PARCELS.—Dec. 23.—In the Court of Exchequer, in re Machin v. the South-Western, the plaintiff, a silk merchant, carrying on business in London, sought against the defendants, as common carriers, to recover 1251. 16s. 10d., the value of a bale

of silk entrusted to them to be carried from the Andover-road station to London. The defendants pleaded not guilty, and also that the silk was of greater value than 10*l.*, and that no intimation of its value had been made or given to them by the plaintiff, although they had published the usual notice, limiting their responsibility to that sum, under the provisions of 1 Will. 4, c. 68. The plaintiff replied that the silk had been stolen by T. Johnson, then in their employment, and upon that allegation issue was joined. The bale of silk had been delivered by the joined. The bale of silk had been delivered by the plaintiff's agent to the defendants' servants on the 23rd of November 1846 at the Andover-road station. It arrived safely at the Nine Elms station on the morning after, and was, with other parcels, despatched for delivery by Johnson, who was at that time carman to Messrs. Chaplin & Horne, who were proved to have been the agents of the defendants. Johnson shortly afterwards returned and stated that he had lost the silk. The principal witness, named T. Webb, deposed that he had seen Johnson with one of Chaplin & Horne's waggons at Charterhousesquare about the time the parcel had been delivered. He saw Johnson delivering a parcel answering the description of the bale of silk in question to three bad characters, who drove off with it. For the defendant it was contended that the evidence was very improbable, and scarcely to be relied on .- The Lord Chief Baron, in summing up, told the jury that they were not called upon to analyse the evidence against Johnson as closely as if they had been trying the criminal charge against him. It was the plaintiff's duty to satisfy them that the silk had been stolen by Johnson. -Objections as to the defendants' liability, on the ground that Johnson was the servant of Messrs. Chaplin & Horne when the property was lost having been taken, and leave to move the Court in banco upon them having been reserved, the jury at once – Ďamages, found a verdict for the plaintiff. -125l. 16s. 10d.

Dec. 23.—In the BANKRUPTCY COURT, in re Thomas Burton, railway contractor, for choice of assignees. The bankrupt was described as a builder, of Commercial-road, Lambeth, and also a railway contractor, and had at the present time a contract with the London and North-Western to prepare 20 miles, at a cost of about 170,000l. There were upwards of 300 creditors, whose debts amounted to 60,000l. A short time since the bankrupt proposed to pay them 20s. in the pound, and interest within twelve months, but certain creditors refused to accept the proposition, and hence the present bankruptcy. After some discussion, assignees were chosen.

Dec. 29.—In the Secondaries' Court, in re Thistleton, administrator, v. the South-Eastern, an action was brought by the plaintiff as administrator of Mary Thistleton, deceased, for damages for negligence on the part of the servants of the company, whereby the death of the said Mary Thistleton had been occasioned. The jury were impanelled, but an application was made for an adjournment of the case, the parties not being prepared. The case was therefore postponed till the 31st ult.

At the Manston House another of the railway robbers was last week committed, for pursuing his vocation at the Blackwall station.—Mr. G. White, of Millbank-street, Westminster, said that on the 11th of November he travelled from Blackwall to London, and on the arrival of the train at the Fenchurch-street station, his carpet bags were missing from the carriage in which they had been placed. Inquiry was made, but nothing was heard of them until Tuesday last, when he heard that some of the property contained in the bags had been recovered. The prisoner had gone to Cheltenham for three weeks, and the officer followed him to that town and apprehended him at his father's house. The prisoner is one of those clever artists who watch the property deposited in vans, get into the nearest carriage to the van, and slip out and seize their prey at the first convenient opportunity. Mr. White, it is conjectured, had been seen to be the owner of the carpet bag, and been accordingly marked by the victimiser.—Dec. 30.—The prisoner was also remanded on several other charges.

Dec. 23.—At the Worship-street Police Court, J. S. Forster, late in the employ of the Eastern Counties, was committed for obtaining money by false pretences from tradesmen transmitting and receiving goods by the line. The prisoner had to make out from the invoices duplicate copies of tickets for grain sent by the carmen for delivery to houses in town, and in consequence of its having been discovered that fraudulent overcharges were made, the prisoner was given into custody. Mr. Fearn, the clerk from the Spitalfields goods department, produced a book in which the proper amount was entered, and proved that Messrs Noble, the seedsmen,

of Fleet-street, had been greatly overcharged, and that the prisoner had paid him the correct value of the freightage and delivery only. Several other charges were proved against the prisoner.

Dec. 28.—In the same Court, R. Smith was finally

committed for stealing a portmanteau, containing property of the value of upwards of 20*l*., belonging to Dr. A. Sedgwick, Professor of Geology at Cambridge,

from the platform of the Eastern Counties.

London and North-Western.—Dec. 28.—At the
New Bailey, Manchester, Hatfield and Clegg, the former an engine-driver and the latter a fireman were brought before the magistrates charged with were brought before the magistrates charged with drunkeness and gross negligence of their duty. From the evidence it appeared that the prisoners had charge of the night mail train from Liverpool to London on the 25th ult. The pointsman at the War-rington junction, says the Manchester Examiner, being at his post waiting for the train, was surprised to hear it coming at a very rapid rate. He had been preparing to turn the points in order to shunt the train on to the Warrington junction; but as the train did not diminish in speed, but rather increased, he, anticipating great danger if he should turn the points, determined on the instant upon letting the train take its course, and not turning them. In consequence of the acuteness of the curve at the Warrington junction, and the tremendous rate at which the train was proceeding—not less than 40 miles an hour—nothing but the presence of mind of the pointsman prevented the train from being overturned. Meantime the train continued its frightful progress; but the mail-guard seated at the end of the train, perceiving that it was going on towards Manchester instead of staying at the junction, signalled to the engine-driver and fireman, but without effect, no notice whatever being taken of the signals. Finding this to be the case, he, at very considerable risk, passed over from carriage to carriage, till he reached the engine, where he found both the prisoners lying drunk and apparently insensible. They resisted for some time all his efforts to stop the train, and he was unable to bring them to a sense of their duty and their peril until they were near to Patricroft. He succeeded in stopping the train just before it reached that station, a distance of 14 miles from Warrington. At the Patricroft station, on the same line as that on which the mail train was running, was another train, containing a number of passengers, who thus escaped from the consequence of a collision. The prisoners were immediately given into custody, and conveyed to the New Bailey prison, while, other assistance being obtained, the train was taken back again to the Warrington junction. The regulation is, in conse quence of the sharp curve at this junction, that the trains shall not run at more than five miles per hour. Hatfield wept at the danger to life and property of which he had been the cause. Clegg said that he had been out all the previous night with a train, and had not taken his clothes off; that before he started from Liverpool he had taken three glasses of spirits and water, but that he went into the office before the train started and did not feel any effects from what he had drunk till after the train started, when he supposed that it was the keen air, coupled with his having been up all the previous night, which caused him to fall asleep. The magistrates had power to commit the prisoners summarily for two months' hard labour, or to inflict a fine of 10*l*., or to send the prisoners for trial at the sessions, at which they would be liable to a sentence of two years' imprisonment. bench appearing to be of opinion that some negligence had been exhibited at the office in Liverpool, or the men would not have been allowed to have left there in such a state of intoxication, sentenced both prisoners to two months' hard labour.

GREAT NORTHERN .- A correspondent of the Lin colnshire Chronicle states that in a recent compensation case, the agent of a noble baronet claimed the sum of 6,800l. for 16 a. 1 r. 16 p. of land, along with the injury, loss and inconvenience that the estate was likely to sustain. The valuer of the company objected to the demand, and both parties agreed to leave the case to reference. The award has been received from the referee, and the sum settled for such land, injury

and inconvenience was 3.250l.

COMPENSATION.—Dec. 20.—Mr. Buddeley claimed 2,000l. from the NORTH STAFFORDSHIRE, for 14 acre of land at Shelton Bridge, based upon the fact that the land should be treated as building land. Verdict of jury, 550l.; the sum previously offered by the company was 350l. for land and 200l. for severance .-Cummings v. Same, who claimed 2a. 25 p. of land eligible for building, and forming part of an estate of 40 acres, abutting on the road, under lease, nine years unexpired. Company offered 1,650l.; jury awarded 1,560%. for value of the land, and 900%. for injury by severance-2,060l.

Reports of Meetinas.

DERBYSHIRE, STAFFORDSHIRE AND WORCESTER-SHIRE JUNCTION.

Dec. 29.—First Meeting, London.—Mr. MATTHEWS in the chair.

The CHAIRMAN produced the register, and put to the shareholders the question of affixing the common

An objection was raised to this, on the ground that the name of the secretary, Dr. Mackenzie, to whom it was stated a large number of proxies had been intrusted, had been improperly placed upon the register. During a long and personal discussion, it was asserted, that the secretary's name had been placed upon the register during the morning, and that he was registered for one share only. Upon the original scrip being called for, a holding for ten shares was produced as that for which Dr. Mackenzie and four or five others had each been registered for one share. The shareholders protested against the legality of such an entry in the register, and a resolution was ultimately passed, authorizing the chairman to erase the name of Dr. Mackenzie. This the chairman did, at the same time entering upon the register his declaration that he doubted the legality of the erasure. The common seal was then affixed to the

The CHAIRMAN next submitted to the meeting the Report. The Royal assent was given to the bill in July 1847, and the funds having been exhausted by two severe parliamentary contests, a call of 11. per share had been made upon the proprietors. This call had not been well responded to, and steps were being taken to enforce the payments. A considerable amount was claimed by the company's late solicitor, whose bill was now under taxation. It was believed that the amount claimed by him would be greatly reduced.

The statement of accounts showed the receipts at 39,714.; expenditure, 39,077l.; balance, 638l., including 284l., due from one of the directors.

In answer to a Shareholder, inquiring the amount

due on the call of 11. per share,-The SECRETARY said the sum unpaid was nearly

Mr. H. BROWNE, M.P., said they had admitted claims against them to the amount of 6,000l. In addition to this there was the balance of 10,000l. claimed by the late solicitor. If this claim were established the company would, in fact, owe 16,000l., but to pay which they had such a trifling balance. There were in the balance-sheet two very singular items of expenditure, one for 6,000*l*., and another for 3,000*l*. for "shares." What was the meaning of these items?

The Secretary said the expenditure had been "for shares purchased for the purpose of rigging the market

Mr. H. Browne saw another item for "interest on commission, 2,000l." What was the nature of the commission?

The CHAIRMAN said the interest was for procuring loan with which to make the parliamentary deposit. Mr. H. Browne: And paid to one of the directors? The CHAIRMAN said it was,

In answer to another question.

The CHAIRMAN admitted that a sum of 284l., put down as owing by a person named, was part of 1,000l., which had been intrusted to the person (a director) for the payment of certain parliamentary fees, and for other purposes.

After considerable further discussion, Mr. Browne moved that the Report of the directors be received. and that it be, with the accounts, referred to the auditors, to make a full report to the directors, who should, if necessary, convene a special meeting.

This was carried.

The chairman was then re-elected, and after some other formal business had been gone through, resolutions were passed, limiting the number of directors to six, and electing Messrs. J. M. Matthews, H. Browne, M.P., W. Harris, Brooks, R. G. Alstone, and E. C. Browne to be directors; appointing two auditors, and requesting the directors to reduce the expenses of management to the lowest possible scale. The salary of the secretary was fixed at 2001. per annum.

SWANSEA VALLEY.

Dec. 29 .- First Meeting, West Strand .- From the non-attendance of shareholders a meeting could not be legally constituted; the business was therefore postponed to the half-yearly meeting in February

ASHBURTON, NEWTON AND SOUTH DEVON. Dec. 24.—Half-yearly Meeting, Ashburton.—Mr. R. CAUNTER in the chair.

The Secretary read the Report, which stated that under the continued depression of the money-market

the directors had determined on the postponement of all operations for the execution of the works for twelve months, and in accordance with the Act re-cently passed they had reduced the expenses within the narrowest limits. The directors decline to accept any remuneration for the past half-year, and the secretary has signified his desire that his salary should be reduced from 150l. to 50l. per annum. The statement of accounts showed the receipts at 10,693l.; expenditure, 6,505l.; balance, 4,188l., invested in Exchequer bills.

The CHAIRMAN, on moving that the Report be adopted, said, that the directors had determined to relinquish all remuneration from last Midsummer, when it was first resolved to suspend all active opera-

Mr. PAIGE said he thought that the directors had shown great prudence in suspending operations, and the shareholders were deeply indebted to them for their economy.

The Report was unanimously adopted. The retiring directors were re-elected.

[For further Reports of Meetings, see p. 13.]

RAILWAYS .- A "continuation" return, moved for by Mr. Moffatt, M.P., shows that the gross total length of all the lines of railroad for which Acts were passed last session (1847) amounts to 1,353 miles; the gross total amount of capital stock to 25,695,257*l.*; the amount of capital actually subscribed to 11,702,951*l.*; and the gross total sums of money which the com-panies are empowered to borrow to 13,764,871*l*. So that adding the amount of capital authorized to be borrowed to the original capital stock, it would appear that it was proposed to appropriate 39,460,2281. sterling to the construction of new lines.

IRON TRADE.-The first decided step towards a reduction in the price of South Staffordshire iron has just taken place, the agent of Lord Ward having issued a circular fixing the price of forged pig iron at 31.10s. Last quarter day the nominal price was 51. although little business has in the meantime been done at that quotation.—Glasgow, Dec. 24.—Quotations have been fully maintained, although several attempts were made to depress them. Prices have been dull enough, and low enough, without the use of any undue influence; but the attempt lately made, (says the North British Railway Journal), and which has proved abortive, tends only to prove that the trade is in a healthy state at heart, and will, doubtless, ere long regain itself. To-day there was difficulty in buying below 46s. for No. 3, 47s. 6d. for mixed Nos., and 48s. to 48s. 6d. for No. 1, cash. Dec. 27.—Our pig iron market is rather dull at 47s. 6d. for No. 1, and 46s. 6d. for mixed numbers, cash. Gartsherrie is still in good demand for the American market, and commands 50s. cash for No. 1.

At a special meeting of the AYRSHIRE IRON COM-PANY, held at Glasgow on the 22nd ult., Mr. J. Watson in the chair, a report, prepared by Mr. M. Clelland, was read to the meeting, from which it appeared that the total debts due amounted to 236,719*l*. 14*s*., of which 15,000*l*. were due on account of the recent speculations in extensive malleable iron works. The assets were estimated in all at 155,8721., leaving a deficiency of 80,847%. Of this the sum of 72,518%, is a debt due by the Blair Iron Company, two of the directors of which (Mr. Alison and Mr. Hamilton) were also directors of the Ayrshire; and from the other proceedings it appears that both of these gentlemen have stopped payment. Mr. Henry said there had been 10,000t. put down as paid to the Blair Iron Company for the Royalty of Pitcon, and that 4,000l. had been over-paid at the pits at Pitcon, without stating whether the royalties which were overdrawn were payable to the partners of the Blair Iron Company, or to Mr. Alison, an individual partner. Mr. M Clelland said the whole of the lordship due to the Pitcon estate had been carried to the debit of the Pitcon estate had been carried to the devote the pockets of the proprietor. The 10,000L was over and above what had been paid, and was a wrong entry. A private meeting was afterwards held, at which it was agreed that the shareholders should subscribe a certain sum, in order to raise sufficient to pay the creditors the sum of 10s. in the pound by the 15th of January next.

[Secretaries of companies are requested to forward notices of Meetings, and closing of Contracts, as early as possible.] MEETINGS.

NOTES AND EXPLANATIONS.

(1) The Government gives \$2,000,000f, and the land, and receives half the profits, after 10 per cent.

(3) The Government guarantees 3 per cent, interest, and 1 p. cent. Sinking Fund. The loan of 10,000,000f, was negotiated at about 4 per cent, per annum.

(3) The Government lends 14,000,000f, and 4,000,000f, additional for half the cost of the passage of the town of Rouen, at 3 per cent. per annum. The dividend is declared after deduction of 1 per cent. from the profits for Sinking Fund. Loan of 6,000,000f, or 6,000 bonds

of 40% each, bearing interest at 4 per cent., created August 1846, reimbursable by 10%, at 50% each, in the course of 73 years.

(4) The Government piece 8000 Mond, the town of Havre 1,000,000%. The Government lends 10,000,000%, and 4,000,000% additional for half the cost of the passage of the town of Rouen, at 3 per cent. Learn ann. The interest commence 3 years after the line is opened. Loan of 10,000,000% or 1000 bonds of 1,000% or 30% each, created December 1845, bearing interest of 50%, per annum, reimbursable by 10% at 1,20% each, in seventy-eight years—8,000 were issued in Dec. 1845, and 2,000 in Oct. 1848.

(6) Loan of 12,500,000f. In Bonds of 1,200f., bearing interest of 50f. per annum, to be paid off in a period of 50 years.

(8) Loan of 2,502,500f. in Bonds of 1,100f. at 4) per cent., to be paid off with a premium of 150f. per Bond. The Government lends 12,500,000 which the Company 123 from the Mark 4 per cent. 12,500,000 which the Company 123 from the 16, 4 per cent. interest per annum has received 15f. per share.

(7) Loan of 6,500,000f. in Bonds of 1,200f. bearing interest of 50f. per annum to be paid off in a period of 50 years.

London Stock Exchange, Dec. 31 .- The share-market has exhibited a slightly increased activity during the current week, and prices have generally improved. The guaranteed stocks have been much sought after, and what business is transacted is of a satisfactory

Liverpool, Dec. 30 .- Our market, during the past week has been somewhat inactive, although prices generally have remained firm.

Suplow, Brothers Manchester, Dec. 30 .- In the former part of the week the prices of most shares improved, and our market had a more healthy appearance. Yesterday Yesterday and to-day the advance is not well maintained, and

and to-day the advance is not well maintained, and but little business doing. SAM. GRINDROD.

Birmingham, Dec. 30.—Very little business has been transacted since the opening of the Exchange after the Christmas holidays: to-day prices have had a downward turn, North Staffords closing at \(\frac{1}{2} \) dis, and Shrewsbury and Birmingham B's at \(2\frac{1}{2} \) dis.

We have: ". Banks.

York, Dec. 30.—The market is neglected, and little business of importance is transacted. We look for a progressive business in shares as money becomes cheaper in the market.

GRAYSTON & EARLE.

Hull, Dec. 30.—There is no change in the character of the market, which remains without animation. Transactions are, if possible, more limited than ever,

in consequence of the holidays. The new year, we trust, will bring an improvement in prices.

FLINT & TOOTAL. Newcastle-upon-Tyne, Dec. 29 .- For the last two or three days there has been considerably more business transacted in our share-market, and at advanced prices. To-day the animation continues. North British. and Newcastle and Carlisles, as well as most of the usual stocks, are in demand. W. FORDYCE.

usual stocks, are in demand. W. FORDYCE.

Glasgow, Dec. 29.—The market has had a firmer
tone since the reduction of the rate of interest by the Bank of England. Several of our leading stocks have advanced in price, and there is a much better speculative demand for the light shares. The following are to-day's latest transactions:—Caledonian, old, 14 dis; new, 50s. dis; Dundee and Perth, quarters, 15s. pm.; Ayr, 100l.; ditto, halves, No. 2, 7½; Great Northern, 6l. 1s. 6d. dis.; Manchester and Southampton, 38s. dis.; North British, thirds, 1s. 6d. dis.; Scottish Central, 3 pm. Buchanan, Aitken & Co.

PARIS LETTER.

Paris, Dec. 29. The opening of the Chambers took place yesterday. Some false reports regarding the King's Speech, circulated on the Exchange, together with the rumour of the occupation of the Italian provinces by the Austrian troops, caused a considerable reduction in the prices of shares; more confidence was shortly afterwards restored, and to-day the market was firmer and prices were for all kinds of stock higher. The only remarkable exception to this general improve-ment was in the Havre shares, which fell to 440f. This fall is surprising, as it is not accounted for by the receipts of the line, which, far from being reduced, on account of the diminished traffic to Havre, present still a return superior to that of other lines, even to that of the Central, which has only 41 years of concession, while the Havre has 99. The advance on the Lyon shares is accounted for by the company's having made proposals for obtaining on good terms the concession for the Lyon and Avignon. The company were anticipated in this proposal by some par-ties who have already given numerous proofs of their

ability and experience in railway matters. We learn to-day that a third proposal has been made by the banking house of Blague, Certain & Brouillard. The terms proposed by these three tenders are so complex that it is difficult to explain them clearly. The different versions given of them are very contradictory; I hope next week to give you more positive information. The reduction of interest by the Bank to 4 per cent. has not affected the share-market, but it has improved the general condition of affairs, and has rendered the money-market, if not more firm, yet better supplied.

The Speech of the King of the French to the Chambers, on his opening a new session, though it seems not to have been quite satisfactory, is remarkable for a passage the spirit of which is well worthy the notice of our legislators; addressing the members he says:—
"I reckon on your co-operation in order to bring to a conclusion the GREAT PUBLIC WORKS [railways] which, by extending to the entire kingdom facility and regularity of communication, must open fresh sources of prosperity.

Railway Chronicle.

LONDON, SATURDAY, JANUARY 1.

As we are entering upon a new term of our labours on behalf of the railway interest, it may be allowable to advert, in a few words, to the way in which they have hitherto been performed. The object of the Railway Chronicle from its commencement has been to apply, in a plain, decisive and impartial manner, the results of practical information and experience to the concerns of a branch of national enterprize, the vast importance of which is now beginning to be generally recognized. It had been perceived by the Editors, that in the treatment of railway subjects by the press, these qualifications had, so far, been wanting; and that consequently, in place of useful comments on the current business of the system, or of a proper notice of the principles requisite for its direction, the papers devoted to this subject were occupied either with trivial remarks, and prophecies after the fact, or with personal gossip and scandal of a more objectionable character. The latter has ever been strictly excluded from these columns; and the Editors, long familiar with the subject of which they undertook to treat, have been in a condition to lead, instead of following, the course of all railway transactions of any importance. That this is no idle boast, the experience of a pretty long period will now have informed our readers. They must remember the many instances in which we have been enabled at once to express distinct opinions upon coming measures, at a time when others were either afraid to commit themselves to any conclusion on undecided issues, or were content to run with the crowd, and merely echoed the loudest cry of the moment. It is no slight satisfaction to recall the manner in which these views of ours have been, in every single instance of the least weight, completely justified by the event; the frequent triumph of principles which it often was our part to proclaim long before any one else had discovered their outlines: the warnings we have had it in our power to give, of consequences which few but ourselves had perceived in advance, and of which the prudence has afterwards been entirely justified by facts. This was the office which the Railway Chronicle from its beginning promised to undertake :- the only office, it may be observed, that can impart to such a journal any usefulness beyond that of merely recording the news and containing the announcements of the day-an office, we shall add, to the fulfilment of which a practical knowledge of the subject, applied with much diligent attention, and some understanding, is indispensable. That it has been steadily and successfully performed by this journal, we may now assert without undue selfpraise; relying on the evidence of facts which are patent to every one of its readers.

We have many gratifying reasons for knowing that this character of our labours has not been unfelt by the railway interest; that its principal members are aware that it is of some value to that great body to possess an honest and well-informed advocate in the press, whose opinions, not open to be purchased, or swayed by personal or party influences, are guided by considerate views of its condition and prospects. They will also feel that for an unbiassed support of this kind, a corresponding support from the body whose cause is thus maintained, is no more than a just recompense -that something more than a preference in opinion is fairly due to a journal deserving this praise; and that it is quite as much for their interest as it can be for ours to give those substantial proofs of their approbation, without which no undertaking like this can be effectually prosecuted. This view of our position we may reasonably express, with our wonted plainness, at a stage of our career at which we can appeal to a pretty long series of useful services, in evidence of the claim advanced to the hearty support of the railway body. We have to acknowledge from many of its constituents much cordial and steady patronage, of that practical kind, without which no public journal can exist: and while returning to those our thanks, we may remind them, and all others concerned in railways, that their approval of our past exertions, and their appreciation of the usefulness of our continuing them, will be most effectually shown in this substantial manner; while we may not unfairly count upon their willingness so to show it.

With this plain and honest reference to our own claims for faithful services, we shall now take leave of our friends and readers, to resume business that concerns them in other ways. It is a period in which their concerns are of more than usual gravity and complication: and we shall continue, as heretofore, to regard them attentively, and to speak our minds fully and freely on the results of careful observation.

The directors' Report of the ASHBURTON, NEWTON AND SOUTH DEVON, recommending the postponement of operations for twelve months, was unanimously adopted at the halfyearly meeting. Retrenchments have been already commenced, by the directors and their secretary voluntarily reducing their salaries.

At the first meeting of the DERBYSHIRE, STAFFORDSHIRE AND WORCESTERSHIRE JUNC-TION it was resolved that the Report and accounts should be specially referred to the auditors, who are to furnish a detailed statement of its contents to the board of directors.

The directors' Report of the Edinburgh and NORTHERN, recommending arbitration on the difference with the EDINBURGH, LEITH AND GRANTON, was carried by a large majority at the special meeting. The Chairman declared that the promise of traffic on their own line was highly satisfactory.

A resolution to abide by the reference proposed for settling the differences between the EDINBURGH, LEITH AND GRANTON and the EDINBURGH AND NORTHERN was adopted at a special meeting of the former company. The sum of 340,000l. is to be applied to the works of the Granton proprietors.

The affairs of the BARBADOES GENERAL are to be specially investigated by a committee of the proprietors. The reception of the Report was consequently postponed.

From our official returns it appears that the amount of traffic for the last week, on upwards of 3,237 miles of railway, was 157,706l., thus accounted for: — 77,345l. for the conveyance of passengers only, 45,368/. for the carriage of goods, and a remainder of 34,493l. for passengers and goods together, not respectively apportioned; being an increase of 24,406l. over the It is no doubt intended to lay this charge either

corresponding week of the former year, when the mileage was about 2,525. The average earnings per mile for last week were 49l., whilst in 1846 they were 53l.

LORD MONTEAGLE'S AUDIT BILL

The provisions of LORD MONTEAGLE'S BILL for a more effectual audit of railway accounts' are few; and, as far as the railways of Great Britain are concerned, will be of small consequence. It is intended to enact that, in case a number of the shareholders in any company, owning collectively a certain amount of stock (to be fixed hereafter), shall desire an official examiner to look into the Directors' accounts. there shall be an auditor sent down, on their application, by the Commissioners at Whitehall, authorized to investigate the state of the company's affairs, and, from the books and papers he is authorized to call for, prepare a balance-sheet for the half-year or other period to which the accounts relate, and report his view of the profit and loss that may have accrued in that period. This Report is to be made out in duplicate; one copy for the shareholders at the meeting held to receive the periodical accounts, another to be deposited with the Railway Commissioners.

It is not likely that any body of proprietors in this country will desire to make use of the power to be given by this bill. The system of audit, by members of their own choosing, already established by the Railway Clauses Consolidation Act of 1845, affords them every facility that can be required for the closest scrutiny into a company's accounts; and in case of any well-founded suspicion arising, there will always be a majority ready to enforce a still stricter inquiry, if the other were not sufficient. The practice in English business is not to run on every occasion to a Government office for help in the transaction of affairs which the parties concerned are best able to manage, and the most immediately interested in. Nor is the want of experienced accountants such that it could occur to any party in want of an auditor to send for one to Whitehall; in which quarter we should hardly look for much acquaintance with book-keeping in general, or any special knowledge of the details of railway accounts. That any number of men of business would invite the help of a retired Captain of Engineers, or a Treasury under-clerk, to verify matters of account for them, is a supposition almost too ridiculous to be gravely stated. Lord Monteagle, being an Irishman, may have taken up this fancy from the practice in his own country; where—as an Edinburgh Reviewer has just reminded us-a gentleman "could not even marry his daughter without asking assistance from the We manage matters differently on this side of the Channel.

The only thing to be looked after in the progress of this futile bill, will be the filling up of the blank left for the number of shares which shall entitle the applicants to import an auditor from Whitehall. It will be proper to see that this number is fixed at such a proportion of the whole share capital as to prevent the possibility of two or three silly or mischievous persons taking this absurd course, whether to allay foolish fears, or to gratify some spite, by "calling the Directors over the coals." If the proportion is so settled as to leave the decision to a fair number, the bill will seldom produce any need-less ceremony of this kind. The majority of railway shareholders have far too much sense to transact their affairs in so childish a fashion.

Nothing is said in the bill of the manner in which, or the parties by whom, the Government auditor would have to be paid, nor of the amount of payment to be made for his services.

Digitized by GOOGIC

on the whole company, or on the portion of it that may ask for the official interference. It is, however, a matter of little consequence how this omission may be supplied; provided the power to apply be reasonably guarded, in the manner above mentioned. Unless it is given to one or two weak or captious individuals, a few of whom may be found here and there in most concerns -and this is too absurd to be easily carriedthe measure, whether passed or not, will not be likely ever to come into operation in Great Britain, whatever may be its fate elsewhere.

ANOTHER BIRMINGHAM AND OXFORD SPECIAL MEETING

We have not to-day much space for comment on the details of the new special meeting of the unlucky BIRMINGHAM AND OXFORD; nor indeed, had we more, would the transactions on the 28th of December afford anything novel in tendency to call for new observations. The same spectacle was exhibited on this as on former similar occasions—the resolutions (for which see meeting, p. 13) put by the representative shareholders were, one after another, repudiated by the Chairman; and carried, in spite of the Directors, by a majority of the meeting; which was then adjourned, in the same manner, to the 14th inst. To these proceedings our remarks on former ones will apply to the fullest extent; they do not bring the company, as far as we can perceive, one step nearer to the solution of the difficulty under which it labours; which nothing but time apparently can conclude, by the gradual dropping out of the refractory Directors. In the meanwhile, the prospect is anything but pleasing for the shareholders; and it might be fortunate for them were other proceedings of the concern to be suspended for the present year, as well as the application to Parliament, ordered by the meeting, but declined by the Board, on the alleged ground of the injunction.

Carrespandence.

ONE REMEDY FOR PRESENT DIFFICULTIES.

It is now some time since I addressed you, and I had hoped ere this to have been able to congratulate my brother shareholders on a more cheerful aspect of affairs. Such, however, is hardly the case, and though it may seem superfluous, after your able remarks, to say anything more on the subject, I cannot too strongly call the attention of directors to the rashness and impolicy of making calls on the first lull of the monetary hurricane we have just gone through. I am well aware that directors have great difficulties to contend against; they are barely carrying out the schemes which their constituents have previously voted by acclamation; and to a great extent it is just as difficult for them to stop their expenditure as it is for an iron-master, a ship-owner, or a cotton-spinner to close his operations at a moment's notice. We may therefore easily see that legislative interference is at this point totally inadequate to the difficulty, and would only lead to the derangement of all mercantile engagements now running, and tend to endless confusion and litigation. The pressure will act much more effectually upon undertakings only partially commenced than any parliamentary enactment, and it would be utterly impossible for any body of directors to raise a large sum for a new line at this moment. We ought perhaps to except the Great Western from this position; they have made their Birmingham and Oxford allies pay up with an energy and rapidity which is quite unexampled in these times: their proceedings, however, have always been anomalous, and they seem determined not to change their course; how far their conduct may tend to the improvement of their own interest and that of the general railway body is a question of grave and serious inquiry. In a previous letter I took the liberty of stating that, if the pressure continued, the expense would be so much increased in financial operations as to destroy all profit upon lines obliged to raise

however, seem to be so fully regarded by directors as it ought to be, that is, if the reports so currently spread, and so generally believed, of the enormous discounts offered to obtain loans and meet engagements, be true. I would fain hope that they are exaggerated; but if only partially correct, the sooner directors who have given way to this fallacy redeem their error the better. The banking and mercantile interests, both suffering under the monetary pressure whether right or wrong, attribute their evils in a great measure to railway competition, and are consequently ready enough to point out any suspicious financial operations to draw away capital from what has hitherto been a favourite investment; I allude here of course more particularly to bonds and debentures. If a default is once made in any line moderately well known, there would, in the present morbid feeling on the subject, be a run on all the others. Money is now more plentiful than it was, but I do not think confidence is, and hence the avidity with which any abuse is received, whether it emanates from the Times or such publications as 'Railways as they really are'. These writers boldly assume, as the basis of their theory, that rails are gigantic bubbles, and their directors enormous swindlers, quite omitting the collateral benefit the country is daily receiving, without reference to the interest of shareholders; their zeal, however, somewhat outruns their discretion, and they should recollect that those who exaggerate injure their own side of the question. Projectors may, no doubt, have committed grievous errors, but the general system I believe to be sound, and Lalso believe that, ere long. it will be in a wholesome condition. I do not mean that we shall again see the absurd premiums we have had, because, for some time to come, the rate of money will probably rule high; but we shall have matters better than at present, provided always there is a proper discretion amongst the higher powers; but with a depreciation of 30, 40 or even 70 per cent. on their property, holders cannot bear much pressure in the way of calls. It is well known that a small over supply depresses the market to a much greater extent than a plain rule of three would indicate; and this holds with terrible truth on the stock-market, where in a panic or pressure the best shares become absolutely unsaleable. The working lines are all making good weekly returns, notwithstanding the depressed state of commerce: larger available balances must consequently be accumulating; and if money is so much wanted, let the directors boldly meet their constituents, state their case fully and fairly, and if need be, take their current revenues to meet their debts: this would no doubt be an evil, but it will be much better in the long run, than in the expectation of better times to go on floundering from bad to worse. We have seen the result of this system miscrably exemplified in the exposes made by the great London houses lately suspended. I do not anticipate such results in companies well managed; but the railway body are now placed in a position of difficulty requiring unusual energy and exertion, and to their own efforts alone must they look for an extrication, which I have no doubt is not very far distant. The course I have indicated might cause some temporary inconvenience, but the ultimate results would be wholesome, a large amount of troublesome floating engagements would be cleared off as they fell due, the directors would be independent, and if accommodation were again wanted might dictate their X. Y. Z.

MANCHESTER, BUXTON, MATLOCK AND MIDLANDS JUNCTION.

As it seems that the directors are again going to Parliament, I am anxious to direct attention to the singular proceedings of this company. The line, as originally carried in 1846 (that of 1844 from Manchester to Buxton amalgamating with it), commenced near Stockport, and passing through Buxton, Bakewell and Matlock, joined the Midlands at Ambergate. That of 1847 preserved the general route, but left out the town of Bakewell; that now projected for 1848 cuts off from the main line both | Buxton and Bakewell, and abandons the general route altogether. Prior to the general meeting I am anxious to state to the shareholders a few facts on the two all-important questions of capital and the revenue had increased twelvefold and more. As

main line, according to the original prospectus issued in May 1845, was 800,000/.; in the September following it was increased by the sum of 600,000L, "for the purpose of carrying out certain branches and extensions," thus making a capital of 1,400,000%. By their Act, however, 9 & 10 Vict. c. 192, s. 4, their capital is fixed at 1,650,0001, "as the estimated expense" of making the main line, without extension, and two short branches, one to Lyme Colliery, the other to Chapel-en-le-Frith, together about three miles long. This certainly requires explanation, but it is not all. The line, as amended last session, saved the company, according to the estimate of Mr. Gooch, the engineer, the large sum of 250,000L, and moreover did away with both of the branches alluded to. Nevertheless, in their amended Act, 10 & 11 Vict., no reduction of capital is provided for, consequently the powers granted to the company for raising a capital of 1,650,000% is, beyond all cavil, highly excessive. When therefore we are told that the bill of 1848 is to "vary or reduce" the capital, I should like to be informed if it is also to reduce the expenditure. If it is not, it is idle to go before Parliament. If it is, (which is hardly credible, as the plans show altogether fourteen miles of additional railway, and the sections, besides 2,025 yards of tunnelling in Chatsworth Park, one tunnel under Cowburn of 3,463 vards, with shafts of a depth without any parallel, to say nothing of gradients of 1 in 214 on the Buxton branch,) then I maintain that even a reduced expenditure is gained at the ruinous cost of a worthless line. This brings me to the consideration of the route. The line of 1846 was laid out to pass through the towns I have mentioned by Mr. G. Stephenson. After a personal inspection in the spring of 1845, Mr. Stephenson, having gone to Spain, left the details in the hands of a subordinate, and on his return disapproving of those details, not the route. application was made to Parliament for an amended line. The amendment at the northern end was unopposed, and saved the company the sum I have mentioned. That near Bakewell was rejected in the Lords, by "the accident," (2) as the chairman expressed it, "of one vote." It passed the Commons by a similar "accident" (!) as the chairman did not, but as the records of Parliament do, tell us. Now, this line of 1847 was advocated by the chairman as the best that could be laid out-better authority could not be produced, as he asserted, no doubt correctly, that "he knew every corner of the county;" by Mr. G. Stephenson, who declared that he knew even the geological strata "as well as if he had been in them," and by a host of others mostly from the Derwent Valley, the district now to be traversed instead of the Wye Valley. Now, if these gentlemen were correct in stating the line of 1847 to be the best, that of 1848, being essentially different, cannot be the best. As a through line from north to south it never had any pretensions; from east to west it is superseded by those already in existence, or now in an advanced state; and the increased length of 11 miles added last session, and 4 miles to be added next, to say nothing of its dependence on a line never likely to be constructed, makes it, as such, quite out of the question. As a local line, if anything more is wanting over and above what I have stated, it is supplied by the evidence of witnesses called by the promoters themselves last session. One of them, the lessee of the tolls up this Derwent Valley, informed the committee on cross-examination, that the toll-bar situated in the very centre of it "was worth nothing;" another that "there was not a coach on the road," nor "any public conveyance for goods or passengers," and "that there was no necessity for conveyances of that description "! If the line of 1846-7 is indeed the reverse of what the chairman, on the authority of Mr. Stephenson, some months after that gentleman's return from Spain, declared it to be: viz. highly remunerative," then the obvious course is to suspend operations, and not in a delirium of despair to plunge into increased works, certain contests and eventual ruin. VERAX. London, Dec. 29.

PROGRESS OF GRIMSBY DOCKS.

In your paper of October 30th you gave a table exhibiting the progress of the revenue collected at the Grimsby Docks. It appeared that in four years capital by temporary means; this truth does not, | route. First, as to capital: the estimate for the | the docks are now an integral part of the Manchester,

Sheffield and Lincolnshire, would it not be interesting to your readers to give periodical returns of the progress of the docks? A SHAREHOLDER.

[We will see if this can be effected.]

Gossip.

How many happy meetings and greetings the facilities of railways provoke at Christmas, and all festivals! A correspondent from Sheffield writes to say, that that busy town was nearly emptied of its mechanics on the morning of Christmas-day. In London multitudes availed themselves of the oppor-London multitudes availed themselves of the opportunities afforded on the several lines to proceed by train, and spend a few days with their friends. Double journey tickets on the London and North-Western, Great Western, South-Western and South-Eastern, &c. were issued and made available. On the South-Eastern and Dover special trains were provided.

CHRISTMAS FESTIVITIES, so far from declining, are rapidly extending—thanks to those increased facilities of railway locomotion—cheapness and celerity.

It is stated that the parcel traffic on the various railways during the week has been enormous. On Christmas eve there arrived by every train such a quantity of hampers, containing poultry and other provisions for the great feast, that special arrangements were necessary to prevent confusion and loss. At the terminus of the Eastern Counties, the great estuary for Norfolk turkeys, a large area in front of the station was covered in for the protection of the up goods, and another adjoining the down line for those pack ages sent from London. By this line, during two days, about 4,000 packages have arrived from the country, and about 2,000 have been forwarded from London. The interchange of presents and the transit of Christmas fare in the metropolis have been as great as from the provinces. The business done by the London Parcels Delivery Company has been unusually The business done by the great. During the last three days there have passed through the office of that establishment upwards of 23,000 parcels, 14,000 of which, mostly consisting of eatables, were received and delivered on the 23rd ult.

The RAILWAY COMMISSIONERS, it is said, are considering the question of UNIFORMITY OF GAUGE!
Perhaps the Duke of Wellington and Lord Ellesmere's fears of invasion will help the settlement, since all other reasons of common sense have failed.

When the broad-gauge party ask for leave to make a double-gauge line, they mean to keep the monopoly of its use exclusively to themselves. It does not re quire a conjurer to tell us how much use a broadgauge company will really make or suffer to be made of a narrow-gauge line.

It is most satisfactory to remark the rapid deve-lopement of the GOODS TRAFFIC on the EASTERN It will be observed that the proportion of the goods traffic of the whole receipts is larger even than on the London and North-Western. It is chiefly of an agricultural nature, and is very en-couraging to other lines of a similar character; those, for instance, which traverse the rich district of Lin-colnshire—as the East Lincolnshire, and the various branches of the Manchester, Sheffield and Lincolnshire. Apropos we may notice that the arrangements on the East Anglian for the conveyance of goods traffic are now completed. A goods train has com-menced running daily to and from Sporle, Swaffham, Lynn and London, and all the intermediate stations on the East Anglian, Eastern Counties and Norfolk.

Arrangements have been entered into between the Eastern Counties and London and North-Western for improving the communication between Cambridgeshire, Norfolk and the North.

The increase of our trade has rapidly developed itself since the introduction and extended use of railways in Great Britain. It appears from official returns just issued, that in 1827 the imports were 44,908,173*l.*, and the exports 62,052,755*l.*; in 1832 the imports were below those of 1827, while in 1837, a period of five years only, they had increased to 54,762,285*l.*, and the exports to 85,779,568*l*.; and in the year just closed the imports have risen to 75,953,875*l*., the exports to 148,584,507l., showing indisputably that railways have been mainly instrumental in this rapid advance of the national prosperity.

The impediments which now arise from the SEPA-RATION of the various RAILWAYS in MANCHESTER will be brought to an end in the course of the next summer. The junction of the Manchester, Sheffield and Lincolnshire with the Manchester and Liver. POOL will at once relieve the first-named company of cartage amounting to 300l. per week and tend materially to increase its traffic.

of the 9th of November last.

The GOODS TRAFFIC between BURY AND IPSWICH, and on the East Anglian system generally, is likely to be without a parallel. Last week, at the Bury station, 1,119 coombs were received for Ipswich, making with cargoes at other stations 1,674 coombs loaded and unloaded in one day, there being 67 waggons and 268 horses employed in conveyance to the stations.

The BRISTOL AND EXETER are, it is said, making preliminary arrangements for the construction of a branch line from Wells to Shepton Mallett and Bruton.

The murderer of the ganger on the CASHEL line has been arrested. He had enlisted in the 67th foot, which was about to sail for Gibraltar.

Since the various through trains have been transferred to the Trent Valley, the London and North-Western have for the better local accommodation of the agricultural districts established three new stopping places for the trains, between Coventry and Birmingham.

Mr. Creed, the secretary of the London and North-Western, who has just completed the eleventh year of his office, is rapidly recovering from the prevailing epidemic. During his absence Mr. Thomas Long has acted as his representative.

We have already spoken of the foolish opposition of the LAMBETH INHABITANTS to the VIADUCTS erecting for the South-Western approach to Waterloobridge; we now find that they have subscribed to

waste a certain sum in legal opposition.

The Workester and Gloucestershire branch of the London and North-Western, having been approved by the Government Inspectors, is to be opened to-day. It joins the main line at Birmingham. alteration will take place in the time-table on this railway at the commencement of the ensuing year.

It has been determined that immediately on the completion of the railway, Boulogne shall become the head-quarters of the daily postal communication between France and England. The service is to commence simultaneously in Paris and in London, as well through Boulogne as Calais and Dover, and in

the manner we have already stated.

At the inquest on the accident on the YORK AND NORTH MIDLAND, of the 4th ult., the foreman of the jury declared a verdict finding all the directors of the company guilty of manslaughter! The jury had framed their verdict inculpating the directors as guilty of negligence; and though impressed by the coroner as to the informality of the finding, the fore-man persisted in the verdict he had delivered in. Ultimately the inquisitions were filled up "Accidental death," and were signed by the whole of the jury except the foreman.

The ANTI-SUNDAY TRAIN OR SABBATH ALLIANCE

Association met with an unpleasant reception last week in Dumfries; much disapprobation arose on its reverend originators hinting a doubt as to the propriety of permitting any person to express opinions adverse to those entertained by the promoters. Amidst the storm, a regiment of reverend gentlemen made a precipitate flight. A Mr. Walsh, who was generally supported with applause, told them that he and many others were of opinion that Sunday trains had a tendency to the preservation rather than the desecration of the Sabbath, seeing that a couple of men upon an engine, which unlike a horse was not a beast of burden, could convey 1,000 people to church, while at the present moment some hundreds of private carriages were used for the pur-pose, employing as great a number of coachmen, footmen, grooms and other persons, besides the employment of horses.

As a specimen, and not a solitary one, of the exaggerating practices of the daily press upon railway casualties, we may state, that the attendant of the Countess of Zetland, was represented to have had "both her hands cut off," when in reality she only lost three fingers of one of them.

The Minister of Public Works, according to La Presse, wishes to adjourn as long as possible the Government lines, or at least those lines not yet adjudicated to public companies. The works necessary for that portion of the road between Paris and Rennes, comprised between Pontgoin and La Loupe, were adjudicated on the 27th ult to MM. Lebarbier and Lusson, of Mans, at the price of 1,150,000f. The contractors have received notice that the Minister is ready to cancel the security for the completion of the works, the budget not being sufficient in the present state of affairs to defray the expenses. The Minister has approved, by a decision of the 16th of December, the definitive plan for the works of the Western, beterially to increase its traffic.

The manager of the York AND Newcastle, on behalf of the directors, has handsomely returned 8t. 11s. clause in the conditions which fixed the period for from the charges for conveying the Newcastle and

North British fire-engines to Durham on the evening | Prefect of the Sarthe not to adjudicate the contract until he shall have received fresh instructions.

We have already mentioned the disposition of Governments on the Continent to meddle with the ELECTRIC TELEGRAPHS. We now hear that a recent ordinance of the King of Holland enacts, that no line of electric telegraph shall be established without the consent of the Government; that the tariff for the transmission of intelligence shall be submitted to the Ministers of the Interior and Finance; that in-telligence from or to the Government shall be transmitted in preference to that of private individuals that in time of war the telegraphs shall be placed under the control of the navy and war departments; that when peculiar circumstances shall require it the service of telegraphs shall be provisionally or entirely suspended; that all the news received or sent by the telegraphs shall be inscribed on registers; and that if eventually the use of electric telegraphs shall be found to lessen the revenues of the Post-office the proprietors of the telegraphs shall be obliged to pay an indemnity.

During the sitting of the Prussian Diet, the lower house refused to vote the funds necessary for carrying on the works on the PRUSSIAN GREAT EAST-ERN, although the obtaining of those funds was the chief object of the Government in convoking the Diet. It appears now, by the Cologne Gazette of the 27th of December, that the Government has given orders to commence the works early in spring, and has set aside a considerable sum for that purpose. is not stated how or where the funds were procured, but it is probable that the civil list has contributed its share. It is reported that the Counts von Kezenplitz and Westphalen have arrived at Berlin in order to take steps for inducing the Government to make an advance of funds for the above railway, the shareholders having not only refused to pay the second instalment of 10 per cent., but having also gained the lawsuit in which the directors had involved them on account of that refusal.

The works of the GREAT WESTERN OF CANADA have been just commenced. The New York Express states that this line is to run along the north bank of Lake Erie, commencing at the Niagara suspension bridge, and extending to a point opposite Detroit, 228 miles, forming the most direct route to Michigan, Wisconsin and Iowa.

Reports of Meetings.

(Continued from p. 7.)

BIRMINGHAM AND OXFORD JUNCTION.

Dec. 28 .- Special Meeting, Birmingham, to consider their course with respect to an action brought for a breach of contract by Messrs. Peto and Easted, and also actions brought by the directors against shareholders for non-payment of calls; also to authorize the directors to proceed to Parliament for an Act giving powers to construct a deviation line from Leamington.—Mr. P. H. Muntz in the chair.

The CHAIRMAN having shortly opened the business

of the meeting,—
Mr. A. PEYTON said that, in the absence of Mr. Mozley, he should submit for adoption four or five resolutions; but, as some points referred to in the requisition calling the meeting would be better discussed on a future occasion, he should have, in conclusion, to move an adjournment. He in the first place moved—

place moved—
That application to Parliament be made by this company, in pursuance of the notice inserted in the London Gazette of the 24th of November last, signed by Mr. A. Dobie and Messrs. Colmore and Beale, for a bill to enable this company to make a deviation in the line of railway between Leamington and Warwick, and to purchase the Stratford-on-Avou Canal, and that Mr. A. Dobie and Messrs. T. Colmore and W. J. Beale be and they are hereby appointed solicitors for and on behalf of this company, to solicit such bill in Parliament, and to take all necessary steps for passing the same into an Act.

He (Mr. Peyton) did not think it necessary to say

He (Mr. Peyton) did not think it necessary to say more, as previous to the last session of Parliament the directors recognized and approved of the proposed line.

Mr. HUTCHINSON seconded the resolution.

The CHAIRMAN said he was placed in a difficulty. He believed a bill for that object had been introduced into Parliament, but in consequence of the opposition of the shareholders had been rejected.

Mr. BEALE observed that the bill had never been

submitted to Parliament.

The Chairman replied, that a resolution had passed a meeting of the company approving of the bill proposed, if the clauses with respect to the Great Western were expunged. That was the understanding. an injunction had been granted by the Vice-Chancellor, prohibiting the passing of any resolution inconsistent with the agreement made with the Great Western on the 12th of November 1846. He therefore considered the passing of a resolution like that proposed would be inconsistent with that agreement and he, as chairman, had no wish to suffer the penal ties on the infringement of the injunction.

Mr. Colmore (solicitor) said the chairman must be aware that the resolution went only for an application to Parliament—it was merely preparatory, and, if found to be an infringement of the injunction, the bill could be abandoned.

After some further discussion, Mr. WHATELEY, the solicitor to the board of directors, declared the reso lution inconsistent with the terms of the injunction and he could not advise the chairman to put it.

The CHAIRMAN said, if he had not been so advised by their solicitor his common sense would have told him that the adoption of the resolution would infringe the injunction. He should therefore reluctantly decline to put it to the meeting.

Mr. PEYTON requested that the resolution should then be returned to him.

The CHAIRMAM declined giving it up; as it had come into his hands as chairman he considered he had a right to retain it.

Mr. COLMORE contended that as the chairman refused to entertain the resolution it ought to be returned to the mover.

Mr. WHATELEY advised the chairman to keep the document as one of the records of the meeting.

Mr. COLMORE declared, that he had never before known such a course pursued.

Lord HATHERTON observed, that this was the first time they had met since the Vice-Chancellor had issued his injunction; and, seeing the position in which they might be placed, he thought the chairman was exercising a proper discretion.

Mr. Beale said, it was the first time he had ever

heard that a resolution became the property of the chairman, when he had refused to put it to the meeting.

Mr. SPOONER, M.P., would advise the chairman to hold the resolution, because he believed it to be an infringement of the injunction. Moreover he advised his friend to endorse it, for he believed the mover, seconder, and the person who should put it would be guilty of a violation of the injunction. They might

laugh; but he sincerely believed what he stated.

The Chairman then handed a copy of his resolution back to Mr. Peyton and impounded the original.

Mr. PEYTON then moved another copy (as the original), and, putting it to the meeting, he declared

Mr. Peyron next moved the following resolution:-

That the seal now produced be now affixed by Mr. Peyton, one of the directors, as the common seal of the company, to the petition to Parliament now also produced for leave to introduce a bill for the before-mentioned purposes, and to the declaration now produced as to the means of defraying the expense of the works to be authorized by such bill.

Mr. COLMORE seconded the resolution.

The seal being produced and affixed to the petition The CHAIRMAN said, I acknowledge no other seal than the company's seal.

The resolution was then put and carried.

Mr. PEYTON again moved.-

That all the expenses to be incurred in soliciting the said bill, or which have been already incurred in giving the notices of the intended application to Parliament, preparing notices of the intended application to Parliament, preparing the necessary plans and sections, and making the necessary deposits with the clerk of the peace and otherwise, as required by the Standing Orders of Parliament, or in any way relating to the intended application to Parliament, be paid and defrayed by the company, and that the directors be instructed to pay and advance to the solicitors appointed at this meeting all such sums of money as shall be from time to time necessary in soliciting such bill in Parliament, and for defraying the expenses ordered to be borne by this com pany as above mentioned.

Mr. HUTCHINSON seconded the motion.

The CHAIRMAN: I beg leave to decline putting the resolution. It is a direct violation of the injunction of the Vice-Chancellor.

Mr. WHATELEY: More so than any of them.

Mr. PEYTON put the resolution, which was carried. This being the termination of the business it was deemed expedient to bring forward at the present meeting.

Mr. PEYTON moved, that the meeting be adjourned

Mr. Colmore seconded the motion.

Mr. BIRLEY, of Liverpool, said he held but a small portion of stock, but he was desirous of making a few remarks. He believed the directors cared nothing for the interests of the shareholders. When he last attended a meeting of the company in Birmingham, the streets were covered with placards headed. "Important Meeting.—Monetary Crisis," yet their directors, Birmingham men, had harassed them with hasty portant Meeting .- Monetary Crisis," and unnecessary calls. He charged the solicitor of the company with harshness, in having served writs upon shareholders when entering their carriages, or engaged in business on the Exchange. The directors, who, he said, had sold their shares so soon as the agreement was made with the Great Western, had

more interest in that company than they had in the Birmingham and Oxford, and why should they not retire! If they were determined, however, to go on, let them not purchase property in Birmingham at three times its value, much less let them not buy property which was of no use to them whatever. It was said, however, that they were to be left to the tender mercies of the Great Western. He would ask them could the Great Western pay them? He would remind them that they had a company present which was ready and able to give them the value of their pro-

The CHAIRMAN would not defend the Great West ern; he had no shares, and probably never should have any interest in it. He did not know whether they could or could not pay; all he would say was the directors of this company, elected unanimously, were directed by the shareholders to enter into the bargain with the Great Western. A better bargain could not now be made with any other company. With respect to the extra calls, he would merely remark, that under the circumstances they were fully justified in enforcing them. The shareholders had been directed by the circulars not to pay the calls, and, seeing the just liabilities under which the company were, he (the chairman) felt it his duty to make the utmost exertions to discharge them. The property in Birmingham had been valued by highly respectable surveyors, and he did not think any person had now a right to complain of the acts of the directors.

Mr. WHATELEY denied that any writs had been served in Liverpool in the manner charged. The consequence of the enforcement of the calls had been the payment of one-half of the amount, and within the last few days one of the dissentient shareholders a gentleman of great influence, and one of the present requisitionists, had written requesting to be furnished with the amount due from him, stating that "he

would no longer be party to a factious opposition."

Mr. Peyton was sorry that Mr. Whateley had been forced into a premature explanation in the absence of Mr. Mozley, as he was sure that gentleman would be able to explain how the question respecting the writs had arisen. He should be sorry the meeting supposed that he objected to the proceedings on the grounds urged by Mr. Birley. He did not object to their having enforced their calls; he did not say they had paid more money than they ought for property, because he did not know it; but he objected that they had made a pretended sale to the Great Western. and then that they had sold out their own stock, and the shareholders. But what was their present position? Why, the judgment of the Vice-Chancellor went to this—that the undertaking was not a sale to went to this—that the undertaking was not a sale to the Great Western, but it might be if they could get a bill; therefore it belonged to the shareholders, and they ought to have the management of it.

Mr. WHATELEY could not for one moment consent to the construction by Mr. Peyton on the judgment of the Vice Chancellor. The directors said that, without any Act of Parliament, it was a good bond *ride* sale; and he begged leave it might not go forth that the Vice-Chancellor had said it was a bad sale.

Mr. PEYTON: That is the construction that has been put upon the judgment of the Vice-Chancellor

by Sir Fitzrov Kelly.

Mr. Shaw said that was his (Sir F. Kelly's) opinion as their adviser. When the sale was made to the Great Western, Mr. Peyton, and the gentlemen who acted with him, did not possess the number of shares they immediately afterwards became possessed of and if they raised the value of shares for party pur-poses, there was no reason why they should destroy their characters by repudiating the sale they had made.

Mr. S. BEALE said, in the month of October his property was pledged to shares he bought in that concern, and, amongst others, twenty from Mr. Shaw, which shares he was deprived from voting upon by their not having been registered. The register was not complete on the 14th of December, and he was deprived of his vote.

Mr. Beale, solicitor, corroborated the last gentleman's statement.

The CHAIRMAN put the resolution of adjournment which was carried.

EDINBURGH AND NORTHERN.

EDINBURGH AND NORTHERN.

Dec. 29.—Special Meeting, Edinburgh.—Mr. J.
Balfour in the chair.—The Report was presented.

The Directors at the last ordinary general meeting made the shareholders aware that it would be necessary, previous to the amadeamation with the Edinburgh, Leith and Granton, to call a special meeting, and its postponement till now has arisen from continued efforts having been made to arrive at a satisfactory settlement. The expenditure of the Edinburgh, Leith and Granton has exceeded the capital of 310,000d, fixed by their spreuments with the Northern. of 310,000% fixed by their agreements with the Northern.

The excess, so far as the Directors have had the means of The excess, so far as the Directors have had the means of judging, amounts to about 70,000%; but as an audit of the books has not been permitted, they cannot determine the amount accurately. Of the manner of disposing of that excess, the financial position in other respects, and the nature of the proposals made to the Granton, the Directors submit a brief statement, with their own views of them, it being premised that the directors of the Granton now maintain, that whether the verses of exceptions may amount to that whatever the excess of expenditure may amount to beyond the fixed capital of 310,000t., that excess, whether now incurred or yet to be incurred in completing their line, ought to become a burden on the amalgamated company. Adopting that ground, the Granton directors have required the amalgamation to be fully carried out at once, without the audit of their accounts, or the inquiry into the com-pleteness of their line and works, stipulated for by the agreements. The original negotiations, when concluded, were embodied briefly in a letter addressed, on the 14th of January 1846, by the secretary of the Northern to Mr. Sand-ford, the chairman of the Girnton, and on the following day acknowledged officially by their secretary. The result of the negotiations stated in these documents, distinctly proves that to this company the Granton was to be handed over completed, plant and proper station accommodation pro-vided, at a cost not to exceed 310,000. These terms were afterwards embodied in heads of agreement, bearing date the 11th and 13th of March 1346, and in the same shape were submitted to the shareholders of the Northern on the 12th of February 1846, and to those of the Granton on the 21st of the same month, approved by both, and authorized to be confirmed by the seals of the respective companies. A new and more formal agreement was accordingly framed, and signed and sealed on the 7th and 8th of October of the same year (see Official Papers). These agreements, besides limiting the capital of the Granton to the sum already mentioned, make a relief program of the transport of the same year of the program tioned, make various provisions with regard to the means of ascertaining the expenditure and state of the works, which will fall afterwards to be more particularly noticed. The bill for the Amalgamation Act was framed by the solicitors for each of the companies and state of the solicitors. for each of the companies, and passed in the last session. The Act contains no special mention of the agreements, but it limits the capital of the Granton to the sum agreed upon, and authorizes shares to that amount to be issued to the Granton shareholders. Power is given to both companies to borrow money to the amount of one-third of their capital, inclusive of the loans previously obtained under the Acts relating to the several companies. The operation of the Act is, however, declared to be wholly suspended until it is Act is, however, declared to be wholly suspended until it is proved to the Commissioners, and their certificates granted, that one-half of the capital stock of the two companies has been paid up and expended. That certificate the Directors have declined to make application for until the affairs of the Granton are made known and the agreement fulfilled, or such modification of its terms obtained as, under the circumstances, may appear to be equitable. Offers of an amicable arrangement have been made by the Directors, dealing liberally with the Granton, but at the same time protecting their own shareholders against undue loss or protecting their own shareholders against undue loss or

Upon the passing of the Act, the Directors applied, on the Upon the passing of the Act, the Directors applied, or unitally to the Granton for a statement of their capital, expenditure and liabilities, which was not, however, obtained till the 5th of August. From that statement, and certain details afterwards supplied, the Directors ascertained that the Granton affairs, as stated by their directors, stood that the Granton affairs, as stated by their directors, stood somewhat as follows:—Capital declared by Act of 1846, and additional capital by that Act, 258,000£; sum authorized to be borrowed, 86,000£; total share capital and loans, 344,000£. Expenditure, including estimated sum yet required to meet cost of additional plant, station accommodation and finish works, 399,729£, 132,46. Arrears of calls, 10,232£; uncalled up, 89,424£; cash balances, 3,379£, 186,94£; excess of expenditure, 95,082£, 68, 104£; total, 198,184£, 09,74£. Sums borrowed on debenture, bills, debts, obligations, &c., 178,118£, 08, 7d£; estimated cost of further works, 20,000£; total, 198,118£, 08, 7d£. Excess of expenditure above the sum of 310,000£, fixed by the agreements, 95,082£, 08, 10d£; but the Granton possess certain extra property, estimated by them at 4,000£, making together 21,000£, leaving still a sum of 74,082£, 08, 10d, above the stipulated cost of the undertaking. cost of the undertaking.

The item to meet additional outlay considered by the The item to neet additional outlay constances 25,000L. Northern to be yet requisite has been stated at 20,000L. Assuming the general accuracy of that item, and before dealing with the question of liability for the excess of cost and mode of disposing of it, it will be observed that of the and mode of disposing of it, it will be observed that of the authorized capital fully 100,000l, remains to be paid up:—bills and debts also to the amount of upwards of 95,000l, stand against the company. The liability of the Granton for the excess of expenditure is undecided. The directors of the Northern maintain that the railway and works were to be completed and handed over for a specific sum—that such is the only fair construction to be put upon the agreement. No subsequent negotiation nor new bargain was ever thought of, and the Northern Directors will not, until they have the distinct assument assume that it is invanded. ment. No subsequent negotiation nor new bargain was ever thought of, and the Northern Directors will not, until they have the distinct assurance, assume that it is intended wholly to set aside the existing agreement. Confining the question therefore to the terms of the agreement, it is important to mark the construction put upon it by the chairman of the Granton, in his address to the shareholders, at their meeting on the 21st of February 1846—after the agreement was read, he proceeded,—"I now come," he says, "to consider what the terms of our analgamation are:—1st, Our capital is fixed at 310,000/L, a sum which will suffice to complete the line. But over and above that, should we be enabled to finish the works for 310,000/L, we have our extra property worth about 10,000/L" (set down at 17,300/L in the state of affairs), "which we can sell and apply to the meeting of such extra expenditure. This, however, I do not think there is any fear of our being called upon to do, as in naming the sum of 310,000/L we did so after the fullest consideration." Again, in replying to certain objections, the chairman further stated, "The first of these objections,—against the appointment of Mr. H. Watson, as the acagainst the appointment of Mr. H. Watson, as the ac-

countant to fix the cost of the Edinburgh, Leith and Granton. &c. Had it been the case, as the Granton directors affirm, that their railway was to be taken, completed or not so, and at an unlimited cost, nothing could have been more inappropriate than the above remarks. And it may be fairly asked.—how came it that the Granton directors reserved to themselves by the agreement all the extra property of the company, and why did they look to that as the source whence they were to reimburse themselves in case they had miscalculated the cost, and were "unable to finish the works for 310,000l," if they were not to be liable for any extra expenditure?

extra expenditure?

The Granton directors have maintained in their correspondence that several of the Northern directors, having latterly been made aware by the chairman of the Granton, authorized officially to make the communication, that there would be an expenditure beyond the sum in the agreement, and having then signified their willingness to incur liability for it (to a limited extent only, however, and that by way of recommendation to their shareholders); that therefore, —upon that ground,—the whole excess now shown to have arisen must be borne by the amalgamated company. But upon the grounds now held by the Granton directors it would certainly seem that their making known their extra expenditure for the purpose of obtaining an engagement as to its disposal was wholly superfluous, and inconsistent with the terms of the agreement.

The various stipulations in the agreement itself will still

The various stipulations in the agreement itself will still Inter various supulations in the agreement riseli will structure replain the views of the directors:—lst. It is stipulated under the second head that after the works are completed, and before they are handed over to the Northern, the auditor should inventory the plant and effects, exclusive of the extra property, and report from the books an abstract of the expenditure. The Granton directors refuse to permit pleted, and before they are handed over to the Northern, the auditor should inventory the plant and effects, exclusive of the extra property, and report from the books an abstract of the expenditure. The Granton directors refuse to permit this audit to take place until after the Amalgamation Act takes effect, and therefore they would virtually postpone the audit till after, and not, as by the agreement, before the line is handed over. It is clear, however, that this investigation is to precede the amalgamation, and the only conceivable purpose in such a stipulation is this, that the Northern might be in a position to protect themselves against an excess of cost before it is too late. 2nd. Again, under the third head of the agreement, it is stipulated that the engineer should report on the extent and cost of work which remained to be done to complete the line. But if the fact was so, that the amount of expenditure, and condition of the railway, were not matters of agreement, what practical use was to be made of such a report and estimate? And wherefore was it stipulated that this estimate was to be put into the custody of the Northern directors? It may here be incidentally remarked, that the estimate referred to was more than once applied for but was not got. 3rd. Further, by the eleventh head, express provision is made for a difference of opinion as to the state or completeness of the works by a reference to Mr. Cubitt, engineer, and to Mr. S. Laing, late of the Board of Trade, with regard to all other questions arising out of the agreement. It is submitted that the provision is without meaning, if the line was to be taken at whatever cost it might chance to reach; for with no limitation of cost, there could be no room for question or reference as to the state and completeness of the works. Under the 6th, 8th, 9th and 10th heads, it is provided that the affairs of the Granton should continue to be managed and directed by the Granton Board alone, but that there should also be a joint committee consisting of a li commend that excess to be borne by the amalgamated com-pany. On the other hand, the Granton directors, it is understood, now maintain that they are liable for no part of understood, now maintain that they are liable for no part of expenditure so incurred, and that, by the exercise of the duties of the joint-committee, the liability rests with the amalgamated company. In this view the Northern Directors could not acquiesce, but it appeared to them that the plain course was to apply the provisions in the agreement, and leave it to the referee to inspect the works and decide the point of difference. This course, reasonable and proper, however, as it appeared to them to be, did not meet with the concurrence of the Granton directors. The works so ordered appeared to those members of the Northern direction who formed part of the joint-committee to be indispensable, and some of them were stated to be even necessary previous to a temporary opening of the line. For essary previous to a temporary opening of the line. For example, the mode in which the incline was to be worked, was directed by that committee. The Granton had proposed to work the incline by locomotive engines, but on investigation that was deemed by the committee to be impracticable, and accordingly it was determined to work it by a stationary engine and a rope. Now, taking the worst view of this against the Northern, the additional expense incurred by this mode of working the incline, beyond that which the working by locomotive nower assuming its praccurred by this mode of working the incline, beyond that which the working by locomotive power assuming its practicability) would have occasioned, is all that the Granton could have relieved themselves of, and it was quite competent and fair to refer such a question to the referees named in the agreement. But the whole cost, it has been pleaded by the Granton directors, fell upon the amalgamated company, and yet their own Reports to their shareholders speak of the change of plan in these terms:—"The engineer of your company has recommended the mode in which the tunnel should be worked, and has finally advised your Directors

that the most advantageous mode of working it, and (what is of the utmost importance), the safest, will be by a stationary engine and endless rope."—"Acting upon this opinion, which coincided with the previous impression of your Directors, they have entered into a contract with Mr. Hawthorn for the stationary engine." Thus adopting the change of plan as being really essential, independently altogether of the Northern, or advice of the joint-committee. Other works stand in precisely the same situation, but the Directors cannot trouble the shareholders with further minute details of this nature.

tors cannot trouble the shareholders with further minute details of this nature.

The Directors now come to the steps they have taken to adjust these differences with regard to the excess of expenditure, and the disposal, in the meantime, of the debts; and upon this part of the Report they will be brief, as the proposals in the appendix, with the explanations now given, will all but suffice to place before the shareholders the information necessary to enable them to form a judgment at once upon the questions at issue. By the first proposal tendered by the Northern Directors, they agreed to recommend that the undertaking should be taken at the increased sum of 360,000L, in place of 310,000L, and that any further sum, not exceeding 20,000L, required to complete the line and works should be borne by the Granton directors. Or, if preferred, that the whole questions and differences, both with regard to the disposal of the extra expenditure and state of the line, should be submitted to the arbiters named in the agreement. These alternative proposals were declined by the Granton directors, and counter proposals made, which could not be acceded to, and for reasons which a cursory glance will make apparent. In the first place, they left every question unsettled, and the immediate amalgamation being insisted on, through the operation of the Act, all adjustment of the questions at issue might thereby have been entirely precluded, and the immediate amalgamation being insisted on, through the operation of the Act, all adjustment of the questions at issue might thereby have been entirely precluded, and the immediate amalgamation being insisted on, through the operation of the Act, all adjustment of the questions at issue might thereby now what might hereafter be ascertained to be the expenditure of the Northern, which was no part of the agreement. With regard to the latter point, it is contended by the Granton directors, that the Northern are as much bound as the former to finish their own undertaking for a specific sum, and

It is proper to point out a modification which the Northern Directors made upon their first proposal, namely, that in Case there should be disagreement as to the necessity of any work to be paid out of the 20,000L to be borne by the Granton, the opinion of Mr. J. Leslie, civil engineer, would be taken and followed,—and further, that the Granton would be entitled to draw and apply towards payments so made the proceeds of their claim against another company. But they come now to the terms at length agreed upon by both Boards, and to be now submitted for the consideration of the shareholders.—(See Official Papers.) The Directors beg to recommend them to the approval of the shareholders has being the best, under the circumstances, to be obtained. The proposals previously made for a settlement, have been explained that the terms now recommended may be fully understood, and that the shareholders may see their real position, and what arrangement they may expect. A sum of 30,000L, will be added to the sum in the agreement, and, with regard to further expenditure, the Directors may anticipate a fair disposal of it, through the decision of the referee; the outstanding debts and obligations being also in the mean time placed on such a footing as will, it is hoped, prevent inconvenience to the company.

The Directors, in conclusion, would embrace the present opportunity of saying a few words with regard to their own undertaking. On the 20th of September last, nearly 30 miles were opened for passenger traffic, and an additional mile and a half within the last fortnight, embracing nearly the whole of that part of the line authorized in 1845—the Perth arm of it, then sanctioned, having been changed in the subsequent session, when the Acts for the extensions towards Dundee and to Dunfermline were likewise obtained. Considering that the portion of line opened has not reached any one of its morthern and western termini, namely, Dundee, Perth and Dunfermline, and that these are reached only by many miles of coaching,—that the season of the year is nearly the worst,—and that neither goods nor mineral traffic has been commenced, nor can be efficiently until the entire completion of the line, the Directors have great reason to be satisfied with the result of the traffic, which, with the Burntisland Ferry, has averaged 600th weekly, being already nearly equal to the parliamentary estimate of that branch of traffic on the portion of line now opened. But the completion of the line toward Dundee and Perth is of the first consequence, and so essential to the fair development of its resources, that the Directors must press upon the shareholders the mecessity of their being supporter by funds requisite to carry on the remaining works. Their expenditure is now carefully contined to such works as seem absolutely necessary. So much of the Dunfermline line is now being proceeded with as will give a single line to the coalideds, and that is now all but attained. The present state of the works on the Perth and Dundee extensic as enables the Directors to say that these may be opened throughout early in spring, provided they are supplied with a suiticiency of funds; and under such circumstances, discouraging as the times are, the Directors feel that the interests of the shareholders demand that the requisite funds be raised in order t

An Appendix was attached, verifying the several statements as to the correspondence and proposals interchanged between the two companies. We have given elsewhere the Agreement and the draft Minute of Reference presented to the shareholders.—(See Official Papers.)

The CHAIRMAN was glad to announce that the proposal of arbitration had been acceded to. He alluded to the point of difficulty between the two companies, viz. the excess of expenditure of 70,00% beyond the terms of the original agreement, for which the Granton directors had stood out. The Edinburgh and Northern directors had consented to add 30,00% to the sum originally agreed upon; and to submit all further claims to arbitration. The draft minute of reference would be forthwith drawn up in proper legal form. The experience of the working of their traffic had confirmed the directors in their expectation. The ferry was their susceptible point, and he believed that had they not the line on both sides of the water in conjunction with the ferry under one management, they could never hope to remedy the inconveniences from the break at the ferry. In reference to the Northern itself, after all their inconveniences, there was every reason to be satisfied with the amount of the traffic on the line, and he had no doubt but that at the next half-yearly meeting the directors would be able to satisfy the shareholders that there was no concern north of the Tweed which had greater promise of success. He concluded by moving that the Report be adopted; that the directors be empowered to enter into an agreement with the Edinburgh and Granton, &c., subject to the reference.

Mr. H. Todd thought the draft reference very imperfect and liable to great objections, and might give rise to questions. He regretted the directors had not taken legal advice in the matter. He would consent to the motion if there was added to it a provision that, "before concluding the proposed minutes of reference, the directors are advised by counsel, on a statement of the facts prepared by one of themselves, that the entry in the minute will not involve any further burdens on the company than those proposed in the Report."

Mr. J. Ayroun, advocate, objected to the question being made matter of arbitration on such a reference. The arbiter might decide that the 40,000l. expended over and above the 330,000l. should become a regular debt upon the Granton, and that the whole surplus of expenditure, expected to arise on the Northern, over their capital of 1,085,000l. should be a debt exclusively on the Northern, instead of the amalgamated company. If the decision of the arbiter was given in favour of the Northern, the dissentients of the Granton would oppose them; if against them, they would be opposed by the non-contents of their own company; and every lawyer knew that references were worth nothing compared to Acts of Parliament, and could not bind dissentient shareholders. They were besides entailing on the company a monstrous expense, for Mr. S. Wortley could not be had for nothing; while they would be obliged to employ counsel and agents against all dissentient parties. He was one of those who thought the company should never have entered into any amalgamation at all. He proposed, that as the draft minute of reference was unsatisfactory, it was not expedient to agree to it without first obtaining the highest legal opinion.

Mr. M. M. CRICHTON seconded Mr. Aytoun's motion.

Mr. M. M. CRICHTON seconded Mr. Aytoun's motion.
Prof. Aytoun, at some length, supported the motion
to adjourn, in order to obtain a legal opinion.

Mr. E. ELLICK, M.P. one of the directors, said, that when it became known to the directors, while in London, that an excess of expenditure above the stipulated sum had taken place in the Granton line, and seeing the Granton directors insisted on their claim according to their interpretation of the Act, their position was either to give up the amalgamation altogether, or to give assurance to the Granton Board that they should recommend to their shareholders to amalgamate at a larger sum, to an extent which was at the utmost contemplated, at from 20,000l. to 30,000l. additional. He considered the amalgamation with the Granton as an object to the Northern, and the directors had a right to presume the shareholders thought so too, and while they were dealing in hundreds of thousands of pounds, it would have been improper to have refused in such circumstances twenty or thirty thousand. Beyond this 30,000l., there was an excess of 40,000l. more.

Mr. J. Kinnear, W.S., thought it would have been only prudent to have taken the advice of the

Mr. J. KINNEAR, W.S., thought it would have been only prudent to have taken the advice of the highest parties at the bar before agreeing to such a reference. He would support the motion for the adjournment; but with regard to the powers of the directors to enter into a minute of reference, his feeling was, that the Granton line had been to them a bad bargain, and they should make the best of it.

Mr. MACARA supported the motion of the directors. A long discussion then ensued, in which the Chairman, Mr. Aytoun, Mr. Monro, Sir W. Dunbar, Mr. Todd and others took part.

Mr. AYTOUN would consent to the chairman's moreference to be made it should be distinctly stated that the surplus expenditure of the Northern, above the capital of 1,085,000l., should not be fixed as a debt on the Northern, but on the amalgamated com-

The CHAIRMAN could not add this provision to his motion. It was urged, on the part of the directors, that it was unnecessary, it being an understood thing by both parties, and that all arrangements in regard to this matter should be left to the discretion of the directors. It would also look like an infringement of the agreement between them and the Granton to

adopt any such stipulation.

Mr. Ayroun then pressed his amendment to adjourn, which, after considerable discussion, was negatived by 365 votes to 18 votes. Mr. AYTOUN protested

for reasons to be given in.

Mr. AYTOUN then brought forward his amendment mr. Arroun then brought forward his amendment to the resolution proposed by the chairman, which was also lost by 361 to 35 votes, exclusive of the great majority of proxies for the directors. The chairman's motion was then declared carried.

EDINBURGH, LEITH AND GRANTON.

Dec. 28.—Special Meeting, Edinburgh.—To consider a proposed minute of agreement betwirt the Edinburgh and Northern and the Edinburgh, Leith and Granton (see Official Papers).—Mr. E. D. Sand-FORD, advocate, in the chair.

The CHAIRMAN stated the position of matters be-twirt the two companies, detailing the negotiations which had taken place, the views held on both sides, and the result, which was that a reference should be made either to the right hon. J. A. S. Wortley or Sir F. Thesiger of the whole points in dispute, their deci-sion to be binding. In the reference it was agreed should be fixed at 340,000%, that the Granton should be fixed at 340,000%, that the Granton should give security, that their debts and loans should not be enforced against the amalgamated company for fifteen months from the application for the certifi-cate; the calls on the Granton shares to be applicable to the liquidation of the said obligations, and their extra property not to be included in the 340,000l., but to be applied to the expenditure beyond that sum. The Chairman concluded by recommending the meeting to agree to this reference as the most advisable means of settlement.

Mr. Munro entered into a lengthened argument to Mr. Munko entered into a lengthened argument to show that the Edinburgh and Northern had taken advantage of the Edinburgh, Leith and Granton, in not specifying their capital, while that of the latter company had been fixed. He therefore moved the adjournment of the present meeting till another day, to give time for effecting a better arrangement, and one more just to the Edinburgh, Leith and Granton. The CHAIRMAN briefly replied to Mr. Munro, and proposed a motion that the meeting approve of the Report, and give authority to the directors to enter into and sign a submission, in terms of the minute

into and sign a submission, in terms of the minute of agreement between them and the Northern, and, if necessary, to apply to Parliament for any power that may be requisite to carry the award of the referee into effect.

Mr. Cowan, one of the directors, seconded the

motion.

After considerable discussion, the motion and amendment were put to the meeting, when the latter was negatived by a large majority, only five hands being held up in its favour. Mr. Munno handed in a protest against this reso-

lution, holding the directors personally liable should they act upon it.

BARBADOES GENERAL

Dec. 28 .- First Meeting, London .- Mr. HAYWOOD in the chair.

The directors' Report stated that the prospectus was issued in 1845; that of the 8,682 shares allotted the deposits were paid on 7,952; that 3,000 shares were set apart for the island, of which 1,514 were applied for, and the deposits paid on 1,012 of them. applied for, and the deposits paid on 1,012 of them. Considerable difficulty was experienced from the oposition of a tram-road company then existing in the island, but, failing to meet with sufficient public support, the tram-road was abandoned. A deputation was sent out to Barbadoes, consisting of Sir R. Schomburgk and Mr. J. Haywood, to enlist the support of the inhabitants and to sure out the propagative and the inhabitants. the inhabitants, and to carry out the necessary arrangements. They were delayed considerably by the opposition of the supporters of the tram-road scheme. A provisional committee of eighty-two gentlemen of capital and influence was then formed in the island.

The first Act was granted in December 1846, subject to the passing of a supplemental bill, which caused a delay of ten months before it was passed; that Mr. C. Hammond, the company's engineer, died in February 1847, and Mr. Statham was appointed engineer in his place. Owing to the state of commercial matters in general, the directors deem it unnecessary at present to call in the shares for registration. They express their disappointment at the absence of any pecuniary aid from the colonial legislature, and that a decided opposition had been shown to granting any guaranteed rate of interest from the State. It appeared, however, that the Governor had intimated that he would not object to assistance in the shape of a loan to the company, or a grant for the expenses incurred on the surveys and for the preliminary engineering expenses, and, at the same time, suggested that the capital of the company should be reduced from 300,000l. to 200,000l. The engineer estimated that the two main lines could be finished for this sum. The directors express their unabated confidence in the soundness of the concern, and think it best at present to discontinue all expenses, to recall the engineer, and suspend operations, in the hope of resuming them hereafter, or else of disposing of the

Acts and survey.

The statement of accounts showed receipts at 9,039l.; expenditure 8,216l.; balance, 823l. The outstanding liabilities amounted to 575l., which would reduce the balance on the 1st of April 1848 to 248l. The CHAIRMAN then moved that the Report and

counts be adopted.

Mr. Lindo proposed, as an amendment, that they be not adopted. He thought that when the directors found that of the 3,000 shares reserved for the people of Barbadoes, only 1,000 shares were taken, and that the population were against the scheme, it ought as a matter of prudence to have been given up. ,5211. was a large sum for the deputation to expend during the two years. He objected to other items in the balance sheet, and concluded by moving that a committee be appointed to investigate the accounts.

The CHAIRMAN would be happy to hear further observations, or to give any explanation. By the deputation to Barbadoes the office had been undertaken reluctantly, from the risks to which their health and lives were subjected from the climate, the loss of time, the extra expenses they were at in maintaining an establishment there, and the opposition they had to contend with in carrying out their objects. If these arguments were properly considered he was sure no one could say the charge was unreasonable. His coadjutor, Sir R. Schomburgk, had been twice attacked by fever, and confined by it for two months to his room. Their engineer had died there, and they were delayed eleven months at Barbadoes in obtaining the supplemental bill. It should be remembered that ad succeeded in accomplishing the object for which they had been sentout—they had obtained their Act, and by the supplemental bill they were granted an extension of time for twelve months; that the railway would be of great service in the island, and rainay would be of great settine in the history, and there was a good merchandise and passenger traffic, which had been carefully estimated to pay 10 per cent. profit. The merchants would have assisted them, but the trade in the West Indies was so paralyzed that they could not expect assistance from them at present. He (the chairman) held a large number of shares, and was anxious to see the undertaking car-

After a long conversation it was proposed to windup affairs. This was opposed on the ground of expense, and that there would be nothing worth dividing.
Others were desirous of waiting to see there suit of events during the twelve months' grace, and, in the event of no favourable change taking place, then to endeavour to dispose of the Acts, plans, &c., for the benefit of the shareholders. The directors did not wish to proceed at present, although they were anxious that the undertaking should eventually be carried out; but, if they found it to be the wish of the majority of the shareholders before the twelve months expired that the shareholders before the twelve months expired that no further proceedings should be taken, they would comply with that request.

Resolutions were passed appointing a committee of shareholders to investigate the accounts and to look

into the affairs of the company with the directors and to report thereon; appointing Messrs. Lindo, Pocock, Smith, Lee, Paul, and Vercy as such committee, three to form a quorum. The meeting was then adjourned to the 15th of February next.

NORTH AND SOUTH WESTERN-HARROW TO BRENT-NORTH AND SOUTH WESTERN—HARROW TO BRENT-PORD.—Dec. 29.—Meeting of Inhabitants of Brentford and its neighbourhood.—Mr. H. Pownall in the chair. —A deputation from the provisional committee, headed by Mr. Chadwick, attended. The chairman called upon the deputation to lay their statements before the meeting.—Mr. Chadwick explained the

general design, which gave value to the projected line, both by the accommodation to the locality it traversed, and by its more extended utility, connecting as it would the north and south-western districts with the south and south-western parts of the kingdom. Not only in reference to merchandise and passenger traffic would this line be valuable, but parti-cularly was the union of the North-Western and South-Western Railways to be desired in the event of the question of our national defences being brought to a practical issue. In elucidation of this view of the advantages of the proposed line, he particularly adverted to, and read extracts from the evidence given before the Gauge Commissioners respecting the movement of troops, and also in respect of the in-convenience of a break of gauge, an inconvenience which did not arise in the projected line. Having dwelt on the subject at considerable length, and having replied satisfactorily to several questions which the subject naturally invited, resolutions in support of the scheme, and expressive of the thanks of the meeting to Mr. Chadwick and the provisional committee, were unanimously carried.

DIEPPE AND FÉCAMP RAILWAYS.—
Mr. JOHN CUNINGHAME, Agent to the Company, begs
to inform the Shareholders that the EIGHTH CALL, amounting
to 11. 192, 9d. per Share, payable from the 15th of December 1847, to
the 5th of January 1848, will be received at his Office, 4, Castlecourt, Birchin-lane.

Interest will be charged as usual after the 5th of January. Those of the Shareholders who have not yet paid the Seventh Call, due the 18th of October, are recommended to do so immediately, in order to avoid the forfeiting of their Sharea.

CLERICAL, MEDICAL AND GENERAL
LIFE ASSURANCE SOCIETY.

Persons of all ages, and in every station, may assure with this
Society on very moderate terms.

No extra premium is required for sea-risk, or residence in any
part of Europe. Persons wishing to visit, or residence in of the world, may also effect Policies at a small increase of
premium.

RONUSES.

The two first Divisions averaged 22 per cent, on the Premiums paid; the third, 28 per cent. The Fourth Lionus, declared Jan. 1847, averaged rather more than 36 per cent.; and from the large amount of profit reserved for future appropriation and other causes, the Bonuses hereafter are expected to exceed that amount. TOURNAY TO JURBISE AND
LANDEN TO HASSELT RAILWAY COMPANY.

NOTICE IS HEREBY GIVEN, that the INTEREST due the
sist ait, on the Shares of the above Company, amounting to 56, 36,
per Share, will be payable on and after the 574 of January next,
at the office of the Company. All applications for the same must
be made between the 374 and 16th in-t., and the Share Certificates
in the difference of the office of the bridges at Herek 81. Lambert, the line from Landen to Harselt was not opened throughout
until the study. Since that period the traffic has developed itself
with great activity, and the receipts have been of a highly satisfactory clemeter.

The opening of the complete line from Jurbise to Tournay has
been delayed by the difficulties that have arisen as to the mode of
crossing the Fortifications at Ath. Those difficulties have now
been cultively overcome, the works are in a very advanced state
throughout, and the Directors for assure that the Oponine of the
line with a single line of rails will not be deferred beyond June
next.

MANCHESTER, BUXTON, MATLOCK and MIDLANDS JUNCTION RAILWAY COMPANY.

A ANCHESTER, DCATOA, MATLAOR, and ANCHESTER, WIDLANDS DENCETON RAILWAY COMPANY.
NOTICE IS HERFBY GIVEN, that the FOURTH ORDINARY GENERAL MEETING of Proprior as in this chapsay will be held at the Station of the Midlant Radows Company, in borby, on Worknesday, the 2th day of February next, at the head of the first of the Company will be the set from Than day the 2th day of January next, at the Local Company will be the set from Than day the 1th day of January next, and NoTHE IS HERFLY FIRTHER OLVIN, that a SEC CLA, MILTIMEN WILL be dat at the same those, or the same Worknesday, the such of the January next, at balt past 2 oclose in the same with early and the set of the Section of the Section of the Miltimen of the Miltimen point of the Miltimen point, for the yeard purp set of submitting to the Figure 1 of the Miltimen

Company's Offices, Matlock, Jan. 5, 1848.

3, College-green, Dullin, Dec. 14, 1847.

Bank of Ireland, Dublin, Messes, Glan & Co., Landardetreet, London, Minchester and Safford Early, Manchester, Early of Diverpool, Borough Bank, Liverpool,

All Shareholders wishing to pay money in anticipation of Calls will be all evel interest on the same, at the rate of 5 per cent. per annum, from the date of payment.

CLERICAL, MEDICAL AND GENERAL LIFE ASSURANCE SOCILTY.

Persons of all aces, and in every station, may assure with this society on very mode at terms.

No extra premium is required for sea risk, or residence in any art of Eurepe. Persons wishing to visit, or residence in the parts of the world, may also effect. Policies at a small increase of remium.

BONUSES.

BONUSES.

The two first Divisions averaged 22 per cent, on the Premiums poid; the third, 28 per cent. The Fourth Bonus, declared Jan. 1847, averaged tather more than 36 per cent; and from the large amount of profit reserved for future appropriation and other causes, the Bonuses hereafter are expected to exceed that amount. Table of Rates, with the last full Report can be obtained of the Society's Accurs, or by addressing a letter to

GEORGE H. PINCKARD, Resident Secretary.

SATURDAY, JANUARY 0.

CALLS FOR PAST AND APPLICATIONS FOR FUTURE WORKS.

A correspondent of one of the morning papers, writing with the confidence of a person acquainted with the facts referred to, not long since gave an explanation-of the necessity under which the directors of the principal companies find themselves, of making frequent calls, at this particular juncture, -which is perhaps true enough in many instances, to a certain extent. They are, he says, as fully aware as any of their constituents can be, of the inconvenience of heavy pecuniary demands in times like the present:—but in the actual condition of the undertakings they preside over, no choice is left them to act otherwise.

Where new works have been undertaken, and a large part of the capital already spent on them, on which the payment of interest is secured to the shareholders during the progress of construction, it is evident that after the proceeds of former calls have been expended on the works themselves, the interest continually accruing can only be provided for by further instalments of the capital, unless recourse be had to the earnings of the productive parts of the undertaking. Were the amount required to be thus raised inconsiderable, the calls demanded for that purpose solely would not form any serious item. The bulk of borrowed and guaranteed capital, however, in several of the principal companies, says the writer, is now become so large, that the mere interest payable absorbs a considerable sum; and in many cases. he adds, the directors, in past months, not foreseeing the extent of the pressure at the year's end, have not scrupled to borrow what was immediately needed for capital expenditure, from the proceeds of the working business; relying on future calls being easily got in to replace these advances, before the day of dividends should arrive. They were therefore, at the close of 1817, in this position, viz., that, unless means were supplied for the restoration of sums borrowed from the current earnings, the division of these amongst the shareholders at the usual time would be impossible; as bankers cannot now be persuaded to make advances on a large scale; and thus the alternative would be-no call, no dividend.

There can hardly be more than a partial truth in this explanation. There are other circumstances, besides those above mentioned, which must render immediate supplies from every capital fund indispensable. The works already under contract, which cannot be suspended, are still extensive enough to require heavy instalments; - and those which are near completion, instead of being slackened, must rather be pushed vigorously forward, in order to give the company that has undertaken them a fair chance of getting something for the outlay. These claims are not alluded to by the writer in question amongst the necessities for calls; and yet it may be seen that they alone would account for a mass of expenditure which can now be met in no other way than by either borrowing at usurious rates of interest, or by direct contributions from the proprietors.

What we think of the first of these two resources has already been plainly stated on a recent occasion. It is an expedient which affords a temporary relief at the cost of permanent injury: -- a system which, if extensively and necessarily resorted to, would prove the calculations of the promoters of works which can only be carried forward on such objectionable terms, to have been fatally erroneous. On this point there cannot be a moment's uncertainty; -and the simple matter of fact, that the

entered into must be thus obtained, would present an incontestable proof that such engagements had grown beyond the proper limits of sound railway enterprise. When the condition of prosecuting it becomes the submission to terms which can afford little hope of profit for the future, the true principles of the system are evidently abrogated; and it must be seen that when the motive on which railway works are founded-the expectation, namely, of a sufficient gain on investments in them-is withdrawn, there can remain no adequate reason for carrying them further; none, at least, with which shareholders can have, or ought to have any sympathy. The test, therefore, of a legitimate prosecution of the business is evidently its being feasible either by the direct contributions of those engaged in it, or by means of engagements the terms of which are easy enough to allow the parties a fair hope of profit, after these are satisfied. Where the shareholders cannot bear the calls, and loans cannot be had at 5 per cent., the ne plus ultra of fair railway undertakings is evidently reached, so long at least as these conditions remain in force.

There is, however, a distinction to be observed in laying down this rule. The stage at which the pressure is felt will have to be regarded. It is one thing to be met by unforescen difficulties in the midst of a career begun in expectation of a different state of things. A want of foresight in the calculations may indeed be regretted; but the error of starting on an unsound principle cannot be imputed when the mistake has merely been one of too much confidence in the future. And it may be allowable, where works, undertaken in better hopes, have already been far advanced, to submit even to the hardest conditions rather than suspend them in an incomplete state. In such cases the sacrifice will often present itself as a real necessity; and the sufferers from this obligation perience, the propriety of a more cautious line of conduct hereafter.

But the case is wholly different, when new projects are under consideration, in such a time of scarcity. Here there is no obligation inherited from a more hopeful period-none, at least, of a kind which can be admitted as any sufficient excuse for plunging into a sea of new embarrassments. The conditions on which the scheme will have to be carried out are here plainly discoverable; the reasons which virtually bar further progress can only be wilfully overlooked. For errors of opinion there is no scope whatever :- what the future may bring, however regarded, cannot here be admitted as an element of the decision; while present circumstances pronounce an absolute reto, there is a plain and imperious rule directly at hand, the meaning of which is unmistakeable. It positively forbids further enterprise until better times shall first allow of its being prosecuted in its natural course. The day when these times may arrive will be variously anticipated, according as the view is more or less sanguine; but until they shall return, such differences of opinion can have no allowable weight, in the meanwhile, on actual decisions. These must be guided by circumstances on which, we repeat it, there is no scope for conjecture whatever. An enhanced current rate of interest, the falling off in private resources which condemus railway enterprise to the exactions of the money dealer, are visible and unanswerable facts. So long as these exist, the question of progress is practically disposed of; so far, at least, as any legitimate advance of the system is concerned.

This view of the subject may have many ciently regular in form to be recorded, have not

money required to meet the engagements already | unwelcome features; we know it; but the repulsiveness of these belongs to the circumstances that have produced, not to the judgment that perceives, them. We are arrived at a time in which it is necessary, above all things, to look at our affairs without evasion of any kind; and we must not be deterred from coming plainly to the truth by any difficulties that lie in the way to it. These, we can well feel, and sincerely regret; but the question of "what ought to be done?" must in all cases be answered on grounds irrespective of the mere pleasure of doing it.

NEW PRACTICE ATTEMPTED BY A "CROWNER'S QUEST" JURY.

We have once and again had occasion to notice the vagaries of coroners' Juries in railway cases. The accident on the York and NORTH MIDLAND on the 14th ult. has furnished an instance of rare absurdity in a body of this kind, surpassing anything we have yet had to The evidence on the inquest being concluded, the foreman of the jury delivered as their finding-"The York and North Midland Company are guilty of negligence," &c. &c.; after which came similar verdicts against the "driver and the guard of the mail train." The coroner, somewhat amazed at the first item, inquired, "Do you mean guilty of manslaughter?" Foreman: "Yes."—Coroner: "WHAT! all the Directors of the company?"—Foreman: "Yes!" Such a verdict the coroner, of course, refused to receive; and pointed out the necesreally consider that this company, of whose names we know nothing, are all guilty of manslaughter?" To this, a juror said "No! but we think them guilty of negligence." The company and that this would have vessite coroner explained that this would be no verdict at all; that the finding must be of some definite legal offence, if the offence were to bear any verdict of "guilty"-described, in short, as of murder or manslaughter. This view the will not act wisely in shrinking from it; although obtuse minds of the jury were for some time they may well learn from the unwelcome ex- unable to take in; and a long rambling dispute arose, in which different opinions were expressed by several of the jurors-the foreman, as it turned out, differing from all-all, however, being alike confused in their notions of what the practical conditions of an inquest required; and all seeming anxious to take in the whole of the "company" in one swoop. The final result of this was precisely the reverse of what these puzzle-headed and angry Yorkshiremen intended. They could not agree as to whether the offence was manslaughter or murder, or point out who should be specifically charged with either. The foreman persisted in the first finding; the whole remaining jurors severally denied that they had agreed to anything of the kind. At last, the coroner solved the puzzle-there being luckily twelve jurors in the box, besides the obstinate foreman-by asking the remaining twelve, "if it was their opinion that the deceased came by their deaths accidentally?" To which question the whole dozen unanimously answered, "Yes!" The inquisitions were filled up accordingly, and the agacious jurors went their way.

Such is the kind of intelligence and judgment on railway accidents, not unfrequently displayed by coroners' juries; to whose verdicts newspaper scribes are wont to call public attention, with as much solemnity as if they were recording a sentence of the most wise, unprejudiced, and authoritative tribunal. It is not often that their unfitness and visible desire to overstep the bounds of their office are shown as absurdly as in the instance now mentioned: but the virtual justice and reasonableness of many previous verdicts, which have been suffibeen one whit greater than this Yorkshire jury's would have been, could it have got entered in its original form. It is clear, as we have often remarked, that the institution, as it now exists, is wholly valueless as a means of ascertaining anything like the truth; in cases on which a popular prejudice may disturb the perceptions of ignorant and limited minds.

Railway Literature.

Westminster Review, No. 95, for January. Art. 7, Railway Help in Railway Need. By Plugson of Undershot.

Our readers have often been amused at the "go a-head" lucubrations of the Westminster Review on railways. We think the following, which professes to be a notice of a book of a droll title, which no one but the reviewer has probably heard of, will be acceptable at this dull season, and sustain the character the Review already has for its treatment of railway subjects. At the same time, we must say that the article contains some matter worth serious consideration:

"A great man—Ralph Waldo Emerson—speaking of England, says, 'Hail, mother of nations! mother of heroes, all hail! Still equal to the time, with a

strength still equal to the hour.'
"Time and the hour run through the roughest day." Firmly we look into eyes of thine, brave Emersonfirmly we grip thy hand and say Amen to thy appeal. The blood of the Saxo-Celt is up and stirring, his brain is working, his brow knits, his eye kindles, heart resolves and hand executes. What shall stop him in his career of eternal progress, marked out for him in his career of eternal progress, marked out for him from the time of creation? Not loss of property, though sunk in the depths of ocean. Still less, the fabulous loss of property involved in changes of ownership. Nothing can stop his career, save loss of Moral Worth, that magic talisman, without which acuteness of intellect is a mere snare to its possessor. As the joint blood of Celts and Saxons generated Englishmen, so from the combination of acute intellect and moral worth is produced the growth of the large wisdom, which, even while going forth as a conqueror, remains as a legislator; and which, whether in Asia or America, in Hindostan or Mexico, is ever working for the civilization of mankindroughly, rudely, it may be—apparently unjustly at times, but, tested by its results, ever truly. Celtic France, Celtic Ireland, Celtic Spain, may be stagnant rrance, Cette freiand, Cette Spain, may be stagnant in progress or violent in explosion; but Celtic clasticity, guided by Saxon gravity, realizing the two great principles that rule the universe, never yet failed in achieving beneficent power and masterdom over circumstance. Welcome to our shores art thou, brave Brother Jonathan, representative of our Transtallatic race and graviting their speech in our care. atlantic race, and speaking their speech in our ears; precious as was Jonathan of old to the son of Jesse, in his sore straits and trials. Nothing shalt thou hear of us unworthy of our past deeds; never will we flag in the onward career of progress, till the universal earth shall be knit up into a bond of union, and the grand scheme of creation shall bear fruit in universal love.
'The hope and elasticity of mankind' shall continue
to exist here, even as they shall 'beyond the ranges
of the Alleghanies.' In the practical means of working out these ends, next to the printing press, comes the railway, the grand fuser of mind with mind. To the railway, the grand fuser of mind with mind. To say that railways are stopped, is but another phrase for saying that civilization is at a stand-still. But in this we do not believe. We believe that sometimes progress gets into the wrong track, and finds itself baffled; but it is not long at fault. It 'tries back,' till the true path be attained, and then it dashes forwards again with added impulse, that more than compensates for lost time. We believe this has been the case with railways. They were commenced, were prosper-ous, and multiplied. They have been wanted faster than they could be supplied, and large demands created high prices, with an indisposition to improve quality or economize production. From a combina-tion of circumstances, the prices of all commodities have fallen, and amongst other things, the progress of railways has been checked. 'We do not make imof railways has been checked. 'We do not make improvements till profits get wire-drawn.' In examining into the mode of constructing railways in England, we find that they are a costly tool of manufacturing industry, not set about with philosophic discrimination as to the fitting means to ends. They are the expensive linking machine of thickly-peopled districts, and not the every-day appliances they might be. They are the work of giants for the use of giants,

while it has been wholly overlooked that dwarfs also want them suited to their capacities. We in England have also our 'Far West' to civilize-in Ireland, in which work railways are a sine quai non instrument; but slow indeed must be the progress, if they are to be achieved only at the cost at present ruling the market. What are the elements of this cost, throwing aside the plundering scramble of parliamentary expenses! Not land, for in proportion to the value of the Liverpool and Manchester directors first advertised for competing engines, one of the stipulations, if we remember rightly, was that they should not exceed six tons. We believe that there are engines now extant, in which only a portion of the weight, borne on a pair of driving wheels, varies from ten tons to twenty. We remember an experimental engine, in which the object sought was to multiply the speed by touthed wheels, and the reason of its failure was stated to be that it weighed 40 tons. Yet, if we be rightly informed, the next monster engines will exceed that weight. Under these circumstances, it is no marvel that the rails, originally intended for light engines, should crush and be no more rails, the more especially as, with very few exceptions, rails are laid on railways on a principle fatal to their durability. There is a sound and a movement, well known to all passengers by railway, which occur at intervals of every fifteen feet. They are caused by the joints of the rails, which at these fixtures possess less than onefourth the strength of the intermediate portions. The two ends of the rails are abutted together in a cast two ends of the rails are abutted together in a cast-iron chair or shoe, which rests on a cross sleeper of timber. To keep these two rails in a straight line together, a wood wedge, measuring about 10 in. long by 2½ wide, and 2 in. in thickness, is driven between the two rail ends and the chair on the outer side; and this piece of match-wood has to sustain the whole side lurch of an engine 20 tons in weight, frequently at a speed of 40 to 50 miles per hour. While the engine is passing over the intermediate parts of the rails, the cross sleepers help to support each other but when passing over the joint, the whole weight of the driving or other wheel presses on the single cross sleeper. It yields under the blow, and the points of the rails give downwards with it. After the passage of the train the sleeper rises, and a hollow is left below it. Water gets in, another engine follows, and the joints get more and more out of order; a side lurch from a heavy engine at one of these loose joints enables the wheel to mount the rail, and this is the frequent cause of accidents, sometimes fatal. That this glaring evil should have been suffered to exist so long, is an apt illustration of the proverb—'What is everybody's business is nobody's business.' When a smith or engineer constructs a piece of machinery, his great care is, where holes occur in the metal, to add on the outside of the hole as much or more than the quantity of metal taken from the interior of the hole. When nature originally designed a man's leg, she placed a great deal more bony material round his joints than in the intermediate parts. When these examples shall be imitated in the joints of railways, making the rail a continuous bearing throughout by additional material at the joints, passengers will cease to count the intervals, and accidents will become less frequent. If this, amongst other points, be attended to, and speed be lessened, the present rails may yet endure some time under their loads. If the imperfect structure, high speeds, and great weights continue simultaneously, it needs no prophet to tell us that the whole lines of England will shortly require re laying, and with metals verging on 156 lb. to the yard. But we have yet to discuss the question whether or not great weights are essential to high speeds. It is indeed alleged that without great weights engines at high speeds would fly off the rails. If this argument has any weight at all, it sets out with admitting the principle that high speeds can be attained without weight. But as to the flying off. If the arguers mean anything, it is that the elastic force of the steam would overcome the gravity so far as to rise upwards, in other words to fly. But they know better than this. They merely mean that owing to the bad construction of the machine, owing to its imperfect clasticity, and the improper position of the centre of gravity, it is very apt to get off the rails, unless it be

make the machine a rail roller. Were the machine of sufficient length, and bearing on a sufficient number of points, with the centre of gravity in the right position, this plan might answer; but were a machine constructed with all these conditions, and perfect constructed with an inese contains, and perfect elasticity to boot, the light machine would be even safer on the rais than the heavy one. Throughout nature we find that the proportionally lightest animals are the swiftest; and their speed is attained by the elasticity of their muscles. The Arab horse, the tiger, the deer, the greyhound, are of this structure. the land must be the numbers of the travelling community. Money may be invested in stations; but that's not it. The solution of the problem is to be found in the largely prevalent fallacy, that 'weight is synonymous with speed;' in other words, that the heavier the locomotive, the greater will be the speed attained. This fallacy, this demonstrable fallacy, has been a fruitful source of wasted capital in outlay, and been a fruitful source of wasted capital in outlay, and problem is only an agent of destruction. To urze a special capital in outlay, and problem is only an agent of destruction. To urze a motion is only an agent of destruction. To urge a Flanders horse to speed were a process simply ludi-To see an enormous engine at high speed CTOUS. would not be less so, were it not for the risk, and the destruction consequent thereon. The possibility of attaining high speeds with light weights, was, however, a problem, and would have remained so, had not the directors of the Eastern Counties sanctioned one of their officers in putting the matter to proof. An engine on four wheels, with the centre of gravity within their base and below the level of the axles, was constructed. The total weight was 22 cwt.—less than half the weight of the lightest vehicle on the line; and with a load of eight passengers, including the driver, this engine made the journey to Cambridge at the rate of 40 miles per hour, the maximum speed attained being at the rate of 47 miles per hour. The expenditure of coke to accomplish this was at the rate of 2 lb. per mile. Thus the fact was established, not merely that an engine regarded as a toy could travel at great speed, but that it could accom-plish this speed with economical result. The fact was established—sucers and vexation from gravitationers notwithstanding-that railway transit is practicable with light engines, by clastic steam power, analogous to the Arab horse and not to the elephant. It became evident from that time that a new system of economical railways might be profitably employed, placing the steam-engine on the passenger carriage, instead of making it a steam-ting. It is obvious that the same principle holds good on railways as on water. The self-contained boat can travel faster than a train of drawn barges. On the steam-tug principle on railways the dead weight varies from 6 to 11 tons to 1 ton of available load. On the steam carriage principle the dead load will probably ultimately be reduced to 1 ton dead and 2 tons available; a proportion which would leave a wide margin for profit. This new discovery—for it really seems to us as a discovery practically—though the mechanical philosopher would have predicted the same result, comes to us in the very time of our need, when the demand for fresh railways is on the increase, and the apparent means to produce them are lessened. With the van-ishing of the mammoth engine and the express trains, the light and cheap rail becomes practicable for the light steam carriage, and the cost of one mile of the present rails may be made to construct six or eight miles of the future. No problem is this, but a feasible proposition, shortly to grow into a fact, solving the difficulty into which existing railways are plunged, by branches and proposed railways connecting with their trunks. They are well competent to judge who have drawn up the proposal now before us; and we believe that at no distant period they will be ready to undertake the work they have projected. We earnestly commend it to the attention of the directors inclined to be merciful to the pockets of their shareholders. We give it entire.

> roposal of a new system of Passenger Transit on Railways, with frequent departures, high speeds, select parties, large numbers, low fares, greater safety, and small capital.

The existing railways have been constructed at an verage expenditure of 30,000l. per double-line mile. The trains on them have increased in number and weight, in some cases beyond the capacity of the rails. In order to draw such trains the engines have been increased in weight till the rails deflect beneath the driving wheels. To prevent collisions it is requisite that goods trains, travelling on the same rails as passengers, should travel at the same speed, or there will be great risk. This will tend still further to increase be great risk. This will tend still further to increase the weight of the engines. The construction of goods waggons being mechanically far interior to that of passenger carriages, their resistance to traction is considerably greater per ton; and this resistance

there is no greater source of loss and expense on a railway than that of deflecting rails; whether from too light scantling, or from bad joints, or both. If the rail deflects, the engine slips. It is equivalent to a constant bad gradient, varying from I to 30 to 1 in 75. And whenever deflection takes place, a constant packing of sleepers will be required—'maintenance of way.' Two ways there are of better using rails of light structure. First, to diminish the speed of heavy trains; for although it is true that the vertical pressure is lessened with the speed, the blows both lateral and vertical are greatly increased. Secondly, to arrange the joints with double chairs and sleepers and fish bars, so that the joints may be as strong as the other parts of the rails, instead of being only onerailway than that of deflecting rails; whether from too the other parts of the rails, instead of being only onefourth the strength, as is at present the case. In short, to make the rails continuous bearings, as is practically the case, with longitudinal timbers. If therefore by the abstraction of the fast passenger traffic from the main lines the general speed can be reduced, a great source of economy will thereby accrue. This can be accomplished over the greater part of the lines by laying down a system of light rails on the slopes and embankments, and other spare land, the rails being a longitudinal timber framing, with iron wile thereon and being a side and the spare land. with iron rails thereon, and being carried one side on the railway fence, and the other on the embankment, and rice versa. Light wood structures would serve to widen the bridges. At tunnels and stations, points to be laid into the main lines, till found desirable to alter by increasing the tunnels or altering the stations. This would be practically four lines of railway. These lines to be worked by a system of steam carriages—not steam tugs—on the steam-boat principle, ages—not steam tugs—on the steam-boat principle, carrying thirty passengers, in a well-arranged body, at a speed of 50 miles per hour. These steam carriages would be very safe by reason of the under side of the frame being within nine inches of the rails, so of the frame being within nine inches of the rails, so that they could not overset in case of a wheel breaking; and in case of getting off the rails the carriage would become a sledge, gradually arresting its own progress. The contrary of these two conditions is the case with existing locomotives. The total weight of these steam carriages would be about 3 tons, or little more than half the weight of an ordinary first-class carriage. The passengers about 3 tons, making up a total of 6 tons, or 14 ton per wheel. The load on the driving wheels of modern locomotives is from 10 to 14 tons. It is obvious therefore that a will of to 14 tons. It is obvious therefore that a rail of to 14 tons. It is obvious therefore that a rail of one-sixth the strength would suffice, the more so, because in the low suspended engine there would be neither oscillation nor blows. The momentum or inertia of the heavy engine and train requires an excess of engine-power to start it, and great friction and space to check it. The light steam carriage, on the contrary, will require comparatively small power. It will easily be started, and as easily be brought to a stand when required. Being capable of great speed, the chances of being run into are obviously lessend. the chances of being run into are obviously lessened; and in case of collision the absence of great momentum will be a material safety. As these carriages will readily ascend gradients of 1 in 50, and pass freely round curves of 300 ft. radius, they will accomposite the money are uniqueness to the property of the pro modate themselves to many circumstances more than ordinary. By their great lightness they will be far less subject to wear in their working parts than heavier engines, and consequently their speed can be heavier engines, and consequently their speed can be greatly increased without mischievous results. With heavy engines drawing trains, the weight of the engine on the driving-wheels must be a maximum for the greatest load ever applied. Consequently, with a minimum load great waste must exist. With a steam carriage carrying its load on its own frame, the load itself would contribute the adhesive power in the requisite proportions at all times. By the ordinary mode of despatching large numbers of passengers at few intervals and moderate speeds station sengers at few intervals and moderate speeds, station sengers at few intervals and moderate speeds, station room and servants, landing platforms, and other working expenses, are required in the same proportion; and these expenses are kept up for use only at short intervals, of not frequent occurrence. It is like a man employing six servants one day for his household work instead of one servant six days. With steam exprisings departing in quick succession, with hold work instead of one servant six days. With steam carriages departing in quick succession, with thirty passengers at a time, station room and servants only for thirty passengers would be required. Nor would the total numbers be small with a rapid succession of departures. Twelve departures per hour would be perfectly practicable, and with a speed of 50 miles per hour the working stock would not be large, as the return transit would be rapid. Twelve departures per hour would give a maximum of 300 departures per hour would give a maximum of 360 passengers; twelve hours for a day's work would give 4,320. But if twenty only were taken each trip, the total would be nearly 3,600. But although

The recognition of the second

of existing (grass grown) highways, or at the sides thereof, or on piles, thus restoring the property along their borders to the ancient prosperity; and also for their borders to the ancient prosperity; and also for new lines of railway, whether set out for passengers transit only, or for passengers and goods; supposing, in the latter case, that four lines of way are to be made, and without which no railway can thoroughly develope all its possible resources.

The following statement gives the probable cost, expenses, and income of a passenger line, with up and down rails, supposed to be laid on the undulating surface of a country, with the inclinations generally not more than 1 in 70, and never more than 1 in 50; such, for example, as the valley of the Thames, or the

such, for example, as the valley of the Thames, or the plain stretching from London to Uxbridge. This would not include bridges or level crossings, but very light timber bridges would suffice for vehicles with the extreme pressure of only 12 ton on each wheel. A line of 24 miles is taken :-

Rails and timber work, fixed on ground surface, at 2,640%, per mile, double line, 24 miles . 63,360 0
Sundries per mile, 360%. 8,640 0
Twelve steam carriages for 30 passengers each, 8,040 0 0 .. 14,400 0 Stations, extra carriages, &c. 3,600 0 0

90,000 U n

This would be at the rate of 3,750l. per mile of double line. Supposing increase of work, a further allowance might be made, say 4,000*l*. per mile, for extra engines, and with other contingencies making up the whole capital to 100,000*l.*, exclusive of land and bridges. Adding them, a further cost would be incurred of say 50,000*l.*, or in round numbers a total of about 6,250*l.* per mile double. This would not include buying off oppositions or parliamentary impediments; but the probability is that such lines would rather be coveted than opposed. And for this outlay the line would be ready for work. The capacity for work would be enormous. On the double line twenty-four carriages per hour might be started, and they could convey, within 90 minutes from the starting of the first, 720 passengers over 24 miles. A day of 12 hours would give 8,640 passengers. A year of 313 working days would give 2,704,320 passengers. This calculation is not based on the supposition that such numbers would be found in any rural district, but merely to show that it could be adapted to any amount of traffic in the most crowded neighbourhood, and would be a much more convenient arrangement than long trains of carriages with heavy engines. Supposing this number of passengers to be carried at $\frac{1}{2}d$, per mile, or omnibus fashion, at 1s. for 'all the way,' or any portion of the way, be it long or short, so as to dispense with tickets, the annual gross revenue would be in round numbers 133,000l. Deducting one fourth for working expenses—a very full allowance on such a cheap system—say 33,000l., there would be left 100,000l. of profit, or 66 per cent. on the original capital. In this statement Sundays are thrown out of the calculation. But supposing only six carriages per hour to start each way, and with twenty passengers each, at 1d. per mile, or 2s. per head, that would be 901,440l. per annum, excluding Sundays, and would be a gross revenue of 90,144l., deducting onewould be a gross revenue of 30,142, deducting one-fourth for expenses—still a large allowance—there would be, in round numbers, a nett revenue of 68,000L, or 45 per cent. profits. 500 passengers per diem, at 2s. each, would amply pay 5 per cent. interest on capital, and all working expenses. But with only 500 passengers per diem, it would be absurd to make a double line. Therefore the capital might in such case be reduced to 100,000. Supposing a line to be made on a railway embankment, or on the surface of a highway, without needing to pur-chase land, a single line could be laid down, and steam carriages for the transport of 1,500 passengers per diem placed on it at an outlay of 2,000*l*. per mile. At 4s. per head, or 2d. per mile, over a 24-mile line, 500 passengers per diem, excluding Sundays, would yield a nett profit of 70,000*l*., or nearly 150 per cent.; and the speed would be nearly double that which people now pay more than 2d. per mile to obtain. The plan of carriage being on the principle of a steam-boat would to a certain extent resemble it in form &c.; it would be very low and very long. It would be upon four wheels, each wheel made to run independently when required, the weight being within the base of the wheels, and below the horizontal line of the axles. Either one, two, three, or all four of the wheels would be propellers when required, they would not exceed it. 6 in in diameter, and their speed would be duplicated from the strokes of the pistons. The boiler would be vertical, but with the base below the level this system has been described as applicable to the slopes of existing railways, it is quite applicable to other positions. For branch lines, for lines of rails to be laid on the surfaces difficulties in procuring capital. For directors

placed in this position, with their land bought and paid for, it will be worth consideration, whether a line of light rails laid on the surface, with a few steam carriages, would be a ready means of commencing their passenger transit and earning the further means of completing their works, instead of lying idle, waiting for money. It would be still better worth consideration whether true economy would not dictate four lines of rail, the two internal for fast traffic, the two external for slow. The external lines, with slow trains, would then serve as feeders for the main lines, and the objection to frequent stoppages would cease. Upon such a system the communication with private property, farms, and manufactories, by means of sidings, would surprisingly increase.

ingly increase.

These carriages might be made to communicate from one railway to another, by means of trams laid in the surface of the streets and roads, and might be thus rendered very valuable for the purpose of carrying the mails. It is strange that these trams should have been so much neglected, practicable as they are. As all good examples must come from those who are placed in conspicuous positions, we will suggest a thought that has often before occurred to us. Her Majesty Qucen Victoria is a great railway traveller, and especially from Windsor to Buckingham Palace. the honour and profit of her transport there are likely to be two competitors, the Great Western and the South-Western. Her Majesty likes to travel with as little trouble as possible to herself or others; and it would assuredly add very considerably to her com-fort if the railways, Great or South, or both, or all, would enable her to keep and use her own railway carriage. We conceive that a carriage might be con-structed on the Eastern Counties' plan, which would convey the whole royal family and suite with the minimum of trouble; in short, a suite of apartments, warmed and ventilated, 'not so wide as a church door, nor so deep as a well,' nor altogether so large as Buckingham Palace, but practically a little moving palace, with every kind of travelling convenience. This caringe might stand in a carriage-room or gallery of Windsor Palace, forming part of the royal suite of apartments, on rails laid therein and communicating, beneath folding doors, with the court-yard and street. These rails, laid on the surface of the road or street, might communicate with the Great Western or South-Western, or both. The carriage might be drawn by horses from the interior of the palace to the railway, and then attached to an engine. On arriving at Paddington, a tramway, laid along the junction road, across Hyde Park and down Constitution Hill, would enable horses to draw the carriage into a room at Buckingham Palace, similar to that at Windsor; and thus her Majesty might perform the journey from palace to palace without even going into the open air. If the arrival were at Nine Elms, a tram over Vauxhall Bridge, through Pimlico, would be perfectly easy. It would not be a slight convenience to be able to make the journey without shifting the carriage. We think that no parish officers would baulk her Majesty in such an arrangement, setting so good an example to the subjects. In point of convenience the Great Western would have the advantage, as being Great Western would have the advantage, as being able to admit the largest carriage—probably 80 ft. by 12 ft.; but then it could not travel on the narrow-gauge; and her Majesty would be obliged to keep a duplicate, 60 ft. by 10 ft. We shall be curious to see whether it will be Mr. Chaplin or Mr. Russell who will first set the example of accommodating her Majesty by connecting railways with horse trams, or whether her Majesty's self, tired of being continually shifted from one moving railway lodging to another. shifted from one moving railway lodging to another, will finally determine on having her own travelling house, and issue her own orders thereon. If this present writing meets the eyes of those who watch over her Majesty's moving architecture, let them think how much human progress may be the consequence if they bring this thing to pass; the example of what can be done producing the will to do more at comparatively small cost.

P. O. U."

The Adventures of a £1,000 Note, or Railway Ruin Reviewed. By the Hon. E. Phipps. The aim of this brochure is high, though its form is small and unpretending. It sets out in the preface with the following inquiries :-

" Are railways the chief cause of the present crisis, or are they only the principal sufferers from it? Do they convert floating into fixed capital, or only pre-sent to it those means of profitable investment without which floating capital possesses no value ! Is the interruption of works upon profitable railways, already commenced, the proper remedy for present embarrassments, or will it be the means of aggravating them to an unheard-of extent! Mendicity

Digitized by GOGLE

public exhausted funds and a double increase of applicants. Workhouses are crowded with sturdy labourers, highway robberies by armed bodies have begun, and the public revenue is diminished: we see saving banks parting with their deposits, trade stagmant, and mills working short time: credit is shaken, and enterprize dead. Does overwhelming necessity require us in such times to discourage rather than promote labour upon incomplete works which Parliament has solemnly pronounced to be of great public utility?

It narrates its adventures to the gentleman who owns it, and who thereupon commences a discussion, on which we shall not offer comment.

"'The country will never bear it,' said I, as I gazed fondly on my 1,000l. bank-note. It was the first time I had had so large a sum in that form, and my pleasure was proportionate. I considered it, too, to be in some degree carned by my own foresight. The great Harwich and Bristol trunk line having been (as I casually heard) intended to pass the corner of my little box in Essex, I immediately converted an old cowhouse that stood in its line into stables of very imposing appearance, and gave them the alternative of a purchase at 1,000*l*., or furious opposition. The thing would not have stood for a moment before legal inquiry. Still, being fortified by the possession of a second cousin who was the habitual chairman of one of the committees of merits, and having a friend among the directors, I prevailed, and by means of fear, favour or affection, got the promise of my 1,000l. The opposition on the part of landlords who had more reason to complain, and less hope of being nad more reason to complain, and less hope of being appeased, was terrific. At length, to my great joy, the bill was passed, and now, at the moment when they would have gladly given up operations altogether, the company had been obliged to exchange for my cowhouse a 1,000*l*. note. It was this that made me gaze on it with such interest, and which turned my thoughts to willware while still I am made he gaze on it with such interest, and which turned my thoughts to railways, while still I exclaimed, 'The country will never bear it!'—'The country will never bear what!' asked Sir George Ferrier, a benignant-looking political economist, if such a creature can be conceived possible.—'What the railways are doing.'—'Nay,' said he, 'if they are in the habit of giving 1,000l. for a cowhouse, the country may think it right to interfere to protect the sharcholders. It has interfered before now with much less cause.'—'I was not speaking of that,' I replied, somewhat previshly; 'I mean that the country will never be able to meet the surprising, the astonishing, the astounding amount of the calls.' I thought I had been emphatic, whereas I had merely been guilty of tautology. 'I have been counting them up, and there are eighteen millions to pay in the next twelve months. —' Pooh!' said Sir George. -'Pooh!' I exclaimed, somewhat surprised.-'You do not see, my dear fellow, that one call, when dis-bursed, helps to pay another. I will make it all clear to you. Sir George was one of those men who, having given you, in a few words, the pith of what naving given you, in a few words, the pith of what they have to say, prose on in explanation, till, like the commentator in Pope, they 'explain the meaning quite away.' His first words had been a revelation to me, and, as he talked on, my mind revolved on the first idea, while my eyes were mechanically fixed on the 1,000% note. At length the monotonous sound of Sir George's explanation stole 'faintly, and more faintly still,' oer my drowsy senses, till it was entirely neutralized by a sharp distinct voice: it was that of my 1,000% note, which narrated to me its that of my 1,000% note, which narrated to me its adventures

Here begins the history of that interesting piece of paper. Here also begins the serious part of the brochure, in which there are discussions of much more value than might have been expected from so light and almost trivial an introduction; to these we shall return next week.

Proceedings of Bocictics.

Institution of Civil Engineers of Ireland,—Dec. 14.—Third General Meeting.—Col. H. D. Jones in the chair.—Mr. Sharp read a paper descriptive of "a clock with a registering machine attached." He exhibited an ordinary clock, with the addition of a certain number of projecting pins on the dial; the interval between every two pins expressed a certain portion of time, being that which clapsed while the hour-hand of the clock, in its ordinary motion, passed from one pin to another; a lever was attached to the back of the dial, by means of which the hour hand could be pushed in at any time against the face of the dial, and by coming in contact with one of the projecting pins

societies and fever hospitals are announcing to the | immediately under it, push it in also, and the pin so pushed in would register, within a few minutes, the exact time the hand was brought in contact with the dial. He explained how, by means of a sufficient number of pins on the dial, very small intervals of time might be registered. This invention, which was made-by Mr. Sharp, he conceived could be used for all the purposes of a noctuary, and might, by means of an additional mechanical contrivance, be made to register the times of the arrival and departure of the trains, by means of the trains themselves. He also explained how the movement of the clock was not in the least injured by this addition, and that this means of registering might be also applied to clocks already constructed.

Mr. Hemans read "A short account of the fall, during a violent storm, of part of a roof in progress of erection over the Dublin terminus of the Midland Great Western." The total length of the roof is 475 ft., and the width 120 ft., divided into two spans of 60 ft. each, the roof resting on walls at either side, and on columns in the centre. The centre columns are 62 ft. 6 in. apart, and are connected by flat arches and gutter-plates. The whole structure. with the exception of the columns, gutter-plates and tie-washers and lockets, is composed of rolled iron. The principal, which are the only rafters, are thirtyeight in number, to each half-roof, and are 12 ft. 6 in. apart. They are formed of what is called "deck beams." The cover of the roof is of corrugated iron, converted by a patent process of galvanism, into a compound of and zinc, and connected by bolts and rivets similarly galvanized, and provision is made for expansion and contraction. Twenty five of the principals were erected on each side, and the whole centre line of columns and arches was complete, when the storm, the cause of the accident, began. The principals, not being connected together by temporary diagonal braces (none would be required when the corrugated covering was fixed), were exposed to the powerful action of the gale in the direction in which no temporary provision had been made to withstand lateral pressure; and the consequence was, as might naturally be expected, that the greater portion of them were blown down one over the other like a pack of cards; and the whole of them had snapped their sockets. Very providentially no person was injured, and the rectifying of the accident was immediately proceeded with, and the roofs are now progressing rapidly towards completion. Mr. Hemans explained very minutely the cause of the accident, and the re medial measures adopted, and exhibited a model and several drawings elucidating his remarks.

Drogress of Works.

CALEDONIAN.—A great number of our contemporaries, says the North British Railway Gazette, are venturing opinions as to the precise day upon which this line will be opened, lut we are authorized to state that the directors have fixed nothing definite as The rails are laid completely through and to that. through, from Carlisle to Edinburgh and Glasgow, but certain parts of the works having, in consequence of the late soft weather, given a little, time must be allowed for them to consolidate properly again. The public are anxious to ascertain the fares of this new route betwixt Edinburgh and Glasgow, and hopes are entertained that 5s. or 6s. for the first class, will be the utmost exaction. In the first instance they will probably not be lower than what are charged at present by the Edinburgh and Glasgow, but in the course of the summer they will probably be reduced considerably. — Capt. Simmonds, the Government Inspector, has reported to the Railway Board his inspection of the line, and his approval of the general state of works along the Aire for public traffic.

WEST RIDING UNION,—The Cleckheaton Valley

Branch is advancing fast to completion, and may be expected to be opened in three or four months. This branch is in one of the most densely populated parts of the district, and will prove very remunerative to the Lancashire and Yorkshire; and when it is opened the proprietors of the West Riding Union will be entitled to a dividend on the cost of construction.

YORK AND NORTH MIDLAND .- (Harrogate Branch.) Crimple Viaduct .- The closing of the last arch of this stupendous work was performed on the E3rd of December, amidst the cheers of the workmen, and in the presence of Messrs. Farrell & Sykes, the contractors. An idea of the extent of this viaduct may be formed from its dimensions. It is 1,848 ft. long, 142 ft. high, and consists of 31 arches, each 50 ft. span. The first stone of the work was laid on the 29th of April 1846, so that, in the short space of twenty months, an unparalleled amount of masonry consisting of those massive piers and lofty arches,

Mr. J. C. Birkinshaw, engineer, and his assistant, Mr. A. Thackeray, of Harrogate.

FORFIGN.

BADEN LINES .- Negotiations respecting the junction of the Wurtemberg and Baden lines have been resumed on the part of the Government of the former country, which has given the preference to Brucksal and the Bretten, as points of junction, whilst the grand ducal government continues in favour of Pforzheim.

MURSEILLES AND AVIGNON.-On Christmas-day, M. Talabot, one of the directors, and some other gentlemen, made an experimental trip from Marseilles, through the tunnel of the Northe and St. Louis, and across the valley of the Aircalades to Arles. Everything passed off satisfactorily in the presence of a considerable number of spectators assembled along the line.

The Irish Railway Gazette gives the following account of the Irish lines :- Affected injuriously as our railways were by the depression of the times, still the progress made during the past year must be gratifying, under the circumstances. We have opened 111 miles of new railway, as follows: Howth branch, 33 miles : Great Southern and Western, 564 miles : Londonderry and Enniskillen, 15 miles; Midland Great Western, 36 miles. Besides which we have almost ready for opening nearly 90 additional miles, namely, the Belfast and Ballymena (throughout): Ulster Extension (Portadown to Armagh); Great Southern and Western (extension to Thurles); Waterford and Limerick (Limerick to Tipperary). These are in almost a complete state, and ready for opening, independent of which we may calculate that during the year the following lines will be opened: Belfast and County Down (to Newtownards and Holywood); Newry, Warrenpoint and Rosstreyor (to Warrenpoint at least); Dundalk and Enniskillen (from Dundalk to Castleblaney); Dublin and Belfast Junction (Drogheda and Dundalk); Nawan Branch (Drogheda to Navan); Irish South-Eastern (Carlow to Kil-kenny); Great Southern and Western (an extension beyond Thurles). Besides the above, it is more than probable that the Midland Great Western will open to Mullingar: that the Cork, Blackrock and Passage will open to Blackrock if deemed expedient to open a portion before the whole line is completed; and the Waterford and Kilkenny are in a position to open shortly between Kilkenny and Thomastown, only the directors have taken some unaccountable whim into their heads, and have declared against opening that portion of the line until the portion between Thomastown and Waterford is completed; and it is beyond our power even to guess when that happy consummation may be attained under the present management. The Cork and Bandon line is in active pregress, but we are not informed whether any portion will be ready for opening this year or not.

Accidents.

BOTLOGNE AND AMIENS .- Dec. 26 .- An OBSERVER thus writes from Paris respecting an escape from an accident on the new French line: - "Having been de-tained several days at Boulogne by the delicate health of one of my family, and fearing from the appearance of the weather a heavy fall of snow, which would have rendered railway travelling more dangerous, especially on a newly-opened line, I left Neuf-chatel for Paris by the 2-45 p.m. train. On its nearly arriving at Etaples, which is the station next after Neufchatel, the train had to wait more than half an hour for another engine, in consequence of something being broken, as the guard informed me, in that which had been used. I was with my family in my carriage, which was fastened, as in England, on a truck. The engine had scarcely begun to move the train when experienced an awful swinging of the carriage, and jerking movement, with a grating sound of the truck. It was at once apparent that we were off the line. The guard, who was in the van immediately before us, and at the head of the train, fortunately caused the engineer to stop before we had proceeded more than about twenty yards. This, however, would not have been done so soon if the engine had not been only then starting, and consequently moving with comparatively little velocity. On viewing the situ-ation of the train I observed the engine was on one line, the guard's van and our carriage-truck diagonally placed between that line and another line, on which last were several first, second and third class carriages -all forming one train with the van and truck. It would seem the fresh engine had been brought up on the line on which the train was not, and had been backed thence by a diagonal line as far as the points (I think that is our name—the French call them aiguilles), which ought to have been set so as to allow has been put together, under the superintendence of 1 of the passing of the train from one line to the other.

The engine being attached and in motion, and the points not set, the guard's van and the carriage truck were violently drawn off the original line. The whole train necessarily would have followed these, if providentially the engine had not then been stopped. There were several English, and we all agreed that the cause of the accident was the inexperience in the matter, or the gross negligence, of a fellow who failed to properly adjust the points, for several persons saw him attempting something and then suddenly run away, or "bolt," as they expressed themselves. After great exertions, and with rude and imperfect instru-ments at hand, the van and truck were got on the line of the rest of the train, and we arrived at Amiens more than three hours after time, where we remained till 12 30, reaching Paris at 5 next morning, instead of 10 30 the same night. I fear there will be no efficient measures taken till some dreadful accident ccurs, as the French seem to think everything right if nothing terrible actually happens, whatever danger there may have been."—[We have inserted this letter that our friends may see how their proceedings are spoken of, but the fear expressed by the writer is not

warranted by the facts. J

ELY MN PETERBOROUGH.—Dec. 27.—Mr. R. Pinkney, merchant, of Lincoln, accompanied a friend to see him off by the up-mail, and when the train started see him off by the up-mail, and when the train started Mr. Pinkney rode on the side of the carriage out of the Peterborough station till he came near the gate on the crossing of the road; there he attempted to get down, and in doing so, it is supposed, he fell against the gate and was thrown back under the carriage, which passed over his neck, and literally severed his head from his body. Of course he was attemption course. At the corner's induct the jury

instantly a corpse. At the coroner's inquest the jury gave a unanimous verdiet of "Accidental death."

LONDON AND NORTH-WESTERN — (Euston Station).—Jan. 6.—The wall of a colonnade, designed as tion).—Jan. 6.—The wall of a coloniade, designed as a promenade for passengers, and forming part of a new grand passenger hall, has fallen in. There were a large number of men employed on the scaffolding in the interior of the building, upon whom the superincumbent mass was thrown. Eleven men were extricated from the ruins, but they were so covered with blood and rubbish that their injuries could not be secretained. They were removed to the Painter. be ascertained. They were removed to the University College Hospital. Mr. Butterwick, the foreman of the works, states that at 3 p.m. on the previous afternoon he inspected the whole of the wall, and found everything correct, the columns being firm and good. Mr. Bevan, the clerk of the works under Mr. Cubitt, who is the contractor for the buildings, says that he was on the spot at 10 a.m. yesterday, only a quarter of an hour before the wall fell, and did not observe the slightest defect. Mr. Hardwick, the architect, is unable to give a positive opinion as to the cause. The clerks of the works, Messrs. Bevan and cause. The clerks of the works, Messrs. Bevan and Hoare, state positively that there were no cracks in the columns, which were built in the strongest manner possible; nor can they account for the sudden manner in which they gave way. From an inspection of the rains, the columns appear to have given way, not in the centre, but near the base. The weather, no doubt, had had a considerable share in causing the columns to give way. To give some idea of the massive character of the work, Mr. Bevan states that the quantity of brickwork which fell would weigh between five and six tons. The removal of the falken mass was superintended and energetically aided in by mass was superintended and energetically aided in by Mr. Butterwick in person; and that geutleman refused to have the roll of the men employed on the stupendous building called over until every brick which had been displaced had been removed. The latest account remember the transfer of the roll of the latest account remembers the removed. latest account reports that one of the sufferers has

Morth British.—Dec. 19.—A large portion of an embankment in one of the deep cuttings between Marshall Meadows and Lamberton fell in upon the line, says the Coledonian Mercury, and completely blocked it up. On the approach of the express train from Edinburgh, at 4 10 p.m. the speed was somewhat slackened, but the engine and tender were littoring of the line plant diverging the statement. thrown off the line ploughing into the ground for several feet, and the rails were torn up for some distance. The carriages remained upon the line, and the only injury from the accident was some slight bruises received by one of the guards.

Law Entelligence.

COMPENSATION FOR DEATH. Dec. 31. In the Secondaries Court, in re Thisleton v. the South-Secondaries' Court, in re Thisleton v. the Nonth-Eastern, an action was brought by the plaintiff, as administrator of his wife, Mary Thisleton, for compensation in damages by the loss he had sustained by her death, she having been killed in June last, by the falling in of an arch of the South-Eastern at Bernondey (see Rail. Chron. 1847, pp. 618, 642). The present was the first action brought under the Act

9 & 10 Viot. c. 93, which came into force on the 26th of August 1846, commonly called "Lord Campbell's By this Act it is provided that an action may be maintained, notwithstanding the death of the party injured, if brought within twelve months after party influed, it brought within twelve months after the death. It is enacted by the second clause, "that every action shall be for the benefit of the wife, husband, parent and child of the person whose death shall have been so caused, and shall be brought by and in the name of the executor or administrator of the person deceased, and in every such action the the person deceased, and in every such action the jury may give such damages as they may think proportioned to the injury resulting from such death to the parties respectively for whom and for whose benefit such action shall be brought; and the amount so recovered, after deducting the costs not recovered from the defendant, shall be divided amongst the above-mentioned parties, in such shares as the jury by their verdict shall find and direct." In the first instance the company had denied their liability, but the plea had been withdrawn; and the passesment. bled to execute a writ of inquiry for the assessment of damages. The matter had been arranged, and the parties had agreed to a verdict by consent for 200l. No blame was to be attributed to any one.—The learned Secondary felt some difficulty in complying with the terms of the Act as to the apportionment of the damages.—The attorney for the plaintiff explained that he had three children; one was married, plained that he had three children; one was married, and the other two were 17 and 16 years old.—It was settled, after some discussion, that the plaintiff, as husband of the deceased, should receive 100t. of the damages, and that the remaining 100t. should be divided between the three children.—The jury gave a verdict in accordance with the terms agreed upon, assessing the damages at 200t.

Jan. 6.—The bankrupt J. B. Falkner has passed his last examination in the BANKRUPTC COURT. His partner B. Falkan has absended and is accordingly

partner, B. Fabian, has absconded, and is accordingly outlawed. Their names will be remembered in connexion with scrip forgeries.

Jan. 5.5-At the New Court, R. Smith was indicted

for stealing a portmanteau and its contents, value 200, the property of Dr. A. Sedgewick. A second count charged the property as that of the Eastern Counties.—The jury found the prisoner "Guilty."—Mr. Commissioner Bullock (who took the Recorder's scat) ordered the prisoner to be kept to hard labour in the house of the street of the second countries. in the house of correction for twelve calendar months.

Dec. 29.—The Sheriff at Paisley fully committed a man named Black for throwing a turnip at a first-class carriage of the 3 30 up Glasgow train, near West Ferry.

London and South-Western (Waterloo Bridge Extension).—Jan. 3.—At the Lambeth Police Court, Mr. Edwards, a member of the vestry of the parish of Lambeth, applied for advice respecting the archway over Church-street. The company were building a pier in the centre of the road, from which two arches were to spring. There was no doubt that this was done with the spring of the surroy of this was done with the sanction of the surveyors of the parish, but the inhabitants felt satisfied that this was given more through ignorance of the law than any improper motive. The inhabitants of the parish, finding that a very serious nuisance was about to be perpetuated, determined on calling a public meeting of the rate payers. The vestry had declared (after adjourning the meeting) that in the mean time the opinion of one of the magistrates at this court should be taken as to the most speedy and least expensive mode of preventing the nuisance.—Mr. Elliott asked the applicant whether he had been deputed by the the applicant whether he had been deputed by the vestry to make the present application, or whether he made it in his individual capacity as a vestryman?—Mr. Edwards replied that he appeared in the latter character, though he might say he spoke the sentiments of nearly the whole of the vestry.—Mr. Elliott observed that there were two modes by which the parish might proceed. The first was by an indictment for a mile since, and the second by a proceeding before a paristrate makes the second by a proceeding before a magistrate, under the provisions of the 5 & 6 Will. 4, for an obstruction of the Queen's highway. In a question of such magnitude as that in dispute, he (Mr. Elliott) thought the former would be the better course, but he would at the same time recommend that the parish authorities should deli-berate well and take the opinion of competent autho-rities as to which was the better course before they adopted the one or the other.-The applicant then left the court.

terly meeting of the iron-masters of South Staffordshire and Shropshire was held at Dudley; most of the great iron-masters were present. The discussion and the resolve, says the Dudly Noes, was more interesting than is usual; sheets which last quarter-day fetched 13l. 10s., were fixed at 11l. 10s.; bars at 10l. were now reduced to 8l.; hoops, 10l. 10s., at 8l. 8s.; and the price of pigs will depend on future circumstances at present they will range from 31. 15s. to 41. 5s. In all probability they will (from the number of furnaces out of blast) soon reach a higher figure. The writer condenns the notices in the Birmingham Gazette (see below), and in contradiction thereof says:—There have been no "large useless erections" whatever, nor is there any disposition to extend present works; on the contrary, to meet the exigencies of the times, the iron-masters have for some time past been limiting their operations as much as possible; but, notwithstanding this, it is to be feared that at the present time there are not fewer than from 4,000 to 5,000 persons engaged in the iron trade out of employment, and the reduction of wages has averaged from 15 to

20 per cent.
The Birmingham Gazette thus comments on this subject. Although the reduction of discounts, and reviving confidence in money matters, joined with the necessitous state of our manufacturers, whose warehouses are everywhere completely destitute of iron, would seem to warrant the expectation of returning activity, still not an order is given out that can by possibility be withheld, and speculative holders have been forced to realize at the most ruinous prices have been forced to realize at the most rumous prices
—48s, has been mentioned in one instance; but, as it
is well known that a quantity of pigs yet remain,
made for the purpose, which would be dear to a consumer at that rate, such a circumstance, if true, is
no cause for dismay. It is also at present uncertain
how long a period may elapse before the resumption
of railway undertakings, and, under these circumstances, great difference of opinion exists with regard
to the reduction in the price of iron. The advocates
for mishing it to an extravagant extent have presed to the reduction in the price of from. The advocates for pushing it to an extravagant extent have pressent into their service "a circular issued by Lord Ward's agent," which has been represented as offering "forged pigs at 3l. 10s., the nominal price fixed at quarter-day last having been 5l." This is altogether an unfair representation. The quality of pigs offered at 3l. 10s. being hot-blast, and not worth at last quarter-day more than 4l. to 4l. 10s.; while the price of best cold-blast is still quoted at 4l. 5s., accompanied with stringent restrictions as to payment. In pig-iron blast is still quoted at 4l. 5a., accompanied with stringent restrictions as to payment. In pig-iron transactions the system prevalent in Staffordshire has been that of taking in payment the purchaser's four months' acceptance monthly. To the continuance of this objections are felt, and the establishment of shorter credit seems to be the chief object of the circular alluded to. To effect this change, the present opportunity has been taken to offer an inducement by way of a large reduction of price. An intention by way of a large reduction of price. An intention has been expressed of continuing the present exorbitant wages of thick-coal colliers, although assenting to a reduction of 20 per cent, upon other classes who are paid upon a much lower scale. This proceeding appears objectionable on the ground of moral justice, and is directly opposed to the manimous decision of the meetings where the subject was discussed.

[Secretaries of companies are requested to forward natices of Meetings, and closing of Contracts, as early as possible.]

ings, and closing of Contracts, as early as possible. J
MEETINGS.
BIRMINGHAM AND OXFORD—Jan. 14. Dirmingham.

London Stock Exchange, Jan. 7 .- The share-market at the end of the week has displayed a more cheerful appearance than it has for a long period. The consol market is decidedly much firmer, and the prospect of improvement is more encouraging and justifies the

* For opening, 18th January 1848.

hope, that unless any fresh calamity overtakes us, confidence will be perfectly established, and we shall have to record a gradual but certain rise in all descriptions of railway property

Liverpool, Jan. 6 .- Although a very small business has been done during the past week, prices have well maintained their position. To-day a slight ten-dency to advance has been manifested. Suppow. Brothers.

Manchester, Jan. 6.—The business of our share-market has been very limited during the week, and prices have not varied much. To-day there is a fair demand at rather better prices. SAM. GRINDROD.

York, Jan. 6 .- The share-market still continues inactive, but there are no sellers of stock in the north lines, except at advanced prices.

GRAYSTON & EARLE. Hull. Jan. 6 .- The market is without any alteration worth recording. At present there is no such thing as speculative buying in the share-trade; the purchases that are made are for investment, and few lond ride holders of stock are selling, except when calls have to be met, and have not been provided for. The practice latterly adopted by some companies, of stating the amount of calls that will be made during the year, defining the dates, appears judicious, as it gives time for preparation.

FLINT & TOOTAL.

Newcastle upon-Tyne, Jan. 6.—There has been less activity during this week in our share-market, but prices continue firm. W. FORDYCE.

Glasgow, Jan. 5.—The market for the last eight days has been in a very inanimate state, partly owing to the holidays, and latterly to the uneasy feeling caused by additional commercial failures. The amount of business done has been trifling. The following of business done has been trilling. The following are to-day's latest transactions:—Clydesdale Juneare to-day's latest transactions:—Clydesdale Junction, 60; Edinburgh and Northern, 16; Glasgow General Terminus, 8; Glasgow, Dumfries and Carlisle, 74. 2c.; Glasgow, Paisley, Kilmarnock and Ayr, halves, No. 1, 7‡; ditto, No. 2, 7½; Glasgow and Greenock, 161; ditto, halves, 8‡; North British, thirds, 37s.; ditto, quarters, 85s.; ditto, new quarters, scrip, 10s. 6d.; Scottish Central, 28‡.

BUCHANAN, AITKEN & Co.

PARIS LETTER.

Paris, Jan. 5.

The great events of last week have acted upon our prices in opposite ways. The reduction of the rate of discount to 4 per cent. by the Bank was neutralized by the effect of the death of the Princess Adelaide, which gave cause for fears about the health of the King. The submission of the Emir Abd el Kader, which gives promise of reduction in the enormalization of the Princess of Alexander, which gives promise of reduction in the coordinate of the Princess of Alexander was the price of the Princess of the P Paris, Jan. 5. mous expenditure on Algeria, was not of sufficient importance to restore confidence, which was further shaken by the stoppage of Faber, Gontard & Flersheim, of Frankfort, which has compromised many respectable banking houses, and caused the failure of the house of J. Cohen. The settlement on the Bourse was difficult. — Continuations on stock were dear. Railway shares were firm, but without variation.

Lyon and Avignon .- There is no news about this line, the only scrious proposals being those of the house of C. Laffitte, Blount & Co. and the Lyon Railway Company. The terms of these are nearly identical, being repayment of the caution-money, a guarantee of 4 per cent., and a long term of concession.
The Lyon Company adds the condition that the 4 per cent. guarantee shall also extend to their own additional loan of 100,000,000f. Although the Minister has not as yet said anything in the matter, it is understood that a bill on the subject will be brought forward in a fortnight.

Dieppe.-The works of the line go on rapidly, and if the cold weather does not stop them, we may expect it to be completed in March next.

Strasburg. - The works on this line between Meaux and Epernay, 54 miles, are far advanced, and those between Meaux and Paris are being pushed on rapidly. It is expected that the whole line from

Paris to Epernay, some 80 miles, will open in September, and also the section of the trunk line near Strasburg. There is to be a call of 50f. or 75f. in April.

Versailles .- In consequence of the refusal of the Versailles, Left Bank, shareholders, to confirm the amalgamation with the Right Bank, the directors of the latter have just arranged with the Minister for the provisional concession of the Chartres line. After this, a delay of two months will be granted to the shareholders of the Left Bank, to reconsider, and come to a final decision. If they reject the offer, they will be called on to refund the 7,000,000 f. they we Government-and the concession of the Chartres line will be confined for five years to the Right Bank, who will supply stock and work it. If by the end of five years the Government are prepared to grant a concession of the whole line to Rennes, it will repay the company for its materiel; and failing this, the concession will be final.

Jan. 6.—The following are the latest prices of shares oan. 0.—1 ne following are the latest prices of since to-day:— Avignon and Marseilles, 575f.; Central of France, 382f. 50c.; Dieppe and Fécamp, 160f.; Montereau and Troyes, 210f.; Northern, 295f.; Orleans and Bordeaux, 132f. 50c.; Paris and Lyon, 140f. 25c.; Paris and Orleans, 120ff. 25c.; Paris and Ranco 902f. 50c.; Paris and Strasburg, 170f.; Ronen Rouen, 902f, 50c.; Paris and Strasburg, 110f.; Rouen and Havre, 430f.; Strasburg and Basle, 161f. 25c.; Tours and Nantes, 91f. 25c.

Railway Chronicle.

LONDON, SATURDAY, JANUARY 8.

After some discussion the proprietors of the Liverpool, Crosby and Southfort passed the Report and accounts presented at their first meeting. The portion of the line between Southport and Waterloo is to be immediately commenced.

The Report and statement of accounts were approved of at the first meeting of the NORTH-AMPTON AND BANBURY. The directors will apply under the new Act for an extension of time for completing the work, &c., although the engineer is instructed to set out the line.

The feeling of the shareholders of the PORT-BURY PIER, &c., at their special meeting, was decidedly against proceeding. Active measures were, however, deferred till the half-yearly meeting.

At the adjourned meeting of the JAMAICA South Midland Junction, all parties were agreed in procuring the dissolution of the company. The proposed amalgamation with the Jamaica was therefore annulled.

Some over-anxious shareholders of the New-CASTLE, BERWICK and NORTH BRITISH lines, have been expressing great apprehensions of injury to their traffic by THE OPENING OF THE CALEDONIAN. We think the alarm very unnecessary, and beg to remind them of a speech of Mr. Hudson, delivered on a similar subject very long ago, when he showed that the THROUGH TRAFFIC from London to the North forms a very small item indeed of traffic on any northern line. We have lately passed over these coast lines more than once, and the two striking circumstances which came under our observation were-the extremely small number of through passengers - and the enormous amount of the local traffic. Edinburgh and London furnish of themselves a comparatively small number of passengers going right through at first-class fares; and those whose time is cheap and money less abundant prefer the steamboats. We do not think that the through traffic between London and Edinburgh is therefore a material point about which either company need to entertain sanguine hopes or grave apprehensions.

The greater number by far of North and South travellers go to intermediate stations, or, at least, stop on their way for local business and special reasons. In one carriage we found that out of six passengers, four had tickets from Edinburgh to York, where they were to stop on business or pleasure, and they were afterwards to go on to London. Now it is plain that the same result would have followed although the Caledonian had been already open. It is clear that, in like manner, a passenger from Edinburgh, wishing to visit Liverpool or Manchester en route to London, would go by the Caledonian, and not by the North British, while a Leeds passenger would take the other route. It is obvious enough to any one acquainted with the districts which these lines traverse, that they will not in any way prove rivals for local traffic, and that local traffic to places intermediate bebe the great staple of this trade.

It is plain therefore that it would be egregious folly on the part of the shareholders of either to place each other in the position of rivals; and that it would be madness to set about competing for long traffic by low fares, or any of

tion. The portion of traffic which each possesses, independent of the other, is much more valuable than any for which they may fairly be

supposed to compete.

The serious rivals of both lines are the steamboats; and it is against them, and not against each other, that the policy of both must be directed. The steamboats on both coasts, but especially on the west, have for many years carried the public at low fares, and with an amount of comfort, regularity and speed, that are unparalleled by any other line of packets. These have both a large passenger traffic and a valuable goods traffic. It will require the utmost attention to speed, regularity, convenience of hours of arrival and departure, and a judicious rate of fares, to meet this steamboat competition. This therefore is plainly a case, not for competition of railways but for combination. The great mass of remunerative traffic for each lies intermediate between the termini of both, and is independent. That for which they might compete is the least important to both, and in that competition both have formidable rivals. Each line must therefore determine the rates, fares and mode of conducting traffic most suitable to its own peculiar circumstances, most likely to be successful against the steamboats, and without considering such arrangements as acts either of rivalry or hostility;—each can harm the other much more than either can benefit by competition.

Capt. Simmons has returned from inspection of the Caledonian, having found the works of the railway in such a state of forwardness as to warrant the intention to open the line this month; the only things remaining to be completed being a small piece of earthwork and the signal-posts and road-gates, &c. The rock cutting, which was the great obstacle on the line, is finished. The completion of so great a work, through physical difficulties so formidable as to have been not long ago deemed impossibilities, and in a time when the financial difficulties of the country seemed to threaten the shareholders with the indefinite postponement of the fructification of an enterprize in which they have already invested some two millions of money, is an event on which they must be heartily congratulated.

From our official returns it appears that the amount of traffic for the last week, on upwards of 3,403 miles of railway, was 178,912l., thus accounted for: — 93,095l. for the conveyance of passengers only, 41,604l. for the carriage of goods, and a remainder of 41,213l. for passengers and goods together, not respectively apportioned; being an increase of 30,926l. over the corresponding week of the former year, when the mileage was 2,615. The average earnings per mile for last week were 521., whilst in 1846 they were 56l.

NOTE ON THE WRITING AND READING OF STATISTICS.

We gave last week the first of a series of practical suggestions for the improvement of PARCEL TRAFFIC. The subject is one that would be important at any time-it is now especially so, as the increase of nett revenue cannot be too earnestly studied, when circumstances are tween the capitals of England and Scotland will tending in various ways to lower the scale of railway profits. This object, we fear, has been thrown too far into the back ground during the struggles and excitements of late years; in which, at times, the fact—that all this enterprize has been created as an investment for the purthe modes of mutual injury which the ingenuity, pose of gain, and that, created as it has been, of rivals so often applies to their own destruc- no other purpose can properly take its place,

-has run some risk of being lost sight of altogether. The present condition of railway property will tend, we both believe and hope, to restore this fact to its due position in directors' councils; and the prospect imparts a peculiar value to all practical suggestions that may contribute to the end implied in it.

Observations on the general scope and feasibleness of the plan of our correspondent "H. C. will be best reserved until the whole of it shall have been developed in our columns.+ In the meanwhile, we shall confine our remarks to any matters of detail, presented in its several portions, that may be noticed for general purposes, without prejudging the main recommendations of the scheme.

In the letter printed last week, our attention was naturally called to paragraphs 14 and 15, containing tabular analyses of the alleged rates of charge and nett receipt on the several kinds of traffic on the London and North-Western; in which a result is exhibited of as much as 801 per cent. profit on parcel business. This way of stating the nett receipt from different sources, is a very questionable process in railway statistics, and open to variations so extreme,-according to the principles on which the quota due to each item is estimated,-that we should fear to adopt the result with confidence as the basis of practice, until the method by which it is brought out had first been declared and substantiated. It is a way, we shall also remark, by no means without peril to some very grave interests, unless the method of the process be guarded with great strictness, and very full consideration. In the transactions between railways and the Government, as well as in the attempts of the independent advocates of coercion, the utmost pains have always been devoted to bringing out hostile and unfair conclusions by this very method. It has been customary to take a single branch of the business; sum up its gross receipts; deduct from them the special charges only which immediately attach to it, casting aside all allowance for a share of those general expenses, without which the business could not exist; and, from the partial result thus obtained, bring out an apparent estimate of immense profits, or of trifling cost, as the object of the calculation may happen to require. Such was the process attempted to be followed by those who were foremost in calling upon railways to convey certain classes of passengers for next to nothing: such the method insisted upon by the Post-office, when attempting to settle a nominal charge for carrying mails. Those who have considered such questions, on behalf of the railway interests, the most wisely, have always repudiated this process as unjust and inaccurate. It has been strongly maintained that, the power of performing any class of duty being conditional on the existence of the whole machine as a working instrument, it cannot be allowable to confine an estimate of the results of any single branch of its work to the particulars immediately necessary for its performance, on a line already organized for various other kinds of work;-that a rateable share of the cost of this general organization is as much a part of the expenses of any one kind of traffic as is the special cost of the service employed in it; that, in short, any comparison on any other basis is purely arbitrary.

In any case, indeed, the fixing of a ratio of charge must partake of this character; and for purposes of information or comparison no statement of a per-centage can be admitted, until the elements of the calculation on which it is founded are first agreed upon. In the rate given by "H.C.", for example, for the parcel profits, the whole significance of the figures depends

† The second paper will be given next week.

Digitized by GOOGIC

knowledge whether the rate is arrived at by merely charging the parcel receipts with the cost of the parcel clerks, delivery carts, compensation for loss, stationery, &c., or whether it includes any proportion of the general expenses of the passenger trains, without the maintenance of which no parcel business could be conducted at all. And then, supposing these necessary data taken into account in some manner,-to what extent are they introduced, and on what principle apportioned? The various methods of treating these questions may include variations in result equal to half the per-centage quoted; and until we learn what method has been pursued, and find the principle followed out to be sufficient for a comprehensive estimate, the rate in such tables can be no more than the sign of an unknown quantity; on which to found any practical conclusion whatever would be "doubly hazardous."

These remarks, occasioned by a view of the tables in "H.C.'s" letter, are chiefly offered because of the high importance of the subject in the external transactions of the railway interest, and of the extreme risk of so treating it as to afford to assailants the very plea for making partial and unjust exactions, which they have ever been striving to draw from our party, by captions and one-sided inquiries. As far as "H. C.'s" case is concerned, the accuracy or error of the statement will not alter the gist of his argument; because no one can doubt the high value of parcel traffic, whether its profits are or are not so large as he makes them to be: and whatever they may be, railways can little afford to lose them, if they can be retained by any natural process whatever.

But the issue of statistics in this form from the railway body must always be a matter of great consequence in other respects, while there are parties lying in wait to take advantage of any partial view or incomplete estimate that may serve the purposes of imposition; and chiefly on this account we have thought it well to point out the precarious nature of such estimates; the variations to which they are liable; the necessity, for any demonstrative purpose, of describing the data taken for them; and above all, the importance of dealing in a way more than usually considerate and comprehensive with details, of the careless handling of which injurious advantages may be unjustly taken.

SYMPTOMS OF MINISTERIAL AMENDMENT.

We have already alluded to a passage, in a MINISTERIAL ARTICLE of this month's Edinburgh Review, as significant of some change in the temper of Government on the subject of interference with railways. The essay is evidently more than semi-official; its "speech bewraveth" its origin, by the starched form of the sentences, and that oracular glozing tone which is familiar to readers of State manifestos. The intimation it affords may fairly be read as something beyond the mere dictum of some obscure contributor.

In the single sentence which the reviewer devotes to this item, he names "the manage-ment of railways for passengers" as one of the probable topics of the coming session;" assumes that "some control by the State" will be deemed applicable to "these mighty engines of transport;" confesses that he can see "no strong reasons for so extensive an interference . as appears to have been at times contemplated by persons whose feelings have been powerfully affected by the details of some railway accident: (coolly leaving the official desire of meddling—the most active source of such "contemplations" - unnoticed;) and further opines that the

concluding with a regret—which one cannot read without a smile—that "no person having a special and professional acquaintance with the subject has attempted to investigate the practical question of the proper extent of a Government control" of these matters.

This lamentation-at variance, by-the-bye, with the matter of fact-comes strangely enough from the organ of a Ministry that has repudiated all assistance from those who are specially familiar with such subjects, and that has hitherto chosen to maintain a permanent attitude of hostility towards all concerned in railway business, not very likely to invite the "professional" counsels of those whom the acts and declaration of Government have kept in a constant state of defensive resistance. This is not a way to get information on "practical questions"; and if the Administration is at last become sensible of the propriety of taking advice from those who know what they are consulted upon, it will be necessary to pursue a totally different method from any that has yet prevailed in official quarters. There is abundance of the best practical assistance to be obtained, if it be sought in a becoming manner, and for purposes which competent and honest people, acquainted with railway business, can properly take part in forwarding.

In the meanwhile, the paragraph shows clearly enough that some notion of the impossibility of pursuing, to the full length, the system of attack hitherto popular in Government offices, has begun to find its way to their recesses; and it may be regarded as a confession of past mistakes as distinct as ministerial organs are usually permitted to convey. There may be some reason, therefore, to hope that future measures will show that conviction has produced something more effectual than a few pompous sentences in a Review.

"AMENITY" WITNESSES IN SCOTCH LAND CASES.

Law reports from Edinburgh acquaint us with a new form of the extortions to which railway promoters have been from the beginning exposed at every step of the process of obtaining land for their useful works-useful to none more than the landowners themselves. In certain districts, it appears, a profitable trade has been attempted to be established in giving evidence on the "amenities" of estates to be intersected by railways. This is a business independent of the surveyor's valuation of land taken, or of material and positive damages. After the claim on these heads is disposed of, there step in some three or four of the neigh-bouring "gentry," who describe the pleasant-ness or "amenity" (as Scottish pedantry chooses to term it,) of the estate, in its virgin condition, estimate the effect of the proposed works as a matter of taste, and by their testimony swell the claim for compensation. Having done this,—for which one might think the "compensated" landowner would be bound to pay them, were any pay due for such dilettante business,-the "gentlemen" proceed to make a charge for their services - some "three or four guineas per day, besides expenses of travelling and maintenance;" and this charge has been claimed from the company, in cases where, as usual, the Directors, on taking land by arbitration, have been required to pay "all the expenses incident thereto." This lucrative system, however, has been lately somewhat discouraged by the decision of the Lord Chief Justice on a demand of the kind against the Caledonian Railway, in a case in Dumfriesshire. His Lordship, after stating that in "valuation cases a set of gentlemen, landed proprietors, and others in that

upon the terms used to obtain them; -upon the | quite as strong as that for railway inspection; | witnesses," claiming to be entitled to charge for their time as if professional-pointedly disallowed their claim for more than the ordinary witnesses' allowance. His description of some of this class of amateurs, whose judgment in matters of taste appears to be equalled by their appreciation of the value of money, was full of

dry, satirical humour:—
They go down to visit a country gentleman—sketch, fish, shoot, during the day—sing with the ladies at night-vote the railway a great nuisance, destroys the whole place-live there three dayswalk over the ground -see that the place will be ruined-attend to say so, and charge 4l. a day for time-they never having got one sixpence for all their time during their whole life, and whose whole object in life has been to consume time in that very way. It is plain any one may thus suddenly become an amenity witness, and with equal claims for time with these witnesses. If some country gentlemen disclaim this description, and try to represent themselves as professional, because they in particular lay themselves out as amenity witnesses-ready to attend whenever asked-they must then bring themselves down to the scale of a profession; and, seeing that they make nothing else by their time, I could not estimate them higher than mechanics—certainly not even as upper tradesmen.

After some further remarks of the same kind, the Lord Chief Justice concluded to the effect that if the claims of these gentry to an extra price for their opinions, on the score of their superior taste and social position, had anything in it, the payment must be made by those who induced them, for their own advantage, to bestow such precious gifts on the business of valuation. As far as the railway company were concerned, he would confirm the taxing master's allowance of one guinea only per day for these non-professional witnesses-professionals being rated at two. Even this, it may be thought, was somewhat too much to be paid, by the parties on whom these "gentlemen's" evidence is employed to raise the item of compensation. But such is the established manner of dealing in this business.

TRAFFIC RESULTS OF 1847.

Owing to various disturbing circumstances, it is difficult to make a just or perfectly satisfactory comparison between the traffic of the years 1846 and 1847. The mere comparison of the totals is fallacious. The mileage has increased 25 per cent., the receipt only 16 on the whole of the railways. It is not to be expected that many miles which were opened towards the very end of the year should instantly be very productive. Still the prospect appears satisfactory, and particularly so in those cases where a true parallel can be made. We will not pretend to estimate what precise effect the badness of the times may have had, although it is obviously a most influential circumstance - more or less affecting all lines. To be able to form a perfeetly just estimate, it is obvious that the amount of mileage ought to be the same in both years. But this happens to be the case in only one or two instances of the more important railways;in the Dablin and Kingstown, in the Lancashire and Yorkshire, and the Manchester, Sheffield and Lincolnshire. On the first-named line, the increase is 6 per cent.; on the second, 2 per cent.; whilst on the Manchester, Sheffield and Lincolnshire it is as much as 17 per cent.; a fact of peculiar congratulation to the shareholders. Next in the category of good results stands the Newcastle and Carlisle: the mileage increase has been 8 per cent., traffic 13 per cent. In the South-Eastern the mileage has increased 13, the receipts 17; Midland, mileage increase 16, traffic 15; Eastern Counties, mileage 25, traffic 29; Glasgow, Paisley and Ayr, mileage 21, traffic 16; Norfolk, mileage 38, traffic 33; Dublin and Drogheda, mileage 9, traffic 6; York and Newcastle, mileage case for a control of passenger steamboats is rank, had laid themselves out to be amenity 60, traffic 40; York and North Midland, mile-

Digitized by GOOGLE

age 42, traffic 24; London and North-Western, mileage 13, traffic 7; London and South Coast, mileage 36, traffic 16; London and South-Western, mileage 75, traffic 20; Great Western, mileage 12, traffic 3; Edinburgh and Glasgow, mileage 15, traffic 3.

In regard to all of these, however, it should

be remarked that the expense per mile of construction of the new lines, is generally much less than the old; so that though the revenues do not increase as the mileage, they may not increase more than the proportion of cost of construction. Our readers will find the detail in the following-

Comparative Results of Traffic, 1847-1846.

NATIONAL GAUGE AND NATIONAL DEFENCES.

During the past week attention has again been directed to the state of the national defences, by the publication of the entire version of the Duke of Wellington's letter to Sir J. Burgoyne on the subject. We offer to our readers, accordingly, the evidence both of Sir J. Burgoyne and Sir W. Gordon before the Railway Board and the views of the Commissioners on this important topic, as connected with the break of gauge question. The recommendations of these military gentlemen deserve especial attention at a time when the scheme of the North and South-

western junction line is being prepared for the ensuing parliamentary session.

Sir J. W. Gordon, G.C.B. G.C.H., Quartermaster-General.—6325. Do you imagine that in the event of this country being at war with France, railways could be advantageously used in the national defence? The effect of rapid communication by railway, speaking militarily, is this, that it enables you to do with a small army the work of a large one.

6326. Do you conceive that such utility would be materially diminished by breaks of the gauge in the line of route, involving a transfer from one set of carriages to another?—Certainly. The practical result would be the inconvenience of a ferry, because at every change you must disembark your troops, men, women and children, and baggage; and not only would time be lost, but there would be no small difficulty in knowing where to put them: you cannot cover large bodies of men without due notice, and I should think the very greatest inconvenience would

result from such a thing.
6328. Supposing, for instance, that at Slough there were to be a change of gauge from the broad to the narrow, and that troops passing from London to Bristol were subject to transfer, without going under cover, would that produce very great inconvenience -Very great delay, and consequent inconvenience. When troops are collected together, a great deal of detail is necessary with respect to their arms, their appointments, their ammunition and their baggage, and when that is carefully stowed away, it would be productive of very great inconvenience to change it from one line to another upon a different gauge.

6329. Or from one set of carriages to another at the same station —Yes; that is what I mean.
6330. It would involve the unpacking of the whole

of that part of the train?—It would.

6332. You have not found the removal of infantry by railway more expensive than ordinary marching! No; the removal of infantry is cheaper, because a railway journey which would occupy the time of nine hours, for example, from here to Manchester, would take seventeen marches; then the expense of the marching money put against the expense of the railway, makes the expense of the railway less. But a horse costs no more marching than he does in the stable; and therefore it is only the difference of the man; consequently the expense of moving cavalry by railway is very great.

· 6334. If these carriages were subjected to a break of gauge, would not the great object of such an arrangement be very much defeated !-- Very much. I can conceive no greater inconvenience than shifting

from one gauge to another.
6336. Will you have the goodness to look at this map; it is understood that there is to be a line of railway from Southampton, passing to Dorchester, and from thence on to the West of England. Now, according to the intentions of the different companies, the line from Dorchester to Yeovil is to be a broad-gauge line, and the line as settled from near Bridport would be a narrow-gauge line; so that there would be a break of gauge at Dorchester, a break of gauge near Bridport, and a break of gauge

near Exeter, if the line going to Cornwall should be a narrow-gauge line?-Nothing could be more in-convenient. The effect of those railways upon the coast is this, in a military sense;—at the breaking out of the last war, when the French were assembling large bodies of troops, with a view to come over, as they probably and certainly, I believe, would do again, you had large bodies of troops quartered at different parts of the coast, which was very inconvenient and very expensive. Now it would not be necessary to do that; you would probably concentrate them in some central place, and move them from theme by railway.

from thence by railway.
6337. You mean that they would not be concentrated upon any point of the coast?—No. At the breaking out of the last war you had a large division of the army in Essex; you had another in Norfolk; you had another in Norfolk; you had another in Northamptonshire, and so on northward: you had a very large one in Kent; you had another in Sussex; you had another in Hampshire; and you had one in Devonshire; all of which were separate and distinct corps, and could not be conveyed but at great expense of time and labour. Now, in the event of similar circumstances of hos-tility with France, it would be much better to concentrate all those troops in some central point, such a central point as might be thought best, and from thence they might be conveyed by railway to any part of the coast, where their services were most required, to and fro, with very great rapidity and

certainty.
6339. Of course it would be a great object that all the radii proceeding from that focus should be upon the same gauge, because otherwise the cross lines would produce great difficulty?—No doubt about it.

Major-Gen. Sir J. F. Burgoyne, K.C.B. R.E., Inspector-General of Fortifications. - 6346. You are probably of opinion that the facility of moving artillery, cavalry and infantry, by railway might be, in case of war, essentially conducive to the national defences?—No doubt of it; of very great importance. I look upon the whole safety of the kingdom to depend upon railways. The whole question of war depends upon the general who can concentrate his troops with the greatest rapidity, and in the greatest numbers, upon a given point of importance, and if you can get down your men from the North faster than the enemy can land theirs upon the coast, of course

you have every advantage.
6347. Under such circumstances, might not a break of gauge, involving a long detention at the point where it would occur, be productive of serious inconvenience, and perhaps disaster — I do not think it would be attended with so much disadvantage as it would be attended with so much disadvantage as is imagined. As far as regards the change of the troops themselves, that would be easily effected from one gauge to another. Of course, everything in the shape of baggage and heavy articles would require time; but there would be one very serious objection, which is, that it would require a double stock of carriages, and the carriages would always be a great difficulty. I imagine that you could find on any railway locomotives enough to move 100,000 men in a short regiod but you could not find carriages. The short period, but you could not find carriages. carriage must be constantly employed, from the mo-ment it has the soldier in it till the moment he comes to his place of destination.

6348. Supposing Bristol, or the district around it, were the point threatened, and that it was desirable to bring there all the troops that you had in the North, they would come by the narrow-gauge lines, and would concentrate at Rugby, bringing, perhaps, the whole stock of carriages from the North, and it would be impossible to find upon one line of railway, which would be the Great Western, the quantity of carriages necessary to carry them forward?—Precisely; that would be a very serious matter. It would be desirable, if possible, for Government to induce companies to have a large stock of carriages. would be desirable, it possible, for Government to induce companies to have a large stock of carriages, trucks and axles. Now, if there was an universal gauge, of course it would be very greatly facilitated, because every carriage would be universally applicable, but where there is a break of gauge it would require a double stock.

6350. Is it likely that cavalry would be carried in great numbers by railway?—I should think not. great numbers by railway — I should think not. There is another great facility that railways give, with regard to military operations, which is in carrying camp equipage. In case of war, camp equipage is of the greatest importance, and the carriage of it by ordinary means is very difficult, but by railway you would carry it with the troops very easily, and you would form an encampment very easily, in a very chest time (16) short time. Of course that would be affected by a change of gauge, having every article to shift from one to another. As regards the lines with respect to which a question was put to Sir Willoughby Gordon where there is a break, I should attach much less im-

Digitized by Google

portance to those on the South, that are parallel to the coast, than to those that come down from the North. All military operations are important in proportion as they come from some concentrated point, and diverge to the outer surface; the connecting links nearer to your central situation are the more important, and the further distant they are the less impor-

6352. In a military point of view, does it appear important that the railways should be connected in the neighbourhood of London; for instance the Birmingham and the Great Western!—I do not see that that is particularly necessary. I do not see why a break would be more inconvenient there than

anywhere else.

6353. For the defence of Plymouth, it is of greater importance in your view that there should be an uninterrupted line of the same gauge from London to Plymouth, than that there should be a coast line from Portsmouth to Plymouth !- I think much greater.

6354. Although there would probably be a large body of troops concentrated at Portsmouth !- Decidedly. I should expect all the reserves to be a long way in the rear, always having the facility of that rapid communication to various points. I would never trust in the front more than were necessary

for immediate defence.
6355. The way in which a coast line would be useful would be that, in the event of your sending a large reserve to Portsmouth, and not finding them necessary there, you might then take them along the coast line to Plymouth !- I would rather trust to

Extract from the Report of the Gauge Commissioners. — Conveyance of Troops. — There is another use of railways which we have deemed it necessary to consider; we allude to the transport of your Majesty's troops, with their military stores, &c., either in the ordinary movement of corps through the country, in time of peace, or in the more pressing and urgent case of their movements for the detence of the coast or of the interior of the country. have carefully weighed the important information given to us by the Quartermaster-General of your Majesty's Forces, as well as by the Inspector-General of Fortifications, both officers of great experience; and we deduce from their opinions, that although a break of gauge, on the line of route, would produce both delay and confusion, yet, that as in time of peace it is usually practicable to give notice of the intended movement of troops, the inconvenience of a break of gauge might be so reduced as not to be an evil of great importance; but in the event of operations for defensive objects against an enemy, the inconvenience would assume a serious character. It would appear that for the defence of the coast, the proper course would be to retain the great mass of troops in the interior of the country, to wait until the point selected by the enemy for his attack should be ascertained with certainty, and then to move upon that point such an overwhelming force as should be adequate to the emergency. It is obvious that the success of such a system of defence must depend upon the means of conveying the troops with great despatch, and without interruption on the journey. The troops should be carried with their equipments complete in all their details, and with their artillery and annunition; and it therefore appears indispensably necessary, in order to insure the requisite supply of carriages, when perhaps little or no notice can be previously given, that the whole should be conveyed in the same vehicles from the beginning to the end of the journey. The effect of a break of gauge might, in this view of the case, expose the country to serious danger.

Gossin.

"A proposition," says the Globe, "has been submitted to Government for funding the railways, with a view to the removal of one of the principal causes of the continued depression of trade." This would be a measure which, of course, could only be carried out with the consent of the parties interested; but as an experiment of this kind could only be tried on a first-rate line, it is not likely soon to come to pass. feasible scheme for relieving railway shareholders would be removing, or at least re-adjusting, the duties on transfers, by which means the difference in disposing of shares might be rendered equitable, and the bond pide business of the share-market increased. At any rate the transfer of fractions of consolidated stock under 1001, should be free of duty-this would at once encourage small investments and protect the public from many fraudulent projects.

Some three weeks ago we noticed the great benefits

which had resulted from the assumption of the

HUMBER FERRIES by the MANCHESTER, SHEFFIELD AND LINCOLNSHIRE. Our paragraph is reproduced, verbatim, to the London public by one of our railway contemporaries as a piece of original news—and by another quoted from a Yorkshire paper!

The connexion between RAILWAYS AND HARBOURS is on the increase. It seems to be officially stated that the Bristol and Exeter have agreed to purchase the GLASTONBURY CANAL AND HIGHERIDGE HARBOUR, in the prospect of being able to make this harbour commodious. Vessels of 500 or 600 tons will be brought up close to the railway. Steamboats for South Wales as well as for Ireland will be able, it

is said, to land at all states of the tide.

The Railway Board, in reply to the inquiries of Sir E. Walker and Sir J. Jervis, whether, consequent on the late accident at the Dee bridge on the Chester and Holyhead, it is intended to make any report on the conditions to be observed in the application of iron to railway structures, have replied, that "the Commissioners for inquiring into the conditions to be observed in the application of iron to railway structures are engaged in preparing experiments to enable them to arrive at satisfactory conclusions on the subject of their inquiry before making their report. With respect to the girder bridges on the Trent Valley, some of them are of similar construction, but of smaller dimensions, than the Dee bridge at Chester, and these have all been strengthened to the satisfaction of the inspecting officer of the Commissioners.

It is stated that the cost of the MECHANICS' INSTI-TUTE at WOLVERTON will be 3,000 l., and that the London and North-Western have liberally undertaken

to pay it.

The portion of the LEEDS AND THIRSK lying between the town of Thirsk and Ripon is just about to be opened for the conveyance of coal, corn and other merchandise.

It is expected that in about three weeks the Cale-monian will be opened from Carli-le to Edinburgh and Glasgow. The Government Inspector examined

the line last week.

A correspondent of the Morning Herald, signing himself a South-Western shareholder, has impugned the legality and character of the South-Western subscription deeds for the new lines west of Salisbury. He especially attacked Mr. Chaplin, the chairman, for the large amounts for which his name appeared. Mr. Chaplin thus answers :- "I have signed the subscription contracts relating to the new capital of the South-Western for no more than my rateable proporof old stock, and in truth, through accident, have taken rather less than my proportion." And again— I have also, as a director, signed the contracts of the Exeter, Yeovil and Dorchester for part of the subscription of the South-Western towards its capital; but in doing so I have abused no regulation of Parliament, inasmuch as the sum my colleagues and I have rendered ourselves liable for on the company's account has been really taken up by the South-Western proprietors for the very purpose of covering our subscription, and furnishing the means of paving it when the Act shall have passed. * I have also signed the Exeter, Yeovil and Dorchester contract for 200 shares I hold in my own right." This letter does not satisfy the South-Western shareholder, who reiterates his grievance that the deeds are not of a bond side character. On this point he says—"On re-ference to the resolutions passed at the general meeting of the South-Western in November last, I see that it was determined to offer to each shareholder one share of 16/. 13s. 4d. for every 50/. of stock possessed by him. Mr. Chaplin states that he has signed the contract only for his own, or indeed for rather less than his own rateable proportion of old capital. I have shown that he has signed for 95,916t, besides. other sums. Am I to understand that Mr. Chaplin holds thrice this amount, or 287.748L of old stock! I further observe that two other directors have signed this general subscription list each for 50,000l. Am I also to understand that each of them holds original stock to the amount of 150,000l! Nor, sir, is this all. These general subscription lists show that eight of the directors have signed for 370,000%, of new stock, besides the sums subscribed by them under indemnity from the company as signing at their request. Am I to understand that these eight gentlemen now hold in the company to the extent of 1,480,000L, viz., the 1,100,000l. of old, and 370,000l. of this new stock, or 185,000% each."—A Mr. Hoyse has also presented a complaint to the Railway Board on the same subject.

It is stated that upon asking for the production of tickets before departure at Easton station, it was found that in six trains the company would have been liable to a loss of 60%

The ISLE OF PURBECK line, it is said, is not to be brought forward until next session.

session, 129 are railway bills, and thus divided:-Pritt & Co., 44; Dorrington & Co., 19; Dyson & Co., 18; Dean & Co., 8; Graham & Co., 7; Websters, 7; Law, 6; Lang, 6; Gregory & Co., 3; Jones & Walmes-ley, 2; Bryden, 2; Dunloy, Toogood, Richardson & Co., Fearon, Bell, Nash, and Brown, 1 each.

The shareholders and others interested in the WISHEACH AND ST. IVES have lately presented Mr. G. G. Day with a gold cup and 500 sovereigns, in token of their gratitude for his labours in carrying

the bill through Parliament.

The NEWFORT AND ABERGAVENNY some weeks since entered into arrangements with the contractors by which the whole of the works are for the present suspended, and the demands upon the company will be limited to those arising out of existing engagements for the purchase of land and tram-roads, and the payment of the deposit on the purchase of the Rhymney line. The directors are in negotiation for an extension of the time for payment of the balance of the purchase-money for the Llanvihangel, Grosmont and Hereford tram-roads, and which they feel confident will be carried out; but until the purchases are completed, they will be unable to appropriate any part of the income from these sources amongst the proprietors. As the directors are taking steps to enforce payment of the arrears due upon the calls, these arrears, together with the funds in hand, will enable them to meet existing engagements without further calls upon the shareholders until the present pressure shall have passed over.

A sort of official contradiction is given to the

rumour that there was to be a call on the WEST RIDING UNION. The directors have no intention of making any demand upon the shareholders for a con-

siderable period.

The Electric Telegraph Company have commenced business on a large scale. Appropriately enough with the beginning of the year the central station in Moorgate-street, opposite the Bank of England, was publicly opened for the transmission of messages to all parts of England (Devonshire and Wales excepted), and in the course of the day the clerks were in communication with Liverpool, Edinburgh, Glasgow, Newcastle, Leeds, Southampton, Norwich, Yarmouth and various other parts. The price charged was 5l., being the amount demanded for sending a message to Liverpool containing about the same number of words as there is in this paragraph: the time occupied in telegraphing the same was about ten minutes. To send a special messenger would have cost at least 21., besides a delay of about

ten hours. Such is the value of time.

Mr. M. B. Sampson, of The Times [Cato?], who had been making a practice of riding in a first-class carriage on the South-Westers when he had paid only second-class fare, and had been at last found out, has been easily let off by the company. He attempted to extenuate his conduct on the ground that often he did not use his return ticket, and so adopted this practice by way of set off. On behalf of himself and a friend, equally in fault, he says:—"Admitting, however, that in point of law the company were justified in the proceedings they have commenced. we are not desirous of resisting their claim, and shall therefore be prepared to acquiesce in any de-cision the directors may come to, which will vindicate their principle and their right to act upon it as they have done."

The STOKER on the EASTERN COUNTIES, who met with an accident a few months since, and had both his legs amputated above the knee, has recently been engaged at the company's station at Stratford to work

the electric telegraph.

A "Railway Traveller," who suggests that the POINTSMAN who acted so well on the night of the 25th ult. on the LONDON AND NORTH-WESTERN should be rewarded, will be happy to hear that his sugges-tion had been anticipated by the directors. The

nan is to be promoted.

A "Protectionist" suggests that the policemen on railways should be organized as a militia force, to help in case Lord Eilesmere's fears of invasion are verified. He would give "them such a knowledge of fire-arms as to enable them, in the event of an inva-sion, to act as a guerilla force along the lines of railway, and as sentries placed at from 500 yards to half a mile apart along the line, having strong picquets of regular troops or militia at stations in support. I would propose arming them with short double carbines, black rifle belts, and rifle sword; the men at each station to be commanded by the senior clerk, who might rank as a captain of militia, and the sub-ordinates might be supplied from the other clerks, with rank accordingly. I would place the whole men of one line under the superintendence of a half-pay major of the line, whose duty it would be to inspect monthly the arms at each station, also the ammuni-Of the 234 private bills brought in for the ensuing tion (of which I would keep a limited supply, say

Digitized by GOGIC

twenty rounds per man), and report their condition We hope to the general commanding the district." We hope that the importance, if not absolute necessity, for a UNIFORMITY OF GAUGE, is not lost sight of, as being perhaps one of our very best safeguards should invasion be threatened. The following is told by the Essex Standard; it

suggests a capital scene for a pantomime. — "The Sweets of Office. — The chairman of a railway board of directors received, during the past week, by way of presents, among other items, 140 turkeys, 50 geese, and 56 hares. We understand most of the parcels were re-directed, and sent among his friends, and,

were re-directed, and sent among his friends, and, strange to say, in nine instances out of ten the presents were unintentionally returned."

The New Carriages for the Scottish Central now building by Mr. George Thomson and the Messrs. Kinross, Glasgow, have a covered seat for the guards. They are thus protected from the cutting inclemency of winter, rendered doubly severe by the rapid motion of the train. The carriages furnished with this accommodation are the brake carrishes for the same commodation are the brake carrishes. nished with this accommodation are the brake carriages, those upon which the guards usually sit, and in the seat there are windows to look both forward and backward; so that he can with comfort to himself, consult alike the safety of the passengers or the seif, consuit anke the safety of the passengers or the train. In addition to the above improvement, in the second and third-class carriages the space below the seats is not boarded up, so that passengers can extend their legs and sit with comfort; and the builders inform us that these carriages altogether are

of a very superior kind.

We are glad to notice that the GREAT SOUTHERN AND WESTERN (I.) have resolved to suspend all their works in any district where outrage or injury is offered to any of their contractors, gangers or

labourers.

The NEW POSTAL ARRANGEMENTS IN FRANCE Seem The NEW POSTAL ARRANGEMENTS IN FRANCE seem to be a little absurd. The Morning Herald thus describes them, in so far as they are connected with the railway:—"Although the night mail leaves an hour later than under the old system—namely, at 7 o'clock instead of 6, yet the time for posting letters for England remains the same. Letters must be put in at 5 o'clock precisely. If a letter be taken to the railway in the form of a parcel, it will only be received on the following conditions:—It must weigh a counte of pounds it must be wranged in oilcloth. a couple of pounds, it must be wrapped in oilcloth, and it must be delivered one hour and half before the departure of the train; so that should our correspondent be pressed for time or arrive a minute too late, his next chance would depend upon the activity with which he could buy a perigord pie, or a pate de foie gras, or some other weighty condiment, in which to envelop his lucubrations, light or heavy, as which to envelop his haddorations, fight or heavy, as the case might be. But as the chance against his arriving at the railway station an hour and a half before the departure of the train would still be against him, he should only make up his mind to carry his letter to Boulogne and comfort himself by eating the intended envelope." We may notice here that the French mind seems to be unable to comthat the French mind seems to be unable to com-prehend the justice of an uniform rate of postage, and the Ministry have avoided it in their Post-office

We are sorry to have to state that the number of shares in the St. Andrew's and Quebec reserved for this country have not been taken up; the Board therefore have issued notices that the deposit of those subscribers who had come forward will be, in terms of the prospectus, returned to the parties without any deduction, if they decline to continue shareholders. The Board, however, state that a deputation, headed by Admiral Owen, has just arrived, and that they anticipate further grants from the Government as well as from the Colonial Legislature. It would be a subject of regret that so promising a scheme should be suffered to fall to the ground for the want of a little public spirit.

The islanders of Trinidad, according to the papers

received this week, are extremely indignant at what they call "the shameless falsehood and daring charges" which they consider to have been conveyed in the allegations made at the meeting at the London Tavern that the colonists did not afford the co-operation which might have been expected of them, and they refer to the meeting held in the island a few days previously in proof of the feeling that is entertained. Still there is a reliance that the share list of the new company

must be promptly filled up on this side of the Atlantic.

At the usual monthly meeting of the Birkenhead Dock Commissioners, at Birkenhead, Mr. Mallaby occupied the chair. A communication was read from the Dock and Warehouse Company (who had been applied to for a portion of the money which they owe the trust, for the purpose of proceeding at once with the dock works). The reply to this demand was to the effect that they really had no who said he represented 9,000 shares—nearly half the obtaining the Act amounted to 8,127l. 7s. 1d., exclusive of 4,000l. paid to the West Lancashire, under the award of Messrs. Stephenson & Bidder. There was now in the bank 9,320l. 16s. 1d. To meet engage-

money. The propriety of commencing legal proceedings against the body was canvassed. The chairman, however, expressed his disinclination to such a measure, and to meet several immediate pressing demands on the commissioners, suggested the sale of a portion of the plant. The chairman thought that as the appointment of the new trustees had given an overwhelming influence to the parties who were responsible for the payment of the money, it would be better for the present commissioners to leave the question of legal proceedings till the power fell into the hands of those to whom he had referred. The matter was ultimately left to the discretion of the previously appointed committee.

The inauguration of the Marseilles and Avignon

is fixed for the 9th inst.

The Presse announces that the two propositions mentioned in our last Paris letter had been addressed to the Minister of Public Works for the concession of the Lyon and Avignon, the one by the Paris and Lyon, and the other by Messrs. C. Laffitte, Blount & Co. M. Jayr would, it was thought, immediately after the discussion on the address, apply to the Chamber for an authorization to concede that line directly to one of those companies, the Government undertaking to guarantee the shareholders an interest of 4 per cent.

The second general meeting of the shareholders of the AIX-LA-CHAPELLE AND DUSSELDORF was held at the latter place on the 30th ult. The Report de-clares that although numerous calls have not been paid up, yet, compared with the standing capital, they are not of sufficient importance to act prejudi-cially on the continuation of the line. Towards the end of the present year, 1848, the section from Dusseldorf to Gladbach will be probably completed, and the entire line at the end of 1849.

The Amsterdamische Courant states that Government have offered to the shareholders of the OVER-Yssel to extend the concession to two years longer. This offer, it is observed, is a superfluous proof of sympathy, for the shareholders have very emphatically declared that they will have nothing further to do with the concern, and have refused to make any further payments.

Reports of Meetings.

NORTHAMPTON AND BANBURY.

Jan. 6. - First Meeting, Westminster .- Mr. Bar-WELL in the chair.

The Report was submitted:

The Report was submitted:—
The directors have the satisfaction to announce that the application to Parliament in the last session, for an Act of Incorporation, was successful. They continue to consider the undertaking as one calculated to afford great public and local advantace, with a fair remuneration. A portion of the line at the Banbury end, of the length of 5½ miles, is granted to this company, in common with the Buckinghamshire, with whom the expense of construction will therefore be divided. The directors anticipate no difficulty in making equitable arrangements with the Buckinghamshire in respect of this portion of the line. Instructions have been given to the engineer to proceed in setting out the line. The directors propose that advantage should be taken of the provisions of the Act relating to railways, passed in the present sions of the Act relating to railways, passed in the present session, for obtaining an extension of time for purchasing land and completing works; and that the necessary applica-tion should be made to the Commissioners for that purpose. tion should be made to the Commissioners for that purpose. Mr. Walkinshaw, one of the directors appointed by the Act, having ceased to be a director, the remaining directors have, according to the provisions of the Act, appointed Mr. H. Newcombe in his stead.

The statement of accounts showed the receipts at

32,067t. 1s. 4d.; expenses 2,001t. 18s. 5d., including 1,500l. parliamentary expenses; balance 30,065l. 2s. 11d.

The Report was unanimously adopted.
Directors and auditors having been elected,

The CHAIRMAN congratulated the shareholders on the successful issue of their application, and assured them that he had not in the slightest degree altered the opinion he had originally entertained undertaking would prove remunerative. The expense of obtaining the Act had, as the statement of accounts showed them, been very inconsiderable, and it was his duty while stating this fact to observe that Mr. Carter, their solicitor, had conducted their business with ability and economy.

JAMAICA SOUTH MIDLAND JUNCTION.

Jan. 6. - Adjourned Meeting, London. - Mr. SHORTER in the chair.

The CHAIRMAN said the object of the meeting was to confirm a provisional agreement, previously passed, for the amalgamation with the Jamaica, and empowering the directors to apply to the Jamaica Legislature for their act.
Mr. SMITH seconded the motion.

shares of the company-who were unanimous in their

opinion against the motion.

The CHAIRMAN admitted that neither he nor the directors were desirous to see their motion carried; they merely submitted it as a matter of form.
The amendment was carried unanimously.

The amendment was carried unanimously.

Mr. SMITH. A director, stated, in reply to Mr.

SPACKMAN, that the directors would have in hand on
the 31st of January, when they proposed closing their
offices, 14,500L, after discharging all claims.

The CHAIRMAN referred to a letter from a Mr.

Smith in Januaica, dated the 22nd of May, stating
that there would be no further claims from the solary that there would be no further claims from the colony upon the funds.

Mr. SPACKMAN inquired what would be the cost of an Act to obtain the dissolution.

The CHAIRMAN said they would not like to try to obtain one; but Mr. SMITH said he thought the cost would be about 3001., whether they were successful or not.

Mr. RUDING considered that an Act to effect a dissolution would be unnecessary, inasmuch as the Act would expire if they did not carry out the powers it conferred upon them. There being no further liabilities he saw no further reason why they should not

at once return 10s. per share, retaining the remainder for any possible expense that might occur.

The CHAIMAN said they must be guided by legal advice. It was possible, if they did this, that a small section of the shareholders might file a bill in Chancery against them, and compel them to pay

the money into the court.

Mr. Ruding said Mr. Spackman had 9,000 proxies, he (Mr. Ruding) had 1,500, a gentleman by his side 2,000, and the directors themselves, he understood, held 6,000—nearly 18,000 shares in the aggregate.

Mr. Spackman explained that it was undoubtedly

in the power of any shareholder to take law proceedings. The shareholders could not dissolve the company; all they could do was to allow it to fall into abeyance, and expire in five years; and, therefore, he would suggest that a resolution should be passed at a meeting to be called, to empower the directors to lend the shareholders a certain sum upon their shares for five years, when the company would expire, retaining enough to meet any contingencies that might arise. This seemed to him an advisable course. The shareholders were much indebted to the directors for their attention.

The meeting was subsequently made special on the requisition of several shareholders, and after some discussion resolutions were agreed to, to the effect that the powers of the Act be at once suspended; that all calls should also be suspended; that the assets be returned to the shareholders — (it being left to the directors to consider whether they could give legal effect to the resolution, the chairman said the directors approved of the proposition); that the directors be authorized to make an applica-tion to the Jamaica Legislature, if they should deem such a course advisable, for the repeal of the Act, and that if there was any opposition, and the Legislature should not grant the repeal if applied for, that the directors be empowered to allow the company to expire in its natural course.

PORTBURY PIER, &c.

Jan. 6 .- Special Meeting, Bristol .- Mr. Alderman MOORE in the chair.

The CHAIRMAN entered into a statement of affairs which had been fully gone into at a meeting in August (see Rail. Chron. 1847, p. 851). He expressed his conviction that it would be unwise to attempt to proceed with the works, or to enforce the payment

Mr. Rumsey agreed with the chairman, that it would be better to abandon the company, which held out no prospect of a fair return to the shareholders,

and proposed a resolution to that purport.

It was ultimately suggested that it would be better to take no step, but to wait for the half-yearly meeting. A deputation was appointed to confer with the directors on the course which it would be best to pursue.

LIVERPOOL, CROSBY AND SOUTHPORT.

Jan. 1 .- First Meeting, Liverpool .- Mr. W. Blun-DELL in the chair.

The seal was affixed to the register of proprietors. In answer to Mr. Crostinwaite, Mr. J. C. Duncan, the secretary, stated that there were 10,718 shares registered, and 452 allotted shares not sent in.

Mr. G. Duscan, the solicitor, read the Report.
The company's Act of incorporation had received the Royal Assent the 2nd of July last. The expenses of obtaining the Act amounted to 8,1271. 7s. 1d., exclu-

ments for the purchase of land, it would be necessary to make a call of 2l. per share, payable in June next; and no further call would be necessary in the present year. From the distressed state of trade, the directors did not recommend the completion of the whole line at present, but they suggested that the part between Southport and Waterloo should be immediately commenced, as the works were easy, and much of the necessary land had been given. The directors had instructed Mr. Bidder, the engineer, to make a survey; and he estimated the cost of constructing this portion (123 miles in length) at 55,750t. There would be no difficulty in opening it by next. June. His estimates were made in November last. Since then the price of iron and labour had been materially reduced. Mr. Bidder concluded that from his experience in such undertakings and from the observations he had made, he was of opinion that a nett annual revenue of 10,000*l*, could be realized by this portion, and the directors wished authority to proceed with it. The consent of the shareholders to such a proposal could not now be asked, but a special meeting would be called for the purpose; and before such a step could be sanctioned the concurrence of twothirds of the proprietary would be necessary.

The statement of accounts showed the engineering expenses, including plans and attendance on parliaexpenses, including plans and attendance on pariamentary committees, at 1,836l.; law expenses and solicitor's bill, 4,44ll.; parliamentary agents, 769l.; witnesses' expenses, 626l. 9s.

Mr. F. Evans thought the parliamentary expenses,

seeing that the bill had been unopposed, were heavy.

Mr. Duncan, the secretary, explained, that although the opposition had been withdrawn at the last moment, it had been necessary to have all the evidence prepared.

Mr. Evans asked, who were the opponents?

Mr. Dungan said there were six petitions against the scheme. The East Lancashire and Mr. Scaris-brick were, however, the two chief opponents.

Mr. Chadwick then moved that the whole of the ten retiring directors, Messrs. W. Blundell, W. Nicol, H. Hornby, H. C. Chapman, T. S. Gladstone, R. Gladstone, W. Earle, J. Aikin, W. Potter and G. Holt, should be re-elected. He said he differed from Mr. Evans, and thought that, on the whole, the expenses were very moderate.

Mr. CROSTHWAITE seconded the motion, which was agreed to. In seconding the motion, Mr. Crosthwaite asked (without wishing to be invidious) if the directors held an entire interest in the concern?

Mr. Duncan (secretary) replied that 1,133 shares were held by them. With but two exceptions, each held at least 100.

Mr. Evans said he happened to hold his whole 100 shares still, to his great regret.

Mr. II. HORNBY thought he would have no cause to regret it by the end of the year.

Mr. Evans was, unfortunately, an honorary provisional director, who might come in for the costs, but not for the emoluments.

Mr. Duncan, solicitor, said that there was no remuneration at present to any directors.

Mr. Evans: But it will come by and by.

On the motion of Mr. Earle, Mr. G. Booth and

Mr. Duckworth were chosen auditors.

The secretary's salary was fixed at 300l. per annum.

The Chairman moved, and Mr. Nicol seconded, that the Report should be provisionally adopted.

Mr. Crossinwatte objected. He thought the proposal made to push the construction of a portion of the line at this time was unwise, and opposed that part of the Report which gave discretionary power to the directors at once to form contracts, &c. He himself held a large stake in the undertaking, having no less than 2,000 shares, and he was sure that he spoke the feeling of a majority of the proprietors.

Mr. CHADWICK thought that the opening of the portion of the line proposed would be so productive to their interests as to lead very shortly to the completion of the whole. The discretionary power which Mr. Crosthwaite opposed could not be exercised till of opinion that the short line between Southport and Waterloo would pay 10 per cent.; and the engineer, he had reason to believe, agreed with him. When legitimate undertakings were developed, the sooner they were completed the better. He would be glad to hear Mr. Bidder's opinion upon it. Mr. J. P. Bidder, the engineer, said that the idea

of completing the line first between Southport and Waterloo did not originate with himself; but when it was told to him that eight miles of the land there had been given, and that arrangements could be made for postponing payment for the remaining part of the land, and when he ascertained, as if by actual contract that the line including chairs and sleavers. had been given, and that arrangements could be made for postponing payment for the remaining part of the land, and when he ascertained, as if by actual contract, that the line, including chairs and sleepers, could be made for 55,000%, he thought that, with agreed to:—"Resolved, that the Report of the com-

Southpert at the one end, and the 300,000 inhabitants of Liverpool at the other, it could not be otherwise than one most profitable. Although the line would not first be completed to Liverpool, it would still be the best route from Manchester to Southport. He believed, indeed, that the particular portion referred to would yield more than the whole line when completed would do.

Mr. CROSTHWAITE asked, if it was not the case that Mr. Bidder's estimate of 55,000l. did not include

stations

Mr. BIDDER said the line would be a single one, and the stations required need be but of a temporary description. Probably 2,000*l*, at each end would be sufficient. In regard to the land not given, its payment, he had been told, might be postponed, in almost every instance, for three years.

Mr. Duncan stated that the cost of the four miles

of land in question would be under 10,0001.

Mr. NICOL said the cost of iron and of labour would be 5,000% less now than when the estimate was made. He referred to the vast population within a short distance of the line.

Mr. Evans did not like the idea of going upon cre-If it happened that the railway did not answer, who was to be answerable-who were the creditors to nounce upon?

Mr. DUNCAN, solicitor, said that now that the Act of incorporation had been obtained, creditors could only come upon the company as such.

After some further conversation the Report was

Mr. CROSTHWAITE withdrew his opposition, at least till the next meeting; and the Report was unanimously received.

LONDON AND SOUTH-WESTERN .-- A litigant can always find a lawyer's opinion to back him, however unsound his case may be. At the last meeting of the inhabitants of Lambeth, an opinion was produced by the committee of those opposing the erection of the arch across Church-street. Some of those present seemed to be ashaved of their proceedings being published, for it was moved that Mr. Tite, the architect, on behalf of the company, and the reporters for the public press, should be requested to retire, and none but ratepayers remain in the room; both resolutions were, however negatived.—Mr. Rogers read the report of the committee, and the opinion of Mr. Willes, the barrister, who had been consulted on the subject; which documents are of great length. The committee were of opinion that the bridge now constructing across the road in Church-street would prove a great nuisance to the neighbourhood, and in all probability cause many and most serious accidents, and that it was the duty of the surveyors of the highways to take steps to remove the present structure. Mr. Willes in steps to remove the present structure. his opinion states that he thought the inhabitants had a remedy at law, and in a similar case, where an injunction had been moved for before the Vice-Chancellor against the same company, to restrain them from building a bridge across a turnpike-road, his Honour refused to interfere, and told the parties their remedy was at common law. Mr. Willes was of opinion that the erection of a pier in the middle of the road was illegal, and that the company might be indicted as for a nuisance.—Mr. Grady wished to know the feelings of the directors.—Mr. Tite said, as the representative of the directors, he could assure the inhabitants that those gentlemen were most anxious to do all in their power to meet the wishes and attend to the recommendations and suggestions of the inhabitants; but they thought it rather hard, after expending upwards of 6,000l. in the erection of a bridge across Church-street, that they should now be subjected to an expensive litigation in a court of law or equity; and not only that, but probably the works might be suspended for a length of time. The company were willing to act most liberally towards the parishioners. What had been done had been done with the consent of the surveyors, and he trusted they would not get the surveyors, and he trusted they would not get up any expensive litigation.—A Parishioner said it appeared from the opinion of Mr. Willes that the surveyors were not legally justified in giving their consent to the erection of a bridge in its present form without the approbation of the inhabitants in vestry assembled.—Mr. Hicks: After what has passed, does the company intend to proceed with the bridge!—Mr. Tite: Most certainly we do; and it is now almost finished. The company had not, nor did not intend to act niggardly towards the inhabitants; they had contributed liberally towards the different charities contributed liberally towards the different charities

mittee be received, and entered on the minutes; and it is the opinion of this vestry that it would be inexpedient to proceed any further on the subject."— This resolution put an end to all further disputes respecting the erection of a bridge across Church-street."—Mr. Tite, on behalf of the company, felt much satisfied that the subject had been thus amicably settled.

STOCK FLUCTUATIONS .- On the 3rd the Times appended to its money article the following table of the fluctuations of consols, exchequer-bills, and the principal railway shares during the past year. It will be observed that the extreme range of consols has been 15; per cent., but that the decline they now show from the price on the 1st of January 1847 (the highest price of the year), is not more than 85 per cent. In railway shares the downward range has been far greater, and the subsequent re-action much less, than in consols:-

RAILWAYS OPENED IN 1847 .- The following is a list of the railways opened in 1837:—Aberdeen, 20 miles; Birkenhead, Lancashire and Cheshire, 3: Calemiles; Birkenhead, Lancashire and Cheshire, §; Caledonian, 40; Cockermouth and Workington, 8½; Dublin and Drogheda (Howth branch), 3½; Dundee, Perth and Aberdeen Junction, 20½; Edinburgh and Glasgow, 5; Edinburgh and Northern, 29; Eastern Counties, 26½; Eastern Union, 34; Glasgow and Ayr, 13; Great Southern and Western, 56½; Great Western, 35; Kendal and Windermere, 10½; Lancashire and Yorkshire, 14; Londonderry and Enniskillen, 15; London and North-Western, 50; London, Brighton and South Coast, 39½; London and South-Western, 83; Manchester, Sheffield and Lincolnshire, 2; Midland, 37; Midland Great Western (1.), 36; Norfolk, 23; Shrew-bury and Chester, 6; South-Eastern, 15; South Pevon, 8½; Taff Vale (Aberdare line), 10; Whitehaven Junction, 12; York, Newcastle and Berwick, 72; and the York and North Midland, 48. The aggregate length of new railway opened for traffic in the United Kingdom during the year 1817 appears to be 750 miles—of during the year 1817 appears to be 750 miles-of which 516 are in England, 127 in Scotland, and 108 in Ireland. It is estimated that there are now about 150 miles of railway, independent of the above, nearly ready to open for traffic. These companies have called up about 22,230,000l. during the year 1847.

EXTENT OF AMERICAN LINES.—By a careful enumeration of the railways in the New England States, it is ascertained, says the New York Express, that there were 2,420 miles fluished or in progress of construction, November 1847. Most of the unfinished roads, it is presumed, will be completed by the end of 1848. The following is about the median of miles of 1848. The following is about the number of miles of railroad in each of the above six States, containing altogether an area of 61,784 square miles:

Besides the above, there are several hundred miles of railroad projected, for which charters have been obtained. The capital already invested in railroads in the New England States is supposed to amount to 50 (100 100 de

next, on an snares on which the Paid.

The Certificates bearing the seal of the Company must be exhibited at the Company's Offices, in Brussels or London, seven clear days previous to the delivery of the Interest Warrants.

By order of the Board,

THOMAS COXHEAD, Secretary.

1, Royal Exchange-buildings, London, Dec. 31, 1847.

CENTRAL OF FRANCE RAILWAY

COMPANY.

Messrs. C. DEVAUX, & Co. beg to inform the shareholders of
the above Railway Company, that the SIXTH CALL of 50,
(ii. 188, 62), per share from the 10th of February next, and that 5
per cold, be an unit be chared from that day on such shares
month. In the control of the 10th of the 25th of the same
month.

onth. London, Jan. 12, 1848.

CHRON

The Directors of the above Company have the honour to inform the Shareholders that a CALL of 75f, per share will be payable between the 20th of March and 6th of April next, less 5f, interest up to the first of March 1818. Interest at the rate of 3 per cent, per annum will be allowed up to the 1st of April on all Calls paid previous to that period, in London at Messrs. C. Devaux & Co. Paris, Jan. 8, 1818.

PARIS AND LYONS RAILWAY.

DEPOSIT OF SHARES.

The Board of Directors beg to inform the Shareholders that according with the Resolution of December 18 last, Certificates of shares may be deposited in the Offices of the Company on and after the 18th inst. They will then receive a nominative certificate of Deposit with the numbers of their shares inscribed therein signed by two Directors and stamped with the Company's stamp.

NOTICE IS THEREBY GIVEN to such Shareholders who have not withdrawn their definitive certificates in exchange for those deposited for the alyment of the Third Call, that they are requested to do so before the 31st inst. After that delay the certificates which are not withdrawn will be deposited in the Offices of the Company, and subject to the expenses of a regular deposit. Paris, Jac 4, 438.

Apply in London to Messrs. C. Devaux & Co., 62, King William-street.

DEMERARA RAILWAY COMPANY.CALL of 21.10s. per Share, making 71.10s. per Share called up.

called up.

NOTICE IS HEREBY GIVEN, that the Directors of the above Company have this day made a CALL of 2L 10s, on each and every Share in this undertaking, which the Proprietors are hereby required to pay on or before the 31st day of the present month, to Messrs, Prescott, Grote & Co., 62, Threadne-diestrect.

M. MCHLERY, Chairman.

HENRY HILL, Secretary.

SATURDAY, JANUARY 15.

VIEW OF THE POLICY SUITABLE FOR 1848.

We have elsewhere this week treated of one branch of the subjects which may be expected to excite a more than usual degree of interest at the forthcoming GENERAL MEETINGS. The dividend obtained from the working lines for last year, will not, however, be a matter of more anxiety to proprietors at large, than the course to be followed in the present one, with respect to new undertakings, and to works in progress but still incomplete.

If it be important that proprietors on this occasion should bestow more attention than heretofore on their revenue accounts, it is of still more consequence that they should form just opinions with respect to further enlargements of the system; and that full use should be made of the approaching opportunity in order to their being thoroughly stated and discussed. The several Boards may be expected to devote particular attention in their Reports to the resolutions to be taken on this head; and with a view to ensure to the subject the serious consideration it deserves, we shall venture to lay down a general principle that, as appears to us, ought to preside over all discussions of this kind at so critical a period for the railway interest.

We may briefly and plainly describe this principle as a retarding one. Hitherto the impulse of railway councils has always been in a forward direction; of late years it has urged on the business with a rapidity continually increasing; until at the present moment the whole body has been run almost out of breath. It is now time, we apprehend, to pause and recruit a little, before any further efforts are made to renew this career, if the health of the interest is to be preserved. In order to effectual progress hereafter, it will be desirable now to remain as stationary as possible; to complete what has been begun already; to concentrate what has been too widely scattered in the haste of late years; to reconcile differences, and avoid needless aggressions; to bring, as far as may be, the obligations incurred into a convenient proportion with the means of those who have to bear

This we believe to be the only sound policy. It could have hardly been accused, with any justice, of over-caution, had our condition at the close of 1847 been a normal one, instead of being, as it is, unusually disturbed and weakened. When we cast an eye over the works now in hand, the engagements already assumed by all the chief members of the railway body, it must appear that, in any case, they would have plenty to do for some time without attempting more; and that whatever it might be expedient to attempt hereafter, would in every way be better deferred until they should have completed what is now in hand. In the present s. 'ate of our finances, and in sight of the effect w, hich scarcity of money and other causes have ha I upon railway property, and railway pro-pric tors also, this view, we think, must become an i, mperative one; as well for the present relief as for that future progress of the system which we an ticipate and desire.

For present relief, the demand is justly pressing. A decline has taken place in the value of railway stock, during the last twelve months, to an amount which cannot be much less than fifty millions sterling. The extreme pressure that has been forcing it down, and which has rendered it impossible at times to dispose of it at all, at whatever loss, may for the moment be relaxed; but so long as these obligations continue to increase, and until some definite and ce, tain term shall for the present be put to their extension, no considerable re-

vival can be looked for. now suffering from the depression is far too large to render it safe to disregard this view of the subject; and it is perfectly clear to us, that, before any question can be properly entertained as to the feasibility or ultimate usefulness of this or that piece of new work, there must be heard the previous questions,-What means have we at present to bestow on any new work whatever? and what sacrifices will its prosecution, in times like these, entail upon us? How these questions must now be answered, if truly answered, there can be little doubt; and we think it will not be denied that they are really the first that ought to be settled in any determination of the policy suited to the present juncture. The future welfare and healthy growth of the

system is not less concerned in the same decision. Railway enterprize has already lost no small part of the prestige formerly attached to it : and it is easy to foresee how this may be still further diminished by another year's display of a dis-ordered and overburdened condition. This, we beg leave to remark, is no trifling consideration in a country where prejudices take deep root, especially amongst the very class of people whose means have hitherto formed the solid basis of railway capital. But this will not be the only risk of doing anything likely to protract the embarrassments, from which it should be our first business to get free as speedily as possible. Their continuance will afford, to the invaders of the system from without, dangerous opportunities of permanently injuring or confining it, which will most certainly be taken advantage of; and the effects of which may be past recall when the time for an easy and prosperous advance shall again present itself. By grasping at things beyond safe reach at present, we may fatally spoil our hopes of those which would be readily attainable hereafter.

Nor is this external risk the only objection against pushing on too fast amidst temporary embarrassments. The system is in great danger

The amount of capital depression is far too disregard this view of feetly clear to us, that, e properly entertained altimate usefulness of work, there must be thous,—What means town any new work town any new work tifices will its prosecutatial upon us? How be answered, if truly ittle doubt; and we that they are really led in any determina—in which this character must inevitably suffer.

of suffering internally by the methods that will be requisite to force an advance under various difficulties. These who will not submit to be checked by present necessities will always have to submit to hard conditions;—to give up many essentials; to purchase immediate results, in short, at the cost of the future. This alone would be sufficient to make such efforts highly questionable in the actual state of the railway system. It has hitherto maintained the character of a spirited, but still thoroughly sound, class of enterprize: it could hardly receive a deeper wound than must be given to it by falling into the region of shifts and desperate expedients—in which this character must inevitably suffer.

This view of the requirements of the time, both for the immediate convenience of proprietors and for the ultimate stability and advance of the business they are concerned in, we believe will be found entitled to precede all others in determining the policy of the year. It will be seen to exclude many questions of detail; for which, we apprehend, so little room is left at present that it would be superfluous to go into them, where the decisive sentence is already issued, before these can come under discussion, by something very like commanding necessity. We commend it to the deliberate consideration both of directors and proprietors, in anticipation of the approaching meetings.

PRACTICAL SUGGESTIONS FOR INCREASING THE PARCEL TRAFFIC ON RAILWAYS, &c. &c.

[Continued from p. 4.]

17. The next inquiry is into the nature of the service which the railways afford to the public in return for this profit of 7½ per cent., the charges to the public, and the principles, if any, which appear to determine and regulate those charges.

The following table exhibits the rates, the weight and the distances in the transit of parcels which are or were recently allowed by several of the most important railways:—

18. TABLE showing the Charges and Allowances for Weight made by some of the largest Railway Companies for the Carriage of small Parcels.

all principle there is at present regulating the charges for small parcels on railways. There is disagreement as respects the rate, limit of weight, and the allowance of distance. All, however, agree in avoiding the adoption of that minimum charge per pound, which is fixed after a certain point. The lowest, or commencing charge of the Eastern Counties and York and North Midland is 6d.; the London and North-Western and South-Western is 8d.; the Great Western is 9d. The London and North-Western take 16 lb. 40 miles for 8d.; the South-Western take 28 lb. 30 miles for 8d.; the Great Western take 12 lb. 36 miles for 9d.

20. The London and North-Western disregard any distance under 40 miles, or between 40 and 80 miles; the Eastern Counties disregard all distance under 30 miles; the Great Western under 35 miles; the South-Western under 31 miles; the York and North Midland under 50 miles; but each and all fix a uniform rate by WEIGHT after a certain starting point.

21. The nearest approximation to a principle of charge seems to resolve itself into an average rate of about ½d. per pound for 40 or 50 miles after a certain fixed maximum weight is attained; but all the railways shrink from applying their rates at a low point, and the reason undoubtedly consists in the excessive charges incurred in the receipt and delivery, and in the great amount of risk and responsibility which the present state of the law fixes on railways.

22. It must not be forgotten that this charge of \$d. per pound for 50 miles, includes not only carriage on the railway but the far more costly items of the receipt and delivery of the parcel. and that too in many cases by agencies independent of the railway, such as coaches and small carriers. What proportion of parcels have to bear the cost of an independent agency, for receipt and delivery, it is not very easy to determine accurately, and not very important to

23. It is very difficult to ascertain the cost of this agency precisely, which varies from 2d. to 3d. and 4d. each parcel for delivery, without regard to the weight or size of the parcel. Thus, I believe, the London and North-Western pay to the agents, who take 2d. for "booking," at least in London, nothing for receipt, but 4d. for the delivery of each parcel within the three-mile circle of St. Martin's-le-Grand; and 3d. in Birmingham. In small towns and other places within certain moderate distances of the stations, the receipt and delivery are managed by the railway itself and its own porters.

24. These charges, calculated at the maximum weight which they cover, are certainly very low; but, low as they are, they cannot successfully compete with those of the Postoffice or the carriers, owing to the mode in which they are assessed.

25. No one, however, can reasonably contend that the charge already established, say at the rate of ½d. per pound for 50 miles, is not quite as low as is necessary for the public, and quite as high as is necessary for the railways, seeing that it yields a profit of 80 per cent., after paying all expenses. But the question arises, is there any rationale for disregarding all weight under 16lb. or 12 lb.? I can discover none, except that the risk of loss makes it the interest of the railways positively to discourage small parcels; but this is the consequence of the state of the law, which certainly wants modification. The present system undoubtedly causes small parcels to pass through the Post-office, through the hands of carriers and through private hands. Small parcels are sent from London in many thousands to country booksellers every month indirectly through the

19. This table shows what a total absence of large publishing houses, rather than directly ample allowance for the cost of the railway exthrough the agency of the railways. This system of evasion is practised to an enormous extent. Every one in a provincial town who has an account with the bookseller of the town, tells his London correspondent to send his parcel to Messrs. Longmans and Whittakers with 2d. on "magazine"day, and the parcel is thus sent to the country bookseller with his monthly or bi-monthly parcel of books. Anomalous as it seems, I know that the railways do not object to the booksellers' parcels. They prefer bulk, because the risk and great charges for delivery are avoided. Then there are certain parties in London and the large towns who systematically collect small parcels and send them in bulk. The following is a copy of the bill of one of these agents, who drives a flourishing illicit trade in most of the great towns :-

General Parcel Booking Office, - Parcels forwarded from this office, by to all the principal cities and towns in England, every evening, by luggage or mail trains, at the following prices, which, upon comparing them with any other tariff, will be seen to be considerably lower than anything ever yet attempted.

The railways have it in their power to defeat all this, and get great popularity and profit in doing so.

26. It may be at once admitted that the charge by the railways of only $\frac{1}{2}d$, for a parcel of a single pound would not be sufficiently remunerative; but granting this, there is surely no reason for making the charge at once always as high as 6d., and generally much higher. If smuggling can with profit take a parcel for 6d. to Coventry by means of the railway, why should not the railway do it?

27. The four great elements of cost in the transit of railway parcels are receipt, carriage, delivery, and risk. I will endeavour to determine what these are :- First, as respects carriage; an analysis of the London and Birmingham accounts before mentioned for six months in 1845 shows that for parcels per ton per mile, the receipts were 18.166d.; charges, 3.566d.; nett receipts, 14.600d.

28. Thus we see that the cost per ton per mile for maintenance of way, locomotive, police, coaching and merchandise, coach and truck repairs, general charges, mileage duty, depreciation, rates and taxes, and delivery, and, in fact, for all charges whatever in the gross, amounts in the whole to 3.566d., or about 31d. per mile, but say 4d., to take a round number; 4d. per ton per mile is at the rate of 0.0017d. per pound per mile, so that the cost per pound to take it from London to Birmingham, 112 miles, and there deliver it, is just at the rate of 0.2d., or less than a farthing, including all charges whatever.

29. This calculation is based upon the gross weight and gross receipts from parcels; but as 0.2d. per pound pay all these expenses in the gross, à fortiori, that sum may be taken as an

penses proper only, EXCLUSIVE OF RECEIPT AND DELIVERY. The cost of carriage, meaning locomotion only, per pound is the same to the railway, whether the pounds be separate pounds or several in one parcel. We will therefore assume 0.2d. as ample payment for the carriage only of a pound for 112 miles.

30. Now what shall we add for receipt and delivery? What is the cost to the railway at present? Nothing for receipt, but 3d. for delivery in Birmingham and 4d. in London. In small places the delivery is executed by the porters of the railway, and does not become an extraneous cost. Most probably the average cost of receipt and delivery, taking all parcels whatever, is not above 3d. per parcel. And this sum, if the number of parcels were increased,

might certainly be reduced.

31. The present charge of 3d, for delivery in Birmingham, and 4d. in London, is a high charge, and one which doubtless stands in the way of much improvement in the mode of assessment. If the Post-office, besides carrying, can receive and deliver letters for 1d. with great profit, as it does, it is fair to ask another agency to do the latter services only for parcels at 2d. The weight of the parcel within certain reasonable limits does not affect the cost of receipt and delivery. Newspaper vending proves how cheap agency may be. The *Times* is actually fetched six, eight, ten miles, and then conveyed and delivered at subscribers' houses for 1d., the vendor taking also the risk of payment of the other 4d. The Daily News gives the vendor little more than 2d. for the same trouble. With systematic agency, 2d. would be an ample remuneration for the receipt and delivery, including risk, of any parcel under 14lb. weight within the three-mile circle of St. Martin's-le-Grand in the metropolis, and certain limits in the large towns. If the metropolitan railways would combine to deliver parcels, it might be done with profit at this sum; and we shall come to this at

32. The cost on a parcel a pound weight from London to Birmingham would therefore stand thus-

Receipt and delivery (including cost

What would be a proper charge to the public? If we say 3d., the railway would get more than 0.8d. clear profit; but it must be quite obvious that it would get this profit upon a much larger amount of business than it now does, and therefore the business would be so much the more remuncrative. Besides, in those cases where there was no outgoing for delivery, the railway would get the full penny charged for it. To begin the scale of charge at one pound, and fix a charge of 3d., or say 4d. for it, between London and Birmingham, would be an immense boon to the public.

33. The charge being so low, it would b 3 quite unnecessary to have any proportionate r eduction of charge for the intermediate distant es between London and Birmingham. No proj ortionate charge would therefore have to be m ade. Three or four pence (take 4d. if you ple ase) would be the charge for the transmission of a parcel of one pound in weight from Lon don to Birmingham, and any place short of B' .rmingham. Hereafter the proper charges for sub-sequent weights will be determined.

34. By the adoption of this charge, the rail-way might at once obtain every pare el above a quarter of a pound that now passes through the Post-office, other arrangements bei ag suitable.

(To be continued.)

all are completed there are innumerable situations of

trust and labour which before had no existence, and which they offer to the honest, the intelligent and

the industrious, while it is certain that their main-

tenance and repair will always afford employment to many. I say nothing of the additional demand for

labour which they indirectly, yet more permanently, cause in iron and coal mines, in lime and stone quarries, in draining and woodcutting. But even granting

that this can never absorb all those employed in their

construction, there are the colonies and foreign countries, not so thickly populated, in which the em-

ployment of the English navigator will be matter, not only of choice, but of necessity. This would be indeed to emigrate, but it would be to do so with equal profit

to the settler and those among whom he comes, which is, alas! but seldom the case at present. What was the second evil under which I said the country had laboured!— The too great competition in trade.— 'True, and the only remedy then suggested to this

cvil, caused by a superabundance of money, was a more cautious trading, a reduction of produce, and the ceasing to invest capital in branches already

Railway Literature.

Mr. Tuck has presented the public with another

edition (the ninth) of this compendious and use-

ful manual; and in the preface he exposes the

fallacies of the anti-railway cry, and thus argues

in behalf of the service for whose especial use

"Instead of railways being the cause of national distress, they are an element of prosperity, a source of national wealth, a means of existence to tens of thousands of the people. By the population returns, it is shown that we increase at the rate of 400,000 a

year, or upwards of 1,000 a day, and where can this increasing and superabundant population find subsistence except in railway operations! The land does not employ one more labourer than it did fifty years

ago; and every branch of manufacture, trade or commerce is already greatly overstocked. In railway occupation only can this additional quantity of labourers be absorbed, which has opened a fresh field of enterprize, a new source of wealth, not in distant inhospitable regions, but within our own counterprize.

try, where every shilling expended returns back to the trader, in exchange for food and clothing. By a return ordered by the House of Commons to be print-

ed, it appears that the number of persons employed on railways open for traffic in the spring of the pre-sent year was 47.218, and on railways in course of construction 256,569, making a total of 303,727. If

this be multiplied by five-the average number of a

family—we have the enormous quantity of 1,518,635 persons subsisting by railway employment! If to these be added all those engaged in the construction of locomotives, carriages, rails and articles required for the carrying stock and working expenses of railways, we shall find a larger number of persons em-

ployed on railways than is to be found in the manufacture of the textile fabrics of cotton, woollen and silk, or in the great staple of iron and hardware. By

a parliamentary return, it appears that 43,790,983 persons travelled on 63 railways in the course of a year

population and excess in the number of labourers to the labour provided for them. It is obvious that railways, winning their way as they do into the most remote rural districts, in their progress from one town to another, o'er "high wild hills and rough uneven ways," must cure this evil; and it is notorious that they have done so. Toward the total pauper expenditure thus materially diminished in so many points whence is derived so recognificant according recome traced on as rankays in the course of a year ending June 1816. Since that period the traffic has greatly increased on the old lines, and many branches have been opened. The opponents of the railway system have to show how this busy intercourse can be carried on except by railway locomotion. They

points, whence is derived so magnificent a contribu-

tion as from the railways themselves! What rich or

by any of the old modes, or by canal, stage-coach, broad-wheel waggon, or pack-horse united." barren acre, what south bank or marshy moor, pays

great a proportionate contribution to the rates as

do the few acres which in any one parish are marked with iron stripes instead of ridge and furrow?"

The disadvantages under which English railway enterprize labours, compared with foreign lines, are thus discussed :-

"I reckon much, too, on a gradual diminution of the disadvantages under which English railways labour." How would you diminish them? 'Let us first inquire what they are. The enormous expense of obtaining their concession, and the absence of any known principle by which it is regulated, so that after money has been wasted to an enormous extent. chance, favour or prejudice may defeat the most worthy claimant, and crown with ruinous honours a weaker competitor. Second, the constant apprehen-sion and occasional infliction of direct competition, after a lengthened examination should have implied those exclusive rights which can alone render con-cession a boon. As no committee would think of conceding at one time, and out of the same group, two rival lines, so should no subsequent and indepen dent tribunal inflict that rivalry upon mere abstract principles, which the original inquiry was intended to avoid. No railway should be conceded that does not afford what is apparently the last line with reference to all the mixed questions which must influence the decision; but once granted, the implied compact ought to be scrupulously kept.' 'Truly,' I remarked, 'the Legislature does not take means to insure the the Legislature does not take means to insure the exclusive or even preferential investment of capital in our own railways. 'Just the contrary,' said Sir George; 'it destroys or neutralizes the advantages we actually enjoy, which is not small. Our iron is far cheaper; our labour, though nominally more highly paid, is so much more effective, that our navigators are welcomed in all foreign railway enterprizes; our travellers are able to pay higher fares, and our inter-change of merchandise and materials is beyond compare greater than that of any other country. In what, then, do the advantages of foreign railways const? 'I never could make out.' 'In their freedom from

tions from their profits; and in the absence of that restless desire of public interference, for assumed public benefit, and with the professed intention of said that the construction of railways cannot last for ever! This is true as to England, though even when diminishing their supposed excess of profits.'—'You speak of a supposed excess of profits; what do you ay to a regular 10 per cent. and occasional bonusses? The bonus, if you mean the creation of new shares, has already, in most cases, for the present, ate into the 10 per cent., though it is probable that on the better lines it may again be realized; but even this, what is it to the original holder but a fair compensa tion for the loss of interest, fluctuation in value, and uncertainty of prospect to which, during its con-struction, his undertaking was originally exposed? To the purchaser at a later period who does not incur those risks, the consequent rise in price gives even less interest than almost any other mercantile adventure, of which the profits are involved in risk and uncertainty. To diminish then to the original holder, or to such a purchaser, his present moderate returns for interest forgone, risk incurred, or capital invested. upon any abstract idea of checking excessive profits, is to the highest degree ridiculous and unfair."

We have next a colloquy on railway inter-

ference:—
"'Would you then,' I inquired, 'have no public interference in the management of railways?—'I would restrict it to three points: first, the decision of overstocked. Had this alone been done, without any other investment presenting itself, it is probable that the money would have been carried abroad, causing there a general reduction in the rate of interest, and afford to the foreign manufacturer a share of the a public Board upon rival competitors for the same a public Board upon rival competitors for the same district, formed upon written statements embodying therein the original prospectus, with a discretion reserved to the Board of requiring further proof upon any statement that seemed to them to require it; each party risking the certain rejection of his project, if any portion should turn out to be exaggerated or untrue.—'Would you make the decision of advantages before possessed exclusively by ourselves. It was at this period that railways fortunately, or perhaps I should say consequently, made progress, and thus furnished not only a home investment for the superabundant capital, but hundreds of thousands of project, if any portion should turn out to be exaggerated or untrue. "Would you make the decision of
that Board final? "As far merely as the exclusion
of all other projects. The selected project should then
stand the ordeal of, first, a parliamentary committee,
on the single question of whether it inflicts any unnecessary or excessive private wrong, and before
such committee landholders' objections only should
be heard, if they preferred (as they seldom would)
that tribunal to the Railway Board. The final decision should be that of the whole house more the rich customers, to take off a part of the excess of the manufacturer's produce. The third evil that formerly cried out for a remedy was the alarming increase of pauperism, and of its inseparable companion the poor This might be treated as a mere consequence of the first cause, inasmuch as sturdy, able-bodied labourers cannot or ought not to be receiving parish relief, except in consequence of general or local overpopulation and excess in the number of labourers to sion should be that of the whole house, upon the question that the bill be read a third time, on which the ministerial influence would be legitimately the ministerial innuence would be legitimately directed to support the decision of the Board.—
What would be your second interference?—'I would require detailed accounts to be prepared, not for the Railway Board, but for the shareholders of each company, in a form (more stringent than the present) to be settled once for all, verified by the treasurer, secretary, and two of the directors, and open to the inspection of shareholders one clear month before each half-yearly meeting. My last proposal would be, that in the case of any and every accident caused by their own defective arrangements, or negligence on their own defective arrangements, or negligence on the part of those employed by the companies, not only should ample compensation be made to the suf-ferer or his family, but a fine to the Queen should be payable, its amount (the utmost extent of which would be limited to be settled by the Justices in Quarter Sessions assembled. The effect of such a measure would. I believe, be not only to cause greater care in examining into the character and skill of those employed, but the universal requirement of imposed improved, but the universal requirement of security from such persons, that a part of the fine so imposed should be forthcoming from their own pockets, or that of their security; thus furnishing the highly influential motive of self-interest to increase their caution.—'You think these provisors would be sufficient?—'With these three provisors I believe that projectors sharpholders and directors. believe that projectors, shareholders and directors might henceforth be left to themselves. By the first, prospectuses would become less sanguine and less de-lusive, as it would be a very different thing to address a greedy and intoxicated public, or an official and independent Board, before whom each intentional or carcless mis-statement would be certain ruin. The second would make each scheme find its true value, and all parties would see the impossibility, if not the folly of the present system of, in many instances, unresisted delusion as to the dividend declared. The third would render the interest of the companies so manifestly and so exactly in accordance with their duties to the public, that additional security would be afforded. At present, the loss to the company is only in proportion to the accidental extent of the damage done, and not, as it should be in any ratio, to their own deficiencies, or their servants' misconduct."

Proceedings of Societies.

ROYAL SCOTTISH SOCIETY OF ARTS .- At the last meeting a "Description of an Over-arch Suspension Bridge," by Mr. K. Milne, was read. A model to scale was exhibited, and its strength tested. This

The Adventures of a £1,000 Note, or Railway Ruin Reviewed. By the Hon, E. Phipps. [Second Notice.]

will hardly contend that it could be accomplished

The serious part of this paper begins, as we said, after the gossiping introduction about the 1,000% bank note. The following exculpation of railways has some truth in it; the Mentor

of the money-market says :-

"'You seem to think, then,' I urged, 'that in all this (pecuniary embarrassment) English railways are the least to blame of all the different causes?—'Not only the least to blame,' he replied, 'but that they have conferred such benefits as far outweigh any de-rangement they may have caused. What were the great evils under which we laboured before their time, according to all the political economists? A superabundant population; excessive competition in trade, which reduced profits by overstocking markets; and the fearfully increasing amount of pauperism. For over-population one remedy suggested was emigration; excellent when judiciously directed, and to a moderate extent, but then utterly inefficient to the object in view; and when not judiciously directed, or immoderately extended, entailing more misery than it removed. What was it but adding the endurance of that misery, away from humble friends, from richer benefactors, and from that sure, though last resource of all, the legal provision offered in their own country? The other remedy was an absorption of the rural in the town or manufacturing population, often to the contamination of health and morals, and involving with it alternate fits of prosperity and misery. Add to all this that either foreign or home emigration, without money, or even skill in the sort of labour required, was madness. For your over-population railways have afforded a remedy. Those who had formerly alternated between the poor-house and the farm, now a general burden and now the cause of depreciation in his wages to the regular labourer, may again recruit their half-starved frames; amass, if well advised, what is to them a little capital, and by their absence raise the general weight of farm wages. Is it

Digitized by Google

bridge is so constructed that the roadway runs under the arch, and is connected to it by suspending rods, which are so disposed that a large portion of the arch sustains a small portion of the roadway, thus enabling the bridge to bear a concentration of weight at any point. The main rods of the arch lean against each other at the centre (where the keystone of a stone bridge is situated), giving mutual support, which is continued towards each end of the arch by circular extenders, enlarging as they approach the piers. The pressure of the main rods against each other is thus turned to the utmost advantage, and gives the greatest stability possible; and from this construction the lee side will resist a gale of wind with the full power of the arch. The model is 20 in. in length, on the scale of 10 ft. to an inch. The entire weight of iron is 6 oz., and it safely bears a load of 56 lbs., nearly 150 times its own weight. Referred to a committee

times its own weight. Referred to a committee.

Mr. S. Hepburn forwarded "Supplementary Explanations of an Improved Railway Brake." A draw ing was exhibited. This is an improvement of a brake submitted by the author (or the inventor) last It consisted of a rubber block of wood at tached to carriages by a moveable frame work; and applied, not to the wheel, like a common brake, but to the rail, by a gradual pressure capable of being increased to such a degree, on an emergency of danger, as to raise the hind wheels from the rail, and to trans fer half the weight of the carriage from them to the brake itself, so as to cause such an intense degree of friction as speedily to bring the train to a stop. The committee, to which the invention was remitted, while satisfied of its efficiency, expressed doubts of its sufficient durability owing to the effect of abrasion. To obviate this objection he proposed the present improvement. The rubber-block, with the fibre of the wood in a vertical position, is inclosed in an iron

case (open on one side, to admit of the block being renewed with facility and expedition,) attached to the moveable frame-work. Referred to a committee.

The other papers, by Mr. J. Crane, of Edgbaston, near Birmingham, consisted of "A new method of enabling Locomotive Engines to ascend or descend Steep Inclines."-This consists in laying along the incline a toothed rail outside of the common rail, and keving on additional wheels with teeth on the shaft of the driving wheels of the engine, outside of the bearing wheels, and working in the toothed rails, and the teeth of which are to work in the teeth of the rail—thus pulling on the train.—"An Improved Rail-way Wheel." This improvement consists in making the wheels with double flanges, one on the outside of the rails, as well as the usual one within them. Thus the wheels would be less liable to go off the rails.—
"A new method of Laying Rails." This consists in laying the rails on longitudinal sleepers, connected together by cross sleepers, and forming a series of strong square frames.—"A Wedge Railway Brake." The principle of this brake differs from that of the ordinary brake in this, that instead of pressing the brake against the wheels, and thereby retarding them by friction, and eventually locking them, this brake falls down at once between the wheel and the rail, inserting itself between them like a wedge, and thereby locks the wheels, and at the same time rubs upon the rail. Four wedges are required for ordinary carriages, one pair at each end; each pair of wedges is connected by a bar of wrought iron, in the centre of which a chain is fastened, which can be raised by the guard, and fastened by passing one of the links When the chain is detached from the hook or button, the brake, by its own weight, and guided by a rod attached to the carriage, falls under the wheels and prevents them revolving. The guiding rod to have its centre of motion eccentric to that of the wheel, and that centre to be a pin fixed on the axle frame of the carriage, a little above it, so that the wedges when raised may be clear of the wheels. Referred to a committee.

Broaress of Works.

EAST ANGLIAN.—Jan. 8.—Capt. Simmons, one of the Government Inspectors, accompanied by Mr. H. C. Lacy, M.P., and a party of the directors, went over the Wisbeach portion for the purpose of inspecting it, prior to opening for public traffic, which event will take place on the 15th (this day).

Edinburgh and Northern.—The Sinclairtown

EDINBURGH AND NORTHERN.—The Sinclairtown station is now open for passenger traffic. It is situated midway between Dysart and Kirkaldy, and in the very centre of a thriving population of nearly 6,000 people. Three trains depart daily for the South and two for the North, and it is confidently expected that the company will, as soon as possible, grant an additional one at mid-day, which will meet the wishes of the inhabitants as well as strangers, numbers of whom have been very much disappointed at the want of a

mid-day train from this station. Workmen are busily employed in making a cart road on each side of the rails for the transmission of goods, which will be of wast importance, the inhabitants generally being employed in the weaving of linen goods, which all require to be sent to the South or the North, as the manufacturers may find a market. Coal depots, says the Fije Herald, are also to be erected, by which means a plentiful supply of Lochgelly coal, so much famed, will always be kept, and which, we trust, will be sold at a cheaper rate than by the usual mode of carrying them from the pits, as at present.

EXETER AND CREDITON.—This line, which has been finished and ready for opening for nearly twelve months, is now being converted from the broad into the narrow gauge. The line, when originally finished, was intended to have been leased to the Bristol and Exeter, but the shareholders succeeded in removing the old directors who favoured the lease and appointed new ones, who are now causing the gauge to be altered, and it will be opened as a narrow gauge line in about two months. A temporary station is

being erected at Cowley Bridge.

LEEDS AND DEWSBURY.—At the introduction of the keystone of the Leeds viaduct, all the labourers employed on the viaduct were present on the summit of the works. Mr. Grainger performed the ceremony of depositing the massive block of stone. He then remarked to those around him that the ceremony they had now witnessed was not in itself an important one compared with some events, but at the same time it was a most important step in the progress of works of this magnitude. He congratulated the contractor and resident engineer on the success which had attended their exertions; adding the gratifying fact that no accident had hitherto occurred during the construction, and expressing his hope that the same good fortune would continue to the end. The structure is erected at the joint expense of the Leeds and Dewsbury and the Lancashire and Yorkshire, both of whose lines will pass over it. It is of magnificent dimensions. Its length is 390 yards, and it crosses the river Aire and the Leeds and Liverpool Canal at a considerable elevation. There are twentyone arches, the centre one spanning the river, and another spanning the canal, being 105 ft. wide. The span of the other arches is 35 ft. Notwithstanding the massive structure of the middle arch, the centres have not shrunk by the weight during the erection though made without the aid of wrought iron. The line is expected to be opened at the latter end of April or the beginning of May next.

LEEDS AND THIRSK.—The viaduct in the valley

of the Aire, from the township of Headingley into the township of Leeds, consisting of twentythree arches, is advancing in the same proportion as the other parts of the Leeds contract. The centres are already thrown over five of the arches. The two viaducts in this valley-that from the south on the Dewsbury line, and that from the north on the Leeds and Thirsk—will, when completed, says the Leeds Mercury, present a stupendous mass of masonry, and will have the appearance at a distance of intersecting the whole valley, as the Wharfe Viaduct, spread from hill to hill, will fill and level that valley in its grasp from south to north.—
Jan. 5.—A train of loaded coal and goods waggons passed over this line from Thirsk to Ripon for the first time, and trains have passed along daily since, so that this line may now be considered open for goods and mineral traffic. Satisfactory arrangements have been made with the York and Newcastle for mutual interchange of traffic to all the towns situate on the respective lines of both companies.

London, Brighton and South Coast.—The Horsham branch will be opened next week.

Newcastle and Berwick, &c.—(Central Station.)—Last week the workmen commenced to lay sewers from the site of the central station at Newcastle. The whole of the ground has been cleared, and the work will be proceeded with immediately. The contractors have undertaken the work for 95,000d.

NORTH BRITISH.—The unsightly appearance of the ground occupied by the theatre, by the road leading to the stair which descends to the base of the North Bridge, and by the dead wall opposite the North Bridge buildings, has long been an eye-sore in the most central and crowded part of Edinburgh. There is now, says the Scottish Railway Gazette, a prospect of this neighbourhood assuming the aspect becoming so important a situation, as the company have scheduled the theatre and the whole square, and intend erecting on the ground a new terminus, with a view particularly to the accommodation of their short trains. This will be an accommodation to the public, especially when the Hawick line is opened, which may be expected early next season.

NORTH STAFFORDSHIRE.—The works are so far advanced that the section between Stoke-on-Trent and

the point of the junction with the London and North-Western is expected to be opened for traffic next month. A further portion, namely, from Stow to Solwich, on the Trent Valley line, will be completed by June next, and the whole system by the end of the autumn.

Scottish Central.—The engine which has been at work on the Larbert division of this line for the first time passed throughout the whole length of the line from Castlecary to the station at Stirling. Although this has been accomplished, a good deal yet remains to be done before the line can be in a fit state for traffic. The different contractors, says the Stirling Journal, are pushing on to the utmost their comparatively nearly finished works, and had the weather continued favourable the new year might have been welcomed by the first passage of a train on the line, but frost and snow have laid their interdict upon the immediate completion of the works.

SOUTH DEVON ATMOSPHERIC - The Plumouth Herald states that several successful experimental trips have been made between Teignmouth and Newton, one of which consisted of starting the trains from the main tube direct from the station without the aid of the auxiliary pipe. A length of about 200 yards of tubing was laid from the platform, in which a vacuum was effected, and by which the train received a sufficient impetus to propel it the distance of the crossing, about 100 yards, to the main pipedecided improvement over the somewhat uncertain practice of the rope and the small auxiliary tube hitherto used. The atmospheric mode is found to hitherto used. The atmospheric mode is found to succeed admirably; and from all we learn there is no doubt that this safe, rapid, and easy plan of propulsion will fulfil the expectations of its most sanguine supporters. In the course of a few days it will work sixteen trains every day from Exeter to Newton, a distance of 211 miles; and in the meantime the atmospheric apparatus is being rapidly finished on the line towards. Totnes. The town of Newton promises to be a second Swindon, as workshops for the manufacture of atmospheric and other machinery, large and commodious storehouses, foundries, smitheries, and other buildings, all of considerable magnitude, are in course of erection in the vicinity of the station. The works near Plymouth are fast proceeding to completion. pike-road over the Laira, diverted and carried over the railway, is nearly finished, and many men are employed in the erection of the station and the necessary buildings at Laira, within two miles of Plymouth. The viaducts between Plymouth and Ivybridge are being strengthened to allow the passing over them of locomotive engines; but some time must yet clapse before the inhabitants will have the benefit of railway communication. As the spring advances, every effort is expected from all parties to give railway travelling to Plymouth, Devonport and Stonehouse.

TAW VALE.—The gauge has not yet been fixed by the Commissioners, but an official is expected to visit the neighbourhood shortly to determine the question. If the broad gauge is fixed on, says the North Deron Advertiser, we shall despair of seeing the line carried out. There is no probability that the Bristol and Exeter would in any way assist in it. The fact is, if no national-gauge line is brought down, the traffic from North Devon must go to their line at Exeter or Tiverton. The Taw Vale is not made independently of this. We are decidedly of opinion that it is the interest of this part of the country to have it fixed as a national gauge line, and there are many reasons for coming to this conclusion. The South-Western are working in harmony with the Taw Vale, and are now most auxious for the line being immediately made; but if the broad gauge is fixed on, it cannot be expected they will feel any interest in it. It will be the cheapest—a fact any one may satisfy himself of by reference to Bradshaw's tables, and the evidence before committees of the House of Commons, by which it has been indisputably proved that the South-Western can convey goods and passengers at 20 per cent. less than the broad-gauge companies. It will be the most useful, inasmuch as the national gauge is found to be by far the most convenient for goods traffic, and this line must expect great support from the carriage of lime, coals and heavy goods. But we may look forward to still greater advantages, as that gauge will be brought to Exeter, when the inhabitants of North Devon will have a direct line of communication with London and all the great ports and districts of the kingdom, by lines already made to the South and East, and by the line now making to all the northern districts. The Taw Vale from the docks to Barnstaple is already laid on the national gauge; the Exeter and Crediton is now altering to the national gauge, and will be opened in the next month. We cannot therefore entertain a doubt of soon being

enabled to congratulate our readers that the intermediate line from Barnstaple to Crediton will be also on the national gauge.

Accidents.

LONDON AND NORTH-WESTERN-(Euston Station). Jan. 11.—An inquest was held touching the death of J. Shea, aged 45 years, late in the employ of Messrs. Cubitt, the contractors, who was killed by the late accident (see Rail. Chron. p. 28). After the evidence touching the cause of death from the medical and other witnesses, J. Stevenson, foreman of the brick layers, was examined. He said, that portion which had fallen consisted of a strong foundation wall 7 ft. wide, on which was a common pedestal of the like width, built crossways to the wall to receive pillars, upon the top of which latter an entablature and further wall were to be placed. The pedestals and pillars were the best kind of brickwork, put up with cement. The pedestals, the pillars on which had given way, were begun on the 21st of October and finished on the 30th. On the 11th of November the nnished on the 30th. On the 11th of November the columns were begun, and on the 22nd of that month they were ready to receive the pediment, or entablature, with the upper portion of the wall. The pillars were eight in number. They were built in twos, about 20 in. apart, and a space of 7ft. was between each pair. They were connected on the top by iron tension-rods, on which the entablature was placed. None but the best workmen were employed in constructing the pillars. Fig. 10th per day were so in constructing the pillars: 5s. 6d. per day wages was paid to them. None of them had ever complained of the work being proceeded with too hastily. Witness could not account for the accident, and should have could not account for the accident, and should have no objection to build from the same drawings again. He considered brick pillars in such a building perfectly safe, and his impression was that the superincumbent wall, and not the pillars, had given way first.—R. Batterwick, deputy foreman of the works, said that though the works were contract as between Messrs. Cubit and the company, they were not so as a reversible the near. He had not be the presented the presented the same and the company of the works were contract as between Messrs. Messra. Cubit and the company, they were not so as regarded the men. He had never been apprehensive of danger, nor could he account for the accident. The columns were 2 ft. 4 in. diameter, and 20 ft. high. Between them and the outer wall of the building ran a gallery communicating with the various rooms in the station. Witness could suggest nothing calculated to prevent a similar accident. Witness did not think the works had been burging as a second suggest as a limit of the works had been burging as a second suggest as the works had been hurried, and, according to common calculations, the columns were calculated to bear five times the weight they had upon them. Mr. Cubitt had examined the works since the accident. and could discover no cause for its having taken place.—Mr. C. Bavin, clerk to Mr. Hardwicke, produced a section of the building. It was his duty to overlook the works; he had done so, and had never discovered cause for complaint. In rebuilding the wall he should proceed precisely on a similar plan, and should not advise the use of stone instead of brick in the construction of the pillars.—The Deputy Coroner said Mr. Cubitt had expressed his willingness to be examined; but as he could hardly be expected to admit that blame attached to the way in which the works had been carried on, probably the jury would hardly think it necessary to call him.—Evidence as to the perfect stability of the scaffolding having been taken, the jury shortly found "That John Shea died from injuries on the chest caused by being marked by the full of a wall and after marked. being crushed by the fall of a wall and other parts of a building at the station of the London and North-Western, but how the said wall fell there is not sufficient evidence to prove."—(Liverpool).—Jan. 7.— Mr. Halliwell, cash keeper to the Preston Brook Docks, crossed the line as the 6 30 p.m. express for London came up. The iron guard in front of the engine caught his head, and the unfortunate man was

dragged for some distance. He subsequently died.
LONDON AND SOUTH-WESTERN.—Jan. 2.—A number
of men were ballasting the road near Romsey, when a train passing one of them was knocked down and killed. The train was going at full speed, but the engineer sounded his whistle when he was full a

engineer sounded his whistie when he was tan a quarter of a mile from the spot.

Newcastle and Berwick.—Jan. 2.—The train which leaves the station at Tweedmouth at 9 a.m. had proceeded to Windmill Hill-lane, a short way north of Beal station, where some of the rails having started from the sleepers, probably in consequence of the late rains, the carriage wheels tore them up, chairs and sleepers being rent assuader. The destruc-tion continued, says the Berwick Advertiser, for the distance of about one hundred yards, when the engine and carriages deviated from the line to the right for about 20 ft., where they were stopped. The guard and fireman kept their places, and the passengers, though greatly alarmed, escaped unhurt. One of the rails started up through one of the third-class of the rails started up through one of the third-class carriages, extending from the floor through the roof,

and alighted in an adjoining field. There were fortunately only two passengers in this carriage, and as they sat at either end, and the accident occurred in

he centre, they escaped without the slightest hurt.

North British.—Dec. 30.—On the arrival of the
mail train from Edinburgh at Marshall Meadows, one of the passengers, apparently a labourer, leaped out of a third-class carriage while the train was going at a rate of between 30 and 40 miles an hour. An alarm was given, and when he was taken up his shoulder was found to be dislocated. He was given into custody of the police by the authorities for a breach of the company's regulations.

SOUTH-EASTERN.-Dec. 28.-About 6 p.m. the down express train came in contact with a butcher's horse and cart on the rails near Staplehurst, in the absence of its owner. The horse was killed and the cart smashed to pieces, but fortunately no accident occurred to the train.

Whilst the NATIONAL DEFENCE QUESTION continues rife, stress cannot be laid too much, or too often, on the importance of Uniformity of Gauge. An excel-lent article from the Daily News affords the following sound advice :- A speedy and decided settlement of the railway gauge question is palpably an obliga-tion of this kind, viz., making the fullest use of such means as we possess already, in reference to any system of national military defence—independently of its claims in other respects, from different branches of the business of this country, whose interests demand the removal of every obstacle to a ready communication between all parts of the island by those highways which now convey, wherever they are established, the whole of our passengers and merchandise. In any scheme of national resistance to attacks from without, the importance of being able to transport troops and artillery with the utmost deepatch from various stations and depots to the menaced point is unquestionable. In the peculiar condition of our military wants, the value of a power of moving the disposable forces backwards and forwards at a moment's notice, and with the speed of thought, must be obvious. A small army may in this manner be, as it were, multiplied: possessed of this advantage, its efficiency for warlike purposes may become double of that usually ascribed to a body of twice its numerical strength; and not only this present readiness, but the better condition of the defenders as well, when transported without fatigue from place as well, when transported without fatigue from place to place, will enable them to act on arrival with more than the ordinary energy. This great advantage the railway system, wherever it exists unbroken, now offers to the troops of Great Britain, in case of any offers to the troops of Great Britain, in case of any offers to the troops of Great Britain, in case of any offers to the troops of Great Britain, in case of any offers in the state of the uninterrupted withdrawn: and in place of the uninterrupted despatch—which our circumstances must render peculiarly important in any case of resistance to an enemy on our own soil—there is, by the difference of gauces, a bar placed at the cutrance of exerct line. gauges, a bar placed at the entrance of every line where a new dimension begins, a dead point in the advance at which the progress of the detachment must be arrested. The process of merely discharging troops from one set of carriages, and re-arranging troops from one set of carriages, and re-arranging troops from one set of carriages, ing them in another at the first joint station, will usually exceed the whole time that would have been required to forward the body from one end of the journey to another on a series of uniform railways—but when they move with head quarters and baggage-when cavalry forms any part of the force -still more if cannon and ammunition are required to be thus transported, the loss of time must then be far more serious, and the detention, if the numbers are great, and the distance from extreme point to point is not very considerable, may absorb the whole of the gain from the speed at which the locomotive enables them to travel while in motion. On this sub-ject, to which attention, one would think, cannot fail to be strongly directed, if our present anxieties are genuine, there was some very important evidence given to the Gange Commissioners, in November, 1845, by Sir Willoughby Gordon, Quartermaster-General. This officer, then already long accustomed to despatch troops by railway, spoke with the authority of practical experience on the military disadvantages of being forced to change to another width of rail at any intermediate point of a route. "It would," he says, "be equivalent in practice to the inconvenience of a ferry—to crossing a river in march." and very sufficient reasons are given in detail for this opinion, somewhat to the effect of what we have generally stated above.

ventions are probably the application of it to printing at a distance, and the application of it to printing at a distance, and the applying it by one wire to many stations. Heighton's application of the gold-leaf electrometer, instead of the magnetic needle, can scarcely be called an invention; and the one-wired telegraph used at Baden-Baden appears to be that of Brett & Little, at whose telegraphic exhibition in Furnival's Inn I met him in August. The fact of the transmission of the electric current to great distances was proved by Dr. Watson and friends on the 14th of July, 1747. They conveyed the shock across the Thames at Westminster on the 14th of August; they conveyed it a circuit of four miles, two of water and two of dry ground; its velocity was so great that no time appeared to clapse during its passage.—Correspondent of the Builder.

IRON TRADE.—Glasgow, Jan. 7.—The market is slightly improved; there is very little iron offering for sale. Quotations are firm at 47s. 6d. for mixed Nos., 48s. 6d. for No. 1, and 40s. 6d. for No. 3, cash.

—Birmingham, Jan. 8.—The colliers still continue out, and, from the further suspension of forges in the district, in all probability in the course of a few weeks the number unemployed will be seriously increased. From a statistical account published in the Birmingfrom a statistical account published in the Birming-ham Journal this morning, it appears that the Staffordshire mining district, which six months ago presented a scene of busy and profitable industry, unequalled in any other part of England, wears just now a changed and cheerless aspect. There are altogether 137 blast furnaces in the district; of these 58 are out of blast, and 79 in; and so late as December, 38 of the 58 naved as blayen out beyond a topped in conthe 55 named as blown out have been stopped in con-sequence of the depressed state of trade. The number of furnaces in blast in the depressed state of trade in June 1843, was 72, and out of blast 69—total, 141. June 1843, was 72, and out of blast 69—total, 141. If the colliers remain out, several of the ironmasters now working short time will close their works altogether until the crisis has passed over. The puddlers have struck in a body, and present appearances do not indicate that they have any disposition to return to their work. The blast-furnace men and miners have manifested something of a better spirit: many of them have made a virtue of necessity, and returned of them have made a virtue of necessity, and returned to their work during the past week.—During the week the three great quarterly meetings of the ironweek the three great quarterly meetings of the from masters have taken place at Dudley, Wolverhampton and Birmingham. Nothing particular occurred. Prices are fixed, as far as the heads of great firms can determine them, at a reduction of 2l. upon last quarter's quotations. The strike of the men is daily becoming more general; the masters, who declare their stocks to be small, are content to bide their time; and, in all probability, before another month has passed over, unless some unexpected counter-movement occurs, the iron works of this immediate neighbourhood will be at a complete stand.

[Secretaries of companies are requested to forward notices of Meetings, and closing of Contracts, as early as possible.]

ings, and closing of Contracts, as early as possible.]

NOTES AND EXPLANATIONS.

NOTES AND EXPLANATIONS.

(1) The Government gives 32,000,000f, and the land, and receives half the profits, after 10 per cent.

(2) The Government guarantees 3 per cent. interest, and 1 p. cent. Sinking Fund. The loan of 10,000,000f, was negotiated at about 4 per cent. per annum.

(3) The Government lends 14,000,000f, and 4,000,000f, additional for half the cost of the passage of the town of Rouen, at 3 per cent. rerannum. The dividend is declared after deduction of 1 per cent. from the profits for Sinking Fund. Loan of 6,000,000f, or 6,000 bonds

of 401 each, bearing interest at 4 per cent., created August 1845, reimbursable by 105, at 501 each, in the course of 73 years.

(4) The Government jers 8,000,000f, the town of Havre 1,000,000f. The Government lends 10,000,000f, and 4,000,000f, additional for half the cost of the passage of the town of Rouen at 3 per cent. per ann. The interest to commence 3 years after the line is opened. Loan of 1,000,000f, or 10,000 bonds of 1,000 f. or 401, each, created December 1843, bearing interest of 30f, per annum, reimbursable by lot, at 1,300f, each, in seventy-eight years—8,000 were issued in Dec. 1845, and 2,000 in Oct. 1846.

(5) Loan of 12, sequent, in Bonds of 1,200f., hearing interest of 50f. per annum, to be paid off in a period of 50 years.

(6) Loan of 2,50,200f in Bonds of 1,00f, at 4) per cent, to be paid off with a premium of 100f, per Bond. The Government bends off with a premium of 100f, per Bond. The Government bends interest per annum, and 1 per cent. Staking Fund, but only when the sharch dides have received 15f, per share.

(7) Loan of 5,000,000f in Bonds of 1,2 of, bearing interest of 50f, per annum, to be paid off in a period of 50 years.

(8) The Government lends 5,000,000f, at 4 per cent. interest.

* For opening, 18th January 1848. + Ex Div.

London Stock Exchange, Jan. 14. - The gradual mitigation of the monetary pressure has produced increased activity in the share-market, and it will be seen prices have greatly improved. Some anxiety is s to the statements of accounts to be exhibited at the ensuing half-yearly meetings, but still it is more general than particular causes that continue to affect the fluctuations in prices.

Liverpool, Jan. 13.—There is no very material change in the state of our market. Prices generally continue firm, but the amount of business transacted is extremely limited. Sublow, Brothers.

Manchester, Jan. 13.—For the most part of the week the prices of shares have been gradually progressing, though no great amount of business has been transacted. Yesterday and to-day our market has not been so buoyant.

Buoyant. Sam. GRINDROD. Birmingham, Jan. 13.—This market has been improving during the week, and more business has been transacted than for some time past. Prices are better, with less disposition to press sales. Midlands

were done to-day at 113. W. Banks.

York, Jan. 13.—We still have to report a limited amount of business. Great caution is used by the buyers, and very little stock is offering. The York and North Midland, and York, Newcastle and Berwick stocks have advanced in price, and seem likely to go higher.

Grayston & Earle. to go higher. Grayston & Earle.

Hull, Jan. 13.—Since our last we have had better

markets, although there has not been much actual

business. Yesterday there was evidently an improved feeling, and at late prices a fair amount of stock might have been disposed of. To-day the market has not been quite so buoyant. FLINT & TOOTAL.

Lancaster, Jan. 13.—Prices have steadily improved

during the past week; yesterday, however, there was some disposition to realize at the advanced quotations. Money continuing in excess of demand, there is some speculation as to the probability of a further reduction of the minimum rate of interest by the Bank of England. East Lancashires have been in fair request.

W. Welch. in fair request.

Newcastle-upon-Tyne, Jan. 13.—Our share-market continues firm with a slight advance in prices, but transactions do not operate over a variety of lines. Newcastle and Carlisles have been done at 99½; Newcastle and Berwick, 62; North Staffordshire, 78.

Glasgow, Jan. 12.—The business done this week, although still confined to comparatively few stocks, has been more extensive, and to-day the market closes firmer than for some time past. The improvement in prices, however, does not keep pace with that in the southern markets. The following are to-day's latest than the past of Caledon and Calloway 12s dis Caledon southern markets. The following are to-day's latest transactions:—Ayr and Galloway, 13s. dis.; Caledonian, 36; ditto, new, 49s. 6d. dis.; Edinburgh and Perth, halves, 6s. 3d. dis.; Glasgow General Terminus, 8; Glasgow, Dumfries and Carlisle, 7½; Ayr, halves, No. 1, 2½ dis.; ditto, No. 2, 3 dis.; Greenock, halves, 8½; Manchester and Southampton, 6s. 6d.; North British, thirds, 1s. pm.; ditto, new quarters, 1s. 9d. dis.; Wishaw and Coltness, 43.

BUCHANAN, AITEEN & Co.

PARIS LETTER.

Paris, Jan. 18. There is so little news regarding railways here, that I delayed writing till the last moment,-hoping that something might transpire worthy of being recorded. But the money-market is so feverish, from the many rumours,—concerning at one time the King's health,-at another the disturbances in Italy, -the events that agitate Spain, -and, lastly, the absurd fears at your side of the Channel, about war and its contingencies, occasioned by the letter of the

Duke of Wellington to Sir J. Burgoyne,—that no one but the speculators for the fall—who have made during the last two years enormous profits-seem to have any desire to embark in these hitherto promising enterprizes;—the various calls announced serving as fresh cause of alarm, and the weak holders selling out to secure themselves from further loss, or to raise the necessary funds for meeting calls on those shares which they hold. The most remarkable fluctuation is in the great fall of Havre shares. This fact has been alluded to by one of your correspondents; and you have referred the question to me. I can only say, that though well acquainted with the circumstances of the line, it is not in my power to explain the fact. I hope in my next to say a few words that may lead to an inmy next to say a few words that may lead to an in-ference somewhat satisfactory.—The following are the latest prices of shares to-day:—Avignon and Marseilles, 557f. 50c.; Lyon and Avignon, 388f. 75c.; Northern, 532f. 50c.; Paris and Orleans 1,187f. 50c.; Paris and Rouen, 895f.; Paris and Strasburg, 103f. 75c.; Rouen and Havre, 437f. 50c.; Tours and Nantes, 380f.; Vierzon, 520f. B.

Railway Chronicle.

LONDON, SATURDAY, JANUARY 15.

The differences of the LANCASTER AND PRES-TON and the Canal Company are not yet healed. At the special meeting the conferences between the Boards of the two corporations were stated to have terminated without any result-except an intimation from the Canal Company of seeking legal assistance.

The Report and accounts were unanimously passed at the half-yearly meeting of the DUNDEE

AND ARBROATH.

We noticed the other day the COMPLAINTS AGAINST THE POST-OFFICE for the delays caused in the delivery of Wolverhampton letters, by of the Trent Valley line. We have made some inquiries into the subject, and find that neither the Post-office nor the Railways are liable for the inconvenience, which is inevitable. It is one of those cases in which the greater good must over-ride the lesser evil. In the case of all loop lines, consisting of a more or less direct portion, similar inconvenience must result. Loop lines are not only most difficult for engineers to work properly, but also for the Postoffice. The evil lies in the very nature of a loop, and occurs as follows :- The loop begins at Rugby. The mail train at Rugby goes directly over the Trent Valley line, avoiding Birmingham. It sends off a few carriages with the mail (for Wolverhampton and elsewhere) at Rugby by the loop line to Birmingham. When this train reaches Birmingham, the Wolverhampton and Stafford mail train to the North has already left the station, and gone northwards to be in time for the North mail train over the Trent Valley at the other end of the loop. When, therefore, the Wolverhampton mail-bag reaches Birmingham there is no train to carry it on, and it is coached to Wolverhampton. This is a grievance; but inevitable. It could be remedied only by a second or express train immediately after the other, which would carry the letters to Wolverhampton and other stations on the northern part of the loop, or by detaining the train from Birmingham till it was too late to meet the mail train at Stafford. The former is impracticable, and the latter would be absurd. This is, therefore, one of those cases where the few must suffer for the benefit of the many. Unless an express train were to be sent to every branch line, it would be impossible to give to every place all its mails at the earliest possible hour. We are always ready to point out Post-office errors where they occur.—and to comment on them severely where the error is palpable and remediable. This is an evil for which the Post-office have been unable to discover a remedy, and for which we can see none. Perhaps some ingenious reader, or Wolverhampton correspondent, will assist us in devising one. We shall be glad to have it.

We regret to record the death of Mr. BENJAMIN CUBITT, the mechanical engineer, brother of William Cubitt [not M.P.], the eminent civil engineer. Mr. Cubitt was a sound mechanic, with a good head, a kind heart, and a fine liberal, honest, independent tone of mind. All his brethren esteemed and liked him. He was taken from a large manufactory in the North to the head of the locomotive department of the South-Eastern, and thence transferred his services to the Great Northern. He has been engaged for many months, with great zeal and judgment, highly interested in obtaining the best possible this gentleman, very great. At present, an annuity in preparing the working stock for this new line, dividend by the utmost care applicable to the of 3t in consols is worth 85t. 10s., but 9t per annum

which he was anxious to render as perfect as possible, by adopting all sound and ascertained improvements. His death, at the early age of 54, is a loss which will be deeply felt by this company, and sincerely lamented by the profession to which he did honour.

From our official returns it appears that the amount of traffic for the last week, on upwards of 3,423 miles of railway, was 160,026l., thus accounted for:—81,077l. for the conveyance of passengers only, 39,720l. for the carriage of goods, and a remainder of 39,229l. for passengers and goods together, not respectively apportioned; being an increase of 21,726l. over the corresponding week of the former year, when the mileage was 2,660. The average earnings per mile for last week were 471., whilst in 1847 they were 52l.

FORTHCOMING HALF-YEARLY REPORTS.

The GENERAL MEETINGS, on the eve of being held for the production of the last half-year's accounts, will in some respects exceed in importance any that have hitherto taken place. The condition of railway property, for some time to come, will depend in a great measure on the nature of the Reports to be made, as well as on the conclusions announced and the measures determined upon at these meetings. As regards the business during the last six months on lines that are fully at work, it will be a matter of serious interest to all concerned, to know what endeavours have been made to obtain from the gross receipts the largest possible share of nett income, and what success has attended such endeavours. That directors will have generally felt the importance of strictly controlling the current expenditure, under the circumstances of the last half-year, we cannot permit ourselves to doubt. The clear profits realized on the working business, they must know to be the object of peculiar solicitude at the present moment, both as regards the proprietors' satisfaction for their past outlay, and with a view to their confidence in the further operations which are still before them on so large a scale. At a time when the money demanded for the latter is not raised without difficulty, it will naturally be desired that of the earnings of the money already invested, the fullest possible advantage should be taken; and as the value of practical evidence to this effect in the half-year's accounts will be great, so, on the other hand, will the appearance of a contrary result be in no little degree discouraging. To this subject we called especial attention at an early period of the half-year now ended;—we pointed out some months since the necessity of studying, by every means consistent with the efficiency of the service, to economize expenditure, and to arrange the working business in the most profitable manner for those concerned in its

There can be no doubt whatever that, with due regard had to these important objects, much may have been effected in both ways. The reports of the half-year's business, to which we shall look with more than usual interest, will show how far they have been attained by the directors in each company respectively.

On many former occasions we have had to remark the passive attitude of proprietors at general meetings, when this topic was presented to them. From them, in such public assemblages, at least, directors have rarely heard the slightest expression, from which it could be discovered that the profits of the business were at all a subject of concern to them; that they were

husbanding of its earnings; or that any peculiar anxiety existed in their minds with respect to the future income of their capital. This seeming apathy has often surprised us: it is probable, however, that a very different feeling will be displayed at the forthcoming meetings. Nor shall we be at all sorry, indeed, to see a change in this respect, provided the proprietors—as will sometimes happen—do not run from one extreme into another; although it may be sincerely regretted that the motive which is likely to quicken their attention to this most essential part of their affairs should be found in the somewhat declining appearance of their property.

We have often said, and we now repeat, that we have no sympathy with captious inquiries, and ignorant suspicions of the directors whom a company have deliberately entrusted with the charge of their undertaking. The vague desire of opposition, no less than a groundless distrust, can only disorder proceedings, discourage practical suggestions, and in other ways prejudice the interests at stake. But without falling into any such courses, the proprietors, when periodically called together, may, with the utmost advantage, make known to the directors, temperately and plainly, the importance which they do in reality attach to the matters we are now speaking of. It is due to themselves; it is no less a duty they owe to the Board they have chosen, to represent to it what they feel to be the main objects of their association. This may be done without in the least entrenching on the confidence, generally, and very properly, reposed in their directors; to whom the friendly instructions of the company, on occasions which are especially appointed for the expression of its views and wishes, cannot be otherwise than useful, and can in no sense be deemed either distrustful or intrusive, while conveyed in a proper manner. They are, indeed, the best guarantee against vexatious differences, between a Board and its constituents. When these arise, it will generally be found that the breach has been preceded by a long period during which the shareholders have given the directors no trouble whatever, leaving matters to take their course, until, at length, the results of the proceedings they have gone on passively regarding, or blindly approving of, begin to tell disagreeably on themselves. Their impatience at this stage, is usually in exact ratio to the indifference preceding it; -and the proprietors may then be seen quarrelling with the consequences of measures, for which their own neglect of any previous caution, or hint to the directors, makes them as fully responsible as those whom they are at last angrily disposed to censure. Against such contingencies the best remedy-before the business begins to wear a doubtful aspect-is the frank and amicable communication of the proprietors' opinion to their directors; -a proceeding useful to both at all times, but most especially apt to show its good effects in seasons when straitened means and somewhat clouded prospects may render it absolutely necessary that the management of affairs should be so handled as to secure the chief and immediate object of these undertakings, in preference to others more inconsiderable and remote.

Correspondence.

FUNDING OF RAILWAY STOCK.

In the Globe of Thursday, the 6th inst., there is a proposition from a "Correspondent," put forward conspicuously, advising the funding of railway stock, in other words, suggesting that Government should assume the management of railways, giving the present holders stock for a like amount. The advantages to be derived from the plan are, according to

in the London and North-Western is only saleable for 1501., or thereabouts, whereas if turned into Government stock, it would produce 2561. 10s.,result I doubt not, that many holders would only be too happy to realize. Some further advantages are also glanced at, amongst others a gradual reduction of fares, and an approximation to those of Belgium. Now in the first place the whole scheme is founded upon a fallacious basis: __ if the Administration attempted to fund the railway capital of the kingdom, the addition of such an amount to our national debt, would send down the price probably 15 or 20 per cent., and if we judge from the way in which Government usually manages, it seems very probable that instead of paying 9 per cent. upon the London and North-Western consols, they might not make out 6, or even 5 per cent. on their capital, -consequently if any reduction of fares was then attempted, it must be effected by a corresponding increase of national taxation, as is actually the case in Belgium at this moment, where there certainly is an effective railway system carried on by Government, but still at a national loss. That some such scheme as the foregoing may be entertained by the railway authorities, is not, I think, improbable,—hitherto, however, their exertions have been confined to petty annoyances, and for any real improvements they have shown themselves utterly powerless_I hardly recollect a single instance where they have exerted themselves beneficially. Nothing has been done for preventing the evils of an increase of mixed gauges, or any other mischief which may have sprung up in the system. Petty trifling interferences in the details of management they have endeavoured to inflict, but they have never issued a single document worthy of the position they ought to hold, or the heavy salaries which they draw. It never has been hitherto considered advantageous for Government to interfere in working public undertakings, and reference to those under their immediate management too glaringly proves their inaptitude for such tasks, -we should find no exception if railways were to be smothered by Government officials. course for the railway body to pursue is to trust entirely to their own exertions, the outcry for a forcible stoppage of all works in progress has passed away, and we now see the natural course of events putting a much more effectual stop to everything than any dictum from Mr. Strutt, or any auditing of accounts under Lord Monteagle's new bill will do. I took the liberty of suggesting that such must be the consequence of what had been no doubt very rashly undertaken, and with an immense amount of individual suffering and loss; but I always thought, and still hold to the same opinion, that matters will yet come right. If the railway interest are only true to themselves. Government interference is worse than uscless, but as I have already said, all depends upon the various boards of directors maintaining a good position before the public. At the next half-yearly meetings men in office will have an unpleasant task to go through in facing their constituencies; I trust, however, they will not flinch from the responsibility, but fully and fearlessly show the real position in which their respective companies stand, -if there is nothing wrong there is no occasion for concealment, and the value of railway stock will rapidly regain its lost ground; if there is reason for an alteration, let constituencies at once replace by better men those who have been unfaithful to their trust, and put matters upon a sound basis. The system, which, though only in its infancy, is producing 157,7061. per week, and has 3,400 miles open, must possess some vitality.

X. Y. Z. Jan. 8, 1848.

MANCHESTER, BUXTON, MATLOCK AND MIDLANDS JUNCTION.

I offer a few observations on a question of public interest with reference to railway legislation, which the above-named railway strongly exemplifies, viz. the mischief of detached tribunals, mutually ignorant of each other's proceedings, passing laws for the railway accommodation of the whole kingdom. mittee A passed a line in total ignorance that Committee B had passed another, which made one of the two useless, if not worse; for thus the lines were sanctioned in several instances over the same district where one only could pay, the public thereby getting |

two bad articles costing double the money of one good one. The Matlock and Midland is a glaring example in point. At the period of its being projected two railways ran into Manchester (besides the Liverpool), one to Birmingham, &c. via Stockport, south, the other to Sheffield, vid Ashton and Hyde, east. The directors had to determine how they would approach Manchester. To do so independently was for various reasons out of the question; to do so by the Manchester and Sheffield line was equally so, as the interests of that company were and are directly hostile to their entire scheme. They consequently formed an alliance with the Manchester and Birmingham, and joined their line near Stockport, from whence they traverse it to Manchester. That company accordingly subscribed 400,000l, to the capital. The opposition of the Manchester and Sheffield having through their own laches failed on Standing Orders, was eventually bought off. They were, amongst other things, allowed to take 50,000% worth of capital, and Parliament made to assert "that the formation of the railway (viz. the Matlock and Midland) will be beneficial to the Manchester, Sheffield and Lincolnshire; but this part of the arrangement was unopposed, and Parliament, too idle to inquire for itself, declared as true that which all parties concerned knew perfectly well to be the reverse. But the matter does not end here: both companies, to quote the Railway Chronicle of the 1st ult. " proceeded on the principle of securing, at all hazards, as much of the ground as could be laid hold of." The Matlock and Midland carried their line from Stockport vid Whaley-bridge to Buxton, the Sheffield carried a branch from Hyde via Marples also to a point close to Whaley-bridge. Thus, Parliament legislating piece-meal and disjunctively at one and the same time, over one and the same district, sanctioned two lines which for a considerable distance (for their length) are separated only by a small stream called the Goyt, and are never distant from each other above some five or six miles, from one end to the other. The amendment now sought by the Matlock does not remedy this evil-on the contrary increases The Hyde branch being in full progress, the Matlock not having turned a sod, it was proposed by the Sheffield, that that portion of the Matlock and Midland line between Whaley and Stockport should be abandoned. The proposal was refused, and a contest is inevitable. I do not wish to blame the directors on this account such a proposal came too late. The independence of the Matlock would by its adoption have been destroyed, and the scheme have become a monstrosity without head or tail. Moreover, the London and North-Western would never submit to subscribe 400,000l. to a scheme which would then be positively injurious to their own interests, by diverting the Manchester traffic from their line to Stockport on to the Sheffield line to The remedy lies in a suspension of all works north of Bakewell, and the sale of the remainder to the Midland, to which it would become a very valua-ble branch. Why this is not done at once I know not. Possibly the shareholders, as a body, are ignorant of the facts I have, I fear at too great length, detailed to you; and probably the directors are still under the evil influence which involved them in last year's damaging and extravagant contest.

VERAX. London, Jan. 11.

LONDONDERRY AND ENNISKILLEN

Sir, As the particulars of the special general meeting of the 9th December, and the adjourned meeting of the 18th of the same month, have been fully before the public in the columns of your journal, I have now to inform you that, in accordance with the wishes of my colleagues, the Report of the committee of investigation appointed by the shareholders was by me sent to Mr. R. Stephenson, without note or comment. That gentleman has addressed to the board of directors the letter I have now the honour to inclose, which being important in character, I have to request the same may appear in the pages of your next issue.
5, Church-passage, Guildhall, Jan. 13. J. G. FRITH.

To the Chairman and Directors of the Londonderry and

To the Underman and Directors of the Londonderry and Ennishillen.

Gentlemen,—In making any remarks upon that part of the Report of the committee appointed by the shareholders at the meeting held on the 9th of December last, I labour under great difficulty in consequence of the extremely

general nature of the blame which they impute to me. The committee content themselves with merely stating that the prices upon which Mr. Leishman's contract is based are exorbitant, without specifying any particulars. Now before the committee ventured in making such a charge, ignorant as they must be of such matters, I think it would only have been just to myself if they had called upon me during their deliberations to offer such explanations as I might have thought fit in reference to the prices which I had sunctioned. Not having done so, they therefore stand in the position of deciding upon a very important engineering subject, involving my character, solely on a parta evidence, or possibly without evidence at all, and without ever intimating to me that they were engaged in such an investigation. I am surely not wrong in regarding such a proceeding as unheard of, and such a decision as unjustifiable and not likely to gain credence with either you or the public. You will recollect that some time ago, when a question was raised by the Londonderry section of the Board respecting the prices of Mr. Leishman's contract. I then entered into an explanation of them, which I believed at the time was satisfactory. I have again examined the original estimate made by Mr. Ross, and carefully reconsidered the prices, and I can positively assert that I could, without reservation of any kind, recommend the adoption of a similar schedule. The Londonderry section of the Board, at the time I allude to, drew up a tabular comparison between Mr. Leishman's schedule and others which they had obtained from other parts of Ireland; but in doing so they contrasted such prices only (without any explanation) as hore out their objections. In comparing prices it is obvious that numerous circumstances must be taken into account, but in contrasting those for excavation they quote 9d. per cubic yard, and compare it with Mr. Leishman's of 1s. 6d., without committee content themselves with merely stating that the prices upon which Mr. Leishman's contract is based are circumstances must be taken into account, but in contrasting those for excavation they quote 9d, per cubic vard, and compare it with Mr. Leishman's of 1s. 6d., without referring to the fact that upwards of 100,000 cubic yards of the latter is hard rock, and avoiding all mention of the circumstance that in the very schedule from which they took the 9d, the next line below the price of rock cutting is put down at 2s. 6d. per cubic yard. This is an omission which I hope is accidental, but it is evident what the tendency of the suppression of such a fact would be in the mind of any person not knowing all the circumstances. The price I sanctioned was an average price merely, for regulating payments on account, the estimate being made out upon two prices—one for earthwork at 1s. per yard, and the other at 2s. for rock. The fair statement, as it appears to me, would have been that I had fixed rather a high price regulating payments on account, the estimate being made out upon two prices—one for earthwork at 1s, per yard, and the other at 2s, for rock. The fair statement, as it appears to me, would have been that I had fixed rather a high price for earthwork and a very moderate one for rock. This difference, however, is really not material; for applying these prices of 9d. and 2s. 6d. to the quantities in Mr. Leishman's contract, the average would have been 1s. 74d. instead of 1s. 6d. Another similar and equally unfair comparison with the schedule attached to the contract on the Derry and Coleraine line is made: the 9d. for earthwork is extracted, but the prices of 2s. and 2s. 6d. for rock is omitted. With reference to the price of hallasting, which I put at 2s. 6d., the same parties compare it with other lines, where it ranges from 1s. to 2s. without inquiring into any of the many contingencies which regulate the price of ballast, an article sometimes exceedingly difficult to obtain of requisite quality. They, however, quote the price of this material in the Derry and Coleraine line, where I also acted as engineer, at 1s. 6d., without probably knowing that there the cuttings were principally rock, with a large redundancy in the excavations, which, of course, was employed for ballast, and tended to reduce the schedule price. Had there been a similar reduncancy in Mr. Leishman's contract, of course I should have been influenced by it in fixing the price. Connected with this price of ballast I must draw your attention to the fact, that Mr. Leishman's contract, in course I should have been influenced by it in fixing the price. Connected with this price of ballast I must draw your attention to the fact, that Mr. Laishman's schedule, with which comparisons have been instituted, is that of fencing, which I put at 2s. 6d., and other contracts in reland are referred to, where the corresponding price varies from this, without knowing what description of fencing is contenting to the solution of making these particular prices appe sidering prices, it is indispensable to take into account the conditions of the contract respecting extras, arising out of contingencies in the works specified, whether they are to be borne by the contractor, or met by the company. In the present case, they are borne by the contractor, and the estimated contents of embankment have been increased, I am informed, fully 30,000 cubic yards, by subsidence in peat boy, for which no extra claim can be made. Between Derry and Strabane it was motorious that bog did exist, but was impossible to estimate the continuous generations. pear bog, for which no extra claim can be made. Between Derry and Strahane it was notorious that bog did exist, but it was impossible to estimate the contingencies consequent upon it existence. I am refuctant to notice any remarks that fell from the speakers at the last meeting, but I cannot, in justice to myself, refrain from alluding to what was said by Mr. Leatham, in defence of the evidence he gave as to the ultimate prospect of the line, alleging that the estimates were much exceeded. Now I have lying before me, the parliamentary papers from which both Mr. Ross and myself gave evidence, which contain an estimate of that portion of the Derry and Enniskillen line which has been executed under Mr. Leishman's contract, and it is upon this identical amount that Mr. Leishman's tender and schedule was framed. These original documents I am ready to submit to the examination of any member of the Board, or to any engineer they may think proper to depute. I hope I have said enough to satisfy you that the charge made by the committee is without foundation, and should you wish further evidence, I beg

dathart ass

distribution of the control of the c

you will consent to the schedule being submitted to two or three competent engineers; giving me an opportunity of entering faily into the necessary explanations, for without this it is perfectly ridiculous to compare schedules of prices from different railways situated under entirely dissimilar circumstances. I will only add that I shall be ready to aid the Board in resisting any unreasonable claims which Mr. Leishman may have made a cannot the company, on the other hand, I shall not shrink from seeing justice done to him as far as lies in my power. far as lies in my power.

mr as hes in my power.

Respecting the instinuation of a partnership between Mr.

Ross and Mr. Leishman, if I had the remotest idea of its

existence, I should not lose a moment in openly declaring

it; but I am confident that it is an unfounded calumny. R. STEPHENSON.

l am, &c. 24, Great George-street, Jan. 11.

ANGLO-BELGIAN DEPOSITS.

You will oblige a subscriber, if you can procure through the medium of the Railway Chronicle any information concerning the Angle-Belgian Railway. As I am a shareholder in that line, on which I paid the deposit of 44, per share more than two years ago, I wish to know why the deposits have not been returned J. S. W. turned. Warrington, Jan. 11.

GRI'ISBY DOCKS.

Perhaps you will ascertain for the benefit of the shareholders in the Manchester, Sheffield, and Lincoinshire, what a e the sources of the great increase in the Dock Dues at Grimsby. What is it that principally goes out and comes into the docks? M.B.

LIST OF NEW RAILWAY BILLS TO BE APPLIED FOR THIS SESSION.

! Those marked thus & have deposited plans.)

Aborder & Amendment Lease to Taff Vale.

Ballyr iena and Ballymoney.

Bally money and Ballycastle.

Barry ingham and Oxford Junction—Deviation and Purch ase of Stratford-on-Avon Canal Navigation.

Deviation from Warwick to Learnington.

Bristol and Exeter—Taunton and Castlecarey branch; re-introduction.

Branch from Bleadon to Wells, Glastonbury and Street: re-introduction.

Branch from Bleadon to Wells, Glastonbury and Street; re introduction.

— Glastonbury Navigation and Canal Purchase, &c. Bristol and South Wales Junction Acts Amendment Glassolution.

— Fusiolution.

— Clydesdaie, Coltness and Wishaw branches, Carrickfer and Larne.

— Chester and Holyhead—Power to Purchase steamboats, and for London and North-Western to contribute capital.

Clarence and Leeds and Thirsk Amalgamation; re-introduction.

duction.

Cornwall—Power to Great Western, Bristol and Exeter and

duction.

Cornwall—Power to Great Western, Bristol and Exeter and South Devon to increase subscriptions.

Coventry, Babbury and Oxford Junction, from Coventry to Southam, with branches.

Birect London and Portsmonth.

Plundee and Arbroath—Dundee Junction.

Dundee and Arbroath—Dundee Junction.

Dundee and Porth—Dundee Junction.

Tay Crossing.

Dunferniline and Queensberry.

East Anghan Edvand Huntingdon)—Extension of time, &c. East Lincolnshire—Alteration of Great Grimsby branch.

Eastern Counties—Cambridge and Royston and Ware line, and branch to the Royston and Histoin; re-introduction.

—Hord to Inhury Fort and Southend, with branch from Vange to Battle Bridge; re-introduction.

—Enlargement of London and Stratford stations, and Amendment of Acts.

—Epping Extension Amendments.

Last Indian, from Calcutta to the North-west Provinces.

Edinlurgh and Bathgate—Extension of Whithurn Branch to Benhar Colliery, and Deviation of Ophall and Binnie Branch.

Edinlurgh and Bathgate—Extension of Whithurn Branch to Benhar Colliery, and Deviation of Ophall and Binnie Branch.

122mburgh and Ferth.
Exeter and Cowley Bridge Junction.
Exeter and Exmonth Amendment.
Exeter, Yeovil and Dorchester—Branch from Exeter to

Veovil, with branches, &c.; re-introduction.
Fleetwood, Preston and West Riding Junction—Burnley and Collery branches; re-introduction.
Furness—Amendment of existing Acts, and power to raise further sums of money, &c.
Glesgow, Andrie and Monklands Junction—Central Junction Branch.
Glesgow, Buryhead and Neilston Direct.

Glasgow, Barrhead and Neilston Direct. 16reat Northern—Amendment and deviations in Lincoln-

and Oxford.

Branch from Slough to Windser.

Extension of Berks and Hants from Hungerford to Westbury; re-introduction.

Loop line from Birmingham and Oxford Junction,

through Learnington.

Creat Western-Oxford and Rugbyline, extension of time, &c. Great Western of Bengal-Dissolution and transfer of capital to the East Indian.

to the rast initian.

Islo of Purheck, from the Southampton and Dorchester,
near Warcham, to Swanage.

Kendal and Windermere—Acts Amendment.
Leeds Central Station; re introduction.

Leeds, Dewsbury and Manchester—Ossett branch, &c.; reintroduction.

\$Leeds and Thirsk-Alteration of levels on Leeds and Har-

tlepool.

Branch from Melmerby to Northalierton, and junction with the York and Newcastle.

Harrogate and Pateley Branch; re-introduction.

ylewes and Octabed.

Liverpool, Manchester and Newcastle-upon-Tyne Junction

-Burnley branch; extension of time, &c.

\$Londonderry and Coleraine.

Londonderry and Enniskillen. London and Blackwall—East and West India Docks and Birmingham Junction, and power to use the Eastern

- Improvement, and branches to St. Katharine's

Improvement, and branches to St. Katharine's Docks; re-introduction.

London, Brighton and South Coast—Extension of time;
Littlehampton and Steyning branches.

Littlehampton and Steyning branches.

London Bridge and New Cross stations, &c.

London and North-Western—Branches to Leamington, and to Mount Pleasant and Graven Cottaces, &c.

London and South-Western—Amendment of Acts, extension and are resolved.

Stondon and South-Western-Amendment of Acts, extension and new works.

Exeter and Crediton, Taw Vale and Dock, and Bodmin and Wadebridge arrangement.

and Southampton and Dorchester amalgamation.

Lowestoft Railway and Harbour-Amendment.

SManchester, Blutton, Matlock and Midlands Junction-Deviation and branches.

SWindson, Staines and South-Western (Act No. 1, 1847)—
Slough extension and deviation.

Wishaw and Coltness-Deviation, connecting branch and

improvement. §York, Newcastle and Berwick-Deviation and abandonment of part of Thirsk and Malton branch.

Durham line, and power to subscribe to Sunder-

land Docks. Great North of England, Clarence and Hartlepool

purchase, lease and amalgamation.

Improvement — Bishop Auckland and other branches; re-introduction.

Gossip.

A most absurd rumour has been freely circulated A most absurd rumour has been freely circulated of late respecting the state of the works on the London and North-Western. It is said that the tunnels, viaducts, and other large works on the line, are in such a dangerous state that the directors propose closing the line for two or three years, and are now making the necessary arrangements for the con-revance of the passengers and goods by horse-power. The rumour is so ridiculous that it carries even on The rumour is so ridiculous that it carries even on the face of it its own refutation; but as it has been repeated in many quarters, we think it right to give it the most unqualified contradiction, and on the highest authority. We can assure our readers and the shareholders in that corporation that the tunnels, viaducts, and indeed all the works, are in the most substantial repair, and that the line generally has never been in so good a condition as it now is since it was opened.

it was opened.

We were enabled to give in our last number the first of a series of returns showing the progress of the Grinshy Docks, which our readers know are now the property of the Manchester, Sheffield and Lincolnshie. The increase of the port dues is most remarkable. The dues last year were above 70,000.—more than double those of 1846 (32,000).); more than six times those of 1815; nearly twelve times those of 1844; and about eighteen times those of 1843. This enormous increase has taken place not from any This enormous increase has taken place not from any greatly increased facilities, but merely in anticipation of the advent of the railway to Grimsby. The purchase of the docks was a most fortunate one for the company: even now it is estimated that it is paying purchase of the docks was a most fortunate one for the company: even now it is estimated that it is paying above 6½ per cent.; yet some people even wondered why a railway should go to Great Grimsby, and of what use it was to be when it got there. The answer will be a very practical one in bales of cotton twist and Baltic timber. The new docks will be second in size to none in the kingdom. They are situate at the mouth of the Humber, and will be candidates for a great part of the shipping which now proceed twenty miles up the Humber to Hull. This short passage is oftentimes tedious, and always dangerous. Last week there were as many as 1,300 vessels lying between Grimsby and Spurn Point waiting for wind and tide to proceed northwards. The boats came up to the springs for fresh water, which abound at the mouth of the Grimsby Docks, in such numbers that they resembled, says our correspondent, "minnows in a pool." Oftentimes from 300 to 600 vessels take shelter here; but 1,300 is so unusual a number as to merit a notice of the fact.

The new building—the scene of the late accident—now constructing at Euston-square, consists of an elaborate vestibule for passengers, 120 ft. long, by 60 ft. wide, and 55 ft. high. It is from a design by Mr. Hardwicke, and will, at a cost of some 70,000t, in addition to the grand onescene hall, contain book.

Mr. Hardwicke, and will, at a cost of some 70,000t., in addition to the grand passenger hall, contain booking-offices, clerks and secretaries' offices, board-rooms and rooms for passengers and lugage. The booking-offices will be right and left of the great hall, which will be lighted from above, and decorated. It will take nearly trader apostle to complete

take nearly twelve months to complete.

Arrangements are in progress between the LONDON
AND NORTH-WESTERN and the BUCKINGHAMSHIRE
relative to an alteration in the leasing of the latter Irestative to an aircration in the costing.

Ilines. We believe that instead of the London and North-Western paying 4 per cent. interest on the outlay and in addition half profits, they have agreed to pay 54 per cent. on the outlay, without any contingency as to profits.

On the 12th, a deputation from the London, Brighton and South Coast; and a deputation from the

Grand Surrey Canal Company, transacted business at the office of the Commissioners, relative to the plan for the formation of an opening bridge to be made by the Brighton over the Grand Surrey Canal.

Mr. Salt and others employed on the Manchester and Birmingham section of the London and North-

Western have been DINING together, and celebrating their good fortune in being the servants of such a

company.

A NEW PLATFORM has been erected at the Reading

A NEW PLATFORM has been erected at the Acading up station of the BERKS AND HANTS.

The MANCHESTER, BUXTON, MATLOCK AND MIDLAND announce that they propose to make a deviation in their line, together with branches to Buxton, Bakewell and the Midlands.

The net-work of the LINCOLNSHIRE RAILWAYS will come into active use in the course of the spring. They serve what may be called an almost wholly agricultural district. With judicious and cheap management, we have always contended that a good and profitable traffic is to be obtained through an agricultural country. An omen of what the Lincolnshire district may be expected to yield is afforded by what is now going on with the southern neighbouring counties. The Railway Times of last week well remarked that the agricultural interest was at the first strongly opposed to the railway system, and districts purely agricultural were the last to avail themselves of its advantages. It was even asserted by many supporters of the system that it was only adapted for large and populous districts, and that unless a railway terminated in a large manufacturing town or a fashionable watering-place, it never would become a profitable investment. The fallacy of these opinions is now fully shown by the enormous quantities of food weekly poured into the metropolis by railway. We have been making some inquiry on the subject, and have been making some inquiry on the subject, and find that it almost surpasses belief, and casts into shade the occasional large arrivals of food into Liverpool from foreign ports during the famine of last spring. From the 18th to the 24th of December, a period of six days, there arrived from the agricultural districts of Norfolk, Suffolk, Essex, Herts and Callifold and the Fester Courter 7.415 and Cambridgeshire, viá the Eastern Counties, 7,447 sacks of flour, 11,546 sacks of malt, 3,198 sacks of wheat, 3,414 sacks of barley, 1,374 sacks of oats, and 1,052 sacks of seeds; 353 tons of dead meat, 193 tons of fish, 94 tons of poultry and game, 133 tons of beer, 5,594 sheep, 545 oxen, 181 pigs, 10,600 quarts of milk, 2,400 loaves of bread, and 480 tons of coal. During the same period 17,209 parcels by passenger trains also came to hand, of which 6,000 were turkeys for Christmas cheer. From these statistics it is evident that the rural and least populated districts stand greatly in need of railway communication, for without rapid and easy conveyance such vast quantities of perishable food could never have reached the metropolis, or other available markets.

The memorial of Mr. A. Hoyes to the Commissioners, respecting the South-Western subscription deeds, merely sets out at great length the hardships that he (Mr. Hoyes), as holding 391 shares in the company, is forced to undergo from the passing of the resolutions on the 27th of Nov. (see Rail. Chron.

1847, p. 1098); recommending certain extensions, &c., to which Mr. Hoyes objects.

The "South-Western Shareholder" of the Morning Herald has repeated his attacks on the company's subscription deeds. Even if the gentleman's assertions were correct and authorized, we should but briefly notice them, but as he gives no name to his letters, we only present an extract from Mr. Chaplin's last reply:—"I explained in my former note, I lin's last reply:—"I explained in my former note, I hoped sufficiently, that I had signed the South-Western new capital contracts for no more than my rateable proportion of the new stock, and the Exeter, Yeovil and Dorchester deed (except as regards my own 200 shares) merely as a trustee for the South-Western, funds to meet such subscription being provided by those (myself included) who had taken up that company's new stock; and I purposely avoided figures, because the fact I stated was the material point, and the extent of my holding in the present stock of the South-Western I deemed without interest to any one but myself. My omission has been turned by your correspondent to good account, and your readers must now therefore bear with me when your readers must now therefore bear with the when I state that the amount placed in his first letter opposite my name (172.9161, 13s. 4d.) is made up of 67,0001, signed to the Exeter, Yeovil and Dorchester deed as a trustee for the South-Western, and covered in the way I have before mentioned; 10,000l. my personal subscription of 200 shares to the Exeter, Yeovil and Dorchester Company's capital; and 95,9161. (calculated as your correspondent puts it) of the new capital due to my holding of old stock in the South-Western.

Two gates on the BEDFORD AND BLETCHLEY have recently been knocked down by the trains coming up before they were thrown open. The driver on finding that the gates were not open for him put on extra steam and forced them down.

The READING AND REGATE works are suspended.
At the last meeting of the Norfolk Archeological
Institute, Sir J. Boileau mentioned that an extensive discovery of first brass Roman coins, to the number of nearly 200, at Chesterford, had been made on the line of railway.

To the recent execution of Reid, at York, the railways, we are sorry to observe, brought many thousand persons. By the 7 20 a.m. train from Leeds there were conveyed to York more than 1,000 extra passengers. All the available carriages were put into

use, and still hundreds were left behind at that time to be conveyed in a subsequent train. This, however, gives but a very imperfect estimate of the number of persons that went from Leeds to York. It was stated in York that no execution has been attended by so many spectators at any period, except those of Eugene Aram, for the murder of Daniel Clark, at Knaresborough, and Mary Bateman, for poisoning, at Leeds. On such an occasion it would almost be allowable for the railways to double or treble their usual fares.

Those who remember the time, says the Leeds Mercury, when the only way of reaching Dewsbury from Leeds in a post-chaise was by making a long circuit round the hills that separate those two important seats of the woollen manufacture, at a cost of nearly two hours' travel, will be greatly struck in April or May next when the Leeds and Dewsbury is opened, and when the journey will be performed in a quarter of an hour.

A meeting of the Scottish Central is about to be held to determine the propriety of prosecuting appeals to the House of Lords against the judgment of the Court of Session passing the notes of suspension and interdict, some time ago presented at the instance of the London and North-Western, Lan-caster and Carlisle, and Caledonian, and also at the instance of certain shareholders in the Scottish Cen-

At the Edinburgh Town Council, on the 4th inst., the Lord Provost's Committee submitted a Report the Lord Provost's Committee submitted a Report on certain parliamentary notices from the Town Council of Leith, the Edinburgh and Glasgow, the North British, as effecting the Trinity Hospital's property, relative to the bills which these parties are to apply for in the ensuing session of Parliament. The Committee recommended that with reference to the notice from the Town Council of Leith the chemical services of the council of the coun Leith they should remain neutral, that from the notice of the Edinburgh and Glasgow they should dissent, and that from one of the notices of the North British they should likewise dissent .- Report approved of.

It is stated that Mr. Maxton, the engineer at Cairo. has designed a steam-carriage capable of conveying a whole cargo of passengers, luggage and goods of one steamer across the Desert in a few hours, and which, with all the necessaries, will only cost 3,500%. He has presented the plans to the Pasha, who, it is said, has approved of them, and ordered one immediately from England. These carriages, with two new steamers expected out shortly for the Nile services will be in the contract of the plant. vice, will, it is expected, greatly improve the traffic through Egypt.

A Spanish paper states that the first station outside the Atocha gate on the Madrid and Aranjuez has

bean begun.

It has been officially announced that the BAYARIAN RAILWAY LOAN of ten millions and a half of florins will be raised by contributions of 100 florins, 500 florins, and 1,000 florins, at the option of parties taking a share in it. In return, each contributor will be entitled to an amount of Bavarian Three-and-a-half per Cent. Bonds (increased to 4 per cent. interest) equal to his advances. The term for paying up instalments extends to three months (up to March 31), provided, however, that the loan be not raised in full before that period.

Reports of Meetings.

BIRMINGHAM AND OXFORD JUNCTION. Jan. 14.—Adjourned Special Meeting, Birmingham.
-Mr. P. H. Muntz in the chair.

Mr. Colmore said, no doubt that the meeting was aware that the Lord Chancellor had stated that he should take the appeal on the decision of the Vice-Chancellor one day next week, and under these cir-cumstances it was not desirable to move any special resolution then. It would be much better to wait until after the decision of the Lord Chancellor had been obtained; and as in all probability that would be in the course of a week, he begged leave to move that the meeting be adjourned till Friday the 28th inst.
Mr. Beale seconded the motion.

The CHAIRMAN said he could only say, that it was his sincere desire that some decision might be given one way or the other, in order that an end might be put to their unseemly disputes, which were proving so disastrous to railway property in general. He therefore trusted that ere they met again the Lord Chancellor would have given his decision, and thus have put an end to them.

The resolution was then put and carried unani-

mously, and the meeting, which scarcely lasted two minutes, adjourned.

LANCASTER AND PRESTON.

Jan. 6 .- Adjourned Special Meeting, Lancaster .-Mr. J. BUSHELL in the chair.

The CHAIRMAN said, that in proposing an adjournment of the last meeting he had considered there were subjects which might be discussed between the railway and canal directors, with a view to an arrangement between them, which it was not then expedient was not the expected that time. At the last neeting he was not without hopes that he should now have been able to have thrown out the olive branch of peace between the two companies. That hope, however, he regretted had not been realized. He did not however fear the result of the proceedings threatened against them by the canal company. He explained what had taken place since the last meeting. An attempt had been made by the directors to come to some arrangement with the canal company, and a conference was attended by five directors, and a rather scanty attendance of the canal Board. It was stated to the canal Board that the question of their lease of the line was not to be brought in at all, as it had been settled at a former meeting of the railway directors. He (the chairman) said to the canal Board, "Are you willing to resign your interest in the railway on re ceiving a fair consideration." The answer was, that there was no objection to do so. The conference the efore broke up with the supposition that the canal company would take the subject into consideration at a full meeting of their proprietors, and that the directors of the railway would hear further from them. The first meeting of the canal company was on the 1st of December Collection. cember following, and he (the chairman) remained in Lancaster to a late hour vainly expecting to hear something from the canal company. The result of the meeting was, that if the railway company would make a specific offer to the canal company, they would place the traffic returns of the line at their d. ispesal to do so. A sub-committee of the railway com pany was then appointed to negotiate with the canal company, which committee asked for a full return of entire receipts and traffic on the line. The returns from September 1846 to 1847 only were sent in. Another conference was held. The conference ended and those returns were promised. The only returns, however, which were sent were the returns of the traffic of the Lancaster and Carlisle over the line, for which the canal company had received toll. A letter in explanation was forwarded to the canal company which was answered the following day. [Here the chairman read the letter. It was to the effect that although the canal company was disposed to meet the views of the railway company in a liberal spirit, yet in the absence of the lease to the canal company being incomplete, and without any distinct proposition having been made, they did not think it right to furnish the account of traffic beyond what was already sent.] Now it was most distinctly understood that the basis of the negotiation was the exclusion of the question of lease. Both companies understood that it was to form no part of the conference; and consequently, after receiving that letter from the canal company, the negotiation ended. The directors had done their best to bring about a compromise between the two companies. company had agreed to surrender the line on compensation being paid them, the question of lease being given up; and, as one of the committee (and he believed he might speak for the rest), they never could have expected such a letter as they had received from the canal company. The canal company stated that no distinct proposition was made, whilst at the same time they were requising the means for such a proposition. they were refusing the means for such a proposition. If the canal company wanted a fair compensation for the surrender of the line, it was but just that they should give the railway company the means of offering it. This having been refused, it was not likely they would buy the "pig in the poke." On reading the letter of the canal company, he thought, and he was sure the meeting would agree with him. "Oh. was sure the meeting would agree with him, "Oh, lame and impotent conclusion." He, of course, held no further correspondence with the canal company, but after seven days he received a further letter.—
[The chairman rend the letter.—It stated that their negotiations appearing to be at an end, the canal company had thought it right to take further steps.]

Mr. Jackson corroborated the Chairman's statement.—They wished to affect the campany and the canal content of the ca

ment. They wished to offer a fair compensation or annuity for the surrender of the line, and had asked for the returns, to find out its value, being determined to make no offer without first being informed on that point.

Mr. BRANCKER eulogized the conduct of the committee. With regard to the canal company it was not for him to say much; he would leave the justifi-

្លា: ១ :

cation of their conduct to themselves, but it did now appear to him that no course which the railway com-pany could adopt would bring them to terms. He would leave them to take what steps they liked against the company, and go to any extremes. In the mean-time he proposed that the meeting be still further adjourned to the 23rd of March next, to see what

course the canal company would take.

Mr. Gillow seconded the motion, which was passed unanimously

The meeting was then made special to determine the necessary steps to take, should the canal company file a bill in Chancery against them for the completion of the lease.

Mr. BRANCKER said that the negotiations being ended, it seemed that the canal company were deter rmined to persevere in a suit of law or equity against them. It would be their duty to defend the action if commenced, and he proposed that the directors have those instructions from the meeting; recom-mending that the chairman, Mr. Jackson, and Mr. Fearn-ide be appointed a sub-committee to look to the matter.

r. BARKER seconded the motion.

Mr. BRANCKER also said he did not wish to throw any impediment in the way of a negotiation if any should be offered in the interval. The object of his motion was, that the canal company having taken certain steps and threatened an action against them, they should place themselves in a position to meet it. The railway company had showed a desire to make a certain offer, the canal company had set them at defiance, and if any further offer was made it should

Come from the canal company, and not from them.

The CHAIRMAN observed, that although not disposed to take the initiative in any further negotiations, he should feel at liberty to accept of any which might be made from the canal company.

The resolution was then passed.

Sanction was also given for the sale and purchase of certain shares.

DUNDEE AND ARBROATH.
Jan. 3. - Half-yearly Meeting, Dundee. - Lord KINNAIRD in the chair.

The Report was read:—
The directors have now to submit the following state of the company's affairs:—
REVENUE.

The gross revenue for half-year ending Oct. 31

lodged in the Eastern Bank of Scotland in name of this company. By that agreement it is further provided that the line shall be worked at a rate not exceeding 37½ per cent, on the cross revenue; and the directors hav-ing satisfied themselves that the expenses have somewlat exceeded that rate, there falls to be deducted 37½ per cent, amounting to

4,183 9 6 Leaving a revenue of £6,972 9 3 CAPITAL.

£191,666 13 15,415 0 Less arrears ...

Total capital paid up . . . £176,251 13 4 On this sum a dividend falls to be paid for the past half year at the rate of 8 per cent. per amnum, amounting to . . .

.. Free revenue as above... 6,972 9 3

Deficiency ... Add interest and feu-duties ...

formed without crossing a single street on the level, and in no way interfering with the free course of the traffic. The bill for carrying out the above objects will be submitted, in terms of the Standing Orders of the House of Lords, to a subsequent meeting to be called for the purpose. The bill for leasing this company's line, in terms of the agreement, is also in progress, and will likewise be submitted to another meeting. Since the last meeting the Edinburgh and Northern has been partially opened, and it is expected, in the course of next spring, or shortly thereafter, the line will be opened to Ferry Port on Craig, in connexion with the ferry across the river at that point. The Scottish Central and Caledonian lines being now also about to be opened, a continuous railway communication will be completed with Glasgow, Edinburgh and London. With all these railways in full operation, the traffic on this and the other local lines of the district cannot fail to be increased to an extent fully equal to the expectations which had been entertained in regard to it. in regard to it.

On the motion of the CHAIRMAN, the Report was unanimously adopted.

LONDON, BRIGHTON AND SOUTH COAST (Croydon and Epsom line).—Adjourned Meeting of Residents within the London and Epsom district (see Rail. Chron. 1847, p. 1159).—Mr. Davenport in the chair.—The Chairman said he was sorry it was not in his power to state to the gentlemen present that the objects of the committee had been obtained from the directors. The directors had denied there was any alteration in the time-tables, and in reference to the want of punctuality in the arrival of the trains, said it could not be avoided, and was common to all lines. acceded to the request that lights should be allowed in the carriages. They declined making any alteration in the day tickets, and also refused to give covered carriages for the accommodation of third-class passengers, which was of the most vital importance to the poorer classes.—Mr. Moore, as one of the committee, was thankful for having obtained the 715 train, as well as another mid-day train, with an enlarged accommodation at the stations. He would recommend waiting a little time to see whether, upon further reflection, the directors would not be disposed to grant still further relief to the residents.—Mr. Maitland said that the third-class carriages were a disgrace to the company. On one occasion, on his arrival at the terminus, he had handed out four young children, with their mother, who had an infant in her arms, all drenched to the skin by the rain, to which they were exposed, for the want of a covering to the carriage. He would conclude by recommending the presenting a memorial to the Government. He must, at the same time, testify to the very civil and obliging manner in which the servants of the line conducted themselves.—After some further observations a resolution was passed—"That the committee be not dissolved, but that it continue to meet and be empowered to take such steps as it may think necessary to obtain relief from the grievances of which they complained.

Law Entelligence.

Jan. 11.—In the LORD CHANCELLOR'S COURT, in re Elliott v. the South Decon, Mr. R. Palmer stated that an award under the Railway Act had been made a rule of court. A motion was made for leave to show cause why the award should not be set aside, and the Vice-Chancellor Knight Bruce made an order, which the registrar refused to draw up. on the ground of the want of any precedent, unless he had the authority of the Lord Chancellor. An application was then made to the Vice-Chancellor Knight Bruce to have the order rendered effective, but his Honour thought the case ought to be mentioned to the Lord Chan-cellor.—His Lordship saw no ground for any applica-tion to him. If the Vice-Chancellor made an order, and the parties were dissatisfied with it, they could appeal in the regular form. He could not give an

opinion on any other.

VIADUCT OR EMBANKMENT.—Jan. 11.—In the Vice-CHANCELLOR'S COURT, in re Tomlinson v. Copeland and North Stajiordishire, an ex parte injunction, granted on the 5th of last December, restraining the company from constructing an embankment over the plaintiff's land, and from making the railway otherwise than by a viaduct with open arches, was now sought to be dissolved. The plaintiff is the incum-bent of the parish of Stoke-upon-Trent. The company entered into possession of the land in April last, the price being left to arbitration, the company consenting to pay interest at 5 per cent on the purchase-money. The arbitrator made his award in June, estimating the price at 16,000%. In July, the com-pany gave notice that they required a small additional portion of land, and in December they commenced their works. The injunction was then obtained, on the ground that there existed an understanding between the parties that the railway should be made upon a viaduct so as to give the plaintiff easy access

to his land on each side. The land lay close to the river Trent, and the above inference arose that a viaduct was intended, as in the parliamentary plan, though it did not mention a viaduct, no more was marked out, being the quantity first purchased, than was required for the breadth of the line. It was than was required for the breadth of the line. It was now insisted that there was no ground whatever for the plaintiff's surmise that a viaduct had been intended, and that the last notice, at least, he had received, was inconsistent with that supposition.—His Honour said the injunction must be dissolved with costs. It had been obtained on the ground that the defendants had no right to make an embankment, whereas it now appeared, at least from the second notice in July last, if not from the first in April, that an embankment was intended, and the application for an injunction should have been made carlier.— Another injunction obtained between the same par-

Another injunction obtained between the same parties, as to another point, was also dissolved.

Costs, &c.—Jan. 12.—In the same Court, in rethe Midland, ex parte Thoroton, Mr. Renshaw appeared in support of the petition from a tenant in tail of certain lands taken by the company, and the purchase-money paid into court. The estate tail in the money had been barred, and the petition prayed that the money might be paid out of court to the petitioner, as the absolute owner, and that the company might as the absolute owner, and that the company might as the absolute owner, and that the company might be directed to pay the costs, charges and expenses of the petitioner of and incidental to the petition, and the order to be made thereon.—His Honour said, if the Court ought properly to throw out any intima-tion, he thought that the petitioner should re-invest the money in land, and thus throw the whole costs of that proceeding on the company, in lieu of the small and no doubt most reasonable costs of the pre-sent. However, as the petitioner did seek the money, the Court was compelled to refuse the costs. The the Court was compelled to refuse the costs. The order was then made on the petition, except as to

EMBANKMENT .- Dec. 11, 12.-In the same Court, in re Elliot v. the South Devon, an injunction, was sought to be dissolved, granted ex parte in the sittings after the last Trinity term, restraining the defendants from making, on land taken for the purposes of the branch to Mill Bay, any embankment, or any walls or wall supporting, or intending to support an embankment, so as to cause a deviation or elevation of the surface level of the line, or any part thereof, to an extent exceeding in any place two feet above the levels or level of the same part of the railway as referred to the common datum line described in the section adopted by the Act, and from deviating from the same levels where the railway is carried over the plaintiff's land to any extent exceeding in any place two feet above the levels marked by the same section, without the previous consent, in writing, of the plaintiff.—His Honour suggested that the construction of the Railway Clauses Consolidation Act might be tried by giving the plaintiff liberty to bring two actions, one upon the admission of the company that they had deviated more than two feet from the datum level; the other, upon their admission that after the order made by the Inspector-General, they had deviated more than five feet in the level. He reserved his judgment as to the continuing or dissolving the injunction in the mean time.

Dissolution, &c.-Jan. 13.-In the same Court, in re Silson v. Edgeworth, this was a suit by a share-holder in the Wrexham, Nantwich and Crewe, (see Rail. Chron. 1847, p. 1150.) on behalf of himself and the other shareholders, not defendants, praying that the accounts might be taken, and the assets divided among the shareholders. A demurrer had been allowed to the bill as it originally stood, with leave to amend. The cause now came on to be heard on a plea to the amended bill, the substance of the plea being that a shareholder had taken proceedings at law to recover the whole of his deposit. The Vice-Chancellor allowed the plea, but gave the plaintiff

leave to amend again.

Jan. 13.—In the Count of Queen's Bench, in re

Trimen v. de Burgh, an action by a surveyor against
the chairman of the Oxford, High Wycombe and
Uxbridge, for work and labour done (see Rail. Chron.
1847, p. 1134), where a verdict had been entered
for the plaintiff, a rule nist was granted, on the
ground of informality in the declaration.

On the same day, in the same Chart in the Instance.

On the same day, in the same Court, in re Watson v. the Earl of Charlemont and others (see Rail. Chron. 1817, p. 1150), a rule to show cause to set aside the verdict obtained for the plaintiff was also granted, on

Vertice obtained for the plannin was also granted, on the ground of misdirection and unfair evidence. Carriers' Act.—Jan. 12.—In the Court of Ex-chequer, in re Machin v. the South Western, this case was tried at the close of the Guildhall sittings after Michaelmas term, and terminated in a verdict for the plaintiff. Mr. Martin now moved to set aside the verdict, and enter it for the defendant. The action was brought to recover the value of a bale of

silk, the property of the plaintiff, which was booked at the Andover station, and arrived safely at the Nine Elms, where it was delivered to a carter named Johnson, in the service of Chaplin and Horne, railway carriers, and was lost or stolen in its transit from the railway terminus to Bunhill-row (see Rail. Chron. ante, p. 6). The defendants pleaded the Carriers' Act, to which the plaintiff replied, that the silk had been stolen by Johnson, a servant of the company. The Lord Chief Baron, with the assent of the rest of the Court, thought the defendants were entitled to a rule to show cause.—Rule nin accordingly.

EASTERN COUNTIES.—Jan. 5.—At the ESSEX QUARTER SESSION, the Eastern Counties v. the South Weald Poor-rate, and nine other appeals against the rates of different parishes in Essex were set out for hearing. The company had resolved to resist in every instance the system at present adopted in assessing their property to the poor-rate, which they contend is most excessive, it being in several cases at the rate of 600l. or 700l. a mile, and nearly thirty notices of appeal have been served by them. The question at issue affects between fifty and sixty parishes in Essex, as well as the principle of rating railways generally. Mr. E. James had been specially retained on the part of the company, but when the first case was called on, he applied to have it postponed till next session; if tried now, he said, and the Court was left to wade through the immense masses of figures, it would occupy three or four days; but efforts were making to settle by admissions the question of figures, and leave the Court to decide the principle, which was of great public importance, as the company would agree that the decision of the Court should be binding in all the other cases. The respite was opposed by the respondents, but the Court, looking to the importance of coming to a satisfactory decision, granted the application.

ASSESSMENT.—Jan. 9.—At the Surrey Sessions, in re the London, Brighton and South Coast v. the Poor-Rates of Croydon and Coulson, these were a series of appeals made against the assessment of the poor-rates in Croydon and Coulson, assessed in 1845, 1846 and 1847, on the grounds that they were excessive, and not levied according to the value of the property. They have been respited from two previous quarter sessions, under an arrangement that, if they were not litigated at the present sessions, they should be struck out with costs. The respondents now applied for special costs of 215t.—The Chairman said, it was a large sum, and before he made the order, he should require the deputy clerk of the peace (Mr. Onslow) to examine the documents.

Onslow) to examine the documents.

OVERTURNING A TRAIN ON THE TAFF VALE.—
Jan. 7.—At the Cardiff Sessions, W. Scott was indicted for wilfully attempting to overthrow a passenger train on the line, by removing several ruils (see Rail. Chron. 1847, p. 1134). The evidence was deemed sufficient by the jury to convict the prisoner, who was condemned under the company's Act to transportation for saven years.

transportation for seven years.

Jan. 6.—At the Petty Session at Swindon, W. Harper, a guard on the Great Western, was charged with having stolen a packet of money containing 80l. 9s. 10d., the property of the company. Money parcels had been delivered to him on his leaving raddington for the stations on the line, and amongst others the one in question for Swindon. He signed the way-bill for seven parcels, but said he did it without seeing that he had the number. Mr. Collard, the superintendent, said the accused's character and conduct had been irreproachable, and that he believed he had been made the dupe of others. On Harper's entering into his recognizance of 100l. for his appearance when called on, he was liberated.

Lately, at the Borris-in-Ossory Petty Sessions, R. H. Stubber, a landowner of fortune, sued the Great Southern and Western for penalties to the amount of 1,340l., for the omission of the company to provide a sufficiently commodious private road on the lands at Castle Fleming, in lieu of one occupied by the company's works. A penalty of 20l. for every day during which the substituted road is not provided is imposed by the Act of Parliament. The company did substitute a road in lieu of the one their works had rendered useless. Mr. Stubber's residence, or rather his temporary habitation, wherein he spends two months out of the entire year, is approached by this road. He complained of its being insufficient, and through his brother and agent corresponded with the agents of the company. He finally determined to proceed for the above penalties, which were adjudged by the magistrates.

Jan. 8.—At the Mansion House, the prisoner Coates, who has been notorious for his active robberies at several of the metropolitan lines, was finally committed.

DEUNKEN ENGINE-DRIVER. - Jan. 12. - At the

Wandsworth Police Court, J. Francom, an engine-driver in the employ of the South-Western, was charged with being drunk, and refusing to give up the charge of his engine.—J. Tomlinson, outdoor foreman of the locomotive department, on the 11th saw defendant at Nine Elms station driving an engine from the main line on to a siding. He was drunk, and witness required him to leave the engine, which he refused to do until the arrival of a policeman, into whose custody he was given. Witness had never known the defendant to be in the slightest degree in liquor previously, and he bore the character of being very attentive to his duties.—The defendant, in answer, said that he had been driving a ballast train to and from the line during the day, and being too unwell to eat and very cold, he sent for a half-pint of rum and a pint of beer, which he mixed together, and drank occasionally. He had been several years in the locomotive department, and two years a driver, and had never been complained of previously.—Mr. Paynter said as this was his first offence he should sentence him to pay a fine of 50s., or be committed for a month

Jan. 11.—At the same Court, a Mr. W. Rough, a gardener, was fined 20s. for being drunk (as well as rude), and interrupting, on the previous night, the officers of the South-Western (Richmond branch) at the Wandsworth station.

Great Western.—Jan. 10.—A robbery of from 1,500l. to 2,000l. took place between the Paddington and Bristol stations. The property, consisting of gold and silver money, was inclosed in an inch thick iron-bound deal box, nailed down, and addressed, "Messrs. Badcock & Co., bankers, Taunton"; the weight of it was about 120 lb., and on its being sent off by the 10 15 a.m. mail train, it was put at the bottom of a seat in a compartment of a carriage in front of which was the guard's seat, and behind was another compartment in which were four or five well-dressed men, some of whom got in at Paddington. They alighted at different stations on the line; and upon the arrival of the train at Bristol, it was found that the box above mentioned, after being taken out, forced open, and emptied of its contents, had been replaced in its original position. No implement by which the plunder might have been effected could be found. Information of the occurrence was communicated to the principal officers. Billing, the guard, was given in custody.

RAILWAY BILLS SUSPENDED UNDER THE ORDER OF LAST SESSION.—A return has been presented to Parliament of the bills which have been suspended, with a view to exercising the privileges in the present, secured under the order passed last session. The amounts of capital stock proposed to be raised and money to be borrowed under each bill are stated in the return. The bills (in number thirteen) are the following:—1. Airdrie and Bathgate Junction (amendment and deviation). No power was to be taken under this bill to raise capital or borrow. 2. Eastern Counties (Cambridge to Royston and Ware); capital, 700,000l.; loan, 233,000l. 3. Lecds, Dewsbury and Manchester (Ossett branch, and Dewsbury and Morley stations); capital, 115,000l.; loan, 38,300l. 4. London and Blackwall (improvement and branches to St. Katharine and London Docks); capital, 100,000l.; loan, 33,000l. 5. Manchester, Sheffield and Lincolnshire (Sheffield Canal purchase); capital, nil; loan, 25,500l. 6. Ditto (station approach in Manchester); capital, 50,000l.; loan, 16,660l. 7. Ditto (junction with the Midland, viā Barnsley, and branches); capital, 50,000l.; loan, 16,600l. 7. Ditto (junction with the Midland, viā Barnsley, and branches); capital, 348,000l.; loan, 16,600l. 9. Strathtay and Breadalbane Extension; capital, 150,000l.; loan, 50,000l.; loan, 50,000l.; loan, 100,000l. 10. South-Eastern (Mid Kent and direct Tunbridge); capital, 900,000l.; loan, 300,000l. 10. Ditto (North Kent); capital, 966,000l.; loan, nil. 12. Ditto (Strood to Maidstone); capital, 275,000l.; loan, 91,600l. 13. Midland (Gloucester and Stonehouse Junction); capital, 110,000l.; loan, one-third.

RAILWAY COLONIZATION OF BRITISH AMERICA.—The last mail brings intelligence that the first contract had been entered into for the line from St. Andrews to Woodstock—the first instalment of the great projected system of railway communication and railway colonization in British North America. The commissioners for the exploratory survey of a route for the Halifax and Quebec Railway, Major Robinson and Capt. Henderson, of the Royal Engineers, arrived at St. John's from Fredericton on the 26th of October, with a party of sappers and miners under their command, and proceeded to Halifax, by special steamer to Windsor. Their labours in the field have closed for the season, and the winter will be spent in Halifax in preparing plans and sections of the several lines of country which have been examined. The

commissioners have already reported to her Majesty's Government the existence of a good and practical route for a railway for the entire line from Halifax to Quebec: and in the whole distance, which is upwards of 600 miles, not more than 20 miles are said to present any difficulties whatever, and those not of a serious nature, but merely such as will somewhat increase the average expense of the line, many portions of which are held to offer extraordinary facilities. The commissioners express themselves greatly pleased with the beauty and fertility of the country which they have passed through within the province of New Brunswick, which is said to be, almost without exception, admirably adapted for settlement and cultivation, and to abound in valuable resources. These railway commissioners are also, in conjunction with the Hon. Mr. Johnston, Attorney-General of Nova Scotia, the commissioners for the settlement of the disputed boundary between New Brunswick and Canada.

Hydrostatic Turn-tables.—Mr. Allen, of Crewe, says the Mining Journal, has taken out a patent for a turn-table, in which he employs the hydrostatic pressure of fluids for the purpose of supporting the superincumbent weight. These tables are constructed of wrought-iron plates, the necessary strength and stability being given by numerous vertical ribs of wrought-iron plates, attached by angleirons, to the lower edges of which are also firmly attached, by angleirons, bottom and circular sides, also of wrought-iron plate, thus forming a hollow water-tight box. This hollow platform is supported in the turn-table pit or reservoir by the pit being filled with water or other fluid, and revolves on a central fixed pillar, around which is a projection, on which run aseries of friction rollers. The turn-table pit or reservoir is filled with water or other fluid, just sufficient to sustain, without any deflection of the platform, the maximum weight of the locomotive engine or carriage, which may, at any time, pass over the turn-table. The height of the surface of the water in the pit being once ascertained and adjusted proportionably with the maximum weight, it is then constantly maintained by a ball cock, attached to a supply pipe, from a cistern above. On the platform are three separate lines of rails abreast, and these are crossed at right angles by three other sets of lines, by which means one turn-table is sufficient to perform the work and effect the transfer of a locomotive engine or carriage from one to the other line, for which, with turn-tables as usually constructed and arranged, two are required; the new one is also worked with considerable economy. The pit or reservoir is formed of masonry or bricks, laid in cement, water-tight, having a sufficiently firm and stable foundation, on which the centre pillar can be properly supported, the object of which, and the friction caused by the upward pressure of the platform upon the plate or head of the central pillar. A cast-iron kirb is fixed on the top of the sides of

Another New Brake.—The Builder gives an account of a plan and description of a self-acting brake, by Mr. V. Yardley. The re-action on the buffers, when the driver checks the engine, brings this brake into action. When the momentum of the carriages, as each comes close up to the one preceding presses on the buffers, these in their turn press on rod, which turns an eccentric lever, and thus, by the flattening and elongation of a spring (kept back apparently by the counter-spring of the buffer when not in action), an elm block with an iron worm surrounding the axle is pushed towards a screw on the end of the same axle, and as the screw enters the worm in order to lock the axle, the block, by means of a pair of iron rods, also brings a pair of strong carriage-springs into action on a pair of friction-blocks, which grip the axle and retard its movement till the climax of the lock is reached—by the sliding of the block along a rod as the screw enters—when the worm, having arrived at its limit on the screw, arrests the motion of the axle and the wheel, unless indeed the brake itself be broken. A reversal of a few yards, Mr. Yardley adds, will be sufficient to unlock this brake.

SATURDAY, JANUARY 22.

COMPULSORY DECISIONS UNDER CERTAIN CIRCUMSTANCES.

The MEMORIAL addressed by Mr. A. Hoyes to the Railway Commissioners, on the subject of the NEW STOCK recently created in the LONDON AND SOUTH-WESTERN, betrays considerable excitement of feeling; and contains some matter that may at once be discarded as irrelevant. It must, however, be admitted to raise two or three questions of importance: one concerning the terms on which the additional capital is to be found in this particular instance; others that may have some weight as regards the position of shareholders on occasions when such a process is unexpectedly resorted to on a large scale. The former, or special point, involved in the arrangement for paying interest at the rate of 7 per cent. on the deposit, attracted our notice at the time when the meeting that adopted it was held; and it will not be necessary to discuss it on this occasion, as it can hardly fail to be a subject of inquiry in other quarters, and it might be superfluous to enter at much length into the argument for or against the principle of the arrangement, while it appears to be at least a matter of doubt whether it will or will not be finally adopted.

As a general question, the situation of proprietors who form a minority dissenting from great enlargements of a company's capital, is a topic of more universal interest. It has frequently been urged upon our notice, in more prosperous times, and on occasions of far less magnitude than are now frequently coming before us. In the present anxious season, and with regard to the vast additions that it has become almost a matter of course to throw on the capital of the established lines, the case of such a minority-which may amount to a large proportion of the whole proprietary—becomes an object deserving of serious consideration. The principle on which only the business of any concern, in which numbers are embarked for a common purpose, can be conducted, is obvious enough; and the law of such associations, to which every one entering them voluntarily subjects himself, must clearly be, that the determination of a majority shall be conclusive, and be for all practical uses the will of all. But neither this nor any other such law can be fairly enforced to its utmost extent, except in cases which lie within the generally understood scope of the undertaking; and it may be seen that the insisting upon it, although with the fullest sanction of the literal terms of constitution, where the subject in hand is of a character by no means implied in any way in the original design of the undertaking, and could not have been foreseen by those who embarked in it at an earlier period-still more especially where the magnitude of the transaction is serious-under such circumstances, we say, the appeal to this established and necessary rule would evidently seem to call for some modification. It may, in some cases of this kind, become a fair question, how far the majority are virtually justified in compelling their fellow shareholders-for to this it amounts-to share in wholly unexpected enlargements of the joint property; to incur burdens that they never anticipated, and may be ill able to bear, -without the offer of any tolerable alternative.

The reluctant proprietor has, indeed, the following courses open to him. He may refuse to take the new shares; but in this case, where the whole of the joint funds are pledged to find dividends upon the enlarged stock, this refusal will amount to giving up the per-centage which will certainly be taken from the income

of the old shares when it is spread over the new. If he would avoid this loss, still remaining in the company, he is compelled therefore to subscribe for the extra stock, however he may disapprove of its creation, and whatever difficulty he may find in meeting the calls upon it. On the one hand, he sees the dividend on the original shares likely to be permanently lowered; on the other, he finds that the calls to be met on the new will for some time wholly absorb the income accruing to him from his paid-up capital. His choice, if he retains his holding, is between these alternatives, neither of which, to many shareholders, in hard times especially, is at all acceptable; while the impatience of them will naturally be enhanced if they arise under conditions that amount to a new direction of the concern, which was not implied in its constitution when they first subscribed or bought their shares; still more if this difficulty meets them at times when the receipt of a clear income from the investment, and the prospect of its undiminished enjoyment, are matters of pressing consequence.

Let us take the condition of a shareholder of but moderate fortune, who has invested the whole, or a great part of his means, in a single company; depending for his subsistence upon the income he was authorized to expect to receive from it; and not at all able to wait for two or three years without any clear receipt, even were this privation certain, at the end of the term, to be far more richly repaid than any one can prudently expect from the new capitals of the last two years. He finds a creation of new shares ordered - it may be, nearly equal in money amount to the whole of the old capital: to raise the calls on his proportion of this stock will not only for some time swallow up all the dividends on his paid-up capital, but demand additional supplies in aid, which he has no method whatever of raising. It is with him a question of immediate means, as well as of future prospects; and, allowing the latter to be certain, it can hardly be quite fair to compel one who has neither the wish, nor indeed the power, of going into a new speculation, to enter into it bon gré malgré, at the cost of years of serious privation, or submit to a possible decrease of his dividend for ever after, in consequence of refusing the new stock, which he cannot well afford to take up. This is evidently a case of grave hardship; and, where the new undertaking is in the nature of an excrescence upon the original one, a case by no means wholly free from injustice. It is now the case of a very considerable number of persons, who have invested their all in railway shares, as a source of income; and whom the vast extensions of late years must embarrass exactly in the way we have been describing. These are certainly entitled to complain when they are distressed by unforeseen engagements, voted by majorities composed of persons quite differently circumstanced.

But the shareholder can sell, it has been replied, if he does not like, or cannot afford to hold. Not so at all times—not so by any means in those times, of all others, in which holding will be the most unwelcome. If he will get rid of his liability in this way, it must be on terms that will merely bring the sacrifice home to him in another form, now that the golden days of premiums on everything are over. But this is not the only case of difficulty: there is a considerable amount of stock now held under circumstances that make dealing with new shares impossible. Mr. Hoyes mentions the case of a trustee, forbidden to sell the original stock, and unprovided, of course, with funds to pay calls on the new allotment, for which the testator could make no provision

-compelled, in fact, to let the latter lie untouched. This tells upon the income of those for whose benefit the dividends are held; and is a damage of no trifling amount to parties wholly unable in any way to help themselves. Now, of such trusts, devised by will, the number is already very great in all the better companies, and must, by the course of nature, be daily on the increase. An arrangement which injuriously affects this class of property, without any remedy being applicable, is the less consistent with justice, where it arises, as we have said, not within the formerly known limits of the company's affairs, but from a determination, on the part of a majority, to extend them in a way lying far beyond their original purpose. Nor will it be prudent, in the long run, to incur the risk of inflicting this injury; which we have already known to be serious in more than one instance, and which must become more frequent as shareholders die and extensions continue. It will be apt to contribute no small weight to other causes that may tend to lame future enterprize, by creating a prejudice, not wholly unfounded, against railway investment as a means of provision for heirs.

In the case of the London and South-Western, on which Mr. Hoyes has started the complaint, which we have merely taken up as the occasion of these general remarks, there are no doubt special circumstances that will properly have considerable weight on the opposite side of the question. The obligations he comes forward to denounce are not now heard of for the first time, but are known to have been almost unanimously approved of by the company at an earlier period; and the steps which he now seeks to retard, are for the completion of proceedings already far advanced in Parliament, on which the chief expense was last year incurred with the proprietors' full consent, and which, if stopped now, will make all that has hitherto been spent a mere loss to all concerned. Under such circumstances, it is clear that to start the objection at this late stage is a captious and untimely proceeding, whatever it might have been if taken up by a large majority before the Directors were permitted to undertake any great extension of the concern.

But it is equally clear that the objection might have been fairly made on the first introduction of the new enlargements, had such a minority then existed.

When a company, with a working capital not exceeding three millions and a half, proposed to enter into engagements demanding four millions more, it is evident that considerations which might scarcely deserve a forward place in an ordinary state of things, would have been fairly entitled to a hearing under such circumstances of extraordinary expansion. But the general question we have been noticing is deserving of regard even under conditions far less extreme; since railways have become the savings' banks for hundreds of thousands of individuals with small incomes and limited properties; and, furthermore, since the effect of frightening such proprietors into other securities would be apt to give the system a shock from which years might not recover it. It belongs to a class of subjects that Directors, attracted by great combinations, and wealthy proprietors, who can afford to play with their investments, have too little taken into consideration. And as we believe it may be for the interest of the whole system that they should be more attentively regarded, we cannot regret the appearance of Mr. Hoyes's memorial, questionable though it may be as applied to the particular object of his complaint, as it may direct attention to a subject, the importance of which, already serious, must be continually increasing.

PRACTICAL SUGGESTIONS FOR INCREASING THE PARCEL TRAFFIC ON RAILWAYS, &c. &c.

[Concluded from p. 36.]

35. It has been shown that a parcel of a pound weight might be received, carried and delivered between London and Birmingham for 4d.; and that of this sum 3d. may be charged to receipt and delivery, including cost and risk, and 1d. to carriage. The distance is 112 miles.

36. If I can show that this distance is certainly a fair average distance every parcel is conveyed throughout the whole kingdom, I shall have established a prima facie case for rejecting distance altogether as an element of charge, and of adopting a UNIFORM RATE for the whole kingdom. Are there any grounds for supposing that parcels are carried further than passengers? The average distance each passenger travels between Birmingham and London is about 65 miles; on the Great Western it is 35 miles; on the South-Eastern 39 miles; on the South-Western 39 miles; for the whole kingdom the average has been estimated at about 13 miles. If the average distance of passengers be objected to, surely that of letters will be admitted to afford an unexceptionable analogy. I have good reason for believing that the average distance a letter is estimated to travel certainly does not exceed 80 miles. To take, therefore, 112 miles as the average distance each parcel travels, is surely a most ample allowance. Fourpence, therefore, for the transit (including receipt, carriage and delivery) of a parcel of a pound, would be a fair and remunerative rate for the whole kingdom. There would be a profit even on parcels sent from the two extremities, from Land's End to Inverness, say 500 miles; for as 0.2d. pays quite profitably for carriage on 112 miles, so five times that amount would pay profitably for less than five times that distance, to say nothing about the profit on the receipt and delivery.

37. It is with parcels as with letters. The numbers decrease according to distance. Thus take any two towns of like circumstances and of equal population, the one distant 50 miles from London, and the other 200, and the number of letters passing between London and the first will be more numerous than those between the latter, almost in the proportion of four to one. Such will be found to be the case

with parcels.

38. And here it may be remarked that the very smallness of the charge is another reason for the uniformity. The cost of railway expenses with profit being only 0.2d. per pound, it is not worth while adopting varying rates, adding the same amount (under a farthing) for every additional 100 miles, or subtracting the proportionate parts of 0.2d. for distance below 100 miles. In fact, it would be more JUST, as well as most convenient and very profitable, to establish a uniform rate of charge.

39. Having thus shown that a uniform rate of 4d. for a parcel of a pound, sent from any part of the kingdom to another, would be remunerative, the next thing is to determine the scale for parcels exceeding a pound. The charge for receipt and delivery would of course only occur once with each parcel. Therefore I propose, after the charge of 4d. for the first pound, to adopt a scale of $\frac{1}{2}d$. for each pound after the first, perhaps taking notice only of gradations

40. Thus the plan which I propose is, that on all the railways of England and Scotland parcels sent by PASSENGER TRAINS should be subjected to the following rates per pounddistance, as an element of charge, being diszarded:-

of two pounds, to save trouble in weighing.

Under 1 lb.

Above 5 lb. and under 7 lb. Above 7 lb. and under 9 lb.

And so on in proportion-a penny for every

two pounds.

41. Of course the charge of 3d. for receipt and delivery remains the same with all parcels: the only charge which increases is that for weight. We have already shown that 0.2d. per pound actually pays all railway charges. A rate of 1d. per 2lb. would be rather an increase on the present charges on heavy parcels, whilst it would at the same time be a most welcome change to the public.

42. It would make heavy parcels for short distances rather dearer than they are now. There is no objection to this, as the public would have the advantage in the lighter parcels, and would always have the option of sending heavy parcels by the luggage train at the present cheaper rate. We have sufficient evidence in the recent Post-office changes to show that there would be no opposition to raising the rate in some cases, coupled with the lowering it in others.

43. The effect of the penny post was to increase the rate of postage in the London district and other local posts throughout the kingdom. The quarter of a pound letter, which before the penny post was sent for 1d, out of London and 2d. in London, became charged under the penny post with 8d.! But not a murmur was heard on this account. Every one welcomed the change for its general good, and did not regard

the exceptions.

44. Of course it would be necessary that every railway should combine to adopt the general system, and receive its proportionate profits. But a beginning might be made on the London and North-Western and Midland Railways. There is already the nucleus of a machinery, and there would be no difficulty in extending the principles of the Clearing-house system to every railway. But it is not necessary to enter upon the organization of the plan here in detail.

45. The receipt and delivery would extend only to those large towns and places where the railways already receive and deliver parcels; just as in the Post-office letters are only received and delivered between one Post-office and another. With the delivery beyond a post-office district in rural places the post does not trouble itself. The inhabitants make their own arrangements to meet this SECONDARY distribution. The distribution of parcels beyond the radius of the three-mile circle in London, and beyond certain limits in the country, would be of this character SECONDARY DISTRIBUTION.

46. Perhaps a system of pre-payment, and by means of certain stamps, as in the Postoffice, might be desirable, chiefly as tending to simplify accounts; but this, too, is a matter rather of detail than one of principle essential to the plan, and the consideration of it may be postponed.

47. The policy of adopting such a course as here suggested remains only to be considered.

48. First as regards the immediate interests of railways. The plan may be said, as a whole, not to propose any positive reduction of charge, but only to begin the charge (a positively higher one in proportion than at present) at a lower point—at a pound weight—and next to adopt an universal principle of charging by WEIGHT only, on the grounds of justice and public convenience.

49. At present the railways get only the heavy small parcels. The average weight of a small parcel on the London and North-Western (southern division) is 16 lb. Who carries the smaller parcels? The Post-office—the carriers especially recommends it for adoption at the —the booksellers and other private agencies. present time. I believe it would furnish a The instant effect of the measure would be at more effectual argument against Government

least to destroy the present illegitimate trade of collecting a great number of small packages and entering them in bulk; and it would supersede the necessity for exercising any powers of search in parcels, considered obnoxious, by destroying the evasion itself.

50. Unless some such a change is made as that now suggested, and that soon, the railways may prepare themselves to give up a considerable part, if not the whole, of their small-parcel business to the Post-office. Under one aspect, therefore, this plan is only a defensive measure. for the protection of railways. But it is not merely defensive; it has intrinsic merits of its own, which would, I believe, bring increased profits and a new class of business to the railways.

51. We may find some of its clements of profit in the following. It would extirpate the smuggling of parcels in bulk by the carriers;-it would attract many small parcels now carried by passengers:—it would create a transmission of parcels between private individuals, to mention only books, which does not at present exist to any extent; -it would bring to the railways the carriage of all the retail country booksellers' separate small parcels throughout the kingdom. rather than a collection of them in large ones. sent through a few publishers; - and it would attract separate small parcels, which are now sent in bulk for economy.

52. The question may be asked, But might not the plan affect the profits derived from the conveyance of the mails? Assume, for a moment, that it annihilated them altogether; it would only be the sacrifice of 13 per cent. (the profit on mails) to save 74 (the profit on parcels), and with the certainty of increasing this 71.

53. If the railways resolved on this course, they might even offer to carry the mails gratuitously without loss, if it were expedient to do so, which I doubt. But there are no grounds to suppose that the plan would affect the question at all. The weight of the mails has greatly increased, and the railways have not obtained proportionately increased payment. The weight of the mails which the Birmingham line by its agreement undertakes to carry, is considerably under the actual weight conveyed; and if, on the one hand, the railways should obtain the carriage of small parcels under a pound, on the other hand, the Post-office is every day getting increased service by the increased number of letters, without paying more for the increased service.

54. Another question asked is, If you have a uniform rate for parcels, why not have one for passengers? A little reflection will show that the cases are not parallel. In the case of a small parcel, it is proved that to carry a pound weight 500 miles, the cost to the railways would be less than 1d. To carry a first-class passenger on the London and North-Western costs 0.831d., or above \$d. per mile; a second-class passenger costs 0.487d., or nearly \(\frac{1}{2}d. \); a third-class passenger costs 0.292d., or above 1d.

55. The cost of a single pound weight per single mile is only 0.0017d. Now, the insignificancy of this cost, not measurable in coin, constitutes THE reason for a uniform rate, whereas, the importance of $\frac{3}{4}d., \frac{1}{2}d.$, and $\frac{4}{4}d.$ per mile is THE reason against it. Besides, the chief elements of charge in parcels,-receipt, delivery, entry in divers books, &c .- do not apply to passengers at all. Other points of difference will occur to every one, but these are surely sufficient to refute the

argument if it be adduced. 56. Besides the profit of the proposed plan,

management and interference with railways than anything else. The traffic of small parcels would always afford an example of competition with the Post-office, useful to both. The delivery would be more frequent, and therefore more convenient to the public; the charge would be cheaper, and therefore more welcome. But to enable the railways to give the public this boon, the present law of liability must be altered. The common law holds the railway responsible for safe delivery, whereas the Postoffice repudiates the liability, even when a letter is especially registered; and a statute sanctions the repudiation! Make the law in both cases alike: let railways adopt a uniform rate for parcels of one pound and upwards, and the public will obtain literally a parcel postage more rapid and cheaper than that offered by the Postoffice. The railways will present an actual illustration of the Marquis of Lansdowne's very correct apophthegm, that in this as in all other instances the Government is always the inferior trader of the two.

57. My advice to railways therefore is,-Assess the present charges on a uniform system, according to weight; -obtain profit and popularity, or remain passive and see the whole of the small-parcel traffic absorbed by the Post-

58. In conclusion, I would say, that the practical managers of railways will, I am sure, admit that such a plan as that suggested, abounding as it necessarily does in many intricate details, cannot be expected to be perfect or incapable of improvement. I believe it enunciates principles which are sound; and if this be the case, the application of them will not be attended with insurmountable difficulties.

Proceedings of Bocieties.

Institution of Civil Engineers,-Jan. 11,-First Meeting .- Sir J. Rennie, president, in the chair .- A paper was read descriptive of Mr. F. Ransome's process for making artificial stone. The modus op randi appeared to be simple. Broken pieces of silica (common flint) being subjected for a time to the action of caustic alkali, boiling under pressure in a close vessel, formed a transparent silicated solution, which was evaporated to a specific gravity of 1 600 (distilled water being 1 600), and was then intimately mixed with given proportions of well-washed sand, broken granite, or other materials, of different degrees of hardness. The paste, thus constituted, after being pressed into moulds, from which the most delicate impressions were readily received, were subjected to a red heat, in a stove or kiln, by which operation the free or uncombined silica of the raw material united with the excess of alkali existing in the solution, thus forming a semi-vitreous compound, and rendering the artificial stone perfectly insoluble. This production must evidently be adaptable to a comprehensive range of objects for decorative art and architectural purposes, busts, vases, flooring, tiles, steps, balustrades, mouldings, capitals, shafts and bases of columns, &c. Even grinding stones and whet stones for scythes have been made—and in fact, from the beauty and variety of the specimens exhibited, there would appear to be a vast field onen for such a production. It pear to be a vast field open for such a production. was stated to be already extensively manufactured at Ipswich, and it was allowed to admit of extensive application where elaborately-carved stone would be too expensive.

Mr. Richmond, of Bow, exhilited and explained an Engine Counter, manufactured by him, on an improved principle. The counters in ordinary use were described as somewhat inefficient machines, liable to error, or of too expensive construction to be generally employed. This counter differed from others chiefly in its simplicity and its accuracy, whilst at the same time its low price of 7. brought it within the reach of every one. With this machine, the number of of every one. With this macaine, the names of strokes made by the engine or other machine could stroke made by the engine or other machine. The be read off at one view without calculation. The leading or unit hand traversed the entire circumference, of the large dial, and those of the three small dials revolved in the same direction. The first motion was described as being given by a sliding bar and fixed spring, instead of by a double pallet, so that the

first wheel could not be thrown more than one tooth by one stroke of the engine. The hands were all moved by a train of wheels and pinions, without skip wheels, so that the motion was regular and progressive. These were admitted to be advantages, and in the discussion upon the machine, its merits ap-

peared to be shown very decidedly.

—J. Field, President; W. Cubitt, J. M. Rendel, J. Simpson and R. Stephenson, M.P., Vice-Presidents; J. F. Bateman, G. P. Bidder, I. K. Brunel, J. Cubitt, J. Locke, M.P., J. Miller, W. C. Milne, T. Sopwith, J. R. M'Clean and C. May, Members; and J. Clutton and T. H. Wyatt Associates of Council.

The Report of the Council showed that the pro-

The Report of the Council showed that the pro-

gress of the Society was steadily good.

Telford medals were presented to Messrs. Jackson, Richardson, Murray, Glynn and Frodsham, and to the two former gentlemen Council premiums of books were added. Telford premiums of books were also awarded to Messrs. Elliott, Keppel, Shears and Masters, for their communications made during the past

Memoirs were given of the deceased members and associates -- Messrs. Thom, Giles, Lipkins, Mushet, Reynolds, Holtzapffel, Evans, Watkins and Ball. The career of several of these gentlemen had been so varied, and possessed such points of interest, that the memoirs were necessarily extended beyond their usual length. The Report noticed the increased atisual length. The Report noticed the increased at-tendance of members and visitors as evidence of its advancing career, and of the interest felt for the science of civil engineering. A pressing appeal was made to members of all classes to contribute papers to induce animated discussions, which are the distinc-tive features of the meetings. The principal events of the past session were touched upon, and several private matters, relative to the internal management of the Institution, were fully discussed. The Council then explained the changed form of the balloting papers, necessitated by the new by-laws and the retirement of Sir J. Rennie from the post of President, which he had so ably and beneficially filled for the last three years. In conclusion, the Report said, Let the civil engineers remember also that 'union is strength, and that if they are true to each other, and use the Institution as the common centre and bond of unity, they may set at nought all efforts to dislodge the civil engineers of England from the proud eminence where their talents, their practical skill and

their probity have placed them. their probity have placed them.

Before leaving the chair, Sir J. Rennie addressed
the meeting on the selection of the President, and
impressed upon them the claims of Mr. Field, not
only as one of the founders of the Institution, and
one who had filled for many years all positions in the Society, nor because he was universally respected and esteemed as an upright, honourable, kind-hearted man, but chiefly on account of his acknowledged celebrity as a mechanical engineer, particularly in that most important department, steam navigation and because his election would unite more firmly the two branches of the profession, which to insure general prosperity must ever go hand in hand, as the had hitherto done in the Institution, in spite of all attempts to make it appear otherwise. He then reviewed the position of the Institution during his presidentship, offering his best thanks to the Vice-Presidents and the members of the Council, and to the secretary, for the support and assistance afforded him, and examined with much candour the relative position of the civil engineers and of the Government Beards and commissions, which had appeared to clash more than was desirable. This he showed not to arise from any of the acts of the civil engineers, who had ever been ready to afford their best assistance to the Government in any capacity; and, further, that it would be the interest of the Government to take advantage of the talent, energy and practical skill of the civil engineers, by whom they had ever been well served, rather than incur the hazard and the expense of forming a corps that would require more time for educating than could be afforded in these active times, when even hesitation

was perdition. vote of thanks to Sir J. Rennie was received with cheers.—Thanks were also voted to the Council and the secretary for their services.

Progress of Works.

finished. The line was travelled over in one of the contractor's waggons. They then viewed the Gonerby tunnel, near Grantham, which is upwards of 500 yards long, nearly half of which is completed, and afterwards walked through the cutting at the east end of the tunnel, and examined the station ground at Grantham, and also the branch line to the wharf. The directors expressed their satisfaction at the progress made, and the superior workmanship of the

bridges, culverts, and the whole of the works, by the contractor, Mr. Wythes, of Reignte.

AVESHIEE AND PAISLEY CANAL.—The goods traffic between Glasgow and Johnstone, and Paisley and Johnstone, according to the Glasgow Constitutional, has been resumed by the Ayrshire, in consequence of the agreement entered into between the Ayr and Greenock and the Paisley Canal having been can-celled, so far as the Ayrshire is concerned. BRISTOL AND EXETER (Tiverton branch).—This

branch, which leaves the main line at the Tiverton-road station, and terminates in the borough of Tiver-ton, seven miles, will be opened for traffic on the 14th

of February. CALEDONIAN. -Although the Government Inspector has reported favourably of the state of the works, it has reported favourably of the state of the works, it will not surprise those who have any practical knowledge of such matters, says the Scottish Railway Gazette, that a line of such great extent as the Caledonian requires vast preparation and care before it be opened for general traffic. At this senson caution is peculiarly called for. The late variable weather has, we believe, in some degree affected particular continuous and in the sensor caution was the sensor of the sensor who we have above above all the sensor who was the sensor who portions, and is a sufficient reason why a short delay should have been considered advisable. The interval, however, has naturally been taken advantage of to improve whatever night seem imperfect in any part of the works. The arrangements for conducting the traffic are making steady and satisfactory progress. At the Edinburgh terminus the booking offices and At the Edinburgh terminus the booking-offices and all the other adjuncts of the station are completed, and they appear to be exceedingly well adapted to the business of the company. In Glasgow similar arrangements are matured, and along the line the temporary stations are fitted up, and in fact occupied by the officers of the company. Mr. Stewart, late of the Edinburgh and Glasgow, has been appointed superintendent at Glasgow, and Mr. Mitchell, from the Great Western will consume a similar need at the Great Western, will occupy a similar post at Edinburgh.—The Caledonian Mercury states that the opening has been postponed in consequence of some subsiding at one or two points of this line where embankments had to be made over a mossy bottom, and that it will require some time to raise them up and allow them properly to consolidate.

Dublin and Belfast Junction.—The directors'

DUBLIN AND BELFAST JUNCTION.—The directors late circular gives the following particulars:—Since the last Report of the engineer, dated the 14th of August 1847, the average number of men daily employed on the works has been 3,575, and of horses 376; and though considerable progress has been made in the works north of Dundalk, and large sums expended thereon, and almost all the land for the entire line has been wall for All for All Forthman. line has been paid or agreed for, the directors have, for the present, suspended the works on that portion of the line north of Dundalk, in hopes of being able soon to finish that part between Drogheda and Dundalk, and thereby commence a revenue for the sharedalk, and thereby commence a revenue for the share-holders, particularly as the Dundalk and Enniskillen line will be ready to be opened as far as Castleblaney in a short time, and thereby cause a considerable traffic on the line of this company. The Navan branch this company is bound by Act of Parliament to finish, and therefore the directors are auxious to fulfil their engagement with the Drogheda, and thereby realize a further revenue, by handing over this branch to that company. This, as well as the completion of the main line as far as Dundalk, will require a considerable sum; and as the funds are not more than sufficient for present liabilities, independent of the heavy weekly payments to the contractors &c., the directors think they were bound to make the last call. The carriages and engines are nearly com-pleted and partly paid for, and the directors do hope that the two portions of the line above mentioned will be soon opened for traffic, but this will and must depend upon the manner in which the sharcholders shall pay these calls. A proposition having been made to the company on behalf of the Newry and Emniskillen on the subject of an amalgamation, the directors could not accede to the terms proposed, nor do they consider that any arrangement could be made at present consistently with the interests of this

company

fear great difficulty will be experienced in getting a firm foundation.

LYNN AND WISBEACH.—At present the permanent bridge over the Ouse is not completed, save the Cambridge Chronicle, but a very substantial temporary one has been formed, over which the line is carried; the strength of this structure was tested somewhat severely on the visit of the Inspector, but so well did it pass through the trial that we cannot doubt

but it will be favourably reported on. SOUTH DEVON.—The Plymouth Herald confidently continues to affirm the success of the atmospheric. We stated, it says, in our last week's paper that the arrangements having been perfected, the trains would be propelled by atmospheric pressure from Exeter to Newton, a distance of 201 miles. Up to that period the system had been in perfect operation only so far as Teignmouth, 151 miles, and we have now the pleasure of placing before the public a most satisfactory report of the working of the line up to the 13th. On the 10th all the trains, except the first and last each way, commenced running by atmospheric power, and the trial has fully answered all the expectations. Notwithstanding the disadvantages attending the commencement of every new undertaking, not a single instance of stoppage or delay has occurred on the new piece of road from Teignmouth to Newton. On the first day the express train was unusually heavy, and it started from Newton six minutes after its proper time, but it reached Exeter at the regular period, gaining six minutes on the 20 miles. 12th the down express train was 30 minutes late at Exeter, but on arriving at Newton 10 minutes had been recovered—so much therefore in praise of this system .- Continued efforts are being made with the The boilers are all in place, and the house all but ready to receive the engine at Dainton. The Plymouth Advertiser reports that the Totnes enginehouse is nearly high enough to receive the roof, and at Rattery the foundations are just commenced. The permanent way is laid continuously from Totnes through the Marley tunnel, but a hiatus occurs from thence to within three quarters of a mile of Erme viaduct, a distance of 5½ miles. The laying is, however, being carried forward from both ends.

the viaducts, a question into which the state of the weather enters largely. Syston and Peterborough.—The contractors be tween Stamford and Oakham have received orders to expedite their work, as the directors, says the Stamford Mercury, at length begin to find that delay is unprofitable. Mr. Moore, one of the sub-contractors, was last week in want of a thousand hands to complete his portion of the line near Luffenham. It is now said that efforts will be made to have the line ready for opening throughout by the 14th of February.

alteration of the viaducts, which we noticed last week,

in order to give them additional security, and indeed

to place their safety beyond a doubt, is in progress

at Erme only; but materials in large quantities are

now on various parts of the line, and there is no doubt

that hands will soon be placed on the others. The station arrangements at Laira, near Plymouth, are being rapidly carried forward, and the opening of the

line will now entirely depend on the completion of

WAKEFIELD, PONTEFRACT AND GOOLE.—The works are nearly completed, and the permanent way is undergoing the process of consolidation prior to opening on the 1st of March.

WATERFORD, WEXFORD, WICKLOW AND DUBLIN .-The works, both at Killiney and at Bray Head, are proceeding as rapidly as the nature of the cuttings will admit. Mr. Brunel minutely examined the works during his recent visit, and expressed himself as well pleased. On Friday last, says the Irish Railway Gazette, the deposit of 10 per cent. on the 250,000l. capital subscribed to this company by the South Wales was lodged in the Accountant General's office in Government 34 per cents., amounting to 21,631l., the deposit money only amounting to 18,750l. The bill to legalize this subscription, and effect other judicious matters, is one of the very few bills promoted by Irish companies this year.

FOREIGN. East Indian .- The commissioners who went out by the Bentinek with an engineer's staff have commenced operations. A careful re-examination of the country about Calcutta, and the opposite side of the Hoogly, has been proceeded with. A letter in the Times declares that this occupation will engage the engineer between two and three weeks or a month, and in the interval such other arrangements are in progress as will not involve any immediate expenditure, while they will contribute materially to the advancement of the entire undertaking. The commissioners, it is understood, have adopted a course which under all circumstances appears the most prudent and advantageous for the shareholders, though it may

They have decided upon expending only so | that the night was clear, and that as the red lights much as shall be indispensably necessary, during the next few months, in lieu of proceeding as rapidly as they had prepared for, and to adapt their arrangements to the altered circumstances of the moneymarket, and remain prepared for more active measures as soon as they shall be advantageously practicable. Railway expenditure in the country will do more to secure and consolidate the Government—to augment its revenues-to extend its commerce and promote the true and permanent interests of its vast community, than from such simple means could be inferred from any past experience in Europe or else-

MARSEILLES AND AVIGNON .- Jan. 9 .- The inauguration of the line to Arles took place. The bishop of the diocese the day previously gave his benediction to the line and the locomotives. A company of gentlemen, in number about 600, headed by M. Talabot, the chief engineer, sat down to a dejeuner in commemoration of the occasion.

Accidents.

BLACKWALL. - Jan. 18. - One of the conductors omitted to unhook the rope attached to the carriage, which, on arriving at the Minories, dragged off the entire front of it, whereon the man was standing; he was thrown across the rails, and died from the injuries received.

CARLISLE AND MARYPORT.-Jan. 14 .- A singular accident took place from one of the locomotives exploding, and destroying the greater portion of the engine-shed. The locomotive was standing underneath the shed, preparatory to taking a passenger train out; the engine-driver and stoker were cleaning the ma-chinery. The two men were injured. The force of the explosion, says the Carlisle Patriot, propelled the engine along the line at an enormous speed. The directors have ascertained that the explosion arose through both safety valves being tightly screwed down. The boiler exploded just above the fire-box and near the tender.

LONDON, BRIGHTON AND SOUTH COAST .- Jan. 10. A switchman at the Lewes station was killed by jumping from a train in motion. He hitched his boot in the step of one of the carriages, and was dragged between the other carriages and the platform.

LONDON AND NORTH-WESTERN (Euston Station) .-Jan. 20.—An inquest was held on the body of one of the men killed by the falling in of the building at the Euston Station. Mr. Hardwicke, the architect, and Mr. Cubitt, the contractor, Messrs. Tite, Blore, and others were present. After some discussion between the Coroner and Jury, it was agreed to apply to the Commissioners of Woods and Forests to examine the buildings. The inquest was adjourned.

LONDON AND SOUTH-WESTERN. - Jan. 14. - The 3 30 p.m. train from Southampton was brought to a stand-still near Frimley, about a mile and a half on the Southampton side of Woking, from some disarrangement of the machinery of the engine. engine-driver in charge of the train, David Markland, immediately proceeded to repair the defect, and, in order to prevent the possibility of accident, the second guard was sent back with a red light to stay the progress of the usual night luggage train from Southampton. This officer had been gone 20 minutes, when the expected train was heard approaching, and, in order to insure safety, another person was sent back with a red lamp. This person had scarcely cleared the passenger train, when the luggage train ran into it. Markland, the engine-driver, who was just putting the finishing stroke to the repairs of his engine—the first guard holding his lamp to him at the time-was crushed to death beneath it, and the brakesman and the stoker of the luggage train were injured, the former more especially. A portion of the passenger train was thrown off the line. Some of the passengers suffered from contusions. One gentleman, the Rev. Mr. Hutchins, of Atherstone, Stokeupon-Trent, had his leg broken. The authorities on the spot were as active and attentive as possible to those hurt. The trains were subsequently brought up to town by a pilot engine, sent from Guildford to ascertain the cause of delay to the passenger train.

— Jan. 17. — At the inquest, at Woking, on the body of Markland, the company's officers were in attendance to give evidence, and to watch the case. The Coroner required the attendance of the two servants in custody. He should take such evidence as was now tendered, and should adjourn the inquiry. Mr. D. Nicholson, surveyor, of Wandsworth, Mr. Beham, and Mr. W. Young, assistant superintendent, who were travelling by the train in question, gave evidence corroborative of the facts above stated. According to the statement of Mr. W. Young, the guard, Brownsmith, did not use the detonating sigretard the completion of the great work in some mea- nals provided; but in answer to this it was shown miles long, including a small portion which was on

could be well seen, that there was no occasion for the use of the detonators. The inquest was adjourned till the 20th.—Jan. 20.—The inquest was resumed at Woking, in the absence of the two prisoners. Mr. C. S. Ward was examined. After detailing the cause of the stoppage of the passenger train he said:
—On receiving directions from Mr. Young to aid in
stopping the advancing goods train, I ran on some or 300 yards in the direction of the approaching train, which was then some distance off." Felt no alarm as I was told somebody had been sent back to stop the goods train. I distinctly saw the white light of the coming train at a distance from me of, I should say, about two miles. As the train approached, perceiving that the steam was not shut off, I took off my hat and waved it. On the engine passing me I saw two men. One was standing up at a greater elevation than usual on that part of the engine where the fire is. The other was standing on the usual place upon the engine. I shouted to them, and they shouted in return. I saw by the rate they were going that they must run into the passenger train, and I turned my head the other way to avoid seeing the collision. I saw the red light then advancing at a considerable distance behind me. I could not dis-tinguish the person of the guard who was carrying it, but I distinctly saw the light from his lamp. pose that was the guard who had been sent back to stop the advancing train.—Mr. C. Stovin, the general manager of traffic, handed in and interpreted the rules of the company providing for accidents. The guards are so placed that they can see both forward and backward, and it is their duty to keep a gond look-out and observe signals. No plan for keeping up a communication between the guards and the drivers has yet been devised that would work. Such a communication would be very desirable. There is now a bell used, which is found to be the best means of communicating with the driver. There is a rule (65) which requires the driver to keep a sharp lookout forward, and he must attend to any signal that may be made, whether he understand it or not : and the fireman is also bound to keep a sharp look-out both before and behind. The guards' boxes in the luggage train are not so constructed as to enable them to look out without putting their heads out of the box, which they are expected to do from time to time. The boxes on the passenger train are elevated, and so made that the guards can look out in all directions. Considered the detonating signals should always be used; and for this reason had given Brownsmith into custody— Young repeated his former evidence .- Mr. Gooch, superintendent of the locomotive department, produced a time-table. The luggage train ought to have been going at the rate of about 20 miles an hour; it would thus take them about 10 minutes to traverse the embankment. It was passed by the passenger train at Winchfield. The passenger train was due at Woking at Sp.m. on Friday evening. The goods train left Southampton at 4 10 p.m., and was due at Woking at 8 20 p.m. On dark clear nights I have seen the red lights at distances of from five to six Under all ordinary circumstances, 600 vards would be sufficient to bring a train to a stand still, even an express train. The gradient on the embank-ment is partly 1 in 300, and partly 1 in 333. In foggy weather or after slight rains the rails become greasy and it is more difficult to stop a train. The accident that caused the stoppage of the engine of the passenger train was one to which all engines are liable. The name of the engine was the 'Mazeppa,' and it was built in the company's own workshops, under my superintendence, about fifteen months ago. I examined it about a week before the accident, and it The injury was then in a perfect state of repair. done was the breaking of the cotter, and the object of the deceased in going underneath the engine was to take away the two pieces of iron which it coupled. It might have occurred by a nut working off. Jones has been in the company's service for twelve months, and Fleming twenty months. I had strong testimonials from two other railway companies with Jones; he had been a good and steady servant, and sober. Jones has been an engine-man from nine to ten months; before that he was a stoker. Both he and Fleming were considered steady and trustworthy men. -W. Bott, engine-fitter, stated that the locomotives of both trains were in perfect repair at the time of the accident.—Mr.Locke, M.P., chief engineer, was aware of the circumstances under which the accident occurred. Without hearing all the evidence, he should be sorry to impute blame to any person, but he had no doubt that the train could have been stopped with such a load as they had behind them within the distance allowed by the company if the signal had been observed. The embankment was about three

oud.

ų,

rel: u

1 10

72 est is the level ground. Some parts of the embankment were 30 feet high, but, generally speaking, it was from 20 to 25 feet. The gradients were about 1 in 330 up to the Frimley cutting, where they changed to 1 in 300, with slight variations, averaging 1 in 306. They were considered good gradients on which trains could were considered good gradients on which trains could be easily managed, and with such gradients there would be no difficulty in stopping a train at any speed within 300 yards. He had made experiments on the subject, and had stopped trains on a level in 200 yards, using the brake attached to the tender, as he principally relied on the brake under the control of the engineman. The engineman had also the power of reversing the engine, but many of them had an objection to do so until the last extremity. If the lines were greasy, it would take 50 or 60 yards more lines were greasy, it would take 50 or 60 yards more in which to stop a train, but then the engine ought to be reversed; and, under all ordinary circumstances, any train could be stopped within the distance allowed by the company. The signal lights could be seen on a clear night at a distance of two or three miles, and when travelling on engines he had frequently seen them at that distance. Had the regulations been strictly adhered to, he had no doubt that the accident would have been avoided. He had no doubt that, by rule 13, the "fog" signal was to be used on all occasions; but he could easily conceive that as it was called a but he could easily conceive that, as it was called a "fog" signal, a man might think it unnecessary strictly to follow the rule on clear nights. He should not attach any great blame to a man for exercising a discretion on a clear night, and, knowing that he was so much ahead of his own train that a train could be easily stopped if his signals were seen. Under the circumstances of a clear night, he thought that the guard had good reason to believe that his lamp signal would be seen, and he (Mr. Locke) should not particularly blame him for exercising a discretion, knowing as he did that in many instances the tion, knowing as he did that in many instances the safety of passengers had been ensured by such a discretion being exercised. He did not think that he could offer any suggestion to prevent accidents arising, but he should certainly propose to omit the word "fog," in describing the detonating signals, as calculated to mislead. No great good arose from pressing too heavily on men for committing mistakes, even resulting in accidents, as he knew from experience heavy likely they were to occur; and many to rience how likely they were to occur; and men to whom accidents happened generally turned out, in consequence, much more cautious servants than new consequence, much more cautious servants than new men could be.—Whiting, the head guard of the passenger train, after deposing to the facts above given, said—It is my duty to see that the signal lights are on the trains. There were three red lights attached to the train. I asked Brownsmith the reason the goods train had not stopped. He told me that he had gone three-quarters of a mile along the line, waving his red light, but that the train did not stop; and when it nessed him he called out, but saw neither driver it passed him he called out, but saw neither driver nor stoker. I think, had I been sent to stop a train, I should, in obedience to the 13th rule, have gone I should, in obedience to the 15th rule, have gone 600 yards, and placed the detonating signals on the line.—The Coroner repeated his determination to procure, if possible, the attendance of the prisoners in custody at the next meeting, which was adjourned to the 1st of February.

Parliamentary Proceedings.

PROCEEDINGS BEFORE THE EXAMINERS.

In accordance with the present Standing Orders, the duties of the Examiners duly commenced on the 15th. During the week the following business was transacted :-

Passed Standing Orders.

Passed Standing Orders.

Aberdeen (Additional capital).

Airdrie and Bathgate Junction (Amendments, &c.).

Bristol and Exeter (Bleadon to Wells, &c.).

Direct London and Portsmouth.

Drumpeller (Extension of time, &c.).

Eastern Counties (Enlargement of London and Stratford stations, &c.); (Amendment of Act).

Edinburgh and Glasgow, Nos. 1 and 2 (Alterations and increase of capital); (Amendments of Acts, &c.).

Edinburgh and Glasgow and Glasgow, Airdrie and Monklands Junction (Amendment, &c.).

Fleetwood, Preston and West Riding (Burnley and Colliery branches).

branches).

and amendments.
North Staffordshire (Wellington deviation).
North-Western (Diversions at Skipton, Casterton and Sedburgh).

North-Western (Diversions at Skipton, Casterton and Sed-burgh). Salisbury, Yeovil and Exeter, &c. Shropshire Union (Extension of time for completing lines from Newton, &c.). Windsor, Staines and South-Western (Slough extension).

Standing Orders not complied with.

Dunfermline and Queensferry (Branch to Inverkeithing

SIMPSON'S PATENT SUBMERGED PROPELLER .-- A submarine propeller has lately been tested with success It gives an increased rate of speed, and there is an entire absence of all surface swell, without the slightest motion of the vessel being experienced by the passenger. The patentee, Mr. T. B. Simpson, has had his invention fitted to a new steamboat, the Albion, of about 20 horse power. There are no paddle-boxes, the propelling wheels acting horizontally, or vertically, in a case entirely underneath the water. The case is a concentric circle, rendered eccentric by its position with relation to the wheel, which it exceeds in size sufficiently to give effect to the centrifugal action of the water. The principle of the invention may be stated to consist in the ejectment of a column of water in a parallel line with that of the vessel's motion, which column acts against the water outside the vessel. The diameter of the submerged propeller wheels of the Albion is only 24 in., and the wheels necessary to be used in a boat of 300 or 400 tons burden would not exceed 30 in. in diameter.

SAGACITY OF RATS.—In cutting through an embankment in a field adjoining the river Lune, the other day, for the formation of one of the culverts rendered necessary by the passing of the North-Western in that direction, the labourers met with between 15lb and 20lb of eels, some quite fresh, and others in the last stage of putrefaction. They varied from a quarter to half a pound in weight, and consisted of the common silver-bellied or river eel, and Lilliputian specimens of the conger or sea eel. The latter, of course, had come up with the tide. As teeth marks were visible on the heads of most of them, it was conjectured they had been destroyed in that way, and stored for winter provision, by some animal whose retreat was not far distant. This proved to be the case. On digging a little further out bounced a matronly rat, with seven half-grown young ones at her heels. The embankment is about 100 yards from the water's days so that it must have required consider. water's edge, so that it must have required considerable time and labour on the part of the old rat to drag the eels thither.—Lancaster Guardian.

IRON TRADE.—Glasgow, Jan. 14.—There is a decided improvement in the market; prices have gradually advanced for two weeks past, and our quotations are firm at 48s. 6d. for mixed Nos., 49s. for No. 1, and 47s. 6d. for No. 3, cash.—In commenting at length on the present condition of the trade, Aris's Birrange of the state of the st mingham Gazette says:—With the exception of rail-way undertakings, the general sources of consumption are not in a state of any unusual activity; and where a superior quality is used—as in articles manufac-tured from wire steel and best iron—a considerable inquiry existed at the declared reduction of price, as also for nail and chain iron; but even in instances also for nail and chain iron; but even in instances where the required description was held, so much doubt was felt as to the replacing it at the same cost, that sales were not effected. The same was the case with pig iron. The reduction is to that unusual extent that time and necessity alone will force a corresponding value upon materials. In coals, which form a large item, no probability exists at present of a return to such rates as would place the pig-maker in a position to sell. The quantity of pig iron also in stock is so small as to afford another motive for hesitation, and each succeeding week materially decreases tation, and each succeeding week materially decreases Newcastle); (Osett branch, and Dewsbury and Moriey stations).

London and Blackwall (East and West India Docks an as their supplies had become exhausted. The present Bristol and Exeter.—51. on the 1001. shares, due Feb. 14.

position of the Staffordshire iron trade is certainly embarrassing, and may be thus briefly summed up — A reduction of 2l. per ton in manufactured iron has A reduction of 2l. per ton in manufactured from has been declared, leaving bars and rods at 8l., hoops 8l. 10s. to 9l., and sheets 9l. 10s. to 10l. per ton. Notice for a reduction of 20 per cent. in wages has been given, but is resisted by a general strike of the workmen. An impossibility exists, with a return to the old rates of wages, to produce iron at the reduction. The result of the meeting of Shropshire masters has been to confirm the same reduction as in Staffordshire, and their pig iron is now quoted at 4l. 10s. at Stourport. In the Wolverhampton district there are 54 furnaces in blast and 37 out; and in the Dudley district 22 in and 26 out; total in South Staffordshire, 76 in blast and 63 out. The total number of pig iron furnaces and works in Scotland is 135; of which 100 are now in blast, 31 are out of blast, and the remaining 2 are now erecting and nearly ready

the remaining 2 are now erecting and hearly ready to be brought into operation.

In the *Times* of the 21st inst., the circular of Messrs. Stit Brothers, of Liverpool, gives the following:—Exports from Liverpool in 1846 and 1847 to New York, Boston and Philadelphia collectively:—

	Rails.	Bars.	Hoops and Sheets.
In 1846 In 1847	Tons. 12,514 12,635	Tons. 12,807 37,543	Tons. 1,686 7,195
Increase	121	24,736	5,500

"Scotch pig iron (continues the writer) has now become an important article in the metal trade, the become an important article in the metal trade, the make having increased within a few years, since the introduction of the hot blast, from about 40,000 to upwards of 500,000 tons per annum. The price in the early part of the year was 75s. to 77s. 6d. per ton, but under the influence of the pressure in the moneymarket, causing forced sales of speculative parcels, it continued with little interruption to decline throughout the year, until it reached the present figure of 46s. 6d., which is lower than at any period since January 1844. Whilst the make has not materially increased, the stock has declined about 55,000 rially increased, the stock has declined about 55,000

NOTES AND EXPLANATIONS.

NOTES AND EXPLANATIONS.

(1) The Government piers 32,0-0,000f, and the land, and receives half the profits, after to per cent.

(2) The Government guarantees 3 per cent, interest, and 1 p. cent. Sinking Fund. The lean of 10,000,000f, was negotiated at about 4 per cent, per annum.

(3) The Government lends 14,000,000f, and 4,000,000f, additional for half the cost of the passage of the town of Rouen, at 3 per cent. per annum. The dividend is declared after deduction of 1 per cent. from the profits for Sinking Fund. Loan of 6,000,000f, or 6,000 bonds

of 40% cach, hearing interest at 4 per cent, created August 1845, reimbursable by lot, at 50% cach, in the course of 73 years.

(4) The Government lends 10,000,000f, the town of Havre 1,000,000f. The Government lends 10,000,000f, and 4,000,000f, additional for half the cost of the passage of the town of Rouen, at 3 per cent, per ann. The interest to commence 3 years after the line is opened, Loan of 10,000,000 of 10,000 bonds of 1,000f, or 40% cach created December 1845, hearing interest of 50f, per annum, rein bursable by lot, at 1,200f, each, in seventy-eight years—8,000 were issued in Dec. 1845, and 2,000 in Oct. 1846.

(5) Loan of 12,500,000f, in Bonds of 1,250f, bearing interest of 50f, per annum, to be paid off in a period of 50 years.

(6) Loan of 2,502,500f, in Bonds of 1,100f, at 4) per cent, to be paid off with a premium of 150f, per Bond. The Government lends 12,500,000f, for which the Company pays, from 187, 4 per cent, interest per annum, and 1 per cent. Sinking Fund, but only when the shareholders have received 15f, per share.

(7) Loan of 6,500,000f, in Bonds of 1,250f, bearing interest of 50f, per annum, not be paid off in a period of 50 years.

(8) The Government lends 5,000,000f, at 1 per cent. interest.

Money Market.

PRICES OF BRITISH STOCKS.

* For account, 26th February. + Ex Div.

London Stock Exchange, Jan. 21. — An increased attention continues to be paid to the better sorts of railway shares, and some considerable investments have been made. Prices are firm and improving; with, however, but limited business. The firstclass debentures find ready sale, while those of an in-ferior description are still to be had at rates exceeding the general value of money.

Liverpool, Jan. 20.—Our market has been very incident throughout. Prices, nevertheless, are very Suplow, Brothers.

Manchester, Jan. 20.—There has been but little business doing in our share-market this week, and no alteration in prices worthy of note.

Sam. Grindrod.

York, Jan. 20 .- The market is firm, but the amount of business done is very limited.

GRAYSTON & EARLE.

Hull, Jan. 20 .- The share-market, in the face of Hull, Jan. 20.—The share-market, in the face of increasing abundance and cheapness of money, remains inactive. North British stock is tolerably firm, thirds especially. Shropshire Unions are in slightly improved request. Northern Counties Union have changed hands during the week at nominal rates. Parties in the town here, interested in this last-named line, are taking steps to stay the further prenamed line, are taking steps to stay the further pro-secution of the works, and we have no doubt good will come of it.

FLINT & TOOTAL.

Newcastle-upon-Tyne, Jan. 20 .- Our market is firm,

though there has been no great amount of business

transacted during the week. Newcastle and Carlisles are in demand at 994. W. FORDYCE.

Glasgow, Jan. 19.—This market is again inactive, with a very limited demand for shares. Prices do not show much variation however, as sellers are not not show much variation however, as sellers are not inclined to lower their limits. We add to day's latest business:—Caledonian, 36; ditto, halves, 2½ dis.; Caledonian and Dumbarton, 3½ dis.; Glasgow, Dumfries and Carlisle, 7½; Ayr Railway, halves, No. 1, 2½ dis.; ditto, ditto, No. 2, 2½ dis.; Glasgow and Garnkirk, 36; ditto, quarters, 9; North British, thirds, 6d. dis.; Scottish Central, 29; Stirling and Dunfermline, BIGLANAN ATKERS & CO. 96s. dis. BUCHANAN, AITKEN & Co.

Paris, Jan. 20.—Our Paris correspondent's observations on the fluctuations of the Havre shares will be found under the head of Correspondence.-The be found under the head of CORRESPONDENCE.—The following are the latest prices at the Bourse:—Avignon and Marseilles, 555f.; Dieppe and Fécamp, 253f. 75c.; Lyon and Avignon, 395f.; Northern, 527f. 50c.; Orleans and Bordeaux, 470f.; Paris and Orleans, 1,175f.; Paris and Rouen, 887f. 50c.; Paris and Strasburg, 402f. 50c.; Rouen and Havre, 440f.; Strasburg and Basle, 160f.; St. Germains, 700f.; Tours and Nantes, 390f.; Versailles (left bank), 190f.; Vierzon, 505f.

FRENCH RAILWAYS .- The budget extraordinary of the minister of public works is fixed for 1849 at 90,270,000f. The execution of the different railways will still cost, in 1849, 57,300,000f., divided in the following manner :-

Paris to HommartonF.20,000,000
Tours to Bordeaux 12,000,000 Tours to Nantes.
Châteauroux to Limoges
Bon d'Allier to Clermont
Versailles to Chartres. 1,300,000 8,000,000 6,000,000 500,000 9,000,000

F.57,300,000

No credit has been allotted either for 1848 or for 1849 for the railway from Lille to Dunkirk, the works of which are executed at the expense of the adjudi- Miscellanea.....

cated company. No credit has been allotted either for the railway from Paris to Lyon. It is well known that 24,000,000f. of the 26,000,000f. which were voted for the construction of this line, have been employed, by royal ordonnance, for the works at Lyon.

RAILWAY RATES.—The average contribution by the English railways to the local and parish rates every year amounts to 5 per cent. of their earnings, estimated at nearly 8,000,000\(lambda\). To round numbers 400,000\(lambda\). Towards the 6,000,000\(lambda\). annually raised for the poor—that is, 1-15th of the total rates, and fifty times what the same quantity of land contributed before its conversion to railways. The burden of feeding the poor during the approaching winter will be shared by the railways who have discontinued "reproductive employment" by the cessation of "cuttings and embankments." One of the Irish railways has paid 900\(lambda\). more in rates than in any prethe English railways to the local and parish rates ways has paid 900l. more in rates than in any preceding year.—Nash's Railway and Land Taxation, New Edition.

Railway Chronicle.

LONDON, SATURDAY, JANUARY 22.

The NORTH STAFFORDSHIRE proprietors received with approbation the Reports and accounts presented at their half-yearly meeting. A dividend of 5s. will be paid in July next from the profits of the canal and the part of the line to be opened in March. The works, according to the engineer's statement, are more forward than could have been expected.

We have already noticed the prudence which some railways have exercised in discriminating between works which might be stopped with advantage to shareholders and those in which the shareholders' interest could only be reconciled with proceeding. The North Staffordshire have, it seems, begun to act on this principle, and have kept back only those parts of the line likely to be last finished, and pressed forward to completion those parts which were likely to become at once remunerative. The parts thus to be opened are, Stoke to Norton Bridge on the 1st of March; Stone, to join the Trent Valley at Colwich, by the 1st of May; also, from Stoke by Harecastle to Crewe; and by Uttoxeter to Burton;-thus completing a through communication by the Potteries between Liverpool and Derby by August next. We refer our readers to the speech of Mr. RICARDO for full information on the position and prospects of this undertaking.

A sufficient number of shares not being represented at the DIRECT LONDON AND EXETER dissolution meeting, further proceedings were adjourned till the 25th.

The CALCUTTA AND DIAMOND HARBOUR shareholders have agreed to a dissolution. A return of 3s. 6d. per share will be forthwith made, and the establishment will be broken up in June.

In the course of the EVIDENCE ON THE IN-QUEST ON THE RECENT SOUTH-WESTERN ACCI-DENT, a good deal of interesting professional information has been elicited, which will be found in its proper place. But there were some observations made by the ENGINEER-IN-CHIEF, having a wider application; made in so excellent and kind a spirit, and exhibiting so much sound policy in reference to railway accidents and railway management in general, that we transpose them for more immediate comment. The true circumstances of the accident and its explanation are quite evident to one familiar with the working of railways. All the men appear to have been good men, and to have done their duty in their understanding of it. There remains one circumstance to be explained -how the driver and fireman of the luggage train did not see the red lamp which met them three-quarters of a mile from the scene of the disaster. It is plain they were not on the lookout a-head at the time of passing the guard who had the lamp. They did not see the light. Why? has not been explained, but will be perhaps. On this point we are unwilling to anticipate the decision of the jury. Meanwhile there remains this important practical consideration applicable on all railways, and already applied on many-Cowper's Signals, of which we carly gave favourable notices in this journal, should be in the cartouche-box of every guard. Let them be no longer called "fog signals. Torpedos would be a capital name, as suggested in our Correspondence. Let the rule be made universal on all railways, that the moment a break down or stoppage takes place, the guard engines travel a long while without requiring repairs.

or person sent back to stop a following train There is one on the Grand Junction Railway which break down or stoppage takes place, the guard

shall at every 300 paces place a torpedo on the has run 37,000 miles without requiring the least rails. This will extend to a mile, if he walk on till he has exhausted the half-dozen with which he is supplied. No better safeguard can be provided against the repetition of such a disaster.

The evidence to which we have already adverted, as exhibiting the true spirit of railway management as distinguished from the red tape routine with which Government officials would fetter us, is given by Mr. LOCKE in the following words :-

Railway servants are not so strict as soldiers, in fol-lowing their directions. That is a fault, perhaps, but, for my own part, I should seldom feel inclined to blame men who had exercised a reasonable discretion although the result might not be so favourable as they had anticipated. I have seen and watched the progress of railways from their infancy, and I am convinced that the exercise of a little discretion on the part of railway servants has saved the public much trouble and inconvenience.—The Coroner said, with respect to what Mr. Locke had stated relative to the exercise of a discretion on the part of railway servants, he remembered a case which lately occurred in the North, where a railway servant had saved a train from being overturned by sending it upon a wrong line. He did not know that this had anything to do with the present case, but, so far as it went, it confirmed Mr. Locke's observation.—Mr. Locke said, the case to which the coroner referred had occurred upon the Grand Junction line, and he was glad he had reminded him of it. The company's servant on that railway, finding that a train was advancing at a faster rate than it ought to have travelled, and that if he had obeyed the signal the train would be turned upon a curve, where, going at that rate of speed, it would probably be thrown over, turned it upon the wrong line of rails. There was no doubt that that man, in the exercise of a little discretion, had saved that train, and it was not by any means the only case which had occurred in his experience. Still he did not wish to excuse the man who had in the present case disobeyed orders. I am most anxious in all cases to do what we possibly can to lessen the frequency of railway accidents, but at the same time I am not over anxious to press upon these unfortunate men. I have been so much accustomed to ride on engines myself that I have no doubt I also have committed faults with the best desire to prevent accidents. Enginemen will sometimes not be looking a head; they will be thinking about other things; and accidents will arise. I am afraid, as long as the world is constituted as it is, if you try and do all some and to propose them. all you can to prevent them. I do not think that any railway company has better servants than the South Western Company. I recollect the faces of many of their engine drivers ever since the railway was opened, and many others have been with the company a long time. These accidents make men more cautious, and if you were to visit such accidents with very severe penalties I do not think the public would be any better served. After one or two misfortunes a man becomes more steady and careful than the one you would put in his place. I have seen instances of this, and I know that it makes them better and more careful servants. At the same time, I am bound to say that the engine driver and fireman of the goods train (Jones and Fleming) could not have been exercising a proper look out upon the line, or they must have seen the signal. I am extremely sorry, but so it was. I am aware that the opinion I have avowed respecting the exercise of a discretion on the part of railway servants is a dangerous opinion for a man in my position, and I have some little delicacy in expressing it. I have made mistakes myself, and I have seen others do the same; but I have seen also much inconvenience saved to the public by acts against rules and by the exercise of discretion. I know we have public feeling and the press ready to censure us for not adhering to rule, but railway operations are so multifarious that the public would not be better secured by a blind adherence to rules, and they would often be subjected to much inconvenience in consequence .-The Coroner: Then an accident such as has happened in this case would not take away your good opinion from a man like Brownsmith for example —Mr. Locke: Not at all. I should look at the case of course with reference to his past conduct and his general intelligence. I had a great respect for Markland (the deceased). He was so steady, I would have trusted him with anything. I believe he had often been with the Queen in her journeys along the line. The cause of the stoppage of the locomotive of the passenger train might have occurred to any engine, but it was one that rarely does happen. Locomotive

repair, and many of them never require repairs more than once in twelve months. The machinery part of railway locomotives is very different from what it was; I believe these engines are now almost as perfect as hands and iron can make them.

There is so much good feeling, strong sense, and practical reasoning in all this, that we are sure our readers will thank us for having drawn their attention to these remarks.

From our official returns it appears that the amount of traffic for the last week, on upwards of 3,423 miles of railway, was 147,391l., thus accounted for: - 71,453l. for the conveyance of passengers only, 37,961/. for the carriage of goods, and a remainder of 37,974l. for passengers and goods together, not respectively apportioned; being an increase of 16,612l. over the corresponding week of the former year, when the mileage was 2,680. The average earnings per mile for last week were 43l., whilst in 1847 they were 481.

CAUSES LIKELY TO ACT ON INVESTMENTS IN 1848.

The change in some features of the moneymarket which has shown itself within a short period, may be seen to add a new item to the list of reasons that give importance to the results of the last half-year's business. Money has been flowing back in considerable streams during the last three weeks; and in the City, as well as in other quarters, this commodity now seems to be abundant enough to render large investments, under ordinary circumstances, an almost certain consequence. In the present state of things, it appears that an uncertain feeling which has come to prevail in regard to railway property, has prevented extensive applications of the capital now affoat to share purchases; and it will be seen that whatever would practically tend to restore the old confidence in this kind of investment, would be apt to invite no small amount of the loose money now lying idle because the owners do not well know where it may safely be invested. In this respect, provided the forthcoming accounts are of a character to revive confidence, their appearance may be the signal of a material improvement in the demand for railway -which, on the other hand, will not be likely to receive so much benefit as might be desired from the influx of money, should the financial results of the half-year wear an unsatisfactory character.

This character, we may observe, will by no means necessarily proceed from an exhibition of some falling off in gross receipts. For this every one is fully prepared; and no permanent discredit will necessarily arise from the operation of causes which the general history of 1847 will sufficiently explain, and which may fairly be regarded as temporary. But an unfavourable impression will not unnaturally be made, if it appear that, while the business has been less productive, expenses have remained stationary:-that no effectual attempts have been applied to reduce them into some proportion with the diminished gross mileage receipts ;or that the concerns have been-and may hereafter be-managed on a principle that will make the keeping up of the former standard of profits depend on a continually increasing revenue. The effect of any exhibition from which such conclusions may be drawn cannot fail to be depressing; and for this reason, amongst others, viz., that an opinion is steadily growing in the minds of observant persons, that the tendency of the course of railway affairs must inevitably be to reduce the scale of receipts per mile of working line; and, consequently, that

inevitably continue to fall. On the other hand, the display of instances of a successful economy will be in the highest degree encouraging, -not only because of the very acceptable present that a good dividend must be at the present moment to all concerned, but still more as holding out a promise of solid prosperity under those future conditions of railway business which considerate people are daily more and more disposed to regard as inevitable.

We believe it will be found, in the meanwhile, that the private investments which for some time past have been going silently on, in small parcels, by many purchasers of but moderate means, have for the most part been made in the paid-up stocks; and that the scrips liable to further calls are much less demanded than they used to be by buyers of this valuable class. The significance of this may be easily seen, and especially in its bearing on the new works for the present year,—the funds for which must be continually supplied, in a larger measure than heretofore, by those who have become early holders of the scrip. We have already pointed out that the feasibility of providing ways and means must now, and will for some time to come, be the decisive question for the conduct of these undertakings; and in estimating these, it may be only prudent to observe that it will by no means follow, even should money become much more plentiful than at present, that it will flow indiscriminately into all channels of railway investment alike. After a period of long anxiety, there will be a preference for such as offer immediate returns, and the value of which may be to some degree ascertained by the rate of the current dividend; and a certain indisposition to take up prolonged obligations can hardly fail to remain throughout the present year in many quarters, where unfinished enterprize found a ready support in more hopeful times.

In every direction, indeed, it may be seen that circumstances are bringing the first principle of railway investment more nearly home to the partakers in it than has been the case in any previous year. It must expect to be tried, on all results of the past, as well as on its future prospects, by the test of its profitableness, at a time when men are urged by various wants not to accept hopes for realities. This condition which has been kept at some distance in the background during years of the rapid progress of the system-is now coming much closer to all concerned; -and those who direct its councils may be advised to take note of the change in this respect; since it is clearly one on the right understanding and due treatment of which the welfare of the interests at stake must greatly depend hereafter.

PRECIOUS INVENTION OF A CHAIN SAFETY CHECK-STRING.

If we seldom notice the suggestions published in newspapers of alleged improvements in sto-NALS, SAFETY COMMUNICATIONS, and other practical matters of the like kind, it is not because we are indifferent to the object they are intended to serve. But we have learned, from some observation of the business to which they must be applied, the mere frivolity and uselessness of proposals arising from partial views, by inexperienced persons, of a very complicated question; and the greater part of the volunteer communications on this chapter bear internal evidence of the authors' entire ignorance of some of the first practical conditions of the case they attempt to handle. Now and then, however, we find occasion to pause for a moment on some was printed (as an advertisement) in the Morning Herald of Tuesday last. A certain "H.E." transmits from Canterbury a scheme, for a communication between passengers and guards, to the following effect:

Let every guard wear round his waist a chain belt, and let there be a chain passing through all the carriages. Let the chain be made long enough so that the guards, just previous to starting, may with case be able to take hold of their respective ends, which I suggest should be made to communicate easily with the chain belt worn by the guards. The chain inside the carriages should be so constructed as not to have too much power, otherwise the pulling of the chain (which, as I said before, should be made to communicate with the chain belt to be worn by the guards) might cause a jerk, and so probably throw the men from their seats; but nevertheless these said chains should have sufficient power to make the men sensible of the slightest touch. I am aware that this mode is subject to one inconvenience, viz., the trains may be liable to be stopped by every person who felt there was cause to do so; but when I consider by the above plan causing a speedy and certain com-munication between the passengers and the guards, and thus a considerable saving of human life may be effected, I regard the above-named inconvenience as

a mere nothing in comparison.

This will be allowed to exceed in absurdity anything, perhaps, that has hitherto appeared on the subject; and we quote the inventor's words, lest, by describing his plan in our own way, we should be supposed to be distorting it for the sake of rendering him ridiculous. It is scarcely needful to observe that to accomplish his object every carriage body must have its own check-string. There are in the extant system, as all know, three separate compartments in every passenger coach; and the longest train rarely carries more than two guards. The reader's imagination may form for itself a picture of one of these victims, with the "chain belt round his waist," trying to hold by their "respective ends" the chains sent forth from each of the divisions of four or five coaches only; -with a nervous passenger pulling at the other end of each, some from before him, others from behind; and admitting "H. E.'s" kindly caution that they should not jerk hard enough to "probably throw the men from their seats, -it may be left to those who are curious in puzzles to determine how the sufferer is to discriminate between the various tugs, and the jerking of the train's motion, if "sensible to the slightest touch"; what he is to do with the chains while getting up and down; and what mechanism would be required to support the unlucky holder of such a weight of iron, supposing that he had no other business but to stand in fetters, taking hold of the "respective ends"; also how he is to manage the brake, with both hands in requisition for "H. E.'s" ingenious means of communication. One may well excuse the prejudice of practical men against dilettante engineering, when we see it produce extravagances of this kind. The author has a "method to prevent collision," hardly less ridiculous than the plan quoted above, which those who are curious for more nonsense of the same description may consult in the Morning Herald. We shall not extract it here, because it is not only silly but dull: whereas the idea of putting the guards in chains is at least diverting.

A MORE REASONABLE PROPOSAL.

The following is a more feasible proposal. We give it, because it shows how little the public are aware of the extent to which railway prevision has anticipated such suggestions as are at all practicable. The writer proposes torpedos, to explode as the train goes over them, and so give the alarm. He is not aware that such pieces of this kind of proffered advice;—either when a feasible plan is actually started, or when the recommendation is so particularly absurd the accident if used. That they were not used,

if expenses cannot be cheapened, profits must as to become amusing. One of the latter kind was an oversight in the alarm of the emer-Unluckily, they are called by Mr. gency. Cowper, the inventor, "fog signals." gest that the name be changed, and that for the future they be called "torpedos." It is a capital short, striking name, not to be forgotten or mistaken.

To the Editor of the 'Times.'

short, striking name, not to be forgotten or mistaken.

To the Editor of the 'Times.'

Sir,—The circumstances of the fatal accident on the South-Western last night will, no doubt, be clicited from evidence, and a statement laid before the public. To know what an accident is to a railway train you must experience it; and it is under these circumstances I lay a few facts and suggestions before the public, in the hope they may be productive of some additional security for the future. With the conduct of our guards, both before and after the accident, I have not the slightest fault to find, as far as my personal observation goes; and I cannot refrain from mentioning the exertions made by Mr. Young, who, I presunct attached to the railway. His feeling and gentlemanly conduct and firm deportment gave confidence to the passengers, particularly when he was addressed by a passencer, and apparently a friend,—"Young, where are you going?" He answered, 'I am going on the engine." Confidence was perfectly restored. I mention this circumstance because I feel it due to him, from the effect it had upon my own family. But now for the facts as they occurred, and the ideas suggested. Our train stopped about 31 miles from Weking, owing to some derangement of the engines; but we felt perfectly secure, knowing there was no train to come up the line, and that the mail would come down on the opposite line. The passengers thus sate contented, and only mourned the loss of time; had they been out of the train the consequences must have been awful, from the distance the accident lay scatter-d over. A messencer was despatched down the line with a red light, but this, unfortunately, had not the desired effect. How they passed the signal-man be provided with a red light, but this, unfortunately, had not the desired effect. How they passed the signal-man be provided with a red light, but this, unfortunately, had not the desired effect. How they passed the signal-man be rovided with a red light, but this, unfortunately, had not the desired eff ier each other an en-I am, Sir, youts, &c., Jous White

wes, Jan. 15. P.S. Would not a percussion torpedo, to slip over the rail, be sure, in addition, to call the attention of the driver, and even awake him if asleep? This would be better than the lanton, which is added. the lanterns, which might not be seen.

Correspondence.

UNDUE DEPRECIATION OF HAVRE SHARES. One of our correspondents having requested information on this subject, we have obtained the following reply from our correspondent at Paris:-

I cannot discover any facts of sufficient importance to warrant the enormous depreciation pointed out by your correspondent. The receipts are, it is true, very far from being so considerable as had been anticipated; but that is no reason why such deficiency should be exaggerated. The enormous falling off of the goods traffic is an extraordinary and singular event, which has no connexion with the regular business prospects of the railway, but arises solely from the present lamentable depression of the manufacturing interests and the great falling off of imports. The manufacturers of Alsace, of Normandy. and, above all, those of Rouen and its environs, all of which import their cotton and other raw material from Havre, have all greatly reduced their importations in consequence of the cessation of demand arising from the late high prices of food, which have prevented the humbler classes, the great consumers of cotton, from making purchases. Such being the fact, and the diminution of the goods traffic having been proved to be accidental and temporary, and such as should excite no fears for the future, let us now look to the figures closely, and see what it is that they really prove, when correctly compared with those presented by other railways in operation. Not to be tedious, I shall take my illustrations only from

JAN. 22

receipts, for 137 kilometres; or 530f. per kilometre. | and business habits interested to allow matters long | but with wealthy termini, if the wealth lying un-Its shares then stood at 830f., and the dividend for the half-year was 13f., or about 5 per cent. The Havre line was opened at the end of March 1847, and draws now 60,214f. as its gross weekly receipts, on a length of 95 kilometres; being 633f, per kilometre, or twenty per cent. greater than on the Rouen line of the corresponding period after the opening. If further it be recollected that the receipts of the Havre last summer were as high as 95,000f, or 100,000f, a week, or more than 1,000f, per kilometre, we shall be able to judge whether the present depression is justified by the facts. A comparison with the receipts of the Central line, opened a few months after the Havre, gives also a great preponderance in favour of the Havre line. During December 1847, the Central, opened for 172 kilometres, earned 295,361f., being 1,717f. per kilometre per month. In the same month the Havre line, 95 kilometres long, earned 253,359f., or 2,667f. per kilometre per month; being 950f. (or 50 per cent.) more than the Central. Nevertheless, the Central shares are selling at 532f. 50c., while the Havre have fallen to 430f. ! Explain, who can, this difference. I, for one, "give it up;" for I do not see how these figures, so indisputable, can be balanced by the objection that a greater part of the Vierzon line is executed at the cost of the State, while the Havre line is wholly constructed by the company: for it is forgotten that while the Havre Company made the line, they received eight millions of public subvention towards it, and one million from the town of Havre; besides, a treasury loan of twelve millions at 3 per cent, was raised, and twenty millions at 5 per cent. It has, moreover, ninety-seven years of concession still to run, which enables it to reduce its capital by no more than 12 centimes a year on 100f., and all this with an actual capital of no more than 20,000,000f. The Central Company, moreover, at present has the temporary advantage of the Lyon line being not yet opened, and so gets, from Orleans to Bourges, nearly all the differences to and from Lyon. Also, it earns only 1,717f, per kilometre per month on a capital of 33,000,000ff, and has only forty years' concession, and a replacement fund for capital of 1 per cent, per annum. The comparison in this point of view is therefore still much in favour of the Havre. The only thing remaining in favour of the Central is, that only a part of the capital is called up, and that the whole dividend is at present payable only on that part; while on the Havre the whole is paid up, and the dividend spread over it all. This temporary advantage will speedily disappear, and a call on the Central is already made, to be soon followed by others. To conclude, I hope these details will satisfy your correspondent. Serious investors, who look to keeping their shares, will find their interest in this information-and those capitalists who propose to invest at present low prices are not likely to find a better opportunity, as it is scarcely possible that the shares now at 430f., can remain long at less than 650f.; their legitimate value in ordinary times. B.

THE 'TIMES' AND LORD MONTEAGLE'S ACCOUNT BILL

The Times of this morning (17th inst.) contains a temperate letter upon railway accounts, and Lord Monteagle's bill for their verification. To one conclusion at which the writer quickly comes, I give a cordial assent, namely, the utter inadequacy of the measure for the end in view; its only effect will be to create additional functionaries at a Board already overstocked with useless officials. A more important part of the letter is that which touches upon the truth or falsehood of existing railway accounts. and this is of serious import to everyone connected with railway property, for if it should unfortunately he proved that directors, in hopes of meeting a temporary difficulty, have falsified, or even mystified their half-yearly statements, the consequences must of necessity be exceedingly injurious, and bitterly will their constituents have reason to complain. But the remedy is in their own hands, and if proprietors, whether it be in a bank or a canal or a railway, choose to sit Irish fashion, waiting for assistance from an Act of Parliament, instead of investigating their own concerns, they hardly deserve pity if they go wrong. I do not, however, anticipate any such results generally; there are too many men of talent |

to remain in a false position; and assuming for a moment that misrepresentations may have occurred in a few instances, prompt and vigorous changes would speedily put even these lines on a sound footing,-that is, of course, if there is no miscalculation as to traffic or cost of construction; -errors on these points must lower prices, as we have seen in the Blackwall and Greenwich lines. These are perhaps extreme cases, but, under any circumstances, the sooner the truth is told the better; let shareholders know how they really stand; bolstering up accounts and faliacious statements will re-act with double the natural effect that a defective revenue would of itself produce. In such an unfortunate state, the only remedy is a strict economy in all departments. or an amalgamation, if possible, with a more prosperous neighbour. Such cases, however, are exceptions, and the majority of working railways are, I doubt not, in a more wholesome state; if errors in management have crept in, the consequences cannot be so disastrous as to justify the enormous depreciation which now exists, and which has been increased by every exaggeration and mis-statement that could be brought to bear upon the question. Though expectations may not have been realized to the extent that sanguine speculators calculated, still there is nothing in the state of working lines to account for the miserable prices now obtainable; this, however, must soon cure itself,-6 and 7 per cent, on such security will not long be obtainable in this country. Against lines unencumbered, with branches not yet complete, the only matter of doubt in their accounts is, whether they have fairly distributed the cost of locomotives and carriages between capital and revenue; this surely is a matter that may safely be left to the decision of the respective companies themselves, and cannot very materially affect dividends. The money pressure stopped the progress of new schemes much more effectually than any legislative enactment could have done; and in like manner the exertions of proprietors guided by their own interest, will much more surely rectify their own accounts, assuming them to be wrong, than any bill which Lord Monteagle may concoct. I quite agree, however, with the writer in the Times, that calls for branches and other lines which may be guaranteed or subscribed to, ought to be kept distinct from revenues derived from traffic, and I can hardly suppose directors can have committed themselves to such a short-sighted policy as to mix the two, -but if there is a doubt, let proprietors insist upon an explanation, and honest directors will not withhold the information. The payment of interest upon instalments in lines in construction, and, of course, earning no revenue, is another important consideration which has hardly met with the attention it merits, but the delay which has been forced upon directors in completing these schemes will render this an important item in future accounts; if continued, there seems no option left but to pay the charge out of capital. I have always looked upon it as a fallacious expedient, and the only argument to be adduced in favour of it is, the stimulus it gives to shareholders to persist in paying up calls,-this, however, will not outbalance the evil. We will suppose a million already expended on a half-finished line; this indicates an interest charge, at 4 per cent., of 40,000L per annum, against which you have not one farthing of earnings to place in the opposite scale: this must tell cruelly on incomplete lines, and perhaps if companies thus circumstanced have not the moral courage to abstain from drawing what is really uncarried unprofitable interest, there is no way in which Parliament could interfere more beneficially for all concerned, and with less injury to private rights than by enforcing the same rule which has been applied to companies of more recent formation. X. Y. Z.

ENGLISH AND SCOTCH TRAVELLING _THROUGH TRAFFIC.

Jan. 17.

I was much struck with your remarks in a former paper as to the inconsiderable amount of the through traffic between England and Scotland, for example, from Glasgow or Edinburgh to London. This subject begins, now, to be of the utmost importance. What are to be the prospects of a railway conducted at vast expense through a poor district,

moved (or moved in another manner) at termini, be not conveyed along the railway? Take the North British, the Caledonian, especially the latter, will sea coast, or desolate moors furnish the pabulum for these truly international undertakings? I leave the consideration of this question to parties possessing greater local knowledge than I do. I beg, however, to draw attention to the subject of through traffic. I know not what arrangements on that subject may have been made yet, but the leading English and Scotch companies will, it is hoped, speedily see the necessity of establishing some satisfactory understanding for the encouragement of this profitable source of revenue. To create a profitable through traffic you must have charges for passengers not greatly exceeding the rates charged by the steam vessels plying between the Scotch and English ports. The disproportion between the rates for conveyance of goods not requiring speed in conveyance must be still less, it being manifest that a box of books, for example, would always be sent per steamer, and not per railway, if the ex-pense by the former mode of conveyance would be less than the latter. In the case of passengers, a slight increase of expense would not deter a passenger from Edinburgh to London from preferring the rapidity and comfort of the railway to the stomachic inconveniences and delay attending a voyage by steam between those two places. I put the question forward, however, not as one of probable rivalry between Pluto and Neptune, fire and water, land and sea; but as one affecting an undeveloped traffic which would not be conveyed by either, without proper encouragement. It behoves the railway kings and rulers in both countries to meet this subject in a spirit of liberality. The arrangement should be of this nature :- through tickets, so termed, and printed on paper of a different colour, should be granted between all places agreed on by the companies. These tickets should, of course, be granted for a lower sum than would be paid if a series of tickets was obtained from the various railways independently of each other. To guard against abuse, they should be available within a given space of time only, and the whole of the charge all along the line must be paid on obtaining the ticket. It should be stamped by all the intermediate railways to show their claims on it. Thus, on a through ticket, granted by the Caledonian Railway from Edinburgh to London, all the fare will be paid. It will be stamped by the Lancaster and Carlisle, &c., and finally by the London and North-Western, to which last the ticket will be delivered, and the latter and all intermediate railways will receive from the Caledonian their proper proportion of the through ticket. By these means, passengers from Glasgow, Edinburgh and Aberdeen, &c. to London will clearly understand their liabilities, and will not be subject to the risks of arbitrary alterations of fares amongst independent lines. P. London, Jan. 10.

IRISH LINES.

In the Railway Chronicle of the 11th of December 1847, you did me the favour to publish a note, in which I suggested that the only practicable mode by which the Irish railways could obtain funds for the completion of trunk lines was, to issue guaranteed preference shares. By an advertisement in to-day's paper, I perceive that one line (the Londonderry and Enniskillen) purpose to do so. Now, this is an excellent example, but it should at once be followed by other still more important lines, such as the Southern, the Midland, the Belfast, &c. Believe me, this is the way to make England develope the resources of Ireland, and the only mode by which money can be extracted voluntarily from this coun-I am unwilling to intrude further on your valuable space, but let me once more urge the leading companies not to lose sight of this important advantage to all bond fide Irish railways.

BIRKENHEAD AND GREAT GRIMSBY DOCKS.

When the latter docks, now in course of construction and amalgamated with the Manchester, Sheffield and Lincolnshire, are mentioned, it is common to hear people say in answer to any prophecy of their success __ " Look at Birkenhead and its present failure!" I would take leave to point out that the

two places and two schemes are very dissimilar. Birkenhead was made to compete with Liverpool, its immediate neighbour. Grimsby has no neighbouring port within 22 miles of it. Birkenhead has no natural advantages over Liverpool. Grimsby has great natural advantages over Hull, the nearest port. Birkenhead is not nearer the sea than Liverpool, and the access to the one is as good as to the other. Grimsby is on the sea, sheltered by a natural break-water—'Spurn Point,' its docks accessible at quarter tide. Hull is 22 miles up the Humber, with its docks only accessible an hour before and after high water. Birkenhead is already opened and has no trade. Grimsby has only at present its old docks, and its trade is already too much for it. Few ships enter Birkenhead. Forty vessels constantly have been known to be waiting for admission to the present miserable docks at Grimsby. In short, whilst trade at Birkenhead is most distant, at Great Grimsby it is overflowing, and in four years the Customs revenue has increased from 3,000l. to 70,000l. a-year. These are facts not to be gainsaid, and prove that the Great Grimsby Docks when completed will not be a repetition of the Birkenhead Docks.

A SHAREHOLDER.

Gassip.

The junction of Sheppield with the North MIDLAND is at present by means of the Rotherham branch, which tends northward from Sheffield. The route southward is by this fork rendered at least six miles longer than it need be. Beighton, Killamarsh, and other places within eight and ten miles of Sheffield, are thus, by the present railway route, lengthened out double the direct distance. These places supply a great part of the scythes and sickles for the Sheffield trade; but for the most part the manufactures are still carried by the old coach-road. The Manchester, Sheffield and Lincolnshire have a little branch from Sheffield to join the North Midland at Beighton, which will remedy this in the course of the present summer, and bring all the south traffic six miles nearer to Sheffield.

A paragraph has been going the round of the papers relative to the FACILITIES adopted by the Orleans and Bordeaux in the mode of PAYING THE INTEREST on the shares. The London shareholders have been long well aware that they have only to present their certificates for this purpose (having previously filled up a blank form obtained at the office) when the certificates are forthwith stamped, and the money paid, the shareholders having no further It is to be regretted, that all the other foreign lines do not adopt a similar plan, as, having authorized agents here, there would not be the slightest difficulty. But by several of the companies the certificates are required to be sent to Paris at the risk of the shareholder, and he has besides to wait some time for his money. We see that the directors of the Paris and Lyon have made some attempt to obviate the risk (on depositing the certificates for payment of calls and interest), by announcing that they will be received at their offices in Paris, and at those of their agents in London, where their safety will be assured to the shareholders by paying a small fee, a stamped document with their names inscribed being given as a warrant for future delivery when they shall be claimed. If this is the best way of doing the business, the proprietors ought not to be saddled with the expense. The methods adopted generally by the foreign companies are so different from those of the English, that shareholders here will be very likely to

these annoyances. The town council of Dundee are not satisfied with the plans of the DUNDEE AND ARBROATH DIRECTORS. They assert that the plan proposed would be very objectionable; that it would affect the interests of the town and the property of several of its inhabitants very disadvantageously; that the junction line is intended to commence at the Dundee and Perth, on the west side of the town, running along the beach, with a rise of 1 in 100, until it gains a height of 16 ft. From this point it sweeps to the north with a considerable curve, crossing several streets by arches of 30 ft. span and 16 ft. in height, and other streets with arches of smaller span. The line then descends from the summit with gradients of 1 in 140 and 1 in 100 until it joins the Dundee and Arbroath. Where it crosses Union-street the width would be reduced by the piers and arches from a clear space of 55 ft. to 44 ft., and another street would be similarly reduced from 85 ft. to 60 ft.; crossing the Green-market and shutting out several lanes from the harbour by a solid

divest themselves of their stock, in order to be rid of

merous to mention. Seeing that a vacant space to the north of the town can be obtained, through which, by means of partial tunneling, a line may be carried, the magistrates and town council hope that the Legislature will not allow the company to carry out their proposed plan.

We are glad to observe a disposition on the part of companies to teach the public honesty, and check the practice of riding in superior carriages, when the fare for an inferior carriage has been paid. On the 11th inst., Mr. R. Wright and Mr. R. Rhodes, of Wigan, and Mr. T. Johnson, of Pemberton, appeared before the magistrates, at the sessions in Manchester, charged with attempting to defraud the LONDON AND NORTH-WESTERN, by riding from Manchester Wigan, in a first-class carriage, with second and third class tickets. The charge was pressed by the company principally on the ground that the offence is extremely difficult to detect, except by the adoption of regulations for inspecting all tickets at different places on the journey, which regulations would occasion considerable inconvenience and annovance to the passengers generally; and, therefore, it was urged that the public are in reality equally interested with the company in the punishment of offences of this character. The magistrates appeared to take the same view of the offence, and inflicted the full penalty allowed by the by-law under which the charge was made-viz., 40s. and costs against each of the defendants.

There is perhaps no railway in the kingdom which, whilst it has so few direct competitors, has so many connexions with other lines as the MANCHESTER, SHEFFIELD AND LINCOLNSHIRE. An examination of the map shows that when its system is fully at work it will have immediate connexion with twelve separate lines, working in amity with all of them. will be connected with the Liverpool and Manchester -the Birkenhead, Lancashire and Cheshire Junction the Huddersfield and Manchester - the South Yorkshire, Doncaster and Goole-the Sheffield and Rotherham—the Midland, in two places—the London and York main line and loop through Gainsborough -the Nottingham, Newark and Lincoln-the London and York loop from Boston to Lincoln-the East Lincolnshire—the Huddersfield and Sheffield—and the Huddersfield and Goole.

Mr. J. G. V. PORTER has published a letter on IRISH RAILWAY MANAGEMENT, the aim of which, after condemning generally the management of all the Irish lines except two, appears as follows :- " I take the liberty to propose that on some convenient day, towards the end of this month, a meeting should take place in Dublin of shareholders in Irish railways. only such shareholders to be admitted as had paid up calls due on their shares, and no newspaper reporters, which would only lead to speeches, but the resolutions adopted to be sent afterwards to the press, -in order to consider, with a view to the whole of Ireland, the best practical measures to put our railway system, that I may say is now only just beginning, upon a sound basis.

It is announced, from Stuttgardt (Wurtemberg), that the works of the NORTHERN, EASTERN and SOUTHERN lines, which the Government is constructing, continue to be pressed forward with the utmost activity; and that it is probable the several lines will be completed in the first six months of the year 1850. These railways will proceed, on one hand, to the Lake of Constance, the Danube and the Necker, and, on the other, they will unite Friederichshafen, Ulm, Stuttgardt and Heilbronn, so as to form an important part of the lines which will extend from the Mediterranean (Genoa) to Switzerland, and from the countries of the Lower Danube to La Mancha and the Atlantic Ocean.

The numerous AGRICULTURAL TRADERS in and about LINCOLN are looking with interest to the opening of the lines which will shortly connect Lincoln and Manchester; for it is at Manchester and the surrounding manufacturing districts that the flour and malt made at Lincoln are chiefly consumed, as well as the cattle which crowd the markets there.

The box of coin lately stolen from the GREAT WESTERN contained only 1,500%, and not the larger sums named. The box was sent by a special mes-senger to the Paddington terminus, and delivered to the guard immediately before the train started, who on receiving it said, "All right-I'll take care of it." The messenger remained till the train was in motion, and not more than a minute classed between the delivery of the box and the departure of the train. On the arrival of the train at Bristol the box was discovered to have been broken open and the contents abstracted; what happened afterwards at present remains a mystery.

It has been stated in some of the papers that the opening of the branches of the MANCHESTER, SHEFbarrier, together with other alleged injuries too nu- FIELD AND LINCOLNSHIRE to New Holland, opposite of the committee of the Trent and Mersey Navi-

to Hull and to Grimsby, would take place on the 1st of February; but this we learn is fixing the day a month earlier than it ought to be. The present day appointed is the 1st of March, on which day the East Lincolnshire from Louth to Grimsby will be opened.

The recent collision on the South-Western is a case which in all probability would have been prevented by the use of Cowper's roo signals, which we have recommended more than once.

In a recent accident on the ORLEANS, the Correctional Tribunal of Orleans refrained from awarding damages to the personsinjured until it should be able to make inquiries. The parties not having been able to come to an arrangement with the company, the Tribunal, in its sitting a few days ago, was called on to decide. One of these parties was a female named Garbé, of Orleans, who received some violent contusions; the company had offered her 500f., and the Tribunal awarded her 1,000f. The other party was the widow of a man named Perrin; the man having died after having had his two legs, which were crushed, amputated. The Tribunal awarded the widow and her children 15.000f., 14,000f. of which are to be placed in the public funds, the interest to be allowed to the widow for life, and at her death the fund to be divided among her three children. On the marriage of her two daughters, they are each to receive fortunes of 1,500f., the same as their father allowed to his eldest girl, and the interest paid to the widow is to be reduced in proportion to the amount withdrawn. Finally, if the widow shall marry again, she is only to receive a third of the interest on the

Reports of Meetings.

NORTH STAFFORDSHIRE.

Jan. 19.—Half yearly Meeting, Hanley.—Mr. J. L. RICARDO, M.P., in the chair. The Directors' Report stated that arrangements

had been made with the London and North-Western for the junction at Norton Bridge, and every facility had been afforded for the advantageous working of the line. After an interval of eight mouses to been found necessary to make a call of 2. 10s. per conceally responded to. The share, which had been generally responded to. The directors thought it due to those proprietors fulfilling their engagements to declare forfeited all shares upon which the two first calls had not been paid. The works being all under contract and in progress, the company was little affected by the provisions of the company was intre anected by the partial the recent Act for the relief of railway companies, and stood in no need of that help. The parliamentary business for the present session was comprised in a bill for a new deviation at Willington, to meet the objections of the owner of the Egginton estate; and another for a branch from Rocester to Ashbourne. They promoted this because the inhabitants of Ashbourne had expressed a strong desire for the extension, and the directors felt confident that a fair return may be expected for the moderate outlay required, and for which the present capital would suffice. These bills would be submitted at the proper period. The Engineer's Report stated that in consequence of the energetic measures taken by the directors upon all occasions the works were in a much more forward condition than could have otherwise been expected. Exertions had been made to open the line from Stoke-upon-Trent to Norton-bridge by the 1st of February; but owing to the extreme wetness of the season it had been deemed desirable to postpone the completion of the works for one month. Considerable progress had been made with the heavy works at Macclesfield, by arching over the river Bollin, and building the retaining walls through the town. The viaducts over the Dove and at Congleton might be considered as each half finished. The whole of the Pottery line south of the tunnel was also in a forward state. About 18 miles of single line of permanent way had been laid. The large station at Stoke was far advanced towards completion. Upon the Crewe and Sanbach branches, and from Stoke to Uttoxeter, great progress had been made. Between Uttoxeter and Burton-on-Trent part of the permanent way was being laid. In former Reports it was stated that the works on the main line would be completed in the autumn of the present year. To meet the continuance of the pressure on the money-

Digitized by GOGIC

market, arrangements have been made to complete

and open certain portions of the line in the following

order-viz., from Stoke to Norton-bridge, by March

the 1st ensuing; and from Stone, to join the Trent

Valley at Colwich, by May the 1st; and from Stoke.

through Harecastle to Crewe; and also from Stoke,

through Uttoxeter to Burton; thus completing a through communication, via the Potteries, from Liverpool to Derby, and the Midland districts, by the 1st of August next. From the Report

gation Branch, it appeared that the receipts on | doubt a great part of the canal traffic would be gation Branch, it appeared that the receipts on it for eleven months, from the 15th of January to the 15th of December 1847, amounted to 153,317*l*., and the expenses to 63,039*l*., leaving a profit of 90,278*l*.; compared with the corresponding period of 1846, it showed an increase of profits of 6,867*l*. The Wolverhampton agency account showed a profit to the 21st of November 1847, of about 2,380*l*. The directors add that the contemplated widening of the canal had been deferred, and will not be proceeded with without the sanction of the pro-prietors. The withdrawal of the credit allowed to carriers under the old system has been attended with satisfactory results. The new arrangement, though it at first encountered great opposition, has been sucthe tries conducted great opposition, has been successfully carried out, so that the bad debts, which up to this time have, through a period of five years, averaged 1,147t. 18s. per annum, do not exceed, even in the present year of unexampled financial difficulty, a sum of 300t. It was to be observed that the profit on the canal for the present year will amount to 90,277l.16s.9d. After payment of one year's intereston a surplus revenue of 12,227*l*. 16s. 9d. The sum received on account of interest amounted to 18,882*l*. 19s. 5d. The directors expected that in July next a further sum would be realized on the canal, and on such part of the line as would have come into operation. and proposed to pay a dividend of 5s. per share.

The CHAIRMAN, in commenting on the statements of the Report, said that since the last half-yearly meeting they had passed through very severe times; and it was with much satisfaction that the directors were enabled to give so good an account as that which they gave to-day of their undertaking. He believed that a great deal of the mischief in the railway world had been caused by the old companies themselves. It was an indisputable axiom, that profits would always find their level, and so long as the efforts of all the old companies were directed to swell their dividends,—so long as they abandoned all idea of keeping down their profits to a proper level, so long they could only expect to be threatened with compe-tition; and therefore they had themselves, in a great measure, to thank for the opposition with which they had been met. It must be clear that if they borrowed money at 4 per cent., and upon that capital so borrowed they made 7 per cent., the additional 3 per cent. went to swell the interest on the money original. nally invested in the particular undertaking. For instance, suppose a capital of 10,000l. were raised, and 10,000l. then borrowed at 4 per cent., and supposing the whole 20,000l. to pay 7 per cent., and sup-quite clear that the 10,000l. first raised would receive not 7 per cent., but 10 per cent.; but the undertaking not per cent, but to per cent, although, so long as money could be borrowed at 4 per cent, so long as money could lo per cent be paid; but the moment that there was a difficulty in the money-market and money could not be borrowed so easily, then they were obliged to have recourse to other means in order to keep up their dividends. He mentioned this to ex-plain the principle on which the directors of the North Staffordshire wished to carry on their undertaking. They would not pay money out of capital which ought to go to revenue, but that which ought to be charged to capital would be charged to capital, and that which ought to be charged to capital, and that which ought to be charged to revenue would go to revenue. The dividend which the directors had been enabled to make, of 5s. per share, arose from the first profits of the line, which they hoped to open on the 1st of March, from the profits on the canal, and from the interest received on money in hand. He wished it to be distinctly understood that the directors did not wish to make any flourish about this, their object being simply to distribute that which was actually revenue amongst the shareholders, and to keep from them that which was capital. He would now advert to the forfeiture of the shares. Since the Report was printed several payments had been made, and of those upon which the first call had not been paid only 36 shares remained, and 470 of the others. Upon those 470 the calls due amounted to 1,175t., and at 10t. per share, the present price, 117 would have to be sold. It certainly appeared to him to be a very simple thing for the holders of those shares to sell a portion to pay up on the remainder. It had been said that the directors were harsh in forfeiting these shares; but they felt that they were bound in duty to the other proprietors to take this course; and if the parties who owned the shares refused to sell them, and persisted in speculating-for that was the proper term to use—at the expense of the company, the directors felt that they were bound to sell the shares themselves. He considered that part of the Report which referred to the canal most satis-They had taken every possible trouble to factory. develope the trade, and they were at this moment carrying very nearly as much as they could. No of Scripholders, London.—Dr. Barnett in the chair. there was enough to go to the jury, as in fact there

thrown on to the line when it was opened; but after thrown on to the line when it was opened; but after the opening of the railway, instead of paying the present dividend of 6½ per cent. on the 450l. old shares to the proprietors of the canal, they would only pay 5 per cent. They would take 5 per cent. from the line, and the profits beyond would be divided until the canal proprietors received the same dividend as they did at present, and any beyond that would go to the railway. Whatever came off the canal would go on to the line, and it was therefore not lost altogether, while, at the same time, they would not have to account for that amount to the preferential shareholders by the sum of 20,000l. They must not therefore consider that they would lose the traffic which would come off the canal on to the line. He anticipated that the traffic on the canal would, in a very short time, become as great as it was at present, even with the railway along-side. A new trade had lately sprung up, and that was the trade in Staffordshire iron, and the import-ance of it was increasing every day. There was another trade which he hoped they would have on the canal. He did not know whether the shareholders were aware that they had very large warehouses at Gainsaware that they had very large warehouses at Gains-borough, which the old proprietors did not make available. The directors, however, had done so, and those warehouses were now quite full, and the com-pany was earning money merely for warehousing goods. There was a great trade to the Baltic in salt, and of course the proper port for that was Hull. He hoped that they would be enabled to get that trade in salt to Gainsborough, bringing back Baltic timber and corn, which at present went round by Liverpool, by the coast, the most dangerous part of the voyage. Considering these circumstances, seeing the voyage. Considering these circumstances, seeing that North Staffordshire was becoming one of the greatest coal districts for the supply of coal to the whole kingdom, he believed that they would get of heavy traffic, which did not naturally go on their line, as much as they would be able to accommodate. But if they should fall short of their traffic, the increased limestone trade would make up for it. Of that lime-stone they could sell as much as they could get, and they would soon be able to get 1,000 tons a day; and if they sold it at a profit, the more they brought the more profit they would get. This trade, therefore, was a sort of safety-valve. He congratulated the shareholders on the position of the company under

the very difficult circumstances of the times.

Mr. E. Wood moved:—

That the Report of the directors is most satisfactory to all present, and that the meeting has the greatest confidence in intrusting into their hands the prosecution of the concern, the opening of the various lines, or any part of them, or the dividend wing profit. dividend giving profit.

In answer to a question, the CHAIRMAN said that the call now due had been met nearly as well as the one of this time twelve months.

The resolution was then agreed to, as also one for the forfeiture of the shares.

CALCUTTA AND DIAMOND HARBOUR. - Jan. 18 .-Meeting of Shareholders, London.—Mr. Bagshaw in the chair.—The Report, at some length, stated that the company was formed in 1845 for the purpose of constructing docks at Diamond Harbour, and connecting them, by means of a railway, with Calcutta. The directors expressed their unabated confidence in the project, which was strengthened by the Report of Mr. Simms, presented to the Governor-General in council. On the receipt of this document the directors addressed a memorial to the East India Company, which had not been replied to. Having failed in obtaining from that company a due recognition of their undertaking, the directors submitted whether it was advisable to proceed, or by their votes to dissolve the company, in which latter event they were prepared to return 3s. 6d. per share. The statement of accounts showed the receipts at 11,314l. 2s. 6d.; expenditure, 4,907l. 8s. 2d.; balance in hand, 6,406l. 14s. 4d.—The Chairman, in answer to a proprietor, said that not a single share had been taken up in India. People there were waiting for Mr. Simms's Report, and when it was made, the severe monetary pressure prevented them entering into any speculations. If in better times the project was revived, the directors would be ready to meet the shareholders, and give effect to their wishes by carrying out the undertaking.—The Report was adopted.—On the motion of the Chairman, seconded by Sir C. Malcolm, a resolution dissolving the company was passed.—The Chairman then intimated that they would have in hand about 1,000l., after deducting the 3s. 6d. per share, in order to meet any further claims that might be made upon them. The establishment would be broken up in June.

-A resolution having been moved and seconded for a dissolution, the Chairman read a letter from Messrs. Stokes and Hollingsworth, the solicitors of the trustees, Dr. Phillimore, Mr. Chambers, and Sir B. Chichester, as follows :-

chester, as follows:—
We are instructed to send you the information contained in this letter, for the guidance of your clients, who have called the meeting for the 19th inst.; and in doing so, we cannot forbear expressing our regret that you have not availed yourselves of our former offer to give you the fullest information as to the affairs of the company. When Sir B. availed yourserves of our former oner to give you the values information as to the affairs of the company. When Sir B. Chichester, Dr. Phillimore, and Mr. Chambers were intrusted by the shareholders with the management of the Chichester, Dr. Phillimore, and Mr. Chambers were intrusted by the shareholders with the management of the affairs of the couppany it was in a state of insolvency, the demands against it exceeding the funds in hand. The largest of these demands was the claim of Mr. Braithwaite, amounting to 5,509L, and since increased to 5,600L. In accordance with the resolution of the general meeting of the 23rd of February 18-46, our clients resisted the claim, and also that of Mr. Abraham, a surveyor. The result has been that they have each been materially reduced. The full demands were, however, in each case contested to the last, no expense spared in their support, and every idea of compromise rejected. In the case of Mr. Braithwaite, the award which has only been obtained within the last few days, is for the sum of 2,524L. 15s. 10d. In that of Mr. Abraham the claim was 900L, and the award was given for 595L. At the same meeting our clients were instructed to take measures for enforcing payment of deposits on shares agreed to be taken by defaulting members of the provisional committee. This has been attempted under the best legal advice the bar afforded, but the claim was strongly resisted on behalf of some of the provisional committee, through the agency of Mr. Columbine, the original solicitor of the company, and the result has been, that a demurrer to the bill has been allowed by the Lord Chancellor. The amount of these and some few other demands, and the expenses of the requisite proceedings, exceed the whole funds placed in our clients hands—a result which is as much deplored by them as it can be by the shareholders. A detailed statement of the accounts of the trustees is in preparation, and will be submitted to the shareholders, or to the Court, as may be determined on. Considerable discussion ensued, in the course of letermined on.

Considerable discussion ensued, in the course of which Mr. Vallance strongly urged the shareholders an incorporated company bankrupt. As they were not an incorporated company, it could not involve any individual shareholder beyond his present liability, there being only an agreement for a company, and not a bond side company established. The Report of the scrutineers, however, declared that there was not a sufficient number of shares represented in favour of a dissolution with bankruptcy, and the meeting was adjourned to Tuesday next.

Law Intelligence.

SHAREHOLDERS.— Jan. 14.—In the VICE-CHANCEL-LOR'S COURT, in re Clark v. Archibald, this was a de-murrer to a bill, filed by plaintiff on behalf of himself and all other the shareholders in the Staffordshire and Shropshire against a member of the provisional committee. The railway was projected in the year 1845, and the plaintiff obtained thirty shares. It was then advertised that all the shares had been allotted, and the plaintiff, on the faith of this representation, paid up the deposits upon his shares, amounting to 82l., and signed the parliamentary contract. The plaintiff subsequently took 170 more shares in an undertaking for an extension. The whole of the deposits were not paid up, and the directors being unable to proceed with affairs, it was subsequently resolved that the company should be dissolved without bankruptcy. The members of the managing committee then retired, and kept the residue of the funds, amounting to 15,700l., in the hands of the defendant. The bill prayed an account against the defendant, and that the Court would declare that the plaintiff and the other shareholders should pay only those liabilities which they would have paid in case all the deposits had been paid up. The surplus also should be paid over to the shareholders, and the defendant be restrained from interfering further in the affairs.—The Vice-Chancellor did not think that the statements in the bill were sufficiently intelligible for the Court to come to any decision. He should allow the de-murrer; and he did not see that there would be any use in giving permission for the bill to be amended as he thought the whole scheme was wrong, and it seemed to be an endeavour on the part of the plaintiff to slip into some relief, on the ground merely of his being the sole plaintiff.

LIABILITY OF SOLICITOR .- Jan. 14 .- In the COURT of Common Pleas, in re-Jackson v. Recce, a rule to show cause to set aside the nonsuit, and for a new trial was sought. The action was brought by a surveyor against the solicitor to the Avon and Severn. He was engaged by a Mr. Russell, a local agent, by the direction of Reece, to survey the line. objected that there was no case to go to the jury, as the engagement was made on behalf of the company by defendant in his capacity as solicitor, and the was no company beyond the secretary and solicitor. Members of the provisional committee had, however, been appointed.—The Court held the nonsuit to be right. There was affirmative evidence of there being a company, and a total absence of evidence of the plaintiff's having been engaged by Reece for himself.—Rule refused.

LIABILITY OF PROVISIONAL COMMITTEEMEN.-Jan. 15.—In the same Court, in re Deans and another v. Haigh, the plaintiff sought a rule to set aside the nonsuit and direct a new trial, on the ground that there was evidence to go to the jury. The plaintiffs were surveyors, and the defendant was a provisional committeeman of the St. Albans and Hatfield Junction, and there was no dispute that the plaintiffs were not retained, or that they had not properly done their work. It was contended that an employment had been proved which would bind the defendant .- Mr. Justice Maule was of opinion that there should be no rule, as the case was within the general rule of law affecting provisional committeemen, and to disturb that rule would be attended with inconvenience.—
Jan. 17.—In re Newton v. Lord A. Conyngham, this was an action brought against one of the provisional managing directors of the Galway and Ennis Grand Junction to recover the amount of deposits paid on 100 shares. The scheme had been abandoned. The plaintiff was nonsuited, on the ground that the subscription contract deed was not produced in evidence (see Rail. Chron., 1847, p. 1102).—Mr. Newton now moved for a rule to show cause why there should not be a new trial on two grounds-first, the rejection of material evidence, and secondly, that there was sufficient evidence to have gone to the jury .- The Court vas of opinion that, whether as regarded fraud or the failure of consideration on which the money was paid, there was an absence of privity between the plaintiff and defendant, in the absence of the deed of contract, and that the nonsuit was right.-Rule refused.

Compensation.—Jan. 18.—In the Ball Court, in re the Queen v. the Lancaster and York, a rule was granted to show cause why a mandamus should not issue commanding the company to issue their warrant to the Sheriff of Yorkshire for a jury to assess the damages to be paid to Messrs. Bradshaw and Briggs, landowners.—The claimants swore that in the month of May last they were severally served with the usual notice of the intention of the company to require certain lands for their works. Since that time the claimants had not received any further communication. They stated that the land was very valuable, and that they sustained considerable injury in consequence of the land being undisposed of.—The attorney for the claimants stated that a communication had taken place between him and the secretary and after some time, when called upon to come to some arrangement, the company intimated that their surveyor was about to put a value on the land. Notice had been given to the company of the present application.

Jan. 20.—In the Bankruptey Court, in re the Tring, Reading and Basingstoke, this was a meeting to declare a final dividend to the creditors under this estate; it was, however, further adjourned for the account of Messrs. Hill and Everill, the solicitors to the company. An application was made on behalf of Mr. Ford, the surveyor, to be admitted to prove for 300%, being half his former claim, and which the directors thought him entitled to.—His Honour said he had already decided that Mr. Ford was a partner, and therefore could not reverse his decision; but an appeal could be made to the Vice-Chancellor.

WATCH AND GUARD.—Jan. 17.—In the MARYLE-BONE COUNTY COURT, in re Bywater v. the Great Western, this was an action to recover the sum of 20t., the value of a watch and guard alleged to have been lost through the negligence of the defendant's servauts.—The plaintiff, while staying near Slough, had broken the glass of his watch, and had placed it in his portmanteau between the shirts. He had not lost sight of the portmanteau till he arrived at the Paddington terminus, where he left it in the care of the porters till the following morning. He then found that the watch and appendage had been abstracted.—The Judge considered, from the indistinct evidence of the plaintiff, he must be nonsuited.

FORFEITED SHARES.—Jan. 17.—In the CITY SMALL DEBTS COURT, in re Dally v. Bradshaw, the plaintiff, a solicitor at Maidstone, sued the defendant, the member for Harwich, as chairman of the Wilts, Somerset and Southampton, to recover the sum of 13l. 15s., deposit paid on ten shares forfeited.—Mr. Sheridan, the secretary, proved that a letter was received from the plaintiff, or in his name, requesting an allotment, and ten shares were allotted to him. Subsequently a person paid the deposit. He after-

wards called for the scrip, and to sign the deed of settlement required by the Act; but as it was known that he was not Dally, the company refused to give him the banker's receipt or scrip, and he was for some time detained. The shares were subsequently declared forfeited: they were then at a premium. Defendant was chairman of the provisional committee.—Mr. Thomas objected that the only legal proof was the registry, which was required to be made, and submitted that the plaintiff must be nonsuited, as secondary evidence of the defendant's connexion could not be received.—The learned Judge was of opinion that the plaintiff must be nonsuited.

WAGES OF NAVIGATORS.—Jan. 14.—In the SMALL DEBTS COURT, Scotland, Messrs. Stephenson, the contractors on the Caledonian, were summoned by several of the workmen for various amounts of wages. One case was allowed to decide the judgment for all the cases preferred. The claim was for 3l. 12s., of which only 3l. 4s. had been paid, the difference in the rate of labour being by a reduction of 4d. a day from the diminished amount of work by the men from the alteration in the length of the working time. The material point to be decided was whether it was the custom to give notice to the men of any intended reduction. The men had, on receipt of their wages, challenged the amount, and had made the appeal.—Mr. Sheriff Tait, from the evidence, decided in favour of the workmen.

At the LAMBETH POLICE COURT, the second guard Brownsmith, the engine-driver Jones, and Fleming the stoker, both of the goods train, were charged, by order of the directors of the South-Western, with negthe continue of the directors of the south western, with heg-lect of duty, at the late accident on the 14th inst. From the examination of Mr. W. H. Young, superinten-dent, who was in the train, and of W. Whiting, the head guard, and others, due precaution seemed to have been observed by the officials of the passenger train.—The prisoner Jones declared that the night was foggy, and that as soon as he saw the signal at the back of the passenger train he reversed his engine, and used the utmost means within his power to prevent a collision; but owing to the shortness of the space, the greasy state of the rails, his coming down an inclined plane, and his having behind him thirty-one trucks heavily laden with goods that propelled one trucks heavily laden with goods that propelled him forward in spite of all he could do, he could not avoid the collision. By keeping on his steam, he said, he was enabled to use a much greater force to stop the train than by shutting it off.—Mr. Elliott did not see that there was anything in the conduct of Brownsmith to justify his detention, but remanded the other prisoners.—Jan. 19.—At the further examination at the Police Court, Mr. Young continued his evidence as to his share in attempting to prevent the accident, and also cave statements explanatory of the accident, and also gave statements explanatory of the rules of the company. He had no doubt the prisoners could have seen the back light at the passenger train had they been on the look-out .- S. Brownsmith, the guard of the Gosport up passenger train, stated that they passed the Southampton up train at Bishopstoke. When the joint train stopped at Purbright embankment, he asked the principal guard if he should go back to stop the up train. The principal guard desired him to do so. On going back about half a mile, he saw the white light of the luggage train directly it emerged from the Frimley cutting. Before it came out of the cutting he heard the rattle caused by it. He saw the train approach from it. He exhibited his lantern with the red light, which is the danger signal, and waved it so as to indicate danger the moment he saw the train come out of the cutting and continued to do so for full a quarter of a mile while proceeding to meet it. Heard no whistle from the train all that time. When the train whistle from the train all that time. When the train passed he looked attentively to the engine and tender, but could not see any one. Had the prisoners, or either of them, been standing on the proper place and on the look-out, they must have seen him or he must have observed them. Witness was on the down line when he endeavoured to signal the prisoners and they were on the up. No effort was made that he observed to stop the train, nor had the whistle been sounded for a minute or two after it had passed him. When the luggage train passed him he was three quarters of a mile, or as near to it as possible, from the passenger train. He should say that the steam was not reversed at the time the luggage train passed him. There are two guards attached to luggage trains, but he could not see whether there were two on the luggage train in question, as he did not see them. He could see the three lights at the back of the stationary passenger train perfectly plain from the greatest distance he had gone to on the line. He had never been a guard of a luggage train, and could not speak as to the difficulty or otherwise of stopping them. It was his firm helief that had the prigoger kent a percelokfirm belief that had the prisoners kept a proper look-

out there was abundance of space to stop the train. —Mr. C. S. Ward, and W. Hood the brakesman of the luggage train, gave testimony confirming the above statement. The prisoner Jones was told he might be admitted to bail on giving security, hinself in 2001., and two housekeepers in 1001. each. On application for the attendance of the prisoners at the inquest, the magistrate declared he had no power to make the order.

Miscellanea.

ROTARY STEAM-ENGINE .- Mr. Elijah Galloway has brought out another patent rotary, which is now at the factory of Mr. Tyrrell, engineer, Deptford, where it has been inspected by the leading officers of the steam department of the Royal Navy. It is in working operation, being employed to drive the blower of Mr. Tyrrell's furnace, which is calculated to require about 4-horse power. The economy of weight and space proposed to be gained will at once be understood when it is affirmed that the whole of this 4-horse engine (without the boiler) would not occupy much more than half a hat-box, the actual dimensions of what may be called the piston being only 9 in. by 4 in., and the weight of the whole box being between 2 cwt. and 3 cwt. A steam-pipe from the boiler brings the steam into this little receptacle, an excentric crank is turned by the rotary motion within it; and here is all the machinery said to be necessary to propel the largest engines, whether mining, marine or locomotive. The adaptation of the interior of the little box may be described to consist of five segments of circles of highly-polished steel, so arranged that the abutments and pistons, or acting arms (also of steel highly polished), bear on each other so as to secure steam-tight contact without any packing. The patentees state that their engine makes 400 revolutions in the time the reciprocating engine makes 200 revolutions, with the same rate only of expenditure in fuel—power for power; and further, that the number of revolutions made in a given time do not sensibly affect the power. One of the most common defects in rotary engines has been their tender. dency to leakage, whereby a continual loss of power has been sustained. The new engine, on the contrary, is perfectly steam-tight. It works, it is reported, at a high velocity without any perceptible friction; it has no "dead point," and works at full power up to the size required. The engine at Mr. Tyrrell's has been tested in various ways, viz. at the engine workshop of the Great Western, at Paddington, where it was employed to drive the lathes and other machinery during the repair of the company's own engine, and subsequently at the workshop of the Earl of Orkney, at Taplow Court, Berks. The alleged economy of water and fuel will be the point upon which the merits of the invention mainly depend; and it is perhaps to be regretted that the little engine at Deptford is supplied with steam from a boiler of 10 horse power, instead of having a boiler of 4-horse power specially adapted to its size. The patentees are about to construct a larger engine on the same principle, with a boiler of proportionate size, and the opportunity will then be afforded in the most practicable way of measuring the consumption of fuel with the power of the engine, and the amount of work actually performed. Messrs Lloyd and Hughes, of the Government steam navy department in Somerset House, have so far reported in its favour, that the Admiralty have requested Capt. Fitzmaurice to send in an estimate of the cost of fitting the Miax with an auxiliary engine of 50-horse power. The Miax is a vessel of 300 tons burthen, and is, it is said, to be furnished. nished with a screw propeller, which the rotary engine is supposed to be peculiarly well fitted to drive. The actual dimensions of this new engine of 50-horse power would be not more than 31 in. by 50-horse power would be not more than 31 in. by 16 in., the velocity being calculated at a mean of 300 revolutions per minute. The substitution of the new rotary engine on board the Miax for the engines at present ordinarily used, would, it is calculated, lighten her, in respect of machinery alone, about 50 tons, leaving out of calculation altogether the economy of space and tuel. Should the merits of Mr. Galloway's invention he such as to lead to its adaption in the invention be such as to lead to its adoption in the Royal Navy, it will necessarily add greatly to the effectiveness of our war steamers, many of which cannot fight with their lower-deck guns in rough weather, in consequence of the immense weight of their machinery and coals.

SATURDAY, JANUARY 29.

UNIFORM RATES FOR SMALL PARCEL BUSINESS.

The suggestions of our correspondent "H.C.," for increasing the parcel traffic, having now been laid at full length before our readers, we may proceed to make such observations as have occurred to us respecting the principle, and the practicability, in the actual condition of railways, of the method proposed. It will be seen, on the slightest consideration, that these must be wholly distinct questions in the present state of the system, when the matter in hand is the adoption of a uniform rate. It will therefore be as well to discuss them separately; first examining the soundness and clearly viewing the nature of the principle itself; after which the inquiry may suitably take place, how far it would be possible, under existing circumstances, to apply it in an effectual manner.

The basis of all rates of charge, it may be premised, once for all, is essentially an arbitrary one. The only real object in all is, so to adjust the terms that the greatest amount of traffic may be secured at the most remunerative prices; and in this arrangement the elements of calculation are, virtually, the convenience afforded; the possibility of it being otherwise obtained, if the demand for this accommodation be too high; and a certain reference to the money charge which each particular class of traffic can easily afford to pay. In some of our early essays on the merchandise business, the grounds of this calculation were discussed; and the rationale of discriminating tariffs, as regards both the particular ends of a trading company, and the general advantage to the public, from the classification of rates for different kinds of articles, has already been, as we apprehend, sufficiently demonstrated. It may be unnecessary, therefore, to repeat the reasoning on this head: it will be sufficient to enunciate the fact, that, whatever apparent differences custom may have introduced, of different charges for different classes of goods, and of rates varying according to distance, the only demonstrable ground of all systems of charge is mainly composed of the elements above mentioned, and their rectitude or error must be determined by the experience of their fitness or failure to produce the desired result. This being once clearly understood, we shall find ourselves relieved from the necessity of going into minute calculations as to the ratio which expense bears to mileage in the total of a given charge for any special description of goods-as, for instance, of small parcels - the rate being intrinsically determined, not by any such consideration, but by the more general conditions above mentioned, in all cases whatsoever.

In this manner it will be seen that in the case before us the question is cleared of many perhaps questionable details; and we can at once proceed to handle it on the real ground which must determine it, by inquiring, namely, -Would a low uniform rate for small articles be likely, if it could be thoroughly introduced. to secure to the railways a command of this branch of traffic,-which they now scarcely obtain, or are in danger of losing,-sufficiently extensive to make it profitable?

The question, thus put, may, we think, be safely answered in the affirmative. The higher limit being fixed at the weight of a few pounds, it may be asserted that any low charge, almost, it a multitude of parcels at such a rate would thereby be secured to the railway companies, must be a profitable one; that the proceeds of

little benefit from this species of articles; and that even a trifling rate of payment, in that point of view, may be regarded as a clear gain, as soon as the mere quota of the expenses of the establishment-which must be incurred for parcels of greater bulk-is exceeded. It may further be asserted, that between the limits of the higher Post-office weights and that of the usual minimum of common coach parcels, there would be ample scope for a large business; and that such a business might be invited directly to the railway office to a large extent by a low uniform rate, instead of finding its way through the country by circuitous and clandestine ways. Supposing the practical adoption of this principle of charge possible for the smaller class of parcels, (and to these only can the system be well applied on the basis we are now discussing, for obvious reasons,) there can be little doubt, not only that the railways might expect to get and keep a command of all but the very lightest species (which the Post-office is sure to retain), but, also, that the business would be a new and profitable addition to the income now enjoyed from parcels, rather than the modification of any which has been of late enjoyed by the railway companies.

The practical introduction of the principle, however, will be found, when we come, in the second place, to examine this branch of the inquiry, to be attended with not a few difficulties. And in regard to these, it will be well to perceive clearly one essential point, in which the analogy, drawn from the Post-office experiment, is wholly inapplicable to the railway system. The success of a uniform rate is almost inseparably bound up with its universal application. This is readily secured in the Government mail establishment, which has no rivals, and extends to all parts of the kingdom alike. The parcel carriage by railways can enjoy no such advantage; and without it, the plan is lamed in its most vital part, and can hardly be brought to a fair trial, or indeed, we may say, executed at all in the only way in which it would promise an advantageous result. In a case of this kind, we cannot estimate the result as of a more or less of success-as a question of degree, determined by the extent to which the experiment may be tried: it appears, by its very nature, to exclude partial or incomplete approaches to the desired end;-if not thoroughly effected, it will lose the essential character on which it must rely for success. Now, it may be seen that, in the present state of the railway system, the introduction of the uniform low rate, even if it could be advantageonsly confined to the limits of that system, would have to contend with not a few obstacles, to the removal of which we do not at present see a very clear way. But even were these all smoothed, we should still be as far as ever from having reached that universality, on which, as it appears to us, the prosperous issue of the plan must depend. At every point of every line there are cross communications, by ways foreign to railway administration, that could not be brought into harmony with the plan; and the recurring discord of which would be incessantly bringing the method into disorder and discredit, and throwing on the railway conveyance the odium of each discrepancy. Unless all parcels liable to extra charges were not only carried on the railways for nothing, but also delivered at the terminus at the standard low rate-which of course would never amount to the sum " paid out" to the branch conveyance-there would be no end to the confusion and to the discontent of the "public." It is well known, to all who have come in contact with them, that they

cumstance that is found at all unwelcome; and the hopelessness of carrying out a plan that must be fostered by the widest popular support, in the presence of an element of endless confusion and complaint, will be best appreciated by those who have had any experience of the difficulty of contending with mixed railway and road communication, under far less numerous and perplexing complications than this business would be apt to produce. In this respect, we must again remark, the Post-office experience would be no sure guide, even had the cases of its extra delivery charges been anything nearly as frequent, and subject to such wide variations, as must occur in the railway parcel business, between the low standard rate and the extras for cross-country parcels. What is submitted to from a Government department, will not be endured in a private company's office; and the whole public would be up in arms in a week against the latter, for a tenth part of what is quietly suffered for years from the former. Here, unfortunately, there would be no avoiding being mixed up with differences far greater than arose from any of the new postage arrangements; and the idea of effecting an universal and widely popular change with these elements of exception and failure in its very heart, would appear to be wholly untenable.

That the principle is a beneficial one, could it be thoroughly applied-but that also a thorough application is the very being of the principle-we may be fully persuaded. That in the present condition of the railway system it could only be partially applied, is obvious; and we do not see how the conclusion can be avoided, that a partial trial would only be apt to bring the principle into discredit. Nor do we see what it could produce, under existing circumstances, but a certain sacrifice in one class of parcel traffic, that would not be redeemed by any sufficient gain from the other, to favour which it was adopted. In a case of this kind, the knot lies in the mode of operation; the principle being abstractedly sound and hopeful, -but only in its completeness. We cannot discover, in the present incomplete state of the railway system, any working method which would give the plan that character of universal currency, without which a minimum rate can never be a duly profitable one. On such a working scheme, however, the whole feasibility of the project must be seen to depend. We do not assert that no such can be framed; so far, however, we have not discovered any sufficient means of bringing it about; and until this essential want is supplied, the principle may be regarded as lying beyond the reach of practical expectations.

Were all the towns in the kingdom accessible by railway, and were the whole network of lines in one hand, the process would be very simple, and its favourable result might be confidently predicted. In the transaction of this or any other business, on anything like equal conditions, the private body will surely enough outrun its official competitor. But the railway system, as it now exists, has no chance of competing on the least approximation to even terms; and we apprehend we must wait until it has attained something like the spread of the Government Post, before we can hopefully adopt the uniform methods that have been found advantageous for the charge upon letters.

POST-OFFICE LETTERS

Our correspondent, "H. C.," on the parcel question, pointed out how greatly the Post-office service on railways had increased. This week this business would be mainly so much new cannot be got to discriminate between the real carning added to income which now receives and apparent authors of any exceptional cirannually since the adoption of Rowland Hill's

		Annu	al Increase.
Year.	Number of Letters	Number of Letters.	Per-centage reckoned on the number for 1839.
*1839 1840 1841 1842 1843	76,000,000 169,000,000 196,500,000 207,000,000 220,500,000	93,000,000 97,500,000 10,500,000 13,500,000	193 per cent. 36 per cent. 14 per cent. 18 per cent.
1844 1845 1846 1847	242,000,000 271,500,000 299,500,000 322,000,000	21,500,000 29,500,000 28,000,000 22,500,000	28 per cent. 39 per cent. 37 per cent. 30 per cent.

The estimate for 1839 (which is exclusive of about six and a half millions of franks) is founded on the ascertained number of letters for one week in the month of November, and, strictly speaking, it is for the year ending December 5, at which time 4d. was made the maximum rate. The estimates the strictly of the stri and, strictly speaking, is in the year cating between the at which time 4d, was made the maximum rate. The estimate for each subsequent year is founded on the ascertained number of letters for one week in each calendar month.—See return to House of Commons, No. 586 (1847).

Thus it appears that the total increase has been upwards of 302 per cent. The Post-office letters last year in the United States were only 52,173,480, or about one-sixth of the number in Great Britain.

Braceedings of Societies.

Institution of Mechanical Engineers. -Birmingham, Jan. 26.—First Annual General Meeting, and Anniversary Dinner.—The first annual general meeting of the members of this Institution took place in the theatre of the Philosophical Institution, for the purpose of receiving the Report of the Council and for the general transaction of business. Mr. J. E. M. Connell, one of the Vice-Presidents, in the chair, in the absence of the President, Mr. G. Stephenson. There absence of the Fresident, Mr. G. Stephenson. There were present nearly 100 members, amongst whom we observed the following:—Messrs. C. Beyer, Buckle, E. A. Cowper, B. Fothergill, J. Henderson, C. Fox, A. Slate, H. Dubs, Ramsbottom, Fowler, C.E., Ald. Thornton, Clift, Middleton, E. Goodfellow, Peacock, Jackson, &c.
Mr. M'Connell said that as this was the anniversary

of the establishment of the Institution, he would content himself with referring to the Report about to be read for the confirmation, he might say, of the more than realized hopes of the most sanguine pro-moters of the Institution. He was gratified to see so large a meeting, and regretted the unexpected absence of the President.

The minutes of the previous meeting were then read by Mr. Kintrea (the secretary), which were confirmed. The chairman called upon Mr. Fothergill to

firmed. The chairman called upon Mr. Fothergill to read the Report by the Council. It was as follows:—
In presenting to the members a brief outline of the proceedings of the Institution for the past year, the Executive Council have much pleasure and satisfaction at having it in their power to congratulate the members on the successful progress and prosperous condition of the Institution, having, by the great addition to its members, numbering 103 members and four honorary members as per list, and the varied and highly interesting business transacted, gained a standing scarcely to have been expected in so short a space of time. The desirableness and importance of founding a society such as this was known to have been long and extensively felt by the engineering and mechanical profession in all parts of the kingdom, and it is not too much to venture to say, that the best expectations of the active and zealous promoters of the Institution have been fully realized, and a great of the Institution have been fully realized, and a great amount of scientific and valuable information has been beneficially and mutually interchanged and diffused amongst beneficially and mutually interchanged and diffused amongst the members. With these highly gratifying and encouraging results, the Council earnestly call upon the members and friends of the Institution to renew their efforts, and to co-operate by every means in their power to promote its further rise and success; and they feel assured that, by so doing, a very short period will suffice to rank it amongst the first and most influential in the kingdom. On the formation of the Institution, Mr. A. Slate was appointed and undertook the office of honorary aggregates, and continued with the asof the Institution, Mr. A. Slate was appointed and undertook the office of honorary secretary, and continued, with the assistance of Mr. Maher, to transact the affairs of the Institution up to the 14th of August last, when the private engagement of Mr. Slate prevented his further attention to the duties of the office, and the business of the Institution becoming daily more important and pressing, it was deemed judicious and indispensable by your Council to appoint a salaried officer as secretary, who should devote his entire attention to the Interests and affairs of the Institution. Accordingly Mr. A. Kintrea, a gentleman considered in every was qualified, was appointed to the office. Inconvenienced by want of suitable and more private offices for transacting the business of the Institution, the Council feeling justified by the of suitable and more private offices for transacting the outsiness of the Institution, the Council feeling justified by the great increase to its members, engaged an office for the secretary and the meetings of the Council early in the autumn of last year: these contingencies, it is hoped, will be approved of by the members. In reviewing the matter and subjects brought under the notice and discussion of the members, as recorded and detailed in the minutes and pro-

ceedings of the Institution, the Council feel it their duty to acknowledge and particularize the following valuable aid:
—the two Papers on the 'Fan-Blast,' by Mr. Buckle; on a 'Self-Acting Brake,' by the President; on an 'Inverted Arch Bridge,' by Mr. Cowper; on 'Locomotive Engines,' by Mr. Beyer: on a 'Turn-Table Lathe,' by Mr. A. Slate; on 'Jones's Gas Exhauster,' by Mr. Clift; on a 'Direct Action Steam Helve or Hammer,' by Mr. II. Smith, of West Bromwich,' Appended, the Council beg leave to lay before the members the financial statement of the affairs of the Institution for 'The vear ending the 25th inst., and which they members the financial statement of the anairs of the institution for the year ending the 25th inst., and which they recommend should be audited and passed in the usual manner. The Council, before concluding their Report, and retiring from office (conformably with the regulations of the Institution), beg respectfully to call the attention of the the Institution), beg respectfully to call the attention of the members to the propriety of their successors appointing a committee to examine into and alter the "rules and regulations of the Institution," as may be found advisable and necessary for the interest and good government of the Institution, it appearing to the Council that some changes are desirable. As provided by the rules, the whole staff of officers go out this day, but are eligible for re-election.

Report of the Finance Committee to the Council.

Your Committee having carefully examined and checked the various amounts against the Institution, beg to report, that every amount has been paid up to the 31st of December; and that the balance in hand amounts to 2181. 6s 5d. ber; and that the balance in hand amounts to 218. 63 years Your Committee wish to suggest, that it would, perhaps, be advisable to appoint two auditors to audit the accounts, but as there is at present no rule to the effect, it would probably, be well to make a law to establish that course.—The inclosed is a balance sheet of the accounts for the year.

January 24.

WM. Buckle, E. A. Cowper.

Mr. C. Fox moved that the Report, with the statement of accounts read, be received and adopted. was so satisfactory, that it was unnecessary for him to do more than propose the resolution.—Mr. Ald. Thornton seconded the proposition, which was carried unanimously.—The Chairman then said, in connexion with the Report, he ought to state there had been a subject of considerable importance under the consideration of the Council for some time past, but it was thought better to defer it until that general meeting. It had been considered that, in consemeeting. It had been considered that, in consequence of the scattered state of the members of the ouncil, an additional number ought to be appointed so as to have all the great towns fully represented.

As Manchester had two representatives at the Council, London two, and Birmingham two, it was thought that there were districts in the North and East of England which should also be represented. According to their rules, however, they were required to make such proposal at their annual meeting; but seeing the necessity for getting an additional active number of members, the Council had suggested the alteration; but it was for the meeting to discuss the suggestion, and he should be happy to hear any gentleman upon the subject. The following recommendation of the Council was then read:

mendation of the Council was then read:

The Council, having had under their consideration the question of the number of the members of the Council, have resolved to recommend to the members of the Institution to authorize the Council for the present year to add to their number, so as to place one member of council or more, as may be considered desirable, in each district where such may be advantageous to the interests of the Institution.

Institution.

Mr. A. Slate said his early connexion with the Institution had given him an opportunity of knowing the working of the system and hearing the opinions of the members, and he thought that the general opinion was that every large town ought to have a representative or two in order to extend the basis of the Institution, and that it might fully occupy that powerful position which it was entitled to amongst the other institutions of the country. As had been stated by the Chairman, Manchester, London and Birmingham were represented, and there was no reason why Newcastle, Leeds and other districts should not have members in the Council. It also appeared that London was insufficiently represented. It did seem that where there was a place like that city, with such a concentration of talent, there ought to be a sufficient number of representatives to onable them to hold a meeting and communicate with the main body. He had therefore great pleasure in moving that the recommendation be adopted.

—The resolution, having been seconded, was put and

carried unanimously. The Chairman then announced that the ballot for twenty-six new members and honorary members had just been closed, the result of which was that the following gentlemen had been elected:—Members: Messrs. W. H. Barlow, J. Beattie, S. Bowler, R. Broad, Messrs. W. H. Barlow, J. Beattie, S. Bowler, R. Broad, A. Colville, J. Croome, T. Craddock, J. Currie, C. Heathcote, J. Jones, T. Mole, J. Pearson, J. Samuel, G. S. Sanderson, R. Staniforth, W. Smith. R. Thorman, H. Woodhouse, H. Wright, and J. Wright. Honorary members: Messrs. J. Banfield, G. Branson, H. Elwell, J. Johnstone, Capt. Simmons, R.E., W. M. Worden. W. M. Warden.

† Abstracts of all these papers have appeared in the Railway Chronicle, and will be found in the last volume, just completed.

The Chairman said the next motion was the election of officers for the ensuing year.—Mr. Henderson thought the best plan they could pursue would be to re-elect the officers of the past year. Great injury might ensue from a change being made at present. He understood that Mr. Radford, one of the members of the Council, had declined, and he (Mr. H.) should propose that the president, vice presidents, and other officers of the Council, should be re-elected, and that Mr. Slate be substituted for Mr. Radford.— Mr. Ald. Thornton seconded the resolution. — Mr. Fothergill said as Mr. Henderson had been called upon to move the resolution, some persons might suppose that that gentleman had been requested by the Council to propose their re-election. Such was not the fact. He himself had objected to the renot the fact. He himself had objected to the re-election somewhat upon the opinion that a willing horse ought not to be spurred. The duties had been very onerous, and required considerable time and labour, and he for one having done what he could to bring the Institution to its present position, would best consult his own feelings by now retiring, but he had been induced to consent to continue a member of council if re-elected; and he would therefore be proud to continue to act if the meeting considered his services worth having.—After some explanatory observations by Mr. Henderson, the Chairman said he quite agreed with his friend, Mr. Fothergill, that the affairs of the Council were a great draw upon the time of the members; but feeling the great importance of the Institution, and that some persons must work to carry it on to its thorough establishment, he for one would not grudge taking from his sleep time for the discharge of the duties. He would gladly retire, but if the members considered that he and the Council had carried out their views, and wished them to continue, he would be willing to renew his them to continue, he would be willing to renew in services.—The resolution was then put, and the following officers re-elected, viz.:—Mr. G. Stephenson, President; Mr. C. Beyer, J. E. M'Connell, and J. Miller, Vice Presidents; Messrs. W. Buckle, E. A. Cowper, B. Fothergill, E. Humphreys, and A. Slate, Council; Mr. C. Gooch, Treasurer; Mr. A. Kintres, Secretary

Mr. Ald. Thornton then moved a vote of thanks to the Council and other officers who had conducted the affairs during the past year; observing that not only was the Institution, but the whole country, indebted to them for the establishment of an association from which such valuable advantages might be derived .-Mr. H. Smith, of West Bromwich, seconded the resolution, which was carried with applause.

Mr. Slate said there was another class of gentlemen who had afforded very valuable assistance to the Institution in bringing it to its present position, namely, the gentlemen of the public press. He believed he might say that at the first origin of the Institution he had received three or four letters from gentlemen connected with several papers offering any assistance in their power, and he was sure that they would have great pleasure in offering their most cordial thanks to these gentlemen for their services.—A resolution in accordance with Mr. Slate s observations was carried.

Mr. Henderson said he thought that the rules of the Society might undergo any alteration at the annual meeting, and he had intended to propose certain alterations that day, but since their last meeting he found such was not the case, and he had made up his mind that it would be more in consonance to wait. and that a committee should be appointed to confer with the Council, and act with them in drawing up an entire new code of rules, or making such alterations us they might think proper for an Institution which was now likely to take its stand amongst the other eminent institutions of the country. He believed it would be necessary to increase the number of meet-ings in the year, and if they could not fix the periods by rule, they might accomplish that object by adjournments. He therefore hoped they would be able, during the ensuing year, to arrange the rules satisfactorily, so that they would be ready to receive the sanction of the Institution at the commencement of the year 1849.-Mr. Fothergill said that the Report recommended that their successors should appoint a committee to examine into and alter the rules, in such manner as might be found advisable for their interest, and he presumed it would now be for the Council to act upon that suggestion. In this opinion the meeting concurred, a resolution upon the subject not being necessary.

The Chairman said he believed they had now concluded that portion of their business which was required to be transacted at their annual general meeting, and he regretted very much they had not had the honour of the presence of their worthy president. A paper would now be read, by Mr. Ald. Thornton, 'On a New Hydraulic Lifting Jack.' "The principle

Digitized by GOOGIC

of this jack is the same as that of the hydraulic press but not having been before applied to a lifting jack, it is thought that the present application of it will be useful for a variety of purposes. Its advantages are the ease and steadiness with which a great weight can be raised by one person; the facility with which the lowering of the weight can be regulated without labour, and from there being no circular motion of the handle, there can be no tendency in the jack to twist from the position in which it is placed; also by the use of strong wrought iron tubes for the cylinder and ram, the weight of the jack is less than others now known. This jack can be used in all cases where now known. This jack can be used in all cases where others are available, and in some where others are not so, for the motion of the lever being vertical instead of lateral, it can be used wherever there is sufficient width to place it. With a jack of the size shown one man can lift from 15 to 20 tons weight." Mr. Thornton said although the jack was not new in principle, one of its great advantages was to be found in the additional power which it gave to one man to raise so great a weight.—The jack was then placed before the Chairman, who said he presumed they all understood the description given by Mr. Thornton. The jack displayed itself by its own appearance and the drawing. So far as the trial he had had with it went they had every reason to be satisfied. It was very simple, acted very nicely, and he thought it was a very ingenious jack.—Mr. Crampton wished to know if it had ever tumbled down?—Mr. Middleton and all persons acquainted with such things must be fully aware that they could not get a jack boxed up. Until, however, an alteration could be made in the handle, it could not be considered a good thing practically.-Mr. Slate observed that though a jack practically.—Mr. Slate observed that though a jack might not be practically good when placed in a tumbling position, it might be good in other cases. A jack like the one now before them might be useful in lifting a great weight, where the ordinary one would not be sufficient.—Mr. Buckle thought that the jack was an exceedingly useful instrument. An ordinary jack would be much more liable to be put out of order than the one before them; besides it presented greater facilities for lowering weights .- Mr. Milner was of opinion that as it was it could not be generally useful. If it was thrown from a tender to the ground it would be destroyed, and their endeavours should be to prevent it, if possible, from capsizing.—The Chairman said Mr. Thornton's object in introducing it was to have the benefit of their experience.—Mr. Peacock said, that for locomotive purposes it was not equal to Heeley's Jack; still, if in other respects it possessed advantages over it, they ought not of course to condemn it. In answer to other questions by various members, Mr. Thornton said it would lift 20 tons. It weighed about 65 lbs., and its price was 12 guineas.—Another member said he should give the preference to Heeley's Jack. Lifting jacks when laid aside, like fire-engines in a country town, not required generally, get out of order, and he was afraid that the one before them would be much more liable to injuries of that kind than the ordinary jack.—The Chairman said, it appeared that it was objected against the jack, that it was liable to get out of order, and that it had not the advantages of Heeley's Jack in lifting from below, but from the top, at the same time it would be admitted that it was steady in action, and that in lowering weight it was necessary to have power and command so as to do it slow and easy. There was one import-ant point in which it had not the advantage, and that was in price. In articles of that kind, the price was a consideration.—Mr. Henderson thought that the jack possessed advantages where there was a great weight to lift, and only one man to work it. Another advantage was the steadiness of the action. The great objection against it was its liability to get out of order. If they wanted a jack to raise 20 tons, he was not aware that they could get any other to do it with the same steadiness.

Mr. Fothergill then read a paper 'On a Perforating Machine,' made for Mr. Evans, the contractor for the iron tubular bridge which is to carry the Chester and Holyhead over the river Conway. This machine is employed to perforate the plates for the bridge, and is at present adapted to punch such pitches only as that work requires, viz., 3 in. and 4 in. from centre to centre of rivet holes, with latitude for departing considerably from those (general) pitches in the lateral rows of the holes. This machine is constructed to perforate, at each stroke, a row of holes across a plate 3 ft. 5 in. broad; but, by employing a series of card plates, (similar to the cards used in the Jacquard loom,) any number of punches may be put out of action at pleasure: and by means of a blank card at the end of the series, the machine is put out of action at a point where no obstacle is presented to the taking out of the perforated plate and putting a blank plate in its stead. In the operation of changing plates weigh-

ing six or seven hundred weight each is performed by half a dozen men in less than one minute, and whilst one plate is being punched, these men get another ready to put into the machine. As these machines take eleven to twelve strokes per minute, it follows that (with a 4-inch pitch) a 12 ft. plate may be punched in less than four minutes, and consequently that (allowing one minute for changing) it may per forate twelve such plates per hour. Many of the plates in the bridge are 12 ft. long, 2 ft. 8 in. broad, and } in. thick, and are punched for rivets 1 in. in diameter. As there are but few engineering con-cerns where such a perforating machine as that at Conway could be employed more than an hour or two per day, it appears to me to be very desirable that ironmasters should have them, and that they should also have machines for straightening and bending plates; by these means the ironmasters would be enabled to supply their customers with plates in a fit state for being riveted together. Were this system brought into practice, engineers would turn their attention to adapt their work to the capabilities of the perforating machine, and thus great perfection, despatch and economy of construction would be the result. A drawing represented a machine (similar in principle to that already described) adapted to perforating paper and thin sheet metal, such as sieves and window-blinds are made of, in which plain perforations, arranged in squares, may be made by a single row of punches; and perforations arranged quincuncially, may also be made by a single row of punches, by giving to the plate a lateral alternating motion; but a double row of punches, arranged intermediately to each other, is preferable. Each of these arrangements admits of a great variety of fancy patterns by the application of the Jacquard principle. A large class of patterns may be produced by punches of various forms and sizes, which shall be so grouped together as to give to the work a columnar effect; and the range of this class may be extended by giving the plate a zig-zag or waved motion, and still further extended by combining it with the Jacquard. Another class of patterns may be produced by employing two distinct sets of punches of different size or form, and with each set a Jac-quard, to bring punches of the one or other set into action as required, and thus be made to produce representations of figures, landscapes, &c., at plea-A further variety of patterns might be produced by the introduction at intervals of punches containing set patterns, such as sprigs, flowers, &c. and perforating the ground with small punches. The foregoing is but a brief description of the capabilities of the Jacquard perforating machine, which in good hands would be found to be nearly co-extensive with those of the Jacquard loom. Another drawing represented a double-acting machine for shearing (at one side) and punching (on the other), at the same time, plates of iron 3 in. in thickness with holes 13 in. in diameter, and to perform both processes to the extent of 18 in. from the edge of the plate.— The Chairman said it was a machine represented as peculiarly adapted for perforating plates used in as becumany authors to be rotating praces used in ship steam-boilers, girders, &c. But, from the description, it appeared to him to be a very useful machine for steam-boilers generally. Seeing the great accuracy with which the punch is made, it would be rather interesting to follow out the applicability of the machine.—Mr. Ald. Thornton asked if the machine punched in any other than a straight direction?—Mr. Fothergill said it did, and it would punch twelve holes at once.—Mr. Beyer thought it was a very excellent punching machine, and it might be applied to a great extent, and to all ordinary sized boilers.—In answer to questions by various members, Mr. Fothergill said, all the punches acted upon the plate at the same time.

A paper was then read by Mr. C. Beyer, 'On the Fitting-up of Cylinders for Locomotive Engines, and a Description of a Machine for Boring them.'—The desirableness of having all the cylinders of every class of locomotive engines perfectly alike, so that they may, at any time, be changed in case of accident, or be replaced by spare ones, it is presumed will be admitted by all; the difficulty of accomplishing this with the tools hitherto employed, will be known to most who are engaged in this branch of the business. These considerations, and the defect of cylinders, the author, from time to time, found necessary to have rectified before passing them to be used, induced him, in 1843, to direct his attention to the boring-machine. The conditions which a good cylinder boring-machine should fulfil, may be stated as follows:—1. That it should make the cylinder perfectly round in its diameter, and parallel in the direction of its axis. 2. That the bored inside should be perfectly concentive or parallel with the outside of the barrel. 3. That the projections beyond the flanches, if there be any, should be true

with the internal bore; and, 4. That every strain or pressure upon the barrel of the cylinder whilst boring should be avoided. The boring-machine here-after to be described has been found, during several years' practice, to have answered these conditions. Messrs. Sharp, Brothers & Co. cast their cylinders from wood patterns in green sand, and commence the process of fitting up by describing or gauging off a circle upon each end of the cylinder, concentive to the barrel, and having formed this circle the ends are bevelled inwards by chipping to an angle corresponding to that of the plates of the cone mandrill. The cylinder being fastened to the mandrill is put into a two-foot slide lathe, with facing motion, and has its ends faced to a gauge, and its projections turned to a gauge, and cut to a length to gauge. There are further two notches cut out of two cone discs, so as to allow of applying an internal gauge for the out-andout length of the cylinder. Thus prepared by turning, it is removed to the boring-machine, inserted between two plates, the faces of which are planed, and the holes for receiving them bored from the boring-bar in their places; it is at once perfectly concentive with setting, and needs nothing but clamping to the plates by headed bolts or clamps by its flanches to be ready for commencing boring. For placing the tops of the steam-chests and valve facings the turned ends are again made use of for setting, by placing upon the planing-machine table brackets placed on their faces and bored out to the same gauge; the cylinder is turned to, in order to insure the parallelism of these parts with the axis, as for similar reasons the inside of the cylinder could not be otherwise than concentive with the outside of the barrel. I prefer making a separate set of gauges, tackling, &c. for each size of cylinders rather than economize by making one do for many, and risk the chance of mistakes, and believe that the plan here described, to work always from the same point, is most likely to insure accuracy, as the faults made by neglect of workmen are not multiplied by subsequent operations. The boring-machine bores by two cylinders at the same time, and is arranged to bore cylinders of 2'6" strokes The bed is that and from 10 to 20 inches diameter. of a common slide lathe, sufficiently long to carry a double set of driving gear, and admits of a sufficient traverse of the boring carriage. The boring bar is supported by three bearings, the former of which is stationary and firmly fastened to the bed to resist the end and pressure of the cub when boring; the latter are fixed upon the carriage and travel with it along the boring bar, and serve for securing the cylinder during boring, as will be shown hereafter. To cause the boring carriage to move endways, a train of wheels descends at the back of the machine to give motion to the shaft, and is transferred by means of a feathered worm to the worm wheel and pinion, both of which move loose above the fast stud of the carriage. This same stud serves as a fulcrum for the lever, carrying upon opposite projections the intermediate pinions, which gear into the stud pinions. It will be clear, therefore, that by setting the lever in such a position as to bring one pinion into gear with another pinion fast on the rack-pinion shaft, motion will be given to the boring car-riage in one direction; and in an opposite or con-trary direction by moving the lever so as to bring the pinions to gear with each other; and this carriage will be stationary or independent of the driving gear altogether, by keeping the lever in its middle The rack-pinion shaft is extended towards hand, when putting in or taking out the cylinder. A provision is also made in the train of wheels for varying the traverse of the carriage by changing the pinion. To hold the cylinder while boring, the pinion. top of the carriage is formed into a kind of square frame, by means of two plates, planed on the inside and fastened to the sides of the bearings or standards and two cross stretchers. These latter are also placed upon their inner faces and are secured to the sides and top of the boring-carriage, and have holes bored in them when secured in their places, by means of the boring head upon the bar corresponding in diameter to the turned projecting ends of the cylinder to be bored. It will be seen, therefore, that if the figure of the cylinder to be bored be turned to the same gauges as the holes are bored to, it need only inserting and clamping fast by the T bolts to be ready for boring without requiring any setting in its pan whatever. One of the cross stretchers is a fixture, whilst the other is removed every time a new cylinder is to be fixed. The boring head is a fixture upon the bar, and has only one plain square tire for boring, ground to cut either way. This tool fits into a planed recess made slightly dovetailed, and is held fast

Digitized by GOOGIC

one man attends to these and the lathe for facing and turning the ends of the rough castings of the cylinders. The cylinders are cast as hard as we are able to cut them with the best cutting tools we can make, and we find it more advisable to complete the boring in three cuts; the first is often as much as A inch in depth, the second we leave about a inch, and the third can hardly be called cutting, but is merely clearing up or finishing. The advance, or traverse, we rarely change, and is set to 1 of an inch for each revolution of the boring bar; or is, for quickest speed of the bar, 3 revolutions per minute; in the second, 1.8 revolution per minute; in the third, or lowest speed, 12 revolution per minute. For boring 15 in cylinders—for roughing out. 18 revolution per minute, or cut at 7 feet per minute; for boring, 3 revolutions per minute, or cut at 11.78 feet per minute; and for finishing, 1.2 revolution per minute, or cut at 5:65 feet per minute.—Mr. Crampton said they should be doing very great injustice to the very valuable paper they had heard read were they to discuss it at that late hour, and he should propose that the further consideration of it should be adjourned till the next meeting. The suggestion was adopted and the meeting terminated.

The Dinner .- In the evening the members and friends, amounting to about 100, dined together at the Queen's Hotel—Mr. M'Connell presiding. (The Chairman's speech on introducing the toast of the evening-"Prosperity to the Institution of Mechanical Engineers"—and the observations of the gen-tlemen in proposing others, will be found in a subsequent page.)

Progress of Works.

BELFAST AND BALLYMENA .- The directors have resolved on opening this line throughout as early as possible next month.

GREAT NORTHERN (Doncaster district). - The Doncaster Gazette affirms that the vigorous prosecution of the works on the north side of the town will be enforced when the weather is more favourable. The lock-spit, the small trench which marks the centre of the line, has been extended from the Marsh to the Balby-road. Fences and gar-den walls have been broken through at many points. The walls of the cottage, situate on the points. The walls of the cottage, situate on the Balby-road, opposite the Pin-fold, have, although yet occupied, been broken through. An opening has also been made in the garden wall of Mr. Ellison, adjoining St. James's Cottage, and in the opposite wall of the field abutting on the end of Burgin-lane; thus marking out the required wide space from the end of Cherry-lane to the point just mentioned, for the purpose of facilitating the correct laying out of the line.
The company have already made terms for the purchase of land from the corporation and other large owners. A large crane has been erected on the right bank of the Cheswold, in Crimpsall. Piles have also been driven at the New Cut, for the purpose of making a tramway over the stream. In the course of a few weeks progress will be made with the works connected with the three bridges, viz., one over the Mill Dike, another over the New Cut, and a third over the Cheswold, near Crimpsall Gate.

LONDON AND SOUTH-WESTERN.-The Chertsey branch has been inspected by Capt. Simmons, accompanied by Messrs. Locke, Stovin, and other officers of the company, previous to its being opened on the 1st of February.

MANCHESTER, SHEFFIELD AND LINCOLNSHIRE (Grimsby New Docks).—The works for the construc-tion of the cofferdam, wharfs and embankments, which comprise a length exceeding 15 mile, are now drawing rapidly to a close; and it is expected that by about the end of March the waters will be shut out. When this is done, the excavations for the foundations of the walls and the locks will be immediately commenced. Huge piles of stone, which in their massiveness suggest the ruins of Palmyra, are already dressed and fit for use as soon as the work of actual construction begins; the piles for the foundation are now being prepared in enormous quantities, The old dock at the present time is well filled, chiefly with ships from Prussia and Russia, and, had the new docks been ready to receive them, there would probably have been at this time a large fleet of vessels.

OXFORD AND RUGBY. - Bridge-building has been resumed, and a further number of workmen is to be set on in a few days.

SCOTTISH CENTRAL.--The Government inspection line, and examined the various embankments, bridges, viaducts, &c., and expressed himself highly satisfied with the stability of the works, especially with the Larbert viaduct across the river Annan, and the heavy cutting under the Forth and Clyde Canal. After inspecting the station at Stirling, the engine and carriages were put on the up rails, and returned to the junction, reaching that place (distance 12 miles) in 29 minutes. Capt. Wynne returned to Edinburgh, and until his Report to the Commissioners is received the directors are unable to fix the day for the opening of the line for traffic.

SOUTH DEVON ATMOSPHERIC.—Experimental trains have been run between Newton and Exeter, and the Plymouth Herald declares that the result was satisfactory. The first started on the 17th from Newton, immediately preceding the 9 50 a.m. train, and performed the distance, 201 miles, in 304 minutes, and returned again just before the 12 30 p.m. up, in 31 minutes. The second trial took place on the 20th, starting from Newton the same time as the one on the 17th, and the distance to Exeter was accomplished in 271 minutes, and the run down only occupied 26 minutes. The trains in each instance consisted of four carriages. The result of the trial on the 20th was extraordinary, as the frost was more intense than had been experienced during the winter; thus fully developing the power of the system. The 9 50 a.m. regular train followed in four minutes after the experimental train, and the up 12 30 p.m. started from the station at great speed within four minutes after the experimental up train: thus proving that a succession of trains can be run, if required, within four minutes of each other, without any danger of collision. On the 18th the fall of snow retarded the early trains on the line for upwards of an hour. The down 7 50 a.m. was behind its time, and consequently the other trains were thrown out, but in a few hours all went well again. The Marley tunnel has been passed through by locomotive during the past week, and a number of men are employed on the viaducts. The directors are urging on the works in every direc-tion. It is confidently said that the road at the Plymouth end will be completed within two months from this time.

SOUTH YORKSHIRE.—The directors propose immediately to execute the part from Doncaster to the Midland at Swinton, with a line to the nearest col-lieries. Besides the 3l. per share already paid up, they design to call for 3l. more during the present year, and 4t. during 1849, which will be half the capital. The amalgamation between the company and the River Dun Navigation will then be effected in accordance with the resolutions of Parliament.

Syston and Peterborough.-It is reported that the line is to be opened between Stamford and Melton early in March.

ULSTER EXTENSION .- The works on this extension, says the Irish Railway Gazette, from Portadown to Armagh, have been delayed, owing to the inclemency of the weather and other causes, but Dargan is making every exertion to have the line ready for traffic in the course of next month.

WEST RIDING UNION.—The branch between Mirfield and Bradford is now so far advanced that it is expected to be opened in May next, from the Manchester and Leeds line at Mirfield to Wibsey, thus changing the route from Bradford to Manchester, via Mirfield, instead of as heretofore, via Brighouse.

YORK AND NEWCASTLE, &c. — The branch proposed from the main line at Penshar to Sunderland is intended to be commenced with early in March. It will be completed, says the New-castle Journal, with all despatch as far as the iron works at Bishop Wearmouth, but the extension the docks at Sunderland will not be undertaken till the docks are accessible to the traffic of the The opening of the projected branch will support. ply a ready access to the town of Sunderland from all parts of the kingdom, and will be a great saving of time and distance in the present mode of travelling to Durham and the locality.

Accidents.

GREAT WESTERN.-Jan. 26 .- As the express train, which leaves Exeter at 6 30 a.m., was proceeding on its way between that place and Bristol at the usual rate, the engine-driver perceived, within a very short distance, an obstruction on the same line of rails. He had but just time to put on the whistle, when the train dashed against a ballast-truck. The engine luckily was not thrown off the line; owing to the velocity of the train, the wreck of the truck, which of the southern portion took place on the 17th inst. Capt. Wyane, after inspecting minutely the points of junction and the arrangements for the interchange of trailic with the Edinburgh and Glasgow, proceeded on the engine along the was almost shivered to atoms, was carried along the rails for some distance. None of the passengers were

discovered. Intelligence of the occurrence was immediately conveyed up the line, and at the next station every assistance was rendered in order to forward the train with as little delay as possible.

Newcastle-on-Tyne.—A Mr. J. F. Reay, commission agent, incautiously standing upon a waggon attached to a train from Cramlington to the Percy Main station, came in contact with the bridge at Hatworth, was knocked down, and run over by another train.

Law Entelligence.

COMPENSATION. - Jan. 20 .- In the COURT OF CHAN-CERY, in re Skerrat v. the North Staffordshire, this was motion to discharge an order of Vice-Chancellor a motion to discharge an order of vice-chancero-Wigram, setting aside an award, and restraining the defendants. The plaintiff is the owner of lands between Hardcastle and Sandbach, on the line. His disputes with the company were referred to arbitra-tion under the Lands' Clauses Consolidation Act. The plaintiff, in the month of June, was pronounced to be entitled to the sum of 547l. for land, and 80l. for damage to the mansion, but being dissatisfied he filed his bill to set aside the award, on the grounds that the decision of the arbitrators did not comprehend all the points referred; that there had been partiality in the umpire, and that the award was made within three months, the time prescribed by the Act.—The Vice-Chancellor held that the objection as to time was a good one, and granted an injunc-tion to restrain the defendants from entering on the land .- The Lord Chancellor thought the objection to the award could not be sustained. The arbitrators had not made any allowance for hedges, fences and culverts, because, until the works were completed, it was not known to what extent they would be required, and the Act of Parliament provided means of compensation. Charges had been made against the arbitrators and umpire of not hearing evidence, and of being guilty of partiality, but they were unsupported by proof. There was no ground therefore for objec-tion on these points. The order of the Court below must be overruled

LIABILITY OF PROVISIONAL COMMITTEEMEN. the same Court, in re Bell v. Lord Merhorough and others, the Lord Chancellor gave judgment. The case came before him (see Rail. Chron., 1846, p. 757) on appeal from an order of the Vice-Chancellor of England, allowing a demurrer put in by certain defen-dants. The bill was filed by two on behalf of all the shareholders, except defendants, in a defunct Devon-shire and Exeter scheme, against the members of the provisional committee and committee of management Certain defendants, members of the provisional conmittee, who did not sign the subscribers agreement or the parliamentary contract, demurred to the bill, which prayed an account against the defendants, and that they might be compelled to pay deposits on shares which had been allotted to them—which they accepted but never took up -- and that the assets of the company might be duly administered.—The demurrer was allowed by the Vice Chancellor, on the ground that the demurring parties were not share holders, therefore not partners in the concern, and therefore not liable to pay or to account; and parti-cularly that the misconduct of the directors operated as a release of these defendants.—The Lord Chancellor, after stating the case made by the bill, said there were those dethere were three questions—first, whether these defendants were liable to take the shares that were allotted to the shares that were allotted to them; second, whether the plaintiffs had a right to sue; and third, whether other persons were not necessary parties. On all these points his lordship was against the plaintiffs. The demurrer

must be allowed, and the appeal dismissed with costs.

(During the week the Great Western v. the Birming) ham and Oxford case has been argued before the

LORD CHANCELLOR.)
Costs. — Jan. 21. — In the Vice-Chancellor's COURT, in re M'Gregor v. the Derbyshire, Stanfordshire and Worcestyshire Junction, this was a demurrer to a bill filed by a solicitor, who projected the railway, against the defendants, who were the directors. The against the decements, who were the directors. In plaintiff had entered into an agreement, on his appointment as solicitor, not to demand any costs until the sale of the shares, which had not taken place, and upon this ground the defendants demurred to the equity of the claim.—His Honour overruled the denurrer with costs. demurrer with costs.

DISSOLUTION, &c.—Jan. 24.—In the same Court, in re Sibson v. Edgeworth, counsel supported four pleas to the bill filed in this case for winding up the affairs One of the of the Wrexham, Nantwich and Crewe. One of the pleas was that the case of the shareholders who had executed the subscribers' agreement was different from that of those who had not, for that the latter, being entitled, on the failure of the scheme, to a return of their deposits, without deducting expenses,

Digitized by GOOGLE

might sue the directors accordingly, and therefore the bill ought not to be filed on their behalf in its present form. It was contended in support of the bill, from the advertisements and prospectus, the parliamentary contract and the letters of allotment of shares, that there was no such distinction.—His Honour overruled the plea, and gave the defendants five weeks' time to answer the bill.—Two of the other pleas were overruled, the actions complained of in them having been brought after the institution of the suit, and the remaining plea was ordered to stand over, there being an appeal on a point raised by it now pending before the Lord Chancellor.

COMPENSATION.—On the same day, in the same Court, in re Emlyn v. Windsor, Staines, &c., a special injunction was sought to restrain the defendants from taking any part of the plaintiff's land until they had paid 500L, as agreed under the following circumstances:— On the application to Parliament, the plaintiff petitioned against the bill, whereupon the defendants contracted that if he would withdraw his opposition they would pay the above-mentioned sum before they commenced forming the line. A deviation of the line subsequently being intended, by which this particular part of the plaintiff's land would not be taken, the company proposed a reduction, which the plaintiff declined to make. On the 21st inst. the workmen of the defendants broke the plaintiff's fences, and commenced digging on part of his property; thereupon the present bill was filed.—His Honour made the

Jan. 25 .- In the same Court, in re the Midland (Nottingham and Lincoln) Act, 1845, ex parte Ward, a petition praying the apportionment of a sum of 1,760l. each in the bank, between a lessee of a church lease and the lessor of the same. The petitioner is possessed of freehold and leasehold property, the latter held of the Pean and Chapter of Lincoln, which were much mingled together, and was offered a sum of 6,000l. for the whole, including the reversion the Dean and Chapter had in the leasehold property, by the company.—Mr. Ward applied to the Dean and Chapter that the value might be apportioned according to their relative interests in the leasehold, but they declined, and accordingly both he and they joined in a contract with the company to sell the leaseholds for the above sum of 1,760%, which was paid into the Bank under the Lands' Clauses Consolidation Act.-His Honour feared he could not make the company pay the costs, as the case did not come within the directions of the Act. But he should not give any parties their costs. The money must be invested, and the dividends paid to Mr. Ward during the remainder of the term for which the lease would have continued, he undertaking to pay the rents reserved by the lease so long as he should receive the dividends.

Jan. 26 .- In the same Court, in re Hawley v. the North Statiordshire, application was made that a submission to arbitration which had been entered into, upon which the arbitrators had been appointed by the plaintiff and the company, might be made a rule of Court. By the Lands' Clauses Consolidation Act it was enacted that the appointment of arbitrators should be considered as a submission. The case has been mentioned twice before, and a difficulty arose in consequence of the absence of the deed of appointment of one of the arbitrators, there being, however, a recital of that document in the appointment of the umpire.—His Honour did not think it was an error to make the submission a rule of Court upon the present materials, and therefore he should grant

Jan. 20.—In the Court of Queen's Bench, in re the Directors of the Dublin and Belfast Junction v. Barnett, this was an action for calls brought against the defendant, who was a shareholder in the company. The defendant pleaded specially that the contract, if any, was made in Ireland: and that the action, if maintainable at all, ought to have been brought in one of the superior courts in Ireland, and that this court was not a court of competent jurisdiction to enforce the payment of the said calls.—A rule to show cause why this plea should not be set aside as frivolous was sought for.—Rule nisi granted.

Jan. 22.—In the COURT OF COMMON PLEAS, in re Bathe v. Batthyany, the defendant was sued as a pro-Direct for the sum of 50l. for printing prospectuses. The jury returned a verdict for the plaintiff for 351. 6s. 8d. Last term a rule nisi was obtained for a new trial, on the ground of misdirection, consisting in the learned Judge having told the jury that if the Count Batthyany gave authority to have his name inserted on the list of the provisional committee, and The committee ordered the work to be done, Count Batthyany was legally liable. The matter now came before the Court on cause being shown against making the rule absolute.—The Court intimated that

they were clearly of opinion that the case came within the operation of the ordinary rule of law affecting committeemen, and the rule was accordingly made absolute.

TRESPASS .- Jan. 25 .- In the Court of Exchequer, in re Ramsden v. the Manchester South Junction and Altrincham, this was an action against the defendants for entering the plaintiff's close, situate in a certain street or highway, in Liverpool, by boring a tunnel underneath without having first tendered compensation. The real question upon demurrer was, whether the defendants became trespassers by having They contended neglected to tender compensation. that after they had entered upon the premises, as the statutes empowered them to do, it was the duty of the owner, if he thought himself damnified, to have a jury summoned to ascertain the amount of compensation. — The Court held that the defendants were bound, in the first instance, to tender reasonable compensation, and that as they had not done so they were trespassers.-Judgment for the plaintiff accordingly.

RAILWAY COMMISSIONERS. — Jan. 14. — In the COURT OF SESSION, Scotland, in re Edinburgh and Glasgow v. Calcdonian, the Caledonian (respondents) were empowered by their Act to cross the line of the Edinburgh and Glasgow, provided they did not obstruct or interrupt the traffic of that line. The engincers of the respective companies differed as to the means of crossing which should be adopted as most calculated to obviate interruption of traffic, and accordingly the matter was, in terms of the statute, submitted to the Commissioners, who pronounced an award ordering the operation of crossing to proceed in a given manner. Thereafter the respondents pro-ceeded, after a short notice, to adopt a method of crossing which necessarily confined the traffic of the suspenders to one line of rails for five or six hours. Against this proceeding the suspenders obtained interim interdict. Subsequently the Lord Ordinary remitted to an engineer to report on the manner in which the line could be crossed with least interruption to the traffic. Against this interlocutor the suspenders reclaimed, and contended that a certain mode of proceeding had been pointed out by the Commissioners' award, which had not been followed by the The Court thought that, as the whole matter turned on the award of the Commissioners, and as that seemed somewhat mystical parties had much better go to the Commissioners and ask them to explain their own award.

Jan. 21.—In the Edinburgh Small Debts Court, an action was brought against the North British for damages, in consequence of the train, advertised to start from Portobello to Edinburgh at 8 5 p.m., passing the station at Portobello, on the evening of the 6th ult., without stopping to take up the passengers 6th ult., without stopping to take up the partial who had paid for their tickets, and were waiting, in who had paid for their tickets, and were waiting, in the train to Edinburgh. The pursuer in this action, along with two other gentle-men, had to walk on foot to Edinburgh. The agent for the company denied the fact of the train not having stopped, and maintained that the pursuer ought to have remained at the station at Portobello until the next train arrived. The fact of the train not having stopped was, however, established by the evidence of four witnesses.—The Interim Sheriff Substitute found the company liable in two guineas damages (the pursuer stating that he did not wish vindictive damages), and one guinea and a penny expenses. No passenger was bound to remain until other trains arrived, but was entitled to proceed to his destination by the best conveyance he could otherwise obtain, and that at the expense of the company, on account

of breach of contract.

Jan. 19.—In the same Court, Mr. Greenlaw, coal merchant, summoned the North British for 81.6s. 8d., as damages due by the company for failing to provide trucks to convey his coals along the line, and also charging demurrage on the coal detained by the company.-The Judge pronounced judgment in favour of the pursuer, intimating his opinion that the company were regarded by the law as common carriers, and bound to provide the public with trucks for the conveyance of goods.

Jan. 26 .- A servant of the South-Eastern Company has been charged before the local police court with stealing two large plaice from the fish-pads which he had to convey to Billingsgate. As it was his first offence, the prisoner was remanded for inquiry into his character.

IRON TRADE, Glasgow, Jan. 21 .- The market for pig iron is firm; little is offered for sale, and quota-

months, open delivery, with deposit. All No. 1 may be quoted 50s. cash. -Birmingham, Jan. 22.—The mining population remain in a very unsettled state. Numbers of the turn-outs have assembled at some of the pits near Dudley, and by intimidation compelled the few men who, for the sake of their families, continued or had resumed their work at the reduced rate of wages to desist from their employ. The works at Holly-hall and also those at Woodside, belonging to Messrs. Cochrane & Geach, were subjected to these visits. Three of the malcontents have already been apprehended. A detachment of cavalry is stationed at Dudley, and it is intended immediately to considerably augment the constabulary force of the district. The discontent of the workpeople is said to be considerably aggravated by orators delegated by the National Association of United Trades, and that at two meetings, one held near Dudley yesterday evening, the colliers on strike resolved unanimously to stand out until their demands were conceded by the masters. At present there does not appear the slightest prospects of the iron and coal masters giving way. It is said that the miners and ironworkers in the employment of Lord Ward are to receive notice to-night of a reduction in their wages similar to that agreed to by the other iron and coal masters in the neighbourhood. It is therefore probable that within a very short time there will not be a single furnace or pit at work in the whole of the South Staffordshire district. Nevertheless, with only one or two exceptions, the various firms of the district, great and small, maintain their position without any rumours of a questionable character. Placing the Oak Farm Works out of question—for this concern, it now appears, was insolvent before the present commercial crisis occurred—there has been only one positive and publicly-announced failure in the district, and even in that case the liabilities were comparatively unimportant.

NOTES AND EXPLANATIONS

(1) The Government gives 32,000,000f, and the land, and receives alf the profits, after 10 per cent.
(2) The Government guarantees 3 per cent, interest, and 1 p. cent. inking Fund. The loan of 10,000,000f, was negotiated at about Sinking Fund.

Sinking Fund. The loan of 10,000,000f, was negotiated at about 4 percent, per annum.

(3) The Government lends 14,000,000f, and 4,000,000f additional for half the cost of the passage of the town of Rouen, at 3 per cent, per annum. The dividend is declared after deduction of 1 per cent, from the profits for Sinking Fund. Loan of 6,000,000f, or 6,000 bonds

of 401 each, bearing interest at 4 per cent., created August 1845, reimbursable by lot, at 501 each, in the course of 73 years.

(4) The Government lends 10,000 of the town of Havre 1,000,000 of.
The Government lends 10,000,000 of, and 4,000,000 additional for half the cost of the passage of the town of Roune, at 3 per cent, per ann. The interest to commence 3 years after the line is opened. Lean of 10,000,000 of, of 1,000 honds of 1,000 of, or 4,00 each created December 1845, bearing interest of 50f, per annum, reimbursable by 15t, at 1,250f, each, in seventy-eight years—8,000 were issued in Dec. 1845, and 2,000 in Oct. 1846.

(5) Loan of 12,500,000f, in Bonds of 1,250f, bearing interest of 50f, per annum, to be paid off in a period of 50 years.

(6) Loan of 2,502,506f, in Bonds of 1,100f, at 43 per cent, to be paid off with a premium of 150f, per Bond. The Government lends 12,602,000f, for which the Company pays, from 1877, 4 per cent, interest per annum, and 1 per cent. Sinking Fund, but only when the shareholders have received 15f, per share.

(7) Loan of 6,402,000f, in Bonds of 1,250f, bearing interest of 50f, per annum, to be paid off in a period of 50 years.

(8) The Government lends 5,000,000f, at 4 per cent, interest.

+ Ex Div.

London Stock Exchange, Jan. 28 .- A greatly increased business has been transacted in the sharemarket, and prices have improved. The principal feature of the week has been a steady demand for the low priced and smaller shares.

Liverpool, Jan. 27 .- Our market during the week has been anything but active, but prices are much the same.

Suplow, Brothers.

the same.

Manchester, Jan. 27.—We have had only a moderate business doing in shares during the week, though the prices of last week have been generally well maintained—in some instances they are higher. The information, by telegraph, that the Bank of England has lowered its rate of discount to 4 per cent. is also producing some effect.

Sam. Grindeness in this market. producing some effect. SAM. GRINDROD.

Birmingham, Jan. 27.—The business in this market

Birmingham, Jan. 27.—The business in this market has been very limited during the last week, but prices have been upon the whole better maintained, and there is scarcely so much disposition to press stock upon the market. To-day North Staffords have been done at § pm., and Shrewsbury and Birmingham (A) at 3½ dis.

W. BANKS.

York, Jan. 27.—The market is firm, but there are few transactions to record in the market. The North Staffords, the York, Newcastle and Berwicks, and a few other stocks are advancing in price. We hear that the directors of the Eastern Union and the Ipswich and Bury Railways have been making con-

undertakings, and we hope to see other companies make the same beneficial revision and retrenchment, for by such salutary measures the public confidence will be the more readily given to these undertakings.

GRAYSTON & EARLE. Hull, Jan. 27.—More disposition has been shown to purchase during the week, although the market has received a temporary check owing to the re-action in consols. We look for higher rates as the year advances. The most striking event of the week as regards prices is the fall in Darwins, which have been done to-day as low as 9½ dis., leaving off sellers thereat. North British, it being expected that the forth-coming dividend will be at the rate of 6 year each at coming dividend will be at the rate of 6 per cent. at least, are firm and in request. Ipswich and Bury attract attention at the low prices. Thirsks are better,

attract attention at the low prices. Thirsks are better, and East Anglians show signs of recovery from their late depression.

FLINT & TOOTAL.

Newcastle-upon-Tyne, Jan. 27.—In our market during the early part of the week shares have been in greater demand, and higher prices have been obtained; but to-day business is not quite so active, nor is the advance fully sustained.

W. FORDYCE.

is the advance fully sustained. W. FORDYCE.

Glasgow, Jan. 26.—We have to report a firmer market this week, but a limited business. Prices of our local stocks have not advanced to the extent that might have been expected from the improved tone of the money market—in fact, the quotations of tone of the money-market—in fact, the quotations of to-day do not show much variation from those of last week, although where there is a difference, the tendency is upwards. We add to day's latest business:—Caledonian, 36½: Ditto, halves, 52s. dis.; Clydesdale Junction, 59½; Edinburgh and Glasgow halves, 3½ dis.; Edinburgh and Perth halves, 6s. 6d. dis.; Glasgow, Dumfries and Carlisle, 7l. 4s. 6d.; Glasgow, Kilmarnock and Ayr, 99¾; ditto, halves, No. 2, 3½ dis.; Glasgow and Greenock, 16½; North British, thirds, 2s. 6d. prem.; ditto, quarters scrip, 1s. dis.; Scottish Grand Junction, 40 dis.; York, Newcastle, and Berwick, Great North of England purchase, 1½ pm.

Bourse de Paris, Jan. 27.—The following are the siderable reductions in every department of these | latest prices:—Avignon and Marseilles, 560f.; Mon-

tereau and Troyes, 240f.; Northern, 533f. 75c.; Orleans and Bordeaux, 477f. 50c.; Paris and Lyon 395f.; Paris and Orleans, 1,181f. 25c.; Paris and Rouen, 900f.; Paris and Strasburg, 408f. 75c.; Rouen and Havre, 455f.; Strasburg and Basle, 156f. 25c.; St. Germains, 625f.; Tours and Nantes, 388f. 75c.; Versailles (left bank), 190f.; Vierzon, 510f.

A general feeling of uneasiness is still reported in the commercial world at Paris, which has been increased by the announcement of several failures in the south of France, and particularly at Montpelier. On the Bourse unfavourable rumours have been industriously circulated, one of which, to the effect that some of the banking houses had been compelled to seek assistance from the Bank of France, was wholly untrue. A report that the Bank of France, was about to make advances on the deposit of shares has been also controlled. also contradicted.

The Morning Post mentions that commissions are about to be nominated by the Governments of Bavaria and France to decide at what point the railway of the Lower Palatinate shall join that of Alsace.

Railway Chronicle.

LONDON, SATURDAY, JANUARY 29.

A dividend of 3s. 6d. per share on the old shares, clear of income tax, was declared at the half-yearly meeting of the London and Green-WICH. Within twelve months the directors hope to close all their accounts.

At the adjourned meeting of the DIRECT LONDON AND EXETER it was determined that the company should be dissolved, and that such dissolution be an act of bankruptcy.

The proprietors of the CLARENCE have specially approved of the agreements for the lease and sale of their line to the LEEDS AND THIRSK. By these arrangements the dividend on the old shares will be increased from 11 to 3 per cent.

The construction of the line from Waterloo to Southport was authorized by a considerable majority at the special meeting of the LIVER-POOL, CROSBY AND SOUTHPORT shareholders.

The SOUTH YORKSHIRE, DONCASTER AND GOOLE SHAREHOLDERS, at their special meeting, have agreed to the suggestion of their directors respecting the immediate construction of part of their line.

The determination of the directors of the PARKGATE, CHESTER AND BIRKENHEAD to apply for an extension of the time for the construction of their line was sanctioned unanimously at the special meeting of the proprietors.

The Report and Accounts were passed with only three dissentients at the half-yearly meeting of the SAMBRE AND MEUSE. The line will probably be opened by the end of March or middle of April. The delay has arisen from the inattention of the contractors of part of the line to the nature of the strata.

At the special meeting of the JAMAICA South Midland it was resolved to ask the directors to lend each shareholder on his register the sum of 10s, per share upon the deposit and transfer of his share, and on his executing a proper release to the directors.

At the special meeting of the Scottish CENTRAL last week, the shareholders declined to prosecute further their opposition to the legal measures taken to bind them to their agreement with the Caledonian. This is virtually conceding the point, and the recommendation of | tion of all directing bodies is now being earnestly the meeting to the chairman, to direct his attention to the settlement of these matters by an amicable arrangement rather than litigation, shows a disposition to obey the law with a good grace rather than a bad one. We hope his Lordship will now enter upon the fulfilment of those duties with an amicable, conciliatory and conceding spirit. These are not days in which so excellent a bargain as that contained in the agreement is to be lightly repudiated or readily replaced.

From our official returns it appears that the amount of traffic for the last week, on upwards of 3,436 miles of railway, was 149,281/., thus accounted for: - 70,814/. for the conveyance of passengers only, 42,315%, for the carriage of goods, and a remainder of 36,122/. for passengers and goods together, not respectively apportioned; being an increase of 11,109% over the corresponding week of the former year, when the mileage was 2.680. The average carnings per mile for last week were 43%, whilst in 1847 they were 50%.

MONEY-MARKET AND GENERAL MEETINGS, laffairs has brought upon them, and to adapt

Since we adverted to the state of the MONEYusual effect of abundance there upon railway values, and the slight impression which it now seems to produce upon them, has become still more apparent. Within the last ten days, in consequence, as it appears, of the influx of specie, and of the hesitation to employ it in mercantile transactions, we have seen a further rise in all the Government securities, in the face of depressing accounts from nearly every quarter of the trading and manufacturing world. Had such a state of things taken place a twelvemonth since, one of its first effects would certainly have been to throw large quantities of the unemployed money into the railway sharemarket; -as it is, while consols have been repeatedly hovering near the point of 90, the stock even of dividend-paying companies has attracted comparatively little attention, and might be had at prices—computed by the rates of dividend hitherto paid—to return from 6 to 7 per cent. There can be no stronger evidence than this of a material change having taken place in the feelings of capitalists and investors with regard to the latter description of securities; and it is now becoming a question of no trifling importance whether this disposition is to be viewed merely as a passing fit, or as a tendency that may continue to prevail throughout the ensuing twelvemonth.

The results of the approaching half-yearly meetings and the declarations of policy to be made on these occasions, we apprehend, will go far to determine the question; - and it may be fortunate in this point of view, that the phenomena we have been noticing above should have presented themselves at so critical a period with a distinctness that no one can overlook, and that must clear that something beyond the scarcity of money is acting upon the value of railway property; and that something beyond a return of the abundance of disposable funds is required to recover its former position. This, we say, it companies are assembled to receive the accounts of past, and to decide upon future transactions. On the former, of course, the conclusions to be drawn from this discovery can have no practical effect; the course of the latter, however, may is a subject to which it is to be hoped the attendevoted. By the manner in which they shall be found to have comprehended the bearings of a critical position, and by the amount of judgment, resolution and aptitude to deal with new circumstances, that may appear in the advice which they will have to lay before the proprietors, on the present occasion, their ability and wisdom will be effectually tested. The trial is, no doubt, of extreme severity: the crisis is one in which little assistance can be had from the routine of common practice in former times;it may also be seen to demand not a few of those sacrifices, of favourite opinions and projects, that are never made without reluctance, and to call for a reference to extensive principles and general considerations, that have not until domestic troubles of the nation should ever so now been regarded as necessary guides to the | far subside as to favour the outlay of capital determination of the several bodies by which the railway system is divided. The difficulty to be solved is, in many respects, a new one, and can neither well be left to remove itself, nor be measured by the ordinary standards of policy. It remains to be seen how far the ruling members of this great interest are able to lay hold istence. In the meanwhile, this little Barceof the novel conditions which the change in its lonese experiment, in a kingdom separated by

their conduct and frame their policy in accord-MARKET last week, the contrast between the ance with exigencies that have never been pressed on their notice before now.

In this respect, as well as in the others we have previously touched upon, the general meetings will assume a character of importance that may well cause them to be looked for with unusual eagerness. With us this feeling is not unmingled with an anxiety, which we shall sincerely rejoice to have reason to declare hereafter to have been causclessly apprehensive.

RAILWAY NEWS FROM CATALONIA.

We had lately some further accounts of the progress of the little SPANISH RAILWAY-the BARCELONA AND MATARÓ-of which we have already once or twice spoken at different intervals before now. The works, it appears, have been found, on a recent inspection by the engineer in chief, Mr. Locke, to deserve altogether the favourable character which was originally given of them to the parties in this country who took an interest in the undertaking; and they have been going on during the last six months at a rate which, it is expected, will allow of the completion of the line before the coming spring is over. It is curious enough, amidst the general political disorders of the province, which have been often brought to public notice during the past year, to discover the steady progress of one important harbinger of civilization and commerce, which cannot fail to promote in many ways the wholesome growth of Catalan prosperity, while it may tend at some points to impede a busy trade on parts of the Spanish coast, the character of which is more than questionable. Cheaply constructed, running through a populous region, the inhabitants of which are industrious and stirring-unlike the Castilian or Andalusian races-and superseding a high road, the badness of which is something egrecommand attention to their causes. It is now | gious, the Barcelona and Mataró seems to have every element requisite to insure a fair success to a railway; and its success might, in any other country, be certainly regarded as the signal for beginning a more extensive series. This, however, for many reasons, is not likely is well to have palpably discovered before the to be the case in Spain. In general the face of the country, (as we had occasion to remark at the time when the wildest projects were brought over from thence for English support,) forbids the construction of cheap lines-the only description that can be expected to pay in any part of the be influenced by them in many ways; and this Peninsula, and most of all in the large tracts of dehesas y despoblados, which cover nearly one half of its various kingdoms. Nor does their social character in any other quarter, at all resemble that of the busy Catalans, whose example, in a nation divided by the strongest local prejudices, would in any case have little effect on the population of other districts; while the commerce that flourishes on the Barcelona sea-board has no existence in their provinces, and the habits that encourage locomotion are utterly foreign to most of them. As financial undertakings, by private companies, few railways, and none of any great length, are likely to flourish in Spain, within the experience of the existing generation, at least. Here and there a small enterprize may be attempted in other provinces, and perhaps obtain a certain degree of prosperity, if the with a hope of its being honestly expended and safely enjoyed. What may be the probability of a near approach of this better state of things, we shall not undertake to discuss; for the present, it is pretty evident that in the greater part of the Peninsula nothing of the kind is in exthe Spanish possessions, may be expected to stand alone, thriving on local resources altogether; confining its benefits and its influence within the limits of the district whose natives have had the spirit to undertake the enterprize; a continual evidence of the isolation in which the several parts of the Spanish kingdom still exist, with scarcely a change since the union of the crowns of Aragon and Castile.

ANNUAL MEETING OF THE INSTITUTION OF MECHANICAL ENGINEERS.

The Institution of Mechanical Engi-NEERS held their great Annual Meeting on Wednesday last, and after the formal business had been transacted, and several important papers read, they adjourned to celebrate their anniversary by a social dinner. The success of this young institution is proved by the rapid increase of its numbers. Instead of being a rival to the Institution of Civil Engineers, it must be regarded rather as a fraternal associate with it. Placed in London, the Institution in Westminster will always be the seat of the records and proceedings of the professional men of England and of the metropolis; but there is no reason why the multitude of intelligent and practical men, who direct the vast operations of the manufacturing and mechanical establishments of the Midland counties of England, should not have meetings more frequent, and more exclusively devoted to discussions of that vast multitude of practical improvements which are continually brought forward by the contriving genius of English mechanics. Nay, further, it is a peculiarity of this Institution, that it discusses the respective merits of new plans, of untried inventions, and so serves to test the value of an invention by the practical opinions of those it is intended to benefit, before the expense of actual trial has been incurred. There can be no doubt, that great good would result from the more frequent contact of mind with mind in the prosecution of mechanical invention, and it is of the highest value for every practical man to have frequent opportunity of testing the correctness of his own opinions by those of others.

It is, however, mainly on account of the connexion of this Institution with the mechanical engineering of railways that it becomes our province to record its proceedings. We observe at its head the name of the father of the mechanical engineering of railways-the inventor of the system of locomotive engines at high velocities -Mr. George Stephenson; and we see among the most active members of the Institution, those who are eminent for their mechanical talent and who are engaged in the daily duty of bringing to the aid of railways all the resources which their ingenuity can command. In these circumstances it gives us much pleasure to record its progress. We have given, elsewhere, the papers read at the meeting of last Wednesday, on subjects of importance, and of practical value, by Mr. THORNTON, Mr. FOTHERGILL, and Mr. BEYER, and we annex a short account of the speeches of the chairman, Mr. M'CONNELL, and the other members who addressed the meeting, as affording information concerning the state and prospects of the Institution and likely to convey a favourable impression of the spirit and objects with which it is conducted.

The CHAIRMAN said, in the absence of their worthy President, he had been called upon to occupy his position, and it became his duty to propose the toast of "Prosperity to the Institution of Mechanical Engineers." Before doing so, perhaps they would allow him to make a few observations upon the past success and future prospects of the body. Many, now present, would recollect at their first meeting success and future prospects of the body. Many, now present, would recollect at their first meeting how sanguine were their expectations of success, favoured in having Mr. Stephenson president the

these most sanguine expectations. When he saw around him the ilite of the mechanical talent of England-he was not saying too much that the Institution had gathered around that board the experience and mechanical talent of England. It augured well, when they saw each other cheerfully going on, enjoying a social meeting like the present, and calling forth those kind feelings, which was one of the main objects they had in view in establishing the Institution. It could not but be seen by the most careless observer that the object of the Mechanical Institution was not their own present interest merely, but the advancement of the arts and manufactures of the country. It had united the talents of a certain class of men who, up to that time, had been separated from each other. It was taking the sparks of mechanical science as it were hot from the furnace. Their Continental neighbours were making rapid strides in mechanical pursuits, and they had latterly heard a good deal about the necessity of national defences in England. But why were these national defences talked of so much! because our foreign neighbours had copied our naval steam power. He thought mechanical engineering would be found to be our best national defence. He hoped, however, the art of war would be the last thing which the members of that Institution would have to study. He hoped their great object would be to produce the best machinery for the cultivation of arts and com-merce. That Institution was more calculated to promote their improvement in machinery than any prominent improvement in machine that individual exertions of each member were necessary, and they ought to impress upon their friends the importance of their becoming members. Each ought to canvas for support, and send contributions of intelligence to the general centre, in order that the usefulness of the Institution may be more fully realized. To railway companies in par ticular that Institution would be most beneficial. friends around him would bear him out in saving it was of the greatest importance to be able to ascertain the value of an invention when it was brought forward. He for one should be sorry to pronounce a verdict unfavourable to an invention, and the most proper manner to have the value of it ascertained was by a discussion upon it before such an Institution as the present. They would then take the general opinion, and decide accordingly. Moreover, it was quite necessary that persons holding official situations should be relieved from the odium of objecting to childish projects, while at the same time it would be most gratifying to them to bring forward, in a legitimate way, and make known useful discoveries and improvements. In both senses they found the Institution a proper and legitimate tribunal for mechanical science. In looking forward, he hoped to see the Institution rank high, and take its stand amougst the foremost in England. When he saw the names of the most important mechanical engineers in the country upon their books, it was evident that it only required the fostering care of the officers to bring the Institution to full maturity. They had had at their head a most remarkable man, who was a bright example for all to follow. There was one subject the Council had at heart; they had felt a difficulty in procuring papers from persons who were not members of the Council. Now he thought it was quite necessary that not only should the Council feel anxious to have a long list of papers, but the members generally in the different districts of the country ought to send their experience to the Institution. The promoters thought a system of intercommunication might be kept up through the secretary, that would be useful to each member, and thus afford a commonwealth of information upon practical subjects which might be interesting. They had hopes, now that the objects of the Institution were becoming known, that the advantages to be derived from it would be a powerful stimulus to its success, and he trusted that at their next annual meeting they would find their numbers again doubled, as in the past year. He hoped that when they should meet again it would be with the same kind and social feelings, and that the plant they had put in the ground might rise to be a useful tree bearing fruit in abundance.—The toast was drunk with applause.

Mr. CRAMPTON proposed "The Advancement of Mechanical Science.

The CHAIRMAN said he rose to request they would drink the health of a gentleman who, from an unavoidable cause, was absent that evening. He be-lieved he had, in common English, taken to himself a wife, and while they drank the health of Mr. G.

language, habits and traditions from the rest of | and it was with pleasure he beheld the realization of | Institution. He was a man born for the age, to wborn they were indebted for the successful developement of science. He might be certainly considered the father of railways, and they must all acknowledge when they saw him that he was worthy of the title. and worthy of being styled the father of mechanical engineers. Mr. Stephenson, in his own graphic words, had been the architect of his own fortune, and when they drunk his health they must bear in mind it was in their power to imitate his example.

The Vice President proposed the next toest, "Prosperity to the Institution of Civil Engineers." He had received many letters approving of the objects of the Mechanical Institution, but at the same time expressing fears that it would be prejudicial to the interests of that of the Civil Enginee Such, however, was not the fact, as was proved by the success of that Institution during the past year, as shown in the report of their late meeting. was sure they would all join him in wishing increased success to that Institution.

Mr. Fowler, C.E., returned thanks for the friendly manner in which they had drunk the toest. The kind feeling they had expressed towards the Civil Engineers would be responded to by that body. did not think any greater harm would come to the civil engineers than by exciting greater emulation to serve the country at large, and make their meetings as valuable as possible.

Mr. Fothergill, in proposing the next toast said, it was true that, as a society for carrying out mechanical talent, they ought never to forget that they owed a debt of gratitude to the gentlemen engaged in the chemical and electrical branches of science, in working out railway operations. Every gentleman would bear him out that a great amount of talent was now brought to bear by gentlemen engaged in that department. Without their aid they could not progress in mechanical science, and he therefore associated with mechanical talent all those engaged in carrying out railway enterprize. In referring to the chemical and electrical operations of the day, it had struck him very forcibly that if they had lived in the dark ages they would have been arrested as witches and sorcerers, and charged with engagements with his Satanic majesty. Such, however, was not the fact; they lived in an age of free agency, when science had conferred the greatest advantages upon society, when talent was brought out, and when they only wanted an opportunity of developing those talents. There was one point which struck him in connexion with the Institution :- he had been frequently called upon to give evidence upon matters requiring the exercise of mechanical science, and he had often seen twelve men sitting to decide upon mechanical questions, when they were really ignorant of the technical terms used in describing the case, and he had seen them compelled to ask for information upon the most ordinary oints. He hoped to see the day, if the Institution of Mechanical Engineers should succeed, when precents would be issued to have all questions of a nature tried The same would by men of mechanical knowledge. apply to gentlemen of chemical knowledge. He hoped they would have chemical engineers, and that all questions involving the interests of that branch of science, would be tried by competent persons.—Mr. Fothergill next adverted to the extraordinary progress which had been made in electrical science, and noticed the wonderful invention of the telegraph. And, in conclusion, said he had no doubt if the Mechanical Engineers of England were only true to their own interest, and become a compact and thoroughly united body, they would be able to confer immense advantages, both on themselves and on their fellow men. Their cause was just-their object was truth and right, and he hoped they should live to see the day when "peace and good will to men" would be universally proclaimed through the agency of mechanical engineering.

Mr. Fox then proposed "the Memory of the Im-

mortal Watt," which was responded to by Mr. BUCKLE, of the Soho works.

Mr. Wilson then proposed the healths of "The Mr. Wilson then proposed the healths of "The Vice-Presidents of the Institution, and Mr. Whit-worth "The Health of the Chairman, (Mr. M. Connell)." Mr. E. Jones gave "The Council of the Institution," and Mr. Fowler "The Locomotive Superintendents, and Success to the Railways."

Corresvondence.

NORTH BRITISH DIVIDEND.

An estimate of the probable rate of dividend to he declared at the next meeting of the North British appeared on the 22nd inst. in the Scottish Railway Gazette. I shall concede the writer's statement of the gross traffic for the current half-year (though by last week's return it is not likely to be

realized) at 60,800%. And I shall not trouble you with parts of 1001. in any case. Now, though 1 could, by an independent method, show that the writer's deductions are too small, I, lest it should be suspected to be a one-sided view, prefer taking my data_as I now do_from the last half-year's Report. The gross traffic is there 48,000l.; the working expenses, 21,500l., or 45 per cent.; interest on loans is also there stated at 4,700l. As, then, such was the cost last half-year, the working expenses for the current half-year, on 60,8001., will be, at the same rate, 27,360l. I shall also admit the writer's statement of interest on loans, 8,000l. (though it is assuredly too little for all the loans got prior, and subsequent, to the last meeting.) Sum anticipated from the current half-year's revenue, to enable the company, at last half-year, to divide 5 per cent. total, 37,660l.; which leaves a balance of 23,1401. The result is, by 8601., short of 5 per cent.-even on the same capital as that on which the dividend was declared for last half-year. While, if the company give dividend also, as they ought, upon capital expended on that part of the Hawick line which has been producing revenue, and on additional expenditure on stations, works and repairs on the main line, it is clear that the company will be still less able to pay 5 per cent. of dividend. Such additional capital ought surely to participate in dividend, and the holders of Hawick stock will not be likely to allow the revenue which their line has produced to be paid to the holders of other stock. Edinburgh, Jan. 24.

IRISH RAILWAYS .- THEIR DEPRESSION AND MEANS OF RESTORATION.

The prostrate condition of Irish railway property renders some effort to restore it very desirable. has always struck me that one great error that has been committed has been the magnitude of their shares. Almost all the shares in Irish railways are 501. shares. What is the consequence? The numerous and heavy calls required to make up that sum cause a ruinous depreciation in the value of the shares, without any reference to the real goodness of the scheme. Take a single example. The Dublin and Belfast, which in its infancy always commanded a premium, is now, with 201. paid up, worth less than nothing! It is most unaccountable to me that in a country where capital is so notoriously deficient railway shares should have been created of so large an amount as to prevent the attraction of capital to those undertakings from the middle and lower classes. I may be told it is fortunate that the poorer class have not been made poorer by any loss on account of railways. The answer is, that if these undertakings are really sound and good, and the promises held out by the prospectuses are likely, in the end, to be realized it is a great misfortune that small capitalists should be excluded from a share in them. The means which I should adopt for raising the value of the shares and obtaining the requisite funds are as follows. I would propose that an Act of Parliament should be passed extending to all the railways in Ireland, making the following alterations and new arrangements as to their shares; viz., I. To reduce all the shares to the amount now actually called up. Thus, supposing 201. per share has been called up on the Dublin and Belfast, all those shares would be reduced to 201. shares. 2. All the other capital required should be empowered to be raised by the issue of new shares not exceeding 101. cach. These shares to be guaranteed a certain dividend. The amount and period of each call might be fixed by the Act. By these alterations the old shares, freed from the heavy liabilities now pressing them down, would rise to an improved value. and a safe and valuable investment would be opened to capitalists of very moderate means. I am only surprised that something of this kind has not been undertaken long ago. London, Jan. 24.

Gossip.

Defeated in two sessions on the merits of their case, in a sort of wildness of despair the Great Western condescend, it is strongly averaged by a correspondent, to a personal attack on the South-Western Com-When the Houses of Parliament permitted a declaration of surplus revenue instead of actual deposit, the Great Western was enabled to project and carry

through many schemes which have almost slumbered since the Acts were obtained;-the district has been secured, and the end has been accomplished. Those who recollect the disclosures last session of the Great Western's mode of proceeding, will not fail to reprobate the course adopted of asking a body of shareholders for a "resolution permitting and authorizing the directors to go for such bills, and to raise the means in any way the directors thought proper." Under this power monies were borrowed of assurance companies of which, it is said, directors of the Great Western were also directors, and their schemes were carried through, which, but for the resolutions to which we have adverted, would have been strangled in their birth. The merits of the South-Western case it is unnecessary to discuss. Mr. Chaplin's letters and his explanations will put it on a proper footing; but we desire to express our disapprobation of the attack now made, by means of a morning paper devoted to the Great Western interests. cannot be creditable to the Great Western to supply, as is alleged, the relative or connexion of two of its clerks with information on which to found these personal attacks against their opponents.

Notwithstanding the gradual advance in the PRICE of GOVERNMENT SECURITIES, the value of railway stocks has not increased proportionably; and the reason we have heard assigned is, that the instant any advance occurs in the price of railway stock in the London market, the holders in Liverpool, Glasgow and Manchester sell, and again depreciation ensues. Of course there will be an end to this process in due time; but no material improvement is anticipated by the best judges until March.

We hear that Mr. Whishaw has resigned the secre taryship of the Electric Telegraph Company. Some outery was made lately of the prices charged for messages. The charge is proportioned to the length of the message. One under twenty words, to Liverpool, costs, we believe, 7s. 6d., which seems cheap enough. The subscription to the rooms is filling up Already there are four thousand members who pay two guineas each annually.

Capt. CHARLEWOOD, the secretary of the BIRKEN HEAD, LANCASHIRE AND CHESHIRE, resigns his post to command the Coast Guard on the Deal station.

Mr. Hudson will shortly lay the foundation stone

of the new DOCKS at SUNDERLAND.

The network of the MANCHESTER, SHEFFIELD AND LINCOLNSHIRE, which is now approaching completion, will when finished afford the shortest route from Liverpool and Manchester to Barnsley-from Barnsley by the South Yorkshire and Goole line to Doncaster—from Sheffield by the Sheffield and Rotherham to Rotherham—to Sheffield, Worksop, Retford, Gains-borough and Lincoln—from Lincoln to Tattershall and Boston by the London and York loop line to Tattershall and Boston. It will obtain all the traffic from the South to Sheffield, which must pass over its loop as soon as the junction with the Midland is completed near Beighton, as well as all the traffic from the South to Hull as soon as its line from Lincoln to Hull is opened.

Increasing WANT OF ACCOMMODATION at HULL for shipping, and the competition threatened by the GRIMSBY DOCKS, are stirring the Hull authorities into active consideration of the subject, and they have recently been holding discussions with Mr. Hudson and other railway functionaries on the subject.

The BUCKINGHAMSHIRE directors are stated to have declined the offer of 51 per cent. for the lease of their line from the London and North-Western, in lieu of the present agreement of 4 per cent. and half profits.
The Chester Courant reports that about 200 feet of 400 of the wooden supports to the tube of the Conway BRIDGE have been removed, and the tube exhibited no sensible deflection. When they are all removed, the bridge will rest on two temporary pillars constructed under its ends, for the purpose of testing it. In a day or two it is expected the whole will be removed. Afterwards it will be floated to the piers in the river, and raised to its proper place. If all things go on well, it is expected that the line to Bangor, 594 miles from Chester, will be opened for goods traffic by the 1st of March.

It is a remarkable phenomenon, that amidst the general depreciation of railway property, the new company to unite the South-Western and Birmingham lines should be at a premium.

A Mr. Montgomery, of Johnstone, has been exhibiting before the Lord Provost of Glasgow a BRAKE, which is said to have acted successfully upon a gradient of 1 in 14.

The SEVERE WEATHER during the week has delayed the trains, and snow seems to have fallen heavily everywhere, except in the immediate neighbourhood of the metropolis.

Mr. A. Hoyes has presented another memorial to Mr. Strutt on his alleged grievances with the

South-Western subscription. The company thus

South-Western subscription. The company thus curtly end the matter, at least for the present:—
"Nine Elms Station, Jan. 14, 1848.—Extract from the Proceedings of the Court of Directors, held this day.—Resolved, "That the proceedings of Mr. Hoyes, as developed in the letters and other papers he has written and published, are, in the opinion of this Court, diametrically opposed to the best interests of the shareholders, which interests the Court of Directors me hound to contest any proposed. That Court of Directors are bound to protect and promote. That for this reason the directors decline any correspondence with Mr. Hoyes on the subject contained in his letters of the 11th inst., addressed to the chairman of this company. That with reference to Mr. Hoyes's application for inspection of the share register, and a copy of certain parts of the company's books, the officers of the company be instructed to furnish Mr. Hoyes with such information and copies as the Acts of Parliament direct, and no more. That a copy of these resolutions be addressed to Mr. Hoyes."

A singular announcement appeared in the Gasette of the 25th inst., of the dissolution of partnership of the following railway companies:—the Birmingham and Gloucester; East Indian; Eastern Counties; Ditto, York Extension; Lancaster and Carlisle; Manchester and Southampton; Newcastle and Darlington; Northern of France; North Kent, and Direct Dover,—as far as regards J. Robertson, A. Robertson, J. Mackintosh, W. Cowan, and Mackintosh and Cowan.

The Falkirk Herald says, contradicting a rumour, that the directors of the Edinburgh mean to proceed with the execution of the Stirlingshire Midland line so soon as land, for which the requisite statutory notices have been given, is acquired. The scarcity of money, and the desire to postpone the necessity of making calls, have led to the delay which has taken place in proceeding with the works. But the contractor is upon the spot, and has already brought a considerable quantity of his plant to the ground.

The EDINBURGH AND NORTHERN, even at this season, have been treating the Cupar people with some cheap trips, which have been popular and well attended.

One or two of the extensive collieries at Lochgelly, according to the Fife Herald, are now forwarding supplies of that much-valued coal by the EDINBURGH AND NORTHERN, to Cupar and Lindores—the distance of these fields being now overcome in the short time and trifling expense attending the transit of coal from them. Newburgh and neighbourhood on the one hand, and Cupar and whole surrounding populous districts on the other, will avail themselves of the boon thus brought to their doors. Arrangements have been made with the company for the forwarding of goods between Cupar and Dundee in direct connexion with the line—the present goods station at Lindores being within a couple of miles of Newburgh. The company are to take and give delivery of goods in Newburgh, thus giving to the Inland Works, who at present take their material from and to Dundee by Newburgh, the opportunity of getting their traffic forwarded more speedily and at much less expense. The central station at Markinch also offers to the numerous extensive works immediately surrounding opportunity of more speedy and less expensive com-munication than they can otherwise command, both in their local trade and in their northward and southward traffic.

The Scottish papers report a case involving a principle of some importance. An action has been brought against the NORTH BRITISH before the Sheriff's Small Debt Court in Edinburgh, for damages, in consequence of the railway train advertised to start from Portobello to Edinburgh at 8 5 p.m. passing the station at Portobello on the evening of passing the station at following to take up the passengers who had paid their tickets and were waiting in order to proceed by the said train to Edinburgh. In consequence of this neglect the prosecutor and others had to walk on foot to Edinburgh. The agent who appeared for the company denied the fact the train not having stopped, and maintained that the pursuer ought to have remained at the station at Portobello until the next train arrived. The fact of the train not having stopped was, however, clearly established. The company were pronounced liable for two guineas of damages and one guinea and a penny of expenses. The Judge remarked that no passenger was bound to remain until other trains arrived, but was entitled to proceed to his destination by the best conveyance he could otherwise obtain, and that at the expense of the railway company, on account of breach of contract.

The success of the NEW STEAM SHIP the Dispatch. which is reported to have attained on its trial, a speed of eighteen statute miles per hour, has been celebrated. Mr. Chaplin in toasting its success observed, that the company was indebted to Messrs. Maudslay & Co. for a beautiful illustration of engineering capabilities; that the South-Western Steam Company were now in a condition to bring Loudon and Paris within a day's journey; and that they only desired the

Digitized by GOOGIC

privilege of uniting the steam company with the railway to enable them to give the public that cheap mode of transit to which they were entitled. Rail-ways, observed the hon. gentleman, had been esta-blished throughout the country at a great cost to private individuals, and must prove an inestimable benefit to the country. As a source of profit to the shareholders they were dependent upon various feeders from towns and tributaries in the way of goods and passenger traffic. One of the obvious advantages of railways was to connect the coast with the capital. But why should the benefit stop there! And why should encouragement not be given to the establishment of steam-packets in connexion with the railways, so as to extend this benefit? It had been from the first conceded to railway companies that as they undertook enterprizes beyond the reach of individuals, their shareholders would have the privilege of limited liability, and why should this privilege be withheld from steam-packet companies?
If Parliament would look at this great question wisely, they would, in his opinion, lose no time in changing the course they had hitherto taken, and would in future aid the connexion of railway companies with steam packets. In so doing they would secure the performance of the packet service in the same admirable manner in which it was conceded that the railways provided for the land passage, and at a time when all were anxious about the national defences, a class of packets would be created which might be at any time of essential service to the country. These were obvious considerations, and yet the policy of Parliament had hitherto been to drive capital from steam-packet enterprize, by navigation companies open to common partnership liabilities, and obstructing railway compartiers in their efforts to supply the public wants in these important particulars. Recurring to the South-Western Packet Company, the hon gentleman con-tinued, it was a subject of national importance to bring the capitals of England and France within the most convenient distance, and this could be effected by the South-Western, and the packets sailing to Havre from Southampton. In referring back to railways and the Acts obtained for their construction, privileges were given to destroy mansions, cut through parks, and disturb private interests and property; but he would ask what interests, what properties or privileges were trenched upon by going across the high seas? None. Then why should there be any objection to an amalgamation which had for its main object a rapid transit, with great accommodation and cheapness to the public.—We may add Parliament has been capricious in its legislation on this amalgamation of railways and steam ships. It forbade it southward, but granted it northward. The Manches It forbade it ter, Sheffield and Lincolnshire possess the whole of the Humber Ferries, and are building steamers for them.

It is stated that M. de Duesberg, the Prussian Minister of Finance, is authorized to establish a special committee to decide on the best mode of executing a railway between the coal-pits of Saarbruck and the Bavarian line, which is to unite the Ludwigshan with the line designed to be constructed between Paris and Metz by Forbach. This line, which is to be executed by the State, will be of great importance to the coal mines of Saarbruck, as their produce will thus be placed within the range of the

whole of Germany, and even of Paris.

It is stated that the RAILWAY COMMITTEE assembled at Brussels to regulate the conditions which should serve as the bases of the conventions to be entered into by France, Belgium and Prussia for the international service of their railways, has just terminated its labours. After visiting all the different large stations between Cologne and Havre, the committee charged M. de Condé, representing France to draw up the conditions. This document has been forwarded to the interested powers to receive their approbation.

Reports of Meetings.

LONDON AND GREENWICH.

Jan. 25.—Half yearly Meeting, London.—Mr. W. SHADBOLT in the chair.

The business was of a formal nature, merely to receive the statement of accounts and to declare a dividend.

The statement of accounts showed the receipts at 19,228l.; expenditure, 11,966l., in payment of interest on loans and preference shares, including office expenses; balance, 7.251*l.*, to be divided amongst the original shareholders.

The accounts were adopted, and a resolution was passed that a dividend of 3s. 6d. per share on the old shares be paid clear of income-tax; and to make up the required amount, that the sum of 287l, be taken from the surplus assets of the company and added to the balance.

Mr. MAUBERT suggested the propriety of capitalizing the debt of 253,000l., the company having a clause in their Act authorizing them to do so, should it be deemed expedient.

Mr. Hichens asked at what period they received the 1,000% increase.
The Secretary replied, on the 1st of January.

Mr. J. Wilson said, that by means of their reserve they had been able to equalize the dividend.

Mr. HICHENS asked if they were free from all liabilities.

Mr. J. Wilson said, that within twelve months they hoped to close all their accounts.

Mr. Deputy Corney said there was a further claim of 200l. on the part of Col. Landman, but they were informed by their solicitor that he had no legal demand.

The retiring directors, Messrs. Shadbolt and Hutchison, were then re-elected.

SOUTH YORKSHIRE, DONCASTER AND GOOLE. Jan. 28 .- Special Meeting, London .- Mr. C. DY-MOND in the chair.

Mr. C. HANDFIELD, the Secretary, read a statement from the directors, which declared

That the Board, in consonance with the Act lately passed, intituled "An Act to give further time for making certain railways," which renders it necessary, in certain cases, that new contracts for construction should be previously authorized by a general meeting, will submit to the shareholders a proposition to authorize the immediate construc-tion of part of the works. The amalgamation with the Dun Navization was deferred until half the capital of the South Navigation was deferred until half the capital of the South Yorkshire should be paid up. In the mean time, however, the surplus profits of the navigation company belong to the railway company, and must accumulate until the amalgamation, when the amount will be paid over, and divided as profits upon the railway capital paid up. The Directors had signified that out of those profits 5 per cent, would be paid from the date of the passing of the bill upon the capital paid up. The amount of profits, however, justifying a larger rate of dividend, and the postponement of its payment until the amaigamation, rendering 5 per cent, an inadequate return upon the investment, the Directors have resolved that from the 22nd inst. the rate shall be increased from 5 to 6 per cent, upon all capital paid up. cent, an inadequate return upon the investment, the Directors have resolved that from the 22nd inst. the rate shall be increased from 5 to 6 per cent, upon all capital paid up. Dividend warrants will be issued for the amount of each half-year, payable at the company's bankers one month after the amalganation. The amalganation will be completed so soon as 10%, per share shall have be en paid up and laid out on the works. 3L per share is already paid up; and the Directors propose, in case the money shall not be sooner paid in advance, to call up 3L per share in the course of the present year, viz.:—R. on the 1st of May next; R. on the 1st of August next; and R. on the 1st of November next. The remaining 4L necessary to make up one half of the capital, the Directors propose to call up in the course of the year 1849. The Directors, however, think it right to give the shareholders the option of paying voluntarily in advance, so as to supersede all calls for the present year. Upon such advances the Directors are authorized to allow interest at 5 per cent, upon be paid in advance, and 6 per cent, upon monies paid in advance, and 6 per cent, upon monies paid in advance, and 6 per cent, upon monies paid in calmount to be paid in advance must be limited to such a sum as the directors can profitably employ in the immediate construction of the works. The directors will execute that vart of the line from Doncaster to the Molland at Swinton. sum as the directors can profitably employ in the immediate construction of the works. The directors will execute that part of the line from Domeaster to the Midland at Swinton, with a coal line to the nearest collieries. This, the engineers report, can be accomplished within the year; and it will give an immediate profitable income. The directors consider they would be able to effect so great a saving upon their contracts for construction of this line, by making them under the present depression of prices, that it will be of the greatest advantage to the company not to lose the opportunity of doing so.

opportunity of doing so.

A discussion upon the terms contained in the preceding statement raised by Mr. RICHARDSON, and joined in by Mr. Wilson and others, took place, during which explanatory details were given by Mr. BAXTER,

the solicitor to the company.
With reference to the Sheffield, Rotherham, Barnsley and Goole, the expenditure was being limited to 1,000l. a month. The South Yorkshire would be second to no line in England. It had no incumbrances, and independent of the 1,000,000 tons of coals per annum that would be carried over it, there would be a large traffic in corn and other commodities.

Mr. RICHARDSON, from an intimate knowledge of its capabilities, was satisfied that the South Yorkshire would be a 10 or 15 per cent. line.

The vote on the main question having been taken, there appeared 11,359 share-assents, and 3,390 nonassents; being a considerable number of votes over the three-fifths required by the Act. The question was then put and carried unanimously.

Mr. Crook complained that there was no office in London for the legal registration of shares. The want of this had facilitated the late forgery in the company's scrip, and he threw out a suggestion that for the advantage of all companies a general railway registration office should be established in London.
Mr. R. W. CARDEN thought there were objections

to such a plan. These cases of forgery only arose where there were spurious places for share transac-

tions-mock sale places in the purlieus of the Stock Not a single spurious document had ever been traceable to the Stock Exchange

The CHAIRMAN said Mr. Crook's suggestion should have the consideration of the Board.

LIVERPOOL, CROSBY AND SOUTHPORT.

Jan. 25 .- Special Meeting, Liverpool, to consider the Report read at the last ordinary meeting, and to determine whether a contract for executing the works for the construction of that part of the line which commences at Waterloo and terminates at Southport should be entered into or not .- Mr. W. BLUNDELL in the chair.

The CHAIRMAN said their business was to ascertain the number of assents to and dissents from the proposed construction, and he would therefore call upon the shareholders present to hand them in to the secretary.

The numbers having been counted over, it was announced that there were in favour of proceeding with the contract 161 shareholders, representing ,249 shares, and five dissentients, representing 103

The CHAIRMAN then stated, that there being more than three-fifths of the entire shares assenting to the proposed contract, the directors had now power to go with the line.

Mr. CROSSTHWAITE said, that having taken such a decided part at the last meeting in opposition to the line being proceeded with at the present time, in consequence of the state of the money-market and the general depression of trade, he was now anxious to say a few words in explanation of the course he then took. On that occasion he represented a considerable number of the shareholders, who did not think which he then stated. He had since had communication with them, and they had left the subject entirely in his hands. He (Mr. Crossthwaite) had had reason to change his previous views, and now admitted that he believed those holders would rejoice with him that the works were to be at once proceeded

PARKGATE, CHESTER AND BIRKENHEAD. Jan. 26.—Sp. cial Meeting, London.—Mr. R. W. WILLIAMS, as representative of the Hon. E. M. L. Mostyn, M.P., in the chair.

The CHAIRMAN stated that the bill for constructing the line, which was about five miles in length, re-ceived the royal assent in July last. A period of three years was allowed by the Act for the construction of the line; but by the late Act the Railway Commissioners have power, on application being made, to extend the time for completing the works for a further period of two years of such railways as had not been commenced; and the object was to obtain the sanction of the shareholders to such an applica-tion being made. It was probable, notwithstanding the proposed application, that it may be desirable to complete the line in a much shorter time. The directors thought it prudent, under the existing pressure, to abstain from making calls on the shareholders, and they did not intend to expend any money without first obtaining the sanction of the shareholders.

The resolution for making the application for an extension of time was then unanimously passed.

KENDAL AND WINDERMERE.
Jan. 25.—Half-yearly Meeting, Kendal.—Mr. J. GANDY in the chair.

The Report, after expressing the satisfaction of the directors at the aspect of the capital and revenue accounts, stated, that the depression which pervaded all the manufacturing and commercial classes had no doubt limited the passenger re-ceipts, and the difficulties in making arrangements for diverting the merchandise traffic to the railway have prevented its earlier developement; in both respects, however, the directors henceforth anticipate an augmentation of the revenue. The number of an augmentation of the revenue. The number of passengers safely conveyed on the line during the half-year was \$1,860. The directors have made application to Parliament for the purpose of raising additional capital. This increase has been rendered necessary by the additional cost of a double instead. of a single line, as originally intended. The amount expended for rails, chairs and works, consequent on doubling the line, has been about 45,000%. The capital account to the 31st of December 1847, showed that 151,478l. had been received, and 169,888l. expended, leaving a balance of 18,410% due by the company. The revenue account for the half-year ending the 31st of December, showed the receipts at 5,550d. 1s. 2d.; expenditure on account of locomotive power, hire of carriages, rates and other necessary disbursements, 3,393d. 8s. 4d., including six months' interest on debenture bonds, 8921. 6s. 3d. and leaving a nett profit of 2,1561. 12s. 10d.

Digitized by GOOGLE

Resolutions were passed adopting the Report, and ppointing Mr. W. Watson, on the resignation of Mr. Hudson, the secretary, to be secretary and engineer to the company, at a salary for the first year

The meeting was then made special. Resolutions were passed approving of the bill for raising additional capital, not exceeding 50,000l. in shares and 16,000l. by loans; and confirming the forfeiture of 468 shares for non-payment of calls.

SCOTTISH CENTRAL.

Jan. 21 .- Special Meeting, Perth.-The Marquis of BREADALBANE in the chair.

The CHAIRMAN said it would be as well to remind the meeting that an interdict had been obtained by the Central and Southern companies in order to

restrain them (the Scottish Central) from connecting themselves with the Edinburgh and Glasgow, which was considered by some of the shareholders, as manifested by the meeting in July, to be a matter of expediency to enter upon. The Board at that time met the interdict in the courts in this country; and it had been decided first by the Lord Ordinary in favour of granting the interdict; it had then been carried into the Inner House, and the decision of the Lord Ordinary was concurred in by four of the Judges, who unanimously confirmed the interdict. It was of importance, in the consideration of the question, to know that by granting the interdict the main point, as to whether the agreement made by the Scottish Central with the Caledonian and Southern companies was legal or not, remained totally un-That was merely an incidental point, but, as he was informed, the interdict did not touch upon the legality or illegality of the agreement with the Caledonian and Southern companies. It was not for him, as that meeting was confined to a special object, to enter into general questions; and the question for decision was, what should be their future action in those material points? The directors had obtained the opinion of Mr. Rutherford, the Lord Advocate and Mr. Talbot on the question as to whether they should appeal to the House of Lords or not, and that opinion would be read to the meeting.

Mr. Reid then read the opinion of Mr. Rutherford and Mr. Talbot, which was against prosecuting the case further, as the same reason which induced the Court of Session to confirm the interdict would also lead the House of Lords to support that decision.

Mr. R. ROBERTSON, Advocate, said, that taking as general rule that, as individuals or corporations, having taken the opinion of counsel upon the subject, they would be guided by it, he moved the following resolution :-

That the meeting having considered the judgment rerhat the meeting having considered the judgment re-cently granted by the Court of Session in the processes at the instance of the London and North-Western, the Lan-caster and Cariisle, and the Caledonian, and at the instance of certain shareholders of the Scottish Central against the Scottish Central, by which an interdict was passed, prohi-biting the Scottish Central from entering into a contract of biting the Scottish Central from entering into a contract of lease or amalgamation, or working agreement, with any other company or parties, it is the opinion of this meeting that it is not advisable to carry these proceedings farther, and that the directors be instructed to adopt the necessary measures for taking the processes out of court.

Mr. Bruce, of Kennett, seconded the motion.

which, after some discussion, was carried; striking out the words as to "taking the processes out of court.

Mr. W. Anderson, of Techmuiry, said he had a resolution to submit. It was that the Marquis of Breadalbane, as chairman, should communicate with the chairman of the Caledonian and the chairman of the Edinburgh and Glasgow, with a view to settle the differences between those companies and the Scottish Central, and to endeavour to effect a lease jointly with those companies on fair terms.

Mr. Brown said there were elements in the resolution which might be unanimously agreed to, but he thought that the mention of a joint-lease was going in the face of the interdict.

Mr. Robertson said that there was another objection to the resolution being put, namely, that that was a special meeting, and must be confined to its own They might, however, dissolve that meeting and then meet as shareholders.

Mr. CAMPBELL agreed with Mr. Robertson on that point, but before the meeting was dissolved, he wished to give notice of a motion on a different question altogether. He gave notice that, at the next half-yearly statutory meeting, he should move that no kind of work whatever should be done on the Scottish Central on the Sabbath-day.

The CHAIRMAN, in acknowledging a vote of thanks, said his desire was to deserve the continuance of that confidence which had hitherto been reposed in him by the shareholders. He had the greatest confidence that the line would turn out one of the most profitable, and, if conducted with judgment and economy,

would prove increasing in its advantages to the proprictary and the public. The works were progressing satisfactorily; and speaking—not certainly as an engineer, but—from the application of his own senses and experience, for he had visited and gone over the line, the works were substantially and solidly constructed, and reflected very great credit on Messrs. Locke and Errington, their engineers. The line from Stirling to the junction of the Edinburgh and Glasgow was now on the point of being opened,—the Government Inspector had gone over it on Monday last, and they expected his report in a few days. He expected that the portion of the line to Stirling would be opened in the course of next spring. In conclusion, he was happy to inform the meeting that the last call had been well responded to.

The special meeting then dissolved, and Mr. Anderson submitted his motion in the following altered

shape, which was agreed to :-

That, considering the great importance of coming to an arrangement of the questions in which this company is at present involved, the noble Chairman be respectfully requested to turn his attention to the best mode of bringing about an amicable settlement of these questions.

The CHAIRMAN felt the responsibility of this motion, but he would endeavour to carry out the recommendation of the shareholders. He would use his best exertions to promote harmony in their proceedings, which, unfortunately, did not exist at present in the councils of other companies besides those of the Scottish Central. Such differences did little good to any undertaking. He had great satisfaction in thinking that, whatever might be the result of conferences with other companies, they had it in their power to carry on independently, and to perform all the requirements - at least the first requirements for traffic-without the assistance of others.

CLARENCE.

Jan. 25 .- Special Meeting, London .- Mr. H. BLANCHARD in the chair.

The CHAIRMAN briefly stated the business of the meeting. The shareholders had to consider the sanctioning certain agreements entered into by the committee of management for the lease and sale of the line to the Leeds and Thirsk; also to sanction the re-introduction of a bill suspended in the House of Lords last session. He called on the solicitor to read the drafts of the agreements to be submitted.

Mr. Bell then proceeded to read the heads of the documents; viz., to enable the committee of management to accept the surrender of the lease of their line from the Stockton and Hartlepool, dated the 22nd of September 1844, and to lease it to the Leeds and Thirsk, for twenty-one years, at a nett rental of 25,800l. per annum; also an agreement to sell the line and branches to the Leeds and Thirsk for 480,000l., made up in the following items:—31,481l. on mortgage due to the Government; 34,480l. in Government loan shares; 108,460l. first-class shares; 100,890% second-class shares; upon all of which the 100,8:00. second-class shares; upon all of which the same dividends are to be continued by the Leeds and Thirsk as are now paid by the Clarence; the sum of 44,688% to be paid in cash; but as the Clarence only require 15,000% in cash to pay their debts, it is proposed to lend the 29,688l. for seven years to the Leeds and Thirsk; of the above sum, 150,000l. is to be taken in 3,000 Leeds and Thirsk preference 50l. shares and the remaining 10,000l. in the ordinary Leeds and Thirsk shares, making a total of 480,000l.

Resolutions were unanimously passed, approving of the agreements and authorizing the committee to enter into the necessary arrangements, and to make the requisite applications to Parliament.

In answer to questions, it was stated that the dividend on the old shares would by these arrangements be increased from 13 to 3 per cent, and that the value to be received for each 100l share would amount to about 66l. It appeared that 600,000l had been expended on the line and works, and that the gross revenue during the year 1847 amounted to

The Leeds and Thirsk are reported to be about to lay out a great deal of money on the line, in order to render it more productive. Whatever increase may take place in the traffic will be in favour of the old

SAMBRE AND MEUSE.

Jan. 22.—Half-yearly Meeting, London.—Mr. W. PARRY RICHARDS in the chair.
The directors' Report stated that the Board hoped

to announce the opening of the first section from Marchienne to Walcourt, with the branches to Laneffe and Morialme, the last portion of which was to have been completed during the present month. The contractors had mistaken the nature of the formation through which the tunnels at Jamioulx and Hamsur-Heure were to be constructed, and some serious slips occurred after the excavation of the tunnels had

been to a considerable extent completed; but these difficulties have been partly surmounted by substituting an open cutting in one place, and by other arrangements. Fresh agreements with landowners have, however, been requisite, and the company has suffered much annoyance and delay, which, however, were greatly diminished by the aid of the Belgian Government. Beyond the delay of a few months, the directors trust that there will be no other cause of regret. The opening will take place at a more favourable season. and the earthworks and masonry on the line will meanwhile have acquired greater consolidation. The junctions with the State line near Marchienne and towards Charleroi are completed. A single line of permanent way is laid between the station of Marchienne and Walcourt, except at the tunnels, and about two miles in portions of cuttings and embank-ments: the permanent way is also laid the entire length of the Laneffe branch, and considerable portions of the branch from Walcourt to Morialmé are ready for receiving the rails. The working stock is nearly completed and will be ready for the opening. On the second section no money has been expended except on the heavy works of the tunrels at Cerfontaine and Dourbes. The directors consider it expedient to await the opening of The directors the first section before submitting any proposition for raising additional capital for the prosecution of other works, particularly as the Belgian Government have signified their intention to bring a bill before the Chambers for an extension of time. The terms of an arrangement with the Charleroi and Erquelines, for the use of the company's station at Marchienne, and also of their junction-lines from that point to the State line, are under consideration, and will shortly be brought to a satisfactory conclusion. At the present time, the number of shares upon which the eighth call remains unpaid does not exceed 100; and of the minth call, the last day for the payment of which expired on the 16th of December, only 1,656 shares remain unpaid, for the greatest portion of which an carly settlement has been promised.

The statement of accounts showed the receipts at

500,705l., including 14,160l. received in interest, exchange, and profits on investments; expenditure, 403,100l.; balance, 97,605l., of which 20,000l. was deposited with the Belgian Government, 2,000l. with the French Government, 29,830l. in investments, 32.000l. advanced to contractors, and 13,774l. in cash. From an approximate statement to the 31st of December 1847, the receipts were 562,817*l*. expenditure, 480,750l., balance, 82,067l., of which 16,030l.

was in cash.

The CHAIRMAN regretted their disappointment in not having the first section opened according to promise. The delay had in a great measure arisen from the inattention of the contractors to the precautions urged from time to time by Mr. Cubitt, warning them of the necessary care to be taken in working through peculiar strata, with the nature of which he was well acquainted. The slip had taken place was well acquainted. The slip had taken place on the estate of a Belgian nobleman, who had op-posed them from the commencement. He demanded 1,320*l.* as compensation, for which he was awarded 120*l.*; and had it not been for the assistance of the Government and local authorities greater delay and expense would have followed. After what had taken place, he (the chairman) should be sorry to pledge himself to promise any time for the opening, but he was told that the line would be ready by the end of March or the middle of April. It was not the intention of the directors to proceed actively with any portion after completing the first section, until a better opportunity arose than the present for raising the additional capital. Application had been made to the Belgian Government for an extension of time for the construction of works, which he had no doubt would be granted. They had about 38,000l. in hand, and, in addition thereto, they would require a portion of the last call, amounting to about 20,000l, to complete the first section of the line. He would willingly answer any questions. He then moved the adoption of the Report, which was seconded by Mr.

Mr. Lindo moved as an amendment-

That this meeting do appoint three shareholders as auditors to examine the accounts, to inquire into the affairs, and to report thereon to a special general meeting to be held on the 10th of March next, and that the meeting do

adjourn.
Mr. Brook seconded the motion.

The CHAIRMAN said there could be no objection to any investigation. Every shareholder could be his own auditor; the directors had nothing to conceal. The accounts could be inspected at the office, and every information would be afforded to the proprietors which they might deem requisite to know with regard to the affairs of the company.

After much discussion respecting the inutility of

appointing auditors, as they could only compare the

vouchers with the items in the accounts, it appeared that under the statutes it was requisite to give due notice of such a motion prior to the meeting, and therefore the amendment proposed could not be legally put to the meeting. The directors, however, signified their willingness to receive the amendment, if it was the wish of the shareholders. The general opinion having been expressed against it, the original motion was then put, and carried by a large majority, only three dissentients appearing against it.

The CHAIRMAN stated, in answer to questions, that in the original undertaking it was contemplated to construct a single line, the branches to be worked by horse power, the capital 600,000*l.*; which they had since every reason to believe would have been sufficient to accomplish what was then intended. They had afterwards consulted Mr. Stephenson. strongly urged the necessity of constructing a double line from Marchienne to a distance of two miles beyond Walcourt, of having heavier rails, and locomotive instead of horse power, which he considered absolutely necessary in order to work efficiently the immense traffic in the district. These extra works, including various improvements on the original plan, required an additional capital of 400,000l., which they would have to raise in order to complete the whole undertaking. The sum of 32,000*l*. lent to the contractors was to enable them to procure the necessary working plant to carry on the works.

The Report was then carried, with only three dissentients.

BIRMINGHAM AND OXFORD JUNCTION. Jan. 28.—Adjourned Special Meeting, Birmingham.
—Mr. P. H. Muntz in the chair.—The suit before the
Lord Chancellor being still pending, Mr. Colemone
moved a further adjournment until Saturday the 19th of February, which was agreed to.

DIRECT LONDON AND EXETER.—Adjourned Meeting.—Dr. Barnett in the chair.—Mr. Robinson (solicitor) read the two resolutions proposed at the last meeting, "That this company be dissolved," and "that such dissolution be an act of bankruptcy." At the previous meeting 4,665 shares were polled, and the object was now to continue the voting so as to give effect to the resolutions under the Act. number of shares was short by 2,804. The polling was continued.—The Chairman then said, that it appeared they had present at the last meeting 4,665 shares, the holders of which all voted for dissolution, and that such dissolution should be an act of bank ruptcy. He would put similar questions to the gentlemen present. The Act required one third of the shares issued to be represented at the meeting in order to take the company to the Court of Bank-ruptcy, and there had been polled 8,130 shares, being more than sufficient under the Act. He now put it to every gentleman present to testify whether it was his intention to vote for the dissolution. The resolutions for dissolution and bankruptcy were then carried, 3,465 additional votes being handed in .- A discussion afterwards arose as to the propriety of reconstituting it, for the purpose of going into the accounts. Several gentlemen complained that accounts prepared by Mr. Hollingsworth, one of the solicitors for the trustees, had been handed about to parties present. Mr. Hollingsworth said he had brought the accounts on the supposition that the resolutions would not be carried; but as it had been decided that they should be investigated in bankruptcy, he must decline going into them. - A somewhat warm discussion ensued, but the meeting separated without coming to any decision.

JAMAICA SOUTH MIDLAND .- Special Meeting, London.—In pursuance of a requisition for completing the arrangements for winding up affairs; Mr. J. G. Shorter in the chair. After much discussion, of no public interest, a resolution proposed by Mr. Spackman was passed, to the effect that the directors be empowered to lend each individual shareholder on register the sum of 10s. per share upon the deposit and transfer of his shares, and on his executing such release and covenant as the directors may consider necessary for their own security.—The Chairman said, that they would do their best to comply with the wishes of the shareholders.

Oxford, Workester and Wolverhampton and

BIRMINGHAM AND OXFORD.—STRATFORD-ON-AVON.-Jan. 19.—Meeting of Inhabitants—for the purpose of memorializing the directors of the above companies upon the subject of completing the line from Weston Subedge to Stratford-upon-Avon, and from Stratford-upon-Avon to Birmingham. Resolutions in further-ance of the above object were carried, and a committee formed to present the memorial to the respective companies. One of the speakers said a town without a railway was like a house without a fire-place—it would be soon deserted. Parliamentary Proceedings.

THE GREAT NORTHERN RAILWAY COMPANY.

(Incorporated by 9 & 10 Vict. cap. 71, June 26, 1846.)

NOTICE IS HEREBY GIVEN, that the HALFYBARLY ORDINARY MEETING of the Shareholders of this Company will be held on Thursday, the 24th of February inst., at 19 c'lockat Noon precisely, at the Ablion Tavern, Aldersgate-street, in the Gity of London, for the purpose of receiving a Report from the Directors upon the general business of the Company, and to consider and determine upon a recommendation of the Directors, to reduce the number of their body from 22 to 20, by not filling up two vacancies caused by the death of S. J. Capper, Esq., and the resignation of W. S. Marshall, Esq., and by electing only four Directors in lieu of that number who retire by rotation, and who are eligible for re-election. Also to confirm the Forfeiture of certain Shares to be then declared, upon which Calls are in arrear, the required notices of the Forfeiture of which have been given to the Proprietors. Also for the purpose of obtaining authority from the Sharcholders to the Directors to exercise the borrowing powers of the Company to such extent, and as soon after half the capital shall have been provided by the Company to such extent, and as soon after half the capital shall have been provided by the Company for the registration of the Transfers of Shares will be closed from Friday, the 11th, to Friday, the 25th day of February inst.

And NOTICE IS ALSO HEREBY GIVEN, that at 1 o'clock, or immediately after the business of the said Half Yearly General Meeting shall have terminated, an EXTRAORDINARY GENERAL MEETING, of the Shareholders of this Company, will be held, in accordance with the Standing Orders of the House of Lords, and with the required notices already issued, dated the 6th day of January 1848, and signed by the Solicitors of the Company, when the Dirats of the several Bills intended to be promoted in the present Session of Parliament, will be submitted for the consideration and approval or otherwise of the Shareholders. Shareholders in arrear of Calls on their Shares

THE GREAT NORTHERN RAILWAY.

(Incorporated by 9 & 10 Vict. c. 71, June 26, 1846.)

NOTICE OF CALL this day made, of 21, 10s, per Share, making a total of 132, per Share called up.

TO THE SHAREHOLDERS.

NOTICE IS HEREBY GIVEN, that the Directors have this day made a CAL of 32, 10s, (Two Founds, Ten Shillings) per Share upon the whole of the Shares composing the Capital of the Company, being in number 224,000 Shares, and numbered 1 to 294,000; and that the said Call is required to be paid on or before Tucsday, the 29th day of February inst, to one or other of the Company's Bankers, viz.:

The Union Bank of London, Princes-street, Mansion House, one of the Company's London Bankers.

Messrs, Smith, Ellison & Co., Lincoln.

Messrs, Swann & Co., York.

Messrs, Jones Loyd & Co., Manchester.

The British Linen Company, Scotland.

Messys, Jones Loyd & Co., Manchester.
The British Linen Company, Scotland.

A Call Letter, with full instructions, will be sent to each Proprietor, showing the amount to be paid on his or her particular Shares.
The attention of Shareholders is particularly directed to the Company's Act, sect. 8, and to the 'Railway Clauses Consolidation Act, 1846, cap. 16. 88, 25 and 123, to the effect that, if such Call be not paid on or before the date fixed for the payment thereof, interest thereon, at the rate of 5 per cent. at the payment thereof, interest thereon, at the rate of 5 per cent. at the contract of the company and an expect of the payment of the company and according to the proprietor may hold in the Company and according the proprietor may hold in the Company and according the trends thereon be paid.

Portice who have made payments in advance of Calls, are to discreas! this notice.
Transfers of Shares cannot be registered after this date, unless this Call be previously paid, and cannot, under any circumstance, be registered from the 11th to the 25th inst, during which time the books will be closed, preparatory to the Half-yearly meral Meeting of the Shareholders, to take place at the Albion Tavern, Aldersgate-street, at 12 o'clock on Thursday, the 24th day of February inst.

SATURDAY, FEBRUARY 5.

THE MIXED GAUGE EXAMINED. BY AN ENGINEER.

I had a few days at my disposal last week; and having read with interest Mr. Stephenson's and Mr. Brunel's Reports on a mixed gauge as a remedy for a break of gauge, I determined to bestow my leisure in visiting the only existing example we have of the mixed gauge, namely, the line between Cheltenham and Gloucester. This piece of line has been laid down, it appears, under Mr. Brunel's own directions, Mr. Stephenson having consented to Mr. Brunel's wishes in respect to the details connected with the mixture of the gauges being in all respects consulted.

Under the impression that the result of my observations may not be uninteresting to engineers, I beg to send you the following memoranda, which I made on the spot.

Before proceeding, I may state, that from Gloucester southwards to Standish, a distance of about 7 miles, there is a broad-gauge railway, used in common by the Great Western Railway Company for the traffic between Gloucester and Cheltenham rid Swindon to London, and by the Bristol and Birmingham section of the Midland Company's lines, for their traffic from Gloucester to Bristol—the Bristol and Swindon lines (both on the broad gauge) diverging at Standish.

From Gloucester northwards the narrow-gauge of the Midland Company proceeds to Birmingham; and between Gloucester and Cheltenham, in addition to the narrow-gauge rails, the Great Western have laid a third rail on each track, to allow of broad-gauge trains running to Cheltenham, where they have a separate station from the Midland Company. Between Gloucester and Cheltenham there is thus the first example of a mixed-gauge railway.

On arriving at about three-quarters of a mile from the Gloucester station by an express train from London, I found that our train was turned by a switch (meeting the train) across the up+ line of the Bristol and Gloucester Railway. When we had gone about 200 yards further, we crossed a turntable on the main line, and pulled up. As we crossed this turntable, I perceived with some dismay an engine and two carriages approaching us at a distance of about 50 yards, upon a line of railway which crossed the turntable which we had just passed over at right angles to the line on which we were running. This engine and train having stopped, (fortunately in time, or of course it would have cut our train in two,) several passengers got out of their carriages and made for our train, one or two with luggage in their hands-an annoying proceeding to them, as it was raining hard at the time, and the platform is uncovered. Two carriages of our train were then detached by means of the turntable which has been mentioned, and were taken back by the engine on the "spur" line, as it may be termed, to Gloucester, while we proceeded to Cheltenham.

All passengers from Gloucester to Cheltenham, and from Cheltenham to Gloucester, a distance of 7 miles, by any of the through broad-gauge trains, have thus, it will be seen, to change their carriages on an exposed platform a mile from Gloucester.

This very peculiar, and, as it appears to me, objectionable mode of working the Gloucester traffic as a branch traffic, with a separate engine and train for the branch, such branch being less than one mile long, and cutting the main line at right angles, (the junction being effected by a turntable,) is the result of the lines

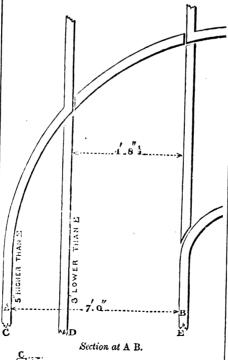

of two different gauges meeting at Gloucester in the station as in a cul de sac, so that the station lies off the road altogether, and can only be reached by a branch; which is itself the consequence of the lines north of Gloucester being of one gauge, and those south of Gloucester being of another gauge; for which reason a necessity arises of bringing the broad-gauge rails parallel to the narrow-gauge rails, for the purposes of transhipment.

Having parted with our Gloucester carriages and picked up the Gloucester branch traffic as described, we proceeded to the point where the broad and narrow gauges become mingled, which is at a place called Barnwood. In order to get on to the down track of the Bristol and Birmingham narrow-gauge line, we here crossed the up line of that railway again, as we had within a distance of a quarter of a mile already done once before. We were now on the mixed gauge; on getting on to it we got a sharp shake, and the road itself between this and the point where the broad-gauge rails turn off to the Cheltenham station, was somewhat rough but not particularly so.

The road is adapted to the broad gauge by the laying of an additional rail on each track, fastened to the sleepers, which are new and longer than the ordinary sleepers for a narrow-gauge track. These additional rails are put on the outside of the narrow-gauge outside rails, so that the common rail is the *inside* rail of each line, and not the outside rail as suggested by Mr. Brunel in his report on the Oxford and Rugby line.

On approaching Cheltenham, we were "slowed" and turned off to the broad-gauge Cheltenham station, which is distinct from the narrow-gauge station, crossing here again, and for the third time in a distance of 7 miles, the up line of the Bristol and Birmingham Railway.

Plan showing Rails at the turn-off to the Cheltenham Broad-Gauge Station.

The type of in Cartal Park I have been a summer.

The turn-off is effected, not by means of a switch in the usual form, but by cutting a notch in the common rail, and so making a fixed point, forms"—has not, it appears, been attempted to

(meeting all the trains of both gauges,) and then by raising the level of the broad gauge outer rail, c, 5 in. above the level of such fixed point, which is the same as that of B, while the level of the narrow-gauge outer rail, D, is kept 3 in. below such fixed point.

The broad-gauge carriages are thus canted over so as to run on one side of the fixed point, while the narrow-gauge carriages are canted over in the opposite direction, so as to take the other side of the fixed point. This, it will be seen, is merely substituting a fixed point meeting the trains for a half switch; it does not, I confess, appear to me either to be any improvement or calculated to remove in the slightest degree the complexities inherent in a mixture of gauges.

Near Barnwood, where the broad-gauge rails turn off towards Standish, avoiding the Gloucester station, there are broad-gauge lines laid down in a manner which cannot be explained without a diagram, to enable broad-gauge short trains from Cheltenham (that is to say, trains proceeding no further than Gloucester) to run straigh, into Gloucester. The broad-gauge trains gon, ginto Gloucester, however, by means of these line's, must cross the up line of the Bristol and Gloucester line once, the spur line (see ante) once, and then both the up and down lines of the Birmingha. The and Gloucester—a very

hazardous course.

The additional switches, fixed points, overcrossing points, and crossing points occasioned
by the intersection and mixture of the gauges
between Gloucester and Cheltenham, I roughly
counted as follows:—

Four fixed points (two meeting the train, q) if five pairs of double-tongue switch (three meeting the trains); two half switches; nineteen pairs of over-crossing points; twenty-five crossing points.

The main lines of rails intersect or run completely across each other (in addition to the intersections of single rails at turn-offs) no less than ten times.

The necessary result of these fearful complexities is, that the speed has to be reduced to a walking pace three times between Gloucester and Cheltenham—a distance of 7 miles; and that the last mile into Gloucester has to be performed at little above a walking pace. A complexity of signals is also requisite, altogether exceeding belief, which complexity is increased by two systems of signalling obtaining on the two gauges. Strange as it may seem, I actually stood in one spot near Gloucester and counted ten different signal posts of several forms.

On reviewing the double-gauge line between Cheltenham and Gloucester, I could not avoid being struck by the fact, that in consequence of the mixture of gauges, there are separate stations at each town; that two sets of stock are provided, two establishments of servants are kept up, and a double number of trains are run. which are precisely the arrangements which Mr. Stephenson in his Report on the Double Gauge declared would be necessary in order to obtain any use from the double gauge, and which arrangements are such as he estimates cost an average sum equivalent to 18,000l. per mile, in addition to the ordinary cost of even a broad-gauge railway. The mode of laying and working the gauges, which Mr. Brunel suggests in his Report,-namely, by making the outside rail common to both gauges, which he advo-cated as the simplest mode of uniting the gauges, and as "admitting" (in his words), "without any complication whatever, of the running of all the trains of both gauges into the same

Digitized by GOOGIC

[†] By the term "up line," Lrefer to that line of rails on which the trains from Cheltenham to London or Bristol run. The "down line" will consequently be that line on which the trains from London or Bristol run.

be exemplified between Gloucester and Cheltenham, neither has the attempt been made to run broad and narrow gauge carriages in the same train, which the advocates of a mixed gauge have talked of.

So that, so far as the experiment of working a mixed gauge between Cheltenham and Gloucester proves anything, it would appear to verify precisely the predictions of Mr. Stephenson.

The cost of laying this piece of mixed-gauge railway between Gloucester and Cheltenham—from the enormous space occupied at the stations, the length of the sidings and the numerous intersections of the rails, the reduplication of stations and everything else—must have been prodigious; and the cost of working, with its duplicate establishments of servants, engines, carrieges for must be very great

carriages, &c. must be very great.

There are no less than twenty-six passenger trains running each way, for the accommodation of the not very enormous traffic between Gloucester and Cheltenham; eight trains a day each way would certainly afford ample accommodation for this traffic. I was amused to hear that goods were carted from one broadgauge station (that of the Bristol and Gloucester line) at Gloucester, to the other broadgauge station (that of the Great Vestern line), also at Gloucester, not fifty yeards distant from each other, as the crow flier, but, owing to the complexity of lines attending the mixture of the gauges, nearly two miles distant by railway, for which reason it is found easier to cart the goods across the anto shunt the heavy trucks of the broad get unge from station to station. The road activally beats the railway in this instance.

The general conclusion to which I came, five in my visit, was, that the mixture of gauges resulted in a form of railway so unsafe, so intricate and broken up, and so extravagant in point of expense, as to render it altogether in indimissible as a practical arrangement, and rujinous to that simplicity on which the utility and safety of railways depend.

An Engineer.

Progress of Works.

ABERDEEN.—Jan. 27.—The portion from the Rottenrow, Montrose, southwards, was publicly opened. At 6 a.m., says the Aberdeen Banner, a large party, including the provost and magistrates, specially invited by the directors, left Aberdeen to be present. They arrived at Montrose about 11 a.m., where they were joined by the provost and magistrates of Montrose and Brechin. The train then set off for the latter place, where they stopped a short time, and returning to the junction of the line, proceeded to Arbroath, were they were joined by the provosts and magistrates of Arbroath and Forfar. The whole party returned to Montrose, where arrangements had been made for the dinner, which took place in one of the buildings belonging to the company. The train, which comprised a great number of carriages, containing about 700 persons, travelled at the average rate of 30 miles an hour, the highest rate being about 40. The general arrangements of the line showed a thorough organization in the practical department, and afforded satisfaction to all present.

BELEAST AND BALLYMENA.—Jan. 21.—The chair-

BELFAST AND BALLYMENA.—Jan. 24.—The chairman, the hon. George Handcock, travelled from Antrim to Belfast in one of the new carriages, and returned on the afternoon of the same day, each trip being accomplished in three quarters of an hour. As regards the opening of the line, we may state, says the Belfast Whij, that notice has been given to the Commissioners that it will be ready for the inspection of the Government officer on the 15th of February. The station accommodation will be of a temporary kind until the permanent shed is erected. The directors, in the exercise of their discretionary power, will open the line as soon as they feel that they can

do so with perfect safety.

CALEDONIAN.—The directors, at the late meeting in Edinburgh, having completed the whole arrangements connected with the working of the line, came to the resolution that it should be opened for public traffic on Tuesday the 15th of February. The Scottish Railway Gazette declares the intended fares

for passengers between Edinburgh and Glasgow to be, 6s. first-class, 4s. 6d. second-class, and 3s. third-class. Cornwall (Saltash Bridge).—Considerable prepar-

ations, says the Plymouth Herald, have been made for this undertaking. We would premise, before we detail the particulars which we are about to communicate, that the estuary of the Hamoaze, at Saltash Passage, is, at high water, about three-quarters of a mile wide, 10 fathoms, more or less, deep, and, from its narrowness compared to other parts, the stream runs there with a most powerful force. It is designed to carry over the river at this passage a bridge of three arches, 95 ft. above the surface of high water, spring tides. To aid in the accomplishment of this great object, the company have purchased two 14-gun packet brigs—the Pigeon and Magnet—of 300 tons each, and have moored them at the passage about midway. By a series of borings it has been ascertained that the bed of the river is covered with mud to depths varying from 18 in. to 15 ft. On the Cornwall side, a stage being moored 20 ft. from the beach at low water, and a thirty-bar ladder, with weights attached, let down to rest on a ledge of the steep rock, a diver had yet to descend 9 ft. before the bottom was obtained. On the Devonshire side there is not so much declivity. The company have just received from Bristol an immense cylinder, weighing 23 tons, 85 ft. 9 in. long, and 6 ft. 3 in. in diameter. It is designed to let this cylinder down perpendicularly between the two brigs, when it will be about 25 ft. out of the water, and in that position to moor it with hemp cables fastened to four or five anchors. some of which weigh a ton each, purchased expressly from Her Majesty's dockyard. An effort will then be made to pump the cylinder dry, by steam engines to be fixed on board the brigs. Should the experiment with this cylinder prove successful, it will have to give place to one of much greater magnitude, weighing 130 tons, of the same length, but having a diameter of 30 ft.—thus providing an area of sufficient extent to lay foundations for the piers of this formidable work. At the present season there are not more than about thirty men employed at Saltash; but a far greater number will be engaged in March. They are under the controul of the resident engineer, Capt. Dance, who is aided by Mr. Pope, the gentle-man who assisted in floating the Great Britain steam-

GREAT NORTHERN .- The earthwork between the Bentley bank and the junction with the Askern branch, at Reedholm, has been actively advanced, and the permanent rails will be proceeded with as early as possible, in order that the line may be ready early in spring. The line between Bentley and Doncaster in spring. The line between Bentley and Doncaster is not in so forward a state, owing to the works being of a much heavier character, but no time will be lost in completing the junction with the purposed Doncaster station. The company, says the Yorkshireman, have not yet completed the purchase of all the land required for the site of the station and plant, but negotiations are rapidly drawing to a conclusion, and in a few days the company will be in possession of all they require. It is satisfactory to state that so far the company have not found it necessary to appeal to a jury, although the prices asked have been exorbitant, and those paid most liberal. As an instance, the corporation asked 1,000% an acre for the Friar's Closes, and accepted 600*l*., with which they express themselves well satisfied. The corporation bought the Friar's Closes a few years ago for about 300*l*. an acre; and as there are about three acres of land, they asked 3,000l. for what a short time ago cost them only 900l. As the purchases are now nearly all concluded, the proposed works will soon be prosecuted with vigour. It is the intention of the company to form a spacious dock in the Crimpsall, and the first erection will probably be an extensive iron foundry by the side of it.

PERTH LINES.—The Perth Constitutional says—As time wears on, the different railways that centre in our city begin to assume by degrees a more finished-like appearance. At the general terminus little has been doing for some time, nor will there be much done, we believe, until some operations connected with the Scottish Midland are in such a state of progress as will enable the contractors to avail themselves of the short and easy access which that line will afford for the cartage of the building stones and other materials to the terminus, in place of the hitherto circuitous route. The foundations at the terminus, however, are laid to a considerable extent; and, judging from them, it would seem that if not a very wide it is at any rate to be a very long building. To any person inspecting either end of the tunnel of the Scottish Central, it must appear that there is yet a heavy amount of work to be done, for completing which such weather as the present is not the most favourable. The tunnel itself is far advanced—the permanent rails being laid in it for, we suppose, more

than three-fourths of its extent; but at the open cut at the south end there is yet much excavation to be performed. The banks at this place present a precipitous and rugged appearance, and must necessarily be secured in some way or other, either by sloping them away, or by arching in the railway. Between the north end of the tunnel and the terminus there is also heavy work to be accomplished, both in excavating and building the bridges; and upon the whole we suspect that if the Marquis of Breadalbane's pro-mise of the line being opened in the spring is to be made good, the contractors must increase their hands and secure more favourable weather. On the Scottish Midland things appear to be going on prosper-ously. From the way in which this line reaches the terminus, it must interfere with four roads-the Dunkeld, the Crieff, the Burghmuir and Auchterarder roads. Bridges are erecting at the whole of these, and are in a state of considerable forwardness, the piers of the arches being nearly completed in all the four. With regard to the junction of the Edinburgh and Northern with the Central at the south end of the tunnel, there will have to be a great quantity of earth removed before it can be effected. The progress of the Dundee line from Barnhill station to the general terminus, involving as it does the erection of a bridge across the river, and a huge pile of forced platform upon which to carry the line up behind platform upon which to carry the line up behind Marshall place, appears an event so remote and uncertain, that at present we cannot speculate upon it as among the probabilities.

SOUTH WALES.—The directors have given orders to the contractors to finish the portion between Newport and Swansea, in order that it may be opened in

the spring of next year.

VALE OF NEATH.—The tunnel between Aberdare and Neath, estimated to be the most expensive undertaking on the whole line, was to have been let on the 13th inst. It was to be divided into four separate takings; several contractors have sent in estimates.

Accidents.

GREAT WESTERN.—Jan. 27.—The tire of one of the whoels of a carriage belonging to the express train from Paddington station at 5 30 p.m., after leaving Didcot, was broken, and part of the carriage ignited. The train was stopped near Faringdon, and no injury was done to any of the passengers.

was done to any of the passengers.

London and North-Western (Euston Station).—
Feb. 3.—At the inqueston the bodies of the men Gedge and Hickey, the labourers killed by the falling of part of the vestibule at the Euston station (see ante, p. 39), the following verdict was returned:—"That the deceased were killed by the falling of a portion of a certain building situate at the Euston-square station of the London and North-Western, and that the fall was caused by the non-induration of the cement with which certain portions of the building were erected during a wet and bad season of they ar; and the jury add to this verdict an expression of their opinion that due caution was not taken in the erection of the building, considering the time of year." The jury declined expressing any opinion respecting the general design and details of the building, Messrs. Hardwicke, W. Cubitt, Tite and Hosking (the last from the Woods and Forests), all appeared to attribute the accident to the un-indurated state of the cement.

LONDON AND SOUTH-WESTERN.—An iron shed in the course of erection at the Woking station fell a few days since, just at the time that an express train from Southampton to London was approaching. It fortunately fell on to the Common.—Feb. 1.—The inquest on the late accident was resumed at Woking. The attendance of the two prisoners, Jones and Fleming, had not been accorded. Their professional adviser had also dissuaded them from being present. Hudd, the brakesman of the goods train, explained the use of the brakes; and Brownsmith, the guard of the passenger train, recapitulated the circumstances previously detailed (see ante, p. 54). Mr. Gooch and others were also re-examined. The whole of the evidence tended to prove that (excepting the use of the fog signals) every precaution had been observed by the officials of the passenger train. The red lights of the passenger train were seen by the guard of the goods train. The inquest was again adjourned.

Law Intelligence.

DAMAGES.—Jan. 28.—In the LORD CHANCELLOR'S COURT, in re Gother v. the Midland, this was an appeal from an order made by Vice Chancellor Wigram during the vacation. The plaintiff obtained an injunction to restrain the defendants from issuing a warrant to the sheriff to summon a juty, for damages on the taking land belonging to St. Bartholomews Hospital, in the

city of Gloucester. The plaintiffs are the trustees, and the question was, whether the special Act gave the company powers to take the land for the construction of a supplemental station.—The Chancellor gave judgment on the appeal, and having examined various clauses in the Lands' Clauses Consolidation Act, the Railway Clauses Act, and the special Act, constituting the company, said he was of opinion that the order of the Vice-Chancellor must be discharged and the motion for the injunction refused with costs.

and the motion for the injunction refused with costs.

MONEY IN COURT.—Jan. 28.—In the VICE-CHANCELLOR'S COURT, in re Arkell v. the Great Western,
the company had taken land belonging to Mr.
Arkell, of Stroud, in Gloucestershire, under the compulsory clauses, paying 620l. 11s. into court. Mr.
Arkell had died, and the petitioners, who were his
executors, had taken out a diocesan probate, and
sought payment of the money.—The Vice-Chancellor
doubted whether it would be proper to make the order, and whether the Accountant-General would pay the money out of court without a prerogative probate.—It was understood that the petition should

stand over for inquiry.

Costs.—Jan. 28.—In the same Court, in re Wor cester College, Oxford, ex parte London and Birming-nam, Mr. Richards appeared upon a petition in this e, and asked for the costs of an interim investment in Consols of the purchase-money of lands taken from the college by the company, pending a re-investment of land. The original Act of the company, now absorbed in the London and North-Western, provided for the payment of the costs of a re-investment, but was silent as to the costs of an interim invest-ment in the funds.—His Honour thought he had no power to go beyond the express terms of the Act in power to go beyond the express terms of the Act in ordering the company to pay costs. It might be hard on individuals to be put to costs, but the Court had no; power to create a remedy.—On the same day, in the same Court, in re Morehouse v. the Mancher and Leeds, his Honour gave judgment on the question of costs in this case, and held, that inasmuch as the plaintiff claimed 3,259l. for his land and damages, which was 900l. more than he was found entitled to, and the company had offered 1,500l., which was 800l. less than it was defined they aught to give each party should now their cided they ought to give, each party should pay their own costs of the suit in equity.

ENTRY ON LAND.—Feb. 1.—In the same Court, in

Emlyn v. Windsor, Staines and South-Western, the plaintiff had obtained an injunction ex parte to restrain the defendants from entering upon his land without payment of a sum of 500%, agreed to be paid to him for purchase-money, and for severance. The entry on the land, on account of which the injunction had been granted, had taken place owing to a mistake in the plans. The company had now paid the 500l., and all matters had been arranged, and the present application was to have the bill dismissed and the injunction dissolved.—The order was made accord-

ingly.

AWARD .- On the same day, in the same Court, in re Elliott v. South Devon, counsel moved, on behalf of a landowner at Plymouth, part of whose property had been taken by the South Devon (see Rail. Chron., 1847, p. 969), to set aside an award on (among other grounds) the ground of partiality in one of the arbitrators and the umpire.—The Vice-Chancellor said that the association of one of the arbitrators with the inquiry before he acted amounted to nothing in this case. He would not give any opinion as to the validity of the document contemporaneous with the award. There did not appear to be sufficient grounds for saying, properly or safely, that the award ought to fail by reason of the existence of that document, or of anything to be inferred from it.

Jan. 29.—In the Court of Queen's Bench, in re the Queen v. the Lancashire and Carlisle, Sir F. Kelly showed cause against a rule calling upon the company to show cause why a mandamus should not issue, commanding them to make convenient ascents and descents to four footways which were crossed by the said railway in the vicinity of the town of Lancaster.

The Court made the rule absolute.

Jan. 31.—In the Court of Excheoure, in re-Chamberlain v. the Chester and Birkenhead, the plaintiff declared against the defendants for opening a branch station on the shores of the Mersey, between the Birkenhead ferry and the Woodside ferry, and near to the latter, without having made or opened a branch to the plaintiff's ferry, as they were required to do by the section of their Act.—The Lord Chief Baron stated that the declaration was not sufficiently distinct, and that it did not necessarily appear from it that the station opened at Woodside was at the expense of the plaintiff's ferry.—Judgment must therefore be entered for the defendants.

RATES.—Jan. 29.—In the BAIL COURT, in re the Norfolk v. Overseers of St. Peter's, Thetford, Mr. Pal-mer applied to his lordship for a rule, calling on the

overseers, &c., of the parish of St. Peter's, Thetford, to show cause on an appeal against a poor-rate in August last. The overseers made a poor-rate of one shilling in the pound, and the directors refused to comply, on the ground that the rate was excessive and that the amount demanded of them was greater than on any previous occasion. They paid the rate, but gave notice of an appeal at the ensuing Quarter Sessions. An objection was taken to the notice of appeal, on the ground that the rate was therein stated to have been made on the 29th, whereas it was made on the 26th of August. On this ground, and no other, the learned Recorder refused to hear the appeal.-His lordship granted a rule.

RETURN PACKAGES .- Jan. 25 .- At the SOUTHWARK COUNTY COURT, an action was brought against the South-Eastern to recover 71. 5s., the value of forty one empty cement casks, consigned by Mr. Wood, cement manufacturer, Rotherhithe, lost, owing to alleged negligence. The company, by their regulations, undertook to re-convey empty packages, &c., free of expense; and the original transmission of the cement, and the re-sending of the empty casks to the station, and their reception by the company's servants having been proved, Mr. Church, for the company, submitted that they were not answerable for the loss. They were not in the present case carriers for fee or reward, and could only be considered as bailees of the goods, without reward, and therefore not liable for any loss or damage; and notice to that effect appeared in their offices at every station. goods were forwarded to be left till called for, and no charge was made, and therefore it was clear that the company were not answerable. The notice expressly stated that they would not be accountable for loss or damage of returned empty packages, nor for any goods left until called for, or to order, or left or warehoused for the convenience of the parties to whom they were consigned.—The Judge was clearly of opinion that in this case the company were not liable; they were in the position of bailes without reward, and with notice that they would not be liable. He should therefore give judgment for the defendant. Judgment entered for the defendant accordingly,

ENTRY ON LAND, &c.—Jan. 26.—In the DUMFRIES SHERIFF'S COURT, a case of some interest under the Railway Clauses Act (8 & 9 Vict. c. 33) was tried. The Glasgow, Dumfries and Carlisle having given notice to Sir Alexander Grierson, of Rockhall, that they intended to take possession of about four acres of his lands adjoining their line, for the purpose of taking earth and materials therefrom, for the con-struction of their works, Sir Alexander objected. It was stated for the complainant that the lands proposed to be taken, consisting of a hill of sand and gravel, would require to be retained, with a view to providing sand and gravel to spread upon unreclaimed moss, which Sir Alexander possesses to a large ex-tent, in the valley of the Lochar, through which the company's line passes, and which he intends to re-claim; also that there were other lands in the neighbourhood, belonging to Mr. Paterson, of Broklehirst from which the company could procure the earth and soil they required, which was to make an em-bankment for the line through Mr. Paterson's pro-The company's evidence went to show that Sir Alexander could procure large quantities of sand by digging into his fields on other parts of his property, and that Mr. Paterson's land could not be made use of but at great additional expense and delay.—The Sheriff found for Sir A. Grierson.

DEPOSITS.—In the QUEEN'S BENCH, Dublin, in re Daly v. Rooney, the action was for money had and received, brought by an allottee of scrip in the Dublin and Sandymount, to recover 31l. 10s., the deposit on scrip issued to him; and the defendant, Ald. Rooney, was a director at the period the payment was made. A verdict had been returned for the plaintiff, and his counsel submitted that the decision was perfectly correct, for the undertaking had been abandoned, and there was no consideration for the money paid for the scrip, which was mere waste paper. There had been no partnership.—Judgment was delivered that the plaintiff had taken his verdict on a ground which had failed, and the verdict was therefore set aside, and a new trial granted without costs.

EXTORTION .- Jan. 22 .- At the NENAGH QUARTER SESSIONS, in re Joseph Keys v. the Great Southern and Western, the appellant summoned the company for the recovery of penalties of 20% a day, amounting to upwards of 3,000%, upon the allegation that the comany had interfered with a private carriage road on his property (he holds about 8 acres of land at 25s, an acre) without having previously substituted another road.—The magistrates dismissed the complaint, and name.— The assistant-barrister, Mr. Serj. Howley, delivered judgment, dismissing the appeal, and confirming the magistrates' decision.

Feb. 1.—The prisoner Coates, who has so frequently figured as a thief at the various town railway stations was sentenced by the COMMON SERJEANT to be trans-

ported for fourteen years.

Feb. 1.— At the MARYLEBONE POLICE COURT a man named Christian was committed for fourteen days' imprisonment, for riding on the London and North-Western line, from Birmingham to London, when he had only paid the fare to Weedon. The prisoner affirmed that he had fallen asleep in the

Feb. 2.-At the LAMBETH POLICE COURT, Jones, the driver, and Fleming, the fireman of the goods train, concerned in the accident on the 14th ult. (see ante, p. 54), were brought up on remand.—Mr. Gooch, after evidence similar to that at the inquest at

Woking, continued-

Woking, continued—

I have made an experiment with a view of ascertaining at what distance such a train could be stopped. I did so by means of a luggage train corresponding with the one which occasioned the accident. I desired a man to walk 600 yards from the 25th mile-stone, where the accident took place, towards the cutting, and stand there with a green light. I had charge of the engine, and regulated the speed of the train at 21 miles an hour, which is one mile over the average speed. I desired the foreman to stand at his brake, to be ready to apply it when I reversed the engine. I came train at 21 miles an lour, which is one mile over the average speed. I desired the foreman to stand at his brake, to be ready to apply it when I reversed the engine. I came up to the green light, heard a detonating signal, which had been placed on the rails, explode, and reversed the engine without cutting off the steam. I sounded the whistle, and called the attention of the guards, who were not aware of my object. When we came to a stand, I got down and measured the distance to where the man was, which was 258 yards. The man had not left the place. This was on a gradient of 1 in 333. There was only one road-box to the train in which the prisoners were. The road-box brake is a great help, but the tender brake is the most efficient one. The latter is in the charge of the fireman. I can calculate on controlling a train by means of the tender brake. On the 14th ult. the train consisted of thirty-one carriages, which were six more than that with which I made my experiment last night.—Mr. Elliott: Does the experiment enable you to state at what distance, supposing the train had consisted of thirty-one carriages, and there had been no road-box, the train would have been stopped by reversing the engine and of thirty-one carriages, and there had been no road-box, the train would have been stopped by reversing the engine and applying the brake?—Witness: Considering the circumstance under which the experiment of last night took place, and the dry state of the rails, I think that an additional 70 to 100 yards would have covered those disadvantages, namely, that instead of 250 yards such a train would require 350 yards to stop it in.—Mr. Elliott: Supposing that it was an unfavourable night, what would happen then?—Witness: I think the distance of 600 yards would provide for every contingency, and I consider that under all circumstances the train on the night of the 14th ult. ought to have been stopped within that distance. The tender brake on the 'Bhiffalo,' the engine with which I conducted my experiment, is of the same construction as the 'Rhinoceros,' the one which drew the luggage train at the time of the accident. I have no recollection of Jones having complained the one which drew the luggage train at the time of the accident. I have no recollection of Jones having complained to me during the time he has been in the service of the company of the ineffective state of the brake of the 'Rhimoceros' engine. On the occasion of making my experiment, I had the tender brake and two others, and on the train to which the accident happened there is only a tender brake. I have never stopped any luggage train by means of the 'Rhimoceros' tender. I have no doubt that a goods train will sometimes run 500 or 5001, or even 1900 yards, after a brake has been applied. It is not a dangerous thing suddenly to reverse an engine going at such a speed, but it is objectionable, because it is calculated to damage the works. It should only be done in cases of emergency.

After the examination of Morling the great of the After the examination of Morling, the guard of the

goods train, and Hudd, the brakesman, repeating information already before our readers, Mr. Wolff submitted, on the part of Fleming, that there was not sufficient evidence to warrant his detention.—The Magistrate said he had carefully considered the evidence, and had decided that both the prisoners must be committed to take their trial for manslaughter. He required, in the case of Jones, two sureties of 100l. each, and himself in 200l.; and for Fleming, two sureties of 50l., and himself in 100l., for their appearance at the next assizes for the county.

London and North-Western.—Jan. 25.—A man named Hootton was committed to Aylesbury gaol, charged with having wilfully placed pieces of bricks

Parliamentary Proceedings.

COMMONS.

Feb. 3.—Returns.—On the motion of Mr. HASTIE, a return was ordered, showing the name of each railway for which Acts have been obtained in the years 1844, 1845, 1846 and 1847; the length of each railway, and how much of the same is now completed; the amount of capital stock, and the sums authorized to be borrowed under the several Acts of Incorporation; the amount of each call made by every company, with the date thereof, distinguishing the several years in separate columns, the proportion of each of such calls against this dismissal an appeal was brought in Key's as have been paid, and the sums remaining to be paid

Digitized by $\mathbf{U}\mathbf{U}\mathbf{U}$ the date and amount of sums borrowed under the several Acts, and which remain owing, stated also in separate columns for each year, together with balance of capital uncalled for, and of money which each company have still authority to borrow; and the periods for which any railway company may have definitively postponed making further calls; with the totals of each.

PROCEEDINGS BEFORE THE EXAMINERS.

Aberdare (Act Amendment); (Lease of line and works to the Taff Vale).

Arbroath and Forfar (Additional capital). Bristol and Exeter (Increased subscription).
Caledonian (Branch across Clyde, and Glasgow station).
Clarence and Leeds and Thirsk (Amalgamation).

East Anglian-Ely and Huntingdon (Extension of time). East Lincolnshire (Alteration of Great Grimsby branch).
Great Western (Increased subscription).
Kendal and Windermere (Act Amendment).

London, Brighton and South Coast (Extension of time in respect of Littlehampton and Steyning branches); (Alter-ation in Arun Navigation Bridge); (Subscription to Direct London and Portsmouth).

London and North-Western (Proposed branches and exten-

sions from the London and North-Western at Leaning-ton to the Birmingham and Oxford Junction, in the parish of Leamington, and from the Coventry and Nunparish of Leamington, and from the Coventry and Nun-eaton line of the London and North-Western to the Mount Pleasant Colliery and to the Craven Colliery; (New approach road at Tamworth); (Enlargement of Rugby station); (Power to hold shares in the Caledonian and in the Chester and Holyhead, and for other purposes). London and South-Western, Exeter and Crediton, Taw Vale and Dock, and Bodmin and Wadebridge (Arrange-ments).

Midland (Gloucester and Stonehouse Junction); (Branch to Ripley, with branches therefrom); (Short branch at Derby); (Widening the line at Derby, and enlargement of the Derby and Burton stations); (Junction lines at Long Eaton, Masborough and Bulwell, and branches to the Cinder-hill Colliery. Newry and Enniskillen (Amendment of Acts, and to autho-

rize arrangements with other companies).

Oxford, Worcester and Wolverhampton, No. 1 (Increase of capital); No. 2 (Deviation of line, and power to Shrewsbury and Birmingham, and Birmingham, Wolverhampton and Dudley, to contribute and make arrangements).

South Wales (Amendment of Acts); (Increased subscription).
Vale of Neath (Power to South Wales to subscribe, and

amendment of Acts).

Whitehaven Junction (Extension, alterations, and branches,

Wishaw and Coltness (Deviation).

Standing Orders not complied with.

Great Western (Loop line from Birmingham and Oxford Junction through Leanington); (To confer additional powers on the company with reference to the agreement for the purchase of the Birmingham and Oxford Junction, and Birmingham, Wolverhampton and Dudley).

Windsor, Staines and South-Western Act, No. 1, 1847 vinctor, staines and south vestern act, i.e., i.e., (Slough extension and deviation). No appearance on the petition. The consequence is, that the bill will either be dropped, or, if application is renewed, the Speaker's permission must be obtained prior to its re-instatement on

Reports of Meetings.

CAMERON'S COALBROOK STEAM COAL AND SWAN-SEA AND LOUGHOR.

Jan. 31.—Special Meeting, London.—Mr. N. P.

CAMERON in the chair.

The CHAIRMAN said they had met to declare a dividend of 8 per cent. for the half-year ending the 31st of December last.

Questions having been put in reference thereto,—
The Chairman said, that the more convenient
course would be to allow the Report to be read, and that then the directors would not shrink from an swering any questions.

The SECRETARY read the Report, which stated that the directors, from the derangement in the money-market, had not availed themselves of their powers to borrow money, except to a very limited extent, and since then an Act had been passed which afforded the company still further time to construct the line. The directors had purchased two ships, and chartered additional vessels at fixed rates, to

and chartered additional vessels at fixed rates, to prevent the future sales of coal being dependent on the fluctuations of freights. The Report concludes:

The company's coal has again been submitted to a minute test and examination at Her Majesty's dockyard at Woolwich, and the result of that examination has proved that the statements oricinally made to the public on these heads have been more than borne out by the recent trial; and on report thereof the Lords Commissioners of the Admiralty have been pleased to direct the company's coal to be placed on the Government list of coals supplied by contract for the use of Her Majesty's steam-vessels. The effect of this order and permission will be, not only to enable the company to tender for Government contracts, but to extend the company's sales among public companies, merchants, contractors, and others who are contined in their purchases to the description of coal only appointed to be included in the description of coal only appointed to be included in the Government list.

said the dividend was paid, not out of the capital, but out of the profits. The present was not the fitting time for placing before the shareholders a balance-sheet; that would be done at the July balance-sheet; that would be done at the July meeting. The shareholders should be supplied with a copy of it a week previously (as a matter not of right but of courtesy, and out of respect to the general feeling of the meeting). He also declared that the balance of 75,000l. would be paid out of the profits; that no part of the profits had as yet been set apart for that purpose; that the directors had no power to make further calls beyond the 6l., without the consent of the shareholders; that if the calls had been promptly paid, and if no panic had taken place in the money-market, the line would have been half completed by this time; that Mr. Cameron (the vendor) had not yet received any dividend on his shares, having relinquished his interest to July last for the benefit of the company; that the directors had not taken any part of the 2,000*l*, voted to them as remuneration at the last meeting; that Mr. Montefiore had resigned his seat at the Board, which had been filled by the appointment of Mr. H. Hart, of High-street, Borough, a commercial man. The balance due on the October call was very trifling; that as to the January call, it was scarcely fair to put a question, as it had only just become payable that the proportion of the outlay carried to the capital account was one-fourteenth of that outlay, and that it had nothing whatever to do with the 75,000*l*, and that the line would be about 4½ miles in length, and cost from 26,000l. to 30,000l., according to the price of labour and materials.

Mr. Burls said that, although he had entered the room with considerable misgivings on his mind, he must say that the proceedings so far were satisfac-There was still one point open to objectionnamely, an item of 9,000L, without any explanation. Without meaning to cast any slur upon the directors or auditors, he congratulated them and all such companies on Lord Monteagle's bill, which would enable shareholders, if they should be of opinion that their accounts were not properly made out, to petition the Board of Trade for a special auditor. He had visited Swansea for the purpose of looking after their affairs and he must say that Col. Cameron's statements had given the fullest satisfaction, and that the coal justified in every respect the qualities attributed to it. He therefore thought that the shareholders, who had heretofore reposed confidence in the directors, had better continue it for six months longer, when the financial and other questions not regularly before the present meeting would have to be considered.

Col. CAMERON assured the meeting that he was in a position to give a satisfactory reply to every question that could possibly be put respecting all the

operations of the company.

The dividend of 8 per cent. was then approved of, but without any formal declaration, which the CHAIRMAN said would be irregular at a special meeting.
The Report was unanimously adopted.

WEST CORNWALL

Jan. 24.—Meeting of Shareholders, Launceston.— The holders of about 2,500 shares declared their wishes of carrying out the undertaking, and that it ought to be vigorously proceeded with as soon as a direction can be obtained that would secure the confidence of the shareholders.

A resolution was passed, appointing a deputation to proceed to London and represent these views at the directors' meeting.

Jan. 31.—Special Meeting, London.—Capt. Moorsom in the chair.

The meeting was called in compliance with the late Act for an extension of time in the construction

The CHAIRMAN explained that the company had been associated with an old railway, in consequence of which liabilities had been incurred which rendered it desirable that the undertaking should become one of the paying class as soon as possible. If the proposal of the directors was not agreed to they would still have the liabilities to meet, and it was calculated that the line between Hayle and Penzance would realise between 8 and 9 per cent., and that they could get it into operation for a moderate sum. They would thus be enabled to meet their liabilities, and avoid the delay of a twelvemonth, which must necessarily ensue, unless the powers were at once granted to the directors. The cost of construction, exclusive of the station at Penzance, would amount to 80,000l.

Mr. Gurney, who formed one of a deputation from

Launceston, and represented several thousand shares,

The Secretary, in reply to a number of questions, | managing directors, in whom they had no confidence. He objected to any further powers being granted until the Board had been in a great measure reformed and some new directors introduced.

On the votes being taken, out of 9,540 shares represented, 5,810 were in favour of the proposal, which, being three fifths, was all that was requisite to decide the question, and the proposal was declared to be carried.

The CHAIRMAN said that the directors, notwithstanding that the powers had been granted them, would not make use of them until they had heard the opinion of the general meeting, which is to take place in about three weeks.

SOUTHAMPTON AND DORCHESTER. Jan. 31 .- Special Meeting, London .- Mr. MILLS in the chair.

The meeting was called to determine whether or not any contract should be entered into before the 20th of December 1848, for the execution of all, or any, of the branches-to Elling, to Lymington, and to Weymouth. There being 9,143 assents, constituting a larger proportion than three-fifths of the entire shareholders, the proposition was carried. There were no dissents.

WINDSOR, STAINES AND SOUTH-WESTERN, Jan. 31 .- Special Meeting, London .- Mr. CHAD-WICK in the chair.

The meeting was held under the late Act for the purpose of obtaining the necessary consent of the shareholders for continuing the works.

The Secretary having read the 8th and 9th clauses, requiring that no company which, previous to the 27th of November 1847, had not executed any part of their works, should enter into any contract for the execution of such works, except with the consent of three fifths of the shareholders, or holders of stock.

The CHAIRMAN announced that the assents for the prosecution of the works represented 17,464 shares, while the dissents were the holders of only 19 shares. The works would therefore be proceeded with. He was happy to inform the meeting that so far as the bill No. I was concerned, the works were proceeding in a satisfactory manner, and he trusted that in the course of the summer the line would be opened through to Windsor. With respect to the No. 2 bill (Staines to Farnborough), the company had only just obtained the necessary authority to proceed with it, but he hoped that in a short time the works would be commenced, and that they would be completed with all convenient speed.

GREAT WESTERN AND WYCOMBE. Jan. 31 .- Special Meeting, London .- Mr. PAUL in the chair.
The CHAIRMAN stated that the present meeting

had grown out of the failure of an arrangement with the Great Western, by which it had been hoped that the works authorized to be constructed would have been proceeded with in the course of the ensuing year. Under the late Act, it was necessary that the directors should take powers from the shareholders to proceed not later than this day; but after the interview which had been held with the Great Western, which had not terminated in the way that had been hoped, the directors had determined that the whole of the powers heretofore conferred should fall to the ground. The directors objected to proceeding at present, and intended to petition the Railway Commissioners for an extension of time for the completion of the works, which extension was limited by the statute to three years from the present time.

After a conversation, in which Messrs. RICHARD-

SON, MARRIOTT (who handed in a protest against the legality of the present meeting on the ground of insufficiency of notice), EMERY and BARLOW took part—

Mr. BAXTER stated that the line had been sold to the Great Western for 30s. per share; and under the agreement 11. per share had been paid to each shareholder; the remaining 10s, per share was to be paid when the conveyance of the line to the Great Western was completed. Before this arrangement could be carried out, Parliament passed a sessional order restraining the sale or analgamation of any railway until one-half the capital had been expended in the construction of the line. This was the bar to the fulfilment of the agreement. The Wycombe company could not legally sell the line until one half the capital was laid out on it, and the Great Western were not anxious for its immediate construction.

The Secretary then declared the numbers of the proxies: dissents, 5.030; assents, 525. A large majority was thus exhibited in favour of the views of the directors.

GREAT WESTERN AND UNBRIDGE Launceston, and represented several thousand shares, said that the feeling of his constituents, although in facts were declared as at the meeting of the Wycombe favour of the undertaking, was not in favour of the shareholders, only in this case the Chairman announced that the directors had the support of 955 dissents against 280 assents.

IPSWICH AND BURY ST. EDMUNDS.

Jan. 29.—Half yearly Meeting, Ipswich.—Mr. J. C. Cobbold, M.P., in the chair.

The CHAIRMAN said, that before calling upon the secretary to read the very short Report, he might be secretary to read the very short Report, he might be permitted to explain the circumstances for calling the shareholders together so suddenly. The specified day for the delivery of the certificate from the Commissioners required to confirm the amalgamation of the Eastern Union and the Ipswich and Bury had some time since passed, and the directors were in daily expectation of the receipt of such certificate. which, if issued, would have suspended the operations of the Ipswich and Bury as an independent company, and rendered null any further proceedings. It had been particularly desirable that the certificate should have been issued earlier. One consideration had reference to the calls in arrear. The united company would be better fitted than an individual company could be to take up the question of outstanding calls. At the last meeting, the question of calls in arrear was brought under notice, but the directors did not like to inconvenience the shareholders by pressing the payment of those arrears, whilst they entertained not the slightest doubt that a little time would enable the holders of shares to make good their obligations. Of the correctness of this opinion, subsequent proof had been afforded by the payments made on that account during the last half-year, which the temporary accommodation afforded had enabled the shareholders to accomplish. In reference to the certificate, he might observe that the required return of the company was sent in early in the present month. In sending in their return of capital, the directors had set forth simply the capital which had been advanced by the Ipswich and Bury and Norwich Exten sion, under the idea that there existed no obligations to make a return of that portion of the capital of the united companies which particularly included the line to Woodbridge. By a correspondence with the Railway Commissioners, it was at length determined that the contract for the extension to Woodbridge should be included in the returns. The amended returns were accordingly made; and it was understood by the directors that the certificate would have been forwarded to the company in the course of a few days. They had not yet received it. Under the supposition that the amalgamated companies would have met only in accordance with the clauses of their Amal gamation Act, they had not thought it necessary to call the half-yearly meeting; but the Act of the Ipswich and Bury rendered it imperative on them to hold their half-yearly meetings in January. In consequence of the certificate not having been received, the directors had thus suddenly called the present meeting.

They had, accordingly, prepared a very short and merely formal Report. Nothing had occurred at all to damp their hopes of the benefits which would be derived from the amplication. He concluded by derived from the amalgamation. He concluded by requesting the secretary to read the Report.

The Secretary then read the following Report: The SECRETARY then read the following Report:—
The directors have been kept in doubt, up to the moment of the present meeting, as to whether it could or could not take place. The calls paid upon the capital had, on the alset of December last, exceeded the amount prescribed to entitle the companies to the certificate necessary to bring into operation the annalgamation of the Eastern Union and Ipswich and Bury; but unexpected delay having taken place in the issue of this certificate, it has been found necessary in the mean time to convene the present meeting. With a view to resume and carry on the works on the Norpswich and Bury; but unexpected deny naving usen place in the issue of this certificate, it has been found necessary in the mean time to convene the present meeting. With a view to resume and carry on the works on the Norwich line, it will be necessary to make further calls on the capital of 1846; but it is not proposed that those calls should exceed 22. 10s, or be made at shorter intervals than six months. By these means the directors are happy to be able to assure you the line to Diss may be completed and opened in the course of the present year, and the line to Norwich in the course of next year. The only resolution that will be submitted to you is to confer upon the Board authority to borrow under Act of Parliament a sum not exceeding 183,0001. If able to do so, it must assist your operations. It remains to say that, in anticipation of the legal amalgamation of the companies, the directors have already consolidated them under one management, and that such arrangements have enabled them materially to reduce the expenses of the establishment from the 1st of January inst. Resolutions will be submitted to the first meeting under the amalgamated company as to the several allowances and salaries requiring the sunction of the start was a desirable arrangement to allow these to be received as cash in payment of calls in arrear, this company being bound to pay the scrip was of that it was a desirable arrangement to allow these to be received as cash in payment of calls in arrear, this company being bound to pay the scrip of at par. In spect of the rate of interest to be paid on calls deviced to the same of the receipts, 10,7134. 18t. 10d.; cattle, 40d. 17t. 7d.; horses, carriages, parcels, mails, &c. 2, 127. 10s. 5d.; total devent and the same of the cambridge and the subject had been already paid, and interest warrants will be issued on the 23th of February to those shareholders who have paid upon the foundary to the cambridge and Ely sine, it works to be borne in mind that the lpswich and Bury set be borne in mind

gross expenditure of 711,3131. 15s. 6d., leaving a balance of 10,7061. 19s. 2d. in favour of the company.

The CHAIRMAN, in moving the adoption of the Report, should add but a few observations. As the present meeting was simply formal, it was, in the opinion of the directors, desirable that only one formal resolution should be adopted, authorizing the exerresolution should be adopted, attributing the exercise of the borrowing powers to an amount not yet exercised—in fact, to the full amount of the company's capital. Not only would the shareholders be in so far relieved from the pressure of further calls, but a facility would be afforded for the arrangements necessary by the amalgamation. The company had not been exempted from the difficulties common to almost all companies originated about the same time with themselves. In some instances money had been pressed upon them; and under the peculiar circumstances the directors certainly did not hesitate to accept those offers, and to push forward the objects of the company. The shareholders were aware of the change in financial affairs, when the return of money was as severely pressed for as it had been previously readily offered. It had always been the wish of the directors to make the severity of the change agree as far as possible with their general convenience. The shareholders would give the directors credit for a general desire to effect every practicable reduction in the expenditure. Some obstacles, however, had hitherto opposed themselves to reductions in particular items, because there had existed two separate companies, and in respect of both certain returns were by the Government resultations required to be were, by the Government regulations, required to be sent in separately to the Commissioners. These obstacles would be removed by the amalgamation; but, in the mean time, the directors had earnestly devoted themselves to effecting reductions. As an earnest of the future intentions of the directors, he might state that a reduction had already been effected to no less an amount than 1,400l. a year-upwards of 1,000l. a year of which was in salaries originally fixed by the shareholders themselves. With respect to the opening of the line to Norwich, it was to be opened as early as possible consistently with the convenience of the shareholders. With this view the directors would submit for their approval the formal resolution to which he had referred. He suggested, in conclusion, that when the amalgamation was perfected it would be a much better time to go into several other important questions than at the present meeting. He then moved the following resolution:—

That the directors of this company be and they are hereby authorized to borrow, on mortgage or bond, or partly on mortgage and partly on bond, any sum or sums of money not exceeding in the whole the sum of 183,333%, in addition to the sums which this company have already authorized to

In answer to Mr. FIELD and others, the CHAIRMAN stated that the amount of money already expended upon the company's lines between Stowmarket and Diss was 150,000*l*.; and that the amount required to open these lines would be 60,000*l*. for a double and 30,000l. for a single line, exclusive of the land, which was estimated at about 70,000l., about 30,000l. being already paid, and about 40,000l. remained unpaid; in many cases the value of the property being still in arbitration. That amount was also exclusive of plant, sufficient, however, being in possession of this company to work the line when opened. The sum of 180,000*l*., which the resolution empowered the directors to raise under the borrowing powers of their Act, would enable them to complete these works. There would therefore exist no necessity

It was then determined that the following statement should be appended to the printed Report given above, and transmitted by circular to the shareholders :-

The directors have called in the residue of the outstanding extension scrip, because they are bound by the terms of it to pay it, sooner or later, at par, with 5 per cent. interest; and they, after due deliberation, came to the conclusion that it was alike better for themselves that they should get that it was alike better for themselves that they should get rid of the obligations to pay them in money, and for the proprietors that they should pay them in as calls. The directors would have proposed to pay 5 per cent. interest for the last half-year to the Ipswich and Bury shareholders, if the Act of amalgamation had come into operation. They propose that the increased rate shall be given for the current year, under the power of the Amalgamation Act.

After some discussion, Mr. Levingston called at-

tention to a report that the Bury line was not paying interest on the capital expended upon it. He should be glad to be informed of the amount of capital expended on the Bury line per se, and the interest on it.

The CHAIRMAN said it would be impossible to give a reply off-hand to such an inquiry. A line, situated as the Bury line was, could not return a large or even a moderate interest. It was a mere branch from the Norwich line, of 11 miles in length, having its terminus in Bury, where it was not intended to stop. The traffic returns exhibited a constant increase. Beyond paying the interest on the debentures, the line was working at a profit.—[A calculation made by some of the directors present showed a return of 3 per cent.

After some observations by Mr. PERRY, referring to an apparent inequality between the interest paid in respect of Eastern Union and Ipswich and Bury

Mr. A. COOKE congratulated the shareholders on the improved and improving aspect of their affairs, the full value of their lines being yet undeveloped, and desired particularly to press upon the attention of the directors the necessity of the offices in London being entirely dispensed with.

The CHAIRMAN stated that the rent of the company's offices in London was only 60l. a year. A wish had been expressed that the future half-yearly meetings should be held alternately in London and the country. The matter, however, must rest in the hands of the shareholders.

The adoption of the Report and accounts was carried, together with the resolutions above given. [For further Reports of Meetings, see p. 93.]

IRON TRADE.—Glasgow, Jan. 28.—The market for pig iron is firm, and the demand good. Much business has been done this week for consumption, and quotations remain at 49s. 6d. to 50s. per ton for mixed numbers cash.— -Birmingham, Jan. 29.-About the trade itself, says the Daily News correspondent, there never was, perhaps, less to report, inasmuch as there are scarcely any orders for the commodity, and the men are not disposed to enable the masters to execute them even though they were as plentiful as eighteen months ago. The trade strike still continues; but the men are, for the most part, as peaceable as they have hitherto been riotous on these occasions. In the neighbourhoods of Kingswinford and Dudley, the colliers have manifested something of a better spirit and return of common sense during the week; they have returned to work at the drop, so that a link in the combination has been broken. By far the most numerous section of the iron-workers, however, including the puddlers and moulders, still persist in their resolve to submit to no reduction of wages: so they remain idle. The forgemen have had meetings at Brettel-lane; and have resolved that no man should return to work at any reduction of former

The improvement in the trade will assist the affairs of the Ayrshire Company. The settlement has been 10s. in the 1l. in money, and bills for the balance at six and twelve months from this date.

[Secretaries of companies are requested to forward notices of Meetings, and closing of Contracts, as early as possible.]

ings, and closing of Contracts, as early as possible.]

NOTES AND EXPLANATIONS

NOTES AND EXPLANATIONS.

(1) The Government gives 32,000,000f, and the land, and receives half the profits, after 10 per cent.

(3) The Government guarantees 3 per cent, interest, and 1 p. cent. Binking Fund. The loan of 10,000,000f, was negotiated at about 4 per cent, per annum.

(3) The Government lends 14,000,000f, and 4,000,000f, additional for half the cost of the passage of the town of Rouen, at 3 per cent. per annum. The dividend is delared after deduction of 1 per cent. from the profits for Sinking Fund. Loan of 6,000,000f, or 6,000 bonds

(5) Loan of 12,500,000f. in Bonds of 1,200f., bearing interest of 50f. per annum, to be paid off in a period of 50 years.

(6) Loan of 2,502,500, in Bonds of 1,000, at 3, per cent, to be paid off with a premium of 150f, per Bond. The Government lends 12,500,000 for which the Company pays, from 1817, 4 per cent, interest per annum, and 1 per cent. Sinking Fund, but only when the shareholders have received 15f, per share.

(5) Loan of 6,000,000 fin Bonds of 1,200, bearing interest of 50f, per annum, to be paid off in a period of 50 years.

(8) The Government lends 5,000,000 f. at 4 per cent, interest.

* For account, 24th February. + Ex Div.

London Stock Exchange, Feb. 4 .- The share-market generally has, during the past week, exhibited strong tokens of healthy improvement; although there has been some depression in two or three sorts of shares, caused by an uneasy feeling with regard to the dividends which will be declared at the ensuing meetings; for as there may be an increase of capital on which interest is to be divided, the question to be decided by the forthcoming reports will be as to the improved revenues to meet it. The market for debentures and loan notes has very much improved.

Liverpool, Feb. 3.—During the week there has been

an increased activity in the market, and a corresponding advance in prices, London stock being the excep-tion. To-day (Thursday), the market has not been so Sublow, Brothers.

Manchester, Feb. 3.—We have had more business doing in our market this week, and prices of almost all shares have gradually improved. To-day there has been a little re-action, which appears to be tem-

porary.

York, Feb. 3.—There has been a gradual improvement in railway shares since our last report, and York and North Midlands, York, Newcastle and Berwicks, North British, North Staffords, and some others have found ready buyers at improved prices. Great Northerns have declined in consequence of another call having been made.

GRAYSTON & EARLE.

Hull, Feb. 3 .- The market has been tolerably steady throughout the week, and we think more confidence has been shown. North British command higher rates. Leeds and Thirsks look better, and the York stocks are in fair request, especially the lighter kinds. Should the forthcoming meetings be of a favourable character generally, we shall have higher prices beyond doubt, but much will depend upon clear and explicit statements at the meetings.

FLINT & TOOTAL. Newcastle-upon-Tyne, Feb. 3 .- There has been considerable improvement in the extent of business in our market during the week, and at fuller prices. York, Newcastle and Berwicks, North Staffordshires, Eastern Counties, and Newcastle and Carlisles, especially the latter, have commanded attention.

W. FORDYCE. W. Fordyce. Glasgow, Feb. 2.—Since our last notice a greater disposition has been shown to operate, and better prices have been obtained. The transactions have been extensive in Dumfries and Carlisle, Ayr, Great Northern, North British thirds and quarters, Scottish Central, and York and Newcastle, Great North of England shares; Caledonian halves have suddenly drough from a transaction of the property of the purpose have suddenly of England shares; Caledonian halves have suddenly dropped, from a rumour of an approaching call. We add to-day's latest business:—Caledonian, halves, 59s. 6d. dis; Clydesdale Junction, 59\(\frac{1}{3}\); Edinburgh and Glasgow, halves, 2\(\frac{1}{3}\) dis.; Edinburgh and Perth, 28s. dis.; Glasgow General Terminus, 8: Glasgow, Dumfries and Carlisle, 7\(\frac{1}{3}\); Glasgow, Kilmarnock and Ayr, 100; ditto, halves, No. 1, 61s. dis.; ditto, No. 2, 62s. 6d. dis. Great Northern, 5l. 10s. 6d. dis.; York, Newcastle and Berwick, Great North of England shares, 2\(\frac{1}{3}\) prem.

Buchanan, Aitken & Co.

Bourse de Paris, Feb. 3.—The following are the latest prices:—St. Germain, 665f.; Versailles (Left Bank), 190f.; Paris and Orleans, 1185f.: Paris and Rouen, 905f.; Rouen and Havre, 440f.; Avignon and Marseilles, 552f. 50c.; Vierzon, 512f. 50c.; Orleans and Bordeaux, 480f.; Northern, 535f.; Paris and Strasburg, 406f. 25c.; Tours and Nantes, 386f. 25c.; Paris and Lyon, 390f.; Dieppe and Fecamp, 255f.

The telegraphic intelligence of the Neapolitan disturbances has produced no effect on the Bourse. The funds remained quiet, as the news was hardly a surprise for the public.

From GERMANY we have notices that the OVERrfom Germany we have notices that the Oversteen state the Covernment. If so, the caution money, amounting to 500,000 guilders, will be for-feited. Another meeting of the shareholders is to be held, to determine the amount that shall be returned from the deposits.—Upon the Koetham, owing to the breaking down of a carriage the links owing to the breaking down of a carriage, the Duke of Coburg and Prince Reuss were exposed to danger, but the train was stopped, and the passengers escaped. -It has been proposed to construct a railway from SPIRE to STRASBURG, and the Government of Bavaria, it is said, has promised to guarantee for twenty-five years a dividend of 4 per cent. per annum upon the capital subscribed.

Railway Chronicle.

LONDON, SATURDAY, FEBRUARY 5.

The half-yearly meeting of the IPSWICH AND BURY ST. EDMUNDS took place somewhat suddenly. The directors had anticipated receiving the Commissioners' certificate of amalgamation with the Eastern Union, which would have suspended all the operations of the Ipswich and Bury as an independent company. The Report exhibited an improving aspect of affairs generally. The directors received authority to borrow 183,000l. under their Act.

The Report was approved of at the half-yearly meeting of the MALTON AND DRIFFIELD. It defended the conduct of the directors in the suspension of works and the postponement of

the calls during the monetary crisis.

The sale of the Coventry, Nuneaton, Bir-MINGHAM AND LEICESTER to the London and North-Western was stated in the Report at the half-yearly meeting to be incomplete until half the capital of the company had been expended on the line. The directors are about, therefore, to make a call of 11. 12s.; and also propose to apply to the Commissioners for an extension of time under the late Act.

The Report and accounts were passed at the half-yearly meeting of the EAST LANCASHIRE. The nett profit (according to the Report) from the working of the lines now in operation is fixed at 4 per cent. on the total cost. whole undertaking will probably be completed in the course of the present year. The calls

had generally been well met.

The Report and accounts were adopted, and a dividend of 4s. per share was declared, at the half-yearly meeting of the Cockermouth and Workington. The improvements at Workington Harbour are progressing, and when completed are expected to lead to a great increase in the lime traffic.

The Report, recommending a dividend of 6s. per share (less income-tax), was adopted at the half-yearly meeting of the Whitehaven Junc-TION. The works on the line are in excellent

order.

At the half-yearly meeting of the EDIN-BURGH, LEITH AND GRANTON the directors' Report announced that the certificate of amalgamation with the Edinburgh and Northern had not been received from the Commissioners, but all the other arrangements had been concluded. The increase of the passenger traffic appears to

be promising.
At the special meeting of CAMERON'S COAL-BROOK, SWANSEA AND LOUGHOR the chairman announced a dividend of 8 per cent. for the half-year ending last December. The Lords of the Admiralty have directed the company's coal to be placed on the Government list of coals

used in Her Majesty's steam-vessels.

The shareholders of the KILKENNY GREAT SOUTHERN AND WESTERN adopted the Report and accounts at their half-yearly meeting. The works are not to be prosecuted for the present.

The following companies have held special meetings under the Chancellor of the Exchequer's Extension Act:

Great Western and Uxbridge. Great Western and Wycombe. Lancashire and Yorkshire. Shrewsbury and Birmingham. Southampton and Dorchester. St. Helen's Canal. West Cornwall.

Windsor, Staines and South-Western.

We are well pleased to notice the improved and improving accounts of the PARIS AND

increase in all departments of business, particularly in the merchandise traffic; and the enlarged receipt is attended with a diminished per-centage of expenditure. For the half-year to Dec. 31, 1847, there has been a greater earning of 598,819f.—more than 22,000l.—than in the corresponding period of 1846. The expenses, on a gross revenue of 5,356,593f., being 3,031,503f., including interest, provision for the sinking fund, &c., are declared to have been reduced, as far as the working part is concerned, in the ratio shown between 39.45f. per cent. and 42.14f. A dividend of 28.15f. per share was accordingly declared, payable on and after Feb. 7. The improved results, as well as this early distribution of the profits of the half-year, will alike be satisfactory to all concerned; peculiarly so at this time, when it is important both to have real assurance of a healthy state of past investments, and to enjoy as speedily as may be the fruits of success. The directors of this company, if they have the good sense to take warning by the example of their neighbours, and now study to preserve the promising concern entrusted to their care, rather than to strain its resources by questionable additions to the demands upon them, may very soon place the property on a footing that no other French line will be likely to rival. We earnestly hope that they may have this wisdom; we are quite persuaded that it may be practised with peculiar advantage in the case of the Paris and Rouen; and also that, whether for its special interests, or for the general national encouragement of railways in France, there is no other course that could promise a tenth of the advantage which must ensue from the adoption hereafter of a strictly economical and conservative policy in that concern. This is the first great half-yearly meeting we have had to report upon; and right glad shall we be to find many able to follow in the same strain as the Paris and Rouen directors have opened the ball with.

The NARROW-GAUGE party in the SOUTH-Western District held a great meeting of inhabitants at Shaftesbury this week, to make a demonstration in favour of their lines, and to show their importance to the proprietors and inhabitants of the intersected counties and adjacent towns. There were representatives and deputations from Sherborne, Wincanton, Yeovil, Burton, Gillingham, Mere, Sturminster, &c. The High Sheriff of Dorset filled the chair, and nearly every landowner of note in the vicinity was present or represented—the Marquis of Westminster, Earl Rivers, Mr. Benett, M.P., Mr. Seymer, M.P.—The company was represented by Mr. Chaplin, M.P., Mr. Locke, M.P., Messrs. Uzzielli, Smith, Townsend and Bircham; and with much good speaking a demonstration was made well calculated to exercise on the Legislature all the favourable influence which it is possible for this kind of meeting to achieve. There can be no doubt of the benefit which such a line would confer on that district, and that it is strongly for the interest of the railway community at large that the broad gauge should be excluded from further incursions in that direction.

The Edinburgh and Glasgow Company has brought down on itself the evils of ruinous COMPETITION, by adhesion to that mistaken policy with reference to the CALEDONIAN which we have so often pointed out. In consequence of this the latter is to run at fares 25 per cent. lower than the Edinburgh and Glasgow. Whether the Edinburgh and Glasgow lower their fares or not the event is equally ruinous to their dividend. To the Caledonian it will not be so

the 29th ult. The Report speaks of growing | and south traffic must run over the line, and may as well take Edinburgh and Glasgow passengers as not. To the Caledonian, at these fares, there may be no great gain, but to the Edinburgh and Glasgow a certain loss. We trust the shareholders will look into the matter again before next meeting, and see whether the evils of competition, at low fares, may not be averted by equitable concessions, such as we have all along suggested. The Caledonian opens, it is said, on the 15th inst.

> Capt. Fitzmaurice, of Ramsgate, has invented a very simple and effective RAILWAY ALARM, which is now lying with Mr. Pulford, at the London Bridge station. It consists of an alarmbell placed on the tender. This bell is kept silent by a piece of leather, on which it is pressed by an iron pin. This pin may be pulled out by drawing a string, and when re-leased by this means, the bell by a strong spring is violently rung. The string passes loosely along the under edge of the roofs of the carriages on the outside, and as it is not required to be kept tight, no more is necessary than to haul in the slack from any part of the train, and release the pin when the alarm is given. This arrangement of a check-string was used some five years ago by Mr. Gregory and Mr. Pulford on the Croydon line, but it was attached to the Engine Whistle, an arrangement not always convenient. In this case a separate bell is used, in which there is no inconvenience. We believe that a check-string of a similar kind is being applied at present by Mr. Williams, of Goswell-street, on the carriages he is constructing for the East Lancashire line. In this case, however, the string is to be attached to the Locomotive Steam Whistle, as in the old Croydon plan. Hitherto, arrangements of this kind have not been retained in practical use; because their expediency has been doubted. The demand of the public for something of the kind has however recalled the attention of engineers to the subject, and Capt. Fitzmaurice's seems one of the simplest that can be adopted.

> The ACCIDENT on the SOUTH-WESTERN and that at the Euston Station have, through laborious investigations and evidence on the inquests, led to very simple and concise results, which may be summed up in a few lines. The joint evidence of eminent architects - Messrs. HARDWICK, TITE, and Hosking-shows that carrying up brick-work too fast, while it is green, and making it carry its own scaffolding at the same time, will endanger its stability; and further, that it much depends on the weather how far a given rate per day is too fast. The further evidence of Mr. Gooch, on the South-Western, shows that the engine-driver and fireman of the goods train, if they had used all the means, could have readily and perfectly prevented the accident, supposing them to have scen or heard a signal at 600 yards off. Mr. Gooch took such a train himself, and brought it up in a space very much less. In both cases it is proved that the chief officers and managers of the company could have taken no other precautions than had been done to prevent such accidents; but that greater vigilance, and the example of the accident itself may prevent their recurrence.

From our official returns it appears that the amount of traffic for the last week, on upwards of 3,436 miles of railway, was 148,325l., thus accounted for: — 69,365l. for the conveyance of passengers only, 41,760l. for the carriage of goods, and a remainder of 37,200l. for passengers and goods together, not respectively apportioned; being an increase of 15,049l. over the Roven, as exhibited at the general meeting on | detrimental, because the trains with the north | corresponding week of the former year, when

Digitized by GOGIE

the mileage was 2,680. The average earnings per mile for last week were 43l., whilst in 1817 they were 49l.

AUDITS OF REVENUE ACCOUNTS.

At the present juncture, when the ACCOUNTS for the last half-year will very shortly come under examination, it will not be unseasonable to advert to some views on this chapter which are occupying the newspaper press. The subject was first broached in the Times some time since, by the letter of a correspondent, the invidious purpose of which was seconded by an editorial article. The intent of both was to create suspicions of the fallacy and dishonesty of the accounts periodically rendered of the receipts from current traffic; to intimate that the dividends were only kept at their apparent rate by unfairly charging on the capital expenditure which ought to be deducted from income, before any dividend was declared; and to draw from these assumptions the conclusion that shareholders do not understand or cannot be trusted with their own business; that those, at all events, who determine the result of affairs at general meetings are, as well as the directors, wholly indifferent to the permanent value of the capital invested, being merely interested in keeping up the immediate price of shares; and that consequently in this respect—as in the others for which the same unfailing remedy has been proposed—there is a want of "Government interference.

The "Correspondent" founded his imputations on extracts from the capital accounts of several companies, presented in parallel columns with their current receipts. It was hereby shown, that in most of the instances quoted the half-yearly additions to capital account on that part of the stock which is the subject of a dividend, had equalled or exceeded the gross earnings; and from hence it was concluded that the latter having been relieved by the funding of expenses which they ought properly to have borne, were only apparent profits, the dividends

being in fact paid out of capital.

The conclusion thus arrived at, with a great array of imposing details, was of course eagerly held up to the light by the Times' editors; who for some reason or other have chosen hostility to railway enterprize and railway management in whatever form or direction, as the one subject on which to maintain that consistency, which upon every other that notorious newspaper openly disregards. The leading article on the letter cried out for investigation and Joseph Hume; as if the accounts of the investments made by private individuals were really as proper an affair for the vigilance of public economists as the disposal of the revenues raised by public taxation; and while omitting all notice of the fact that the State has nothing whatever to do with the controll of funds invested for their own profit by individuals who never asked from the State a penny to make them profitable, proceeded to take it for granted that the owners of this money, now that they have raised, are neither able to look after it, nor fit to be trusted with the management of the revenues, which they, and they only, are entitled to enjoy. From this point, once established, the transition, of course, to an entire exclusion of the body from the enjoyment as well as from the management of its enterprize; to a comfortable deposit of the whole in the Commissioners' hands; to the dawn of a golden day of official patronage and pay at the cost of the luckless founders of the system, would of course be imminent. This it is, in fact, at which all these invidious charges and blustering proposals are continually driving.

Some time after the appearance of the double-shotted discharge in the Times, there appeared (this weck) in the Daily News a critique on the mistatement of matters of fact on which the charges and proposals of the former were argued. The writer, who seems to have had some practical knowledge of the business, points out the principle understood to prevail in apportioning the charges on working lines-part to capital, where they are for completing the works or putting the stock on a permanently wider basis; part to revenue, where they are for current expenses on the line so completed, or the working of the stock thus supplied. He further points out that the rendering and controul of these accounts are matters with which the State, having furnished none of the funds, has nothing to do; and expresses a belief that the real owners of the stock have a pretty strong interest in wishing to see it in a permanently sound condition; that they may be quite safely left to practise the means known to be in their power for testing and regulating their accounts; and that there is no ground whatever for Government or Joseph Hume being called in on pretence of defending the railway companies from themselves, but in reality to complete the scheme of elbowing the proprietors out of every part of the possession of their own affairs.

With this view, of course, we cordially agree. As far as the public are concerned—and in this respect only can railway accounts have much claim on the attention of writers for the public press-there is not a shadow of excuse for calling in the officers of Government to examine our balance-sheets, and draw up their own accounts of the profits, which they have long been craving to swallow by one means or another. The Daily News has perceived that the Times has attempted to drag out, as a matter for public dissection, an affair with which none but the railway public have the shadow of a concern; that the business belongs to the latter alone; and that it must be left to it to manage its own business. Here the case of the general journalist of course has an end; and here also-we may proceed to remark-that of our special constituency most properly meets us.

The just and faithful rendering of accounts is a matter that concerns all proprietors: it is one that they have ample power, as well as the most urgent motives, to look after-especially in critical times. At such seasons there is a temptation to try to make affairs look more promising than they really are, - particularly where the pains required to give them real prosperity have on any account been relaxed or lost sight of in the pursuit of other objects. That it is a temptation always fully resisted, we cannot honestly affect to believe. The greater portion of the sums charged to capital account are no doubt of the kind pointed out by the Daily News as truly belonging to the nature of further investment; but to these, others, we apprehend, have now and then been added, in more than one instance, which are properly chargeable to current revenue - which would have been so charged, if the desire to present a better result than the true balance of receipt and expense would allow had not suspended the strict rules of account-keeping. This is a sad mistake—a permanent loading of the property of those who hold for the benefit of those who may want to sell, or for the concealment of errors that it is for the interest of the former to have promptly noted and corrected;—a process altogether improvident, and not a little dishonest-one that we need not call in State auditors to prevent, but that railway proprietors should heartily use the sufficient means they have in their own hands to discourage and to rectify.

We have already said how strongly we desire to see the companies able to make good dividends this half year-to hear of accounts showing good husbandry on the part of the directors: we have pointed out what would be the benefit of such a display at a time like this, what the discouraging effect of a contrary result. But in order to the former being of any value, they must be bona fide statements of complete transactions, not merely such as have been made to look better than they ought to be by shuffling off any part of the true liabilities of the current business. Such fictitious returns of profit will be most injurious, and not in one respect only. They will not only be procured at the expense of permanent injury to the concern in which it may be attempted to throw undue charges on capital account,-already in all concerns sufficiently burdened with its proper liabilities. They will tend to postpone that real understanding of the financial effects of the dealings of past years, that due regulation of future dealings and policy, with an eye to that end which is the root of all railway investment, -which it is above all things needful to have strictly regarded at the present crisis.

The auditors who are called upon to examine balance-sheets at a time in which the temptation we have alluded to is certainly strong, in which the mischief of yielding to it will as certainly be great,-have an office of more than usual responsibility to fulfil. We hope they will feel it to be their duty to look closely at the principle on which the items in revenue and capital accounts have been distributed, for the past halfyear; to insist on the charge being made to income of all expenses that should properly fall upon it, and see that whatever may be divided is really and clearly nett profit, after everything belonging to the working expenses has first been honestly deducted. If good dividends can be procured in this way, so much the better; if they cannot, the case will no doubt be seriously to be regretted; but it can only be made worse instead of being alleviated, by adding present insincerity to what may be deemed a past mis-

Correspondence.

THE HAVRE AND CENTRAL LINES.

In your paper of the 22nd ult., you have an article comparing the Rouen and Havre and Central, and expressing surprise that the difference in price of the shares of these railways should be so great. Now, I think this surprise will cease when you consider their actual conditions. 112 kilometres of the Central were opened on the 20th of July last, and 60 kilometres more in November, making 172 kilometres now opened.

The actual receipt from the 20th of July to the
20th of January (six months) was ... F.1,552,300
Deduct charges of all kinds at 50 per cent. ... 776,150

Profit F.776,150

which is about 12f. per share on 66,000 shares, or within a trifle of 7 per cent. on the paid up capital. There are still 60 kilometres of the best part of this line to open. It will be seen from the above that about a third has only been opened for two months, and yet it pays at the rate of nearly 7 per cent, per annum for the six months. This railway is in fact a continuation of the Paris and Orlcans, through the very centre of France, and under the same management. Continuations of it are now in progress by Limoges, towards Toulouse and the south of France, on the one side, and on the other by Clermont, Lyon, Marseilles, &c. Each year, therefore, must, as these successively open, add to the traffic of the Central Railway; and there appears every prospect of its paying, after a few years, a dividend equal to what the Paris and Orleans now does. This is the second half-year of the Havre; as all have been opened from the first, it cannot be increased in length, being bounded by the sea.

Digitized by GOOGIC

The actual receipts from the 1st of September (being the beginning of the second half-year) F.1.390.718 to the 15th of January, amounted to ... Add six weeks to make up the six months at 450.000 1,840,718

Maddin.

The Commissioners, in acknowledging the receipt of Mr. Hoyes's memorials, decline expressing any decided opinion upon the contents, as the subject is one on which, after the recess, they will make a

special report to the committee on railway bills.

The reduction in the rate of discount by the Bank of England, and the difficulty which railway companies have of borrowing, except at very extortionate rates, are likely to lead, we believe, to some general making of calls. The abundance of money warrants directors to a great extent in prosecuting works already commenced with activity, and thus bringing into profitable working capital which would otherwise remain sunken and idle.

More than one prophecy made by our correspondent, "H. C.," on the parcels question in reference to the Post-office, seems likely to receive an early fulfilment. The Times announces that "some new arrangements, which will be productive of great convenience to the public, have been notified at the Post-office. A third mail, to arrive in London at about 5 p.m., has just been placed on the London and Birmingham, and additional mails also have been recently placed on the Brighton and South-Western. These desirable additions, it is proper to remark, have been effected by the co-operation of the companies, without further expense to the Post-office." That is, more service obtained from railways and less money paid by the

public.
The RAILWAY COMMISSIONERS are becoming a perfect bore to companies, with their calls for idle returns of all kinds. A correspondent observes "the Commissioners alone would keep an office employed, with the nonsensical returns they are eternally calling for, and which no one ever looks at, but my Lord Brougham and Mr. Strutt, I suppose." We hear some most childish inquiries about locomotives have been issued.

In anticipation of the OPENING OF THE LINES TO GREAT GRIMSBY AND NEW HOLLAND early in March, and for the IMPROVEMENT OF THE HUMBER FERRIES, the Manchester, Sheffield and Lincolnshire have purchased, we believe, this week, two Thames steamers, which, during the summer, plied to Greenwich.-We may add that the Furness, in conjunction with Messrs. Fell & Jopling and others, have purchased the steamer Zephyr, which, in the course of a month, will commence running betwixt Liverpool and the Furness, to carry goods and passengers. The communication between the above-named places will be three times a week.

Rumour states that the shareholders in Rastrick's DIRECT LONDON AND MANCHESTER may expect to receive a further 10s. per share.

The Railway Record reports that it is the intention of the directors to open the CHESTER AND HOLYHEAD as far as Bangor, a distance of 61 miles, on the 1st of March. Notice has already been forwarded to the Railway Commissioners. The general meeting is to be postponed until about the 8th of March, when the fact of the opening may be announced to the shareholders.

We have noticed more than once lately the efforts of HULL to meet the coming competition with the new Docks at Great Grimsby. The report of the directors of the Hull Dock Company has just been issued, which states that "the works have made considerable progress during the past year. Out of 860,452 cubic yards, the original quantity of certhwork to be removed only 141.762 cubic of earthwork to be removed, only 141,762 cubic yards remain. Of 2,119 lineal yards of walling comprised in the Victoria Dock and its south basin, 885 yards are now ready for the coping stones, and 553 yards in addition have been raised one third of the intended height. The lock-gates for the 50 feet entrance into the dock have been completed, and are

now ready for being set up, as well as the stank or temporary dam, placed in the same entrance as a matter of precaution against any accident to the cofferdam, in exavating the south basin. The lockgates for the 35 feet entrance are also in a forward condition. The whole of the several interests connected with the ground required for the entrance from the river Hull and drypool basin for the Vic-toria Dock have been purchased, and the money paid to the late respective proprietors, with the ex-ception of what is comprised in a small portion of the quay on the east bank of the river Hull, which will receive the early attention of the directors.

Reports of Meetings. [Continued from p. 87.]

LANCASHIRE AND YORKSHIRE.

Jan. 29 .- Special Meeting, Manchester .- Mr. H. Houldsworth in the chair.

The CHAIRMAN stated that the meeting was called upon to determine whether or not a contract should be entered into within twelve months of the passing of the late extension Act, for executing the works of part of the line called the Liverpool and Bury, com-mencing at Love-lane and terminating at Tythebarnstreet, both in Liverpool. A statement had been sent to each shareholder with his voting paper, explaining the reasons for asking the powers sought. He would only say that it would give them a most convenient central station in Liverpool, abutting on the Exchange, and particularly valuable to passengers by the various steam-boats from Liverpool. Its importance would be further enhanced when the line to Southport was finished as far as Clifton and Wigan, for these places would then possess equal advantages as a communication between Manchester and Liver-The distance between Salford and Liverpool, vid Clifton, would then be 36 miles.

In answer to Mr. Hadfield, the Chairman said

that the project would not retard the payment of dividends on the main line between Liverpool and Bury, which would commence as soon as the line was opened to Tythebarn-street. While they as a company had laboured under all the late difficulties incidental to railway companies, their suspension of works had only been during the winter months—since October, in fact-from inability to command the funds neces-

Mr. Kynaston moved an adjournment, but was informed that such adjournment could not take place, as the Act of Parliament was imperative, this being the last day on which, under it, assents or dissents could be received. Mr. Kynaston would merely men-tion the rumours on which he had wished to move an adjournment, in order that a committee of inquiry might report to a subsequent meeting. These were, first, that the Preston and Wyre had turned out a bad bargain; secondly, that Mr. Hawkshaw, their engineer, had at first proposed terms for this same contract which the directors could not accept; thirdly, as to the reductions made in the salaries of the officials.

Mr. D. PRICE condemned the conversion of his shares in the Belton line into stock which had by sub-sequent Acts of Parliament been subjected to responsibilities which it had no right to bear.

The CHAIRMAN referred to the position of the company and the progress of its schemes, explaining the mode in which the sharcholders of extensive stock were brought into the receipt of dividends as the lines for which that stock was created were brought into operation. As to the Tythebarn-street and Exchange extension at Liverpool, it was estimated to cost 300,000l., but the more likely cost of it would be 400,000L, passing as it did entirely through valuable building property. The half of that expense was borne by the East Lancashire, and the other half by themselves. Of their half, one moiety again would be ruised on mortgage. If rumours adverse to the directors had been circulated, the shareholders must remember that they themselves had sanctioned all the schemes in which they had engaged for the last By these schemes they had 233 miles to execute within two years; that is, schemes belonging to their own, or which they were to do jointly with other lines. Nearly two-thirds of that amount of work had been completed and was ready to be opened for traffic. Of course on it they had mainly concentrated their means; -33 miles were in progress, going slowly towards completion, and on 100 miles more they had entirely suspended operations. Had all these lines been pushed on at once they would certainly have been blamed for rashness. He (the chairman) had certainly foreseen the evils which had since overtaken the country, though he had not thought they would be of their present extent. But the chief blame attached to Parliament for sanctioning so many schemes in 1845. He had given advice by which that

evil might have been greatly mitigated, but it had not been listened to. He attributed the first appearance of the pressure in the money-market to the suspension by the Bank of England of its discounts in April last, which gave the first shock to public confidence. In the month of May the directors resolved to reduce the expenditure from 200,000l. to 130,000l. In June the directors intimated that they were anxious to borrow money; and in the month of July they received offers of a sum amounting to July they received offers of a sum amounting to 209,000l. on loan. They were receiving capital about 180,000l. a month, and by the reduction he had mentioned they were enabled to continue their works during the summer. They had brought them to a stand-still in October, since which time they had done little or nothing, and reduced the expenditure to a merely nominal amount. He felt bound to say that the railway, as a security, presented the best-security for mortrage investments. On 100 miles, security for mortgage investments. On 100 miles, raised by a capital of 7,500,000*l*., they had mortgages to the amount of 1,700,000*l*., at 5 per cent., which was a better security than the funds themselves; and if the funds were regarded highly as a security— which they ought to be—so was their railway pro-perty, in the centre of the most enterprizing and industrious part of the country, the revenue of which could only fail with the general revenue of the nation. Parliament could do much to relieve the money pressure by extending the time of repayment of loans in anticipation of calls for several years beyond 1849, when they were payable. The directors had given up their right to the 3,600l. granted to them for their services, and the salary of Mr. Hawkshaw and other officers had been reduced one-half. An arrangement had been made with Mr. Hawkshaw, by which his services were secured as general manager of the line. He begged to say that all the rumours which had come to his ears in regard to the line and its affairs were wholly untrue; and that the condition of the line was such as he could assure the proprietors presented no difficulties which would not be got over when the money pressure was past. If the share-holders should at any future period determine upon a committee of inquiry, as mooted by Mr. Kynaston, the directors would be perfectly prepared to give any explanation that might be required.

After the year porting votes had been passed it

After the usual routine votes had been passed, it was discovered, by an accurate scrutiny, that the votes were as follows:—In favour of proceeding with the extension, 96,913; against it, 7,514. The extension will therefore be proceeded with.

EAST LANCASHIRE

Jan. 31 .- Half-yearly Meeting, Bury .- Mr. J. GRUNDY in the chair.

Jan. 31.—Half-yearly Meeting, Bury.—Mr. J. Grundy in the chair.

The Secretary read the Report. It stated that—
Since the 31st of December the arrears of salls have been reduced to the sum of 37,300%, and now that the monetary pressure is considerably relaxed, the directors trust that ere long the amount now due for calls will be further reduced. From the secretary's circular of the 27th of November last, it will be seen that the Board has considered it expedient to modify the arrangement previously acted upon in paying interest on calls—a modification authorized by the provisions of the company's Acts, and founded upon just principles. The nett profit from the working of the lines now importation during the past half-year amounts to the sum of 14,4031 19s. 9½/—a result which, keeping in view the commercial depression, affecting, during the past half-year every branch of manufacturing interest in this district, and also the incomplete state of the line, the directors consider satisfactory; it shows a clear profit of 4 per cent, upon the cost of the lines now working. The dividend of 5 per cent; due on the quarter shares, amounting to the sum of 1,021/, is payable out of the balance of the revenue account; but as the residue of the company's capital hears interest, the directors propose to appropriate the remainder of this balance to general purposes. The working expenses for the half-year amount to about 40 per cent. on the gross receipts. The directors can assure the shareholders that it has not been without the exercise of the most rigid economy that they have been able to keep the working expenses, the directors continue to feel the prejudicial effect of the incomplete state of the greater portion of the company's undertaking. The Blackburn and Preston, and Manchester, Bury and Rossendale lines are entirely unconnected, which occasions an increased expenditure in the working of the traffic. plete state of the greater portion of the company's understaking. The Blackburn and Preston, and Manchester, Buryand Rossendale lines are entirely unconnected, which occasions an increased expenditure in the working of the traffic. At one period of the past half year the directors were underthe apprehension that the works must be suspended to an extent that would have postponed indefinitely the opening on the remainder of the line. Such a suspension has been avoided, although the directors have curtailed the expenditure on the works during the winter considerably: the progressive return to a healthlier commercial and financial condition will enable the Board to secure future satisfactory progress. On referring to the report of the engineers, the sharcholders will be informed of the present state of the works under contract, and it appears that in the course of the present year the undertaking may in the main be completed. The shareholders are aware that the works on the Liverpool Bock branch have not yet been commenced. This branch is under a mile in length, and the whole of the land (with the exception of a very small portion) required for its construction has been purchased. The estimate for works is rather under 70,0004, and as the line is to be

Digitized by GOOGIC

executed on the joint account of this and the Lancashire and Yorkshire, one half of the cost will be borne by the latter company. The directors consider it expedient to proceed with the execution of the works immediately, as the line connects your undertaking with the docks at Liverpool, and is alsolutely necessary for the accommodation of your goods traffic at that port.

The statement of accounts showed the total expenditure upon capital account, 1,733,914l. 18s. 6d., and that the directors had in hand upon that account, and that the directors had in hand upon that account, 98,866l. 10s. On revenue account the receipts for the past half-year had been 26,315l. 2s., and the working expenses 11,909l. 2s. 2½d., leaving a nett profit, as above stated, of 14,405l. 19s. 9½d.

The Chairman, in moving the adoption of the Report, after adverting to the falling off in the pastencer-traffic said that since the last meeting they

senger-traffic, said that since the last meeting they had only been able to borrow 15,000l., owing to the depressed state of commercial affairs. The calls, however, which the directors had been compelled to make had been well met, and since the accounts were made up the arrears had been reduced by 49,000*l*. The Chairman dwelt upon the necessity of a new terminal station in the town of Preston, which and he concluded by showing that, instead of the Liverpool and Bury line being injurious to the East Lancashire, it would have a contrary effect, inasmuch as the traffic would all have to pass over a portion of the East Lancashire line.

In answer to Mr. Armitage, the Chairman said, that it was true that overtures had been made by the London and North-Western for the lease of the line. The proposal came from an individual director of the London and North-Western, and the offer was, a lease at 6 per cent.; but that proposal was clogged with a provision which the directors of the East Lancashire never could entertain—that the London and North-Western should at any time hereafter, if they thought fit, have the power of paying off the East Lancashire shareholders at par.

Mr. RAND, in seconding the adoption of the Report, bore testimony to the zeal of the directors.

In answer to Mr. VANCE, it appeared that the average rate of interest at which the company had borrowed money was 43 per cent. The delay which had occurred in opening the line was owing to adverse weather and had soil. weather and bad soil.

Mr. Vance, at great length, opposed the payment of interest to the holders of the quarter shares, as the shares were created with the understanding that they should not bear interest until the year 1850; and moved an amendment, that that part of the Report referring to the payment of interest on the quarter shares should not be adopted.

The amendment fell to the ground for want of a

seconder, and the motion for the adoption of the

Report was then put and carried.

The retiring directors having been re-elected, a resolution was carried, for paying 5 per cent. to the holders of the quarter shares.

Mr. GRIEG then brought forward a motion for

prohibiting Sunday travelling, which was negatived.

The meeting was then made special, when 485 shares were declared forfeited, upon which 2,268l. had been paid, but upon which 7,000l. was due.

COCKERMOUTH AND WORKINGTON.

Jan. 28.—Half yearly Meeting, Cockermouth.—Mr. J. W. FLETCHER in the chair.

Mr. JACOB, the secretary, read the Report, which

Mr. Jacob, the secretary, read the Report, which said—

Your directors, in presenting the shareholders with the fifth half-yearly Report, think there is every reason to be encouraged by their present and prospective position. Although the passenger returns have hitherto materially exceeded the original estimates, yet the chief resources of the company, consisting in the transit of goods and minerals, are still but very partially developed. The improvements for the accommodation of Workington Harbour are progressing satisfactorily; and the increased demand for coals and lime likely to be consequent on the extended facilities for its exportation and supply, give good ground for anticipating the realization of all the expectations of the projectors. The directors have hitherto been unable to secure the revenue from the transit of lime, in consequence of the season for its shipment being nearly over before the station at Brigham and the necessary conveniences at Workington were completed. The importance of maintaining the working expenses at the lowest practicable limit has claimed the close attention of your directors; and reductions have been made compatible with the safe and efficient working of the trails. During the balf-year upwards of 41,000 passengers have been conveyed over the line. The trains have hitherto worked with great regularity, and no accident has occurred. The statement of receipts and except the safe and efficient working of the trails. During the balf-year upwards of 41,000 passengers have been conveyed over the line. The trains have hitherto worked with great regularity, and no accident has occurred. The statement of receipts and except the safe and efficient working of the trails. Part of the latter amounting to 687t, 15x, 3d, which, added to 153, 7z, 2d., the balance of last half-year, gives a total of 841l, 2z, 5d, available for the purposes of a dividend. A portion of the expenses—viz., for tola may be a subject, and he found that in one case which had been reported to him the receipts an

free of income tax, be paid and payable on the 13th of February next.

The Secretary also read an abstract of the ac-

counts of the company, divided under the usual heads. The capital account showed the receipts on the five calls, up to the 31st of December 1847, at 72.870*l.*; amount borrowed on mortgage debentures, 26,660*l.*; transfer fees, 3*l.* 5*s.*; and rents, 18*l.* 17*s.*—giving a total of 99,558*l.* 2*s.* The total disbursements to the same period, 109,857*l.* 2*s.* 1*d.*; balance on the capital account, 10,299*l.* 0*s.* 1*d.* against the company. The revenue account to the 30th of June last, shows a balance in that department of 153l. 7s. 2d. in favour.

Mr. J. CLEMENTSON wished to ask the chairman, as a coal proprietor, whether he and the other coalowners using the line had shipped, during the last few months, a quantity equal to what they had done during the

same period of the preceding year. The CHAIRMAN replied that they had shipped a great deal more than in the preceding year, but this was owing to the difficulty they then experienced in getting their coals conveyed by carts. Taking the last few years into consideration, it might be considered a fair average.

A desultory conversation took place respecting the best means of increasing the merchandise traffic, the state of the coal trade, &c., and—

Mr. Gibson eventually moved that the Report and statement of accounts be adopted, which was carried unanimously.

WHITEHAVEN JUNCTION.

Feb. 1 .- Half-yearly Meeting, Whitehaven .- Mr. W. MILLER in the chair.

The directors' Report declared that the receipts during the past half-year amounted to 5,611l. 14s., and the working expenses to 3,288l. 9s. 6d., and that 2,323l. 6s. 6d. had been carried to the profit and loss account, which left a balance of 1,546l. 6s., out of which they recommended the payment of a dividend of 6s per share, less the income tax. Her Majesty's mails had been carried on the line since May last, but as the amount of compensation had not yet been settled, the directors had left this item out of the accounts. The capital account to the 31st of December 1847 showed that 148,6967. 16s. 11d. had been received, and 147,0957. 6s. 2d. expended, leaving a balance in hand of 1,6017. 10s. 9d. The number of passengers conveyed was 120,284. Arrangements had been entered into with the Whitehaven Steam Navigation Company and the Maryport and Carlisle for the transit of goods between Belfast and Newcastle and Liverpool and Newcastle, via Whitehaven and Carlisle, from which a considerable increase of traffic was anticipated. The works on the line were in excellent order, though exposed to some very severe storms during the winter. Respecting the unfinished works on the Whitehaven contract, it was stated that an arrangement had been made by which the contractors were to pay the company 550l, to take the works off their hands. To meet present liabilities the sum of 12,000l, was required, and the directors were negotiating a loan to that extent. Application had been made to Parliament for power to raise additional capital, and also to extend the line to the harbour at Whitehaven. It had been deemed ad-

visable to apply for separate bills for these purposes.

The Report was adopted, and the directors empowered to carry out its recommendations.

The meeting was afterwards made special, and drafts for the bills recommended in the Report were

Driffield, which was only 25 miles in length, there were eleven paid directors. He argued that under existing circumstances it was highly necessary that there should be a reform in the directory. The result of experience was that small boards of directors and small committees worked better than large ones, and he concluded by moving an amendment, more to raise the question than otherwise, that the number of directors be reduced to three.

Mr. Holmes seconded the amendment.

The CHAIRMAN and other Directors replied that the present Board had been united, and had worked together from the commencement of the undertaking; that they had asked of the shareholders a less acknowledgment for their services than their Act of Parliament authorized them to receive; that the cost of their Act had been comparatively small; that considerable saving had been effected by the directors doing work which, strictly speaking, clerks might have been employed to do; that during the late crisis their number had been found to be a great advantage in the way of assistance and encouragement; and that if their number were reduced they should resign, and that most happily, their situations.

Eventually it was found that a clause of the Act

rendered it incompetent for the meeting to entertain the amendment without special notice. The Report the amendment without special notice. The Rep was therefore received and adopted unanimously.

Four of the directors, who retired by rotation, were then re-elected; a number of shares were declared forfeited.

COVENTRY, NUNEATON, BIRMINGHAM AND LEICESTER.

Feb. 1 .- Half-yearly Meeting, Birmingham .- Mr.

F. LEDSAM in the chair. Mr. WATKINS read the Report, which set out by re-

gretting that a sufficient number of shareholders had not assembled to form a meeting at the close of the last half year. Since the meeting held in October 1846 successful application had been made to Parliament for powers to legalize the sale of the shareholders interest either to the London and North-Western or Midland, and the Act, which received the royal assent in 1847, authorized the completion of such sale on the conditions therein named. directors, immediately after taking office, gave orders for a re-survey of the line, and several amendments, by their engineer, Mr. Gooch, were made. The line, as so amended, has been set out, and the working plan and sections are in a forward state. It subsequently declared that by a clause in the Act, authorizing the sale and purchase of the line, the company are prohibited from availing themselves of the powers of sale until one-half of the whole capital is called up and actually expended in the formation of the railway. As the provided in the companied of the railway. As the proprietors in the companies of which the Coventry, Nuneaton, Birmingham and Leicester was composed have paid up, in deposits upon their shares, the sum of 104,000*l*. only, and are credited accordingly in the books of the company, it will be necessary to call up a further sum to expend it and the balance in hand upon the construction of the line, prior to disposing of their powers and privithe line, prior to disposing of their powers and privileges. As the Act for the construction of the line does not provide for the allowance of interest upon the deposits and calls, and as many of the shareholders have pressed upon them the desirability of concluding as speedily as possible, by a compliance with the provisions of the Act of 1847, the arrangement which has already been approved, the directors have deemed it their duty to make a call of 11.12s. have deemed it their duty to make a call of 1l. 12s. per share, and to determine upon other proceedings for fulfilling the intentions of Parliament. The directors, considering it advisable to provide against the large of the company represente apply the lapse of the company's powers, propose to apply to the Railway Commissioners, under the recent Act, for an extension of the time allowed for the purchase of lands and the completion of the line. The statement of accounts showed exenditure at 6,549l. 4s. 1d.; balance in hand, 57,060l. 18s. 5d.

The Report was adopted, and the retiring directors were re-elected, with the exception of Mr. Ridway, for whom Mr. J. Ellis, of the Midland, was substituted.

SHREWSBURY AND BIRMINGHAM.

Jan. 28.—Special Meeting, Wolverhampton.—Mr. W. O. Gore, M.P. in the chair.
The directors' Report stated, that by the Act the consent of the shareholders was required previously to entering into contracts for certain of the works, and thus continued: and thus continued:-

and thus continued:—
The directors, considering it to be for the advantage of the sharcholders that the works on the main line from Shrewsbury to Wolverhampton should be finished with as little delay as possible, so as to realize as early a return as practicable on the outlay, have no intention of using the capital at their disposal for other works, so as to impede that result. At the same time it must be kept in mind that the branch line from Shiffual to Madeley and Ironbridge is

mately adouted.

The meeting was adjourned.

The suggestions contained in the Report were ulti-

ST. HELEN'S CANAL, &c.

Jan. 29.—Special Meeting, Liverpool, for the purpose of determining whether any contract shall be

entered into for executing the new works of the rail-way from Widnes to Garston, and the proposed Gars-ton Docks.—Mr. G. GREENALL, M.P. in the chair.

they had not yet commenced any new works; and as

that hat was still in force, the directors wished the sanction of the shareholders for proceeding, so as not to be affected by any subsequent Acts. The shareholders should place them in a position to enter into contracts for a portion of their new works which they thought desirable to forward. It would be for

The CHAIRMAN said that the company had obtained two Acts for the construction of works—one in July 1846, and the other in 1847. Under that of 1846

्राच्य (त्या (त्या (त्या

EB. 5

Ted Sec

ü

they thought desirable to forward. It would be for the interest of all parties to proceed with the pro-posed works. Under the Act of 1846 they had power to raise 240,000*l*. in shares, and 80,000*l*. by loan, in order to form the dock at Garston. The formation of this dock involved a large portion of the estimated sum. They wished to commence at once with the dock and that part of the proposed line which was the heaviest (viz., from Widnes to Garston), in order that the whole of the works wight he

that the whole of the works might be opened simultaneously.

Mr. Jones asked if the chairman could say what the probable amount of calls might be during the next

twelve months. The CHAIRMAN replied that, knowing the pressure existing, the directors would not make more calls than were really necessary, but he could not name any particular amount that might be called for.

The assents and dissents were then handed in.

The CHAIRMAN made the number to be-assents.

1,665, dissents, 87—a much greater proportion of assents than the Act required. He declared those numbers correct, and the directors had therefore

power to proceed with the works.

Mr. Connah desired to know what further portion of the 25t. shares would be required in future.

The Chairman replied that the present contract

for the alterations of the incline amounted to 20,000%. Already 51, per share had been paid. Perhaps in

sheap 3t. per share had been paid. Perhaps in twelve months they might call for a further 5t. per share. The alterations were most satisfactory. They would be able to save 2,000t. per year by them, which would materially improve the value of the property.

EDINBURGH, LEITH AND GRANTON.

Jan. 31.—Half-yearly Meeting, Edinburgh.—Mr B. D. Sandford in the chair. The directors' Report announced that they had little to add to the information afforded at the special meeting, on the 28th of December last. In the in-

the deed of submission had been amicably adjusted and signed, and an arrangement concluded with the Edinburgh and Northern to apply to the Railway Commissioners for the certificate of amalgamation, without the delay of an appeal to the referee

The traffic was not yet fully developed, but additional facilities were about to be afforded, and no doubt was entertained that former anticipations of return would be realized. The number of passengers during the past half-year amounted to 480,808, being an increase over the corresponding period of last year of 286,150. The total receipts were 7,572t. 18s. 1d. The working expenses had been heavy, but with due economy the

Intended to accommodate the important traffic between South staffordshire and the Coalbrookdale district, and that the traffic on the main line must be considerably increased when this branch is opened. If these objects can be effected without an immediate outlay on the part of the proprietors, it will obviously be their interest to avail themselves of any such opportunity. The directors have accordingly to report that they have received offers from the principal landowners on the line to receive the company's debentures for the land required; they have also received an offer from a most respectable contractor to enter into a contract for the works on advantageous terms, and to receive a considerable part of the amount in a like manner. It is therefore on the condition that such contracts shall not increase the amount of calls during the present year, that the proprietors were asked to sanction the same. The other contract proposed to be entered into, for the station at Wolverhampton and junction with the main line, will involve a much smaller outlay of capital, and may be required for the completion of the main line, as it is at present uncertain which lines will first be completed beyond Wolverhampton—whether the Birmingham, Wolverhampton and Dudley, in connexion with the high-level station, or the Birmingham, Wolverhampton and Dudley, in connexion with the low-level, by either of which this company will secure a continuous line to Birmingham.

The suggestions contained in the Report were ultidown as 354,000l., instead of 300,000l., the capital under the original Act, he thought it consistent with the proceedings adopted at the special meeting simply to express his dissent from this part of the Report. The expenditure appeared to him to be double that of any other line.

Mr. PEDDIE remarked, that the expense of making a short line was comparatively much greater than upon a long one. The tunnel itself was a great expense. Besides, the same staff that was required to work the present traffic would be sufficient were the traffic upon the line increased tenfold.

The CHARMAN had made a calculation before coming to the meeting, and thought the expenses might be reduced to 2001. a week.

Mr. Munro said that the calculation which he had

made brought the expenses down to 150l.

The CHAIRMAN mentioned that the company had within a few days, received an offer of 10,000 tons of coals from one house. Other offers of traffic had also been received.

Mr. MUNRO asked when the directors would retire

from the management.

The CHAIRMAN replied, that the directors would retire when the certificate of amalgamation with the Edinburgh and Northern was received.

KILKENNY AND GREAT SOUTHERN AND WESTERN,

Feb. 4 .- Half yearly Meeting, London .- Mr. J.

Wise in the chair.
The Secretary read the Report, which stated that The Secretary read the Report, which stated that repeated attempts had been made to hold meetings in the years 1847 and 1848, but, owing to the non-attendance of the proprietors, they fell to the ground. The directors did not recommend the adoption of any active measures at present, and had applied to the Commissioners for an extension of time. The expenses had been reduced, within their utmost limits, and the liabilities were of such an amount as to necessitate a call for 10s. per share.

call for 10s. per share.

The statement of accounts showed the receipts at 16.974l. 2s. 5d.; expenses, 16,651l. 17s. 9d.; and the balance in hand, 322l. 4s. 8d.

The CHAIRMAN being previously acquainted with the country could bear testimony to the importance of the line to all parts of its district, as it would be a direct communication between Kilkenny. would be a direct communication between Kilkenny, Dublin and Limerick, and, ultimately, he hoped, with Galway, and all the western part of Ireland. The Great Southern and Western line had rapidly carried on their works, and this increased the desire that the communication between that line on the one side communication between that line on the one sace and Kilkenny on the other should be completed. Looking at the late distress in Irchand, it was not to be expected that there would be any surplus capital be expected that there would be any surplus capital to apply to objects, even of such admitted utility as this line. He trusted, however, that the condition of Ireland had during the last year reached the lowest point, and that they might look forward to better times, and should this hope be realized this and other similar projects for the permanent improvement of the country would be carried out. This it should be borne in mind was no mean speculative scheme, it was one for forming a really necessary communication between one of the richest districts of the country. A district well inhabited throughout; and the coast on each side. The directors had informed the shareholders that they did not propose to prosecute the works at present—that they intended to wait for better times, and that in the mean time the expenditure would be limited to the smallest possible amount. The directors received nothing for

A gentleman wished to speak to the accounts, as proxy for a shareholder. He was himself a shareholder as an allottee in the original line (the Galway and Kilkenny), but would not admit himself to be a shareholder in the present company. The CHAIRMAN said that he could not be heard, except as a shareholder, which the directors admitted him to be; and on his refusal to speak in this character he was not heard.

It was afterwards intimated by the CHAIRMAN that a claim had been sent in that morning for 1,000%, which, if found to be correct, would increase the

liabilities to 6,000l. Mr. White, a shareholder, said that it had been reported out of doors, that the 16,75%, said to be subscribed, had never actually been deposited previous to proceeding with the bill, and thus the Act had been obtained by fraud.

The Secretary said that there was not a word of truth in that statement; the money had actually been

deposited.

Resolutions adopting the Report and balance-sheet, The Chairman, seconded by Mr. H. Bruce, moved the adoption of the Report, which was agreed to.

Mr. Munno said that observing their capital set a syear were then passed. for reducing the number of directors to nine, and for fixing the maximum of the secretary's salary at 3001.

In reference to the last, the CHAIRMAN said that the secretary would accept 100l. a year only until the company should be in a better position.

PARIS AND ROUEN.

Jan. 29. -- Half-yearly Meeting, Paris. - M. DE

L'ESPEE in the chair. The SECRETARY read the Report, which stated that the loans authorized by the general meetings, and amounting in all to 11,000,000f. (440,000), had been expended. A sum of 8,000,000f. (320,000), has been laid out on improvements successively called for by laid out on improvements successively called for by the increasing traffic of the line; and the remaining 3,000,000f. (120,000L) over and above the 4,000,000f. (160,000L) allowed by the State, had been appropriated to defray the additional cost of the passage through Rouen. The advantages arising from the extension to Havre were amply sufficient to compensate for the additional expense thus incurred. Since the opening of the Rouen line it had not been necessary to expend anything in strengthening works. Since the opening of the Kouen line it had not been necessary to expend anything in strengthening works, all had remained perfectly sound; but large additions to the moveable stock, and more extensive accommodation at the stations, had been provided, in consequence of the immense increase in the traffic; very important sidings had been constructed to prevent accidents which otherwise would be likely to occur accidents, which otherwise would be likely to occur, when the number of trains had been increased from four to twenty per day. The movement of the goods, which in one year after the opening averaged about which in one year after the opening are agon about 210 tons a day, had now reached 900, and even 1,500 tons had been attained in a single day. The return given by the line on the capital invested was advancing given by the line on the capital invested was advancing satisfactorily, having been hitherto from 6 to 8 per cent., and in the last year upwards of 10 per cent. The receipts from the 1st of July to the 31st of December 1847, amounted to 5,356,593f,51c. (214,263L), cember 1847, amounted to 5,356,593f. 51c. (214,263L), being an augmentation on the corresponding six months of 1846 of 598,819f. 94c. (23,952L). The expenses from the 1st of July to the 31st of December 1847, had been 3,031,503f. 12c. (121,260L), leaving a profit of 2,331,738f. 91c. (93,209L), or, after all calls of interest, sinking fund, &c., had been provided for, yielding a dividend of 28f. 15c. per share (that in July last was 23f. 25c.). The expenses on the leat size yielding a dividend of 28f. 15c. per share (that in July last was 23f. 25c.). The expenses on the last six months exhibit an increase of 367,554f. 23c. (14,72l.), which being deducted from the 508,819f. 94c. (23,952l.) of augmentation in the receipts, leaves a nett increase of 231,265f. 71c. (9,250l.), principally caused by the opening of the Havre line. The Report then details at much length the various sources of traffic and the proceeds thereon belonging to the line. It afterwards relates the items of the working expensive It afterwards relates the items of the working expen-It afterwards relates the items of the working expenditure, and presents a comparative account of the receipts and expenses in 1846 and 1847. The expenses of the working property, so called, are diminishing, having been 42f. 14c. per cent. in 1846, whilst in 1847 they were only 39f. 55c. per cent. The suits brought by the waggon and river conveyance companies against the company had in both cases failed; and the difference existing between the municipal corporation of Rouen and the company, relative to the double station, remained undecided, the municipal body having, it is said, some intention of carrying the matter before the Council of State.

of State.

After some questions had been asked relative to the new plan of distributing the sinking fund over the whole length of the concession, the accounts were passed, and the dividend of 28f. 15c. per share voted payable at the banking-house of Messrs. C. Laffitte, Blount & Co., on and after the 7th of February. February.

DUBLIN AND BELFAST JUNCTION .- Feb. 2 .- Meeting of Shareholders, London .- Mr. Donkin in the chair. -Mr. Spackman had summoned the meeting respecting "an offer made by the Newry and Enniskillen to purchase the unmade portion of this line from Porta-down to Gorahwood," and also to decide on the necesdown to Gorahwood," and also to decide on the necessary steps to be taken "to secure the representation in the directory of the Dublin and Beliast Junction of the interests of English shareholders," who are alleged in the circular to hold "more than one-half of the entire stock of the company, and at present wholly unrepresented."—Mr. Spackman explained at length the reasons, in the opinion of proprietors holding the property of the present whose interests are the present the commany, whose interests more than 3,000 shares in the company, whose interests he (Mr. Spackman) represented, that some equitable arrangement should, if possible, be effected between the two companies. Two lines were wholly unnecessary, and unless some arrangement like that proposed were brought about, the property embarked in both would be lost, or, at any rate, rendered unproductive by the competition. The directors were not indifferent to the present movement. By an official letter, signed by the secretary and read to the meeting, the directors earnestly desired" the shareholders to abstain from

signing "any document which might be placed before them by any committee," and requested them to delay their decision until the general meeting, to be held at Dublin on the 23rd of this month.

—A resolution was unanimously passed in favour of some equitable arrangement being made with existing companies, omitting, however, any particular mention of the Newry and Enniskillen. A further resolution, declaring the necessity of a more complete representation in the direction of the English shareholders' interest, was also unanimously passed; and Mr. Spackman was requested to communicate the result to the directors in Dublin.

SALISBURY AND YEOVIL.—Feb. 1.—Meeting of Inhabitants, Shaftesbury, to petition Parliament in favour of the above bills now before the house, in reconnexion with the London and South-Western line. There was a deputation from the London and South-Western, including the chairman, Mr. W. J. Chaplin, M.P., Mr. J. Locke, M.P., and others.—Mr. Chaplin said that the deposits required by Parliament had been paid in, amounting to more than 100,000t., and every other Standing Order complied with; that the South Western was quite sanguing as to the hell South-Western were quite sanguine as to the bill passing both houses. When the bill had passed the works would be commenced immediately.—Several sentlemen spoke in favour of carrying through this line to Yeovil and Exeter, as being the most direct. Shaftesbury has so greatly suffered during the last few years by being shut out from such transit, that ats trade has been reduced nearly one half .-- A petition was agreed to.

Miscellanea.

In answer to much contradictory discussion as to the actual powers of raising money by way of loan which are legally vested in the EASTERN COUNTIES, the Railway Times observes that the clear "borrowing power" of the company amounts to 1,740,000l.; the amount of all their bonds and debentures at the the amount of all their bonds and debentures at the present time is 620,000l. There remains, therefore, a clear available surplus to be raised by way of loan to the extent of 1,120,000l. If the absence of incumbrance be any evidence of valid security, now that the question of the use of capital is so important, it would seem that this company has the merit of being these except hard with most tagged lebt, than any other less encumbered with mortgage debt than any other of similar standing. The above statement is without any reference to the powers of borrowing which the company derive in respect of the York extension share

capital. POST-OFFICE PARCEL TRAFFIC.—By way of illustration of the statement that the Post-office has already obtained a considerable PARCEL TRAFFIC, arready obtained a considerable PARCEL TRAFFIC, which most naturally would seem to belong to railways, we may enumerate from an official return the following collection of articles found in "dead" letters—that is, letters unclaimed:—The articles are of the most varied character, some of them of bulk and description little calculated for transmission per post. There are trinkets of all kinds, silver spoons by the dozen, spectacles, watches, waistcoats, shirts, soda powders, artificial flowers, books, snuff-boxes, fiddle strings, dish mats, petticoats, old clothes, fishing flies, razors, pictures, night gowns, a clarionet, bruss weights, buttons, window curtains, a whistle, prayer and other books, bunches of keys, bradawls, scissors, and a panorama. The more portable articles consist chiefly of lace and Berlin work in the form of scollars, cuffs, dolls' things, and purses. Besides the above, of documents and papers there are wills, railway and other shares, a Greek manuscript, subpoenss, a vast number of pawn tiskets, and postage stamps innumerable. The number of money orders undelivered is 346, for cash to the amount of 4071.

12s. 8d. The return from Scotland is quite characteristic of our more careful neighbours. The valuables undelivered and remaining in the General Post-office which most naturally would seem to belong to railperistic of our more careful neighbours. The valuables undelivered and remaining in the General Post-office undelivered and remaining in the General Post-office in Edinburgh on the 5th of January 1847 consist chiefly of coin and bank notes—4l. 16s. 1d. of the first, and 13l. 10s. of the latter, and only 10s. worth of other property, all contained in 89 letters. Only five epistles containing money orders are among the "dead," for sums amounting to 3l. 17s. 9d. In the II-sib General Post-office are 457 undelivered letters, extensions propagaty valued at 4691 9. 11d. Secret entaining property valued at 462l. 9s. 11d. Several of these missives contain "a free passage to New York." The number of unclaimed money orders is 64, for 88l. 14s. 9d. In the London General Post-office 64, for 881. 14s. 9d. In the London General Post-office there are 4,201 letters lying in the Dead Letter-office, containing property valued at the almost incredible sum of 40,410l. 5s. 7d.; this has accrued during the last three years. When all inquiry is found unavailing, the letters are kept three years, to give time for application for them, after which period segment of the property as consists of money is paid so much of the property as consists of money is paid into the revenue.

SUMMERLY's

ART-MANUFACTURES.

Art-Manufactures aim to produce in each article superior utility, which is not to be sacrificed to ornament: to select pure forms: to decorate each article with appropriate details relating to its use, and to obtain these details as directly as possible from Nature. These principles are by no means put forward as forming an universal rule; but it is thought they may be adhered to advantageously in most Articles of Use, and may possibly contain the germs of a style which England of the 18th century may call its own. Several of our best Artists have already expressed their willingness to assist in this object, among them may be named—

John Bell, Sculptor.
C. W. Cope, A.R.A.
T. Creswick, A.R.A.
W. Dyce, A.R.A.
J. C. Horsley.
J. R. Herbert, R.A.
J. C. Horsley.
The Art-Manufactures will be of all kinds, and executed in metals, pottery, glass, wood, papier maché, and other materials.

Those now ready are—
A Bride's Inkstand, in Parian, with Tazza.
Designed by John Bell, price 14. 134, and upwards. Also in Bronze,
equal in make to the old Florentine, with papier maché tray,
G. 6s. and upwards: in Silver, 35 Guineas.

Kissing Children, surmounting a Paper Weight, a Paran, 9s.; in Bronze; and also a Loving Cup. in Parian, 9

Boy and Dolphin as a Seal or Paper-knife Handle, ith gilt flax-blade, 24, 5s, and upwards.

A Beer-Jug, in Parian: emblematical of the Gathering Storing and Employment of the Hop. Designed by H. J. Townsend, price 18.; or with extra Figures, 30. **
****Size The Gold Medial of the Society of Arts was awarded to Messrs. Minton & Co., the Manufacturers, for the Union of Superior Art and Manufacture which this Jug displays.

The Infant Neptune. Designed and modelled to II. J. Townsend, 27s. in Parian; also in Silver, and Silver ilt, 25 Guineas and upwards.

A Water Jug, in Glass. Designed by R. Redgrave, R.A., at various prices; also Goblets to match, price 10s, each, he Vase on a smaller scale will be executed in Porcelain.

The "Bitten Tongue"—a Mustard Pot, in Porcelain and Parian. Modelled by John Bell, price 2. The figure will also be applied to a Silver and Plated Metal Mustard-pot.

A Pair of carved Wooden Brackets, by Taylor, Williams and Jordan, price 5t. 5s. Dorothea, a Statuette, in Parian. Modelled by John Bell, price 24, 28; also in Bronze.

"Purity," or Una and the Lion, a Statuette.
Designed and Modelled by John Bell; a companion to Danceker's
Ariadne, or "Volaptuousness," price 33.38.
The Lyon would not leave her desolate,

ith her went along, as a strong gard Of her chaste person.
—Spenser's Faerie Queene, booke i. canto iii.

A Bust of the Duke of Wellington as at vaterloo. Modelled by S. Joseph, price 11, 11s. 6d.

The Milk Jug which received the Prize awarded by the Society of Arts in 1846, Designed by Felix Summerly; exe-cuted in Porcelain and Glass: also in Silver by Messrs. Hunt & Roskill, 156, New Bond-street.

Roskill, 136, New Bond-street.

Fish Carvers, by John Bell, in Silver, 11 Guineas, made by Joseph Rodgers & Sons.

Wine Tray, which fixes the Decanters. Designed by R. Redgrave, and made by J. Cundall, 12, Old Bond-street; by P. & D. Colnachi, 13, Pall Mall East; Barry & Son, Egyptian Hall, Piccadilly; G. Bell, 186, Fleet-street; J. Mortlock, 250, Oxford-street; J. Phillips, 208 and 239, Oxford-street; J. Franant, 149, Strand; J. Green, (late Brumby's), 19, St. James's-street; and Jennens & Bettridge, 3, Halkin-street West; and all Dealers.

A Catalogue sent on receipt of two Postage-stamps.

SATURDAY, FEBRUARY 12.

LONDON AND SOUTH-WESTERN EXTENSIONS.

Mr. Hoyes-whose memorials to the RAIL-WAY COMMISSIONERS lately gave us an occasion for some general remarks, as to the effect, in certain cases, of large additions to capital on shareholders of limited means-has since published, in the Morning Herald, a letter to his fellow proprietors on the subject of his com-This address, however, contains plaints. nothing on the matter of fact beyond what was alleged in the memorials; and throws no new light on his position, with regard to the proceedings of former years, except in so far as it admits that he did at one time advise the company to take the extension lines into their own hands, instead of supporting their formation by allied bodies. This admission of a fact which was likely to be urged with damaging effect against his present attitude, he naturally wishes to take the opportunity of making in his own way, with such explanations as may diminish its weight, before it is brought forward against him by the opposite party. The explanation amounts to this: viz., that although he did think it better to have the lines made by the South-Western than by other parties under their patronage, it did not follow from thence that they should be immediately prosecuted by the former; and that he was altogether opposed to their being started, although in the way he had approved of, at the time when the South-Western took them up. The value of this explanation his fellow shareholders, who are cognizant of the situation of the company, and of its proceedings during the last two years, will be so well able to appreciate, that it is not necessary to state our estimate of it here. It may suffice to observe, as far as the question of time is concerned, that the choice of the season for proceeding with or delaying the enterprizes in this manner could not be quite so free a one as Mr. Hoyes would now appear to infer; that with a pretty strong local interest, on one hand, resolved to promote the central communications in one way or another, and with the Great Western, on the other, prepared to make every sacrifice to get hold of the district in question, the question might, in reality, be simply whether the South-Western should come into the field instantly with all the force they could command, or whether they should once for all give up every hope of a connexion with the Western district on the standard gauge. The events of last year's parliamentary contest, and the important county movements that have just taken place as we are writing, would seem to illustrate both these points pretty clearly. And as it appears that a desire for the establishment of the western connexion was almost unanimously entertained at the decisive moment, not by the Directors merely, but by the proprietors at large; and that on more than one occasion, when the ground of these proceedings was being laid down, they have made this desire expressly known, and without any sign of dissent appearing at the time,—it must be allowed that the past wishes and actions of the company cannot be overlooked without great unfairness in any view of the present state of the business.

This it must be for the interest of all concerned to keep clearly in mind—there being a very important distinction between proposing measures of vast extent, brought forward now for the first time, and the taking of steps to which the promoters are already engaged, on which they have expended infinite labour and large sums of money, with a success that little now may remain to complete, and that a change of purpose at the present stage must cause to have been of its only chances of success; of proceedings of proceedings of its only chances of success; of proceedings of proceedings of the biene it sequenced to success; of proceedings of the biene its expected to that only chances of success; of proceedings of the biene its expected to the future. Since the last Report the future. Since the last Report the future since the future size of the future size of the future. Since the future size of the fut

purchased in vain. What has been determined upon and done in past years cannot now be annulled, except by the loss of all that has been spent on bringing these schemes within reach of a final triumph. The question therefore now is, not whether the extensions shall be promoted as wholly new measures, on the approval or rejection of which the company is free to decide for the first time; but whether, having already approved of them-having made unusual efforts to obtain them—having seen these efforts re-warded by a successful progress through the greatest difficulties and the most costly processes of the application, the company shall now fall back-declare all that has been invested in the pursuit a dead loss-involve in this loss all who have taken part in it, relying on the determination of the shareholders to carry through what they at one time warmly urgedand by this change of measures give up a victory apparently within their grasp,-not merely adjourn the possession of what all these sacrifices have been made to obtain, but forfeit for ever the prospect of realizing it.

Such we take to be the real state of the question now at issue as regards the bills of which Mr. Hoyes complains; and this, as we remarked on adverting to his memorial must give his grievance a very different aspect from that it would justly assume were the promotion of such extensive measures to be debated now for the first time. It might be a serious question, in the latter case, how far the enterprize would be a prudent one; and were it resisted, as a new proposal, by any considerable minority of shareholders, averse to further demands on their means, there would be, as we have remarked, strong grounds for deeming it a hardship to force them on in a manner amounting practically to compulsion. But no such case can apply to the particular decision now before the shareholders, which Mr. Hoyes seeks to influence. The projects have been long since voted; and at the time when objections might fairly have been raised, no dissent, we believe, was heard. The Directors therefore had every reason to count upon the support of their constituency in prosecuting the measures the latter had approved of. They have conducted them, with great pains and at a heavy cost, to a point at which little more is now wanted to complete them. If they are given up now, all the past outlay is a mere destruction, it may be, of some hundreds of thousands of the company's capital. The only method of gaining compensation for the money so far spent, is to take advantage of the ground it has purchased, and try to realize the schemes so dearly bought. The matter at issue is not whether the great outlay shall now be incurred or not; it is whether any benefit shall or shall not be drawn from it. There can be little doubt how, in the present state of the company's bills, the question must be answered, if common sense is to determine the reply.

This immediate question, it will be seen, has nothing whatever to do with the more general one of the original expediency of such projects. In the case before us, the company have long since determined that inquiry—in a sense which we do not pretend to say is exactly ours. In many quarters besides this, we are now witnessing consequences of attempting too much, which have been early foreseen and pointed out in these pages; and our cautious notions are receiving a confirmation from visible facts, which we can heartily regret to find so strongly marked

that would not undo former indiscretions, but merely serve to render their consequences utterly ruinous. The duty of the present time is clearly to make the best of what has been irrevocably done in a former period; and to learn from any hardships connected with it to be wiser on future occasions.

Official Papers.

LONDON, BRIGHTON AND SOUTH COAST. Directors' Report to the Half-yearly Meeting, Feb. 11.
[For Meeting, see p. 109.]

[For Meeting, see p. 109.]

In submitting the following Report for the half-year ending the 31st of December 1847, your Directors regret that the traffic of the company has suffered from the pressure of the times and the extraordinary crisis in the commercial world, which have affected every branch of industry throughout the country.

The gross earnings of the half-year are 250.610%, showing an increase of 23.89%, over the corresponding period of has year. The additional mileage on which this excess has been obtained is 34 miles, including the Keymer branch, opened in October, but not the Newhaven, opened on the 8th of December last. An analysis of the traffic shows the following results:—On the trunk line between London and Brighton, as compared with the corresponding half-year of 1946, ing results:—On the trunk line between London and Brighton, as compared with the corresponding half-year of 1846, the receipts are less by 19,027t., and on the Croydon line by 2,080t. A similar comparison cannot be established with the new lines, as a large portion of them were not at that period open; but the decrease of revenue on the trunk lines demonstrates clearly the effect of the times, and must lead to the conclusion that the developement of the extension lines has been checked and impeded by the same causes. In reference to the progressive growth of railway traffic, when unimpeded by extraordinary causes such as have

when unimpeded by extraordinary causes such as have marked the year 1847, the following statistics are submitted for consideration. The receipts on the Brighton trunk line, prior to the opening of any of the extensions, in the six

for consideration. The receipts on the Brighton trunk line, prior to the opening of any of the extensions, in the six months ending 1842, were 104,5341., or 1,850l. per mile. 1843, "113,3144., or 2,005l. "or 8½ per ct. increase. 1844, "128,525l., or 2,275l. "or 13½ showing an increase in 1845 as compared with 1842 of 38 per cent., or proceeds equal to 2,548l. per mile. In the half-year just ended the receipts on the same portion of the line were only 1,97l. per mile—clearly showing the influence of the times upon the traffic of your railway. Upon the whole length of the line now open the proceeds amount to 1,649l. per mile during the last half-year.

Your Directors have now to advert to the subject of expenditure. There is a considerable increase under the head of maintenance of way and works, which arises from the increased mileage at the charge of the company since the last Report. The next increase—a very scrious one—is in the locometive department, attributable not merely to the extended mileage to be worked, the high price of coke, and the advanced rate of freight; but also to the fact that one of the manufacturers failed in his contract for the delivery of a large number of engines, intended to neet the exigences of the company since the last properties of the manufacturers failed in his contract for the delivery of a large number of engines, intended to neet the exigences of the contract of the delivery of a large number of engines, intended to neet the exigences of the manufacturers failed in his contract for the delivery of the manufacturers failed in his contract for the delivery of a large number of engines, intended to meet the exigencies of the autumnal traffic, by which the expenses of keeping up the working stock in a state of efficiency were seriously augmented. A large supply of engines has, however, since been received, which will insure a more economical working of the traffic; and in the important item of coke, also, a considerable saving will be effected, inasmuch as large quantities have, of necessity, been purchased, in consequence of the company not having the means of making sufficient for their own consumption. The coke made by the company is less costly and of far superior quality to that which has been purchased; and, as additional ovens have been built at Kingston, and others will shortly be creeted elsewhere, the company will be enabled to supply themselves with nearly all they require.

It may be desirable to inform the proprietors that no charge for engines, carriages or other stock is carried to capital, except for additions to the number of each class, rendered necessary by the extended mileage of the company.

capital, except for additions to the number of each class, rendered necessary by the extended mileage of the company. Under other heads of annual charge, your Directors would be misleading the proprietors were they to hold out hopes of any material diminution. They have effected as great reductions in the expenses incidental to the working of the line as they deem compatible with its efficiency. An exception, however, must be made in the case of the London Bridge station, where a considerable reduction is contemplated, and which is one of the beneficial results likely to exist from the friendly relations now subsisting between the

plated, and which is one of the beneficial results likely to arise from the friendly relations now subsisting between the South-Eastern and this company. Your Directors also propose the relinquishment of the remuneration hitherto paid to them for the management of that station.

The amount of capital upon which the dividend is now payable greatly exceeds that of the corresponding period of last year, arising not only from the increase of share capital, on which the balance is divisible, but from the interest heretofore deducted upon unproductive capital being now altogether charged to the current revenue, from the dates of the respective openings of the additional lines.

Your Directors, under the circumstances above referred to, can only announce a dividend equal to 11, per 50t, share. Such dividend, if it has not the merit of being large, has at least that of being just; and they are confident that if the proprietors maturely weigh the present position of the the proprietors maturely weigh the present position of the company in all its bearings, they will have well-grounded

Digitized by GOGIC

tages, however, this company has carried about 5,000 passengers within the space of three months, during the autumn, in connexion with the boats of the Brighton and Continental Steam-packet Company from Shoreham. The Hailsham, Eastbourne and Deptford branches have been suspended for the present. The branch to Horsham is ready for opening, and has received the approval of the Railway Commis-

and has received the approval of the Railway Commissioners.

No definite arrangement has yet been carried out between the Brighton and Portsmouth Companies, but your Directors entertain no doubt, from the feeling which exists between the respective Boards, that their proceedings will be regulated by a due regard to the interests of all parties. In addition to the shares in that undertaking which were formerly the property of the Croydon Company, your Directors, in accordance with the arrangements for the amalgamation with the Portsmouth Company, subscribed for 4,000 shares therein, as your trustees, in order to complete the requisite capital—the agreement having precluded the shareholders in the Portsmouth Company from participating in any capital beyond the amount then subscribed.

Your Directors have the satisfaction to announce that an arrangement with the South-Eastern Company has been entered into, which is founded upon the following basis, viz., that the tolls payable by the one company to the other for the use of their respective lines between London Bridge and the Croydon junction are commuted—the South-Eastern Company granting to this company the free use of the

for the use of their respective lines between London Bridge and the Croydon junction are commuted—the South-Eastern Company granting to this company the free use of the Bricklayers' Arms line and station. They also assign in perpetuity nearly live acres of land at the Bricklayers' Arms station as a goods depot for this company, and remit the payment by this company of 25,000L, for the third line of rails on the Greenwich viaduct. By the substitution of the Bricklayers' Arms station for goods in lieu of New Cross, this company will effect a saving in the cartage and other expenses incidental to the goods traffic; and by the facility afforded, an augmentation of this traffic is expected. A collateral advantage, of no ordinary importance, will also result in the diminution of the outlay which must otherwise have been incurred at the London Bridge station.

A resolution will be submitted to the meeting for the conversion into stock of the fifteenth shares, amounting to 36,000C, whereon the 5 per cent. preference interest has been abandoned since the last meeting.

It is proposed to take powers to borrow on mortgage 176,59E, under the authority of the several Acts for making the branch lines, passed in the 9th & 10th years of her present Majesty.

sent Majesty

Four of the directors, E. Wigan, E. Crowley, J. Whiskin and J. Lawrie, retire, pursuant to the Act of Parliament, but are eligible for re-election, and will offer themselves accordingly.

MANCHESTER, BUNTON, MATLOCK AND MID-LANDS JUNCTION.

Engineer's Report for the Meeting, Feb. 9 (p. 110).

I think it necessary to inform you that all the works from Ambergate to Matlock (which have been let to contractors) are progressing very satisfactorily; and I expect that the line will be opened to Darley Dale in the latter part of this year. If the deviation bill be obtained, it will be opened so far as Rowsley; and therefore a considerable income from traffic may be expected next year. I have now to describe to you the character of the deviation time which I have recommended to be taken. The deviation converges from traffic may be expected next year. I have now to describe to you the character of the deviation commences near Whaley Bridge, crosses the river Goyt near that place, thence continues on the south-cast side of the Bug-worth Valley on to Chapel Milton, still following the Roych Dale, until it arrives at the western side of the summit ridge of the county, where a tunnel will be required. This tunnel will the through the Summit ridge 140 ft. lower than the line of last year; it opens out on the north cast side into the Edale Valley, in which valley the line continues, until it intersects the Hope Dale, passing near Castleton. Up to this place the line runs upon extremely favourable ground, and continues equally favourable forward to Hathersace, crossing the Perwent near Mytham Bridge, thence continuing along the margin of that river, and crossing it only twice in its course forward to Darley Dale. The only work of any magnitude, after passing the Summit Tunnel, is crossing Chatsworth Parl, where partly tunneling and partly cutting and covering for nearly one mile will be required, which will entirely prevent the railway being Seen from the house. This line may almost be considered a surface one, except the tunnels and cutting alluded to, and passes through an extensive, fertile and productive valley, which will yield more traffic than any other route that can be selected through Derhyshire to the West; and it does not intrice with one gentleman's house, excepting Chatsworth, in assing which is his been so arranced as to meet the an with one gentleman's house, excepting Chatsworth, in passing which is has been so arranged as to meet the ap-proval of the Duke of Devonshire. For the accommodation with one gentleman's house, excepting Chatsworth, in passing which is has been so arranged as to meet the approval of the Duke of Devonshire. For the accommodation of Bakewell I have projected a branch from Rowsley, which is about 3½ miles long. It passing the Hall will be cut and covered in like manner as at Chatsworth, so as to prevent it being seen from the Hall. It will be continued up the river at the lowest level the river will admit of, and with which it will not injuriously interfere, and will be carried to a convenient place for a station at Bakewell. The deviation from Darley Dale by Rowsley will be nearly a surface line, whereas the embanisment in passing Rowsley would have been 50 ft. high by the old line; and I am happy to inform you that we shall not have one piece of unsound ground along the whole line; as the Summit Tunnel will pass through the mill-stone grit formation, which is much more favourable for tunneling than the line through the summit ridge proposed last year. A branch will be taken from near Chapel Milton to Buxton, for the accommodation of the latter town, and will be about 5½ miles long. You will perceive that whilst these branch s to Buxton and Rakewell will scure all the trailie that was expected upon the old line, a large accession of entirely new traffic will be derived from the country traversed by the deviated line. You are well aware that I could never have attempted to take the route by Chatsworth until the Duke of Devonshire gave consent: in so doing, he has enabled me to take the line up the beautiful Vale of the Derwent, through an extensive and fertile district. I may also mention that in the whole route of this line an abundant supply of water from the various streams may be obtained, for manufacturing purposes, and I have no doubt but that nanifactories would be erected immediately upon the completion of the line. In comparing the old line with the deviation, the merits of the latter for public advantages of the new line are these—the Summit ridge will be passed 140

VALE OF NEATH.

Engineer's Report for the Meeting, Feb. 9 (p. 110).

Since the last half-yearly meeting, the works upon the lower part of the line have been proceeded with. Difficulties in obtaining the land have created delay at one or two points; and during the winter the contractors have not made that progress which might have been desired, but I trust that, these obstacles being removed, and the season being more favourable, we shall be able to make much more regard advanced to the contractors have been desired, but being more favourable, we shall be able to make much more rapid advances. As the works are light, and mattended with any natural difficulties, no delay ought to result in the final completion of the contracts at the periods originally fixed—namely, a little more than twelve months from the present time. The works connected with the tunnel near Merthyr—that is, the sinking of the shafts and the excavation of the adjoining cuttings—have been let; and immediately possession is obtained of the required lands, these works will be proceeded with. Upon the intermediate part, the determination of some portion of the line depended on arrangements with landowners, which, I regret to say, have led to great delays. I trust that these obstacles are also in Digitized by GOOQIC

a fair way of being removed, and that we may proceed with the letting of these works, which will complete the main line. I. K. BRUNEL.

18, Duke-street, Westminster, Feb. 8.

Progress of Works.

CHESTER AND HOLYHEAD. — Feb. 2. — The tube crossing the Conway was suspended upon temporary piers, 400 ft. span, and, with its own weight, 1,300 tons, the deflection did not exceed, but was under 8 in. With 300 tons of loaded trucks the deflection was increased to 11 in., being, as near as possible, in the ratio of 1 in. to 100 tons of load. The computed breaking weight of the tube is 2,200 tons equally distributed, exclusive of its own weight. The wedges supporting the tube upon the platform upon which it was erected have been removed, leaving it to rest solely upon temporary stone piers erected under each end, and having a hold of 6 ft. only on each pier, with a clear span over the river of 400 ft. It has been put to the severest test, with a success beyond expectations. The experiment was made by running locomotives and heavily-laden ballast-waggons through. One of the trains consisted of twenty-eight waggons, filled with iron, weighing upwards of 300 tons.

OXFORD, WORCESTER AND WOLVERHAMPTON.—A correspondent of the Morning Post gives the following account of the line:—"A kind of semi-authoritative announcement has been made, to the effect that it is the intention of the directors now to push forward the completion of that portion, about 12 miles, between Abbott's Wood and Stoke Works, so as to bring Worcester into direct communication with the Bristol and Birmingham. The works are in a very forward state; the earthworks are levelled almost throughout, and the ballast is being laid down, so that in fact there requires little more to be done than to lay down the sleepers and rails and erect the station; for until the whole, or a greater portion of the remainder of the line, is completed, the company will not require locomotives or carriages, as the 12 miles between Stoke Prior and Abbott's Wood will be used by the Bristol and Birmingham exclusively, they, of course, paying a rent. It is thought that something over 100,000% further outlay for rails and sleepers will render this 12 miles ready for the loco motives. The Worcester tunnel has been completed for some months, and appears safe and well executed. There has been very little work done upon the Wor cester, or any other portion of the line, for two or three months past, in a great degree owing to the scarcity of money. In the construction of the bridges on this line there have been many failures, several of them having fallen in after completion. The Mickleton tunnel, a very heavy piece of work, through a portion of the Broadway hills, has been very slowly progressing. A few days ago a portion of the brickwork of what had been completed gave way. and was followed by a heavy fall of earth, which will further delay the completion of the tunnel. This is one of the heaviest pieces of work between Worcester and Oxford. In their last Report the directors an nounced, upon the authority of a Report from their engineer, Mr. Brunel, that 'unless unforeseen causes of delay should occur, the whole line may be com-pleted, ready for the permanent way, by the time stated in my last Report, viz., by the end of next year (1848), before which time, however, of course, the greater portion will have been ready to receive the rails.' Judging, however, from the present condition of the line, there is no hope that any such early completion of the works will be effected. At the very same meeting at which Mr. Brunel made the calculation above quoted, he also reported as follows:—'The portion of the line between Stoke and Abbott's Wood, forming the works of the loop line passing by the town of Worcester, may be finished, as stated in my last Report, by the end of the present year (1847); and we are about to com-mence very shortly with laying the permanent way, and the construction of such of the station arrangements as may be required for the working of the Birmingham and Gloucester traffic over this line.' Report was dated August 21, 1847, and notwithstanding the promises herein made, the works between Abbott's Wood and Stoke are still uncompleted. Not a vard of permanent rails has been laid down, nor a brick of the foundation of stations been laid.

FOREIGN.

DIEPPE.—The works are rapidly approaching completion. The tunnel under the hill between the valleys d'Arques and de la Scie is finished; the last bricks were placed in by the Sous-Préfet and the mayor of Dieppe and other officials last week. The rails will be immediately laid down.

Accidente.

LONDON AND NORTH-WESTERN.—A fireman died from injuries received on the 27th ult. in shifting a train of goods waggons on to a siding. The drag rope broke and lashed itself round him and he was forced under the moving waggons.—Feb. 9.—The fire-bars and fire fell from the engine of the 9 a.m. down train, near Rugby. The train was detained only about two hours.

MIDLAND.—Feb. 6.—A guard, attempting to jump on the step of one of the carriages of a moving train at the Birmingham station, slipped, fell under the wheels, and was crushed. He subsequently died at the hospital after amputation of his legs.

Law Intelligence.

BILL OF COSTS.—Feb. 8.—In the LORD CHANCEL-LOR'S COURT, ex parte Bass in re Stephen, &c., this was an appeal from an order of Vice-Chancellor Knight Bruce, made upon a petition presented by Mr. G. Bass, a brewer in Burton-upon-Trent, and once acting director of the London and Manchester Direct Independent, praying for an order to refer for taxation the bill of costs of Sir G. Stephen and partners, the solicitors.—His Lordship said, the main point raised by Mr. Bass's petition was, whether the sum of 28,000l., paid by the acting committee to Sir G. Stephen, was the right sum. Sir G. Stephen had been joint solicitor to the company. Being desirous of resigning such office, Sir G. Stephen made a proposition to give up all the papers and documents relating to the company in his hands, and afford any assistance that might be required of him, upon being paid the sum of 28,000l., as compensation in full for all his professional services. The sum demanded was paid by the acting committee in four checks, and a receipt in full of all demands signed by Sir G. Stephen. From the affidavits in support of the appeal at the time of this arrangement Sir G. Stephen had in his hands a great quantity of valuable documents relating to the company, and threatened to take proceedings for the recovery of his costs, to take proceedings for the recovery of his costs, unless his demand was agreed to, and the documents themselves proved how much the company were at the time in his power. Mr. Bass was no party to this arrangement, but protested against it; and when a bill was filed against him, as a member of the acting committee, for misappropriating the funds of the company, he immediately applied to have the bill of costs of Sir G. Stoppen texted. His Lordship at great costs of Sir G. Stephen taxed. His Lordship at great length gave his reasons for esteeming Mr. Bass as one of the committee liable for costs to Sir G. Stephen for professional services, and decided therefore that the usual order must be made upon Mr. Bass's petition to refer the bills of costs of Sir G. Stephen, in respect of this company, to the master, for taxation, as there was nothing in the case to compel Mr. Base to file a bill to obtain such relief.

Feb. 9.—In the same Court, in re the Great Western v. the Birmingham and Oxford Junction, this was an appeal from the Vice-Chancellor's decision, as to the badness of the defendants' demurrer (see Rail Chron., 1847, p. 1094).—His lordship now gave judgment. The value of the interest at stake, and the amount of the property invested in the railways in question, must explain the great importance attached to the discussion of the demurrer, for the case by the bill did not appear to his lordship to raise any diffi-The application of the familiar practice of the court showed plainly that there was no tenable ground on which the demurrer could be supported. The bill, after stating the agreement for the sale, went on to say that, on the faith of that agreement the plaintiffs had come under liabilities to the amount of several hundred thousand pounds for the due pro-secution of the works; that these sums were to be repaid by calls made on the subscribers to the Birmingham and Oxford; that the company had attempted to recede from that contract, and to prevent such calls from being so applied; that they threaten and intend to sell the railway to the London and North-Western; and they therefore prayed a specific performance of the agreement, and that the defendants might be restrained from attempting to interfere with the rights obtained under the agreement. The Court would certainly interfere to preserve property in statu quo during the pending of a suit in which rights are to be decided, and that interference frequently took place without expressing, and often without the means of forming, any opinion on the rights. A purchaser pendente lite might get a title which would embarrass the original purchaser in his suit against the vendor, and in such a case the Court interfered by injunction. Cases of that kind were numer ous. If there was no real question between the parties the Court would not interfere, but where there was a substantial ground for proceeding the property would

be preserved until the question at issue was regularly disposed of. In order to support an injunction for such a purpose, it was not necessary for the Court to decide in favour of the plaintiff on the merits. When a bill charged an intention to do certain acts, the title to an injunction might be good, although the title to the relief which it prayed might not afterwards be sustained. Was, then, the case made by the present bill so clear in favour of the defendants, and so inadequate to support the equity prayed by the plaintiffs, as to justify the Court in permitting it to be disposed of, and a new title or interest introduced before a decision on the main question raised on the bill? The case made was that the Birming-ham and Oxford, under the Act 9 & 10 Vict., had powers given them, with the authority and sanction of three-fifths of the proprietors, to sell and transfer to the Great Western their railway, or any part thereof; that on the 12th of November 1846 they entered into an agreement for that purpose; that such agreement was duly ratified by three-fifths of the proprietors; and that, after incurring heavy liabilities on the faith of that agreement, the defendants threaten to sell the railway to the North-Western, and to prevent any calls from being made to discharge the liabilities. The defendants on their part say, that if that was the simple statement of the case, the injunction might be quashed, but that there are circumstances in the bill which show the plaintiffs not to be entitled to such protection, for the agreement of November was not merely a contract with the defendants, but also with the Wolverhampton and Dudley, and that the agreement expressly provided for the amalgamation and subsequent sale of both the railways, and that for such amalgamation and sale there was no parliamentary authority at the time of the contract the answer to that objection was, a statement in the bill that by an Act of July 1847, the Wolverhampton were duly authorized to carry the agreement of vember 1846 into effect, which would be sufficient, and that as to amalgamation the provisions between the two companies were confined to the period during which the works were in progress; that these works must be completed before a sale took place, and that these provisions were inapplicable to the state of things when one company possessed all the three railways. Under such circumstances, the amalga-mation having been previously resolved on, the plain-tiffs charged that the objection could not arise. However that might be, his lordship saw that the agreement expressly provided for seeking powers from Parliament to give it effect, and by the appeal he was asked to treat such agreement as a nullity, and that all other contracts are to be treated as a nullity, when the parties to them, not having full powers at the time of entering on them, must go to Parliament, and the Court was not to be at liberty to protect the property until the parties had an opportunity of going to Parliament. The effect of such a course of proceeding would be to nullify many family arrangements, entered into frequently under the sanction of the Court of Chancery, but to give effect to which the powers to be obtained from Parliament were indispensable. Such a course would also nullify all contracts by persons projecting new companies be-fore an Act of Parliament could be obtained to sanction them. His lordship was not prepared to say, by allowing the demurrer, that the contract entered into was a nullity because some of its provisions might require an Act of Parliament to carry them into effect. The objections of the defendants apply only to some of the provisions of the agreement; the substance of it was the sale of the Birmingham and Ox-Was it quite certain that, under such circumstances, the defendants could be heard to say that the plaintiffs were not to have the benefit of such parts of the contract as could be performed, because he whole of the contract could not be performed without an Act of Parliament; and, moreover, that the plaintiffs were to be precluded from taking an opportunity to obtain these powers? In general a purchaser was entitled to all that a vendor contracted to give him, and to compensation for what he could not give him, if it formed part of the contract. In the present case, the Court was called on to say, not that the plaintiff was to have compensation for the part not performed, but that, as they could not ob-tain all they had agreed to purchase, they were not to be assisted in getting a part, and still more, that the contract itself must be considered as at an end. He thought that he had already explained sufficiently the grounds on which, in his opinion, the defendants had failed in showing that the plaintiffs had no title to any part of the relief or protection that they asked by their bill, and that they had made this clear enough to deprive the Court of any right to interfere, so as to preserve the property in contest until such time as the title to it became the subject of a judicial

decision. The decision of the Vice-Chancellor was therefore affirmed, the demurrer of the defendants being overruled, and their appeal dismissed with

SHAREHOLDERS' DUES .- Feb. 5 .- In the COURT OF EXCHEQUER, in re the Newry and Enniskillen V. Edmonds, counsel showed cause against a rule to reduce the verdict passed at the trial before Lord Denman, at Kingston, by the amount of 100l. action was brought to recover the sum of 225l. from the defendant, as the holder of fifty shares, on which two calls of 2l. and 2l. 10s. respectively had been made. The defendant bought the scrip certificates in the market, and claimed to be registered as the holder. The certificate of his being the holder of fifty shares was duly given to his agent, and the de-fendant's name was entered in the draught register. and the first call of 2l. made before the seal of the company was attached to the register. The question thus was, whether the company could enforce the first call, it being admitted by the defendant that the second was made after the seal had been attached to the registry containing his name, and that he was consequently liable. The counsel for the company consequently hable. The counsel for the company proceeded to contend, on the construction of the Railway Clauses Consolidation Act, 8 Vict. c. 16, that the affixing the seal to the register was only meant to be prima facie evidence of proprietorship, and that in ease of the proprietors; but that when the question arose between the company and the shareholders it was open to the company to resort either to the sealed register, or, if it did not exist, to the ordinary common-law proof of ownership and liability in consequence thereof, of which it was contended that there was abundance in this case.—The Court, how-ever, made the rule absolute. The scaling of the register was clearly a condition precedent to the power of suing the proprietors for calls. Until it was sealed there was no register at all; and the register was the only way of proving the liability to calls. The verdict must therefore be limited to the second

call, to which no such objection applied.

LIABILITIES OF PROVISIONAL COMMITTEEMEN.—
Feb. 9.—In the Court of Exchequer, in re Reynell v. Lewis, on a new trial in the case of an advertising agent against a provisional committeeman of the Central Kent, (who had been guaranteed by the solicitors of the company,) and the facts of which have been so repeatedly before our readers, the jury at length found a verdict for the defendant.

Jan. 27.- In the Court of Session, in re the Edinburgh and Glasgow v. the Caledonian, an interdict was sought at the instance of the Edinburgh and Glasgow against the mode in which the Caledonian proceeded to effect their junction with the Scottish Central. Interim interdict had been granted on the averment that the Caledonian had varied from the mode of operations prescribed by the Board of Trade. A motion was now made on behalf of the Caledonian, to be allowed to proceed in their own way, upon reliance of their own engineer.—The Court refused to undertake this responsibility, and the case stood over.

Dissolution, &c .- Feb. 2 .- In the same Court, in re Managed v. Eagle Henderson and others, this was a suspension and interdict at the instance of an accountant in Edinburgh, a shareholder of the late Dundee and Northern Junction, complaining that a general meeting had come to a resolution to dissolve it, and praying that the provisional committee of the company should be interdicted from acting on that resolution, as it was illegal and ultra vires of the resolution, as it was inegal and across the open general meeting. It was stated that the meeting had before them, at the time they passed the resolution, nothing but the Report of the provisional companion of the provision of mittee, advising an amalgamation with the Edinburgh and Northern, on which proposal alone they had power to decide. Moreover, that by the subscribers' deed of agreement, the power of abandoning had been given to the provisional committee alone, the company not having been incorporated by Act of Parliament.—The Court unanimously adhered to the Lord Ordinary's judgment, and refused the interdict.

COMPENSATION .- Feb. 5 .- At the RICHMOND PETTY SESSIONS, in re the Richmond, Staines and South-Western, Mr. E. Collins, brewer, claimed 1,560l. of the company, for losses from a part occupancy by the company of some meadow land, situate near Richmond-green, of which he is a yearly tenant under the Crown. Mr. Smith, on behalf of the claimant, said the park contained 352 acres, and was held by Mr. Collins at a rental of 1,0551. was from year to year, and consequently determinable at six months' notice; but as the Crown never turned its tenants out of possession, the lease was as good as a twenty-one years' lease. His claim was for two years. The loss arose from the company having cut down 29 trace out of 300 in the week and which cut down 32 trees out of 300 in the park, and which sheltered the cattle taken in to feed. Witnesses on

behalf of the claimant stated their belief that great | loss would result from depriving the cattle of shade: that the erection of a shed would not supply the place of the natural shelter of trees; that the cattle were not long enough in the park to get used to the trains, by which they would be much frightened. Mr. Drake, for the company, contended that the sum claimed by Mr. Collins was too great. The Crown might at any time cut down the whole of the timber, and the tenancy might be terminated at six months notice. A shed might be erected which would answer all the purposes of trees, and the cattle would very soon get used to the passing of the trains.—The bench decided upon an award of 100l., each party to pay his own costs.

Barliamentary Proceedings.

LORDS

Feb. 10 .- Halifax and Quebec .- Earl FITZWILLIAM presented a petition praying a Government loan for enabling the company to complete their works. The undertaking was one of great importance to the colony, and well calculated to create a demand for labour in favour of the multitudes who were every day emigrating to North America from Great Britain and Ireland.—Lord ASHBURTON presented a petition to the same effect from two counties in New Brunswick .- Earl GREY admitted the importance of the railways to which the petitions referred; but though the survey had been made the report on the line had not been sent home. Under present circumstances he was not prepared to state that the Government could recommend any advance. He thought that in such cases they were bound to exercise much caution in making grants of money. As to employment being wanted, that could form no argument in favour of a grant, for it had no foundation in fact. emigrants very readily found employment without the aid of railways.

PROCEEDINGS BEFORE THE EXAMINERS.

Passed Standing Orders.

Dundee and Perth (Lease of Dundee and Arbroath). Exeter and Exmouth (Acts Amendment). Taw Vale and Dock.

Waterford, Wexford and Wicklow (Amendment of former

Standing Orders not complied with.

Glasgow, Barrhead and Neilston Direct (Amendment and branches to Paisley; to the Glasgow, Paisley and Greenock; the Glasgow, Paisley, Kilmarnock and Ayr; and to the joint line thereof between Glasgow and Paisley; to the Paisley and Renfrew; to main street of Barrhead; to East Dykebar; to Haugh Pits; to Waterloo Pit; and to Speirs-bridge.)

Abandoned.

East Indian.
Glasgow, Paislev and Greenock (Branches at Port Glasgow).

Reports of Meetings.

LIVERPOOL, MANCHESTER AND NEWCASTLE JUNCTION

Feb. 8 .- Half yearly Meeting, Manchester .- Mr. FERANCE in the chair.

The SECRETARY read the Report, which stated, that during the past half-year the directors have abstained from any active prosecution of the works as now sanctioned. The passing of the late general extension Act justified the directors in this course. Under the provisions of the above Act the directors have made application to the Commissioners for an extension of the periods for the purchase of the lands and completion of the works upon that portion authorized to be constructed under the powers of this company's original Act, namely, from Elslack to Aysgarth; and the Commissioners have granted such extensions, and authorized the directors to give the necessary notices. The directors have not thought it expedient to extend this application to the remaining portions authorized under the company's Acts of last session, believing that their powersover these portions, which do not expire till 1850 for the purchase of lands, and till 1854 for the completion of the works, will be sufficient. The directors did not consider it necessary to call the shareholders together under the other provisions of the general Act, to ask their authority to proceed with the works during the present year, believing that the views of the directors, as to suspending for the present all operations, would meet with general approbation. No inconvenience has as yet resulted from the vacancies at the Board; and by this reduction, and the concentration of business into one office, upwards of 1,000l. has been saved. The directors advert to a subject which demands serious attention. An agitation, having ostensibly for promoters of it. A bill has also been introduced into Parliament during the present session, by the same parties, which, while it seeks to take powers to abandon the railway, also seeks for powers to alter the entire construction of the present Board. The directors received no intimation whatever of these proceedings, other than what was given to them individually as shareholders. They have been advised that, consistently with their trust, they cannot do otherwise than oppose this bill, and they have there-fore given the necessary instructions. On the 19th of January last a requisition was presented to the directors by the same parties, requiring them to call a special meeting. The requisition related to the abandonment or lease or sale of the line, and to the reduction of the Board, and removal of the present directors. The directors are advised that many of the objects contemplated by the requisitionists are unauthorized by the Acts which regulate the constitution of the company, and contrary to law, and any resolutions or proceedings founded thereon would be absolutely null and void, and could not be carried into effect. While taking care, however, to guard themselves against any presumed participation in the objects and purposes of the requisitionists, the directors have, in compliance with their wishes, called a special meeting, to be held at such a time as they trust will afford the shareholders an opportunity, in the meanwhile, fully to consider their position and prospects. The directors believe that the questions as to the propriety of the abandonment of the railway, or the sale or lease of it to some other company, are not the true objects of the parties promoting the present agitation, many of whom are the same who, in February last, sought to remove the majority of the present directors, and assume to themselves the sole control of affairs. If the propriety of the abandonment of the railway was the sole question before the shareholders, still the directors would advise them to pause and seriously reflect ere they decide upon relinquishing powers which have been obtained at a cost of upwards of 100,000l., and under so much opposition from other companies, who were contending for the possession of the district. The directors believe that these powers may be employed to far greater advantage to the shareholders than could result from any immediate abandonment, which, among other matters, would involve serious questions with the landowners. From the statement of the accounts it appeared that the present balance in hand amounts

to S1,4171. 14s. 8d.

The CHAIRMAN moved the adoption of the Report.

A personal which was seconded by Mr. MARRYATT. A personal conversation took place between the Chairman, Messrs. Alhusen, Leman, Parson and others on matters connected with the bill now before Parliament for the dissolution.

Mr. C. Gibson, town clerk of Salford, observed that it was quite clear that the affairs could not go on profitably so long as the present divisions existed, and that the money of the shareholders must be squan-He therefore moved as an amendment,-

dered. He therefore moved as an amendment,—
That the reception and consideration of the Report of the directors, with the statement of accounts appended thereto, now read, be postponed until an adjourned meeting, to be held at the Albon Hotel, Manchester, on the 38th day of March next, at 12 o'clock at noon; and that Mesrs, W. Hutt, M.P., G. Ashin, P. Kilgour, Ald, Langworthy, J. C. Prescott, and C. Carr, be, and are hereby, appointed a committee to investigate and report to such adjourned meeting; also upon the contracts entered into by the directors for and on behalf of the company; and also report upon the prospects of the undertaking, especially as to the possibility of carrying on the railway with profit to the shareholders, and upon the various matters and things mentioned and referred to in the said Report of the directors;—and that the directors and olicers of the company are requested to produce for the examination and pany are requested to produce for the examination and inspection of the committee all the books and papers belonging to the company, and give all possible information on the subject of the inquiry :—and that this meeting do now adjourn until the 30th day of March next, at the Albion Hotel, Manchester, at 12 o'check at noon.

Mr. LEMAN, of Leeds, seconded the motion.

After much personal discussion, during which the CHAIRMAN stated, that if Mr. Gibson's motion could be legally carried, the directors would have no objection, and some conversation with gentlemen around the Chairman, it was stated that the chief objection to the amendment was in the names to constitute the committee. A consultation took place as to altering these names, and ultimately the amendment was made a substantive motion, with the following alterations: the words from the beginning to the words "upon the contract entered into, &c., to have substituted in their place the following: "That the reception and consideration of the Report of the directors, with the statement of accounts appended thereto, now read, be postponed until an adjourned meeting, to be its object the abandonment of the railway and the dissolution of the company, has been commenced by parties, the majority of whom were among the chief or immediately after the termination of the spe-

Digitized by GOGIG

cial general meeting; and that Messrs. C. Gibson, Chair general meeting; and that Messrs. C. Gloson, P. Kilgour, Ald. Langworthy, W. A. Potter, G. W. Cramm and W. Gibb be, and are hereby appointed, a committee to investigate and publish to the shareholders at the special general meeting convened for the 30th of March next;" and after the word "inquiry," near the end of the amendment, the following words were substituted: "And that the committee do publish and forward a copy of the said Report to each shareholder fourteen days before the said 30th day of March next; and that the meeting do now adjourn until the 30th day of March next, at the Albion Hotel, Manchester, at 1 o'clock p.m."

This motion was carried, and the meeting adjourned.

LANCASTER AND CARLISLE.

-Half-yearly Meeting, Liverpool.-Mr. E. Feb. 9.-W. HASELL in the chair.

The CHAIRMAN said he should make a few observations on their present position and future prospects.
The Report was short, because there was, in reality,
very little on which it was necessary to make any
lengthened observations. Their line might be said
to be nearly completed. From the experience derived from one year's working, their prospects were bright and favourable. The traffic returns were very satisfactory. Including the payments received from the Government on account of the mails, the returns had exceeded 1,500l. a week. In short, it enabled them to declare a dividend for the half-year, at the rate of 4 per cent., as they had done at the previous half-yearly meeting. He then alluded to the prospects which were before the shareholders on the opening of the Caledonian and Scottish Central lines.

Both these occasions were referred to in the Report

as full of promise to their own undertaking. He was
not desirous of raising false hopes, but he could not refrain from saying that a bond pide trunk line, such as their own, was almost sure to pay, and if this failed, no other line in the country could succeed. He had much satisfaction in informing the shareholders that the directors all worked harmoniously together.

The SECRETARY then read the Report, which stated

The directors have much pleasure in reporting that the trains have continued to run with great regularity. The line is in very good order, and the contract with the London and North-Western for the supply of locomotive power and carringes is satisfactory to both parties. The income account, which has been made up from the opening trather more than a year since), confined to the traffic conveyed over the Lancaster and Carlisle, warrants your directors in recommending you, as they did at the last half-yearly meeting, to declare a dividend at the rate of 4 per cent, per annum. Your directors are informed that the Caledonian line will be opened throughout, to Edinburgh and Glasgow, on the 15th of the present month, and they congratulate the shareholders on the near approach of an event which will doubtless have the effect of greatly increasing their traffic. Nor can your directors omit alluding to the probable opening, within a few more months, of the Scottish Central, which will connect the Caledonian with the numerous lines in the The directors have much pleasure in reporting that the will connect the Caledonian with the numerous lines in the north of Scotland, and thereby materially promote your interests as well as those of the public. The demands on your directors for the sums necessary to carry on so important a work as the station at Carlisle, and to complete the other stations on the line (with, in several instances, additional sidings and other accommodations requisite for additional sidings and other accommodations requisite for a traffic increasing locally, independently of the augmentation now expected on the opening of the Caledonian, oblige them to ask your permission to raise a further sum on loan, not exceeding the powers given by the Acts of Parliament. Your directors have to report with much regret the resignation by Mr. Wakefield of his office as a director. In his place, as deputy-chairman, Mr. Howard, of Greystoke, has since been unanimously elected.

The statement of accounts showed the total receipts

on the capital account at 1,391,130l. 14s. 2d., expenditure, 1,395,1524. 15s. 11d., leaving a balance against the company of 4,0224. 1s. 9d. On the traffic account, the receipts from the opening of the line to the 31st of December last were 79,4194. 16s. 9d., and the expenditure 35,619l. 5s., leaving a balance in favour of the company of 43,800l. 11s. 9d.

In answer to questions by Mr. HOUGHTON and other shareholders, the CHAIRMAN explained the amount of the Government allowance for the mails had only been recently included in the accounts, because the dispute pending between the company and the Government had only recently been settled by the arbitrator, Mr. W. Patten; that the guarantee to the Scottish Central was proportioned to the amount to be received from that company; that no guarantee whatever was extended to the Dundee and Perth. as some gentlemen had imagined; and that no dispute existed with the Lancaster Canal Company, as had been reported, nor was this company in any manner involved in the dispute now going on between the Lancaster and Preston and the canal company.

Mr. G. BRAITHWAITE desired particularly to draw the attention of the directors to the want of accommodation provided at the Oxendale station for the

The CHAIRMAN explained that the duty of providing the station accommodation in question devolved upon the Kendal and Windermere, not upon the Lancaster and Carlisle. Some decided steps would. however, be taken in reference to this matter.

Mr. Horsfall was anxious to know what was the amount of share capital which the London and North-Western held in the Lancaster and Carlisle.

Mr. Swift, the solicitor of the company, said above ne half.

Mr. Horsfall observed that it was very desirable the shareholders should be assured that this large interest was not likely to be used to the prejudice of

the original shareholders.

Mr. Swift explained that by the terms of the Act of Incorporation of the Lancaster and Carlisle, the London and North-Western were disqualified from voting on any contract in which they were interested; so that there was no ground of apprehension on that score.

After some few further observations

The CHAIRMAN put the motion for the adoption of the Report and the statement of accounts appended thereto, which was carried unanimously

The two following resolutions were also put, and, in like manner, carried unanimously, namely—"That a dividend of 1l. per whole, and 4s. per third share, be now made and declared out of the nett profits of the undertaking up to the 31st of December last." And "That the directors be empowered to raise, on loan, such further sums from time to time as they shall find requisite for the purposes of the undertaking, not exceeding what the Acts of Parliament

COCKERMOUTH AND KESWICK EXTENSION.

Feb. 4 .- Half-yearly Meeting, Kendal .- Mr. J. WHITWELL in the chair

The SECRETARY read the Report, which stated that in conformity with the resolutions previously confirmed, the directors had not deemed it desirable, under present circumstances, to propose taking any steps under the powers of the Act. The considera-tion of the propriety of applying to the Commission-ers for the extension of the duration of time for the existence of the powers of the Act now came before the meeting.

On a motion being put for the seal being attached to the register, some discussion ensued, from which appeared that various parties had signed the subscription deed without paying their deposits, and their names were now left out of the register.

Mr. Musgrave moved, as an amendment,—
That a full and perfect list of the shareholders, with the
names arranged in alphabetical order, the number of shares
for which each individual has subscribed, and the amount paid such upon shares, be made out forthwith, and submitted to the meeting for its approval, before the seal of the company be affixed to it.

Mr. Mordy seconded the amendment.

The CHAIRMAN hoped they would act upon the suggestion he had offered after reading the Report, that they should affix the seal of the company to the list of shareholders produced. He thought that would be the best plan.

It was, however, resolved, that the names omitted should be added to the register.

The retiring directors were then re-elected.

Mr. MUSGRAVE was in expectation, along with other shareholders, that some statement of the accounts would have been submitted.

The Chairman said he had not prepared any

statement.

Mr. Musgrave never heard of such a case before. He believed there was a general feeling prevailing amongst the shareholders that the affairs should be wound up, and that each shareholder should pay his proportion of the expenses incurred, and allow some on the undertaking at some future time.

The Secretary read a statement of accounts,

which showed a balance against the company of 2,132l. 3s. 11d.

A motion for applying to the Commissioners for an

extension of time was carried.

It was then resolved, that the accounts should stand over till the next half-yearly meeting.

The Chairman observed that he had been elected chairman in his absence. He had attended two meetings, at one of which there were no shareholders present. With respect to the register list, which had undergone so much discussion, he thought it hardly fair to adopt the course resolved upon against thos who had put down their names for so large an amount of shares, under their present unfortunate circumstances. They would really lose nothing by affixing stances. They would really lose nothing by affixing the seal then to the list as originally produced; and the shareholders would exonerate them from blame rather than they should do what was irregular.

ther than they should do what was irregular.

Mr. Musorave complained of the chairman again

TAW VALE.—Feb. 12. London Tavern, at 12.

wishing that the subscription contract list should not be made out, after the meeting had passed a resolu-tion to the effect that it should be laid before the meeting before they departed in a corrected form, and the seal of the company affixed, as required by

Some further discussion took place upon the subiect, when-

The CHAIRMAN said that he had made an appointment at Maryport, and as the train was then about to start he was compelled to leave the chair. Mr. Musgrave: If you do leave the chair before

the meeting is over, depend upon it we shall elect another chairman, commence de novo, and remain until the perfected list is produced, and the seal affixed.

The chairman then left the room.

Mr. Fletcher was voted to the chair, and a long discussion took place while the register was being corrected, in the course of which it was stated that five of the wealthiest men in Kendal, who ought to have paid 15,000*l*. in deposits, had not paid a single farthing, notwithstanding they had signed the subscription deed.

The corrected list was adopted by the meeting, and the old list was entrusted to the secretary to be destroyed.

[For further Reports of Meetings, see p. 109.]

IRON TRADE.—Glasgow, Feb. 4.—The market, says the North British Railway Gazette, for pig iron continues firm, with a fair average business; the accounts from Liverpool announcing the failure of Messrs. Jevons & Sons caused a temporary dulness, but as their liabilities are, we may say, totally confined to England and Wales, our market has regained its usual firmness: there is little iron offering for sale, and our quotations are firm at 50s. 6d. for No. 1, and 49s. 6d. for mixed Nos., cash.—Birmingham, b. 5.-Reports of fresh embarrassments of the principals in one or two large houses in the fron trade of the district are current. The trade, says the Daily News, remains in a state of deplorable depres-sion. Little has been done during the week to bring about an adjustment of the differences between the masters and the men. A considerable number of the colliers have returned to their work, but the millmen and forgers still stand out against any reduction of wages, the result of which is that several additional forges have been blown out in the neighbourhood of Dudley during the week. The men were calculating upon the chances of the influx of orders the masters will receive in the spring for iron for railway puroses, forcing them to allow a resumption of work at the old prices, thus preferring to wait for chances which may not occur, rather than receive such wages as are consistent with present prices in the meantime. Some of the smaller manufacturers are still paying to the men the full wages; they are enabled to do so by reason of the fact that as all the large works are completely at a stand, the orders which require immediate execution, of course, fall into the hands of these limited producers. The iron moulders are still out: they have held another meeting at Tipton; they calmly discussed the questions at issue between themselves and the masters; and in the end they resolved unanimously not to submit to any reduction in their wages. The forgemen have also had another meeting at Dudley; the proceedings were conducted in a very orderly manner; the men unanimously resolved to submit to no reduction whatever; and there is the more reason for believing that they will stand firmly by this resolve, seeing that they report the "trade fund" as sufficient to support those who are members of it for three months at least.

NOTES AND EXPLANATIONS.

(1) The Government piper 32,000,000f, and the land, and receives half the profits, after 10 per cent.
(2) The Government guarantees 3 per cent, interest, and 1 p. cent. Sinking Fund. The loan of 10,000,000f, was negotiated at about 4 per cent, per annum.
(3) The Government lends 14,000,000f, and 4,000,000f, additional for half the cost of the passage of the town of Romen, at 3 per cent, per annum. The dividently selected after deduction of 1 per cent, from the profits for Sinking Fund. Loan of 6,000,000f, or 6,000 bonds

of 40% cach, bearing interest at 4 per cent, created August 1845, reimbursable by lot, at 50% cach, in the course of 73 years, (4) The Government pires 8,000 wood, the town of Havre 1,000,000f. The Towernment lends 10,000 wood, and 4,000,000f, additional for half the cost of the possage of the town of Rouen, at 3 per cent, rer ann. The interest to commence 3 years after the line is spened. Loan of Housepool, or 10,000 bands of 1,000 or 40% cach, created becomber 1845, bearing interest of 50% per annum, reimbursable by lot, at 1,250% cach, in seventy-eight years—8,000 were issued in Pec, 1845, and 2,000 in Get. 1846.

(5) Lean of 12,500,000f, in Bonds of 1,250f, bearing interest of 50f, per annum, to be paid off in a period of 50 years.

(6) Lean of 2,502,500, in Bonds of 1,00f, at 44 per cent, to be paid off with a premium of 1,00f, per Bond. The Government lends 22,000,000 for which the Company pairs, from 1877, 4 per cent, interest per annum, and 1 per cent. Stoking Fund, but only when the shareholders have received 156, per share.

(7) Lean of 6,500,000f, in Bonds of 1,200f, bearing interest of 50f, per annum, to be paid off in a period of 50 years.

(8) The Government lends 5,000,000f, at 4 per cent. interest.

+ Ex Dir. * For account, 24th February.

London Stock Exchange, Feb. 11 .- The share market generally has been quiet during the week, and quota-tions have remained firm; the demand for guaranteed stocks still exists. Considerable excitement has prevailed with reference to the Report of the London and Brighton, which has much disappointed the shareholders, and caused a fall of about 3t. per share within the week. A stormy meeting is expected on Monday, to which day it stands adjourned, in conse-quence of the place of meeting not being sufficiently

Liverpool, Feb. 10.—There is no feature to notice in our market. Business throughout the week has been extremely dull, prices generally are without any material alteration.

Suplow, Brothers.

Munchester, Feb. 10.—Our share-market during the week has been fluctuating and uncertain. There appears to be kind of pause, and a not-knowing-what-to-do.

SAM. GRINDROD.

York, Feb. 10.—The principal feature in this market has been an advance in price in the York, New-castle and Berwick stocks. The extension stock, No. yith the old stock. Parties are looking with some with the old stock. Takes all meetings of the rail-ways.

Grayston & Earle.

Hull, Feb. 10.—The unfavourable half-yearly Report of the Brighton, and a rumour that the London and North-Western will only pay at the rate of 8 per cent., have contributed, with other circumstances, throw a slight shade of gloom over the share-market;

which, however, we hope the full result of the meetings will clear away. It is imperative on all Boards of direction to have no mystification as to their exact position, especially as there is a feeling abroad to make the most of any disposition of this kind to the detriment of holders of stock. Darwens, which declined the other day to 10 and 101 dis., owing to a sale under peculiar circumstances, have since recovered, and may now be marked 10 and 93 dis.;

North British are flatter. FLINT & TOOTAL.

Newcastle-upon Tyne, Feb. 10.—The state of our market does not offer anything very material to notice Business is not quite so active, but prices ly firm.

W. FORDYCE. this week. are tolerably firm.

Glasgow, Feb. 9.—This market has been steady during the week, and a considerable amount of stock has changed hands. Yesterday and to-day, buyers are more cautious, and although no great anxiety is are more cautious, and although no great anxiety is shown to realize, the tendency in prices is rather downward. We add to-day's latest business:—Aberdeen, 17 dis.; Caledonian, 35½; ditto, halves, 50s. dis.; Glasgow, Dumfries and Carlisle, 7½; Ayr halves, No. 1, 64s. dis.; ditto, No. 2, 65s. dis.; Glasgow and Greenock, 16½; Great Northern, 6½ dis.; North British halves, 12½; ditto, thirds, 1s. dis.; York, Newcastle and Berwick (Great North of England purchase), 45s. pm.

BUCHANAN, AITKEN & CO.

Bourse de Paris.— F.b. 10.— The following are the latest prices of shares:—St. Germain, 650f.; Versailles (Right Bank), 295f.; ditto (Left Bank), 197f. 50c.; Orleans, 1180f.; Rouen, 862f. 50c.; Havre, 415f.; Marseilles, 537f. 50c.; Basle, 157f. 50c.; Vierzon, 510f.; Bordeaux, 476f. 25c.; Northern, 538f. 75c.; Strasburg, 405f.; Nantes, 380f.; Lyon, 390f.

A report has reached Paris of a serious accident of a land-slip having occurred on the Rouen and Havre, which caused the prices of Havre shares to fall 25f.

which caused the prices of Havre shares to fall 25f. as the quotation above shows.

WORKING OF THE FRENCH AND BELGIAN RAILWAYS. The Minister of Public Works of Belgium, in the Chamber of Representatives, lately contrasted the French and Belgian lines. It appeared that the working and keeping up the Belgian railways is much less than that of the French. The Minister made

the comparison between the State railways of Belgium the comparison between the State railways of Beignum and the Northern of France, although the latter, having only been opened a short time, has not yet had to renew its rails, &c. The Belgian Government works nine lines; the Northern, two; Orleans, two; Rouen and the Rhenish only one each. The Belgian railways have eleven stations at the extremities of lines; the Northern railways three: Orleans three; Rouen and the Rhenish, two; the Belgian railways have twenty-nine principal stations: Northern eight; have twenty-nine principal stations; Northern eight; Orleans three; Rouen three; and the Rhenish line, two. The Belgian railways have sixty-six intermediate Rouen, seventeen; Rhenish, eight. In Belgium, for a movement of 3,700,000 passengers and 791,000 tons of merchandise there has been an expense of 7,945,000f. On the Obligation of the control of the con 7,245,000f. On the Orleans the expense was 3,411,000f. for 1,521,000 passengers and 237,000 tons of merchandise. On the Rouen the expense was 3,594,000f, for 1,004,000 passengers and 265,000 tons of merchandise.

Railway Chronicle.

LONDON, SATURDAY, FEBRUARY 12.

Yesterday, from the want of sufficient room at the London Tavern for the shareholders of the London, BRIGHTON AND SOUTH COAST, who had there assembled for their half-yearly meeting, all proceedings were adjourned until Monday, the 14th inst., when the meeting will be held in the banqueting-room of the same tavern at 11 o'clock.

The reception of the Report and accounts at the half-yearly meeting of the LIVERPOOL, MAN-CHESTER AND NEWCASTLE JUNCTION Was postponed till the 30th of March. A committee to investigate the accounts was appointed in the resolution authorizing the adjournment of the meeting.

The LANCASTER AND CARLISLE proprietors adopted the Report and accounts presented at their half-yearly meeting. A dividend of 1/. per whole share, and 4s. per third share was declared amid unanimous approbation.

At the half-yearly meeting of the shareholders of the GREAT NORTH OF ENGLAND the simple and pleasant announcement of a dividend at the rate of 10 per cent. was the only business transacted.

The Report and accounts of the MANCHES-TER, BUXTON, MATLOCK AND MIDLANDS, adopted at the half-yearly meeting, satisfactorily exhibit the activity of the directors. The works had been continued during the time of the monetary pressure. Mr. G. Stephenson declared the line would be made and worked cheaper than any other in the country.

The Report presented at the half-yearly meeting of the VALE OF NEATH shareholders promises satisfactorily. Application is to be made for authorizing the subscription of the South Wales for one-fourth of the whole shares, and for extension of time under the late Act.

The WAVENEY VALLEY AND GREAT YAR-MOUTH shareholders, at the special meeting, authorized the managing committee to take all the necessary steps to enforce the rights of the shareholders in the present dispute with the Norfolk.

The CALEDONIAN AND DUMBARTONSHIRE have specially authorized their directors to apply for an extension of time under the late Act. No additional call will be made till the spring of 1849.

The special meeting of the KILLARNEY AND VALENTIA was again adjourned till the 15th of April.

The SAMBRE AND MEUSE shareholders in Brussels passed the Report previously adopted by the London proprietors.

The directors of the AMIENS AND BOULDGNE line are preparing with energy for giving the public great additional accommodation on the complete opening of the line to Boulogne. Mr. BLOUNT, of the firm of Laffitte, Blount & Co., has been here with some of the managers of the railway to make arrangements with the South-Eastern directors, which may give the public a maximum of benefit from the opening of the entire line from London to Paris, which is fixed for the 15th of March. They are also doing all in their power to make arrangements with the authorities of the French Customs and the passport officers to facilitate the transit. There are to be express trains both ways, arranged so as to enable a passenger to breakfast in either metropolis, and arrive for (late?) dinner in the other. The tides and the English Custom-house officers

are said to be the only impediments in the way of doing this successfully and uniformly.

It is said that the RAILWAY COMMISSIONERS, to whom a reference was some time since directed, of the question of GAUGE for the TAW VALE line, have now decided on reporting in favour of its being laid down on the Great Western scale. We ought not to say we are surprised at this new exercise of their discretion; inasmuch as all their acts, since the first establishment of the new office, have been such as to prove the incapacity of the Board to approach railway business with large and far-sighted views, or to employ the powers entrusted to them in any better way than by snatching at the wrong end of matters of detail-to any better purpose than of increasing the perplexities which some persons were sanguine enough to suppose they might be able to remove. In the present case it appears that they must have treated the matter at issue as nothing more than an object of dispute between two contending companies; that they either overlook the bearing of their decision on the general uniformity of the railway system, or, if that has not escaped their notice, take this opportunity of declaring their indifference to its value. On either supposition the proceeding would be in character with the tenor of what they have done or attempted to do since they were put in office; and whichever way we take it, it will be seen that however apt they may be to trouble and threaten the railway body, we are not to expect from them any statesmanlike measures towards improving or ordering it. The decision in this instance brings them virtually into collision with some repeated verdicts of committees of both the Houses of Parliament; who, as is well known, have affirmed in a positive manner the expediency of providing the Western district with lines able to communicate with the rest of the national system; because, by promoting the broad gauge between Barnstaple and Exeter, the road will be barred from the Bristol Channel to those railways on the standard dimensions which have once and again been declared necessary for the accommodation of the district. At the present moment, of all others, when a new weight has been given to the reasons in favour of uniformity by the view of its importance to the defensive uses of railways, it is curious enough that the Commissioners should come forth with a determination tending to perpetuate and increase the differences of the system. Were their judgments to be deemed final, one might indeed regard the prospect of any future set-tlement on this head as wholly desperate. But we do not suppose the House of Commons will quite surrender its authority to them on a point of such importance, or allow its intentions to be frustrated by a by-stroke of the Commissioners, without further inquiry.

The Lord Chancellor has at length delivered judgment in the BIRMINGHAM AND OXFORD case, affirming the sentence on the demurrer, of the lower Equity Court. The effect of this is that the defendants, i. e. the present company, are called upon to answer the bill of the plaintiffs (the Great Western), requiring the former to complete the imperfect agreement of November 1846, for the transfer of the railway to the broad-gauge party; - the demurrer, i. e. the representation of the company, that the agreement when made was, from its nature, imperfect, and being now repudiated by the parties who would have to apply to Parliament in order to complete it, cannot be equitably insisted upon -having been overruled by both Judges. Supposing a further progress of the operations of equity law in the same direction, it would ap-

company to go to Parliament for power to do that from which they now entirely dissent; and as this power can only be obtained by the assent of a majority, the result of carrying such an order into effect, or of imposing penalties for refusing to obey it, would be to establish a principle the strangest we have yet seen applied to the transactions of any joint-stock company. It would seem, as far as we can understand its probable operation, to authorize directors to make treaties with a view to future measures, which they cannot effect without taking the consent of their constituents for the time being, at some later period; then to dispose of the greater part of their interest to new shareholders, who buy in the belief that they shall be secured in the powers, understood to be given to them by the laws, of deciding in the usual manner on all the questions affecting the value of their property,—and, when these find it injurious to the property, to fulfil treaties which the directors, at the time of making them, could only engage themselves to, subject to the approbation of a future constituency at the time for perfecting them, to pronounce that while one law gives the latter a decisive veto on all such arrangements, another forces them not merely to remain passive while measures are carried out which they deem contrary to their interests, but actually to pronounce a formal consent in order to their being effected! It remains to be seen whether the courts of equity, after the defendants' answer shall have been argued, will declare this to be an equitable kind of proceeding in the eye of the law; -as an argument, we suppose, will now have to be opened, in which this part of the subject must come under review.

From our official returns it appears that the amount of traffic for the last week, on upwards of 3,436 miles of railway, was 147,352., thus accounted for: — 68,068. for the conveyance of passengers only, 41,838. for the carriage of goods, and a remainder of 37,446l. for passengers and goods together, not respectively apportioned; being an increase of 12,527l. over the corresponding week of the former year, when the mileage was 2,680. The average earnings per mile for last week were 43l., whilst in 1847 they were 50%.

LONDON AND BRIGHTON ACCOUNTS.

The accounts for the last half-year are not calculated to relieve the despondency which is visibly gaining ground on the subject of our working railways. Neither the figures in the balancesheet nor the comments upon them in the Report can be regarded as at all likely to raise the spirits of the owners of shares in that undertaking; and the opening of the series of half-yearly statements with one distinguished by a far from favourable result, may be taken for an unwelcome omen. Comparing the gross results with those of the same period in 1846, we find an increase in the whole traffic of the , large amount of 23,899l.;—the mileage, however, on which this has been received is 30 miles more than in the former year: - and from a tabular statement of receipts per mile in various years, we find that from 2,275l. in 1844, and 2,548/. in 1845,-or in periods anterior to the opening of the branches,-the earning has sunk in the last six months to 1,977%. on the main line, and, including the branches, to 1,649%, only. This result the directors ascribe wholly to the bad times. There is, however, an important element besides, which they have either overlooked or have not deemed it pear that the Courts must hereafter order the expedient to advert to. This is the great reduc-

Digitized by GOGIC

tion of the fares, carried into effect by the former directors.

Our readers will probably have remembered our doubts of the effect of this experiment, expressed on more than one occasion, while it was a subject of confident hope in many quarters. We pointed out that to make cheap fares profitable you must have cheaply made lines also:-that to lower rates seriously on a railway that has cost upwards of 50,000%. a mile, must on all lines be a questionable process:- and especially in one that derives its main business from the conveyance of passengers who will not be satisfied without luxurious accommodation and frequent departures. We have also pointed out that the effects of this process would be apt to show themselves progressively, in a direction tending to reduce the average of profit to an extent more than equivalent to any nett gain from the increased traffic it would certainly promote:-that, meanwhile, the habit of using the inferior class of carriages was growing amongst the easier classes, and would tell seriously in time on earnings; and that unless expenses could be notably reduced on the one hand, prices could be lowered beneath a certain scale, on the other, only at the expense of the company. The traffic tables for the last half-year afford no little confirmation of this view: the increase of first-class passengers is inconsiderable: the numbers of second-class are swelled in larger proportion than before to the receipts from them,-while, in 1846, 371,529 produced 60,422l., the earning from 533,133, in 1847, was no more than 73,1671.—a difference of something like 20 per cent. in the ratio of receipt to numbers carried; which cannot by any means be fully explained by the increase of the proportion of branch line passengers to the total of all kinds.

The expenses, also, we regret to find very largely increased. The charge for locomotive power alone is very nearly double of what it was in 1846,-that is to say, while the greater earning has been 23,8991., the increased expense in the single item of engines is 20,824/.; and the total increase of current outlay in 1847, as compared with 1846, is 28,796l.; so that the nett result of the half-year is worse than it was with a smaller gross traffic in the same period of 1846. Here one must assign a cause rather different from that which appears in the Report. The laches of a defaulting engine builder, and the higher charge for coke, will not be accepted by practical men as sufficient to account for so notable a rise in the expenses. Either the business has been too carelessly looked after, or it is conducted on a principle in which the ratio of receipt bears no fair proportion to its expenses; or both these causes together may have occurred to influence the results of the half-year. This, we apprehend, will be something near a true supposition. We notice that the item of compensation is a heavy one: exceeding 3,000/.

While the Board was occupied with its contentions in and out of Parliament, it could not be surprising that the business of economizing and ordering the current traffic should have given place to more exciting cares. These, we trust, are now at an end; and the directors may address themselves to duties, which are at all times important, but which in the present state of the concern, they must feel to be imperative. They cannot expect the shareholders to be satisfied with a continuance of accounts like those presented to the meeting yesterday; and it must be their chief care now to see what can be done to make the concern more productive; to improve its returns, which have been sinking instead of rising for the last twelve months. Here, as well as in other quarters, it John Bailward, Esq., Horsington House, Somerset.

will be proper for the Board to keep in mind the claims of the promoters to a better reward than they have yet received for the services rendered to the public. If these cannot be so arranged as to afford the proprietors a fair compensation, it will be proper to modify them in some way or ways calculated to render them more profitable to those at whose expense they are afforded. It is neither reasonable nor right that the advantage should be all on one side. The owners have a right to benefit by these schemes as well as the public, and will be very weak if they do not show a pretty strong determination to have their due share of the general good. If the business, as it is now conducted and charged for, cannot afford them more than the dividends made for 1847, it is clear that they ought to try such changes in the business as may pay them better; and of these, two obviously suggest themselves-less frequent trains; and, if this step will not answer alone, some addition to the fares. We should, however, imagine, that the first of these measures, combined with really good management, would sufficiently improve the nett receipt as to render no great increase of charges necessary; if the latter were to be considerably raised, of course it would not be wise to restrict the accommodation. That something ought to be attempted, of a very effectual kind, we think the proprietors must now be pretty well informed by the very poor results of the last two half-years; with which they cannot be, and have no right to be, at all contented.

WAR OF THE GAUGES.—SALISBURY AND YEOVIL.

The war of the gauges is raging once more in the South-Western district, and is carried on with vigour at every available point. We noticcd last week the large meeting at Shaftesbury, and now another attack has been made on the Board of Commissioners in Whitehall, preparatory to the great engagement of the Session in Westminster Palace. To the former long list of peers and landowners a new one is now added, nearly as long and not less influential. It is plain that the policy originally invented and so largely employed by the Great Western. is now turned against themselves, and with redoubled energy. The battle is to be fought, not merely on its bare merits, but with all the appliances which can make those merits felt and appreciated in the right quarter. This is the policy which has succeeded hitherto, and which presents, it seems, the best prospect of success. Mr. BENETT placed the whole question before the Commissioners in a nutshell; Mr. BANKES and Mr. Seymour supported him adroitly, and Mr. STRUTT, with the usual forms of ministerial mystery, assured the deputation that "the opinions and wishes of so large and influential a body of landowners and residents could not but have their due weight with the board,' Here also, it appears, that what is possible has been done. We may now look forward to the effect of all this on Parliament. The following is the array of important landowners and residents, who formed the deputation:-

T. Bowyer Bower, Esq., High Sheriff of the county of Dorset.

The Marquis of Anglesey represented by Lord Affred Paget, M.P. and Wm. Beer, Esq. Lord Arundell, of Wardour Castle, represented by Charles F. Arundell, Esq. The Earl of Pembroke represented by R. W. Lumley, Esq. The Hon. Sidney Herbert, M.P. and Wm. Wendham, Esq., of Dinton House, by Wm. Robson, Esq.

of Dinton House, by Wm. Robson, Esq.
The Earl of Morley.
Sir Wm. Medlycott, Bart., Ven House, Somerset,
John Benett, Esq., M.P. for South Wilts.
George Bankes, Esq., M.P.
John Floyer, Esq., M.P.
Henry Ker Seymer, Esq., M.P.
(Carles Barring Wall, Esq., M.P., Norman Court, Wilts.
Henry Seymour, Esq., Knoyle House, Wilts.
Col. Thomson Jacob, of Shilling-ton House, Dorset.
George Harbyn, Esq., of Newton House, Somerset. for the county of Dorset. Ferdinand Huddleston, Esq., Stourton Caundle, Dorset, John Rutter, Esq., of Shaftesbury, accounted for the absence of the Marquis of Westminster, and also of John Grove, Esq., of Ferne House, and Robert Graves, Esq., of Charlton House, who were appointed treather of the distance of the content of the cont were appointed members of the deputation

Correspondence.

LONDON AND NORTH-WESTERN DIVIDEND.

I find that there is an idle rumour affont that the directors will recommend a dividend at the rate of 8 per cent. only. Now this report may be merely a ruse to bring down the value of the stock, for it is not likely that the intentions of the directors would be divulged beyond the Board room. I think, however, that there are grave reasons why the directors should maintain a dividend at the rate of 9 per cent., if their revenue accounts will permit the appropriation of a sufficient amount for that purpose. The last half-year has been one of unexampled depression in trade and commerce; but better times are at hand; and the company will shortly be in a position to devote the whole of its energies to the collection of traffic, and to afford accommodation to many important, thickly populated, and wealthy districts of country. The value of their property, after an extraordinary and unnecessary depression, is gradually increasing; and no good purpose, individually or nationally, can be accomplished by an unnecessary reduction in the rate of dividend. Such a step, if unhappily determined on, would have the effect of exciting general distrust with reference to railway securities, as it would be argued that the directors had fears with respect to future operations, although such fears have in reality no existence. With returning prosperity all will be well with such lines as the London and North-Western.

J. A. C.

UNIFORM PARCEL RATES.

I have read with great satisfaction the articles from your correspondent "H. C." on this subject. I have also considered carefully your editorial notice. In the abstract, you seem entirely to agree with 'H. C." as to the fairness of his principle. You have some hesitation in adopting his precise figures; but you grant that his proposals are capable of being worked out with advantage to the public, and that they are calculated, also, to prove reciprocally advantageous to the railway companies. Your only ground of objection appears to be,-that whilst each line is conducted by distinct and independent parties, that unity of interest and universal co-operation, so essential to the carrying out of a great uniform system, can never be obtained. I have had considerable experience in the management of railways, and have sufficient reason to make pretensions to a knowledge of the parcel traffic in particular; and I must say, with all deference, that judging between you and "H. C.," the experience of the latter gentleman, as to what railways and a united management are capable of, appears to me to be the most perfect. It is not necessary to discuss further the details of his scheme. I may just add, that all my experience has convinced me that the parcel traffic is, in proportion, by far the most remunerative department of traffic, as it requires so much less expense and attention in conducting it. And I have always found that a reduction in the rates has been followed by an augmented exchequer, - whether under a monopoly or in the face of competition. I see nothing clearer than this,-that if the managers of the lines leading out of London were to resolve on establishing the principle its execution could easily be effected. I say the managers of the lines leading out of London, because the branch and extension lines in connexion with these are usually governed by the same rules; and therefore I do not hesitate to say that the system would extend over the whole country. As an example of this, I point to "uniform time," which having first been established on a few of the leading lines, has now been adopted even so far north as Dundee and Perth. This being arranged, let a "Uniform Parcel Traffic Clearing-House" be opened in London. I purposely object to the existing clearing house at Euston-square being burthened with the conduct of a traffic which would become so enormously extensive; and I am decidedly of opinion that a distinct and separate establishment is absolutely required to give the "uni-

form" system a fair and attentive trial. The existing clearing-house takes cognizance of passengers, parcels, horses, carriages, dogs, mileage of carriages and waggons, &c.; and it would not be doing justice to "H. C.'s" proposed system, if it were to be handed over to an establishment that already has enough to manage well. The new clearing-house would keep daily record of all the monies received and paid by the respective railway companies on account of the traffic; it would assign (weekly or monthly) to each the proportion due to or by it, and pay over and receive these amounts, and it would generally take a superintendence of the "uniform parcel traffic" throughout the kingdom,-each company rendering to it a daily account of their transactions outwards and inwards. I put it to you whether an establishment such as I propose would not answer all the purposes which you have asserted can only be secured by a Government authority like the General Postoffice; and whether, with the hearty assistance of the railway companies, and in the hands of an energetic and able manager, it might not be made so efficient as to deter the Post-office authorities from encroaching upon or interfering with the parcel traffic now in the possession of the railway companies? The cost of the establishment could be defrayed by a uniform rate of subscription per mile, from each company-say, 7s. 6d. per mile per annum, which, upon 3,500 miles,—somewhere about the number now opened for traffic, - would yield an annual revenue of 1,3121, 10s., amply sufficient to pay an expert manager, with assistants, rent of offices, despatch bags or boxes, &c. Feb. 1.

Gossip.

Mr. Hudson has redeemed his pledge to his constituents of Sunderland of affording them all the aid in his power to their commerce and enterprize. On the 4th inst. the Foundation Stone of the Docks at Sunderland was laid by him. The event was celebrated with great rejoicings. The whole of the shops were closed, and business suspended. The bells of the parish churches rang during the morning. The vessels in the harbour were decorated with flags, and banners were displayed at all the principal works and public establishments in the town. The parties taking an active part in the ceremonies of the occasion met an active part in the ceremonies of the occasion met at the Exchange-buildings, in the High-street, at 12 30 p.m., and thence walked in procession to the docks. On arriving at the site of the stone, Mr. Murray, the engineer, who is the projector of the undertaking, delivered to Mr. Hudson the tools to be employed by him on the occasion, and the articles to be placed in a cavity which had been prepared in the stone. Mr. Hudson, on receiving the bottle, which was hermetically sealed, placed it in the cavity of the stone, the remaining space of which was filled up with gutta percha, which was poured into it in a semi fluid state. It was then covered with a zinc plate, bearing an appropriate inscription. The stone, which had been suspended by means of a crane dur-ing these proceedings, was then lowered into its in-tended site, and Mr. Hudson delivered an inaugural oration. The directors of the company and a large party of individuals afterwards dined together, and the proceedings of the day were closed by a ball in the Athenseum, which was fully attended.

Some parliamentary opposition is threatened by the interests at HULL to the erection of a MORE CON-VENTENT PIER, by the MANCHESTER, SHEFFIELD AND LINCOLNSHIRE, at Hull. At present the landing there at low water is difficult, especially for horses and car-riages. The Manchester, Sheffield and Lincolnshire want to remedy this. But the Hull people, it is said, will neither let them, nor even do it themselves.

At the meeting of the BIRKENHEAD DOCK COMMIS-BIONERS the idea was repudiated that they were the parties who proposed to interfere with the Liverpool dock and town dues. The resignation of Mr. W. Laird, as a commissioner, was accepted, on the ground of interference with his duties in the Birkenhead and Chester Railway.

The resident landowners seem in real earnest for having the South-Western Extension to Exeter. On the 5th a deputation from the landowners and prin-cipal gentry and inhabitants of the counties of Dorset, Wilts and Somerset, had an interview with the Railway Commissioners at the Board of Trade, to present a memorial agreed to at the meeting at Shaftesbury, relative to the Salisbury and Yeovil Extensions, which we have noticed elsewhere.

The Brighton and Direct Portsmouth directors have been visiting Mr. Strutt, on the subject of their bills before Parliament. to require additional trains.

The TRAFFIC between MANCHESTER AND SOUTH-

MPTON is reported to be greatly increasing. The Scottish Gazette states that the traffic passing on the ABERDEEN in these early days, already has

fully realized expectation.

The discrepancies in the VALUE OF BRIGHTON SHARES are thought to have arisen from knowledge improperly obtained and circulated.—A shareholder improperly obtained and circulated.—A shareholder addresses the *Times*, alleging that "unfair use appears to have been made of confidential knowledge of the state of the accounts prior to their publication, for the purpose of speculating in a fall in the price of shares. Within the last fifteen days their value has fallen St. per share, influenced by the knowledge that has gradually transpired of what the dividend was to be. In the first instance about the 25th of Langery be. In the first instance, about the 25th of January, an advance of 2l. was effected by means of reports of an improved dividend being forthcoming, supported public purchases of this dividend at the Stock Exchange at 31s. each. This was immediately followed by large sales of shares for the account after the meeting; and then came rumours that the dividend was to be only 20s., which has proved correct. In this way large sums have been made by individuals; and it is difficult to avoid the inference that parties have been acting on the knowledge of what would be proposed, their plan having been to give in the first instance a stimulus to prices, and to take the oppor-tunity to sell largely for the account, when the real state of the railway would be known and when prices would fall in consequence. Surely the public will feel with me that the opportunity to affect prices in this way should be prevented. The directors may be to blame only so far that they have not adopted the precaution, which is usual in mercantile firms, of keeping a separate and private ledger for bringing together the aggregate of such accounts as are in-tended to be preserved from the knowledge of the

The Town Council of Edinburgh, says the Scottish Railway Gazette, have no intention to persist in their proposal to mulet the North British Company in an expense of 10,000l. to widen the North Bridge for the benefit of the public and the local proprietors. does not appear, however, that the corporation have agreed to the company's bill on the understanding that they are to receive a fair price for any ground or other property which may be required. We preor other property which may be required. We presume, indeed, that they are still determined to oppose the contemplated improvements at Shakspeare-square. Although we find it difficult to reconcile such a reso lution with their declared willingness to support the measure, provided the company agree to alter the bridge, the question would appear to be narrowed to the simple point of compensation, and the company are quite willing to have this matter determined upon an equitable footing, and in no way unfavourable to

the corporation.

Mr. Wells, of Suffolk place, has patented a MECHANICAL RAILWAY WHISTLE. The sound of this whistle is produced by the action of a crank upon a couple of what may be termed air pumps, 10 in. diameter, the pistons having a 4 in. stroke. The apparatus weighs about 1 cwt., and is so constructed that the handle by which the wheel is worked can be easily turned by the guard while he is screwing on the brake. On the 8th inst., the whistle was, in experiment, fixed to an open third-class carriage, attached to the 6 30 down Dover train. There was a strong head wind against the train, says the Morning Herald, a circumstance calculated to test the efficiency of the contrivance. With the train partially shielded from the wind, and proceeding at about 20 miles per hour, the whistle was heard by the engine driver, but where a speed of about 40 or 45 miles an hour was attained, the whistle was found not to be sufficiently powerful. But the power of the whistle can be easily increased, without adding to the weight of the apparatus, and it is probable that the patentee will, by a little attention to the mechanism of his apparatus, make it very useful.

There is a sort of IRISH HUMOUR in their EXAGGER-ATED DEMANDS for COMPENSATION against railways. Yearly a week has been engaged in a case of Beard the Great Southern and Western. The property which formed the subject of dispute bears the appropriate cognomen of "Bruin Lodge," with its small demesse, situated in the immediate suburbs of the city of Cork. It was required by the Great Southern and Western for their Cork terminus, the approach being effected through some stupendous tunneling under the rocky hills by which the town is surrounded. Negotiations had been going on, but an amicable adjustment was found to be hopeless, and the case came on before a jury. The claimant asked 15,000t.; the company offered 5,000t., which he peremptorily rejected. After a hearing of unprecedented length,

The EAST ANGLIAN have commenced issuing return the jury brought in a verdict, awarding 4,250L tickets. The traffic in cattle and stock is so great as (10,750L less than the claim, 750L less than the company's offer) as the full satisfaction to which Mr. Beare was entitled.

The Moniteur Parisien says,—"The Presse pre-tends that the Minister of Public Works, after having formally announced his intention of presenting this year certain bills respecting railroads, has since in-formed the parties interested in them that they are abandoned, and that none of the propositions in question will be presented to the chambers this session. This assertion is incorrect. The minister has not made to any person such a declaration."

Since the setting in of the cold weather, the OR-LEANS COMPANY, says the Chemins de Fer, have allowed their third-class passengers to ride at night in second-

class-carriages.

The directors of the Boulogne and Amiens have arranged with the South-Eastern directors for the arranged with the South-Eastern directors for the commencement of the through traffic between London and Paris and the Continent generally. The double line is now laid the entire distance from Boulogne to Paris, with the exception of about half a mile, and the line, it is said, will be opened throughout on the 15th of next month. There will be five through trains from Boulogne to Paris each lay on and after the 15th of Merch and exceptions. day on and after the 15th of March, and a corresponding number of through trains from Paris to Boulogne. At present it is intended that the depar-3 p.m., and 9 p.m. From Paris the trains are intended to start at 8 a.m., 9 a.m., 12 noon, 4 p.m., and 7 p.m. The train leaving Paris at 8 a.m. is to be an express train, to perform the distance to Boulogne in 5 h. 20 m.; so also the train starting from Boulogne Paris in 5 h. 20 m. An express steamer belonging to the South-Eastern will leave Folkstone to convey passengers to the train to start from Boulogne at 3 p.m.; this arrangement will enable the public to breakfast in London and be in Paris the same day at 8 20 p.m. So also between Paris and London there will be a special steamer in union with the trains leaving Paris at 8 a.m.; this steamer will start from Boulogne for Folkstone on the arrival of the train, by which means passengers of that morning from Paris will heans passengers of that morning from Paris will arrive in London at 6 30 p.m. Passengers will be enabled to book through the whole journey by one payment at London Bridge station; so also at the Paris, Amiens and Boulogne stations.

Reports of Bleetings.

[Continued from p. 103.]

LONDON, BRIGHTON AND SOUTH COAST Feb. 11.—Half-yearly Meeting, London.—Mr. C. P. GRENFELL, M.P., in the chair.

In consequence of the announced reduction of the dividend to 1l. per share for the half-year, or 4 per cent. per annum, this meeting was looked to with more than usual interest, and long before the hour of meeting arrived not only was the room engaged for the occasion at the London Tavern—which is the next in point of size to the Banqueting-hall-crowded toexcess, but on the staircase and landing leading to it there were between 100 and 200 persons endeavouring to obtain admission, failing in which they vented their feelings of disappointment in calls for an adjournment, which were continued uninterruptedly during the hour occupied by the directors in the attempt to proceed with the business. On their entrance the directors were received with loud disapprobation, and an almost general demand for an adjournment to some place capable of accommodating the whole of the proprietors present. Sufficient order was at length restored to permit the Secretary to read the advertisement calling the meeting.

A Shareholder, previous to the business being pro-

ceeded with, wished to ask if Mr. Wilkinson had not

sold his shares in the company?

Mr. Wilkinson replied that he had not sold as single share.

The cries for an adjournment to a larger room, principally from those proprietors who were near or outside the door, here increased to such an extent as to prevent one word of the Report which the chairman

The CHAIRMAN having by great exertion obtained a hearing for a moment, said "If there is a larger room in the house we will adjourn to it, but if there is not we cannot make one, and I am informed that this is the largest room vacant." (Cries of "Adjourn

Another effort was made by the Secretary to read the Report, but with no better success, the attempt being met by cries of adjourn and expressions of dis-

approbation.
The CHAIRMAN: Will the meeting do me the favour to say, whether the proceedings of the day are to be

Digitized by GOGIC

allowed to goon! (No, Adjourn, No, and Go on). If we | works necessary to complete the communication beare to go on, hon. proprietors must do us the favour to listen to the Report. (Adjourn to a larger room.) It is impossible for us to create a larger room than

Ald. WILSON submitted to the chairman that there was a larger number of proprietors outside the room than in it. All had a right to be present whose property was affected by the proceedings of the day. He was aware that there was no larger room vacant in the house; it was therefore a question for consideration whether the meeting should not adjourn until a the shareholders be kept out of the most important meeting the company had yet held, merely because a sufficiently large room had not been engaged for the meeting? If the adjournment were refused he for one would depart; he would be no party to a hole and-corner meeting.

The CHARMAN having again, with considerable

difficulty, obtained a partial hearing, said, " always the principle of Englishmen to hear both sides. A charge has just been made against the directors, which had no right to have been made,—a charge of breach of honesty, and integrity of purpose in selecting this room. I repudiate that charge with contempt, and I tell the hon. proprietor who made it that he states that which is false."

Ald. WILSON: If I made use of any expression, you, Sir, think I ought not to have used, I at once withdraw it. What I said, I did not mean as a charge against the directors; but I wished to show that it would have the appearance, to the public, of this being a hole-and-corner meeting, if you proceeded to transact the business of the company while the greater part of the proprietors are excluded by the size of the room.

The CHAIRMAN: I quite agree that every proprietor has a right to be present at the meeting, and I can only say, if the hon, proprietor can suggest any mode which every proprietor shall be accommodated with an arm-chair to sit on, to hear the Report read, I shall be happy to adopt it. I am not aware that I have said anything ungentlemanly, and I do not, therefore, expect to be met with the ungentlemanlike howling by which I am assailed.

At least twenty proprietors here attempted to speak together, continuing in that attempt amid a running accompaniment of groans and other discordant noises for some moments ere they appeared to discover that not one word of what they said could be heard.

Mr. TAYLOR at length succeeding in making his voice heard above the din, and after complaining (but without, as he said, imputing motives) of the neglect on the part of the directors in not securing sufficient accommodation, moved that the meeting do now adjourn till to-morrow or any other convenient time. It was not the usual place of meeting they were now in.

The CHAIRMAN said a room in the London Tavern had been engaged by the directors for more than a month, and that morning an application had been made for the large room up-stairs, but it had been engaged long before.

A stormy discussion, extending over nearly half an hour, ensued, as to whether the meeting should be adjourned or not-in the course of which several propositions as to time and place were made. Ultimately the CHAIRMAN put the question which had been moved and seconded, that the meeting adjourn till to-morrow (this day) at one o'clock, and an amendment that the adjournment be to Monday, at the London Tayern, when the large room will be disengaged. The latter of which being put first, was carried by an immense majority. The meeting accarried by an immense majority. The meeting ac-cordingly stands adjourned to Monday, at eleven o'clock, at the London Tavern.

VALE OF NEATH.

Feb. 9 .- Half-yearly Meeting, London .- Visct VILLIERS, M.P., in the chair.

The CHAIRMAN said that he was happy to have

still to lay before the proprietors a satisfactory account of the state of their finances. Since their last meeting there had been a very great depression of trade and commerce, and during that depression the directors had felt it their duty to husband as much as possible the resources, taking care at the same time that the works contracted for should so progress as that the works contracted for should so progress as that when a turn took place in the monetary con-dition they might be enabled at once to take advantage of it to push on the works to completion. this view two contracts entered into for the works at the lower part of the line had been put in active operation, so that they might expect that eight or nine miles in that part of the valley would be open for traffic by the beginning of next year. With regard to the upper part of the line, and the heavy the directors of the Waveney Valley. Most of the share-

tween the valley of Neath and the town of Merthyr, four contracts for the shaft and headings of the Merthyr tunnel had been let at satisfactory prices. and to able and solvent contractors, who would effectually perform the works. As to the intermediate part of the line, they expected shortly to be able to complete a contract for the works from Neath to Mr. Crawshaw's great iron works at Hirwann, so that within a very short period a large portion of the works on the whole line would be in a satisfactory state of progression. With regard to the finances, the directors had taken care that the money, pending the progress of the works, should be so invested as to give a fair interest on the calls, and to prevent the necessity of pressing hard upon the shareholders. An application would have to be made to Parliament during the present session, to enable them to com-plete the arrangement with the South Wales, which had subscribed for nearly one-fourth of the whole number of shares. It was also intended to apply to the Railway Commissioners, under the Act, for the full period of extended time allowed by that Act for purchase of land and the completion of the works; and as the communication of their own line must depend in a great measure on the completion of other lines, which were also applying for extended time, the shareholders would in no way suffer by the delay. The accounts of the ultimate prospects of the line were as flattering now as when it was first projected; and when he was in Wales the other day, he found that all parties there had the same confidence in it as he had always had, and concurred with him in the belief that it would be one of the best in the kingdom With a view to take advantage of the present low prices of iron, the directors had called upon the ironmasters for contracts for supplying the rails, to be delivered at such periods during the progress of the works as might be necessary. These contracts were not yet in, but they would be submitted to the share-

holders at the next half-yearly meeting.

The Secretary read the Report, which stated that an arrangement had been made with the South Wales, by which they had consented to subscribe for 6,389 shares in the Vale of Neath, but in consequence of some ambiguity in the wording of the Act of 1846. it had been found necessary to apply to Parliament for a confirmation of that subscription, and a bill had been introduced for the purpose of effecting this object. The directors have much satisfaction in stating, that, with one exception, they have hitherto been able to obtain possession of the land required without having recourse to the compulsory powers of their Act. Two of the largest landholders their Act. in the immediate vicinity have given immediate possession and afforded great facilities to the contractors in proceeding with the works. The directors trust that equal facilities will be afforded by the gentlemen interested in the land required. They amounced the retirement of Mr. R. F. Gower from the Board, the loss of whose services they much regret. The following directors retiring by rotation, were eligible, and offer themselves for re-election:—Messrs. H. J. Grant, W. Meyrick, M. Morgan, N. V. E. Vaughan. Mr. T. Wayne, the retiring auditor, also offered himself, being eligible for re-election.

The statement of accounts showed the receipts at 104,970*l*, : expenditure, 30,085*l*, 1s, 1d.; balance in hand, 74,884*l*, 18s, 11d.

(For Engineer's Report, see Official Papers.) In reply to questions, the CHAIRMAN stated that another call would probably be made some time be-fore the month of June next, and it would depend on the progress of the works whether a second call would be made this year or not. The directors received 1,000% a year for their services, those only being paid who attended. The secretary's salary was

The Report was adopted, and the retiring directors and auditor were re-elected.

WAVENEY VALLEY AND GREAT YARMOUTH. Feb. 10 .- Special Meeting, London .- Mr. W. WIL-

SHERE in the chair.

The Report by the committee stated that-The Report by the committee stated that—
An agreement was entered into with the Norfolk on the
21st of feetober 1845, for the purpose of uniting their
schemes, which were projected for effecting the same object,
commencing from the Norfolk at Reedham, passing through
Beecks, Bungay, and Hardsstone, to Diss, with a branch
to Balesworth. For the purpose of raising the funds, the
Norfolk aereed to create new shares in their undertaking,
bearing a guaranteed interest of 5 per cent, peranaum; the
serial follors in the Wave ney Vadey and Great Varne atth to
be cutified to subscribe for 20 ect shares of 20% each in the
said capital upon payment of a deposit of 3 %, per share, and
that credit be given to them upon such deposit for the sum
of 26 upon each share. In the event of the application to of 2l. upon each share. In the event of the application to Parliament proving successful, a further sum of 5s, per

holders availed themselves of the arrangement by paying 30s, per share to the Norfolk, and receiving a scrip receipt credited 40s, per share paid up by virtue of the agreement. During the session of 1847 a Standing Order of both houses precluded the payment of interest on calls out of capital, and the Norfolk then altered their bill by striking out the clause which related to the guaranteed interest on calls, and in perpetuity to the Waveney Valley proprietors; consequently the Norfolk have no power to grant shares consistently with their agreement. The Norfolk were to pay the directors of this company 5,080d, on the passing of the bill, but, notwithstanding repeated and urgent applications, they have been unable to obtain it, although the Norfolk directors made rejeated promises of payment. The scripholders, who are unwilling to take such stock as the Norfolk can give them under their Act, have a right to call upon the Norfolk to return them the amount of their subscriptions. The committee of management submit they holders availed themselves of the arrangement by paying upon the Norfolk to return them the amount of their sub-scriptions. The committee of management submit they should be entrusted with power to enforce their rights, and, if necessary, by an appeal to a court of equity. There are claims of the Wavency Valley upon the Eastern Union, and upon the Chelmsford and Bury, to the amount of some thousands, still unsettled. The latter company dispute their The statement of accounts to August 1847, showed

the receipts at 35,875*l*.; expenditure, 31,493*l*.; balance, 4,382*l*.; of which 1,255*l*. is in cash, and 3,127*l*. deposited on 2,085 Waveney Valley shares in the Norfolk, at 30s. per share. The liabilities to the Norfolk, at 30s. per share. The liabilities t Capt. Moorsom and others were stated to be 2,050l.

The Secretary stated that Capt. Moorsom had already received 2,500t. from the company, and his claim now amounted to 1,720t. The 5,000t. due from the Norfolk was to be paid to the directors for the plans, which cost three times that amount, and to be distributed amongst the original Waveney Valley shareholders. It was thought the latter would receive about 7s. per share. The amount claimed by this company from the Eastern Union was about 3,000%, and about 2,000% of it had been admitted by the latter company. That 16,000 out of the 20,000 shares had been registered in the Waveney Valley stock of the Norfolk.

The CHAIRMAN moved that the Report be adopted and expressed his readiness to afford any information. A long desultory discussion by Messrs. HARVEY, BACK, and W. WILKINSON ensued as to the best mode of

obtaining the concessions and stipulated payment from the Norfolk, and also as to the parties who were entitled to share in the 5,000l., when that sum should be received.

The Report was agreed to, and resolutions were passed authorizing the committee to take such steps in the matter as they might be advised to do, and to report the result at a special meeting, also to take such steps towards the Eastern Union and Chelmsford and Bury as they might be advised were proper.

MANCHESTER, BUXTON, MATLOCK AND MIDLANDS JUNCTION.

Feb. 9.—Half yearly Meeting, Derby.—The Hon. G. H. CAVENDISH. M.P., in the chair.

Mr. WRAGGE, the secretary, read the Report. It stated that the object of the meeting was twofold, viz., to transact the ordinary business of the company, and to consider a bill for the purpose of effecting an extensive deviation in the authorized line of the company's undertaking, which would save 170,000l. in the cost of construction. The Report also stated that the works were proceeding satisfactorily, and that the opening of the line into Darley Dale, and possibly to Rowsley, will be effected within the period stated at the last half-yearly meeting; for this purpose, how-ever, it will be necessary to make a call of 1/. per share, payable in May next. The statement of accounts showed the receipts at 213,541t. 12s. 7d.; disbursements, 159,186l. 12s. 9d.; balance in hand, 54,354l. 19s. 10d.

(For Engineer's Report see Official Papers.)

The CHAIRMAN, in proposing the adoption of the Report, congratulated the shareholders on the favourable progress of the works. Although the directors had had to encounter a season of extreme commercial embarrassment, they had not felt it incumbent upon them to discharge one of their workmen. The works had consequently proceeded with great activity, and he hoped that they would be enabled, early in the autumn, to open the first and most remunerative portion. After their defeat last year, Mr. Stephenson was directed to make another survey, and the result of his labours had been the deviation referred to in his Report, and which, if carried out, would save 170,060l. on the original estimate, besides affording greater accommodation. The opposition with which they would have to contend, with respect to the new and improved scheme of communication, proceeded from the Duke of Rutland, the inhabitants of Bakewell, and from the Manchester, Sheffield and Lincolnshire; but as these latter opponents had no connexion with the country which they proposed to traverse, and had therefore no right to become their antagonists, he thought it would be unnecessary for him

to say anything about them. With respect to the op-

position of the Duke of Rutland and the inhabitants of Bakewell, he would only say this, that he hoped they would re-consider their grounds of opposition, because he believed that they would find the line exceedingly advantageous to them. He would not refer to the question of the tunnels, concerning which so much had been said, and so much vexatious opposition caused last year; though he might say that the parties who opposed them so strenuously had forgotten to mention the vast expense of their own tunnels, and the difficulties which they had experienced in their construction. It appeared to him that it would be mad to lay out 170,000l. in making an entirely direct line, when it was evident that at some future time a railway might be brought down to the Darley Valley, and entirely cut off the traffic of such a line. urged in committee that they had entered into a friendly agreement with the Duke of Rutland one year, respecting the land belonging to him, which were desirous to get rid of in the next. The fact was that they had made an agreement with his Grace with respect to the former line, to which he was but as the new line was not so objectionopposed. able to him, they had expressed their wish to withdraw from their former agreement, consenting to abide by its terms with respect to whatever land they might require for the new line. Buxton and Bakewell, in the new scheme, would be placed on branches of un-objectionable gradients. Mr. Haywood, who was pre-sent, was strongly of opinion that Buxton would derive much benefit from being on a branch. It seemed that some of the inhabitants of Bakewell entertained a different opinion: but he trusted the inhabitants would sink, in some degree, their individual interests, in order to secure so great a boon as the entire system to the district. He hoped also that the Duke of Rutland would make no objection to their passing up the valley of the Derwent. It was lamentable to think that so much money had been spent in opposing this line. But for it the line might have been opened to Bakewell this summer. He was, however, not without hope that next year they would be celebrating the opening of the Bakewell portion of the line, with bells ringing and banners flying at the Rutland Arms. He wished to say a few words on a subject on which he should have felt bound to be silent if he had not been their chairman. It had been stated that the support given to the line by the Duke of Devonshire arose from interested motives. It was just possible there were some persons in the committee-room who could not understand a man being actuated by other than mere personal motives. His consent to allow the line to pass through Chatsworth was spontaneously given to him by his noble relative. He said he admired the undertaking, and, considering that it would be of great public utility, he could not withhold his support from it. The committee of the House of Lords did not seem to understand how the possessor of such a beautiful estate as Chatsworth could allow, in the words of Shakspeare, such an unsightly thing as a railway to "come between the wind and his nobility." In conclusion, the hon. gentleman stated that if they had to contend, in their next parliamentary campaign, with such formidable and expensive opposition as during the past, he should feel it his duty to resign his office, which under such circumstances, would become an unthankful office, leaving his brother directors to do their best to carry out this great undertaking to a successful issue.

The adoption of the Report having been seconded, some discussion took place, in the course of which it was elicited that the original capital would be diminished about one-fifth; that the new line, including branches, would be nine miles in length, or four miles longer than the old one. They did not expect to make all the traffic between Buxton and

Bakewell.

Mr. Kahrs objected to the placing of Bakewell and Buxton upon branches, as he considered they

would lose much of their traffic.

Mr. G. Stephenson was thoroughly convinced of the excellent opinion which he formed fifteen years ago in surveying a line through the district, which circumstances prevented being carried out, that the line he had laid down was the only one which should be taken through Derbyshire. They had better gradients than their opponents, though he admitted they had some bad ones; but the Buxton line would be made and worked cheaper than any in England.

Mr. ELLIS, the deputy chairman of the Midland, said he represented there Mr. Hudson and the Midlands, who held a large stake in this line, and his and their opinion was that the line along the Derwent Valley was the best; he had traversed the whole district to satisfy himself, and the result had perfectly astonished him. If they could not get the deviation, he was disposed to advise the company not to go up the Buxton Valley. Bakewell had but 1,500 inhabitants, and it was preposterous to say that they

could support a railway. The company would accommodate the Duke of Rutland by making a single line to the town, but they did not anticipate any profit.

Mr. TOOTAL said, in reply to questions, that the worst of their gradients was better than 1 in 100. They intended to seek power to lessen their capital, but they would not fix the amount—that would be matter for after consideration.

The CHAIRMAN stated, in reply to a question, that 13,000*l*. of the calls remained unpaid; 60,000*l*. out of the 73,000*l*. had been paid.

The Report was adopted.

Mr. Du Boulay was elected auditor.

The meeting was then made special, and the proposed deviations were unanimously agreed to.

GREAT NORTH OF ENGLAND.

Feb. 4.—Half-yearly Meeting, Darlington.—Mr. N. Plews in the chair.

The business was entirely formal, the line being under lease to the York, Newcastle and Berwick, and simply consisted of declaring the following dividends, at the rate of 10 per cent. per annum, viz.:—5l. per share on the 100l. shares, 1l. 6d. on the 40l. shares, 1l. 10s. on the 30l. shares, and 1s. 6d. per share on the 15l. shares, the latter being one year's interest at the rate of 5 per cent. per annum on the amount paid up, the whole to be payable on and after the 14th inst., subject to the reduction of income-tax.

CALEDONIAN AND DUMBARTONSHIRE.

Feb. 10.—Special Meeting, Glasgow.—Mr. Stott, of Balloch, in the chair.

of Balloch, in the chair.

The directors' Report announced that having received powers at a former meeting to adopt the best means of postponing the works, and instructions to make arrangements with landed proprietors and contractors to enable them to go on without making any additional call till the spring of 1849, they had succeeded in making such arrangements as would enable them to carry the wishes of the shareholders into effect. The Report also alluded to a difference of opinion which had arisen between the directors and the magistrates and Town Council of Helensburgh, in reference to the quay and harbour of that town.

The CHAIRMAN said, the directors had acted up to the instructions received by them at last meeting. No further operations would be gone into till the sense of Parliament was known with regard to railways. Parliament, as the meeting was aware, had passed one bill on the subject; and the directors, as a matter of course, had made application to the Railway Commissioners for an extension of time for those portions of the railway which had been contracted for. He had the satisfaction of stating that the contractors had acted towards them in the most liberal manner. They did not wish to press the full amount of their claims, but to receive a fair compensation-and he had the assurance of those who were much better acquainted with the nature of the contracts than he was, that the shareholders had nothing to complain of in regard to them. He concluded by moving the adoption of the Report, which was seconded by Mr. W. CAMPBELL.

Sir J. Colquioun proposed an amendment upon that part of the Report in reference to Helensburgh, and entered into a long statement regarding the original agreement between the company and the magistrates and town council, as to the construction of a quay at Helensburgh. His amendment was to the effect that the meeting should instruct the directors to carry out the original agreement.

After a few observations from Shareholders, it was agreed to postpone the consideration of the question to the ordinary meeting, about to be held.

The Report was then approved of.

At the ordinary meeting, which immediately followed, the Secretary submitted a short abstract of

affairs.

Mr. Forrester suggested that a small committee should be appointed to scrutinize the affairs of the company.

Mr. LAMOND remarked, that the whole documents of the company were patent to the shareholders, and that any one who had the slightest wish to get information could easily obtain it.

Sir J. Colquidun's amendment was then con-

Sir J. Colquidun's amendment was then considered, and, with some verbal alterations, agreed to. On the motion of Mr. Smollett, M.P., the following gentlemen were appointed directors for the ensuing year:—Messrs. W. Graham, jun., P. Denny and

KILLARNEY AND VALENTIA.

Feb. 10.—Adjourned Meeting, London.—Mr. J. ATTWOOD in the chair.

the Buxton Valley. Bakewell had but 1,500 inhabitants, and it was preposterous to say that they appointed for the purpose of laying before the protitive months.

prietors the result of certain negotiations pending at a former meeting, with a view to enable the company to proceed with the line. These negotiations not having been brought to a conclusion, he would move that this meeting be adjourned to April 15.

The motion was seconded by Mr. MILLER.
Mr. BEADELL wished to see a statement of the accounts. He thought it very desirable that they should know how their affairs stood.

The CHAIRMAN admitted it was very desirable that a statement of their accounts should be submitted, which he promised to do at their next meeting. He believed the funds in hand would not meet their liabilities, and that Mr. Attwood was some thousands out of pocket.

Resolutions were unanimously passed, adjourning the meeting to the 15th of April, and that a balance sheet from the commencement be then laid before the proprietors.

SAMBRE AND MEUSE.

Jan. 29.—Annual Meeting, Brussels.—Mr. T. HAN-KEY, jun., in the chair.

The Report, which was read at the meeting lately held in London (see ante, p. 79), was adopted unanimously.

The CHAIRMAN, in the course of his observations, stated that the directors were quite satisfied with the contractor for the works, and with the chief engineer. In reply to one of the Belgian shareholders, it was

In reply to one of the Belgian shareholders, it was stated that the works had been for the present suspended on the second section; that the capital hitherto paid up was not sufficient to complete the entire line, but that the works on the first line were actively progressing. A similar statement was made with reference to the works in the two tunnels.

Mr. PIDDINGTON observed that notwithstanding

Mr. PIDDINGTON observed that notwithstanding the badness of the times in England, all the calls upon the shareholders (and these calls amounted to eight) had been well responded to. The first section of the line would open some important mineral districts.

NORTHERN COUNTIES UNION .- Feb. 10 .- Meeting of Shareholders, Leeds.—Mr. C. Atkinson in the chair.—Mr. J. Baker, of Thirsk, said, that in his opinion the grand mistake which had been made vas the union of three lines which had no community of interest; the object of one being to connect the eastern part of England with the western portion of Scotland, and the other to unite the coal district of Bishop Auckland and Newcastle with the district between Kendal and Liverpool, from the circumstance that coal was very scarce between Manchester and Carlisle. He recommended that they should endeavour to get rid of the heavier part of the works, from Tebay to Bishop Auckland, which would cost two millions, and also of the simultaneous clause, which required them to invest their property equally upon the three lines, thus protracting the period when the lines might become prefitable: and he intimated that there was a party (stated afterwards to be the Stockton and Darlington) ready to take a large por-tion of it off their hands. It would be necessary to have another Act of Parliament, and he was of opinion that at the general meeting next week they should resolve to stay all further proceedings, to make no further calls, and that they should instruct the directors to dispose of that part to which he had referred at a fair price, and to lease the other if they could get 6 per cent. or upwards, and to adjourn the meeting for three months. That portion of the line between Wath and Bedale, which was likely to be very profitable, should be completed without delay. He concluded by moving—

That in the opinion of the meeting it was expedient that at the general meeting, to be held on the 16th inst., a resolution should be passed restraining the directors from making further calls, or incurring further liabilities on account of the Northern Counties Union.

Mr. J. Proctor seconded the motion, and after some discussion, the resolution was unanimously adopted.

—Mr. Smith, of Wakefield, then moved—

That the shareholders should at such meeting be empowered to negotiate the sale of the line from Bishop Auckland to Tebay, and the lease of other portions of the line at a minimum interest of 6 per cent, upon the cost.

Mr. Gill thought the adoption of the resolution would

seem like hawking the line before the public, which was not desirable.—Mr. Eddison said that according to the recent Standing Orders, no line could be leased until it was completed, though those Orders might not apply to the suspended bills.—The resolution was adopted, with the words after "Tebay" omitted.—Mr. Wilkinson was of opinion that it would be difficult to obtain a further call from many of the present registered shareholders, some of whom were not monied men. He moved—

That to afford time to the directors to negotiate these arrangements, the said meeting should be adjourned for three months.

This resolution was adopted.—It was also resolved that Messrs. C. Atkinson, of Leeds, C. Smith, of Bradford, D. Smith, of Liverpool, C. Wilkinson and J. Baker, of Thirsk, be appointed as a deputation to the general meeting in London, to support these resolutions and for other purposes.

GREAT WESTERN .- Feb. 7 .- Meeting of Inhabitants, Eton, to resist the proposed branch from Slough to Windsor.—Dr. Hawtrey in the chair.—The Rev. E. Coleridge stated that the object of the meeting being to re-affirm their opposition of last year to the branch from Slough to Windsor, he had drawn up a petition to the House of Commons, which he begged to submit for the adoption of those present. The petition set forth at great length the grievances which it alleged would be inflicted upon the town and college of Pton by the Great Western kill pressing into of Eton by the Great Western bill passing into a law, and concluded by praying that the house would not permit its determination of last session to be disturbed .- The petition was seconded by Mr. C. Barton, and carried unanimously.

THE MALT TRADE AT WORKSOP .- Before the opening of the Manchester and Leeds, the great malting town of Worksop paid upwards of 41,000l. per annum for malt duty, but in 1843 this amount had declined to 26,000l., and the only reason to be given for this unpleasant change is the fact that other malting towns have had the good fortune to be placed on rail-ways, whilst Worksop has been neglected. The Manchester, Sheffield and Lincolnshire will, however, accommodate the town, as there is a station at Work-sop. The cost of conveying a ton of malt from Worksop to Manchester, by canal to Eckington, and thence by railway, is 17s. 43d., and by the Trent and Yorkshire canal 20s. per ton, with, on both routes, great delay, and considerable risk of pilfering in the canal boats. The cost by railway will be under 10s., a difference more than sufficient to restore the malting trade to Worksop in more than its former vigour.

The country around Worksop comprises about 6,000 acres of woods, and the timber trade has always been carried on here to a considerable extent. Besides timber in bulk, wood is here manufactured for all the purposes of the Sheffield trade-such as staves for packing-cases, handles to edge tools, and implements of all kinds; Windsor and other common chairs are also made, and lately a very large business in railway sleepers has accrued, so that altogether Worksop on an average exports 230 tons of wood a week; the greater part of this is sent by carts, wains, or waggons on the ordinary roads to Sheffield, and not by canal, a circumstance which, of course, subjects this trade to heavy additional expense.

SHEFFIELD AND ITS SUPPLIES OF COALS.—The price

of coal in Sheffield and the neighbourhood varies according to the quality, from 2s. 6d. a ton, the lowest, to 7s. a ton, the highest price at the pit mouth. The two most valuable beds of the Yorkshire coal-field are, The two one which lies about the middle of the series, and about 300 yards below the topmost workable seam—this bed is called according to the different places at which it is worked, or its owner, the Barnsley thick bed; the Gauber Hall, the Worsborough, the Elsecar, Lord Fitzwilliam's, Lorby's, France's, the Parnall, the Handsworth, and the Reighton coal-this is a remarkably pure hot coal, and free from earthy par-ticles, and is on that account the best coal for iron This mineral may be called the "converting works. This mineral may be called the "converting coal." It is, however, only the pit pieces of this which are used for "converting coal," the broken and smaller parts being sold at a lower price for "engine coal." The other bed is the Silkstone, the Sheffield bed, Newbolds, the Intake, and the Unstone bed, all of which are precisely the same coal. This bed lies about 300 yards before the foregoing, and is the lowest of the Yorkshire workable scams. It does not make so good railway coke as the other, being less frake so good rankay coke as the other, being less for this purpose by 2s. a ton, it is most used in Sheffield for manufacturing purposes. The price of the "converting coal" increased in May 1844 from 8s. to 2s. 3d. a ton delivered at the consumer's door, so that the demand exceeded the supply. This is the coal of which, more than others, Sheffield wants an increase to supply, and of this very coal there is abundance along the line of the Sheffield and Lincolnshire, which can thereby be brought into Sheffield at a

diminished price.
THE WESTERN LINE OF INDIA.—Commenting on recent news from India, the Times observes :revival of the port of Gheriah is an object of singular importance. This old Mahratta harbour—the scene of some of our earliest exploits—is excellently situ ated, not only as a port of refuge on an awkward conset, but as an outlet for merchandise at a most convenient point. The roads which would converge upon it pass through some of the best cotton countries of the district. It is ascertained, too, that the

great chain of the Western Ghauts is passable at this point with unusually little difficulty, and that the country from the pass to Kolapoor, and thence to Hyderabad, offers few obstacles to the construction of a direct highway. Nor do the advantages end here, for a road already exists from Hyderabad to Masulipatan on the Coromandel coast, so that the formation of a corresponding branch from Gheriah to Hyderabad would open a straight and unbroken communication from sea to sea, across the very centre of the peninsula, the line of which would include, about midway, the great garrison of Hyderabad, with all its troops and munitions, and would terminate at its extremities in ports respectively contiguous to Madras and Bombay. Such a connexion of the two coasts as this would supply the interior with the benefits of sea-borne goods, and would make available for exportation a vast quantity of produce which is now left to perish. At present even the salt of the coasts cannot be conveyed into the interior in quantities adequate to the demand. When this project is carried out it would be desirable that attention should be given to a suggestion made some time back by a local committee, to the effect that all new roads in India, wherever laid down, should be so constructed that they might at any time receive a double line of rails, and that all bridges or other stonework should be made of strength corresponding to the pos-

sible service of the causeway.

The Niagara Bridge.—A correspondent of the
New York Courier gives the following account of a proposed bridge over the falls of Niagara. It would spoil it if we were to attempt to abridge it. He says: I have been intensely interested to day in listening to a description, from a well-informed and competent source, of the great bridge over the gorge that separates the dominions of the Queen from those of the President. If anything could be wanting in the attraction of the country about Niagara to turn thither the tour of the multitudes in the pleasure season, this bridge will supply it. Its thousands of tons weight of the strongest iron cord that the ingenuity of the ironmaster can desire find a safe support in wrought iron anchors, built in the solid rock, 100 ft. below the surface, so that before it could yield, the very rock-bound earth would forsake its tenacity. large wooden framework is to be placed, so that no undulating motion can be experienced. In full sight of the cataract—the surge of angry waters far beneath—the sullen storm-beaten rocks all around neath—the suiten storm-beaten rocks an around—the quick locomotive will put forth all its quickness to rush beyond the peril of its journey. This glorious work is already begun, the money for its cost paid in and available, the excavations commenced, and the contractor is to cross on horseback by the middle of next June. Its firmness is to be such that with all the burden of a powerful locomotive and a long attendant train of cars it is not to vibrate one inch in the centre. The railway is to occupy the centre, two carriage-ways on either side, and two footways. What a magnificent spectacle this road in full use will present! A road of this kind over the Menai Straits, in Wales, is famous for the daring displayed in its confamed. It will be an iron link of civilization between the two ruling powers of the world, and will never be One of the first thoughts that present themselves in reference to the construction is, as to how the wires are to be thrown across. The steamboat now used below the falls is to take over two cables, to which strands of iron are affixed. These are to be drawn over till two ropes of iron are drawn over, on which a temporary pathway is to be placed. And when I inquired where workmen could be found who had nerve enough to work effectually under such circumstances, the answer so characteristic of American strength of action was, 'Oh, there are always plenty of Yankees who have both the courage to work there, and the ingenuity to work well.' great railway in Canada which is to be connected with this mighty work presents some admirable fea-tures. Its grade is over 20 ft., and a very, very large proportion of the distance is on a straight line. On one line, perfectly straight, 90 miles are laid out. All the highways of the country are to pass either over or under the road, by depression or elevation, so that there will be neither obstacle nor hindrance to a flight which will put more life into the provincial dominion of her Britannic Majesty than it has yet seen. 'That same' province of Canada West has yet to see great days. England expends millions on sections of her great dominion far less worthy of her notice and fos-tering care. 'The last link' is completed when this bridge of the cataract shall have been completed. From Boston and New York an unbroken line is presented, and the day is soon coming when

HULL AND SELBY RAILWAY. The HALF-YEARLY GENERAL MEETING of the Shareholders of the Hull and Selby Railway Company will be held at the Offices of the said Company, in Robway-street, in the Borough of Kimeston-upon-Hull, on Friday, the 18th day of February 1818, at 12 o'clock at noon. The Books kept by this Company for the Registration of Transfers of Shares will be closed from the 10th to the 18th day of February inst, both inclusive.

By order,
CHAS. H. PHILLIPS, Solicitor of the said GEORGE LOCKING, Secretary J Company.

Railway Office, Hull, Feb 2, 186.

Railway Office, Hull, Feb. 2, 1848.

MANCHESTER, SHEFFIELD AND LIN-COLNSHIEE RAILWAY.

NOTICE IS HEREBY GIVEN, that the ORDINARY HALF-YEARLY MEETING of the Proprictors of the Manchester, sheffield and Lincolnshire Railway Company will be held, for the despatch of ordinary business tincluding the confirmation of the Forfeiture of certain shares in the Company, at the Abion Hotel, in Manchester, on Wednesday, the 16th day of February next, at 10 clock in the Afternoon.

And NOTICE IS HEREBY FURTHER GIVEN, that an EXTRAORDINARY GENERAL MEETING of the Proprietors of the said Company will be held at the same place, at 3 o'clock in the Afternoon of the same day, for the purps of ostimiting for the Approval of the Proprietors present at the said Extraordinary Meeting, Drafts of the following Billia, now depending in, or about to be introduced into Parliament, that is to say,—
1st. "A Bill for vesting in the Manchester, Sheffield and Lincolnshire Railway Company the Canal Navigation from Manchester to or near Asthon-under-Lyne and Oldham.—
2nd. "An Act for enabling the Manchester, Sheffield and Lincolnshire Railway Company to make improved communications to their Stations in Manchester."
2rd. "A Bill to enable the Manchester, Sheffield and Lincolnshire Railway Company to make improved communications to their Stations in Manchester, to increase their station accommodation at Manchester and Statchridge, and for other purposes."
4th. "An Act for enabling the Manchester, Sheffield and Lincolnshire Railway Company to make a Railway to Farnely, with Branches therefrom, all in the West Riiding of the County of the Act for resting in the Manchester, Sheffield and Lincolnshire Railway Company to make a Railway to Farnely, with Branches therefrom, all in the West Riiding of the County of the Act for resting in the Meachester.

Branches therefrom, all in the West Riding of the County of York.

5th. "An Act for vesting in the Manchester, Sheffield and Lincolnshire Railway Company the Sheffield Crad."

6th. "A Bill to enable the Manchester, Sheffield and Lincolnshire Railway Company to construct an additional or enhanced Station at Sheffield, and to make a Branch Railway to the Shefield Canal.

7th. "A Bill for improving the Steam Communication across the river Humber, belonging to the Manchester, Sheffield and Lincolnshire Railway Company; for erecting a Piera King-Goughan Hull, and enlarging the Works at New Holland; for making a connecting line near Habronen, in the county of Lincoln; for amending the Piotage of the Port of Grast Grimby, and dramending the Acts relating to the Manchester, Sheffield and Lincolnshire Railway Company.

And Sth. "A Bill for enabling the Manchester, Sheffield and Altrincham Railway Company to provide additional Station accommodation in Manchester, and for other purposes."

accommodation in Manchester, and for other purposes."

And NOTICE IS HERERBY FURTILIE GIVEN, that the
Resister of Transfers of Shares in the Manchester, Sheffield and
Lindon-hire Rankung will be closed from the 3rd to the 16th days
of February next, both days inclusive.

CHRONICE

Company's Office, London, Moorgate-street,

SUMMERLY

ART-MANUFACTURES.

Art-Manufactures aim to produce in each article superior utility, which is not to be sacrificed to ornament: to select pure forms: to decorate each article with appropriate details relating to its use, and to obtain these details as directly as possible from Nature. These principles are by no means put forward as forming an universal rule; but it is thought they may be adhered to advant ageously in most Articles of Use, and may possibly contain the sorms of a style which England of the 18th century may call its own. Several of our best Artists have already expressed their willingness to assist in this object, among them may be named—

John Bell, Sculptor.

C. W. Cope, A.R.A.
T. Creswick, A.R.A.
W. Dyce, A.I.A.
J. C. Herbert, R.A.
J. R. Herbert, R.A.
J. C. Horsley.
The Art-Manufactures will be of all kinds, and executed in metals, pottery, glass, wood, papier maché, and other materials.

Those now ready are-

Those now ready are—
A Bride's Inkstand, in Parian, with Tazza.

SATURDAY, FEBRUARY 19.

LONDON, BRIGHTON AND SOUTH COAST. COMMITTEE OF INQUIRY.

The LONDON AND BRIGHTON directors seem to have conducted themselves with both good temper and good judgment at the adjourned meeting on Monday last. The course they took, of assenting without hesitation to the appointment of a committee of inquiry, was evidently the wisest that could have been pursued under the circumstances. We trust they will continue to show the same discretion, by frankly assisting the labours of the shareholders' deputies,—the nomination of whom, in the actual state of the company's affairs, instead of being viewed as a hostile proceeding, may rather be regarded in the light of a special consultation, on the part of all concerned, for the purpose of securing the common interest. Seeing what the result of the two last half-years' business has been, and how greatly it has disappointed the expectations and predictions of those even who had the reins of the management in their hands, it cannot be urged that such a consultation is either uncalled for or premature at the present moment. It will, we hope, be conducted in the way by which only any useful end can be reached, namely, by the committee directing their inquiries to the practical object of restoring, by all possible means, the prosperity of the concern; avoiding fruitless recriminations or vain censures of what has been transacted past recall; and using their best judgment and energies to make the most of the business, as it exists, for the future advantage of the proprietors.

The inquiry, followed out in this spirit by the deputation, and duly assisted by the directors, may be productive of the utmost good. It will bring under deliberate consideration, by the impulse of fresh minds, not merely the arrangements of the current business, and the nature of the capital expenditure, but the principles of general policy, as well, by which the company's interests may be best secured hereafter. And there can be no doubt whatever that in each of these respects, especially in the latter, a firm and agacious view of what the circumstances of the case require may lead to results highly beneficial to the concern-may do much to recover its credit, and to restore confidence in its prospects, which it cannot be denied has greatly fallen during the last twelve months.

The affairs of the company have evidently reached a stage from which it will be expedient to date a new era of administration. The capital for some years past has gone on increasing at a rapid rate: the experience of last year's business has shown beyond a doubt that the traffic cannot sustain any great addition to the pressure of this weight without the divi-dends permanently sinking. Neither the distress of the past year, nor any casual defects or accidents of management, will explain the whole decline in the nett returns; while it appears from the statement of the chairman that the company is bound hand and foot to its present low scale of charges,-a circumstance, we may observe in passing, that speaks pretty loudly in evidence of the price the company has had to pay for its repeated parliamentary applications. The chairman may well inveigh against the "rapacity of the Legislature;" but it must be added, that the victimized party have in a manner invited its exercise at their expense by continually pressing for leave to extend their works and branches, with an eagerness that gave Parliament the desired opportunity of imposing its own terms as the condition of granting them. It must now be felt that the extensions and connecting lines of the last three or four years have

been dearly purchased; and it must also be seen that it is now high time to put an end to this expensive process.

The object now must be to preserve and utilize the property of the company. To this end, the first step, it is clear, is to fix a ne plus ultra to external enlargements; the next, to review the schemes already undertaken, and bring them into as compact a state as possible; carry out with all possible despatch, but with a judicious economy, those which either are already far advanced, or may be found, on a strict revision, to promise fair returns; and promptly lay aside, or at least suspend, any of a doubtful character which can be got rid of for the present. This done, the whole position of the concern will be fairly apparent: the extent of the capital invested, and to be further expended, ought to be definitely fixed,—and, its limits once known, the administration will then for the first time be in a condition to view in a business-like manner the prospects of the company; estimate the probable returns from the money laid out; and devote its energies to the necessary duty of cultivating the traffic and applying a wise economy to its management. The concern. thus handled, with decision and good sense, we believe may be essentially recovered, in spite of all the disadvantages to which the strife and the ambition of the last three or four years have permanently condemned it. By no other way, we apprehend, can anything but a further decline be looked for: but as the shareholders seem now to be alive to the necessity of something effectual being done, it may be hoped that the right method will be perceived and pursued; and that by this means a really profitable result may be gained from their resolution to investigate the affairs and prospects of the undertaking.

If, instead of keeping this useful end in view, the inquiry is wasted on mere details of past transactions—if the committee be more busy to examine why certain things have been already done, and who was the particular author of doing them, than studious to discover what is proper to be done now, and what it will be wise to do in future,—their appointment can produce little beyond new irritation and increasing despondency. We do not mean, of course, that the accounts should not be fully looked into:it will be necessary, with a view to the proposal, on solid grounds, of future measures, to have a clear knowledge of the practical working of the company's past transactions; and whatever may be found erroneous in the course of this survey should be noted and rectified. But we would desire most strongly to impress on the minds of all engaged in this business, that the main purpose of any such examinations must be, after all, to suggest useful decisions for the time to come, rather than to sustain complaints of decisions that cannot now be recalled; to promote that wholesome revival of which the entire concern is in urgent need, rather than to furnish matter for barren censures of individuals. We are persuaded that, on the choice made between these opposite courses, the future health or decay of the undertaking will greatly depend: while we can hardly suppose that any motive but the desire to secure the former can be suffered to prevail, when the decision so nearly touches interests of the most serious importance. There is no way, in short, of working through a crisis of embarrassment to better fortunes but by the cordial and well-directed co-operation of all concerned towards the object in which all alike are interested. Such, we hope, is the common

pany, the most hopeful expectations may then be fairly entertained.

Official Bapers.

[See Table of Contents for reference to several Meetings.] SOUTH-WESTERN.

Directors' Report to the Half-yearly Meeting, Feb. 17 The Directors invite the attention of the proprietors to the receipts and expenditure of the half-year ended on the 31st of December last. The gross income amounts to 247,623.7, 5.4. d.; the gross expenditure, including 12,200, 5s. 7d. interest on borrowed capital, and the 5,674. voted sh. 7a. Interest of borrower capital, and the 5,572. Voca at the last half-yearly meeting to the holders of old 40l. shares, to 143,1452. 16s. 2d.;—showing a balance applicable to dividend of 104,479l. 11s. 2d.

Since the last half-yearly meeting, the dividend-bearing shares in the company have been converted into consolidated stock, and the dividend which the directors recomdated stock, and the dividend which the directors recom-mend to be now made is at the rate of 8 per cent per annum, on the amount of such stock, subject to income tax. There will remain a sum of 3,0674. 3s. 2d., to be carried to the credit of the current half-year.

The receipts for traffic during the half-year, have not come

up to the amount of which previous experience, in better times, had justified the anticipation. The Directors who have ing to the amount of which previous experience, in better times, had justified the anticipation. The Directors who have examined with care into the causes which have induced this result, have no hesitation in pronouncing them to be mainly of a temporary character, and to be ascribed to the great commercial depression, which has affected sensibly the traffic on this as on all other railways. The expense of working the Dorchester and Salisbury lines has probably been as great as it will be when their traffic shall be developed, but the Directors believe that their earnings will, after a few months, be materially increased, even without taking into account the great addition to their usefulness and remunerative character as East and West communications, on the completion of the line (now nearly finished) between Fareham and the South Coast line at Cosham. The branch to Chertsey was opened on the 14th inst., and will be found a useful tributary,—especially after the completion of the line to Waterloo Bridge.

The Directors have received a Report from Mr. Locke on the subject of the extensions and branch lines now in course of construction; and although, in deference to the assumed convenience of the proprietors, less frequent calls have been made, and the expenditure on some of the works has been consequently restricted, the progress evidenced in his Report, it is hoped, will be deemed satisfactory.

The plan proposed by the Directors to the last half-yearly meeting, for cancelling the scrip of November 1846, and registering its holders as proprietors of third shares, was found to be as satisfactory to the parties individually as it was to the general meeting; and, with exceptions to a nominal extent only, the whole of the scrip has been brought in and its proprietors registered. A resolution will be submitted to the present meeting authorizing the Board to take up on loan, as the convenience of the company may require, the amount which, under the Acts enabling the coupany to create this share capital, they are examined with care into the causes which have induced this

pany may require, the amount which, under the Acts enabling the company to create this share capital, they are

enabling the company to create this share capital, they are empowered to borrow. A resolution will likewise be submitted for converting the 40l, shares of 1845, at the option of their holders, into a proportionate number of 50l, shares. An Act has been passed in the present session for enabling the Commissioners of Railways to extend the time for completing railways not yet commenced, and disabling companies from contracting before the 27th of November 1848 for the execution of any lines not begun or nucler contract, cunless with the consent of a meeting of proprietors, held on or before the 31st of January last. It has not been decreased to take any steps under the provisions of on or before the 31st of January last. It has not been decemed necessary to take any steps under the provisions of this Act, except for obtaining an extension of the time given by the London Bridge Extension, and the Guildford Extension and Portsmouth and Farcham Acts, for the completion of those lines: but meetings of the Windsor, completion of those lines: but meetings of the Windsor, Staines and South-Western, and the Southampton and Dorchester have been held, in order to save to those companies the power of contracting (if deemed expedient) during the present year for the Staines and Pirbright line and the Weymouth, Lymington and Eling branches. In the operations of these companies the London and South-Western are mainly interested, and the directors will use due caution before giving their assent to the exercise of the

powers which have been thus preserved.

Acting under the authority of the last half-yearly meeting, the Board have completed arrangements with the sharethe holders in the Southampton and Dorclester, and all the remaining shares, except twenty—and those held by the Directors of that company, who have agreed to the same terms—have been transferred in exchange for the same number of South-Western consolidated 50t. tenth shares, which had not been issued. A bill has been introduced into which had not neen issued. A fill has been introduced into Parliament at the joint instance of the two companies for completing their amalgamation. Under the same discretionary powers further purchases have been also made of sharesin the Windsor, Staines and South-Western Company, upon satisfactory terms.

upon satisfactory terms,
At the meeting of proprietors in February 1847, the company was indebted to Mr. Serj. Gaselee for a suggestion that the rotation prescribed in the company's Act of Parliament, respecting the retirement and election of Directors, had not been accurately observed. In consequence of this informality, a clause was inserted in the amendment Act of last session, remedying the past inaccuracy, and defining the course of future rotation and election. Under this enactment three of the present number of fifteen Directors to be determined on each occasion by ballot or agreement amongst them elves) will go out of office at the present meeting, and a like number at each succeeding February meeting, until aim of both directors and shareholders on the present occasion. Of the result of their united endeavours to improve the prospects of the com-

Lyre and Messrs. Smith and Uzielli have on this occasion voluntarily offered and agreed to retire. They are candi-

dates for re-election. Having thus briefly reviewed the company's operations under their existing powers, the Directors feel it right to motice shortly the bills which since the special meeting in November last, and introduced into Parliament, and all of which should be the special meeting, the Board submitted to the proprietors and recommendations as appeared to the Directors worthy of acceptance, and recapitulated so far as the limits of a Report would allow, those leading facts in connexion with the company's position, which it seemed proper on such an occasion to bring under review. The Directors then felt and arowed all the responsibility of the steps they were taking; but with interests identified with those of the general body of proprietors, and holding in the aggregate a large stake in the undertaking, they had no hesitation as to the course which was most beneficial to the company; and the special general meeting adopted the same view by almost unanimous votes. The shares then agreed to be created would have raised an amount somewhat beyond the sum ultimately needed for the entire fulfilment of all the objects enumerated in the Report to that meeting; but although the Directors did not, and up to this time do not was disapproved by more than a few proprietors and was alsapproved by more than a few proprietors and was alsapproved by more than a few proprietors proportion of the special main, in a special present of the simes, would fall to take up their absolutes increased by the efforts publicly making to delet rish shareholders from times, would fall to take up their absolutes increased by the efforts publicly making to delet the shareholders from the special meeting in operates amount of the new capital than should be absolutely necessary, in order to comply with the Standing Orders of Parliament; and they also resolved to postpone altogether the applications for the Hiland-ford branch, being anxious to defer to the suggestions of landowners, who insisted that a line less hijurious to their individu

Engineer's Report to the Directors.

In reference to the several lines of railway now under con In reference to the several lines of railway now under construction, I have to report, that on the Metropolitan extension all the arches from the Wandsworth-road to the Waterloo station, with the exception of two or three across the great thoroughfares, and a short length through the starch manufactory in Lambeth, are entirely completed. For nearly all the distance the arches are covered with asphalte, ballasted and the rails laid. The arching for the station is rapidly advancing, and a sufficient area will be raised to the proper level by the end of the present month, so as then to enable the architect to commence the permanent booking and other offices. The whole of this extension, which has been constructed for four lines of rails, will be completed and ready for opening by the end of June next. The Weybridge and Chertsey branch is completed, and will

be open to the public on the 14th inst. The station at Chertsey, however, is only temporary. The Guildford and Godalming and the Guildford and Alton lines are proceeding less rapidly, by reason of that universal cause which last year rendered it imperative to limit expenditure to the smallest possible amount; and the same remark applies to the Basingstoke and Salisbury line, where the working operations have been still further limited, and nearly altogether confined to the line between Basingstoke and Andover. From Fareham to Cosham, to join the Brighton const line, more activity has prevailed, and the completion of this line will be effected by the month of June next. The Hampton Court line is only just commenced, but it will be completed by the month of July next. In reference to the whole of these works, I am happy in being able to report that their entire cost will fall considerably within the parliamentary estimates. You are aware that the progress of some of the lines was purposely retarded during the last year, on financial grounds. We sustained no injury by the delay, and the contractors are prepared (on obtaining the same sufficient notice of your intentions) either to continue at the same rate, or to expedite their progress, as you may direct. There would be no difficulty in opening the lines to Godalming, Alton, Andover and Portsmouth in the spring of the ensuing year.

LONDON AND NORTH-WESTERN.

Directors' Report to the Half-yearly Meeting, Feb. 18.

In meeting the proprietors on the present occasion, the Directors have to report to them the position of the company after perhaps the most disastrous period upon record in our commercial history; a period of enterprise, speculation and excitement having been followed by its natural consequence a season of extreme themselves and appropriate and appropriate and appropriate and appropriate and appropriate and appropriate and appropriate and appropriate and appropriate and appropriate and appropriate and appropriate and appropriate appropriate and appropriate appropr consequence, a season of extreme stagnation and unprece-

consequence, a season of extreme stagnation and unprecedented difficulties.

As regards the extent of the railway traffic, the effect has, so far, been less seriously manifested than might have been expected. The passenger traffic, notwithstanding the general depression, has equalled that of the corresponding period of last year; and both in general merchandise and coal the gross receipts have exhibited a considerable increase.

The proprietors are aware that in the merchandise department the directors have carried into effect, on the southern division of the line, that system of operations which, for a long time, has been the prevailing policy in the North, of employing no intermediate agent between the company and the public; in fact, of being themselves the carriers on their own line. The Directors, up to the present time, have every reason to be satisfied with the result; and they attribute the favourable position of this branch of their business, in part at least, to the improved system of working; a system which has been introduced under many

Digitized by GOGIC

disadvantages, and certainly at an unfavourable season in

disadvantages, and certainly at an unfavourable season in reference to the recent monetary and commercial crisis. The attention of the proprietors has been called, on previous occasions, to the fact, that at the reduced rates of conveyance now prevailing, a much larger number of passengers and a greater weight of merchandise must be carried to produce the same gross receipts than was formerly the case; while, at the same time, an increased ratio of disbursements is the obvious tendency. Larger stations and a greater number of servants, more locomotive engines, carriages and wagons, and the repair of all these, are the necessary consequences. Under these circumstances the Directors consider that they have reason to be well satisfied with the general result of the last half-year's working, as exhibited in the accounts now laid before the proprietors. The per centage of working charges on the receipts, exclusive of Government and parish taxes, is 33½ per cent.

The increased wear and tear of the rails, owing to the more rapid speed of the trains and to the greater weight of the engines, has been very carefully investigated by the company's officers, and the result has been to satisfy the Board that as a matter of prudence it is desirable periodically to set aside a depreciation fund to meet the expense attending a gradual relaying of the whole line. A sum of 10,000% will be found to be appropriated for this purpose in the current half-year. It is satisfactory to the Directors to be enabled to add that the whole of the tunnels and the way and works of the line are in perfect order. In further pursuance of this policy, by which the company has heretofore

and works of the line are in perfect order. In further pursuance of this policy, by which the company has heretofore been guided, the proprietors will perceive that a large sum has been appropriated to renew the locomotive engine and carriage stock as gradually worn out. The Directors rely on the full concurrence of the proprietors in this proceeding; on the fill concurrence of the proprietors in this proceeding; and at the same time they are happy to report to them that the whole moving plant of every kind is in the most complete and satisfactory state. They believe that the expediency of a timely and adequate provision for the maintenance and renewal of stock—as a question affecting all railways, has not generally been sufficiently considered.

maintenance and renewal of stock—as a question affecting all railways, has not generally been sufficiently considered. The Directors are happy to inform the meeting, that they have no intention to apply to Parliament for any new lines in the present session, with the exception of two short branches to a coal-field near Coventry, the estimated cost of which is 26,000. They have requested from the Commissioners of Railways, under the provision of the Act of last session, an extension of time for the purchase of land, in all cases where it has appeared to be beneficial to the company to adopt that course. And in reference to certain of the new lines, for which Acts of Parliament had been obtained, but in the construction of which little or no outlay has taken place, the Directors will take into their serious consideration the course which it may be desirable to pursue.

The opening of the Chester and Holyhead has been retarded longer than was anticipated at the date of the last half-yearly meeting. The works, however, have proceeded steadily and without accident towards their completion; and the opening of the line from Chester to Bangor it is expected will take place in the ensuing spring. The Caledonian in which this company are interested, was opened throughout, to Edinburgh and Glasgow, on the 15th inst. thus completing the railway communication by the west coast line, between London and the North. The Trent Valley was opened throughout, both for goods and passengers, on the 1st of December last.

Owing to the imperfect consolidation of the new line of way, and to the unfavourable weather for some time after the opening, the journeys were performed with less regu-

Owing to the imperfect consolidation of the new line of way, and to the unfavourable weather for some time after the opening, the journeys were performed with less regularity than along the old route by Birmingham. These difficulties, however, no longer exist, and the journey between London and the North is now performed with the desired regularity. The opening of the Trent Valley, and the new Post-office arrangements required for the conveyance of the mails by that line, was considered a favourable opportunity for introducing uniformity, between railway. opportunity for introducing uniformity between railway and Post-office time; and for regulating the expression of all local time, as far as practicable, in conformity with the longitude of Greenwich. In this arrangement the principal railway companies have concurred; and the public authorities of the most important towns in connexion with the great lines of silvent Linescent Management Programment Special Section 1988. great lines of railway (Liverpool, Manchester, Birmingham, Leeds, &c.), taking into consideration the public convenience of one common standard, by which to regulate the appointments of a commercial and locomotive people, cheerfully acquiesced in the views of the railway companies, thereby assisting them most materially to accomplish the desired electrics. desired alteration, without either public or private incon-

From the statement of the half-year's accounts it will be seen that the nett proceeds, after deducting 40,4621.18s. for the renewal of stock, amount to ... £607,392 16 7 To this must be added the balance carried

forward from the last half-year ... Making a disposable sum of ... £614,419 18 6

Out of this sum the Directors recommend a dividend of 4 per cent. for the six months, amounting to 564,0298. 8s. 11d., and leaving a balance of 50,330t. 9s. 7d., (exclusive of the contingent reserve fund of about 130,000t.) to be carried to the next half-year's account. The dividend on the Manchester and Birmingham shares is calculated for the present half-year, on five months' receipts, which arises from these shares, in 'conformity with the Act of Parliament, having been entitled, previously to the present half-year, to a dividend for six months, ending on the 31st of January instead of the 31st of December. In future these changes in the state of the contraction of the state of the contraction of the state of the contraction. of the 31st of December. In future these shares will receive

dividends in common with the general stock of this company. GREAT WESTERN.

Directors' Report to the Half-yearly Meeting, Feb. 17. The Directors beg to submit the usual statement of eccipts and disbursements for the six months ending the

31st of December last, which has already been distributed

The broad-gauge line between Gloucester and Chelten-

ham was opened on the 23rd of October. The proprietors are aware that the greater portion of this railway (about 6 miles) on which a mixed gauge was required by the original Act of 1836, and has been constructed, belongs equally to the Great Western and the Midland. In addition to that no the Great western and the Midland. In addition to that molety, the extension line of a mile and a quarter, into the new station in St. James's-square, in the town of Cheltenham, belongs exclusively to this company, who are consequently the owners of $\frac{1}{2}$ miles of the entire railway between Gloucester and Cheltenham.

The Berks and Hants branch from Reading to Hungerford The Berks and Hants branch from Reading to Hungerford
—a distance of 25 miles, was opened for passengers only on
the 21st of December. The traffic in goods has always been
expected to form an important item in the revenue of this
railway, and the preparations for conducting it are being
made. There is evidence of its existence, and already a
portion of the trade is brought to the line. The arrangement of permanent sheds, sidings and warehouses to facilitate the full developement of that traffic will be made as
experience may show where they can be most usefully constructed to answer every object. structed to answer every object.

Adverting to the limited extent of the Gloucester and Cheltenham line belonging to this company, and to the fact that the Hungerford branch had been opened but a few days, for passengers only, the entire length of line worked by the Great Western in the last half-year may, for all practical purposes, be regarded as nearly the same as that opened in the corresponding half-year of 1846. The exact average of the whole half-year shows 2483 miles worked in 1847, as contrasted with 2441 miles in 1846. If a comparison be made between these two periods, it will be found from appendix No. 1, that the number of passengers travelling in the last half-year has increased by 138,119 over the corresponding half-year of 1846; that there has been an excess also of 27,821 tons of goods, and that the receipts have been augmented to the extent of 17,5721. 15s. 8d.; of which in crease, it may be satisfactory to state, that 10,6344. has been realized exclusively on the Great Western, and 3,8316. on the Cheltenham lines. The increased expenditure results in a great measure from the extent of the content of the content of the cheltenham lines. The increased expenditure results in a great measure from the extent of the cheltenham lines. Adverting to the limited extent of the Gloucester and in a great measure from the extra trains and additional hands required for the goods traffic, and the increase of establishment for the new lines. The engines have travelled 108,269 miles more in the latter than in the former period.

108,269 miles more in the latter than in the former period.

The balance now disposable for dividend amounts to 257,3184. 2s. 3d., and the Directors recommend that a dividend of 3t. 10s. per cent. on the amount of capital called up be declared for the half-year ending the 31st of December 1847, payable on and after the 1st of March to all the proprietors who were registered on the books of the company on and before the 7th of February last, absorbing the pany on and before the 7th of February last, absorbing the sum of 215,526L. 10s. By the note appended to the foot of the accounts, the proprietors will see it stated, that the balance would admit of the usual dividend of 4 per cent, and still leave a surplus of 11,102L. 2s. 2d.—sufficient in ordinary times to be carried to the next account. They are influenced in making the recommendation of the smaller rate of dividend principally by the fact of an unusual stagnation in railway traffic at this moment, perceptible during the last few weeks on this, as on almost all other lines of railway in England. The directors firmly believe that this is the natural, and will prove to be merely a temporary result of the existing state of trade and commerce in this country, and that the progressive and steady increase hitherto manifested in the receipts of the existings. In the next be resumed in the income of your undertakings. In the next half-year, always the least productive, the capital upon which a dividend will be payable has been increased by the which a dividend will be payable has been increased by the calls very recently made; and with a view to equalise the rates of the two dividends during this period of depression, and until the new lines just opened can materially add to the resources of the company, the Directors are decidedly of opinion that the permanent value of the property will be best insured by carrying the larger balance of 41,7911. 12s. 3d. over to the credit of the current half-year. It is, however, the province of the proprietors to decide the rate of dividend, after ascertaining the state of the accounts, and being apprised of the general position of the company; and the Directors have therefore thought it proper to express frankly the grounds of their recommendation in favour of confining the present dividend to the rate of 33 per cent.

The works of the Berks and Hants Railway, between Reading and Basingstoke, are completed, and it only remains to lay the permanent way, and finish the stations,

The works of the Berks and Hants Railway, between Reading and Basingstoke, are completed, and it only remains to lay the permanent way, and finish the stations, which can be done within three or four months. Since the last Report the Directors have found it necessary to take the works of the Oxford and Rugby out of the hands of the contractors, in consequence of their incapability of proceeding with them satisfactorily. They have been discharged from their contract, this company taking over the materials which were requisite for carrying on the works. This circumstance enabled the Board to postpone the works during the winter months, and, at the time of the greatest monetary pressure, to dispense with outlay of capital; they have now placed the works in the hands of very competent convactors, to be finished between Oxford and Fenny Compton, at the junction with the Birmingham and Oxford line, by the time that railway shall be ready to bring the traffic of Leamington, Warwick and Birmingham to the Oxford and Rugby. The Directors, however, beg to refer to the Engineer's Report, which is appended, for fuller information respecting the progress which has been made generally in all the lines connected with this company.

The Directors look forward with much interest to the

The Directors look forward with much interest to the opening of the South Devon to Plymouth, and they have no doubt that after the completion of that line to its terminus in so important a port in the West of England, and when the full developement of its resources shall be obtained, this company will acquire a considerable augmentation of income from a new and important traffic flowing over the Great Western line.

The Directors refer with much satisfaction to the recent The infectors refer with much satisfaction to the recess decision of the Lord Chancellor in the case of the suit in-stituted to enforce the performance of the agreement for the purchase of the Birmingham and Oxford, which had been resisted by a majority of the present shareholders in

that company. By this decision the demurrer to the bill on the part of the Birmingham and Oxford has been finally the part of the Birmingham and Oxford has been finally overruled, and the previous decision of the Vice Chancellor of England in favour of this company has been confirmed, the appeal from his judgment having been dismissed with costs. The injunction which was granted by the Vice Chancellor, prohibiting any steps being taken by the Birmingham and Oxford, or by any of their directors, which can interfere with the performance of the agreement entered into on the 12th of November 1846, for the sale of their line to this company, sepains in force, and under the peculiar circums. 12th of November 1846, for the sale of their line to this company, remains in force, and under the peculiar circumstances of the judgments so delivered, the Directors can scarcely doubt that the contest, as to the validity of the contract, may now be considered virtually terminated, as it was publicly announced at the time by the parties principally engaged in it that they would give no further trouble in the matter after the Lord Chancellor's opinion should have been obtained if adverse to them.

cipally engaged in it that they would give no further trouble in the matter after the Lord Chancellor's opinion should have been obtained, if adverse to them.

The Directors have to announce to the proprietors that they have considered it expedient to limit their applications to Farliament in the present session for any new powers to the utmost extent, and that the following, already sanctioned by general meetings, are the only measures promoted by the Great Western, viz.:—The Berks and Hants Extension from Hungerford to Westbury, which was a suspended bill in the last session, has been re-introduced under the privileges conferred by the Sessional Orders of the two houses; a bill to confer additional powers upon this company with reference to the purchase of the Birmingham and Oxford, and Birmingham, Wolverhampton and Dudley; and a bill for the loop line as a deviation of the Birmingham and Oxford at Leamington and Warwick. A branch railway from Slough to Windsor has again been promoted by the same company as before,—the being agreed that it is to be constructed by, and then incorporated with, this company under arrangements with the promoters.

The accounts have, as usual, been carefully audited by Mears. Croathwaite and M'Calmont, the latter of whom is desirous of retiring; and the Directors therefore recommend that the appointment of his successor should be made at this meeting.

that the appointm ent of his successor should be made at his meeting.

this meeting.

The resignation of Messrs. R. F. Gower and J. Lean, and the Right Hon. W. G. Hayter, M.P., as Directors of this company, is much regretted by their colleagues. By the two former of these resignations, the directors were reduced to twelve, the number determined upon by the resolutions of the court of proprietors of the 18th of August 1842 and the 16th of February 1843, as the permanent board of management, since which the Directors have elected Mr. W. H. C. Plowden, M.P. to fill the vacancy occasioned by the subsequent retirement of Mr. Hayter. The Directors retiring at the meeting, according to rotation, are Messrs. F. P. Barlow, E. W. Mills and W. Tothill, who offer themselves as candidates for re-election. selves as candidates for re-election.

The particulars of which appear in the annexed account. And the additional profits now realised by the company, in their capacity of carriers, more than compensate for any temporary falling off in general increlandise. The shareholders will also hear in mind that the portion of their line at present yielding revenue, is its most expensive link, both in construction and working, and as yet is comparatively isolated, registering in its returns chiefly the comparatively. Coal 40.576 48,784

its comparatively isolated, registering in its returns chiefly its own local traffic, and excluding those advantages of through traffic which it must acquire when its connexions westward through Manchester, and eastward from Sheffield shall have been completed.

The canals have not been uniform in their results. On some of them there appears a loss, from the interruption chiefly in the mineral traffic during the suspension of the

mills, while the rest present a nearly counterbalancing gain.

The Grimsby Dock, purchased by the company, continues to progress steadily. It now yields a return exceeding 5 per cent. on the total cost, and fully 8 per cent. on that portion of the cost as yet entitled to receive interest, and this apart from the large accession of valuable land which it brings the company. This fact, and the additional one, that the custom dues of the port have gradually increased, in four years, from 3.929. to 70.075l. per year, satisfactorily indicate the future prosperity of this port and of this part of the under-

These results and indications, during a season of unexampled depression, are viewed by the directors with satis-

A dividend is proposed to be paid for the half-year, at the rate of 5 per cent. per annum on the 100% shares, and at the usual guaranteed rate of 7½ per cent. on the No. 1

quarters.
While the monetary crisis was impending, the Directors, from prudence, as well as necessity, curtailed the expenditure upon new works. They suspended many of the works of easy formation, and concentrated their means upon those which were more urgently needed, or required a longer time to finish, so as to postpone as little as possible the entire opening. In this manner they pressed forward the works from Sheffield to the Midland, in order to give conworks from Sheffield to the Midland, in order to give continuity and direct connexion eastward, to the part of the line already opened; and those from New Holland and Grimsby to Lincoln, in order to give to Ilull direct and unbroken access to the South, by way of the Humber Ferries and Lincolnshire, and to connect North Lincolnshire with Sheffield and the West. The Directors likewise pressed forward the second line of the Summit Tunnel, the engine

and carriage depot at Gorton, the warehouses in Manchester and carriage depot according the warenouses in Manchester and Ashton (demanded for present as well as prospective purposes of traffic, and, as far as their ability extended, the South Junction line through Manchester. This latter Junction, though exceedingly important, has suffered some impediment for want of the necessary amount of capital to complete it; but the company, in conjunction with the other part owners (the London and North-Western), are seeking to remove the inconvenience by an application to Parliament in the present session. A further length of line (of 16 miles) from New Holland (facing Hull) to Grimsby, (of 16 miles) from New Holland (facing Hull) to Grimsby, with a continuous portion of the East Lincolnshire line from thence to Louth, is proposed to be opened in the beginning of March next. The early completion and opening of the emainder must depend upon the pecuniary co-operation of the shareholders. A plain commercial principle points out the expediency of making remunerative, at the earliest practicable time, that heavy outlay of capital which at present lies unproductive in unfinished works; and with this object in view the directors recommend a more vigorous. sent lies unproductive in unfinished works; and with this object in view, the directors recommend a more vigorous progress during the ensuing summer. As regards the required tinances, the Directors have felt very convincingly the wisdom of the vote by which the shareholders, at their last meeting, created the preferential stock of 872,000%, bearing 6 per cent, interest. Its marketable character has enabled them to refrain from making calls during the late pressure, and yet to meet with punctuality every engagement of the company. A very small portion of this stock still remains on hand, which, judging from the daily applications for it, will be speedily allocated. But the remaining capital to accrue from this source is limited, and active operations would soon exhaust it. Loans on the company's debentures form another financial resource, and so far as they can be obtained on reasonable terms, they will be received in relief of calls; but loans on any other terms the Directors would reject. Should these resources prove in-adequate, and payments from the shareholders become requisite, the Directors trust that the shareholders will cordually respond to such calls as may be made to complete the line, and render the dead outlay productive. With funds adequately supplied, the entire line from New Holland aderimsby to Gamsborough may be opened by the lst of July next; and to Lincoln, by the ensuing autumn; and from object in view, the directors recommend a more vigorous next; and to Lincoln, by the ensuing autumn; and from Gainsborough to the Midland, by the following spring; while the line from Sheffield to the Midlands, together with the Manchester South Junction, may arrive at completion in the present year.

For the precise state of the works, and the condition of

the working establishment, reference is requested to the Engineers' Reports.

The five bills which, in the last session of Parliament, were postponed to the present session, under legislative regulations for their re-introduction, have been accordingly re-introduced, together with two additional bills, involving small outlay, which the directors deem essential for station accommodation. The postponed bills are, for the Barnsley branch, the extension of the Sheffield station, the access to branch, the extension of the Shemica station, the access to the Manchester goods station, and the purchases of the Ashton and the Sheffield canals. The new bills are for improving the piers and works on the banks of the Humber, at and opposite to Hull, and for station arrangements in at and opposite to rull, and for station arrangements in Staleybridge and Manchester, with some miscellaneous objects; and another bill, promoted by the Manchester South Junction and Altrincham, has for its object an increase of that company's capital, and the securing of auxiliary lands. All these bills have passed the Standing Orders of the House of Commons; and the approval by the present meeting is essential to their safe passage through the House of Lords. Under a general Act lately passed, the Directors are

applying for an extension of time to complete some of their branches, which admit of postponement without comprosing the company's interests. The advantages expected from this extension are, that the shareholders will thus be enabled to direct their undivided resources, in the first instance, to the works of their main line, and to secure to themselves a longer period for payment of the remaining capital.

At the present meeting, six Directors retire from office, but are eligible for re-election. The retiring directors are, Messrs. Gisborne, Raudall, Coates, Hencage, Thorold, and Gouldisbrough.

Parliamentary Proceedings.

LORDS.

Feb. 11.—Audit of Railway Accounts. — Lord Monteagle, in moving the second reading of this sill, deprecated all hostility to railways. Some persons, however, opposed parliamentary interference with railways; he did not concur in this opinion, as he considered they should be made the subject of legislative control. No less than 324,000,000l, was invested in railways up to 1846, and the magnitude of the interests involved necessitated parliamentary inter-ference. The mode in which the powers of the companies were exercised required looking after. power of borrowing, for instance, tempted companies to give an exorbitant rate of interest for money. a company required 200,000l. to complete their line, they would give any rate of interest for that sum, because, by so doing, they would not only be able to complete their line, but would begin to realize a profit on the whole capital by setting the works in operation. The present mode of auditing railway accounts was not independent, but, on the contrary, often of a partial character. His bill was of a permissive nature. He proposed that if a certain number of shareholders applied for a public audit of their accounts, the Railway Board should send down an independent officer

to audit them. He would not give him the power of disallowing any item in the accounts; all that he asked was that such officer should have full power of investigation, that he should state his opinion to the company, and transmit a report to the Railway Board, making such a report a public document accessible to both houses. Railways had two sources of profit, capital and annual income, and by mystifying the two, companies were able to make their dividends appear higher than they really were, and thus deceive those from whom they were going to borrow money. His bill would provide against this evil; and, looking to the great importance of the subject, he hoped the measure, or some similar one, would obtain the con sent of the house. The expense of the audit should be borne by those who asked for it. If the principle of the bill were sanctioned by the second reading, he should propose to postpone the committee until ample time had been afforded for communicating with all parties interested .- Lord GRENVILLE sup ported the bill, but did not think it went far enough The auditors were now very often chosen from persons who had been most active in the management of the accounts of the company, and he did not see why the shareholders should not have an independent auditor. He thought that to all well conducted railways the measure would be a great boon. The Government, he believed, would give their support to the bill.—Lord Kinnard did not intend to oppose the bill, but thought there had been too great a disposition to interfere with railway companies. He thought the bill would be ineffectual, as so much time would be occupied in the inspection of the accounts.—Lord ASHBURTON said the shareholders were more interested in this measure than any one It would be calculated to afford them security for the proper application of their money, and raise the character of the companies. It could not be supposed that these companies receiving such immense sums of money should be allowed to go on without any interference at all. The complication of accounts between capital and revenue, and the difficulty of ascertaining the true amount of the dividends from about the latter source, were sufficient reasons for the appointment of public independent auditors.—After a few words from Earl FITZWILLIAM,—Lord MONT-BAGLE replied, expressing his readiness to adopt some of the suggestions which had been thrown out .- The bill was read a second time.

Reports of Meetings.

LONDON, BRIGHTON AND SOUTH COAST.

Feb. 14.—Adjourned Half-yearly Meeting, London.

Mr. C. P. Grenfell, M.P., in the chair.

The Secretary read the Report (see ante, p. 99).

The CHAIRMAN said that from what had previously passed he should not now intrude at any length on the time of the proprietors. He presumed that from the hostility lately shown parties had grave and serious charges against the directors. It is (continued the chairman) with the view of courting the fullest inquiry into their conduct in all respects, and with the desire that every proprietor shall leave this room satisfied that their affairs have been managed, at least with honour and with integrity, that I now call upon any proprietor to state any and what charges he has to make against the directors, together with the grounds upon which such charges rest, and it will then be my duty, and the duty of my brother directors, to give him such explanations as shall exonerate ourselves, and make him acquainted with the exact condition of his affairs. I will therefore merely move that this Report be received and confirmed.

Mr. Parsons (the deputy-chairman) seconded the motion.

Mr. Whishaw submitted an amendment. From the high character and position of their chairman in the commercial world, he anticipated nothing less than the declaration they had just heard; and seeing the feeling with which it was likely to be met. he had no doubt that the amendment with which he should conclude would conduce to their general interests. The first thing that struck the proprietors in looking over the accounts, was the great decrease of the dividend for the last half-year, while out of doors they found an enormous depreciation in the value of the shares. There appeared also an enormous increase in the working expenses; and so far from any disposition on the part of the Board to put an end to the capital account, it was proposed to increase it by a large subscription on account of the Portsmouth Direct line. If the dividend was now but 4 per cent. for the most profitable half-year, they could not but expect a further reduction for the next half-year; but the decrease in the value of shares had gone far beyond the falling off in the traffic—the one was 42 per cent., while the other was only from 10 to 20. With respect

he great increase in the working expenses, in the

corresponding half-year of 1844 the charge was 314 per cent.; in 1845, 304; in 1846, 364; which in 1847 they had increased to within a fraction of 47 per cent. In the item of coke, the charge for the half-year ending December 31, 1846, was 10,138*l*.; the last half-year it was 19,546L, or nearly double. The Brighton was paying $6 \pm d$. a mile for coke, while a neighbouring line, similarly circumstanced and having precisely the same difficulties in the way of getting their supply, paid only 4d. Surely there must be something radically wrong. The small returns from the goods traffic struck him as remarkable, especially when compared with the South-Eastern. During the last five weeks the return for goods on that line 6,958l., while on the Brighton it was only 4,732l., there being an excess in mileage in the former of less than 20 miles. He now came to one of the worst features, viz., the subscription in respect to the Portsmouth line. He looked upon this as one of the worst features, because it proved that there was no disposition to decrease the capital account. That amount had gone on increasing. In December 1845 it was 3,092,000*l.*; in 1846, after the amalgamation, it was 4,922,000*l.*; and in 1847 it amounted to 6,760,383*l.*, besides considerable sums authorized to be raised. In fact, there was an actual deficiency in the capital account amounting to 78,741l. With regard to this Portsmouth line, too, it was clear the object was to make a third line into Portsmouth, thus competing not only with the South-Western, but with the Brighton and South Coast. There might be circumstances justifying this, but at all events it was a subject for inquiry. He regarded the arrangement with the South-Eastern as anything but a subject for congratulation. That arrangement, like the purchase of the Chichester and Portsmouth line, and the amalgamation with the Croydon, was all in favour of one side, and that side not the Brighton. What was the effect of this arrangement with the South-Eastern? The Brighton were to give up an increasing toll of between 11,000*l*. and 12,000*l*. for five acres of land, the Bricklayers' Arms station (which was a most inconvenient spot), and a claim of 25,000l. which the South-Eastern had against the Brighton. He would next advert to the general management of the line. It was the duty of the directors to appoint as managers such efficient officers as the public and the drivers should have confidence in; but it could not be denied (and the rumour was in every mouth) that there were great doubts existing as to the competency of the present managers. And when he found so large an increase in the working expenses, and at the same time public meetings held at Croydon, New Cross and other places, complaining of the inconvenience to which the public are put—the shutting up of one station and the opening of others; and when they found the subordinate officers dismissed from time to time, without notice or explanation, he thought some inquiry was necessary. He therefore proposed the appointment of a commission by whom all these matters should be investigated, and he would now move as an amendment-

That the Report be received, and so much of it as related to the dividend be contirmed, and that a committee of tive shareholders be appointed to investigate the accounts and affairs of the company, and report thereon.

Mr. FLOOD seconded the amendment, and complained of the alterations made in the fares. He believed much of their difficulties was to be attributed to the reduction of fares.

The CHAIRMAN was sorry to say they were at the maximum rate of fares. It was an important circumstance connected with railway legislation, and one for which the Legislature alone was answerable, that every fresh application for branches or extensions necessary to complete a main line was made a pretext for the rapacity of Parliament to reduce the fares. It was possible that hereafter all companies might be called upon to make common cause for the purpose of obtaining a revision of the tariff which the injustice of Parliament had imposed upon them.

Mr. Flood, at some length, complained of the insufficiency of the Report and the accounts.

Mr. Parsons replied that during the previous halfyard the mortgage debt was received at various times, and interest was not payable upon the whole of it for the half-year. But this half-year nothing had been received, but part of the debt had been paid off, and the whole interest had been charged.

The CHAIRMAN remarked that the directors courted inquiry, and were quite prepared to support the proposition that a committee of five, or seven, or twenty shareholders be appointed to investigate the whole of the affairs, and he submitted that all details and matter of figures should be left to that committee.

Mr. Flood: Had I supposed for a moment that the directors intended to take that course I should not have said one word beyond seconding the amendment.

Mr. LEVY said the rumour was that one of the greatest misfortunes that had befallen the company was the purchase of the Chichester and Hastings lines. Wherever he went he was asked, "Why do the Brighton proprietors allow the directors to remain after what they had done in respect to the Chichester line?" They had bought the shares of that line up at 124 premium at a time when nobody else would have taken them at 5 discount. He hoped a full account would be given to the committee of all the circumstances and facts attending the purchase of both the lines he had referred to. He did not want to turn lines he had referred to. He did not want to turn out the directors, for if they had new directors they would have some fresh schemes. Knowing the circumstances of the year 1847, especially the autumn of that year, he did not complain of the smallness of the dividend-especially considering the drawbacks they had had in the atmospheric experiments, the Brighton and Chichester, and the Lewes lines. If the Board could show there was no foul play in regard to the purchase of the lines he had mentioned they should have his vote of confidence.

Mr. Makins complained bitterly of the small dividend, and proposed a resolution to the effect that the registered list of proprietors should be open to inspection, on the payment of a 5s. fee, seven days before and seven days after the usual half-yearly meetings. His object being to ascertain the position of the directors in regard to their stock, this resolution created some discussion, it being objected that it would encourage fraud, and it was ultimately withdrawn. He had been induced to hold his shares by a statement made last year by the Chairman that the dividend for 1847 would be at least 7 per cent.

The CHAIRMAN protested against being made re-

The CHAIRMAN protested against being made responsible for opinions given honestly under ordinary circumstances, and without, of course, contemplating such a year of general depression as the last had been. He protested against any attempt to interfere with him—on the ground of his being a director—in the free disposal of the property he might hold in the line. Though he had in some measure changed his opinion as to the amount of stock he held, Mr. Schuster, who had a far better knowledge of the concern, had increased his stock in it within the last twelve months. His brother directors now held within 10,000l. of the amount they held last year, and together they held considerably more than 120,000l.

Mr. Schuster explained that the working expenses had increased from causes the directors could not control. Taking the mileage, however, the expenses had not increased. In 1845 they were 660l. a mile, whereas, during the last half-year, taking the Croydon and Epsom into account separately, they were only 552l. a mile; and this notwithstanding the disadvantages of taking in new lines with new officers, &c. He believed, ere long, the dividend would come again to 7 per cent.

Mr. Cohen complained that the fares had been altered from 20 in some, to 50 per cent. in other cases. First-class fares had been reduced from 12s. 6d. in 1845, to 10s. now, and season tickets from 100l. to 501. It was his intention to move for a return of the parties in whose names the Brighton and Chichester shares were held when they were bought up. That line had been estimated, he was informed, by the directors as a 4 per cent. line. He wanted to know what had so altered their opinion as to give 6 per cent. for it, and who got the profit? He charged the directors with having given up the good part of the line to the South-Western at half its cost, while they retained the unprofitable part themselves. He complained of the expense of the atmospheric system, the charge for the maintenance of permanent way, for the repair of engines, carriages, plant, light gold (350l.), and other items. There was another circumstance requiring explanation; -he alluded to the giving of information of the affairs of the company to certain persons on the Stock Exchange. On a former occasion he had complained of the practice of giving to any paper information of the number of shares he or any other proprietor held. He must say that a just discredit was cast on the company by these improper disclosures. He would name the party to the committee. As a shareholder, he could not but feel amazed when he found gentlemen of high standing on the Stock Exchange employed to buy up the dividends at 31s. a share, while, on a calculation he had made, it appeared that the utmost that under any circumstances could be obtained was 32s. 6d. The effect of this was to make it appear that the concern was more prosperous than it really was, and shares were then poured into the market. A gentleman well known on the Exchange (Mr. Capel) had told him, when the shares were at 441, not to be deceived, for the dividend could not be greater than 25s., though they were being then bought up at 31s. He felt that information had been given surreptitiously, and that

Digitized by GOOGIC

it could not have come from the office of the company. He called, therefore, on the directors to institute a strict inquiry, and to dismiss any officer they might

discover to have been guilty of these practices.

The CHAIRMAN called upon Mr. Cohen, in justice,

to name the party giving information.

Mr. Cohen would do so to the committee. He was, however, quite prepared to state that the charge was not levelled against any of the directors.

The CHAIRMAN: But the charge of "bearing" the market was made against somebody in connexion with the direction, and the hon. proprietor having made the charge publicly ought to give the name.

Mr. Cohen: How can I do that? If it was done

by a director, it would be done as they sell shares, by means of a 30s. stamp-through third parties. Many persons can bear me out that dividends have been bought up at 31s. 6d. He thought also that the sooner the company got rid of their present manager the better. From a report in the public prints, it appeared that he had something like a commission on the savings he effected on the line.

The CHAIRMAN: No, no.

Mr. Cohen then proceeded to make charges against certain officers, which the CHAIRMAN suggested had better be made to the committee.

Mr. COLEMAN inquired whether any money had been lent to the steam-boat company, with which this company was connected.

The CHAIRMAN declined to give any answer to the gent of the General Steam Navigation, which had filed a bill in Chancery against this company.

Mr. Coleman begged to say he did not appear on the part of any company. It was proposed now to take powers to raise 176,598l. at 5 per cent., while this company was only earning 4 per cent. He objected to their borrowing money for the branch lines until better times.

Mr. Parsons had hoped that Mr. Cohen, when he accused the directors, would have mentioned his name. He (Mr. Parsons) had been infamously tra-duced. He heard of these rumours on Wednesday last, on going to the Stock Exchange, which, though a member, he did not attend regularly. The effect of that rumour was, that his brother had bought up 500 Brighton dividends, and arranged for more, for the purpose of "bearing" the market. He immediately wrote to his brother, and received from him a letter, which he would call on the secretary to read.

The letter was read as follows:-

Dear John,—The following are the facts to which your note refers:—About a fortnight since I learnt at my friend Hutchinson's office, that Brighton dividends were offered at the Stock Exchange at 31s. per dividend. Recollecting that at the corresponding period of last year 35s. had been declared, and finding, at the same time, the amount of increased receipts, and the additional mileage since opened, increased receipts, and the additional mileage since opened, I thought there were reasonable data to anticipate an equal dividend for the past half-year. I purchased, in consequence, 400 dividends, in conjunction with two friends, who took an equal share in the speculation. I retain my interest entire, and shall hence sustain a loss of about seventy guiness. This circumstance having transpired, most discreditable inferences have been drawn from it, implying that I possessed a knowledge of what the dividend would be, and that I had entered into this transaction for the purpose of raising the price, to enable me to make speculative sales—a most infamous imputation, and so far from the truth, that, with infamous imputation, and so far from the truth, that, with this exception, I have not had one transaction of any kind in Brighton shares during my residence in London, which comprises a period of upwards of two years. You can make what use you like of this note; I write it solely out of consideration to your position at the Brighton Board as a director, otherwise I should not take any notice of the calumny, as I know it would be impossible to discover its author, &c.—(Signed, Groger Parsons, 22, St. James'street, Feb. 9.—J. M. Parsons, Eq.

Mr. G. Parsons stated he was prepared to give any further explanations.

further explanations.

Mr. PARSONS: It had been rumoured that he had communicated something to his brother as to the dividend; this would show the means taken to vilify

his position and name. Mr. Cohen denied having mentioned Mr. Parsons

Ald. WILSON asked if the company had not a bill before Parliament to lend the Steam Packet Company money to the extent of 100,000l.

The CHAIRMAN replied there was a bill for incorporating the Steam Packet Company with this company, and for the proprietors to be allowed to subscribe 70,000l.

Ald Wilson believed there were two hills for extending the works, which would involve a very large outlay; he hoped the committee would include in their inquiry the propriety of proceeding with these measures. The lines from Chichester and Hastings were now anything but profitable. The express train from Hastings sometimes brought no more than two passengers. He wanted to know whether the arrange ment as to the London Bridge station would require the confirmation of the proprietors.

The CHAIRMAN: It will.

Ald. WILSON believed that agreement would involve large expenditure for new works, while the New station, upon which large sums had been spent, would be thrown out of use. In a pecuniary point of view the arrangement, too, was ill advised. He complained also of the want of accommodation, and the general neglect of the line. The works-brick, iron and wood—were so dilapidated, that the people asked, "if the line was not in Chancery." If the direction had been satisfied with the Brighton line without the branches and extensions, it would have paid 20 per cent.

A Proprietor inquired the object of the bills now before Parliament.

The Solicitor replied that one was to alter the span of the bridge over the Arun, on the Chichester line, for the convenience of the shipping; a second to extend the time for the purchase of the land on the Steyning branch; and a third to enable the company to subscribe to the Steam Packet Company. For these, as well as the proposed arrangement with the South-Eastern, the consent of the proprietors would be necessary.

Mr. Schuster held that the extensions and branches were not so detrimental to the general interest as had been represented. The main line during the last half year had paid 1,977l. a mile—the branches 1,649l. a mile, and when the traffic was fully developed they would be still more productive. He considered it detrimental to the interests of the company that the policy of the directors should be discussed at large meetings like the present. He believed the competition to which all companies had been exposed was the result of publishing too much of their affairs to the world. Much of the charges in the present accounts was for making good the works which it was said were dilapidated, and which were now in progress of restoration. The expense for the plant was less than on other lines. On the Eastern Counties, according to the accounts to June 1847, the charge for plant was 3,331l. per mile; on the North-Western, 3,520l.; while on the Brighton it was

Mr. WILKINSON, the late chairman of the Croydon, defended the general conduct of the directors, but laid the locomotive mismanagement of the line entirely to the door of Mr. Clarke, the manager, who, he

said.

id, practised false economy.

After some further conversation, it was suggested that it would be necessary to pass so much of the Report as authorized the directors to raise a loan, not exceeding 176,598l., the money being necessary to pay the dividend and meet engagements already incurred. The paragraph empowering the conversion of the stock of the fifteenth shares, amounting to 38,000l., whereon the 5 per cent. preference interest had been abandoned since the last meeting, after some cavilling as to the loan, was agreed to. amendment was then put and carried in the following

That so much of the Report as relates to the dividend. the raising of money by loan, and the conversion of shares into stock be received and adopted, and that a committee of seven shareholders be appointed to investigate the accounts and affairs of the company, and report thereon at an adjourned meeting, to be held at the London Tavern on the 30th of March next, at one o'clock, and that three shall

It being understood that if the committee should not be prepared to report by the time named, notice to that effect, and of the day to which the meeting should be further adjourned, should be advertised. It was afterwards resolved that the qualification to sit on this committee should be the possession of not less than forty shares for at least twelve months past, The following gentlemen were then appointed, viz..

Messrs. Whishaw, P. A. Taylor, Cash, C. Nicholson,
H. East, Sterry, and S. L. Griffith.

The CHAIRMAN formally declared the dividend.

EAST ANGLIAN.

Feb. 16 .- Half-yearly Meeting, London .- Mr. H. C. LAOY, M.P., in the chair.

The SECRETARY read the Report. It stated that to complete the works and secure the necessary facilities for the traffic would entail a much greater

outlay than originally expected.

The directors have found that the amount of liabilities actually incurred to the 31st of December last, not included actually incurred to the 31st of December last, not included in the statement already transmitted to each shareholder, is 89.8624; the cost of works now in progress and necessary for accommodating ordinary traffic, 91.4004; further amount required for sidings, goods sheds, cattle pens, additional carrying stock, and to lay down the electric telegraph, 57,3004; total, 248.5524. The increased expenditure arises from the excess of cost of contract works, and costs of extra from the excess of cost of contract works, and costs of extra works required by public bodies empowered by Act of Parliament to prescribe the extent and height of bridges, and the modes by which drainage and navigation should be protected. Act, 180,0001.; increased cost of land, including 20,0001., for additional station room, 170,0001.; increased sost of iron, 60,000%; occupation crossings on the Ely line

and branch 5,000L; cost of 20 miles of double line, not included in the estimate, 69,0006; parliamentary expenses in the years 1846 and 1247, 28,0006; total, 503,0006. This statement comprises all the debts due from the company. all the liabilities incurred, and all further necessary expen-The company have in hand to meet the above sum 249,562l., amount in shares and loans 117,451l., leaving a sum of 131,111l. still to be provided. This sum the directors preferential dividend in perpetuity of 7 per cent, per annua, in the proportion of one new share of 3d, for every existing 25d. share, and one new share of 3d. for every existing 1dd. share. The line from Denver to Ely was opened for traffic on the 26th of October, and the branch from Watlington to Wisbeach on the 1st inst. In a few weeks the junction of this branch with the Eastern Counties line from Wisheach to March and St. Ives will be completed, and, by these means, a communication will be established with the St. Ives and Huntingdon line. The traffic, upon the portion of the lines already opened, has averaged 423L per week. These returns have been realized in the absence of customary facilities for traffic, at the worst season of the year, and at a time of commercial and general depression. Of tomary facilities for trailic, at the worst season of the year, and at a time of commercial and general depression. Of course, therefore, the existing traffic is no test of the capabilities of the lines. Nor can those capabilities be fairly estimated until the railways are opened throughout their entire course. The directors are of opinion that the working expenses will be as low on the East Anglian as upon any line in the kingdom. They also look with confidence to the accession of traffic not included in the original estimates, viz., coal in the direction of the river Ouse. The average import of this mineral into Lynn for the last seven years has been 244,400 tons annually, of which quantity about four-fitths pass into the interior in the direction of the com-

The statement of accounts to the 31st of December showed the receipts at 1.000,985l., including a nett sum of 5.2254. for traffic; expended, 1,062,7414.;

balance, 4,243*l*.

The CHAIRMAN moved the adoption of the Report. In answer to questions from Messrs. Copeland and PUNCHER and others, it was stated that one item in the accounts of banker's charges, commission on loans, and debentures, of 3.209L, arose principally from the latter items; the commission for loans being paid to brokers who introduced the parties lending the money, and the debenture stamps costing about 1,500%. Prior to August last the offices were at Lynn, and consequently the London bankers duly received the money on account of the company, and transto the Lynn bankers fortnightly. London bankers did not therefore allow interest on the money in hand, but the Lynn bankers allowed 11 The balance only of the receipts was ner cent. carried to the account, the expenses having been deducted. A separate revenue account had not been prepared, in consequence of the officers at present being so occupied in promoting the traffic of the line and in the construction department. A separate account of the expenses was, however, now kept, and it appeared that the stations department cost 49%. the locomotive department, 37l. 5s. 8d.; the coke, oil, &c., 48l. 11s. 1d.; the carriage department, 13l. 16s. 11d.; and the secretary's others, 9l. 15s. 11d. The original capital authorized for the line was for the Lynn and Ely, 300,000.; the Lynn and Dereham, 270,000l.; and the Ely and Huntingdon, 194,000l.; making together 764,400l., with power to borrow 254,400l.; making a total capital of 1,013,800l.

Mr. J. Marriott wished to know how it was that

the cost of construction had been so much more than

was estimated.

Mr. J. C. WILLIAMS explained that in the portion of the county traversed, the high-water mark of the Ouse and the Wisory was above the level of the land, and it was only by means of artificial banks that they were kept within bounds. These embankments be-longed to the Bedford Level, Middle Level, and other draining corporations, who obtained the insertion of clauses preventing the company crossing the rivers, except with such bridges as they should approve. Mr. Rastrick had found that the Ouse was crossed in many places by bridges having openings of 30 ft., and he made his estimate for the line crossing it with a similar bridge; but the company was compelled to cross it with a bridge of 120 ft. span, which was very expensive, as the soil was peat resting on clay. In fact, the contractor's temporary bridge for carrying over the ballast, &c., cost more money than was originally estimated for the railway bridge itself. Then again, on the portion between the Ouse and the Wisory, the Level corporations compelled them to have an embankment of 18 or 19 ft., and, from the nature of the soil, nearly as much gravel, &c. sunk below the ground as was visible above it-sinkross the Wisory at a point where it was only 40 ft. in width they were required by their Act of Parliament to construct a bridge of 102 ft. span, which would have exceeded even the limits of the banks on either side; but, by repeated applications to the Bedford Level Commissioners, they had succeeded in getting that span reduced to 70 ft. There were

Digitized by GOGIC

two similar bridges erecting on the Wisbeach branch, the traffic at present, under the sanction of the Commissioners, who had satisfied themselves of their stability, being conducted over the contractor's temporary bridges erected for the cartage of ballast, &c. ost of embankments was such a hazard, from the difficulty of obtaining materials, except by the purchase of land, which could not be dug above three or four feet before coming to water. With respect to the additional land taken, he believed that it did not exceed 40 or 50 acres, but the difference occurred through the operation of the Lands' Clauses Consplidation Act. This Act, which had proved most oppressive to all public companies wishing to purchase lands, did away with reference to juries, who generally gave a reasonable amount for lands if the landowner chose to elect going to an arbitration. The company had tried every manœuvre to drive some of the landowners before a jury, but without effect, and the manner of an arbitration being conducted was somewhat as follows:-The landowner was compelled to make a claim, and then the company were obliged to make an offer, which, from the stringency of the clauses of the bill, must be a reasonable one, and if the arbitrator give a decision in favour of the company, he had a black mark placed against his name, and was never again employed by the landowners; and if he gave it in favour of the landowner, he was never again employed by the company. The plan seemed to be generally adopted of going about half way between what was demanded and what was offered, so that if 20,000l. were demanded, and 2,000l. offered, the amount awarded would generally be about 10,000l. In addition to the 60,000l. estimated for the land of the Lynn and Ely line, there was estimated for the Lynn and Dereham line 30,000L, and for the St. Ives branch 11,000L, making 101,000L; while the actual cost, he believed, would amount to 270,000L, and that, too, though he did not know of a single ornamental property that was touched. Then, again, they were put to considerable expense by the Lands Clauses Consolidation Act in the payment of interest By that Act they could not take possession of any land until they had deposited the purchase money in the Bank of England, or some bank approved by the landowner, and on that they must pay 5 per cent. until such time as the purchase was completed, even though a delay of two or three years should occur from a disputed title, or other causes over which the company had no control: and when the matter was settled, the company paid all the legal expenses. At the meeting on the 3rd of November has the company had 80,000%. Iying at interest, from the cause he had stated, and now they had nearly 50,000% so deposited.

In answer to other questions,
Mr. WILLIAMS stated that no expense had been occasioned by the application to Parliament for power to amalgamate with the Eastern Counties. The only expense that had resulted from that agreement between the two companies was the laying down 10 or 12 miles of double rails on a portion of the line sooner than would otherwise have been required, and the taking of some additional land at Lynn to accommodate the expected traffic.

In answer to Mr. OMBERLEY,-

Mr. BRUCE (the deputy-chairman) said that their receipts were at present circumscribed, in consequence of their not being yet able to afford warehousereduced, during the last few weeks, by the return tickets, which had not had time to develope their advantages. The receipts at present were 423l. a week, and the working expenses certainly did not amount to 59 per cent. on those receipts. The charge for the conveyance of coal on the line would be ld. per ton per mile, exclusive of the cost for loading and unloading. The line was originally laid out as a single one, in consequence of the success that had attended the Norwich and Yarmouth line, and it being believed that, with the assistance of the electric telegraph, it would be easily worked. In consequence of their trains depending on those of the Eastern Counties, it was found necessary to have a double line as far as Watlington, especially as the Wisbeach branch went off at that place, and therefore there was double traffic over it. The electric telegraph along the line would cost 134,000l., but it was calculated to effect great saving in labour and the number of trucks, &c., as orders for additional plant could be instantly sent and answered.

Mr. COPELAND must object altogether to the Report, and the raising of additional capital. How different was the tale now told them to what it was in the origin of the project! They were then told that there would be no embankments; that there pay them 10 per cent. on their outlay. If there was any gentleman connected with the drawing up of the original prospectus, by which he (Mr. Copeland) would say they were led to join the line through false pretences—either as director, engineer or solicitor no confidence ought to be placed in the representa tions now made to the shareholders. The original estimate for the line was 1,000,000l., and now they were told that another 500,000% was wanted.

The CHAIRMAN begged pardon. The outlay was

1,068,000%, and the further amount 248,000%.

Mr. COPELAND: Now, if they looked to the working expenses of other lines, they would see that the receipts upon this line would not even pay the expenses. Take the Norfolk line, which was 81 miles long. The working expenses upon that line were Anglian line were only about 400l. a week, which gave them 22,000l. a year; and as their line was 50 miles in length, how could that amount pay the expenses, if it cost 44,000l. to work 81 miles? In fact, at the end of the year, they must be bankrupt. Having referred to the North British and other lines in support of his argument, he said he had expected. when the shareholders were told at the last meeting that the directors continued to have the fullest confidence in the line, something better than what was presented to them that day. Now they were only told that it was the fault of Parliament that they had been run to such expenses. Did not the chairman and the solicitor know before that day that, by the introduction into the Act of the clauses of which they complained, the estimate would be much exceeded? He proceeded to contend, at great length, that the law and engineering expenses were excessive, and declared that he had no longer any confidence in the prospects of the line.

Mr. Bruce said that during the interval between the amalgamation and the last meeting, they had had to attend to the transfer of the accounts of the three companies into one set of books, the opening of the line between Denber and Ely, and the developement of traffic. They had therefore to rest satisfied with the statement of accounts as furnished. Prior to the amalgamation he had been auditor of the Lynn and Ely, and on his becoming a director of the amalgamated company he was unxious to ascertain the real state of the accounts. From the statement then made to him it appeared that the amount at the disposal of the company was 115,5251, including the shares they were entitled to issue; and, deducting from that the discount from new shares at the prices at which they were to be issued, there still remained 93,525l. With the conviction that that account was correct, he at that time remained satisfied, believing that they had nothing to do but develope the traffic. He regretted that, from the way in which railway books were kept, so as only to exhibit the receipts and payments—and not, as a merchant's books would do, the engagements there was a great difficulty in arriving at the liabilities; and, it was only after a close examination of the engineer and secretary, that he was enabled to do There were two ways of dealing with the proprietors of railways—the one being to keep back the figures and deal only in generalities—and the other that which they had adopted, viz., to come before them with clean hands and clean hearts, and tell them the real state of their affairs. It was not true to state that the company was bankrupt, and those who had the management of it were determined that it should not be so if the shareholders would only give them their support; and the directors were now making arrangements for extending their traffic if the shareholders would give them the funds to do so. The expenses were incurred before the amalgamation, and that was the reason why the directors had not been enabled to arrive sooner at the real state of their

A Shareholder had bought his shares under an impression that he was to receive a guarantee of 6 per cent, from the Eastern Counties, and he wanted know how it was that the agreement entered into with that company did not contain a clause imposing a heavy penalty upon them if they did not carry it out. Even after the bill was thrown out in the House of Commons, Mr. Waddington, the deputy-chairman of the Eastern Counties, told him that the bill having failed only prevented the amalgamation being carried out for the present as a matter of form, but that the company would abide by the agreement; and he wanted, therefore, to know how it was that their legal advisers had allowed the agreement with the Eastern

Counties to slip from their hands.

Mr. J. C. WILLIAMS, the secretary, said he had yet to learn that a man, because he belonged to the honourable profession to which he belonged, could not be an honest man, and faithfully serve those by would be scarcely a bridge upon the line; and not whom he was paid. He did not see that abuse was only would it give them a fair return, but it would the best mode of eliciting information. He thought

it would be better to ask temperate questions, and have them temperately answered. As to putting a penal clause into the agreement with the Eastern Counties, he should like to know what Mr. Hudson would have said if he had had the presumption to propose such a thing! Besides, had the clause been introduced, it would have been of no use, as such agreements—except that they prevented disputes as to the terms agreed upon—were mere waste paper until they received the sanction of the Legislature. With regard to the Amalgamation Bill, the committee of the House of Commons refused to hear any evidence upon it, but threw it out, and stated that they had made up their minds to do so. When asked for their reasons for coming to that determination, the chair-man (Col. Rawstone) said he had learned early in life

never to give a reason for what he did.

The Shareholder wished to know whether the Eastern Counties had given any reason why they

refused to stand by their agreement?

Mr. WILLIAMS replied that the only reason given as, that it was not likely that the Eastern Counties shareholders would sanction their directors giving any company 6 per cent. in the present state of monetary affairs. At the same time, perhaps, he might be allowed to say that, had the Legislature sanc-tioned the agreement with the Eastern Counties, no additional capital would have been required, as they were to have taken the plant at cost price, and finished the goods station, &c., at their own cost, as they wished them to be.

The CHAIRMAN wished to say that in his opinion

there was no breach of faith on the part of the Eastern Counties, as the agreement was only for one

Mr. MARRIOTT thought that thanks were due to the directors for their candid answers, and he sug-gested the watching the opportunity for favourable arrangements with either the Great Northern or the Eastern Counties.

Mr. HARRISON, having had some experience, said as the line would only cost 16,000L per mile, he did not see any reason to doubt of the ultimate results, if the shareholders supplied the capital to carry it out.

Mr. J. MARRIOTT (a merchant of Lynn) said that the best portion was as yet unopened. The population on the Lynn and Ely section was comparatively scanty, and though the Lynn and Ely had been the favourite on the Stock Exchange, they might depend upon it that the Lynn and Dereham line, which connected them with Norwich and Yarmouth, would be the most profitable.

Mr. WHEELER entered into some calculations to show that if, at the original estimate, they had a right to expect a return of 9 per cent., they might now fairly expect on the increased capital 48 or 5 per cent., which might be increased by paying attention to the traffic. In regard to what had been said by Mr. Copeland, as to the secretary, he could truly state that no gentleman was better fitted for his office, and no heart more sincerely felt the position in which they were placed than that of Mr. Williams.

The CHAIRMAN moved the adoption of the Report, which was seconded by Mr. BRUCE, the deputy-

chairman.

Mr. COPELAND moved as an amendment that the Report be not received; but on the question being put to a show of hands, the amendment was negatived about 150 hands being held up for the adoption of the Report, and one against it.

The retiring directors and auditors were re-elected. The CHAIRMAN then moved a series of resolutions

to the effect-

to the effect—
That under the provisions of the East Anglian Act of 1847, the sum of 151,600% be raised by the creation of 22,760 shares of 58, each; and 10,800 shares of 38, each; bearing a preference dividend of 7 per cent., to be offered rateably to the present shareholders, in the proportion of one 58 share for every 25%, share held in the company; and one 38, 10s, share for every 18%, share held in the company; the first deposit of 11, per share to be paid on the 31st of March next. Such shares as are not taken up by that time to be disposed of by the directors in such manner and on such terms as of by the directors in such manner and on such terms as they might deem best for the interests of the company. In-terest at 5 per cent. to be allowed on all sums paid in antici-pation of calls.

Mr. Punchen contended that they could have no reasonable hope of getting a traffic that would pay the interest upon the guaranteed shares, and at the same time leave anything for the original shareholders. He therefore moved that no additional

capital be raised.

The CHAIRMAN said that he knew Mr. Puncher to be a large shareholder; but as he had not yet registered his shares in the amalgamated company, as a matter of form it would be desirable to get somebody else to move the amendment.

Mr. Benting accordingly moved it, though objecting to it; and, on the show of hands being taken, the amendment was negatived by about 80 to 7.

The original motion was then carried. Digitized by GOOGIC MANCHESTER, SHEFFIELD AND LINCOLNSHIRE. Feb. 16.—Half-yearly Meeting, Manchester.—Mr. J. Chapman, of Hill End, in the chair.

The Report was read (see Official Papers).

The CHAIRMAN hoped the Reports were satisfactory So fully did they explain the position of affairs, that he would make no superfluous remarks-although he was quite ready to answer any questions put by the present meeting. The directors had nothing to with-hold or conceal; their only desire was to make the shareholders as fully acquainted as themselves with their position. The more the shareholders knew of the whole working of the line the more assured they would feel of its ultimate success. He would just mention one subject with respect to the deputation received this morning as to the directors consenting to reduce their present number to twelve if possible, or at all events to fifteen. This was a question which he thought the directors would entirely leave to the shareholders. It was a shareholders' question, and one which they ought to be the best judges about; but it certainly was strange that it was only twelve months ago that the shareholders themselves called a special meeting to increase the number of directors, and now, without having seen whether the increase was an advantage or not, to wish for a reduction to about the same number as there was before the increase. There was another question which the deputation also wished the directors to consider, that the remuneration to the directors should be reduced to 1.2001. This was also a question for the shareholders, and not for the directors. As far as he was concerned, he would much rather have no remuneration at all. That had been his feeling throughout, from the very commencement. But he did not call it a remuneration; it was nothing more than a matter of compliment from the share holders to the directors. The directors were most anxious to answer any questions, because the share-holders were entitled to know precisely what they vere worth. He was an advocate for each share holder being put into possession of all the facts, because if he should wish to dispose of his property he knew what to do, and if a man wanted to buy he did not buy in the dark. Again alluding to the proposed reduction of the Board, he said, perhaps the proper plan would be to postpone this meeting from to-day to some future day, of which notice would be given, and a special meeting called, because if the shareholders were to part without electing directors to fill the vacant seats, it would be the duty of the remaining directors to fill up the vacancies. shareholders thought proper, he should move a resolution adjourning the meeting to some future day. He concluded by moving that the Reports be adopted.

Mr. PEYSER said that the reason why a Board of eighteen did not give satisfaction was, because they believed that a less number would give greater satisfaction, and make the line pay better. He would have asked a few questions as to the balance-sheets, but he felt it only due to the directors to say that, on inquiry at the office, he was informed that the secretary would willingly give every information. He complained of the form in which the balance sheet was presented. It was not the form they had been accustomed to have presented. In the first place, the debit and credit sides had been reversed during the last six months, and the low interest was coupled with the profit. After alluding to other discrepancies, Mr. Peyser compared their expenditure with that of others; for instance, the expenditure of the Eastern Counties, the South-Western, and the Midland was much less. He had no doubt the directors wished to give satisfaction, but the shareholders ought to know why this line could not be worked as cheaply as others, and whether or not it arose from the inability of the directors.

The CHAIRMAN said, as to the accounts, the directors had been only anxious to put them in an intelligible shape. They employed a clever accountant, who had done his best. As to the changed form, nothing could be more clear than which side contained the receipts and which the expenditure. With regard to the interest of loans, and the increased value of money, they did not borrow for three months but for a term of years; hence the interest on loans last half-year was the same as before. The interest they paid did not change with changes in the money-market. As to the working expenses, the cost of carrying traffic was more, because they had carried a greater weight, causing more wear and tear. The line cost more at present, because it was merely from Sheffield to Manchester, and not a through line. They could not run through to Liverpool-they had a bad communication at Sheffield. Their chief traffic was local; and lines so circumstanced were always more expensive. It could not therefore be compared with the Midland, the Eastern Counties, and other lines, which had a through run. There was another reason why the balance-sheet was not so favourable.

Instead of putting, as formerly, certain charges belonging to revenue to capital, they had now put them to revenue, considering that the more correct course. They had put the whole cost of working to the revenue account, in order to show what the working really was.

Mr. M'Turk remarked that the amount of capital derived from the original 100*l*. shares was stated in this account at 594,556*l*. whereas formerly it had been put down at 604,043*l*.

The CHAIRMAN explained that the larger sum included 9,487. for shares held for landowners. These gentlemen had been paid off, and the amount had now been deducted from the produce of those shares.

Mr. T. Gerio said the former accounts had been so well sifted that he thought they should now confine themselves to the present accounts. He thought the Report highly satisfactory. Railway property was more seriously depreciated than any other, from a general suspicion that the accounts were cooked, and that past expenses for engineering, deputations, &c., were being perpetually thrust into them. Had this company adopted the system of drawing bills, or allowing the contractors to draw bills, which the directors accepted? He had been informed that the architects had been paid by a per centage on the outlay,—a system that no well-regulated trade would adopt. The law expenses, too, required to be looked into. It was a question, too, how long they ought to need a standing engineer at a regular salary. He urged that they should combine economy with utility.

Mr. J. J. SMITH said there were some distinct ques tions asked in reference to the accounts. The first item was the balance of 21.8614, which the balancesheet states to be applicable to the payment of dividend and interest. The sub-committee, consisting of Messrs. Holland, Turner, Ellison, and myself, went over these accounts for the sole purpose of placing them in the most perfectly intelligible shape. Our object in placing this amount in one sum was to show the profit of the line during the last half-year. Complaint is made about the cost of working; but gentle men do not seem to consider that during the halfyear they have become carriers themselves. We have carried 100,000 fewer passengers than in the corresponding half of the previous year, and less merchandise; but our nett gain, after this reduction, is some thousands of pounds greater on the working. By be-coming carriers ourselves, though there has been a trifling, or, if you please, a considerable addition to our working expenses, the result has been to our benefit. During the late pressure no contractor from Sheffield eastward, though we have had a large expenditure, has been for one hour without a cash cheque for the full amount certified by the engineer. we have a cash balance in hand, and before the next pay-day we shall have ample funds to meet As to the iron bills, as far as my knowledge of railway matters goes, it has always been customary to give bills for iron and for sleepers. And yesterday along with the discharging of other demands, ever bill falling due in February was provided for. have appointed an architect during the last few months for the stations of the east section, and the system referred to is not that on which the architect has been employed. The next question related to legal matters. You all know that what is now the Manchester, Sheffield and Lincolnshire has been formed by amalgamation of the Grimsby, the Grimsby Docks, the Sheffield and Lincolnshire, and the Sheffield and Manchester, as well as the Manchester and Lincoln Union. Of course each company had to go separately to Parliament. I believe a company was never better served than the railways east of Sheffield have been by the gentlemen enlisted in support of our undertakings. The opposition was not feeble; it was promoted by men high in station, high in influence. And when your opponents found that they could not throw you out, they set up the plea that the traffic was so great that Parliament should not only grant your line from New Holland to Lincoln, but also another belonging to Mr. Hudson and the Midland.

and the Midland.

Mr. C. HOLLAND could confirm all this. The traffic showed a gross increase of from 10,000l. to 11,000l. upon the corresponding period of last year. But the nett increase was about 2,000l. in the face of a decrease of passengers, to the extent of 100,000. There had been an increase of mineral traffic, of about 20,000 tons. That the locomotive expenses must have been increased was self-evident, from the increase of 20,000 tons of minerals, that species of traffic affecting materially locomotive charges. The Board were not desirous to carry any charge to the capital account, fairly to be charged to revenue. But for this, having a gross increase of 11,000l., they could have shown a larger nett increase. They had added to the revenue account charges which had not formerly been made against it, because they wished

to gloss over nothing. As to the several items now charged to revenue, which might have been carried wholly or in part to the charge of capital—there was nearly 5,000L for maintenance of way. But 1,000L of it was not for mere maintenance, but to complete unfinished works. The charges for engineering, salaries, repairs of station, compensation, township rates and taxes, had also all been carried. Thus, though the rate of working expenses was 65 per cent, upwards of 15 to 20 per cent. could not be regarded as permanent charges. As to economizing their expenses, he could only repeat, that they had every appliance necessary for working a line double the length of their own. They would really economize by pushing on further openings. He then alluded to the increasing advantages of their Grimsby Docks bargain, which was already paying 5 per cent.

Docks bargain, which was already paying 5 per cent.
The CHAIRMAN read the following extract from a circular addressed by a Hull broker to a house in Manchester, which he thought of interest:—

You will also be pleased to hear that greater accommodation will be afforded in Hull for placing goods which arrive there for re-shipment, and that a separate station will be devoted to merchandise, as the passenger trains will arrive at the new station, now almost complete; and, in conclusion, we beg to give you the following information respecting the port of Grimsby, at the mouth of the Humber, in order to show you that we are a sting for your interest on all occasions. This port promises to rival Hull for many reasons. First, being at the mouth of the river, it will save time, freight and insurance. Secondly, it will have better accommodation for shipping than I full. The Dock Company have inclosed about 130 acres of ground for the docks, which will be opened in a few years, besides the one already in operation. But, thirdly, what will give it still greater advantages, will be the excellent and numerous lines of railway which will connect it with all the largest English towns. In March or April next the traffic with Liverpool and Manchester will no doubt commence, as the lines will then be completed from those towns; and we were informed, during a recent visit, that arrange ments are being made for conveying the Hamburgh mail to and from London through Grimsby. As soon as the port is in working condition, our branch establishment will be opened there, and you will receive all information which may facilitate your business or be interesting to you.

Mr. RILEY deprecated the making of the line to Whaley-bridge—a place that he thought ought never to be inhabited for a hund red years to come. The directors, in the present state of the line, should be content with the honour of the thing, without remuneration. He would propose the reduction of the Board to twelve, and he would give notice of a motion for a special meeting.

The CHAIRMAN read the draft of a resolution he had prepared on the subject, supposing it were the wish of the meeting.

Mr. J. J. Smith said in the Whaley-bridge branch a wider range of policy than Mr. Riley seemed to contemplate was taken by the directors; and if affairs were to be conducted profitably they must be left to them. As to the new station at Sheffield, he should like to know who informed Mr. Riley that they were going to erect one?

Mr. Rilley said that was not a fair question.
Mr. J. J. Smith said he did not know of such an

Mr. J. J. SMITH said he did not know of such an intention, and he thought proprietors should be well informed before they asked questions.

Mr. J. Greig seconded the motion.

In answer to Mr. S. P. ROBINSON, whether it was true that some of the solicitors' bills had not been cut down by the directors—

Mr. C. HOLLAND said there had been a loose practice of charging by the solicitors, and without rule: but on the matter being placed before those gentlemen, they expressed the utmost willingness to meet the Board in fixing rules for their charges, and had also agreed to a large discount on their bills then due.

Mr. S. P. Robinson asked whether the architects west of Sheffield were paid by a per-centage on their building accounts? Secondly, whether a large number of passes were not issued by the directors, and whether some of their relatives and friends were not riding free by means of those passes?

Dr. Bartolome repudiated the assertion that any of the friends of the directors had ever ridden free on the line.

The CHAIRMAN said the architects west of Sheffield were paid 3 per cent. on all buildings. As to the other question, if it was a fact, he did not know of the practice.

Mr. WHITTAKER said there had been one case, and remuneration had been made to the company for it.

The CHAIRMAN said that was a case unknown to the Board at the time of its occurrence.

The resolution adopting the Report then passed. Mr. Ald. LIVINGSTON asked how was it that the Acts for the canals had cost so much, and why they did not pay? also, whether anything had been received on the waterworks?

on the waterworks?

The CHAIRMAN replied, these Acts had been obtained fifty years, and he could not answer. As to

profits, if Mr. Livingston would say why business was so bad, he could answer him. As to how much had been expended on the waterworks, all the accounts had not been received, but it would be upwards of

Mr. Bradshaw contended there had not been sufficient economy in the working expenses. Could they not also do with but one solicitor, and reduce ex penses in that respect, calling for additional assistance when it was required? Mr. Stephenson, the engimeer, too, was surely competent to manage it himself, without incurring other expense.

Mr. Smith said it was true there was a solicitor for

the Sheffield and Lincoln and Grimsby lines. Would any one suggest before the bills they had in Parliament were disposed of, that the men who had most

knowledge of them should be dispensed with?

The CHAIRMAN next moved that the dividend recommended in the Report be payable on the 1st of March.

Mr. COATES seconded it.

The motion was carried.

The CHAIRMAN next moved the re-appointment of the auditors.

The motion was carried.

The CHAIRMAN then moved the forfeiture of certain shares, that the owners might have a better title, the title having been lost through irregularities among the shareholders.

The motion was carried.

The CHAIRMAN now came to the question of reappointing directors about to retire; and as to the adjournment, he would leave it to the shareholders.

Mr. RILEY moved that the meeting be adjourned to Wednesday, the 8th of March, at 1 p.m., and that a special meeting be called for 12 noon (an hour previous), to consider the question of a reduction of the Board. He denied the shareholders increased the number willingly.

Mr. PETTITJEAN seconded the motion.

Mr. RILEY hoped the directors would not come with proxies.

Mr. BUCKLEY said they should leave it to the meeting.
Mr. J. Wood seconded the motion.

A Proprietor moved, as an amendment, that they should proceed to the re-election of directors.

The amendment was carried.

The CHAIRMAN then moved the re-appointment of the retiring directors.

Mr. RILEY moved the substitution of Mr. S. Lees, in place of Mr. C. Randall's name.

Mr. Pettigrew seconded the motion.

Mr. RILEY said he believed Mr. Thorold was not qualified by the register.

Col. HUMPRY said Mr. Thorold had a large amount of stock, ten times the amount necessary

The CHAIRMAN put the question, and the amendment was declared to be carried; and, with this alteration, the list of directors was agreed to.

Mr. T. Greig moved a resolution against Sunday

trains, contending that the argument that it was for the benefit of the working classes was unsound, and such a practice could not prosper. He gave notice, if the motion was not carried, he would bring it forward at every meeting till it was.

There were two amendments, one to diminish the trains to one in the morning and one in the evening on Sundays; and the other was, that the number of trains be left at the discretion of the directors. last was carried.

The meeting then adjourned on the question of the reduction of the number of directors from fifteen to twelve; and it was resolved that the meeting should stand adjourned until March 30, at the same hotel.

The meeting was then made special, when drafts of the following bills now before Parliament were

submitted to the meeting:—

1. For vesting in the Manchester, Sheffield and Lincolnshire the canal navigation from Manchester to or near shire the canal navigation from Manchester to or near Ashton-under-Lyne and Oldham. 2. To make improved communications to their station in Manchester. 3. To carry the line of their railway across Sheffield-street, in Manchester; to increase their station accummodation at Manchester and Staleybridge, and for other purposes. 4. To make a railway to Barnsley, with branches therefrom, all in the West Riding of the county of York. 5. For vesting in the company the Sheffield canal. 6. To construct an additional or enlarged station at Sheffield, and to make a branch to the Sheffield canal. 7. For improving their steam communication across the river Humber; for erecting a pier at Kingston-upon-Hull, and enlarging the works at New Holland; for making a connecting line near Haring a pier at Kingston-upon-fluit, and emarking the works at New Holland; for making a connecting line near Harbrough, in the county of Lincoln; for regulating the pilotage of the port of Great Grinsby; and for amending the Acts. 8. For enabling the Manchester, South Junction and Altrincham to provide additional station accommodation in Manchester, and for other purposes

Resolutions approving of the several bills, and authorizing their prosecution before the Legislature,

were carried unanimously.

NORTHERN AND EASTERN. Feb. 17.—Half-yearly Meeting, London.—PATERSON in the chair. -Mr. R.

The meeting had been called pro forma, in order to comply with the company's Act of incorporation, which stipulates that the half-yearly meetings are to be held on or before the 21st of August and 21st of February; but the half-yearly meeting of the Eastern Counties being fixed for the 26th of February, at which the proprietors of this company have the privilege of attending-

The CHAIRMAN proposed that the meeting be adjourned until the 2nd of March, when the directors Report would be submitted to the shareholders, and a dividend declared.

Mr. MILLS seconded the resolution, which was unanimously carried.

SOUTH-WESTERN STEAM NAVIGATION COMPANY.

Feb. 17.—Half-yearly Meeting, London.—Mr. W. TITE in the chair.

The Report of the directors was as follows:-The directors in meeting the proprietors have to request their attention to their Report of August last. The Report gave a full statement of the circumstances of their formagave a full statement of the circumstances of made with the old companies, and gave a list of the ships thereby obtained; it also stated the progress made in building new vessels of a better class, and the contracts with Messrs. Maudslay & Co. for that purpose. With regard to the old ships, the directors better class, and the contracts who the old ships, the directors for that purpose. With regard to the old ships, the directors regret their inability to dispose of them by private contract, and the whole, therefore, remain the property of the company; but in order to avoid further charges the directors have thought it advisable to order the sale by public auction of those useless. The sale will accordingly take place in the month of March next. The progress made in the new ships has been on the whole satisfactory. The Express was completed and at work on the Havres tation in July of last year. The Conrier was completed in October, and commenced the Channel Island service at that time. The third and last The Courter was completed in October, and commence the Channel Island service at that time. The third and last vessel, the Dispatch, is now ready for the spring trade to France. These vessels, it is believed, are unequalled in speed, the Courter having made the voyage from Jersey at the rate of nearly twenty miles per hour. This extraordinary speed can only be obtained at a great expense of fuel, the effect of which is seen in the revenue account annexed. The directors expressed in their last Report the hope they entertained that, in proportion to the company's greater ability to conduct the public service in conveying the mails to the Channel Islands with increased speed and convenience, to the Channel Islands with increased speed and convenience, the Government would deem it right to increase the remuneration. This matter is still under discussion with the Lords of the Admiralty. The revenue account shows that the earnings from July to December 1847 inclusive amount altogether to 21,6454. 16s. 11d. This sum is not much less than the earnings of the previous nine months, and is so far satisfactory; but the directors still feel that the arrangements during the autumn were very imperfect, and that much remains to carry out that communication. The fleet of the company may now be considered complete. Commercial difficulties have diminished, and though the competition for the French traffic is formidable, still there are remaining and peculiar advantages belonging to this line. petition for the French traffic is formidable, still there are promising and peculiar advantages belonging to this line. After making every reasonable allowance, the directors recommend a dividend of 5 per cent. per annum on the present capital, payable out of the earnings of the half-year ending on the 31st of December last. Four directors, viz., Messrs. Tite, Uzielli, Chaplin, Hibbert, and one auditor, Mr. Valpy, retire by rotation, but are eligible for re-election

The revenue account showed: receipts at 24,469*l*. 5s. 11d.; expenditure, 22,307*l*. 15s.; balance applicable for dividends, 2,161*l*. 10s. 11d. In the capital account appeared the following :- Purchase of South-Steam-Packet Company's ships and property, 56,623L; purchase of South of England Steam Navigation Company's ships and property, 29,500l. the Express, Dis in part of cost of three new shipspatch, and Courier, 42,870l. In the receipts there appeared an entry of 31,000l. "on account of loan of 50,000l. from London and South-Western.

The CHAIRMAN observed that he thought their ondition sufficiently encouraging; and although he did not pretend that it was a very profitable concern, he thought that they were in no danger of ruining either themselves or the railway company.

The Report was adopted, the retiring directors reelected, and the remainder of the routine business speedily disposed of.

[For further Reports of Meetings, see p. 129.]

IRON TRADE. - Glasgow, Feb. 11. - The market for pig iron continues very firm, and with the moneymarket gradually getting easier and more plenty, prices will not, probably, be much lower. Many anticipate an advance to a slight extent: the demand is good, and holders firm. The shipments noted below, by the North British Railway Gazette, show a fair average for January, which is generally a dull month. Shipments in January

From Broomielsw14,300 10.492 Port-Dundas and Kirkintilloch, .. 7,390 7,073

21, 690 17,555 tons. In all, Birmingham, Feb. 14, 15.—The price is now firmer, WHITEHAVEN JUNCTION.—6a per share.

with, if anything, an inclination upwards, stocks being so small; although, of course, in the absence of demand, no improvement worth notice can be expected. The forge and mill men have held a meeting at Tipton, to determine upon the measures to be taken with reference to the strike. Thereat it was reported that upwards of sixty iron works were yet standing still, and that two only had resumed opera-tions during the week; making something like eighteen works in this district working at the old prices. A resolution was unanimously passed not to return to work at the reduced wages. The colliers return to work at the reduced wages. held another meeting to consider an amicable arrangement with their employers; a deputation was appointed. The men stipulate, that when the price of iron was reduced 10 per cent., their wages should be reduced 7½ per cent., and that when it advanced 10 per cent., their wages should be rose 7½ per cent. They enforce these conditions with some show of reasoning, that a compliance with them only can be the means by which the strikes can be put an end to, which have hitherto been attended with such ill constitution. sequences. Further, they express themselves willing to return to their labour at the rate of 1s. per pound per ton on the existing price of pig iron, that is 3s. 6d. per day, and to rise and fall in the proportions above named; or they are willing to accept a settled rate of wages.—The settlement of the affairs of the Oak Farm works has been delayed by the refusal of Lord Ward to take any composition for his debt, which is only 700l.

NOTES AND EXPLANATIONS

(1) The Government gives 32,000,000f, and the land, and receives half the profits, after 10 per cent.
(2) The Government guarantees 3 per cent, interest, and 1 p. cent. Sinking Fund. The loan of 10,000,000f, was negotiated at about

Sinking Fund. The loan of 10,000,000f, was negotiated at about 4 per cent. per annum.

(3) The Government lends 14,000,000f, and 4,000,000f, additional for half the cost of the passage of the town of Rouen, at 3 per cent. per annum. The dividend is declared after deduction of 1 per cent. from the profits for Sinking Fund. Loan of 6,000,000f, or 6,000 bonds

of 401 each, bearing interest at 4 per cent., created August 1845, reimbursable by lot, at 501, each, in the course of 73 years.

(4) The Government lends 10,000,000f, the town of Havre 1,000,000f. The Government lends 10,000,000f, and 4,000,000f, additional for half the cost of the passage of the town of Ruoen, at 3 per cent. per ann. The interest to commence 3 years after the line is opened. Loan of 10,000,000f, or 10,000 bonds of 1,000f, or 401, each, created December 1841, hearing interest of 50f, per annum, reimbursable by lot, at 1,200f, each, in seventy-eight years—8,000 were issued in Dec. 1845, and 2,000 in the 1846.

(5) Loan of 12,500,000f. in Bonds of 1,250f., hearing interest of 50f. per annum, to be paid off in a period of 50 years.

(6) Loan of 2,502,500f. in Bonds of 1,100f, at 49 per cent., to be paid off with a premium of 150f. per Bond. The Government lends 12,500,000f. for which the Company pays, from 187, 4 per cent. interest per annum, and 1 per cent. Sinking Fund, but only when the shareholders have received 13f. per slare.

(7) Loan of 6,500,000f, in Bonds of 1,250f., hearing interest of 50f. per annum, to be paid off in a period of 50 years.

(8) The Government lends 5,000,000f, at 4 per cent. interest.

* For account	, 24th I	Februar	y.	,	' † Ex	Div.

London Stock Exchange, Feb. 18 .- A very considerable business continues to be transacted in the public funds, but confidence to the same extent is not restored in the share-market. Prices are, however, pretty well maintained. The large dividends declared by two of the leading railway companies have produced but little effect, the public still having doubt as to the correctness of the mode of keeping the

Liverpool, Feb. 17.—There is no improvement in this market. Prices are steady, but the transactions are of the most limited description.

Suplow. Brothers. Manchester, Feb. 17 .- We have had but little business doing in our share-market this week, and prices have undergone no material change. But, on the whole, anticipations are in favour of improvement. SAM. GRINDROD.

York, Feb. 17.—The market is flat, and few business transactions occur except in the York, Newcastle and Berwick and in the North British stocks.
GRAYSTON & EARLE.

Hull, Feb. 17.—The gloom to which we alluded in our last as hanging over the share-market has continued during the week; nor do we expect to see much improvement until after the meetings of the leading companies shall have taken place. Darwens, buyers at 10 dis., sellers at 9\(\frac{3}{2} \) dis.; North British, flat, and North Staffords the turn lower.

Filing & Tootal.

Birmingham, Feb. 17.-This market has been languid during the week, but to-day business has been brisk and prices firm. North Staffords closed with buyers at 1 pm.; and there have been sales in Birmingham and Stour Valleys at 13 dis., Shrewsbury and Birmingham A, at 56s. 3d. dis., and Shrop-shire Unions at 23 dis.

W. Banks. shire Unions at 2½ dis.

Glasgow, Feb. 16.-There has been no material change in the state of this market during the past eight days. A steady inquiry continues for shares suitable for investment, particularly the guaranteed; the more speculative class have rather improved in price, but the demand is limited. A very small amount of business was done to-day, of which we add the last prices:—Glasgow General Terminus, 8; Glasgow, Dumfries and Carlisle, 71. 7s.; North British, thirds, 3s. dis.; Paisley, Barrhead and Hurlet, 25s. dis.; York, Newcastle and Berwick, G. N. E. purch., 2½ pm. Buchanan, Aitken & Co.

Bourse de Paris. — Feb. 17. — The following are the latest prices of shares:—Versailles (Right Bank), 295f.; ditto (Left Bank), 197f. 50c.; Orleans, 1,182f. 50c.; Rouen, 865f.; Havre, 422f. 50c.; Marseilles, 531f. 25c.; Basle, 157f. 50c.; Northern, 540f.; Strasburg, 405f.; Nantes, 381f. 25c.; Lyon, 391f. 25c.

ITALIAN AND AUSTRIAN. -- (Inauguration of the Maria Antonia line.)—Feb. 2.—Considerable excitement was caused in Florence by this opening of the first portion (from Florence to Prato, about 11 English miles). The Grand Duke Leopold II. assisted at the ceremony, accompanied by the Grand Duchess, who has allowed her name, Maria Antonia, to be given to the line. There were also present the archgiven to the line. There were also present the archibishop and other dignitaries, the ministers of state, the diplomatic corps, and numbers from Florence, who had been invited by the directors. The station excited much admiration, with a general remark that, from its noble dimensions, such an edifice, intended for public use, was worthy of the city of Florence. The personages present attended the sacred ceremony of the benediction of the line, which was performed by the reverend prelate. The prince

then proceeded by the first train, which was decorated with festoons of flowers and the national flag. A second train followed drawn by another engine. A second train followed drawn by another eighte.

More than 600 persons were thus conveyed to Prato, and the trains then returned to Florence, and again proceeded to Prato with an equal number. Bands of music greeted their arrival at Prato, with a sumptuous collation, at the sole expense of the Gonfaloniere, and at the Florence station a collation was equally provided at the expense of the directors. On the following day the line was opened to public traffic.

CALEDONIAN.—Feb. 14.—The line was opened; and at Beattock there was a general re-union of the trains from Edinburgh, Glasgow and Carlisle. The party, headed by the chairman, Mr. G. G. H. Johnstone, and other officials, lunched at Carlisle, and dined afterwards at Gibbs's Hotel, Edinburgh.

Kailway Chronicle.

LONDON, SATURDAY, FEBRUARY 19.

Never did the peculiar talent of the CHAIRMAN of the GREAT WESTERN shine out with a lustre so dazzling as in the brilliant speech of Thurs-The dark prospects of the coming traffic, the cloud and gloom through which we have passed, served merely to bring out in more striking relief the genius of the champion of broad-gauge interests, the Napoleon of Great Western policy. True it is, that the traffic even of the past half-year has fallen below that of last year; but this is no cause either for future alarm or present discontent; it is but an opportunity for trustful shareholders to perform an act of striking magnanimity, and to abstain for once from dividing the odd half per cent; and, accordingly, they do, all but unanimously, forthwith restore the odd thousands of pounds, to lie idle, if we may so understand it, in the coffers of the Bank of England (?) fructifying at 2 per cent. for the next six months. - Generous and confiding shareholders! verily ye shall have your reward!

One man certainly did venture to say a word about widows and orphans, and poor old annuitants; but "what business have they to be mentioned in meetings of shareholders?" and so six hands were held up in their favour, but an infinite number against. It is on broad principles of policy, and not the mere dividend to poor shareholders, that the Great Western is to be managed.-A poor holder of five-fifths of a share opened his mouth to ask an explanation, which the Chairman at once shut up by appealing to the body, whether so small a personage should be answered or put down; and the latter was

accordingly done, nem. con.

To this magnanimity and generosity of principle and of measures were united, in the speech of the accomplished chairman, an amount of prudence, moderation, and caution rarely exercised by the same man. Dealing in large and enlightened principles, the Board has, nevertheless, during the whole year, been remarkably considerate of the wants and feelings of its shareholders in rigidly abstaining from every call which it was possible to avoid. They have ceased to go on with any new works not already far advanced; and in their instance this self-denial has the merit of a virtue, not, as in other railways, a mere necessity. They have other railways, a mere necessity. never wanted money-never. At 5 per cent. money was poured in on the directors in overflowing abundance. When 8 per cent. was asked at the Bank of England, and 18 without-when Mr. Hudson, with a pocketful of Exchequer bills, was denied cash at the Bank, — all this while the Great Western Board laboured under a plethora of gold—or, at least, their paper was everywhere current, and everywhere exchangeable for gold, at 5 per cent. No wonder, then, that shareholders place their confidence implicitly in men who can thus turn even adversity into gold.

Another point is not only instructive but, to us, delightful and refreshing. The Great Western are to have no more foolish schemes of aggrandizement-no new lines-no projects of any kind. Past extravagance is entirely the fault of Government, and the mania of the public. This year there are to be no new schemes. It is true there is a proposed line to Windsor, but then their word is pledged to that-and the word of the Great Western! Then, also, there is the proposed Hungerford extension; but then that is not all their own. There are the poor Kennett in that. Never be it said that the Great Western | plighted faith and broke it—that they raised expectations, and did not fulfil them. broad gauge, too, on the Birmingham and Oxford line-that is nearly settled, and the directors, victorious at law, are just and magnanimous -they are not the men to push an opponent into a corner—they will make a fair arrangement, and overtures have been received, &c .-Well, enough of this; we refer the reader to our copious account of the meeting, to which we shall by-and-bye return. For the future, we believe in the power of Mr. Russell and his allies to wield facts and figures, and, we may add, shareholders, with a power that is unrivalled.

The SOUTH-WESTERN meeting passed off quietly, because of the maintenance of the 8 per cent. dividend, notwithstanding the recent depression, and this seems to have given great satisfaction. Mr. CHAPLIN made one of his sound statistical speeches, in which he proved, and apparently to the satisfaction of the shareholders, that even in the event of all their extensions being completed, no apprehension need be entertained of any ultimate depression of dividend under, at the worst, 7 per cent. Mr. Locke quieted the apprehensions of the shareholders by assuring them that the works will be done under the estimates, and that no further use will be made of the parliamentary powers to be obtained, than to keep the enemy out of a field which they will only proceed to occupy as fast as may be deemed advisable. The absurd idea that he wanted these lines because they touched Honiton, he refuted by the statement that the lines were planned long before the purchase of Honiton had either been planned or executed. Mr. Hoyes' motion fell to the ground for lack of supporters; and, on the whole, a meeting which was viewed with alarm has passed over quietly, creditably and satisfactorily to the great body of shareholders.

The proceedings of the London and North-WESTERN meeting lasted so long, that we cannot at this late hour reserve space for many comments that suggest themselves. The dividend is reduced to 8 per cent., and we are glad it is, for at that we believe it sound; and at 9, with a prospect of speedy reduction, and a deduction from reserves to make it, we think that the shares would have fallen more than with a plain staightforward 8 per cent., which is likely to be maintained. At 8 per cent. these shares are certainly worth more than the market price at which the apprehension of this reduction has long kept them, and we have no doubt that in improved times they will rise far above their present price.

We were further glad to find the extent of active interest which the shareholders displayed at the meeting. There has seldom been a more animated meeting, nor more lively discussions carried on in a right feeling, and met with be-coming temper. The shareholders have not failed to enter their protests against undue extensions and engagements, without, however, taking steps of any unnecessarily obnoxious nature.—Mr. GLYN made his usual plausible and agreeable speech, and seasoned it with a reference to the Government bill for audit of accounts, by which we are glad to see that he repudiates the measure, even notwithstanding his latent tendencies to Whiggism and its bureaucratic tendency. We must defer further remarks, but recommend Mr. Glyn's speech to careful perusal.

At the adjourned half-yearly meeting of the BRIGHTON, when every grievance had been pretty well discussed, a resolution was passed

dividend, the raising of the loan, and the conversion of the stock of the fifteenth shares; and appointing a committee of investigation, to consist of seven shareholders.

The directors' Report of the EAST ANGLIAN declares that the estimates for construction must be greatly exceeded by the extra works required by various public bodies in the districts of the line; additional capital is to be raised. The traffic of the lines already opened averages 4231. per week.

The Manchester, Sheffield and Lincoln-SHIRE has held its half-yearly meeting at Manchester, when it declared a dividend of 5 per cent. per annum on the stock of the old company, reserving a balance of 22,353l. as a revenue fund applicable to future dividends. This company adopts the good practice of distributing to the proprietors its accounts, prepared with much detail, some days before its meeting; and of facilitating attendance at the meeting by issuing free passes along the line to the shareholders. It will be satisfactory to the shareholders to note that the Grimsby Docks, now amalgamated with this company, are actually yielding in these early days a dividend nearly at the rate of 9 per cent. on the amount at present expended in behalf of the docks, namely, 62,000/.; for it must be remembered that of 100,000/., the purchase-money for the old docks, only 50,000l. in fact has yet been paid, which sum, added to the mortgage of 12,000/., makes the expenditure what we have stated it to be on this head.

The Report and accounts were respectively adopted at the half-yearly meetings of the NORTHERN COUNTIES UNION and the NEWRY. WARRENPOINT AND ROSSTREVOR.

The Northern and Eastern have adjourned their half-yearly meeting until after the meeting of the Eastern Counties.

The Report presented to the half-yearly meeting of the EXETER AND CREDITON affirmed that the opening of the line from Crediton to Cowley Bridge only awaited the Government inspection. The bill for leasing the line to the South-Western has passed Standing Orders.

After the reception of the Report and accounts at the half-yearly meeting of the TAW VALE it was resolved to apply for a reversal of the late decision of the Commissioners appointing the laying down of the broad gauge. A culm mine, opened near Bideford, on the company's land, promises an unexpected source of income.

Dividends of 10s. per share on the old stock, and 2s. 6d. on the new stock were declared at the annual meeting of the WILSONTOWN, MORN-INGSIDE AND COLTNESS.

The Reports and accounts were adopted, after much discussion, at the half-yearly meeting of the Cork and Bandon. A forfeiture of 315 shares was also authorized.

Negotiations for the disposal of the Act and plans were sanctioned at the adjourned meeting of the BARBADOES. No future call is to be made without the sanction of a special meeting

The CEYLON shareholders passed the Report recommending an adjournment until the decision of the local Legislature has been received.

The SECOND READING of Lord MONTEAGLE'S RAILWAY ACCOUNTS AUDIT bill in the Lords can scarcely be regarded of itself as a transaction deserving the particular attention of our readers. Lord Granville (the Master of Royal Buckhounds and Railway Commissioner) opined that "it did not go far enough;" and truly his lordship was so far right, that, were it really found necessary by the ruling powers to hand over the books of our companies to a tribe of State auditors, the object could not well be and Avon Canal propriectrs; they are interested | adopting that part of the Report relating to the | reached by any merely permissive bill; -nothing

Digitized by GOGIC

short of absolute compulsion being likely to induce any sane Englishman to give up to strange hands,—least of all to such hands as are busy in public offices,—the management of their own money affairs.

At the moment of writing this, we have an instructive specimen of the mode of transacting business that may prevail in the quarters to which Lord Granville would make us subject. The default of Mr. Mason, the head clerk of the Board of Works in Ireland, has brought out revelations on the manner in which accounts slip through public offices, that will hardly increase our willingness to seek for direction in such a school as this. We extract the following from a morning paper; and may have a few words more to say on the subject next week.

The trial of Mr. H. Mason, charged with embezzling a large sum of the money under the control of the Shannon Navigation Commissioners, has occupied the Commission Court from its sitting this morning to an advanced hour this afternoon. The particulars of the charges have already appeared in the *Herald*. Let this trial terminate as it may, the mode of doing business at the Board of Works, as elicited to-day on the examination of Cols. Jones and Burgoyne, must attract the attention of the Government and the Legislature. Blank cheques and blank accounts used to be signed by Col. Jones whenever he desired to leave town. Such was his confidence in Mr. Mason, that he does not appear to have ever scrutinized his accounts, or taken common precaution against fraud.

The assertion of the sporting Commissioner, that the auditors employed under the extant Act are "frequently chosen by the persons most active in the management of the company," is one of that sinister kind we are now pretty familiar with in the utterances of the office to which he belongs. The appointment rests with the general meetings; and whosoever is approved of by such an assembly, by whomsoever proposed, is, to all intents and purposes, chosen by the company itself; and so chosen because the company is satisfied with the choice, of which it is at all times a free master. Wherever suspicion can be entertained, or exactly in those cases to which the recourse to an official auditor is professedly thought necessary by Lord Granville, on the ground of this assertion of his,-wherever, we say, any dissatisfaction or distrust may prevail, the condition of the choice which he adduces, as if it were an inevitable one, will not be found in existence. The proprietors will only receive, if they ever receive, an auditor at the recommendation of a director or directors, so long as they have entire confidence in the directing body; and when this is shaken, they will select strict and competent examiners from their own ranks, in whom they will place infinitely more reliance than in any unknown underling whatever that may be despatched from a Government office. Whether we are or are not to receive Lord Granville's commentary as an announcement of the intention of the Railway Board to try to get this part also of the system into their hands, we cannot pretend to divine.

That this, as well as every other kind of interference, by which the power and patronage of the office might be swelled, would be acceptable to the new department, is, of course, to be understood; it lies in the nature of all such bodies to regard the increase of its jurisdiction as one of its essential duties; and this, indeed, so far, is the only kind of duty which the Board has attempted to fulfil with the least consistency of purpose. But we apprehend that the railway body is sensible enough of its true interests to distrust any admission of the wolf's paw through this door of all others; and we trust that it is now strong enough to keep it closed against any such insidious encroachments.

From our official returns it appears that the amount of traffic for the last week, on upwards

accounted for: - 70,423/. for the conveyance of passengers only, 41,632l. for the carriage of goods, and a remainder of 36,144l. for passengers and goods together, not respectively apportioned; being an increase of 13,635l. over the corresponding week of the former year, when the mileage was 2,680. The average earnings per mile for last week were 43l., whilst in 1847 they were 50l.

OPENING OF THE CALEDONIAN BAILWAY.

The Caledonian opened on Tuesday lastexactly thirty months after the commencement of the works-works of a most ardnous description: a line full of unwonted difficulties, through a country so mountainous that it was not long ago pronounced impracticable. A line which was only to be opened by tunnels of two, three, or five miles long, and which would take, it was said, ten years to complete, and at least ten millions of money, has been begun, completed and opened in thirty months. This is another striking achievement of British enterprise and engineering skill; such an one as no Government in any country has ever accomplished, and of which the merchants and engineers of England may well be proud. This is another great benefit conferred on England and Scotland, not by its Government but its people, and those people the shareholders, directors and engineers of whom it is so much the fashion to speak slightingly in Government offices, in Boards of Trade, and even, sometimes, on the floor of St. Stephen's. We congratulate both countries on this new link, which obliterates for ever the separating boundary which has divided England from Scotland. London and Edinburgh and Glasgow are now only ten or twelve hours apart; and if it be true that twice twelve months and six months more have seen this great work achieved, the fact becomes still more surprising when we look at the large amount of work which this completion has involved ;-ten millions of cubic yards of material have been excavated and filled; a million and a half yards of solid rock have been cut away; even the very ballasting of gravel or broken stones, on which the rails are supported, amounts to a million of cubic yards. And all this has been done at a cost scarcely exceeding a million and a half sterling-130 miles of railway, through a mountainous and arduous country, at a cost of works not exceeding 13,500/. per mile. We may therefore adduce the Caledonian works as a specimen of the economics of modern railway engineering, which it will be difficult to equal or to surpass. But by the very reason of this rigid economy, it will be obvious that we have less in the way of splendour or magnificence in the works connected with the line to place on record than on almost any other line of equal length. There are few gigantic viaducts, no tunnels at all, no magnificent stations, no splendid termini. The engineer seems to have worked under a self-denying ordinance; he has avoided large works, he has everywhere adroitly contrived to escape grand specimens of masonry, he has erected no great monuments of con-structive genius, he seems to have looked to one evident, stern duty—that he was to regard it as his business to lay down four continuous bars of iron over 130 miles, and that it was his business to place them there at the least possible cost, in the least possible time, and in the most substantial manner. This stern duty he seems to have sternly done; and his Directors have to thank him for this very self-denial, as the reason why now, in these critical times, they have a line at all; and but for this, they would now have had a bridge here, a cutting of 3,436 miles of railway, was 148,1991., thus there, a viaduct elsewhere, plenty of works, but I at the Treasury :- and while this, under all the

-no railway. The railway is now open, the money is now fructifying, the work of the public is being done, and every shareholder is able to see his money in the fair way to earn for him a future revenue. In such times no such works have ever been before achieved. All who know the critical state of the times we have passed through, must also know that, but for the near approach to completion to which it had come, this line would have been for the present abandoned. A little more cost or a little lenger time, and we should have had no Caledonian

· There remains, however, a source of regret even in this festivity; competition has been begun; the Edinburgh and Glasgow Railway has now got a rival line; and has not, as far as we know, concluded any arrangement of a final or satisfactory kind, to enable it to escape the evils of ruinous competition. This is a cause of unmitigated regret, and we have but one source of hope—that the approaching meeting of shareholders will see it right to avoid pre-cipitating their property into the ruinous gulf of competition.

GAUGE OF THE TAW VALE LINE.

Since our announcement, last week, of the fiat of the RAILWAY COMMISSIONERS, with regard to the GAUGE of the TAW VALE line, the meeting of the shareholders in that concern has not only elicited the document in which the decision is pronounced, but has also made known the extreme disappointment and dissatisfaction with which it is received by the parties immediately affected by its provisions. In the Report prepared before the official sentence had been communicated to the Directors, they expressed a confident hope that the Commissioners would meet the wishes of the company by confirming its original plan of a line on the national scale:—and the grounds adduced for this expectation, founded on the great importance, as well to the proprietors as to the public, of a cheap line, able to work in connexion with the Exeter and Crediton, to which the standard gauge has already been applied; and on the formal declaration of the most influential residents in the district traversed in favour of this common-sense arrangementmight well have sufficed to determine the official sentence, even had no additional reasons existed in the wider bearing of the decision on the uniformity of the railway system at large. In a supplementary Report, drawn up after the Commissioners' order had been sent in, the Directors adduce further grounds for their surprise at its tenor, and for their desire to obtain a reversal of the sentence. They point out that "by this extraordinary decision, a broad gauge line is placed between two national gauge lines, which will impose upon the passengers two changes of carriages in a distance of thirty-one miles:"-and may well complain that they should be called upon to incur an addition to their outlay of 125,000l. in making the line so inconvenient to passengers as to destroy its best hopes of being profitably worked. Such being the practical conditions attempted to be imposed on this unlucky railway by the Board at Whitehall, it will be felt that the terms in which we spoke of the order last week-as affording & new proof of the perverse way in which they seem of set purpose to deal with practical questions-were, if anything, less emphatic than the real character of this strange decision might have justified. We observe that one of the speakers at the meeting,-a shareholder, too, in the Bristol and Exeter, -while impugning the folly and injustice of the Commissioners order-made no scruple of plainly ascribing it to "the private influence of certain noble lords"

Digitized by GOGIC

strong circumstances of the case, would seem to be no improbable supposition, the mere suspicion of the fact may well increase the discontent of all concerned. A resolution, authorizing the Directors to take instant measures to procure, if possible, a reversal of the Commissioners' sentence, was carried by amajority of 16 to 3; and this determination will not want effectual support in other quarters. The House of Commons, as we observed last week, may be reasonably expected to have some regard to the decisions of three successive sessions, in favour of a national line to Exeter, the spirit of which this act of the Commissioners wilfully contradicts; and we trust that the Legislature, even if the Railway Board should persist in their erroneous views, will step forward on behalf of economy, common-sense and the public advantage, as well as to protect the company from the injurious consequences of a decision in which each and all are disregarded.

Correspondence.

MANCHESTER, SHEFFIELD AND LINCOLNSHIRE MEETING.

I trust you will find room for a few remarks on the meeting of the above company, just held at Manchester. Having some stake in the undertaking myself, as well as having been the means of persuading several friends and near relations to invest largely in this line, from a conviction of its turning out at no distant period one of the best properties in England, I went to the meeting, though the attendance in a crowded room to hear reports and speeches which one may read at home much more comfortably is anything but agreeable; and from what I saw of the character of a Manchester meeting. I have come to the conclusion in future to stop away, and send my proxy to a friend in whose judgment I can place confidence, or to give it to the chairman, whose character is too well known to make any shareholder distrust him. But the object of my present letter is to try and persuade railway holders who cannot or will not attend personally such meetings to send their proxies to some respectable man of business habits or friend, and not to leave the issue of the meeting to a little knot of Stock Exchange jobbers and gossiping local agents, when the property they hold is at stake. It was evident, yesterday, from the character and appearance of the people who were most pertinacious in their questions, and the hindrance their petty distrust opposed to the main object of the day, that some paltry local feeling of jealousy was the underhand motive of their opposition. Upwards of two whole hours were wasted in idle questions and remarks by people with outlandish Scotch names, who to my knowledge had a mere nominal stake in the concern, while many of those present who aided and abetted them were jobbers and sharebrokers, and others who though on the list of shareholders had not paid their calls-people buying shares to-day and selling them to-morrow, as the turn of the market enabled them to turn a shilling. From inquiries I made, I found that the little knot of Stock Exchange jobbers who had got up the opposition they endeavoured to maintain were men of no note in Manchester, and that the party they succeeded in substituting for the director they turned out is at the best a new man in railway directions, and not likely to be most beneficial to the direction, to my the least of it. He is, as I understand it, the representative of this little band of malcontents, and a delegate of the jobbers, at the Board. Such management is not what is wanted. The large shareholders at a distance ought to step in, and 2 they cannot personally take a part in public meetings, they should entrust their proxies to mane person who may be above such local influt is not by "harking back" over old grievsucces, and asking, for the hundredth time, the same questions which have been answered year after year that economy and good management can be introduced, always supposing that they are not sought after by the present Board. It is not right, nor is it at all agreeable to any gentleman to see his name the subject of controversy in newspapers, and on that

now on the Board of this company, whose character alone is a sufficient guarantee that nothing underhand or mean shall be allowed, and there is not a director among the whole eighteen who could possibly be suspected of allowing or conniving at such dirty tricks as passing their wives and relations free on the line, while their well-known affluence renders the very mention of such pilfering ridiculous. One stand the accounts," and thought they were "suspicious," Are not the signature. appointed by the shareholders themselves, besides a well-known accountant, in addition to the chairman and secretary of the company, a sufficient guarantee, at any rate, against such effrontery as a fabricated balance-sheet? The sole effect of such absurd question and answering is to waste time, to hinder business, and to prevent the main end and object of the meeting from being attained. After all their pettifogging questions had been answered and explained satisfactorily, as may be seen from the public reports on the subject, the bulk of the people at the meeting ran away, and allowed resolutions authorizing ten or eleven new bills to be introduced into Parliament, at an expense in law and agents' charges alone of many thousand pounds, without a word of explanation asked or comment made. And two or three years hence, these same supient economists will be asking-how it comes the company have so many parliamentary agents and lawvers' bills to pay? __not but that I believe every bill so authorized is likely to be beneficial to the shareholders' interests, but it shows, the character of the petty opposition the chairman has to deal with. In conclusion, I will only repeat, that all persons holding railway stock, especially in new companies, should be so far alive to their own interests, as not to entrust their property to the tender mercies and intellects of such people as Mr. Mac-this or Mr. Macthat; but either attend in person, and ascertain the character of the directors, or entrust their vote to a man of character and standing in the commercial world-not a clique of jobbers and shareholders, who are only anxious to get their own representatives into the direction for the sake of profiting by the turn of the market. After all the talk of this line not paying, is it not paying already 5 per cent, on the worst and most expensive portion of it, and carrying over 20,000% to next dividend?

A CONSIDERABLE HOLDER IN THE LINE. P.S.—Had the votes been taken, instead of being content with a show of hands, I am confident the retiring director for whom the new one was substituted would have been re-elected as well as his colleagues, by a large majority of the meeting present. Lincoln. Feb. 17.

Gossip.

been lately considering a vast variety of schemes for effecting a better communication than that which now exists between engine-drivers and guards, and between guards and passengers. They have selected for trial the plan recommended by Mr. Wyndham Harding in his late report on the subject,* which has the primd facie advantage of simplicity. The late accident on the Great Western railroad between Didcot and Farringdon-road, when a curriage ran for several miles with a part of the wheel-tire off, and with the guard's brake so hard on as to prevent the wheel from revolving, appears to establish two points:

—1st, that a better mode of communication between the guards and drivers than now exists on the broadgauge lines, viz, by the application of the brake only, is necessary; and 2ndly, that the travelling porters in the "coffina" on the tenders afford no security. The guard was in the present case unable to draw the attention of either the travelling porter or driver, and was also unable to make his way along the train.

Every day corroborates some principle of railway policy which the Railway Chronicle was the first to enunciate. Our readers well remember the battle we had to fight for the CARRYING QUESTION. "The additional profits," states the Report of the Manchester, Sheffield and Lincolnshire, "now realized by the company in their capacity of carriers more than compensate for any temporary falling off in general merchan-

ise." This is most satisfactory.
Gossip has been busy this week, stating that ar-

account alone I forbear to quote nine or ten names now on the Board of this company, whose character alone is a sufficient guarantee that nothing underhand or mean shall be allowed, and there is not a director among the whole eighteen who could possibly be suspected of allowing or conniving at such dirty tricks as passing their wives and relations free to the line, while their well-known affluence renders the very mention of such pilfering ridiculous. One person at the meeting said, "he could not understand the accounts," and thought they were "suspicious." Are not the signatures of the two auditors appointed by the shareholders themselves, besides a well-known accountant, in addition to the chairman and secretary of the company, a sufficient guarantee, at any rate, against such effrontery as a fisbricated balance-sheet? The sole effect of such absurd question and answering is to waste time, to hinder

So the GREAT WESTERN, it is said, have no objection to the London and North-Western having the BIRMINGHAM AND OXFORD at last, whilst the London and North-Western say, "pray keep your bargain." The opening of the TRENT VALLEY has proved that the Birmingham traffic was not worth fighting for.

Capt. Huish writes to the Times thus pertinently, respecting two accidents reported in that paper to have occurred to passenger trains on the London and North-Western:—"The statements throughout are very circumstantial. I beg to apprize you that no such accidents have occurred, the entire paragraph being a fabrication."

The formal documents relative to the lease of the DUNDEE AND PERTH to the CALEDONIAN were signed and sealed last week by the directors on both sides. The lease is for twenty years, at the guaranteed dividend of 8 per cent.

dend of 8 per cent.

We heard it stated a few days ago that all the 10t. shares of the PREFERENTIAL STOCK OF 872,000t. guaranteed 6 per cent. by the MANCHESTER, SHEFFIELD AND LINCOLNSHIRE have been disposed of, excepting 15,00td, and that within the last day or two, a considerable number of these have been taken at Manchester.

We observe that Mr. Whishaw, late of the ELECTRIC TELEGRAPH company, is advertising a new Hydraulic Telegraph.

A meeting of the inhabitants of Enniskillen unanimously resolved to support the continuation of the LONDONDERRY AND ENNISKILLEN line from Strabane towards Omagh.

We remark that Mr. NASH'S TESTIMONIAL for his successful prosecution of the luggage robberies is drawing to a close. We think every director's name at least ought to be found among the subscribers.

SOUTH-WESTERN.

Feb. 17.—Half yearly Meeting, London.—Mr. W. J. CHAPLIN, M.P., in the chair.
Mr.J. W. CROKER, as a convert to the minutes of the

Mr. J. W. CROKER, as a convert to the minutes of the last meeting, would simply acquiesce in the resolutions then passed. He must renew the protest he then entered relative to the steam-packet company, which he had considered, and still held to be a most calamitous speculation.

Mr. Hoves inquired whether proper means had been taken that the meeting should be composed exclusively of shareholders of the South-Western. He thought it was highly improper that there should be any persons present who were merely holders of South-Western extension scrip. Many persons held that scrip who were not shareholders of the South-Western. He trusted that if there were any such persons in the room they would abstain from voting upon the questions that would be brought under discussion.

The CHAIRMAN replied that there was a person stationed at the door for the purpose of requesting those who attended to write their name in a book.

Mr. Hoves admitted that, but remarked that the

person alluded to did not inquire whether or not the persons so signing their names were shareholders.

The CHAIRMAN thought that if any gentlemen had

The CHAIRMAN thought that if any gentlemen had come in under the circumstances referred to by Mr. Hoyes, they would have the kindness to stand on one side.

Mr. Hoves did not require that, as he would be quite satisfied if they abstained from interfering with the business.

Mr.. MORGAN remarked that there were scarcely any persons present but South-Western shareholders.

ho are merely scripholders, and not shareholders in the present line?

In answer to the question, three gentlemen held up their hands.

The CHAIRMAN remarked that it would be expected of them that they would not vote upon any of the resolutions.

Mr. TAUNTON, the assistant-secretary, in the absence of Mr. Laurentz Campbell, the secretary, who was prevented from attending by severe indisposition, then read the Report (see Official Papers).

The CHAIRMAN said, such was the Report which had been agreed upon by the directors, and he was gratified to find, by the manner in which it had been received, that it was approved of so far. At the last half-yearly meeting he endeavoured to lay before them a statement as to a few of their lines, and the result of their traffic in the various districts, together with a comparison of their traffic with that of the two preceding years, which then appeared to be generally satisfactory. Since that period nothing generally satisfactory. Since that period nothing material had occurred in the ordinary run of their business, and he therefore felt that under the head of traffic he might simply observe that notwith-standing that of the last half-year had been to some extent affected by the pressure of the times, the directors entertain little doubt of its speedy and steady increase. His object on that occasion would have been, if possible, to have laid before them a financial statement of the various undertakings, first with a view to inform them of the capital which they had available for the completion of all their engagements. He might now state that thus far their ways and means were satisfactory. In estimating the entire capital for the whole of the works which the company had authority to construct, he might fix its amount, in round numbers, at nine millions and a quarter, and all who knew Mr. Locke knew that he was not likely to exceed his estimate. They had the details of the money to be laid out on their respective lines, and they would find there would be sufficient to meet With respect to the the requirements of the case. revenue, he was ready to admit that questions upon that subject could not be so readily answered. their estimate were not included the London Bridge extension, the Andover and Southampton, and the Southampton and Dorchester branches; the execution of these lines being for the present suspended. He was sure, that until the Waterloo Bridge extension was completed and in operation it was quite absurd to push forward the extension to London Bridge. Shortly after the 30th of June, by which time they were pledged to have the Waterloo Bridge branch opened, they would be better able to judge of the traffic and of the wisdom of carrying out the further extension. With respect to the Southampton and Dorchester branches, during the pressure on the money-market, they had thought it better to defer their construction. With reference to the Andover and Southampton, it might be placed in the same category. The total capital, with those exceptions, was 8,413,000*L*, 2,000,000*L* of which would be raised by loan at 43 per cent., leaving a share capital of 6,413,000*L*. They would experience no difficulty in raising the amount at 43 per cent. cent., because they had already engagements for 31 and 4) per cent. for some years to come, so that they would be able to raise that amount at 4) per cent., reducing the share capital to 6,413,000. Now if they inquired of him the precise dividend which would be offered, he confessed it would be a somewhat difficult task to answer the question. During the past half-year there had been a great monetary pressure, which had occasioned an utter prostration of commercial credit, and had crippled commercial enterprise. So that if he formed an opinion from past times he might underrate it, and induce despondency, whereas if he stated his opinion formed for future prospects, he might be charged with being too sanguine. It was not from want of anxiety and trouble in going into figures past, present and future, that rendered it difficult for them to give the neces sary estimate, but simply on account of the circumstances he had already stated. He (the chairman) knew very well that certain vague reports had been industriously circulated, by persons hostile to the interests of the company, all of which were based on falsehood; he should be delighted if he could at that meeting dissipate those unfounded rumours, and establish confidence in the minds of the shareholders with regard to their property. The most cautious of his colleagues estimated the future dividends upon the whole capital at 61. 7s. per cent., but there must be many causes to increase that amount. the other hand, when he enumerated the points, the shareholders would see that 61. 7s. was not to be limited by 20s. more per cent. They would

The CHAIRMAN: Are there any gentlemen present | be enabled to form an opinion as to the dividend that would accrue from the statement of accounts presented to them. With respect to the capital, he could assure the shareholders of their perfect safety, and he was certain that they would admire the manner in which the respective undertakings had been secured. They had placed four distinct lines on the road between Nine Elms and the Waterloo Bridge Station, so that whatever might be the adventurous spirit of future promoters of lines south of London, the South-Western shareholders would be enabled to benefit from their They had a vast number of arches speculations. running through very populous districts, and judging from the offers which had been made for them, there could be little doubt that the shareholders would receive a very satisfactory return for the amount of capital invested. When he told them that there were at the present time one million and a quarter passengers per annum passing to and from Nine Elms Station, and when they added to that the Windsor, Brentford, and Richmond traffic, and the increase that would result upon the opening of the Waterloo Bridge line, they would be able to imagine the amount of business that might result from it. With the slight increase of fares (perhaps 4d. on each passenger) they would secure 40,000l. a year. So that what with the perplexity of parliamentary affairs during the past half-year, the financial pressure that many of them had felt, and, he would almost say, the botheration of the law, he thought the shareholders would give the director credit for saying that, when they have completed, and by care and economy carried out, the undertakings in hand, they would secure for the shareholders a liberal return on their capital. Before he dismissed the subject of revenue he might mention that there was one subject that had occasioned them considerable anxiety, namely that of fares. On referring to the last seven half-yearly statements he found the mileage in fares to be as follows: - in 1841 it amounted to 1,963l. per mile; in 1842, it was 1,832l. per mile; in 1843, 1,909l. per mile; in 1844, 2,013l. per mile; in 1845, 2,015l. per mile. In 1846 the fares were lowered and the amount fell to 1,450%. per mile, but rose again in 1847 to 2,024*l*. per mile. It would at first occur to them that the low prices were begin-It would at ning to redeem themselves, and to prove that the experiment adopted was a sound and politic one; but there were various circumstances which might have tended to that sudden increase, amongst others the opening of the Dorchester and Salisbury lines, and thus it was difficult to ascertain exactly in what situation they were with respect to fares. They had to contend on the one hand against the severe pressure of the times, whilst on the other there were the favourable influences to which he had The one therefore neutralized the other, alluded. and the directors must therefore leave the shareholders to form their own judgment as to the amount of dividend, on an examination of the circumstances which he had thus stated to them. He had told them seriously and advisedly at a former meeting that it would reach 7 per cent., and he had no reason now to alter that figure. It was very desirable that he should succeed in impressing that fact upon the minds of the shareholders, because it would engender a strong feeling of confidence in the directors. He had already adverted to certain charges circulated with respect to their present position.

They had heard of dividends made up out of capital, they had heard of auditors in this company, of want of confidence in the directors, of legerdemain tricks with the accounts, by which the property of the shareholders would be endangered,—they had heard of the directors making undue preferences,-indeed every thing unprepossessing that could be imagined had been charged against them. Now as regarded the first of these serious charges they should hear how far dividends had been made up out of capital. In 1845 the capital account was 2,604,405l. 11s. 6d. During the last six half-years they had redeemed the land-tax, paid for improvements in sidings, paid for engines, carriages, telegraphs, defrayed law charges, and had leaving, after deducting 192/. for land sold, an addition of 34,603/, to the capital account. This would enable them to judge of the fairness of these charges. He trusted that the shareholders were at all events satisfied on that point. It had been said, in connexion with that charge, that the only plan to prevent such misappropriation of the funds in future would be the appointment of auditors. Those shareholders who had attended the previous meetings would have heard it alleged that there were auditors in most public companies, and that their appointment in the South-Western was absolutely necessary. That remark had often been made, but it was never forcibly urged, and, indeed, had received very little encouragement from the great body of shareholders generally. For himself, he had no objection to the

appointment of auditors, if the shareholders desired but he must be allowed to say that he did not at see the necessity of them. There need be no all see the necessity of them. There need be no reserve on the subject, and he for one was at once ready to adopt any proposal that might be generally acceptable. With regard to the other charges he did acceptable. With regard to the other charges he did not think that in justice to his colleagues he ought to notice them further than by reference to the charges made respecting the mode of raising the new capital. At the last special meeting he (the chairman) assured the proprietors that they had deferred their meeting till the last possible moment, as Parliament was called together, and they anticipated a public expression from the Legislature on the subject of railways, and they anticipated that their bills might be suspended. The result, however, was that Parliament decreed that the bills should not be suspended. That naturally drove their opportunity of raising their capital to a painfully short period. The facts of the case were laid before the shareholders, some of whom were unable to take their ratio, whilst others declined to do so, and some considered the terms not sufficiently attractive. The directors had put the terms as low as they possibly could, in order to consult the interests of the old proprietors. Seeing the desire to proceed, as expressed on former occasions—seeing that the capital had been raised five times on former occasions -seeing the strong feeling existing on the part of the special meeting—seeing the great anxiety that existed on the part of the localities through which the proposed lines were to pass, and the enormous expenses that would be incurred if they stood still-taking all these things into consideration, they did all they could to carry out their projects, and large sums were subscribed by the directors for that purpose. Who, then, were the assumed delinquents that had subscribed so largely, and had been so unceremoniously branded! They were not men of straw-men who could not pay their calls-amongst them were gentlemen to whom they had entrusted the management of their affairsengineers and others of equal responsibility. Among those parties he might refer to Mr. Locke, though his name did not appear on the deed, he being on the Continent at the time; but he wrote us word to say that he would take a larger interest in carrying out the lines. We, not having his warrant of attorney, and there not being time to send to Italy, were obliged to get other gentlemen to subscribe their names to be answerable for property for which Mr. Locke is actually liable, and that is the reason why you see the names of some engineers, and others of the staff, on the deed. Now I think I have answered that objection to our conduct, and I think that it must be manifest that of all evils that of having small holding directors in a company is about the worst. declared he expected a vote of thanks for stimulating such men to come forward; instead of that, however, he had been visited with unmitigated abuse. directors invested large sums, a circumstance which could not be objectionable, for all present knew perfectly well the disadvantage of large holdings on the part of directors. There was another thing for which he was almost vain enough to think he should merit a vote of thanks; the directors had prosecuted the works manfully, and had spent 27,000l. per week since last July, and had not made a call, except upon the thirds, for that purpose. With regard to the Western extensions, he believed that enough had been said on former occasions. The directors felt that the propositions they had made were highly important, and that it was absolutely necessary that they should be carried out. They therefore trusted that the shareholders would assist them heart and hand, that thus they might carry on their operations promptly and with every assurance of marked success. He would now move that the Report be adopted, and having suggested the manner in which the business should be conducted, he resumed his seat

Mr. Hoyes rose to propose an amendment, and complained in strong terms of the manner in which the accounts had been presented. In their present shape he defied any one to understand them. showed plainly enough, he said, how the money was expended, but gave no information as to the manner in which it was raised. Much of the money was, no doubt, raised by loans, but he thought the shareholders were entitled to a clear and distinct statement. They had met that day to receive a statement of their affairs for the last six months, but instead of that the directors had given them a résumé of their affairs ab initio. The shareholders wanted to know what had been paid from July to December, and what was the state of their affairs from that time.

The CHAIRMAN remarked that the hon, proprietor could easily have obtained that information by comparing the statement of accounts with that issued at the last half-yearly meeting.

Mr. Hoves admitted that, but suggested that in all

Digitized by GOGIE

well-regulated companies such matters were explicitly stated. He saw that the Taw Vale had to receive from the South-Western the sum of 78,000l. The South-Western engagements were pressing enough on the shareholders, and it was not at all proper to put upon their shareholders the liabilities and obligations of other companies. If gentlemen put their names to subscription-deeds they certainly should hold themselves prepared to carry out their obligations. new South-Western navigation scheme was another hopeful speculation. By a report which he (Mr. Hoyes) had seen a few days since, he found that the South-Western had given 23,000% towards that scheme. Mr. Tite, the chairman of that company, was reported to have said at a late meeting that the company was doing uncommonly well. If such were the case they certainly ought to pay up their own calls and debts instead of increasing them. Tite assured them that it was uncommonly well managed; but it had been proved that the number of passengers from Havre to England averaged twentyone, and the same from England to Havre. Now, it was doubtful whether such a company could be said to be in a flourishing condition. If it were not a flourishing concern the South-Western ought not to have anything to do with it; and if it were, it ought to be enabled to meet its own liabilities. The ought to be enabled to meet its own liabilities. next item in the old account to which he objected was 534,000l. for new schemes. That was swept out of the new account, but still he was not quite sure that the items were carried to the proper heads in the new account; but that was too intricate a subject to bring before the meeting, and therefore he would let it drop. The law expenses were virtually stated at 4,000*l*., but it was impossible to conceive that they were so low as that. A solicitor had told him (Mr. Hoyes) that a company whose business had extended over twenty-one days had incurred an expense of 5,000l. per day,—so that it was absurd to suppose that the expenses fell lightly upon the South-Western, who during their parliamentary struggle had been opposed right and left. He had exercised his privilege as a shareholder some days since, and had looked at the law expenses. He found that Mr. Bircham, their solicitor, had drawn such enormous sums from the company that he was utterly amazed, and had not the courage to proceed further with his investigation. Such facts, he thought, pretty clearly proved the necessity of appointing auditors in order to the protection of the society's property. He then turned to the revenue account, which was by no means clearly stated. In that statement he found nothing about the electric telegraph, and he would therefore like to know whether it produced anything or not. Printing and stationery for the half-year he found cost 3,648*l*; that, he thought, was a frightful amount to pay. On insurances he found a diminution of cost, and that he took to be a bad sign. Their extensions did not bring in more than 3 per cent. per annum; but if their old line stood alone it would be a very capital concern. He was not at all an alarmist about railway property, but he thought if they stood still they would do very well. There was not any man in that room would contend that the lines to be constructed would be more productive than those which were in course of working. Indeed, he thought that if all of them were made to-morrow they would not be able to divide more than 5 per cent. upon them. Then with regard to the dividends, they were nothing but a fallacy and a snare. They paid a nominal dividend it was true, but then Mr. Morgan the very next week invariably favoured them with a call. Mr. Hoyes reiterated his objections, and intimated his intention of moving a series of resolutions at a future stage of the proceedings.

The CHAIRMAN defended the directors. The stationery account was large in consequence of the necessity that had arisen for supplying the new stations, and he contended that they were right in proceeding with their works, having already lost many good lines in consequence of want of enterprise.

Mr. BAKER condemned the manner in which the

accounts had been presented.

Mr. Serj. GASELEE desended the directors, and spoke at some length on the necessity of proceeding with the works as far as Exeter, and eventually as far as Plymouth, inasmuch as the Great Western could never answer the wants of the neighbourhood. He suggested that the Reports should be sent out a week before the day of meeting.

The CHAIRMAN said it should be done in future.

The Report having been adopted, a lengthened discussion arose with reference to the propriety of granting free passages to the proprietors attending the meeting, and it was ultimately agreed that the privilege should not in future be allowed.

The CHAIRMAN then proposed a resolution declaring a dividend of 8 per cent. per annum upon the

capital stock of the company, payable on and after the 1st March; which was adopted.

The CHAIRMAN then proposed a resolution authorizing the directors to borrow, at such times and upon such terms and conditions as to them shall seem expedient, all or any part of the sums which this company is authorized, under the Act of Parliament relating to the company, to borrow; and a resolution was also carried—that the shares of 40l., created in 1845, be, at the option of the holders thereof, converted into a proportionate number of 50l. shares.

The next resolution, for re-electing the retiring

The next resolution, for re-electing the retiring directors, The Count Eyre, and Messrs. Smith and Uzielli, was opposed by Mr. HOYES, who proposed, as an amendment, a vote of want of confidence in the directors.

The amendment, however, only obtained two votes and the original motion was carried.

The CHAIRMAN then stated that the next resolusion was the one on which the subject of the extension to the West of England would be brought prominently before them; it was—

That this meeting confirms and sanctions the measures and proceedings of the directors with reference to the subjects comprised in the Reports of the directors to the special meeting of 27th of November last and this meeting, and authorizes and requests the Board to continue the pending applications to Parliament, and otherwise to act in the promotion of the same measures as to them shall seem most conducive to the interests of the company.

A discussion arose relative to these extensions, Mr. Hoves condemning them in strong terms, while

many others approved of them.

Mr. Locke earnestly advocated the proposed extensions, and shielded himself from some imputations which had been thrown out that he was supporting the extensions simply with a view to render his property at Honiton more valuable. He had contended that these extensions would be valuable to the company long before he had any connexion with Honiton. Charges had been promulgated that surveyors could obtain copies from the surveys of the Ordnance Office at a price of about 10s. per mile. Now, he could assure the meeting that the Ordnance surveys were of no value to English railways. They had been used in Ireland, where the surveys were made on a much

It was also stated that there was every desire on the part of the South-Western to be at peace with the Great Western, but that could be only brought about by the success of the extensions bills.

Mr. Hoves proposed a resolution deprecatory of the proposed extensions.

On a show of hands being taken, 6 hands were held up for the amendment, and upwards of 300 against it.

Mr. Hoves then demanded a ballot, but after a shortconversation, in which the CHAIRMAN announced that he had received 12 proxies, representing 30 votes, in favour of Mr. Hoyes's motion, and upwards of 2,000 proxies, representing about 3,000,000% of capital, against it, he withdrew host demand.

The proceedings then terminated with a vote of thanks to the chairman and directors.

GREAT WESTERN.

Feb. 17.—Half-yearly Meeting, London.—Mr. C. Russell in the chair.

The CHAIRMAN observed that the six months' accounts and proceedings, respecting which the directors would this day report to the meeting, had been amongst the most calamitous in the commercial annals of England. Most of the great interests had in some way or other severely suffered. Merchants, manufacturers, capitalists, and colonists had fallen, and had been crushed beneath the pressure. It was not to be expected that the great railway interests, dependent as they were on the facility of obtaining resources necessary for carrying on their works, on the calls on the proprietors, and on credit, should not have shared in the common commercial difficulty; but the directors had seen nothing to impugn the soundness of their original views, or to disturb the secure and lasting foundation of their enterprise. Their main line between London and Bristol, with its branches to Oxford, Cirencester, Gloucester, and Cheltenham, had been at work for many years, and had answered every expectation. There was a due and continuous increase in their traffic. He believed that there were but three weeks in the last half-year, with truth, in which the traffic had not considerably increased. The traffic and receipts on these lines, during the corresponding weeks of the last half of the preceding year, were also satisfactory. arrangements with regard to the subsidiary lines were made for the purpose of bringing the traffic on the old line, or in order to ward off aggressions. These arrangements were regularly approved of.
There was nothing which had occurred calculated in any way to affect them, except in some degree to re- | be in their recollection, and it would not be necessary

tard their final completion. In those arrangements which they had made they had entered into no extreme or excessive engagements. They had given no guarantees for the payment of 8, 9 or 10 per cent. The principal lines were the Wilts, Somerset and Weymouth, Oxford, Worcester and Wolverhampton, and South Wales. The South Wales line was the most productive. They guaranteed 5 per cent. out of it, and from the other two 4 per cent. He believed no lines in the kingdom, except one or two from the metropolis or some of the large towns, yielded a traffic of more than 4 per cent. The course for the directors under such difficult circumstances was plain and obvious, namely, to suspend altogether, for the present, such works as were not actually begun, and to postpone, consistently with their engagements, the completion of works commenced; to diminish their establishment at Swindon: to husband their resources: to apply their receipts as they came in to their most urgent wants, and to abide patiently but confidently better times. result must, he was sure, inspire them with confidence. They had continued to work all their establishments with perfect efficiency; they had met their liabilities (and they were not inconsiderable), and prosecuted their works, not, to be sure, with their customary despatch, but still so as to maintain their engagements with their contractors; and all this without requiring any assistance from the bankers, and without taking up one shilling at a higher rate of interest than 5 per cent. The result of the working of their line, exhibited in the accounts, must prove equally The directors were, by such a course, satisfactory. enabled now to place at the disposal of the shareholders a sufficient balance to empower them, if they were so minded, to distribute their accustomed dividend of 4 per cent. for the half-year; but at the same time they earnestly recommended them to be satisfied with 3½ per cent. on the present occasion. He knew that he should be told that they were content hitherto to carry over a balance of a few thousands, and that now they had a balance of no less a sum than 41.000/.: but he would entreat them to remember that these times were no ordinary times. The crisis and the panic had indeed passed away, but the distress which they had occasioned was left behind. The trade, commerce and manufactures of this country were all languishing. Let them look where they would, and they would see a universal necessity for economy and retrenchment. Under this influence the traffic not only of the line belonging to this company, but of all in the kingdom, had shown symptoms of stagnation; but he believed all things would come round -all would return to prosperity, though slowly and gradually. They must, moreover, recollect that they had recently opened new lines, and that they should have others to open, and that it was well known that lines did not become productive for a considerable period after they were opened; they must nevertheless carry the money expended on them to the capital of the company, and must pay the interest of the money belonging to them out of the revenues of the company. There was no doubt that these lines would turn out prosperously, and that in a year or two they would fully develope the expected traffic. The South Devon line would shortly be open, and when they had a com-munication with Plymouth, steamers from all parts of the world would resort to that port, and considerably increase their traffic. The South Wales was delayed by the same cause which operated on all their lines; but the directors were anxious to press forward the works as fast as they could, consistently with prudence and with a due regard to the interests of the proprietors. These were pregnant sources of prosperity, but some time must elapse before they could reap their fruits. The directors thought, therefore, that they would be acting wisely in reserving a larger balance than usual to meet these contingencies. The question was one constitutionally belonging to the shareholders. They could declare what they would do with that money which had been fairly and legitimately earned by their enterprise; but the directors, who from their position had perhaps a better opportunity of deciding, felt that they would not discharge their duty did they not express their opinion frankly and firmly; but, at the same time, he was directed by them to state that they would of course be most willing to defer to an opposite determination on the part of the proprietors. The bills to be proposed in Parliament during the present session were preserved within the narrowest limits. Some newspapers that were in the habit of writing down railways, had affirmed that the com-pany was again in the field with some forty or fifty new projects. If they had seen that statement they would be glad to hear that there were literally no projects, the only ones at all deserving the name being two reserved from last session—namely, the Windsor branch and the Hungerford extension line. cumstances connected with the Windsor branch must

Digitized by GOOGLE

for him to do more than revert to them. The traffic of Windsor, which was almost standing on their own line, and for which they were already to carry a branch to Windsor, was handed over to a distant and adverse line; but so deep and general was the feeling with regard to that injustice that they need not have any doubt that it would be repaired by the concession of this branch. The measure would be conducted by the same company as in the last session; but they entered into arrangements with the said company that it should become an integral portion of their own line when completed. The other was a bill for the extension from Hungerford town through Wilt-shire and Somersetshire. That bill had passed suc-cessfully through a committee of the House of Commons last session, and was suspended, with permission to be prosecuted on certain conditions in the present session. They had certain arrangements with the Kennet and Avon Canal Company, obligatory on them to prosecute the bill in the present session and he trusted that the time would never arrive when they should not act up fully and fairly to all their engagements. There were other circumstances which would oblige them to prosecute the bill. The South-Western were again asking for bills to carry out a line from Salisbury to Exeter. Now, if the Legislature should think in the present session as it seemed to have thought in the last, though from the great railway distress it would appear unlikely that a third line was necessary for the traffic of Exeter and the West, their line from Hungerford to Westbury would form a most important junction with it, whether through Taunton or on to the former place it must therefore become the main line to the West of England, because it would be some miles shorter, and the distance could be done in a much shorter space of time. These were their only two projects during the present session. They had applied for two other bills, to enable them to make a deviation from the Birmingham and Oxford line, so as to give much greater accommodation to the inhabitants of Leamington; and as the shureholders of the Birmingham and Oxford had agreed that such was desirable, he thought that they could not entertain any doubt as to the certainty of obtaining it. There was also a bill by which they sought additional powers to enable them to carry out their agreement with the Birmingham and Oxford. This brought him to state to them what had occurred with respect to their contest with the North-Western since they last met. They had always been most sincerely desirous to bring that question to an amicable termination, on just and reasonable terms, but they always thought that, as a preliminary to that adjustment of the matter, the validity of the agreement of the 12th of November should be fully established by the decision of the Court of Chancery; and it was proposed by the directors that an amicable suit should be instituted at the smallest expense and with the shortest delay. That proposition was not agreed to. On the first occasion, they accordingly filed a bill in Chancery, praying for the specific performance of the agree-ment, and for an injunction prohibiting any steps injurious to the fulfilment of the contract into which they had entered. Their opponents, however, instead of meeting them on the broad question of the validity of the contract, put in a demurrer to their bill, which meant to say, that notwithstanding their admitting all the facts stated in their bill to be true, yet there were no equitable graunds on which a Court of Chan-cery could grant the prayer contained in it. The question of the domurrer was referred to the Vice Chancellor of England, who overruled it, having heard it fully argued and he issued the injunction which they prayed for. Their opponents then appealed on the same question to the Lord Chancellor, who dismissed the appeal, with costs, so that the injunction remained in full force. Now, judgment having been only given on that point, they had no formal or technical decision of the Court of Chancery on the validity of the agreement, but in the course of his judgment the Lord Chancellor enunciated some general principles, and referred to some precedents, which he (the chairman) thought very conclusive It was to obtain powers to enable them to complete the whole of that agreement that they now applied for the bill to which he adverted. It had been sugested that some obstacle was imposed by Lord gested that some obstacle was imposed by Loru Wharncliffe's order. If such were the case, he believed that their Lordships would take the same view as the Lord Chancellor. He should now state that within the last twenty-four hours, they had received a letter from the solicitor of the dissentient shareholders of the Birmingham and Oxford, containing a final amicable adjustment. propositions were so important that they neces sarily required much consideration, and it would not, therefore, be right on the present occasion for him, having had them only a few hours in his

hands, to express any opinion on them, but this he would say, that the directors were influenced by the same desire for peace which they always entertained and that they would carry out that spirit to its full extent. They had some other bills before Parliament, for no other purpose than to ask for an extension of the time allowed them to complete their works. The course to be adopted with respect to these works would entirely depend on the future commercial state of the country, but of this they may be assured that the directors would proceed slowly and cautiously. He hoped and believed that the extremity of the crisis had passed, but the languor of the disease still remained. The railway companies of this country must not enter into a rush race of competition with each other, as to which should soonest get their money, and which should soonest complete their works. Companies should press as lightly as possible on the national resources and on the individual resources of the proprietors, by postponing the calls as much as they could. But when persons called directors madmen for making calls on the proprietors, they should bear in mind that they had entered into engagements which should be fulfilled. and that, above all other considerations, must be the consideration of honour and good faith. If they pursued that course there was no doubt of success; on the contrary, out of all that they had suffered much good would result. The Legislature and the Government would grow more wise and just and would cease to encourage and sanction rival works for the purpose of facilitating the exactions on old companies, and out of these results would arise greater stability, security and steadiness, to that class of enterprise in which was now embarked 100,000,000l, of capital, and which now involved the well-being of thousands of human beings. And more justice would be done to that class of enterprise which through that capital, and by means of those individuals, had done more, he believed, than any other class of enterprise, or any other science, to promote the social and commercial interests of this country.

The Report was read by Mr. WARD (see Official Papers).

The CHAIRMAN moved the adoption of the Report. A Proprietor said the speech of the chairman would have been an admirable one if delivered three years ago, before the company had embarked in its quarrels, its expensive lawsuits, and large parliamentary outlays. The chairman spoke of the necessity of economy; but it was an economy that was to be felt by the shareholders. He did not see why the usual dividend of 8 per cent. should not be declared. He had looked over the accounts for the last eight half-years, and found that the directors had proposed 8 per cent. dividends, with balances of 1,600L and 3,00cL. He had struck the average amount of balances carried over for the last eight half-years, and found it had always been under 5,000L.

The CHAIRMAN suggested that the observations of the hon. proprietor should be reserved till the dividend was proposed.

Mr. Lillingston said, that in the accounts there was one item which he could not understand—it was "To balance of interest paid on loans, 41,8122." It appeared that the company's loans amounted to upwards of 4,500,000l. The half-yearly intereston this, at 5 per cent., would amount to more than 112,000l.

The CHAIRMAN explained. There was an account kept which was called the interest account. In that account, every sum paid for interest was inserted to the debit, and every sum received for interest was credited. The balance of the interest was then struck, and the interest afterwards appropriated to the different lines to which it properly belonged. The total amount of interest paid for the half-year was 110,5481. 3s. 6d., and the amount received 4,186*l.*, leaving, as balance of interest, the sum of 106,000*l.* This interest, as he had stated, had to be apportioned among their different lines, and if the shareholder would inspect the printed accounts, he would find that an amount of interest was charged against the Hungerford line, on which the works were in progress. He would on which the works were in progress. He would find the same to be the case on the Oxford and Rugby, the Monmouth and Hereford, and every other undertaking. The balance, after paying all other undertaking. The balance, after paying all these charges for interest, was chargeable against the revenue derived from that portion of the capital expended on the lines at work

Mr. SAUNDERS confirmed, with details, the statement of the chairman.

Mr. LILLINGSTON thanked the chairman and Mr. Saunders for their satisfactory explanations, but said that independent of the desire that he had to understand how the interest account was made out, he thought it necessary toask for information respecting the financial state of the company. It was asserted that the Great Western shares were not a sound investment; it was said the company was paying interest out of capital.

The CHAIRMAN: The hon, proprietor was speaking the sentiments of anonymous writers.

Mr. LILLINGSTON: These were not the opinions of one set of men—not merely the judgment of their opponents, but of various clusses of persons, some of whom were of the highest respectability, and perfectly independent of both companies. It was asserted that the published accounts of the company were so mystified, and so difficult to be understood, that nothing was to be gleaned from them.

Mr. L. HEYWORTH thought that what the chairman had already said was a complete answer to these statements.

After an irregular discussion on matters of no public importance,

Mr. MARRIOTT wished to know what was the amount of the liabilities for works performed up to Christmas last.

The CHAIRMAN said he had to make an appeal to the proprietors. The question propounded by the hon. proprietor was one of the most vague and indefinite character, and it was impossible for any person to answer the question in the mode in which it was proposed. He put it to the proprietors whether they desired that Mr. Marriott should have any information given to him. That person held five fifth shares, which was, in fact, equal to a single share. When the meeting to consider the Birmingham and Oxford question was held in that room, Mr. Marriott was one of the most vehement in his opposition to the interests of the Great Western. He would read a letter from Mr. Marriott to the secretary:—

Marriott to the secretary:—

London, No. 9, Regent's Park-terrace, Gloucester-gate, An. 26.—Sir.—I shall feel obliged, being a shareholder, by your forwarding to me a copy of the printed circular issued by the Great Western about the 19th of November 1846, in reference to the terms of the agreement with the Birmingham and Oxford Junction, particulars of which are set forth in the document referred to. You will also oblige me by stating whether the performance of the agreement by the Great Western is contingent upon the obtaining power from Parliament to lay down the broad as well as the narrow gauge; and further, when the coupon or acceptance for 200. 5s. per share, bearing interest at 5 per cent, per annum from a certain date, will be issued to the Birmingham and Oxford shareholders, seeing that the 204 shares are now fully paid up. I regret much to hear in all quarters great complaints of what men of integrity and business call the shuttling and trickery of the Great Western in reference to the companies with which it has connected itself by lease or purchase; and am convinced that whilst this feeling of disgust and distrust exists the interests of the Great Western in will sadly suffer. It is a melancholy fact that the public will not purchase any shares in lines connected with the Great Western, and this disinclination is growing rapidly, to the severe injury of the unfortunate holders who may require to realize occasionally, and of the true interests of the Great Western itself, which is fast sinking in public estimation and favour.

F. Markitory (Shareholder).

The CHAIRMAN observed that a printed copy of the Birmingham and Oxford agreement was duly forwarded to Mr. Marriott, with the following letter:—

Paddington, Jan. 27.—Sir,—I am desired by the directors, to whom I thought it my duty to submit your letter, to inform you that they decline to do more than acknowledge the receipt of it, and express their opinion that the tone and spirit of your letter entirely preclude them from any correspondence with you.—CHAS. ASALYDRISS, Secretary. He (the chairman) must add one fact—that Mr. Marriott did not become a proprietor in this company till after the agreement was entered into with the Birmingham and Oxford, and he believed he became a shareholder only for the purpose of specially advocating interests adverse to the welfare of the Great Western. He begged to say, on the part of himself and his colleagues, that they would not give Mr. Marriott any information, and he left it to the proprietors at large to say what degree of attention they would pay to that hon, proprietor's remarks.

Mr. Marriott would not attempt to contradict any statement that had been made by the chairman, but he must observe, with respect to the letter he had written, and which had just been read, that he sought only to convey to the chairman the feelings which appeared to him to pervade the public mind.

The Report was then adopted.

Lord ABINGER moved that the dividend be after the rate of 3½ per cent. for the half-year.

Mr. LILLINGSTON seconded it.

Mr. Stanford moved an amendment to the effect that the usual dividend of 4 per cent. be paid instead of 3½ for the last half-year. He contended that the surplus of 11,000*l*., which would be left after the payment of the larger dividend, was abundantly sufficient for the purposes of the company, and that the present proprietors, including orphans and widows, whose dividends were their only dependence, ought to have the full benefit. The supporters of the original motion argued that the increase of the reserve fund would improve the property of the company much more than a higher dividend, because it would secure the confidence of the public.—Several joined in the discussion.

The amendment was then put and rejected, and

Digitized by GOGIC

the original motion carried, as it appeared from the show of hands, by a large majority.

A poll was then demanded and granted, the CHAIR-MAN stating that it should close at six o'clock, to be resumed at ten the next morning and to close at three o'clock, when the remaining business of the meeting would be transacted, it being adjourned to that time

Feb. 18.—The polling on the question of the amount of the half-yearly dividend closed at 3 p.m.

Mr. C. Russell took the chair, and announced to the meeting that the dividend of 33 per cent was carried by a majority of 2,129 votes. The auditors were then re-appointed for the ensuing half-year.

LONDON AND NORTH-WESTERN. Feb. 18 .- Half-yearly Meeting .- Mr. G. C. GLYN,

M.P., in the chair.

The CHAIRMAN said :- Gentlemen, I regret very much that we have been obliged to delay the halfyearly meeting to a later date than usual. I regret it partly on account of its being caused by the illness of my hon. friend the secretary, but also in conse. quence of its delaying that opportunity which we for some time desired of answering publicly and before you all those attacks in the public prints against railway interests in general. I might also add, that the condensation of the extreme multiplicity of our accounts, at the end of the half-year, takes now such a long time as to partly account for that delay. In alluding to the attack made on railway interests generally, it is not my intention to occupy your time by going into the vexed question, how far during the late monetary crisis the transfer of floating capital into fixed capital, in the case of railway enterprise has led to the mischief over the commercial world. I would rather leave the consideration of that question to political economists in other places, if, at the time they undertake it, they only do the railway interest justice to consider its vast public advantages and I take upon myself to say, that if the question is dispassionately considered—although I do not deny that there may be a transfer of floating capital to fixed capital, which, if carried to too great an extent, is a positive evil; on the other hand, I assert that the operations of railway companies, by freeing an enormous amount of capital, formerly locked up in the warehouses, in the shops, and in the counting-houses of our traders, has done more, infinitely more, to re-lease capital in this country than anything else. But I do not state that no evil has arisen from the operation of railway companies on the money-market during the late crisis. The railway com-panies, like other commercial bodies, appear in the markets for the purpose of raising the necessary They had engagements which they were as much bound to carry out as any other of our great trading companies. They had powers given them by Parliament which they must necessarily exercise; and I maintain that it is no fair allegation to assert that the evil has arisen from them; and that, in common with the Bank of England and the East India Company, and in common with all large trading corporations, they appeared as competitors in the moneymarket for their necessary funds. If there is any fault to be found, let it not fall on the railway companies themselves; let it fall on those who, in the course of 1845 and 1846, chose to legislate and to adopt the principle of competition: to force upon the country the necessary levying of an immense amount of capital for the formation of new lines, and to force upon us the necessary defence of our property, by calling on us to undertake schemes which otherwise, neither myself nor colleagues would ever have entered into. But I now pass to a more serious subject. Let me occupy a few moments of your attention, by attempting to repel another attack which I have not only en put forward in the public prints, but upon which I have received from proprietors communications which induce me more particularly to allude to it upon this occasion. I mean the allegation-not specifically brought against us-that railway companies are in the habit of making up, and declaring their dividends out of other than their real profits; and, that by this system, a serious depreciation in the property of railway companies is naturally produced. It might, perhaps, be unnecessary for me in this room to do more than call upon you to credit the denial I absolutely give to any such allegation upon our part; but that does not satisfy either myself or my colleagues on the present occasion. We must stand before you free from any imputation of the We must show you that our property is based upon bond side transactions; that we account to you, honorably and honestly, for our earnings; that what you do earn you shall have, but that you shall not have, with the consent of your directors, one farthing which ought to be applied to the future advantage of the property in question. You shall not

take it, if we can help it, to appropriate it for the purposes of dividend, if we conceive that it should be properly appropriated to the keeping up your stock and your staff; and thereby the safety of the public; and, in point of fact, I may add, the real increase of the value of your property. I am perfectly aware that as long as the capital account of any company remains open, people will indulge their suspicions that directors are inclined to help their dividend out of that resource. Such an imputation is very easily made, and is open to contradiction; but I hope before I leave the subject, to convince you that our course is one of which you will approve, and which you will think perfectly honest, fair, and legitimate. We gladly would have closed it, and my colleagues all concurred in the feeling, many years back, as to the principle of closing our capital account. It is perfectly easy, I am aware, on the part of a canal company or on the part of a dock company to close their capital account; they pay for their land, they finish their works, they seek for trade, and there is an end, in point of fact, to their capital account at once. But our case is totally different. I remember perfectly well at the commencement of this undertaking, under the advice of Mr. R. Stephenson, we purchased of Lord Southampton, 22 acres at Camden Town, and an admirable purchase it was. I remember perfectly, in my ignorance at the moment, remarking to Mr. R. Stephenson, how it was he thought of buy such an extraordinary quantity of land? to which he made this reply, which has been impressed on my mind ever since—"Mark me, Mr. Glyn, you'll require it; but if you don't require it, the value of the property in that neighbourhood will be so much enhanced that you can part with it to advantage." Thus, what has been the result? We then contemplated making at Camden Town, not only our goods station and our locomotive engine station in London, but also our passenger station. What do we find now? We have moved our passenger station down to Euston, and the 22 acres have been totally insufficient for the purpose of the goods traffic and our locomotive requirements at Camden Town. We have been obliged to purchase lands in addition there, time after time. What have we done at Euston? We thought that we had bought sufficient land of the Duke of Bedford. Since then we have been obliged to buy streets to give the necessary accommodation which the public require. When the new buildings are finished--at our Eustonstation-buildings which are being erected without a single ornament-there is no expense, nothing but what is for work-when we have finished these buildings, and done everything, we shall not have a foot of ground or room more than we can do with at present moment. I apply the same observation to Wolverton, where we are obliged to double our accommodations to Crewe and to Manchester; and I say it in the face of many Liverpool gentlemen-we are obliged to increase our station at Liverpool because, in point of fact, the station is a disgrace to us. In truth, if we had doubled the area of every one of our large stations from the commencement we should only have done right. But we don't plead guilty to any charge here. None of us knew better. We have only derived experience from what we have learned since the commencement of the line, and that experience is this-that we cannot close our capital account. Day after day new requirements are coming upon us for the purposes of traffic. Our traffic increases and will increase, and it is impossible for us, without calling on you at once for more capital than would be fair and right, to know how, in point of fact, well to lay out the capital which may be required. With regard to our capital account I hope I have said enough to show you, although the items which appear for the half-year as outlay on capital account are large, yet I trust, that we account fairly for them all. is another point to which I must call your attention. It is quite possible that there might be a mode of eking out a dividend on the question of the workingstock of the company. Now, gentlemen, I think that your executive here may take credit to themselves, in spite of a good deal of opposition that they have encountered on the subject, for having always kept steadily in view the question of depreciation. We have felt from the first,-composed as this direction is of mercantile men, who weigh these questions—we have felt that the depreciation question was one of serious import, and that, sooner or later, that question must press itself on our railway companies. You will see from the accounts, some charges against capital for new stock. I will take, in the first instance, the question of rails-a very important question, and one which is beginning to press itself more and more on public attention,-the greater their weight, and the greater our speed. We have found it necessary from the experience that we have gained, to increase considerably the weight of our rails.

have, whenever we took up the old rails, and substituted new ones for them of increased weight, charged it against revenue; and the cost of the old original weight of rail, that which you started with — your original capital, is paid over to re-venue; and new capital, laid out in increased weight, we have charged to capital account. Can any one find a fairer system than that which we now adopt? But it does appear to my mind, one that will approve itself to the mind of every mercantile man at once. With regard to our locomotive engines, suppose, at the beginning of the last half-year our stock for working the line was 300, or any other given sum; that, during the course of the half-year, 10 of these engines became worn out, broken and incapacitated for doing our work, they are replaced by 10 new ones, and these 10 new ones are charged against revenue. In the same half-year, we undertake to work a new line, say the Lancaster and Car-lisle—we order 30 new engines; we pay for them out of capital. They are new capital stock added to our own stock. Our amount of engines then be-comes 330. Upon that amount of stock the revenue is for the future entirely liable; and I appeal to you, whether there is anything more simple or more fair than that mode of dealing. You will find, by re-ference to the accounts, that the total income received during the last half-year, amounted to 1,130,129*l.*, and that our working expenses, exclusive of taxes, amounted to 378,771*l.*, or 33½ per cent; but, including taxes, they amounted to 38 per cent. The total increase on the traffic account, during the last half-year, has been 38,000l. This has been principally derived from the coal or goods traffic; and I take this opportunity of stating, that the new system upon which we are now carrying our goods traffic has fully answered our expectations. At first, there were considerable difficulties, and the public service was perhaps not done with the due efficiency. Now, I hope that every succeeding day will bring us nearer to a more perfect service. As regards the passenger traffic, you will bear in mind the almost unexampled times of the last six months, the pressure upon trade in every direction, and you will at once apply the conclusion that necessarily arises from it to the question of the passenger traffic. The pressure has, in point of fact, been particularly felt in the manufacturing districts, and of course the traffic there has suffered correspondingly. There is also, another considerable diminution worth mentioning, in comparing one halfyear with another. Although it is taken from our 👞 nockets. I must mention it with entire satisfaction. that we have lost, during the last half-year that very large and profitable traffic which arose from the railway mania itself-the hurrying to and fro, over the earth, of engineers and officers, lawyers and their clerks, who put money into one of our pockets and took it out of the other; and as regards the revenue of the company, it is a very considerable amount of money. That is a source of traffic which of course has fallen away this half-year. But, in spite of this deduction, the passages when the senger traffic has kept up within a few hundreds or rather more, of what it was during the corresponding Under all the circumstances, I candidly, that I do not think it would be prudent for us to look forward to an immediate improvement of affairs, although the traffic of the last week has sensibly increased. And I do not think it right that during the next three or four months, we should look for anoth otherwise than the effects which must arise from the pressure that has been so generally felt. There is another item to which I hope my present allusion in this room, and elsewhere, may lead at last to remedial results. I allude to the immense amount -the growing amount - of our rates and taxes. We have been paying actually some 30,000%. for one half-year only, being an increase on the corresponding half-year of 4,500l. Now, we have, I am happy to state, in motion, means by which some proper reduction may take place upon this head. It is a crying grievance, and those who live in the country, on a railway, know that it has become a habit on the part of those who have the administration of the parish and county rates to look to a railway, and to settle down upon it the greater part of the charges that ought to fall on the parish gene-Whether it will be necessary to apply to Parliament upon the subject; or whether, by means of the law as it now exists, to obtain redress, I cannot say; but the subject is pressing itself on the attention of all companies in some way or other, and will, at last, I hope, command a united effort for its removal. When you look at the results of the half-year, you will find that, if you choose to stop the appropriation of the funds which we think necessary to the depreo in-ciation accounts, you would be able to make your We former dividend of 41 per cent. But, gentlemen your

Digitized by GOOG

directors, trusting to the good sense and feeling of the proprietary, do not hesitate on this occasion to recommend that the dividend should only be 4 per cent. and in making that dividend it is only right that you should know, that even then we shall have netted a larger amount of income on the last half-year than we ever realized before; and, in point of fact, be dividing among you a larger amount of money in dividend. It is the new capital which has been distributed among you which is now rendering it necessary to diminish your dividend. The question of depreciation is one which ought to occupy the most serious attention of your executive body, for upon it really depends the proper management of the whole of the line; the proper state of the material; and the proper state of your engines. And your directors have thought fit not only to take the usual course with regard to the relaying of rails, but conceiving that in the course of some fifteen or twenty years, the existing rails, would, from the traffic and working upon them, be necessary to be replaced by others, they have thought it their duty to call upor you to sanction an annual appropriation of 15,000l. for forming a fund to meet the contingency from time to time. I have next to give the most absolute contradiction to an assertion or statement which I understand, from time to time, has appeared in a variety of newspapers, as to sundry amalgamations and leases. It is needless for me to particularize any specific case where I am going to give a contradiction to the whole; but I state to you without reserve, that we have not pending, at this moment, a single nego with the triation for amalgamating or leasing, or anything that will add to our liabilities. We have no parliamentary proceedings of our own this year, except one small colliery branch, which we are under engagement with some coal-owners to make, in the neighbourhood. Save and except that, we have no application whatever to Parliament, and I do earnestly hope, that the time for parliamentary contests is ending. I hope time is coming when railway companies will unite to gether, and endeavour, by a fair system of accommodation to the pubic, by doing their duties to their customers, and by attending to their interests in Parliament generally, to put on a safe basis property which more or less, you all participate in, in the different lines. I must now allude to certain reports most industriously circulated, even to this extent,-that your directors have made a contract with Chaplin & Horne to buy horses and carriages for the purpose of coaching the old line of road, and that in the meantime we were going to shut up part of the railway I and the other officers have had to answer letters upon letters respecting it. Last Saturday I had a letter from a friend in Wales, begging to know Last Saturday I had if the line was still open; and if it were open, whether in point of fact, the tunnel was safe at Kilsby? I am bound to say that there never was a time, from the opening of the railway to the present day, when the line was in a better, safer, or more perfect condition for working than it is at present. You will recollect that during the two last sessions we have possessed ourselves, through the medium of different Acts, of various powers for the construction of lines in different parts of the coun-We have under the circumstances of the times. delayed all these schemes, and have only pressed on-wards, or kept going those which it would have been folly at the moment to have abandoned. With regard to all those scarcely begun, no one will be entered upon by us without a full consideration of all the circumstances. We shall consider what the country through which the lines run may require, We shall consider what the and we shall also consider how far the outlay con nected with those lines will be instrumental or otherwise, to our future permanent interest. I will admit that eighteen months ago we were all more or less impregnated with railway making. We all felt, perhaps too strongly, the necessity of warding off attacks, apprehended from a variety of quarters. These schemes received your sanction at the time, and I am not disposed to repeat that we went to Parliament to secure the ground. But before we expend any capital we shall fully consider their bear ings both on your interest and those of the public. If Parliament continues to encourage the doctrine of competition, which it has hitherto been inclined to do, I, for one, must consider railway property as uncer tain and inconvenient, and as a tenure which no man would recommend to his family or to his widow to hold. But if the present Parliament shall return to the system which Lord Dalhousie recommended-if, instead of competition, Parliament will put all railway companies on a fair system of fares and charges for the public good, and will benefit and protect existing and vested interests,-then I don't hesitate to say that the old existing lines, and this one in particular, will continue to be, under any circumstances, sound and secure investments.

Mr. BOOTH then read the Report (see Official agreed to by the directors on Tuesday, and in con-

The CHAIRMAN, in reply to Mr. UPCROFT, with reference to the power contained in the Post-office bill for the carriage of small parcels, said it had occupied the attention of the directors; but they did not know how they could prevent Government coming into competition with them in the carriage of that article.

In reply to other proprietors, the CHAIRMAN said that there was an objection to circulating the Report prior to the meeting, as it prevented the full attendance which was desirable.

Lord LIFFORD called attention to the various unconstructed short lines, such as the Rugby and Leanington, and the Coventry and Nuneaton, begging that they should be stayed for more prosperous times. They might be useful for the purposes of protection, but he doubted whether they would be for profit.

The CHAIRMAN intimated that the suggestions of

The CHAIRMAN intimated that the suggestions of the noble lord would meet with due attention.

Mr. Slaney, M.P., adverted to the desirableness of carrying on the Shropshire Union.

The CHAIRMAN said that there were ample funds in hand for the formation of the Shropshire Union, and they expected that both it and the Shrewsbury and Chester would be completed in the summer of the next year.

In reply to Mr. Cadbury, who adverted to the recent accident at Warrington, caused by the intoxication of the engine-driver and stoker, the Chalrman said that it would be a difficult task to undertake to teetotalize all their stokers. The men when they left the station, on inspection, were found sober, but they had concealed the liquor in the tender.

A long discussion, which the crowded state of our columns and the protracted character of the proceedings will not permit us to record, ensued, originated by Mr. Leff, of Saddleworth, joined in by Capt. Watts, Messrs. Garnett, Erle, Peyton and others, relative to the proposed Government audit of railway accounts.

The Report having been adopted, the dividend declared, and a resolution for consolidating some stock carried, the meeting was made special, and the various bills enumerated in the notice calling it agreed to.

Mr. Entwisle, M.P., moved an amendment on a resolution for ratifying the lease of the Scottish Central, to the effect that its further consideration be adjourned.

This was opposed by Mr. Fox Maule, M.P. and Mr. Swift.

On being put to the vote it was negatived by a majority of nearly the entire meeting.

TAW VALE AND DOCK.

Feb. 12.— Half-yearly Meeting, London.—Mr. E.

COOPER in the chair.

The Report stated that in consequence of the late vere monetary pressure, and the suspension of the bill for leasing the line to the South-Western, the directors thought they would best consult the interests of the shareholders by limiting the progress of the works, and thus avoiding the necessity of a call until after the decision of Parliament. They had received the cordial aid of their allies, the South-Western, who have made advances in anticipation of calls. which prevented the entire suspension of the works. The South-Western have presented a bill for a junction with their central station in Exeter, and at Cowleybridge on the Exeter and Crediton line, and also a for leasing the Exeter and Crediton, both of which have passed Standing Orders. The railway from the docks at Fremington to Barnstaple is completed, and the gauge of the Exeter and Crediton has been altered to the national gauge, in conformity with the resolutions of the proprietors to adapt it to that of the Taw Vale. The opening of an extensive culm mine near Bideford promises an unexpected source of income to the company of considerable amount so soon as the branch to that town can be formed. The directors, being impressed with the importance of a cheap line, have strongly memorialized the Commis sioners to fix this part of the line on the national gauge, in conformity with the portion already laid down, and with the recent alteration of the Exeter and Crediton; since the moderate fares and rates which characterize the national (narrow) gauge can alone insure a sufficient traffic to pay an adequate re-muneration. Memorials to the same effect have been numerously and most respectably signed by the influential parties of the district through which the railway is to pass. Under these circumstances, the directors cannot doubt that the Commissioners would decide in favour of the national gauge, more especially as the broad gauge would entail an increased outlay to the public and the proprietors of about 125.000%

The CHAIRMAN said that the Report just read was

sequence of an extraordinary and unexpected order received from the Commissioners relative to the line, they had prepared a supplemental Report. This Report stated that the directors have received an order from the Commissioners that the line from Crediton to Barnstaple shall be laid down on the 7-foot gauge. This decision was the more surprising, because the original Taw Vale Act authorized the narrow gauge to be laid down, and the Exeter and Crediton was also laid down on the narrow gauge. Thus, by this extraordinary decision, a broad gauge line is to be placed between two narrow gauge lines, which will impose upon passengers two changes of carriages in a distance of 31 miles. In consequence of this decision the directors communicated with the South-Western Board, in order to ascertain whether it would have any effect on their agreement with that company. They have received assurances that no effort shall be wanting to fulfil their agreement and to obtain the sanction of Parliament to the leasing

The statement of accounts showed the receipts at 119.189*l.*, expenditure, 117,560*l.*, balance in hand, 1629*l*

At the request of Mr. Rowe the order of the Commissioners was read. It stated that it was provided by the Taw Vale Act that the gauge on which the railway shall be laid down shall be such as the Board of Trade shall in its discretion approve. By a subsequent Act the power reserved for the Board of Trade had been transferred to and vested in the Commissioners of Railways; and in virtue of that power they authorize and require the company to lay down the railway with a gauge of 7 feet accordingly, subject to the power vested in them of ordering an additional line of rails to be laid down on the said railway, in case the same should in the first instance be laid down as a single line only.

In answer to questions, the CHAIRMAN said there was only an arrear of 1,390% on the first call, and 2,430l. on the second call. He believed they would obtain a tonnage or tollage of not less than 30,000l. a year from the opening of the culm mine on their line. He called the serious attention of the shareholders to the necessity of adopting measures to obtain a reversal of the decision of the Commissioners. This decision was most important, as the line from Exeter to Cowley Bridge, a distance of 6 miles, was on the narrow gauge; to Barnstaple, a distance of 31 miles, they were to have the broad gauge; and from that place to Penhill, a distance of 3 miles, would be on the narrow gauge; and he supposed the Commissioners would determine on having the remaining 6 miles on the broad gauge, so that the passengers would then have the pleasure of riding in four different carriages in a distance of 49 miles. The Court of Chancery had determined that the Exeter and Crediton line could only be opened on the narrow gauge; and the directors would therefore submit a resolution authorizing them to take measures for obtaining a reversal of the Commissioners' decision. The debts of the company were about 10,000l. or 12,000l. He did not think it likely that a call would be made until the leasing bill was sanctioned. They had received upwards of 14,000% in anticipation of calls, which had been paid by the holders of 7,000 shares, to assist the directors in abstaining from making calls.

Resolutions were passed adopting the Report, reclecting the retiring directors, and authorizing the directors to borrow 5,000% under their original Act.

The CHAIRMAN said that they now came to the most important resolution of the day, which was to authorize the directors to take the steps necessary under the peculiar circumstances of the decision of the Commissioners to get that decision reversed either by the Commissioners or by Parliament.

A long discussion ensued, in the course of which Mr. Badham, secretary of the Bristol and Exeter, stated that the opposition of the broad-gauge companies to the Taw Vale bill was withdrawn only in consequence of an arrangement that it should be constructed on the broad gauge, but it was then found too late to get a clause inserted in the bill; it was therefore agreed to be left to the decision of the Board of Trade. He did not see the slightest chance or ground for the reversal of the decision which had been given in favour of the broad gauge.

Mr. Rowe trusted that the directors would never rest until, through the exertions of some able man in the House of Commons, all the memorials and statements presented to the Commissioners were laid before the house, and the names of their opponents made known. He had no doubt that if all the parties could be brought face to face before a competent tribunal, they must obtain a reversal of the decision of the Commissioners. His honest opinion was, that if the line got into the hands of the broad-gauge party it would never be made at all.

Digitized by Google

The resolution for endeavouring to obtain a reversal of the decision of the Commissioners eventually carried by a majority of 16 to 3.

EXETER AND CREDITON.

Feb. 12.-Half-yearly Meeting, London. THORNE in the chair.

Mr. HARTNOLL, the secretary, read the Report, which stated that in conformity with the resolution of the meetings on the 3rd of July and on the 26th of August, the directors have had the gauge of the railway altered to the national gauge, to make it in conformity with that of the Taw Vale, and a station has been erected at Cowley Bridge, and arrangements have been made to have the line opened for the traffic from Crediton to that place so soon as the proper surveys have been certified by the railway authorities. Messrs. Blagden and Davey and Dr. Miller go out from the direction by rotation this year. The London and South-Western have presented a bill for leasing the line, in accordance with the agreement adopted by the proprietors on the bill before Parliament. They have also presented another bill to connect the line at Cowley Bridge with their central station in Exeter. Both bills have passed Standing Orders. The statement of accounts appended to the Report showed the receipts at 93,7971. 2s. 4d.; expenditure, 88,621l. 9s.; balance, 5,175l. 13s. 4d., 5,000l. of which has been advanced on loan to the Taw Vale.

On the motion of the CHAIRMAN, the Report was

unanimously adopted.

The CHAIRMAN then moved that Lieut. Col. Henderson, the Hon. F. Scott and Mr. Townsend (three of the directors of the South-Western) be elected directors.

Mr. Davey, having been a director from the commencement, wished to explain his conduct, and the reason of his opposition to his brother directors on the subject of the alteration of gauge, and the loan of 5,000l. to the Taw Vale. He had considered it right to present a protest, which he would read.

The CHAIRMAN and one or two of the directors here interposed, alleging that Mr. Davey was out of order, as he could, in point of form, speak only on the question before the meeting, and not on matters personal to himself.

Mr. BESLEY thought that Mr. Davey ought to be heard. He would ask whether that gentleman had been asked to stand for re-election?

The CHAIRMAN replied in the negative, but stated that Mr. Davey was present when the Report and

recommendation were agreed to.

After a short discussion, in which Mr. Besley questioned the desirability of applying for a reversal of the decision of the Commissioners on the subject of the gauge, Mr. Blagden, Dr. Miller and Mr. Davey were put in nomination for re-election as directors

to enable the latter gentleman to make his statement.

Mr. Davey read his protest, which stated the grounds upon which he and two of his colleagues objected to the alteration of the gauge—namely, because the debts and liabilities already incurred considerably exceeded the amount of capital authorized to be raised, and there were no funds to meet the heavy outlay for such an alteration; that it would deprive a large and important district of a supply of lime and coal from sources which a junction with the Bristol and Exeter could open; that the majority of the shareholders supporting that alteration were only nominees of the South-Western Company; and that it was improper, while the subject of the gauge for the Taw Vale Extension was under the consideration of the Commissioners, for the Board to take any steps for the alteration of the gauge. Mr. Davey stated, in presenting this petition, that he had only followed the example of Messrs. Thorne and Woolmer, who had presented a protest against a proposed junction from Cowley Bridge to the Bristol and Exeter. He further contended that the money lent to the Taw Vale was not safely lent, and that though the shareholders had given Messrs. Woolmer and Cooper, by a resolution of the 12th of April last, authority to fit the Exeter and Crediton line for opening, there was no express authority for altering it to the narrow gauge.

The CHAIRMAN briefly replied, to the effect that an injunction having been granted to prevent the company from opening the line upon the broad gauge, they had no alternative but to open it on the narrow or to keep it closed. With respect to the protest presented by himself and Mr. Woolmer to the former directors, he considered that it had no analogy to he (the Chairman) and Mr. Woolmer protested against was making a line with the money of that company, which they contended ought to be made by the Bristol and Exeter, who were now, in fact, carrying it out, thereby proving their views correct.

The question was then put, when the election of Mr. Davey and his friends was negatived by a majority of 12 to 3, and the original motion was carried by 13 to 4.

NORTHERN COUNTIES UNION.

Feb. 17.—Half-yearly Meeting, London.—Major BERESFORD, M.P., in the chair.
The Report stated—

The Report stated—
That the directors were still convinced of the ample resources of the district, and of the remunerative character of the undertaking. As little outlay as possible had been incurred, the works having been confined to the Wath contract. Overtures had been made by influential companies, one of which was the York, Newcastle and Berwick, to lease the line from Bedale to Castle Bolton, a distance of 15 miles, for twenty-one years, at 5 per cent., or 4 per cent. and half profits, on condition that the portion of the line in course of construction should be abandoned. The directors did not think these terms ought to be accepted. They had unanimously determined on proceeding to Parliament to obtain mously determined on proceeding to Parliament to obtain powers to amend their act. The directors considered it would be for the interest of the shareholders to open that section, from Walh by Bedale to Leyburn, a distance of 19 miles, simultaneously with the opening of the Leeds and Thirsk to Leeds, and the Great Northern from Doncaster to Peterborough, so that the large agricultural produce of Wensleydale may be taken to Leeds and the West Riding, and the lime existing in the district may be conveyed not only to the country bordering on this line and that of the Leeds and Thirsk, but also into Lincolnshire. Should the directors be authorized, as they desire, to concentrate the funds in the hands of the company on the works of the Wensleydale line, no call would be necessary prior to the next ordinary meeting. The directors anticipate that the line will be opened from Wath to Leyburn in the summer of 1849, and that this section will of itself pay a profitable dividend upon its cost.

The statement of accounts showed the receipts at 199,989l. 5s. 8d.; expenditure, 110,967l. 16s. 3d.; balance. 89.021l. 9s. 5d.

The CHAIRMAN, in moving the adoption of the Reort, said that the directors had done nothing but what had been authorized by the shareholders at a public meeting, and had used the utmost economy in their disbursements. He advised the meeting to give no heed to the false statements abroad, as they proceeded from those who had refused to pay their calls, and would, by their acts, like to legislate for those who had paid them, which was contrary to common sense, as well as to the law of the land. The shareholders, generally speaking, were men of substance, and capable of paying their calls; and if many, through the late commercial pressure, had rather preferred to pay 5 per cent. than meet their calls, they were now willing to pay. He hoped there were men to be found amongst them who would be ready, when required, to take on them the liabilities of those not paying their calls. He trusted, therefore, that the shareholders would uphold the directors in their management. The contracts had been proceeded with in a cautious and economical manner, which was one main cause why there was such a large balance in hand. Still more favourable conditions than those mentioned in the Report had been offered, and negotiations were now pending, but he was not enabled to communicate anything definite at present. This was for only a portion of their line; and as to the remainder of it, the directors were open to a fair price from any company. By the amended bill, for which they were proceeding to Parliament, they could diminish their capital, and it would remove that great blot on all their doings-he meant the simultaneous clause. On the repeal of this the directors were now unanimous, so that he had no doubt of its passing the Legislature. The amount of capital would 1,800,000/., instead of 3,000,000/., and make the liability of the shareholders 30%, instead of 50%, By the repeal of this obnoxious clause the share holders would have the power of controlling the funds Another thing of much importance was the fact that they had still about five years to complete the under taking. He fully agreed in what he before stated, that the returns of the traffic between Leyburn, Wath, &c., would afford a return of 7 per cent. Therefore, if they only laid out 300,000l. to make that line they would not be ill remunerated if they got a return of 7 per cent. If shareholders were backward with their calls, there would be no difficulty in raising this sum when they already found a public company tendering a per-centage for it more than was given in any of the public funds. The balance in hand would greatly forward the object in view, and would enable them, he hoped, to go on till the next general meeting.

A Shareholder asked how much of the calls was in

The CHAIRMAN stated to the extent of 40,000l. A long discussion here ensued, in which Messrs.

AMS, BAKER, GULSON, PEASE, SPACKMAN and others took part.

Mr. Spackman moved the appointment of a committee of inquiry, to report to an adjourned meeting. The motion was seconded, and led to much angry

discussion; but after the explanations of the directors, and several local inhabitants had spoken of the value of the undertaking and their opinion of the integrity of the directors, the seconder of the amendment withdrew his support.

The CHAIRMAN then put the original motion for the adoption of the Report, which was passed unani-

The retiring directors were re-elected. The meeting was then made special, and the draft of the amended bill was approved of.

WILSONTOWN, MORNINGSIDE AND COLTNESS. Feb. 11. - Annual Meeting, Glasgow .- Mr. J.

HOLDS WORTH in the chair.

The Report stated that the receipts for the halfrear ending the 31st of December last did not exceed those of the preceding half-year. The cause was ascribed rather to the unavoidable interruptions on the line during the alteration of the gauge than to any material falling off in the traffic. The working expenses were proportionably less during the last half-year, and the directors declared a dividend of 10s. per share, free of income tax, leaving a balance of 215l. The improvements for widening the gauge and laying the inclined plane with heavy rails have been completed, and the branch to Shott's ironworks has been for some time open for traffic. The works on the Bathgate branch have been contracted for, and when this branch is completed, and the junction formed between Bathgate and the Edinburgh and Glasgow, a large and progressive increase of traffic is expected. An agreement for amalgamation had been entered into with the Edinburgh and Glasgow, which was confirmed by the proprietors. Every proprietor of shares in the 140,000/. stock of the capital stock of this company will receive a dividend half yearly out of the profits of the Edinburgh and Glasgow at the rate of 8 per cent. per annum, and every proprietor of shares in the 35,000 ℓ . stock is to receive likewise a dividend at the fixed rate of 5 per cent. per annum. The latter stock may be redeemed by the Edinburgh and Glasgow, or the holders of it may compel that company to purchase up and redeem the amount of stock held by them. These dividends are to have shorts need by them. These dividends are to have priority over the dividend of any of the ordinary shares of the Edinburgh and Glasgow. The amal-gamation bill had passed the Standing Orders; and although the amount of capital required by the resolution of Parliament has not been paid up, a clause will be introduced in the bill postponing the amalgamation until the necessary amount has been expended on the line. The capital account to the 31st of December showed the receipts at 82,793t.; expenditure, 125,807t.; balance, 43,013t. due to the Royal Bank; outstanding accounts chargeable on capital, 27,9091.; showing the debts and liabilities at 70,9221. The revenue account for the half-year ending December 31 showed the receipts at 3,347*l.*; expenditure, 1,404*l.*; 1,110*l.* on interest, leaving a balance of 8321., which, added to the 1011. surplus from the last account, made 933l. available for dividends.

Resolutions were passed adopting the Report, reelecting the retiring directors, and electing Messrs. J. Henderson and J. E. Oppenshaw as directors, Mr. J. Littleton, secretary, approving of the dividend of 10s. per share on the old stock, and of 2s. 6d. per share

on the new stock.

GLASGOW, DUMFRIES AND AYR. Feb. 15.—Half yearly Meeting, Glasgow.—Mr. J. LEADBETTER in the chair.

Mr. SMITH read the notice calling the meeting. The Report was read by Mr. SMITH. It stated, that notwithstanding the great depression which has existed for several months in monetary affairs, the financial position of this company has been a favourable one. The call made in August last has, under existing circumstances, been well responded to, and there is otherwise a comparatively small amount of outstanding arrears, which the directors are now gradually realizing. In consequence of the depression, the directors had deemed it expedient to extend the In consequence of the depression, period for completion of some of the contracts: consequently the opening of the line between Dumfries and its junction with the Caledonian was postponed till July, and the completion of the works north of Dumfries to Sanguhar for a still longer period. The directors had also pleasure in reporting that an amicable arrangement had been made with the Caledonian, by which it had been agreed that neither company should this year apply for any branches or extensions involving a competition of interest, and that no opportunity of cultivating friendly feelings should be lost

After the Report had been approved of-

The CHAIRMAN said the Report which had just been read by their secretary conveyed to them a full and clear idea of their affairs. The state of the times

had retarded their operations; but as they improved he trusted they would get on more vigorously. The prosperity of the Ayrshire rested on a broad foundation, the mineral resources of which were yet in their infancy. It might be gratifying to know that the revenue of 1847 exceeded that of 1846 by 1,600L, notwithstanding the depressed state of the country. The main part of the line is from Dumfries to Gretna, and when the Kirkcudbright branch was obtained, it would be doubly so, because the whole traffic on the portion of the line, consisting of 42 miles, runs through the beautiful and picturesque valley of Nith, and the immediate vicinity of mineral fields of grent value. In fact, there were few undertakings, if any, of the kind which possessed better prospects than their own line.

Several resolutions, re-electing officers, were then approved of.

NEWRY, WARRENPOINT AND ROSSTREVOR. Feb. 18.—Half-yearly Meeting, London.—Lord NEWRY AND MORNE in the chair.

The SECRETARY read the Report, which stated that the works have been progressing with as much expedition as the means at disposal would admit of The circumstances of the times, however, have delayed in many cases the payment of the calls, which necessarily retarded the period of opening the line. directors have purchased the rails necessary for a single line, which are now in course of delivery at the works. Thus, every provision has been made for opening the line to Warrenpoint early in the ensuing summer,— this object, if attained, would secure a prompt return to the shareholders upon their whole outlay. It will therefore be understood how materially their interests will be benefited by early payment of the calls in arrear. Half the capital having been paid up, the borrowing powers come into operation, and this meeting has been made special for the exercise of these powers. Two of the directors will retire from office at the ensuing general meeting, but are eligible for re-election. One of the auditors also retires, and is re-election. One of the audito likewise eligible for re election.

The statement of accounts showed the receipts at 49,998l. 17s. 9d.; expenditure, 48,753l. 13s. 11d.; balance in banker's hands, 1,295l. 3s. 10d.

The CHAIRMAN said that the delay that had taken place beyond the hour for holding the meeting, had been occasioned by the secretary being occupied in ascertaining whether there was a sufficient number of shareholders present to constitute a meeting. He then proposed the adoption of the Report, and said that though the Report was short, it referred to a line of railway which he had every reason to believe could be as prosperous as the Report upon it was brief. The directors had done everything in their power to facilitate the progress of the works; but they had taken into consideration the pressure of the times, which accounted for the arrears of calls, but he hoped that those arrears would now be paid up promptly in order that the line might be opened with as little delay as possible. If they were not, then compulsory expedients should be resorted to.

Mr. CHADWICK hoped to see the line opened in connexion with the Portadown or the Dublin and Belfast Junction line; and if it were, there could be no doubt it would be one of the best and most remu-

nerative lines either in England or Ireland.
Mr. LOMBARD observed, that out of 52,000l. there remained in the shape of arrears only 15,000l., but

he hoped it would be got in without delay.

The CHAIRMAN said, that the sum to be borrowed was 33,333*l.*, for which 6 per cent. would be paid; but if the shareholders advanced the money they would of course get the advantage of the per centage. He said, in answer to some questions, that he had every hope that this line would be taken into conjunction with some other line.

The sum of 500l. was voted to the directors as their salary for the ensuing year, after which, the outgoing directors, auditors, and other officers were re-elected.

CORK AND BANDON.

Feb. 9 .- Half-yearly Meeting, Cork .- Major BEA

MISH in the chair.

The Report stated that the directors had undi-minished confidence in the success of their undertaking, although impeded by a combination of circumstances beyond control. The non-payment of arrears by defaulting shareholders had pressed heavily upon their funds, but the balance in hand since the 3lst of December had been increased, notwithstanding the payment of several outstanding debts. The directors had instituted legal proceedings in all cases where a fair prospect of recovering the amount due presented itself; nearly 8,000l. of arrears have been recovered since the commencement of those proceedings, and every exertism was being

made to secure the payment of the large arrears still outstanding. Some of the shares were purchased by parties with a view to sell at a profit; failing in their expectations, they were unable to meet the calls. The liabilities of the company had been considerably reduced, no heavy engagement being left outstanding, excepting the completion of the contract for rails. operations were principally confined to the Bandon half of the line; the engineering staff had been reduced, and a saving effected by it of 500l. in twelve months. Owing to the large arrears due, the works have been considerably retarded, and the possibility of obtaining the long-wished-for loan from the Government has been hitherto frustrated. satisfactory arrangement had been entered into with the Duke of Devonshire for the purchase of certain lands, for which he is willing to accept payment in the company's shares at par.

(For Engineer's Report see Official Papers.) The statement of accounts showed the receipts at 77,630l.; expenditure, 75,711l.; balance at the bankers, 1,918l.

In the course of a discussion between Messrs. SMITH, ANDREWS, SARSFIELD, the CHAIRMAN, and others, it was declared that 3,164 shares in the company were held in Ireland, and 1,458 in England There was one English gentleman who had paid up 8,000l. on 246 shares. Out of 60,000l. of arrears, 45,000l. were due in the neighbourhood of Cork and Bandon alone; and it was the determination of the directors for the future to take all fair means for the recovery of the money due, to forfeit some of the shares, and place them in the hands of solvent parties. The shareholders were desirous of having a few English gentlemen on the direction. The direction. tors accordingly proposed that the Board should consist of fourteen members in future, instead of eighteen. There was a London gentleman, who held more shares in the company upon which he had paid than all the directors put together.

The CHAIRMAN stated that the directors had received, since the 31st of December, 1,3904.; 35,0004. including rails, and 45,000l., including engines, carriages, &c., would complete the Cork half of the line; and it would require 36,000l. to complete the Bandon end of the line. It was 10 miles in length, and would cost about 1,661*l*. per mile. The entire cost of the undertaking would be 230,000*l*. for a single line of

rails, including engines and carriages.

Mr. LEANY said that although the late engineer had brought an action against the company for 8,000*l*., he had only got a verdict for 320*l*.; the costs amounted to 2,500*l*., and it was expected they would be reduced, by taxing, to 1,000l.

Resolutions were passed adopting the Report and electing Capt. Belcher and Messrs. T. R. Sarsfield, R. Nettles, J. Andrews, Beamont, Warrington, and Allen to be directors.

The meeting was then made special, and the for-feiture of 315 shares, upon which 1,967t. had been paid, was confirmed.

NORTH BRITISH RAILWAY. No. 1 At B. 16 I T. 18 H. RAILWAY.

NOTICE IS HEREBY GIVEN, that the STATUTORY HALF-YEARLY GENERAL MEETING of the North British Railway Company will be held in Gibb's Royal Hotel, Edinburgh, on Thursday the 9th day of March 1818, at 12 o'clock Noon, in terms of, and for the purposes mentioned in, the Act incorporating the Company.

terms of the Company.

A Motion, "That there shall be no Traffic on this Railway on the Sabbath-day"—(of which notice was given at the last Half-yearly Meeting)—will be submitted to the Meeting.

yearly Meeting;—will be submitted to the Meeting.

The Meeting will also be made 8PECIAI. for the purpose of having the following Bills now before Parliament submitted to them for approval, viz.

No. 1. A Bill to empower the North British Railway Company to raise additional capital for certain purposes.

No. 2. A Bill to empower the North British Railway Company to construct certain railways in connexion with the North British Railway, with the Tranent branch thereof, and with the Edinburgh and Dalkeith Railway; to alter and improve part of the line of the Edinburgh and Dalkeith Railway; the railway; to acquire certain additional property; and for other purposes.

North British Railway; to acquire constant and for other purposes.

Proxies require to be lodged with the Secretary three clear days before the Meeting.

The Transfer Books will be closed from the 24th of February to the 24th of March, inclusive.

By order of the Directors,

JOHN LEARMONTH, Chairman.

Edinburgh, Feb. 12, 1848.

Edinburch, Feb. 12, 1848.

RASTERN COUNTIES RAILWAY.

TWENTY-THIRD GENERAL MEETING.

NOTICE IS HEREBY GIVEN, that in pursuance of the Act
of Incorporation, the HALE-VEARLY GENERAL MEETING
of the Sharcholders of the Company will be held at the London
Tavern Bishopsate-street London, on Saturday, the 26th day of
February next, at 130 clock precisely, for the purpose of receiving
a Report from the Directors of the progress of the undertaking
and for the transaction of other business.

The Dividend for the half-year ending the 4th of January last
will be payable to those parties who on the 16th of February shall
be the resistered proprietors in the books of the Commany.

The Transfer-Books of the Commany will be closed on Wednesday, the 16th of February, and will not be opened until Monday,
the 28th of February.

The Transaction of February, and win and the 2-th of February, and win and the 2-th of February.

London: Longman, Brown, Green and Longmans.

RENFREWSHIRE, SCOTLAND. VALUABLE MINERALS on the ESTATE of CASTLESEMPLE TO BE LET.

This Estate, which is situated in the purishes of Lochwinnoch and Kilbarchan, and county of Renfrew, extends over a surface of upwards of 5,000 Acres, and the Minerals consist of COAL, LIMESTONE, IRONSTONE and COPPER ORE.

COAL—The Coal, so far as has hitherto been proved, is found to be of sood quality. The field is supposed to stretch along the line of the syrable call was a manufactories, as the western extremity of the lake. From the vicinity of so brang extensive ironworks and manufactories, as well as from the local wants of the district, and the immediate vicinity of so brang extensive ironworks and manufactories, as well as from the local wants of the district, and the immediate vicinity of so brang extensive ironworks and manufactories, as well as from the local wants of the district, and the immediate vicinity of the populous village of Lochwinnech, coal is in great request.

LIMESTONE—The carboniferous Lincettane has been found.

village of Lechwinnech, coal is in great request.

LIMESTONE—The carboniferous Limestone has been found
on various points of the property, and is supposed to be of good
quality and easily workable. As usual, it is found under the coal
beds. It is in good demand in the district.

IRONSTONE—The Ironetones are both of the Clayband and
Blackband species, but sufficient trials have not been made to
ascertain their value. It is probable, however, from the stratabeing in the immediate neighbourhood of the well-known Ayrshire
Blackband Ironetone, and lying in the same direction, that they
may turn out on farther trials to be valuable.

may turn out on farther trials to be valuable.

COPPER ORES.—These are supposed to be of excellent quality. Some works have already been commenced in the neighbourhood, and it is understood that the veins of Copper which have been found in the adjoining property of Kaim are continued into the Castlesemple estate, where the lands of High Barnaigh (part of the Castlesemple estate) adjoin to Kaim. The greater part of the Ore Castlesemple estate adjoin to Kaim. The greater part of the Ore 50 per cent. of copper.

The Castlesemple estates are situated about 15 miles west from Glasgow, and 8 from Paisley, and surround the town of Lochwinnoch, where there is a Station of the Ayrebire Railway. The Proprietor is ready to entertain ofters for a Lease of the whole or any of the above Minerals.

Further particulars will be learned on application to the Proprietor, Lock and the Ayrebire Railway. The Proprietor is under the surround of the Ayrebire Railway. The Proprietor is under the surround of the Ayrebire Railway. The Proprietor is under the surround of the Ayrebire Railway. The Proprietor is under the surround of the Ayrebire Railway. SUMMERLY's

ART-MANUFACTURES.

Art-Manufactures aim to produce in each article superior utility, which is not to be sacrificed to ornament: to select pure forms: to decorate each article with appropriate details relating to its use, and to obtain these details as directly as possible from Nature. These principles are by no means put forward as forming an universal rule; but it is thought they may be adhered to advantaceously in most Articles of Use, and may possibly contain the germs of a style which. Encland of the 18th century may call its own. Several of our best Artists have already express 1their willingness to assist in this object, among them may be named.

John Bell, Scalptor.
C. W. Cope, R.A.
T. Creswick, A.R.A.
W. Multicady, R.A.
W. Dyce, R.A.
J. C. Horsley.
The Art-Manufactures will be of all kinds, and excented in metals, pottery, glass, wood, papier maché, and other materials.

Those now ready are-e's Inkstand, in Parian, with Tazza. A Bride's Inkstand, in Parian, with Tazza. Designed by John Bell, pine 16, 166, and upwards. Also in Bronze, equal in make to the old Florentine, with papier make tray, 62, 66, and upwards; in Silver, 35 Guineas.

Rissing Children, surmounting a Paper Weight, Parian, 96.; in Bronze; and also a Loving Cup.

Boy and Dolphin as a Seal or Paper-knife Handle, ith gelt that blade, 20 or and upwards

A Beer-Jug, in Parian: emblematical of the Gathering, Storing and Employment of the Hop. Desirned by H. J. Townsend, price 18c; or with extra Figure, 36c, sex The Gold Medal of the Society of Arts was awarded to Messrs, Minton & Co., the Manufacturers, for the Union of Superior Art and Manufacture which this Jug displays.

The Infant Neptune. Designed and modelled by H. J. Townsend, 27s, in Parian; also in Silver, and Silver Gilt, 25 Guineas and upwards.

A Water Jug, in Glass. Designed by R. Redgrave, A.R.A., at various prices; also Goldets to match, price lee each. The Vasc on a smaller scale will be executed in Porcelain.

The "Bitten Tongne"—a Mustard Pot, in Porcelain and Parian. Modelled by John Bell, price of The figure will also be applied to a Silver and Flated Metal Mustard-pot.

A Pair of carved Wooden Brackets, by Taylor, Williams and Jordan, price of 5s.

Dorothea, a Statuette, in Parian. Modelled by John ell, price 2, 26.; also in Bronze.

Bell, price 2f. 2s. I also in Bronze.

"Purity," or Una and the Lion, a Statuette.
Designed and Modelled by John Bell; a companion to Danecker's
Ariadre, or "Voluntionisms," price 3f. 2s.

The Lyon would not leave her desolate,
But with her went along, as a strong gard
Of her chaste person.

Silvanes, Exprise Querrie, booke i. canto m.

A Bust of the Duke of Wellington as at faterlos. Modelled by S. Joseph, price H. Hr. of.

The Milk Jug which received the Prize awarded y the Secrety of Arts in 1816. Designed by Felix Summerly; excuted in Porcelain and Glass; also in Silver by Messrs. Hunt & oskill, 186, New Bond street.

Fish Carvers, by John Bell, in Silver, 11 Guineas, ade by Joseph Rodgers & Sons.

made by Joseph Rodgers & Sons.

Wine Tray, which fixes the Decanters. Designed by R. Rekgrave, and made by Jennens & Bettridge.

The articles are sold by J. Camball, 12, old Bond-street; by P. & D. Colmoghi, 13, Pall Mall East; Bury & San, Espitian Hall, Piccadilly, G. Bell, 186, Fleet-street; J. Morthock 286, Oxford-street; J. Phillips, 25; and 289, Oxford-street; J. Frenand, 149, Strand; J. Green, date Brumbock) 19, St. James were; and Jennens & Bettridge, 3, Halkinstreet West; and all Dealers.

A Catalogue sent on receipt of two Postage-stamps.

SATURDAY, FEBRUARY 26.

GENERAL VIEW OF THE LONDON MEET-INGS LAST WEEK.

Of the great companies whose HALF-YEARLY MEETINGS are held in London, four had already laid their accounts before the proprietors when we last went to press. The Reports of the London and North-Western, the Great Western, and the London, Brighton and South Coast, with many differences in their respective details, all resembled each other in one important point: - each has had to make known that the rate of dividend received at the corresponding period of 1847 can no longer be kept up. The Brighton came first, with a fall from 7 to 4 per cent.; the London and North-Western descended from 10 to 8; and the Great Western from 8 to 7. The directors of the first and last-named companies do not quite treat this decline as a permanent one: they point to the hard times of last year; and while these are made to bear the blame of the reduction in nett profits, a hope of better things is presented on the revival of the national prosperity. The chief of the second has been more sparing of prophecies: Mr. Glyn eschewed very adroitly any comparison between the results of the last half-year and those of the same period in 1846;—fixed his attention on the half-year's dividend immediately preceding — without bearing on the fact that it, too, was a reduced one; -and invited the proprietors to look forward to a permanent rate of 8 per cent. as the most cheerful prospect he could lay before them:—a prospect, however, which he thinks contingent on the return of Parliament to better principles of railway legislation than have ruled since Lord Dalhousie spoke on the subject of competition. The London and South-Western, as we stated last week, maintain their position, the dividend of 8 per cent. on the consolidated stock being virtually nearly the same as that declared the preceding year on the shares. The statistics of Mr. Chaplin were carefully detailed; and went to show a probable increase of traffic in many quarters when the works now in hand by the South-Western shall have been completed; but he did not think it expedient to promise more from these figures than a dividend at the present rate. Altogether, so far as the results of these meetings can be tested by the actual accounts on the one hand, and by the data produced for estimates of the future, on the other, it would appear that they coincide in announcing the settled descent of profits to a lower stage: in which intimation we apprehend the most dubious feature is the permanence of the rate on their reduced level, unless some effectual means are taken to keep it stationary.

The conclusion is not likely to be welcome to the purchasers of railway stock. It is far from being what subscribers-with very rare exceptions-looked for, when they voted continually growing issues of new shares-and listened with approbation to the long lists of new projects that directors, at every general meeting, produced for their sanction. It must be added that the directors themselves, when asking their consent to fresh enterprises, whether for extensions, purchases or guarantees, either did not foresee how the outlay upon them might tell at a later period on the profits from the original capital, or, if they saw it, were not sufficiently desirous of making this conviction known to the shareholders. Nor can the prediction uttered by Mr. Glyn at one meeting, some eighteen months ago, be regarded as any exception to this general description; since on the next subsequent occasion he expressly recalled this prophecy, and, indeed,

be able to maintain its then current rate of | dividend upon the new capital also. The relation both of proprietors and directors to the projects of the last three years may be simply explained. Neither the one nor the other looked beyond the excitement or the nearest circumstances of the moment. They were, each, it may be, in a different way, engrossed with immediate objects; and went on fighting and scheming from day to day, in the best possible spirit; leaving the future to take care of itself so long as nothing occurred to disturb the enjoyment of the present. This we may state, as a matter of record, with entire fairness-because in saying it now we are not prophesying after the fact, but merely repeating what has been uttered time after time in these pages; when, to us at least, the future operation of what was then beginning was perfectly evident; when it was not less evident to us that the parties concerned did not foresee the probable consequences of what they were so busy in bringing to pass. And as it was certain also that their ardour would be by no means so lively as it then was, could they be made aware of the tendency of what they were doing—and, further, that it would have been greatly for the advantage of the whole interest had its heat been cooled by a view of the end to which we saw them all hastening,-we did, as our readers well know, bestow much pains in trying to turn their attention to the future; to point out consequences of which we are now recording the unwelcome appearance. These pains were altogether thrown away: the caution was unheeded; or, if it found a response anywhere, it was neither in the councils of the directors, who sounded unceasing summonses to new exertions and wider enterprises, nor in that active class of the shareholders by whose approval they were carried. Now that the event has turned out exactly as we foretold it must, we are surely entitled to point, without any invidious emphasis, to a connexion between cause and effect, which we do not now insist upon for the first time, and which we should have been glad to have succeeded in making clear to the perception of the railway body while it might have narrowed the grounds of its present sacrifices. That the demonstration was ineffectual, we must say, did not lie in any defect of the argument-although we know that it might have been more strongly enforced by others; but in that entire indisposition to be led in a practical way by any general arguments or considerations whatever,-which we have remarked as a characteristic of both managers and constituents of the railway body. They have not been accustomed from the beginning to carry their views beyond the immediate scheme before them; -this empirical method was not found to lead to serious errors while railway enterprise was confined to insulated projects, and had not spread into larger relations :- it had become fixed as the habitual and sufficient method, by the time when the business had outgrown its early limits and demanded wider and wiser guidance,-and it has been persisted in to the present timewith what effect any one may now perceive. Our suggestions, therefore, were of no use, not because they were weighed and found wanting -but because it never occurred to the parties addressed to steer their course on any principle that would have suggested an examination of their error or rectitude.

conviction known to the shareholders. Nor can the prediction uttered by Mr. Glyn at one meeting, some eighteen months ago, be regarded as any exception to this general description; since on the next subsequent occasion he expressly recalled this prophecy, and, indeed, gave it as his opinion that the company might

the "hard times" are net wholly nor mainly to blame. It is due to the spread of capital over works that are barely profitable; to the waste of capital in endless fighting and negotiation; to that bidding and competing, in the hope of staving off competition, which have afflicted the body more severely than any evil which these efforts were professedly meant to avert, could have done. There has ensued this unlucky circumstance—which also we long since foresaw and pointed out; that, while the exertions have been thus exhausting, the evil has not been averted after all. An enormous price has been paid, in the hope of an immunity, which is just as remote now as it was when the biddings begun.

We may hope that glimpses of this truth have begun to find their way into many quarters. We are at all events glad to perceive a change in the tone of Reports and chairmen's speeches on the subject of future policy. The necessity of a more cautious progress; of a less hostile attitude; the expediency of devoting more care than heretofore to the traffic and working arrangements; the discovery that, after all, railway works were undertaken, by those who gave the money to make them, in the hope of a fair profit on the investment; and that to secure this object is really a duty of directors far more important, if less exciting, than that of planning grand combinations, moving to and fro vast sums of money, or taking up a large space in the public business of the day;—these views, we say, have become more visible than heretofore at the recent general meetings. Of this change the cause is not to be found solely in the action of events on the directors themselves: it has been aided by a wholesome perception of the fact that the present state of their affairs will not be agreeable to the proprietary; and by a feeling that they cannot be expected to remain as passive as heretofore, while the outcome of past measures is beginning at length to tell seriously on their incomes. That the several Boards have not been premature in making this discovery, we have seen, and have seen with entire satisfaction, at the late London meetings. The shareholders in many quarters have begun to take some part in the business that concerns them; to express what they have long felt, but have been slow enough to bring forward; to make heard the claims, not merely of the richest and most prominent in the proprietary, but also of those who have invested in a more humble way-of those who must be the first and worst sufferers from a declining income—to regard in the counsels of the management. This we must view as the most hopeful circumstance of the time; because we are persuaded that nothing but this will ever bring the rules of railway policy to the test of what is, after all, its essential principle, -of which it has nearly altogether lost sight in the confusions and extravagance of the last three years. So far, it has not transgressed the bounds of temperate and fair representation (for the exceptions, in certain cases, of individual petulance, do not affect the general character of the proceedings, and found no sympathy in the mass); and while it keeps within these bounds it will be the surest element of future prosperity. It will rest in a good measure with the directing bodies to determine whether it shall continue to move in its appropriate limits or pass into that excited state in which all restrictions are confounded, and both reason and prudence give way to the anger and suspicion of disappointed men. We desire to see the former preserved as strongly as we dread and dislike the latter; and we shall rejoice therefore to see the industry of directors henceforth more

now command than ambitious of new dominions. There is scope enough for all they can do, and far more than that all, in repairing the breaches and making good the cost of the warfare of past years; and we are fully persuaded that the gradual revival or the constant decline and ultimate fall of the railway interest depend on the degree to which this paramount duty is henceforward performed or neglected.

Official Papers.

(See Table of Contents for reference to several Meetings.) MIDLAND.

Directors' Report to the Half-yearly Meeting, Feb. 19.

It is a source of much satisfaction to your Directors, that, at the close of a period of severe commercial difficulty, they are enabled to report a balance of 287,975/2.123. 3d., which, after deducting 48,2384. 10z. 5d., the amount of the guaranteed dividend on the 6 per cent. stock and shares, will enable this meeting to declare a dividend of 33. 10z. upon each 100l. of Midland consolidated stock; of 3l. 10z. upon each 100l. of the consolidated preferential stock; and after the rate of 7 per cent. per annum upon 10l. of each of the 40l. shares; of 2l. 16z. 3d. upon each 100l. of the consolidated Birmingham and Derby stock; and after the rate of 5 per cent. per annum from the opening, 6th of September to 31st of December last, upon 32l. 10z. (the amount then called up) of the Erewash Valley shares, and leaves a balance available for the present half-year of 45,672l.

The gross receipts for the half-year from each portion of the line, and including the Ashby Canal, have been 586,034l.
9z. 2d., being upwards of 101,000l. more than those of the previous half-year.

After so considerable an increase in the receipts, and the It is a source of much satisfaction to your Directors, that

previous half-year.

After so considerable an increase in the receipts, and the prospective addition from the further immediate opening, by means of the Syston and Peterborough, in connexion with the Eastern Counties, with the Eastern districts of England, for the supply of minerals, and the return from thence of corn for the manufacturing districts, the propriers will necessarily find a large increase in the locomotive, carriage and waggon stock.

carriage and waggon stock.

Since the last half-yearly meeting, 12 miles of the Erewash Valley branch have been opened, but as the branches to the principal collieries are not yet completed, and the junction with the Pinxton has been postponed for the present, the receipts from this portion have been small.

Since the last meeting, the Directors have taken the entire of the carrying business on account of the company; and though it has entailed a very heavy additional expense in the shape of salaries, wages, &c., as will be seen on reference to the statement of accounts, the Directors are of opinion that the change has been advantageous both to the share-

to the statement of accounts, the Directors are of opinion that the change has been advantageous both to the share-holders and the public.

Mr. Barlow, the resident engineer, reports,—"The works executed on the main line during the half-year just past, have been chiefly confined to station enlargements and in executed on the main line during the half-year just past, have been chiefly confined to station enlargements and increased siding room, to accommodate the growing traffic of the line. The increased carriage and engine stock has required additional repairing shops at Derby, and a further addition may be expected on this head during the next half-year. Accommodation has been furnished for the corn traffic at Lincoln, Leicester, Loughborough and Woodlesford. Gas works have been erected at Newark, Syston and Melton, and various alterations have been made in the buildings and offices of the goods department of the principal stations, consequent on the change of system on which that traffic has been conducted. The extension line to the docks at Gloucester is nearly completed. The branch line to the canal and stone quarries at Little Eaton will be completed in about three weeks. The new passenger station at Nottingham is approaching completion. Considerable progress has been made with the new station at Leeds. The engine house is finished. The contracts for the workshops are ready for letting, and the contract for the booking offices is in course of preparation. The electric telegraph has been erected on the Birmingham and Gloucester portion of the line, and the instruments are now being attached."

As the last of the old contracts for maintenance of the permanent way will expire next July, and a considerable saving will then be effected in this item of expenditure, the Directors propose to form a fund by appropriating after that date 20.000% annually, for the purpose of renewing the rails and sleepers from time to time as may be found necessary.

Mr. Kirtley, the superintendent of the locomotive and

Mr. Kirtley, the superintendent of the locomotive and

arriage departments, reports that the locomotive arrange and waggon stock is in improved working condition. The Syston and Peterborough line is very nearly completed, and will be open for through traffic before the end of next month. The works on the Leicester and Swannington, consisting of the removal of the incline plane at Bag-

of next month. The works on the Leicester and Swanningone, consisting of the removal of the incline plane at Bagworth, and the addition of another line of rails, will shortly
be finished and ready for full work. The extension of this
line from Long-lane, through Ashby, to the Midland, at
Burton-upon-Trent, is going on, and will be ready for traffic
in the course of this year. The line from Nottingham and
Mansfield is proceeding.

Three bills have been introduced into Parliament in the
present session: one of them for sanctioning an alteration
in the South Midland line near Wellinghorough, by which
a saving in the estimate will be effected; the other for
nuthorizing the construction of a short branch from Derby
to Ripley, with branches out of it for the accommodation of
the collieries; another short branch from the Masborough
station, and two others in connexion with the Erewash
Valley and Nottingham and Mansfield branches, and also
certain enlargements of the Derby and Burton stations.

These branches are chiefly designed for the better accommodation of the mineral traffic. The total estimated cost

is 93,000%. The bill relating to the Gloucester and Stonehouse branch, which was suspended last year in the House of Lords, has been again introduced into Parliament; but this, in common with all the railway bills of the session, has been suspended until the Railway Committee appointed by the House of Commons at the commencement of the session shall have made their report. These bills will be submitted for approval to a special meeting, to be held immediately after the general meeting.

The following Directors retire at this meeting: Messra. Murgatroyd, Newton and Peyton, all of whom are eligible for re-election. Mr. Cripps, one of the auditors, also retires at this meeting, and is also eligible for re-election. is 93,000%. The bill relating to the Gloucester and Stone-

YORK AND NORTH MIDLAND

Directors' Report to the Half-yearly Meeting, Feb. 21.

Directors' Report to the Half-yearly Meeting, Feb. 21.

The Directors in laying before the proprietors the statement of the accounts of the company for the half-year ending the 31st of December 1817, have to report that the receipts on the traffic account for passengers, parcels and mails amount to 126,3463. 33. 34.; for merchandise, cattle, &c., 106,3911. 193. 54.; and for rents and staith dues, 1511. 12. 4d. Total, 233,9991. 4s. The expenses of working the line during the same period are 69,2961. 17s. 7d., and the interest on dehentures, 18,653. 4s. 4d.

The clear profits of the half-year derived from traffic being 147,7651. 11s. 2d., the Directors recommend that a dividend be declared after the rate of 10 per cent. per annum on the consolidated stock of the company, and after the same rate upon 104. per share of the East and West Riding shares, being the amount which was paid up on those shares previous to the 30th of June last, deducting income-tax. The total amount of this dividend will be 113,3311. 13s. 6d., the payment of which, together with the half-year's rent of the Hull and Selby and Bridlington lines, due on the 1st of February inst., will leave a balance of 83tl. 15s. 9d.; which being added to the sum of 16,090, the proceeds of the sale of a portion of the East and West Riding share which were placed at the disposal of the Directors, leaves a gross surplus of 16,8811. 15s. 9d. to the credit of the company.

The Harrogate line was opened as far as Spofforth on the 10th of August; the line between Filey and Bridlington was opened on the 20th of Cetober; and from York to

The Harrogate line was opened as far as Spofforth on the 10th of August; the line between Filey and Bridlington was opened on the 20th of October; and from York to Market Weighton on the 4th of October; and the Directors expect to open the line from Selby to Market Weighton, and the new station at Hull with the branches leading thereto in April next, and the remainder of the Harrogate line in May next. The greater part of the works on all these lines has been already executed, and the stations at Hull and Harrogate are preparable of the stations at Hull and Harrogate are preparable of the stations. Hull and Harrogate are approaching completion.

The Directors add the following details of the traffic for the half-year, also the statement of the capital and revenue of the company:—Passengers: first class, 105,815; second class, 241,443; third class, 31,9713; Government ditto, 160,094; total, 827,065. Horses, 3,431; carriages, 1,172; dogs, 3,135. Merchandies: goods and grain, 396,627 tons; coal, 115,503 tons; coke, 79,955 tons; lime, &c., 13,682 tons; total, 605,767 tons. Cattle, 15,332; sheep, 64,055; sizes 6,043.

YORK, NEWCASTLE AND BERWICK.

Directors' Report to the Half-yearly Meeting, Feb. 21. The Directors beg to present to the proprietors the usual statement of the capital and revenue accounts for the half-year ending the 31st of December last, showing a balance of 216,714. 12s. 8d. in favour of the company on the revenue account, after deducting working expenses and interest.

The Directors recommend that a dividend be declared at

the rate of 9 per cent. per annum upon the consolidated stock of the company, and upon 10t. per share of the York and Newcastle extension shares No. 1; and that a dividend at the same rate be paid upon 15t. per share of the original Newcastle and Herwick, and North Shields purchase shares Newcastle and Herwick, and North Shields purchase shares respectively, and at the rate of 5 per cent. on the remaining 10t, per share of the North Shields shares. After the payment of these several dividends, and the half-year's rent of the Great North of England, a surplus of 45,883t. 13s. 10d. will remain to the credit of the company.

The traffic for the past half-year appears to the directors to have been most satisfactory; and as there will be no addition to the rent now payable to the Great North of England for the next eighteen months, and as a large increase of traffic may be confidently expected on the com-

England for the next eighteen months, and as a large increase of traffic may be confidently expected on the completion of the bridges across the Tyne and Tweed, and of the different branches yet unopened, the Directors regard the future prospects of the company as of the most encouraging character.

the future prospects of the company as of the most encouraging character.

The Directors propose to commence forthwith the construction of the docks at Jarrow Slake, for which an Act was obtained last session. These docks, when completed, will form an important addition to the facilities which the company now possess for shipment of coals and other merchandise, and cannot fall to prove highly advantageous.

During the late monetary crisis, the Directors have not had occasion to suspend any of the works in operation. They have used their best endeavours to forward the completion of the bridges over the Tyne and Tweed, and have proceeded with the Bedale and Kelso branches as they obtained possession of the land. The Bedale branch will be opened for traffic on the 1st of March next.

The Directors are applying to Parliament this session for power to deviate part of the branch line between Thirsk and Malton, by which a large sum will be saved in the expense of construction. They are also applying for power to lease the Hartlepool dock and railway, and to make a line of railway from Newcastle to Durham by the Team Valley, and to make certain branches in the county of Durham.

The Directors add the usual cash statement, and also the following details of traffic, for the last half-year, viz.:—Passengers: first class, 135,518; second class, 549,438; third class, 944,931; Government ditto, 88,649; total, 1,718,436. Horses, 2,092; carriages, 1,002; dogs, 3,171; cattle, 13,631; sheep, 37,283; pigs, 2,663; goods, 139,121 tons; minerals, 1,245,067 tons.

LONDON AND BLACKWALL

Directors' Report to the Half-yearly Meeting, Feb. 22.

Directors' Report to the Half-yearly Mecting, Feb. 22.

The usual period for meeting the shareholders having again arrived, the Directors beg to submit their Report of the proceedings of the past half-year.

From the statement of the revenue account it appears that the receipts from the ordinary traffic on the line and from wharfage amount to 33,023. 10x. 4dx., and the total expenditure to 25,527. 3s. 6d.; there is, consequently, a balance of 7,496. 6s. 10d. available for dividend, which will admit of the payment of 3s. per share, clear of income-tax, to the proprietors of the 49,000l. original shares; and the Directors recommend the declaration of a dividend accordingly.

There is no item in the revenue account which, in the There is no item in the revenue account which, in the judgment of the Directors, calls for particular explanation, excepting the cost of coals, which presents a considerable increase in the amount as compared with the corresponding period of 1846. This is attributable solely to the high freights charged during the last year, and not to any augmentation of the quantity consumed.

The subjoined is a comparative statement of the passenger traffic during the corresponding months of the last two years:—

two years:-

1846 Passengers. Amount. July 428,700 £6,767 14 11 August ... 407,497 6,334 10 11 September 345,070 5,360 18 11 October .. 233,037 3,793 17 8 Passengers. Amount. 450,488 £6,224 16 11 445,170 6,065 18 7 328,332 4,693 17 7 257,030 3,845 6 3 185,378 2,990 17 6 November 193,414 3,346 3 3,031 8 December 175,126 179,515

1,782,884 £28,634 14 1 1,845,913 £26,857 11 10 Upon an analysis of the traffic it is found that the diminution in receipts is traceable to the local traffic, or that which is unconnected with the river, and that the river traffic has considerably increased in numbers, though, owing

trainc has considerably increased in numbers, though, owing to the continued competition and the low fares, the amount received remains nearly the same.

At the meeting in August last the Directors stated that the contractor had engaged to complete the extension line for traffic before the close of the year. It was therefore with

the contractor had engaged to complete the extension line for traffic before the close of the year. It was therefore with much regret they learnt in the month of November that the bridge over the Bow-road, the plan of which had been referred to the Commissioners of Railways for their decision, could not be completed in due time, and that consequently the line could not be finished as was anticipated. Finding this to be the case, and being most anxious to obtain as early a return as possible for the outlay on the works, the Directors instructed their engineer to advance the opening of the line to the Bow-road, leaving that portion connecting it with the Eastern Counties to be subsequently completed. The Directors do not anticipate any considerable delay in bringing the whole of the extension line into operation, not only for the great traffic which may reasonably be expected from the populous vicinities of Bow, Stratford, &c., but also in direct connexion with the Eastern Counties. It is most satisfactory to report that the directors of that company have tendered every facility for passengers from their railway to avail themselves of the advantages which the Fenchurch-street terminus offers. The Directors have much pleasure in reporting a result so favourable to the interests of the Blackwall proprietors, offering as it does the prospect of a great augmentation of traffic, which the valuable position of our terminus cannot fail still further to extend.

When the bill authorizing the alteration of gauge shall have passed the House of Lords, no time will be lost in substituting locomotive power for the use of the rope. By this alteration an immediate saving in the expense of working the line will be forced, which the public will be so accommodated as not to endanger the traffic worked by the present costly system.

In addition to the favourable points already adverted to,

costly system.

In addition to the favourable points already adverted to. it will be satisfactory to the proprietors to be informed that terms of agreement are almost definitively settled with the directors of the East and West India Docks and Birmingham Junction, for bringing on our line the passenger traffic from the district through which that railway is intended to pass,

the district through which that railway is intended to pass, as well as the longer traffic from the London and North-Western.

Since the last meeting a vacancy in the auditorship has occurred by the resignation of Mr. D. Ogilvy, and the Directors have appointed Mr. J. Wilson to that office, subject to the confirmation of the shareholders. The following Directors go out of office by rotation, viz., Mr. Daniell and Dr. Bowring, and, being eligible for re-election, they offer themselves secondingly. selves accordingly.

WORKS, &c.—Feb. 10.—In the VICE-CHANCELLOR'S COURT, in re Elliot v. the South Devon, his Honour dissolved an injunction restraining the defendants from constructing a branch across the plaintiff's land at a level more than 2 ft. higher than the common datum line specified in the section referred to by their railway Act, and also from using such land for temporary purposes. The Court did not, on motion, and rarely at the hearing of a cause, order parties by an injunction in this form to undo works which they already had done. With regard to the conflict between the surveyors on each side, as to the actual elevation of the works above the common datum line, and as to the question whether the company were entitled under the railway Act to deviate 2 ft. or 5 ft. above the level,—these were matters for a court of law. If the company would undertake to remove the works, in case they should be determined not to be authorized by the powers of the Act, the injunction might be dissolved altogether; if not, special directions must be given.—His Honour subsequently delivered judgment with regard to the The injunction must be dissolved except as to the construction of the railway at a level of 2 ft. above the common datum line. As to that part of the case, the company declining to undertake to alter the level of the line, if the Court should at the hearing so direct, let the plaintiff bring his action to try the right of the defendants to construct the railway at the level of more than 2 ft. above the common datum line; the defendants admit constructing the line at a level exceeding 2 ft. higher than the common datum line laid down in the section referred to. The question would then be raised whether the plaintiff's land were to be taken as town lands within the meaning of the Rail-way Clauses Consolidation Act. For the trial of the other question the plaintiff must on the action admit that the Inspector-General has required the company to carry the railway over Union-street by a bridge; and that the defendants have, since such requisition, constructed the railway at the place in question at a level exceeding 5 ft. above the common datum line.—Feb. 11.—In the same Court, in re Ross and others v. the South-Eastern, an ex parte injunction was obtained to restrain the company from continuing their works at Northfleet, Kent, on plain tiff's property, for which compensation-money had not yet been paid.

Costs.—On the same day, in the same Court, exparte the Huddersfield and Manchester in re Bayshave, the petition prayed the taxation of the bill of costs of Messrs. Bagshawe & Co., at Manchester, solicitors. The bill had been delivered upwards of twelve calendar months, and the question was, whe ther a correspondence which extended through the whole twelve months relative to certain parts of the bill, and the authority to employ parties, was such a special circumstance as to account for the delay in presenting the petition, that time being limited by the Solicitors' Act, 6 & 7 Vict. c. 37. His Honour directed the taxation, the company bringing the balance into court.

COMPENSATION.—Feb. 11.—In the same Court, in re Barker v. the North Staffordshire, the plaintiff is the lessee, under the freeholder, of brine pits and salt works at Sandbach, in Cheshire. The company gave the usual notices, but by some mistake only seven instead of nine plots had been taken, and there had been some irregularity in the bond. Both these defects being alleged to have been remedied, a motion was now made to dissolve the injunction obtained. The compensation claimed for the land was above 4,000*l.*, but the sum awarded by the surveyor and valuer was only 53*l.*; the plaintiff alleging, in support of his claim, that the land proposed to be taken would destroy the value of the salt works; the company, on

the other hand, insisting that the land might be taken without the slightest detriment to the works and buildings; and, moreover, to show that they were fair in their proceedings, offering at the bar to pay a proper sum for compensation for the damage, if any, that might be done, and to dig brine pits, if needful, contiguous to the works in lieu of those proposed to be taken.-His Honour refused to dissolve the injunction (reserving the question of costs), after specially entering into the allegation on either side. -In the same Court, in re Robinson v. the Great Northern, the plaintiffs, who held lands near Boston, were served with a notice by the defendants that a portion of their land would be required for their line, under the provisions of the Acts, and they sent in a claim for 8,000l. The company, considering the demand excessive, had taken the usual proceedings for having the amount fixed by a jury, and a special jury had been struck by them and the plaintiffs injunction to restrain further proceedings by the company was now sought. After some discussion it was arranged that the company should be at liberty to proceed before the jury, if they thought fit, without prejudice to any question in the cause, undertaking not to act on the verdict, or take possession of the land without leave of the Court, and to abide by

the order of the Court as to costs and otherwise.
In the same court, in re Skerratt v. the North Stajiordshire, his Honour ordered the payment out of court of 1,000l., which had been paid in by the company on dissolving the injunction restraining the prosecution of their works over the plaintiff's lands. The applications before him had all turned upon the question whether the award was valid that fixed the compensating terms. The Lord Chancellor had held the award to be good. It was only on the contrary supposition that the money was ordered to be paid into court; and it must therefore be now paid and the company must be released from their undertaking as to the works on the lands in question. He could now make any order as to costs, so far as the motion related to the award. The other costs would

be costs in the cause.

Liability of Provisional Committeemen.—
Feb. 11.—In the Court of Queen's Bench, in re Parrett v. Lambert, where an advertising agent sued a provisional committeeman of the Jamaica South-Eastern, &c. for 640l., cause was shown against a rule nisi.-The Chief Justice thought the plaintiff's rule nist.—The Other Justice thought the plantin is commission would be the proper measure of the value of his work. Unless that could be arranged a new trial would be granted.——Feb. 12.—In the same Court, in re Warrington v. Lambert, the plaintiff, a surveyor, sought the amount of his bill a provisional committeeman of the Great Welsh Junction. In the cause, tried before Mr. Justice Erle, the defendant's name was on the list of provisional committee, between the 7th of July and the 13th of August; but he afterwards came to remonstrate about it. A meeting was about to take place, and he was induced to take the chair; and the doubt was, whether he did this before or after the order for which this action was brought. The jury returned a verdict for the defendant. A rule has since been obtained for a new trial. The Court did not think that the mere fact of a man having his name on a provisional committee was alone sufficient to make him liable as such. But what he did, in reference to attending the committee, was certainly evidence for the jury to answer, in determining whether he had held himself out to the world as a person giving the orders, and making himself responsible

for them.—Rule discharged,

Breach of Agreement.—Feb. 12.—In the same
Court, in re the Blackwall v. Scott and others, this was an action by which the plaintiffs sought to recover the sum of 500l. on the breach of an agreement. The defendants were the directors of the East and West India Dock and Birmingham Junction, and had entered into an agreement with the plaintiffs by which, in consideration of the latter withdrawing their opposition to a bill which was then before Parliament, the defendants undertook to pay the costs of the plaintiffs, as between attorney and client, to the extent of 500%. When the bill got into the House of Lords, Lord Shaftesbury objected to the defendants' railway crossing the Blackwall line on a level, and insisted on a clause being introduced into the bill, whereby the defendants would be compelled to build a bridge over the Blackwall. It was explained to his lordship that the effect of introducing such a clause would be to deprive the Blackwall of their benefit under the agreement. His lordship, notwithstanding, insisted upon the introduction of this clause. The plaintiffs would have worked the defendants trains across their railway, and derived a benefit thereby, but the introduction of Lord Shaftesbury's

the bill in the House of Lords. The plaintiffs had, by this opposition, it was asserted, put an end to the agreement. The jury returned a verdict for the plaintiffs.—Damages, 500l.

Share Dealing.—Feb. 18.—In the Court of Con-

MON PLEAS, in re Bayley v. Wilkins, the plaintiff, a stockbroker, had been authorized by the defendant, of Swansea, to buy twenty Vale of Neath shares for him at 30s. discount. At that time a call of 21. had been paid, and the shares were accordingly bought at 10s. per share from a lady named Bennett. Under the statute 8 Vict. c. 16. no shareholder can transfer any shares until he has paid all the calls; the seller is authorized to pay the calls although not due, and to claim the same from the purchaser. A second call was made on the 24th of February of 2l. per share, to be made payable on the 12th of April. The shares were sold to the plaintiff, as the defendant's broker, before this second call was paid, and 10l. as the price and 11. commission, were received by him for the shares on the 5th of April. The second call was paid by Miss Bennett before the contract was completed, and her brokers demanded the amount from the plaintiff as the defendant's broker, which he was compelled to pay. The defendant was written to for 40t., the second call on his shares; at first he asked for time to pay, but eventually refused to pay altogether, alleging that he had bought the shares, second call included, for 10s. a share. These facts were proved in evidence from the letters between the parties and by witnesses .- His Lordship directed that a verdict should be entered for the plaintiff for the sum claimed, 40L, with leave to move to enter a nonsuit, if he were wrong.—Mr. Serj. Byles elected to take the verdict on the first count "for money paid.

PROPERTY LOST .- On the same day, in the same Court, in re Richards v. the London, Brighton and South Coast, Mrs. Charlotte Susanna Richards, the wife of the plaintiff, was a passenger from Woodgate to London on the 10th of November 1846, in one of the company's carriages, with her luggage, and it was the duty of the company, as common carriers, to carry and safely deliver the luggage at the London carry and safely deriver the higgage at the London Bridge station, but by their neglect a dressing-case, part of the luggage, was lost. A second count alleged the obligation on the part of the company to be to carry the case from that part of their station at London Bridge where the railway carriages stop to a certain other part of it, where there is a stand of hackney-coaches. The third set up a special contract to carry the case from the railway carriage to the hackney coaches. The defendants pleaded several pleas, putting all the material allegations in issue, and setting up the defence that the dressing-case contained jewellery, and that the value had not, in compliance with the provisions of the Carriers' Act, been declared, and an additional fare paid accordingly. The principal fact in the plaintiff's case was that the maid-servant accompanying Mrs. Richards had wished to remain in charge of the dressing-case and other packages in the carriage, but that the porters assured her that they would safely dispose of all the luggage. The jury found a verdict for the plaintiff of 150/

Feb. 22. -In the same court, in re Pilbrow v. Pilbrow's Atmospheric, the complainant, a civil engineer, sought damages of 14,000l. of the Earl of Essex and other directors for his invention. The whole question in dispute was whether the improvement was or was not a valuable and practicable one. The advantage it was said to possess over the atmospheric principles previously invented was the absence of a longitudinal valve, which passed through the tube from which the atmosphere had been exhausted, and which in its passage ripped up the covering of a groove, and which therefore required to be cemented before the air could be again exhausted. Verdict for the defendants on the material issues.

Feb. 15.—In the COURT OF BANKRUPTCY, in the Bankruptcy of the Tring, Reading and Basingstoke, application was made by Mr. Lawrance to the Commissioner respecting certain shares, set down in the books as belonging to the secretary. The assets would be sufficient to pay 20s. in the pound. Green, the secretary, claimed the residue of his salary, but the official assignee, seeing his name in the scrip-book for seventy-five shares, had hesitated to pay his demand until his Honour had decided whether or no Mr. Green, being a shareholder and partner, was entitled.—Mr. Green denied that he ever received any shares, or paid any deposit upon them. It was the custom of the directors to allot a number of shares to certain parties to be sold for the benefit of the company when the prices of such shares rose to a premium, and the directors charged themselves with the receipt of such premium.—The Commissioner said that as Mr. Green's name appeared upon the scrip-book he must treat him as a partner. clause prevented their carrying out their intention, and they therefore opposed the further progress of The practice of the directors, as just stated, amounted

almost to a fraud upon the public. He would adjourn | required for their construction; and for this reason the consideration of the claim.

Feb. 12 .- In the MARYLEBONE COUNTY COURT, in re Parker v. the Great Western, the plaintiff, a carrier in the Old Bailey, sucd the defendants for overcharge. The question at issue in the first case was, whether the hampers of meat should be charged for in the aggregate per ton, or as separate parcels. In the second case, the parcels sent were several of them under the weight of 200lb., and differed in their contents; containing butter, meat, hides, paper, drapery, earthenware, &c. The company, in their table, fixed the price for such small parcels, if of the same nature, under what they termed the fourth class, so much per ton, and for single parcels had formed a fifth class, which was the fourth-class price, with the addition of 2d. The company had charged for the plaintiff's parcels as single ones, because their contents were different, and the plaintiff maintained that as they were sent at the same time they could not be called single parcels. The Judge considered that they were, within the meaning of the Act, of a like nature, though of different contents. One item in the plaintiff's bill of particulars was for an overcharge for the conveyance of four truckfuls of goods. The company said they had a right to charge by the ton, because the contents of each truck were of a mixed description, the plaintiff urging that they should be charged for by the truckful, whatever the contents might be. The last claim was for an overcharge of 50 per cent. upon the carriage of some congreve matches.—The Judge said that his opinion was, that the company was not entitled to make the charges in respect of which the action was brought. As to the trucks, he was of opinion that the party engaging them had a right to their exclusive control: and his judgment therefore was, in both actions, for the plaintiff.-Verdicts for the plaintiff accordingly.

A man named Fitch, a toll collector at Ilford turnpike, has been remanded at the Worship-Street Police Court for firing a ball through one of the carriages of an express train on the Eastern Counties line. The prisoner declared he had been firing at some birds.

A man named Rowe has been remanded at the Mansion House for having robbed the South-Eastern of several bank-notes of the amount of more than 80%

At a compensation court before the Under Sheriff of Lincolnshire the sum of 17,000l. was lately awarded to the corporation of Grimsby for certain land taken by the Manchester, Sheffield and Lincolnshire. The valuation by the corporation ranged from 24,000l. to 27,000l.; that by the company was set down between 8,000l. and 9.000l.

### Parliamentary Proceedings.

LORDS.

Feb. 24.—Audit Accounts Bill.—The committee on this bill was postponed until the 29th. COMMONS.

Feb. 18.—Cast-iron Bridges.—In answer to Mr. OSBORNE, Mr. STRUTT stated that after the failure of the Dee bridge the company had immediately applied temporary supports. The Government Inspector recommended that while the bridge remained with these temporary supports trains should not pass over it except at moderate speed; it would then be perfectly secure. With a view to prevent similar accidents, a commission had been issued to consider the principles on which cast-iron bridges, for railway purposes, should be constructed. They could not come to a satisfactory conclusion without experiments on a large scale; and the means of making those experiments had been placed at their disposal by the Government. He trusted the result of their inquiries would be satisfactory. Very shortly after the accident, the Commissioners sent circulars to all companies, recommending them to make a report as to the cast iron bridges on their lines, and the nature of their construction. On one railway, where the construc-tion was similar to that of the Dee bridge, the scale was much smaller, and therefore the stability of the construction was greater; yet temporary supports had in all cases been resorted to, and no danger need be apprehended.

#### Reports of Bleetings.

MUDLAND.

Feb. 19. — Half-yearly Meeting, Derby.—Mr. G. Feb. 19. -

The Report was read (see Official Papers).

The CHAIRMAN said, in moving the adoption of the Report, he should explain its principal features and principles. He remarked on the attacks which at various times had been made on railway property, and especially on the clamour for a low tariff, which had prevailed in some companies, though repelled successfully in their own case. The same party is now spreading the accusation that the dividends are paid out of the capital. This charge the hon. Chair-man most emphatically denied. The practice had never for a single instant existed with them. He then remarked on their present financial position, which was highly satisfactory. He had at the last meeting declared that their revenue for the half-year would be 600,000l. His prediction was realized to the letter. He continued: You are probably aware that the statement that we pay our dividends out of capital is divisible into two parts, the items upon which we have been most attacked being the charges for the interest on capital, and for our working stock. Not one sixpence has ever been debited to the account of capital for interest on our debenture debt, but has always been charged to the revenue. As to the question of our carrying stock, I must premise that I should wish every gentleman to walk round the station and view the state of our stock, under Mr. Kirtley, and convince himself of its present efficient state compared to what it was at the time of amalgamation. I will show you what was the amount of our carrying stock in 1845, when the amalgamation was entered into, and what it is now. I will further show you what was our revenue at that time, and what it is at present, and you will then see that our stock is larger now in proportion to our revenue than it was at that time; and I do not believe that any one will think that we have added more to the capital account than was necessary to meet the requirements of the new lines and the increase of our traffic. Previous to the amalgamation the working stocks of the three companies, either of engines, carriages, or waggons, were not equal to the traffic. In saying this I do not wish to cast any reflections on either the Midland, the Midland Counties, or the Birmingham and Derby Companies. Each economized their funds, and the result was, they could not adequately provide for the traffic. The engines were not only numerically too few, but they were deficient in power. Those engines we have had made larger and more powerful—and though they were rendered nearly new and equally as good-we charged the expense to the revenue and not to the capital account. At the amalgamation we had 174 miles opened, and the sum spent on working stock amounted to 467,462l.; at the present time, including the Bristol and Gloucester line, we have 437 miles open and at work, and the amount spent on the working stock is 1,387,710*l*.; but in that sum is included 130,000l. for coal waggons, not usually supplied; and if we deduct that amount, it reduces the cost of our working stock, in round numbers, to 1.250,000l. Now if the number of miles is multiplied by three, 3,000*l*. per mile being the usual sum calculated for the working stock, it will be found that in each case we are under the average. In the same period, our receipts have increased from 430,000*l*. per annum to upwards of 1,200,000*l*. per annum. Before the amalgamation you will therefore see our working stock had cost us 2,700l. per mile, and now it has cost us 2,900%, per mile; while, in the same time, both our stock and our revenue have been trebled. If our stock has continued in as good condition as it was in 1845, at the time of the amalgamation—and I should not rest satisfied if it was not considerably better-I think I have shown you that your capital has been faithfully applied; and I may add, that present session, and the amount of capital which they | there is never a carriage or engine worn out on the | so he (the chairman) should have met the shareholders

line that is not replaced by a better. I am not aware that there is any other charge against us. You will see by the Report that the directors propose next year to commence the creation of a depreciation At present we are under a contract entered fund. into for seven years for keeping the permanent way of one line in repair. The last of our old contracts for the line to Derby and some other places expires at Midsummer, when a considerable saving will be effected. That saving, together with other funds, we intend to apply to the formation of a fund for the repair of the permanent way, and replacing rails and sleepers. In consequence of a heavier description of engines being now used, and a higher rate of speed than was formerly necessary, the rails have had to be replaced by heavier ones. But though the old rails have had to be taken up as not sufficiently heavy for the main line, yet not being worn out, we have lines and sidings, for which other used them in new rails would otherwise have had to be bought. The cost of the new rails has been carried to capital account, but when the old rails have been used their cost has been charged to the revenue, so that, in point of fact, the only addition thus made to the capital account is the amount of difference in the cost between the old and the new rails. You are probably all aware that the Ministers brought forward the budget in the House of Commons last night. A special train was engaged to carry this morning's papers containing the debate to the North, and we have learned by the electric telegraph that our engine conveying the express performed its duty in two hours and six minutes, being at the rate of 54 miles an hour, a speed which, I believe, has never been excelled on the narrow gauge; while it has been attained at a much less cost than on a wider gauge. There is another gratifying fact, the directors do not mean to make any call upon you for money during the present half-year. It was with for money during the present nan-year. It was with exceeding regret that, during the late disastrous times, the directors had to make any calls, but they found it absolutely necessary. Loans were falling in, and not knowing whether the parties would renew them, or call for their money, we could not avoid making calls. It is, of course, difficult to settle, with any degree of accuracy, the amount of our future dividends; but I hope that at the next meeting we shall be enabled to declare the same amount of dividend as we recommend to be declared to-day, notwithstanding that at that time a large amount of 401. shares will come into the receipt of dividend. form my opinion as to the result of our next dividend from the conviction that, after the severe depression which we have experienced, trade must improve, if the gold be not run away with out of the country by the operation of free trade; and my worthy friend, the deputy-chairman (Mr. Ellis), assures me that it will not; and as I hope that it will not, a large improvement in trade must shortly take place. Besides, the Bank is enabled to issue to the amount of 14,000,000l. on the credit of the Government, and has now upwards of 10,000,000l. of bullion in hand. After such a dreadful squeeze, it is remarkable that the Bank should have so soon been brought into the most favourable position it has ever occupied since the passing of the Act of 1844. That circumstance, so promising to trade, taken in connexion with the heavy balance (40,000*l*.) this company will have in hand, is the reason why I expect that the dividend will be kept up. I may mention that this day we called all our principal officers together, and of the consideration in which I hold their ability, their honour and integrity, I cannot speak too highly. We called them before us to-day, and we drew their serious attention to the necessity of economically conducting the line, being satisfied that everything should, under present circumstances, be conducted with the strictest economy, always keeping in view, however, the efficiency and well-working of the line; for there can be no economy more unwise than having ill-paid and dissatisfied servants. There was an item in the ac-counts for oil and tallow (7,825/.) which had hitherto been spread over several departments, but which was now collected under one sum. The Birmingham and Gloucester, when they took it, required the relaying of the line, which was in an unsatisfactory state. directors had gone on with this work, and they had continued to charge the expense to the capital account. It would not be fair to charge this out of the revenue, for the line had never been in a complete state to be used by the public. There was also an increase in the item of gas. The carriers used to pay for the gas they consumed, and the company having now taken the carrying trade into their own hands had of course to pay for the gas. He then stated that they had seen in other companies rather noisy meetings, in consequence of a reduction of the dividends. That fortunately was not their case; but had it been

Digitized by GOGIC

with the same confidence in their support; for it could not be expected that upon the immediate opening of new lines which had been forced upon them, they should be suddenly developed, three years being the average time usually allowed for that process. If they obtained a smaller dividend for a time, they must bear in mind it was on a larger capital, and that they had received the shares in the extensions as a portion of their profit; and whether they had retained or sold their shares, they must equally so consider them. He concluded by moving the adoption of the Report.

Mr. RAMSEY seconded the motion; and after a short conversation, in which Mr. BRANDRETH confirmed, from personal examination, the statement of the chairman as to the efficiency of the stock, the

resolution was unanimously carried.

A series of resolutions were then passed, declaring the dividend as recommended in the Report; for converting the 40l. paid-up shares into stock; authorizing the directors to borrow various sums of money under the powers of their Acts; and re-electing the retiring directors and auditors.

The meeting was then made special, and the bills introduced into Parliament were unanimously approved of. A vote of thanks to the chairman was accompanied with three rounds of applause.

YORK AND NORTH MIDLAND. Feb. 21.—Half-yearly Meeting, York.—Mr. G. HUDSON, M.P., in the chair.

The Report was read (see Official Papers).

The CHAIRMAN moved the adoption of the Report. The directors declared with great satisfaction an undiminished dividend; but as increased capital had to be paid upon, so, unless the traffic increased and trade revived, the dividend for the future might perhaps be decreased. It was only a question of traffic. With respect to the East and West Riding shares, he proposed that they should pay another 5l. capital next half-year, another 5l. on the succeeding halfyear, and a further 5t. on the third half-year. The interest on these shares had not been paid out of capital, although their Act permitted them to do so. Their traffic, during the past half-year, had averaged 8,000t., and he anticipated that next year they would realize an average of 10,000t. per week. Hereferred to his remarks at Derby on Saturday last. This company had also resisted a reduction of fares before Parliament, and possessed the same tariff as when first incorporated. They had not dipped into capital for working their line; no amalgamation was anticipated with the York and Newcastle. He stated these facts in contradiction to certain rumours. There had been, as was seen, a great increase in their traffic during the last half-year, which to him (the chair-man) had proved the elasticity of the trade of the district through which their line passed. Hitherto the shareholders had had to struggle with a great many branches and new lines. Some portions had been recently opened. It was hardly possible to judge of the amount of traffic of a new line, for it was well known that it took two or three years to mature a traffic; indeed, until the third or fourth year, it was impossible to estimate such a traffic. But he entertained not the slightest doubt, even with all these difficulties, that they should be able to continue the present dividend. He was confirmed in the estimates he had formed of the prospects of the line from some details of the traffic estimates which he held in his Thus, the number of passengers which they carried during the last half-year was 800,000, whilst in the previous half-year they had carried only 638,000. In goods and merchandise there was also a still more remarkable increase in favour of this half-year. It amounted to 605,000 tons against 275,000 tons of the preceding half-year. In coke and coal the increase was also great-in fact so great as to convince the directors that their prospects were safely based. He might congratulate the shareholders that the directors had no occasion to go to Parliament this year, and he hoped the day was far distant when the name of the York and North Midland would be heard within the walls of Parliament. The property was quite secure, unless, indeed, Parliament—and there was no saying what Parliament would or would not do—should be led to the encouragement of competing lines. Nothing short of a parallel line with the York and North Midland could interfere with their prolines. jects. He might add that it would have been better had the company been left to carry out their extension and branches in their own way. But the impatience of the public would not allow them to stand still. At the same time it was satisfactory to know that the extension and branches which they were engaged themselves to construct were of the utmost importance, and sure, when the traffic was fully developed, to return a very ample remuneration.

They must wait for three or four years for the traffic being matured on these lines; but there could be no doubt they would ultimately pay them. In the meantime it was impossible for this company not to undertake the works they had. They could not leave the East and West Riding line unfinished. They could not leave the portion to Scarborough incomplete. They could not refuse to pay attention to Whitby. Indeed, if they had not attended to these lines, they were threatened with their being taken up by other companies. The pledges given by this company to execute certain lines he trusted would be redeemed with all prudent speed, and he felt confident that when the whole system was carried out they would realize the expectations of all their hopes, and enter into the full receipt of the traffic of the There were many circumstances besides those line which he had already stated which in his (the chairman's) opinion appeared to justify the expectations of an increased traffic for the next half-year. Amongst these he regarded the fact that at pre-sent the Bank of England held—or would hold on Saturday next-about 10,000,0001. in bullion; and he anticipated that the facilities which would in consequence be afforded to commercial men would create a revival of trade. Railway companies were so circumstanced that they participated in every depression or revival of trade. If trade and commerce suffered they must suffer also, but with the reviving prosperity railway property must in like manner revive, and he therefore entertained the conviction that they should at no distant period be placed in a position of continually increasing prosperity.

The resolution was carried unanimously.

Mr. Moon asked some questions in reference to the buying up by the directors of the preferential shares of the Hull and Selby.

Mr. RAND objected to such questions being pressed during negotiations which were pending respecting the lease of the Hull and Selby line, in which the Manchester and Leeds shareholders have an interest.

The CHAIRMAN entered into some further details, from which it appeared that he expected they had ample capital to meet all their expenses in the execution of their branches.

Mr. Brough recommended that the East and West Riding shares should participate sooner in full dividend.

The CHAIRMAN promised to consider the suggestion before next meeting.

The resolution declaring the dividend as recommended in the Report, viz., at the rate of 10 per cent. per annum on the consolidated stock, and los per share on the East and West Riding shares, less incometax, was then carried

Sir J. Simson and Mr. R. Nicholson, two directors, rere re-elected.

In reply to the vote of thanks,

The CHAIRMAN said he hoped that, instead of having received 25 per cent. of their capital, they would receive the whole in the shape of dividends.

YORK, NEWCASTLE AND BERWICK.

Feb. 21.—Half yearly Meeting, York.—Mr. G. Hudson, M.P. in the chair.

The Report was read (see Official Papers). The CHAIRMAN, in moving the adoption of the Report, observed that their weekly traffic had averaged 12,400l.; and but for the "squeeze" in October it would probably have reached 13,000l. They had a large balance after paying their dividend. The bridges over the Tyne and Tweed were being pressed on with all speed, and he hoped that in the month of July next they would have a temporary bridge over both places. On the completion of those bridges the traffic would greatly astonish all parties. They would furnish Edinburgh and a great part of Scotland with coal and coke. The Kelso branch would be opened as soon as possible in the next autumn, and would form an important feeder. The Bedale branch would be opened on the 1st of next month. With reference to the traffic, had they possessed sufficient dock room, they could have worked their traffic at much less expense. They had carried above a million tons of coals in the last half-year. No property existed which could be relied upon with more certainty than the railways in this district, which possessed a large travelling population, immense agricultural produce, and minerals for which there was enormous demand. He did not expect that they would require any calls during the next half-year; but he declined to pledge himself. The next call would be on the No. 2 extensions; then the calls would be on No. 1 and No. 2, in equal sums, pursuant to the terms of amalgamation.

The resolution adopting the Report was carried unanimously.

The CHAIRMAN moved that a dividend be now declared at the rate of 9 per cent. per annum on the

consolidated stock, on 15t. per share of the original Newcastle and Berwick shares; on 15l. per share of the North Shields purchase shares; and on 101. per share of the extension No. 1 shares; and at the rate of 5 per cent. on the remaining 10l. per share of the North Shields purchase shares, such dividend to be paid, less income-tax, on the 28th of February inst.

This resolution was carried unanimously. The CHAIRMAN referred to the express train, on the 19th, from London to Glasgow, with the budget. They beat the Caledonian line into Glasgow by two hours and a half. The details were as follows:— From Rugby to Normanton, 113 miles, in 2h. 6m., being at the rate of 54 miles an hour; from Normanton to York, 25 miles, in 29m., being at the rate of 52 miles an hour; from York to Berwick, 150 of 52 miles an hour; from 1 ork to Berwick, 150 miles, in 3h. 20m., being at the rate of 43 miles an hour; from Berwick to Edinburgh, on the North British, 58 miles, in 1h. 20m., being at the rate of 47 miles an hour; and from Edinburgh to Glasgow, 48 miles, in 1h. The total distance from Rugby to 48 miles, in 1h. The total distance from Rugby to Glasgow was 394 miles, which was done in 8h. 21m., including the time lost in crossing the Tweed and the

Tyne, where the bridges are not completed. The next resolution, re-electing Messrs. G. Hudson, M.P., and R. Davis directors, and Messrs. T. Burston and H. Richardson auditors, was carried.

The meeting was made special, to consider the drafts of the following bills to be applied for in the present session, viz. :-

To deviate or alter part of their Thirsk and Malton branch, and to abandon part of the same, and for other purposes;—to enable the Hartlepool lock, &c. and the Great North of England, Clarence and Hartlepool Junction Berwick;—to improve the main line, and to make certain branches in the county of Durham, and for other purposes.

The CHAIRMAN briefly explained the object of these several bills, and they were all unanimously

Mr. J. RAND, of Halifax, said he felt that the pro-prietors would ill discharge their duty if they did not tender their best thanks to their Chairman in particular, and to the board of directors generally, for the admirable statements which had been pre-sented before them that day. Nothing was better calculated to refute those observations which were continually being reiterated, to the injury of railway proprietors, than such facts as had now been published. He proposed that such vote should be tendered, as a similar one was at Derby, on Saturday, with cheers.

The motion was seconded and carried as proposed. The CHAIRMAN said he and his colleagues were deeply interested in everything that concerned the well-being of the undertaking, and he should never consider anything a trouble which would protect their property and increase its value.

#### HULL AND SELBY.

Feb. 18 .- Half-yearly Meeting, Hull .- Mr. R. PEARSE in the chair.

The CHAIRMAN stated that an interview had taken place between the Hull and Selby Board and Mr. Hudson, M.P., relative to the value of certain stores claimed by the Hull and Selby, but that Mr. Hudson refused to admit the claim, on the ground that all the property was, by the agreement, to be transferred to the lessees of the railway, and that if the matter had been urged at the outset, he would rather have foregone the lease of the line, than have agreed to what he considered unfair.
